This course provides an overview of contemporary brain science and its applications to business. Students are first rapidly introduced to the basic anatomy and physiology of the brain and become familiar with important techniques for measuring and manipulating brain function. The course then surveys major findings in neuroscience with applications to business, including vision, attention and advertising; valuation and marketing; decision making; learning, innovation and creativity; social influence, team-building, and leadership; and discussion of the ethical, legal, and societal implications of applying neuroscience to business. Applications to business, education, sports, law, and policy are discussed throughout.

MKTG 7380 Consumer Neuroscience
How can studying the brain improve our understanding of consumer behavior? While neuroscience made tremendous strides throughout the past few decades, rarely were meaningful applications developed outside of medicine. Recently, however, breakthroughs in measurement and computation have accelerated brain science, and created an array of opportunities in business and technology. Currently, applications to marketing research and product development are experiencing explosive growth that has been met with both excitement and skepticism. This mini course provides an overview of the neuroscience behind and the potential for these developments. Topics will range from well-known and widely used applications, from eye-tracking measures in the lab and the field, to emerging methods and measures such as mobile technologies, face-reading, and neural predictors of market response. This course is self-contained and has no prerequisites. However, students with some background in business, economics, psychology, and/or neuroscience are likely to find some of the material covered in this course complementary to their existing knowledge. Much of the foundational work in consumer neuroscience and neuroeconomics involves laboratory experiments. Accordingly, we will read and discuss several experimental papers and the craft of designing an experiment will occasionally be discussed. However, we will not dedicate significant time to the methodology of experimental design and analysis. As will become clear as the course progresses, “consumer neuroscience” can be used to study almost any aspect of consumer behavior.

0.5 Course Units

MKTG 7390 Visual Marketing
As consumers, we are constantly exposed to advertisements and experience visual messages from product packages in stores, retail displays, and products already owned. In essence, visual marketing collateral is omnipresent and is an essential part of corporate visual identity, strategy, branding, and communication. Some of this falls to creative graphic design, but advertising, design, and marketing can also be significantly enhanced by knowledge of how visual information and its presentation context can be optimized to deliver desirable and advantageous messages and experiences. This course will emphasize how to measure, interpret, and optimize visual marketing. This course will use lectures, discussions, exercises and a group project, to help students understand the underlying processes that influence our visual perception and visual cognition. Students will learn about the theoretical processes and models that influence, attention and visual fluency. Students will also be exposed to eye-tracking instruments that help measure eye movement. Finally, we will explore how visual stimuli can influence consumer memory, persuasion, and choice. We will examine practical applications in marketing, advertising, packaging, retail, and design contexts.

Spring
Mutually Exclusive: MKTG 2390
1 Course Unit
MKTG 7410 Entrepreneurial Marketing
This course focuses on the real life marketing challenges involved in launching an entrepreneurial venture. The primary goal of the course will be to provide a roadmap for students seeking to actively engage as entrepreneurs, investors or managers in the startup culture. Many of the entrepreneurial marketing principles studied in this course will be equally applicable to mid-size and larger companies seeking new approaches to drive top-line growth. The course will address how start-ups, early growth stage and more mature companies have used entrepreneurial marketing as an essential competitive weapon to grow their businesses by gaining customers, driving revenue, acquiring funding and recruiting A-level employees, advisors and directors. Students will form teams and select an idea/concept for an entrepreneurial venture, and by the conclusion of the course will have developed a fully fleshed out and testable marketing plan. Preferably, the selected venture will be one that one or more members of the team would consider implementing, should their plan prove feasible.

MKTG 7470 Marketing Strategy for Technology Platforms
This course focuses on the unique aspects of creating effective marketing and management strategies for technology-intensive on-line and off-line businesses. It addresses the effective competitive marketing strategies for winning in markets which are powered by technology: specifically, how firms create value for customers and how they can integrate technology in delivering a better consumer experience. While competitive marketing strategy is important for all managers, this course will be particularly useful to students who are planning to accept a position in leading technology companies, and marketing firms in which technology is likely to play an important role. In addition, the course will provide value to those who expect to work in consulting or investing in technology industries, and must analyze firm strategies.

MKTG 7520 Marketing Analytics
Companies are currently spending millions of dollars on data-gathering initiatives, but few are successfully capitalizing on all this data to generate revenue and increase profit. Converting data into increased business performance requires the ability to extract insights from data through analytics. This course covers the three pillars of analytics – descriptive, predictive and prescriptive – within the marketing context. Descriptive Analytics examines different types of data and how they can be visualized, ultimately helping you communicate your findings and strengthen your team’s or organization’s decision making. Predictive Analytics explores the use of data for forecasting. You will learn to utilize various tools, including regression analysis, to estimate relationships among variables and predict future behavior. Prescriptive Analytics takes you through the final step – formulating concrete recommendations. These recommendations can be directed toward a variety of marketing actions, including pricing and social-platform outreach. Students will be exposed to several methods such as linear regression, logistic regression, multinomial regression, machine learning methods (e.g., neural networks and random forests). We will learn how to employ these methods for such managerial decisions as demand forecasting, pricing, and valuing customers. Overall, you will develop a data analytics mindset, learn new tools, and understand how to convert numbers into actionable insights.

MKTG 7600 Innovation, Marketing Strategy, and Antitrust
This course considers business strategy and law, particularly the role of antitrust and intellectual property law in managing innovation. We will examine several highly innovative firms in technology rich areas, considering how they adapt their strategies to the competitive and legal environment, and asking whether antitrust law promotes or hinders innovation. The strategies of both current firms such as Uber, Google, Apple, and Microsoft and historical examples such as American Can Company, Standard Oil, Brown & Williamson Tobacco Co., and Kodak will provide context and source materials for the course. We will pay special attention to the role of intellectual property rights in fostering or hindering innovation. The legal focus is primarily on U.S. law, but the course will occasionally address foreign regimes as well. The course is useful to students interested in marketing or competitive business strategy, and, more broadly, to anyone desiring to understand the legal and public policy issues relating to competition and innovation.

Fall or Spring
Also Offered As: LGST 8050
1 Course Unit
MKTG 7680 Contagious: How Products, Ideas and Behaviors Catch On
Why do some products catch on and achieve huge popularity while others fail? Why do some behaviors spread like wildfire while others languish? How do certain ideas seem to stick in memory while others disappear the minute you hear them? More broadly, what factors lead to trends, social contagion, and social epidemics? Interactive media, word of mouth, and viral marketing are important issues for companies, brands, and organizations. This course looks at these and other topics as it examines how products, ideas, and behaviors catch on and become popular. Marketers want their product to be popular, organizations want their social change initiative to catch on and entrepreneurs want their ideas to stick. This course will touch on four main aspects: (1) Characteristics of products, ideas, and behaviors that lead them to be successful. (2) Aspects of individual psychology that influence what things are successful. (3) Interpersonal processes, or how interactions between individuals drive success. (4) Social networks, or how patterns of social ties influence success.

Not Offered Every Year
1 Course Unit

MKTG 7700 Digital Marketing, Social Media and E-Commerce
MKTG 7700 explores the digital marketing environment from both a consumer and business perspective. The course provides an overview of various online business models and delves into digital advertising and social media marketing techniques and technologies. A mixture of case studies, guest speakers and assignments, including one that uses real advertising data, translates theory into practice. It is recommended that students enrolling in the course be comfortable using Excel and are knowledgeable in applying regression analysis techniques. Students who would prefer a less technical course may wish to take MKTG 7270, Digital Marketing and Electronic Commerce, a half cu course offered by the department.

Fall or Spring
Mutually Exclusive: MKTG 2270, MKTG 2700, MKTG 7270
Prerequisite: MKTG 6110
1 Course Unit

MKTG 7710 Models for Marketing Strategy
The course develops students' skills in using analytics to make better marketing decisions. Compared to other courses in marketing analytics, the focus is less on "what is happening?" or "what will happen?" and more on 'what should we do?' i.e., the course moves beyond descriptive and predictive analytics into prescriptive analytics. It covers a variety of topics, models and tools: (1) Marketing mix modeling & optimization, (2) Choice modeling, choice-based conjoint analysis & market simulators, (3) Modeling churn & maximizing customer lifetime value, and (4) Quantifying causal effects in marketing. The course requires familiarity with Excel and linear regression from the very first day, but is otherwise self-contained. Lectures are organized around a mini-case or illustrate the model/technique at hand through one or more real-life applications.

Mutually Exclusive: MKTG 2710
Prerequisite: MKTG 6110 AND (MKTG 6120 OR MKTG 6130)
1 Course Unit

MKTG 7750 Managing Customer Value
As the concept of CRM becomes common parlance for every marketing executive, it is useful to take a step back to better understand the various different behaviors that underlie the development of successful CRM systems. These "behaviors" include customer-level decisions, firm actions, and the delicate but complex interplay between the two. Accordingly this course is comprised of four main modules. We start with the discussion of customer profitability - focusing on the concepts of "customer lifetime value" and "customer equity". We will examine how to measure long-run customer profitability in both business-to-customer and business-to-business environments, and the uses of these measures as major components assessing overall firm valuation. Second, we move to the value that the firm provides to its customers - better understanding the true nature of customer satisfaction and its non-trivial relationship with firm profitability. Third, we examine each of the three main components of the firm's management of its customer base: customer acquisition, development, and retention - and the complex resource allocation task that must be balanced across them. Finally, we conclude with a discussion of various tactical and organizational aspects of customer relationship management.

1 Course Unit

MKTG 7760 Applied Probability Models in Marketing
This course will expose students to the theoretical and empirical "building blocks" that will allow them to construct, estimate, and interpret powerful models of consumer behavior. Over the years, researchers and practitioners have used these models for a wide variety of applications, such as new product sales, forecasting, analyses of media usage, and targeted marketing programs. Other disciplines have seen equally broad utilization of these techniques. The course will be entirely lecture-based with a strong emphasis on real-time problem solving. Most sessions will feature sophisticated numerical investigations using Microsoft Excel. Much of the material is highly technical.

MKTG 7780 Strategic Brand Management
Which brands make you happy? Apple? Amazon? Starbucks? Everlane? Soulcycle? Sweetgreen? What draws you into these brands? How do companies create compelling brand experiences? How could you cultivate a well-loved brand? This course explores such questions with the goal of identifying the ingredients for building an inspired brand. The course is created for students interested in building a brand and/or immersing themselves in the enhancement of an existing brand, and it is comprised of lectures, cases, guest speakers, discussions, in and out of class exercises, and a final project. Broadly, the course will be divided into four parts: 1) Understanding Brand, 2) Crafting Brand, 3) Measuring Brand, and 4) Managing Brand. The course will provide students with an appreciation of the role of branding and (taking a consumer-centric approach) will augment students’ ability to think creatively and critically about the strategies and tactics involved in building, leveraging, defending, and sustaining inspired brands.

MKTG 7790 AI in Our Lives: The Behavioral Science of Autonomous Technology
This course takes a behavioral perspective on the topic of autonomous technology, such as Artificial Intelligence. It reviews new insights to help companies thrive in the dawning age of smart machines. The emerging behavioral science of autonomous technology helps us understand barriers to consumer adoption and how to design captivating AI experiences. Moreover, we discuss how to improve managerial decision-making with data and algorithms. This is a non-technical course. No coding or data science skills are required. The course uses a blend of pedagogical approaches, including interactive lectures, workshops, guest lectures, and case discussions, to bridge two perspectives. On one side, we acknowledge the tremendous value that autonomous technology can provide to firms and individual consumers. In many ways, automation defines progress. On the other side, we examine emerging risks for consumers in an AI-driven economy. The main theoretical lens will be offered by psychology, but we will also examine ideas from economics, management, history, statistics, computer science, art, sociology, and philosophy. The application contexts will focus on marketing. While also relevant to other disciplines (e.g., operations, innovation), the course is therefore especially suitable for students interested in a career in marketing (e.g., product management, customer experience management).

0.5 Course Units

MKTG 8090 Experiments for Business Decision Making (Center Special Topic)
In the past decade, massive shifts in how companies interact with their customers have suddenly made field experiments an economically feasible way to learn about a variety of business questions such as what types of promotions are most effective, what products should be stocked at a store, how e-mail promotions should be designed, how sales staff should be compensated, etc. Many marketers engaged in online retailing, direct-marketing, online advertising, media management, etc. are rapidly embracing a "test and learn" philosophy and a number of platforms such as Google Website Optimizer, have been developed to facilitate rigorous field experiments in the online environment. Just as with the quality revolution in manufacturing during the 1980s and 1990s, the rapid rise of the "test and learn" philosophy in marketing has created a huge demand for those who can design, field, and analyze marketing experiments. Through this course, you will learn and practice a wide range of critical skills, from the statistical methods used to design and analyze experiments to the management and strategy required to execute an experiment and act on the results. Although the cases and examples will focus on marketing problems, the material covered can be applied in a number of other domains particularly operations management and product design.

MKTG 8550 Special Topics - AI in Our Lives: The Behavioral Science of Autonomous Technology
"AI in Our Lives: The Behavioral Science of Autonomous Technology" (or "AI in Our Lives" for short) takes a behavioral perspective on the topic of autonomous technology, such as Artificial Intelligence. It reviews new behavioral insights to help companies thrive in the dawning age of smart machines. We focus on both the behavior of consumers and how managers should make decisions about consumers. Related to the former, the emerging behavioral science of autonomous technology helps us understand barriers to consumer adoption and how to design captivating AI experiences. Related to the latter, we discuss how to improve decision-making with data and algorithms. This is a non-technical course. No coding or data science skills are required. The course uses interdisciplinary materials and a blend of pedagogical approaches, including interactive lectures, workshops, guest lectures, and class discussions. In addition to its many substantive insights, the course offers moments of reflection to help you understand how technology is changing our lives, and how each of us can help effect positive change in the world. The course bridges two perspectives. On one side, we acknowledge the tremendous value that autonomous technology can provide to firms and individual consumers. In many ways, automation defines progress. On the other side, we examine emerging risks for consumers in an AI-driven economy. The main theoretical lens will be offered by psychology, but we will also examine ideas from economics, management, history, statistics, computer science, art, sociology, and philosophy. The application contexts will be focused on marketing. While also relevant to other disciplines (e.g., operations, IT, innovation, or general management), this course is therefore especially suitable for students interested in a career in marketing (e.g., product management, brand management, service design, and customer experience management). The ultimate goal of the course is to help ensure that the amazing technologies currently being developed bring about positive change. The course will strive to achieve that by tackling the following UN Sustainable Development Goals: SDG9 (Innovation), SDG8 (Economic growth), SDG3 (Health and wellbeing), SDG10 (Reduced inequality), and SDG12 (Responsible consumption and production). The course complements the research activities of the new Wharton Human-Centered Technology Initiative.

MKTG 8900 Advanced Study Project (ASP)
ADVANCED STUDY PROJECT (GENERAL): The principal objectives of this course are to provide opportunities for undertaking an in-depth study of a marketing problem and to develop the students' skills in evaluating research and designing marketing strategies for a variety of management situations. Selected projects can touch on any aspect of marketing as long as this entails the elements of problem structuring, data collection, data analysis, and report preparation. The course entails a considerable amount of independent work. (Strict library-type research is not appropriate) Class sessions are used to monitor progress on the project and provide suggestions for the research design and data analysis. The last portion of the course often includes an oral presentation by each group to the rest of the class and project sponsors. Along with marketing, the projects integrate other elements of management such as finance, production, research and development, and human resources.

MKTG 8930 Advanced Study: MKTG in Emerging Economies: Understanding & MKTG to the Chinese and Indian Consumer

This course is a two part series. The first part concentrates on the Indian Consumer and the second part concentrates on the Chinese Consumer. India and China add up to half of the world’s population. Each presents its own challenges and opportunities. US and European MNCs have been in both countries for many years, but emerging market MNC’s are becoming stronger and in many cases overtaking US and European companies despite their strong brands and know-how. Marketing to the Indian Consumer will provide a careful understanding of: The opportunity and challenges in the Indian consumer market 2) Various segments within the Indian consumer market. 3) Consumer psychology and decision making processes in each segment 4) Distribution channels in Indi Media in India: Mass, Local and non-traditional. 6) Bottom of the pyramid consumers and rural markets. 7) Product design and development decisions. The course will focus on the following industries: consumer packaged goods, mobile phones, financial services (insurance and banking), healthcare, sports and entertainment, and transportation. The course will involve case studies from local and international companies, guest lecturers, and visits to consumer homes to observe their tastes, habits, and preferences.

MKTG 8950 Global Business Week

GLOBAL BUSINESS WEEK: MKTG 895 is one in an array of Global Business Week (GBW) study tour courses offered by various departments across Wharton. Each of the GBW courses offered in a term, will entail travel to a different part of the world and address a different element of economic driver for a country or industry. A faculty member will drive the topic and curriculum associated with a study tour to a region of the world where the study of a topic will provide insights and clarity available only by being in country. In country lectures from the lead faculty and area experts in industry, academia and government will form much of the basis of class time. In addition, students will experience relevant company and cultural settings where they will again hear from industry experts. Each course will require an individual student paper, a participation component, and a pre-travel or in-country set of assignments. See course syllabus for details. CUSTOMER CENTRICITY AT THE LEADING EDGE OF ANALYTICS AND TECHNOLOGY: LEARNING FROM SCANDINAVIA. Instructor: Peter Fader. The concept of "customer centricity," i.e., that not all customers are created equal, is gaining credibility and traction. More and more firms are coming to the realization that understanding and leveraging the behavioral differences across customers can potentially be more sustainably profitable than more conventional product-centric thinking that continues to dominate today’s business landscape. At the heart of this transformation are three critical ingredients data, analytics, and technology. Using customer data at a granular level allows firms greater visibility into customer interactions, their use of social media, biometrics, and geolocation as tools to enhance business models and even create new ones. It allows a firm to be deliberate about which customers to go after and what kinds of services to provide them. For many, the key to profitable growth lies in successfully harnessing and developing the tools, organizational structures, and corporate cultures that create and enhance these capabilities.

MKTG 8970 Advanced Study: Luxury Branding and Retailing - Bringing it into the 21st Century

The luxury industry has been heavily impacted by the Covid-19 pandemic, with some estimates suggesting a contraction of over 20%. Some of the changes in consumer behavior directly affected luxury in the short-term, but these changes in behavior may eventually revert to past history when the pandemic is over. Examples of these include the drop in tourism travel, work from home trends, reduced traffic to physical retail and malls, and the reduction of festive social activities (e.g., weddings). Other trends affected many industries and are likely to fundamentally change consumer behavior long-term: (1) net zero retail now, (2) digital by design, (3) thoughtful experience, (4) re-localization and (5) lead with purpose. This course explores the special challenges that are faced by luxury brands as they try to navigate rapidly evolving shopping behaviors in both the online and offline environments. In this course we will articulate the key principles for successful luxury branding & experiences and focus on the challenges and opportunities that luxury brands face. Although we will have some traditional lecture/discussion classes, the course is primarily experiential. We will explore luxury broadly across many product categories. We will learn from what we see on location, but we will also critically assess how companies are coping with the challenges of the post-covid retailing environment.

MKTG 9420 Research Methods in Marketing - Part A
This course provides an introduction to the fundamental methodological issues that arise in experimental and quasi-experimental research. Illustrative examples are drawn from the behavioral sciences with a focus on the behavior of consumers and managers. Topics that are covered include: the development of research ideas; data collection and reliable measurement procedures; threats to validity; control procedures and experimental designs; and data analysis. Emphasis is placed on attaining a working knowledge of the use of regression methods for non-experimental and quasi-experimental data and analysis of variance methods for experimental data. The primary deliverable for this course is a meta-analysis of a research problem of the students choosing that investigates the effects of research methods on empirical results.

MKTG 9500 Judgment and Decision Making Perspectives on Consumer Behavior - Part A
The purpose of this course is to provide a solid foundation for critical thinking and research on the judgment, decision-making and choice aspects of consumer behavior. There is a focus on how people process information when making judgments and choices and how the processes of judgment and choice might be improved. Topics of discussion include rationality, judgment under uncertainty, judgment heuristics and biases, risk taking, dealing with conflicting values, framing effects, prospect theory, inter-temporal choice, preference formation, and the psychology of utility. The focus will be on the individual decision-maker, although the topics will also have some applicability to group and organizational decision-making and behavioral research methodologies.

MKTG 9520 Contemporary Topics in Consumer Research - Part A
The purpose of this seminar is to provide graduate students with an overview of contemporary topics in consumer research. Depending on faculty, areas addressed may include basic research on consumer knowledge (learning and memory), goals, persuasion, and emotions, with applications to branding, consumer finance, human-technology interaction, and social influence. The course draws from the literature in marketing, psychology and economics. The course will enable students to conceptualize, operationalize, and develop research ideas. Therefore, the focus is on understanding theoretical and methodological approaches to various aspects of consumer behavior, as well as advancing this knowledge by developing testable hypotheses and theoretical perspectives that build on the current knowledge base.

MKTG 9530 Contemporary Topics in Consumer Research - Part B
The purpose of this seminar is to provide graduate students with an overview of contemporary topics in consumer research. Depending on faculty, areas addressed may include basic research on consumer knowledge (learning and memory), goals, persuasion, and emotions, with applications to branding, consumer finance, human-technology interaction, and social influence. The course draws from the literature in marketing, psychology and economics. The course will enable students to conceptualize, operationalize, and develop research ideas. Therefore, the focus is on understanding theoretical and methodological approaches to various aspects of consumer behavior, as well as advancing this knowledge by developing testable hypotheses and theoretical perspectives that build on the current knowledge base.

Spring, even numbered years only
0.5 Course Units

MKTG 9540 Economic/OR Models of Marketing - Part A
This doctoral seminar reviews analytical models relevant to improving various aspects of marketing decisions such as new product launch, product line design, pricing strategy, advertising decisions, sales force organization and compensation, distribution channel design and promotion decisions. The primary focus will be on analytical models. The seminar will introduce the students to various types of analytical models used in research in marketing, including game theory models for competitive analysis, agency theory models for improving organization design and incentives within organizations, and optimization methods to improve decision making and resource allocation. The course will enable students to become familiar with applications of these techniques in the marketing literature and prepare the students to apply these and other analytical approaches to research problems that are of interest to the students.

0.5 Course Units

MKTG 9560 Empirical Models in Marketing - Part A
This course is designed to generate knowledge of the use of quantitative statistical, econometric, and Machine Learning methods and their application to Marketing problems. A strong emphasis is also placed on the applied nature of applying these methods in terms of data requirements, exogenous versus endogenous variation, and computational challenges when using complex models. Students outside of Marketing are welcome, and we discuss how these models can be applied to other disciplines. By the end of the course, students should be familiar with the key issues and approaches in empirical marketing modeling.
Spring
0.5 Course Units

MKTG 9570 Empirical Models in Marketing - Part B
This course is designed to generate awareness and appreciation of the way several substantive topics in marketing have been studied empirically using quantitative models. This seminar reviews empirical models of marketing phenomena including consumer choice, adoption of new products, sales response to marketing mix elements, and competitive interaction. Applies methods and concepts developed in econometrics and statistics but focuses on substantive issues of model structure and interpretation, rather than on estimation techniques. Ultimately, the goals are a) to prepare students to read and understand the literature and b) to stimulate new research interests. By the end of the course, students should be familiar with the key issues and approaches in empirical marketing modeling.

Master of Applied Positive Psychology (MAPP)

MAPP 6000 Introduction to Positive Psychology
An introduction to the research, theory and intellectual history of positive psychology. This course is only open to students in Master of Applied Positive Psychology Program.
Fall
1 Course Unit

MAPP 6010 Research Methods and Evaluation
A methodology course exploring the valid and reliable assessment of positive states, such as positive emotions, and positive traits, such as character strengths. This course is only open to students in the Master of Applied Positive Psychology Program.
Fall
1 Course Unit
MAPP 6020 Foundations of Positive Interventions
An investigation into the theoretical, empirical and experiential nature of positive interventions. This course is only open to students in the Master of Applied Positive Psychology Program.
Fall
1 Course Unit

MAPP 6030 Perspectives on Well-Being
An exploration of facets of the human experience that contribute to well-being among individuals, groups, and communities. This course is only open to students in the Master of Applied Positive Psychology program.
1 Course Unit

MAPP 7020 Advanced Positive Interventions
In this course students will extend the horizon of knowledge about positive interventions. Beginning with the rich theoretical base of psychological research on positive affect, engagement, and meaning, and building on current research on how to raise these various components of the full life, students will focus on the creation and testing of new and more effective interventions. Students will explore single interventions that integrate cognitive, affective, and somatic components, and they will experiment with ways of clustering individual interventions together for greater cumulative effect. Also emphasized will be the importance of appropriate fit between the intervention, the individual, and the cultural context so that single or clustered interventions can be applied with maximal effectiveness.
Spring
1 Course Unit

MAPP 7080 Positive Psychology and Individuals
An exploration of positive psychology applications in coaching, clinical and other relational settings. This course is only open to students in the Master of Applied Positive Psychology program.
Spring
1 Course Unit

MAPP 7090 Pos Psych & Organztns
Positive Psychology and Organizations.
Spring
1 Course Unit

MAPP 7100 Humanities and Human Flourishing
An exploration and integration of culture and science to support the deeper understanding and more effective cultivation of human flourishing. This course is only open to students in the Master of Applied Positive Psychology program.
1 Course Unit

MAPP 7120 The Psychology & Neuroscience of Character
An investigation of positive approaches to building cognitive, emotional and character strengths across the lifespan. This course is only open to students in the Master of Applied Positive Psychology program.
Spring
1 Course Unit

MAPP 7140 Applying Positive Interventions in Institutions
An exploration of positive organizational scholarship interventions, including an application lab that enables students to design research-informed interventions as service learning projects for non-profit organizations. This course is only open to students in the Master of Applied Positive Psychology program.
1 Course Unit

MAPP 8000 Capstone
The capstone project is a distinguishing feature of the Master of Applied Positive Psychology program, blending academic and professional experiences and serving as the culmination of your work in the program. Through the capstone project, you will explore, in depth, the theories and practical applications you’ve learned in the program, to advance the field of positive psychology itself. The capstone is completed during the summer semester and has no on-site course requirements. You will conduct this project work independently, with your advisor's ongoing guidance, in a setting that is significant to you and most relevant to your future professional goals.

1 Course Unit

MLA 5410 Academic Writing and Research Design in the Arts and Sciences
Have you ever noticed that scholars in different academic disciplines seem to speak different languages? Have you wondered how scholars put together a plan for their research, explain their findings, and organize and write their papers? The class is designed to introduce MLA students and other advanced students to the research and writing conventions used by scholars in the arts and sciences. With attention to disciplines in the humanities, social sciences, and sciences, we will identify and explore some of the theories, sources, language and qualitative and quantitative methodologies that scholars use as they conduct original research in their fields. Throughout the class, we will also discuss writing conventions across the arts and sciences, with special attention to the structure of argument; the use of evidence; voice and style in both traditional academic writing and more innovative forms of writing; and documentation conventions. Students will develop an original research project through incremental writing assignments, and will write a formal research proposal (15-20 pages), which can be used as their Capstone proposal if they wish.

Master of Science in Social Policy (MSSP)

MSSP 6010 The Power of Partnerships between Government, Non-profits, & the Private Sector
Everything from the Affordable Care Act to the Mayor’s Rebuild Initiative here in Philadelphia could not be implemented by government without strong and vital partnerships with non-profits and the private sector. These collaborations provide an opportunity to help people, impact and change policy, improve outcomes, and multiply the impact that non-profit and private sector organizations can have. The course will help graduate (and advanced undergraduate) students not only understand the theory, policy, and practice of these collaborations but also learn how they actually happen. Students will also learn the characteristics of these three sectors, their roles and contributions, and competitive forces that are often at work in the collaborative process. Topics for discussion will include attitudes and expectations in the public sector, the ingredients of effective partnerships, and effective communication strategies with elected and appointed officials. The course will be conducted on a seminar basis. Graduate students are expected to take an active part in shaping the discussion. Students will be expected to rotate leadership for the class discussions and to supplement course materials with independent study of relevant magazine and newspaper articles. Course grades are assigned as follows: 20 percent for class participation, 15 percent for an in-class written exam, 30 percent for a group presentation and write up of a case study, and 35 percent for a final project. High quality written work and accurate citations is an expectation in all assignments.
1 Course Unit

MSSP 6060 Data for Equitable Justice Lab
Data for Equitable Justice Lab is a non-credit research group that gives SP2 Masters students an opportunity to analyze some of today’s most important social issues through data and, with faculty support, create a product for audiences well beyond our classrooms and campus. With guidance from the lab faculty, students develop a project - either individually or as part of a team - to examine a contemporary social policy or political issue through or on data or digital technology. Through these projects students will produce an op-ed, blog post, podcast, academic article, short film, or other product of their choosing that creates or contributes to contemporary discourse.
Fall, Spring, and Summer Terms
0 Course Units

MSSP 6070 Practical Programming for Data Science
This course familiarizes students with no prior programming experience with the core concepts of programming and the practice of software development for data-intensive applications in industry and government. After this course, students will be comfortable (1) writing code to save and load from files and spreadsheets into basic data structures like strings, lists, and maps; (2) manipulating data with code to perform tasks like generating aggregate statistics and filtering data into subsets; (3) effectively communicating findings from interactive, exploratory programming with others; and (4) working with technical teams, using best practices of software development when building line-of-business applications.
Fall
1 Course Unit

MSSP 6080 Practical Machine Learning Methods
This course prepares students with no background in machine learning or data science to use tools from those fields effectively in applied contexts. Using GUI-based software - or optionally, by programming with libraries - students will build skills including (1) feature representations of spreadsheet-based or text datasets; (2) training classification and regression models for prediction tasks; (3) evaluation of machine learning model accuracy and error analysis; and (4) reasoning about predictive models and making tradeoffs like bias vs. variance, granularity and annotation complexity in labeled training data, and the ethical application of predictive modeling to human-centered data.
Spring
1 Course Unit

MSSP 6090 Invisible Injustices: How Policy & Bureaucracy Create (& Hide) Diff. & Power
How does the design of everyday objects and systems in our social world - from the workplace to the civic sector - produce variation in our political participation to promote or stifle the collective project of social justice? Systemic injustice expresses itself in everything from software interface designs to paper passport applications. Using these objects and others, this course focuses on the ways in which power operates through and within aesthetics to create and enforce difference and produce the inequalities that demand a collective reimagining of our world. What might we learn from these “aesthetic assemblages” of power and difference, and their manifestations in current social policy? In this course, we will work with case studies from a range of politically urgent topics - mass incarceration, immigration reform, healthcare inequity - through the lens of critical theories and pedagogies that center the lives of those communities most impacted by discriminatory social policy. Students will learn to apply the thinking of scholars such as Fred Moten & Stefano Harney, Dean Spade, and Mel Chen towards their own social justice-informed approaches to social policy and practice. Through independent study projects, students will explore their own unique areas of interest beyond the scope of this course to rethink how critical theory can shape and be shaped by on-the-ground, everyday practices.
Fall, Spring, and Summer Terms
1 Course Unit

MSSP 6280 Policy: Analysis of Issues, Strategy and Process
Policy analysis requires an understanding of social problems/social issues and the processes by which policy is developed and implemented. Critical skills in many policy frameworks include: problem definition and analysis, review of relevant research, identification of possible actions, implementation and evaluation, and fiscal analysis. Competency in written and oral communication is also essential. To develop these and related skills, this course utilizes as a base a dynamic social problem analysis framework that addresses issues of equity, equality and adequacy. It also examines multiple theoretical and analytical perspectives. Through the review of contemporary and historical social policy debates and provisions, selected case examples and policy briefs, this course provides students with an understanding of the policy roles of the legislative and executive branches of government, including goal setting, policy rulemaking and enactment, allocation of resources, financing, regulation, and implementation. The policy process at state and local levels of government will also be addressed. The primary focus is on U.S. policy although global policies will be discussed when relevant.
Fall
1 Course Unit
MSSP 6290 Research and Evaluation Design
Research and Evaluation Design introduces social research methods in the context of social policy and program evaluation. The course provides a conceptual and practical understanding in the design of experimental, quasi-experimental, and non-experimental research and in the application of quantitative and qualitative methods. Students learn about the application of the research process and skills in all phases of assessing a social policy and developing a social program, including needs assessment, implementation analysis, and evaluation of policy or program effectiveness. Students learn to be critical and informed consumers of research and to apply guidelines of research ethics in social policy settings.
Fall or Spring
1 Course Unit

MSSP 6300 Quantitative Reasoning/Social Statistics
The primary goals of this course are (1) to provide students with a solid understanding of the logic of social science research as well as (2) to provide students with an introduction to a broad range of statistical methods commonly used in social science research. The first portion of the semester concentrates on defining research problems, research design (including sampling, measurement, and causal inference), and assessing research quality. The latter portion of the semester focuses upon data analysis including descriptive statistics, measures of association for categorical and continuous variables, introduction to t-tests, ANOVA and regression, and the language of data analysis. Students will learn how to choose and apply statistical tools to data sources, how to interpret quantitative studies, and will gain experience using SPSS - a statistical software package.
Fall
Also Offered As: SOCW 6300
1 Course Unit

MSSP 6310 Law and Social Policy
This course introduces students to the basics of the American legal system, focusing on the interplay between litigation and social policy. Students will learn how law, and particularly case law, is made, how to read case law and evaluate precedent, legal reasoning and argument. This course will utilize various teaching methods including introduction to the "Socratic" lecturing method which is frequently utilized in the study of law. Students will also study the structure of court systems at both state and federal levels as well as the litigation process and the role of law and courts in shaping and addressing social policy issues. Students will also learn the basics of several areas of substantive law, with an eye toward consideration of how that law has been, and can be, used to effect social change.
Spring
1 Course Unit

MSSP 6320 Capstone Seminar I: Policy Communications
The focus of the Capstone Seminar is three-fold: 1) to enhance student integration of the theory and practice of social policy analysis; 2) to enhance the student’s competencies in the written and oral communication processes and procedures necessary for the policy world; and 3) to ensure basic knowledge about federal budget processes, stakeholder roles, and inter-organizational collaboration. Registration restricted to majors only.
Spring
0.5 Course Units

MSSP 6330 Capstone Seminar II: Policy Internship
Capstone II consists of an intensive, multi-week policy internship that is selected through a consultative process involving the student, MSSP advisors, internship coordinator/advisor, and mentors/supervisors at potential sites. The internship provides an opportunity for the student to expand horizons beyond the academic. It serves as a medium to integrate classroom learning with experiences in policy making activity. Registration restricted to majors only.
Summer Term
0.5 Course Units

MSSP 6340 MSSP/DA Capstone I: Telling Stories with Data
The volume and complexity of data continues to increase in the world around us, including science, business, medicine, social media and everyday human activity. This course aims to expose students to visual representation methods and techniques that increase the understanding of complex data. Good visualizations not only present a visual interpretation of data, but do so by improving comprehension, communication, and decision making. In this course, students will learn about the fundamentals of perception, the theory of visualization, and good design practices for visualization. The course will also provide hands-on experience on the process of data communication, from initial data analysis, to identifying appropriate visualization techniques, to crafting informative visualizations.
Fall
0.5 Course Units

MSSP 6350 MSSP+ DA Capstone II: Policy Internship in Data Analytics

The internship provides an opportunity for the student to expand horizons beyond the academic. It serves as a medium to integrate classroom learning with experiences in policy making activity. Registration restricted to majors only.
0.5 Course Units
**MSSP 6670 Critical Global Politics, Policy & Identity**

What is identity? Why do we identify with categories such as "Black", "Latino", "Queer", "American" or "Asian"? How do these categories play a role in current Global Politics, and how have Global Politics & Policies helped configure different identities throughout history? According to Fredric Jameson, in the 60's there was a Global Shift by which the "natives of the world" became human beings. Concepts such as "diversity" and "identity" as we know them today originated in these global reconfigurations of subjectivity that occurred in the context of the decolonization of Africa, the Civil Rights movements in the United States, and the Cuban Revolution, among other historical events. As western nations were coming to terms with Otherness within their own borders, confronting the needs of women and minorities, underdeveloped nations were fighting for independence and liberation claiming their rights in the new geopolitical arena. At the same time, the Orient had become the West's most powerful cultural contestant and, as Edward Said put it, its "deepest and most recurring" Other. This course is designed to provide students with the critical and analytical tools to understand different global policies and political events, while examining their implications in the formation of identity through the lens of critical theory. Each class will be structured around a case study that students will reflect upon using the assigned readings and supporting materials. Students will learn about the discursive formations that have made possible to name ourselves in opposition or in relation to others, claiming gender, race, national, class identities that are indebted to power-knowledge dynamics rooted in colonialism. We will examine how class is reformulated into different types of Capitals that inform positionality in the social space (Bourdieu). We will analyze how race as a tool for classifying bodies became a global category present, for example, in the War on Terror after 9/11, as well as in the Global division of nations based on different degrees of development. We will question how nationalism is formed and enacted in a changing world where migration is so prevalent. Along with racial, national, and global processes for subjectivization, we will examine gender, non-binary and queer identities, and how they all intervene LGBTQ rights, abortion and same-sex marriage policies. Fall, Spring, and Summer Terms

1 Course Unit

**MSSP 6680 Economics for Social Policy**

Economics allows us to determine the costs and benefits of social policies like cash benefits, unemployment insurance, health insurance, pensions, education, etc. Policies typically affect the behavior of agents like individuals, families and firms, and we have to take these reactions into account when analyzing policy. Economics allows us to predict how policy is likely to affect behavior by understanding how the policy changes individuals’ decisions, and what collective outcomes these myriad individual decisions bring about. For example, a universal basic income allows individuals to sustain themselves and their families when they are not working. At the same time, such guaranteed income has the potential to discourage people from looking for a job. If enough people are discouraged from looking for a job, employment in the economy will decrease, leading to lower production and lower tax revenues for the government. Policy makers have to take these phenomena into account in order to design a good income support system.

Fall, Spring, and Summer Terms

Also Offered As: SOCW 6680, SWRK 6680

1 Course Unit

**MSSP 7010 Race, Technology, & the Body**

The history of the relationship between race and technology has long been fraught. On the one hand, the sociopolitical formation of race constituted black and brown bodies in juxtaposition to the logics of reason that the instruments of post-Enlightenment technicity were built. On the other hand, as Wendy Chun argues, the discursive formation of race was a technology in and of itself that was designed to hierarchize and differentiate bodies as well as to make black and brown bodies extracted technologies for labor and Capital. This seminar will explore this deeply enmeshed history between race and technology by engaging text in the history of science and philosophy, critical theories of technology, cybernetics, and critical theories of difference. These text will range in topics from the transparent subject to surveillance studies to algorithmic bias to the speculative fiction of Afrofuturism. The text will include both scholarly written products as well as media and popular culture. Students will learn about the history of philosophy and technology in relation to race and the (em)body as well as how to examine for speculative futures.

Fall, Spring, and Summer Terms

1 Course Unit

**MSSP 7030 Visual Techniques for the Contestation of an Unjust World**

In this course we will work through a select history art, social movements, and collective organizing. This material will be used for gaining new clarity on present conditions of social injustice and to tease out novel solutions. In combination with these case studies, students will also read literature related to the field of political and decolonial aesthetics by authors such as Jacques Ranciere, David Graeber, and Silvia Rivera Cusicanqui. We will discuss how social issues such as poverty, incarceration, and racism are reframed from the perspective of those positioned within impacted communities, and/or outside of government and policy. A central question of this course is to ask how aesthetics plays a role in the formation of political conflicts and subjectivities, and whether or not this role can be turned back on itself to offer new possibilities in thinking resistance and abolition. The ultimate goal of this course is twofold. One is to train students in a new analytic framework through which to approach issues of conflict, injustice, and asymmetries of power. By drawing from diverse and potentially unfamiliar examples students are encouraged to free themselves up to think more broadly with the new tools they will gain during this course. The second goal is to encourage students to critically assess existing ethics, or evaluative patterns, by which problems and solutions are thought in policy today. Experience with and knowledge of art history is not a requirement for this course, and in fact, students from a range of disciplinary backgrounds and interests are encouraged to participate.

Fall, Spring, and Summer Terms

1 Course Unit
MSSP 7040 Critical Studies in Health Inequity and Policymaking
The relentless focus on the being of health inequity often overshadows the becoming of health inequity. Each drip of social injustice pools into a confrontation that disproportionately affects the health and healthcare of the socially disadvantaged groups. This course navigates health policymaking through a sociohistoric lens and grapples with contemporary perspectives in health equity. We explore the theoretical frameworks that best inform the existence of health inequity along with the practices that eliminate health inequity. Students will have the opportunity to learn how to effectively communicate evidence-based strategies in both policy and academic grant formats. While generally structured as a seminar, this course extends the walls of the classroom and encourages students to confront real-life health policy issues while engaging local, state, and federal health policy influencers. Students will spend time in the robust archives and cutting-edge medical facilities at Penn to best hone their policy-making voice.
Fall, Spring, and Summer Terms
1 Course Unit

MSSP 7060 Behavioral Economics and Social Policy Design
This course will introduce students to the field of behavioral economics and its application to designing social policies concerning health, education, childcare, voting, poverty, financial stability, legal and regulatory frameworks, among others. Behavioral economics extends the classical textbook theory of how the "rational" economic individual - often referred to as homo economicus - makes choices to include insights from psychology, biology, anthropology, sociology and other fields in order to increase the explanatory power of economic theories. While classical economics is still a useful tool for any social scientist to possess, behavioral economics, in the words of one of the fields founding fathers, Richard Thaler (2015), "is more interesting and more fun than regular economics. It is the un-dismal science."
1 Course Unit

MSSP 7080 Data, Decision, Death: Security, Raciality, and Policy during the COVID-19 Global Pandemic (thus far)
"Bio-power (covers) the set of mechanism through which the basic biological features of the human species became the object of a political strategy (...), how, starting from the eighteenth century, modern Western societies took on board the fundamental biological fact that human beings are a species." *Michel Foucault, Security, Territory, Population
When the spread of the disease caused by the new coronavirus (SARS-CoV-2) took the form of a global pandemic, in the second and third week, March 2020, very quickly we were hailed by abstract representations and strategies, that is, policy decisions - which included the setting up of the COVID-19 Global Pandemic (thus far) data dashboards and web-based maps. These topics will be discussed in the course.
Fall, Spring, and Summer Terms
1 Course Unit

MSSP 7100 Democratizing Data? Critical Data Studies in Algorithmic Governance
With the advent of digital technologies and the increasing power of computational analytics, the proliferation and ubiquity of data production has increased at exponential rates enabling new possibilities for social analysis. This course will examine the emergence of democratizing data - the movement to make government and other data more widely or publicly available and its potential enabling for democratic possibilities. The types of data being made available, through various analytic systems, and the ways in which their accessibility and inaccessibility is contributing to reconfigured power relations, will be described. The paradigmatic tensions and shifts that have emerged in the debates on "Big Data," such as deductive versus inductive reasoning and the challenges posed to statistical sampling theory, will be interrogated. The appropriation of machine learning and predictive analytic algorithms for social analysis will be critically explored. Issues related to the ethical and legal use of administrative data, particularly data related to patient, client, student, and taxpayer information will be considered, as well as from internet-based sources including social media. Potential solutions to data security challenges will be additionally considered. Methods for web-scraping of data, analysis of web traffic data, and the use of social networking data in the modeling of social phenomena and public opinion will be examined. Students will learn how to make results accessible to non-technical audiences via data visualization tools, such as web-based data dashboards and web-based maps. These topics will be discussed in the course.
Fall
1 Course Unit

MSSP 7300 Community Mapping
Geographic space is important to family and community well-being, as we know. Community Mapping introduces students to geographic information systems (GIS), computer software for making maps and analyzing spatial data. Students will learn how maps have been used in social welfare history as well as how GIS can be used for needs assessments, asset mapping, program evaluation, and program planning. The course builds on research skills developed in SWRK 615. For the final project, students have an opportunity to apply their GIS skills to creating maps related to their field placement. The use of such maps may lead to both program and policy change in neighborhoods and communities.
Fall
1 Course Unit
MSSP 7410 Gender & Social Policy
Gender and Social Policy develops an advanced understanding of social policies through the lens of gender - a socially constructed classification system based on ideals of femininity and masculinity, which are most commonly understood to be binary, mutually exclusive categories corresponding to sex (female and male). (Gender is) a concept that pervades all aspects of culture: structuring institutions, social identities, cultural practices, political positions, historical communities, and the shared human experience of embodiment*. The class provides students with the opportunity to explore how social policies respond (and contribute) to the needs and risks of different groups of people based on gender classifications. Rather than a survey of "gender" policy, students will be introduced to key feminist and trans concepts and frameworks that can be applied to any social issue and policy intervention. Policy examples may include reproduction, state violence, exclusionary/inclusive space, and national emergencies. The topics and specific readings may change based on the class's interests and current events. Class assignments are designed to provide an opportunity to practice applying gender theory, as well as for each student to examine a policy issue of import to them through a gendered lens. *paraphrasing Garland-Thomson, 2002, "Integrating Disability, Transforming Feminist Theory", NWSA Journal, 14(3): pg 4.
Fall, Spring, and Summer Terms

Also Offered As: SWRK 7680
1 Course Unit

MSSP 7800 Policy and Difference in Postmodernity
Social constructions of "difference" permeate the institutions, spaces, and assumptions of our society. These social constructions include but are not limited to the racialized, gendered, sexed, classed, and dis/abled constructions of the body. By leaning on postmodern thinkers such as Iris Marion Young, Pierre Bourdieu, Judith Butler, Jacques Derrida, Ernesto Laclau, and Michel Foucault, this seminar course will begin by engaging the questions of what is "difference" and how is "difference" discursively constructed and reproduced in society. Using a postmodern lens, the remainder of the course will engage various social science texts that deal with the varieties of "difference" (i.e. race, gender, class, sexuality) and the explicit and/or implicit policy implications of these works. Thus, we will critically engage policies such as welfare, affirmative action, economic policies of taxation, and same-gender marriage, among others. The underlying questions throughout the course will be to what extent does social policy enable the possibilities of freedom, justice, and democracy for the "Other", the deviant, the abject, the marginalized, those of assumed "difference"? And, to what extent does policy constrain those possibilities at the same time? This course does assume familiarity with social theory and is an introduction to postmodern thought on the law, the political, and policy.

1 Course Unit

MSSP 7960 Family Economic Mobility: Problems and Policies
The experiences and voices of mothers, fathers, children, employers, children's teachers, human service workers, job training providers, policymakers and others in cities across America graphically show us the "real life" challenges to economic mobility facing today's families and organizations. These voices particularly illustrate how economic, social, and cultural policies, practices, and beliefs intersect to perpetuate economic inequality for low-income and many middle-income working families alike. The labor market, welfare and workforce programs, public schools and government are some of the institutions implicated in this intersection. In the course we deconstruct concepts such as the "work ethic," "family-friendly workplace," and "good jobs" in terms of economic, racial and cultural inequalities and, more broadly, in terms of their meaning, aims and rhetoric. At base, this course examines occupational mobility in America within the broad framework of capitalism, democracy, race, ethnicity and gender. Students from GSE, SAS, City Planning, and Communications often join SP2 students to read and critique classic and contemporary literature from multiple disciplines and explore generative roles for "meso-oriented" social change professionals.

1 Course Unit
MSSP 7970 Social Policy in Revolutionary Cuba (1959-2017)
Cuba represents one of the world’s long-standing institutionalized revolutions whose narrative and policies have changed from a strong nationalism yearning for independence, to an alignment with communism’s ideology and modus operandi, to a nostalgic, post-Soviet Union "socialism" ruled by a binary, state-controlled capitalism. In addition to the myriad of social and political changes affecting the island, the transition of leadership from Fidel Castro to his brother, Raul, and the death of the former in 2016, has put into question the theoretical pillars of the Revolution, thus undermining its initial legitimacy. This course is designed to provide students with the critical and analytical tools to dissect Cuban revolutionary politics, policies, and identity mutations within the island’s historical trajectory. We will begin by critically reviewing key points of diplomatic and historical relationships between the U.S and Cuba, followed by an analysis of the notion of independence - upon which Castro relied to gather massive support - in the context of the 60’s debates on decolonization and underdevelopment. In addition, we will delve into the theoretical foundations of the Revolution focusing, among other texts, on the literature by Cuba’s "founding father" Jose Marti, who deeply influenced the Spanish-American war (1898)'s outcomes as well as Fidel Castro’s vision for Cuba. Throughout the course, students will also have the opportunity to critically read and discuss main Cuban social policies such as its famous Literacy Campaign, and other Education, Housing, Cultural, Health, and Immigration policies, as well as the island’s complex relationship with technological development and communications. Finally, we will study identity and race dynamice, which are inextricably embedded in Cuba’s political landscape.

MSSP 7980 Social Policy Topics
Titles and topics vary.
Fall, Spring, and Summer Terms
1 Course Unit

MSSP 7990 Independent Study
Independent studies provide a flexible opportunity for standing faculty and students to work together in pursuing a topic of special interest that is not sufficiently covered by other courses in the curriculum. The content of independent studies is highly specialized and, as such, requires a plan of study developed jointly by the student(s) and the supervising standing faculty member. Part-time faculty members are not eligible to offer independent studies. Independent studies require the academic advisor’s approval.
1 Course Unit

MSSP 8610 Advanced Policy Analysis Research Methods
This course examines how policy research methods are applied to the study of contemporary social issues. The course is intended for students with a basic knowledge of regression, and will be especially useful for students with practical experience in a policy setting who want to learn about advanced research methods. The course begins by exploring policy analysis frameworks, and the contexts of social policy and social policy research. The remainder of the course explores a variety of common approaches to the conduct of social policy research by looking at the types of questions social policy analysts most frequently ask, and the types of answers that they are most often able to provide. The policy analysis approaches we will examine include: needs assessment methodologies (e.g. the “epidemiology” of social problems); analyses of client-level service utilization patterns (e.g. creating “typologies”); modeling trends in demand for services over time (e.g. forecasting); locational and other spatial factors associated with need, service use, and resource allocation decisions (e.g. block grant formula funding); machine learning (e.g. predictive analytics); the roles of qualitative research methods in policy research; comparative research on social welfare policy; performance management applications of administrative data; and longitudinal, multisectoral research using integrated administrative data systems. The application of these various methods is illustrated with studies of mental health, homelessness, criminal justice, child welfare, housing and segregation, welfare reform, income inequality and social service planning. Students participate as discussants of weekly readings, and as presenters of an assigned paper.
Fall
Also Offered As: SOCW 8610
1 Course Unit

MSSP 8970 Applied Linear Modeling
This course deals with the underlying assumptions and applications of the general linear model with social science, education, and social policy related questions/data. The first half of the course begins by covering simple linear regression and the assumptions of the general linear model, assumption diagnostics, consequences of violation, and how to correct for violated assumptions. This will also include methods of incomplete case analysis (i.e. missing data analysis). Then various aspects of regression analysis with multiple independent variables will be covered including categorical explanatory variables (e.g. to estimate group differences), interaction effects, mediating effects (e.g. to estimate the indirect effect of social processes), and non-linear effects. The course will then cover some of the applications of the general(ized) linear model including logistic regression, some elements of path modeling (structural equation modeling), multilevel analysis (hierarchical linear modeling), and longitudinal modeling (growth modeling). The course will be taught using SAS, but students are welcome to use any statistical package of comfort. Introductory Graduate Statistics is a prerequisite.
Fall
Also Offered As: SOCW 8970
1 Course Unit
MSSP 9990 Independent Study
Independent studies provide a flexible opportunity for standing faculty and students to work together in pursuing a topic of special interest that is not sufficiently covered by other courses in the curriculum. The content of independent studies is highly specialized and, as such, requires a plan of study developed jointly by the student(s) and the supervising standing faculty member. Part-time faculty members are not eligible to offer independent studies. Plans for an Independent Study should include: a statement of the issue(s) to be studied; a rationale for why the identified issue(s) should be pursued via an independent study; a statement of how the independent study fits into the student’s overall educational plan; a summary of the independent study’s major learning objectives; the methods to be used in carrying out the study; a workable plan; the educational "products" that will result from the study (normally a written report or paper); and the expected date by which the independent study will be completed. The process for arranging an independent study requires approval of both the student’s academic advisor and a standing faculty member who has agreed to conduct the independent study. The procedures to be followed are: 1) the student discusses interest in doing an independent study with the academic advisor; 2) if the advisor concurs with the student’s submission, the advisor and student will discuss potential standing faculty sponsors; 3) if a standing faculty sponsor can be located, the student and standing faculty sponsor craft the specific plan, including learning objectives, content, and structure for the course; and 4) the academic advisor informs the registrar that an independent study for the student has been approved.

Fall, Spring, and Summer Terms
0.5-1 Course Unit

Master of Science in Translational Research (MTR)

MTR 5350 Introduction to Bioinformatics
This course provides overview of bioinformatics and computational biology as applied to biomedical research. A primary objective of the course is to enable students to integrate modern bioinformatics tools into their research activities. Course material is aimed to address biological questions using computational approaches and the analysis of data. A basic primer in programming and operating in a UNIX environment will be presented, and students will also be introduced to Python R, and tools for reproducible research. This course emphasizes direct, hands-on experience with applications to current biological research problems. Areas include DNA sequence alignment, genetic variation and analysis, motif discovery, study design for high-throughput sequencing RNA, and gene expression, single gene and whole-genome analysis, machine learning, and topics in systems biology. The relevant principles underlying methods used for analysis in these areas will be introduced and discussed at a level appropriate for biologists without a background in computer science. The course is not intended for computer science students who want to learn about biologically motivated algorithmic problems; BIOL 4536/BIOL 5536 and BE 5370/CIS 5370/MPHY 6090 are more appropriate. Prerequisites: An advanced undergraduate course such as BIOL 4210 or a graduate course in biology such as BIOL 5210, BIOL 5240, or equivalent, is a prerequisite.

Fall
Also Offered As: CIS 5350, GCB 5350
Prerequisite: BIOL 4210 OR BIOL 5210 OR BIOL 5240
1 Course Unit

MTR 6000 Introduction to Biostatistics
The goal of this course is to develop translational scientists who are able to apply the necessary statistical methods to their thesis project, critically assess the application of statistical methods in the literature, and collaborate with biostatisticians. The course will be designed to include weekly seminars to teach introductory biostatistics concepts and group assignments applying the principles through critically assessing the literature.

Fall
Also Offered As: REG 6000
1 Course Unit

MTR 6010 Practical Scientific Writing
Students should expect this process to be iterative. Students will learn, and practice in class, multiple techniques that they can apply in the future to improve their scientific writing. These include how to: (a) define the scope of a scientific document; (b) save time organizing, navigating, and formatting scientific documents; (c) read scientific articles efficiently; (d) establish a workflow for reading large volumes of scientific material; (e) efficiently find the most relevant articles in biomedical databases include PubMed, Embase, Scopus, Web of Science; (f) use large language models like Chat GPT as tools; (g) improve writing mechanics to craft clear and compelling scientific discourse. Note: point (g) encompasses ~15 different writing mechanical techniques taught and practiced over multiple class sessions. This is a hands-on course during which students will develop a solid draft of the introduction to their master’s thesis; sometimes this introduction is referred to as a ‘literature review’ (~3-6 pages double-spaced, >100 references).

Summer Term
Also Offered As: REG 6010
1 Course Unit

MTR 5100 Introduction to Clinical and Translational Research
This introductory course lays the foundation for understanding practical aspects of conducting clinical research in an academic environment. The course is divided into two modules: Module 1: Research Methods & Protocol Development and Module 2: Regulatory Environment for Clinical Trials. The first module introduces clinical research, clinical protocols, study designs and biostatistics that underlie such studies. The second module covers ethical considerations in clinical research, study execution and oversight, and the regulatory environment for clinical research. Upon completion, students should have a strong foundation in the fundamentals of clinical research and should be able to apply contemporary research tools to clinically relevant areas of investigation.

Fall
Also Offered As: REG 5100
1 Course Unit
MTR 6020 Proposal Development and Study Design
This course has two primary areas of focus: (i) proposal development and enhancement; and (ii) a focus on research and study design. (i) Proposal Development and Enhancement: Students apply foundational concepts by revising and refining their written proposal and presenting their research project throughout the course. Students receive an overview of approaches to developing an effective proposal, and guidance on how to write and present their hypothesis, specific aims, research strategy, significance, innovation, and approach using the general NIH application format. (ii) Research and Study Design: Students receive an overview of translational research principals and clinical study design approaches relevant to thesis projects designed to probe mechanisms of disease and translate results in basic research into investigations in humans. Topics include clinical and translational research methods, and study design and execution. Students are introduced to these topics through asynchronous and synchronous learning environments. At the end of the course, each student submits and presents their written proposal to their peers and a panel of reviewers for critique and feedback. Members of the panel include the students’ research mentor(s), program mentor, and thesis committee. The panel provides feedback on the proposal which the student will then incorporate into the written proposal. Students submit their final revised proposal to be reviewed and graded by their program mentor.
Fall
Also Offered As: REG 6020
1 Course Unit

MTR 6030 Disease Measurement
Students will acquire the knowledge to effectively incorporate disease measurements into the design of clinical and translational research protocols, gain a basic understanding of measurement methodologies used in clinical medicine, understand how "normal" values are determined, and how to interpret test results in the context of patients/research subjects. Students will also approach disease measurements as a mean of answering questions, and be able to choose appropriate tests to answer the question posed. The measurement aspects of the students research protocols are evaluated during this course. The course is separated into lab and imaging sections, with common introductory lectures.
Fall
1 Course Unit

MTR 6040 Scientific & Ethical Conduct
In this course, students will learn the foundational principles of scientific, operational and ethical conduct of research, complete directed experience in evaluating ethical principles through IRB membership and ultimately be able to apply all principles to their own work. By the end of the foundational class sessions, students will understand scientific conduct, ethical considerations of human subject's research, good clinical practices (GCP), good laboratory practices (GLP), conflict of interest, and budgetary concepts. The directed experience will include becoming a member of an Institutional Review Board (IRB) (Penn or CHOP) and participating as an active member in 6 meetings. Spring
Also Offered As: REG 6040
1 Course Unit

MTR 6050 Data Manuscript Writing
Students will write a primary data manuscript for publication with their primary lab mentor. Emphasis will be placed on identifying publishable data that was either generated by the student, or which is made available to the student for analysis from the mentor’s lab. The student will be expected to learn the role of first author including 1) coordination with the senior mentor to write the introduction, 2) organize data, analyses and figures, 3) obtain or write methods and results from collaborators, 4) writing a discussion and, 5) getting it out the door. Mentors will be asked to agree to participate in this process, or identify another senior individual in their group who would perform the function as a condition to have MTR students funded in their program. Course director and members of the curriculum committee will provide guidance and critical review of work throughout the process.
Spring
1 Course Unit

MTR 6060 Grantsmanship
Students will learn to write and submit a new investigator and/or mentored career development NIH grant on which they will be primary investigator.
Fall or Spring
1 Course Unit

MTR 6070 Thesis I
Candidates are expected to complete a thesis that involves designing a research project, writing a formal research proposal, performing the study described in it, preparing a comprehensive scholarly scientific paper reporting the results, and presenting and defending the thesis at a public seminar. At the time of application, each candidate specifies the project they will pursue, along with the lead mentor who will supervise the project.
1 Course Unit

MTR 6080 Thesis II
Candidates are expected to complete a thesis that involves designing a research project, writing a formal research proposal, performing the study described in it, preparing a comprehensive scholarly scientific paper reporting the results, and presenting and defending the thesis at a public seminar. At the time of application, each candidate specifies the project they will pursue along with the lead mentor who will supervise the project.
1 Course Unit

MTR 6200 Medical Entrepreneurship: Commercializing Translational Science
This course provides in depth insight into the process by which health technology platforms including scientific discoveries are transformed into viable commercial entities. This includes methods to evaluate market opportunities and derisk critical assumptions within the rapidly changing academic and healthcare environment. Topics include intellectual property creation and licensing, technology transfer, regulatory pathways, raising capital/NIH SBIR/STTR grant funding, go to market strategy, market sizing, formation equity, and recruiting co-founders. The major project will involve the formation of teams that will create a defendable business plan and consummate in a presentation (pitch deck) intended to raise capital. The course will be especially valuable for students who may be considering entrepreneurial career paths including starting a company, working for an early stage venture, healthcare consulting, or assuming innovation leadership roles.
Spring
Also Offered As: BE 6080
1 Course Unit
MTR 6210 Cell and Gene Therapy
This course will provide students with a general overview of translational research in the area of gene and cell therapy. This includes technical considerations, translating preclinical investigation into therapeutics, the execution of gene and cell therapies clinical trials, and key regulatory issues. Entrepreneurial considerations will be discussed as well. By the end of this course, students will understand the basic technologies employed for gene and cell therapy along with approaches and pitfalls to translating these therapies into clinical applications including regulatory and commercial aspects of this emerging area. Prerequisite: For graduate students, at least one prior course in immunology. An undergraduate-level or medical school immunology course is sufficient to meet the prerequisite.
Two Term Class, Student must enter first term; credit given after both terms are complete
Also Offered As: CAMB 7070, REG 6210
1 Course Unit

MTR 6220 New Trends in Medicine and Vaccine Discovery
Modern drug discovery has evolved to include human genetic diagnosis and various biological approaches which has enabled progress in a variety of fields, including rare diseases, immuno-oncology, precision medicine, and biomarkers. The goal of this course is for students to understand newer treatment modalities and approaches beyond one size fits all small molecule drugs, as well as the technologies that empower them. Students will learn regulatory processes that govern medicine discovery and development and also consider business and societal aspects of medical progress. Students will be able to apply concepts directly to work in the healthcare industry. Students will be taught by experts in the field internal and external to Penn.
Fall
Also Offered As: REG 6220
1 Course Unit

MTR 6230 Writing an NIH Grant
This course will provide a comprehensive overview of the grant writing process: fundamentals of good grant writing, general preparation of grant application (e.g. specific aims, research strategy, budgets, analysis of reviews and strategies of rebuttal and re-application), identifying RFAs, study sections, program officers and Scientific Review Officers (SROs), research strategy and detailed descriptions of the different types of funding mechanisms (e.g. R01, R21, K99/R00). While all grant mechanisms will be discussed, the class will focus on those relevant to the participants. Three mock study sections – two consisting of peer review and the other of faculty – is expected to familiarize the participants with the NIH review process. This course is expected to provide the foundation of any grant proposal, in terms of writing skills. It will be mandatory for all students to submit the intermediate proposals, and the final proposal. The participants will be drafting, revising, and working one-on-one with their peers and the course director to improve their proposal. The course will provide hands-on experience drafting the specific aims, significance, and innovation sections, through peer and faculty evaluation. Audience: Faculty or postdocs who have not written an NIH grant before or need guidance with submitting a revised application. Advanced graduate students may be permitted to enroll in the course.

MTR 6400 Seminar in Entrepreneurial Science
Seminar in Entrepreneurial Science. Permission from department required to enroll.
Fall
0.5 Course Units

MTR 9999 Master of Science in Translational Research LAB
1 Course Unit

Master of Urban Spatial Analytics (MUSA)
MUSA 5000 Statistical and Data Mining Methods for Urban Data Analysis
This hands-on course will cover a wide range of methods frequently used for analyzing urban and spatial data. These methods are drawn from a variety of fields, including traditional statistics, spatial econometrics, and machine learning, and include 1) regression analysis (OLS, ridge/lasso, logistic, multinomial logit); 2) measures of spatial autocorrelation; 3) spatial regression (spatial lag, spatial error, geographically weighted regression); 4) point pattern analysis; 5) an introduction to clustering methods (k-means, hierarchical clustering, DBSCAN); and 6) big data and GIS. Students will learn the assumptions and limitations of each method, and assignments will focus on the implementation, presentation and interpretation of the analyses. Students will use R and GeoDa in this course.
Fall
Also Offered As: CPLN 6710
Mutually Exclusive: CPLN 5050
1 Course Unit

MUSA 5030 Modeling Geographical Objects
This course offers a broad and practical introduction to the acquisition, storage, retrieval, maintenance, use, and presentation of digital cartographic data with vector-oriented (i.e. drawing-based) geographic information systems (GIS) for a variety of environmental science, planning, and management applications. Previous experience in GIS is not required.
Fall
Also Offered As: CPLN 5030
1 Course Unit

MUSA 5080 Public Policy Analytics
This course teaches advanced spatial analysis and an introduction to data science/machine learning in the urban planning and public policy realm. The class focuses on real-world spatial analysis applications and, in combination with introductory machine learning, provides students a modern framework for efficiently allocate limited resources across space. Unlike its private sector counterpart, data science in the public or nonprofit sector isn't strictly about optimization - it requires understanding of public goods, governance, and issues of equity. We explore use cases in transportation, housing, public health, land use, criminal justice, and other domains. We will learn novel approaches for understanding and avoiding risks of “algorithmic bias” against communities/people of color as well as communities of different income levels. The format of the class includes weekly lectures/in-class demos and labs. There are seven required assignments, including two projects. Prerequisites include either CPLN503, the summer GIS course or prior experience with GIS in a formal setting. The class is conducted entirely in R. Having experience in R and the ‘tidyverse’ is helpful but not strictly required.
Fall
Also Offered As: CPLN 5920
1 Course Unit
MUSA 5090 Geospatial Cloud Computing & Visualization
This course teaches students how to collect, store, wrangle and display cartographic data in a cloud-based setting. Students will learn a reproducible approach for pulling spatial data from APIs with emphasis on PostGIS, Socrata and BigQuery; to wrangle these data in python; and visualize in various platforms including Seaborn and Carto. Students will build their own APIs and eventually develop their own introductory custom web applications. This course is the first in a progression and leads to the Spring course on Javascript Programming for Planning (a class on building comprehensive mapping applications.)
1 Course Unit

MUSA 5500 Geospatial Data Science in Python
This course will provide students with the knowledge and tools to turn data into meaningful insights, with a focus on real-world case studies in the urban planning and public policy realm. Focusing on the latest Python software tools, the course will outline the "pipeline" approach to data science. It will teach students the tools to gather, visualize, and analyze datasets, providing the skills to effectively explore large datasets and transform results into understandable and compelling narratives. The course is organized into five main sections: Exploratory Data Science; Introduction to Geospatial Data Science; Data Ingestion & Big Data; Geospatial Machine Learning; Data Visualization & Storytelling. Fall
Also Offered As: CPLN 6720
1 Course Unit

MUSA 6110 JavaScript Programming for Planners and Designers
This course will introduce City Planning, MUSA and design graduate students to JavaScript. Students will learn the logic and syntax of the JavaScript programming language for use in simple web applications, as well as how to program data and map-oriented web applications using Javascript. The "hands-on" uses of JavaScript in urban planning applications will be emphasized. Students will hone their skills through a series of complete application projects. Fall
Also Offered As: CPLN 6920
1 Course Unit

MUSA 6500 Geospatial Machine Learning in Remote Sensing
Satellite remote sensing is the science of converting raw aerial imagery into actionable intelligence about the built and natural environment. This course will provide students the foundation necessary for the application of machine learning algorithms on satellite imagery. Use cases include building footprint detection, multi-class object detection in cities and land cover/land use classification. The students will learn basic concepts of machine learning, including unsupervised and supervised learning, model selection, feature elimination, cross-validation and performance evaluation. After learning traditional methods and algorithms, the course will focus on recent deep learning methods using convolutional neural networks and their application on semantic image segmentation. Prerequisites include MUSA 508, Geospatial Data Science in Python or equivalent. Spring
1 Course Unit

Materials Science and Engineering (MSE)

MSE 0099 Undergraduate Research and/or Independent Study
An opportunity for the student to become closely associated with a professor (1) in a research effort to develop research skills and technique and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student's academic level. To register for this course, the student and professor jointly submit a detailed proposal to the undergraduate curriculum chairman no later than the end of the first week of the term. Note: a maximum of 2 c.u. of MSE 099 may be applied toward the B.A.S. or B.S.E. degree requirements. Open to all students. Fall or Spring
1-4 Course Units
MSE 2010 Materials Lab I
This is the first of three 0.5 CU required laboratory courses in the undergraduate MSE program. This course will focus on applying introductory materials science principles, in tandem with those from prior physics and chemistry courses, to study the properties of metals, polymers, and glasses. Students will apply many of the concepts that are taught in the concurrent course, MSE 220. Hands-on laboratory skills that will be developed include thermal testing and characterization, optical microscopy and scanning electron microscopy (SEM), mechanical testing, effects of thermal treatment on material properties, and the basics of MATLAB applied to lab work. In addition, students will develop professional skills regarding working safely and effectively in a team-based laboratory setting, basics of statistics and error analysis, and analyzing and presenting data in written reports and presentations. ENGR 105 recommended.
Fall
Prerequisite: CHEM 1012
Corequisite: MSE 2200
.5 Course Units

MSE 2020 Materials Lab II
This is the second of three 0.5CU required laboratory courses in the undergraduate MSE program. This course will build on the experimental and professional skills introduced in MSE 201 and will reinforce concurrent lecture courses in materials thermodynamics and optoelectronics of materials. Hands-on experimental skills to be developed include phase transformations in metals and characterization using electron microscopy image analysis, thin-film fabrication methods and measurement techniques, nano-materials synthesis (including quantum dot technologies) and characterization of size and optical properties, and characterization of next-generation photovoltaic materials. Students will expand on their MATLAB skills for image analysis, I-V curve plotting, and presentation of high-quality figures for technical reports and presentations. Students will also be exposed to material life-cycle analysis, device sensitivity, and sustainability and how they each apply to materials design.
Spring
Prerequisite: MSE 2010
Corequisites: MSE 2150, MSE 2600
.5 Course Units

MSE 2150 Introduction to Functional Materials: From Macro to Nanoscale
The purpose of this course is: 1) to introduce key concepts underlying the design, properties and processing of functional materials and their applications, and 2) to apply these concepts in the rapidly growing field of nanomaterials and nanotechnology. Fundamental chemical and physical principles underlying electronic, dielectric, optical and magnetic properties will be developed in the context of metals, semiconductors, insulators, crystals, glasses, polymers and ceramics. Miniaturization and the nanotechnology revolution confronts materials science with challenges and opportunities. Examples in which nanoscale materials exhibit qualitatively different properties compared to bulk will be emphasized.
Spring
Prerequisite: MSE 2210
1 Course Unit

MSE 2200 Introduction to Materials Science and Engineering
The course is an introduction to the most important concepts in materials science and engineering. You will learn how the control of chemical bonding, synthesis, processing, structure and defects can be used to tailor the properties and performance of materials for applications that range from sustainable sources of energy, to construction, to consumer electronics. Case studies are also included to highlight environmental issues associated with materials degradation. This course includes lab demonstrations of key materials properties and a final project where students research an area of materials technology of their own interest.
Fall
Also Offered As: MEAM 2200
Prerequisite: CHEM 1012 AND (PHYS 0140 OR MEAM 1100)
1 Course Unit

MSE 2210 Quantum Physics of Materials
This course develops the background in basic physics required to understand the behavior of electrons in atoms, molecules and solids. Beginning with experiments and ideas that led to the foundation and postulates of Quantum Mechanics, the behavior of an electron in simple potential wells is treated. The electron in a harmonic oscillator well and the Coulomb potential of a hydrogen atom are treated next. Pauli’s exclusion principle and generalization to multi-particle systems are introduced. The Fermi energy, density of states and free electron band structure will be introduced. Many state-of-the-art materials analysis techniques will also be demonstrated throughout the course.
Fall, Spring, and Summer Terms
Prerequisite: PHYS 0141 OR PHYS 0151
1 Course Unit

MSE 2600 Energetics of Macro and Nano-scale Materials
Basic principles of chemical thermodynamics as applied to macro and nano-sized materials. This course will cover the fundamentals of classical thermodynamics as applied to the calculation and prediction of phase stability, chemical reactivity and synthesis of materials systems. The size-dependent properties of nano-sized systems will be explored through the incorporation of the thermodynamic properties of surfaces. The prediction of the phase stability of two and three component systems will be illustrated through the calculation and interpretation of phase diagrams for metallic, semiconductor, inorganic systems.
Spring
Prerequisite: CHEM 1022
1 Course Unit

MSE 2960 Study Abroad
1 Course Unit
MSE 3010 Materials Lab III
This is the third of three 0.5CU required laboratory courses in the undergraduate MSE program. The culmination of the lab program, this course will focus on applying advanced materials science principles taught in concurrent lecture courses to crystallographic techniques and analysis, and to measurements of polymers and soft materials. Students will employ many of the experimental and professional skills developed in past lab experiences; new hands-on laboratory skills to be covered include synthesis of ceramic super-conductor materials and effects of processing on properties, X-ray diffraction and X-ray scattering, and surface modification and contact angle measurements. Students will also be responsible for proposing an independent set of experiments to study a given material that will test their mastery of experimental equipment, procedures, and associated data analysis. In addition, students will develop professional skills surrounding preparing professional technical reports and presentations in a team setting.
Fall
Prerequisite: MSE 2010 AND MSE 2020
Corequisite: MSE 3600
.5 Course Units

MSE 3300 Self-Assembly of Soft Materials
Soft matter is found in diverse applications including sports (helmets & cloths); food (chocolate, egg); consumer products (e.g., lotions and shampoo); and devices (displays, electronics). Whereas solids and liquids are typically hard and crystalline or soft and fluid, respectively, soft matter can exhibit both solid and liquid like behavior. In this class, we investigate the thermodynamic and dynamic principles common to soft matter as well as soft (weak) forces, self-assembly and phase behavior. Classes of matter include colloidal particles, polymers, liquid crystalline molecules, amphiphilic molecules, biomacromolecules/membranes, and food.
Fall
Also Offered As: BE 3300
Prerequisite: (MSE 2200 OR BE 2200) AND CHEM 1022 or equivalent
1 Course Unit

MSE 3600 Structure at the Nanoscale
To understand the atomic arrangements of crystalline matter, this class focuses on crystallography, symmetry, and diffraction techniques. The first half focuses on learning how to describe the structure of crystalline matter through the basics of crystallography and symmetry by introducing two-dimensional symmetry operations, point, and plane groups; this knowledge is then extended into three-dimensions to arrive at an understanding of space lattices and space groups. The second half is concerned with applying this information to understand structures through various diffraction and microscopy techniques.
Fall
Prerequisite: MSE 2200
1 Course Unit

MSE 3930 Materials Selection
Throughout mankind’s history, materials have played a critical role in civilization and technology. The selection of materials has been based on availability and functionality. The rapid advances of materials technologies in the last 150 years, however, have made nearly all classes and forms of materials available, at a cost. These costs include the dollars and cents costs that typically accompany the use of stronger, lighter materials, but environmental costs are also important and significant. Therefore, in theory at least, materials selection can now proceed on a rational basis as an optimization process involving performance and costs - both financial and environmental. In this course, we will focus on structural applications where mechanical design is central. By the end of the course, the students can expect to acquire a level of engineering familiarity with a broad range of materials, and be prepared to undertake responsible material design projects in the future.
Prerequisite: Junior standing or approval of the instructor
Spring
Prerequisite: MSE 2200
1 Course Unit

MSE 4050 Mechanical Properties of Macro/Nanoscale Materials
This course will discuss the mechanical properties of a wide range of materials from both macroscopic and microscopic viewpoints. Beginning with a review of elasticity and tensors, the course will describe the deformation, fracture and fatigue behavior of metals, ceramics and polymers. Dislocation theory, strengthening mechanisms and rate-dependent deformation will also be discussed. The following topics will be discussed: 1. Introduction and review of linear elasticity and tensors. Stress and strain tensors, transformations, principal stresses, invariants. Mechanical testing methods at the macro and micro scale. 2. Crystal symmetry and its effect on second and fourth rank tensors. Linear thermal expansion and thermal stresses. Anisotropic linear elasticity. Anisotropic elastic moduli of crystals. 3. Plasticity and yield in continuum elasticity. Notion of yield surfaces. 4. Elements of dislocation theory. Stress and strain fields of dislocations, forces and interactions. 5. Slip and twinning in crystalline solids. 6. Strengthening and deformation properties of crystalline materials. 7. Rate-dependent and high temperature deformation of materials. 8. Fracture of materials.
Spring
Also Offered As: MEAM 4050
Prerequisite: MSE 2200 or MEAM 2100
1 Course Unit

MSE 4300 Introduction to Polymers
Polymer is one of the most widely used materials in our daily life, from the rubber tires to clothes, from photoreists in chip manufacturing to flexible electronics and smart sensors, from Scotch tapes to artificial tissues. This course teaches entry-level knowledge in polymer synthesis, characterization, thermodynamics, and structure-property relationship. Emphasis will be on understanding both chemical and physical aspects of polymers, polymer chain size and molecular interactions that drive the microscopic and macroscopic structures and the resulting physical properties. We will discuss how to apply polymer designs to advance nanotechnology, electronics, energy and biotechnology. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, shape memory polymers, hydrogels, and elastomeric deformation and applications.
Fall
Also Offered As: CBE 4300
Prerequisite: (MSE 2600 OR CBE 2310) AND CHEM 2210 AND MEAM 2030
1 Course Unit
MSE 4400 Phase Transformations
The phase of a material is dependent upon temperature, thermal history, and other variables such as pressure and composition. In this course, concepts of metallurgical thermodynamics and kinetics are used to study phase transformations to produce materials with desired properties. Subjects covered include diffusion in solids, crystal interfaces (coherent, semi-coherent, incoherent interfaces), nucleation and growth, equilibrium and nonequilibrium solidification processes, solid state transformations (nucleation and growth of precipitates, GP-Zone formation, Ostwald’s step rule, order-disorder transition, spinodal decomposition, martensitic transformation).
Spring
Mutually Exclusive: MSE 5400
Prerequisite: MSE 2200 AND MSE 2600
1 Course Unit

MSE 4550 Electrochemical Engineering of Materials
After introducing basic electrochemical concepts including cell potential and cell thermodynamics, electrochemical kinetics, mass transport and cell overpotentials, redox reactions, electrolytic versus galvanic cells, standard reduction potentials, and key reactions in electrochemical energy conversion and storage, this course will cover the broad impact of electrochemical phenomena on materials. Topics that will be discussed include: (1) materials for lithium-ion battery electrodes, (2) materials extraction from their ores to finished products using electrochemical methods, (3) materials degradation by electrochemical corrosion, (4) Three-dimensional nanostructured materials by selective electrochemical corrosion. Students will be engaged in interactive classroom activities and hands-on electrochemical experiments (this year – fall 2022 – students will learn to cycle LiMn2O4 coin cell batteries).
Fall
Mutually Exclusive: MSE 5550
1 Course Unit

MSE 4600 Computational Materials Science
This course provides an introduction to modeling and simulation in materials science, covering continuum methods (e.g. finite element methods) and atomistic and molecular simulation (e.g. molecular dynamics). These tools play an increasingly important role in modern engineering. You will get hands-on training in both the fundamentals and applications of these methods to key engineering problems. The lectures will provide an exposure to areas of application, based on the scientific exploitation of the power of computation. We will use software packages (Comsol and LAMMPS) and thus extensive programming skills are not required. Matlab background needed for the course will be covered in a self-contained module. Junior or Senior Standing. Ability to write simple computer codes would be an advantage.
Fall
Prerequisite: MATH 2410 AND ENGR 1050 or equivalent
1 Course Unit

MSE 4650 Fabrication and Characterization of Micro and Nanostructured Materials
This course surveys various processes that are used to produce materials structured at the micron and nanometer scales for electronic, optical and biological applications. Basic principles of materials chemistry, physics, thermodynamics and surface/interfacial science are applied to solid state, liquid, and colloidal approaches to making materials. A wide range of nano- and microfabrication techniques, including photolithography, soft lithography, nanoimprint lithography, 3D printing and self-assembly, are covered. The course is heavily lab based, with 30% of class time and 50% of the homework devoted to hands on experiences and lab report writing. Lab assignments are a series of structured individual/group projects. Evaluation is based on 3 lab reports, 4 problem sets with journal paper reading assignment, and a final project design.
Spring
Mutually Exclusive: MSE 5650
1 Course Unit

MSE 4950 Senior Design
The senior design course is a two-semester capstone program that gives students the opportunity to design and execute an original experimental or theoretical project in materials science, engineering, or product/device development that is solving a real world problem. Students will work closely with a scientific advisor in their lab and meet once a week in the classroom to learn from an innovative curriculum that will build real-world skills in the context of their research and design project. These skills include project management, networking, teamwork, impactful written and verbal communications, upward management, self-reflection and feedback. Students will also learn how to design research in the context of having an impact on the world. This will be through weekly vignettes of innovative materials science solutions that solve problems in industries ranging from construction to healthcare to consumer products.
Fall
1 Course Unit

MSE 4960 Senior Design
The senior design course is a two-semester capstone program that gives students the opportunity to design and execute an original experimental or theoretical project in materials science, engineering, or product/device development that is solving a real world problem. Students will work closely with a scientific advisor in their lab and meet once a week in the classroom to learn from an innovative curriculum that will build real-world skills in the context of their research and design project. These skills include project management, networking, teamwork, impactful written and verbal communications, upward management, self-reflection and feedback. Students will also learn how to design research in the context of having an impact on the world. This will be through weekly vignettes of innovative materials science solutions that solve problems in industries ranging from construction to healthcare to consumer products.
Spring
1 Course Unit
MSE 5000 Experimental Methods in Materials Science
This laboratory course introduces students to a variety of experimental methods used in materials science and engineering. Hands-on training will be provided for atomic force microscopy, X-ray diffraction and scattering, mechanical testing with image capture, and dynamic light scattering. Students will use numerous software packages for data collection and analysis, as well as being introduced to LabVIEW as a method for customizing experiments. In addition, students will see demonstrations of scanning electron microscopy, transmission electron microscopy, and electron diffraction and analyze data from these methods. The format for the course will include a weekly lecture (1.5 hours), a weekly lab session (4 hours) and six assignments. Prerequisite: Permission of the Undergraduate Curriculum Chair and Instructor Fall
1 Course Unit

MSE 5040 Materials Sustainability
This course will introduce strategies to improve materials sustainability, particularly with respect to reduced energy consumption and greenhouse gas emissions during the extraction, synthesis and fabrication of materials. Innovative solutions will be described that include alternative feedstocks, materials substitutions, and materials waste reduction. This 0.5 CU course will primarily focus on metals and polymers. The course will present overarching concepts and illustrative examples that capture the global nature of materials supply chains. Students will explore issues through the framework of the materials lifecycle, including resource availability, manufacturing choices, and disposal options for materials appropriate for the application. The intention is for students to be able to make more informed material selection decisions and to identify critical needs for future material development to improve materials sustainability. Spring
Prerequisite: MSE 2600 OR CBE 2310 or the equivalent
0.5 Course Units

MSE 5050 Mechanical Properties of Macro/Nanoscale Materials
The application of continuum and microstructural concepts to elasticity and plasticity and the mechanisms of plastic flow and fracture in metals, polymers and ceramics. Topics covered include elasticity, viscoelasticity, plasticity, crystal defects, strengthening, crystallographic effects, twinning, creep and fatigue. Emphasis will be on mathematical and physical understanding rather than problem solving. Spring
Also Offered As: MEAM 5050
Prerequisite: MSE 2200 OR MEAM 2100 OR MATH 2400
1 Course Unit

MSE 5060 Failure Analysis of Engineering Materials
This course will introduce students to the broad field of failure through hands-on real-life examples of specific failures. All engineering materials classes will be considered, including metals, polymers, elastomers, ceramics, and glasses. Emphasis will be placed on understanding how to actually analyze a failed component and understand the cause of failure. Several classes will be conducted by outside experts from places like the NTSB, FBI and OSHA. Fall
Also Offered As: MEAM 5060
Prerequisite: MSE 2200 or equivalent
1 Course Unit

MSE 5070 Fundamentals of Materials
This course will provide a graduate level introduction to the science and engineering of materials. It is designed specifically to meet the needs of students who will be doing research that involves materials but who do not have an extensive background in the field. The focus is on fundamental aspects of materials science and will emphasize phenomena and how to describe them. The course assumes an undergraduate background in any area of physical/chemical science and undergraduate mathematics appropriate to this. The course will also be accessible to students of applied mathematics. Fall
Also Offered As: MEAM 5070
1 Course Unit

MSE 5150 Mathematics for Materials Science
1 Course Unit

MSE 5180 Structure and Function of Biological Materials
Biological materials display unique properties that give rise to important biological functions. This graduate course will cover topics related to structure and function of biological materials. Students will learn basic principles in assembly and hierarchy of biological materials and biological cellular structure and composition. Lectures will cover biominer alization and inorganic materials, structure and properties of bone and cartilage, biopolymers and elastomers, solid foams and cartilage, and functional and bioinspired materials. Students will critically review assigned scientific papers in group discussion. Groups will be assigned to propose a scientific project related to biological materials. Groups will give a final presentation and submit a 3-6-page written proposal. Individual assessments will include problem sets and two midterm exams. The goal for the course is for students to apply their skills and background in materials science to deepen their understanding of the structure and function of biological materials. Lessons from this course will help students identify new research topics in biological materials science that could be relevant for their graduate studies. Fall
Prerequisite: Undergraduate students: MSE 2200 or BE 2200 is required
Graduate students: No pre-req
1 Course Unit

MSE 5200 Structure of Materials
Crystal structure and bonding. Symmetry: line, plane, point, and space groups. Symmetry considerations in structure-property relations. Physical optics, diffraction as Fourier transforms. Effects of size, shape, temperature and distortion on diffraction intensity. Diffraction of gas, liquid, fibers, and DNA. Diffuse scattering, order/disorder. Pair distribution function, inverse problem, small angle scattering. Radiation-matter interaction, scattering physics, atomic and electronic spectroscopy. Prerequisite: Permission of the Undergraduate Curriculum Chair and Instructor Spring
1 Course Unit
MSE 5250 Nanoscale Science and Engineering
Overview of existing device and manufacturing technologies in microelectronics, optoelectronics, magnetic storage, Microsystems, and biotechnology. Overview of near- and long-term challenges facing those fields. Near- and long-term prospects of nanoscience and related technologies for the evolutionary suspension of current approaches, and for the development of revolutionary designs and applications. Prerequisite: If course requirement not met, permission of instructor required.
Fall
Also Offered As: ESE 5250
Prerequisite: ESE 2180 OR PHYS 1240
1 Course Unit

MSE 5300 Thermodynamics and Phase Equilibria
Fundamental elements of engineering thermodynamics, statistical thermodynamics, chemical thermodynamics and defect thermodynamics. Thermodynamic functions, stability, phase transitions, mixtures (gases, condensed matter, polymer solution), defects and interfaces. Phase diagrams and predominance diagrams. Applications to energy problems (engines, efficiency, power, electrochemical cells) and properties (Curie's law, rubber elasticity, specific heat, phonon/photon spectra, constitutive equations, equation of states). Prerequisite: Permission of the Undergraduate Curriculum Chair and instructor
Fall
1 Course Unit

MSE 5360 Electronic Properties of Materials
This course will introduce the physical principles underlying broad spectrum of electronic properties in the solid state. Starting with the band structure of solids, the course will give an overview of electronic, dielectric, magnetic, thermal and optical properties of materials. The treatment will use quantum mechanical and statistical mechanical concepts familiar to students at the undergraduate level. Commonly used theories and models will be introduced and their predictions will be compared with observations. Students who have taken MSE 221/ MSE 260 and/or MSE 570/MSE 575 will benefit from this advanced introduction to material properties.
Spring
1 Course Unit

MSE 5370 Nanotribology
Engineering is progressing to ever smaller scales, enabling new technologies, materials, devices, and applications. This course will provide an introduction to nano-scale tribology and the critical role it plays in the developing areas of nanoscience and nanotechnology. We will discuss how contact, adhesion, friction, lubrication, and wear at interfaces originate, using an integrated approach that combines concepts of mechanics, materials science, chemistry, and physics. We will cover a range of concepts and applications, drawing connections to both established and new approaches. We will discuss the limits of continuum mechanics and present newly developed theories and experiments tailored to describe micro- and nano-scale phenomena. We will emphasize specific applications throughout the course. Reading of scientific literature, critical peer discussion, individual and team problem assignments, and a peer-reviewed literature research project will be assigned as part of the course. Prerequisite: Prerequisite: MEAM 3540 or MEAM 5190 or MSE/MEAM 5040 or equivalent required, or consent of instructor. Experience with mathematical analysis software (e.g. Matlab, Python) is required.
Not Offered Every Year
Also Offered As: MEAM 5370

MSE 5400 Phase Transformations
The phase of a material is dependent upon temperature, thermal history, and other variables such as pressure and composition. In this course concepts of metallurgical thermodynamics and kinetics are used to study phase transformations to produce materials with desired properties. Subjects covered include diffusion in solids, crystal interfaces (coherent, semi-coherent, incoherent interfaces), nucleation and growth, equilibrium and nonequilibrium solidification processes, solid state transformations (nucleation and growth of precipitates, GP-Zone formation, Ostwald's step rule, order-disorder transition, spinodal decomposition, martensitic transformation).
Spring
Mutually Exclusive: MSE 4400
1 Course Unit

MSE 5450 Materials for Energy and Environmental Sustainability
This course will cover the fundamental materials science issues central to the design of sustainable energy technology. The goal of this course is to expose students to the emerging advances in materials science and materials chemistry that underpin technologies for energy conversion (fuel cells, thermolectrics, photovoltaics, wind energy etc..), storage (biofuels, artificial photosynthesis, batteries etc) and distribution (smart grids and hydrogen and methane economy concepts etc..) and to place these in a real world context. This class will emphasize concepts in “green materials and green engineering practices” that are emerging with a global focus on “Sustainable Technology.” “Sustainability is defined as meeting the needs of the present without compromising the ability of future generations to meet their needs.” Engineering materials and processes at all scales; molecular/nanometer, micro, and the macro-scale are critical to developing the tools society required to meet the growing needs for energy and sustainable materials for the built environment. This course is appropriate for graduate students and advanced undergraduates in Penn’s Material Science Programs. Core MSE curriculum components in thermodynamics, structure, electronic & ionic transport, mechanics, polymers and optical materials will be expected, and exposure to the preparation in basic Chemistry and Physics will be advantageous in this highly interdisciplinary course.
Fall
1 Course Unit

MSE 5500 Elasticity and Micromechanics of Materials
This course is targeted to engineering students working in the areas on micro/nanomechanics of materials. The course will start with a quick review of the equations of linear elasticity and proceed to solutions of specific problems such as the Hertz contact problem, Eshelby’s problem etc. Failure mechanisms such as fracture and the fundamentals of dislocations/plasticity will also be discussed. Prerequisite: graduate standing or permission of the instructor.
Fall
Also Offered As: MEAM 5190
1 Course Unit
MSE 5550 Electrochemical Engineering of Materials
After introducing basic electrochemical concepts including cell potential and cell thermodynamics, electrochemical kinetics, mass transport and cell overpotentials, redox reactions, electrolytic versus galvanic cells, standard reduction potentials, and key reactions in electrochemical energy conversion and storage, this course will cover the broad impact of electrochemical phenomena on materials. Topics that will be discussed include: (1) materials for lithium-ion battery electrodes, (2) materials extraction from their ores to finished products using electrochemical methods, (3) materials degradation by electrochemical corrosion, (4) Three-dimensional nanostructured materials by selective electrochemical corrosion. Students will be engaged in interactive classroom activities and hands-on electrochemical experiments (this year —fall 2022 — students will learn to cycle LiMn2O4 coin cell batteries).

Fall
Mutually Exclusive: MSE 4550
1 Course Unit

MSE 5610 Atomic Modeling in Materials Science
This course covers two major aspects of atomic level computer modeling in materials. 1. Methods: Molecular statics, Molecular dynamics, Monte Carlo, Kinetic Monte Carlo as well as methods of analysis of the results such as radial distribution function, thermodynamics deduced from the molecular dynamics, fluctuations, correlations and autocorrelations. 2. Semi-empirical descriptions of atomic interactions: pair potentials, embedded atom method, covalent bonding, ionic bonding. Basics of the density functional theory. Mechanics, condensed matter physics, thermodynamics and statistical mechanics needed in interpretations are briefly explained. No prior coding experience is required. Students will be taught the basics of python in the first week of class.

Fall
Also Offered As: MEAM 5530
Prerequisites: Undergraduate introduction to classical physics, quantum mechanics, thermodynamics and mechanical properties is helpful.
1 Course Unit

MSE 5650 Fabrication and Characterization of Micro and Nanostructured Materials
This course surveys various processes that are used to produce materials structured at the micron and nanometer scales for electronic, optical and biological applications. Basic principles of materials chemistry, physics, thermodynamics and surface/interfacial science are applied to solid state, liquid, and colloidal approaches to making materials. A wide range of nano- and microfabrication techniques, including photolithography, soft lithography, nanoimprint lithography, 3D printing and self-assembly, are covered. The course is heavily lab based, with 30% of class time and 50% of the homework devoted to hands on experiences and lab report writing. Lab assignments are a series of structured individual/group projects. Evaluation is based on 3 lab reports, 4 problem sets with journal paper reading assignment, and a final project design. Prerequisite: If course requirement not met, permission of instructor required.

Spring
Mutually Exclusive: MSE 4650
Prerequisite: MSE 3600
1 Course Unit

MSE 5700 Physics of Materials I
Failures of classical physics and the historical basis for quantum theory. Postulates of wave mechanics; uncertainty principle, wave packets and wave-particle duality. Schrodinger equation and operators; eigenvalue problems in 1 and 3 dimensions (barriers, wells, hydrogen, atom). Perturbation theory; scattering of particles and light. Use of computer-aided self-study will be made. Undergraduate physics and math through modern physics and differential equations

Fall
1 Course Unit

MSE 5750 Statistical Mechanics
Statistical Mechanics is a unique branch of physics that permeates our understanding of matter at all length scales, from nanometers to stellar dimensions, and ranging in temperatures from pico-Kelvin (or lower) to billions of degrees Kelvin. This course will provide an overview of select topics in equilibrium and non-equilibrium statistical mechanics. The course will introduce the basic postulates of classical and quantum equilibrium statistical mechanics, explain the methodology of calculating observable properties, and discuss several applications in diverse fields. The second part of the course will introduce the methodology of non-equilibrium processes and discussing important theorems and results in the linear response regime. Finally, a brief discussion of systems far from equilibrium will be presented. Select applications from condensed matter physics, chemistry, materials science, biology, astrophysics, economics and meteorology will be used to illustrate the fundamental principles.

Spring
1 Course Unit

MSE 5760 Machine Learning and Its Applications in Materials Science
Beginning with a review of linear algebra, probability theory, Bayesian statistics, Statistical Mechanics notions of entropy, information and optimization tools, some of the major advances in deep learning over the past twenty years will be discussed in detail. These include the multilayer perceptron (MLP), convolutional neural network (CNN), recurrent neural networks (RNN), autoencoders, graph networks, Boltzmann machine, variational autoencoders and deep generative adversarial models. In conjunction with the weekly lectures, a set of labs will be offered (roughly 2 per month) that will demonstrate the workings of important models using data derived from Materials Science research papers and MSE databases. The labs will also complement the contents of the homework sets for each fortnight. The lab sessions will implement the following models: linear regression, logistic regression, random forest model, single layer and multi-layer perceptron, CNN, RNN, graph neural networks and general adversarial networks. A variety of data sets representing material properties for varied applications will be used in the labs. The homework sets will use additional data sets. For students with no prior coding skills, a preliminary Python Lab 0 tutorial will be held in the first week of classes. Students may obtain assistance from the TAs for coding logic and help with homework during office hours. A written project is due in the final week of classes. Students will submit a 1-2 page synopsis of a published paper from a peer-reviewed journal that uses ML and DL methods. This report will be graded on the student's ability to summarize the paper's ideas, results and discussions for future work.

Summer Term
Prerequisite: MSE 2500 AND MATH 2400
1 Course Unit
MSE 5800 Introduction to Polymers
Polymer is one of the most widely used materials in our daily life, from the rubber tires to clothes, from photoresists in chip manufacturing to flexible electronics and smart sensors, from Scotch tapes to artificial tissues. This course teaches entry-level knowledge in polymer synthesis, characterization, thermodynamics, and structure-property relationship. Emphasis will be on understanding both chemical and physical aspects of polymers, polymer chain size and molecular interactions that drive the microscopic and macroscopic structures and the resulting physical properties. We will discuss how to apply polymer designs to advance nanotechnology, electronics, energy and biotechnology. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, shape memory polymers, hydrogels, and elastomeric deformation and applications.
Fall
Also Offered As: CBE 5100
1 Course Unit

MSE 5850 Materials for Bioelectronics
Bioelectronics is an emerging field that involves the use of engineering principles to create devices for applications in biology, medicine, and health sciences. One of the most important aspects of bioelectronics is the development of communication interfaces between biological materials (cells, tissues and organs) and manmade devices for optimal energy delivery and signal transduction efficacies. Progress in materials science and engineering is bringing revolutionary advances to the biointerface design and has unlocked unprecedented applications in various biomedical fields. This course focuses on the materials science and engineering concepts that are of relevance to bioelectronics. It also introduces basic biochemical, biophysical and physiological principles that are required to understand the design and application of bioelectronic devices.
Spring
Also Offered As: BE 5850
1 Course Unit

MSE 5970 Master's Thesis Research
For students working on an advanced research leading to the completion of a Master's thesis.
Fall or Spring
1-2 Course Units

MSE 5990 Master's Indep Study
Fall or Spring
1-4 Course Units

MSE 6100 Transmission Electron Microscopy
Theory and application of transmission electron microscopy methods to problems in materials science and engineering, condensed matter physics, soft matter, polymeric materials, inorganic chemistry and chemical engineering. The principles of microscope operation, electron scattering, image formation and spectroscopy will be described, with an emphasis on both theory and experiment. With laboratory.
Not Offered Every Year
1 Course Unit

MSE 6110 Advanced Synchrotron and Electron Characterization of Materials
This course provides an overview of the latest techniques for the characterization of materials with synchrotron x-rays and electron microscopy. Emphasis is placed on understanding of x-ray and electron interactions with matter, and how these may be exploited to characterize structure and chemistry at the nanometer to atomic scale. Prerequisite: Graduate students: Background in solid-state physics, crystallography and quantum mechanics is strongly recommended. Undergraduates: MSE 570.
1 Course Unit

MSE 6400 Optical Materials
This course discusses the optical properties of modern materials engineered for specific functionality and covers exciting new developments being made in this rapidly evolving field. Emphasis is placed on how modern nanotechnology reshapes the light-matter interaction and delivers novel optical properties that are not available in nature.
Spring
1 Course Unit

MSE 6500 Mechanics of Soft and Biomaterials
This course is aimed to expose the students to a variety of topics in mechanic materials via discussion of “classic” problems that have had the widest impact long period of time and have been applied to analyze the mechanical behavior a variety of biological and engineering materials.
Not Offered Every Year
Also Offered As: MEAM 6500
1 Course Unit

MSE 6990 MSE Seminar
The seminar course has been established so that students receive encouragement to attend and recognition for attending departmental seminars. Students registered for this course are required to attend weekly departmental seminars given by distinguished speakers from around the world. To obtain a satisfactory (S) grade, the student must attend more than 85% of such seminars. No unexcused absence allowed. Participation in the seminar course will be documented and recorded on the transcript. In order to obtain their degrees, doctoral students will be required to accumulate seven seminar courses and MS candidates two courses. Under special circumstances, i.e., in case of conflict with another course, the student may petition to the Graduate Group Chair to waive the seminar requirement for a particular semester.
Fall, Spring, and Summer Terms
0 Course Units

MSE 7900 Selected Topics in Materials Science and Engineering
Students should check department office for special topics.

Mathematical Sciences (MTHS)
The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).
MTHS 1000 Mathematical Foundations for Data Analytics
This course provides an introduction to key topics that form the foundation for further study in mathematics, data analytics, and statistics. Topics covered include finite math, logic, algebra (including basics of matrix algebra) functions, probability, and a conceptual introduction to calculus. Through this course, students will develop both an understanding of the concept the ability to apply the concepts and techniques to analysis and problem-solving. Course format includes readings, lectures and demonstrations, and extensive hands-on practice with instructor and peer feedback.
1 Course Unit

MTHS 1010 Maths All Around
1 Course Unit

MTHS 2000 Mathematics All Around You
This course covers topics in logic, sets, probability, history and philosophy of mathematics, graph theory, game theory, geometry, and their relevance to contemporary science and society. Students can register for MTHS 2000 without completing MTHS 1000.
1 Course Unit

MTHS 2200 Introduction to Applied Statistics
In this introductory statistics course students will be familiarized with the fundamental techniques for using sample data to make inferences about populations. We will begin with developing the necessary probability framework and statistical intuition before moving to the specific procedures for statistical inferences from large and small samples, single and multiple linear regressions, and measuring correlation. We will examine real-world examples that illustrate the concepts and help students see how they apply to life and work situations.
1 Course Unit

MTHS 3000 Linear Algebra
Understanding concepts from Linear Algebra is essential to serious study of many disciplines, ranging from physics and chemistry to economics and computer and data science, not to mention further study of higher mathematics. In this course, we'll be looking at both computational and theoretical aspects of linear algebra, as well as at a number of applications. The "basic stuff" of linear algebra comprises vector spaces and the linear mappings between them. These mappings are represented by matrices, and a lot of linear algebra is concerned with reducing the enormous amount of data contained in a matrix to a few salient numbers and properties. There aren't many prerequisites for the course other than basic high-school algebra and a willingness to stretch your mind around some awesome abstract concepts -- higher (than 3)-dimensional spaces, deducing things abstractly from basic principles, and learning how to interpret and exploit the deductions. It will be an exciting and fast-paced journey through topics such as Gaussian elimination, linear systems, linear transformations and their matrix representations, eigenvalues and eigenvectors, the singular-value decomposition and principal component analysis.

1 Course Unit

MATH 1080 Mathematics of change, Part II
Multivariate calculus; optimization; multivariate probability densities. Introduction to linear algebra; introduction to differential equations. Mathematical modeling and applications to the social, economic and information sciences.
1 Course Unit

MATH 1100 Calculus for Wharton Students
Differential calculus, integral calculus, series, differential equations and elements of multivariable calculus, with an emphasis on applications.
Fall or Spring
Mutually Exclusive: MATH 1400
1 Course Unit

MATH 1234 Community Algebra Initiative
Community Algebra Initiative
Fall or Spring
1 Course Unit

MATH 1248 Community Math Teaching Project
This course allows Penn students to teach a series of hands-on activities to students in math classes at University City High School. The semester starts with an introduction to successful approaches for teaching math in urban high schools. The rest of the semester will be devoted to a series of weekly hands-on activities designed to teach fundamental aspects of geometry. The first class meeting of each week, Penn faculty teach Penn students the relevant mathematical background and techniques for a hands-on activity. During the second session of each week, Penn students will teach the hands-on activity to a small group of UCHS students. The Penn students will also have an opportunity to develop their own activity and to implement it with the UCHS students.
Not Offered Every Year
1 Course Unit
MATH 1400 Calculus, Part I
Brief review of High School calculus, applications of integrals, transcendental functions, methods of integration, infinite series, Taylor’s theorem, and first order ordinary differential equations. Use of symbolic manipulation and graphics software in calculus.
Fall or Spring
Mutually Exclusive: MATH 1100
1 Course Unit

MATH 1410 Calculus, Part II
Functions of several variables, vector-valued functions, partial derivatives and applications, double and triple integrals, conic sections, polar coordinates, vectors and vector calculus, first order ordinary differential equations. Applications to physical sciences. Use of symbolic manipulation and graphics software in calculus.
Fall or Spring
Mutually Exclusive: MATH 1510
Prerequisite: MATH 1400
1 Course Unit

MATH 1510 Calculus, Part II with Probability and Matrices
Functions of several variables, partial derivatives, multiple integrals, differential equations; introduction to linear algebra and matrices with applications to linear programming and Markov processes. Elements of probability and statistics. Applications to social and biological sciences. Use of symbolic manipulation and graphics software in calculus.
Fall or Spring
Mutually Exclusive: MATH 1410, MATH 1610
Prerequisite: MATH 1400
1 Course Unit

MATH 1610 Honors Calculus
Students who are interested in math or science might also want to consider a more challenging Honors version of Calculus II and III, Math 1610 and Math 2600 (the analogues of Math 1410 and Math 2400, respectively). These courses will cover essentially the same material as 1610 and 2400, but more in depth and involve discussion of the underlying theory as well as computations.
Fall or Spring
Mutually Exclusive: MATH 1510
Prerequisite: MATH 1410
1 Course Unit

MATH 1700 Ideas in Mathematics
Topics from among the following: logic, sets, calculus, probability, history and philosophy of mathematics, game theory, geometry, and their relevance to contemporary science and society.
Fall or Spring
1 Course Unit

MATH 2020 Proving Things: Analysis
This course focuses on the creative side of mathematics, with an emphasis on discovery, reasoning, proofs and effective communication, while at the same time studying real and complex numbers, sequences, series, continuity, differentiability and integrability. Small class sizes permit an informal, discussion-type atmosphere, and often the entire class works together on a given problem. Homework is intended to be thought-provoking, rather than skill-sharpening.
Fall or Spring
Prerequisite: MATH 1400 OR MATH 1410 OR MATH 2400
1 Course Unit

MATH 2030 Proving things: Algebra
This course focuses on the creative side of mathematics, with an emphasis on discovery, reasoning, proofs and effective communication, while at the same time studying arithmetic, algebra, linear algebra, groups, rings and fields. Small class sizes permit an informal, discussion-type atmosphere, and often the entire class works together on a given problem. Homework is intended to be thought-provoking, rather than skill-sharpening.
Fall or Spring
Prerequisite: MATH 1400 OR MATH 1410 OR MATH 2400
1 Course Unit

MATH 2100 Mathematics in the Age of Information
This course counts as a regular elective for both the Mathematics Major and Minor. This is a course about mathematical reasoning and the media. Embedded in many stories one finds in the media are mathematical questions as well as implicit mathematical models for how the world behaves. We will discuss ways to recognize such questions and models, and how to think about them from a mathematical perspective. A key part of the course will be about what constitutes a mathematical proof, and what passes for proof in various media contexts. The course will cover a variety of topics in logic, probability and statistics as well as how these subjects can be used and abused.
Fall or Spring
Prerequisite: MATH 1410 OR MATH 1510
1 Course Unit

MATH 2400 Calculus, Part III
Linear algebra: vectors, matrices, systems of linear equations, vector spaces, subspaces, spans, bases, and dimension, eigenvalues, and eigenvectors, matrix exponentials. Ordinary differential equations: higher-order homogeneous and inhomogeneous ODEs and linear systems of ODEs, phase plane analysis, non-linear systems.
Fall or Spring
Prerequisite: MATH 1410
1 Course Unit

MATH 2410 Calculus, Part IV
Partial differential equations and their solutions, including solutions of the wave, heat and Laplace equations, and Sturm-Liouville problems. Introduction to Fourier series and Fourier transforms. Computation of solutions, modeling using PDE’s, geometric intuition, and qualitative understanding of the evolution of systems according to the type of partial differential operator.
Fall or Spring
Prerequisite: MATH 2400
1 Course Unit

MATH 2600 Honors Calculus, Part II
This is an honors version of Math 2400 which explores the same topics but with greater mathematical rigor.
Not Offered Every Year
Prerequisite: MATH 1410
1 Course Unit
MATH 2800 Entropy Math Evolution
The goal of this is to explore a new theory of evolution developed by L. Demetrius at MIT based on the second law of thermodynamics. The essential idea is that life exists because if increases overall entropy quicker than other processes. The course will include an introduction to thermodynamics as well as to the information theory definition of entropy. Eventually I want to apply this to other systems. For instance, I think the theory explains why political candidates who create chaos, tweet and require more bits of information to describe each day are favored by the second law. Demetrius makes a distinction between robust high entropy environments and precarious low entropy environments which is a very interesting in many different systems.

Fall
1 Course Unit

MATH 2900 Undergraduate Mathematics Research Course
This is a project-oriented mathematics research course that teaches students to solve real-world problems by constructing and analyzing mathematical models. Typically the problems considered will come from mathematics, chemistry, biology, and materials science but sometimes they will also come from economics, finance, and social sciences. The research problems in the course vary from year to year.
1 Course Unit

MATH 2989 Study Abroad
Free elective for undergraduate mathematics courses not equivalent to existing courses satisfying math major requirements.
1 Course Unit

MATH 2990 Undergraduate Research in Mathematics
Research conducted with the supervision of a faculty member. Must be approved by the Undergraduate Chair. May be repeated for credit.
Spring
1 Course Unit

MATH 2999 Transfer and Credit Away
Free elective for undergraduate mathematics courses not equivalent to existing courses satisfying math major requirements.
1 Course Unit

MATH 3120 Linear Algebra
Linear transformations, Gauss Jordan elimination, eigenvalues and eigenvectors, theory and applications. Mathematics majors are advised that MATH 3120 cannot be taken to satisfy the major requirements.
Not Offered Every Year
Prerequisite: MATH 2400
1 Course Unit

MATH 3130 Computational Linear Algebra
Many important problems in a wide range of disciplines within computer science and throughout science are solved using techniques from linear algebra. This course will introduce students to some of the most widely used algorithms and illustrate how they are actually used. Some specific topics: the solution of systems of linear equations by Gaussian elimination, dimension of a linear space, inner product, cross product, change of basis, affine and rigid motions, eigenvalues and eigenvectors, diagonalization of both symmetric and non-symmetric matrices, quadratic polynomials, and least squares optimization. Applications will include the use of matrix computations to computer graphics, use of the discrete Fourier transform and related techniques in digital signal processing, the analysis of systems of linear differential equations, and singular value decompositions with application to a principal component analysis. The ideas and tools provided by this course will be useful to students who intend to tackle higher level courses in digital signal processing, computer vision, robotics, and computer graphics.
Mutually Exclusive: MATH 5130
Prerequisite: MATH 2400
1 Course Unit

MATH 3140 Advanced Linear Algebra
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Cononical forms; Scalar products: Euclidean, unitary and symplectic spaces; Orthogonal and Unitary operators; Tensor products and polylinear maps; Symmetric and skew-symmetric tensors and exterior algebra.
Mutually Exclusive: AMCS 5141, MATH 5140
Prerequisite: MATH 2400
1 Course Unit

MATH 3200 Computer Methods in Mathematical Science I
Students will use symbolic manipulation software and write programs to solve problems in numerical quadrature, equation-solving, linear algebra and differential equations. Theoretical and computational aspects of the methods will be discussed along with error analysis and a critical comparison of methods.
Fall
Prerequisite: MATH 2400
1 Course Unit

MATH 3400 Discrete Mathematics I
Topics will be drawn from some subjects in combinatorial analysis with applications to many other branches of math and science: graphs and networks, generating functions, permutations, posets, asymptotics.
Not Offered Every Year
Also Offered As: LGIC 2100
Prerequisite: MATH 1410 OR MATH 1510
1 Course Unit

MATH 3410 Discrete Mathematics II
Topics will be drawn from some subjects useful in the analysis of information and computation: logic, set theory, theory of computation, number theory, probability, and basic cryptography.
Also Offered As: LGIC 2200
Prerequisite: MATH 3400
1 Course Unit

MATH 3500 Number Theory
Congruences, Diophantine equations, continued fractions, nonlinear congruences, and quadratic residues.
Not Offered Every Year
1 Course Unit
MATH 3600 Advanced Calculus
Syllabus for MATH 360-361: a study of the foundations of the differential and integral calculus, including the real numbers and elementary topology, continuous and differentiable functions, uniform convergence of series of functions, and inverse and implicit function theorems. MATH 508-509 is a masters level version of this course.
Fall or Spring
Prerequisite: MATH 2400
1 Course Unit

MATH 3610 Advanced Calculus
Continuation of MATH 3600.
Fall or Spring
Prerequisite: MATH 3600
1 Course Unit

MATH 3700 Algebra
Syllabus for MATH 370-371: an introduction to the basic concepts of modern algebra. Linear algebra, eigenvalues and eigenvectors of matrices, groups, rings and fields. MATH 502-503 is a masters level version of this course.
Fall or Spring
Prerequisite: MATH 2400 OR MATH 2600
1 Course Unit

MATH 3710 Algebra
Continuation of MATH 3700.
Fall or Spring
Prerequisite: MATH 3700 OR MATH 5020
1 Course Unit

MATH 4100 Complex Analysis
Complex numbers, DeMoivre's theorem, complex valued functions of a complex variable, the derivative, analytic functions, the Cauchy-Riemann equations, complex integration, Cauchy's integral theorem, residues, computation of definite integrals by residues, and elementary conformal mapping.
Fall or Spring
Mutually Exclusive: AMCS 5100
Prerequisite: MATH 2400
1 Course Unit

MATH 4200 Ordinary Differential Equations
After a rapid review of the basic techniques for solving equations, the course will discuss one or more of the following topics: stability of linear and nonlinear systems, boundary value problems and orthogonal functions, numerical techniques, Laplace transform methods.
Fall or Spring
Mutually Exclusive: AMCS 5200
Prerequisite: MATH 2400
1 Course Unit

MATH 4250 Partial Differential Equations
Method of separation of variables will be applied to solve the wave, heat, and Laplace equations. In addition, one or more of the following topics will be covered: qualitative properties of solutions of various equations (characteristics, maximum principles, uniqueness theorems), Laplace and Fourier transform methods, and approximation techniques.
Fall
Prerequisite: MATH 2400
1 Course Unit

MATH 4320 Game Theory.
A mathematical approach to game theory, with an emphasis on examples of actual games. Topics will include mathematical models of games, combinatorial games, two person (zero sum and general sum) games, non-cooperating games and equilibria.
Fall or Spring
Prerequisite: MATH 2400
1 Course Unit

MATH 4600 Topology
Point set topology: metric spaces and topological spaces, compactness, connectedness, continuity, extension theorems, separation axioms, quotient spaces, topologies on function spaces, Tychonoff theorem. Fundamental groups and covering spaces, and related topics.
Not Offered Every Year
Prerequisite: MATH 2400 AND MATH 2410
1 Course Unit

MATH 4650 Differential Geometry
Differential geometry of curves in the plane and in 3-space; n gauge theories Surfaces in 3-space; The geometry of the Gauss map; ons. The language of Intrinsic geometry of surfaces; Geodesics; Moving frames; of vector bundles, The Gauss-Bonnet Theorem; Assorted additional topics.
Not Offered Every Year
Mutually Exclusive: MATH 5010
Prerequisite: (MATH 2400 OR MATH 2600) AND (MATH 3140 OR MATH 5140)
1 Course Unit

MATH 4800 Topics in Modern Math
Mathematics 4800 will open with a review of the basics of real analysis (brief or extended background requires). The review will include: introduction of the real numbers through Dedekind cuts, continuity of real-valued functions on the real line; Cantor nested-interval principle, basic results for continuous functions, Maximum and Intermediate Value theorems, Heine-Borel Theorem, Uniform Continuity on closed intervals; metric spaces, convergence of sequences, Cauchy sequences, completeness, more general uniform continuity and intermediate value theorems; general topology, separation, compactness, product spaces, Tychonoff's Theorem. Special topics in analysis: Weierstrass Polynomial Approximation Theorem, Bernstein polynomials and simultaneous approxfunctions and derivatives, topics from divergent series, summation methods; r measure theory, the Lebesgue integral, Lp spaces, Holder, Minkowski, and and Cauchy-Schwarz inequalities; basics of Functional Analysis, normed spaces, Banach spaces and Hilbert space, with examples (Lp spaces, continuous-functions spaces), Banach spaces and spectral theory, groups and Fourier transforms, Tauberian theorems; approximation theory, again, through the prism of functional analysis; extension of the polynomial approximation theorem (Stone-Weierstrass theorem), Muntz approximation theorem (by polynomials with preassigned powers), compact operators, the Spectral theorem, Stone's theorem (representations of the additive group of real numbers); Peter-Weyl theory (representations of compact groups). A selection from these topics as time and class preparation allow.
Not Offered Every Year
1 Course Unit

MATH 4990 Supervised Study
Study under the direction of a faculty member. Intended for a limited number of mathematics majors.
Fall or Spring
0-1 Course Unit
MATH 5000 Topology
Point set topology; metric spaces and topological spaces, compactness, connectedness, continuity, extension theorems, separation axioms, quotient spaces, topologies on function spaces, Tychonoff theorem. Fundamental groups and covering spaces, and related topics.
Not Offered Every Year
Prerequisite: MATH 2400
1 Course Unit

MATH 5010 Differential Geometry
The course moves from a study of extrinsic geometry (curves and surfaces in n-space) to the intrinsic geometry of manifolds. After a review of vector calculus and a section on tensor algebra, we study manifolds and their intrinsic geometry, including metrics, connections, geodesics, and the Riemann curvature tensor. Topics include Eulerian curvature and Euler's theorems, the Gauss map and first/second fundamental forms, the Theorema Egregium, minimal surfaces in n-space; other topics as time permits.
Not Offered Every Year
Mutually Exclusive: MATH 4650
Prerequisite: (MATH 2400 OR MATH 2600) AND (MATH 3140 OR MATH 5140)
1 Course Unit

MATH 5020 Abstract Algebra
An introduction to groups, rings, fields and other abstract algebraic systems, elementary Galois Theory, and linear algebra – a more theoretical course than Math 3700.
Fall
Prerequisite: (MATH 2400 OR MATH 2600) AND (MATH 3140 OR MATH 5140)
1 Course Unit

MATH 5030 Abstract Algebra
Continuation of Math 5020.
Spring
Prerequisite: MATH 5020
1 Course Unit

MATH 5040 Graduate Proseminar in Mathematics
This course focuses on problems from Algebra (especially linear algebra and multilinear algebra) and Analysis (especially multivariable calculus through vector fields, multiple integrals and Stokes theorem). The material is presented through student solving of problems. In addition there will be a selection of advanced topics which will be accessible via this material.
Fall
1 Course Unit

MATH 5050 Graduate Proseminar in Mathematics
This course focuses on problems from Algebra (especially linear algebra and multilinear algebra) and Analysis (especially multivariable calculus through vector fields, multiple integrals and Stokes theorem). The material is presented through student solving of problems. In addition there will be a selection of advanced topics which will be accessible via this material.
Spring
1 Course Unit

MATH 5080 Advanced Analysis
Construction of real numbers, the topology of the real line and the foundations of single variable calculus. Notions of convergence for sequences of functions. Basic approximation theorems for continuous functions and rigorous treatment of elementary transcendental functions. The course is intended to teach students how to read and construct rigorous formal proofs. A more theoretical course than Math 3600.
Fall
Prerequisite: MATH 2400 AND MATH 2410
1 Course Unit

MATH 5090 Advanced Analysis
Spring
Prerequisite: MATH 5080
1 Course Unit

MATH 5120 Advanced Linear Algebra
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Cononical forms; Scalar products: Euclidean, unitary and symplectic spaces; Orthogonal and unitary operators; Tensor products and polylinear maps; Symmetric and skew-symmetric tensors and exterior algebra.
1 Course Unit

MATH 5130 Computational Linear Algebra
A number of important and interesting problems in a wide range of disciplines within computer science are solved by recourse to techniques from linear algebra. The goal of this course will be to introduce students to some of the most important and widely used algorithms in matrix computation and to illustrate how they are actually used in various settings. Motivating applications will include: the solution of systems of linear equations, applications matrix computations to modeling geometric transformations in graphics, applications of the Discrete Fourier Transform and related techniques in digital signal processing, the solution of linear least squares optimization problems and the analysis of systems of linear differential equations. The course will cover the theoretical underpinnings of these problems and the numerical algorithms that are used to perform important matrix computations such as Gaussian Elimination, LU Decomposition and Singular Value Decomposition.
Mutually Exclusive: MATH 3130
Prerequisite: MATH 2400
1 Course Unit

MATH 5140 Advanced Linear Algebra
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Cononical forms; Scalar products: Euclidean, unitary and symplectic spaces; Orthogonal and Unitary operators; Tensor products and polylinear maps; Symmetric and skew-symmetric tensors and exterior algebra.
Also Offered As: AMCS 5141
Mutually Exclusive: MATH 3140
Prerequisite: MATH 2400
1 Course Unit
MATH 5200 Selections from Algebra
Informal introduction to such subjects as homological algebra, number theory, and algebraic geometry.
Not Offered Every Year
Prerequisite: MATH 5020
1 Course Unit

MATH 5300 Mathematics of Finance
This course presents the basic mathematical tools to model financial markets and to make calculations about financial products, especially financial derivatives. Mathematical topics covered: stochastic processes, partial differential equations and their relationship. No background in finance is assumed.
Not Offered Every Year
Prerequisite: MATH 2400 OR MATH 2600 STAT 4300
1 Course Unit

MATH 5400 Selections from Classical and Functional Analysis
Informal introduction to such subjects as compact operators and Fredholm theory, Banach algebras, harmonic analysis, differential equations, nonlinear functional analysis, and Riemann surfaces.
Not Offered Every Year
1 Course Unit

MATH 5460 Advanced Applied Probability
The required background is (1) enough math background to understand proof techniques in real analysis (closed sets, uniform coverage, fourier series, etc.) and (2) some exposure to probability theory at an intuitive level (a course at the level of Ross's probability text or some exposure to probability in a statistics class).
Fall
Also Offered As: AMCS 5461
1 Course Unit

MATH 5600 Selections from Geometry and Topology
Informal introduction to such subjects as homology and homotopy theory, classical differential geometry, dynamical systems, and knot theory.
Not Offered Every Year
Prerequisite: MATH 5000
Corequisite: MATH 5000
1 Course Unit

MATH 5610 Selections from Geometry and Topology
Informal introduction to such subjects as homology and homotopy theory, classical differential geometry, dynamical systems, and knot theory.
Not Offered Every Year
Prerequisite: MATH 5000
Corequisite: MATH 5000
1 Course Unit

MATH 5700 Logic and Computability 1
The course focuses on topics drawn from the central areas of mathematical logic: model theory, proof theory, set theory, and computability theory.
Not Offered Every Year
Also Offered As: PHIL 6721
Prerequisite: MATH 3710 OR MATH 5030
1 Course Unit

MATH 5710 Logic and Computability 2
A continuation of PHIL 6721.
Not Offered Every Year
Also Offered As: PHIL 6722
Prerequisite: MATH 5700
1 Course Unit

MATH 5800 Combinatorial Analysis
Standard tools of enumerative combinatorics including partitions and compositions of integers, set partitions, generating functions, permutations with restricted positions, inclusion-exclusion, partially ordered sets. Permission of the instructor required to enroll.
Not Offered Every Year
1 Course Unit

MATH 5810 Topics in Combinatorial Theory
Variable topics connected to current research in combinatorial theory. Recent topics include algebraic combinatorics and symmetric functions, analytic combinatorics and discrete probability.
Not Offered Every Year
Prerequisite: MATH 5800
1 Course Unit

MATH 5840 The Mathematics of Medical Imaging and Measurement
The last several decades have seen major revolutions in both medical and non-medical and imaging technologies. Underlying all of these advances are sophisticated mathematical tools to model the measurement process and reconstruct images. This course begins with an introduction of the mathematical models and then proceeds to discuss the integral transforms that underlie these models: the Fourier transform, the Radon transform and the Laplace transform. We discuss how each of these transforms is inverted, both in theory and in practice. Along the way we study interpolation, sampling, approximation theory, filtering and noise analysis. This course assumes a thorough knowledge of linear algebra and a knowledge of analysis at the undergraduate level (MATH 3140 and MATH 3600 and MATH 3610, or MATH 5080 and MATH 5090).
Not Offered Every Year
Also Offered As: AMCS 5840, BE 5840
Prerequisite: MATH 1410 AND (MATH 3600 OR MATH 5080) AND (MATH 3610 OR MATH 5090)
1 Course Unit

MATH 5861 Mathematical Modeling in Biology
This course will cover various mathematical models and tools that are used to study modern biological problems. Mathematical models may be drawn from cell biology, physiology, population genetics, or ecology. Tools in dynamical systems or stochastic processes will be introduced as necessary. No prior knowledge of biology is needed to take this course, but some familiarity with differential equations and probability will be assumed.
Fall
Also Offered As: BIOL 5860
1 Course Unit

MATH 5940 Mathematical Methods of Physics
A discussion of those concepts and techniques of classical analysis employed in physical theories. Topics include complex analysis, Fourier series and transforms, ordinary and partial equations, Hilbert spaces, among others.
Fall
Also Offered As: PHYS 5500
1 Course Unit
MATH 5999 Independent Study
Study under the direction of a faculty member. Hours to be arranged.
Fall or Spring
1-4 Course Units

MATH 6000 Topology and Geometric Analysis
Fall
Prerequisite: MATH 5000 AND MATH 5010
1 Course Unit

MATH 6010 Topology and Geometric Analysis
Covering spaces and fundamental groups, van Kampen's theorem and classification of surfaces. Basics of homology and cohomology, singular and cellular; isomorphism with de Rham cohomology. Brouwer fixed point theorem, CW complexes, cup and cap products, Poincare duality, Kunneth and universal coefficient theorems, Alexander duality, Lefschetz fixed point theorem.
Spring
Prerequisite: MATH 6000
1 Course Unit

MATH 6020 Algebra
Fall
Prerequisite: (MATH 3700 AND MATH 3710) OR (MATH 5020 AND MATH 5030)
1 Course Unit

MATH 6030 Algebra
Continuation of Math 6020.
Spring
Prerequisite: MATH 6020
1 Course Unit

MATH 6040 First Year Seminar in Mathematics
This is a seminar for first year Mathematics graduate students, supervised by faculty. Students give talks on topics from all areas of mathematics at a level appropriate for first year graduate students. Attendance and preparation will be expected by all participants, and learning how to present mathematics effectively is an important part of the seminar.
Fall
1 Course Unit

MATH 6080 Analysis
Complex analysis: analyticity, Cauchy theory, meromorphic functions, isolated singularities, analytic continuation, Runge's theorem, d-bar equation, Mittag-Leffler theorem, harmonic and sub-harmonic functions, Riemann mapping theorem, Fourier transform from the analytic perspective. Introduction to real analysis: Weierstrass approximation, Lebesgue measure in Euclidean spaces, Borel measures and convergence theorems, C0 and the Riesz-Markov theorem, Lp-spaces, Fubini Theorem.
Fall or Spring
Also Offered As: AMCS 6081
Prerequisite: MATH 5080 AND MATH 5090
1 Course Unit

MATH 6090 Analysis
Fall or Spring
Also Offered As: AMCS 6091
Prerequisite: MATH 6080
1 Course Unit

MATH 6100 Functional Analysis
Prerequisite: MATH 6080 OR MATH 6090
1 Course Unit

MATH 6120 Selections from Algebra
Informal introduction to such subjects as homological algebra, number theory, and algebraic geometry.
Not Offered Every Year
Prerequisite: MATH 6000 AND MATH 6020
Corequisites: MATH 6000, MATH 6020
1 Course Unit

MATH 6180 Algebraic Topology, Part I
Fall
Prerequisite: MATH 6000 AND MATH 6010
1 Course Unit

MATH 6190 Algebraic Topology, Part I
Rational homotopy theory, cobordism, K-theory, Morse theory and the h-cobordism theorem. Surgery theory.
Spring
Prerequisite: MATH 6180
1 Course Unit
MATH 6200 Algebraic Number Theory
Dedekind domains, local fields, basic ramification theory, product formula, Dirichlet unit theorem, finiteness of class numbers, Hensel's Lemma, quadratic and cyclotomic fields, quadratic reciprocity, abelian extensions, zeta and L-functions, functional equations, introduction to local and global class field theory. Other topics may include: Diophantine equations, continued fractions, approximation of irrational numbers by rationals, Poisson summation, Hasse principle for binary quadratic forms, modular functions and forms, theta functions.
Not Offered Every Year
Prerequisite: MATH 6020 AND MATH 6030
1 Course Unit

MATH 6210 Algebraic Number Theory
Continuation of Math 6200.
Not Offered Every Year
Prerequisite: MATH 6200
1 Course Unit

MATH 6220 Complex Algebraic Geometry
Algebraic geometry over the complex numbers, using ideas from topology, complex variable theory, and differential geometry. Topics include: Complex algebraic varieties, cohomology theories, line bundles, vanishing theorems, Riemann surfaces, Abel's theorem, linear systems, complex tori and abelian varieties, Jacobian varieties, currents, algebraic surfaces, adjunction formula, rational surfaces, residues.
Not Offered Every Year
Prerequisite: MATH 6020 AND MATH 6030 AND MATH 6090
1 Course Unit

MATH 6230 Complex Algebraic Geometry
Continuation of Math 6220.
Not Offered Every Year
Prerequisite: MATH 6220
1 Course Unit

MATH 6240 Algebraic Geometry
Algebraic geometry over algebraically closed fields, using ideas from commutative algebra. Topics include: Affine and projective algebraic varieties, morphisms and rational maps, singularities and blowing up, rings of functions, algebraic curves, Riemann Roch theorem, elliptic curves, Jacobian varieties, sheaves, schemes, divisors, line bundles, cohomology of varieties, classification of surfaces.
Not Offered Every Year
Prerequisite: MATH 6020 AND MATH 6030
1 Course Unit

MATH 6250 Algebraic Geometry
Continuation of Math 6240.
Not Offered Every Year
Prerequisite: MATH 6240
1 Course Unit

MATH 6260 Commutative Algebra
Topics in commutative algebra taken from the literature. Material will vary from year to year depending upon the instructor's interests.
Not Offered Every Year
Prerequisite: MATH 6020 AND MATH 6030
1 Course Unit

MATH 6280 Homological Algebra
Complexes and exact sequences, homology, categories, derived functors (especially Ext and Tor). Homology and cohomology arising from complexes in algebra and geometry, e.g. simplicial and singular theories, Cech cohomology, de Rham cohomology, group cohomology, Hochschild cohomology. Projective resolutions, cohomological dimension, derived categories, spectral sequences. Other topics may include: Lie algebra cohomology, Galois and etale cohomology, cyclic cohomology, l-adic cohomology. Algebraic deformation theory, quantum groups, Brauer groups, descent theory.
Not Offered Every Year
Prerequisite: MATH 6020 AND MATH 6030
1 Course Unit

MATH 6290 Homological Algebra
Continuation of Math 6280.
Not Offered Every Year
Prerequisite: MATH 6280
1 Course Unit

MATH 6340 Arithmetic Geometry
Arithmetic Geometry
1 Course Unit

MATH 6420 Topics in Partial Differential Equations
Problems in differential geometry, as well as those in physics and engineering, inevitably involve partial derivatives. This course will be an introduction to these problems and techniques. We will use P.D.E. as a tool. Some of the applications will be small, some large. The proof of the Hodge Theorem will be a small application. Discussion of the Yamabe problem and Ricci flow (used to prove the Poincare Conjecture) will be larger.
Prerequisite: MATH 6080 AND MATH 6090
1 Course Unit

MATH 6440 Partial Differential Equations
Subject matter varies from year to year. Some topics are: the classical theory of the wave and Laplace equations, general hyperbolic and elliptic equations, theory of equations with constant coefficients, pseudo-differential operators, and non-linear problems. Sobolev spaces and the theory of distributions will be developed as needed.
Not Offered Every Year
Prerequisite: MATH 6080 AND MATH 6090
1 Course Unit

MATH 6450 Partial Differential Equations
Subject matter varies from year to year. Some topics are: the classical theory of the wave and Laplace equations, general hyperbolic and elliptic equations, theory of equations with constant coefficients, pseudo-differential operators, and non-linear problems. Sobolev spaces and the theory of distributions will be developed as needed.
Not Offered Every Year
Prerequisite: MATH 6080 AND MATH 6090
1 Course Unit

MATH 6480 Probability Theory
Measure theoretic foundations, laws of large numbers, large deviations, distributional limit theorems, Poisson processes, random walks, stopping times.
Fall
Also Offered As: AMCS 6481, STAT 9300
Prerequisite: STAT 4300 OR STAT 5100 OR MATH 6080
1 Course Unit
MATH 6490 Stochastic Processes
Continuation of MATH 6480/STAT 9300, the 2nd part of Probability Theory for PhD students in the math or statistics department. The main topics include Brownian motion, martingales, Ito’s formula, and their applications to random walk and PDE.
Not Offered Every Year
Also Offered As: AMCS 6491, STAT 9310
1 Course Unit

MATH 6520 Operator Theory
Subject matter may include spectral theory of operators in Hilbert space, C*-algebras, von Neumann algebras.
Not Offered Every Year
1 Course Unit

MATH 6540 Lie Groups
Connection of Lie groups with Lie algebras, Lie subgroups, exponential map. Algebraic Lie groups, compact and complex Lie groups, solvable and nilpotent groups. Other topics may include relations with symplectic geometry, the orbit method, moment map, symplectic reduction, geometric quantization, Poisson-Lie and quantum groups.
Not Offered Every Year
Prerequisite: MATH 6000 AND MATH 6010 AND MATH 6020 AND MATH 6030
1 Course Unit

MATH 6550 Lie Groups
Continuation of Math 6540.
Not Offered Every Year
Prerequisite: MATH 6540
1 Course Unit

MATH 6560 Representation of Continuous Groups
Possible topics: harmonic analysis on locally compact abelian groups; almost periodic functions; direct integral decomposition theory, Types I, II and III: induced representations, representation theory of semisimple groups.
Not Offered Every Year
Prerequisite: MATH 6000 AND MATH 6010 AND MATH 6020 AND MATH 6030
1 Course Unit

MATH 6600 Differential Geometry
Riemannian metrics and connections, geodesics, completeness, Hopf-Rinow theorem, sectional curvature, Ricci curvature, scalar curvature, Jacobi fields, second fundamental form and Gauss equations, manifolds of constant curvature, first and second variation formulas, Bonnet-Myers theorem, comparison theorems, Morse index theorem, Hadamard theorem, Preissmann theorem, and further topics such as sphere theorems, critical points of distance functions, the soul theorem, Gromov-Hausdorff convergence.
Not Offered Every Year
Prerequisite: MATH 6000 AND 6010 AND 6020 AND 6030
1 Course Unit

MATH 6610 Differential Geometry
Continuation of Math 6600.
Not Offered Every Year
Prerequisite: MATH 6600
1 Course Unit

MATH 6710 Topics in Logic
Discusses advanced topics in logic.
Not Offered Every Year
Prerequisite: MATH 5700 AND MATH 5710
1 Course Unit

MATH 6770 Topics in Logic
This graduate course focuses on topics drawn from the central areas of mathematical logic: model theory, proof theory, set theory, and computability theory.
Not Offered Every Year
Also Offered As: PHIL 6720
1 Course Unit

MATH 6940 Mathematical Foundations of Theoretical Physics
Selected topics in mathematical physics, such as mathematical methods of classical mechanics, electrodynamics, relativity, quantum mechanics and quantum field theory.
Not Offered Every Year
1 Course Unit

MATH 6950 Mathematical Foundations of Theoretical Physics
Selected topics in mathematical physics, such as mathematical methods of classical mechanics, electrodynamics, relativity, quantum mechanics and quantum field theory.
Not Offered Every Year
1 Course Unit

MATH 6982 Representation of Continuous Groups
Possible topics: harmonic analysis on locally compact abelian groups; almost periodic functions; direct integral decomposition theory, Types I, II and III: induced representations, representation theory of semisimple groups.
Not Offered Every Year
1 Course Unit

MATH 7020 Topics in Algebra
Topics from the literature. The specific subjects will vary from year to year.
Not Offered Every Year
1 Course Unit

MATH 7200 Advanced Number Theory
Ramification theory, adeles and ideles, Tate's thesis, group cohomology and Galois cohomology, class field theory in terms of ideles and cohomology, Lubin-Tate formal groups, Artin and Swan conductors, central simple algebras over local and global fields, general Hasse principles. Other topics may include the following: zero-dimensional Arakelov theory, Tate duality, introduction to arithmetic of elliptic curves, local and global epsilon factors in functional equations, p-adic L-functions and Iwasawa theory, modular forms and functions and modular curves.
Not Offered Every Year
Prerequisite: MATH 6200 AND MATH 6210
1 Course Unit

MATH 7210 Advanced Number Theory
Continuation of Math 7200.
Not Offered Every Year
Prerequisite: MATH 7200
1 Course Unit

MATH 7240 Topics in Algebraic Geometry
Topics from the literature. The specific subjects will vary from year to year.
Not Offered Every Year
Prerequisite: MATH 6220 AND (MATH 6230 OR MATH 6240) AND MATH 6250
1 Course Unit
MATH 7250 Topics in Algebraic Geometry
Topics from the literature. The specific subject will vary from year to year.
Not Offered Every Year
1 Course Unit

MATH 7300 Topics in Algebraic and Differential Topology
Topics from the literature. The specific subjects will vary from year to year.
Not Offered Every Year
Prerequisite: MATH 6180 AND MATH 6190
1 Course Unit

MATH 7310 Topics in Algebraic and Differential Topology
Topics from the literature. The specific subjects will vary from year to year.
Not Offered Every Year
Prerequisite: MATH 6180 AND MATH 6190
1 Course Unit

MATH 7480 Topics in Classical Analysis
Harmonic analysis in Euclidean space, Riemann surfaces, Discontinuous groups and harmonic analysis in hyperbolic space, Pseudodifferential operators and index theorems, Variational methods in non-linear PDE, Hyperbolic equations and conservation laws, Probability and stochastic processes, Geometric measure theory, Applications of analysis to problems in differential geometry. The specific subjects will vary from year to year.
Not Offered Every Year
Prerequisite: MATH 6080 AND MATH 6090
1 Course Unit

MATH 7520 Topics in Operator theory
Topics from the literature. The specific subjects will vary from year to year.
Not Offered Every Year
1 Course Unit

MATH 7530 Topics in Operator Theory
Topics from the literature. The specific subjects will vary from year to year.
Not Offered Every Year
1 Course Unit

MATH 7600 Topics in Differential Geometry
Topics from the literature. The specific subjects will vary from year to year.
Not Offered Every Year
Prerequisite: MATH 6600 AND MATH 6610
1 Course Unit

MATH 7610 Topics in Differential Geometry
Topics from the literature. The specific subjects will vary from year to year.
Not Offered Every Year
Prerequisite: MATH 6600 AND MATH 6610
1 Course Unit

MATH 8200 Algebra Seminar
Seminar on current and recent literature in algebra.
Not Offered Every Year
1 Course Unit

MATH 8300 Geometry-Topology Seminar
Seminar on current and recent literature in geometry-topology
Not Offered Every Year
1 Course Unit

MATH 8310 Geometry-Topology Seminar
Seminar on current and recent literature in geometry-topology
Not Offered Every Year
1 Course Unit

MATH 8710 Logic Seminar
Seminar on current and recent literature in logic.
Not Offered Every Year
1 Course Unit

MATH 8780 Probability and Algorithm Seminar
Seminar on current and recent literature in probability and algorithms.
1 Course Unit

MATH 8810 Combinatorics Seminar
Seminar on current and recent literature in combinatorics.
Not Offered Every Year
1 Course Unit

Mechanical Engineering and Applied Mechanics (MEAM)

MEAM 0099 Independent Study
An opportunity for the student to become closely associated with a professor in (1) a research effort to develop research skills and technique and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student's academic level. To register for this course, the student and professor jointly submit a detailed proposal. Subject to the approval of the MEAM Undergraduate Curriculum Chair.
Fall or Spring
1 Course Unit

MEAM 1010 Introduction to Mechanical Design
This hands-on, project-based course covers the fundamentals of the modern mechanical design process, from needfinding and brainstorming to the basics of computerized manufacturing and rapid prototyping. Topics include: product definition (needfinding, observation, sketching, and brainstorming); computer-aided design (part creation, assemblies, and animation using SolidWorks); fundamental engineering design practices (material selection, dimensioning, tolerances, etc.); basic computer simulation and analysis; and rapid prototyping (laser cutter, 3-D fused-deposition modeling, and an introduction to computer-controlled machining).
Fall or Spring
1 Course Unit
MEAM 1100 Introduction to Mechanics
This lecture course and a companion laboratory course (MEAM 1470) build upon the concepts of Newtonian (classical) mechanics and their application to engineered systems. This course introduces students to mechanical principles that are the foundation of upper-level engineering courses including MEAM 2100 and 2110. The three major parts of this course are: I. Vector Mechanics; II. Statics and Structures; and III. Kinematics and Dynamics. Topics include: vector analysis, statics of rigid bodies, introduction to deformable bodies, friction, kinematics of motion, work and energy, and dynamics of particles. Case studies will be introduced, and the role of Newtonian mechanics in emerging applications including bio- and nano-technologies will be discussed. Students should be taking MATH 1400 concurrently with this course, unless they have MATH 1400 credit for taking it in a previous semester. 
Fall
Corequisite: MEAM 1470
1 Course Unit

MEAM 1470 Introduction to Mechanics Lab
This half-credit laboratory class is a companion to the Introduction to Mechanics lecture course (MEAM 110). It investigates the concepts of Newtonian (classical) mechanics through weekly hands-on experiments, emphasizing connections between theoretical principles and practical applications in engineering. In addition to furthering their understanding about the workings of the physical world, students will improve their skills at conducting experiments, obtaining reliable data, presenting numerical results, and extracting meaningful information from such numbers. 
Fall
Corequisite: MEAM 1100
0.5 Course Units

MEAM 2010 Machine Design and Manufacturing
Building upon the fundamentals of mechanical design taught in MEAM 101, this hands-on, project-based course provides students with the knowledge and skills necessary to design, analyze, manufacture, and test fully-functional mechanical systems. Topics covered include an introduction to machine elements, analysis of the mechanics of machining, manufacturing technology, precision fabrication (milling, turning, and computer-controlled machining), metrology, tolerances, cutting-tool fundamentals and engineering materials. Enrollment is limited. 
Fall or Spring
Prerequisite: MEAM 1010
1 Course Unit

MEAM 2020 Introduction to Thermal-Fluids Engineering
This course introduces students to basic concepts of thermodynamics, fluid mechanics, and heat transfer, with emphasis on applications. The course will focus on first law of thermodynamics, mass and momentum conservation for both closed and open systems. Students will be exposed to the different modes of heat transfer (conduction, convection, and radiation) with attention to conduction and convection applications to heat engines and devices. Hydrostatics, including pressure distribution and forces acting on submerged surfaces, and buoyancy effects will be discussed as how they are related to hydraulic applications. Fluid dynamics will cover inviscid flows, Bernoulli equation, and concepts of lift, drag, and thrust, and how these are related to aerodynamical systems including wind turbines. Introduction to internal flows, head loss in pipes, friction factors, and Moody chart. 
Fall
Prerequisite: MATH 1400 AND (MEAM 1100 OR PHYS 0150) AND MATH 1410
1 Course Unit

MEAM 2030 Thermodynamics I
Thermodynamics studies the fundamental concepts related to energy conversion in such mechanical systems as internal and external combustion engines (including automobile and aircraft engines), compressors, pumps, refrigerators, and turbines. This course is intended for students in mechanical engineering, chemical engineering, materials science, physics and other fields. The topics include properties of pure substances, firs-law analysis of closed systems and control volumes, reversibility and irreversibility, entropy, second-law analysis, exergy, power and refrigeration cycles, and their engineering applications. 
Spring
Prerequisites: MATH 1400 AND MATH 1410 and MEAM 2020
1 Course Unit

MEAM 2100 Statics and Strength of Materials
This course is primarily intended for students in mechanical engineering, but may also be of interest to students in materials science and other fields. It continues the treatment of statics of rigid bodies begun in MEAM 1100/PHYS 0150 and progresses to the treatment of deformable bodies and their response to loads. The concepts of stress, strain, and linearly elastic response are introduced and applied to the behavior of rods, shafts, beams and other mechanical components. The failure and design of mechanical components are discussed. Students should have either taken MATH 2400 in a previous semester or be taking it concurrently with this course. 
Fall
Prerequisite: (MEAM 1100 OR PHYS 0150 OR PHYS 0170) AND MATH 2400
Corequisite: MEAM 2470
1 Course Unit

MEAM 2110 Engineering Mechanics: Dynamics
This course introduces the basic concepts in kinematics and dynamics that are necessary to understand, analyze and design mechanisms and machines. These concepts are also fundamental to the modeling and analysis of human movement, biomechanics, animation of synthetic human models and robotics. The topics covered include: Particle dynamics using energy and momentum methods of analysis; Dynamics of systems of particles; Impact; Systems of variable mass; Kinematics and dynamics of rigid bodies in plane motion; Computer-aided dynamic simulation and animation. 
Spring
Prerequisite: MEAM 2100 AND MATH 2400 AND (ENGR 1050 OR CIS 1100 OR CIS 1200) AND (MATH 2410 OR ENM 2510)
1 Course Unit

MEAM 2200 Introduction to Materials Science and Engineering
The course is an introduction to the most important concepts in materials science and engineering. You will learn how the control of chemical bonding, synthesis, processing, structure and defects can be used to tailor the properties and performance of materials for applications that range from sustainable sources of energy, to construction, to consumer electronics. Case studies are also included to highlight environmental issues associated with materials degradation. This course includes lab demonstrations of key materials properties and a final project where students research an area of materials technology of their own interest. 
Fall
Also Offered As: MSE 2200
Prerequisite: CHEM 1012 AND (PHYS 0140 OR MEAM 1100)
1 Course Unit
MEAM 2250 Engineering in the Environment
Humans modify and control our environment, but are also subject to the whims of geologic forces. Earthquakes, landslides, floods and dust storms are natural hazards that, while unpredictable, may be understood from basic mechanical principles; and this understanding may be used to better prepare and adapt to a changing world. Human-induced climate change is triggering not only warming, but also “global weirding” as the climate system becomes increasingly unstable and unpredictable. This course will lead with applications related to the environment and climate change, and use simple scaling and dimensional analysis to develop physical intuition. Students will be introduced to topics such as mechanics (e.g., failure) and flow of soil and rock, river erosion, and transport and dispersion of contaminants in water and air, as well as basic phenomena of weather and climate. I will present an integrated approach to understanding these problems by applying elementary concepts of thermo-fluids and mechanics. Gravity currents make up the vast proportion of environmental flows; I will emphasize common principles, such as buoyancy and mixing. The primary objective for this course is that students discover how to apply basic engineering insight to non-engineered (i.e., natural), unconstrained systems. A secondary objective is to entice mechanical engineers to become interested in the environment.

Spring, odd numbered years only
1 Course Unit

MEAM 2470 Mechanical Engineering Laboratory I
This is the first of a two semester sophomore level laboratory sequence that students complete over the fall and spring semesters. The course teaches the principles of experimentation and measurement as well as analysis and application to design. This fall semester course follows closely with MEAM 2020 and MEAM 2100, involving experiments to explore the principles of statics and strength of materials and thermo-fluids and energy. Prerequisite: Sophomore standing in engineering
Fall
Corequisites: MEAM 2020, MEAM 2100
.5 Course Units

MEAM 2480 Mechanical Engineering Lab I
This is the second of a two-semester sophomore level laboratory sequence that students complete over the fall and spring semesters. The course teaches the principles of experimentation and measurement as well as analysis and application to design. The spring semester course follows closely with MEAM 2030 and MEAM 2110, expanding upon the principles of experimentation, measurement, analysis, and design of systems through hands-on laboratories and projects in thermodynamics and dynamics. Prerequisite: Sophomore standing in engineering
Spring
Corequisites: MEAM 2030, MEAM 2110
.5 Course Units

MEAM 3020 Fluid Mechanics
Physical properties; fluid statics; Bernoulli equation; fluid kinematics; conservation laws and finite control-volume analysis; conservation laws and differential analysis; inviscid flow; The Navier-Stokes equation and some exact solutions; similitude, dimensional analysis, and modeling; flow in pipes and channels; boundary layer theory; lift and drag.
Fall
Prerequisite: (MATH 2410 OR ENM 2510) AND (PHYS 0150 OR MEAM 1100 OR PHYS 0170)
1 Course Unit

MEAM 3200 Intro to Mechanical and Mechatronic Systems
This course introduces topics in the design and analysis of modern mechanical systems. The course will cover concepts in mechanism design, kinematics, electronic circuits, motors and electromechanical systems, and measurement and filtering. Specific topics include kinematics of linkages, operational amplifiers, and interfacing with mechanical systems by programming microcontrollers. Corequisite: MEAM 3470
1 Course Unit

MEAM 3210 Dynamic Systems and Control
This course teaches the fundamental concepts underlying the dynamics of vibrations for single-degree of freedom, multi-degree, and infinite-degree of freedom mechanical systems. Methods include Newton’s force methods as well as energy methods (e.g., Lagrangian approaches). Students will learn how to analyze transient, steady-state, and how different forcing scenarios relate to system stability (e.g., for controls)... The course teaches analytical solution techniques for linear systems, and practical linearization and numerical approaches for analysis of nonlinear dynamic systems.
Spring
Prerequisite: (MATH 2410 OR ENM 2510) AND MEAM 2110
1 Course Unit

MEAM 3330 Heat and Mass Transfer
This course covers fundamentals of heat and mass transfer and applications to practical problems in energy conversion and conservation. Emphasis will be on developing a physical and analytical understanding of conductive, convective, and radiative heat transfer, as well as design of heat exchangers and heat transfer with phase change. Topics covered will include: types of heat transfer processes, their relative importance, and the interactions between them, solutions of steady state and transient state conduction, emission and absorption of radiation by real surfaces and radiative transfer between surfaces, heat transfer by forced and natural convection owing to flow around bodies and through ducts, analytical solutions for some sample cases and applications of correlations for engineering problems. Students will develop an ability to apply governing principles and physical intuition to solve problems.
Spring
Prerequisite: MEAM 2030 AND MEAM 3020
1 Course Unit

MEAM 3470 Mechanical Engineering Design Laboratory
This is the first of a two-semester junior level laboratory sequence that students complete over the fall and spring semesters. The course is project-based, with problems whose solution requires experimental data and quantitative analysis, as well as creative mechanical design. The technical content is connected to MEAM 3020, MEAM 3200, and MEAM 3540, including aerodynamics, applied fluid systems, and structural analysis. The course also includes electromechanical systems and applications of finite element analysis. Prerequisite: Junior standing in engineering
Fall
1 Course Unit
MEAM 3480 Mechanical Engineering Design Laboratory
This is the second of a two-semester junior level laboratory sequence that students complete over the fall and spring semesters. The course is project-based, with open-ended design problems that challenge students to develop original experiments and choose appropriate analyses, with an increasing emphasis on teamwork and project planning. The technical content is connected to MEAM 321 and MEAM 333, including multimodal transient heat transfer and dynamic systems modeling. Prerequisite: Junior standing in engineering.

Fall
1 Course Unit

MEAM 3540 Mechanics of Solids
This course builds on the fundamentals of solid mechanics taught in MEAM 2100 and addresses more advanced problems in strength of materials. The students will be exposed to a wide array of applications from traditional engineering disciplines as well as emerging areas such as biotechnology and nanotechnology. The methods of analysis developed in this course will form the cornerstone of machine design and also more advanced topics in the mechanics of materials. Prerequisite: If course requirements not met, permission of instructor required.

Fall
Prerequisite: MEAM 2100 OR BE 2000
1 Course Unit

MEAM 4050 Mechanical Properties of Macro/Nanoscale Materials
This course will discuss the mechanical properties of a wide range of materials from both macroscopic and microscopic viewpoints. Beginning with a review of elasticity and tensors, the course will describe the deformation, fracture and fatigue behavior of metals, ceramics and polymers. Dislocation theory, strengthening mechanisms and rate-dependent deformation will also be discussed. The following topics will be discussed: 1. Introduction and review of linear elasticity and tensors. Stress and strain tensors, transformations, principal stresses, invariants. Mechanical testing methods at the macro and micro scale. 2. Crystal symmetry and its effect on second and fourth rank tensors. Linear thermal expansion and thermal stresses. Anisotropic linear elasticity. Anisotropic elastic moduli of crystals. 3. Plasticity and yield in continuum elasticity. Notion of yield surfaces. 4. Elements of dislocation theory. Stress and strain fields of dislocations, forces and interactions. 5. Slip and twinning in crystalline solids. 6. Strengthening and deformation properties of crystalline materials. 7. Rate-dependent and high temperature deformation of materials. 8. Fracture of materials.

Spring
Also Offered As: MSE 4050
Prerequisite: MSE 2200 or MEAM 2100
1 Course Unit

MEAM 4110 How to Make Things: Production Prototyping Studio
The course centers around a sequence of three projects that each culminate in the design and fabrication of functional objects. A 2D Design, 3D Design, and final "Micro-Manufacturing" project will introduce students to a wide variety of design, engineering, and fabrication skills made possible by the new Studios @ Tangen Hall. The micro-manufacturing final project will task interdisciplinary student teams to create a "micro-business" where they will design and utilize 3D printed molding and casting techniques to create a small-scale run of functional products. These products will then be showcased in an end of semester exposition, where the teams will merchandise and market their products to the Penn community. This exposition will also be a wonderful inaugural use of the student and alumni retail space on the 1st floor of Tangen Hall and serve as a great university-wide event to show case the work of SEAS students. Requires proficiency in solid modeling software (e.g., SolidWorks, Maya, Rhino), practice with design process, and hands-on fabrication experience.

Also Offered As: OIDD 4110
1 Course Unit

MEAM 4150 Product Design
This course provides tools and methods for creating new products. The course is intended for students with a strong career interest in new product development, entrepreneurship, and/or technology development. The course follows an overall product design methodology, including the identification of customer needs, generation of product concepts, prototyping, and design-for-manufacturing. Weekly student assignments are focused on the design of a new product and culminate in the creation of a prototype, which is launched at an end-of-semester public Design Fair. The course project is a physical good - but most of the tools and methods apply to services and software products. The course is open to any Penn sophomore, junior, senior or graduate student. The course follows a studio format, in which students meet for three hours each week with Professor Marcovitz for lectures and hands-on making, and students will complete 90 minutes of asynchronous, self-paced content from Professor Ulrich on their own time each week. Professor Ulrich gives one in-person lecture during the semester and attends the Design Fair, but is not present at the weekly studio sessions.

Also Offered As: OIDD 4150
1 Course Unit

MEAM 4210 Control For Autonomous Robots
This course introduces the hardware, software and control technology used in autonomous ground vehicles, commonly called "self-driving cars." The weekly laboratory sessions focus on development of a small-scale autonomous car, incrementally enhancing the sensors, software, and control algorithms to culminate in a demonstration in a realistic outdoor operating environment. Students will learn basic physics and modeling; controls design and analysis in Matlab and Simulink; software implementation in C and Python; sensor systems and filtering methods for IMUs, GPS, and computer vision systems; and path planning from fixed map data. Prerequisite: If course requirement not met, permission of instructor required.

Fall
Also Offered As: ESE 4210
Prerequisite: ESE 2240 OR MEAM 2110 or permission of instructor
1.5 Course Unit
MEAM 4450 Mechanical Engineering Design Projects
This capstone design project course is required of all mechanical engineering students. Student teams will design and test complex mechanical systems that address a societal or consumer need. Projects are devised by the team, sponsored by industry, or formulated by Penn professors. Each project is approved by the instructor and a faculty advisor. Topics treated in the course include project planning, prototyping, patent and library searches, intellectual property, ethics, and technical writing and presentations. The work is spread over MEAM 4450 and MEAM 4460. Prerequisite: Junior standing
Fall
1 Course Unit

MEAM 4460 Mechanical Engineering Design Projects
This is the second course in the two course sequence involving the capstone design project. See MEAM 4450 for course description.
Spring
1 Course Unit

MEAM 5020 Energy Engineering in Power Plants and Transportation Systems
Most energy consumed in the U.S. and in the world is produced using thermal-to-mechanical energy conversion. Through problem sets and a semester-long group project, students will learn the engineering principles that govern how heat is converted to mechanical power in electric power plants, jet aircraft, and internal combustion engines. Topics covered include a review of thermodynamics and basic power cycles, supercritical, combined, and hybrid cycles, cogeneration, jet propulsion, and reciprocating internal combustion engines. A brief introduction to desalination and combustion is also included. The material in this course will provide students a foundation important for industrial and research employment in energy engineering.
Fall
1 Course Unit

MEAM 5030 Direct Energy Conversion: from Macro to Nano
The course focuses on devices that convert thermal, solar, or chemical energy directly to electricity, i.e., without intermediate mechanical machinery such as a turbine or a reciprocating piston engine. A variety of converters with sizes ranging from macro to nano scale will be discussed, with the advantages offered by nanoscale components specifically highlighted. Topics will include thermoelectric energy converters and radioisotope thermoelectric generators (RTGs), thermionic energy converters (TEC), photovoltaic (PV) and thermophotovoltaic (TPV) cells, as well as piezoelectric harvesters. Additional topics may include magnetohydrodynamic (MHD) generators, alkali metal thermal-to-electric converters (AMTEC), and fuel cells.
Fall
1 Course Unit

MEAM 5040 Tribology
The course will comprehensively cover both theoretical and practical tribology, the science and technology of interacting surfaces in relative motion. The various modes of lubrication, hydrodynamic, elastohydrodynamic, hydrostatic, mixed, solid and dry, will be studied in detail. The contact between solid surfaces will be covered, leading to an understanding of friction and various modes of wear. At each stage, it will be shown how the tribological principles learned can be applied in practice to improve the efficiency and durability of mechanical equipment and thereby enhance sustainability through energy and materials conservation. Prerequisite: Senior standing in Mechanical Engineering or Material Science or permission of the instructor
Fall
1 Course Unit

MEAM 5050 Mechanical Properties of Macro/Nanoscale Materials
The application of continuum and microstructural concepts to elasticity and plasticity and the mechanisms of plastic flow and fracture in metals, polymers and ceramics. Topics covered include elasticity, viscoelasticity, plasticity, fracture, fatigue, wear, and materials conservation. Prerequisite: Senior standing in Mechanical Engineering or Material Science or permission of the instructor
Fall
1 Course Unit

MEAM 5050 Mechanical Properties of Macro/Nanoscale Materials
The application of continuum and microstructural concepts to elasticity and plasticity and the mechanisms of plastic flow and fracture in metals, polymers and ceramics. Topics covered include elasticity, viscoelasticity, plasticity, crystal defects, strengthening, crystallographic effects, twinning, creep and fatigue. Emphasis will be on mathematical and physical understanding rather than problem solving.
Spring
Also Offered As: MSE 5050
Prerequisite: MSE 2200 or MEAM 2010 OR MATH 2400
1 Course Unit

MEAM 5060 Failure Analysis of Engineering Materials
This course will introduce students to the broad field of failure through hands-on real-life examples of specific failures. All engineering materials classes will be considered, including metals, polymers, elastomers, ceramics, and glasses. Emphasis will be placed on understanding how to actually analyze a failed component and understand the cause of failure. Several classes will be conducted by outside experts from places like the NTSB, FBI and OSHA.
Fall
Also Offered As: MSE 5060
Prerequisite: MSE 2200 or equivalent
1 Course Unit

MEAM 5070 Fundamentals of Materials
This course will provide a graduate level introduction to the science and engineering of materials. It is designed specifically to meet the needs of students who will be doing research that involves materials but who do not have an extensive background in the field. The focus is on fundamental aspects of materials science and will emphasize phenomena and how to describe them. The course assumes an undergraduate background in any area of physical/chemical science and undergraduate mathematics appropriate to this. The course will also be accessible to students of applied mathematics.
Fall
Also Offered As: MSE 5070
1 Course Unit

MEAM 5080 Materials and Manufacturing for Mechanical Design
The selection of materials and manufacturing processes are critical in the design of mechanical systems. Material properties and manufacturing processes are often tightly linked, thus this course covers both topics in an integrated manner. The properties and manufacturing processes for a wide range of materials (i.e., metals, ceramics, polymers, composites ) are examined from both a fundamental and practical perspective. From a materials standpoint, the course focuses on mechanical properties, including modulus, strength, fracture, fatigue, wear, and creep. Established and emerging manufacturing processes will be discussed. Design-based case studies are used to illustrate the selection of materials and processes.
Spring
1 Course Unit
MEAM 5100 Design of Mechatronic Systems
In many modern systems, mechanical elements are tightly coupled with electronic components and embedded systems. Mechatronics is the study of how these domains are interconnected. This hands-on, project-based course teaches: MECHANICAL elements --prototyping (lasercutting, 3D printing), microcontrollers (ATmega32-u4, ESP32), actuators (DC motors, servos, solenoids, LEDs) and sensor (light, sound, touch, force sensors), ELECTRONICS -- basic circuits, filters, op amps, discrete logic, sensing and control of voltage and current, and COMPUTING -- interfacing with the analog world, microprocessor technology, basic control theory, wireless communication and structured embedded programming (including register level) and some web programming. Prerequisite: knowledge of structured programming language (C, C++ preferred).
Fall
1 Course Unit

MEAM 5130 Feedback Control Design and Analysis
Basic methods for analysis and design of feedback control in systems. Applications to practical systems. Methods presented include time response analysis, frequency response analysis, root locus, Nyquist and Bode plots, and the state-space approach.
Spring
Also Offered As: ESE 5050
Prerequisite: MEAM 3210 OR ESE 2100
1 Course Unit

MEAM 5140 Design for Manufacturability
This course is aimed at providing current and future product design/development engineers, manufacturing engineers, and product development managers with an applied understanding of Design for Manufacturability (DFM) concepts and methods. The course content includes materials from multiple disciplines including: engineering design, manufacturing, marketing, finance, project management, and quality systems. Prerequisite: Senior or graduate standing in the School of Design, Engineering, or Business with completed product in development and/or design engineering core coursework or related experience.
Spring
Also Offered As: IPD 5140
1 Course Unit

MEAM 5160 Advanced Mechatronic Reactive Spaces.
This course combines performance art and advanced mechatronics concepts that include the design and implementation of large-scale actuation, advanced sensing, actuation and control. This course pairs design school and engineering students to form interdisciplinary teams that together design and build electro-mechanical reactive spaces and scenic/architectural elements in the context of the performing arts. The two disciplinary groups will be treated separately and receive credit for different courses (ARCH746 will be taught concurrently and in some cases co-located) as they will be learning different things. Engineering students gain design sensibilities and advanced mechatronics in the form of networked embedded processing and protocols for large scale actuation and sensing. Design students learn elementary mechatronics and design reactive architectures and work with engineering students to build them. The class will culminate in a some artistic performance (typically with professional artists) such as a Shakespeare play, robotic ballet, a mechatronic opera.
Not Offered Every Year
Also Offered As: IPD 5160
Prerequisite: MEAM 5100
1 Course Unit

MEAM 5170 Control and Optimization with Applications in Robotics
This course covers a variety of advanced topics in model-based nonlinear control, primarily focused on computational techniques and dynamic robotic applications. Students will learn both the theoretical basics of nonlinear and optimal control along with computational algorithms. Topics include dynamic programming, trajectory optimization, canonical underactuated systems, control of limit cycles, stability analysis, nonsmooth mechanics, and model predictive control. Applications include walking and running robots, manipulation, and flying machines. As the course will cover state of the art techniques, we will review relevant research papers. At the end of the semester, students will prepare and present a final project on a related topic of their choosing. Prerequisite: If course requirement not met, permission of instructor required.
Fall
1 Course Unit

MEAM 5190 Elasticity and Micromechanics of Materials
This course is targeted to engineering students working in the areas on micro/nanomechanics of materials. The course will start with a quick review of the equations of linear elasticity and proceed to solutions of specific problems such as the Hertz contact problem, Eshelby's problem etc. Failure mechanisms such as fracture and the fundamentals of dislocations/plasticity will also be discussed. Prerequisite: graduate standing or permission of the instructor.
Fall
Also Offered As: MSE 5500
1 Course Unit

MEAM 5200 Introduction to Robotics
The rapidly evolving field of robotics includes systems designed to replace, assist, or even entertain humans in a wide variety of tasks. Recent examples include human-friendly robot arms for manufacturing, interactive robotic pets, medical and surgical assistive robots, and semi-autonomous search-and-rescue vehicles. This course presents the fundamental kinematic, dynamic, and computational principles underlying most modern robotic systems. The main topics of the course include: rotation matrices, homogeneous transformations, manipulator forward kinematics, manipulator inverse kinematics, Jacobians, path and trajectory planning, sensing and actuation, and feedback control. The material is reinforced with hands-on lab exercises involving a robotic arm.
Fall
1 Course Unit

MEAM 5230 Control Systems for Robotics
This course covers a variety of advanced topics in model-based nonlinear control, primarily focused on computational techniques and dynamic robotic applications. Students will learn both the theoretical basics of nonlinear and optimal control along with computational algorithms. Topics include dynamic programming, trajectory optimization, canonical underactuated systems, control of limit cycles, stability analysis, nonsmooth mechanics, and model predictive control. Applications include walking and running robots, manipulation, and flying machines. As the course will cover state of the art techniques, we will review relevant research papers. At the end of the semester, students will prepare and present a final project on a related topic of their choosing. Prerequisite: If course requirement not met, permission of instructor required.
Fall
1 Course Unit

MEAM 5250 Control and Optimization with Applications in Robotics
This course covers a variety of advanced topics in model-based nonlinear control, primarily focused on computational techniques and dynamic robotic applications. Students will learn both the theoretical basics of nonlinear and optimal control along with computational algorithms. Topics include dynamic programming, trajectory optimization, canonical underactuated systems, control of limit cycles, stability analysis, nonsmooth mechanics, and model predictive control. Applications include walking and running robots, manipulation, and flying machines. As the course will cover state of the art techniques, we will review relevant research papers. At the end of the semester, students will prepare and present a final project on a related topic of their choosing. Prerequisite: If course requirement not met, permission of instructor required.
Fall
1 Course Unit
MEAM 5270 Finite Element Analysis
The objective of this course is to equip students with the necessary background needed to carry out finite elements-based simulations of various engineering and science problems using finite elements packages. The first part of the course will outline the theory of finite element methods. The objective is to acquaint the students with the theory rather than to equip them with the programming skills needed to write multi-dimensional finite elements codes. The second part of the course will address the solution of the classical equations of mathematical physics such as the Laplace, Poisson, Helmholtz, wave, and heat equations. The general properties of the solutions will be described, and potential pitfalls will be addressed. This part of the course will also address issues such as code verification and convergence. The students will gain hands-on experience working with COMSOL Multiphysics (finite element analysis, solver and simulation software / FEA software package for various physics and engineering applications). This part of the course will also address relevant topics of numerical analysis such as the solution of initial value problems and their precision, the solution of algebraic equations, and the calculation of eigenvalues and eigenvectors. The third part of the course will consist of case studies taken from various areas of engineering and sciences. Presentation of each case study will start with a description of the pertinent physical and engineering background and how finite elements are being used to solve the problem. The case studies will also address the verification issue (how do we know that the solution is right) and the analysis and post-processing of the computed data. Prerequisites: Calculus, introductory level fluid & solid mechanics and heat transfer
Fall
1 Course Unit

MEAM 5290 Introduction to Micro- and Nano-electromechanical Technologies
Spring
Also Offered As: ESE 5290
1 Course Unit

MEAM 5300 Continuum Mechanics
This course serves as a basic introduction to the Mechanics of continuous media, and it will prepare the student for more advanced courses in solid and fluid mechanics. The topics to be covered include: Tensor algebra and calculus, Lagrangian and Eulerian kinematics, Cauchy and Piola-Kirchhoff stresses, General principles: conservation of mass, conservation of linear and angular momentum, energy and the first law of thermodynamics, entropy and the second law of thermodynamics; constitutive theory, ideal fluids, Newtonian and non-Newtonian fluids, finite elasticity, linear elasticity, materials with microstructure. Multivariable Calculus, Linear Algebra, Partial Differential Equations.
Spring
1 Course Unit

MEAM 5350 Advanced Dynamics
MEAM 2110 and some Linear Algebra. Senior or Master's Standing in Engineering or permission of the instructor.
Fall
1 Course Unit

MEAM 5360 Viscous Fluid Flow and Modern Applications
This is an intermediate course that builds on the basic principles of Fluid Mechanics. The course provides a more in depth and unified framework to understand fluid flow at different time and length scales, in particular viscous flows. Topics include review of basic concepts, conservation laws (momentum, mass, and heat), fluid kinematics, tensor analysis, Stokes' approximations, non-Newtonian fluid mechanics, and turbulence. The course will explore important modern topics such as microfluidics, swimming of micro-organisms, wind turbines, rheology, biofluid mechanics, and boundary layers. This course is intended for juniors, seniors, and graduate students from the School of Engineering and/or Arts and Sciences that have a general interest in fluid dynamics and its modern applications. Students should have an understanding of basic concepts in fluid mechanics and a good grasp on differential equations.
Spring
1 Course Unit
MEAM 5370 Nanotribology
Engineering is progressing to ever smaller scales, enabling new technologies, materials, devices, and applications. This course will provide an introduction to nano-scale tribology and the critical role it plays in the developing areas of nanoscience and nanotechnology. We will discuss how contact, adhesion, friction, lubrication, and wear at interfaces originate, using an integrated approach that combines concepts of mechanics, materials science, chemistry, and physics. We will cover a range of concepts and applications, drawing connections to both established and new approaches. We will discuss the limits of continuum mechanics and present newly developed theories and experiments tailored to describe micro- and nano-scale phenomena. We will emphasize specific applications throughout the course. Reading of scientific literature, critical peer discussion, individual and team problem assignments, and a peer-reviewed literature research project will be assigned as part of the course. Prerequisite: Prerequisite: MEAM 3540 or MEAM 5190 or MSE/MEAM 5040 or equivalent required, or consent of instructor. Experience with mathematical analysis software (e.g. Matlab, Python) is required.
Not Offered Every Year
Also Offered As: MSE 5370
1 Course Unit

MEAM 5380 Turbulence
This course is an introductory course on turbulent flows. The course provides physical and mathematical framework for quantitative and qualitative descriptions of fundamental processes involved in turbulent flows. Topics include the Navier-Stokes equations, the statistical description of turbulence, equations for mean and fluctuations, energy cascade, turbulence spectra, Kolmogorov hypotheses, behavior of shear flows, and isotropic turbulence. The course will also explore modern topics such as computational modeling of turbulence. Instructor permission required for undergraduates. One graduate-level course in fluids or transport (e.g., MEAM 5360, MEAM 5700, or CBE 6400) required.
Spring, even numbered years only
1 Course Unit

MEAM 5430 Performance, Stability and Control of UAVs
This course covers the application of classical aircraft performance and design concepts to fixed-wing and rotary-wing Unmanned Aerial Vehicles (UAVs). A survey of the latest developments in UAV technology will be used to motivate the development of quantitative mission requirements, such as payload, range, endurance, field length, and detectability. The implications of these requirements on vehicle configuration and sizing will be revealed through application of the fundamentals of aerodynamics and propulsion systems. The course will also cover basic flight dynamics and control, including typical inner-loop feedback applications.
Fall
1 Course Unit

MEAM 5450 Nanotribology
Engineering is progressing to ever smaller scales, enabling new technologies, materials, devices, and applications. This course will provide an introduction to nano-scale tribology and the critical role it plays in the developing areas of nanoscience and nanotechnology. We will discuss how contact, adhesion, friction, lubrication, and wear at interfaces originate, using an integrated approach that combines concepts of mechanics, materials science, chemistry, and physics. We will cover a range of concepts and applications, drawing connections to both established and new approaches. We will discuss the limits of continuum mechanics and present newly developed theories and experiments tailored to describe micro- and nano-scale phenomena. We will emphasize specific applications throughout the course. Reading of scientific literature, critical peer discussion, individual and team problem assignments, and a peer-reviewed literature research project will be assigned as part of the course. Prerequisite: Prerequisite: MEAM 3540 or MEAM 5190 or MSE/MEAM 5040 or equivalent required, or consent of instructor. Experience with mathematical analysis software (e.g. Matlab, Python) is required.
Not Offered Every Year
Also Offered As: MSE 5370
1 Course Unit

MEAM 5460 Hovering Vehicle Design and Analysis Techniques
This course aims at providing an overview of the fundamental concepts in the design and analysis of helicopters. The course will start with an overview of how helicopters of various types work (single main rotor, tandem rotor, tilt-rotor, quad-copter etc.). This will be followed by the introduction of how rotors work with a specific emphasis on the aerodynamic operating environment. The course will introduce topics pertaining to the rotor wake, inflow and will provide opportunities to exercise analysis techniques such as momentum and blade element theory. The latter portion of the course will cover the dynamic operation of larger scale rotors and will introduce concepts of blade articulation and associated analysis models/techniques. The content of the course will be laid to showcase the varying operating environments of rotor at different scales (e.g. small quadcopter, large multi-person carrier etc). The course will require students to code their analysis models using the language of their choice (C, C++, FORTRAN, MATLAB, Python etc.) and is intended to emphasize the importance of computational methods to engineering analysis. MEAM 2110 and MEAM 2020 or equivalent and required , MEAM 3020 and MEAM 3210 are recommended. Recommended textbook: Principles of Helicopter Aerodynamics, 2nd Edition, J. Gordon Leishman, ISBN-13: 978-1107013353, ISBN-10: 1107013356
Spring
1 Course Unit

MEAM 5490 Order-of-magnitude estimation for terrestrial and space engineering
The goal of this course is to develop the ability to make quick order-of-magnitude estimates that are not completely rigorous and precise but still very useful. In practicing engineering, one is often confronted with real-life problems where multiple technical approaches are possible, but rigorous theoretical analysis of all options would require too much time. Making quick order-of-magnitude (back-of-the-envelope) estimates of the performance limits can quickly eliminate some approaches and allow one to focus on the ones that offer the best chance of succeeding. Examples covered in this course will focus on Earth’s climate and planetary science, aircraft and spacecraft, orbital mechanics, and space travel.
Fall, even numbered years only
1 Course Unit

MEAM 5500 Design of Microelectromechanical Systems
A course that covers the design and fabrication of micro- and nano-electromechanical systems. Topics in the course include micro- and nano-fabrication techniques, mechanics of flexures, thin film mechanics, sensing and actuation approaches (e.g., electrostatic, piezoelectric, and piezoresistive), as well as materials and reliability issues. The fundamentals of these topics will be augmented with device-based case studies.
Not Offered Every Year
Prerequisite: MEAM 3540
1 Course Unit
MEAM 5530 Atomic Modeling in Materials Science
This course covers two major aspects of atomic level computer modeling in materials. 1. Methods: Molecular statics, Molecular dynamics, Monte Carlo, Kinetic Monte Carlo as well as methods of analysis of the results such as radial distribution function, thermodynamics deduced from the molecular dynamics, fluctuations, correlations and autocorrelations. 2. Semi-empirical descriptions of atomic interactions: pair potentials, embedded atom method, covalent bonding, ionic bonding. Basics of the density functional theory. Mechanics, condensed matter physics, thermodynamics and statistical mechanics needed in interpretations are briefly explained. No prior coding experience is required. Students will be taught the basics of python in the first week of class. Fall 1 Course Unit
Also Offered As: MSE 5610
Prerequisites: Undergraduate introduction to classical physics, quantum mechanics, thermodynamics and mechanical properties is helpful.

MEAM 5550 Nanoscale Systems Biology
Nano-science and engineering approaches to systems in biology are of growing importance. They extend from novel methods, especially microscopies that invite innovation to mathematical and/or computational modeling which incorporates the physics and chemistry of small scale biology. Proteins and DNA, for example, are highly specialized polymers that interact, catalyze, stretch and bend, move, and/or store information. Membranes are also used extensively by cells to isolate, adhere, deform, and regulate reactions. In this course, students will become familiar with cell & molecular biology and nanobiotechnology through an emphasis on nano-methods, membranes, molecular machines, and ‘polymers’ - from the quantitative perspectives of thermodynamics, statistical physics, and mechanics. We specifically elaborate ideas of energetics, fluctuations and noise, force, kinetics, diffusion, etc. on the nano- thru micro- scale, drawing from very recent examples in the literature. Laboratory experiments will provide hands-on exposure to microscopies in a biological context (eg. fluorescence down to nano-scale, AFM), physical methods (eg. micromanipulation, tracking virus-scale particles or quantum dots), and numerical problems in applied biophysics, chemistry, and engineering. A key goal of the course is to familiarize students with the concepts and technology (plus their limitations) as being employed in current research problems in nanoscale systems biology, extending to nanobiotechnology. Prerequisite: Background in Biology, Physics, Chemistry or Engineering with coursework in Thermodynamics or permission of the instructor. Fall 1 Course Unit
Also Offered As: BE 5550, CBE 5550

MEAM 5610 Thermodynamics: Foundations, Energy, Materials
To introduce students to advanced classical equilibrium thermodynamics based on Callen’s postulatory approach, to exergy (Second-Law) analysis, and to fundamentals of nonequilibrium thermodynamics. Applications to be treated include the thermodynamic foundations of energy processes and systems including advanced power generation and aerospace propulsion cycles, batteries and fuel cells, combustion, diffusion, transport in membranes, materials properties and elasticity, superconductivity, biological processes. Undergraduate thermodynamics. Spring 1 Course Unit

MEAM 5700 Transport Processes I
The course provides a unified introduction to momentum, energy (heat), and mass transport processes. The basic mechanisms and the constitutive laws for the various transport processes will be delineated, and the conservation equations will be derived and applied to internal and external flows featuring a few examples from mechanical, chemical, and biological systems. Reactive flows will also be considered. Prerequisite: graduate standing or permission of the instructor. Fall 1 Course Unit

MEAM 5710 Advanced Topics in Transport Phenomena
The course deals with advanced topics in transport phenomena and is suitable for graduate students in mechanical, chemical and bioengineering who plan to pursue research in areas related to transport phenomena or work in an industrial setting that deals with transport issues. Topics include: Transport processes with drops, Bubbles and particles; Phase change Phenomena: condensation, evaporation, and combustion; Radiation heat transfer: non-participating media, participating media, equation of radiative transfer, optically thin and thick limits; Introduction to Hydrodynamic and Thermal Instability; Microscale energy transport; Nano-particle motion in fluids and transport. Prerequisite: If course requirements not met, permission of instructor required. Not Offered Every Year
Prerequisite: MEAM 5700 OR MEAM 6420 OR CBE 6400 1 Course Unit

MEAM 5750 Micro and Nano Fluidics
The course focuses on topics relevant for micro-fluidics, lab on chip technology, point of care diagnostics, nano-technology, biosensing, and interfacial phenomena. Although we will discuss briefly the fabrication of micro and nano fluidic devices, the course will mostly focus on physical phenomena from the continuum point of view. The mathematical complexity will be kept to a minimum. The course will be reasonably self-contained, and any necessary background material will be provided, consistent with the students’ background and level of preparation. Specifically, we will examine fluid and nanoparticle transport under the action of pressure, electric, magnetic, and capillary forces; the structure and role of superhydrophobic surfaces; how the solid/liquid interface acquires electric charge; ion transport in electrolytes (Poisson-Nernst-Planck equations); colloid stability; electroosmosis, electrophoresis, and particle polarization; electrowetting and digital microfluidics; particle and cell sorting; immunoassays; and enzymatic amplification of nucleic acids. Not Offered Every Year 1 Course Unit

MEAM 5800 Electrochemistry for Energy, Nanofabrication and Sensing
Principles and mathematical models of electrochemical processes in energy conversion and storage, water desalination, nanofabrication, electroplating, and sensing for engineering and science graduate students and advanced undergraduates, lacking prior background in electrochemistry. The course covers equivalent circuits, electrode kinetics, electrokinetic and transport phenomena, and electrostatics. The course will introduce and use the finite element program COMSOLTM. We will discuss, among other things, applications to stationary and flow batteries, supercapacitors, integrated electric circuit fabrication, electrokinetics, and biosensing. In contrast to CBE 545 Electrochemical Energy Conversion that focuses on solid state electrochemistry, this course emphasizes liquid-based electrochemistry. Spring 1 Course Unit
MEAM 5970 Master's Thesis Research
Fall or Spring
1-3 Course Units

MEAM 5990 Master's Independent Study
Fall or Spring
1-4 Course Units

MEAM 6130 Non-Linear Control Theory
The course provides a basic understanding of nonlinear systems phenomena and studies analysis and control design problems of nonlinear systems. The main analysis tools that will be presented are Lyapunov theory for stability, including the well known LaSalle's invariance principle, and barrier function theory for safety of both autonomous and non-autonomous systems. Further topics include input-output stability, passivity, and the center manifold theorem. The main control tools that will be presented are feedback linearization, backstepping, as well as recent results on learning control. Lyapunov and control barrier functions from data. Examples will be taken from mechanical and robotic systems.
Not Offered Every Year
Also Offered As: ESE 6170
Prerequisite: ESE 5000
1 Course Unit

MEAM 6200 Advanced Robotics
This course covers advanced topics in robotics and includes such topics as multi-body dynamics, nonlinear control theory and planning algorithms with application to robots and systems of multiple robots. Prerequisite: Graduate standing in engineering
Spring
1 Course Unit

MEAM 6240 Distributed Robotics
This course covers challenges and approaches for planning, coordinating, and controlling multi-robot systems. Main topics of the course include: consensus, distributed search, multi-agent planning, coverage, swarming and flocking, with applications for distributed control in networked sensors/actuators in soft robots or in multirobot systems common in aerial, underwater, and autonomous driving applications. Students will learn to formally model and analyze multi-robot systems through paper readings on state-of-the-art techniques and an independent final project.
1 Course Unit

MEAM 6300 Advanced Continuum Mechanics
This course is a more advanced version of MEAM 530. The topics to be covered include: tensor algebra and calculus, Lagrangian and Eulerian kinematics, Cauchy and Piola-Kirchhoff stresses. General principles: conservation of mass, conservation of linear and angular momentum, energy and the first law of thermodynamics, entropy and the second law of thermodynamics. Constitutive theory, ideal fluids, Newtonian and non-Newtonian fluids, finite elasticity, linear elasticity, materials with microstructure. One graduate level course in applied mathematics and one in either fluid or Solid Mechanics.
Not Offered Every Year
1 Course Unit

MEAM 6320 Plasticity
This course develops the mathematical theory of plastic deformation for both crystalline and disordered materials. Phenomenological models for strain-hardening, creep and size-dependent plastic flow as well as physically-based theories for single crystals are discussed. Applications are drawn from problems in structural mechanics, deformation processing, friction and contact, and fracture. Large strain deformations and problems involving strain localization are considered. Prerequisite: If course requirement not met, permission of instructor required.
Not Offered Every Year
1 Course Unit

MEAM 6330 Mechanics of Adhesion and Fracture
This course focuses on mechanics aspects of adhesion and fracture of solids. The topics are intimately related, as fracture involves decohesion. Topics include forces of interaction between surfaces of solids, perfect versus imperfect adhesion, aspects of contact mechanics, linear analysis of cracks in elastic materials, nonlinear analysis of cracks in elastic-plastic materials, J-integral methods, phenomenological theories, crack growth and healing, and stability. Micro-mechanical models of fracture are analyzed using nonlinear elasticity and energy methods. Applications to various material systems and processes, including structural materials, layered materials, friction and wear.
Not Offered Every Year
Prerequisite: MEAM 5190 AND ENM 5100
1 Course Unit

MEAM 6340 Rods and Shells
This course is intended for 2nd year graduate students and introduces continuum mechanics theory of rods and shells with applications to structures and to biological systems as well as stability and buckling. The course begins with topics from differential geometry of curves and surfaces and the associated tensor analysis on Riemannian spaces. A brief introduction to variational calculus is included since variational methods are a powerful tool for formulating approximate structural mechanics theories and for numerical analysis. The structural mechanics theories of rods, plates and shells are introduced including both linear and nonlinear theories. First-year graduate-level applied mathematics for engineers (ENM 510 and 511) and a first course in continuum mechanics or elasticity or permission of instructor.
Not Offered Every Year
1 Course Unit

MEAM 6350 Composite Materials
This course deals with the prediction of the average, or effective properties of composite materials. The emphasis will be on methods for determining effective behavior. The course will be concerned mostly with linear mechanical and physical properties, with particular emphasis on the effective conductivity and elastic moduli of multi-phase composites and polycrystals. However, time-dependent and non-linear properties will also be discussed.
Not Offered Every Year
Prerequisite: ENM 5100 AND ENM 5110
1 Course Unit

MEAM 6420 Advanced Fluid Mechanics
Fluid mechanics as a vector field theory, basic conservation laws, constitutive relations, boundary conditions, Bernoulli theorems, vorticity theorems, potential flow. Viscous flow; large Reynolds number limit; boundary layers.
Not Offered Every Year
1 Course Unit
MEAM 6460 Computational Mechanics
The course is divided into two parts. The course first introduces general numerical techniques for elliptical partial differential equations - finite difference method, finite element method and spectral method. The second part of the course introduces finite volume method. SIMPLER formulation for the Navier-Stokes equations will be fully described in the class. Students will be given chances to modify a program specially written for this course to solve some practical problems in heat transfer and fluid flows. Prerequisites: ENM 5100 or equivalent, and one graduate level introductory course in mechanics. A programming experience is necessary.
Not Offered Every Year
1 Course Unit

MEAM 6500 Mechanics of Soft and Biomaterials
This course is aimed to expose the students to a variety of topics in mechanical materials via discussion of "classic" problems that have had the widest impact long period of time and have been applied to analyze the mechanical behavior a variety of biological and engineering materials. Not Offered Every Year
Also Offered As: MSE 6500
1 Course Unit

MEAM 6620 Advanced Molecular Thermodynamics
This course begins with a brief review of classical thermodynamics, including the development of Maxwell relationships and stability analysis. The remainder of the course develops the fundamental framework of statistical mechanics, then reviews various related topics including ideal and interacting gases, Einstein and Debye models of crystals, lattice models of liquids, and the basis of distribution function theory. Fall
Also Offered As: BE 6620, CBE 6180
1 Course Unit

MEAM 6630 Mechanics of Macromolecules
This course is targeted for engineering/physics students working in the areas of nano/bio technology. The course will start with a quick review of statistical mechanics and proceed to topics such as Langevin dynamics, solution biochemistry (Poisson-Boltzmann and Debye-Huckel theory), entropic elasticity of bio-polymers and networks, reaction rate kinetics, solid state physics and other areas of current technological relevance. Students will be expected to have knowledge of undergraduate mechanics, physics and thermodynamics. Not Offered Every Year
1 Course Unit

MEAM 6920 Topics in Mechanical Systems
This course will be offered when demand permits. The topics will change due to the interests and specialties of the instructor(s). Some topics could include: Electromagnetics, Control Theory, and Micro-Electro-Mechanical Systems.
Not Offered Every Year
1 Course Unit

MEAM 6990 MEAM Seminar
This seminar course has been established so that students get recognition for their seminar attendance as well as to encourage students to attend. Students registered for this course are required to attend weekly departmental seminars given by distinguished speakers from around the world. In order to obtain a satisfactory (S) grade, the student must not only attend more than 70% of the departmental seminars but also provide satisfactory answers to the mini-essay assignments (shown as quizzes on Canvas) about three of those seminars. It is recommended that the student pick the seminars closest to their research interests, but they may choose any seminar they wish. Up to two of the seminars to be counted toward the MEAM 699 requirement may come from outside MEAM. To be counted, a non-MEAM seminar must be part of an established Penn seminar series that is focused on engineering, science, mathematics, computation, or other technical discipline. A mini-essay quiz must be completed for each non-MEAM seminar. There will be three such quizzes distributed through the semester, graded pass/fail. Participation in the seminar course will be documented and recorded on the students transcript. In order to obtain their degree, doctoral students will be required to accumulate six seminar courses and MS candidates two courses. Under special circumstances, i.e. in case of conflict with a course, the student may waive the seminar requirement for a particular semester by petition to the Graduate Group Chair.
Fall or Spring
1 Course Unit

MEAM 8910 Shop Training: Special Topics
Intended for graduate students conducting research. Building upon the fundamentals of mechanical design, this hands-on, project-based course provides participants with the knowledge and skills necessary to design, analyze, manufacture, and test fully functional subtractive manufacturing processes and part components. Topics covered include an introduction to machine elements, analysis of the mechanics of machining, manufacturing technology, precision fabrication (milling and computer-controlled machining), metrology, tolerances, cutting-tool fundamentals and engineering materials. Graduate standing in engineering or permission of the instructor. Completion of MEAM 101 or suitable computer aided design experience; this prerequisite may be waived at the discretion of the instructor, i.e. in case of conflict with a course, the student may waive the seminar requirement for a particular semester by petition to the Graduate Group Chair.
Fall or Spring
0.25 Course Units
MEAM 8920 Shop Training: Additive Fundamentals
Intended for graduate students conducting research. This course introduces students to the methods, techniques, and machines utilized in additive manufacturing spaces at Penn. The focus will be on iterative design using Fused Deposition Modeling, Stereolithography, and Polyjetting. These methods will be compared with alternatives such as Digital Light Processing, Selective Laser Sintering, Subtractive Manufacturing, and other fabrication techniques. Students will use computer-aided design tools and additive machines to solve problems of physical device and item manufacture. Graduate Standing in engineering or permission of the instructor. MEAM 101 or a suitable 3D computer aided design experience to be determined by the instructor.
Fall or Spring
0.25 Course Units

MEAM 8950 Teaching Practicum
This course provides training in the practical aspects of teaching. The students will work with a faculty member to learn and develop teaching and communication skills. As part of the course, students will participate in a range of activities that may include: giving demonstration lectures, leading recitations, supervising laboratory experiments, developing instructional laboratories, developing instructional material, preparing homework assignments, and preparing examinations. Some of the recitations will be supervised and feedback and comments will be provided to the student by the faculty responsible for the course. At the completion of the 0.5 c.u. of teaching practicum, the student will receive a Satisfactory/Unsatisfactory grade and a written evaluation from the faculty member responsible for the course. The evaluation will be based on comments of the students taking the course and the impressions of the faculty.
Fall or Spring
0.5 Course Units

MEAM 8990 Independent Study
For students who are studying specific advanced subject areas in mechanical engineering and applied mechanics. Before the beginning of the term, the student must submit a proposal outlining and detailing the study area, along with the faculty supervisor’s consent, to the graduate group chair for approval. At the conclusion of the independent study, the student should prepare a brief report.
Fall or Spring
1-4 Course Units

MEAM 9950 Dissertation
0 Course Units

MEAM 9990 Thesis/Dissertation Research
For students working on an advanced research program leading to the completion of master's thesis or Ph.D. dissertation requirements.
Fall or Spring

Medical Physics (MPHY)

MPHY 6010 Introduction to Radiation Protection
Introduction to applied nuclear and atomic physics; radioactive decay; radiation interactions; biological effects and safety guidelines; radiation detection, instrumentation and protection.
Fall
0.5 Course Units

MPHY 6020 Physics of Medical / Molecular Imaging
Physical principles of diagnostic radiology, fluoroscopy, computed tomography; principles of ultrasound and magnetic resonance imaging; radioisotope production, gamma cameras, SPECT systems, PET systems; diagnostic and nuclear medicine facilities and regulations. The course includes a component emphasizing the emerging field of molecular imaging.
Fall
Prerequisite: MATH 2410 AND BIOL 2310 AND BE 3050
1 Course Unit

MPHY 6030 Image-Based Anatomy
Taught by a radiation oncologist, this course covers major organ systems and disease areas and is presented from a radiologic or imaging (including cross-sectional) viewpoint in addition to a standard anatomy and physiology presentation.
Fall
1 Course Unit

MPHY 6040 Radiological Physics
Fundamental concepts underlying radiological physics and radiation dosimetry. Interactions and energy deposition by ionizing radiation in matter and charged particle equilibrium; introduction to radiation detection, calibration, and therapy.
Fall
1 Course Unit

MPHY 6050 Medical Ethics / Governmental Regulation
Fundamentals of professional ethics for medical physicists through exploration of Code of Ethics (published by the American Association of Physicists in Medicine); case studies; survey of governmental regulations pertinent to medical physics.
Spring
0.5 Course Units

MPHY 6060 Physics of Radiation Therapy
Clinical radiation oncology physics; principles of radiation-producing equipment; photon and electron beams; ionization chambers and calibration protocols; brachytherapy, dose modeling and calculations; treatment planning.
Spring
Prerequisite: MPHY 6040
1 Course Unit

MPHY 6070 Radiation Biology
Fundamental knowledge of mechanisms and biological responses of human beings to ionizing and non-ionizing radiation through the study of effects of radiation on molecules, cells and humans; radiation lesions and repair; mechanisms of cell death; cell cycle effect, radiation sensitizers and protectors; tumor radiobiology; relative sensitivities of human tissue and radiation carcinogenesis.
Spring
1 Course Unit
**MPHY 6080 Radiation Detection and Measurement**
Fundamentals of detection and measurement of ionizing radiation; working principles of many detectors used currently in the field including their application in radiotherapy, nuclear medicine, and diagnostic radiology.
Spring
1 Course Unit

**MPHY 6090 Biomedical Image Analysis**
This course covers the fundamentals of advanced quantitative image analysis that apply to all of the major and emerging modalities in biological/biomaterials imaging and in vivo biomedical imaging. While traditional image processing techniques will be discussed to provide context, the emphasis will be on cutting edge aspects of all areas of image analysis (including registration, segmentation, and high-dimensional statistical analysis). Significant coverage of state-of-the-art biomedical research and clinical applications will be incorporated to reinforce the theoretical basis of the analysis methods. Prerequisite: Mathematics through multivariate calculus (MATH 2410), programming experience, as well as some familiarity with linear algebra, basic physics, and statistics.
Fall or Spring
Also Offered As: BE 5370, CIS 5370
1 Course Unit

**MPHY 6100 Computational Medical Physics**
Fundamentals of computational calculations with MATLAB on common problems in radiation therapy physics: Compton scattering cross-section and its applications; Bremsstrahlung scattering cross-sections and its applications; 3D photon dose calculation algorithms; 3D electron dose calculation algorithms; CT reconstruction; DICOM format.
Fall
1 Course Unit

**MPHY 6110 Medical Physics Laboratory**
Lab course offering hands-on experience with a range of measurements commonly encountered in the practice of clinical medical physics. Project offerings may include: Task Group 51 calibration of linear accelerators; 4-Dimensional Computed Tomography (4DCT) imaging and image analysis; Deformable image registration and dose sum reconstruction; Monthly linear accelerator Quality Assurance (QA) procedures; Brachytherapy source calibration and High Dose Rate (HDR) machine QA; Positron emission tomography (PET) imaging and image analysis; MRI imaging and image analysis; Linear accelerator shielding calculations and radiation survey.
Fall
1 Course Unit

**MPHY 6120 Data Science and Artificial Intelligence for Medical Physics**
The course will teach students practical programming techniques (Python), data science infrastructure, data analysis workflows, medical physics specific programming and how to create machine learning (ML) and Deep learning (DL) artificial intelligence models.
Spring
1 Course Unit

**MPHY 6130 MRI Fundamentals**
Magnetic resonance imaging (MRI) is an important and widely used imaging modality for making clinical diagnosis, prognosis, and monitoring treatment response. In this course, students are introduced to the fundamental principles behind the physics of MRI. Topics include basic electromagnetism; MRI hardware; signal generation; image contrast mechanisms, basic and advanced pulse sequences for obtaining structural, metabolic and physiologic information; artefacts; and safety issues. The course offers hands-on experience with an MRI scanner.
Fall
1 Course Unit

**MPHY 6990 Independent Study**
This course is designed to provide the student with a unique learning experience not achievable by ordinary course work. Clinical projects offered by faculty and staff physicists from the Department of Radiation Oncology may count as an independent study course.
1 Course Unit

**MPHY 7000 Clinical Practicum**
Practical experience in a subspecialty of medical physics including radiation therapy, diagnostic imaging, radiation safety, and nuclear medicine. Taking place in a clinical setting and supervised by a qualified medical physicist, the practicum provides an understanding of instrumentation methodology, calibration, treatment planning, and quality assurance; and may include patient interaction, clinical conference attendance, and a review of new techniques.
Summer Term
1 Course Unit

**MPHY 9900 Thesis I**
Faculty-mentored research project (extended research paper or original research) resulting in a final paper and short oral presentation that is the culmination of a master student's graduate study.
1 Course Unit

**MPHY 9910 Thesis II**
Faculty-mentored research project (extended research paper or original research) resulting in a final paper and short oral presentation that is the culmination of a master student's graduate study.
1 Course Unit

**Military Science (MSCI)**

**MSCI 1010 Basic Leadership I Laboratory/Practicum**
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. No credit, or as awarded by cross-enrolled schools.
Fall Corequisite: MSCI 1100
1 Course Unit

**MSCI 1020 Basic Leadership I Laboratory/Practicum**
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. No credit, or as awarded by cross-enrolled schools.
Spring Corequisite: MSCI 1200
1 Course Unit
MSCI 1100 Leadership and Personal Development
Introduces students/cadets to the personal challenges and competencies that are critical for effective leadership. Focus is placed on developing basic knowledge and comprehension of the U.S. Army’s Leadership Dimensions while gaining a “big picture” understanding of the Army ROTC program, its purpose in the U.S. Army and our nation, and its advantages for the student. Classes are conducted for one hour once each week. Credit excluded from full-time calculation.
Fall
Corequisite: MSCI 1010
1 Course Unit

MSCI 1200 Foundations In Leadership
Reviews leadership fundamentals such as setting direction, problem solving, listening, presenting briefs, providing feedback and using effective writing skills. Students/cadets are also exposed to key fundamentals of skills required to be successful as an MS II cadet; namely military map reading and land navigation, and small unit operations/leadership drills. Credit excluded from full-time calculation.
Spring
Corequisite: MSCI 1020
1 Course Unit

MSCI 2010 Basic Leadership 2 Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. No credit, or as awarded by cross-enrolled schools.
Fall
Corequisite: MSCI 2100
1 Course Unit

MSCI 2020 Basic Leadership Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. Basic Course Leadership Laboratory. 2h. Open only to (and required of) students in the associated Military Science course. Series, with different roles for students at different levels in the program. Learn and practice basic skills. Gain insight into Advanced Course in order to make an informed decision whether to apply for it. Build self-confidence and team-building leadership skills that can be applied throughout life. Basic Course Physical Fitness. Only open to students in MSCI 1010, MSCI 1020, MSCI 2010 and MSCI 2020. Series, with different roles for students at different levels in the program. Participate in and learn to lead a physical fitness program. Emphasis on the development of an individual fitness program and the role of exercise and fitness in one's life. Students who continue in the advanced course as juniors and seniors become obligated to serve either on active duty or in the reserve component. The Advanced Course consists of the courses MSCI 3010, MSCI 3020, MSCI 4010 and MSCI 4020. It is open only to students who have completed the Basic Course or earned placement credit for the basic course (various methods). The Advanced Course is designed to qualify a student for a commission as an officer of the United States Army. Students must complete all courses numbered greater than 3000, to include a six-week Advanced Camp during the summer, usually between the junior and senior years. The courses must be taken in sequence unless otherwise approved by the Professor of Military Science. All contracted students receive $150 per month stipend during the school year. No credit, or as awarded by cross-enrolled schools.
Spring
Corequisite: MSCI 2200
1 Course Unit

MSCI 2030 Leadership Lab
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. 1 Course Unit

MSCI 2100 Innovative Tactical Leadership
Explores the dimensions of creative and innovative tactical leadership strategies and styles by studying historical case studies and engaging in interactive student exercises. Focus is on continued development of the knowledge of leadership values and attributes through an understanding of rank, uniform, customs and courtesies. Credit excluded from full-time calculation.
Fall
Corequisite: MSCI 2010
1 Course Unit

MSCI 2200 Leadership In Changing Environments
Examines the challenges of leading in complex contemporary operational environments. Students/cadets are exposed to more complex land navigation/map reading tasks, as well as more advanced small unit operations/leadership drills. Cadets develop greater self awareness as they practice communication and team building skills. Credit excluded from full-time calculation.
Corequisite: MSCI 2020
1 Course Unit

MSCI 2300 Adaptive Team Leadership
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. 1 Course Unit

MSCI 3010 Leadership Laboratory/Practicum 3
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. No credit, or as awarded by cross-enrolled schools.
Fall
Prerequisite: MSCI 1010 AND MSCI 1020 AND MSCI 1100 AND MSCI 1200 AND MSCI 2010 AND MSCI 2020 AND MSCI 2100 AND MSCI 2200
Corequisite: MSCI 3100
1 Course Unit
MSCI 3020 Leadership Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. ROTC Advanced Camp. A six-week camp conducted at an Army post. Only open to (and required of) students who have completed MSCI 3010 and MSCI 3020. The student receives pay. Travel, lodging and most meal cost are defrayed by the US Army. The Advanced Camp environment is highly structured and demanding, stressing leadership at small unit levels under varying, challenging conditions. Individual leadership and basic skills performance are evaluated throughout the camp. The leaders and skills evaluations at the camp weigh heavily in the subsequent selection process that determines the type commission and job opportunities given to the student upon graduation from ROTC and the university Nurse Summer Training Program. Consist of three weeks at an Advanced Camp (see above) and up to five weeks serving as a nurse in a military medical treatment facility. Only open to (and required of) nursing students who have completed MSCI 3010 and MSCI 3020. Replaces normal advanced. The student receives pay. Travel, lodging and most meal costs are defrayed by the US Army. The camp and clinical environments are demanding, stressing leadership and basic skills performance are evaluated throughout. The leadership and skills evaluations weigh heavily on the subsequent selection process that determines the job opportunities offered to the nurse upon graduation. No credit, or awarded by cross-enrolled schools.

Spring
Prerequisite: MSCI 1010 AND MSCI 1020 AND MSCI 1100 AND MSCI 1200 AND MSCI 2010 AND MSCI 2020 AND MSCI 2100 AND MSCI 2200
Corequisite: MSCI 3200
1 Course Unit

MSCI 3100 Leadership in Contact
Uses increasingly intense situational leadership challenges to build cadet awareness and skills in leading small units. Skills in decision-making, persuading, and motivating team members when "in combat" are explored, evaluated, and developed. Credit excluded from full-time calculation.

Prerequisite: MSCI 1010 AND MSCI 1020 AND MSCI 1100 AND MSCI 1200 AND MSCI 2010 AND MSCI 2020 AND MSCI 2100 AND MSCI 2200
Corequisite: MSCI 3010
2 Course Units

MSCI 3200 Complex Team Leadership Issues
Challenges cadets with more complex leadership issues to further develop, practice, and evaluate adaptive leadership. Cadets continue to analyze and evaluate their own leadership values, attributes, skills and actions in preparation for the Leadership Development and Assessment Course (LDAC). Primary attention is given to preparation for LDAC and the development of both tactical skills and leadership qualities. Credit excluded from full-time calculation.

Spring
Corequisite: MSCI 3020
1 Course Unit

MSCI 3300 Military Leadership
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.

Prerequisite: MSCI 1010 AND MSCI 1020 AND MSCI 1100 AND MSCI 1200 AND MSCI 2010 AND MSCI 2020 AND MSCI 2100 AND MSCI 2200
1 Course Unit

MSCI 4010 Leadership Laboratory/Practicum 4
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. Credit excluded from full-time calculation.

Fall
Prerequisite: MSCI 1010 AND MSCI 1020 AND MSCI 1100 AND MSCI 1200 AND MSCI 2010 AND MSCI 2020 AND MSCI 2100 AND MSCI 2200 AND MSCI 3010 AND MSCI 3020 AND MSCI 3100 AND MSCI 3200
Corequisite: MSCI 4100
1 Course Unit

MSCI 4020 Leadership Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. Advance Course Leadership Laboratories. 2h. Open only to students in the associated Military Science course. Series, with different roles for students at different levels in the program. Involves leadership responsibilities for the planning, coordination, execution and evaluation of various training and activities with Basic Course students and for the ROTC program as a whole. Students develop, practice and refine leadership skills by serving and being evaluated in a variety of responsible positions. Advanced Course Physical Fitness. Only offered to (and required of) students in MSCI 3010, MSCI 3020, MSCI 4010 and MSCI 4020, of which this program is an integral part. Series, with different roles for students at different levels in the program. Participate in and learn to plan and lead physical fitness programs. Develops the physical fitness required of an officer in the Army. Emphasis on the development of an individual fitness program and the role of exercise and fitness in one's life. No credit, or as awarded by cross-enrolled schools.

Spring
Prerequisite: MSCI 1010 AND MSCI 1020 AND MSCI 1100 AND MSCI 1200 AND MSCI 2010 AND MSCI 2020 AND MSCI 2100 AND MSCI 2200 AND MSCI 3010 AND MSCI 3020 AND MSCI 3100 AND MSCI 3200

1 Course Unit

MSCI 4030 Leadership Lab
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. 1 Course Unit

MSCI 4100 Developing Adaptive Leaders
Develops cadet proficiency in planning, executing, and assessing complex operations, functioning as a member of a staff, and providing leadership performance feedback to subordinates. Cadets are given situational opportunities to assess risk, make ethical decisions, and provide coaching to fellow ROTC cadets. Credit excluded from full-time calculation.

Fall
Prerequisite: MSCI 1010 AND MSCI 1020 AND MSCI 1100 AND MSCI 1200 AND MSCI 2010 AND MSCI 2020 AND MSCI 2100 AND MSCI 2200 AND MSCI 3010 AND MSCI 3020 AND MSCI 3100 AND MSCI 3200
Corequisite: MSCI 4010
1 Course Unit
MSci 4200 Leadership in the Contemporary Operating Environment of the 21st Century
Explores the dynamics of leading in the complex situations of current military operations. Cadets examine differences in customs and courtesies, military law, principles of war, and rules of engagement in the face of international terrorism. Aspects of interacting with non-government organizations, civilians on the battlefield, and host nation support are examined and evaluated. Credit excluded from full-time calculation.
Prerequisite: MSCI 1010 AND MSCI 1020 AND MSCI 1100 AND MSCI 1200 AND MSCI 2010 AND MSCI 2100 AND MSCI 2200 AND MSCI 3010 AND MSCI 3020 AND MSCI 3100 AND MSCI 3200
Corequisite: MSCI 4020
2 Course Units

MSci 4300 Advanced Leadership in Contemporary Environments
Continues exploration of the dynamics of leading in the complex situations of current military operations. Culminates the ROTC curriculum with a capstone "hands-on" small unit leadership exercise which tests the cadet's tactical, technical and leadership skills utilizing an intense, realistic tactical scenario based on actual military operations in the contemporary operating environment of the 21st century.
2 Course Units

Modern Middle East Studies (MODM)
The courses listed on this page are exclusive to the LPS BAAS degree (https://lponline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lponline.sas.upenn.edu/academics/certificates/).

MODM 1000 The Middle East and the West
This course provides an overview of themes and issues in Middle Eastern history from the medieval era to the present, with an emphasis on encounters and exchanges between the "Middle East" (defined as Southwest Asia and North Africa) and the "West" (chiefly Europe and the United States). Key topics include perceptions of Islam since its inception, conflicts between predominantly Christian Europe and the Islamic world during the Crusades, East-West encounters during the age of exploration, European colonial domination of the Middle East from the 19th century, independence movements and the rise of nationalism in the 20th century, the Middle East and the Cold War, and the challenge of Islamist radicalism and anti-Western sentiment in recent times.
1 Course Unit

MODM 2000 Women and Gender in the Middle East
Depictions of Middle Eastern women frequently present them as voiceless, oppressed, and disadvantaged, and often cite Islam as the cause. This course explores the many complexities of gender and the position of women in the predominantly Islamic Middle East, surveying the major developments, themes, and problems in women's history from the medieval era to the contemporary period. Special emphasis will be placed on the role of women in foundational Islamic texts and the many interpretations of those texts regarding questions of gender. The course will also challenge the idea that gender divisions and the role assigned to women have been static throughout history, by tracing women's legal status, sexual morality, family life, and economic and political participation over time. Themes discussed include the importance of the harem and the influence of women in political life, the challenges posed by the impact of the West, women's reactions to these challenges, the return of Islam and Islamism, and the repercussions for women in dress, employment, and moral life. The course will also consider gender norms and homoeoerotic relations. In addition, the course will also look at Western representations of the Oriental woman, the effects of colonialism and nationalism on Middle Eastern women, and the rise of Muslim women activist movements. We will also address the highly contested subject of veiling and consider the effects of modern US wars on Middle Eastern women. Seeking to go beyond just scholarly studies, this course will make use of art, documentaries, and literature in order to demonstrate how, in the modern period, women have defined themselves amid great political, social and economic turmoil.
1 Course Unit

MODM 2600 Oil, Poli in Mid East
Few issues have dominated the economic and political landscape of the Middle East over the past hundred years more visibly than oil. This course examines the historical, economic, political and social dimensions of petroleum exploration in the region, from the first major oil discoveries in Iran in 1908 to more recent attempts to diversify the regions economic and energy practices. Topics discussed include oil and economic development, colonialism and foreign oil exploration, petro-nationalism and the rise of OPEC, the Arab oil embargo of 1973, the significance of oil in the US-Saudi relationship, and the role of climate change and sustainability priorities in the Middle East.
1 Course Unit

MODM 3000 Rigs Trads Mid East
Understanding the modern Middle East is almost impossible without first developing an appreciation for the importance of its diverse religious traditions, and the role that religion has played in the development of the region since antiquity. This course examines the many ways that religion has functioned in Middle Eastern societies, beginning with ancient, pre-Islamic practices, such as the Zoroastrian religion of the Persian Empire, the development of Judaism among the ancient Israelites, and the spread of Christianity in the eastern Roman Empire. Of special interest will be the rise of Islam in the seventh century, and the development of unique and localized Islamic traditions in the rapidly expanding Arab empires of the medieval period. The class will focus on such themes as the differences between Sunni and Shia Islam, the position of non-Muslim minorities in Islamic history and the different responses offered by Muslims to the challenge of western hegemony in predominantly Muslim lands. The class will conclude by looking closely at the many ways religion is practiced in the Middle East today, from the official secularism of states like Turkey, to the post-revolutionary religious politics of the Islamic Republic of Iran, to the complex relationship between Judaism and Zionism in Israel, to the special challenges faced by Christian and other minorities in places like Egypt or Lebanon.
1 Course Unit
**MODM 3200 America and Iran: 1720 to Present**
In recent times, the United States and Iran have seemed closer to war than peace, but that is not where their story began. When the United States was in its infancy, Thomas Jefferson and John Quincy Adams turned to the history of the Persian Empire as they looked for guidance on how to run their new country. In the following century, Iranian newspapers heralded American politics and practices as ideals that their own government might someday emulate. How, then, did the two nations become the adversaries that they are today? In this course, we will trace the complex story of America and Iran over three centuries. Drawing on a range of primary sources, films and other historical materials, students will be expected to challenge easy notions of right and wrong, and instead seek to understand why each country has made the decisions it has made at various points in history. The ultimate goal will be to gain a deeper understanding of when, where and how it all went wrong for Iran and America and why, perhaps, it didn’t have to be this way. Note: There will one hour of synchronous meetings every Monday, at a time to be determined in consultation with registered students. Students are strongly urged to read the following two Wikipedia entries before the first day of class: 1979 Iran Hostage Crisis (https://en.wikipedia.org/wiki/Iran hostage crisis) and 1953 CIA Coup (https://en.wikipedia.org/wiki/1953 Iranian coup d%27%C3%A9tat)
1 Course Unit

**Music (MUSC)**

**MUSC 0050 College Music Program**
Private study in voice, keyboard, strings, woodwind, brass, percussion, and non-western instruments. Such study is designed to meet the artistic, technical, and/or professional needs of the student. Note: This is not a syllabus. Course requirements and assessment will be determined by the private instructor. Private lessons in the College House Music cannot be taken Pass/Fail. Please visit http://www.sas.upenn.edu/music/performance. Students cannot register through Penn In Touch. Registration will be maintained by the music department upon receipt of application and instructor permission. An additional lesson fee will be charged to student account for participation in this program.
0.5 Course Units

**MUSC 0070 Ensemble Performance**
Successful participation in a music department sponsored group. Ensemble groups: University Orchestra, University Wind Ensemble, Choral Society, University Choir, Collegium Musicum, Baroque and Recorder Ensemble, Chamber Music Society, Arab Music Ensemble, Samba Ensemble, Penn Flutes, Opera and Musical Theater, and Jazz Combo. This course must be taken for a letter grade (Pass/Fail registration option may not be utilized for this course).
0.5 Course Units

**MUSC 0100A Marian Anderson Performance Program**
Special instruction in vocal and instrumental performance for music majors and minors only. Students must demonstrate in an audition that they have already attained an intermediate level of musical performance. They also must participate in a Music Department ensemble throughout the academic year, perform in public as a soloist at least once during the year (recital), perform a jury at the end of the spring semester, and attend and participate in masterclasses.
Two Term Class, Student must enter first term; credit given after both terms are complete
0.5 Course Units

**MUSC 0100B Marian Anderson Performance Program**
Special instruction in vocal and instrumental performance for music majors and minors only. Students must demonstrate in an audition that they have already attained an intermediate level of musical performance. They also must participate in a Music Department ensemble throughout the academic year, perform in public as a soloist at least once during the year (recital), perform a jury at the end of the spring semester, and attend and participate in masterclasses.
Two Term Class, Student must enter first term; credit given after both terms are complete
0.5 Course Units

**MUSC 0110A Marian Anderson Group Performance Program**
Special instruction in vocal/instrumental small group (ensemble) performance, for music majors and minors only. Students must demonstrate in an audition that they have already attained an intermediate or advanced level of musical performance. They also must participate in a Music Department ensemble throughout the academic year, perform in public as a soloist at least once during the year (recital), perform a jury at the end of the spring semester, and attend and participate in masterclasses. Prerequisite: Students must be a music major or minor.
Two Term Class, Student must enter first term; credit given after both terms are complete
0.5 Course Units

**MUSC 0110B Marian Anderson Group Performance Program**
Special instruction in vocal/instrumental small group (ensemble) performance, for music majors and minors only. Students must demonstrate in an audition that they have already attained an intermediate or advanced level of musical performance. They also must participate in a Music Department ensemble throughout the academic year, perform in public as a soloist at least once during the year (recital), perform a jury at the end of the spring semester, and attend and participate in masterclasses. Prerequisite: Students must be a music major or minor.
Two Term Class, Student must enter first term; credit given after both terms are complete

**MUSC 0160 First-Year Seminar**
The primary goal of the first-year seminar program is to provide every first-year student the opportunity for a direct personal encounter with a faculty member in a small setting devoted to a significant intellectual endeavor. Specific topics will be posted at the beginning of each academic year. Please see the College’s First-year Seminar website for information on current course offerings http://www .college.upenn.edu/courses/seminars/freshman.php. Fulfills Arts and Letters sector requirement.
1 Course Unit
MUSC 0180A Music in Urban Spaces
Music in Urban Spaces is a year-long experience that explores the ways in which individuals use music in their everyday lives and how music is used to construct larger social and economic networks that we call culture. We will read the work of musicologists, cultural theorists, urban geographers, sociologists, and educators who work to define urban space and the role of music and sound in urban environments, including through music education. While the readings make up our study of the sociology of urban space and the way we use music in everyday life to inform our conversations and the questions we ask, it is within the context of our personal experiences working with music programs in public neighborhood schools serving economically disadvantaged students, that we will begin to formulate our theories of the contested musical micro-cultures of West Philadelphia. This course is over two-semesters where students register for .5 cus each term (for a total of 1 cu over the entire academic year) and is tied to the Music and Social Change Residential Program in Fisher Hassenfeld College House which will sponsor field trips around the city and a final concert for youth to perform here at Penn, if possible. Students are expected to volunteer in music and drama programs in Philadelphia neighborhood public schools throughout the course experience.
Two Term Class, Student must enter first term; credit given after both terms are complete
Also Offered As: URBS 0180A

MUSC 0181 On Belonging: Music, Displacement, and Well-Being
The 2020s has begun as a time of global existential angst: we are all living with so much uncertainty and change. Think of the impact of the COVID pandemic and the questioning of science in the form of vaccine resistance; climate change challenges; a technological and educational revolution; growing income inequality; the urgency of BLM protests in the USA, moves against dictatorships, the need to decolonize universities, and the pressure to address human rights and refugee challenges. But it is also a moment of real excitement, with increased technological access and presence in our lives. In fact, the capacity to connect to others almost anywhere in the world, immediately, is truly revolutionary. As is the capacity to plug into the sound of the world's music in an instant. Through personal music listening, for example, we can use music to soothe, to excite, to travel imaginatively, to focus, for meditation, as a soundtrack to our everyday lives, and as emotional regulation. But the work of music for personal wellbeing and collective healing is much larger than just an individualized listening experience. This seminar opens up the issue of emotional regulation and collective healing by examining the relationship between sound and musical practice, performance, and engagement, both locally and around the world. You might think about this seminar as a kind of reflexive moment as you arrive on campus: as undergraduates and members of communities you will think about the relationship between your own recent move/displacement and the work of music/sound as a strategy of individual and collective belonging. There will be an ABCS component to the class.
1 Course Unit

MUSC 0190 Critical Speaking Seminar: See department for current offerings
Critical Speaking Seminars utilize oral communication assignments as a primary method for learning and assessment. They have three key requirements: (1) At least half of the course grade is based on two prepared oral presentations (one group and one individual). Students will meet with an undergraduate speaking advisor outside of class at least twice. (2) One rehearsal for each of the two required presentations. (3) Students will be video-recorded and will watch the recording with either the instructor of the advisor. Critical speaking fellows are doctoral candidates who teach in the respective disciplines. Enrollment is capped at 16 students/course. For additional details regarding a critical speaking requirement, see: https://www.sas.upenn.edu/cwic/courses/critical.html
Not Offered Every Year
1 Course Unit

MUSC 0810 First-Year Seminar: Italian Music
Topics vary. See the Department’s website at https://www.sas.upenn.edu/italian/courses for a description of current offerings.
Fall or Spring
Also Offered As: CIMS 0089, ITAL 0089
1 Course Unit
MUSC 1250 Musical Interfaces and Robotics
Musical Interfaces and Robotics is a skills and discussion-based class for students interested in learning the basics of electricity and physical computing specifically for musical purposes. Discussions will be organized around readings related to art and technology with a focus on sound-based works. Students will learn to program Arduinos that control DC motors and respond to physical buttons or sensors. We will learn how to integrate these tools with music applications that communicate with MIDI such as Reaper, Logic Pro, and/or Max/MSP. As a final project students will present a working prototype for a new instrument they've created or plans for an art installation featuring a kinetic sculptural element.
1 Course Unit

MUSC 1270 Introduction to Electronic Musimaking
An exploration of composition, style, and technique in a variety of popular and experimental electronic music genres. We'll study and practice making works in genres including acousmatic music, beat-driven music such as hip-hop and techno, pop songwriting, and sound art. As we proceed, we'll investigate techniques including field recording, sampling, sound synthesis, and generative music. Within each genre, we'll begin from the analysis and technique of exemplary music, then work towards presentation and group discussion of student composition projects.
Not Offered Every Year
1 Course Unit

MUSC 1280 Audio Production
Audio Production is designed for students interested in taking their mixing, mastering, and recording skills to the next level. During this course we will conduct critiques and analysis of student projects as well as learn from local industry professionals. Through listening assignments we will refine our ears to identify the effects digital signal processing production tools have on recorded sounds. While we will examine current practices from many different genres, a special emphasis will be placed on exploring experimental approaches that you might be able to integrate into your artistic practice. A good understanding of Logic Pro is necessary to enter this course. Significant experience working with Pro Tools may substitute pending approval from the instructor.
Not Offered Every Year
1 Course Unit

MUSC 1290 History of Electronic Music
This course is a nonlinear history of electronic music, primarily in the United States. It is divided into ten topical milestones of electronic music history. Each week one topic is addressed, divided between mainstream and experimental perspectives and their interactions. Topics include early experimental electronic instruments, sampling/hip-hop, disco, and noise/glitch. Much of the class is about listening and learning to analyze music in terms both subjective and objective. Students will also train their ears to identify concrete elements within a musical track such as development and instrumentation, and consider abstract elements such as meaning and perception.
Fall or Spring
1 Course Unit

MUSC 1300 1000 Years of Musical Listening
We know that we like music and that it moves us, yet it is often difficult to pinpoint exactly why, and harder still to explain what it is we are hearing. This course takes on those issues. It aims to introduce you to a variety of music, and a range of ways of thinking, talking and writing about music. The majority of music dealt with will be drawn from the so-called "Classical" repertory, from the medieval period to the present day, including some of the 'greats' such as Handel, Beethoven, Mozart, Berlioz, and Verdi, but will also introduce you to music you will most likely never have encountered before. This course will explore the technical workings of music and the vocabularies for analyzing music and articulating a response to it; it also examines music as a cultural phenomenon, considering what music has meant for different people, from different societies across the ages and across geographical boundaries. As well as learning to listen ourselves, we will also engage with a history of listening. No prior musical knowledge is required. (Formerly Music 021).
Fulfills College Cross Cultural Foundational Requirement.
Fall or Spring
1 Course Unit

MUSC 1320 Composers: Opera Composers 1600-1900
This course will center on the biography, works, and cultural context of a specific composer or group of composers. As well as introducing students to the musical works of the composer(s), the course will examine issues such as reception history, the canon, mechanisms of cult formation, authorship and attribution, identity, historical and social contexts, and nationalism and patriotism. Fulfills Arts and Letters Requirement. The course centers on a group of composers who created or developed opera as a successful genre by setting texts in Italian: Monteverdi, Handel, Mozart, Verdi, and Puccini. We will explore how these musicians were involved in opera as a business model, how their careers took shape, how their music interacted on stage with words, bodies, and sets (enhancing narratives based on literature, mythology and history), how their works were products of larger social contexts, and finally, how and why these operas are presented today by American theatres (also adapted as Broadway musicals) or in film versions. The course is intended for non-majors, but music majors are welcome. Knowledge of Italian is not necessary.
Not Offered Every Year
Also Offered As: ITAL 1320
1 Course Unit

MUSC 1321 Composers: Verdi and Shakespeare
This course will center on the biography, works, and cultural context of a specific composer or group of composers. As well as introducing students to the musical works of the composer(s), the course will examine issues such as reception history, the canon, mechanisms of cult formation, authorship and attribution, identity, historical and social contexts, and nationalism and patriotism. Fulfills Arts and Letters Requirement. Italian composer Giuseppe Verdi wrote three famous operas based on Shakespeare, Macbeth (1847), Othello (1887), and Falstaff (1891). We will examine the intriguing relationships between the plays and the operas, explore Verdi's entire output and the conventions and contexts of Romantic opera, and finally discuss issues of race, gender, and performance that were as relevant for these two authors as they are for us today. The course is intended for non-majors, but music majors are welcome.
Not Offered Every Year
1 Course Unit
MUSC 1322 Composers: Mozart/DaPonte
This course will center on the biography, works, and cultural context of a specific composer or group of composers. As well as introducing students to the musical works of the composer(s), the course will examine issues such as reception history, the canon, mechanisms of cult formation, authorship and attribution, identity, historical and social contexts, and nationalism and patriotism. Fulfills Arts and Letters Requirement. Mozart's meeting with Lorenzo Da Ponte in Vienna in 1783 sparked one of the most successful collaborations in opera history between a poet and a composer, generating three works that are frequently staged in today's theatres worldwide, The Marriage of Figaro (1786), Don Giovanni (1787), and Così fan tutte (1790). We will study the literary sources of these operas, the poetic and operatic conventions of the time, and the issues (such as love, power, and gender) that these works raise, by also comparing different versions on video. The course is intended for non-majors, but music majors are welcome.
Not Offered Every Year
Also Offered As: ITAL 1322
1 Course Unit

MUSC 1323 Composers: Anonymous, History's Most Prolific Composer
This course will center on the biography, works, and cultural context of a specific composer or group of composers. As well as introducing students to the musical works of the composer(s), the course will examine issues such as reception history, the canon, mechanisms of cult formation, authorship and attribution, identity, historical and social contexts, and nationalism and patriotism. Fulfills Arts and Letters Requirement. This course traces the "anonymous," the first and most prolific composer in Western Europe, through multiple centuries, exploring what it means for music to be created by a shadowy figure of anonymity and the implications for research, analysis, and listening. The course is intended for non-majors, but music majors are welcome.
Not Offered Every Year
1 Course Unit

MUSC 1324 Composers: Medieval Songwriters
This course will center on the biography, works, and cultural context of a specific composer or group of composers. As well as introducing students to the musical works of the composer(s), the course will examine issues such as reception history, the canon, mechanisms of cult formation, authorship and attribution, identity, historical and social contexts, and nationalism and patriotism. Fulfills Arts and Letters Requirement. In this course we explore the sometimes anonymous, sometimes named creators of song across Europe, ca. 1100-1500. Some, like Philip the Chancellor, wrote serious, even polemical Latin songs, while others, such as Adam de la Halle, wrote works firmly entrenched in the poetics of courtly love. In the course we will consider issues of authorship/composership; attribution and transmission; linguistic and national song styles; and the contemporary reception of the medieval "troubadour."
Not Offered Every Year
1 Course Unit

MUSC 1325 Composers: Fryderyk Chopin
This course will center on the biography, works, and cultural context of a specific composer or group of composers. As well as introducing students to the musical works of the composer(s), the course will examine issues such as reception history, the canon, mechanisms of cult formation, authorship and attribution, identity, historical and social contexts, and nationalism and patriotism. Fulfills Arts and Letters Requirement. Permanently exiled from his native Poland for half his short life, and debilitated by illness for much the same time, Fryderyk Chopin nonetheless produced a profoundly important repertory of music for the piano, music at times transcendently beautiful and at times viscerally exciting. Through close listening to recordings, viewing of recorded live performances, and selected readings, this course will explore Chopin's music and the cultures within which and for whom he composed. The course is intended for non-majors, but music majors and performers are more than welcome as well.
Not Offered Every Year
1 Course Unit

MUSC 1326 Composers: Ludwig van Beethoven
This course will center on the biography, works, and cultural context of a specific composer or group of composers. As well as introducing students to the musical works of the composer(s), the course will examine issues such as reception history, the canon, mechanisms of cult formation, authorship and attribution, identity, historical and social contexts, and nationalism and patriotism. This course will explore the nature, evolution, and meanings of Beethoven's music. We will also consider aspects of his biography, particularly as they touch on his compositional output, and also think about the relationships between his music and cultural and political developments of his time. Listening to Beethoven's music, discussing it, and thinking about his life and art will constitute the heart of the course. The course is intended for non-majors, but music majors and performers are more than welcome as well.

1 Course Unit

MUSC 1340 Performers: Dancers and Musicians
This course looks at the history of popular, vernacular, and art music in various time periods. Studying music from the ground up, we examine how performers have influenced music history. This introductory course examines the relationship of musicians and dancers from the Middle Ages up to the emergence of ballet. Engaging with musical scores, iconography, theoretical writings, and a range of other textual sources, we will consider the ways in which dance (and dancers) informed music (and musicians), and vice versa, over the course of several hundred years.
Not Offered Every Year
1 Course Unit

MUSC 1341 Performers: The Singer ca. 800-1400
This course looks at the history of popular, vernacular, and art music in various time periods. Studying music from the ground up, we examine how performers have influenced music history. Tracing the figure of the singer beginning in the court of Charlemagne to the papal outpost of Avignon in the late thirteenth century, this introductory course considers the evolving roles of singers in the Middle Ages. From monastic cantors to virtuosic soloists, we will be concerned not only the cultural function of singers but also the repertoire they performed.
Not Offered Every Year
1 Course Unit
MUSC 1342 Performers: Celebrity
This course looks at the history of popular, vernacular, and art music in various time periods. Studying music from the ground up, we examine how performers have influenced music history. This introductory course looks at the history of celebrity culture in the eighteenth and nineteenth centuries. From "rival queen" actress-singers on London stages to mania over virtuoso instrumentalists, we will explore how celebrities dazzled fans, popularized repertoire, manipulated their public images, and were depicted in the media.
Not Offered Every Year
1 Course Unit

This course looks at the history of popular, vernacular, and art music in various time periods. Studying music from the ground up, we examine how performers have influenced music history. We will focus on the life, times, and art of legendary African-American contralto and native Philadelphian Marian Anderson, whose archive is housed by the University of Pennsylvania’s Kislak Center for Special Collections. Anderson’s legacy remains extraordinarily relevant today as the country and the music world face new and old challenges in broadening access and fostering equality across boundaries of race, gender, and social class. We will develop hands-on projects based on Penn’s archival holdings (photos, diaries, letters, programs, audio materials, and scores) to explore Anderson’s pathbreaking role in American history, impacting music, politics, racial and gender relationships, and social justice. The exciting primary-source foundation will be complemented by secondary readings, listenings, and viewings.
Not Offered Every Year
1 Course Unit

MUSC 1400 Jazz Style and History
This course is an exploration of the family of musical idioms called jazz. Attention will be given to issues of style development, selective musicians, and to the social and cultural conditions and the scholarly discourses that have informed the creation, dissemination and reception of this dynamic set of styles from the beginning of the 20th century to the present. Fulfills Cultural Diversity in the U.S.
Not Offered Every Year
Also Offered As: AFRC 1400
1 Course Unit

MUSC 1420 Thinking About Popular Music
Catchy yet controversial. Fun but hard-hitting. Popular music is not just entertaining: it presents societal issues, raises questions, expresses ideas. This course considers how popular music of the 20th century manifested the hopes, contradictions, ingenuity, and challenges of life in the United States, as seen and heard through the experiences of musicians and audiences. We will address three core questions: (1) How is “talent” and “good” music distinguished? (2) What happens when we treat music as "property," especially with respect to broader ideas of ownership and credit? (3) When, how, and why is music considered dangerous? We delve into these questions by profiling musicians’ lives, analyzing the musical traits of specific repertoire, investigating changes in how music circulates, and situating popular music in U.S. cultural history. This course is not a chronological survey and does not aim to cover all U.S. popular music (or global popular music). Instead, each core question is addressed through case studies. Over the course of the semester students learn listening and analytic skills, how to engage critically with a range of writings about music, how to develop compelling arguments and articulate them verbally in class discussions and in writing assignments.
Not Offered Every Year
1 Course Unit

MUSC 1430 History of Opera
An investigation, through a series of representative works, of the central problem of opera: how does the combination of music, text, and visual spectacle create an art form in which the whole is more powerful than its parts. Today this issue can be examined not only in live performances but also through media such as film, DVD, streaming video—media to which this four-centuries-old multimedia form has adapted, evolving in still compelling ways. The works chosen for the course provide a chronological survey but also represent the variety of sources on which opera has drawn for its subject matter: myth and legend, the epic, the tragic, the comedic, the bad, the ugly, the battle of Algiers, and Teorema, as well as for American films such as Malick’s Days of Heaven and Tarantino’s The Hateful Eight. Weekly screenings required. Open to all: music majors, minors, and non-majors; will count toward requirements for music minor.
Knowledge of music and Italian helpful but not required. All readings and lectures in English.
Also Offered As: ITAL 1430
1 Course Unit

MUSC 1440 Film Music in Post 1950 Italy
An exploration of cinematic sound through the lens of specific composer/director collaborations in post-1950 Italy, examining scores, soundtracks, and the interaction of diegetic and non-diegetic music with larger soundscapes. Composers Nino Rota and Ennio Morricone serve as case studies, in partnership with directors Fellini, Visconti, Leone, Pontecorvo, Pasolini, and Coppola. Highlights include several excerpts from the Fellini/Rota collaboration, including The White Sheik, I vitelloni, The Road, Nights of Cabiria, La dolce vita, 8 1/2, Juliet of the Spirits, Satyricon, The Clowns, Roma, Amarcord, Casanova, and Orchestra Rehearsal. Rota’s music for Visconti will be examined in Senso, the Leopard, and Rocco and his Brothers, along with his Transatlantic collaboration for The Godfather. Morricone’s work with various directors will be discussed in The Good, the Bad, and the Ugly, The Battle of Algiers, and Teorema, as well as for American films such as Malik’s Days of Heaven and Tarantino’s The Hateful Eight. Weekly screenings required. Open to all: music majors, minors, and non-majors; will count toward requirements for music minor.
Also Offered As: CIMS 1440, ITAL 1440
1 Course Unit
MUSC 1450 Songwriting
This class will tackle song as a topic of study from the perspective of the listener and the maker. We will consider popular song, folk song, art song, and other styles, as well as styles that may be hard to categorize, taking a big picture look at the role of songs in our lives and also getting into the nitty gritty of how songs are created. Reflective and analytical work will be required of students, with the main focus being the creation of original songs.
Fall or Spring
1 Course Unit
MUSC 1500 World Musics and Cultures
This course examines how we as consumers in the “Western” world engage with musical difference largely through the products of the global entertainment industry. We examine music cultures in contact in a variety of ways—particularly as traditions in transformation. Students gain an understanding of traditional music as live, meaningful person-to-person music making, by examining the music in its original site of production, and then considering its transformation once it is removed, and recontextualized in a variety of ways. The purpose of the course is to enable students to become informed and critical consumers of “World Music” by telling a series of stories about particular recordings made with, or using the music of, peoples culturally and geographically distant from the US. Students come to understand that not all music downloads containing music from unfamiliar places are the same, and that particular recordings may be embedded in intriguing and controversial narratives of production and consumption. At the very least, students should emerge from the class with a clear understanding that the production, distribution, and consumption of world music is rarely a neutral process. Fulfills College Cross Cultural Foundational Requirement.
Fall or Spring
Also Offered As: AFRC 1500, ANTH 1500
1 Course Unit
MUSC 1510 Music of Africa
African Contemporary Music: North, South, East, and West. Come to know contemporary Africa through the sounds of its music: from South African kwela, jazz, marabi, and kwaito to Zimbabwean chimurenga; Central African soukous and pygmy pop; West African Fuji, and North African rai and hophop. Through reading and listening to live performance, audio and video recordings, we will examine the music of Africa and its intersections with politics, history, gender, and religion in the colonial and post colonial era. (Formerly Music 053). Fulfills College Cross Cultural Foundational Requirement.
Not Offered Every Year
Also Offered As: AFRC 1510
1 Course Unit
MUSC 1530 Music in Troubled Places
In this class, we go beyond the headlines to discuss the history and cultures of peoples who have had to endure terrible suffering, particularly through ethnic conflict and civil war. We will focus on a curious phenomenon: populations typically defined as separate from one another (e.g., Israelis and Palestinians) often have a history of shared or related cultural practices, of which music is a prime example. We will survey a number of current and recent conflict zones and use music as a way to deepen our understanding of the identities and relationships between the peoples involved including through a consideration of my own fieldwork in Sri Lanka. Querying the very definitions of music, trouble, and place, the course then broadens out to consider how musicians have been affected by and/or responded to important global problems like slavery, sexual violence, climate change and other ecological disasters, like Hurricane Katrina. Regions to be considered in our lectures and/or readings include: Afghanistan, Iraq, Syria (including Kurdish musics), Israel-Palestine, Sri Lanka, the Maldives, Myanmar/Burma, Uganda, Sierra Leone, North and South Korea, the Marshall Islands, Cambodia, Mexico, and the United States.

1 Course Unit
MUSC 1580 Weird Music
The term “weird” has long been used pejoratively to describe music that people don’t understand, which sounds to them like some combination of extreme, bad, pretentious, or indecipherable (“strange”). The term “weird” may be laced with racism and ignorance, such as when one chooses to say another culture’s music is “weird” rather than try to understand it. “Experimental,” by contrast, elevates music that is perceived as intending to push boundaries. Thus, both conjure up what they are not: “normal” music, such as a mainstream pop song. In this class, we take a journey through some of the world’s “weirdest” music and in the process question musical normativity and taste. We consider music deemed by its makers (or by outsiders observers) as too loud, soft, fast, slow, complex, meandering, or simple; we study global histories of experimentalism, including experimental instruments and tuning systems, subversive and/or humorous uses of digital and analog technologies, and the “slow movement” and related DIY and punk subcultures; and we explore alternative ways of conceptualizing the structure and function of music that lie far outside the mainstream music industry. Questioning how capitalism makes its musical object, and moving beyond exoticism, we will seek greater insight into the fraught role of musical outsiders and cultural difference in mainstream capitalist culture. Why does some music strike us as weird? What role has the music industry played in shaping conventions? What strategies might we use to better respect musical difference?
Not Offered Every Year
1 Course Unit
MUSC 1700 Introduction to Theory and Musicianship
This course will cover basic skills and vocabulary for reading, hearing, performing, analyzing, and writing music. Students will gain command of musical rudiments, including notation, reading and writing in treble and bass clefs, intervals, keys, scales, triads and seventh chords, and competence in basic melodic and formal analysis. The course will include an overview of basic diatonic harmony, introduction to harmonic function and tonization. Musicianship skills will include interval and chord recognition, rhythmic and melodic dictation and familiarity with the keyboard. There will be in-depth study of selected compositions from the "common practice" Western tradition, including classical, jazz, blues and other popular examples. Listening skills—both with scores (including lead sheets, figured bass and standard notation), and without—will be emphasized. There is no prerequisite. Students with some background in music may place out of this course and into Music 170, Theory and Musicianship I. Fulfills College Formal Reasoning and Analysis Foundational Requirement.
Fall or Spring
1 Course Unit

MUSC 1780 Audiovisual Climate Research*
In this course, you will collaborate with your peers to create a public-facing, digital exhibit that communicates research about a local problem posed by the climate crisis. First you will encounter theories for communicating climate research in sounds, images, and embodied practices. You will apply these theories to analyze exemplary audiovisual projects. Then you will connect with your university's digital scholarship librarian and visit a media lab to help you shift from theoretical to technical aspects of creating a digital exhibit and recording sounds and images. After agreeing on a local climate problem that the exhibit will address, you will then form teams focused on creating different components of the overall exhibit: on the sound team, you might combine field recordings and recorded interviews into a short podcast episode; on the image team, you might create photo or video essays; on the education team, you might create public educational resources like DIY monitoring kits, reading lists, or create/improve relevant Wikipedia articles; on the interface team, you might link your skills in electrical engineering or environmental monitoring to build interfaces that connect bodies with real-time, local air quality measurements. Or you might devise an altogether different team in consultation with the professor. The course culminates in a public showcase of each team's contribution to the digital exhibit. You will share your projects with peers, faculty, project participants/interviewees, and other community members. * Audiovisual Climate Research© 2022 by Andrew Niess

MUSC 2300 Introduction to European Art Music
This course aims to introduce students to what it means to study the European musical tradition. Students will approach the diverse music that constitute the classical tradition from a variety of scholarly perspectives. The goal of this class is to listen deeply and think broadly. Students will consider questions such as: what sort of object is music? Where is it located? What does it mean to say a work is "canonic"? What is left out of the story? This class will be in dialogue with other tier-one classes, and will consider what the historian can bring to the study and understanding of music. Fulfills the requirements of the Music major.
Prerequisite: MUSC 1700 or 2700, or equivalent; or by permission of the instructor. Preference given to music Majors and Minors.
Prerequisite: MUSC 1700 OR MUSC 2700
1 Course Unit

MUSC 2400 Introduction to the Music Life in America
This course surveys American musical life from the colonial period to the present. Beginning with the music of Native Americans, the European legacy, and the African Diaspora, the course treats the singular social and political milieu that forged the profile of America's musical landscape. Attention will be given to the establishment of the culture industry and to various activities such as sacred music, parlor music, concert and theater music, the cultivation of oral traditions, the appearance of jazz, the trajectory of western art music in the United States, and the eventual global dominance of American popular music. Prerequisite: MUSC 1700 or 2700, or equivalent; or by permission of the instructor. Preference given to music Majors and Minors. Fulfills the Cultural Diversity in the U.S. College Requirement.
Prerequisite: MUSC 1700 OR MUSC 2700
1 Course Unit

MUSC 2500 Introduction to Ethnomusicology
This course introduces students to the field of ethnomusicology through a series of case studies that explore a range of traditional, popular, and art musics from around the world. The course takes as a point of departure several works of musical ethnography, musical fiction, and musical autobiography and, through in-depth reading of these texts, close listening to assigned sound recordings, and in-class case studies, generates a context within which to think and write about music. Fulfills the requirements of the Music major.
1 Course Unit

MUSC 2700 Theory and Musicianship I
Introduction to and development of principles of tonal voice-leading, harmonic function, counterpoint, and form through written analysis, composition, improvisation, and written work. Course covers diatonic harmony and introduction to chromaticism. Repertoires will focus on Western classical music. Musicianship component will include sight-singing, dictation keyboard harmony. Fulfills College Formal Reasoning and Analysis Foundational Requirement.
Fall
Prerequisite: MUSC 1700
1.5 Course Unit

MUSC 2710 Theory and Musicianship II
Continuation of techniques established in Theory and Musicianship I. Explores chromatic harmony. Concepts will be developed through analysis and model composition. Musicianship component will include sight singing, clef reading, harmonic dictation and keyboard harmony.
Spring
Prerequisite: MUSC 2700
1.5 Course Unit
MUSC 3200 Modular Electronic Music Systems & Performance
MUSC3200 offers an introduction to electronic music/sound production with a focus on modular hardware systems and performance. Guest artists will join us for in-class visits and performances during the semester. Meetings will take place in the classroom, in concert spaces and in the studio. Preference given to Music majors and minors for registration.
Spring
Prerequisite: MUSC 1700 OR MUSC 2700
1 Course Unit

MUSC 3210 Recording Music: Theory & Methods
An introduction to music and sound recording with a focus on concerts and live performances. The entire process will be examined from start to finish, including the roles played by composers, musicians, listeners, performance spaces, and recording technology. Meetings will take place in the classroom, in concert spaces and in the studio. Music majors and minors will be given preference for registration.
Fall
Prerequisite: MUSC 1700 OR MUSC 2700
1 Course Unit

MUSC 3230 Computer Music I
This is an introductory class to the music creation software Max/MSP. Students will learn basic principles of synthesis, in theory and practice. Classwork includes lectures, problem-solving, and student presentations of creative work. Assignments and two large projects are creatively oriented with limitations to ensure understanding of concepts. Students are required to purchase and install the software on their machines (Mac or PC).

In this course, students will have the opportunity to explore music history from a thematic or conceptual perspective, frequently through several eras. Among the topics that we will explore: music's media and formats; music and gender.
Not Offered Every Year
1 Course Unit
MUSC 3340 Performers: Music, Rhetoric, Performance
This course looks at the history of popular, vernacular, and art music in various time periods. Studying music from the ground up, we examine how performers have influenced music history. We engage critically with issues such as music in social life, collaborative creative processes, and vernacular music's engagement with race and gender. The great variety and quality of the instrumental and vocal music composed in Europe during the period 1600-1800, roughly from the birth of opera to Mozart’s death, solicits today an equally wide and intriguing array of responses from instrumentalists and singers aware of pre-Romantic performance practices. In this intermediate course fulfilling elective requirements for music majors, we will study the music from this early modern period by focusing on its performance, exploring topics such as sound, relationships between text and music, improvisation, and ornamentation, among others; for opera, we will focus on staging and acting practices, then and today. We will familiarize ourselves with issues such as: national idioms, dance music, rhetoric, the history and ideology of the performance practice movement, and the critical use of editions and of primary material, including original treatises and iconographical and literary sources.
Not Offered Every Year
1 Course Unit

MUSC 3341 Performers: Dancers and Musicians
This course looks at the history of popular, vernacular, and art music in various time periods. Studying music from the ground up, we examine how performers have influenced music history. We engage critically with issues such as music in social life, collaborative creative processes, and vernacular music's engagement with race and gender. This intermediate course fulfilling elective requirements for music majors examines the relationship of musicians and dancers from the Middle Ages up to the emergence of ballet. Engaging with musical scores, iconography, theoretical writings, and a range of other textual sources, we will consider the ways in which dance (and dancers) informed music (and musicians), and vice versa, over the course of several hundred years.

MUSC 3342 Performers: The Singer ca. 800-1400
This course looks at the history of popular, vernacular, and art music in various time periods. Studying music from the ground up, we examine how performers have influenced music history. We engage critically with issues such as music in social life, collaborative creative processes, and vernacular music's engagement with race and gender. Tracing the figure of the singer beginning in the court of Charlemagne to the papal outpost of Avignon in the late thirteenth century, this intermediate course fulfilling elective requirements for music majors considers the evolving roles of singers in the Middle Ages. From monastic cantors to virtuosic soloists, we will be concerned not only the cultural function of singers but also the repertoire they performed.

1 Course Unit

MUSC 3343 Performers: Celebrity
This course looks at the history of popular, vernacular, and art music in various time periods. Studying music from the ground up, we examine how performers have influenced music history. We engage critically with issues such as music in social life, collaborative creative processes, and vernacular music's engagement with race and gender. This intermediate course fulfilling elective requirements for the music major looks at the history of celebrity culture in the eighteenth and nineteenth centuries. From "rival queen" actress-singers on London stages to manias over virtuoso instrumentalists, we will explore how celebrities dazzled fans, popularized repertoire, manipulated their public images, and were depicted in the media.

1 Course Unit

MUSC 3450 Studies in African-American Music
This course explores aspects of the origins, style development, aesthetic philosophies, historiography, and contemporary conventions of African-American musical traditions. Topics covered include: the music of West and Central Africa, the music of colonial America, 19th century church and dance music, minstrelsy, music of the Harlem Renaissance, jazz, blues, gospel, hip-hop, and film music. Special attention is given to the ways that black music produces "meaning" and to how the social energy circulating within black music articulates myriad issues about American identity at specific historical moments. The course will also engage other expressive art forms from visual and literary sources in order to better position music making into the larger framework of African American aesthetics. (Formerly Music 146).
Not Offered Every Year
Also Offered As: AFRC 3450
1 Course Unit
MUSC 3460 The Blackness of Rock: Revisiting Histories of Race, Gender, and Genre
This course explores the history of rock music by focusing specifically on the innovations and contributions of black musicians. The course will address itself to the legacies of race records, the uninterrupted appropriation of black sounds by white artists (think Elvis), and the further complications introduced by the British Invasion, all while focusing on individual artists such as Fats Domino, Big Mama Thornton, Bo Diddley, Chuck Berry, Sister Rosetta Tharpe, and Jimi Hendrix. The course will highlight and offer hands-on explorations of the innovations brought to rock music by these black artists. And, because the guitar is such an iconic instrument in rock, the course also will introduce students, through a series of labs, to the gear that makes these sounds possible. Understanding how amplifiers, effects pedals, and guitars interact and produce radically divergent sounds depending on how they are set up will offer insights into the artistry of these early rock musicians. Understanding the circuits, and how using (and abusing) them in particular ways is part of the materiality of rock’s sound, will help shed light on the extent to which creative engagement with technology determined particular sonic pathways within the genre (distortion, overdrive, fuzz, feedback, etc.). And, these innovations literally shaped the future of rock, providing a foundation of sound and style and a particular relationship to gear that extends into the present. The final unit of the course will explore the racial politics, gender dynamics, and industry structures that have buried the black histories of rock and sidelined women’s crucial contributions to the genre, contributing to rock’s framing and marketing as a (mostly) male, white genre. The course will also ask how black musicians who perform rock today, such as Tosin Abasi, Lenny Kravitz, Brittany Howard of the Alabama Shakes, Bad Brains, Big Joanie, and Living Colour, among many others, negotiate these politics, these silenced histories, this industry barriers, and these audience expectations?

Also Offered As: AFRC 3460
1 Course Unit

MUSC 3480 Gender, Sexuality, & Pop Music
How is popular music implicated in the representation, production, performance, and interpretation of gender and sexuality? How have musicians negotiated traditional categories of gender and sexuality? In this class, we will approach the study of popular music through the lens of feminist and queer theory, critical race theory, transnational feminist theory, and intersectional methodologies to articulate the ways in which gender and sexuality have shaped musical discourse and popular culture more broadly. Topics include: gay anthems, trans vocality, masculinities, boy bands, oral histories, queer electro-pop, afrofuturism, performance alter-egos, queer(ing) methods, cover songs, censorship, musical borrowings & cultural appropriation, the politics of representation, and affective modes of listening. Students will learn about and be able to articulate the values and ideologies that are communicated in various subgenres of popular music, and how musical production impacts our understanding of cultural practices and social systems. *No prior musical knowledge required.*
Also Offered As: GSWS 3480
1 Course Unit

MUSC 3510 Music and Healing
In this class we will explore the many ways in which music around the world, and in our own neighborhoods, has been used for social-emotional healing, and individual and collective well-being. We will think about music and healing in four ways: through the lens of the musical, the social/cultural, performative, and biomedical (Roseman 2012). In other words, we read across the disciplines, to include ideas about music, the brain, and emotion; about the impact of adversity, and the work of music and creativity as vehicles of restoration and healing. There will be an Academically Based Community Service project in the Spring 2022 class. The course is intended specifically for music majors and minors, but others may request a place from the instructor.
Not Offered Every Year
1 Course Unit

MUSC 3520 Music, Religion, Ritual in South and Southeast Asia.
What role does music play in articulating religious identities and spaces? What is the importance of ritual musics as they persist and change in the modern world? How does music reflect and articulate religious ways of thinking and acting? In this course, we explore these and other questions about the interrelations between music, religion, and ritual in South and Southeast Asia. Focusing on India, Sri Lanka, Malaysia, and Indonesia, the course emphasizes musics from Hindu, Buddhist, Muslim and Christian traditions; nevertheless, it draws widely to touch upon sacred musics in Pakistan, Nepal, Burma, Thailand, Vietnam, and among some indigenous peoples in the region. Throughout, we explore ontologies of sound; sonic occurrences in religious structures, public processions, and pilgrimage sites; the construction of religion and ritual as ideas forged through colonial encounter and modern scholarship on religion; the politics of sacred sounds in today’s public spaces and contemporary media, such as television and online; and the surprising fluidity between popular and sacred musical genres.

Also Offered As: ANTH 3520
1 Course Unit

MUSC 3550 Accordions of the New World
This course focuses on the musical genres and styles (both traditional and popular) that have grown up around the accordion in the New World. We will begin our explorations in Nova Scotia and move toward the Midwest, travelling through the polka belt. From there, our investigation turns toward Louisiana and Texas–toward zydeco, Cajun, and Tex-Mex music. We will then work our way through Central and South America, considering norteno, cumbia, vallenato, tango, chamame, and forro. Our journey will conclude in the Caribbean, where we will spend some time thinking about merengue and raike-n-scare music. Throughout the semester, the musical case studies will be matched by readings and film that afford ample opportunity to think about the ways that music is bound up in ethnicity, identity, and class. We will also have occasion to think about the accordion as a multiply meaningful instrument that continues to be incorporated into debates over cultural politics and mobilized as part of strategies of representation through the New World. (Formerly Music 157).

MUSC 3560 Music and Performance of Africa
This class provides an overview of the most popular musical styles and discussion of the cultural and political contexts in which they emerged in contemporary Africa. Learning to perform a limited range of African music/dance will be part of this course. No prior performance experience required. (Formerly Music 253).
Not Offered Every Year
Also Offered As: AFRC 3560, ANTH 2560
1 Course Unit

MUSC 3570 Caribbean Music and Diaspora
This course considers Caribbean musics within a broad and historical framework. Caribbean musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Caribbean contexts—concepts such as post-colonialism, migration, ethnicity, hybridity, syncretism, and globalization. Each of these concepts, moreover, will be explored with a view toward understanding its connections to the central analytical paradigm of the course—diaspora. Throughout the course, we will listen to many different styles and repertoires of music ranging from calypso to junkanoo, from rumba to merengue, and from dance hall to zouk. We will then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own North American contexts of music consumption and production. (Formerly Music 258).

1 Course Unit

MUSC 3660 Performance, Analysis, History
Participation in the course may require an audition, see section details. This course must be taken for a letter grade (pass/fail option may not be utilized for this course). This weekly seminar will explore music from the past and present through class discussions of performance, historical or contemporary context, and analytical aspects of the music led by a professor and/or performer. One example of a class in this number will be an indepth study of chamber music repertoire led by the Daedalus Quartet. Students will prepare for a final performance at the end of the semester as well as a paper/presentation. MUSC 3660 may be taken multiple times, but can only count once as a Music major elective, and no more than twice toward the major performance requirement. Please note that a course that counts as an elective may not also count toward the performance requirement.
Spring
1 Course Unit

MUSC 3700 Theory and Musicianship III
Continuation of techniques established in Theory and Musicianship I and II. Concepts will be developed through analysis and model composition. Musicianship component will include advanced sight singing, clef reading, harmonic dictation and keyboard harmony.
Fall
Prerequisite: MUSC 2700 AND MUSC 2710
1.5 Course Unit

MUSC 3710 Composition I: Historical Practices
Studies in selected 16th through 19th century compositional practices. Possible topics may include 16th century modal counterpoint; sonata forms in Viennese classicism; advanced chromatic harmony. Course includes analysis of relevant pieces and student compositional projects reflecting course topic.
Not Offered Every Year
Prerequisite: MUSC 2700 AND MUSC 2710
1 Course Unit

MUSC 3720 Composition II: Contemporary Practices
Studies in selected 20th and 21st century compositional practices. Possible topics may include symmetry in post-tonal harmony; composing for piano; the sonata in the 20th century. Course includes analysis of relevant pieces and student compositional projects reflecting course topic.
Not Offered Every Year
Prerequisite: MUSC 2700 AND MUSC 2710
1 Course Unit

MUSC 3730 Orchestration
An introduction to writing for the instruments of the orchestra. Course will include study of individual instruments and various instrumental combinations, including full orchestra. Representative scores from the 18th century to the present day will be analyzed. Students will be responsible for several scoring projects and will have opportunities to hear readings of their projects. Prerequisite: at least two semesters of music theory or permission of instructor.
Not Offered Every Year
Prerequisite: MUSC 1700 OR MUSC 2700
1 Course Unit
MUSC 3740 Composition for Musicians
Music 3740 is a Composition Seminar that treats composing as both an end in itself and a means for thinking broadly and speculatively about music. We will work on various compositional techniques through exercises as well as ‘free’ composition, giving attention to skills as well as to personal voice. We will survey the current musical landscape through listening, analysis and discussion. The question of musical style itself will be pursued, and while we will be oriented to western art music, we will consider a wide range of styles, including popular music. It is assumed that students will have fluency with musical notation. Prerequisite: Music 171, or permission of the instructor.
Prerequisite: MUSC 2710
1 Course Unit

MUSC 3800 Critical Birding: Music, Observation, and the Environment
Critical birding encompasses birds, birdsongs and sounds, birds’ environments, humans’ interest in birding, and the inspiration musicians take from birds. Focusing primarily on the nineteenth century to today, we will use birding explore the relationship between “nature” and “music.” First, composers and musicians have long listened to and imitated birds, and we will study a diverse repertoire of bird-based musical works. Second, birding itself has strong cultural and political significance, including for the history of conservation, of environmentalism, and of race in the United States. We will familiarize ourselves with these histories. Finally, birding offers an opportunity to critically consider the visual and aural practices of observation. We will engage in amateur birding. This course meets once a week for three hours. It is a seminar-style discussion-based learning experience with some outdoor local birding activities.

MUSC 4500 Seminar in Ethnomusicology
This is an advanced seminar, primarily for juniors and seniors who are prepared to engage deeply and critically with a specialized research topic in ethnomusicology. The topic of the seminar is determined by the instructor, and can focus on a particular theoretical concern (for example: postcolonial studies, sound studies, ethnicity, war), and/or on a genre or body of repertoire.
Fall or Spring
1 Course Unit

MUSC 4700 Seminar in Theory & Composition
This is an advanced seminar, primarily for juniors and seniors who are prepared to engage deeply with the study of compositional practices, and/or theoretical and analytical issues including a range of musical styles. The topic of the seminar is determined by the instructor.
Not Offered Every Year
Prerequisite: MUSC 2700 AND MUSC 2710
1 Course Unit

MUSC 4720 Creative and Compositional Approaches
This course focuses on methods for thinking and engaging creatively through sound, whether compositionally or through other kinds of sound objects. Topics may include: compositional strategies; recording and producing; film; sound installations; experimental ethnography; sound art; and performance practice. Students will begin to put these methodological ideas into practice by developing semester-long projects. These projects can be individual or collaborative.
Not Offered Every Year
1 Course Unit

MUSC 4730 Composing For Performers
This graduate level composition seminar brings active focus to composing for live performers. Class activities and assignments are designed to foster the exploration of what is possible through interpretation and collaboration, as well as how best to anticipate possibilities through notation. Students will study repertoire, both old and new. Course content will vary depending on the instructor. Students may take this course a second time with a different instructor.
Not Offered Every Year
1 Course Unit

MUSC 4750 Seminar in Composition
This is an advanced seminar, primarily for juniors and seniors who are prepared to engage deeply with the study of compositional practices, and/or theoretical and analytical issues including a range of musical styles. The topic of the seminar is determined by the instructor.
Not Offered Every Year
1 Course Unit

MUSC 4760 Seminar in Electronic Music
This is an advanced seminar, primarily for juniors and seniors who are prepared to engage deeply with the study of compositional practices, and/or theoretical and analytical issues including a range of musical styles. The topic of the seminar is determined by the instructor.
Not Offered Every Year
1 Course Unit

MUSC 4780 Seminar in Sound Art
This is an advanced seminar, primarily for juniors and seniors who are prepared to engage deeply with the study of compositional practices, and/or theoretical and analytical issues including a range of musical styles. The topic of the seminar is determined by the instructor.
Not Offered Every Year
1 Course Unit

MUSC 4790 Seminar in Film
This is an advanced seminar, primarily for juniors and seniors who are prepared to engage deeply with the study of compositional practices, and/or theoretical and analytical issues including a range of musical styles. The topic of the seminar is determined by the instructor.
Not Offered Every Year
1 Course Unit

MUSC 4800 Seminar in Visual Art

1 Course Unit

MUSC 4810 Seminar in Performance Practice
This is an advanced seminar, primarily for juniors and seniors who are prepared to engage deeply with the study of compositional practices, and/or theoretical and analytical issues including a range of musical styles. The topic of the seminar is determined by the instructor.
Not Offered Every Year
1 Course Unit
MUSC 6300 Historical and Historiographic Approaches
This course focuses on theories and models of historical investigation. It explores, among others, methodologies and conceptions of archival research, textual criticism and editing, codicology and paleography, philology and bibliography, encoding and textual technologies, and digital humanities; critical frameworks such as performance, gender/sexuality, critical race, transnational, environmental/landscape, materiality, and ritual and religious studies; and topics concerning oral histories, notational systems, and book, manuscript, and print cultures.
Not Offered Every Year
1 Course Unit

MUSC 6500 Ethnographic and Anthropological Approaches
This course focuses on the ethics, politics, and practice of ethnography. Topics may include: fieldwork methods; collaborative practice; ethnography and the archive; power and subjectivity; multimodal approaches; reciprocity and questions of accessibility; oral histories; experimental ethnography; and the politics of transcription, inscription, and translation. Students will begin to put these methodological ideas into practice by developing semester-long ethnographic projects. These projects can be individual or collaborative partnerships, and might also connect students to ongoing community-based research.
Not Offered Every Year
1 Course Unit

MUSC 6700 Analytical and Theoretical Approaches
This course focuses on the analytical methods and theoretical approaches. Topics may include: the politics of listening; score-based analysis; social and critical theories; issues and politics of translation, inscription, and transcription; questions of form; the history of theory; performance studies; the history of musical notation; voice and vocality; and sound studies. Students will typically begin to put these methodological ideas into practice through a series of hands-on assignments which could be either individual or collaborative in nature.
Not Offered Every Year
1 Course Unit

MUSC 6710 Theory-Critical Perspectives
Study of the relation of theory and criticism to analytic, ethnographic, and historical methods. Topics may include anthropology of nature and culture; archaeology and genealogy; actor-network and assemblage theories; critical race theory; deconstruction; feminist theories; gender and sexuality; materialisms and new materialisms; media archaeology and cultural techniques; phenomenology; technics.
Not Offered Every Year
1 Course Unit

MUSC 7200 Seminar in Composition
Seminar in selected compositional problems, with emphasis on written projects. See department website (under course tab) for current term course description: https://music.sas.upenn.edu
Not Offered Every Year
1 Course Unit

MUSC 7201 Computer Music I
This is an introductory class to the music creation software Max/MSP. Students will learn basic principles of synthesis, in theory and practice. Classwork includes lectures, problem-solving, and student presentations of creative work. Assignments and two large projects are creatively oriented with limitations to ensure understanding of concepts. Students are required to purchase and install the software on their machines (Mac or PC).
Not Offered Every Year
Mutually Exclusive: MUSC 3230
1 Course Unit

MUSC 7210 Composition Studio and Forum
Composer’s Forum is a regular meeting of graduate composers, often along with other members of the Penn composing community, in which recent performances are discussed, musical issues taken up, and visitors occasionally welcomed to present their work or offer master classes. In addition to weekly Forum meetings, students will be paired with a composer for individual lessons in composition. Ph.d. Candidates in Composition in their third year in the program will continue non-credit participation in both forum and lessons.
Fall or Spring

MUSC 7300 Studies in Medieval Music
Seminar on selected topics in the music of the Middle Ages. See department website (under course tab) for current term course description: https://music.sas.upenn.edu.
Not Offered Every Year
1 Course Unit

MUSC 7310 Studies in Renaissance Music
Seminar on selected topics in the music of the Renaissance.
Not Offered Every Year
1 Course Unit

MUSC 7320 Studies in Baroque Music
Seminar on selected topics in the music of the Baroque period. The seminar explores musical genres (madrigal, opera, cantata, etc.) using poetic texts in Italian (primarily), French, and German, which circulated mainly in Europe in both private and public settings during the 17th and early 18th centuries. Issues of reception and performance/staging during the 20th and 21st centuries are also investigated. Each instance of the seminar has a focus, e.g.: Monteverdi’s madrigals, opera in seventeenth-century Venice and Paris, Guarini and Marino in music, histories of the madrigal, Petrarchism and music, the “Baroque” in theory and practice, Handel’s operas, staging Baroque opera today, historically informed performance practice, etc. Please see department website https://music.sas.upenn.edu/course-list/ for current term course descriptions.

MUSC 7360 Topics in Musicology
This seminar investigates topics unfolding across different historical periods.
Not Offered Every Year
1 Course Unit
MUSC 7390 Methods for Music and Archives (Learning to Go Along and Against the Archival Grain)
This seminar focuses on archives and "archives." That is, the course offers, on the one hand, a practicum on historical research methods; and on the other, an exploration of how information is collected, housed, and organized to produce knowledge. Archives are trendy: the "archival turn" continues to bring critical attention to the generative and coercive power of institutions that hold historical records. They are also the source of some musicological consternation: scholars struggle with how to reconcile the piecemeal work of archival research with other goals, such as music criticism and critique generally. We will approach the archive from multiple directions, reading classic texts on archives and their allure (from musicology, ethnomusicology, theory, anthropology, history, and other disciplines); exemplary scholarship based on extensive and inventive uses of archival sources; and critiques of archive. We won't just talk about archives, however. Students will design and undertake archival projects using collections in the Philadelphia area. Through this hands-on experience students will gain skills in managing information, frustration, and intuition when conducting archival research. The course culminates in a symposium in which the students present their research projects.
Not Offered Every Year
1 Course Unit

MUSC 7400 Seminar in African-American Music
Seminar on selected topics in African American Music. See department website (under course tab) for current term course description: https://music.sas.upenn.edu

Naval Science (NSCI)

NSCI 1000 Naval Science Drill
A professional laboratory covering various aspects of naval leadership and professional development. While emphasis is given to military marching, formation, and parade, the course also includes lectures from sources in and out of the Navy. Guest speakers cover topics such as leadership, Navy career paths, equal opportunity, rights and responsibilities, AIDS awareness, terrorism/counterterrorism, naval warfare doctrine, employment of naval forces, ethics and values, operations security, and safety. Must be taken concurrently with NSCI 1010 (fall) NSCI 1020 (spring).
Fall or Spring
1 Course Unit
NSCI 1010 Naval Orientation
A course designed to familiarize the student with the history, characteristics and present employment of sea power. Particular emphasis is placed upon our naval forces and their capability in achieving and maintaining our national objectives. Naval organization and operational functions are discussed in conjunction with sea power concepts. Additionally, the student is given an insight into the Naval Service, shipboard organization and safety, time management skills and study techniques.
Fall
1 Course Unit

NSCI 1020 Seapower and Maritime Affairs
A broad survey of naval history designed to add historical perspective to current defense problems. Topics covered include: naval power as an aspect of national defense policy, navies as an instrument of foreign policy, strategy selection, resource control, technology, and manning.
Spring
1 Course Unit

NSCI 2010 Leadership & Management
This course emphasizes principles of leadership, personnel and material management, and subordinate development in the context of the naval organization. Practical applications are explored through experiential exercises and case studies.
Fall
1 Course Unit

NSCI 2020 Navigation I
A comprehensive study of the theory and practice of terrestrial, and electronic navigation and the laws of vessel operations. Topics include fundamentals of coastal and harbor piloting, electronic navigation and mean of navigating without reference to land. An in-depth study of the international and inland nautical Rules of the Road is also included. Case studies and practical exercises are used to reinforce the fundamentals of marine navigation.
Spring
1 Course Unit

NSCI 3010 Engineering
This course provides an overview of how propulsion and electricity are provided to our Navy's fighting ships. The basic engineering principles relating to thermodynamics, steam propulsion (conventional and nuclear), gas turbine propulsion, internal combustion engines, electricity generation and distribution, and various support systems will be taught. Ship design, stability, damage control, and some engineering-related ethical issues will also be discussed.
Fall
1 Course Unit

NSCI 3020 Weapons
This course provides an overview of the theory and concepts underlying modern weapons systems. The principles behind sensors and detection systems, tracking systems, computational systems, weapon delivery systems, and the fire control problem will be examined, with a consistent emphasis on the integration of these components into a "weapons system". Case studies will be used to illustrate and reinforce concepts introduced in the course.
Spring
1 Course Unit

NSCI 3100 Evolution of Warfare
This course is designed to add broad historical perspective to understanding military power. Treating war and the military as an integral part of society, the course deals with such topics as: war as an instrument of foreign policy, military influences on foreign policy, the military as a reflection of society, manning and strategy selection.
Fall, even numbered years only
1 Course Unit

NSCI 4010 Navigation II
Insight into modern naval operations is gained through analysis of relative motion pertaining to ships at sea, underway replenishment, shiphandling, and tactical communications. The process of command and control and leadership is examined through case studies of actual incidents at sea.
Fall
1 Course Unit

NSCI 4020 Leadership and Ethics
The capstone course of the NROTC curriculum, this course is intended to provide the midshipman with the ethical foundation and basic leadership tools to be effective junior officers. Topics such as responsibility, accountability, ethics, the law of armed conflict, military law, division organization and training, and discipline are introduced through practical exercises, group discussion, and case studies.
Spring
1 Course Unit

NSCI 4100 Fundamentals of Maneuver Warfare
This course prepares future military officers and other leaders for service by studying modern tactical principles, current military developments, and other aspects of warfare and their interactions with the influences on maneuver warfare doctrine. There is a specific focus on the United States Marine Corps as the premier maneuver warfighting organization. Study also includes historical influences on tactical, operational, and strategic levels of maneuver warfare practices in the current and future operating environments.
Fall, odd numbered years only
1 Course Unit
Near Eastern Languages & Civilization (NELC)

NELC 0001 Introduction to the Ancient Near East
The great pyramids and mysterious mummies of Egypt, the fabled Tower of Babel, and the laws of the Babylonian king Hammurabi are some of the things that might come to mind when you think of the ancient Near East. Yet these are only a very few of the many fascinating – and at time perplexing – aspects of the civilizations that flourished there c. 3300-300 BCE. This is where writing first developed, where people thought that the gods wrote down what would happen in the future on the lungs and livers of sacrificed sheep, and where people knew how to determine the length of hypotenuse a thousand years before the Greek Pythagoras was born. During this course, we will learn more about these other matters and discover their place in the cultures and civilizations of that area. This is an interdisciplinary survey of the history, society and culture of the ancient Near East, in particular Egypt and Mesopotamia, utilizing extensive readings from ancient texts in translation (including the Epic of Gilgamesh, "one of the great masterpieces of world literature"), but also making use of archaeological and art historical materials. The goal of the course is to gain an appreciation of the various societies of the time, to understand some of their great achievements, to become acquainted with some of the fascinating individuals of the time (such as Hatshepsut, "the women pharaoh," and Akhenaten, "the heretic king"), and to appreciate the rich heritage that they have left us.

1 Course Unit

NELC 0002 Introduction to the Middle East
This is the second half of the Near East sequence. This course surveys Islamic civilization from circa 600 (the rise of Islam) to the start of the modern era and concentrates on political, social, and cultural trends. Although the emphasis will be on Middle Eastern societies, we will occasionally consider developments in other parts of the world, such as sub-Saharan Africa, Central Asia, and Spain, where Islamic civilization was or has been influential. Our goal is to understand the shared features that have distinguished Islamic civilization as well as the varieties of experience that have endowed it with so much diversity.

NELC 0003 Origin and Culture of Cities
The UN estimates that 2.9 of the world's 6.1 billion people live in cities and that this percentage is rapidly increasing in many parts of the world. This course examines urban life and urban problems by providing anthropological perspectives on this distinctive form of human association and land use. First we will examine the "origin" of cities, focusing on several of the places where cities first developed, including Mesopotamia and the Valley of Mexico. We will then investigate the internal structure of non-industrial cities by looking at case studies from around the world and from connections between the cities of the past and the city in which we live and work today.
Fall
Also Offered As: ANTH 0103, URBS 0003
1 Course Unit

NELC 0004 Myths and Religions of the Ancient World
This course will survey the religions of the ancient Middle East, situating each in its historical and socio-cultural context and focusing on the key issues of concern to humanity: creation, birth, the place of humans in the order of the universe, death, and destruction. The course will cover not only the better-known cultures from the area, such as Egypt and Mesopotamia, but also some lesser-known traditions, such as those of the Hittites, or of the ancient Mediterranean town of Ugarit. Religion will not be viewed merely as a separate, sealed-off element of the ancient societies, but rather as an element in various cultural contexts, for example, the relationship between religion and magic and the role of religion in politics will be recurring topics in the survey. Background readings for the lectures will be drawn not only from the modern scholarly literature, but also from the words of the ancients themselves in the form of their myths, rituals, and liturgies.

1 Course Unit

NELC 0050 Ancient Civilizations of the World
This course explores the archaeology (material culture) of early complex societies or civilizations in Egypt, Mesopotamia, and the Aegean. According to the traditional paradigm, civilization first emerged during the fourth millennium BCE in Egypt and Mesopotamia. In the Mediterranean, state-level societies first appeared in Crete and mainland Greece in the early second millennium BCE. This course investigates how and why these civilizations developed, as well as their appearance and structure in the early historic (or literate) phases of their existence. A comparative perspective will illustrate what these early civilizations have in common and the ways in which they are unique. This course will consist largely of lectures which will outline classic archaeological and anthropological theories on state formation, before turning to examine the available archaeological (and textual) data on emerging complexity in Egypt, Mesopotamia, and the Aegean. This course does not presuppose any knowledge of archaeology or ancient languages; the instructor will provide any background necessary. Because this is a course on material culture, some of the class periods will be spent at the Penn Museum of Archaeology and Anthropology. These will consist of a guided tour of a relevant gallery, as well as a hands-on object-based lab with archaeological materials selected by the instructor.
Spring, odd numbered years only
Also Offered As: ANTH 0105, URBS 0050

NELC 0060 Art of Mesopotamia
Visual expression was first developed in Mesopotamia in the same environment as the invention of writing. This lecture class will introduce the arts of the major periods of Mesopotamian History ending with the "cinematic" effects achieved by the Assyrian artists on the walls of the royal palaces. The strong connection between verbal and visual expression will be traced over the three millennia course of Mesopotamian civilization from the earliest periods through the imperial art of the Assyrians and Babylonians of the first millennium BCE. The class and the assignments will regularly engage with objects in the collections and on display in the galleries of the Penn Museum.

NELC 0100 Archaeology & The Bible
Archaeology and the Bible is a chronological survey of the long span of human occupation in the Land of the Bible, known by the names of the modern nation-states and political entities that occupy the area, as well as various short hands such as Levant and Syria-Palestine, from ca. 10,000 BCE, when humans first began to farm and herd animals through the time of the Divided Monarchy of Israel and Judah. While archaeology has moved beyond a primary concern with illuminating the Bible, NELC 155 will investigate the broader import of archaeological discoveries for our understanding of ancient Israel and its neighbors.

1 Course Unit

NELC 0102 Reading Ancient Mesopotamia
An introduction to the literature of Ancient Mesopotamia. The literature of ancient Mesopotamia flourished thousands of years ago in a culture all of its own, yet the survival of hundreds of thousands of written records challenges us to read it and make sense of it without simply approximating it to the realm of our own understanding. How can we learn to do this? Situating our understanding of how we read and how we understand culture within an interdisciplinary range of literary-critical and analytic approaches, we will approach this question by immersing ourselves in the myths tales and mentalities that made Mesopotamian literature meaningful. To give us a measure of our progress we will bracket the semester by reading Gilgamesh which is never less than a great story, but which will take on new layers of meaning as the semester develops and we learn to read the text in more and more Mesopotamian ways. As we journey through these mysterious realms we will reflect not only Mesopotamia and its immortal literature but on what it means to read and understand any cultures other than our own.

NELC 0220 Women in Ancient Egypt
This class will examine the many roles played by women in ancient Egypt. From goddesses and queens, to wives and mothers, women were a visible presence in ancient Egypt. We will study the lives of famous ancient Egyptian women such as Hatshepsut, Nefertiti and Cleopatra. More independent than many of their contemporaries in neighboring areas, Egyptian women enjoyed greater freedoms in matters of economy and law. By examining the evidence left to us in the literature (including literary texts and non-literary texts such as legal documents, administrative texts and letters), the art, and the archaeological record, we will come away with a better understanding of the position of women in this ancient culture.
Not Offered Every Year
1 Course Unit

NELC 0225 The World of Cleopatra
The figure of Cleopatra is familiar from modern stories, legends, and film. Was this famous woman a brazen seductress or a brilliant political mind? How many of these presentations are historically accurate? This class will examine the Ptolemaic period in Egypt (305-30 BCE), the time period during which Cleopatra lived, in an attempt to separate myth from reality. The Ptolemaic period is filled with political and personal intrigue. It was also a time of dynamic multiculturalism. Arguably one of the most violent and fascinating eras in ancient Egyptian history, the Ptolemaic period is largely unknown and often misunderstood. This course will examine the history, art, religion and literature of Egypt’s Ptolemaic period which culminated in the reign of Cleopatra VII.

NELC 0305 Great Books of Judaism
Since the early medieval period, Jews have been known as "the People of the Book". Yet the books they produced and consumed changed drastically over time and place, spanning a variety of known genres and inventing new ones. These works, in turn, shaped the texts, ideas, and lives of Jews and others for millennia, spawned vast commentary traditions, and inspired new works. This course engages prominent Jewish texts, such as the Hebrew Bible, Rabbinic Literature, the works of major medieval philosophers, pre-modern intellectuals, and modern authors, situating them in their literary, cultural, and social contexts, and examining their later reception.

1 Course Unit

NELC 0311 Divinity, Polytheism and Monotheism in the Hebrew Bible and Ancient Israel - Judah
This course treats monotheism as a particular historical development of the texts in the Hebrew Bible (that is, the Jewish Tanakh/Christian Old Testament), and thus analyzes the idea of "one God only" as the product of a complex set of historical conditions. It will take extensive time to examine the early history of the Hebrew Bible’s familiar God, Yhwh, in inscriptive, biblical, and archaeological evidence, showing that he was once at home in the polytheistic environment of the ancient Near East (Southwest Asia). By embracing these longstanding entanglements, this course will explore the means by which Hebrew scribes came to define this deity not only as the most important god among many, but as the only all-powerful deity to exist in the entire cosmos. A variety of topics will be covered, addressing a number of questions raised by the evidence at hand: what is the evidence for Yhwh outside of the Bible? How do historians define his emergence in history? Did he really have a wife named Asherah? What did he look like and where did he live? What circumstances caused Judean writers to consider him the only all-powerful deity the universe? And finally, how did the subsequent Jewish imagination re-inscribe the older polytheistic world in light of monotheizing changes? While knowledge of the Bible, its languages, and its history may seem like a desired feature for the prospective student, there are no prerequisites. This course will be able to introduce the material to those at a beginner’s level.

NELC 0355 Women in Jewish Literature
"Jewish woman, who knows your life? In darkness you have come, in darkness do you go." J. L. Gordon (1890). This course will bring into the light the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres -- devotional literature, memoir, fiction, and poetry -- we will study women's roles and selves, the relations of women and men, and the interaction between Jewish texts and women's lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction and poetry from the past century. The course is divided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are portrayed in the Hebrew Bible, in rabbinic commentary, in pre-modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah's daughter. Next we turn to the seventeenth century Glikl of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction written by women in Yiddish, Hebrew, and English.

NELC 0400 Getting Crusaded
What did it feel like to get crusaded? In this course, we will examine the roughly two-century period from the call of the First Crusade in 1095 to the final expulsion of Latin Crusaders from the Middle East in 1291. Our examination will be primarily from the perspective of the invaded, rather than the invaders, as is usually done. How did the Muslims, Jews, and Eastern Christians of the medieval Middle East respond to the presence of Frankish invaders from Europe? Fall, even numbered years only
1 Course Unit

NELC 0450 Warriors, Concubines & Converts: the Ottoman Empire in the Middle East & Europe
For almost six hundred years, the Ottomans ruled most of the Balkans and the Middle East. From their bases in Anatolia, Ottoman armies advanced into the Balkans, Syria, Egypt, and Iraq, constantly challenging the borders of neighboring European and Islamicate empires. By the end of the seventeenth century, Constantinople, Jerusalem, Cairo, Baghdad, Sarajevo, Budapest, and near Vienna came under Ottoman rule. As the empire expanded into Europe and the Middle East, the balance of imperial power shifted from warriors to converts, concubines, and intellectuals. This course examines the expansion of the Ottoman sultanate from a local principality into a sprawling empire with a sophisticated bureaucracy; it also investigates the social, cultural, and intellectual developments that accompanied the long arc of the empire’s rise and fall. By the end of the course, students will be able to identify and discuss major currents of change in the Ottoman Empire and the Middle East. The student will have a better understanding of the roles of power, ideology, diplomacy, and gender in the construction of empire and a refined appreciation for diverse techniques of historical analysis. Fall
Also Offered As: HIST 0310
1 Course Unit

NELC 0460 First-Year Seminar: Of Horses, Bows and Fermented Milk: The Silk Roads in 10 Objects
The empires of the Turkic and Turkish peoples have stretched across much of Eurasia since before the Common Era until the twentieth century. We first hear of them in Chinese chroniclers’ tales of a powerful people in the wilderness. Greek historians, Byzantine writers, and Arab polymaths write about the empires of the steppes. Centuries later, the heirs of these empires move south and west, establishing empires and tribal confederations beyond the steppe, in Central Asia, Anatolia, and the Middle East. The Turkic empires seem to appear in the periphery of many civilizations, challenging, and, one could say, enriching their borders. But looking at a map, is really more than a half of Eurasia a periphery? If we flip the map, could we say these historians were writing from the margins of the Turkish empires? This course introduces the student to the history of empire by following the various histories of Turkic and Turkish people through 15 objects. It discusses the questions of periphery, borders, and the divide between agrarian, pastoral, and nomadic societies. The student will learn to derive historical questions and hypothesis through the intensive study of material culture, literature, and historical writing tracing the long and diverse history of the bow, the saddle, dumplings, and fermented milk (among others) across Eurasia. Fall or Spring
Also Offered As: HIST 0061

NELC 0600 The Middle East through Many Lenses
This first-year seminar introduces the contemporary Middle East by drawing upon cutting-edge studies written from a variety of disciplinary perspectives. These include history, political science, and anthropology, as well as studies of mass media, sexuality, religion, urban life, and the environment. We will spend the first few weeks of the semester surveying major trends in modern Middle Eastern history. We will spend subsequent weeks intensively discussing assigned readings along with documentary films that we will watch in class. The semester will leave students with both a foundation in Middle Eastern studies and a sense of current directions in the field. Fall
1 Course Unit
NELC 0605 Penn/Philadelphia/and the Middle East
This seminar explores the historic engagement of the University of Pennsylvania and its faculty, students, and graduates in the Near and Middle East. It does so while drawing on archives, rare books and manuscripts, and artifacts that are now preserved in the University Archives, the Penn Museum, and the Penn Libraries. Together we will consider how, beginning in the late nineteenth century, Penn scholars engaged in archaeological expeditions to celebrated sites like Ur (in what is now Iraq) and Memphis (in Egypt) and how some of these efforts influenced the late Ottoman Empire's policies towards antiquities and museums. We will examine how Penn's curriculum changed over time to accommodate Semitics, including the study of languages and biblical traditions, in light of or in spite of historic tensions at the university between secular and religious learning. We will assess how Penn responded to American popular attitudes and U.S. foreign policy concerns relative to the Middle East, including during the Cold War and post-2001 (post-9/11) eras. Finally, we will trace the stories or biographies of some individual objects in Penn collections in order to appreciate the university's roles in collecting, preserving, analyzing, and disseminating knowledge about the region's deep cultural heritage. Ultimately, by investigating and writing.

NELC 0610 Modern Middle Eastern Literature in Translation
The Middle East boasts a rich tapestry of cultures that have developed a vibrant body of modern literature that is often overlooked in media coverage of the region. While each of the modern literary traditions that will be surveyed in this introductory course—Arabic, Hebrew, Persian and Turkish—will be analyzed with an appreciation of the cultural context unique to each body of literature, this course will also attempt to bridge these diverse traditions by analyzing common themes such as modernity, social values, the individual and national identity as reflected in the genres of poetry, the novel and the short story. This course is in seminar format to encourage lively discussion and is team-taught by four professors whose expertise in modern Middle Eastern literature serves to create a deeper understanding and aesthetic appreciation of each literary tradition. In addition to honing students' literary analysis skills, the course will enable students to become more adept at discussing the social and political forces that are reflected in Middle Eastern literature, explore important themes and actively engage in reading new Middle Eastern works on their own in translation. All readings are in English.
Spring
1 Course Unit

NELC 0615 Modern Arabic Literature
This course is a study of modern Arabic literary forms in the context of the major political and social changes which shaped Arab history in the first half of the twentieth century. The aim of the course is to introduce students to key samples of modern Arabic literature which trace major social and political developments in Arab society. Each time the class will be offered with a focus on one of the literary genres which emerged or flourished in the twentieth century: the free verse poem, the prose-poem, drama, the novel, and the short story. We will study each of these emergent genres against the socio-political backdrop which informed it. All readings will be in English translations. The class will also draw attention to the politics of translation as a reading and representational lens.

1 Course Unit

NELC 0620 Food in the Islamic Middle East: History, Memory, Identity
In the tenth century, a scholar named Ibn Sayyar al-Warraq produced an Arabic manuscript called Kitab al-Tabikh (The Book of Cooking). This volume, which compiled and discussed the recipes of eighth- and ninth-century Islamic rulers (caliphs) and their courts in Iraq, represents the oldest known surviving cookbook of the Arab-Islamic world. Many more such cookbooks followed; in their day they represented an important literary genre among cultured elites. As one food historian recently noted, there are more cookbooks in Arabic from before 1400 than in the rest of the world's languages put together. Ibn Sayyars cookbook can help us to think about the historical and cultural dynamics of food. In this class, we will focus on the Middle East across the sweep of the Islamic era, into the modern period, and until the present day, although many of the readings will consider the study of food in other places (including the contemporary United States) for comparative insights. The class will use the historical study of food and foodways as a lens for examining subjects that relate to a wide array of fields and interests. These subjects include economics, agricultural and environmental studies, anthropology, literature, religion, and public health. With regard to the modern era, the course will pay close attention to the consequences of food for shaping memories and identities including religious, ethnic, national, and gender-based identities particularly among people who have dispersed or otherwise migrated. It will also focus considerably on the politics of food, that is, on the place of food in power relations. Among the questions we will debate are these: How does food reflect, shape, or inform history? By approaching the study of Middle Eastern cultures through food, what new or different things can we see? What is the field of food studies, and what can it offer to scholars? What is food writing as a literary form, and what methodological and conceptual challenges face those who undertake it?

1 Course Unit

NELC 0625 Israel in the Middle East
This introductory level course will offer an in-depth look at Israeli history and society, and how it relates to the Middle East through varying lenses. We will consider such topics as the rise of Jewish, Palestinian, and Arab nationalisms in the context of changing imperial control over Palestine/Israel (from Ottoman to British), and the emergence of the Middle East in its current borders; Conflict and conflict-resolution in Israel, Palestine, and the Middle East; Israel's Palestinian minority, Jewish immigrants to Israel from the Middle East, food and music culture in Israel, and their connection to the Middle East; or the place of the Middle East in Israeli literature and film. We will use cutting edge research from several disciplines, as well as literature, film, audio, and photographic evidence. Students will leave the class with a firm grasp of Israeli history and society, and will be widely familiar with the different narratives, viewpoints, and complexities concerning Israel and its position in the Middle East. Prior knowledge of Israeli or Middle Eastern history is not required.

1 Course Unit
NELC 0650 History of the Middle East Since 1800
A survey of the modern Middle East with special emphasis on the experiences of ordinary men and women as articulated in biographies, novels, and regional case studies. Issues covered include the collapse of empires and the rise of a new state system following WWI, and the roots and consequences of the Palestinian-Israeli conflict, the Iranian revolution and the U.S.-Iraq War. Themes include: the colonial encounter with Europe and the emergence of nationalist movements, the relationship between state and society, economic development and international relations, and religion and cultural identity.

NELC 0675 Arab/Israeli Conflict in Literature and Film
This course will explore the origins, the history and, most importantly, the literary and cinematic art of the struggle that has endured for a century over the region that some call the Holy Land, some call Eretz Israel and others call Palestine. We will also consider religious motivations and interpretations that have inspired many involved in this conflict as well as the political consequences of world wars that contributed so greatly to the reconfiguration of the Middle East after the fall of the Ottoman Empire, and after the revelations of the Holocaust in Western Europe. While we will rely on a textbook for historical grounding, the most significant material we will use to learn this history will be films, novels, and short stories. Can the arts lead us to a different understanding of the lives lived through what seems like unending crisis?

NELC 0680 Civilizations at odds? The United States and the Middle East
Foe or friend, Satan or saint - America has often been depicted in the Middle East either as a benevolent superpower or an ill-meaning enemy. In America, too, stereotypes of the Middle East abound as the home of terrorists, falafels, and fanatics. This undergraduate lecture course will explore the relationship between the United States and the Middle East by moving beyond such facile stereotypes. Our goal is to understand why a century of interaction has done little to foster greater understanding between these two societies. By reading novels, memoirs, and historical accounts, we will examine the origins of this cultural and diplomatic encounter in the twentieth century. The readings will shed light on America's political and economic involvement in the Middle East after the Second World War. We will consider the impact of oil diplomacy on U.S.-Middle East relations, as well as the role of ideology and religion, in our effort to comprehend the current challenges that face these societies.

NELC 0690 From Oil Fields to Soccer Fields: The Middle East in the 20th Century
How did the Middle East become modern? Life changed in spectacular ways for the people of the Middle East in the span of a century. Oil -- once considered a scarce natural commodity -- was discovered in many countries and exported in substantial quantities that altered the economic landscape of the world. Movie theaters, sewage systems, and public housing projects changed the urban backdrop of Middle Eastern cities and towns. Soccer, swimming, and volleyball became some of the new-fangled sports embraced by Middle Eastern communities. This course will traverse these fascinating and fraught cultural transformations of the Middle East in the twentieth century. Although inclusive of the military battles and conflicts that have affected the region, this class will move beyond the cliches of war to show the range of issues and ideas with which intellectuals and communities grappled. The cultural politics and economic value of oil as well as the formation of a vibrant cultural life will be among the topics covered. By considering illustrative moments that shed light on the political history of the period, this course will develop a nuanced framework to approach the history of the U.S. involvement in the region, the Iran-Iraq war, the Arab/Israeli conflict, and the current crises in the Persian Gulf. Students are required to participate in every lecture and/or recitation, as on Thursdays, part of the class time will be devoted to discussing select documents provided by the instructor. Please keep in mind that lectures do not duplicate readings, but rather supplement them. We will also watch video clips during some lectures. In addition, students are expected to complete each week's readings before class. Course requirements include satisfactory performance on a Powerpoint presentation related to the weekly readings, 2 short factual quizzes, and 7-page paper. The paper can be on a topic of contemporary interest that is placed in the proper historical context.

NELC 0700 Iranian Cinema: Gender, Politics and Religion
This seminar explores Iranian culture, society, history and politics through the medium of film. We will examine a variety of cinematic works that represent the social, political, economic and cultural circumstances of contemporary Iran, as well as the diaspora. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the role of cinema in Iranian society and beyond. Discussions topics will also include the place of the Iranian diaspora in cinema, as well as the transnational production, distribution, and consumption of Iranian cinema. Films will include those by internationally acclaimed filmmakers, such as Rakhshan Bani-Etemad, Asghar Farhadi, Bahman Ghobadi, Abbas Kiarostomi, Mohsen Makhmalbaf, Dariush Mehrjui, Tahmineh Milani, Jafar Panahi, Marjane Satrapi and others. All films will be subtitled in English. No prior knowledge is required.

NELC 0900 Pastoral Nomadism in the Past and Present
Pastoral nomadism is a "third way" of human subsistence separate from farming and foraging. It is a sustainable human adaptation to grassland and arid environments practiced through particular technologies and domesticated animals. This course begins by examining the human ecology and social organization that emerge from mobile ways of life, drawing on modern, ethnographic, and archaeological examples of pastoral nomadic groups in the Middle East and Central Asia. Academic readings and ethnographic films will form the basis of discussions about several larger themes, including: the origins of pastoral nomadism and horse riding; the development of dairy-based foods and human adaptations allowing the digestion of lactose; the historical relationship between mobile groups of pastoralists and territorial states; popular perceptions of nomads in various forms of historical and modern media; and the influence of ideas about nomads on modern senses of heritage and nationalism in the Middle East and Central Asia.

1 Course Unit

NELC 0905 Water in the Middle East Throughout History
Water scarcity is one of the most important problems facing much of the Middle East and North Africa today. These are arid regions, but human and natural systems have interacted to determine relative water scarcity and abundance at different times and places. This course examines the distribution of water resources throughout the Middle East and the archaeology and anthropology of water exploitation and management over the last 9000 years, looking at continuities and changes through time. Students will learn to make basic digital maps representing Middle Eastern hydro-geography and arguments about modern and historic water resources in the region. The class will cooperatively play an "irrigation management game" designed to familiarize personnel involved in the operation of irrigation schemes with the logistical and social issues involved in water management. We will engage with a variety of media, including academic readings, popular journalism, films, satellite imagery, and digital maps, in our quest to explore whether or not the past can inform present efforts to better manage modern water resources. The course is structured in units focused on each of the major hydro-environmental zones of the Middle East: the river valleys of Mesopotamia, Egypt, and the Levant, the internal basins of western Central Asia and the Levant, the deserts of Arabia and North Africa, highland zones in Yemen and Iran, and coastal marsh areas along the Persian Gulf. We will examine irrigation systems, water supply systems, and ways of life surrounding water sources known from ethnographic studies, history, and archaeological excavations. These data will allow us to engage with debates in Middle Eastern anthropology, including those concerning the relationship between water and political power, the environment in which the world's earliest cities arose, and the relevance of "lessons of the past" for present and potential future water crises and "water wars." In our final weeks, we will discuss archaeology and historical anthropology's contribution to conceptions of water "sustainability" and examine attempts to revive traditional/ancient technologies and attitudes about water.

NELC 0910 Food and Fire: Archaeology in the Laboratory
This course will let students explore the essential heritage of human technology through archaeology. People have been transforming their environment from the first use of fire for cooking. Since then, humans have adapted to the world they created using the resources around them. We use artifacts to understand how the archaeological record can be used to trace breakthroughs such as breaking stone and bone, baking bread, weaving cloth and firing pottery and metals. The seminar will meet in the Penn Museum's Center for the Analysis of Archaeological Materials. Students will become familiar with the Museum's collections and the scientific methods used to study different materials. Class sessions will include discussions, guest presentations, museum field trips, and hands-on experience in the laboratory.

NELC 1000 Iraq: Ancient Cities and Empires
Iraq: Ancient Cities and Empires is a chronological survey of the ancient civilization that existed in the drainage basin of the Tigris and Euphrates Rivers from the early settled village farming communities of the 7th millennium BCE to the middle of the 1st millennium BCE, when Nebuchadnezzar II ruled Babylon and much of the Middle East. Though organized period by period, NELC 241 explores various social, political, economic, and ideological topics, exposing students to various strands of evidence, including settlement survey data, excavated architectural remains, artifacts, and documentary sources, as well as an eclectic mix of theoretical perspectives. The course aims to provide students with a strong foundation for the further study of the ancient and pre-modern Middle East.

NELC 1001 The Arabian Nights
The Arabian Nights (more accurately known as The Thousand and One Nights) is a collection of stories that circulated in the medieval Islamic world and would later become a canonical classic of world literature thanks to various stages of addition, translation, and creative retelling. It is a heady agglomeration of tales written with a distinctive frame story and form about characters and deeds that have been considered in turn memorable, hilarious, disgusting, arousing, thrilling, repugnant, and inspirational by various audiences since its beginning—and possibly even before it ever existed. In this course, we will read almost the entirety of the 14th century collection of tales that constitute the earliest existing version of The Thousand and One Nights and analyze it both in relation to the medieval genres and historical contexts that shaped it and through contemporary theoretical frameworks. The Thousand and One Nights is a fluid and changing collection, so it is not our goal to focus on some clearly-defined "original". We will instead discuss this collections' origins, famous later additions such as the stories of Aladdin and Sindbad, and the role that its reception and translation in Europe played in making it a key text of world literature. We will also study some of its many later adaptations in film, poetry, and narrative. By analyzing key components of the text such as the frame story, fantasy, romance, and representations of race and gender, and by considering the aesthetics and politics of literary engagement with The Thousand and One Nights in modern contexts, we will come to appreciate the stories’ many travels across time and genres and develop our own ideas on what The Thousand and One Nights can teach us about the enduring power of storytelling. This course is taught in English, including all readings.

NELC 1325 Jews and Christians
The first few centuries of the Common Era witnessed one of the most important developments in religious history: the formation of both Judaism and Christianity. According to the traditional understanding of the formation of these groups, Judaism was an ancient religion, extending from the time of the Bible, and Christianity was a small upstart that "parted ways" from Judaism and eventually emerged as a major world religion all on its own. After their parting, according to this understanding, Judaism and Christianity were almost exclusively hostile to one another. In recent years, however, the traditional understanding has been challenged and largely dismantled. It is now clear that both groups continued to define and redefine themselves in dialogue and/or competition with the other; that Judaism itself is formed alongside Christianity in this period; that lines between the groups remained blurry for centuries; that the discourse of an early and total "parting" was created in large part by elite men describing and creating the "parting" they hoped for; that Jews and Christians interacted in ways that were not hostile but in fact productive and positive. In this course, we will study the ways that Judaism and Christianity continued to overlap throughout antiquity, as well as the many discourses that were applied to draw lines between these overlapping groups and to cause them to "part". While the content of the course will focus on Judaism and Christianity, the implications of our investigation apply to the definition, evolution, growth, and other issues that attend groups and their formation in both antiquity and the present. The course will address larger questions related to how history and rhetoric are fashioned, how identities are shaped in conversation with each other, how orthodoxies are formed and challenged, and more.

NELC 1400 The Making of Scripture: From Revelation to Canon
The Bible as we know it is the product of a lengthy process of development, elaboration, contest, and debate. Rather than a foregone conclusion, the process by which the texts and traditions within the bible, and the status ascribed to them, was turbulent and uncertain. This course examines that process, examining the Bible, traditions and communities from the Second Temple Period - such as the Dead Sea Scrolls and Community - that rewrote, reconsidered, revised, or rejected now well-recognized figures and stories, and constructed distinct ideas of what was considered scripture and how it should be approached. Even as the bible began to resemble the corpus as we now know it, interpretive strategies rendered it entirely different, such as Hellenistic Allegorizers, working from the platonic tradition, rabbinic readers who had an entirely different set of hermeneutics, early Christians, who offered different strategies for reading the “Old” and “New” Testaments alongside one another (and employing categories like “Old” and “New,” themselves constituting a new attitude and relationship to and between these texts), and lastly early Muslim readers, who embraced many of the stories in the Bible, altered others, and debated the status of these corpuses under Islam.

NELC 1605 Muslims, Christians, and Jews in the Middle East: Historical Perspectives
A reading- and discussion-intensive seminar that addresses several recurring questions with regard to the Middle East and North Africa. How have Islam, Judaism, and Christianity influenced each other in these regions historically? How have Jews, Christians, and Muslims fared as religious minorities? To what extent have communal relations been characterized by harmony and cooperation, or by strife and discord, and how have these relations changed in different contexts over time? To what extent and under what circumstances have members of these communities converted, intermarried, formed business alliances, and adopted or developed similar customs? How has the emergence of the modern nation-state system affected communal relations as well as the legal or social status of religious minorities in particular countries? How important has religion been as one variable in social identity (along with sect, ethnicity, class, gender, etc.), and to what extent has religious identity figured into regional conflicts and wars? The focus of the class will be on the modern period (c. 1800-present) although we will read about some relevant trends in the early and middle Islamic periods as well. Students will also pursue individually tailored research to produce final papers. Prior background in Islamic studies and Middle Eastern history is required. Middle Eastern history is required. This class is intended for juniors, seniors, and graduate students.

NELC 1610 Nationalism and Communal Identity in the Middle East
This seminar views the phenomenon of nationalism as it affected the modern Middle East in the nineteenth and twentieth centuries. Together we will consider the diverse components of nationalism, including religion, language, territorial loyalty, and ethnicity, and test the thesis that nations are “imagined communities” built on “invented traditions.” At the same time, we will examine other forms of communal identity that transcend national borders or flourish on more localized scales. This class approaches nationalism and communal identity as complex products of cultural, political, and social forces, and places Middle Eastern experiences within a global context. Students must take a survey of modern Middle Eastern history or politics before enrolling in this class. This class is intended for juniors, seniors, and graduate students.
Fall
Prerequisite: NELC 0002
1 Course Unit

NELC 1615 Migration and the Middle East
This reading-and discussion-intensive seminar examines the phenomenon of migration into, out of, within, and across the Middle East and North Africa. We will focus on the period from the late nineteenth century to the present, and will emphasize the cultural (rather than economic) consequences of migration. Along the way we will trace connections between the Middle East and other regions— notably the Americas, sub-Saharan Africa, South Asia, the Caucasus, and Western Europe. Readings are interdisciplinary and include works of history, anthropology, sociology, medical research, literature, political science, geography, and human rights advocacy. As students develop final projects on topics of their choice, we will spend time throughout the semester discussing tactics for research and writing.

1 Course Unit

NELC 1620 Middle Eastern Jews in Israel
This undergraduate seminar offers an in-depth look at the history of Middle Eastern and North African Jews, focusing in particular on their place in Israeli society and culture. It will begin with a historical background on the Jewish communities in Ottoman Palestine, and in the larger Ottoman Empire, Iran, and Morocco. We will then proceed to consider the engagement of these Jewish communities with Zionism, and with other conflicting forces, such as European colonialism, Arab nationalism, and Cosmopolitanism. We will learn about Jewish immigration from the region to Palestine/Israel in the period between 1880 to 1948, and about their exodus/expulsion post-1948. We will then explore in depth their settlement in Israel: governmental policies towards Jewish immigrants from the Islamic World, especially between the 1950s and the 1970s; their integration in Israeli society; identity politics in Israel (or: the “invention” of “Mizrahim”); Mizrahi political action; Mizrahi music, film, literature, and food culture; and Mizrahi attitudes towards Arabs, both within and outside Israel. Students will leave the class with a firm grasp of the social and cultural history of Middle Eastern Jews in Israel, and the issues facing third-generation Mizrahim in Israel today. Students will also be introduced to basic methods of inquiry in history, sociology, anthropology, and cultural studies. Students will engage with a mix of scholarly research, readings in original documents, film, literature, music, and some material and visual artifacts.
1 Course Unit
NELC 1650 1947-49: British Empire and the Partitions of South Asia and Palestine
The partitions of South Asia and Palestine marked the end of the British Empire in those regions. British colonial rule in India ended in 1947 with the emergence of not one, but two nation states, India and Pakistan. Decolonization was marked by mass migration and ethnic cleansing along their borders. An estimated million people died in the violence in less than a year, and 12.5 million people migrated from their homes. The British Empire also gave up its claims to Palestine in 1947, exhausted by the two nationalisms of Zionists and Palestinians. This partition set up the declaration of the state of Israel, and the War for Palestine. By 1949, almost a million Palestinians found themselves displaced over many borders, some also within the borders of Israel. This comparative course is organized around three themes - the prehistories of these cataclysmic events, the role of Empire in catalyzing them, and the afterlives of these events that continue to haunt us into the present, seventy-five years later. It explores the political history - and the collapse of politics - that led to violence on a scale that was without precedent in the history of the Indian subcontinent. It examines the political, social and cultural events that led to decades of war and exile, and shaped the lives of generations of Palestinians, Israelis and the wider Middle East. Primary sources will help to explore the perspectives of ordinary people whose lives were turned upside down in both places.

NELC 1700 Introduction to Persian Poetic Tradition
This course introduces some of the major genres and themes of the millennium-old Persian poetic tradition from ancient to modern Iran. Epic and romance, love and mysticism, wine and drunkenness, wisdom and madness, body and mind, sin and temptation are some of the key themes that will be explored through a close reading of poems in this course. The course suits undergraduate students of all disciplines, as it requires no prior knowledge of or familiarity with the Persian language or the canon of Persian literature. All teaching materials are available in English translation. Students are expected to attend seminars and take part in discussions.
Spring
1 Course Unit

NELC 1900 Digital Exploration of the Past: Archives, Databases, Maps, and Museums
This course exposes students to digital methods for investigating past environments and societies, including digitization of analog records, the construction and querying of databases, and the creation of digital maps. The ultimate goal of the course will be to carry out a final project that benefits the Penn Museum and the public. In fall 2018, our exploration of digital methods will center around the archaeological site of Ur (Tell el-Muqayyar), located in southern Iraq. Ur was one of the earliest cities in the world, and, thanks to campaigns partly funded by Penn in the 1920s and 1930s, is one of the best-excavated sites in southern Mesopotamia. Here at Penn, we have unparalleled access to archival documentation and artifacts from the site. We will draw upon this access to contribute to an ongoing digital humanities project in the Penn Museum (the public "Ur Online" database). In the process, students will re-assess data that has the potential to change anthropological ideas about issues such as the environmental setting of the earliest cities and archaeological ideas about demographic and urban structure within the city of Ur itself. There are no prerequisites, but students must bring an interest in Mesopotamian archaeology and/or the origins of urbanism and be motivated to carry out individual and group research guided by the instructor & classmates.
1 Course Unit

NELC 1905 GIS for the Digital Humanities and Social Sciences
This course introduces students to theory and methodology of the geospatial humanities and social sciences, understood broadly as the application of Geographical Information Systems (GIS) and spatial analysis techniques to the study of social and cultural patterns in the past and present. By engaging with spatial theory, spatial analysis case studies, and technical methodologies, students will develop an understanding of the questions driving, and tools available for, humanistic and social science research projects that explore change over space and time. We will use ESRI’s ArcGIS software to visualize, analyze, and integrate historical, anthropological, and environmental data. Techniques will be introduced through the discussion of case studies and through demonstration of software skills. During supervised laboratory sessions, the various techniques and analyses covered will be applied to sample data and also to data from a region/topic chosen by the student.

1 Course Unit
NELC 1970 Filming the Middle East
This course will take us through the history of the modern Middle East as told by the region's many film-makers. We will explore how cinema developed and grew throughout countries like Egypt, Iran, Syria, Turkey, Lebanon, Israel and Palestine. Unusually for a typical course on the Middle East, we will also pay close attention to North Africa's film industry, with a deep exploration of the cinema of Algeria, Tunisia and Morocco. Sudanese films will be an important part of our study as well. What does it mean to have a national cinema? Many of these countries' film industries grew under European occupation and colonialism. With independence, were more markets available to Middle Eastern films? Where did directors and screenwriters train? Who were the intended audiences for these films? We will watch canonical films from the region, many of which focus on or reflect the political turmoil and aftermath of wars. But we will also examine the lightness of comedies, which were usually much more popular with Middle Eastern audiences, and which reveal every bit as much about the region's histories. And we will watch and discuss a phenomenon not found in Western cinema - the Ramadan soap operas and historical reenactments that are unique to the Middle East.

NELC 2040 Ancient Iranian Empires
Iran - as a landmass and a political entity - was central to the ancient world in a variety of ways. Ancient Iranian Empires were of central importance to and centrally located in the ancient world. It was the successor kingdom to the Assyrians and Babylonians; the power against which Greece and Rome defined themselves; and the crucible in which various communities and models of rule developed. This course offers a survey of the history of the ancient Persianate world, focusing in particular on the political and imperial entities that rose to power, the cultural, political, mercantile, and other contacts they shared with their neighbors to the East and West, and the communities and religious groups that arose and flourished within their lands. Ancient Iranian empires rivaled the Greek and Roman Empires to their West, and the central and eastern Asian Empires to their east, and the ongoing history of diplomacy, cultural contact, and war between these regions was formative to each and to the ancient world as a whole. Iran was home to and similarly formative for a variety of religions, including Zoroastrianism, Judaism, Christianity, Manicheanism, and Islam, and a central question Ancient Iranian political powers sought to address was how to negotiate and address the variety of populations under their control. The course will conclude by studying how, rather than a simplistic story of decline, the strategies, policies, institutions, and memory of the Iranian Empires continued to shape early Islam, medieval imagination, and modern political regimes.

NELC 2100 Archaeology of the Lands of the Bible: 1200-330BCE
Did the walls of Jericho really come tumbling down? How did the kings, queens, and prophets of ancient Israel and Judah live? In this introductory course, students will learn how archaeology illuminates the material and social world behind the texts of the Hebrew Bible and contributes to debates about the history and culture of these societies. We will study the sites, artifacts, and art of the lands of Israel, Judah, Phoenicia, Philistia, Ammon, Moab, and Edom during the period framing the rise and fall of these kingdoms, ca. 1200 to 330 BCE. We will see how biblical archaeology arose in the nineteenth and early twentieth centuries, how the complex relationship between archaeology and the biblical text has evolved to the present day, and how new discoveries continue to challenge preconceptions about this period. In addition, students will get a behind-the-scenes look at the development of a new gallery for the biblical archaeology collections at the Penn Museum and get further insight into how material objects can tell the story of the fascinating cultures of this region.

NELC 2102 Imagining Ancient Egypt: A History of Popular Fascination from Antiquity to the Present
Thousands of years after the pyramids were built and the last hieroglyphs were written, ancient Egypt remains a source of mystery and intense interest. Why are we so fascinated with ancient Egypt, and what does that fascination reveal about us? This course explores the reception history of ancient Egypt: how people in various periods and areas of the world have thought about ancient Egypt, what it has meant to them, why they were interested in it, and how they brought the ancient Egyptian past into the present. We will focus not on ancient Egypt itself, but on the history of perceptions of, ideas about, and interactions with ancient Egyptian culture. Our investigation will include how Egyptians of later periods thought about their ancient past, as well as European and American representations (and appropriations) of ancient Egypt. A major focus of the course will be the impact of political and cultural relations between Egypt and the West on perceptions and uses of ancient Egyptian culture. This interdisciplinary course will combine multiple areas of history—intellectual, cultural, and political—and multiple types of sources, including historical writing, literature, film, and opera. Beginning with ancient Greek and Roman visitors to Egypt, we will investigate changing modes of understanding, constructing, and representing ancient Egypt, from the medieval sultans of Egypt to Mozart to W. E. B. DuBois to protesters in Egypt's 2011 revolution. Over the course of the semester, we will explore questions such as: - What does it mean to think of Egypt as African vs. Middle Eastern vs. Mediterranean? Is Egypt Western, Eastern, both, or neither? - To whom does ancient Egyptian heritage belong? How do colonialism and conceptions of race and ethnicity factor into this question? - How do the past and the present shape each other? What is the impact of modern politics and culture on perceptions of the past? What role does the past play in the formation of modern political, social, and cultural identities? - How can we learn about modern problems and concerns from representations of the past?

NELC 2354 The Body in Middle Eastern History
The body has long been the focus of social and scientific inquiry, as well as the foundation of religious, philosophical, and artistic thought. This seminar examines premodern and modern notions of the body in the Middle East as they intersect with colonialism, nationalism, religion, labor, law, military, gender, race, medicine, and art. Students use the notion of the body as a "useful" historical category to investigate the broader social, cultural, and political transformations occurring in the Ottoman Empire and Qajar Iran, followed by post-empire and colonial modern Middle Eastern contexts. The course addresses diverse views and theories as manifested in the constructions and practices over the body by using literary texts, primary sources, medical recipes, religious orders, and even public monuments to unearth the role of the body in the making of Middle Eastern history.

NELC 2400 Faces of Love: Gender, Sexuality and the Erotic in Persian Literature
Beloved, Lover and Love are three concepts that dominate the semantic field of eroticism in Persian literature and mysticism. The interrelation among these concepts makes it almost impossible to treat any one of the concepts separately. Moreover, there exists various faces and shades of love in the works of classical and modern Persian literature that challenges the conventional heteronormative assumptions about the sexual and romantic relationships between the lover and the beloved. A sharp contrast exists between the treatment of homosexuality and 'queerness' in Islamic law, on the one hand and its reflection in Persian literature, particularly poetry (the chief vehicle of Persian literary expression), on the other. This course introduces and explores different faces of love, eroticism and homoeroticism in the Persian literary tradition from the dawn of dawn of the Persian poetry in the ninth century all through to the twenty-first century. It offers a comprehensive study of representations and productions of heteronormativity, sexual orientation and gender roles with particular reference to the notion of love, lover and beloved in Persian literature.

NELC 2510 Introduction to Islamic Law
This course will introduce students to classical Islamic law, the all-embracing sacred law of Islam. Among the world's various legal systems, Islamic law may be the most widely misunderstood and even misrepresented; certainly, misconceptions about it abound. Islamic law is, however, the amazing product of a rich, fascinating and diverse cultural and intellectual tradition. Most of the readings in this course will be taken from primary sources in translation. Areas covered will include criminal law, family law, law in the Quran, gender and sexuality, the modern application of Islamic law, Islamic government and other selected topics.

1 Course Unit

NELC 2565 Silencing: Voices of Dissent in the Middle East
The Middle East boasts a rich and vibrant literary tradition. At the same time, modern Middle Eastern literature has incorporated innovative techniques to produce unique literary forms that give meaning to the contemporary circumstances of the region. This course will survey this literary history as a window through which to observe and understand Middle Eastern society. We will begin by reading excerpts from classical texts, since these works resonate strongly in contemporary Middle Eastern culture. Next, we will read Middle Eastern novels from various countries and different eras. The last part of the course will focus on memoirs that shed light on wars and conflicts through personal reflections. We will use literary works (epic poetry, novels, memoirs) as historical texts and analyze the social milieux in which these works emerged.

1 Course Unit
NELC 2566 Israel and Iran: Historical Ties, Contemporary Challenges
Israel and Iran have longstanding ties and connections that predate the contemporary feuds in which they are currently engaged. Iranian Jews rank as some of the oldest communities of the Middle East, and their history dovetails with the ancient Iranian past. This course will explore the historical roots of Jewish communities in Iran, with a focus on the post-18th century period, and will end with conversations that contributed to the diplomatic impasses faced by both countries since the 1979 Islamic Revolution. Films, novels, memoirs, and other historical accounts will be incorporated alongside secondary works to give students an opportunity to consider the complexities of this relationship.

1 Course Unit

NELC 2567 Sex and Power in the Middle East: Unveiling Women's Lives
How did Islamic women really live? What were their attitudes toward veiling and politics? To what extent did family dynamics and sexuality inform social interactions? This course strives to answer these questions by offering a comparative perspective on the lives of women primarily in the Middle East and North Africa. It combines historical accounts with select fictional works to study women's social and cultural milieux under colonialism, as well as the evolution of women's roles in politics and society with the emergence of independent nation-states in the Middle East and North Africa. By crossing national boundaries, this course highlights the diversity of women's experiences. Active participation is critical to the success of this seminar. Every student is required to prepare a Powerpoint presentation on one week's readings. The presentation must be completed before the start of each class meeting and subsequently distributed to the members of the class. The PPT presentation should offer critical reflections on the topics discussed in the text. Rather than providing summaries, or personal commentary, students should attempt to raise questions and explain the arguments presented in the readings. In addition to the PPT presentation, students must complete a term paper (approx. 20-25 pages) by the end of the semester on a subject approved by the instructor. Students may select a primary text and discuss its relevance by drawing on the readings from the seminar. The text MUST be different from the text chosen for the PPT presentation. Required books are available for purchase at the Penn Book Center at 34th and Sansom Streets.

NELC 2900 Who Owns the Past? Archaeology and Politics in the Middle East
This course explores the role of cultural heritage and archaeological discoveries in the politics of the Middle East from the nineteenth century to the recent aftermath of the Arab Spring. We will explore how modern Middle East populations relate to their pasts and how archaeology and cultural heritage have been employed to support particular political and social agendas, including colonialism, nationalism, imperialism, and the construction of ethnic-religious identities. Although it was first introduced to the Middle East as a colonial enterprise by European powers, archaeology became a pivotal tool for local populations of the Middle East to construct new histories and identities during the post-World War I period of intensive nation-building after the dissolution of the Ottoman Empire. To understand this process, we will first look at the nineteenth-century establishment of archaeology by institutions like the Penn Museum. Then we will move on to individual case studies in Turkey, Iraq, Egypt, Israel/Palestine, Iran, and the republics of former Soviet Transcaucasia to look at the role of archaeology and cultural heritage in the formation of these countries as modern nation-states with a shared identity among citizens. We will conclude with an examination of the recent impact of the Islamic State on material heritage in Syria and Iraq, the changing attitudes of Middle Eastern countries toward foreign museums, and the role of UNESCO in defining Middle Eastern sites of world heritage. The course will also include field trips to the Penn Museum.

NELC 2910 The University, the Museum, and the Middle East
This seminar explores how two kinds of institutions - the research university and the museum - developed in the United States as American scholars and philanthropists and the U.S. government engaged with the wider world. We will take the involvement of the University of Pennsylvania and the Penn Museum in the Middle East as a test case for this history, while focusing on the period from the late nineteenth century to the present. We will approach questions in transnational intellectual, cultural, and political history through the lens of Penn's Middle Eastern engagements. For example, how did the university and its museum contribute to the construction of the Middle East as a zone of U.S. diplomatic intervention? How have American scholarly traditions shaped academic fields of inquiry including "Semitics" (a term used a century ago to suggest the study of biblical languages and traditions), "Oriental Studies" (a now-passe and politically loaded term suggesting connections to American traditions of Orientalist thought), "Islamic Studies", and "Egyptology"? How did Penn's archaeological expeditions to celebrated sites like Ur in the late nineteenth century influence the late Ottoman Empire's policies towards antiquities and museums? How did Penn's broader expeditions in the twentieth century, to Egypt, Iran, and elsewhere, shape nationalist imaginations in the United States and in Middle Eastern countries, while also informing international antiquities policies? Finally, how have institutions like Penn and the Penn Museum responded to changing American popular attitudes and U.S. foreign policy concerns relative to the Middle East, during the Cold War and post-2001 ("post-9/11") eras, and most recently, amid civil strife in Syria and Iraq? This seminar offers students an opportunity to consult Penn's phenomenal collections of Middle East-related materials as they pursue end-of-semester research. These collections include artifacts (museum objects), archival records (such as documents, drawings, and photographs), and rare books and manuscripts from the Penn Museum and Penn Libraries.

1 Course Unit

NELC 2920 World Heritage in Global Conflict
Heritage is always political. Such a statement might refer to the everyday politics of local stakeholder interests on one end of the spectrum, or the volatile politics of destruction and erasure of heritage during conflict, on the other. If heritage is always political then one might expect that the workings of World Heritage might be especially fraught given the international dimension. In particular, the intergovernmental system of UNESCO World Heritage must navigate the inherent tension between state sovereignty and nationalist interests and the wider concerns of a universal regime. The World Heritage List has almost 1200 properties that has many such contentious examples, including sites in Iraq, Mali, Syria, Crimea, Palestine, Armenia and Cambodia. As an organization UNESCO was born of war with an explicit mission to end global conflict and help the world rebuild materially and morally yet has found its own history increasingly entwined with that of international politics and violence.

NELC 2950 Living World in Archaeological Science
By focusing on the scientific analysis of archaeological remains, this course will explore life and death in the past. It takes place in the Center for the Analysis of Archaeological Materials (CAAM) and is taught in three modules: human skeletal analysis, analysis of animal remains, and analysis of plant remains. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how organic materials provide key information about past environments, human behavior, and cultural change through discussions of topics such as health and disease, inequality, and food.

NELC 3060 The Hellenistic and Roman Near East
In this course we will study the history of the Hellenistic and Roman period from a Near Eastern perspective. From the conquests of Alexander the Great to the end of Roman rule in late antiquity, this region was the scene of conflicts, but also of peaceful and fruitful interactions between Greeks, Romans, Egyptians, Jews, Syrians, Arabs and many other societies. What was the impact of Greek and Roman rule and how did the peoples of the region react to these fundamental changes? On the other hand, how did they influence the culture and worldview of their conquerors? We will use historical texts, documents and archaeological evidence to discuss these political, cultural and religious encounters that made the Near East to a key region of Greco-Roman history. All texts will be discussed in translation. No prerequisites, although it would be useful to have some background in Hellenistic and/or Roman history.

1 Course Unit
NELC 3070 Origins of Art / Origins of Writing
Each of the earliest systems of writing had intimate and enduring ties to pictorial traditions. This seminar addresses the fundamental relationship between texts and visual imagery in the Mesopotamian, Egyptian, Chinese, and Maya traditions. The class will take a comparative approach to examine the parallel development of scripts and images, extending from their earliest beginnings to their on-going lives as mature systems. As the individual scripts became more capable of representing speech, the subject matter, composition, and payment of images changed, and one goal of this class is to identify these processes. Emphasis will be put on seeing text and image as collaborative and interactive constructions, in which parts of a single message can be encoded and presented in different ways. The class will make extensive use of the collections and the curatorial expertise of the Penn Museum.

Also Offered As: ANTH 2330, ARTH 3230
1 Course Unit

NELC 3260 Eastern Christianities
The history of Christianity is often told from the perspective of its spread westward from Israel to Rome. Yet, in the first millennium, there were more Christians living in the East, in places as far away as Persia, Yemen, India, China, and Mongolia, than in the West. Spread across the Asian continent, these Christians were actively involved in local and imperial politics, composed theological literature, and were deeply embedded in the cultural fabric of their host societies. This course traces the spread of Christianity eastward, paying particular attention to its regional developments, its negotiations with local political powers, and its contact with other religions, including Buddhism, Manichaism, and Islam. Readings will cover a broad range of sources, including selections from classical Syriac literature, Manichaean texts, Mesopotamian magic bowls, the so-called “Jesus Sutras,” and the Quran. All readings will be provided in English, and no background is presumed.

NELC 3300 Jewish Magic
The Hebrew Bible legislates against magic and witchcraft. But Jewish literature is replete with demons, witches, spells and incantations. This course will examine the phenomenon of Jewish magic in the longue duree. We will explore a wide array of sources describing ancient Jewish magical practices, and attempt to reconstruct the various aspects of ancient Jewish magic. We will start with demonology and exorcism in biblical and Second Temple literature. Then we will examine rabbinic attitudes towards magic and sorcery and rabbinic magical recipes. We then turn to material artifacts: late antique Jewish amulets and magic bowls. Finally we will survey the large corpus of magical texts from the Cairo Geniza and Hebrew manuscripts of magic from the middle ages. During the course we will consider broader questions such as the relationships between magic and religion, the identity of the Jewish magicians and their clients, relationship between Jewish and contemporary non-Jewish magic, and the role of women in magical practice.

1 Course Unit

NELC 3400 Age of Caliphs, 600-1100
There are few moments of human history that were as creative as the seventh, eighth and ninth centuries in the Near East. Nor are there many such moments in history that pose as many questions to the historian. How do we know what we think we know about early and ‘classical’ Islamic history? In what ways is pre-modern Islamic history distinctive? How do we understand the role of religion in pre-modern societies? In this course, we will examine the social and political history of the Islamic Near East (with a few exotic pit-stops) in its formative centuries, from the rise of Islam to the coming of the Seljuq Turks. Special topics include: the rise of Islam; the early Islamic conquests; the expansion and disintegration of the imperial caliphate under the Umayyads and ‘Abbasids; religious authority in early Islam; ‘Abbasid successor states; Shi’ism; provincial cultures.
Fall
Prerequisite: NELC 0002
1 Course Unit

NELC 3410 Age of Sultans 1100-1500
In this course, we will examine the social and political history of the Islamic Near East in its medieval centuries, from the coming of the Seljuq Turks to the rise of the Ottoman and Safavid Empires. Special topics include: the Eleventh-Century Transformation; Crusades and Jihads, the Mamluk Institution; Knowledge and Power; The Mongol Invasions; Timur and His Legacy; Gunpowder Empires. This course requires basic prior knowledge of Islam and the Near East, such as prior enrollment in NELC 102 or equivalent. Note that undergraduates must register for the course as NELC 338; graduate students must register for the course as NELC 638. Undergraduates are not permitted to register under the graduate number.

Prerequisite: NELC 0002
1 Course Unit

NELC 3550 Africa and the Mid-East
This course will explore the historical relationship between these two regions from the early modern age to the present. We will examine the history of trade, particularly the slave trade, and its cultural and political legacy. We will compare the experiences of European imperialism—how the scramble for Africa dovetailed with the last decades of the Ottoman Empire—with an eye to how this shaped nationalist movements in both regions. The course will also explore the decades of independence with a special eye towards pan-Africanism and pan-Arabism. We will also study the ramifications of the Arab-Israeli conflict on the relationship between African and Middle-Eastern countries, from Uganda to Ethiopia, from OPEC to Darfur. The course will pay close attention to migrations through the regions, whether forced or economic or religious. Whenever possible we will explore, through film and literature, how people in Africa and the Middle East see their connections, and their differences.
Fall or Spring

1 Course Unit
NELC 3560 Gunpowder, Art and Diplomacy: Islamic Empires in the Early Modern World
In the sixteenth century, the political landscape of the Middle East, Central Asia, and India changed with the expansion and consolidation of new Islamic empires. Gunpowder had transformed the modes of warfare. Diplomacy followed new rules and forms of legitimation. The widespread use of Persian, Arabic and Turkish languages across the region allowed for an interconnected world of scholars, merchants, and diplomats. And each imperial court, those of the Ottomans, the Safavids, and the Mughals, found innovative and original forms of expression in art and literature. The expansion of these Islamic empires, each of them military giants and behemoths of bureaucracy, marked a new phase in world history. The course is divided in four sections. The first section introduces the student to major debates about the so-called gunpowder empires of the Islamic world as well as to comparative approaches to study them. The second section focuses on the transformations of modes of warfare and military organization. The third section considers the cultural history and artistic production of the imperial courts of the Ottomans, the Mughals, and the Safavids. The fourth and final section investigates the social histories of these empires, their subjects, and the configuration of a world both connected and divided by commerce, expansion, and diplomacy.

NELC 3600 Urban Life in the Middle East and North Africa
With rapid urbanization, most people in the Middle East and North Africa are living now in cities and towns, rather than in rural areas. This seminar introduces the complex realities of living in the major cities of the region, in terms of globalization, social class, politics, gender and sexuality, culture, religion, communal identities, communal networks, and more. Through intensive engagement with the various readings and films, both documentaries and feature films, we will explore how those realities and processes shape the urban space, or express themselves in it. In addition, we will explore the basic premises of such disciplines as anthropology, cultural studies, history, or sociology, and learn how they can help us research and understand the realities of urban life in the modern and contemporary Middle East and North Africa. We will use Cairo, Egypt, as our main case study, while looking at a range of other cities, such as Istanbul, Turkey, and Marrakesh, Morocco, for further insights.

1 Course Unit

NELC 3610 Egypt in Four Revolutions
This seminar offers an in-depth look at the political and social history of revolution and protest in modern Egypt. We will examine four such seminal events, through different lenses: The Urabi Revolution (1879-1882), The 1919 Revolution, The 1952 Revolution, and The 2011 Revolution. We will discuss their political, social, and economic causes and effects; popular participation and the use of public space; the roles of the army, women, youth, and social organizations in those events; their ideological and international aspects; their colonial and post-colonial contexts; and more. We will use cutting edge research from several disciplines, as well as literature, film, music, photography, and social media as sources. Students will leave the class with a firm grasp of the social and political history of modern Egypt, as well as of current scholarly discussions about the nature of revolution and protest.

1 Course Unit

NELC 3900 Women Making History: The Penn Museum and the Centennial 2020
The year 2020 marks the 100th anniversary of the 19th Amendment to the U.S. Constitution, which declared that the right of citizens to vote "shall not be denied or abridged by the United States or by any State on account of sex". To mark this centennial – to both celebrate it and critically assess its impact on American society – we will investigate the history of women at the Penn Museum as archaeologists, ethnographers, epigraphers, philanthropists, and more. At the same time, we will examine material in the Penn Museum that women collected, donated, or studied. Our goal will be to produce original research that may contribute to future exhibits and publications as well as to broader public forums. Sponsored by the Department of Near Eastern Languages and Civilizations, our seminar will focus heavily on western Asia, southeastern Europe, and North Africa – all zones that scholars have variously associated with the Near East or Middle East, and where the Penn Museum has been active since its foundation in 1887. To situate the Penn Museum and its collections within a global and comparative frame, we will also study select women who made major scholarly contributions to other parts of the world such as the Americas and Oceania. Among the figures we will study are Sarah Yorke Stevenson (Egypt), Katharine Woolley (Mesopotamia/Iraq), Harriet Boyd Hawes (Ottoman Crete and Greece), Florence Shotridge (Alaska), Zelia Nuttall (Mexico and Russia), and Tatiana Proskouriakoff (Guatemala). We will venture into many different kinds of history. In regional terms, our scope will be transnational and international: we will cover the United States and the Middle East in the wider world. In thematic and methodological terms, we will approach our subject through biography, oral history, and microhistory, material history and museum studies; cultural and intellectual history; women's and gender studies; and the history of academic disciplines, especially archaeology and anthropology. Some background in Middle Eastern history; or Anthropology; or Women's History; or Museum Studies recommended.

Spring, odd numbered years only

NELC 3950 Intro to Digital Archaeology
Students in this course will be exposed to the broad spectrum of digital approaches in archaeology with an emphasis on fieldwork, through a survey of current literature and applied learning opportunities that focus on African American mortuary landscapes of greater Philadelphia. As an Academically Based Community Service (ABCS) course, we will work with stakeholders from cemetery companies, historic preservation advocacy groups, and members of the African Methodist Episcopal Church to collect data from three field sites. We will then use these data to reconstruct the original plans, untangle site taphonomy, and assess our results for each site. Our results will be examined within the broader constellation of threatened and lost African American burial grounds and our interpretations will be shared with community stakeholders using digital storytelling techniques. This course can count toward the minor in Digital Humanities, minor in Archaeological Science and the Graduate Certificate in Archaeological Science.

NELC 4300 Seminar in Modern Hebrew Literature
This course introduces students to selections from the best literary works written in Hebrew over the last hundred years in a relaxed seminar environment. The goal of the course is to develop skills in critical reading of literature in general, and to examine how Hebrew authors grapple with crucial questions of human existence and national identity. Topics include: Hebrew classics and their modern "descendents," autobiography in poetry and fiction, the conflict between literary generations, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students' literary understanding.

NELC 4305 Spirit and Law
While accepting "the yoke of the commandments", Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from overtly polemical challenges to the law, such as those leveled by Paul, medieval Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law's meaning and purpose, by examining a range of primary sources within their intellectual and historical contexts. Texts (in English translation) include selections from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic homilies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.

NELC 4955 Mining Archaeology
In ancient times, materials such as stone and metals were used to produce artifacts including pigments, jewelry, tools, and weapons. This course is designed to introduce students to research on the early exploitation of mineral resources. Which techniques were used to access and process raw materials in antiquity? Which archaeological methods can be used to investigate these features and artifacts? The course will provide worldwide examples through time, ranging from Stone Age flint mining, Iron Age rock salt mining to Medieval silver mining. Ethnographic studies and hands-on activities will contribute to our understanding of mining in archaeology, and artifacts from the Museum’s collections will undergo scientific analysis in the Center for the Analysis of Archaeological Materials. Spring
Also Offered As: ANTH 3219, CLST 3314
Mutually Exclusive: ANTH 5219
1 Course Unit

NELC 4955 The Past Preserved: Conservation In Archaeology
This course explores the scientific conservation of cultural materials from archaeological contexts. It is intended to familiarize students with the basics of artifact conservation but is not intended to train them as conservators. The course will cover how various materials interact with their deposit environments; general techniques for on-site conservation triage and retrieval of delicate materials; what factors need to be considered in planning for artifact conservation; and related topics. Students should expect to gain a thorough understanding of the role of conservation in archaeology and how the two fields interact. Also Offered As: ANTH 3235, ARTH 0143, CLST 3315
1 Course Unit

NELC 4992 Transfer Credit: Major
Course credit for NELC majors for courses taken in an approved program. 1 Course Unit

NELC 4995 Senior Conference
Directed study for seniors.
Fall or Spring
1 Course Unit

NELC 4999 Independent Study
Supervised reading and research with Near Eastern or Middle Eastern content for undergraduates

NELC 5010 History and Society of Early Mesopotamia
The fourth millennium BCE saw the rise of cities and the birth of writing in ancient Mesopotamia (modern Iraq). This class traces the history of Mesopotamia from about 3000 BCE to about 1600 BCE (the end of the Old Babylonian Period), examining political history and changes in social organization as well as developments in religion, literature and art. Spring, even numbered years only
1 Course Unit

NELC 5020 Mesopotamia 2200-1600 BCE
This seminar style class will focus on two canonical periods of Mesopotamian history from 2100-1600 BCE. It is structured to examine fundamental institutions of kingship, religion, economy, law and literature. Practices well established in Sumer by the end of the third millennium evolved during the first half of the second millennium BCE when Amorite speaking peoples assume central roles in Mesopotamian institutions. The class will be structured around case studies engaging key monuments of art, architecture and literature. It will be team-taught by Prof. Pittman, focusing on material remains and visual arts and by Prof. Steve Tinney who brings expertise to the rich cuneiform textual traditions. Also Offered As: AAMW 5020, ANTH 5024, ARTH 5240
1 Course Unit

NELC 5050 Ancient Iranian Art Seminar
This seminar will focus on the environmental, archaeological and textual record for settlement in the Persian/Arabian Gulf region from the Neolithic to the pre-Islamic Late Antique. Emphasis will be on the settlement history and material culture. Special attention will be paid to the close interaction of the local communities on the Arabian side of the Gulf with those on the Iranian/Indus valley side. The patterns of sea faring trade and interaction from Mesopotamia, Iran, Indus Valley and beyond will be considered. It is possible that this class will take a site trip to the UAE during the spring break, if the logistics can be arranged. Not Offered Every Year
Also Offered As: AAMW 5220, ARTH 5220
1 Course Unit

NELC 5054 Courtly Life in Mesopotamia, Persia, and the Mediterranean
Who could approach and speak with the Sumerian Queen? What rules governed a banquet with the Persian king? What was the most elegant way to drink wine? Where were the women in the Assyrian court? With hundreds of people crammed into a palace, was hygiene important? How were court guests treated? What games were played at court? Is the stereotypical image of the “Oriental” court characterized by lust, backstairs intrigue, flatteries, and secrets sustainable in the light of new evidence and theoretical approaches? The court at the same time is considered as a large amorphous body in a physical location or an institution, or a group of people, or even to particular events. This seminar style course considers Middle Eastern courts from the Sumerians through the Assyrian and Persian empires articulating shared and diverse features. Textual, visual, material and archaeological sources are considered through sociological and anthropological theories and core concepts such as groups, individuals, ultrasociality, proxemics, sociopetal, sociofrugal and purity to name a few. Comparisons with later courts in the Middle East are welcome. Also Offered As: AAMW 5241, ARTH 5241
1 Course Unit

NELC 5100 Seminar on Egyptian Archaeology and History
Specific topics will vary from year to year. Not Offered Every Year
1 Course Unit
NELC 5101 Imagining Ancient Egypt: A History of Popular Fascination from Antiquity to the Present

Thousands of years after the pyramids were built and the last hieroglyphs were written, ancient Egypt remains a source of mystery and intense interest. Why are we so fascinated with ancient Egypt, and what does that fascination reveal about us? This course explores the reception history of ancient Egypt: how people in various periods and areas of the world have thought about ancient Egypt, what it has meant to them, why they were interested in it, and how they brought the ancient Egyptian past into the present. We will focus not on ancient Egypt itself, but on the history of perceptions of, ideas about, and interactions with ancient Egyptian culture. Our investigation will include how Egyptians of later periods thought about their ancient past, as well as European and American representations (and appropriations) of ancient Egypt. A major focus of the course will be the impact of political and cultural relations between Egypt and the West on perceptions and uses of ancient Egyptian culture. This interdisciplinary course will combine multiple areas of history—intellectual, cultural, and political—and multiple types of sources, including historical writing, literature, film, and opera. Beginning with ancient Greek and Roman visitors to Egypt, we will investigate changing modes of understanding, constructing, and representing ancient Egypt, from the medieval sultans of Egypt to Mozart to W. E. B. DuBois to protesters in Egypt's 2011 revolution. Over the course of the semester, we will explore questions such as: - What does it mean to think of Egypt as African vs. Middle Eastern vs. Mediterranean? Is Egypt Western, Eastern, both, or neither? - To whom does ancient Egyptian heritage belong? How do colonialism and conceptions of race and ethnicity factor into this question? - How do the past and the present shape each other? What is the impact of modern politics and culture on perceptions of the past? What role does the past play in the formation of modern political, social, and cultural identities? - How can we learn about modern problems and concerns from representations of the past? Not Offered Every Year
Also Offered As: CLST 5710
Mutually Exclusive: NELC 2102
1 Course Unit

NELC 5104 History of Egypt -New Kingdom

Covers principal aspects of ancient Egyptian culture (environment, urbanism, religion, technology, etc.) with special focus on archaeological data; includes study of University Museum artifacts.
Spring
Mutually Exclusive: NELC 4105
1 Course Unit

NELC 5105 Literary Legacy of Ancient Egypt

This course surveys the literature of Ancient Egypt from the Old Kingdom through the Graeco-Roman period, focusing upon theme, structure, and style, as well as historical and social context. A wide range of literary genres are treated, including epics; tales, such as the "world's oldest fairy tale;" poetry, including love poems, songs, and hymns; religious texts, including the "Cannibal Hymn"; magical spells; biographies; didactic literature; drama; royal and other monumental inscriptions; and letters, including personal letters, model letters, and letters to the dead. Issues such as literacy, oral tradition, and the question poetry vs. prose are also discussed. Not Offered Every Year
1 Course Unit

NELC 5200 The Bible in Translation

This course introduces undergraduates and graduate students to one specific Book of the Hebrew Bible. "The Bible in Translation" involves an in-depth reading of a biblical source against the background of contemporary scholarship. Depending on the book under discussion, this may also involve a contextual reading with other biblical books and the textual sources of the ancient Near East.
Fall or Spring
1 Course Unit

NELC 5210 Great Books of Judaism

The Babylonian Talmud, known simply as the Bavli, is the foundational legal and ethical document of rabbinic Judaism. It is one of the best read works of world literature, and it is the most widely disseminated and revered rabbinic work. It not only contains legal discussions and rulings but rather it also presents the worldview of the rabbis. This course will analyze and contextualize the perspectives of the Talmud towards the important phases of life. We will examine in-depth several Talmudic passages relating to the various stages of the human lifecycle: birth and naming of the child; circumcision; bar/bat mitzva and adulthood; earning a livelihood and choosing a career; marriage and divorce; procreation and raising children; death, burial, mourning and the belief in the resurrection of the dead among others. We will evaluate these teachings in light of other traditions and in their broader late antiquity and contemporary contexts. All texts will be read in their English translation but originals will also be provided.
Fall
Mutually Exclusive: NELC 0305
1 Course Unit

NELC 5211 Elementary Biblical Hebrew I

This course is an introduction to Biblical Hebrew. It assumes no prior knowledge, but students who can begin to acquire a reading knowledge of the Hebrew alphabet before class starts will find it extremely helpful. The course is the 1st of a 4-semester sequence whose purpose is to prepare students to take courses in Bible that demand a familiarity with the original language of the text.
Fall
Mutually Exclusive: NELC 0301
1 Course Unit

NELC 5212 Elementary Biblical Hebrew II

A continued introduction to the grammar of Biblical Hebrew, focusing on the verbal system, with an emphasis on developing language skills in handling Biblical texts. A suitable entry point for students who have had some Modern Hebrew. Prerequisite: If course requirement not met, permission of instructor required.
Spring
1 Course Unit

NELC 5213 Intermediate Biblical Hebrew I

This course will focus on using the grammar and vocabulary learned at the introductory level to enable students to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the punctuation marks used in the Bible. This is a suitable entry point for students who already have strong Hebrew skills.
Fall
1 Course Unit
NELC 5214 Intermediate Biblical Hebrew II
This course is a continuation of the fall semester’s Intermediate Biblical Hebrew I. No one will be admitted into the course who has not taken the fall semester. It will continue to focus on using the grammar and vocabulary learned at the introductory level to enable students to read biblical texts independently and take advanced Bible exegesis courses. We will concentrate this semester on various selections of Biblical poetry, including Exodus 15 and Job 28. We will also continue to translate English prose into Biblical Hebrew.

Spring
1 Course Unit

NELC 5300 Seminar in Rabbinic Literature
Most of the foundational writings of rabbinic Judaism corpora of Midrash, Mishna, and the two Talmuds were in existence by the end of the sixth century CE. Yet, for several centuries thereafter, there is little evidence attesting to the lived nature of rabbinic culture and society. Course will focus on writings by Jews and about Jews, produced between the 7th and 10th centuries, complemented by secondary sources. Texts will include selections from archaeological inscriptions; Midrash; liturgical poetry; Targum, Masora; geonic responsa, writings by Muslims and by Church Fathers. While students must be able to read Hebrew, much class time will be devoted to the improvement of reading and comprehension skills. Undergraduates should seek permission of the instructor.

NELC 5400 Introduction to Modern Hebrew Literature: Short Story Reinvented
The objective of this course is to develop an artistic appreciation for literature through in-depth class discussions and text analysis. Readings are comprised of Israeli poetry and short stories. Students examine how literary language expresses psychological and cultural realms. The course covers topics such as: the short story reinvented, literature and identity, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students’ literary understanding.

Fall
Prerequisite: HEBR 0400
1 Course Unit

NELC 5405 Manuscript Arts in the Islamic World
This hands-on seminar will explore the long tradition of manuscript-making and manuscript-makers in the Islamic world, using the extensive collections of Arab, Persian, Turkish and Indian volumes at the University of Pennsylvania and the Free Library of Philadelphia. These include copies of the Qur’an (Islam’s holy text) and other religious, scientific, historical and literary texts. Emphasis will be placed on traditional materials and artistic techniques, specifically calligraphy, binding, illumination and illustration, as well as on production methods and the historical, social, and economic contexts in which manuscripts were made, used and collected from early Islamic times to the early modern period. Also at issue will be the ways that Islamic manuscripts were transformed over the centuries as they journeyed from their diverse places of origin (Egypt, Morocco, Syria, Iran, India, etc.) to Philadelphia. The goal is the art historical skills involved in the study of Islamic codices, through close examination, discussion and presentation, and to recognize that every manuscript has a story. Most of the class sessions will be held either at the Kislak Center in Van Pelt Library or at the Free Library on the Parkway.

Also Offered As: ARTH 5360
1 Course Unit

NELC 5410 Seminar in Modern Hebrew Literature
This course introduces students to selections from the best literary works written in Hebrew over the last hundred years in a relaxed seminar environment. The goal of the course is to develop skills in critical reading of literature in general, and to examine how Hebrew authors grapple with crucial questions of human existence and national identity. Topics include: Hebrew classics and their modern “descendents,” autobiography in poetry and fiction, the conflict between literary generations, and others. Because the context of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students’ literary understanding.

Mutually Exclusive: NELC 4300
Prerequisite: HEBR 1000
1 Course Unit

NELC 5620 Intro to Digital Archaeology
Digital methods allow archaeologists to approach research questions about the human past with increasing accuracies on larger datasets and at multiple scales. This class introduces students to the three main steps of digital archaeology: data management, analysis, and sharing. Data management involves the design, creation, and curation of digital objects that capture the archaeological process and evidence. Students will gain deep familiarity in working with the main types of digital archaeological data: structured data (relational databases), 3d models/spatial data, and raster images. The class will provide abundant hands-on experience with the latest equipment and software for working with many different kinds of data. We will learn about data analysis techniques through a close examination of a variety of case studies in the literature that demonstrate how other archaeologists have applied digital methods to their archaeological questions. Finally, we will discuss the importance of sharing data through open access data publication and we will apply our skills with structured data to existing online archaeological datasets. The goal of this class is to prepare students to make methodological decisions during future research endeavors, both in the field and in the archaeological lab.

1 Course Unit
NELC 5700 Iranian Cinema: Gender, Politics and Religion
This seminar explores Iranian culture, society, history and politics through the medium of film. We will examine a variety of cinematic works that represent the social, political, economic and cultural circumstances of contemporary Iran, as well as the diaspora. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the role of cinema in Iranian society and beyond. Discussions topics will also include the place of the Iranian diaspora in cinema, as well as the transnational production, distribution, and consumption of Iranian cinema. Films will include those by internationally acclaimed filmmakers, such as Rakhshan Bani-Etemad, Asghar Farhadi, Bahman Ghobadi, Abbas Kiarostami, Mohsen Makhmalbaf, Dariush Mehrjui, Tahmineh Milani, Jafar Panahi, Marjane Satrapi and others. All films will be subtitled in English. No prior knowledge is required.
Fall or Spring
1 Course Unit

NELC 5920 The University, the Museum, and the Middle East
This seminar explores how two kinds of institutions - the research university and the museum - developed in the United States as American scholars and philanthropists and the U.S. government engaged with the wider world. We will take the involvement of the University of Pennsylvania and the Penn Museum in the Middle East as a test case for this history, while focusing on the period from the late nineteenth century to the present. We will approach questions in transnational intellectual, cultural, and political history through the lens of Penn's Middle Eastern engagements. For example, how did the university and its museum contribute to the construction of the Middle East as a zone of U.S. diplomatic intervention? How have American scholarly traditions shaped academic fields of inquiry including "Semitics" (a term used a century ago to suggest the study of biblical languages and traditions), "Oriental Studies" (a now-passe and politically loaded term suggesting connections to American traditions of Orientalist thought), "Islamic Studies", and "Egyptology"? How did Penn's archaeological expeditions to celebrated sites like Ur in the late nineteenth century influence the late Ottoman Empire's policies towards antiquities and museums? How did Penn's broader expeditions in the twentieth century, to Egypt, Iran, and elsewhere, shape nationalist imaginations in the United States and in Middle Eastern countries, while also informing international antiquities policies? Finally, how have institutions like Penn and the Penn Museum responded to changing American popular attitudes and U.S. foreign policy concerns relative to the Middle East, during the Cold War and post-2001 ("post-9/11") eras, and most recently, amid civil strife in Syria and Iraq? This seminar offers students an opportunity to consult Penn's phenomenal collections of Middle East-related materials as they pursue end-of-semester research. These collections include artifacts (museum objects), archival records (such as documents, drawings, and photographs), and rare books and manuscripts from the Penn Museum and Penn Libraries.
Spring, even numbered years only
1 Course Unit

NELC 5925 Geophysical Prospection for Archaeology
Near-surface geophysical prospection methods are now widely used in archaeology as they allow archaeologists to rapidly map broad areas, minimize or avoid destructive excavation, and perceive physical dimensions of archaeological features that are outside of the range of human perception. This course will cover the theory of geophysical sensors commonly used in archaeological investigations and the methods for collecting, processing, and interpreting geophysical data from archaeological contexts. We will review the physical properties of common archaeological and paleoenvironmental targets, the processes that led to their deposition and formation, and how human activity is reflected in anomalies recorded through geophysical survey through lectures, readings, and discussion. Students will gain experience collecting data in the field with various sensors at archaeological sites in the region. A large proportion of the course will be computer-based as students work with data from geophysical sensors, focusing on the fundamentals of data processing, data fusion, and interpretation. Some familiarity with GIS is recommended.
Spring, odd numbered years only
Also Offered As: AAMW 5720, ANTH 5720, CLST 7315
1 Course Unit

NELC 5930 Women Making History: The Penn Museum and the Centennial 2020
The year 2020 marks the 100th anniversary of the 19th Amendment to the U.S. Constitution, which declared that the right of citizens to vote "shall not be denied or abridged by the United States or by any State on account of sex". To mark this centennial - to both celebrate it and critically assess its impact on American society - we will investigate the history of women at the Penn Museum as archaeologists, ethnographers, epigraphers, philanthropists, and more. At the same time, we will examine material in the Penn Museum that women collected, donated, or studied. Our goal will be to produce original research that may contribute to future exhibits and publications as well as to broader public forums. Sponsored by the Department of Near Eastern Languages and Civilizations, our seminar will focus heavily on western Asia, southeastern Europe, and North Africa - all zones that scholars have variously associated with the Near East or Middle East, and where the Penn Museum has been active since its foundation in 1887. To situate the Penn Museum and its collections within a global and comparative frame, we will also study select women who made major scholarly contributions to other parts of the world such as the Americas and Oceania. Among the figures we will study are Sarah Yorke Stevenson (Egypt), Katharine Woolley (Mesopotamia/Iraq), Harriet Boyd Hawes (Ottoman Crete and Greece), Florence Shotridge (Alaska), Zelia Nuttall (Mexico and Russia), and Tatiana Proskouriakoff (Guatemala). We will venture into many different kinds of history. In regional terms, our scope will be transnational and international: we will cover the United States and the Middle East in the wider world. In thematic and methodological terms, we will approach our subject through biography, oral history, and microhistory; material history and museum studies; cultural and intellectual history; women's and gender studies; and the history of academic disciplines, especially archaeology and anthropology.
1 Course Unit
NELC 5950 Ruins and Reconstruction
This class examines our enduring fascination with ruins coupled with our commitments to reconstruction from theoretical, ethical, socio-political and practical perspectives. This includes analyzing international conventions and principles, to the work of heritage agencies and NGOs, to the implications for specific local communities and development trajectories. We will explore global case studies featuring archaeological and monumental sites with an attention to context and communities, as well as the construction of expertise and implications of international intervention. Issues of conservation from the material to the digital will also be examined. Throughout the course we will be asking what a future in ruins holds for a variety of fields and disciplines, as well as those who have most to win or lose in the preservation of the past.
Also Offered As: ANTH 5805, CLST 7317, HSPV 5850
1 Course Unit

NELC 6010 Reading Ancient Mesopotamia
An introduction to the literature of Ancient Mesopotamia. The literature of ancient Mesopotamia flourished thousands of years ago in a culture all of its own, yet the survival of hundreds of thousands of written records challenges us to read it and make sense of it without simply approximating it to the realm of our own understanding. How can we learn to do this? Situating our understanding of how we read and how we understand culture within an interdisciplinary range of literary-critical and analytic approaches, we will approach this question by immersing ourselves in the myths tales and mentalities that made Mesopotamian literature meaningful. To give us a measure of our progress we will bracket the semester by reading Gilgamesh which is never less than a great story, but which will take on new layers of meaning as the semester develops and we learn to read the text in more and more Mesopotamian ways. As we journey through these mysterious realms we will reflect not only Mesopotamia and its immortal literature but on what it means to read and understand any cultures other than our own.

NELC 6020 Iraq: Ancient Cities and Empires
Iraq: Ancient Cities and Empires is a chronological survey of the ancient civilization that existed in the drainage basin of the Tigris and Euphrates Rivers from the early settled village farming communities of the 7th millennium BCE to the middle of the 1st millennium BCE, when Nebuchadnezzar II ruled Babylon and much of the Middle East. Though organized period by period, NELC 241 explores various social, political, economic, and ideological topics, exposing students to various strands of evidence, including settlement survey data, excavated architectural remains, artifacts, and documentary sources, as well as an eclectic mix of theoretical perspectives. The course aims to provide students with a strong foundation for the further study of the ancient and pre-modern Middle East.

1 Course Unit

NELC 6040 Ancient Iranian Empires
Iran - as a landmass and a political entity - was central to the ancient world in a variety of ways. Ancient Iranian Empires were of central importance to - and centrally located in - the ancient world. It was the successor kingdom to the Assyrians and Babylonians; the power against which Greece and Rome defined themselves; and the crucible in which various communities and models of rule developed. This course offers a survey of the history of the ancient Persianate world, focusing in particular on the political and imperial entities that rose to power, the cultural, political, mercantile, and other contacts those shared with their neighbors to the East and West, and the communities and religious groups that arose and flourished within their lands. Ancient Iranian empires rivaled the Greek and Roman Empires to their West, and the central and eastern Asian Empires to their east, and the ongoing history of diplomacy, cultural contact, and war between these regions was formative to each and to the ancient world as a whole. Iran was home to and similarly formative for a variety of religions, including Zoroastrianism, Judaism, Christianity, Manichaeanism, and Islam, and a central question ancient Iranian political powers sought to address was how to negotiate and address the variety of populations under their control. The course will conclude by studying how, rather than a simplistic story of decline, the strategies, policies, institutions, and memory of the Iranian Empires continued to shape early Islam, medieval imagination, and modern political regimes.
1 Course Unit

NELC 6050 Art of Ancient Iran
This lecture course offers a survey of ancient Iranian art and culture from the painted pottery cultures of the Neolithic era to the monuments of the Persian Empire.

Mutually Exclusive: ARTH 2240, NELC 0060
1 Course Unit
NELC 6080 Worlds of Late Antiquity
The period between the third and eighth centuries - from the Tetrarchy led by Diocletian to the rise of Umayyad Caliphate - is characteristically regarded as a period of ferment and change, whether that be on the still-influential model of Decline and Fall first proposed by Edward Gibbon in the eighteenth century or the somewhat less deterministic account of transformation favored by Peter Brown in the late twentieth. These narratives tend to emphasize the large-scale processes that played out over these centuries, such as the florescence and fragmentation of two world empires; the emergence of two highly influential monotheistic religions of the book; and the codification of legal systems that continue to dominate contemporary practices and theories of law. Equally, what characterizes these centuries is the particular granularity and character of the textual and archaeological evidence that exists for the functioning of this world at the micro-scale, as against the periods that preceded and followed. This course traces the social, economic, cultural, and religious institutions and processes that make this period distinctive, explores the nature of the evidence for those institutions and processes, and exposes to scrutiny the assumptions and preconceptions that underpin the scholarly narratives that have been constructed about them.

NELC 6110 The World of Cleopatra
The figure of Cleopatra is familiar from modern stories, legends, and film. Was this famous woman a brazen seductress or a brilliant political mind? How many of these presentations are historically accurate? This class will examine the Ptolemaic period in Egypt (305-30 BCE), the time period during which Cleopatra lived, in an attempt to separate myth from reality. The Ptolemaic period is filled with political and personal intrigue. It was also a time of dynamic multiculturalism. Arguably one of the most violent and fascinating eras in ancient Egyptian history, the Ptolemaic period is largely unknown and often misunderstood. This course will examine the history, art, religion and literature of Egypt’s Ptolemaic period which culminated in the reign of Cleopatra VII.

1 Course Unit

NELC 6120 Women in Ancient Egypt
This class will examine the many roles played by women in ancient Egypt. From goddesses and queens, to wives and mothers, women were a visible presence in ancient Egypt. We will study the lives of famous ancient Egyptian women such as Hatshepsut, Nefertiti and Cleopatra. More independent than many of their contemporaries in neighboring areas, Egyptian women enjoyed greater freedoms in matters of economy and law. By examining the evidence left to us in the literature (including literary texts and non-literary texts such as legal documents, administrative texts and letters), the art, and the archaeological record, we will come away with a better understanding of the position of women in this ancient culture.
Spring
1 Course Unit

1 Course Unit
NELC 6310 Faces of Love: Gender, Sexuality and the Erotic in Persian Literature
Beloved, Lover and Love are three concepts that dominate the semantic field of eroticism in Persian literature and mysticism. The interrelation among these concepts makes it almost impossible to treat any one of the concepts separately. Moreover, there exists various faces and shades of love in the works of classical and modern Persian literature that challenges the conventional heteronormative assumptions about the sexual and romantic relationships between the lover and the beloved. A sharp contrast exists between the treatment of homosexuality and ‘queerness’ in Islamic law, on the one hand and its reflection in Persian literature, particularly poetry (the chief vehicle of Persian literary expression), on the other. This course introduces and explores different faces of love, eroticism and homoeroticism in the Persian literary tradition from the dawn of dawn of the Persian poetry in the ninth century all through to the twenty-first century. It offers a comprehensive study of representations and productions of heteronormativity, sexual orientation and gender roles with particular reference to the notion of love, lover and beloved in Persian literature.
Fall
1 Course Unit

NELC 6350 Archaeological Fieldwork in Southern Iraq
After several decades of closure to foreign researchers, the heartland of the world’s earliest cities (southern Iraq) has reopened for archaeological expeditions. This course is a seminar for graduate students who will conduct fieldwork in Spring 2019 at two major Mesopotamian cities, Ur (Tell al-Muqayyar) and Lagash (Tell al-Hiba), as part of Penn-led teams. Leading up to fieldwork, we will conduct a critical review of past investigations at these and other contemporary Mesopotamian sites of the fifth-second millennium BC. We will discuss how recent work in northern Mesopotamia (Syria, SE Turkey, Kurdistan), Anatolia, and South Caucasus provides new archaeological approaches to be applied, new questions to be answered, and new models to be tested in southern Iraq. In the field, students will work alongside the instructor and other archaeological project staff to learn and hone excavation and survey techniques. During and following fieldwork, each student will conduct an independent project on material excavated and surveyed in the field at Ur and/or Lagash. This project should align with the student’s interests and will further the research program of the archaeological teams at Ur and Lagash.

1 Course Unit

NELC 6375 Rabbinic Literature: History and Methods
This course is intended as an in-depth survey of research debates, historical-critical methods and resources employed in the study of classical (pre-Geonic) rabbinic literature; in other words, this class offers a robust introduction to the history of the field. The course will introduce students to much (but by no means all) of the fundamental modern scholarship of the 19th-21st centuries, divided into key topics.
Spring, even numbered years only
Also Offered As: JWST 6375
1 Course Unit

NELC 6400 Age of Caliphs, 600-1100
There are few moments of human history that were as creative as the seventh, eighth and ninth centuries in the Near East. Nor are there many such moments in history that pose as many questions to the historian. How do we know what we think we know about early and ‘classical’ Islamic history? In what ways is pre-modern Islamic history distinctive? How do we understand the role of religion in pre-modern societies? In this course, we will examine the social and political history of the Islamic Near East (with a few exotic pit-stops) in its formative centuries, from the rise of Islam to the coming of the Saljuq Turks. Special topics include: the rise of Islam; the early Islamic conquests; the expansion and disintegration of the imperial caliphate under the Umayyads and ‘Abbasids; religious authority in early Islam; ‘Abbasid successor states; Shi‘ism; provincial cultures.
Fall
Prerequisite: NELC 0002
1 Course Unit

NELC 6500 Seminar in Selected Topics in Arabic Literature
This is the graduate seminar course in which a variety of aspects of Arabic literature studies are covered at the advanced graduate level. Students in this course are expected to be able to read large amounts of literature in Arabic on a weekly basis and to be able to discuss them critically during the class itself. Topics are chosen to reflect student interest. Recent topics have included: 1001 NIGHTS; the short story; the novel; MAQAMAT; classical ADAB prose; the drama; the novella; modern Arabic poetry.
Spring
1 Course Unit

NELC 6510 Approaches to Islamic Law
This course aims to introduce students to the study of Islamic law, the all-embracing sacred law of Islam. In this course we will attempt to consider many different facets of the historical, doctrinal, institutional and social complexity of Islamic law. In addition, the various approaches that have been taken to the study of these aspects of Islamic law will be analyzed. The focus will be mostly, though not exclusively, on classical Islamic law. Specific topics covered include the beginnings of legal thought in Islam, various areas of Islamic positive law (substantive law), public and private legal institutions, Islamic legal theory, and issues in the contemporary development and application of Islamic law.
Not Offered Every Year
Also Offered As: RELS 6510
1 Course Unit

NELC 6550 Islamic Archaeology Seminar
This seminar will address the problems of studying architecture in the Islamic world. Considered will be issues of architectural design, regional and trans-regional constructional traditions, structural knowledge and innovation, patronage and use. The examples discussed will be mainly religious and social service complexes. Attention will be paid to the manner of transmission of architectural design knowledge and constructional skill. Open to graduate students only.
Not Offered Every Year
Also Offered As: ARTH 7380
1 Course Unit
NELC 6560 Religion and the Visual Image: Seeing is Believing
Seeing is Believing engages in a historical, theoretical, and cross-cultural analysis of the place of visuality in religion and of religion in visual culture. We will examine images, buildings, places, objects, performances and events. The geographical, cultural and historical scope of the material is broad, including subjects from Europe, the Islamic World, non-Muslim South Asia, the US and Latin America from the medieval period until the present. Theoretical works will be read in conjunction with representative examples to invite intellectual engagement in a socially and historically grounded way. Important issues to be covered include the relationship of visual to material culture; visual theories versus theories of vision; locating religion in human sensory experience; perception at individual and collective levels; authentics, fakes and simulacra; iconoclasm and image veneration; aesthetics, use and utility; and things.

Also Offered As: RELS 5410, SAST 5410
1 Course Unit

NELC 6605 Muslims, Christians, and Jews in the Middle East: Historical Perspectives
A reading- and discussion-intensive seminar that addresses several recurring questions with regard to the Middle East and North Africa. How have Islam, Judaism, and Christianity influenced each other in these regions historically? How have Jews, Christians, and Muslims fared as religious minorities? To what extent have communal relations been characterized by harmony and cooperation, or by strife and discord, and how have these relations changed in different contexts over time? To what extent and under what circumstances have members of these communities converted, intermarried, formed business alliances, and adopted or developed similar customs? How has the emergence of the modern nation-state system affected communal relations as well as the legal or social status of religious minorities in particular countries? How important is religion been as one variable in social identity (along with sect, ethnicity, class, gender, etc.), and to what extent has religious identity figured into regional conflicts and wars? The focus of the class will be on the modern period (c. 1800-present) although we will read about some relevant trends in the early and middle Islamic periods as well. Students will also pursue individually tailored research to produce final papers. Prior background in Islamic studies and Middle Eastern history is required. Middle Eastern history is required. This class is intended for juniors, seniors, and graduate students.
Not Offered Every Year
1 Course Unit

NELC 6610 Nationalism and Communal Identity in the Middle East
This seminar views the phenomenon of nationalism as it affected the modern Middle East in the nineteenth and twentieth centuries. Together we will consider the diverse components of nationalism, including religion, language, territorial loyalty, and ethnicity, and test the thesis that nations are "imagined communities" built on "invented traditions." At the same time, we will examine other forms of communal identity that transcend national borders or flourish on more localized scales. This class approaches nationalism and communal identity as complex products of cultural, political, and social forces, and places Middle Eastern experiences within a global context. Students must take a survey of modern Middle Eastern history or politics before enrolling in this class. This class is intended for juniors, seniors, and graduate students.
Fall
Prerequisite: NELC 0002
1 Course Unit

NELC 6620 North Africa: History, Culture, Society
This interdisciplinary seminar aims to introduce students to the countries of North Africa, with a focus on the Maghreb and Libya (1830-present). It does so while examining the region’s close economic and cultural connections to sub-Saharan Africa, Europe, and the Middle East. Readings will include histories, political analyses, anthropological studies, and novels, and will cover a wide range of topics such as colonial and postcolonial experiences, developments in Islamic thought and practice, and labor migration. This class is intended for juniors, seniors, and graduate students.
Not Offered Every Year
Also Offered As: AFRC 6620

NELC 6630 Egypt in Four Revolutions
This seminar offers an in-depth look at the political and social history of revolution and protest in modern Egypt. We will examine four such seminal events, through different lenses: The Urabi Revolution (1879-1882), The 1919 Revolution, The 1952 Revolution, and The 2011 Revolution. We will discuss their political, social, and economic causes and effects; popular participation and the use of public space; the roles of the army, women, youth, and social organizations in those events; their ideological and international aspects; their colonial and post-colonial contexts; and more. We will use cutting edge research from several disciplines, as well as literature, film, music, photography, and social media as sources. Students will leave the class with a firm grasp of the social and political history of modern Egypt, as well as of current scholarly discussions about the nature of revolution and protest.
1 Course Unit

NELC 6650 Topics In Anthropology and the Modern World
This course relates anthropological models and methods to current problems in the Modern World. The overall objective is to show how the research findings and analytical concepts of anthropology may be used to illuminate and explain events as they have unfolded in the recent news and in the course of the semester. Each edition of the course will focus on a particular country or region that has been in the news.
Fall
Also Offered As: ANTH 6110
1 Course Unit

NELC 6700 Media and Culture in Contemporary Iran
This course offers a comprehensive introduction to the culture and media of modern Iran, with a critical perspective on issues such as identity formation, ethnicity, race, and nation-building. It focuses on how these issues relate to various aspects of modern Iranian culture - such as religion, gender, sexuality, war, and migration - through the lens of media, cinema, and literature.
Fall or Spring
1 Course Unit

NELC 6720 Key Concepts in Modern Persian Poetry
This graduate seminar which is tailored for graduate students with higher intermediate and advanced command of Persian language focuses on a variety of recurrent concepts in Modern Persian poetry. The seminar will run as a workshop and students are expected to embark on a project in which they explore large amounts of literary materials in Persian. Students must feel confident to read and discuss large amounts of literature in Persian on a weekly basis. Concepts such as exile, home, belonging, body, borders, nationalism and selfhood will be explored.
Spring
1 Course Unit
NELC 6900 GIS for the Digital Humanities and Social Sciences
This course introduces students to theory and methodology of the geospatial humanities and social sciences, understood broadly as the application of Geographical Information Systems (GIS) and spatial analysis techniques to the study of social and cultural patterns in the past and present. By engaging with spatial theory, spatial analysis case studies, and technical methodologies, students will develop an understanding of the questions driving, and tools available for, humanistic and social science research projects that explore change over space and time. We will use ESRI's ArcGIS software to visualize, analyze, and integrate historical, anthropological, and environmental data. Techniques will be introduced through the discussion of case studies and through demonstration of software skills. During supervised laboratory sessions, the various techniques and analyses covered will be applied to sample data and also to data from a region/topic chosen by the student.

Fall
1 Course Unit

NELC 6910 Digital Exploration of the Past: Archives, Databases, Maps, and Museums
This course exposes students to digital methods for investigating past environments and societies, including digitization of analog records, the construction and querying of databases, and the creation of digital maps. The ultimate goal of the course will be to carry out a final project that benefits the Penn Museum and the public. In fall 2018, our exploration of digital methods will center around the archaeological site of Ur (Tell el-Muqayyar), located in southern Iraq. Ur was one of the earliest cities in the world, and, thanks to campaigns partly funded by Penn in the 1920s and 1930s, is one of the best-excavated sites in southern Mesopotamia. Here at Penn, we have unparalleled access to archival documentation and artifacts from the site. We will draw upon this access to contribute to an on-going digital humanities project in the Penn Museum (the public "Ur Online" database). In the process, students will re-assess data that has the potential to change anthropological ideas about issues such as the environmental setting of the earliest cities and archaeological ideas about demographic and urban structure within the city of Ur itself. There are no prerequisites, but students must bring an interest in Mesopotamian archaeology and/or the origins of urbanism and be motivated to carry out individual and group research guided by the instructor & classmates.

Also Offered As: AAMW 6190
1 Course Unit

NELC 6920 Material World in Archaeological Science
By focusing on the scientific analysis of inorganic archaeological materials, this course will explore processes of creation in the past. Class will take place in the Center for the Analysis of Archaeological Materials (CAAM) and will be taught in three modules: analysis of lithics, analysis of ceramics and analysis of metals. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how the transformation of materials into objects provides key information about past human behaviors and the socio-economic contexts of production, distribution, exchange and use. Discussion topics will include invention and adoption of new technologies, change and innovation, use of fire, and craft specialization.

Not Offered Every Year
Also Offered As: ANTH 5221
1 Course Unit

NELC 6930 Archaeobotany Seminar
In this course we will approach the relationship between plants and people from archaeological and anthropological perspectives in order to investigate diverse plant consumption, use, and management strategies. Topics will include: archaeological formation processes, archaeobotanical sampling and recovery, lab sorting and identification, quantification methods, and archaeobotany as a means of preserving cultural heritage. Students will learn both field procedures and laboratory methods of archaeobotany through a series of hands-on activities and lab-based experiments. The final research project will involve an original in-depth analysis and interpretation of archaeobotanical specimens. By the end of the course, students will feel comfortable reading and evaluating archaeobotanical literature and will have a solid understanding of how archaeobotanists interpret human activities of the past.

NELC 7550 Qur’anic Studies
This seminar explores the nature and uses of the Qur’an. It focuses on the practice and theory of Qur’an commentary and interpretation (safsir and ta’wil). A major portion of the course will involve a close examination of manuscripts of the Qur’an at the Philadelphia Museum of Art and the Kislak Center at the University of Pennsylvania, concentrating on the relationship between the text and marginalia as well as on the peculiarities of individual manuscripts. The rest of the course will center around reading commentaries on the Qur’an in manuscript as well as print. In addition, we will read and discuss theoretical works on the history and nature of Qur'an commentary, literary criticism and textual analysis, and spend some of the later section of the course discussing issues of translation and editorial processes involved in popularizing Qur’an commentaries on the internet. READING KNOWLEDGE OF ARABIC REQUIRED.

1 Course Unit

Network and Social Systems Engineering (NETS)

NETS 1120 Networked Life
How do infectious diseases spread? Why do some memes spread virally while others do not? Why do some teams or organizations perform better than others? Are we all really connected by six degrees of separation and, if so, how is that are our neighborhoods, workplaces, and social circles are so segregated? The answers to these questions and many more are all part of Network Science, a fascinating subject at the intersection of many disciplines, including computer science, communications, psychology, sociology, mathematics, and economics. This course will provide an introduction to the technical language of network science as well as to a collection of applications such as mathematical epidemiology, social contagion, games of cooperation and coordination, and collective problem solving.
Fall
1 Course Unit

NETS 1500 Market and Social Systems on the Internet
Want to understand the sociological and algorithmic aspects of friend recommendation? Want to know how Google decides what 10 answers to return, out of the 10 million matching results? Want to understand how search engines have revolutionized advertising? Then this is the course for you! NETS 150 provides an overview of the issues, theoretical foundations, and existing techniques in networks (social, information, communication) and markets on the Internet. Subsequent NETS courses are available for students wishing to explore any of these topics in greater detail.
1 Course Unit

NETS 2120 Scalable and Cloud Computing
What is the “cloud”? How do we build software systems and components that scale to millions of users and petabytes of data, and are “always available”? In the modern Internet, virtually all large Web services run atop multiple geographically distributed data centers: Google, Yahoo, Facebook, iTunes, Amazon, EBAY, Bing, etc. Services must scale across thousands of machines, tolerate failures, and support thousands of concurrent requests. Increasingly, the major providers (including Amazon, Google, Microsoft, HP, and IBM) are looking at “hosting” third-party applications in their data centers - forming so-called “cloud computing” services. This course, aimed at a sophomore with exposure to basic programming within the context of a single machine, focuses on the issues and programming models related to such cloud and distributed data processing technologies: how to think about dividing both data and work across large clusters of machines, both within and across data centers, how to design algorithms that do this parallel computation, and how to implement the algorithms in new frameworks such as MapReduce.
Fall
1 Course Unit

NETS 2130 Crowdsourcing and Human Computation
Crowdsourcing and human computation are emerging fields that sit squarely at the intersection of economics and computer science. They examine how people can be used to solve complex tasks that are currently beyond the capabilities of artificial intelligence algorithms. Online marketplaces like Mechanical Turk and CrowdFlower provide an infrastructure that allows micropayments to be given to people in return for completing human intelligence tasks. This opens up previously unthinkable possibilities like people being used as function calls in software. We will investigate how crowdsourcing can be used for computer science applications like machine learning, next-generation interfaces, and data mining. Beyond these computer science aspects, we will also delve into topics like prediction markets, how businesses can capitalize on collective intelligence, and the fundamental principles that underlie democracy and other group decision-making processes.
Fall or Spring
Prerequisite: CIS 1200
1 Course Unit

NETS 3120 Theory of Networks
Want to understand how memes spread across the Internet? How organisms exhibit flocking behavior? How the structure of a network can help predict behavior among the nodes? This course is a rigorous study of the structure and function of complex networks. From World Wide Web to networks of banks and lenders that form the financial sector, to friendship networks that influence our opinion and everyday decision-making, networks have become an integral part of our daily lives.
Fall or Spring
1 Course Unit
NETS 4120 Algorithmic Game Theory
How should an auction for scarce goods be structured if the sellers wish to maximize their revenue? How badly will traffic be snarled if drivers each selfishly try to minimize their commute time, compared to if a benevolent dictator directed traffic? How can couples be paired so that no two couples wish to swap partners in hindsight? How can you be as successful as the best horse-racing expert at betting on horse races, without knowing anything about horse racing? In this course, we will take an algorithmic perspective on problems in game theory, to solve problems such as the ones listed above. Game theory has applications in a wide variety of settings in which multiple participants with different incentives are placed in the same environment, must interact, and each "player"'s actions affect the others.

Fall or Spring
1 Course Unit

Neuroscience (NEUR)

The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).
NEUR 2000 Behavioral Neuroscience
An introduction to the experimental analysis of natural animal behavior and its neurobiological basis. Behavior is examined in an evolutionary and ecological context, and questions are focused on the neural processes that allow animals to carry out critical activities such as locating prey and finding mates. The course is comparative and strives to identify common principles in sensory and motor processing and brain function.
1 Course Unit

NEUR 2600 Hormones, Brain, Behavior
This course aims to introduce students to important interactions between the brain, behavior, and endocrine systems. Students learn about diverse vertebrate species, a variety of physiological systems, and the molecular mechanisms of hormone action. The specific neuroendocrine systems to be studied include reproduction, social bonding, fluid and energy balance, and emotional regulation. In addition, students develop skills required for critical reading of primary neuroscience literature and scientific communication.
1 Course Unit

NEUR 2800 Autonomic Pharmacology
In this course, students learn how the central nervous system regulates the activity of peripheral tissues to maintain homeostasis in the body. Output from the autonomic nervous system affects a variety of physiological parameters, including blood glucose levels, blood pressure, and ingestive behaviors. Students then apply the knowledge of the autonomic outflow to understand the actions of a variety of classes of drugs, including those prescribed for diabetes, hypertension, and other conditions.
1 Course Unit

NEUR 4000 Psychopharmacology
Students examine drugs used in the treatment of central nervous system (CNS) dysfunction, including psychiatric diagnoses and neurodegenerative diseases. Explore the strategies, techniques, and challenges of psychopharmacological research and the use of drugs to probe neural substrates of behavior. Introductory material will be followed by advanced discussion of specific topics through the reading and discussion of primary journal articles.
1 Course Unit

Neuroscience (NGG)

NGG 5100 Neurotransmitter Signaling & Neuropsychopharmacology
The goals of this course are three-fold: 1) Provide an overview of major psychiatric disorders. 2) Provide in-depth information on neurotransmitters, emphasizing the wealth of new molecular information on how neurons function and communicate, as well as the basis for psychotherapeutics (one class per week). 3) Develop skills to appreciate, present and critically evaluate the current literature in neurotransmitter signaling and neuropsychopharmacology (one class per week). Prerequisite: Permission of course director
Spring, odd numbered years only
Also Offered As: PHRM 5100
1 Course Unit

NGG 5210 Brain-Computer Interfaces
The course is geared to advanced undergraduate and graduate students interested in understanding the basics of implantable neuro-devices, their design, practical implementation, approval, and use. Reading will cover the basics of neuro signals, recording, analysis, classification, modulation, and fundamental principles of Brain-Machine Interfaces. The course will be based upon twice weekly lectures and "hands-on" weekly assignments that teach basic signal recording, feature extraction, classification and practical implementation in clinical systems. Assignments will build incrementally toward constructing a complete, functional BMI system. Fundamental concepts in neurosignals, hardware and software will be reinforced by practical examples and in-depth study. Guest lecturers and demonstrations will supplement regular lectures. BE 3010 (Signals and Systems) or equivalent, computer programming experience, preferably MATLAB (e.g., as used the BE labs, BE 3100). Some basic neuroscience background (e.g. BIOL 2310, BE 3050, INSC core course), or independent study in neuroscience, is required. This requirement may be waived based upon practical experience on a case by case basis by the instructor.
Spring
Also Offered As: BE 5210
1 Course Unit

NGG 5340 Seminar on current genetic research: Human Disease Modeling in Experimental Sys
An advanced seminar course emphasizing genetic research in model organisms and how it informs modern medicine. Each week a student will present background on a specific human disease. This is followed by an intense discussion by the entire class of 2 recent papers in which model organisms have been used to address the disease mechanism and/or treatment. As a final assignment, students will have the opportunity to write, edit, and publish a "News & Views" style article in the journal "Disease Models and Mechanisms". Offered spring semester. Prerequisite: If course requirements not met, permission of instructor required.
Spring
Also Offered As: CAMB 5340
Prerequisite: CAMB 5420 OR CAMB 6050
1 Course Unit

NGG 5720 Electrical Language of Cells
This course introduces students to high-speed electro-chemical signaling mechanisms that occur in nerve and other excitable cells during normal activity. Topics considered in substantial detail include: a) a basic description of the passive and active membrane electrical properties; b) the molecular architecture and functional role of ion channels in cell signaling; c) the role of the calcium ion as an ubiquitous chemical messenger, with applications to neuro-secretion; d) excitatory and inhibitory transmission in the central nervous system; e) sensory transduction, as illustrated by the visual, olfactory, and auditory pathways. The course assumes a standard background in cell biology, as well as basic concepts from college physics and college calculus.
Fall
1 Course Unit
NGG 5730 Systems Neuroscience
This course provides an introduction to what is known about how neuronal circuits solve problems for the organism and to current research approaches to this question. Topics include: vision, audition, olfaction, motor systems, plasticity, and oscillations. In addition, the course aims to provide an overview of the structure of the central nervous system. A number of fundamental concepts are also discussed across topics, such as: lateral inhibition, integration, filtering, frames of reference, error signals, adaptation. The course format consists of lectures, discussions, readings of primary literature, supplemented by textbook chapters and review articles.
Spring
Also Offered As: PSYC 6090
1 Course Unit

NGG 5750 Neurobiology of Learning and Memory
This course focuses on the current state of our knowledge about the neurological basis of learning and memory. A combination of lectures and discussions will explore the molecular and cellular basis of learning in invertebrates and vertebrates from a behavioral and neural perspective. This course is intended for upper level undergraduate and graduate students.
Fall, odd numbered years only
1 Course Unit

NGG 5840 Neurobiology of Sleep and Arousal
The objectives of this course are to discuss mechanisms controlling sleep and arousal; to survey novel approaches to investigations in these areas; to communicate the clinical relevance of these ideas where possible. The course is run in the style of a journal club where in each weekly session, students review and discuss influential papers in the field.
Fall, even numbered years only
1 Course Unit

NGG 5880 Topics in Translational Neuroscience
This course will introduce graduate students in neuroscience and related disciplines to basic mechanisms and clinical features of major categories of nervous system disease. Each two-hour class will consist of two-parts; a formal lecture followed by a seminar on the same topic. The formal basic science lectures will discuss genetic, molecular, and cellular mechanisms relevant to the disease examined while the seminar will illustrate how that information can be used in the clinical setting to promote further discovery and inform treatment. Some of the seminar will be associated with the Clinical Neuroscience Training Program (CNST) to provide the opportunity to interact with medical students and clinicians. The course will rely on assigned readings of primary research papers and discussions during class.
Spring
1 Course Unit

NGG 5890 Neuroendocrinology
Goals: This course aims to familiarize students with recent discoveries in neuroendocrine research with a focus on puberty. Students have an opportunity to consider how neuroendocrine hypotheses are generated and learn how to analyze data for themselves. Students will master this emerging topic and develop writing and presenting skills as they develop their own research ideas. Format: We will spend three class meetings dissecting each of four journal articles from a single lab in chronological order. These three meetings will involve fully understanding the key concepts, methods, results and future directions. The professor will provide background information in short (20-30 min) lectures. Students will be expected to participate in discussions and work collaboratively with other students. At the end of the course, each student will present a proposal of "future directions" based on the papers we have discussed. Student Evaluation: Eighty percent of the final grade will be based on participation in these in-depth journal club discussions. The final twenty percent of the grade will be based on the presentation of Future Directions to the class. Prerequisite: Permission of course director.
Spring, even numbered years only
0.5-1 Course Unit

NGG 5900 Research & Community: Biomedical Science in the Urban Curriculum
NGG 5900 is an activity-based course with three major goals. First, the course is an opportunity for biomedical graduate students to develop their science communication skills and share their enthusiasm for neuroscience with high school students at a nearby public high school in West Philadelphia. In this regard, Penn students will prepare demonstrations and hands-on activities to engage local high school students, increase their knowledge in science, and ultimately promote their interest in science-related careers. Second, the course will consider the broader educational context, such as the conditions of the local high school and its overall progress in science education. Students will discuss the problems they encounter and learn how to develop effective proposals, taking into account the participants and the origins of current policies. Third, students will reflect and discuss the important connection between their biomedical research at Penn and the local Philadelphia community.
Spring
1 Course Unit
NGG 5910 Digital Signal Processing
The course is designed for an audience that does digital signal processing (e.g., people who do neuroscience) but that do not have a strong math or engineering background. The goal of the course is that after you have completed it you’ll have a fairly sophisticated understanding of how to apply several digital signal processing techniques, including better understanding to what is really happening when you push certain buttons in packaged neuroimaging software (e.g., filter settings). After completing the course you’ll also better understand how to collect neuroimaging data (e.g., data sampling rate). Digital Signal Processing contains four sections: Basics, Tutorial, Try It, and Literacy. Part 1: Introduction to sine/cosine functions, discussion of time series and spatial data, discussion of amplitude, frequency, and phase, and a section on adding sine waves. There’s also a brief introduction to complex numbers and the Euler Identities. Students also read in time and spatial data (grayscale images). Part 2: Detailed discussion of the Nyquist Theorem and aliasing (time and spatial domain), a section on multiplying sine waves, and a brief discussion of plotting complex numbers and determining the magnitude and phase of complex numbers. Part 3: Convolution, and via convolution, filtering. Ideas are explored in the time domain. In this process, students are introduced to high- and low-pass filters and gain functions. Students use convolution to filter several time domain datasets. Part 4: Generally the same as Chapter 3, but now examining spatial data. Students use convolution methods to filter grayscale and color images. Normal distributions and random noise are also discussed. Part 5: Using sine and cosine to compute the magnitude and phase of activity at different frequencies: time and spatial data. Students also see that magnitude and phase information can be obtained more easily using complex exponentials.
Spring
1 Course Unit

NGG 5940 Theoretical and Computational Neuroscience
This course will develop theoretical and computational approaches to structural and functional organization in the brain. The course will cover: (i) the basic biophysics of neural responses, (ii) neural coding and decoding with an emphasis on sensory systems, (iii) approaches to the study of networks of neurons, (iv) models of adaptation, learning and memory, (v) models of decision making, and (vi) ideas that address why the brain is organized the way that it is. The course will be appropriate for advanced undergraduates and beginning graduate students. A knowledge of multi-variable calculus, linear algebra and differential equations is required (except by permission of the instructor). Prior exposure to neuroscience and/or Matlab programming will be helpful.

1 Course Unit

NGG 6050 NeuroCore: Quantitative Rigor and Reproducibility in Neuroscience
The quantitative neuroscience core course is designed to be an overview of quantitative approaches used for rigorous and reproducible neuroscience research. This course does not cover statistics in a traditional way, in the sense that it does not provide a comprehensive survey of statistical tests, nor does it dive very deeply into formal mathematical derivations of those tests (information about such things can be found in textbooks and all over the web). Instead, the course focused on teaching students how to apply quantitative approaches to now they think about neuroscience research from beginning to end, including defining clear hypotheses; designing experiments to test those hypotheses; collecting, visualizing, analyzing, and interpreting data in reference to those hypotheses; and keeping effective and transparent records at each stage to ensure rigor and reproducibility. There are two main components to the course. The first component consists of a series of four modules, each of which is designed to use a specific example from neuroscience to illustrate a set of quantitative approaches and tools. The second component consists of group projects that focus on designing and implementing quantitative analyses for existing data sets (e.g., from rotation projects).
Spring
1 Course Unit

NGG 6150 Cell Control by Signal Transduction Pathways
This course, “Targeting the cancer cell: from mechanism to precision medicine”, will examine how various signal transduction mechanisms influence cell functions including replication, growth, transcription, translation and intracellular trafficking. We will also consider how non-cell autonomous mechanisms, such as the tumor microenvironment and the immune system influence cancer cell signaling. We will consider how important signaling pathways, such as Ras, Raf, Notch, Wnt, TGF beta, and various kinases/phosphatases become dysregulated in cancer, as well as delve into how the DNA damage response, immune system, and tumor microenvironment exert important influences on oncogenic signaling. In the first half of the course, invited faculty members will pick 2 relatively recent papers from their field that highlight important areas. Each paper will be assigned to a student, who will meet with the faculty mentor prior to the class to discuss the paper and their presentation. During the class, students will present each paper for approximately 45 minutes with time for discussion. Students will present the important background, break down the paper, look for strengths and weakness and come up with a plan of what the next set of experiments could or should be. In the second half of the course, students will independently pick a relevant paper for in class presentation and will also write a short “News and Views” style article based on the paper they have chosen. The goal of the course is to provide students with a view of the cancer cell that integrates both cell autonomous and non-cell autonomous signals and to use this information to consider how to successfully treat cancer.
Spring
Also Offered As: CAMB 6320, PHRM 6320
Prerequisite: BIOM 6000
1 Course Unit

2023-24 Catalog | Generated 08/02/23
**NGG 6180 Recovery After Neural Injury**

The human nervous system is subject to several types of injury, (traumatic, ischemic, epileptic, demyelinating and/or inflammatory) that cause serious functional deficits. The mechanisms used by the central and peripheral nervous systems for functional recovery from these injuries will be described in this course. The molecular and cellular pathobiology of CNS injury will be reviewed and methods to enhance functional recovery will be discussed in detail. These include the limitation of secondary neuronal damage by pharmacological manipulations (neuroprotection), the promotion of regeneration, and plasticity, the application of bioengineering strategies, and the use of behavioral rehabilitative approaches. Course Format: a combination of lecture, journal club style student presentations and classroom discussion.

Spring, even numbered years only
1 Course Unit

**NGG 6200 Special Topics in Neuroscience 1**

Special Topics in Neuroscience 1 - more to come, placeholder course for now
1 Course Unit

**NGG 6210 Special Topics in Neuroscience 2**

TBD - placeholder course for now
1 Course Unit

**NGG 6950 Scientific Writing**

This 7-class course is designed to introduce students to basic scientific writing skills and is timed for second year graduate students preparing for qualifying examinations. Participants will review the general principles of clear, persuasive writing, and will apply these principles to writing for a scientific audience. Particular emphasis will be placed on conveying the significance of your research, outlining the aims, and discussing the results for scientific papers and grant proposals. The course will also provide an overview of the structure and style of research grant proposals and scientific manuscripts. Classes are highly interactive, and the majority of class time will be spent discussing student scientific writing. The goal of the course is to encourage active and open interaction among students. Ideal endpoints include improved self-editing, and development of effective strategies for offering and receiving editorial recommendations among peers. Prerequisite: NGG pre-candidacy exam students only.

Spring
0.5 Course Units

**NGG 6990 Lab Rotation**

Lab rotation.
0-3 Course Units

**NGG 7060 Neuroeconomics**

This seminar will review recent research that combines psychological, economic and neuroscientific approaches to study human and animal decision-making. This course will focus on our current state of knowledge regarding the neuroscience of decision-making, and how evidence concerning the neural processes associated with choices might be used to constrain or advance economic and psychological theories of decision-making. Topics covered will include decisions involving risk and uncertainty, decisions that involve learning from experience, decisions in strategic interactions and games, and social preferences.

Fall or Spring
Prerequisite: PSYC 1230 AND PSYC 2737 AND PPE 3003
1 Course Unit

**NGG 7130 Neuroepigenetics**

This is a course intended to bring students up to date concerning our understanding of Neural Epigenetics. It is based on assigned topics and readings covering a variety of experimental systems and concepts in the field of Neuroepigenetics, formal presentations by individual students, critical evaluation of primary data, and in-depth discussion of potential issues and future directions, with goals to: 1) Review basic concepts of epigenetics in the context of neuroscience, 2) Learn to critically evaluate a topic (not a single paper) and set the premise, 3) Improve experimental design and enhance rigor and reproducibility, 4) Catch up with the most recent development in neuroepigenetics, 5) Develop professional presentation skills - be a story teller. Each week will focus on a specific topic of Neuroepigenetics via a "seminar" style presentation by a class member. Prerequisite: If course requirement not met, permission of instructor is required.

**Neuroscience (NRSC)**

**NRSC 0030 Neurobiology of Brain Disorders**

The human brain is clearly the most complicated and magical organ in the body. We don't completely understand how it works, but we do know, unfortunately, for a variety of reasons, the human brain is prone to failure, either by acute injury, chronic degeneration, genetic flaws in its composition, or unknown disturbances in its behavior. Diseases of the brain can take many forms but are all uniformly devastating for individuals, families, and our society, and are also very costly. This course will explore the ways in which various brain disorders (both neurological and psychiatric) manifest themselves and discuss their underlying neurobiological mechanisms. In addition, the social and economic impact of these diseases in society will be considered, as well as some well-publicized political issues surrounding many of these brain disorders.

1 Course Unit
NRSC 0050 Forensic Neuroscience
Progress in behavioral neuroscience and brain imaging techniques, such as functional and structural Magnetic Resonance Imaging (MRI) and Positron Emission Tomography (PET) has forced the courts to reconsider the role of behavioral sciences in courtroom decision-making. The goal of this course is to enable students to understand and interpret the use of behavioral neuro evidence in the justice system. The course will introduce the students to the relevant behavioral neuroscience constructs, principles of brain imaging and rules of scientific evidence. Students will be asked to use this introductory knowledge to critically evaluate the use of brain imaging and other behavioral neuroscience techniques as evidence in representative legal cases. For each case, students will serve as neuroscientists for the defense or prosecution and prepare, present and defend their testimony against the opposing team. Through this course, students will develop the ability to critically evaluate brain imaging and other neuroscience data in forensic and legal settings.
1 Course Unit

NRSC 0060 Music and the Brain
Every human culture that has ever been described makes some form of music. The musics of different cultures cover a wide range of styles, but also display fascinating similarities, and a number of features are shared by even the most disparate musical traditions. Within our own culture, music is inescapable—there are very few individuals who do not listen to some form of music every day and far more who listen to music virtually all day long. Appreciation of music comes very early in newborns prefer music to normal speech and mothers all over the world sing to their babies in a fundamentally similar way. And yet, despite this seeming ubiquity, the real origin and purpose of music remains unknown. Music is obviously related to language, but how? Why do so many cultures make music in such fundamentally similar ways? What goes into the formation of music “taste” and preferences? Does music have survival value, or is it merely “auditory cheesecake”, a superfluous byproduct of evolution as some critics have maintained? What is the nature of musical ability and how do musicians differ from non-musicians? In this course, we will look for answers by looking at the brain. Almost 200 years of scientific research into brain mechanisms underlying the production and appreciation of music is beginning to shed light on these and other questions. Although the sciences and the arts are often seen as entirely separate or even in opposition, studying the brain is actually telling us a lot about music, and studying music is telling us just as much about the brain.
1 Course Unit

NRSC 0090 Your Brain on Food
What motivates us to eat? Why do many of us eat even in the absence of hunger? How do our food preferences and habits form? And how can eating transition from regulated to dysregulated? This seminar class investigates these questions and many others, with a focus on how our brains regulate food intake. We will explore the neuroscience behind eating, as well as the genetic, psychological, social, cultural, and societal influences that shape our behavior. Through readings, assignments, and class discussions, we will navigate the biological forces behind normal eating, as well as how eating becomes disordered in diseases like obesity and eating disorders. Through this course, students will learn about behavioral neuroscience research from human and animal studies and will develop critical thinking, reading, and writing skills. There are no prerequisites except for a love of food.
Fall
1 Course Unit

NRSC 1110 Introduction to Brain and Behavior
Introduction to the structure and function of the vertebrate nervous system. We begin with the cellular basis of neuronal activities, then discuss the physiological bases of motor control, sensory systems, motivated behaviors, and higher mental processes. This course is intended for students interested in the neurobiology of behavior, ranging from animal behaviors to clinical disorders.
Fall or Spring
Also Offered As: BIOL 1110, PSYC 1210
1 Course Unit

NRSC 1159 Memory
This course presents an integrative treatment of the cognitive and neural processes involved in learning and memory, primarily in humans. We will survey the major findings and theories on how the brain gives rise to different kinds of memory, considering evidence from behavioral experiments, neuroscientific experiments, and computational models.
Also Offered As: PSYC 1530
1 Course Unit

NRSC 1160 ABCS of Everyday Neuroscience
This course is an opportunity for undergraduates to share their interest and enthusiasm for neuroscience with students in grades 9-12 attending urban public schools in West Philadelphia. The course will allow Penn students to develop their science communication and teaching skills. Students will prepare neuroscience demonstrations, hands-on activities, and assessment tools. In parallel, the course aims to engage local high school students, increasing their interest and knowledge in science, and ultimately promoting lifelong science literacy.
Prerequisite: NRSC 1110
1 Course Unit

NRSC 2110 Molecular and Cellular Neurobiology
Cellular physiology of neurons and excitable cells; molecular neurobiology and development. Topics include: action potential generation; synaptic transmission; molecular and physiological studies of ion channels; second messengers; simple neural circuits; synaptic plasticity; learning and memory; and neural development.
Fall
Also Offered As: BIOL 2110
1 Course Unit

NRSC 2140 Evolution of Behavior: Animal Behavior
The evolution of behavior in animals will be explored using basic genetic and evolutionary principles. Lectures will highlight behavioral principles using a wide range of animal species, both vertebrate and invertebrate. Examples of behavior include the complex economic decisions related to foraging, migratory birds using geomagnetic fields to find breeding grounds, and the decision individuals make to live in groups. Group living has led to the evolution of social behavior and much of the course will focus on group formation, cooperation among kin, mating systems, territoriality and communication.
Fall
Also Offered As: BIOL 2140, PSYC 2220
Prerequisite: BIOL 1102 OR BIOL 1121 OR PSYC 0001
1 Course Unit
NRSC 2217 Visual Neuroscience
An introduction to the scientific study of vision, with an emphasis on the biological substrate and its relation to behavior. Topics will typically include physiological optics, transduction of light, visual thresholds, color vision, anatomy and physiology of the visual pathways, and the cognitive neuroscience of vision.
Spring
Also Offered As: PSYC 2240, VLST 2170
Prerequisite: NRSC 1110
1 Course Unit

NRSC 2227 Physiology of Motivated Behavior
This course focuses on evaluating the experiments that have sought to establish links between brain structure (the activity of specific brain circuits) and behavioral function (the control of particular motivated and emotional behaviors). Students are exposed to concepts from regulatory physiology, systems neuroscience, pharmacology, and endocrinology and read textbook as well as original source materials. The course focuses on the following behaviors: feeding, sex, fear, anxiety, the appetite for salt, and food aversion. The course also considers the neurochemical control of responses with an eye towards evaluating the development of drug treatments for: obesity, anorexia/cachexia, vomiting, sexual dysfunction, anxiety disorders, and depression.
Fall or Spring
Also Offered As: PSYC 1212
Prerequisite: PSYC 0001
1 Course Unit

NRSC 2233 Neuroethology
In course, students will learn how neurobiologists study the relationship between neural circuitry and behavior. Behaviors such as bat echolocation, birdsong, insect olfaction, spatial navigation, eye movement and others will be used to explore fundamental principles of brain function that include brain oscillations, population codes, efference copy, sensorimotor maps and sleep replay. The course will also discuss the various methodologies that are used to address these questions. The reading material will be derived mostly from the primary literature.
Spring
Prerequisite: NRSC 1110
1 Course Unit

NRSC 2240 Chronobiology and Sleep
Topics to be covered include basic principles of chronobiology; neuroscience mechanisms of circadian rhythms and sleep; phylogeny and ontogeny of sleep; human sleep and sleep disorders; circadian dysfunction; circadian and sleep homeostatic influences in human health and safety.
Spring
Prerequisite: NRSC 1110
1 Course Unit

NRSC 2249 Cognitive Neuroscience
The study of the neural systems that underlie human perception, memory and language; and of the pathological syndromes that result from damage to these systems.
Fall or Spring
Also Offered As: PSYC 1230
Prerequisite: PSYC 0001 OR COGS 1001
1 Course Unit

NRSC 2260 Neuroendocrinology
This course is designed to examine the various roles played by the nervous and endocrine systems in controlling both physiological processes and behavior. First, the course will build a foundation in the concepts of neural and endocrine system function. Then, we will discuss how these mechanisms form the biological underpinnings of various behaviors and their relevant physiological correlates. We will focus on sexual and parental behaviors, stress, metabolism, neuroendocrine-immune interactions, and mental health.
Fall or Spring
Prerequisite: NRSC 1110
1 Course Unit

NRSC 2269 Autonomic Physiology
This course will introduce the student to the functioning of the autonomic nervous system (ANS), which is critically involved in the maintenance of body homeostasis through regulation of behavior and physiology. The course will begin with a review of the basic anatomy and physiology of the ANS including the sympathetic, parasympathetic and enteric divisions. The mechanisms by which the ANS regulates peripheral tissues will be discussed, including reflex and regulatory functions, as well as the effect of drugs which modulate ANS activity. The role of the ANS in regulating behavior will be addressed in the context of thirst, salt appetite and food intake.
Spring
Prerequisite: NRSC 1110
1 Course Unit

NRSC 2270 Drugs, Brain and Mind
The course will begin with a review of basic concepts in pharmacology including: routes of drug administration, drug metabolism, the dose response curve, tolerance and sensitization. Following a brief overview of cellular foundations of neuropharmacology (neuronal biology, synaptic and receptor function), the course will focus on several neurotransmitter systems and the molecular and behavioral mechanisms mediating the mind-altering, addictive and neuropsychiatric disorders, including depression, schizophrenia and anxiety with an emphasis on their underlying neurobiological causes, as well as the pharmacological approaches for treatment.
Fall
Also Offered As: PSYC 2250
Prerequisite: NRSC 1110
1 Course Unit

NRSC 2273 Neuroeconomics
This course will introduce students to neuroeconomics, a field of research that combines economic, psychological, and neuroscientific approaches to study decision-making. The course will focus on our current understanding of how our brains give rise to decisions, and how this knowledge might be used to constrain or advance economic and psychological theories of decision-making. Topics covered will include how individuals make decisions under conditions of uncertainty, how groups of individuals decide to cooperate or compete, and how decisions are shaped by social context, memories, and past experience.
Also Offered As: PSYC 2555
1 Course Unit
NRSC 2350 Developmental Neurobiology
This course will focus on cellular and molecular mechanisms of the organogenesis of the central nervous system. A goal of the course will be to understand the form, function and pathology of the adult nervous system in terms of antecedent developmental processes.
Fall or Spring
Prerequisite: NRSC 1110 AND BIOL 1101
1 Course Unit

NRSC 3310 Functional Neuroanatomy
A laboratory course designed to familiarize the student with the fundamental gross and histological organization of the brain. The mammalian brain will be dissected and its microscopic anatomy examined using standard slide sets. Comparative brain material will be introduced, where appropriate, to demonstrate basic structural-functional correlations.
Fall
Prerequisite: NRSC 1110
1 Course Unit

NRSC 3334 Computational Neuroscience Lab
This course will focus on computational neuroscience from the combined perspective of data collection, data analysis, and computational modeling. These issues will be explored through lectures as well as Matlab-based tutorials and exercises. The course requires no prior knowledge of computer programming and a limited math background, but familiarity with some basic statistical concepts will be assumed. The course is an ideal preparation for students interested in participating in a more independent research experience in one of the labs on campus.
Spring
Also Offered As: PSYC 3281
Prerequisite: NRSC 1110
1 Course Unit

NRSC 3375 Laboratory in Animal Behavior
This course will allow students to understand the variety, function, and evolution of complex behaviors in simple animals and how the genes governing these behaviors can be used to provide insight into human behavior and brain disease. The course is structured to allow students to experience what it is like to work in a neuroscience research laboratory. We will use the fruit fly (Drosophila melanogaster) as our model organism (with one class dedicated to song birds). Over the course of the semester, we will examine the underlying neurobiology, physiology, and genetics of a variety of fly behaviors to understand aggression, taste, learning and memory, courtship, neurodegenerative diseases, and circadian rhythms. We will review both current and historical research advances in detail by focusing on primary literature. Students will be expected to design, analyze and interpret the behavioral experiments that are employed. Students will learn how to conduct animal behavior research, enhance their ability to critically read scientific literature, and improve their written and oral communication skills through paper presentations and written reports.
Spring
Prerequisite: NRSC 1110 AND ((BIOL 1101 OR BIOL 1102) OR (BIOL 1123 OR BIOL 1124))
1 Course Unit

NRSC 3492 Experimental Methods inSynaptic Physiology
In this lab course, a small number of students meet once per week to discuss topics in synaptic physiology and to become proficient at sharp electrode techniques for intracellular recording, using isolated ganglia from the snail Helisoma. The first part of each class will consist of discussion of weekly reading from the primary literature, with the remainder of the class devoted to hands-on experiments. After learning to record from and characterize single neurons, students will study synaptic transmission by stimulating incoming nerve trunks or by recording from pairs of interconnected neurons. As a mid-term assignment, students will prepare and present a short research proposal using this model system, to be evaluated by the class. For the last half of the course, the class will work together on one or two of these proposals, meeting at the end of each class to pool our data, analyze the results and discuss their significance.
Fall or Spring
Prerequisite: BIOL 2110
1 Course Unit

NRSC 3999 Independent Research
Individual research of an experimental nature with a member of the standing faculty leading to a written paper. The grade is based primarily on a serious term paper describing original research carried out by the student. Students must submit a proposal prior to registering. During the semester, students must attend two seminars to discuss planning and independent research project, ethical concerns in research and writing a scientific paper. Attendance at the meetings is mandatory. Students doing more than one credit of independent study will be required to present a poster at the annual Student Research Symposium.
Fall or Spring
Prerequisite: NRSC 1110
1 Course Unit

NRSC 4110 Neural Systems and Behavior
This course will investigate neural processing at the systems level. Principles of how brains encode information will be explored in both sensory (e.g. visual, auditory, olfactory, etc.) and motor systems. Neural encoding strategies will be discussed in relation to the specific behavioral needs of the animal. Examples will be drawn from a variety of different model systems.
Spring
Also Offered As: BIOL 4110, PSYC 3220
Prerequisite: BIOL 2110
1 Course Unit

NRSC 4233 Seminar in Cognitive Neuroscience: Brain Development
This discussion-based seminar will focus on the neural bases of cognitive development. Each week the class will discuss a selection of papers that consider the roles of genes and environment on topics including the development of perceptual abilities, language, and cognition. The course will cover several aspects of pre- and postnatal brain and behavioral development with particular emphasis on animal models. This course is intended for students interested in neurobiology, cognitive psychology, evolutionary psychology and development.
Fall
Also Offered As: PSYC 3233
Prerequisite: PSYC 1230
1 Course Unit
NRSC 4266 Molecular Genetics of Neurological Disease
This course will focus on the molecular basis of neurological diseases, exploring in detail key papers that cover topics including defining the disease genes, development of animal models that provide mechanistic insight, and seminal findings that reveal molecular understanding. Diseases covered will include neurological diseases of great focus today such as Alzheimer’s, Fragile-X and autism, dementia, motor neuron degeneration, and microsatellite repeat expansion disorders. The course will provide a perspective from initial molecular determination through current status. Students will gain an understanding of how the molecular basis of a disease is discovered (from classical genetics to modern genomics) and how such diseases can be modeled in simple genetic systems for mechanistic insight. The course will be comprised of lectures with detailed analysis of primary literature and in-class activities. Grading will be based on class participation, exams, and written papers. Biology 2210 is a pre-requisite. Seniors are prioritized for the course. Fall
Also Offered As: BIOL 4266
Prerequisite: BIOL 2210
1 Course Unit

NRSC 4413 Cellular Structure and Neurological Disorders
Microtubules are dynamic cytoskeletal filaments that are crucial to the structure and function of neurons. From providing the scaffolding for the unique architecture of neurons, to guiding intracellular trafficking, to supporting neuronal migration and connectivity, microtubules are important for a variety of neuronal roles. Consequently, the dysfunction of microtubules and microtubule-associated-proteins is associated with a number of nervous system disorders. This seminar will explore the role of microtubules in a number of neurobiological diseases and disorders including Neurodevelopmental disorders (ex. Fragile X, Lissencephaly), Neurodegenerative Disorders (ex. Alzheimer’s and the Tauopathies, Hereditary Spastic Paraplegia), Psychiatric Disorders (Ex. Schizophrenia and Mood disorders), and also in Traumatic Brain Injury. We will use readings from the primary literature as a basis for lectures, student presentations, and papers. Fall
Prerequisite: NRSC 1110
1 Course Unit

NRSC 4420 Smell and Taste
All organisms respond to chemicals in their environment. This chemosensation guides diverse behaviors such as a feeding, avoiding predators, sex, and social interactions. This course will provide a broad survey of our current understanding of taste and smell, focusing on insect and rodent model systems as well as studies in humans. The course will begin with a review of chemical signal transduction mechanisms, and build to an exploration of the cortical integration of chemical signals and chemical guided behaviors. Class time will emphasize primary literature, discussion, and student presentations. The goal is to reach an integrated understanding of the physiology and psychology of chemical sensory systems. In the process, students will learn to read and critically evaluate data from primary research articles. Not Offered Every Year
1 Course Unit

NRSC 4421 Functional Imaging of the Human Brain
The course will provide a detailed overview of functional brain imaging and its potential uses. Issues regarding advantages and disadvantages of different modalities, study design image analysis & interpretation and how these relate to various neurological & psychological phenomena will be discussed. Class will cover the following specific topics in this general time frame: Introduction to functional brain function, basics of nuclear medicine imaging (including instrumentation, image acquisition, and radiopharmaceuticals for positron emission tomography and single photon emission computed tomography), imaging of neurological disorders, imaging of psychological disorders, introduction to activation studies, image analysis and statistical problems, story design, literature review, journal article presentation, tour of Penn imaging facilities, interpretation of imaging studies, implications for clinical and research, and implications for understanding the human mind and consciousness. Spring
Prerequisite: NRSC 1110
1 Course Unit

NRSC 4422 Neuroimmunology
This seminar will focus on how immune and central nervous systems communicate and influence each other. We begin with the anatomical and cellular basis of the thymus, gut, and brain, then discuss the connection between these organs and how these connections can influence neurological disorders. The class includes lectures, analysis of scientific literature, class discussions, and journal presentations. The course requires no prior knowledge of neuroimmunology, but understanding of basic neuroscience and immunology principles will be assumed. Spring
Prerequisite: NRSC 1110 or permission of instructor
1 Course Unit

NRSC 4425 Neurotechnology: From Concept to Clinic
The nervous system, and in particular the brain, remains the least understood part of the human body and is also the site of devastating, irreversible injury and disease. This course reviews wearable and implantable medical devices and surgical techniques that have been developed to treat conditions of the nervous system. The course will begin with a review of human neuroanatomy and neurophysiology and proceed to establish benchmarks and context for evaluating device efficacy. Contrasts with pharmaceuticals and the emergence of “electroceuticals” will be discussed. An overview of the bench-to-bedside process will be provided and then we will cycle through a series of major neuro-related medical devices (cochlear implants, deep brain stimulators, epiretinal arrays, responsive neurostimulators, spinal cord stimulators, functional electrical stimulation), and surgical approaches (nerve grafts, tendon transfers). The course will conclude with a focus on brain-computer interfaces and autologous engineered neural constructs and explore the ethical and medical implications of implanting such devices in able-bodied people, bottlenecks in enhancement and critical evaluation of the idea of superintelligence. This course may be of interest to students interested in pursuing careers in medicine, surgery, artificial intelligence, software development, medical device design, electrical engineering, and business. Fall
Prerequisite: NRSC 1110
1 Course Unit
NRSC 4429 Seminar in Sleep and Memory
Why do we sleep? This question has puzzled scientists for centuries, but one reason emerging from research in the area is that sleep is critical for forming, retaining, and transforming our memories. This seminar explores human and animal research in psychology and neuroscience that has shed light on how sleep carries out these functions. Topics will include the different stages of sleep and their roles in memory consolidation, its neural systems involved in representing memory at different timescales, and the role of dreams in processing memories.

Spring
Also Offered As: PSYC 3300
Prerequisite: CIS 1210
1 Course Unit

NRSC 4430 The Cognitive Neuroscience of Autism
This course examines neurobiological mechanisms of autism spectrum disorder (ASD). The cognitive neuroscience literature on autism will be roughly categorized around major theoretical models and their relation to autism, focusing on cognitive neuroscience and functional brain imaging, along with some structural imaging and EEG.

Spring
Prerequisite: NRSC 1110
1 Course Unit

NRSC 4433 Neural Basis of Auditory Perception and Cognition
This seminar will focus on the neural basis of auditory perception and cognition. We will examine auditory processing in animal 'specialists' to understand how sounds are processed in parallel pathways for identification and localization. We will also examine auditory cortical mechanisms for cognitive functions including attention, decision making, speech comprehension, and working memory. Emphasis will be placed on the analysis of primary literature. Students will be required to orally present journal articles from the primary literature, participate in the article discussions, write peer-reviews, and write a final "News and Views"-style paper.

Fall
Prerequisite: NRSC 1110
1 Course Unit

NRSC 4440 The Neuroscience behind the addiction to chocolate, wine, coffee and tobacco
Both clinical observations and popular culture support the idea that food might have addictive properties. Similar to the narrative for addictive drugs, individuals and the media use terms like "food addict" and "chocoholic", and refer to cravings, symptoms of withdrawal, and escalating patterns of eating that might be viewed as evidence of tolerance. The class will discuss chocolate and coffee as examples of so-called "addictive" food and compare their effects and mechanisms with those of alcohol and nicotine, two substances with well-characterized addictive properties. Furthermore, we will discuss why some forms of overeating are thought to reflect an addictive behavior. Considering the social dimension of alcohol, coffee, and tobacco consumption and the fact that large numbers of the population consume them together, we will also discuss the possible interactive effects of combinations of these psychoactive substances on mood and disease state. At the end of the course the student will become familiar with the diagnostic criteria for substance dependence, the anatomy and physiology of the brain circuits involved in reward processing and drug dependence, and the neurotransmitter systems involved.

Fall or Spring
1 Course Unit

NRSC 4442 Neurobiology of Learning and Memory
This course focuses on the current state of our knowledge about the neurobiological basis of learning and memory. A combination of lectures and student seminars will explore the molecular and cellular basis of learning in invertebrates and vertebrates from a behavioral and neural perspective.

Fall
Also Offered As: BIOL 4142, PSYC 3301
Prerequisite: BIOL 2110
1 Course Unit

NRSC 4450 Music and the brain: the new and old science of music
In a world where humans can't seem to agree on much of anything, there is one thing that still unites us: we love music. Why should abstract sequences of sounds give us such strong emotional reactions? Why indeed should they give us any emotional reaction at all? On every continent, today and throughout history, there is not a single human culture that has ever been described that does not make music. Within cultures, music is so ubiquitous that we actually have clinical terms (amusia and musical anhedonia) to describe people who don't understand or don't enjoy music. And yet, despite this ubiquity, the evolutionary origin and purpose of music remains unknown. Not only do people everywhere make music - they do so in fundamentally similar ways. All over the world people divide rhythm into twos and threes; all over the world people divide the frequency spectrum logarithmically, in octaves; with a very few exceptions, we divide octaves into no more than 12 steps, and we use subsets of 5-7 of these tones at a time. Not only that, but many cultures seem to have independently arrived at the same sets of 5-7 notes. These are probably not coincidences. If not coincidence, then what? In this course we look for explanations to these and other questions about music by looking at something that humans all over the globe have in common: the brain. Using readings from the primary literature and classic texts, supplemented with software exercises and analysis, we will see how many of the age-old mysteries and questions of music can be either answered or in some cases amplified by a consideration of brain mechanisms. Thinking about music in the context of brain function also provides a biological and evolutionary rationale not just for why music is the way it is, but why it should exist at all. More broadly, this course is an example of what can (and cannot) be accomplished by addressing aesthetic and philosophical questions as scientific and empirical ones. Prerequisite: NRSC 1110 and prior musical instruction, any instrument.

Fall
1 Course Unit

NRSC 4460 Neuroendocrinology Seminar
This course is an upper-level seminar, designed to examine the various roles played by the nervous and endocrine systems in controlling both physiological processes and behavior. We will focus on sexual and parental behaviors, stress, metabolism, neuroendocrine-immune interactions, and mental health. The format will be a mixture of lectures and journal club discussions based on recent primary literature in the field of neuroendocrinology. Students will also write several short papers based on the clinical neuroendocrinology.

Fall or Spring
Also Offered As: PSYC 3260
Prerequisite: NRSC 1110
1 Course Unit
NRSC 4469 Stress Neuroscience
Stress can be caused by a variety of conditions, ranging from low-level noise in the workplace to life-threatening situations and these stressors can cause changes in the physiology and behavior of individuals. This course will examine the neural mechanisms underlying physiological and emotional responses to stress in a journal club format. Topics to be covered include anxiety disorders, depression and other mood disorders, the differential effects of stress on males and females, the physiological effects of stress on the immune system and feeding behavior, the effects of maternal stress on offspring as well as strategies to mitigate the effects of stress.
Fall or Spring
Prerequisite: NRSC 1110
1 Course Unit

NRSC 4470 Animal Models of Neuropsychiatric Disorders
This seminar will focus on the significant role of animal models in the investigation of the pathophysiology of a variety of human neuropsychiatric disorders as well as in the development of treatments for these disorders. The course will focus on the use of genetically modified mice in the investigation of Autistic Spectrum Disorders (ASD), anxiety and affective disorders, schizophrenia and obsessive-compulsive disorder (OCD), with an emphasis on the limitations of such models. Class time will consist of short lectures and open discussions via student-led presentations. Emphasis will be placed on the critical analysis of primary literature.
Not Offered Every Year
Prerequisite: NRSC 1110
1 Course Unit

NRSC 4473 Neuroeconomics Seminar
This seminar course reviews the behavioral effects of drugs in animals, the general biological and psychological principles of drug action, and the relationship between drugs that affect brain monoamine and opiate systems and their behavioral effects. Introductory lectures on general topics will be followed by advanced discussion of specific topics in a journal club format through student presentations.
Not Offered Every Year
Prerequisite: NRSC 1110
1 Course Unit

NRSC 4475 Neurodegenerative Diseases
This course will familiarize students with advances in our understanding of the clinical features and pathogenesis of a wide range of neurodegenerative diseases, including Alzheimer’s disease and other dementias, prion diseases, Parkinson’s disease and atypical parkinsonisms, neurodegenerative ataxias, motoneuron diseases, degenerative diseases with chorea, iron and copper disorders, and mitochondrial diseases. Students will analyze original research reports on a range of proposed pathological cellular processes that may represent steps in cell death pathways leading to neuron loss seen in these diseases. Significant emphasis will be placed on the fast-expanding field exploring genetic contributions to neurodegenerative disease, as identification of genetic mutations pathogenic for familial neurodegenerative diseases has been a major driving force in neurodegenerative research and pointed researchers towards essential molecular process that may underlie these disorders. Strategies for therapeutic intervention in the management, prevention, and cure of neurodegenerative disease will be addressed.
Fall or Spring
Prerequisite: NRSC 1110
1 Course Unit

NRSC 4480 Biological Basis of Psychiatric Disorders
The contributions of basic sciences (neuroanatomy, neurophysiology, neurochemistry, and neuropharmacology) to an understanding of behavior and behavioral disorders will be covered and important psychiatric disorders will be discussed, primarily from the viewpoint of their biological aspects. Emphasis will be placed on critical evaluation of research strategies and hypotheses.
Fall or Spring
Prerequisite: NRSC 1110
1 Course Unit

NRSC 4481 Behavioral Pharmacology
This seminar course reviews the behavioral effects of drugs in animals, the general biological and psychological principles of drug action, and the relationship between drugs that affect brain monoamine and opiate systems and their behavioral effects. Introductory lectures on general topics will be followed by advanced discussion of specific topics in a journal club format through student presentations.
Not Offered Every Year
Prerequisite: NRSC 1110
1 Course Unit

NRSC 4482 Clinical Psychopharmacology
This course examines the history, rationale and putative mechanism of action of drugs used in the treatment of psychiatric disorders. Emphasis is placed on neurobiological processes underlying psychopathology and pharmacological intervention. Drugs currently in use as well as new drugs in development will be covered. Strategies, techniques, issues and challenges of clinical psychopharmacological research will be addressed and new approaches to drug discovery, including the use of pharmacogenomics and proteomics to understand variability in drug response and identify new molecular drug targets, will be covered in depth. Specific drug classes to be considered include antidepressants, anxiolytics, typical and atypical antipsychotics, narcotic analgesics, sedative hypnotics, and antiepileptic medications. A contrasting theme throughout the course will be the use of drugs as probes to identify neural substrates of behavior.
Not Offered Every Year
Prerequisite: NRSC 1110
1 Course Unit
NRSC 4485 Nerve and Muscle in Health and Disease
In this seminar course, we will deepen our understanding about excitability in the nervous system and in skeletal and cardiac muscle. A particular focus of the course will be the roles which calcium ions play as second messengers in nerve, muscle and synapse. We will study disease processes involving excitability and calcium handling, such as Long QT syndrome and hyperkalemic periodic paralysis. The later part of the course will have a journal club format, based on the reading and presentation of original papers, including papers about non-opioid analgesia and malignant hyperthermia. We will learn about the techniques used to study intracellular calcium and about how calcium is handled in nerve and muscle. Classical, physiological experiments will be interpreted in terms of modern molecular knowledge.
Spring
Prerequisite: BIOL 2110
1 Course Unit

NRSC 4999 Advanced Independent Research
Continuation of NRSC 3999 research. Students will be required to attend weekly Honors Seminar meetings and give an oral presentation of their research at the annual Student Research Symposium.
Fall or Spring
Prerequisite: NRSC 3999
1 Course Unit

NRSC 5585 Theoretical and Computational Neuroscience
This course will develop theoretical and computational approaches to structural and functional organization in the brain. The course will cover: (i) the basic biophysics of neural responses, (ii) neural coding and decoding with an emphasis on sensory systems, (iii) approaches to the study of networks of neurons, (iv) models of adaptation, learning and memory, (v) models of decision making, and (vi) ideas that address why the brain is organized the way that it is. The course will be appropriate for advanced undergraduates and beginning graduate students. A knowledge of multi-variable calculus, linear algebra and differential equations is required (except by permission of the instructor). Prior exposure to neuroscience and/or Matlab programming will be helpful.
Spring
Also Offered As: BE 5300, NGG 5940, PHYS 5585, PSYC 5390
1 Course Unit

Nonprofit Leadership (NPLD)

NPLD 5100 Social Innovation
This is a class focused on understanding how innovation plays a central role in public problem solving. We will explore how social entrepreneurs develop their ideas, define intended impact, market their solutions, understand competition, and collaborate with other actors. At the end of the course, students will have mastered a set of conceptual tools that will allow them to be effective problem solvers in diverse settings throughout their careers. The course has five core objectives: 1) To introduce students to the concepts and practices of social entrepreneurship; 2) To introduce students to the components of a successful social enterprise; 3) To equip students with the tools to be able to accurately identify and assess innovation and impact in social enterprises; 4) To train students to view the world from a perspective of social innovation; and 5) To empower students to develop their own innovative solutions to difficult social problems around the world.
Spring
1 Course Unit

NPLD 5110 Approaches to Social Impact Creation: International Context
This course introduces students to important international development challenges and different approaches adopted in addressing them. Seven specific development challenges: hunger, health care, education, credit provision, risk management, provision of savings avenues and livelihood creation will be discussed in detail. The prevailing scenario, the progress made and the gaps that remain will be discussed. The different approaches adopted in addressing each issue will be highlighted after which one or two international cases will be discussed in detail. Some of the approaches discussed include initiatives by cross sector collaborations, not for profits, for-profit social enterprises, philanthropic organizations, and innovative Government programs. The penultimate session will focus on the challenges of adopting innovative approaches to development challenges in bureaucratic settings, an area that is especially important as well as particularly challenging. Strategies and tactics used by such innovators will be discussed. The final session will be about scaling up successful innovations. Different models that have been used to scale up innovation will be discussed. Both final sessions also include case study discussions.

1 Course Unit

NPLD 5490 Leading Nonprofits
Leading Nonprofit Organizations is designed for those interested in leading and managing a nonprofit organization. It takes a practitioners perspective on strategic realities of modern practice. Each section will seek to rapidly orient a new manager to the complexities, strategic issues, & politics. The course is taught through a combination of theory and practice using selected readings, lectures, guest presentations, group activities (Mock senior staff discussions) and field assignments (pairing with area nonprofit leader and attendance at one of the organizations board meetings.)
Spring
1 Course Unit
NPLD 5520 Energy, Innovation, and Impact in the Global South
Over the past decade, a new type of social enterprise has emerged, which aims to deliver goods and services to the huge market of low-income households in developing countries. These social enterprises, known as 'Base of the Pyramid' (BoP) ventures, seek to simultaneously achieve profits, scale, and social impact. This new operating model has reframed the way companies, foundations, and NGOs engage billions of poor people. This course will focus on a sector that has been radically transformed by BoP ventures over the last decade - clean energy. Not only has this sector been catalytic to delivering clean energy access across the developing world, it also directly aims to combat climate change, the existential issue of our age. Within the BoP energy ecosystem, progress between sub-sectors could not be more different. For example, the clean cooking sector has failed in its mandate to address the problem of open fire cooking. By contrast, the solar lighting sector has scaled massively. This emergent field has attracted a generation of professionals looking to balance profitability and social impact, from social entrepreneurs to impact investors. Yet is the hype justified – is there really a ‘Fortune at the Base of the Pyramid’? This is a course for those who are interested in becoming social entrepreneurs, particularly in developing countries. It will reveal the nuances of operationalizing these ventures and provide a business toolkit for designing and launching a social venture. The course will equally be topical for those who are simply interested in better understanding the inner workings and implications of this fast-growing and alluring model of alleviating poverty and disease. While renewable energy will serve as a focal point, the course will also consider a range of cross-cutting themes, including climate change, gender, culture, public health, and the role of the private sector in development.
Spring
0.5 Course Units

NPLD 5610 Nonprofit Branding
This half credit course will provide the tools and framework for helping to understand the role that marketing and brand building can play in the non-profit sector. As such, we will create a shared understanding of the key concepts that help define branding and the classic elements of marketing that will serve as a foundation for discussion and analysis throughout the semester. We will identify the fundamental differences that non-profit organizations face in building their brands and how those challenges differ from traditional/for profit brand building. We will identify tools and frameworks that brands/organizations can use to help design and implement marketing strategy. We will utilize current and relevant case studies that help demonstrate the core concepts of this course. For term specific details please consult our website: https://www.sp2.upenn.edu/academics/ms-in-nonprofit-leadership
Fall
0.5 Course Units

NPLD 5620 (Almost) Everything You Need to Know About Nonprofit Law
This half credit course will provide a basic understanding of the law that applies to nonprofit organizations, with an emphasis on the law affecting 501(c)(3)public charities. It will focus on ways to obtain and maintain federal tax exempt status, including issues of private inurements and private benefit, limits on advocacy, lobbying and electioneering, unrelated business income tax, and excess benefits taxes. It will show how legal structure and governance procedures affect the answer to the questions “Whose Organization Is It?” Students will review bylaws of multiple organizations to see how differences in structure reflect the great diversity of nonprofits and why “one size does not fit all” within the sector. They will learn how to avoid bad legal drafting that can create problems for dysfunctional organizations. The course will explain the fiduciary duty of officers and directors, explore the extent of potential personal liability, and review necessary insurance and indemnification. It will review Form 990 publicly available tax returns of multiple nonprofits to see why a tax return may be a nonprofit’s most important public relations document. It will also review the basics of charitable giving through a mock meeting of university development officers, outline the concepts of planned giving, and discuss the requirements for charitable solicitation registration at the state level. It will explain the legal requirements for maintaining endowments and discuss a series of ethical issues that can face nonprofit executives and their lawyers. Students will receive one year of free access to Don Kramer’s Nonprofit Issues website and will emerge with a better understanding of key legal issues facing the nonprofit sector that regularly make the news.
Fall
0.5 Course Units

NPLD 5630 Raising Philanthropic Capital
Americans gave more than $350 billion to nonprofit organizations last year, the highest total ever recorded. Now, more than ever, it is crucial that nonprofit leaders master the art and science of raising philanthropic capital. Participants in this innovative class will: 1) acquire an understanding of the nonprofit funding landscape; 2) learn proven and creative strategies to secure investments; 3) gain the experience of giving and motivating charitable commitments; and 4) receive peer evaluation and professional consulting feedback. This experiential and interactive learning course will provide students an opportunity to evaluate a nonprofit organization endeavoring to attract voluntary support, and coach students to think through and develop the ideas, skills, and tools required to participate personally in today’s philanthropic market.
Spring
0.5 Course Units

NPLD 5640 Social Impact and International Development
Social Impact and International Development will explore impact creation in resource-constrained settings, especially outside of one’s home community. We will meet online on 5 consecutive Thursday evenings starting October 24th. The class will cover 1) adapting solutions as a way of generating ideas, 2) careful stakeholder segmentation, 3) challenges of deliverables and distribution, 4) revenue and developing a unit of transaction, and 5) identifying and reducing uncertainty and risk. Students will produce written and verbal reflections on the tensions of working in a developing context; insider-outsider identities and trade-offs; and ethics, tensions, and opportunities of working in and out of one’s home community.
Spring
0.5 Course Units
NPLD 5650 Financial Management of Nonprofits
The half credit class will provide students with the ability to use the financial tools of cash flow, budgeting and forecasting models to assist in strategic thinking as it relates to a nonprofit organization. In addition, the class will provide tools that can be used to follow implementation of such strategies including: personal cash flow; basic financial statements; supplemental schedules; and cash flow, budgeting, and forecasting.
Spring
0.5 Course Units

NPLD 5660 Social Media Strategies
This course is intended as an introduction to strategic use of social media for social ventures. Many of you already use social media platforms in your personal lives, and have developed an intuitive understanding of how they work, and use them reflexively. If you're unfamiliar with various social media venues, that's ok! Many social media platforms will be described briefly in the lectures, but the course is not intended as a how-to for using them. We suggest that if you're new to the various social media platforms mentioned, that you jump in and try them out! These platforms are designed for individuals with all levels of technical proficiency, and they're designed to be inviting. You might find that with only a bit of effort that you become comfortable with them quickly. We expect that, regardless of your skill level, comfort, and current personal use of social media, you will gain real value from this course. Much of this value relates to conveying an understanding of how to use these tools strategically, and on behalf of a social venture or a social cause you care about. This sort of use of social media is significantly different than the way you would use it in your personal life. We hope, as you move through this course, you will wonder: 1) What does it mean to craft the voice of an institution? 2) What is it like to speak in the voice of an institution instead of my own? 3) How could one possibly develop a strategic plan to organically and authentically engage a community? 4) How do you define, find, and build community? 5) More than retweets and likes, what is engagement, how do you measure it, and how do you create engagement to spark social change?
Fall
0.5 Course Units

NPLD 5670 Unleashing Large Scale Social Movements
There is no shortage of compelling ideas and effective interventions for making the world better, however, very few of these great ideas spread. Aspiring leaders of big social change rarely succeed in engaging others in a meaningful or comprehensive way, their passion and their knowledge reaching hundreds or thousands when millions more could benefit. There are exceptions to this pattern, however, and this course seeks to explain what sets apart the initiatives that become successful large-scale movements. These efforts reliably address three questions in order to have a big impact: 1. How can we secure a genuine commitment from others to join us in the hard work ahead? 2. How can we set a strategy that gives us leverage and reach, making the most of our finite resources? 3. How can we take action, day in and day out, in such a way that we meet our aims for growth and impact, optimizing rapid learning and improvement by everyone in our movement? Drawing on examples from around the world and across the social sector, this course will walk you through these questions and provide you with a blueprint for spreading ideas, innovations, and programs that work, allowing you to engage the most people possible to change behavior and social outcomes at scale.
Fall or Spring
0.5 Course Units

NPLD 5680 Marketing Strategy for Social Impact
The first step in engaging beneficiaries, donors, and other customers is to understand what you will do, what you will not do, and why. This "marketing strategy" sets you up to make smart choices each day for how you will engage your stakeholders. In this course we will focus on the strategic vision that leads to engagement and growth. This course will enable you to: 1) Describe challenges and opportunities from the perspective of the customer rather than the organization; 2) Define and articulate a value proposition that can help guide marketing and strategic decisions; and 3) Evaluate the alignment of programs, pricing, promotion, and channels to affect consumer behavior and achieve goals.

NPLD 5700 Philanthropy: Society's Passing Gear
The United States has a vast nonprofit sector that features 1.3 million organizations. (And that doesn't include 250,000 religious institutions!). Approximately $1.5 trillion of earned and contributed revenue flows through the so-called third sector. In 2018, Giving USA reported that $427 billion of those funds came from philanthropy -- given by a mix of individuals, foundations and corporations. The use of philanthropic dollars is as diverse as the donors who give those dollars. But what is the best use of those dollars? Sustaining high performing nonprofits? Supporting catalytic action? Nurturing individual excellence in the arts or sciences? This course will explore field of Philanthropy -- what it is, how it works, who participates, and its intersection with public policy and government.

0.5 Course Units

NPLD 5710 Major Gifts: Strategies in Practice
There has never been a more important time for nonprofits to contribute to the common good. But nonprofits face a major challenge: With 1% of donors accounting for 49% of donations, in a $420 billion market, the philanthropic pyramid is looking more like the Eiffel Tower. The answers lie in major gift strategy and tactics. This course will provide a framework for conceptualizing a major gift strategy as well as tools for designing and making a major gift solicitation. This course's goal is to ensure that each student has a case for support and a pitch for use in the immediate future. Notes: For term-specific details, refer to https://www.sp2.upenn.edu/academics/ms-in-nonprofit-leadership/curriculum/ and select the "Course Descriptions - Online Program" option.
Summer Term
0.5 Course Units
NPLD 5720 Design for Recovery

Anything that can be created or improved upon by humans is designed - products (digital and physical), services, experiences, communications, processes, brands and organizations. And individuals who aren’t trained as designers can leverage design methodology and tools to better meet the needs of the people their organizations serve. Think of design methodology as another problem solving toolkit that enables practice in thinking divergently and convergently, analogously and even wildly; in working with stories, quotes, and observations as data and recognizing patterns from them; in working collaboratively and building off of others; in expressing ideas simply and visually; and in learning by making and by getting feedback early and often. Design for Recovery is a new half credit class that will teach the fundamentals of design methodology alongside a new framework for recovery design as well as resources from the relatively new field of trauma informed design. Case studies and group projects will be on recovery design and therefore could include topics such as mental health; substance use; immigration, job, housing or other transitions; grief; or recovery from other traumatic experiences. The focus of the class is not on understanding the trauma but on understanding recovery and designing interactions to aid that recovery. Students will be expected to choose group projects with which they don’t have personal experience, both to acquire experience in designing for others and to minimize their own re-traumatization. Groups will pitch at least 2 project ideas, so that the instructor can help them choose an appropriate project. Human-centered design is a collaborative practice, so the best way to learn is to…practice! Good design also depends upon good listening, observation and inspiration. Therefore, much of students’ time outside of class will be experiential and involve learning by doing, together. In this course, students will not learn to become a designer—that’s a lifelong pursuit and involves a lifelong investment and practice in one’s craft. However, at the end of the class students should feel confident in their abilities to apply the design tools they’ll learn to any challenge they’re facing and to come up with new ideas and solutions as a result. Despite the focus on recovery design, students will be able to better serve the individuals served by their future social impact organizations, no matter what the organizations’ foci. The recovery design focus will simply better equip them for more emotional participant interviews/observations and for more meaningful storytelling.

Summer Term
0.5 Course Units

NPLD 5740 Social Impact at the Bottom of the Pyramid

The half credit course will offer a broad and pragmatic perspective on social impact at the Bottom of the Pyramid. The early part of the course will focus on general characteristics, challenges, and opportunities of resource-poor settings and high-uncertainty environments. The bulk of the course will focus on tools and frameworks designed to operationalize such Social Impact initiatives. The course is aimed at students with no to moderate experience in entrepreneurship/international development. Students with extensive work experience in for-profits, nonprofits, NGOs, or development work are most welcome.

0.5 Course Units

NPLD 5800 Nonprofit Governance

Effective governance relies upon consistent and ethical board leadership, yet nonprofit organizations that exemplify truly model governance are few and far between. This half credit course introduces students to broad frameworks of governance but will focus most deeply on the human dimensions of board leadership. In particular, we will examine real examples and cases of moral and ethical dilemmas faced by nonprofit boards and executive leaders, and the nuanced practices required to achieve effective board governance, with the goal of providing a practical grounding for students who expect to contribute to nonprofit leadership in their careers — either as executive staff or as board members.

Spring
1 Course Unit

NPLD 5820 NGOs and International Development

The first part of the course will offer a broad perspective on development, aid, and the role of NGOs. The latter half of the course will focus on issues in NGO management: problem analysis, solution design, fundraising, staffing (expatriate and local), monitoring and evaluation (including randomized controlled trials). The course is aimed at students with none to moderate experience in international development, but students with extensive work experience with NGOs or development work are encouraged to join.

Fall
1 Course Unit

NPLD 5830 Social Impact Measurement

The twofold purpose of social impact measurement is to assess and improve the impact of nonprofit programs and to offer actionable information for ongoing improvement. Social impact measurement is an essential learning opportunity for grantmaker and grantee. Developing an evaluation plan, instruments, and processes that are culturally responsive and equity informed will lead to actionable results and learning that will drive continuous improvement. This course offers an overview of leading social impact measurement methodologies and tools in a format that includes asynchronous recorded video lectures, synchronous discussion lectures, readings, and practical assignments designed to teach the design and implementation of a social impact measurement plan.

Fall or Spring
0.5 Course Units

NPLD 5850 Social Impact Lab

NPLD 585 is a 5-day, off-site, intensive service-learning course in social innovation. Students will learn how innovation and entrepreneurship play a central role in public problem solving. The course will explore how social entrepreneurs co-develop new ideas with key stakeholders, articulate problems and solutions, define intended impact, understand competition, and collaborate with other actors. At the end of the course, students will have mastered a set of conceptual tools and strategies that will allow them to be effective problem solvers in diverse settings throughout their careers. The course has five core objectives: 1) To introduce students to the concepts and practices of social entrepreneurship; 2) To introduce students to the components of a successful social enterprise; 3) To train students to view the world from a perspective of social innovation; 4) To encourage and empower students to develop their own innovative solutions to different social problems around the world. 5) To introduce students to real social issues and social innovations in a real-world setting.

1 Course Unit
NPLD 5860 Empowering Nonprofit Leaders to Thrive
This course is designed for interdisciplinary students interested in cultivating flourishing organizations, engaged stakeholders, and inspiring leaders across sectors and especially within nonprofits. Over the past several years, the field of Positive Organizational Scholarship (POS) has proliferated, yielding a compelling body of knowledge on how and when people thrive at work. This course focuses on both the theoretical and practical insights that can be gained from cutting-edge POS research and applied to help practitioners enrich people’s experiences at work and beyond. Special attention is placed on how this wisdom applies not only across sectors but also specifically to the nonprofit organizational context. In particular, the learning objectives of the course provide students with: 1) Techniques and real-world experience in using positive leadership concepts to enrich one's own career, relationships, and life; 2) Ability to identify opportunities to use positive leadership practices in the workplace to enhance stakeholder engagement, individual and organizational performance, and collective impact; 3) Tools for applying positive leadership concepts in nonprofits, as well as in other organizational domains (e.g., business, government, coaching, the family, etc.). Additionally, the course is built upon a foundation of experiential learning, such that students can expect to experiment and apply course concepts in their own lives throughout the semester. At the end of the course, students will feel a strong grounding in their own strengths and values, their own authentic leadership, their ability to connect with others in meaningful, supportive ways, and their capacity to surface opportunities that inspire constructive change at any level of interaction or organizing. The final paper will help students to crystallize their unique vision for a successful future and design clear action steps to pursue after the course ends.

Fall
1 Course Unit

NPLD 5870 Empowering Nonprofit Leaders to Thrive
NPLD 5870 is designed for interdisciplinary students interested in cultivating flourishing organizations, engaged stakeholders, and inspiring leaders across sectors and especially within nonprofits. NPLD 5870 focuses on both theoretical and practical insights that can be gained from cutting-edge research on how and when people thrive at work. This research can be applied to help practitioners enrich people's experiences at work, in collaboration with various stakeholders, and beyond. Additionally, NPLD 5870 is built upon a foundation of experiential learning, such that students can expect to experiment and apply course concepts in their own lives throughout the semester. Indeed, we intentionally start with ourselves as the first site of learning and development to promote greater authenticity and psychological safety. The experiential learning community is enhanced throughout the course with highly interactive, live class sessions, in-depth feedback from the Teaching Team, and intentional practice with constructive peer coaching. At the end of the course, students will feel a strong grounding in their own strengths and values, their own authentic leadership, their ability to connect with others in meaningful, supportive ways, and their capacity to surface opportunities that inspire constructive change at any level of interaction or organizing. The learning objectives of the course provide students with: 1) Techniques and real-world experience in using positive leadership concepts to enrich one's own career, relationships, and life; 2) Ability to identify opportunities to use positive leadership practices in the workplace to enhance stakeholder engagement, individual and organizational performance, and collective impact; 3) Tools for applying positive leadership concepts in nonprofits, as well as in all other organizational domains (e.g., business, government, communities, the family, etc.); 4) In-depth experience in peer coaching and developing practical experiments to innovate and improve on a daily basis.

Spring
1 Course Unit

NPLD 5890 Ethics and The Pursuit of Social impact
Leaders of organizations must often make difficult decisions that pit the rights of one set of stakeholders against another. Having multiple stakeholders or bottom-lines brings with it challenges when conflicts arise, with the perennial question of whose rights/benefits prevail? What trade-offs need to be made between multiple bottom lines? Does the mission of the organization prevail over the privileges of employees/clients? To what extent can large donors influence the mission of the organization? What is an appropriate social return on investment? This course will introduce the factors that influence moral conduct, the ethical issues that arise when pursuing social goals, and discuss the best ways to promote ethical conduct within such organizations. The course will use specific case studies, real and hypothetical, to analyze a variety of ethical issues that arise [including finance, governance, accountability, fundraising, labor (paid and unpaid), client groups, and service provision] among the multiple stakeholders and balancing multiple bottom-lines. This course is offered in the fall semester and will conclude by discussing ways that organizations can prevent and correct misconduct, develop a spirit of ethical behavior, and institutionalize ethical values in the organization's culture. For term specific details please consult our website: https://www.sp2.upenn.edu/academics/ms-in-nonprofit-leadership

Fall
1 Course Unit
NPLD 5900 Social Finance
“Economic analysis and financial accounting are like languages: fluency comes with practice. In-class review of case studies (including, on occasion, in-person discussions with the representatives of diverse agencies and organizations featured in the case studies) will enable students to test and develop their capacity for applying conceptual tools and analytical methods to sometimes messy and always complicated, real-life situations. The course objective is to develop theoretical understanding, critical judgment, and practical skills for sensitive and effective engagement with financial and economic matters of significance.”
1 Course Unit

NPLD 5910 Change Making: Personal Traits and Professional Skills
Over the past decade, researchers have identified some of the key skills that people need to succeed in their work and in their lives. These are skills that anyone can develop with practice. In this class, we will teach three of the key skills: resilience (the ability to thrive in difficult times); creativity (the ability to come up with innovative solutions to problems); and productivity (the ability to make the best use of your time and find life balance). This summer session will take place through dynamic, interactive workshops. During the first session we will learn the key skills. Over the course of the next three weeks, we will practice these skills to see significant improvement in important areas of our daily lives. By the final day of class, we will talk about how to sustain these gains in our personal and professional lives long after the course has ended. This course is not a traditional lecture course. While we will review the best scientific research on the skills for effective change makers, the main part of the course is devoted to practicing these skills. In other words, this is a highly experiential, interactive, and dynamic course!
Summer Term
1 Course Unit

NPLD 5930 Design Thinking for Social Impact
Thinking like a designer can transform the way people and organizations develop products, services, processes, and strategy. This approach, called design thinking, brings together what is desirable from a human point of view with what is technologically feasible and economically viable. It also allows people who aren’t trained as designers to use creative tools to address a vast range of challenges. Design thinking is a deeply human process that taps into abilities we all have but get overlooked by more conventional problem-solving practices. It relies on our ability to be intuitive, to recognize patterns, to construct ideas that are emotionally meaningful as well as functional, and to express ourselves through means beyond words or symbols.
Spring
1 Course Unit

NPLD 5940 Technology and Social Impact
As mobile computing technologies become increasingly functional and affordable, donor and grassroots organizations find ways to justify and massively fund their use in social sector work. This reading- and discussion-based class will be driven by concern that technological resources be used maximally to promote social initiatives’ efficiency, effectiveness, cultural appropriateness, and sustainability. We will use organizational and sociotechnical frameworks to understand how resource-constrained social organizations translate potentially performance-improving technologies into actual performance improvements for stronger mission achievement. No technology influences social outcomes in a vacuum - we will study how implementation environments, and distribution and adoption strategies, influence technologies’ uptake and mission-advancement.
Summer Term
0.5 Course Units

NPLD 5950 Effective Communication and Storytelling
Great leaders are storytellers. They are able to engage and entertain their communities, and tell a compelling narrative about how the world works. They use language powerfully and communicate in ways that uplift and inspire others. In this class, we will explore the power of telling great stories, and learn how to do it most effectively when promoting your campaigns to make the world a better place. We will also look at the skills of framing language in ways that will win over an audience. Finally, we will look at other key skills of effective communication, including the best strategies for persuasion, negotiation, and conflict resolution.

1 Course Unit

NPLD 5960 Design and Incorporation of High Impact Nonprofits
Design and Incorporation of High Impact Not-For-Profits is designed for those who have a practitioner’s interest in the design, governance, leadership, and management of high impact not-for-profit organizations. This course is taught through learning best practice theory, applying this theory to a simulation experience, and providing students the opportunity to apply their new knowledge and experience in an interview with a current not-for-profit leader. Students, through the combination of theory and practice, are provided with the essential competencies and tools to design and incorporate a not-for-profit, conduct in-depth analysis of a not-for-profit’s effectiveness including, but not limited to, governance, leadership, social impact, financial sustainability, and systems and policy influence. Through the mock simulation process of designing, incorporating, and governing, students will leave with a “best practice” for not-for-profit manual that includes articles of incorporation, bylaws, governance deliverables, strategic business plan, organizational scorecard, 3-5 year budget, development plan and public policy strategy.
Spring
Also Offered As: SWRK 5960
1 Course Unit
NPLD 5970 Social, Public, and Law Policy for Nonprofits
SOCIAL, PUBLIC and LAW POLICY is designed for students to strengthen and develop their skills to formulate, shape, and influence public policy. Students will strengthen and develop their skills in policy formulation and implementation. The social, economic, legal, ethical, and political environments, which influence public policy, planning, evaluation, and funding will be explored. Participants will (a) analyze the structural, social, and policy issues that have galvanized advocacy efforts and (b) explore the roles that the government, private sector, and consumers and advocacy groups play in setting policy agendas and examine the intended and unintended effects of these policies. With an increasing competitive market, the overall social sector is changing the landscape for private, nonprofit and government organizations nationally and globally. The public, as well as leaders in government, social investors and philanthropists are demanding new social models that are cost effective, financially self-sustainable, adaptive to feedback and metrics, with clear outcome accountability measures, and the potential for large-scale impact, policy influence, and systems change.

Summer Term
1 Course Unit

NPLD 5980 Nonprofits and Urban Revitalization: The Philadelphia Story
Once the "workshop of the world" with a diverse manufacturing economy, the City of Philadelphia lost a huge proportion of its historical economic base from 1950 through 2000. Today Philadelphia struggles to find its competitive advantage. Yet it has tremendous assets that can be leveraged, and its robust nonprofit sector constitutes the most critical set of actors. This course will explore the rise and fall of Philadelphia's manufacturing economy, efforts to forestall its decline in the 1960s and 70s, the racial and gender dynamics of its employment ecosystem, and contemporary strategies to create a sustainable local economy. We will focus on the role of the nonprofit sector – large and small organizations alike – in the revival of downtown residential living, tourism and hospitality, workforce development, business attraction and retention, place-based development, and much more. The course will combine readings in economic and social history and urban economics with case study analyses of local policies aimed at stimulating growth.

Summer Term
1 Course Unit

NPLD 5990 Independent Study
Independent studies provide a flexible opportunity for students and NPL faculty or part-time instructors to work together in pursuing a topic of special interest that is not sufficiently covered by other courses in the curriculum. The content of independent studies is highly specialized and, as such, requires a plan of study developed jointly by the student(s) and the supervising professor. Independent studies require the academic advisor's approval.

Fall or Spring
1 Course Unit

NPLD 7200 Data Analysis for Social Impact
Practitioners, leaders, and researchers need to engage with the latest cutting-edge research findings in their field. In this class you will develop an understanding of the quantitative methods that underpin social impact research, in an applied lab-based context. Theoretically, we will focus on developing your working statistical knowledge, and practically we will develop your data analysis skills by introducing you to a range of approaches for analyzing and handling large-scale secondary quantitative data that capture social impact. The substantive focus of the course will be on individual-level participation in the Non-profit Sector in activities such as volunteering and charitable giving. This applied course covers the fundamental elements and approaches to handling and analyzing quantitative survey data. The emphasis is on developing an adequate understanding of basic theoretical statistical principles, descriptive and exploratory methods of analysis, graphical representation, operational procedures and interpretation of statistical results. The course will cover a wide range of statistical techniques from basic descriptive statistics to more advanced multivariate statistical techniques, such as OLS regression and logistic regression. You will also be introduced to a number of important topics, including theory testing and development; philosophy of science and research judgement; and replication in social impact research. This course is an introduction to applied social impact research and is designed for those who want to engage with quantitative social impact research, but also those who wish to make their own original research contributions. No prior statistical knowledge or programming skills are required to enroll in the course.

1 Course Unit

NPLD 7300 Difficult Art of Listening
The art of listening ethnographically has many benefits. Using a generally anthropological framework to organize sessions, this course attempts to make a case for the productive force (for scholars, policy makers, nonprofit leaders and others) of hearing in proactive and nuanced ways. Highlighting the value of acoustemological ways of understanding the world (knowing through hearing), the course asks students to listen in newfangled ways to many of the things they've heard before - while also listening out for things that they've never previously taken note of. Thinking about how listening carefully greases the wheels for successful interpersonal communication and overall cultural understanding, students will be asked to observe themselves listening in ways that might allow for innovative translations of observable/empirical data into knowledge that can be deployed in service to personal, institutional, and structural change.

0.5 Course Units
NPLD 7500 Corporate Social Responsibility (CSR): Partnerships and Practices
Businesses performing philanthropic activity often use their platform of CSR activities to engage with society, directly, via a corporate foundation, or through partnerships with nonprofit organizations. Although such philanthropic activities are not directly related to profit-making ventures, they may boost their reputation, be used in marketing their products, talent recruitment, increase employee engagement and commitment, and thus contribute to the profit indirectly. Many businesses undertake their CSR related philanthropic activities using strategic partnerships with nonprofits or public sector organizations to meet their goals. This provides opportunities to nonprofit and public sector leaders in achieving social and sustainable change.

1 Course Unit

NPLD 7510 Widening the Aperture: Assessing Global Social Impact Interventions
Part of being a working professional in social impact is assessing the effectiveness of intervention models. This is true whether you work in service delivery, consulting, evaluation or philanthropy. This course offers students a unique, experience-based opportunity to assess an organization’s work from afar, then on the ground in Malawi. The expectation is that several assumptions established in the beginning of the course will hold through to the end. Importantly, others will not. Students will understand how we build a knowledge base about an organization’s work, what assertions we come to, and then how we test those assumptions. This process represents a vital skill set including research, perspective-taking, and direct engagement with the communities served and the people doing the work. The course will provide students with a practical framework for analyzing social impact interventions through three important and complementary lenses: sector practice, environmental factors and organizational implementation. Students will use the immersive, travel experience in Malawi to engage directly with one of three service organizations to apply the framework. They will also use data collected about these organizations through the Lipman Family Prize selection process, a University of Pennsylvania-based social impact prize, combined with their own research, both primary and secondary, to better understand the organizations, staff, and forces influencing the intervention. Students will use ethnographic tools to collect and analyze primary data regarding staff attitudes and perceptions at these organizations. Students will present their findings to the organizational leadership while still in the country. The course will include significant team-based project work.
Summer Term
1 Course Unit

NPLD 7520 Energy, Innovation, and Impact in the Global South
Over the past decade, a new type of social enterprise has emerged, which aims to deliver goods and services to the huge market of off-grid, low-income households in developing countries. These social enterprises, known as ‘Base of the Pyramid’ (BoP) ventures, seek to simultaneously achieve profits, scale, and social impact. This course will focus on a sector that has been radically transformed by BoP ventures over the last decade – clean energy. Not only has this sector been catalytic to delivering energy access across the developing world, it also directly aims to combat climate change, the existential issue of our age. This is a course for those who are interested in becoming social entrepreneurs, particularly in developing countries. It will reveal the nuances of operationalizing these ventures and provide a business toolkit for designing and launching a social venture. The course will equally be topical for those who are simply interested in better understanding the inner-workings and implications of this fast-growing and alluring model of alleviating poverty and disease.

NPLD 7810 Understanding and Managing Volunteers for Impact
In chemistry, an atom is the smallest unit of matter that has the properties of an element. In the same vein, volunteers are the atoms of voluntary action. Volunteers are the backbone of many human service organizations, environmental organizations, and other nonprofit organizations. Volunteers serve almost every function from stuffing envelopes to sitting on boards of nonprofit organizations. They make many programs such as education, and environmental protection possible and fill the void created by the fiscally retreating governments as well as newly arising social problems and human needs. Without volunteer participation, the services that are offered by many nonprofit organizations would be unavailable or provided at a higher cost to government, clients, and donors. The literature as to what constitutes volunteering and what produces committed and effective volunteers is confusing and full of contradictions. Furthermore, only few organizations know how to face the challenges of managing unpaid staff and how to motivate volunteers without offering material benefits. Volunteers are simultaneously non-remunerated employees and independent support with a different agency than paid employees. This course will combine presentations, group work, discussions, case studies, video clips, and readings to delve into the challenges of volunteering.

NPLD 7820 Group Dynamics
"Today, everything we do in life is influenced by • The interpersonal relationships we develop • The partnerships we create in work, friendship, and family groups • Our capacities to understand, embrace, and manage conflicts • The ways we affirm both our differences and our commonness. NPLD 7820 is a half credit course designed for U Penn grad students who want to enhance their skills at everything from managing work groups through to engaging in discovery-learning and co-educating each other about how to make best use of your time, energies and resources. All of our lives have been altered by the pandemic in ways that are obvious and in ways that are hidden and hard to recognize. People of all ages and walks of life are trying to re-envision the paths we are on, and the contributions we can offer to the world. We are also discovering new things about our identities, the roles we are asked to take up, our sense of belonging in a range of settings, plus things like global economic disparities, the pernicious -isms (race, gender, class, etc.), and humanity’s relationship with nature. 7820 is experientially based. This means knowledge and insights are acquired through the direct experience of relational engagement. As we generate new forms of relatedness, our understanding of ourselves deepens, and in turn leads us to take actions that enrich both others and ourselves.”

NPLD 7830 Field Exercise in Social Impact Measurement
The twofold purpose of social impact measurement is to assess and improve the impact of nonprofit programs, and to offer actionable information for ongoing improvement. Social impact measurement is an essential learning opportunity for grantmaker and grantee. However, developing an evaluation plan, instruments, and process that is culturally responsive with an equity lens and also aligned with a nonprofit’s capacity is crucial. This course will offer an overview of leading social impact measurement methodologies and tools and field exercise experience. During the field exercise, student teams will develop an evaluation plan and associated instruments for a nonprofit using one or more of the methodologies. Teams will present their evaluation plans and offer recommendations for implementation. Lectures will be complemented by class time devoted to field exercise team meetings and off-site work.

NPLD 7840 The Nonprofit Sector: Concepts and Theories
Nonprofit organizations are ubiquitous. They impact almost every area of society. From health care to homeless shelters, from education to the environment, nonprofits provide services, promote legislation, protect rights, and produce public and private goods. This class will survey the entire nonprofit sector, to gauge its vast scope and multiplicity. The course will also cover various concepts and theories related to the nonprofit sector. These concepts and theories come from a variety of academic fields, including economics, sociology, political science, psychology, law, and public administration. We will cover the basic voluntary behaviors associated with nonprofit organizations, such as volunteering and charitable giving. We will also cover the basic concepts associated with nonprofit management, like board governance and fiduciary duties.

1 Course Unit

NPLD 7850 Group Dynamics and Organizational Politics
This is one of the courses referred to as "The Power Lab at Penn." This intensely experiential course is designed for those providing group and institutional leadership at any level of a human enterprise, managing work groups, chairing committees, serving on special task forces, conducting support groups, offering legal services, teaching in classrooms, facilitating groups in clinical settings, etc. Participants will focus on two topics: (1) an in-depth understanding of group dynamics while they are in action, and (2) the organizational relationships between groups that are in a powerful position, groups locked in a powerless state and those caught in the middle between the powerful and the powerless. Prerequisite: Permit required; all potential participants are required to attend a Primer class which consists of one evening session AND an all-day session. Permits are granted only after students have completed the primer classes. Course Structure: This course has six components: (1) A pre-course discerning process, which consists of a one evening plus one full day Primer workshop; (2) Module 1 which is focused on group dynamics; (3) reading an assigned book and writing a paper based on Module 1 experiences; (4) Module 2 which addresses power relationships among groups with differential resources; (5) reading two assigned books and writing a paper based on Module 2 experiences; and (6) a post-course debriefing. The Primer provides all potential participants with a common conceptual base for engaging in the essential learning and lays out the intellectual foundations of the course. Fall
1 Course Unit

NPLD 7860 Strategic Management and Leadership of Nonprofits
This course is about doing good and doing well. It is designed to introduce you to the fundamental issues in accountability and governance and the administration and management in nonprofit organizations. Through research and analysis, you will understand multiple structures of accountability and the various stakeholders in nonprofits, understand the duties and dynamics of boards of directors in conjunction with other mechanisms of governance (e.g. chief executive officers, advisory boards, etc.), and develop an understanding of management techniques and leadership skills for enhancing the effectiveness of nonprofit organizations. You will be asked to think about the challenges of running nonprofit organizations in a comparative context, with cases drawn from both the U.S. and abroad. The emphasis of this course is on acquiring operational skills. The course is designed for those who may have had years of experience managing other people and programs in the nonprofit sector but who want to develop a more systematic mastery of this challenge, as well as students from other sectors who aspire to a nonprofit leadership role.
Spring
1 Course Unit
NPLD 7870 Leadership Theory and Practice
This course will present the evolution of leadership theory beginning with classical trait theories and ultimately focusing on more modern perspectives such as adaptive, authentic, and shared leadership models that engage more critical understandings of traditional leadership theory. Ultimately, we frame leadership as socially constructed, collective experience that is generated by complex group dynamics. We will examine leadership in nonprofit organizations, government, and social movements. Readings will include a formal overview of leadership theory as well as contemporary feminist and futurist perspectives. The practice focuses on developing new relational capabilities that include deep listening, self-reflection, and adaptive problem solving. “There is nothing so practical as good theory” – Kurt Lewin, Organizational Psychologist “All models are wrong, but some are useful” – George Box, Statistician “To learn which questions are unanswerable, and not to answer them, this skill is most needful in times of stress and darkness.” – Ursala K. Le Guin
1 Course Unit

NPLD 7880 Social Impact Entrepreneurship Meets Mass Incarceration
"This course is an integral part of the Penn Restorative Entrepreneurship Program (PREP) https://www.sp2.upenn.edu/research/special-projects/prep/ and will offer a group of previously incarcerated people intensive training on developing a new business. Students from SP2, Wharton and Penn Law will work with returning citizens on teams throughout the semester which will learn to craft a viable business plan while also engaging in critical analysis of the limits of social impact entrepreneurship in addressing longstanding social problems such as mass incarceration. In the final meeting, the teams will make pitches to a panel of angel investors who are recruited to provide additional supports to the most promising proposals. This ABCS (Academically-Based Community Service) course aims to not only play an important role in reducing recidivism but to also enable Penn students the opportunity to connect with members of our broader community and engage in meaningful social change in a cross-disciplinary setting where the expectation is that all of us has something to learn from and to teach to everyone else."

NPLD 7910 Leadership: Designing the Future
This course is a Call to Action! It is time for the next generation to shape the world anew. NPLD 7910 provides opportunities for participants to create new insights that help them to reimagine their relationships with themselves, others, and the natural and man-made environments. This is the moment to advance the human condition by co-creating knowledge and perspective while also preserving the wisdom passed on to us from our collective ancestors. NPLD 7910 is a full semester, 1.0 credit unit, synchronous, virtual, experiential course that operates on the principles of discovery learning. Simply put, there is little that is conventional about this class. There are no power-point slides. There are no universal takeaways. There are no final exams. Instead, we offer the chance to immerse, explore, and discover together. Though, come to think of it, the class is delivered via Zoom. That’s pretty conventional these days. NPLD 7910 has four parts: Module 1 is a primer that explains the course architecture and creates the learning community for the course. Module 2 provides course members the opportunity to study their own group dynamics while also working to extract salient insights located in a scholarly text on a specific societal dilemma Module 3 has course members working together in new configurations, exploring the power dynamics between groups seeking to enact and amplify social change. Module 4 involves a post-course reading of a book to be determined at the end of Module 3, and the writing of a final paper based on the links that book and the experiences of course participants throughout the semester.
Fall or Spring
1 Course Unit

NPLD 7920 Social Entrepreneurship
Social entrepreneurs are individuals with innovative vision seeking to accomplish important public purposes through the creative and aggressive mobilization of people and resources. Using academic theory and research on social entrepreneurship as a framework, student innovators learn to design, develop, and lead social change organizations of their own invention. Students turn their passion for changing the world into concrete plans for launching a venture. Over the course of the semester, we will cover a broad array of topics associated with social innovation and entrepreneurship, including defining the problem/opportunity, refining the mission/vision, developing market research and industry analysis, defining a financial and operating structure, assessing results and progress, and scaling an enterprise. This course is neutral on sector. Graduate students in any of Penn’s graduate and professional schools who want to create social value through either nonprofit or for-profit ventures are invited to take the class and develop their ideas. The class will expose students to the process of getting an organization - regardless of sector - off the ground and running. While this is a class on innovation and entrepreneurship, students do not need to be committed to starting a venture upon graduation. The skills and tools contained in the course have wide applicability in the workplace. Being able to develop a coherent venture plan is great training for anyone who wants to work in government, philanthropy, or the business sector funding or managing existing organizations. The course attempts to convey a picture of what a well-considered and well-executed venture plan looks like with the goal of developing in students an appreciation for clear thinking in the pursuit of the creation of public value.

NPLD 7940 Fundraising and Philanthropy: The Donor Journey
Today, we stand at an important moment in the history of philanthropy, as U.S. giving reached an all-time high in 2018, with $427 billion invested in the philanthropic marketplace. As charitable giving is on the rise, nonprofit professionals are thinking more strategically about securing charitable gifts that will position their organization to have greater social benefit, whether they represent small grassroots organizations or large institutions. This course will provide students with the theory and basic knowledge of fundraising that charitable organizations use to raise private philanthropic dollars. The course will begin with an overview of the philanthropic landscape and key trends in philanthropy to contextualize the role of fundraising. Each subsequent module will review different aspects of the theory and body of knowledge that guides the most effective fundraising programs in charitable organizations, including principles of individual giving, major gifts, structural philanthropic vehicles, making the case for support, prospect research, and engaging volunteer leaders in fundraising. Modules are structured to both impart theory and develop skills to enhance students’ critical analysis of philanthropy. By the conclusion of the course, students will gain the knowledge, tools, and techniques to implement fundraising best practices at their professional organization or in a volunteer capacity to raise funds for social benefit.

Spring
1 Course Unit

NPLD 7960 Philanthropy and Fundraising Tools for Managers of Nonprofit Organizations
This fall semester course will review the everyday tools that nonprofit managers and development officers need to raise funds from individuals and other sources of private philanthropy. Last year, Americans gave approximately $300 million to charitable organizations and 83% of it was from individual giving. The fundraising profession has created a body of knowledge in the past twenty years that can guide effective fundraising programs so that charitable organizations can support their mission. The class sessions will review the theory and practical techniques that development professionals use every day in large and small organizations, including annual giving, major gifts, planned giving, cultivation of donors, making your case for support, the Seven Faces of Philanthropy, special events, and prospect research. There will also be discussions of philanthropic trends and current giving patterns. For those who are interested in nonprofit leadership and positions of influence, these will be critical tools to understand.

Fall
1 Course Unit

NPLD 7970 Philanthropy and the City
This course will focus on how urban communities are shaped by the nonprofit sector and the billions of philanthropic dollars that fuel their work. By bridging theory and practice, the class explores what dynamics are at play to deliver vital services or programs in healthcare, education, the arts, community development, and other issues. The course will also focus on these important questions: (1) Whose responsibility is the public good? How is that responsibility shared by the public, private, and nonprofit sectors? and (2) Given that responsibility for the public good, which individuals and groups make the decisions about how to serve the public good? How are these decisions made, and who benefits from these decisions? Students will consider these questions in an interdisciplinary context that will bring a historical and philosophical perspective to the examination of the values and institutions that characterize the contemporary philanthropy and the nonprofit sector.

Nursing (NURS)

NURS 0020 Pre-First Year Program in WRIT/NURSCI/LABS
This course uses an interdisciplinary approach to study diabetes mellitus. The basics of general, biological and nutritional chemistry as well as the physiology necessary for an understanding of the metabolic basis of diabetes mellitus will be covered. The course includes lectures, anatomy and nursing physical assessment laboratory activities, and application of knowledge via case study discussion. The course is designed to provide an introduction to the Nursing curriculum and related skills using the disease diabetes mellitus as its framework. In addition to classroom lectures, an introduction to physical assessment and nursing interventions for patients with diabetes, anatomy laboratory activities, and exposure to nursing research are provided. The course will stress active student learning.
0-1 Course Unit

NURS 0061 Biologically-Based Chemistry
A contextual approach will be used in studying the concepts in General, Organic and Biological Chemistry that are foundational to an understanding of normal cellular processes. Topics that will be covered include measurements, atomic structure, bonding, chemical reactions, properties of gases and liquids, solutions, equilibrium, acids and bases, pH, buffers, nuclear chemistry, nomenclature and properties of the main organic functional groups, and the structures and function of carbohydrates, proteins and lipids.

Fall
.5 Course Units

NURS 0065 Fundamentals of Nutrition
Essentials of normal nutrition and their relationships to the health of individuals and families. These concepts serve as a basis for the development of an understanding of the therapeutic application of dietary principles and the nurse's role and responsibility in this facet of patient care. Prerequisite: Equivalent Science Sequence Course if course prerequisites not met

Spring

Prerequisite: NURS 0061 OR NURS 0068
1 Course Unit
NURS 0068 Integrated Cell Biology and Microbiology with Recitation
Through didactic and recitation interactive learning, students will explore the major topics of cell biology and microbiology that are foundational for an understanding of normal and pathological cellular processes. Topics will include the brief study of prokaryotic and eukaryotic cell structures and functions; the main biological molecules; membrane transport; cellular communications; the flow of genetic information; cell division; and cellular metabolism. The course will also examine the role of cells and microbes in human health and infectious diseases. It will include a description of the main types of microbes, how they are identified, their growth requirements, and the role of the immune system in controlling infections, the control of microbes, host-microbe interactions. The context of the recitation sessions allow students to apply knowledge of cell biology and microbiology for understanding of advanced processes like the cellular basis of cancer and infectious human infection diseases. This course will include special sessions from a clinical perspective in the various fields of medicine, microbiology, and immunology.
Fall
1 Course Unit

NURS 1010 The Nature of Nursing Practice
This course facilitates students’ ability to conceptualize the experiences of individuals, families, communities, and populations living with health and illness. It emphasizes the integration of knowledge from other disciplines and of nursing science as the basis for practice. The course introduces the four core themes of the undergraduate nursing program: engagement, inquiry, judgment, and voice as it provides guided observational experiences in a wide variety of settings. These experiences help the student to discover what is not known and what is subsequently necessary to know. These experiences also explore the place of the natural and social sciences and the arts and humanities in nursing practice. This course also will highlight the relationships between and among members of the interprofessional team and families and patients. NURS 102 fosters development of the professional role and sets the stage for life-long learning.
Spring
Prerequisite: NURS 1010
.5 Course Units

NURS 1020 Situating the Practice of Nursing
This course emphasizes not only how nursing is practiced, but also where it is practiced. The course further explores the four core themes of engagement, inquiry, judgment, and voice as it provides guided observational experiences in a wide variety of settings. These experiences help the student to discover what is not known and what is subsequently necessary to know. These experiences also explore the place of the natural and social sciences and the arts and humanities in nursing practice. This course also will highlight the relationships between and among members of the interprofessional team and families and patients. NURS 102 fosters development of the professional role and sets the stage for life-long learning.
Spring
Prerequisite: NURS 1010
.5 Course Units

NURS 1030 Psychological and Social Diversity in Health and Wellness
This course explores and integrates the intersection of psychological, cognitive, and social development with the lived experiences of individuals, families, and communities across the lifespan in order to conduct socially contextualized health assessments and health teaching. Extant theories will be critically analyzed and examined with respect to issues of health care access, health history, health promotion, and issues of equity and diversity from a life-course perspective. This knowledge will be synthesized and integrated with the development of the student's communication skills and interviewing processes necessary to develop socially attuned health history and teaching that promote psychological well being and healthy lifestyles. Simulated and observational experiences provide students with opportunities to acquire and apply knowledge necessary for conducting a comprehensive health history of an individual situated within a diverse community. They also provide opportunities to develop prioritized health teaching plans in partnership with that individual.
Fall
Prerequisite: NURS 1010 AND NURS 1020
1 Course Unit

NURS 1120 Nutrition: Science & Applications
An overview of the scientific foundations of nutrition. The focus is on the functions, food sources and metabolism of carbohydrate, fat, protein, vitamins and minerals. Effects of deficiency and excess are discussed and dietary recommendations for disease prevention are emphasized. Current issues and controversies are highlighted. Students will analyze their own dietary intakes and develop plans for future actions. Prerequisite: For Non-nursing Students
Fall or Spring
1 Course Unit

NURS 1310 Human Anatomy and Physiology - Part A
The structural and functional organization of the human organism is presented, along with the fundamentals of developmental anatomy and embryology. Histologic and gross anatomical features of selected organ systems are related to the physiologic and biochemical mechanisms which enable the human body to maintain homeostasis in an ever-changing environment. Prerequisite: Equivalent College Level Chemistry and Biology if course prerequisites not met
Spring
Prerequisite: NURS 0061 OR NURS 0068 OR CHEM 1011 OR BIOL 1101
1.5 Course Unit

NURS 1320 Human Anatomy and Physiology - Part B
The structural and functional organization of the human organism is presented, along with the fundamentals of developmental anatomy and embryology. Histologic and gross anatomical features of each organ system are related to the physiologic and biochemical mechanisms which enable the human body to maintain homeostasis in an ever-changing environment. Basic concepts of pathophysiology are introduced and applied to certain clinical disorders.
Fall
1.5 Course Unit
**NURS 1590 Pathways to Practice**
This course builds on the accelerated student’s background and experience and uses them as building blocks to garner the intellectual capital needed to integrate his/her identity as a professional nurse. The course links the Penn Compact 2020 to the four core themes of Penn’s BSN nursing program: engagement, inquiry, judgment, and voice. It introduces phenomena of concern to nursing, contextualizes societal meanings of nursing practice and health care delivery across time and place, and stresses the importance of nursing science as the basis for practice. Emphasis is placed on debate, critical analysis, and constructing a logical and lucid verbal and written argument regarding issues related to professional nursing practice and health care delivery.  
1 Course Unit

**NURS 1600 Physical Assessment**
This is a laboratory course designed to help beginning nursing students to develop competence in the process of physical assessment. Students engage in actual practice of physical assessment with fellow students as their ‘patient’ subject. A blending of instructor demonstration and supervision of physical examination practice sessions is used in the learning laboratory setting. Students prepare via self-learning activities with a variety of supplied resources (readings, videotapes, computer programs) and have the opportunity to refine their skill through faculty-supervised practice sessions. Procedural skills that correlate with the presentations of physiologic system assessment are included. Prerequisite: For students in Accelerated BSN Nursing Program Only Summer Term  
1 Course Unit

**NURS 1630 Integrated Anatomy, Physiology, and Physical Assessment I**
This is the first part of a two-semester course designed to provide a comprehensive study of the structure and function of the human body along with essential embryology and maturational physiology. Histological and gross anatomical features of selected organ systems are related to the physiologic and biochemical mechanisms that enable the human body to maintain homeostasis. Within each system, deviations from normal are considered to situate the student’s understanding of health problems and to foster an appreciation for the complexity of the human organism. Integrated into each topic are the correlated physical assessment parameters and related procedural skills. Laboratories exercises and case study analysis provide a contextual base to acquire and use domain-specific knowledge of concern to the practice of nursing. Prerequisite: Equivalent Science Sequence Course if course prerequisites not met.  
Spring  
Prerequisite: NURS 0061  
2 Course Units

**NURS 1640 Integrated Human Anatomy, Physiology & Physical Assessment II**
This is the second part of a two semester course designed to provide a comprehensive study of the structure and function of the human body along with essential embryology and maturational physiology. Histological and gross anatomical features of selected organ systems are related to the physiologic and biochemical mechanisms that enable the human body to maintain homeostasis. Within each system, deviations from normal are considered to situate the student’s understanding of health problems and to foster an appreciation for the complexity of the human organism. Integrated laboratories and case studies provide a contextual base to acquire and use domain-specific knowledge that includes physical assessment, and procedural.  
Fall  
Prerequisite: NURS 1630  
2 Course Units

**NURS 1650 Integrated Pathophysiology, Pharmacology, and Therapeutics**
Pathophysiologic concepts and processes are introduced with major emphasis on commonly occurring acute and chronic illnesses and their therapeutic interventions. Major classes of drugs that are used to support organ function are explored. The physiological and pathophysiological rationale for each drug indication, mechanisms of drug action, individualized dosing implications, and adverse drug events will be explored for prototypical agents used in the selected cases. The course will enhance the student’s comprehension of the scientific complexity of therapeutic interventions in various conditions and will build upon the foundational sciences. Additionally the course will provide the student with sufficient scientific knowledge and skills to prepare administer and monitor drugs and therapies in a safe and effective manner.  
Spring  
Prerequisite: NURS 1640  
2 Course Units

**NURS 2150 Nursing of Women and Infants**
This course emphasizes the child-bearing cycle, and the related issues of maternal and infant mortality and morbidity. It also explores women and infant’s health care and health promotion needs across the lifespan. It provides a global perspective, and uses the United Nations’ Pillars of Safe Motherhood and World Health Organization’s Millennium Development Goals as the vehicles to enable students to understand the interrelationships among issues of health and health promotion; social, economic, political and environmental contexts; and the care of women across the lifespan. Clinical experiences provide opportunities for students to understand the connections between the local and the global; to use their developing knowledge base to affect the health of women and their infants. Students will have opportunities for hospital-based care of child-bearing women and their infants. In addition, community-based experiences with individual women and with groups of women across the life cycle will be provided in order to enhance teaching, interviewing and assessment skills.  
Spring  
Prerequisite: NURS 1010 AND NURS 1020 AND NURS 1030 AND NURS 1600 AND NURS 1640  
1.5 Course Unit
NURS 2250 Pediatric Nursing
This course considers how nursing influences the health and healing capacities of infants, children, adolescents and their families. It focuses on the knowledge and skill acquisition needed to care for these patients at particular moments, across the continuum of care, and through transitions in an illness experience. It addresses pediatric nursing phenomena of concern and major final common pathways of pediatric illness from infancy through adolescence using a using a developmental and systems approach. Emphasis is placed on family-centered care through transitions in the illness and recovery phases. The course emphasizes clinical reasoning; family centered strategies for optimizing health and maintaining individuality; promoting optimal developmental, physiological, and psychological functioning; and enhancing strengths within the context of family. Clinical experiences at various children's hospitals and simulation experiences provide sufficient opportunities for clinical reasoning, clinical care and knowledge integration. Additional Prerequisite: Clinical 12 hours weekly and 2 hours Simulated Laboratory Weekly
Fall or Spring
Prerequisite: NURS 1650 AND NURS 2150
1.5 Course Unit

NURS 2300 Statistics for Research and Measurement
This course examines statistical methods used by scientists in the analysis of research data. The fundamental theorem for this course is the "square root law" (central limit theorem). Students become literate in statistical terminology and symbols and knowledgeable of assumptions for statistical tests. Fundamental statistics include basic theorems and principles, sample, population and data distributions, measures of central tendency, correlational techniques, and commonly used parametric and nonparametric statistical tests. Parameters for inferential and descriptive statistics are examined as the basis for explaining the results from research studies. Students apply chance models in estimating confidence intervals of percentages and means, and in hypothesis testing. This content is taught in the context of nursing research and measurement of nursing phenomena. Examination of research publications enable students to apply their knowledge to reading and understanding data analyses used in studies. Students evaluate tables and graphs as ways to summarize research findings. Course content prepares students to examine statistical and clinical significance of research findings.
Fall
1 Course Unit

NURS 2350 Psychiatric, Behavioral, and Mental Health Nursing
This course examines the influences of psychological, emotional, cognitive and social development of individuals and groups across the lifespan. Students combine this foundational knowledge with their developing understanding of social determinants of health. This course will help students learn to identify and assess individual, family and group level needs for those persons at risk for or experiencing behavioral or psychiatric/mental health challenges using evidence-based interventions applicable across the continuum of care. Emphasis is placed on the role of the professional nurse in assuring the delivery of equitable behavioral and psychiatric/mental health nursing care. The course addresses nursing phenomena of concern related the meanings of a behavioral or mental health illness and the development of healing relationships with individuals, families, and groups. In addition, the student will learn essential advanced communication strategies, including exposure to skills necessary for motivational interviewing, essential to engage individual and families in mental health promotion and treatment. This course provides the tools to enable students to construct effective interventions groups with patients, collaborate with disciplinary and inter-professional colleagues, and understand the healing dimensions of environments. Clinical and simulation experiences are designed to provide sufficient opportunities for clinical reasoning, clinical care, and clinically situated knowledge integration.
Fall
Prerequisite: NURS 1650
1.5 Course Unit

NURS 2450 Nursing of Young and Middle Aged Adults
This course considers how nursing influences the health and healing capacities of young and middle aged adults who experience functional status impairments as a result of serious illness or injury. It focuses on the knowledge and skill acquisition needed to care for these patients at particular moments, across the continuum of care, and through transitions in an illness experience. It addresses nursing phenomena of concern, including risk factors for illness or injury, strategies to overcome barriers and support personal health resources, alleviate suffering and reduce the impact of illness or injury on the functioning of the person. Content and clinical experiences integrate developmental and role issues; policy, cultural and ethical considerations. Clinical experiences in acute care hospital units and simulation experiences provide opportunities for clinical reasoning, clinical care, and knowledge integration. Additional Prerequisite: Clinical 12 hours weekly and 2 hours Simulated Laboratory Weekly
Fall or Spring
Prerequisite: NURS 1650 AND NURS 2150
1.5 Course Unit
NURS 2550 Nursing of Older Adults
This course considers how nursing influences the health and healing capacities of older adults. It focuses on the knowledge and skill acquisition needed to care for these patients at particular moments, across the continuum of care, and through transitions in an illness experience. It addresses nursing phenomena of concern including the unique set of principles and body of knowledge and skills necessary to the practice of nursing with older adults. Students are provided with the theoretical background necessary to understand health system issues affecting older adults. Students will attain the knowledge necessary to complete a comprehensive assessment of the older adult’s physical, functional, psychosocial, and cognitive status. Common problems associated with cardiovascular, respiratory, neurological, musculoskeletal, sensory, and genitourinary systems that affect older adults will be discussed. In addition, principles of continuity of care, rehabilitation, nutritional and pharmacodynamic changes, cultural diversity and ethics will be integrated throughout the course. Clinical experiences in acute care hospitals and simulation experiences provide sufficient opportunities for clinical reasoning, clinical care, and knowledge integration. Special emphasis is placed on transitional care for older adults across the health care continuum. Additional Prerequisite: Clinical 12 hours weekly and 2 hours Simulated Laboratory Weekly
Fall or Spring
Prerequisite: NURS 1650 AND NURS 2150
1.5 Course Unit

NURS 2760 How We Change: Social-Psychological and Communication Dynamics (SNF Paideia Program Course)
Have you wondered why people undergo religious conversion, change their political affiliation, suddenly endorse conspiracy theories, alter their taste in music, or seek hypnosis to quit smoking? What is common to these processes of change, and how does resistance to change play out across these seemingly different contexts? In "Why We Change," we will ask unique questions such as how religious change might highlight methods of transforming public health communications or how the study of attitude change might yield new theories about the impact of life experiences on personality. Broadly speaking, the class will provide an opportunity for students to learn theories of belief formation, attitudes and persuasion, normative influence, and behavioral change. For example, we will work to understand how specific beliefs, such as group stereotypes, or specific attitudes, such as trust and values, change in response to variations in the environment and communication with other people. We will cover culturally based and professional approaches to change, from fear appeals to motivational interviewing, to hypnosis. Students will read empirical studies and conduct observational projects about potential sources of social, cultural, or psychological change and resistance to change in Philadelphia.
Also Offered As: COMM 2760, PSYC 2760
1 Course Unit

NURS 2990 Independent Study in Nursing
An opportunity to develop and implement an individual plan of study under faculty guidance. Additional Prerequisite: Permission of Instructor
Fall or Spring
0.5-2 Course Units

NURS 3030 Contemporary Issues in Human Sexuality and Health
Course content emphasizes theories of sexual development and factors influencing sexual behavior within the continuum of health and illness. Common sexual practices of people are studied within the context of lifestyle and situational life crises. Concepts of normal sexual function and dysfunction are examined. Contemporary sexual issues are explored.
Spring
Mutually Exclusive: NURS 5030
1 Course Unit

NURS 3050 Narrative Matters in Health and Illness Experiences
This course emphasizes the uses of narrative and memoir to consider major themes and events related to the experience of health and illness in the United States as well as the carative role, as either family member or health professional and crafting policy.
Spring
1 Course Unit

NURS 3060 Opioids: From Receptors to Epidemics
This survey course reviews the neuropharmacology of opioids including central and peripheral sites of opioid actions. Opioid receptor pharmacology as well as cellular and molecular neuroadaptations to opioids are discussed in relation to addiction, physical dependence, tolerance, hyperalgesia and withdrawal. Genetic and pharmacogenomic effects on variation of opioid response are also presented. Opioid addiction and the actions of opioids on pain systems are reviewed with an emphasis on their pre-clinical and clinical expression. The effects of regulatory, pharmaceutical and criminal justice forces on opioid prescription in the US are considered vis-a-vis pain management and opioid addiction. Finally, the causes and consequences of the current “opioid epidemic” are reviewed, as well as federal, healthcare and community efforts to address it. Prerequisite: Permission of instructors.
For BSNs: NURS 165
Spring
Mutually Exclusive: NURS 5060
Prerequisite: NURS 1650 OR BIOL 1101 OR BIOL 1121
1 Course Unit

NURS 3120 Nutritional Aspects of Disease
This course provides an advanced understanding of the role of nutrition in integrated biological systems. Students will develop a rigorous comprehension of major clinical disorders, including the underlying pathophysiology and conditions that are affected by nutrition and how optimization of nutritional variables may modulate these processes. A critical overview of the role of nutrition in disease prevention, management and treatment, and in health maintenance will be emphasized throughout the course.
Spring
Mutually Exclusive: NURS 5120
Prerequisite: NURS 0065 OR NURS 1120
1 Course Unit

NURS 3130 Obesity and Society
This course will examine obesity from scientific, cultural, psychological, and economic perspectives. The complex matrix of factors that contribute to obesity and established treatment options will be explored.
Fall
Mutually Exclusive: NURS 5130, NURS 6760
1 Course Unit
NURS 3150 Sociocultural Influences on Health
This course is intended for students interested in U.S/Global Healthcare. It includes lectures, discussions, readings, and written assignments focused on various social, cultural, and economic factors that impact the health and illness perceptions and behaviors of various ethnic and minority groups. In particular, it focuses on how culture affects health and disease, and how health and disease affect culture. This course takes a critical approach to knowledge development by scrutinizing values, theories, assumptions, and practices cross culturally. It relies upon a range of interdisciplinary approaches to analyze how disease is diagnosed, treated, and experienced differently in various cultural contexts. At the same time, students will have the opportunity to examine and critique cultural assumptions and theories, the shifting nature of cultures, the situational use of cultural traditions, and the ethnocentrism of contemporary Western health care. Special attention is given to the influence of race, class, gender, religious, and spiritual ideas about health and illness.
Spring
Mutually Exclusive: NURS 5150
1 Course Unit

NURS 3160 Social Determinants of Global Food Insecurity
A detailed consideration of the nature, consequences, and causes of hunger and undernutrition internationally. Approaches are explored to bringing about change, and to formulating and implementing policies and programs at international, national, and local levels, designed to alleviate hunger and under-nutrition.
Spring
Mutually Exclusive: NURS 5160
1 Course Unit

NURS 3200 Designing to Care: Improving Health and Wellness (SNF Padeia Program Course)
Designing to Care is informed by ideas and skills from across the disciplines of design, nursing, and health research. As an interdisciplinary and project-based course, it actively examines the connection between the design of healthcare, how we communicate health strategies, and the impact of both on individual, institutional, and community wellbeing. Through this course, students are exposed to the content (evidence, research, and misconceptions) and the context (people, places, and systems) that impact health as we generate compelling human-centered design and science-based strategies that can impact the lives of those who live within and beyond our local Philadelphia community. It culminates in the ideation, development, and realization of a collaborative project that strategically communicates, educates, or otherwise works to improve health at the individual, institutional, or community level. The course includes direct, project engagement and guest lectures from healthcare, design, communication, and health research professionals. It incorporates targeted skill building and software training, individual and group activities, class conversations and critiques, and community engagement. From this foundation, the goal is to create real, implementable, and innovative solutions to health and healthcare challenges that embody design in action.
1 Course Unit

NURS 3240 Children's Health in the United States, 1800–2000
This course explores the impact of historical ideas, events, and actors pertaining to the history of children’s health care in the United States. Emphasis is placed on tracing the origins and evolution of issues that have salience for twenty-first century children’s health care policy and the delivery of care. Prerequisite: For Benjamin Franklin Scholars & Nursing Honors Students This course satisfies the History & Traditions Sector for Nursing Class of 2012 and Beyond.
Fall
Also Offered As: GSWS 3240
1 Course Unit

NURS 3270 Foundations of Global Health
This interdisciplinary course covers fundamental concepts of global and population health. Epidemiology and methodology, historical and contemporary contexts, physical (water, air, climate change, and food/ nutrition) and social (health inequalities, sex/reproduction, injury/violence) determinants of health, and interventions for health improvement are addressed. Health problems such as infectious and chronic diseases cannot be understood apart from history, economics, environment, and inequalities - they are not simply medical issues. Global Health refers not only to the health problems of "others" living in far corners of the world (low- and middle-income countries), but also to our own health problems as citizens of a very rich, but very unequal and multicultural nation. The aim of the course is to help students become more informed and active global citizens. Learning methods include faculty presentations, student presentations, and small group discussions. Although this course has a health focus, it is aimed at all students interested in global issues.
Fall
Mutually Exclusive: NURS 5270
1 Course Unit

NURS 3300 Theoretical Foundations of Health Care Ethics
The theoretical foundations of health care ethics including definitions of ethics, history of bioethics and nursing ethics, and the influence of religion, psychology of moral development and philosophy in the development of ethical theory. Nursing code of ethics, changing ideas in ethics, and discussion of the developing profession of nursing are included.
Fall or Spring
1 Course Unit

NURS 3340 Public Policy and the Nation’s Health
This course examines health care and social policy from domestic and international perspectives. It is designed to engage undergraduate students in critical thinking about health policy issues as they affect our health care, employment, taxes, and social investments. The current national debate on health care reform is used as a frame of reference for examining the strengths and weaknesses of health care services in the U.S. from the perspectives of patients/families, health professionals, health services providers, insurers, employers, and public policy makers, and the pros and cons of a range of prescriptions for system improvement from across the political spectrum. About a third of the course focuses more specifically on global public health challenges and the policy strategies for reducing health disparities worldwide. Please note, the online version of this course has a synchronous component (live online class sessions). The day/time will be listed in the course register.
Spring
Mutually Exclusive: NURS 5400
1 Course Unit
NURS 3420 Health of Sexual and Gender Diverse Individuals and Populations Across the Lifespan
Grounded in a nursing perspective that employs a dual strengths-based and health equity lens, we will examine how gender and sexuality, as socially constructed power relations that operate in the individual, interpersonal, community and institutional levels, influence the health outcomes of individuals as well as at the population level. Rooted in a social justice approach, this course explores the interplay between gender, sexuality, and health - within the U.S. and international context and in relation to other axes, including social inequality, class and race. We will examine lifespan development and the milestones associated with each stage as it applies for sexual and gender diverse individuals. Throughout the semester, class participants will use critical thinking skills to examine ecological factors that influence sexual and gender diverse individuals’ health alongside other intersecting facets of identity including race, ethnicity, age, ability/disability, mental and physical health, and other factors that affect individual development and consequent population outcomes. Finally, this course requires an openness and appreciation of a range of perspectives that will enable students to explore and develop a nursing mindset attuned to the unique concerns and health needs of sexual and gender diverse individuals, both in acute care and community health settings.
Spring
Mutually Exclusive: NURS 5420
1 Course Unit

NURS 3430 Global Engagement Seminar
This course is a Global Seminar which includes a travel component; topics vary. Topics and locations may include Chile, Ghana, or China. For more information and to apply: https://global.upenn.edu/pennabroad/pgs.
Mutually Exclusive: NURS 5430
1 Course Unit

NURS 3510 Case Study: Sleep through the Life Span
Sleep is a fundamental behavior related to the pathophysiology of various diseases and to responses/outcomes of diseases and treatments. This case study introduces foundational theories on sleep, diagnosis, measurements, and treatments of various sleep disorders, and the impacts of sleep/sleep disorders in health promotion and the care of illness across the life span. This course aims to prepare nursing students to play a vital role in comprehensive patient care and education in sleep in the community and in various clinical settings. This course also includes 14-hour field work/shadowing at sleep clinics to provide an opportunity to observe and work with individuals who suffer from sleep problems.
Prerequisite: NURS 1630 AND NURS 1640
1 Course Unit

NURS 3520 Case Study: A Community-Based Approach to Mitigating Climate Change and Food Insecurity
The Penn Food and Wellness Collaborative (PFWC), including Penn Park Farm (PPF), was established through seed funding from the Your Big Idea Wellness competition in 2019. To date, we’ve grown nearly 2,500lbs of produce that has been distributed free of charge to food insecure students, HUP employees, and West Philadelphia residents. Using the PPF as a learning laboratory, this course will explore the link between climate change, food insecurity and physical and mental health across the lifespan. Students will engage with community partners to identify the best mechanism for meeting food insecurity and improving physical and mental health among students, faculty and staff on campus and among members of all ages in the communities surrounding Penn. In collaboration with the learning lab, instructor led seminars and discussions support the identification, development and completion of a community-based project.
Fall
Corequisite: NURS 3800
1 Course Unit

NURS 3530 Health Communication in the Digital Age
Health communication spans activities from in-person communication to technology based interventions and mass media campaigns. Health communication interventions are applied across a variety of health promotion and disease prevention activities. In this course, we will explore a variety of approaches to using communication strategies to improve individual and population health. The course will provide an introduction to the theory, design, and evaluation of health communication programs. We will review and critique several health communication interventions. The course will also include a special emphasis on new media and technology, as well as developing practical skills for developing health communication programs.
1 Course Unit

NURS 3540 Case Study - Addressing the Social Determinants of Health: Community Engagement Immersion
This case study offers students experiential learning to develop an in depth understanding of social determinants of health in vulnerable, underserved populations and to collaboratively design and refine existing health promotion programs based on the needs of the community site. Grounded on an approach that builds upon the strengths of communities, this course emphasizes the development of techniques to lead effective, collaborative, health-focused interventions for underserved populations. Students are required to draw on skills and knowledge obtained from previous classes related to social determinants of health and community engagement and will engage in specific creative, innovative community based programs developed for populations across the life span. These culturally relevant programs, which have been shown to positively impact communities, create opportunities for students to address the social determinants of health, build engagement and leadership skills and increase program success and sustainability. Prerequisite: Completion of sophomore year nursing requirements
1 Course Unit
NURS 3550 Case Study: Self-care of Chronic Illness
Self-care is done by lay people to prevent or manage chronic illness. In this case study, we will discuss the history, definitions, predictors, and outcomes of self-care in various chronically ill populations. A focus of discussion will be an in depth exploration of the factors that influence self-care. Understanding these factors will prepare nurses for their role in promoting self-care. Fieldwork experiences are designed to provide practical experience in engaging well individuals in preventing illness and helping chronically ill perform self-care.
Spring
Prerequisite: NURS 1630 AND NURS 1640
1 Course Unit

NURS 3560 Case Study: Culture of Birth
This course will explore the cultural context of birth, the practices and paradigms and the activities of birthing people and professionals and/or attendants. The history of caring for people at birth, international health care, cultural mores/societal values, place of birth, psychosocial factors, ethical decision-making and the role of technology are content areas that will be discussed. Prerequisite: If course requirement not met, permission of instructor required. Open to Nursing and non-Nursing majors. Traditionally, this course includes a weekend long Doula training; after completion, students may serve as Doulas. 2020-2021 Academic year, this course will be offered in both the Fall and Spring semesters.
Spring
Prerequisite: NURS 2150 OR NURS 2250
1 Course Unit

NURS 3570 Case Study: Innovation in Health: Foundations of Design Thinking & Equity-centered Design
Innovation, defined as a hypothesis-driven, testable, and disciplined strategy, is important to improve health & healthcare. Employing new ways of thinking, such as with design thinking, will help open up possibilities of ways to improve health & the process of healthcare. Additionally, equity-centered design integrates features of design thinking with a focus on how the design process impacts the end-users and requires the inclusion of under-resourced communities throughout the design process to ensure that the power differences that lead to oppression, marginalization, and health inequity are removed (Equity Design Thinking, 2022). Incorporating current & emerging social & digital technologies such as mobile apps, wearables, remote sensing, and 3D printing, affords new opportunities for innovation. This course provides foundational content & a disciplined approach to innovation as it applies to health, healthcare, public health and health equity. A flipped classroom approach has the in-class component focusing on group learning through design thinking activities. The course is open to undergraduate nursing students as a case study & upper-level undergraduates and graduate students from across the Penn campus. The course provides a theoretical foundation in design thinking and equity-centered design along with a focus on using a Design Justice Lens and the importance of storytelling. To enhance the didactic component, students will actively participate in a design case study. Students will be matched by interest and skill level with teams & will work with community-based organizations, healthcare providers and/or innovation partners. Student teams will meet with their partners to identify & refine a health, healthcare, public health or health equity problem to tackle. Students will work throughout the semester to create an innovative solution that will be pitched to their community-based organization, healthcare provider, and/or innovation partner at the end of the semester. Prerequisite: Completion of freshman & sophomore level courses
Fall or Spring
Mutually Exclusive: NURS 5730
1 Course Unit

NURS 3580 Case Study: Nurses and the Child Welfare System
Building on knowledge and skill acquired through undergraduate nursing courses, this case study offers nursing majors an in depth and interprofessional opportunity to study research, policy, and practice-based issues in children and families involved with the child welfare system. Special emphasis is placed on the role of the nurse in the child welfare system. Fieldwork experiences will enable students to gain practical experience regarding the needs of children and families with an emphasis on a consideration of how to achieve partnership and create alliances with parents and youngsters.
Fall
Prerequisite: NURS 1630 AND NURS 1640
1 Course Unit

NURS 3590 Case Study: Healthcare Quality and Patient Safety
The 1999 Institute of Medicine Report "To Err is Human: Building a Safer Health System" called national attention to the shocking crisis of patient injury and death in the United States health care systems. This case study examines errors in health care and how nurses, working inter and intra-professionally, contribute to and/or lead quality improvement efforts in health care settings to make care safer. Through classroom discussion, clinical observations and special quality improvement project experience, the student will become familiar with the Science of Improvement grounded in W. Edwards Deming’s body of knowledge called a “System of Profound Knowledge.” The student will also learn patient safety strategies, behaviors and practices that reduce or eliminate the risk of patient harm and develop an appreciation for attributes of an organization that contribute to a strong patient safety culture.
Prerequisite: Completion of sophomore year nursing requirements
Spring
Prerequisite: NURS 1630 AND NURS 1640
1 Course Unit

NURS 3600 Case Study: Nursing Practice for Patients Living with HIV
This course is directed at the need to increase nursing majors knowledge and clinical expertise in the care of persons with HIV/AIDS. Hands on clinical practice with nurses who are AIDS experts will be combined with seminars that provide epidemiologic, clinical assessment, infection control, symptom management, patient teaching, psychosocial, ethical, cultural, political, and policy information.
Fall
Prerequisite: NURS 1630 AND NURS 1640
1 Course Unit

NURS 3610 Case Study: Breast Feeding & Human Lactation
Human milk is recognized universally as the optimal diet for newborn infants. The health benefits of breastfeeding are so significant that a National Health Objective set forth by the Surgeon General of the United States for the year 2010 is to increase the proportion of mothers who breastfeed their babies in the postpartum period. Through classroom and clinical experiences, this course will provide an in depth examination of the anatomy and physiology of lactation, essential aspects of establishing and maintaining lactation, and the nurses’ role in counseling the breastfeeding family. Emphasis will be placed on current research findings in the content area.
Fall
Prerequisite: NURS 1630 AND NURS 1640
1 Course Unit
NURS 3620 Case Study: Nurses leading Complex Care for Individuals and the Caregiving Family using TCM
Many studies reveal that the transitional care needs of people with complex health and social needs and those of family caregivers are poorly managed, often with devastating human and economic consequences. The purpose of this case study is to provide an immersive experience for students with the Transitional Care Model (TCM), supporting engagement with multidisciplinary teams at Penn. This nurse-led, team-based care management strategy has been proven to improve health and quality of life outcomes and reduce costs for at-risk older adults who experience episodes of acute care while supporting their family caregivers. This course will enable students to apply skills foundational to the delivery of evidence-based transitional care.
Fall
1 Course Unit

NURS 3630 Case Study: Aggressive Behavior in Healthcare: Assessment Prevention and Treatment
The escalating incidence and prevalence of aggression in the healthcare setting requires that providers acquire a new set of pragmatic competencies for managing its complex sequelae. This course presents theoretical frameworks for understanding, predicting, preventing and responding to aggressive behaviors across the life span. Historical, bio-behavioral, social, and cultural explanations for aggression will be synthesized and analyzed within the context of multiple points of entry into the health care system across clinical settings. Personal self-awareness, debriefing, and stress management techniques exemplify techniques to prevent untoward consequences in providers. This course also uses exemplars and a range of experiential learning strategies, including skill development, situation analysis, concept mapping, unfolding case studies and cooperative learning, to examine the assessment, prevention, treatment, and response to aggressive behavior in patients and management of its consequences in self and others.
Spring
Prerequisite: NURS 1630 AND NURS 1640
1 Course Unit

NURS 3640 Case Study: Cancer
This elective case study offers students the opportunity to learn about the etiology, diagnosis, and management of cancer across the lifespan. Building on existing clinical knowledge and skills, students will explore cancer care from the perspectives of prevention, early detection, treatment, survivorship, and death. Observational clinical experiences and selected case studies will enhance students’ understanding of patients’ and families’ cancer experience. Class instruction includes small group discussion, case studies, and some lectures. Students will complete 12 clinical hours, to include observation, panels and tours of treatment areas.
Spring
Prerequisite: NURS 1630 AND NURS 1640
1 Course Unit

NURS 3650 Case Study: Case Analysis in Clinical Nutrition
This course is designed for present and future nurse professionals who wish to increase their knowledge of nutrition and expertise and application of knowledge to achieve optimal health of clients and themselves. Principles of medical nutrition therapy in health care delivery are emphasized in periods of physiologic stress and metabolic alterations. Individual nutrient requirements are considered from pathophysiologic and iatrogenic influences on nutritional status. Nutritional considerations for disease states will be explored through epidemiological, prevalence, incidence, treatment and research data. Understanding application of medical nutrition therapy are included through case analysis and field experiences
Spring
Prerequisite: NURS 1630 AND NURS 1640
1 Course Unit

NURS 3670 Case Study: Principles of Palliative Care
This course prepares students to collaborate effectively with an interdisciplinary team in assessing patients and families, and planning and evaluating palliative and end of life care for diverse populations with progressive illness in multiple health care settings. Course content and assignments focus on the nurse’s role in addressing the complex assessment and responses to the psychosocial and spiritual concerns of patients and caregivers across the trajectory of advanced illness.
Fall
Mutually Exclusive: NURS 5570
Prerequisite: NURS 1630 AND NURS 1640
1 Course Unit

NURS 3680 Case Study: Home Health Care
This course examines the major aspects of home-based care across patients’ life spans from acute to long term care. New trends, advances, and issues in home management of complex conditions, innovative delivery systems and legal, ethical and policy consideration will be explored.
Fall
Prerequisite: NURS 1630 AND NURS 1640
1 Course Unit

NURS 3690 Case Study: Caring for Patients with Opioid Use Disorder
This course examines opioid use disorder and the current opioid overdose crisis from a nursing perspective. Students will explain the neurophysiology underlying the disease, risk factors for its development, and common co-occurring diagnoses. We will explore the health consequences associated with the disorder and review approaches for effective treatment, with an emphasis on harm reduction interventions. Historical, sociocultural, legal and policy implications which frame the disease will be discussed with an understanding of the effects of stigma on approaches to care. Students engage in the critical analysis of literature, research, and engage in observational/fieldwork experiences addressing the biopsychosocial needs of individuals with opioid use disorder.
Fall
Prerequisite: NURS 1650 AND NURS 2350 AND NURS 3340
Corequisites: NURS 2350, NURS 3340
1 Course Unit
NURS 3750 Nutrition Throughout the Life Cycle
Understanding and meeting nutritional needs from conception through adulthood will be addressed. Nutrition-related concerns at each stage of the lifecycle, including impact of lifestyle, education, economics and food behavior will be explored.
Fall, odd numbered years only
Prerequisite: NURS 0065 OR NURS 1120
1 Course Unit

NURS 3760 Issues in Nutrition, Exercise, and Fitness
An examination of the scientific basis for the relationship between nutrition, exercise and fitness. The principles of exercise science and their interaction with nutrition are explored in depth. The physiological and biochemical effects of training are examined in relation to sports performance and prevention of the chronic diseases prevalent in developed countries.
Spring
1 Course Unit

NURS 3770 Weight Management: Principles and Practices of Obesity Treatment
This course focuses on the principles and theories guiding the clinical care and treatment of people with obesity across the lifespan. We will discuss the effectiveness and evidence-base supporting a variety of obesity treatments diet, physical activity, behavioral therapy, pharmacological, surgical, and combined approaches. Emphasis will be placed on the practical aspects of providing obesity education and counseling to assist individuals and families in attaining and maintaining a healthy weight.
Spring
Prerequisite: NURS 0065 OR NURS 1120
1 Course Unit

NURS 3800 Nursing in the Community
This course considers how nursing influences the health and healing capacities of both communities as a whole (populations) and of groups, families, and individuals living within particular communities locally and globally. It addresses the complexity of nursing practice using a public health paradigm. It requires students to draw from prior class and clinical knowledge and skills and apply this practice base to communities across care settings, ages, and cultures with different experiences of equity and access to care. It provides the tools needed to engage in collaborative community work and to give voice to the community's strengths, needs, and goals. It also moves students from an individual and family focus to a population focus for health assessment and intervention. Students consider the science, policies, and resources that support public health, and community based and community-oriented care. Clinical and simulated experiences in community settings provide sufficient opportunities for clinical reasoning, clinical care and knowledge integration in community settings. Students will have opportunities to care for patients and populations within selected communities.
Fall
Prerequisite: NURS 2450 AND NURS 2550 AND NURS 2150 AND NURS 2250 AND NURS 2350
1.5 Course Unit

NURS 3820 Public Health Nursing Care in Communities
This course considers how nursing influences the health and healing capacities of both communities as a whole (populations) and of groups, families, and individuals living within particular communities locally and globally. It addresses the complexity of nursing practice using a public health paradigm. It requires students to draw from prior class and clinical knowledge and skills and apply this practice base to communities across care settings, ages, and cultures with different experiences of equity and access to care. It provides the tools needed to engage in collaborative community work and to give voice to the community's strengths, needs, and goals. It also moves students from an individual and family focus to a population focus for health assessment and intervention. Students consider the science, policies, and resources that support public health, and community based and community-oriented care. Clinical and simulated experiences in community settings provide sufficient opportunities for clinical reasoning, clinical care and knowledge integration in community settings. Students will have opportunities to care for patients and populations within selected communities.

NURS 3860 Benjamin Franklin Scholars in Nursing Capstone Honors Research Project
This course is an advanced seminar for research and scholarship to be taken by Benjamin Franklin Scholars in Nursing. Enrollment is concurrent with student's final year of studies and entails undertaking a capstone project for Benjamin Franklin Scholars in Nursing. Practical considerations in carrying out such a project, including scholarly approach and scientific integrity as well as scholarly writing and dissemination will be discussed and illustrated, using exemplars and student projects. The various phases of students' projects will be used as launching points for discussions and to complement students' work with their faculty supervisor. Paths and planning for careers in nursing and related disciplines and the idea of scholarly trajectories will be developed throughout the course.
Prerequisite: NURS 5470
0.5 Course Units
NURS 3890 Research/Inquiry-Based Service Residency
This course is designed to facilitate students' intellectual curiosity and independence in exploring the research process in an area of interest. Similar to clinical practica, NURS389 serves as the research practicum for NURS230 and NURS547. In this applied course, students will engage in a structured, hands-on faculty-mentored experience. Students will be contacted approximately 6-10 weeks prior to the start of the semester of enrollment to either: 1) submit a proposal to work on an existing project with an established mentor, or 2) identify their key areas of interest and select from an existing list of projects/preceptors that varies by semester. Students will be matched with a research preceptor based on their selections and, in collaboration with their preceptor, they will define learning objectives to guide their individualized plan of study. Students have opportunities to experience systematic methods for research, service-based clinical inquiry, or quality improvement. This mentored residency can be fulfilled by completing one of the following options: * Research-based practicum in basic or social science, clinical research, nursing history, healthcare policy, ethics, or informatics. * Inquiry-based Service practicum such as conducting quality improvement procedures or program evaluations in an affiliated healthcare institution. Students must register for both the lecture and recitation sections. For the recitation section students are expected, with the assistance of their advisor, to allocate 2 hours of work outside of class each week towards their project. Students can schedule this work based on their own schedule but must be prepared to complete the work each week. The course is taken in the final semester of the senior year.
Fall or Spring
Prerequisite: NURS 5470
.5 Course Units

NURS 3900 Leadership in the Complex Healthcare System
This two-part course provides the didactic and clinical experiences in increasingly complex nursing care situations and environments which facilitate the students’ transition to independent practice. In the lecture component, the focus is on the integration of knowledge and skill for nursing practice and develops the ability of students to see nursing practice as part of a complex system. It examines systems thinking and complexity, development of a leadership role and skills, inter-professional communication and teamwork, and leading change in healthcare organizations. This course also examines the nurse’s role in improvement science and patient care delivery, focusing on quality improvement processes, patient safety, nurse sensitive process and outcome metrics with micro-systems. This course also allows students to develop the capacity for clinical expertise, leadership, and for translating the science of the profession into practice. Students also are assigned to a seminar component that is correlated with their selected site for the specialty clinical practicum. This aspect of the course allows the student to further develop leadership concepts learned in lecture while developing additional expertise in a specialty area of practice. These seminar components are adult health and illness, adult critical care, obstetrics/labor & delivery, and pediatrics. Advanced simulation experiences and extensive clinical practice in an area of the students' choice provide multiple opportunities to synthesize the multidimensional aspects of nursing and provide the environment which facilitates transition to professional nursing practice. Students select from a variety of settings in which to refine their practice skills. Principles of leadership, accountability and change will be applied to clinical practice as the student begins to operationalize the professional nursing role. Emphasis is placed on the nurse as a knowledgeable provider of health care who is both a change agent and advocate.
Fall or Spring
Prerequisite: NURS 3800
3 Course Units

NURS 4000 Advances In Health Systems Research And Analysis
Capstone Course for NURS/WH Joint Degree Students. Prerequisite: By Permission Only
Spring, even numbered years only
1 Course Unit

NURS 5000 Introduction to Principles and Methods of Epidemiology
This course provides an introduction to epidemiologic methods and overview of the role of epidemiology in studies of disease etiology and in the planning, delivery and evaluation of health services. The population-based approach to the collection and analysis of health data will be emphasized throughout the course. Through textbook reading, problems sets, class discussion and review of the recent literature, students will become acquainted with the basic designs of epidemiologic studies in theory and in practice. Students will develop the basic skills necessary to use epidemiologic knowledge and methods as the basis for scientific public health practice. Background in elementary statistics is a prerequisite for this course.
Spring
1 Course Unit
NURS 5010 Ways of Knowing for Nursing Practice I: Assessment of Health
This course is designed to develop knowledge and skill acquisition for the health assessment of individuals which includes taking a health history and performing/documenting a physical assessment. Students engage in active learning strategies including instructor demonstration and supervision of physical examination practice sessions in the clinical learning laboratory. Students prepare via self-learning activities with a variety of supplied resources such as readings, media, and audio/visual adjunctive etc. Students refine their skills through faculty supervised practice sessions. Procedural skills that correlate with the presentation of physiological system assessment are included. Along with skill acquisition for physical assessment, the student will also recognize the value of storytelling and narratives that can support the change of attitudes and behaviors. Students will be introduced to the use of narratives and its impact to support and manage the health of individuals and populations.

Fall
1.5 Course Unit

NURS 5020 Ways of Knowing for Nursing Practice II: Promoting Health & Health Equity
This course is the first of a series of two courses (pre-cursor to NURS 5100) laying the foundation for the exploration of how psychological, behavioral, cognitive, and social development influences the lived experiences of individuals, families, and communities across the lifespan. Emphasis is placed on the role of the professional nurse to promote and deliver socially just care. Students recognize social determinants of health for assessment and health teaching in the preparation for NURS 5100. Extant theories are examined with respect to issues of health care access, health history, health promotion, and issues of equity and diversity. Students refine communication skills and interviewing processes needed for socially attuned health history and teaching that promote psychological wellbeing and healthy lifestyles. Using advanced communication strategies, students learn to engage with individuals and families in behavioral health promotion strategies. They also provide opportunities to develop prioritized health teaching plans in partnership with that individual.

Fall
Corequisite: NURS 5010
0.5 Course Units

NURS 5030 Contemporary Issues in Human Sexuality and Health
Emphasizes the theories of sexual development and sexual behavior within the continuum of health and disease. Common sexual practices of people are studied in relation to life-style and/or situational life crisis. Contemporary issues in sexuality and health will be examined. Prerequisite: Junior and Senior Undergraduates. Open to all graduate students This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

Spring
Mutually Exclusive: NURS 3030
1 Course Unit

NURS 5040 Nursing Caring for the Individual Adult and Across Populations
This course considers how nursing influences the health and healing capacities across the continuum of care from young to older adults experiencing functional status impairments. Content includes the knowledge and skill acquisition needed to care for these individuals at particular moments, across the continuum of care, and through transitions in an illness experience. It addresses nursing phenomena of concern, including risk factors for illness or injury, strategies to overcome barriers and support personal health resources, alleviate suffering, and reduce the impact of illness or injury on the functioning of the person. Content and clinical experiences integrate developmental and role issues; policy, cultural, and ethical considerations. Onsite and off-site clinical experiences help to guide skill acquisition for clinical reasoning, clinical care, and knowledge integration.

Spring
Prerequisite: NURS 5010 AND NURS 5020 AND NURS 5070 AND NURS 5100
Corequisite: NURS 5140
1.5 Course Unit

NURS 5050 Nurses Coordinating Care for Adults and Older Adults
This course focuses on the management of transitions in care for adults, older adults, and their family caregivers. Nurses working with "at risk" populations and their caregivers manage transitions across health care settings and through stages of illness severity with a focus on team-based care coordination. Nurses are well positioned to be key influencers and leaders of these transitional care processes. ([Penn Nursing website](https://www.nursing.upenn.edu/live/news/1610-new-open-online-course-focused-on-transitional) Clinical learning activities will focus on intentional collaboration across professions and with care team members, patients, families, and communities to optimize care, enhance the healthcare experience, and strengthen outcomes. Students will acquire skills for building interprofessional partnerships that involve coordinated, integrated, and collaborative implementation of the unique knowledge, beliefs, and skills of the full team for the end purpose of optimized care delivery. Effective collaboration requires an understanding of team dynamics and an ability to work effectively in care-oriented teams. Onsite and off-site Clinical experiences help to guide skill acquisition for clinical reasoning, clinical care, and knowledge integration.

Spring
Corequisite: NURS 5040
1.5 Course Unit

NURS 5060 Opioids: From Receptors to Epidemics
This survey course reviews the neuropharmacology of opioids including central and peripheral sites of opioid actions. Opioid receptor pharmacology as well as cellular and molecular neuroadaptations to opioids are discussed in relation to addiction, physical dependence, tolerance, hyperalgesia and withdrawal. Genetic and pharmacogenomic effects on variation of opioid response are also presented. Opioid addiction and the actions of opioids on pain systems are reviewed with an emphasis on their pre-clinical and clinical expression. The effects of regulatory, pharmaceutical and criminal justice forces on opioid prescription in the US are considered vis-a-vis pain management and opioid addiction. Finally, the causes and consequences of the current "opioid epidemic" are reviewed, as well as federal, healthcare and community efforts to address it. Permission of Instructor required.

Fall
Mutually Exclusive: NURS 3060
1 Course Unit
NURS 5070 Pathophysiologic Mechanisms & Pharmacologic Interventions in Caring for Individuals and Populations
Pathophysiologic mechanisms are introduced with emphasis on concepts and processes involving acute and chronic illnesses and their therapeutic interventions. For major classes of drugs, the physiological and pathophysiological rationales are discussed for each drug indication, mechanisms of drug action, individualized dosing implications, and adverse drug events. The course content enhances the student's comprehension of the scientific complexity of therapeutic interventions in various conditions and builds upon the foundational sciences. Additionally, the course provides active learning experiences to gain scientific knowledge and skills in preparing to administer and monitor drugs and therapies in a safe and effective manner.
Fall
Prerequisite: NURS 1630 AND NURS 1640 AND NURS 0068
2 Course Units

NURS 5090 The Child with Special Healthcare Needs
This course is designed to assist prospective practitioners develop advanced skills in identifying the needs and interventions for medically fragile neonates, children and their families.
Summer Term
1 Course Unit

NURS 5100 Nurses Caring for Psychiatric Mental Health of Individuals: Theory & Behavioral Health Management
This is the second of two-course series (follows NURS5020) that explores the intersection of psychological, behavioral, emotional, cognitive, and social development with the lived experiences of individuals, families, and communities across the lifespan. This course provides an opportunity for the novice to begin to apply the knowledge and skills for the delivery of culturally responsive nursing care of patients with diverse conditions along the mental health continuum. The course addresses nursing phenomena, the development of healing relationships with or within individuals, families, and groups. Simulated and observational experiences provide students with opportunities to acquire and apply knowledge necessary for conducting a comprehensive health history of an individual situated within a diverse community. Clinical and simulation experiences provide sufficient opportunities for therapeutic use of self, clinical reasoning, best clinical practices, and knowledge integration.
Fall
Prerequisite: NURS 5020
Corequisites: NURS 5010, NURS 5070
1.5 Course Unit

NURS 5110 Loss, Grief and Bereavement
Loss, grief and bereavement are pervasive aspects of the human experience. The content of this course provides a basis both for personal development and professional growth. Through a series of seminars, key issues surrounding loss, death, dying, grief and bereavement will be examined.
Fall
1 Course Unit

NURS 5120 Nutritional Aspects of Disease
This course provides an advanced understanding of the role of nutrition in integrated biological systems. Students will develop a rigorous comprehension of major clinical disorders, including the underlying pathophysiology and conditions that are affected by nutrition and how optimization of nutritional variables may modulate these processes. A critical overview of the role of nutrition in disease prevention, management and treatment, and in health maintenance will be emphasized throughout the course.
Spring
Mutually Exclusive: NURS 3120
1 Course Unit

NURS 5130 Obesity and Society
This course will examine obesity from scientific, cultural, psychological, and economic perspectives. The complex matrix of factors that contribute to obesity and established treatment options will be explored. 
Prerequisite: Undergraduate by permission of instructor This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Fall or Spring
Mutually Exclusive: NURS 3130, NURS 6760
1 Course Unit

NURS 5140 Advancing Leaders in Health & Health Equity
This course is designed to enhance one's understanding of leadership concepts and theory to phenomena of concern to nursing, contextualizing societal meanings of nursing practice and professionalism. Students will explore current trends and issues related to professional nursing practice and health care delivery. Emphasis is placed on optimization of health through transforming health care systems and developing a vision for nursing of leading in this transformation. Students will begin a leadership journey appreciating their ability to know oneself as leader, representing and communicating the nursing perspective to others, and advocating for self.
Spring
Prerequisite: NURS 5010 AND NURS 5020 AND NURS 5070 AND NURS 5100
.5 Course Units

NURS 5150 Sociocultural Influences on Health
This course is intended for students interested in U.S/Global Healthcare. It includes lectures, discussions, readings, and written assignments focused on various social, cultural, and economic factors that impact the health and illness perceptions and behaviors of various ethnic and minority groups. In particular, it focuses on how culture affects health and disease, and how health and disease affect culture. This course takes a critical approach to knowledge development by scrutinizing values, theories, assumptions, and practices cross culturally. It relies upon a range of interdisciplinary approaches to analyze how disease is diagnosed, treated, and experienced differently in various cultural contexts. At the same time, students will have the opportunity to examine and critique cultural assumptions and theories, the shifting nature of cultures, the situational use of cultural traditions, and the ethnocentrism of contemporary Western health care. Special attention is given to the influence of race, class, gender, religious, and spiritual ideas about health and illness.
Spring
Mutually Exclusive: NURS 3150
1 Course Unit
NURS 5160 Social Determinants of Global Food Insecurity
A detailed consideration of the nature, consequences, and causes of hunger and undernutrition internationally. Approaches are explored to bringing about change, and to formulating and implementing policies and programs at international, national, and local levels, designed to alleviate hunger and under-nutrition. Prerequisite: Graduate Students Only
Spring
Mutually Exclusive: NURS 3160
1 Course Unit

NURS 5180 Nursing and the Gendering of Health Care in the United States and Internationally, 1860-2000
This course examines changing ideas about the nature of health and illness; changing forms of health care delivery; changing experiences of women as providers and patients; changing role expectations and realities for nurses; changing midwifery practice; and changing segmentation of the health care labor market by gender, class and race. It takes a gender perspective on all topics considered in the course. A comparative approach is used as national and international literature is considered. This focus is presented as one way of understanding the complex interrelationships among gender, class, and race in health care systems of the United States and countries abroad.
Spring
Also Offered As: GSWS 5180
1 Course Unit

NURS 5190 Nursing Caring for Family I: Sexual and Reproductive Health
From the lens of person and family-centered sexual and reproductive health, this course focuses on nursing care, health promotion/disease prevention, and health equity for individuals, families, and populations across the reproductive life cycle. Students are introduced to evidence-based nursing practice designed to support and enhance perinatal health and newborn care. Emphasis is placed on the understanding of how social determinants impact sexual and reproductive health. Additionally, this course addresses concepts of gender identity, sexual orientation, and sex assigned at birth with a focus on how to promote and provide individualized, evidence-based, and respectful sexual and reproductive health care. There are opportunities for students to make connections between caring for families both locally and globally. Clinical and laboratory experiences provide opportunities for students to develop, refine, and apply knowledge and skills for the delivery of sexual and reproductive health care for this population.
Summer Term
Prerequisite: NURS 5050
1.5 Course Unit

NURS 5200 Nurses Caring for Family II: Pediatric Health and Wellness
Building on prior learning of the family, this course focuses on nursing care that influences the health and healing capacities of infants, children, adolescents, and their families. It focuses on the knowledge and skill acquisition needed to care for these individuals at particular moments, across the continuum of care, and through transitions in an illness experience. It addresses pediatric nursing phenomena of concern from infancy through adolescence using a developmental and systems approach. Family-centered care incorporates pediatric transitions of care evidenced in the health maintenance of the well-child and as well as in the illness-recovery continuum. The course emphasizes clinical reasoning; family-centered strategies for optimizing health and maintaining individuality; promoting optimal developmental, physiological, and psychological functioning; and enhancing strengths within the context of family and social determinants of health to promote and advance health and health equity. Clinical experiences provide sufficient opportunities for clinical reasoning, clinical care, and knowledge integration.
Summer Term
Prerequisite: NURS 5050
1.5 Course Unit

NURS 5210 Current Topics in Nutrition
The objective of the course is to integrate the nutrition knowledge obtained from previous course work in nutrition and provide the student the opportunity to explore, analyze and formulate implications of the research and related literature on a self-selected topic under the guidance of the faculty coordinator. Current topics and controversies in nutrition will be discussed weekly. Readings will be assigned in coordination with each discussion topic and students will be required to seek out other sources of information to add to the class discussion. Topics will change from year to year to reflect the most recent interests and issues.
Not Offered Every Year
0.5-1 Course Unit

NURS 5230 Advanced Nutrition: Molecular Basis of Nutrition
Essentials of nutritional biochemistry of macronutrient (protein, carbohydrate, lipid) metabolism from the molecular level to the level of the whole human organism. Linkages between energy and nitrogen balance and states of health and disease are examined. Topics include energy metabolic pathways, nutrient transportation, nutrient catabolism, nutrient anabolism, body composition, and biomarkers.
Prerequisite: NURS 0065 OR NURS 1120
1 Course Unit

NURS 5240 Advanced Human Nutrition and Micronutrient Metabolism
Essentials of vitamin and mineral digestion, absorption, metabolism, and function in humans during states of health and disease are examined. Linkages between key vitamins and their function in biological systems, such as bone health, energy metabolism, hematopoietic function, and immune function, are explored in depth. Topics include pertinent research methodologies, biomarkers, deficiency and toxicity states, and requirements across the life cycle. Prerequisite: Special permission
Prerequisite: NURS 0065 OR NURS 1120
1 Course Unit
NURS 5250 Ethical Aspects of Health and Technology
Interdisciplinary approach to the study of the interface between ethics and law in the provision of health and illness care. This course draws upon the disciplines of philosophy, law, biomedical engineering and nursing in examining such concepts as the use/non-use of biomedical technology, who and how one decides what shall be done for a given patient, and the rights and responsibilities (accountability) of all persons involved in health/illness care decisions. The interplay of ethical theory, personal value systems, law and technology will be stressed throughout. Lectures, seminars and case studies will be used.
Spring
Prerequisite: NURS 0065 OR NURS 1120
1 Course Unit

NURS 5260 Child and Adolescent Mental Health
This course is designed to prepare advanced practice registered nurses to address mental health concerns of children, adolescents and their families from a bio-psycho-socio-cultural perspective. Prevention, assessment, and treatment of psychiatric disorders affecting children and adolescents in a variety of settings will be presented in the context of mental health, school and primary health care delivery systems. Students will explore both pharmacologic and nonpharmacologic treatment strategies, as well as methods to identify and implement evidence-based practice in child and adolescent populations. Mental health policy, as well as the unique needs of special populations (e.g., youth in the juvenile justice system) will also be discussed. Prerequisite: Matriculation in a MSN Program or permission of instructors. Priority will be given to Psychiatric Mental Health NP students
Spring
1 Course Unit

NURS 5270 Foundations of Global Health
This interdisciplinary course covers fundamental concepts of global and population health. Epidemiology and methodology, historical and contemporary contexts, physical (water, air, climate change, and food/nutrition) and social (health inequities, sex/reproduction, injury/violence) determinants of health, and interventions for health improvement are addressed. Health problems such as infectious and chronic diseases cannot be understood apart from history, economics, environment, and inequalities - they are not simply medical issues. Global Health refers not only to the health problems of others living in far corners of the world (low- and middle-income countries), but also to our own health problems as citizens of a very rich, but very unequal and multicultural nation. The aim of the course is to help students become more informed and active global citizens. Learning methods include faculty presentations, student presentations, and small group discussions. Although this course has a health focus, it is aimed at all students interested in global issues.
Fall
Mutually Exclusive: NURS 3270
1 Course Unit

NURS 5290 Consumer and Personal Health Informatics
This course is designed to develop intelligent consumers, managers, and researchers of telehealth and personal health/consumer health informatics systems through guided exploration into the components of such systems. The course is designed to introduce many of the challenges facing designers and managers of telehealth/ mHealth and remote health care delivery networks. The spectrum of activity ranging from research into implications of system design for applications that bridge geographic distance to the development of practical applications to promote patient engagement is considered in both historical context and in case studies. The current status and future trends of this emerging domain are reviewed. It is recommended that students have some exposure to health care or health systems prior to enrolling in this course.
NOTE: Non-majors need permission from the department.
Fall
Also Offered As: BMIN 5090
1 Course Unit

NURS 5300 Nurses Caring for and across Communities
This course is designed to emphasis how nursing influences the health and healing capacities of both communities as a whole (populations) and of groups, families, and individuals living within particular communities locally and globally. It underscores community-based nursing practice within a public health paradigm. It requires students to draw from prior coursework and clinical knowledge and skills and apply this practice base to communities across care settings, ages, and cultures with different experiences of equity and access to care. It provides the tools needed to engage in collaborative community work and to give voice to the community’s strengths, needs, and goals. It also moves students from an individual and family focus to a population focus for health assessment and intervention. Students construct health promotion initiatives and efforts to engage community in upstream interventions toward improving health and health equity. Clinical and simulated experiences in community settings provide sufficient opportunities for clinical reasoning, clinical care, and knowledge integration in community settings.
Summer Term
1.5 Course Unit

NURS 5320 Cognitive Behavioral Strategies in Health Care
Cognitive therapy will be studied as it has been adapted to treat a broad spectrum of clinical disorders including depression, anxiety, phobias, substance, obesity, marital problems, sexual dysfunction, and psychosomatic disorders. Students will have an opportunity to study and observe the crucial link between thoughts and emotions and the sense of competency patients can develop through self-help techniques. The course utilizes didactic, experiential and observational techniques.
Spring
1 Course Unit

NURS 5350 Comparing Health Care Systems in an Intercultural Context: Study Abroad
This course offers students an opportunity to: 1) expand their knowledge base in health care systems; 2) develop intercultural competency skills and 3) shape a conceptual framework for improving the quality of health care for the individual, the family, the community and society at large. Emphasizes the relational, contextual nature of health care and the inseparability of the notions of the health of individuals and the health of family, society, and culture. Includes field experience. Prerequisite: Permission of instructor Seminar held in Spring, study abroad field experience held intra-session
Spring
1 Course Unit
NURS 5370 Systems Approach for Promoting Safe Nursing Practice
In this course, students are introduced to integrative system approaches to assess and solve problems intrinsic to nursing practice. Students explore a new way of thinking about and resolving complex, persistent problems and the factors that contribute to unsafe practices. This course examines errors in health care and how nurses, working inter and intra-professionally, contribute to and/or lead in quality improvement efforts. Through classroom discussion, the student will learn patient safety strategies, behaviors, and practices that reduce or eliminate the risk of patient harm and develop an appreciation for attributes of an organization that contribute to a strong patient safety culture.
Summer Term
0.5 Course Units

NURS 5380 Summer Innovation Institute: Collaborative Design & Co-Creation for Health Equity
Innovation is necessary to achieve health equity. However, the human-centered approach of design thinking, a powerful tool of innovation, does not guarantee equitable solutions. It must be complemented by equity-centered models. These approaches focus on collaboration and co-creation. Collaborative work that centers the voices of, and engages with, all stakeholders and members of interested communities ensures that innovative design thinking solutions reflect the needs and preferences of the intended audiences. This one-week, in-person intensive workshop provides participants the opportunity to explore design thinking, equity-centered design by co-collaboratively putting them into practice. During a series of dynamic and interactive sessions throughout each morning, attendees will engage in lecture, discussions, and a variety of activities regarding how we can move the needle towards health equity through the integration of human-centered design, participatory models, and entrepreneurship principles. Institute faculty and speakers will provide insight into how design thinking and equity-centered design have already transformed health as well as the importance of addressing equity in all aspects of the process. Come with ideas, leave with frameworks, contact, and plans.
Summer Term
0.5 Course Units

NURS 5400 Current Issues In Health and Social Policy
Analysis of key contemporary issues in health and social policy that will provide students with a deeper understanding of the design and structure of the U.S. health care system, the policy initiatives that have shaped it, and the roles of the government, the private sector, and consumers and advocacy groups in setting the policy agenda. Seminars will examine the origins of each issue, the policies enacted and their effects, both intended and unintended, and will propose and debate the merits of alternative policy solutions. The role of health services and policy research in informing the policy debate and directions will be highlighted. Please note, the online version of this course has a synchronous component (live online class sessions).
Fall, Spring, and Summer Terms
Mutually Exclusive: NURS 3340
1 Course Unit

NURS 5420 Health of Sexual and Gender Diverse Individuals and Populations Across the Lifespan
Grounded in a nursing perspective that employs a dual strengths-based and health equity lens, we will examine how gender and sexuality, as socially constructed power relations that operate in the individual, interpersonal, community and institutional levels, influence the health outcomes of individuals as well as at the population level. Rooted in a social justice approach, this course explores the interplay between gender, sexuality, and health within the U.S. and international context and in relation to other axes, including social inequality, class and race. We will examine lifespan development and the milestones associated with each stage as it applies for sexual and gender diverse individuals. Throughout the semester, class participants will use critical thinking skills to examine ecological factors that influence sexual and gender diverse individuals’ health alongside other intersecting facets of identity including race, ethnicity, age, ability/disability, mental and physical health, and other factors that affect individual development and consequent population outcomes. Finally, this course requires an openness and appreciation of a range of perspectives that will enable students to explore and develop a nursing mindset attuned to the unique concerns and health needs of sexual and gender diverse individuals, both in acute care and community health settings.
Spring
Mutually Exclusive: NURS 3420
1 Course Unit

NURS 5430 Global Health Seminar
Global course topics vary by section. Please contact the program for additional details.
1 Course Unit

NURS 5450 Maternal and Infant Care in the Americas
This clinical elective will provide an intensive historical, sociopolitical, and cultural perspective of health and health care delivery in the Americas with a special emphasis on Latin America and the Caribbean. Classroom, direct clinical care and field experiences are designed to provide students with a broad view of the history and culture system of the country of focus. The delivery of health care to women and children will be explored from a sociopolitical, cultural and historical context. Service learning experiences are an integral component of this course. The course includes 5 seminars on campus and 10-14 days on site in the country of focus. The country of focus may vary each semester. Prerequisite: Permission of instructor
Spring
1 Course Unit
NURS 5470 Scientific Inquiry for Evidence-based Practice
This course is designed to advance students' understanding of the research process, methods of scientific inquiry, and analytical techniques. Students acquire knowledge of systematic approaches used by scientists to design and conduct studies. Course content prepares students to appraise quantitative and qualitative research, and evaluate the scientific merit and clinical significance of research for translation into practice. Evidence-based guidelines are examined and rated for strength of evidence and expert consensus using evidence grading systems and defined criteria. Students engage in variety of creative learning experiences to facilitate appreciative inquiry, clinical reasoning, and evidence-based practice. Quality improvement, comparative effectiveness analyses, information science, and electronic health systems technology demonstrate the capacity for measurement and surveillance of nursing-sensitive and other outcomes used to evaluate quality nursing care and test interventions. Ethical, legal and health policy implications for research are explored. This course serves as the basis for scientific inquiry about human experiences to address important problems that require solutions and to expand the research and the evidence base for professional nursing practice.
Fall or Spring
Prerequisite: NURS 2300 OR STAT 1010 OR STAT 1110
1 Course Unit

NURS 5480 Negotiations in Healthcare
This course examines the process that leads to change in health care settings and situations. Students will develop skills that lead to effective negotiations in interpersonal and organizational settings. Included in the discussion are: concepts of organizational structure and power, negotiating in difficult situations, and the role of the health care professional in negotiation and change. The course also examines techniques leading to successful implementation of negotiated change in the practice setting. Prerequisite: Undergraduates must have permission of instructor
Fall
1 Course Unit

NURS 5490 Human Resources Management in Healthcare
Today's healthcare industry continues to be highly turbulent in nature presenting many challenges for leaders in the workplace. Competency in workforce planning and recruitment, selection and retention of top talent for organizational innovation and growth are essential for nursing leaders. Utilizing the American Organization of Nurse Executives (AONE) Competencies (2006) as a curricular guide, this course emphasizes human resources management skills essential for any nurse leader to address employee relations challenges and provide for an enriching work environment.
Summer Term
1 Course Unit

NURS 5530 Innovation & Applied Technology in Health Care
This course is offered to undergraduate and graduate students from across the Penn campus who want to join interdisciplinary teams that tackle health care challenges using technology in the form of games, apps, websites, or other technology. Students from nursing, engineering, computer science, design, marketing, or communication, or other schools or departments will be matched by interest and skill to multidisciplinary teams. Types of technology, theory of gaming, motivation, and incentives to change health behaviors are a few of the topics that may be identified as a project. The course provides a forum for germinating and developing conceptual models, programming, using game theory for therapeutic interventions, and entrepreneurship. Examples of such applications are medication management tools, health risk detectors, games that teach health skills and behaviors, e-prescribing applications, recruitment tools for greater diversity in nursing, applications that improve the workflow in health care settings, and applications that promote patient-centered care.
Spring
0.5 Course Units

NURS 5570 Principles of Palliative Care
This course examines national and global perspectives and clinical issues in the delivery of palliative care with diverse populations in multiple health care settings. Students focus on the care of persons with life-threatening, progressive illness, emphasizing respect for patients' and families' beliefs, values, and choices. Students also explore psychosocial and spiritual dimensions of palliative care. Historical, sociocultural, economic, legal, and ethical trends in palliative care are discussed. Factors affecting health care systems and societal attitudes are considered in evaluating the delivery of care during advanced illness and at the end of life. Students engage in the critical analysis of literature, research, and observational experiences concerning biopsychosocial needs of patients and families. Students acquire competencies in patient/family assessment, communication, decision-making, and interdisciplinary collaboration in palliative care. Prerequisite: Undergraduate Students need permission This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Fall
Mutually Exclusive: NURS 3670
1 Course Unit
NURS 5600 Nurses Leading in Complex Care
This course requires students to apply knowledge of complex nursing care situations and environments to facilitate the students’ transition to practice. Didactic teaching helps learner to integrate knowledge and skills for nursing practice and develops the ability of students to see nursing practice as part of a complex system. It reinforces systems thinking and complexity, development of a leadership role and skills, inter-professional communication and teamwork, and leading change in healthcare organizations. This course also allows students to develop the capacity for clinical expertise, leadership, and for translating the science of the profession into practice. Students also are assigned to a seminar component that is correlated with their selected site for the specialty clinical practicum. This aspect of the course allows the student to further develop leadership concepts learned in lecture while developing additional expertise in a specialty area of practice. Advanced simulation experiences and extensive clinical practice in an area of the students’ choice provide multiple opportunities to synthesize the multidimensional aspects of nursing and provide the environment which facilitates transition to professional nursing practice. Students select from a variety of settings in which to refine leadership and practice skills. Principles of leadership, accountability and change will be applied to clinical practice as the student begins to operationalize the professional nursing role.
Fall
Prerequisite: NURS 5300
2 Course Units

NURS 5650 Advocacy & Public Health: Turning Knowledge into Action
This course is designed to provide the foundational context and practical skills necessary to effectively identify public health problems, craft evidence-based solutions and advocate for those solutions in furtherance of public health objectives. The class will be interactive in nature and will require participation in public health advocacy exercises in order to hone advocacy skills. There will also be a focus on persuasive communication, both oral and written. We will explore the entire advocacy process from the identification of a problem and evaluation of possible public health policy solutions to utilizing the full range of advocacy tools to promote policy change. We will be using real-time examples of public health challenges affecting the health, safety and well-being of children and families here in Philadelphia and in communities across the country. Students will apply advocacy skills during an Injury & Violence Prevention Hill Day in Washington, D.C. with national partners.
Not Offered Every Year
Also Offered As: HPR 6370, PUBH 6370
Prerequisite: PUBH 5050 OR PUBH 5070
1 Course Unit

NURS 5670 An Evidence-based Approach to Managing Symptoms in Advanced Illness
This course uses an evidence-based approach towards systematic assessment and management of common symptoms and symptom clusters accompanying progressive, life-limiting illnesses within a framework of nationally recognized standards and guidelines for palliative and end-of-life care. Students are prepared to apply principles of palliative management to diverse patient populations across clinical settings including acute, primary, long-term, and community care. Refer to course syllabus or email course faculty for respective requirements. Prerequisite: Junior and senior undergraduates may be admitted with course faculty permission
Spring
1 Course Unit

NURS 5700 Foundations of Public Health
This course will provide a topical overview of the inter-disciplinary field of public health and provides grounding in the public health paradigm. Through a series of lectures and recitation sessions, students will learn about the history of public health and the core public health sciences including behavioral and social sciences, biostatistics, epidemiology, environmental health, and policy and management. Other topics include ethics in public health, context analyses (specifically sociographic mapping and urban health), community participation in research, public health promotion, and the prevention of chronic and infectious diseases.
Fall
1 Course Unit

NURS 5730 Innovation in Health: Foundations of Design Thinking
Innovation, defined as a hypothesis-driven, testable, and disciplined strategy, is important to improve health & healthcare. Employing new ways of thinking, such as with design thinking, will help open up possibilities of ways to improve health & the process of healthcare. Incorporating current & emerging social & digital technologies such as mobile apps, wearables, remote sensing, and 3D printing, affords new opportunities for innovation. This course provides foundational content & a disciplined approach to innovation as it applies to health & healthcare. A flipped classroom approach with the in-class component focusing on group learning through design thinking activities. The course is open to undergraduate nursing students as a case study & upper-level undergraduates and graduate students from across the Penn campus. The course provides a theoretical foundation in design thinking & may provide an overview of innovation technology & digital strategies as well as social & process change strategies. To enhance the didactic component, students will actively participate in a design case study. Students will be matched by interest and skill level with teams & will work with community-based organizations, healthcare providers and/or innovation partners. Student teams will meet their partners to identify & refine a health or healthcare problem to tackle. Students will work throughout the semester to create an innovative solution that will be pitched to their community-based organization, healthcare provider, and/or innovation partner at the end of the semester.
Fall or Spring
Mutually Exclusive: NURS 3570
1 Course Unit

NURS 5750 Health, Sustainability, Built Environment Design
Placemaking is a powerful tool for healthy communities. This course is open to students in nursing, public health, medicine, environmental policy, planning and design for intersectoral professional work. Through the design of place, including housing, schools, healthcare facilities, and the workplace, the class will investigate the impact of Social Determinants of Health and build a Culture of Health. Course work covers design and planning theory that intersects with diseases, sustainability, climate action and interconnectivity. Case studies, seminars, and tours will help students synthesize how to promote health through the design and development process and to make effective communication to enhance health equity.
Not Offered Every Year
1 Course Unit
NURS 5780 Inquiry-based Innovation for Nursing Practice
This course is designed to further the students' intellectual curiosity and independence as the student explores pathway toward clinical practice and research in an area of interest. The focus of the course is to synthesize advanced knowledge of systematic methods for research, service-based clinical inquiry, and improvement science. Students will engage in fieldwork related to their area of interest initiated during NURS5370 Systems Approach for Promoting Safe Nursing Practice. The focus of the fieldwork component is either a quality improvement initiative or a faculty-mentored experience to pursue research. Students have flexibility for how the fieldwork is structured. The fieldwork in research or quality improvement are supported by members of Penn Nursing and/or collaborating partners in the community offering an opportunity to interact with affiliated investigators and clinicians who contribute to and enrich the course.
Fall
Prerequisite: NURS 5370
1 Course Unit

NURS 5800 Pharmacology of Anesthesia and Accessory Drugs I
This course explores the various routes of anesthetic administration addressing the potential benefits and risk of each. Special emphasis is placed on specific anesthetic agents and their appropriate use. The responses and common complications associated with these agents are discussed.
Fall
1 Course Unit

NURS 5870 Advanced Leadership Skills in Community Health
Grounded in a social justice perspective, this course aims to provide the student with a foundational overview of the field of community health and leadership skills in public health advocacy. The course encourages critical thinking about health outcomes framed by the broad context of the political and social environment. This course analyzes the range of roles and functions carried out by leaders in healthcare advocacy for marginalized communities; integrates knowledge of health policy and the key influence of government and financing on health outcomes; explores community-based participatory research and interventions as tools for change; and discusses ways to develop respectful partnerships with community organizations. An assets-based approach that draws upon the strengths of communities and their leaders provides a foundation for community-engagement skill building. The course emphasizes the development of skills and techniques to lead effective, collaborative, health-focused interventions for disenfranchised groups, including residents of urban neighborhoods. Prerequisite: Undergraduates with permission of the instructor
Spring
Also Offered As: HPR 5880, PUBH 5880
1 Course Unit

NURS 5880 The Politics of Women's Health Care
This course will utilize a multidisciplinary approach to address the field of women's health care. The constructs of women's health care will be examined from a clinical, as well as sociological, anthropological and political point of view. Topics will reflect the historical movement of women's health care from an obstetrical/gynecological view to one that encompasses the entire life span and life needs of women. The emphasis of the course will be to undertake a critical exploration of the diversity and current issues in women's health care needs and the past and current approaches to this care. Issues will be addressed from both a national and global perspective, with a particular focus on the relationship between women's equality/inequality status and state of health. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.
Fall

NURS 6000 Principles and Practice of Transformative Nursing Education
This course is designed to provide a theoretical foundation to promote excellence in teaching in both faculty and professional development roles. Principles of adult learning theory, learning styles and preferences are explored with a focus on impact for educational design. Students review various learning domains, teaching theories, approaches for curriculum development and a variety of active learning strategies. An examination of documents that inform curriculum development and regulate nursing practice is performed. The major construct of critical thinking and its importance to nursing is explored. General tactics for the use of simulation, approaches for inter-professional collaboration, and methods for evaluating learner competence when educating nurses are reviewed.
Fall
1 Course Unit

NURS 6010 Teaching Nursing in an Academic Environment
This course is designed to provide a theoretical foundation to promote excellence in teaching in both faculty and professional development roles. Principles of adult learning theory, learning styles and preferences are explored with a focus on impact for educational design. Students review various learning domains, teaching theories, approaches for curriculum development and a variety of active learning strategies. An examination of documents that inform curriculum development and regulate nursing practice is performed. The major construct of critical thinking and its importance to nursing is explored. General tactics for the use of simulation, approaches for inter-professional collaboration, and methods for evaluating learner competence when educating nurses are reviewed.
Fall
1 Course Unit

NURS 6010 Teaching Nursing in an Academic Environment
This course provides the fundamental knowledge and skills in preparation for teaching in a faculty role in an academic environment. Specific focus is placed on program design, approaches to teaching in didactic, simulation, clinical, and online learning environments, management of didactic and clinical course offerings including effective use of learning management systems, and methods for evaluation of student performance. This course also reviews approaches and resources for working with students who have learning challenges or performance issues.
Spring
Prerequisite: NURS 6000
1 Course Unit
NURS 6020 Teaching Professional Nurses in the Practice Environment
This course provides nurses who are considering working in nursing professional development (NPD) in a variety of practice settings, an overview of the practice environment and roles of NPD practitioners. This course is taken after completing the pre-requisite NURS6000 Principles and Practice of Transformative Nursing Education offering, and uses the most current American Nurses Association Nursing Professional Development Scope & Standards of Practice as a foundation for examining roles and responsibilities of nursing professional development practitioners. Content addresses the who, what, where, when, how, and why of nursing professional development including but not limited to principles related to onboarding/orientation, education and role development, competency management, developing collaborative partnerships, translating evidence-to-practice, facilitating quality improvement, and measuring the value of Nursing Professional Development.
Spring
Prerequisite: NURS 6000
1 Course Unit

NURS 6030 Basic Principles of Nurse Anesthesia Practice II
This course provides students the opportunity to integrate theory and principles into practice within the clinical setting. Scope of practice, role development, ethical and cultural considerations and anesthetic interventions will be introduced and explored in the classroom and simulation suite. The student will transition to the surgical suite to begin clinical fieldwork, where they will progress from the care of healthy patients undergoing minimally invasive surgical procedures to the more complex patients with multiple health issues.
Fall
1 Course Unit

This course focuses on theory and research from the behavioral and nursing sciences on the psychological and social consequences of on-going illness. In addition, the health policy issues engendered by these problems will be addressed. Prerequisite: Primary Care Majors or instructor permission
Spring
1 Course Unit

NURS 6050 Advanced Principles of Nurse Anesthesia Practice: Cardiac, Vascular, and Thoracic Surgery
The basic principles of anesthesia practice will be expanded upon, focusing on specific populations, including the incidence and prevalence of various disease states. This course explores the special considerations required for the care of cardiac, vascular and thoracic patients undergoing anesthesia. An in-depth analysis of the pre-anesthesia assessment, perioperative considerations and post anesthesia monitoring necessary to facilitate optimal patient outcomes are summarized. Further, evidence-based case studies will be discussed highlighting the epidemiologic considerations for various disease states.
Fall
1 Course Unit

NURS 6060 Adv Principles of Nurse Anesthesia Practice: Neurosurgery, Orthopedics, Pain Management & Trauma
The basic principles of anesthesia practice will be expanded upon, focusing on specific populations, including the incidence and prevalence of various disease states. This course explores the special considerations required for the care of the neurosurgical, orthopedic and traumatically injured patients undergoing anesthesia. An additional focus will be directed towards pain management in the surgical population. An in-depth analysis of the pre-anesthesia assessment, perioperative considerations and post-anesthesia monitoring necessary to facilitate optimal patient outcomes are summarized. Further, evidence based case studies will be discussed, highlighting the epidemiologic considerations for various disease states.
Fall
1 Course Unit

NURS 6070 Advanced Physiology and Pathophysiology
This course will integrate advanced physiology with pathophysiology and clinical implications across the lifespan for advanced nursing practice. Organ systems function and dysfunction from the level of the cell through integrated organ levels will be presented, and the genetic basis of disease will be discussed. Recent scientific advances will be discussed with application to new approaches to disease and symptom management. The interrelationships between basic physiology, clinical pathophysiology, and genetics are emphasized through lecture and case studies. Registration is restricted to students enrolled in the MSN or DNP programs or by permission of instructor.
Fall
1 Course Unit

NURS 6080 Advanced Pharmacology and Therapeutics for Nursing Practice
Advanced principles of clinical pharmacology and therapeutics are applied to the nursing care of individuals across the life-stage spectrum. It focuses on the content and knowledge employed by the advanced practice registered nurse in the management of various conditions and disease states. The course builds on the pharmacology knowledge base acquired in the baccalaureate nursing program. The advanced pharmacology and therapeutics of several common diseases or conditions found in the acute care and primary care setting is presented. This is supplemented with pharmacotherapy modules to meet program specific needs.
Fall or Spring
Prerequisite: NURS 6070 OR NURS 6850
1 Course Unit

NURS 6090 Advanced Principles of Nurse Anesthesia Practice: Special Surgery
This course explores the perioperative evaluation and advanced anesthetic principles related to patient populations undergoing a broad range of surgical procedures. Emphasis is placed on selection and administration of anesthesia to these populations to ensure optimal patient care, safety, monitoring and implementing interventions to prevent and treat common perioperative emergencies. Prerequisite: Enrollment in NANS program - year 2
Spring
1 Course Unit
NURS 6110 Advanced Principles of Nurse Anesthesia Practice: Problem-Based Learning
Exploration of the conceptual-theoretical basis of nursing. Analysis and evaluation of conceptual models of nursing and nursing theories with emphasis on implications for nursing practice. Prerequisite: Enrollment in CRNA program; year 3
Spring
1 Course Unit

NURS 6120 Principles and Practice of Healthcare Quality Improvement
Healthcare delivery is complex and constantly changing. A primary mission of leading healthcare organizations is to advance the quality of patient care by striving to deliver care that is safe, effective, efficient, timely, cost effective, and patient-centered. The goal of this interprofessional course is to provide students with a broad overview of the principles and tools of quality improvement and patient safety in health care while also guiding them through the steps of developing a quality improvement project. It will provide a foundation for students or practicing clinicians who are interested in quality improvement and patient safety research, administration, or clinical applications. As part of this course, students will design and plan for a real quality improvement project in their area of interest within healthcare using the methods and tools taught in the course.
Fall
Also Offered As: HQS 6120
1 Course Unit

NURS 6130 Behavioral Economics & Health
Among the many determinants of health outcomes around the world, human behavior plays a central role. Examples abound in many different areas of health: smoking and exercise can have an impact on the burden of chronic diseases globally; utilization of vaccination services can affect the spread of infectious diseases; decisions made by providers can affect the health outcomes of patients. Understanding human behavior – specifically how people make health-related decisions – is therefore essential for learning how we might develop interventions and policies that have the potential to improve health outcomes. This understanding can be advanced and enriched using behavioral economics. Behavioral economics, a field at the intersection of psychology and economics, suggests that humans rarely behave rationally when making health-related decisions. Instead, a collection of fundamental psychological forces — including cognitive biases, mental shortcuts, and inconsistent time preferences — lead us to act against our best interest (and sometimes the interests of our patients, family members, or communities that we care for.) The course will take a very pragmatic, hands-on orientation to behavioral economics and health research and practice. Examples of public health related questions that this course will address include: How can we convince smokers to quit smoking permanently? What’s the best way to get employees to show up to a flu vaccine clinic? How can we encourage patients to take their medications regularly? How can we increase the utilization of health products like bednets in low-income countries? How can we reduce health care costs through increased prescription of generic medications?
Fall
Also Offered As: PUBH 6080
Prerequisite: PUBH 5060 OR PUBH 5040
1 Course Unit

NURS 6140 Advanced Principles of Nurse Anesthesia Practice-Professional Practice
Population specific topics of concern to nurse anesthetists are reviewed and discussed. Seminal works in the field of anesthesia are reviewed and discussed to facilitate a comprehensive review of contemporary anesthesia practice. The gaps between research and its implementation in practice will be considered. Students will focus on completing a comprehensive review of 1) Basic sciences; 2) Equipment, Instrumentation and Technology; 3) Basic Principles of Anesthesia Practice; and 4) Advanced Principles of Anesthesia Practice as described by National Council on Certification and Recertification of Nurse Anesthetists. Prerequisite: Must be enrolled in the Nurse Anesthesia program
Spring
1 Course Unit

NURS 6160 Interpreting Epidemiologic Literature to Inform & Influence
This course is designed for students interested in further exploration of epidemiologic methods and the challenge of establishing a causal relationship between exposure and outcome using an observational science. We will utilize case studies to address the application of epidemiologic data to specific issues of relevance to public health. The nature of observational data will be explored through these case studies and specific methodological challenges will be highlighted and examined.
Also Offered As: PUBH 6060
Prerequisite: PUBH 5020
1 Course Unit

NURS 6230 Nutrition Counseling
This online course introduces the future healthcare professional to the foundations of nutrition counseling. Each asynchronous session focuses on theory and application for promoting effective behavior change.
Fall
Also Offered As: NUTR 6060
1 Course Unit

NURS 6240 Pathogenesis of Mental Disorders and Psychopharmacology Across the Lifespan
The conceptual and practice application of brain-behavior relationships for individuals with psychiatric conditions is developed in this course. Specific biological theories of diagnostic classifications found in the Diagnostic and Statistical Manual of Mental Disorders Fifth Edition (DSM-5). This provides the basis for the development of a fund of psychopharmacology knowledge, critical thinking, and clinical judgment in the application of psychopharmacology agents in the treatment of psychiatric conditions for advanced practice psychiatric mental health nursing practice. Using case study methods to encourage the application of knowledge to clinical practice, the course pragmatically addresses culturally diverse client populations across the lifespan who present with a range of symptom manifestations, at all levels of severity. The course emphasizes evidence-based practice, research based clinical decision making and a holistic approach to integrating the science and biology of the mind with social and behavioral interventions.
Fall
Prerequisite: NURS 6070
1 Course Unit

NURS 6250 Clinical Modalities Across the Life Cycle in Advanced Practice Psychiatric Mental Health Nursing
Crisis intervention, brief psycho-therapy, group processes and practices, milieu therapy, and intervention with families are examined as they relate to nursing practice in mental health.
Summer Term
1 Course Unit
NURS 6260 Family and Organizational Systems Across the Life Span  
This course presents Bowen Family Systems Theory as it applies to families over the life and organizations over time. This is a theoretical course whose purpose is to provide the student with a broad, systemic perspective on human functioning. The course begins with a detailed presentation of Systems Theory, from both a family and organizational perspective. As presented there is a continual compare and contrast to other dominant theories of human functioning. It then applies the concepts of Systems Theory to the understanding and assessment of the stages of the normal family life cycle from a multi-generational, multi-cultural perspective. This is followed by discussions of the theory’s application to the emotional problems of children, adolescents, adults and their families. Likewise, application to organizational behavior is made, including health care organizations. Relevant research is discussed throughout.  
**Summer Term**  
1 Course Unit

NURS 6280 Mental Health and Aging  
An examination of the psycho-socio-cultural processes which influence the behavior patterns, coping, and adaptation of older adults. The course emphasizes strategies to promote mental health as well as assessment, presentation, and intervention in the major acute and chronic psychiatric disorders affecting the older adult.  
**Spring**  
1 Course Unit

NURS 6290 Basic Principles of Nurse Anesthesia Practice  
The fundamental concepts learned in Advanced Physical Assessment and Clinical Decision Making will be used as a foundation to inform the basics of anesthesia practice. Assessment of the patient is reviewed with a specific focus on the anatomic and physiologic issues involved in the administration, maintenance and recovery from anesthesia. In addition, the course will encompass an overview of anesthesia history, nurse anesthesia practice and the perioperative environment. The student will transition to the surgical suite to begin clinical fieldwork at the conclusion of the course. Prerequisite: enrollment in NANS program, year 1  
**Fall**  
1 Course Unit

NURS 6360 Pain Science and Practice  
This interprofessional course focuses on the biopsychosocial aspects of pain and pain management from the perspectives of individualized pain care, scientific discoveries, evidence-based practice and cross-disciplinary learning. Content includes an integrated overview of the neurobiology of pain, psychosocial aspects of the pain experience, pain assessment and outcomes measurement, pharmacological and nonpharmacological approaches to the treatment of acute and chronic pain syndromes, national health policies for pain, evidence-based guidelines and best practices, and interprofessional care delivery models. Peripheral and central modulation of pain, neuroanatomical pathways, neurochemical mediators, and genetics are examined as the basis for explaining pain perception, behaviors and responses to treatments. Pain assessment and management for vulnerable populations are addressed along with strategies to reduce pain treatment disparities. Several acute and chronic (persistent) pain syndromes are discussed across the continuum of care (e.g., primary care, hospital, outpatient pain centers, and home care). Current research findings and evidence-based guidelines are applied to interprofessional collaboration and clinical decision-making to promote optimal care and outcomes for persons experiencing pain. Through case-based and directed learning, classroom simulation, and interactive discussions with national leaders spanning multiple disciplines, students acquire a strong scientific and practice foundation in the clinical care of persons with acute and chronic pain.  
**Spring**  
Also Offered As: MED 5360  
1 Course Unit

NURS 6370 Introduction to Research Methods and Design  
The relationships among nursing theory, research and practice will be examined. An emphasis will be placed on research competencies for advanced practice nurses (APNs), including understanding nursing research methods and strategies in order to evaluate research results for applicability to practice and to design projects for evaluating outcomes of practice. An understanding of statistical techniques will be integrated into the course and build on the required undergraduate statistics course. Published nursing research studies will be evaluated for scientific merit and clinical feasibility, with a focus on evidence-based practice. Please note, the online version of this course has a synchronous component (live online class sessions). See department for meeting days/times. Prerequisite: Undergraduate Statistics Class, Must hold an RN license  
**Fall, Spring, and Summer Terms**  
1 Course Unit

NURS 6400 Global Health Policy & Delivery  
This participatory, interdisciplinary seminar course examines contemporary issues in global health policy and delivery. Students will develop skills in policy analysis, development of evidence-based policy, and effective delivery of global health interventions. The class will explore the health delivery and policy process using a variety of contemporary global health case studies, which focus on content areas such as maternal health, HIV policy, global child health, family planning and medication access. At the completion of this course, the student will be able to: (1) critically examine key issues in global health policy and delivery; (2) understand how epidemiology and various factors influence the design of evidence-based policy and interventions; (3) analyze frameworks for effective health intervention delivery in low-resource and middle-income countries; (4) develop skills to assess policy and program impact for continuous improvement and best practice dissemination.  
**Spring**  
Also Offered As: PUBH 5510, SWRK 7930  
1 Course Unit
NURS 6410 Autism Spectrum Disorder: Prevalence, Etiology, Screening and Assessment

Through classroom and clinical experiences, this course provides an overview of the public health problem of autism spectrum disorder (ASD). Content addresses the natural history, etiology, rising prevalence, risk factors, and core features. Changes in prevalence statistics and possible causes are outlined. These subjects are described in general terms for an overall picture of the disorder. Taking a developmental approach, students begin case management and follow a family through screening, diagnosis, and treatment planning. Key information is elaborated through case studies. The course highlights the important and evolving role of nurses in the care of people with ASD. Content is supported by the scientific literature. Students’ clinical experiences start the identification of and collaborative work with a family that has a young child with ASD. The student follows that family and the child through diagnosis, treatments, and long-term planning. This case approach allows the student to work with the same family over the entire post-masters program to learn the value of interdisciplinary, contiguous care. Prerequisite: Junior and senior undergraduate students may be admitted with course faculty permission. Post-BSN students only.

Fall
1 Course Unit

NURS 6420 Health and Behavioral Care Planning and Intervention for Autism Spectrum Disorder

Through classroom and clinical experiences, this course focuses on the application of various treatment approaches to the management of acute and chronic problems of autism spectrum disorder. Approaches to behavioral, psychological, and medical co-morbidities are explored, practiced, and evaluated. Students’ clinical experiences build on the previous semester and continue with the application of class instruction to patient and family care. The student works closely with behaviorists, psychologists, and occupational therapists to integrate nursing care planning with other services. This case approach continues, and exposure to a second family is added to expand learning opportunities and develop nursing services.

Spring
1 Course Unit

NURS 6430 Leadership, Advocacy, and the Practice of Integrated Nursing Care of Autism Spectrum Disorder

Emphasis is on the synthesis of course content practice. Through classroom and clinical experiences, students critically examine the role of nursing in the life-long care of people with ASD. Students explore the availability of services in the community and discuss approaches to patient advocacy. Students have opportunities to select an area of specialization to develop specific practice expertise. Special areas are Diagnosis and Referral Practices (e.g., ADOS Training), Behavioral Therapy Training (e.g., Applied Behavioral Analysis), and clinical research. Practical issues of collaboration and reimbursement for services are explored. Students’ clinical experiences are designed to facilitate scholarship, independence, and advanced specialization in a chosen component of ASD care, for example, behavioral analysis, screening, and diagnosis, or an agenda for research. Students identify and implement an independent project.

Summer Term
1 Course Unit

NURS 6440 Health Care in an Aging Society

Individual and societal influences on the care of older adults are examined in detail within the context of an emerging health care system. Normal changes in physical and psychological health are explored in depth. Significant issues affecting care of older adults and their families at the global and national level are discussed.

Spring
1 Course Unit

NURS 6460 Primary Care: Diagnosis and Management of Adults Across the Lifespan

This course focuses on development of critical thinking skills to address health care problems of adults across the lifespan, with an emphasis on middle-aged and older adults, developing differential problem solving skills and determine appropriate management interventions. The management of common acute and chronic health conditions will include evidence-based primary prevention and intervention, and referral to other health care providers. Students have the opportunity to build on previously acquired skills and to apply concepts of primary care to manage the health problems of adults across the lifespan.

Fall
Prerequisite: NURS 6570
Corequisite: NURS 6470
1 Course Unit

NURS 6470 Primary Care Clin Practicum: Diagnosis & Mgmt of Adults across the Lifespan

Management and evaluation of primary care problems of middle-aged and older adults in a variety of ambulatory and occupational settings. Opportunity to implement the role of the nurse practitioner with middle-aged and older adults and their families in the community. Interdisciplinary experiences will be pursued and collaborative practice emphasized. Students are expected to assess and begin to manage common chronic health problems in consultation with the appropriate provider of care. The initiation of health promotion & health maintenance activities with individuals and groups is stressed. Includes 16 hours a week of clinical experience with a preceptor.

Fall
Prerequisite: NURS 6570
Corequisite: NURS 6460
1 Course Unit

NURS 6480 Primary Care: Complex Diagnosis and Management of Adults across the Lifespan

This course will build on concepts presented in the Diagnosis and Management of Adults across the Lifespan (NURS 646) course. The focus is on refining health assessment skills, interpreting findings, developing and implementing appropriate plans of care to meet common health maintenance needs of adults and to promote the health of adults with more complex health problems with an emphasis on the frail adult. The student will gain increased expertise in communication skills, health assessment skills, interpreting findings, epidemiological concepts and developing and implementing plans of care. The emphasis will be placed upon managing an aging population with complex, chronic healthcare needs and promoting healthy behaviors across the lifespan.

Spring
Prerequisite: NURS 6460 AND NURS 6470
Corequisite: NURS 6490
1 Course Unit
NURS 6490 Primary Care Clin Practicum: Complex Diagnosis & Mgmt of Adults across the Lifespan
The focus of this course is the application of concepts presented in the Complex Diagnosis and Management of Adults Across the Lifespan (NURS 648) including initial workups of new patients, and the evaluation and management of patients with self-limiting acute problems, or stable chronic illnesses. Students will gain increased clinical expertise in a variety of community-based clinical settings including but not limited to health maintenance organizations, community clinics, long term care, assisted living, continuing care retirement communities, occupational health settings, and private practice. The student will gain increased expertise in communication skills, health assessment skills, interpreting findings, applying epidemiological concepts and developing and implementing plans of care for adults across the lifespan with health maintenance needs, and/or common acute and chronic health problems.
Spring
Prerequisite: NURS 6460 AND 6470
Corequisite: NURS 6480
1 Course Unit

NURS 6500 Systems Thinking in Patient Safety
This blended online/in-classroom graduate level course integrates principles of systems thinking with foundational concepts in patient safety. Utilizing complexity theories, students assess healthcare practices and identify factors that contribute to medical errors and impact patient safety. Using a clinical microsystem framework, learners assess a potential patient safety issue and create preventive systems. Lessons learned from the science of safety are utilized in developing strategies to enhance safe system redesign. Core competencies for all healthcare professionals are emphasized, content is applicable for all healthcare providers including, but not limited to, nurses, pharmacists, physicians, social workers and healthcare administrators, and may be taken as an elective by non-majors.
Spring
Also Offered As: HQS 6500
1 Course Unit

NURS 6510 Healthcare Informatics
Healthcare systems and consumers today are becoming increasingly reliant on information technology. The objective of this course is to provide a foundation for knowledge about health information technology and to expose students, clinicians, and administrators to the breadth of tools and systems currently used in practice. We will explore topics such as mobile health applications/telehealth and their implications for clinical practice and impact on patient outcomes; electronic health records, data analytics, and visualization tools and how these can effectively be used to support decision making and patient care.

0.5 Course Units

NURS 6560 Professional Role Issues for Nurse Practitioners
This course is intended for students planning a career that involves primary health care delivery. It includes lectures, discussions, readings, and projects focused on health, social, economic and professional factors influencing health care delivery in the community.
Fall
1 Course Unit

NURS 6570 Advanced Physical Assessment and Clinical Decision Making
This didactic/laboratory course is designed to help future advanced practice nurses develop advanced clinical assessment skills. Provider-patient interaction, data collection, and hypothesis formulation are emphasized. All participants engage in live practice with fellow students, and/or models, and consenting patients. This course is to be taken the semester before clinical begins.
Fall or Spring
1 Course Unit

NURS 6580 Clinical Management of Primary Care with Young Families
Assessment and treatment of the young child in ambulatory care settings is the focus of this developmentally organized course. This course provides the nurse practitioner student with the necessary knowledge and experience to assist individuals with the most common health problems, including acute episodic illness as well as stable chronic disease. The concepts of health promotion and health maintenance are integrated throughout the curriculum. Using a developmental framework, the maturational tasks and problems of children and their families in relation to illness and health are explored.
Fall or Spring
Prerequisite: NURS 6560 AND NURS 6570
Corequisite: NURS 6590
1 Course Unit

NURS 6590 Clinical Practicum: Primary Care with Young Families
Management and evaluation of primary care problems of children in a variety of ambulatory settings. Opportunity to implement the role of nurse practitioner with children and their families in the community occurs under the guidance of faculty and experienced preceptors. The initiation of health promotion and health maintenance activities with individuals and groups is stressed. Collaborative, interdisciplinary practice is emphasized as students assess and manage common problems in consultation with an appropriate provider of care. 20 hours a week of clinical experience with a preceptor is arranged.
Fall or Spring
Prerequisite: NURS 6560 AND NURS 6570
Corequisite: NURS 6580
1 Course Unit

NURS 6600 Clinical Practice with Select Populations: Adolescents
Focus on assessment and treatment of adolescents in a variety of settings. Didactic emphasis is on the special needs encountered among adolescents. This course adds to the student's previous knowledge and skill in the delivery of primary care. Working with this specific population the student gains necessary knowledge and experience in assisting individuals with most common health problems, including acute episodic illness and stable chronic disease, as well as health promotion needs.
Summer Term
Prerequisite: NURS 6580 AND NURS 6590
1 Course Unit
NURS 6610 Clinical Management of Primary Care with Adults
Assessment and treatment of younger adults in ambulatory care settings is the focus of this clinical course. The course provides the nurse practitioner student with the necessary knowledge and experience to assist individuals with most common health problems, including acute episodic illness. The concepts of health promotion and health maintenance are integrated throughout the curriculum. Using a developmental framework, maturation tasks and problems of the adult and family in relation to illness and health are explored.
Summer Term
Prerequisite: (NURS 6460 AND NURS 6470) OR (NURS 6900 AND NURS 6910)
1 Course Unit

NURS 6630 Advanced Concepts in Primary Care
In conjunction with the development of advanced clinical skills, students focus on advanced practice role development and the study of issues in health service delivery related to the practice of primary health care. Economics, case management and cultural/ethical aspects of care are discussed.
Summer Term
1 Course Unit

NURS 6640 Advanced Practice Nursing for Oncology Care
Students are introduced to cancer epidemiology and pathophysiology, cancer genetics, prevention, risk assessment and reduction for specific cancers, screening techniques, diagnostic procedures and criteria, and local and systemic therapies used to treat cancer. The influence of individual characteristics on health promotion, health behaviors, population cancer risk, and cancer detection are explored in the context of biological, psychological, socioeconomic and sociocultural factors across age groups from adolescents to older adults. Evidence-based practice guidelines and research are applied to promote healthy lifestyles, monitor cancer risk, address psychosocial issues, facilitate access to care, and reduce health care disparities for populations at risk and diagnosed with cancer, and cancer survivors. Online course with both synchronous and asynchronous components. Students are also required to attend two days of on-campus instruction in the fall semester. Permission to take this course as an elective must be approved by the course faculty.
Fall
1 Course Unit

NURS 6660 Effects of Cancer and Cancer Therapy
Principles of cancer treatment, associated responses and symptom management are presented. Emphasis is on the development of advanced clinical decision making skills in identifying multiple alterations resulting from cancer and cancer therapy. Online course with both synchronous and asynchronous components Students are also required to attend two days of on-campus instruction in the spring semester. Permission to take this course as an elective must be approved by the course faculty.
Spring
Prerequisite: NURS 6640
1 Course Unit

NURS 6670 Oncology Practice: Assessment, Diagnosis, & Cancer Management
Emphasis is on the application of critical thinking and diagnostic reasoning skills in advanced clinical decision making. Students access, diagnose, and manage the care of oncology patients with a variety of cancers. The delivery of care and evaluation of role effectiveness within the health care system are examined. Online course with both synchronous and asynchronous components. Course includes 240 clinical hours in an oncology setting
Summer Term
1 Course Unit

NURS 6700 Principles of Adult Gerontology Acute Care I
This didactic course examines the epidemiology, assessment, diagnostic approaches, management, and evaluation of acutely or critically ill or chronically complex ill adults across the adult-older adult age spectrum. Students explore the dynamic interplay between the pathophysiologic basis of disease and the psychosocial and socio-cultural responses to acute and critical illness and injury as they develop clinical decision-making skills. An evidence-based approach to nursing and medical management including pharmacologic and non-pharmacologic modalities is emphasized. Diseases, infections, and prevention issues related to the cardiovascular and pulmonary systems commonly encountered by adults-older adult age spectrum are covered.
Fall
Prerequisite: NURS 6070
1 Course Unit

NURS 6710 Principles of Adult Gerontology Acute Care II
In this didactic course, students learn to integrate their advanced pharmacology and pathophysiology background with their understanding of acute illness and injury. The focus is on the evidence-based management of patients with neurologic, gastrointestinal, renal, oncologic, and metabolic health problems. Students develop skills to create a differential diagnosis when an adult/older-adult presents with a constellation of symptoms. Common and atypical presentations of illness and disease are explored. Focus is placed on holistic care including the psychosocial, cultural, and spiritual aspects of patients’ response to their illness or injury. Epidemiology, assessment, diagnosis, management, and advanced clinical decision making based on current clinical research are emphasized.
Spring
1 Course Unit

NURS 6720 Principles of Adult Gerontology Acute Care III
This didactic course examines issues related to the epidemiology, assessment, diagnosis, management and evaluation of acute, critical and complex chronically ill adults across the adult-older adult age continuum. Students explore the dynamic interplay between the pathophysiologic basis of disease and the psychosocial and socio-cultural responses to illness and injury across the adult age continuum as they develop clinical decision-making skills. An evidence-based approach to nursing and medical management including pharmacologic and non-pharmacologic modalities is emphasized. Content focuses on special adult and older adult patient populations with commonly encountered health problems.
Summer Term
1 Course Unit
NURS 6730 Advanced Clinical Decisions in Adult Gerontology Acute Care
This didactic and fieldwork course focuses on development of a systematic approach to advanced physical assessment, the use and interpretation of diagnostic technologies, and development of diagnostic reasoning as it applies to patient management of the adult-older adult acutely ill or injured patient. Emphasis is placed on development of competence to perform a comprehensive history and physical examination, incorporating the analysis of biotechnological data trends, determining a prioritized differential diagnosis, and use clinical judgement to determine the healthcare needs for acutely ill and/or chronically complex patients across the adult age continuum.
Fall
Prerequisite: NURS 6070 AND NURS 6570
1 Course Unit

NURS 6740 Adult Gerontology Acute Care NP: Professional Role and Clinical Practicum I
This didactic and clinical fieldwork course explores issues relevant to the role of the Adult Gerontology Acute Care Nurse Practitioner within the complex U.S. health care system. Role development, reimbursement issues, provision of quality and ethical care and evidence-based nursing and medical interventions are introduced and discussed in the classroom. Clinical fieldwork focuses on assessment of complex acute, critical and chronically-ill patients for urgent and emergent care conditions, using both physiologically and technologically derived data, to evaluate for physiologic instability and potential life-threatening conditions, development of differential diagnoses, application of diagnostic reasoning and formulation, implementation, evaluation and modification of individualized plans of care including pharmacological and non-pharmacological modalities. Development of advanced clinical competencies and clinical decision making abilities about adults across the age continuum is emphasized. Prerequisite: Clinical field component requires two 10-hour clinical days, to be scheduled with the student’s individual preceptor.
Spring
Prerequisite: NURS 6730
1 Course Unit

NURS 6750 Adult Gerontology Acute Care NP: Professional Role and Clinical Practicum II
This didactic and fieldwork course focuses on the role of the Adult Gerontology Acute Care Nurse Practitioner and the expansion of advanced clinical competencies and clinical decision making abilities. Clinical experiences in acute care settings provide the student with opportunities to refine history and physical examination techniques, diagnostic reasoning, formulation, implementation, evaluation and modification of individualized management plans. Specific attention is given to the unique presentation of syndromes and constellation of symptoms that may be typical or atypical presentation of complex acute, critical and chronic illness in adults and older adults. Facilitating transition of patients at varying life stages through the complex health care system is encouraged exploring the multiple governmental, social and personal resources available to acutely ill adults across the age continuum. The application of advanced nursing, medical and biopsychosocial knowledge in the management of patients and the collaboration between the nurse practitioner and the patient, family and interprofessional healthcare team are emphasized.
Summer Term
Prerequisite: NURS 6740
1 Course Unit

NURS 6760 Obesity and Health
This 14-week online course introduces the learner to the etiology, prevalence, and pathophysiology of obesity in children and adults. This series of asynchronous sessions focuses on the biological, genetic and environmental causes of obesity and highlights the impact of obesity on chronic disease.
Spring
Also Offered As: NUTR 6760
Mutually Exclusive: NURS 3130, NURS 5130
1 Course Unit

NURS 6810 Applied Physiology for Nurse Anesthesia I
This course provides an in-depth analysis of the anatomy, physiology and pathophysiology of the respiratory system and related anesthetic implications. Students learn concepts of pulmonary mechanics, neural control of breathing, and ventilation/perfusion as they relate to oxygen, anesthetic delivery, and metabolism. This learning supports the integration of effects of compromised pulmonary function and implications for the patient and anesthesia plan. There is a review of the fundamental concepts of pulmonary physiology from the cell to the organ level framing a foundation of normal physiology before proceeding to pathophysiology content. Advanced knowledge of the pulmonary system in health and disease is presented from the physiological perspective.
Summer Term
1 Course Unit

NURS 6820 Applied Physiology for Nurse Anesthesia II
This course provides an in-depth analysis of the anatomy, physiology, and pathophysiology of the cardiovascular, renal, immunologic, and hematological systems and related anesthesia implications. Emphasis is placed on the assessment of the patient with common disorders of these systems. Nurse anesthesia care related to patients undergoing surgeries involving each system is discussed. The foundational concepts from pulmonary physiology are used as the underpinnings for discussing key concepts of the circulatory system.
Fall
Prerequisite: NURS 6810
1 Course Unit

NURS 6830 Applied Physiology for Nurse Anesthesia III
This course provides an in-depth analysis of the anatomy, physiology and pathophysiology of the neurological, gastrointestinal, and endocrine systems with a focus on anesthesia implications. Emphasis is placed on the assessment of the patient with common disorders of these systems. Nurse anesthesia care related to patients undergoing surgeries involving each system is discussed. The foundational concepts from pulmonary physiology are used as the underpinnings for discussing key concepts of the circulatory system.
Spring
Prerequisite: NURS 6820
1 Course Unit

NURS 6850 Advanced Developmental Physiology and Pathophysiology
This course will address advanced human embryology, physiology and pathophysiology. Biochemical genetics and the genetic basis of disease will be discussed. Normal fetal development and physiology of organ systems will be used as the foundation for understanding the pathophysiology of disease across the lifespan. Prerequisite: Undergraduate course in Anatomy & Physiology
Fall
1 Course Unit
NURS 6860 Well Women Health Care, Theory
This course focuses on the management and evaluation of physical, emotional, socio-cultural and educational needs of gynecologic primary health care of women from adolescence through post-menopausal years. The content is directed at expanding the expertise of the student in in meeting the primary women's health care needs in contemporary society. Social influences that have an impact on women's lives are also explored. Fall
Also Offered As: NURS 7810
Prerequisite: NURS 6070 AND NURS 6570
1 Course Unit

NURS 6880 Complementary/Alternative Therapies in Women's Health
The dramatic rise in the use of complementary and alternative medicine (CAM) by the American public requires that the contemporary health care practitioner have an awareness of CAM therapies and modalities currently available. The end result of this course will not be proficiency in the practice of any of these modalities in particular, but rather a basic understanding of each approach to common conditions and their potential contribution to health and well-being. The focus of the CAM modalities discussed in this course will center on their use in women's health care provision. Fall
1 Course Unit

NURS 6900 Family Focused Primary Care of the Middle-Aged and Older Adult
This course focuses on primary care problems encountered by middle-aged and older adults and their families. Students have the opportunity to build on previously acquired skills and to apply concepts of primary care to manage the complex health problems of middle-aged and older adults. Spring
Prerequisite: NURS 6560 AND NURS 6570
Corequisite: NURS 6910
1 Course Unit

NURS 6910 Clinical Practicum: Family Focused Primary Care of the Middle Aged and Older Adult
The focus of this course is the evaluation and management of primary care problems in middle-aged and older adults. Students will have an opportunity to implement the role of the nurse practitioner in the clinical setting. Interdisciplinary collaborative experiences will be essential to the clinical practicum. The initiation of health promotion and health maintenance activities with individuals, groups and families is stressed. Students are expected to assess and manage common chronic health problems in the clinical setting. Spring
Prerequisite: NURS 6560 AND NURS 6570
Corequisite: NURS 6910
1 Course Unit

NURS 6910 Clinical Practicum: Family Focused Primary Care of the Middle Aged and Older Adult
The focus of this course is the evaluation and management of primary care problems in middle-aged and older adults. Students will have an opportunity to implement the role of the nurse practitioner in the clinical setting. Interdisciplinary collaborative experiences will be essential to the clinical practicum. The initiation of health promotion and health maintenance activities with individuals, groups and families is stressed. Students are expected to assess and manage common chronic health problems in the clinical setting. Spring
Prerequisite: NURS 6560 AND NURS 6570
Corequisite: NURS 6910
1 Course Unit

NURS 6950 Quality Improvement Capstone I
The purpose of the quality improvement capstone I is to provide a culminating experience in the program that requires the integration and application of knowledge attained in pre- and co-requisite coursework. The Capstone will build upon prior coursework that provided a broad overview of the principles and tools of quality improvement and patient safety in healthcare with a focus on implementation and sustainment of change. Students will apply this knowledge through completion of a mentored quality improvement project in a healthcare organization. In collaboration with faculty and health organization advisors, students will identify a quality improvement opportunity and use improvement methodology to describe the extent of the problem, analyze the current system, design tests of change (countermeasures), implement at least two plan-do-study-act cycles, and measure results. Students will also reflect on lessons learned and process of change. This is a hybrid course with virtual and in person components. Spring
Also Offered As: HQS 9900
1 Course Unit

NURS 6960 Quality Improvement Capstone II
The purpose of the quality improvement capstone II course is to provide a culminating experience in the master's program that requires the integration and application of knowledge attained in prior coursework. Students will build on the skills obtained throughout the master's program and specifically in Quality Improvement in Healthcare Capstone I (HQS990/NURS695) while continuing to lead and experience cycles of improvement work while measuring their results. Students will be required to write a final report and deliver an oral presentation for this course. Fall, Spring, and Summer Terms
Also Offered As: HQS 9910
1 Course Unit

NURS 6970 Leadership in Advanced Oncology Nursing Practice
Students explore the diagnosis and treatment of common cancers in a multidisciplinary approach. The broad array of bio-medical and psychosocial issues that result from the disease itself across the illness continuum are studied. Quality of life, rehabilitation and palliative care issues related to cancer care are addressed. Additionally, students complete an administrative practicum with a nursing leader in an oncology specialty area within a healthcare organization. Summer Term
1 Course Unit

NURS 6980 Public Health Considerations for Human Milk and Breast/Chest Feeding
In this course students will examine the multiple spheres that impact family's infant feeding decisions in the United States and globally. Despite longstanding recommendations by the World Health Organization, less than 40% of infants receive exclusive human milk for the first 6 months. Students will examine the social, economic, political, industry, and policy influences related to human milk and breastfeeding/chest-feeding. This interdisciplinary course provides students from multiple schools (nursing, public health, dental, medical, college, and others) the opportunity to gain a comprehensive perspective of the issues surrounding infant feeding. Students will be challenged to identify evidence-based solution, in order to improve the health of our society through the lifesaving medical intervention of human milk and breastfeeding. Spring
1 Course Unit
NURS 6990 Advanced Roles in Administrative Nursing Practice
Offered at the end of the Nursing and Health Care Administration or Health Care Leadership programs, this course prepares the graduate for entry into a myriad of administrative or leadership roles. Students will explore role responsibilities for various levels of management positions; health care consultants; health policy advocates; global health leaders; staff development directors; and administrators in non-traditional settings i.e., journal editors, professional associations etc. Prerequisite: For Students of the Nursing Administration and Healthcare Leadership Only
Summer Term
1 Course Unit

NURS 7050 Advanced Practice Nursing Practice: Psychiatric Mental Health NP I
Supervised advanced psychiatric mental health nursing practice with children, adolescents and their families, or adults and/or older adults and their families in a variety of settings, depending on the subspecialty option selected. Focus is on clinical assessment/diagnosis and decision-making. A minimum of 16 hours of practice and 3 hours of small group supervision is required.
Fall
1 Course Unit

NURS 7060 Advanced Practice Nursing Practice: Psychiatric Mental Health NP II
Supervised advanced psychiatric mental health nursing practice with children, adolescents and their families, or adults and/or older adults and their families in a variety of settings, depending on the subspecialty option selected. Refinement and development of clinical intervention with an increasingly diverse caseload. A minimum of 16 hours of practice and 3 hours of small group supervision is required.
Spring
1 Course Unit

NURS 7070 Advanced Practice Nursing Practice: Psychiatric Mental Health NP III
Supervised advanced psychiatric mental health nursing practice with children, adolescents and their families, or adults and/or older adults and their families in a variety of settings, depending on the subspecialty option selected. Outcome evaluation, termination and professional role development. A minimum of 16 hours of practice and 3 hours of small group supervision is required.
Summer Term
1 Course Unit

NURS 7140 Management of Critically Ill Children with Acute and Chronic Conditions: Advanced
This clinical course is designed with emphasis on continued development of advanced clinical decision-making skills in the care of critically ill children. Emphasis is placed on knowledge and skills that allow the advanced practitioner to efficiently and effectively manage children who are dependent upon or assisted by technological devices to carry out life processes.
Summer Term
Prerequisite: NURS 7360
1 Course Unit

NURS 7150 Common Management Issues of Children with Acute and Chronic Conditions: Pediatric Oncology
This course examines the unique contribution made by nurses with advanced clinical skills in the care of children with oncologic and hematologic disorders, and their families, from the time of diagnosis throughout the treatment period and beyond. The course provides the student with the most recent advances in knowledge about cancer in childhood. While the focus is on oncology, hematologic disorders as well as AIDS will be discussed. Recent methods of treatment and the nursing management of children and their families will be addressed.
Fall
1 Course Unit

NURS 7200 Nursing of Children Theory I: Child and Family Development
This course focuses on developmental theories and concepts that form the basis for nursing assessment and intervention with children and families. Emphasis is given to current research and issues in child and family development and functioning.
Fall
1 Course Unit

NURS 7210 Advanced Physical Assessment Across the Life Span and Clinical Decision Making: Nursing of Children
This clinical course is designed to help prospective advanced practice nurses develop advanced skills in physical and developmental assessment both across the lifespan and with a specific focus on children in a variety of settings. Data collection, data interpretation, and hypothesis formulations are emphasized for the purpose of clinical decision making. The role of the advanced practice nurse in assessment of child health care issues and health promotion is incorporated throughout the course. Community collaboration and evaluation of social determinants of health, as integral aspects of assessment, will be an ongoing focus.
Fall
1 Course Unit

NURS 7310 High-Risk Neonate, Theory
This course focuses on the care of high-risk neonates within the context of the family unit. The biological and psychosocial aspects are studied as a basis for nursing practice. Emphasis is placed on the role of the Advanced Practice nurse in improving services to high-risk neonates with the purpose of decreasing mortality and morbidity rates and improving the quality of life of high-risk newborns and infants.
Spring
Prerequisite: NURS 7210
Corequisite: NURS 7330
1 Course Unit

NURS 7330 Clinical Practicum for the High Risk Neonate
This clinical course focuses on the care of the high risk infant within the context of the family unit. Clinical experiences provide students with opportunities to expand their skills in managing the care of infants, both acutely ill and growing neonates. Students continue their experiences with neonatal nurse practitioners to examine role issues of these individuals.
Spring
Prerequisite: NURS 7210
Corequisite: NURS 7310
1 Course Unit
NURS 7340 Intermediate Principles of Pediatric Acute Care
This course focuses on evidenced based care for infants, children, and adolescents with complex acute and chronic health conditions. Emphasis is placed on developing a framework for practice based on a synthesis of knowledge from biological, behavioral, and nursing sciences through the process of advanced clinical decision making. The student gains the necessary clinical management skills to provide specialized patient centered care across the entire pediatric age spectrum from complex chronic illness to physiologic deterioration and life threatening instability with emphasis on the patient and family as a full partner in decision making.
Spring
Prerequisite: NURS 7200 AND NURS 7210 AND (NURS 6070 OR NURS 6850)
Corequisite: NURS 7350
1 Course Unit

NURS 7350 Pediatric Acute Care NP: Professional Role and Intermediate Clinical Practice
This course focuses on the implementation of the professional role of the Pediatric Acute Care Nurse Practitioner (PNP-AC). Particular emphasis is placed on the role components of the nurse practitioner in pediatric acute care. Applications of nursing, biological and behavioral science are emphasized in the advanced clinical assessment, clinical decision making and management skills needed to care for complex, unstable acutely and chronically ill children and their families. The role of the advanced practice nurse in promoting optimal child/family outcomes is emphasized.
Spring
Prerequisite: NURS 7200 AND NURS 7210 AND (NURS 6070 OR NURS 6850)
Corequisite: NURS 7340
1 Course Unit

NURS 7360 Advanced Principles of Pediatric Acute Care
This course expands the student's understanding evidenced based care for infants, children, and adolescents with complex acute and chronic health conditions. Emphasis is placed on advancing a framework for practice based on a synthesis of knowledge from biological, behavioral, and nursing sciences through clinical decision making. The student continues to gain the necessary clinical management skills to provide specialized patient centered care across the entire pediatric age spectrum from complex chronic illness to physiologic deterioration and life threatening instability with emphasis on the patient and family as a full partner in decision making.
Summer Term
Prerequisite: NURS 7340 AND NURS 7350
Corequisite: NURS 7370
1 Course Unit

NURS 7370 Pediatric Acute Care Nurse Practitioner: Professional Role and Advanced Clinica
This course focuses on the implementation of the professional role of the Pediatric Acute Care Nurse Practitioner (PNP-AC). This course adds to the students' previous knowledge and skills and prepares them to deliver care to children of any age who require frequent monitoring and intervention. Applications of nursing, biological and behavioral science are emphasized in the advanced clinical assessment, clinical decision making and management skills needed to care for complex, unstable acutely and chronically ill children and their families.
Summer Term
Prerequisite: NURS 7340 AND NURS 7350
Corequisite: NURS 7360
1 Course Unit

NURS 7400 Advanced Practice Concepts for the Childbearing Family
The seminar will provide students with the skills necessary to provide primary health care to high risk infants in ambulatory settings. Course material will include detailed physical assessment skills of the infant through the first year of life. The clinical component will include home visits and experience in the ambulatory and long term care settings.
Fall
1 Course Unit

NURS 7410 Mgmnt of Chldrn with Acute and Chronic Conditions: Nursing of Children in the Community Adv Clinical
This clinical course focuses on the implementation of the role of the advanced practice nurse with particular emphasis on providing continuity of care for children with specialized health needs across their transitions in sites of care delivery and throughout phases in the cycle of their illnesses. Application of nursing, biological and behavioral science is emphasized in the community aspects of clinical assessment and management of children with health care needs and their families.
Summer Term
Prerequisite: NURS 7360
1 Course Unit

NURS 7430 Fetal Evaluation
This course focuses on identifying at risk and high risk maternal-fetal dyads, developing knowledge relating to assessment of fetal well being, and understanding the implications of obstetric, non obstetric, and fetal complications on the management of the high risk pregnancy. Additionally the course provides an understanding of the scientific basis for new technologies used to evaluate at risk and high risk populations. Information about the physics of ultrasound, pulse echo imaging, and doppler techniques will be provided. Students must be able to practice ultrasound skills while in this course.
Spring
Prerequisite: NURS 6070
Corequisites: NURS 7830, NURS 7840
1 Course Unit
NURS 7450 Data Analytics
This course approaches statistics from both applied and theoretical perspectives in order to develop an understanding of the ways that data are analyzed and reported. The course is situated in healthcare data analytics and the varied ways existing/new data is analyzed and results communicated. Focus is given to learning the appropriate application, including decision-making for analysis plan, and interpretation of statistical analyses. The course addresses data transformation, effect size and power analysis, clinical significance, parametric and non-parametric statistical tests including t-tests, analysis of variance, chi square, correlation, linear and logistic regression and other methods of analyses for continuous and categorical data. Emphasis is placed on understanding why statistical methods are chosen, developing a cohesive analysis plan, applying best practices for data preparation and management, executing an analysis and using statistical software programs, including conduct of analyses, review of output and interpretation using existing software programs.
Fall
Prerequisite: NURS 7890 AND NURS 6370
1 Course Unit

NURS 7480 Leadership Development in Healthcare
This course will provide the conceptual and theoretical framework for examining the concept of leadership within the contexts of health systems, health professionals and health policy. It will focus on characteristics of personal and professional leadership, change theory, and the application of critical thinking to the analysis of work environments, systems and the politics of health.
Fall
1 Course Unit

NURS 7490 History, Health and Social Policy
This course explores the impact of historical ideas, events, and actors on current issues in health and illness care. Topics include the movement from hospitals to health care systems; the changing definitions of professionalism and professional practice patterns; and the ways historical context shapes definitions of leadership roles and theoretical knowledge.
Spring
1 Course Unit

NURS 7500 Inquiry and Nursing
This course introduces students to the process of intellectual inquiry. It explores the intellectual foundations of scholarly disciplines in general and the discipline of nursing in particular. Emphasis is placed on the process of knowledge development, with particular emphasis on historical, philosophical, positivist, and gendered and phenomenological ways of knowing. Emphasis is also placed on having students develop their particular intellectual approach to disciplinary inquiry and on formulating ideas for publications and presentations. Prerequisite: PhD Student
Fall
1 Course Unit

NURS 7510 Clinical Fieldwork for Nurse Anesthesia Practice I
This course provides students the opportunity to integrate theory into practice within the clinical setting. The focus is on the development of diagnostic, therapeutic, ethical, and cultural judgments with the perioperative patient. Students' progress from the care of healthy patients undergoing minimally invasive surgical procedures to the more complex patient with multiple health issues. Clinical preceptors are experienced CRNAs or anesthesiologists who act as mentors to facilitate the learning process. Students' progress along the learning continuum as they integrate theory into practice and assume the role of the advanced practice nurse. The student begins to develop an advanced practice nursing role that integrates role theory, nursing theory, and research knowledge through clinical practice.
Fall
1 Course Unit

NURS 7520 Clinical Fieldwork for Nurse Anesthesia Practice II
This course provides the opportunity for students to integrate theoretical knowledge and research findings into practice within the clinical setting. The clinical progression allows students to provide anesthesia care to patient with complex, multisystem problems. Selected surgical specialty rotations begin, introducing the student to the particular requirements for these special situations. Techniques for managing the acute pain of clients are also emphasized. The student grows in the ability to individualize a plan of care specific to the patients' needs and surgical requirements. The student also now possesses the ability to combine theories and skills in selected clinical situations. The guidance of CRNA faculty preceptors contributes to the development of the students critical thinking.
Spring
1 Course Unit

NURS 7530 Evolving Nursing Science
We will examine concepts, propositions, and theories from specific areas of nursing science, investigating the adequacy of existing knowledge in specific areas of nursing science and the beliefs and assumptions that underlie that knowledge. Generalizability or transferability of the knowledge will be addressed. The impact of knowledge on nursing practice and health policy will be evaluated. Prerequisite: PhD Students and faculty permission required.
Spring
1 Course Unit

NURS 7540 Quantitative Research Design and Methods
This one semester survey course provides an overview of quantitative clinical research design and methods. Ethical and legal considerations in human subjects research, access to patient populations, sampling designs and power analysis, experimental and non-experimental designs, measurement of variables, data collection techniques, and data management are included. This course is intended for doctoral students in the health sciences. Prerequisite: Students must have completed at least one doctoral-level statistics course. PhD Students
Spring
Prerequisite: NURS 7500
1 Course Unit
NURS 7550 Clinical Fieldwork for Nurse Anesthesia Practice III
Integration of non-experimental quantitative research designs and methodologies, including common statistical techniques for analyzing resulting data. Statistical techniques examined include: factor analysis, multiple regression, canonical correlation, causal modeling, and logistic regression. Power analysis of statistical tests to estimate sample size discussed. Data analysis practice using computer software integrated throughout course.
Summer Term
1 Course Unit

NURS 7560 Nurse Anesthesia Residency I
This course is the first and second of four residencies that provide the nurse anesthetist student the opportunity to attain competencies within the Certified Registered Nurse Anesthesia (CRNA) scope of practice. Throughout the residency, the nurse anesthesia resident will utilize appropriate clinical judgment to manage the complex medical, physical and psychosocial needs of clients in the perioperative phases. Further refinement of the patient assessment, anesthesia administration, and critical thinking skills will be emphasized. Students' progress by providing anesthesia care for patients throughout the continuum of health care services. The guidance of CRNA faculty preceptors contributes to the development of the independence of the CRNA student. Collaborative practice within a care team model is emphasized and the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative experience, with clinical support as required. Prerequisite: Enrollment in NANS program, year 2
Fall
1 Course Unit

NURS 7570 Nurse Anesthesia Residency II
This course is the second of four residencies that provide the nurse anesthetist student the opportunity to attain competencies within the Certified Registered Nurse Anesthesia (CRNA) scope of practice. Throughout the residency, the nurse anesthesia resident will utilize appropriate clinical judgment to manage the complex medical, physical and psychosocial needs of clients in the perioperative phases. Further refinement of the patient assessment, anesthesia administration, and critical thinking skills is emphasized. Students progress by providing anesthesia care for patients throughout the continuum of health care services. The guidance of CRNA faculty preceptors contributes to the development of the independence of the CRNA student. Collaborative practice within a care team model is emphasized and the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative experience, with clinical support as required. Prerequisite: NURS 7560
Spring
1 Course Unit

NURS 7580 Nurse Anesthesia Residency III
This course is the third of four residencies that provide the nurse anesthetist student the opportunity to attain competencies within the Certified Registered Nurse Anesthesia (CRNA) scope of practice. Throughout the residency, the nurse anesthesia resident will utilize appropriate clinical judgment to manage the complex medical, physical and psychosocial needs of clients in the perioperative phases. Further refinement of the patient assessment, anesthesia administration, and critical thinking skills will be emphasized. Students' progress by providing anesthesia care for patients throughout the continuum of health care services. The guidance of CRNA faculty preceptors contributes to the development of the independence of the CRNA student. Collaborative practice within a care team model is emphasized and the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative experience, with clinical support as required.
Summer Term
Prerequisite: NURS 7570
1 Course Unit

NURS 7590 Nurse Anesthesia Residency IV
This course is the fourth of four residencies that provide the nurse anesthetist student the opportunity to attain competencies within the Certified Registered Nurse Anesthesia (CRNA) scope of practice. Throughout the residency, the nurse anesthesia resident will utilize appropriate clinical judgment to manage the complex medical, physical and psychosocial needs of clients in the perioperative phases. Further refinement of the patient assessment, anesthesia administration, and critical thinking skills is emphasized. Students progress by providing anesthesia care for patients throughout the continuum of health care services. The guidance of CRNA faculty preceptors contributes to the development of the independence of the CRNA student. Collaborative practice within a care team model is emphasized and the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative experience, with clinical support as required. Prerequisite: Enrollment in NANS program, year 3
Fall
Prerequisite: NURS 7570
1 Course Unit

NURS 7600 Nurse Anesthesia Residency V
This course is the fourth and final residency that will provide the nurse anesthetist student the opportunity to attain competencies within the Certified Registered Nurse Anesthesia (CRNA) scope of practice. Throughout the residency, the nurse anesthesia resident will utilize appropriate clinical judgment to manage the complex medical, physical and psychosocial needs of clients in the perioperative phases. Further refinement of the patient assessment, anesthesia administration, and critical thinking skills is emphasized. Students' progress by providing anesthesia care for patients throughout the continuum of health care services. The guidance of CRNA faculty preceptors contributes to the development of the independence of the CRNA student. Collaborative practice within a care team model is emphasized and the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative experience, with clinical support as required.
2 Course Units
NURS 7640 Advanced Technologies & Clinical Decisions in Acute Care
This course applies a technology assessment framework to examine numerous advanced technologies employed in the care of acutely or critically ill and/or chronically complex patients. Students investigate how technologies are used to assess, diagnose, manage and/or evaluate the health status of patients. Students enhance their decision-making regarding the benefits and limitations of each technology through the use of evidence-based research. Students are introduced to the psychomotor skills used to perform select invasive procedures.
Fall
Prerequisite: (NURS 6070 AND NURS 6570) OR (NURS 6850 AND NURS 7210)
1 Course Unit

NURS 7680 Role of the Clinical Nurse Specialist
This course provides students the opportunity to apply CNS theory to practice and enables students to develop strategies to overcome barriers to safe, quality healthcare delivery. Students acquire knowledge and skills characteristic of CNS practice particularly as it relates to clinical judgment, facilitation of learning, advocacy and moral agency, caring practice and response to diversity.
Fall
1 Course Unit

NURS 7690 Clinical Nurse Specialist Clinical I
This clinical course provides students the opportunity to apply CNS theory to practice and enables students to develop strategies to overcome barriers to safe, quality healthcare delivery. Students acquire knowledge and skills characteristic of CNS practice particularly as it relates to clinical judgment, facilitation of learning, advocacy and moral agency, caring practice and response to diversity.
Spring
Prerequisite: NURS 6570
1 Course Unit

NURS 7700 Clinical Nurse Specialist Clinical II
This clinical course focuses on the application of CNS theory to practice. Students focus on furthering the development of the knowledge and skills related to the core competencies of the CNS. Strategies to improve provider and system issues related to the provision of care to the population of interest are developed, implemented and evaluated. Developing leadership in the development of system-wide or healthcare policy is promoted. Advocating for the individual, family, caregiver and population of interest needs within the context of clinical practice and policy making is encouraged.
Summer Term
Prerequisite: NURS 6570
1 Course Unit

NURS 7760 Clinical Nurse Specialist Clinical III
This course examines specific pathophysiological mechanisms which may result in body system failure. Strategies for clinical management are examined based on a synthesis of biological, behavioral, medical, pharmacological, and nursing knowledge. Theoretical analysis of the roles of the advanced practitioner with critically ill patients is emphasized.
Summer Term
Prerequisite: NURS 7310 AND NURS 7330
Corequisite: NURS 7770
1 Course Unit

NURS 7770 High Risk Neonatal Clinical II
This clinical course is designed with emphasis on continued development of advanced clinical skills in the care of critically ill children. Emphasis is placed on integration of the roles of the advanced practitioner. This course adds to the student’s previous knowledge and skills in advanced practice and prepares them to manage care of critically ill children.
Summer Term
Prerequisite: NURS 7310 AND NURS 7330
Corequisite: NURS 7760
1 Course Unit

NURS 7780 High Risk Neonatal Clinical III
This clinical course is designed with emphasis on continued development of advanced clinical decision-making skills in the care of critically ill children. Emphasis is placed on knowledge and skills that allow the advanced practitioner to efficiently and effectively manage children who are dependent upon or assisted by technological devices to carry out life processes.
Summer Term
Prerequisite: NURS 7760 OR NURS 7770
1 Course Unit

NURS 7800 Health Care of Women and Primary Care
The focus of this course is a clinical approach to primary care problems commonly encountered by women in an ambulatory setting. This course provides the women’s health care nurse practitioner and midwifery student with the knowledge and problem solving approach to assist individuals with the most common health problems, including acute episodic illness as well as stable chronic disease. The concepts of health promotion and health maintenance are integrated throughout the curriculum.
Summer Term
1 Course Unit

NURS 7810 Well Women Health Care, Theory
This course focuses on the management and evaluation of physical, emotional, socio-cultural and educational needs of gynecologic primary health care of women from adolescence through post-menopausal years. The content is directed at expanding the expertise of the student in meeting the primary women’s health care needs in contemporary society. Social influences that have an impact on women’s lives are also explored.
Fall
Also Offered As: NURS 6860
Prerequisite: NURS 6070 AND NURS 6570
1 Course Unit

NURS 7820 Well Women Health Care, Clinical
This clinical course further prepares students in understanding and developing the Women’s Health Care Nurse Practitioner and Nurse-Midwifery roles. This clinical course focuses on the management and evaluation of physical, emotional, socio-cultural and educational needs of gynecologic primary health care needs of women from adolescence through post-menopausal years. Emphasis is placed on promoting and maintaining wellness, clinical decision making, systematic health interview, physical assessment, interpretation of laboratory findings, and diagnosis and treatment of gynecological problems.
Fall
Prerequisite: NURS 6070 AND NURS 6570 AND NURS 7800
Corequisite: NURS 7810
1 Course Unit
NURS 7830 Health Care of Childbearing Women, Theory
The antepartum course builds upon the well-woman health care course. The focus is management of prenatal care for the childbearing family. Conceptual threads of public policy and ethics are integrated within the content to help students to identify broader implications for prenatal care. Content includes theory and practice related to nurse-midwifery/nurse practitioner management of the normal pregnant woman, and nurse-midwifery/nurse practitioner management and strategies to reduce selected obstetric complications.
Spring
Prerequisite: NURS 7810 AND NURS 7820
Corequisites: NURS 7430, NURS 7840
1 Course Unit

NURS 7840 Health Care of Childbearing Women, Clinical
This course focuses on the management and evaluation of the childbearing women and their families in primary care settings. The course presents the opportunity to implement the role of the Nurse Practitioner with the childbearing woman and her family. The focus is on comprehensive physical, psychosocial and educational management of women and their families during pregnancy and postpartum.
Spring
Prerequisite: NURS 781 AND NURS 782
Corequisites: NURS 7430, NURS 7830
1 Course Unit

NURS 7850 Integration I
Intensive integration of theory and clinical practice in women's health care with emphasis on ambulatory care. Clinical practice in all areas of ambulatory women's health care, teaching rounds, case presentations, and seminars with professional colleagues.
Summer Term
Prerequisite: NURS 7830 AND NURS 7840
1 Course Unit

NURS 7860 Integration II: Midwifery Integration
Intensive integration of theory and clinical practice in women's health care with emphasis on intrapartum, postpartum, and newborn care. Clinical practice during the intrapartum and postpartum, teaching rounds, case presentations, and seminars with professional colleagues.
Fall
Prerequisite: NURS 7830 AND NURS 7840
Corequisite: NURS 6930
1 Course Unit

NURS 7870 Intrapartum / Postpartum / Newborn Care, Theory
Anatomy and physiology relevant to the care of the women and their families during the intrapartum, postpartum and newborn periods. Includes management of selected obstetrical emergencies and medical complications.
Summer Term
Prerequisite: NURS 7830 AND NURS 7840
Corequisite: NURS 7880
1 Course Unit

NURS 7880 Intrapartum / Postpartum / Newborn Care, Clinical
Clinical care and management of women, newborns and their families during the intrapartum, postpartum and newborn periods. Includes management of selected obstetrical emergencies and medical complications. Clinical assignments related to module objectives.
Summer Term
Corequisite: NURS 7870
1 Course Unit

NURS 7890 Principles of Patient Safety & Quality Improvement in Healthcare
The course integrates the principles and methodologies of both quality and patient safety, which transforms and sustains high reliability organizations. Knowledge of the elements to complete a framework for safe and reliable healthcare will be described, as well as used by the students to apply the framework to a patient safety clinical situation. In addition, critical components of the current status of health care quality will be discussed, with emphasis on the role of patients, leadership, microsystems, and policy leaders. Organizational excellence will be examined in case reviews and discussions on strategies to develop and sustain quality and safety in the delivery of safe, effective, patient centered, timely, efficient, and equitable care.
Fall
1 Course Unit

NURS 7900 The Business of Healthcare: Principles of Finance, Accounting and Economics
In this course, students will focus on the business of health care and the financial competencies needed to manage complex health care organizations. This course integrates the basic principles of accounting, finance, and health care economics with business planning. It is designed to facilitate the student's knowledge and application of financial principles in the health care setting. Course content includes an overview of the health care landscape, basics of health insurers, introduction to budgeting, cost-benefit analysis, an overview of the financial planning cycle, operating budget development and labor variance analysis. The course culminates with an opportunity for students to apply their skill sets in performing an environmental scan and developing a business case.
Fall or Spring
1 Course Unit

NURS 7950 Nurse Anesthesia Residency II
This course is the second of two residencies that provide the nurse anesthetist student the opportunity to attain competencies within the Certified Registered Nurse Anesthesia (CRNA) scope of practice. Throughout the residency, the nurse anesthesia resident will utilize appropriate clinical judgment to manage the complex medical, physical and psychosocial needs of clients in the perioperative phases. Further refinement of the patient assessment, anesthesia administration, and critical thinking skills is emphasized. Students progress by providing anesthesia care for patients throughout the continuum of health care services. The guidance of CRNA faculty preceptors contributes to the development of the independence of the CRNA student. Collaborative practice within a care team model is emphasized and the student assumes more overall responsibility for the quality of care for the patients throughout the perioperative experience, with clinical support as required.
Spring
2 Course Units
NURS 7960 Diagnosis and Management of Adult Gerontology Acute Care Patients I
This online didactic course is designed for the practicing nurse practitioner or clinical nurse specialist who seeks to gain additional knowledge and skills related to the care of adult gerontology acutely ill patients with a specific focus on cardiovascular and pulmonary systems, thoracic issues, infectious processes, wound healing and diabetes. Particular focus is placed on specific issues related to the older adult such as frailty, dehydration, loss of functional mobility, falls, and other geriatric syndromes. The basics of ECG, CXR and PFT interpretation, ABG analysis and ventilator modes are highlighted. This course examines the epidemiologic, assessment, diagnostic, management, and evaluation of acutely or critically ill adults across the adult-older adult age spectrum. An evidence-based approach to nursing and medical management including pharmacologic and non-pharmacologic modalities is emphasized. Prerequisite: For Streamlined Adult Gero Program Students Only. Fall, Spring, and Summer Terms. 1 Course Unit

NURS 7970 Diagnosis and Management of Adult Gerontology Acute Care Patients II
This online didactic course, designed for the practicing nurse practitioners or clinical nurse specialists seeking to gain knowledge and skills relative to care of adult gerontology acute care patients, focuses on the medical and surgical issues of the neurological, renal, gastrointestinal, hematological, oncologic and orthopedic systems. This course examines the epidemiologic, assessment, diagnosis, management and evaluation of acutely or critically ill adults across the adult-older adult age spectrum. An evidence-based, interprofessional team approach to the nursing and medical management of patients is emphasized. Prerequisite: For Streamlined Adult Gero Program Students Only. Fall, Spring, and Summer Terms. Prerequisite: NURS 7960. 1 Course Unit

NURS 7980 Adult Gero Acute Care NP: Prof Role & Clinical Practicum for Primary Care Prepa
This online didactic course and accompanying clinical fieldwork focuses on issues essential to the implementation of the role of the Adult Gerontology Acute Care Nurse Practitioner. Clinical fieldwork focuses on the unique assessment, diagnosis, management and evaluation of acutely, critically and complex chronically-ill adults, across the adult age continuum, experiencing acute, urgent and emergent conditions, using both physiologically and technologically derived data. Evaluating for physiologic instability and potential life-threatening conditions is emphasized. Attention is given to the typical and atypical presentation of syndromes and constellation of symptoms exhibited by adults and older adults experiencing complex acute, critical and complex chronic illness. Issues related to the transition of patients through the health care system are explored. Collaboration between the nurse practitioner, patient, family and interprofessional healthcare team are encouraged. Prerequisite: For Streamlined Adult Gero Program Students Only. Fall, Spring, and Summer Terms. Prerequisite: NURS 7960. 0-1 Course Unit

NURS 7990 MSN Clinical Remediation
Students whose clinical performance would benefit from additional clinical exposure in order to demonstrate the expected competencies are, with course faculty and faculty advisor approval, eligible to register for NURS 799. This experience will be allotted no more than one credit unit and must be completed in a time frame not to exceed one academic semester. A course may be remediated only one time. Not Offered Every Year. 1 Course Unit

NURS 8000 Dissertation Seminar I
Advanced study and research in nursing leading to the completion of the dissertation proposal. Prerequisite: PhD Students. Fall. 1 Course Unit

NURS 8090 Hillman Scholar Seminar in Nursing Innovation
This course is designed to provide an exploration of innovation in society, health care, and nursing. It will provide a broad overview of innovation from historical to current times and from a variety of disciplines. It will focus on promoting innovation and discovery and its translation to policy, the health care system and nursing practice. Emphasis is placed on having scholars develop their individual approach to innovation and strategize implementation and evaluation strategies for innovation. Prerequisite: Selection as a Hillman Scholar in Nursing Innovation; 1.5 hour seminar every other week until completion of PhD courses with Hillman Scholar. Fall or Spring. 1 Course Unit

NURS 8100 Statistics I
This is the first course in a sequence of two courses designed to provide a broad overview of statistics and its applications to research in the health sciences. Topics covered will include techniques for describing and summarizing observations, for assessing associations among variables, and for determining the extent to which chance may be explaining and/or influencing the observed results. Following inference and basic hypothesis tests, bivariate and multivariable linear modeling techniques will be introduced with an emphasis on application and interpretation, diagnostics and model selection. Emphasis is on application of these techniques to the analysis of health science data. Students will learn how to choose, apply, and interpret commonly used statistical tests and predictive models. Students will be working with a common existing dataset throughout the sequence. In addition, students will gain experience using a commonly used statistical software package, to analyze real world data. Fall. 1 Course Unit

NURS 8110 Statistics II
This is the second in a sequence of two courses designed to provide a broad overview of statistics and its applications to research in the health sciences. Building on the previous course the course will include logistic, Poisson, survival, and repeated measures modeling. Special topics will include mediation and moderation and analytic concepts related to experimental designs along with power analysis and sample size calculations. Emphasis is on application and ethical implications of these techniques to the analysis of health science data. Students will continue to work with an existing dataset and gain experience using a commonly used statistical software package, to analyze real world data. Spring. Prerequisite: NURS 8100. 1 Course Unit
NURS 8130 Qualitative Paradigm Empirical Nursing Research
Study of selected qualitative paradigm empirical research approaches, including design and methodology. Critique of selected qualitative research reports from the literature of nursing and related disciplines. Fieldwork exercise and research proposal required. Prerequisite: PhD Students
Fall
1 Course Unit

NURS 8140 Doctoral Seminar: Ethics and Nursing
A critical review of the theoretical and empirical literature dealing with bioethics, nursing ethics, moral development, women's ethics and specific ethical concerns in health and illness care. Students will study topics related to their own interests/needs, guided by the instructor in relation to the discipline of ethics. Prerequisite: PhD Students
Spring, even numbered years only
1 Course Unit

NURS 8180 Families and Research
This seminar will explore issues related to research of families. Included in the ongoing discussion will be an analysis of nursing and other theories in relationship to research of families. Methodological issues related to research of families will be discussed, as will the analysis of family data and measurement issues common to research of families. The seminar will conclude with an agenda for future directions to research of families. Prerequisite: PhD Students
Spring, odd numbered years only
1 Course Unit

NURS 8190 Seminar on the Social History of Nursing
This course will involve a guided review of the pertinent literature relating to the history of technology in 20th century America. The focus will include a critical examination and review of the social origins and implications of technological development and diffusion in healthcare. Various theoretical frameworks in the history of technology will be closely examined in an attempt to assist the student in the development of their own framework. Prerequisite: PhD Students
1 Course Unit

NURS 8200 Seminar on the Social History of Nursing
This course involves a guided review of the pertinent literature relating to the social and intellectual history of nursing in the late 19th and 20th century. Students will critically examine and review the origins and implications of history and social justice concepts for interdisciplinarity, equity, what we consider as evidence, knowledge and research priorities, innovation, technology, and relevant healthcare issues. This guided review focuses on the United States as well as global perspectives.
Fall
1 Course Unit

NURS 8220 Seminar on the Social History of Nursing
This seminar will explore issues related to research of families. Included in the ongoing discussion will be an analysis of nursing and other theories in relationship to research of families. Methodological issues related to research of families will be discussed, as will the analysis of family data and measurement issues common to research of families. The seminar will conclude with an agenda for future directions to research of families. Prerequisite: PhD Students
1 Course Unit

NURS 8240 Health Equity: Conceptual, Linguistic, Methodological, and Ethical Issues
The course focuses on advanced analysis and evaluation of theories, concepts, and methods related to health equity. Topic areas include models and frameworks of health equity; linguistic choices related to equity, disparity, and vulnerability; role of economics, class, gender, sex, sexuality, race, and ethnicity; health equity in special populations; and issues in health policy, research ethics, and research methods. Emphasis is on advanced discourse and analysis of health equity theory and research. Prerequisites: PhD Students
Fall, odd numbered years only
1 Course Unit

NURS 8250 Seminar on Integrative Science in Aging
This fall semester interprofessional seminar will prepare students and fellows to identify appropriate measurement tools for use in aging research. We will specifically focus on analysis of selected concepts, models and measures central to the integrative science of aging. Topics include measurement of geriatric syndromes, models commonly used in integrative science of aging, outcomes of evidence-based care in older adults, regulatory and ethical issues specific to the conduct of research with older adults. Prerequisite: PhD Students
Spring
1 Course Unit

NURS 8260 Advanced Qualitative Research Methods
The course extends beginning qualitative research methods skills to a more advanced level. Students planning a dissertation or career focus in qualitative or mixed methods may use the course to refine interest and skill. The focus of the course centers on interactionist perspectives and collective analysis through methods tangential to these perspectives. Standpoint and participatory methods and analysis may be considered given sufficient student interest. Students are actively involved in selection and critique of seminal and critical readings. Students must have at their disposal a suitable dataset with commensurate permissions or have plans to collect qualitative data amenable to analysis during the course term. This data base can be from previous research proposals and fieldwork can be used as the building blocks for the course assignment(s). The course will focus on data collection, analyses, interpretation, and presentation of results. Skill building will center on collection and management of data; analytic technique including comparative, narrative, and text analysis; development and management of coding schemas; abstraction and development of situation specific theory; and dissemination and diffusion of findings, theories, and relevance to similar phenomena and use in practice. Prerequisite: PhD Students
Spring
1 Course Unit

NURS 8280 Response to Chronic Illness: Theory and Research
Millions of people of all ages live with chronic illness(es). A diagnosis of a chronic illness is a life-changing event, causing disruption and a sense of loss for many. Common early responses are stress, anxiety, depression, fear, and anger. Over time, with support and experience with the illness, many adjust. But, others report persistent feelings of loss due to physical, emotional, spiritual/existential, social, occupational, and/or financial influences of chronic illness. Those who adjust the best typically find a way to return a sense of normalcy to their lives. Loved ones and caregivers are equally affected by chronic illness and much has been written in recent years about caregiver burden. However, some individuals (caregivers and patients) report positive responses to illness, including a deepened purpose for living and a reordering of life priorities. The focus of this course is on individual responses to chronic illness—the person diagnosed and his/her loved ones. This course is intended to complement N818, which focuses on families and dyads dealing with chronic illness. In this course we will explore the major theoretical perspectives that underlie this field. The literature describing common responses of both those diagnosed and their loved ones as well as the social and cultural context that helps explain the responses of individuals facing chronic illness will be examined. Methods used to study chronic illness will be explored in depth.
Fall
1 Course Unit
NURS 8300 Conducting Research in Global Women's Health
An introduction to theoretical and methodological issues as they relate to conducting research in global women's health. Advanced analysis of historical, social, cultural, economic, political, technological and geographical contexts as they influence the health of girls and women across the lifespan and their relation to health care systems as both clients and providers. This includes contextual issues that constrain the provision and receipt of adequate healthcare. Prerequisites: Completion of course in Global Health (this may include a reputable online course eg: Coursera), or equivalent background (eg. global health field experience). Permission of Instructor. For graduate and professional students from any field with an interest in global women's health; Master students by permission of instructor. A critical examination of theoretical and methodological issues pertaining to research on women and girls conducted around the world across disciplines. A focused and intensive exploration of place as it pertains to women and girls formal and informal structures of health care delivery as those needing and/or seeking health care, and as those providing health care to others. Students will examine the multiple dimensions and qualities of these endeavors (e.g. activity, power, control, visibility, value, and remuneration) and the intersection of gender and health - locally, globally and across borders. Students will focus their examination on the implications of seeking and providing health care for women's and girls' health and well-being. By examining issues in local and global contexts and across geographical boundaries, students will have the opportunity to challenge gendered, class, political, and cultural assumptions related to women's health.
Fall
Also Offered As: GSWS 8300
1 Course Unit

NURS 8330 Measurement of Health-Related Behavior and Determinants
This one semester seminar will provide a detailed overview of measurement of health-related behaviors and determinants of behavior. The course will cover characteristics of measures, data collection, and how to apply the science of measurement to specific health research questions. The course will emphasize This one semester seminar will provide a detailed overview of measurement of the intersection of self-report measures with biological and physical measures, and the use of newer technologies to collect data and improve data quality. Students will integrate concepts and topics covered in the course as they work on a measurement project in their specific area(s) of interest and engage in problem-solving with their peers. This course is intended for doctoral student and advanced masters-level students in the health sciences.
1 Course Unit

NURS 8370 Web-based Research Methodology
This doctoral elective course will provide an introduction to Web-based research methods in health-related disciplines. This course will examine research methods that have been adapted to the study of human subjects through the Web. This course will have particular emphasis on quantitative and qualitative empirical methods using the Web as a data collection medium. Another important feature of this course will be intensive analysis of ethical and methodological issues conducting research through the Web. Areas to be analyzed include: types of Web-based research; advantages and disadvantages of Web-based research; vehicles (e.g. funding, mentoring) that have supported Web-based research; human subject protection issues; issues/concerns in recruitment and data collection in Web-based research; and professional vehicles (e.g. scholarly publication, lay publications, speaking forums) that have helped disseminate the knowledge derived from Web-based research. Prerequisites: PhD Student
Fall
1 Course Unit

NURS 8390 Mixed Methods Research
This course will focus on mixed methods research techniques including mixed methods designs, developing mixed methods research questions, data collection, analyses focusing on data integration of qualitative and quantitative data, interpretation, and presentation of results. Skill building will center on sampling, collection, and management of data; data integration techniques; data visualization, methodological rigor and reporting data including dissemination of findings. Students will complete a mixed methods "mini" proposal.
Fall
1 Course Unit

NURS 8400 Design Thinking in Healthcare Institute
Innovation, defined as a hypothesis-driven, testable, and disciplined strategy, is important for improving health and healthcare processes. Innovation includes the methodologies we use to solve problems, the systems, products and processes we create, social and digital technologies, as well as the way we communicate with our patients, their families, our colleagues and communities at-large. Employing new ways of thinking, such as with design thinking, opens possibilities for creating meaningful and innovative solutions. This course provides foundational content in design thinking and a disciplined approach to innovation as it applies to health and health care. Offered as an online classroom environment coupling synchronous interactive sessions with asynchronous foundational content, students learn innovative approaches for solving a variety of healthcare problems.
Spring
0.5 Course Units

NURS 8410 Transformational Leadership
Transformational leaders create an organizational vision, inspire and motivate others from diverse backgrounds to actualize strategic goals even during uncertainty. Developed and presented by expert Wharton Executive Education faculty in a one-week synchronous online session (or an on-campus intensive as possible) with asynchronous online modules, students explore strategic planning and execution, stakeholder analysis, negotiation and influence, resource allocation, organizational culture and change management. On the path to becoming purpose-driven leaders, students learn of cutting-edge research on the qualities and behaviors of both successful and unsuccessful work environments and how this research can be applied to practical, real-life workplace situations.
Fall
1 Course Unit

NURS 8420 Thriving in an Everchanging Healthcare Environment
Due to a complex and everchanging healthcare environment, efforts to improve population health in innovative and cost-effective ways has proven challenging for providers and insurers alike. Offered in an asynchronous online format and including content taught by expert faculty in the Perelman School of Medicine Health Care Innovation Graduate Program, this course introduces students to main forces affecting the health insurance environment including changing mechanics of the insurance market, health insurance plan costs, and innovative methods for modifying behavior through incentives embedded within benefit design. Students also examine various examples of insurance reform incentivizing practice innovation and the development of new service delivery models in the healthcare industry.
Spring
0.5 Course Units
NURS 8421 Thriving in a Value-Driven Healthcare Economic Environment
Thriving in an everchanging healthcare environment requires that leaders have foundational knowledge of the healthcare insurance market, rivers of value in this industry and available levers of policy change in government and the private sectors. Most policy experts agree that focusing on value will lead to a united approach for improving health care delivery. Offered in an asynchronous and synchronous online format and including content taught by Senior Executives in care transformation and expert faculty in the Perelman School of Medicine Health Care Innovation Graduate Program, this course introduces students to main forces affecting the health insurance environment and drivers of value and practice innovation in the healthcare industry.
Spring
1 Course Unit

NURS 8430 Executive Leadership in Complex Healthcare Systems
Executive leadership in a complex healthcare industry requires the knowledge and skills to revolutionize care delivery models and improve patient and organizational outcomes. Students explore foundational concepts essential for executive leadership decision-making including behavioral economics and principles of systems thinking and complexity theory. Through the exploration of exemplars in transforming facets of healthcare systems, students also examine pragmatic approaches for leading systems-level change in care delivery. Offered in an asynchronous and synchronous online format and including content developed and presented by expert faculty in the Perelman School of Medicine Health Care Innovation Graduate Program as well as healthcare industry leaders, students develop skills inherent for success in leading transformational change in their own organizations.
Spring
1 Course Unit

NURS 8490 Exploring Data Science Methods with Health Care Data
The growth and development of electronic health records, genetic information, sensor technologies and computing power propelled health care into the big data era. This course will emphasize data science strategies and techniques for extracting knowledge from structured and unstructured data sources. The course will follow the data science process from obtaining raw data, processing and cleaning, conducting exploratory data analysis, building models and algorithms, communication and visualization, to producing data products. Students will participate in hands-on exercises whenever possible using a clinical dataset.
Spring
Also Offered As: BMIN 5490
1 Course Unit

NURS 8510 Translating Evidence into Practice (DNP Project #1)
This course focuses on the translation of research into practice to achieve sustainable improvements in clinical, patient and systems outcomes. Course content builds on the foundational principles of evidence-based practice and the critical scientific appraisal of evidence to guide advanced evidence-based reasoning and decision-making for translation and application to practice.
Prerequisite: NURS 5470 OR NURS 6370
1 Course Unit

NURS 8520 DNP Project Planning II (DNP Project #2)
This course provides an overview of the concepts, procedures, and fundamental processes of project management for Doctor of Nursing Practice students. Principles, tools and techniques of project management within an integrative framework are reviewed and applied to the development of the practice change/quality improvement project proposal. Students will develop a proposal for an evidence-based project that addresses a health problem, health promotion opportunity, healthcare system issue, community health concern, clinical problem, integration of technology/informatics in care or a policy-related issue. Students will finalize the project plan by the conclusion of the course. Students will develop a partnership with key stakeholders relative to their intended project and meet with key stakeholders and members within a healthcare agency and/or communities of interest where the project is to be implemented. Students are expected to develop collaborative working relationships and team leadership skills throughout the course of the semester through regularly scheduled team meetings that engage project site stakeholders and project mentors, including both site and faculty project mentors.
Fall
Prerequisite: NURS 8510
0.5 Course Units

NURS 8521 DNP Project II: Project Proposal
This is the second in the series of three project courses. The focus of this course is the development of a complete project proposal. This course provides an overview of the concepts, procedures and fundamental processes of project management for Doctor of Nursing Practice (DNP) students. Principles, tools, and techniques of project management within an integrative framework are reviewed and applied to the development of the DNP project. Students will finalize a project management plan that advances high quality, equitable and accessible health care. Students will continue to meet with key stakeholders and members within healthcare agency and/or communities of interest where the project is being implemented. This course offers individualized faculty guidance and mentored opportunities for the planning process.
Fall
Prerequisite: NURS 8510
1 Course Unit

NURS 8530 DNP Project Implementation (DNP Project #3)
This course requires DNP students to implement their project and determine how the results can be used to improve processes and procedures within the healthcare agency or community of interest. Students are expected to integrate evidence-based practice paradigms and process principles into the development of a final report and present the findings to each other for peer critique. Barriers from people, places and policies will be addressed and strategies developed to negotiate solutions. Principles of sustainable evidence-based practice change across disciplines and within various healthcare settings will be discussed. Students will assume the role of leader in the interprofessional collaboration, consultation, and partnership with the healthcare organization or communities of interest.
Fall or Spring
Prerequisite: NURS 8520
0.5 Course Units
NURS 8531 DNP Project III: Project Implementation
This is the third of a series of three courses with the focus on implementation and dissemination of the Doctoral of Nursing Practice (DNP) project. In this final course students are expected to carry out the project and determine how the results can be used to improve processes and procedures within the healthcare agency or community of interest. Students integrate evidence-based practice paradigm and process principles into the development of a final report and present the findings to each other for peer critique. Barriers from people, places and policies will be addressed and strategies developed to negotiate solutions. Principles of sustainable evidence-based practice change across disciplines and within various healthcare settings will be discussed. Students will assume the role of leader in the interprofessional collaboration, consultation, and partnership with the healthcare organization or communities of interest with the goal to also share findings and advance nursing scholarship. Students demonstrate proficiency in time management, leveraging resources, communication skills and interprofessional collaboration through the implementation of the project.
Spring
Prerequisite: NURS 8521
1 Course Unit

NURS 8540 DNP Project Evaluation and Dissemination (DNP Project #4)
The Doctor of Nursing Practice (DNP) project is the terminal project for fulfillment of the DNP Degree requirements. The DNP Project prepares students to lead and conduct a scientific clinical inquiry project that integrates and applies learning from coursework and clinical practicums. The DNP project is a logical extension of the practice emersion experience, and uses evidence and the literature-related information to guide improvements in either practice or patient outcomes. The DNP Project will culminate in the development of an evidence-based, practice manuscript.
Fall
Prerequisite: NURS 8530
1 Course Unit

NURS 8580 Professional Aspects & Leadership for Nurse Anesthesia Practice
This course will provide students with an opportunity to explore professional issues which affect the practice of nurse anesthesia and the healthcare delivery system. Discussion of professional issues which impact nurse anesthetist practice will include professionalism, scope of practice, patient safety from a systems perspective, medical legal concerns, ethical decision making, reimbursement and other financial issues which impact healthcare delivery. Students will be afforded the opportunity to develop their own sense of professionalism as they explore these issues and develop a professional presentation.
Summer Term
1 Course Unit

NURS 8760 Advanced Clinical Concepts and Professional Role for Critical Care Advanced Practice Providers I
This course examines the complexities of caring for critically ill patients within the modern ICU. Advanced concepts of critical care diagnosis, management and therapeutics are analyzed. Patient cases are evaluated within established professional standards of practice and alternative management strategies are discussed and analyzed. Care provided in patient cases is compared to the quality and safety (QSEN) competencies and strategies to improve care are described. Professional behaviors such as teamwork and collaboration and other interprofessional collaborative competencies are developed within practitioners and demonstrated and applied in simulations. Prerequisites: Admission to the Penn Medicine Critical Care Advanced Practitioner Fellowship or By Permission Only.
Not Offered Every Year
1.5 Course Unit

NURS 8770 Advanced Clinical Concepts and Professional Role for Critical Care Advanced Practice Providers II
This is the second of two courses specifically designed for Advanced Practice Providers enrolled in the Penn Medicine Critical Care Advanced Practitioner Fellowship Program. This course continues to examine the knowledge, skills and professional behaviors required to deliver safe, quality care that meets defined standards of practice. Core competencies to provide evidence-based, cost effective care expected of Advanced Practice Providers in an intensivist-led, multiprofessional critical care team are further developed and honed. Strategies to synthesize and integrate these knowledge, skills and attitudes into the fellow's practice are constructed and demonstrated.
Fall
Prerequisite: NURS 8760
1.5 Course Unit

NURS 8900 Nursing Doctoral Teaching Residency
The purpose of this required one semester teaching residency is to enhance the expertise of students in the role of educator. The residency will be tailored to the student’s individual learning needs. At the minimum, students with no or minimal prior teaching experience will gain a beginning level of expertise in course planning, course evaluation, dealing with difficult student situations, test construction, paper assignment construction and grading, content delivery methods, as well as other aspects of the faculty teaching role. Students with more extensive teaching experience will tailor their residences with their residency supervisor to enhance their expertise in these various areas. Prerequisites: PhD Student
Fall
1 Course Unit

NURS 8970 Nursing Doctoral Research Residency
The purpose of this required one semester research residency is to enhance student research training early in the doctoral program by providing a mentored research experience. The residency is designed to be a tailored hands-on experience to provide students with exposure and the opportunity to participate in one or more aspects of an ongoing research project. Research residencies are experiential activities designed to meet the student’s individual learning needs. At the minimum, students with no or minimal prior research experience will gain a beginning level of experience on a variety of components of an ongoing research project. Students with more extensive research experience will tailor their residences with their residency supervisor to enhance their expertise in these various areas. Prerequisites: PhD Student
Fall
1 Course Unit
NURS 9000 Directed Study
Must be arranged with the written permission of the sponsoring faculty member prior to registration.

1 Course Unit

Operations, Information and Decisions (OIDD)

OIDD 0001 Prescriptive Analytics: Making Business Decisions using Optimization and Simulation
In this course, we will explore the subject of quantitative business decision making. Specifically, we will study optimization and simulation tools and provide you with a set of key skills in the area of prescriptive analytics. We will illustrate the use of these tools in a variety of business applications, including manufacturing, logistics, inventory management, capital budgeting, insurance, and revenue management.
0.5 Course Units

OIDD 0002 Grit Lab 101: The Psychology of Passion, Perseverance, and Success
The aims of Grit Lab are two-fold: (1) to equip you with generalizable knowledge about the science of passion and perseverance, and (2) to help you apply these insights to your own life—such as when applying to college. At the heart of this course are cutting-edge scientific discoveries about how to foster passion and perseverance for long-term goals. As in any college undergraduate course, you will have an opportunity to learn from current research. But unlike most courses, Grit Lab encourages you to apply these ideas to your own life and reflect on your experience.
0.5 Course Units

OIDD 1010 An Introduction to Operations, Information and Decisions
OIDD 101 explores a variety of common quantitative modeling problems that arise frequently in business settings, and discusses how they can be formally modeled and solved with a combination of business insight and computer-based tools. The key topics covered include capacity management, service operations, inventory control, structured decision making, constrained optimization and simulation. This course teaches how to model complex business situations and how to master tools to improve business performance. The goal is to provide a set of foundational skills useful for future coursework at Wharton as well as providing an overview of problems and techniques that characterize disciplines that comprise Operations and Information Management.
Fall or Spring
1 Course Unit

OIDD 1050 Analytics in Excel VBA
This course introduces the construction and use of data analysis tools that are commonly used for business analysis. The course builds on the spreadsheet and analytical skills developed in OIDD1010, providing a much more extensive treatment of spreadsheet application development (using Excel Visual Basic for Applications). In addition, we will cover best practices in programming and analytics generally which can carry over to other tools and languages. Time permitting, we will do an introduction to some advanced analytical methods that show up in complex data analysis tasks and provide a foundation for further study. In prior years, this course was a 1 cu offering combining the content described here with the content of what is now OIDD3150: Databases for Analytics (0.5 cu). Students seeking this experience can take this course along with OIDD3150 either sequentially or concurrently.
0.5 Course Units

OIDD 2000 Grit Lab: Fostering Passion and Perseverance in Ourselves and Others (SNF Paideia Program Course)
At the heart of this course are cutting-edge scientific discoveries about passion and perseverance for long-term goals. As in any other undergraduate course, you will learn things you didn’t know before. But unlike most courses, Grit Lab requires you to apply what you’ve learned in your daily life, to reflect, and then to teach what you’ve learned to younger students. The ultimate aim of Grit Lab is to empower you to achieve your personal, long-term goals—so that you can help other people achieve the goals that are meaningful to them. LEARN -> EXPERIMENT -> REFLECT -> TEACH. The first half of this course is about passion. During this eight-week period, you’ll identify a project that piques your interest and resonates with your values. This can be a new project or, just as likely, a sport, hobby, musical instrument, or academic field you’re already pursuing. The second half of this course is about perseverance. During this eight-week period, your aim is to develop resilience, a challenge-seeking orientation, and the habits of practice that improve skill in any domain. By the end of Grit Lab, you will understand and apply, both for your benefit and the benefit of younger students, key findings in the emerging science on grit.
Fall
Also Offered As: OIDD 0050, PSYC 0405
1 Course Unit

OIDD 2010 Technology Management, Information and the Digital Economy
OIDD2010 introduces students to two critically important and tightly linked concepts. The first is online business model innovation, including key opportunities to exploit information-based strategies in businesses as diverse as Capital One and Uber (newly vulnerable markets) and Amazon and Airbnb (online channel conflict). The second is computer-based simulation modeling to assess the viability of an online innovation, the strategies for its launch, and its economic value.
1 Course Unit

OIDD 2100 Online Business Models and the Information-Based Firm
This course provides a broad-based introduction to the management of information technology focusing on three interrelated themes: technology, organization, and strategy. The goal of this course is to equip students with the knowledge and tools to utilize information systems to pursue a firm’s strategic and organizational goals. The course has no prerequisites other than a general interest in the applications of information technology.
Fall or Spring
1 Course Unit
OIDD 2150 Intro to Analytics and the Digital Economy
Over the past decade, there has been a dramatic rise in the use of technology skills and data analytic thinking to solve business problems in many domains, including finance, HR, policy, transport, and strategy. As a result, the modern “analytic leader” increasingly requires the use of technology, statistics, and data skills to facilitate business analysis. This includes knowing how to effectively frame data-driven questions and use a new generation of technology tools that are becoming available to acquire, analyze, interpret, and communicate insights derived from data. Students in this hands-on course will engage with weekly labs that introduce them to new technologies, techniques, and data-driven business challenges.

0.5 Course Units

OIDD 2200 Introduction to Operations Management
This course introduces basic concepts of operations management and application of the same in business practice today. We will examine the theoretical foundations of operations management and how these principles or models can be employed in both tactical and strategic decision making. Topics covered in detail are forecasting techniques, planning under deterministic and uncertain demand, operations planning and scheduling, queuing theory, service operations management, newsvendor models, risk pooling strategies in firms, capacity and revenue management, and supply chain coordination. We will conclude by discussing how supply chains evolve under technological change.

Fall or Spring
1 Course Unit

OIDD 2220 Internet Law, Privacy, and Cybersecurity
This course examines the complex and often novel legal issues surrounding the development and current state of the Internet, information privacy, and cybersecurity. Topics include federal- and state-level regulation and enforcement of Internet and privacy legal concepts, data breaches, online privacy protections, how to legally manage a borderless Internet, and the liability of intermediaries such as network operators, social media services, and search engines.

Fall or Spring
Also Offered As: LGST 2220
1 Course Unit

OIDD 2240 Analytics for Service Operations
This course considers tools and concepts that can generate operational excellence for the production and delivery of services in industries such as banking, transportation, health care, and communications. Since services typically are intangible, not storable or transportable, and often highly variable, the management of their operations is complex and involves distributed operations with a significant amount of customer contact. Therefore, the understanding and effective management of service operations requires specialized analytical tools and customer-centric focus. This course covers a mix of topics with the emphasis on quantitative methods, application of analytics and strategic frameworks. The class will introduce simple models and basic concepts that support analysis of tradeoffs in a variety of common service processes. Students also will have the opportunity to apply the ideas and analytical models developed in the course to a particular service industry. They will do so by conducting a guided, application group project which includes opportunities for in-depth analysis of a particular service process and field work.

1 Course Unit

OIDD 2340 M&T First Year Seminar
The objective of this seminar course is to help students understand the intersection of management and technology and how it is being translated in practice. It is designed to lay the foundation for an integrated productive learning program at Penn as students adjust to their new educational environment. The seminar is structured to accomplish this through faculty and alumni speakers from different sectors. Enrollment is limited to the freshman students and the few transfer students admitted to the M&T program only.

Fall
0.5 Course Units

OIDD 2360 Scaling Operations in Technology Ventures: Linking Strategy and Execution
This course helps students learn to make strategic scaling decisions that are grounded in operational reality. Students will study how to build and evaluate the “operation systems” of the firm to maximize value with the focus on scaling the firm’s operations. This involves tailoring the firm’s operational competencies, assets, and processes to a specific business strategy. The course will approach the challenge of scaling operations and operations strategy by taking a holistic view that incorporates competitive strategy, financial evaluation, and the customer experience.

1 Course Unit

OIDD 2380 M&T Global Immersive Week
The M&T Global Immersive week is designed to provide the students in the program with firsthand experience to a global technology hub to further enhance learnings from both Penn Engineering and Wharton. With the number of technology startups in countries like Israel, India, China, especially the unicorns, the world will soon catch up with United States, if it has not already. Hence, the learnings of our future leaders should include a thorough understanding of the driving forces of the technology landscape in countries with a thriving startup culture. Each year M&T students across four years will go on a weeklong trip to a specific country chosen for that year in the first week of January. The global module will incorporate class lectures, workshops, guest lectures and visits to tech focused companies to meet local business founders and executives.

Class will comprise of a group of up to 15 students chosen through an application process. The experiential learning provides the students an opportunity to learn from the leaders while immersing themselves in another culture and building relationships with the alumni in that area.

0.5 Course Units

OIDD 2450 Analytics and the Digital Economy
Students who take this course will engage with the world of data science using tools such as Tableau and R that are becoming increasingly popular in industry. The first half of the course is designed for students with limited experience with data projects, and while familiarity with R, via courses such as STAT 4050 or STAT 4700, will be ideal preparation, students with other programming exposure can pick up the required skills via review sessions and self-instruction. The second half of the course extends students’ experience to industry applications of text mining and machine learning and requires students to work with more unstructured data. Each week of the course will be devoted to analysis of a data set from a particular industry (e.g. HR, sports, fashion, real estate, music, education, politics, restaurants, non-profit work), which we will use to answer business questions by applying analytic techniques. The course is very hands-on, and students will be expected to become proficient at applying data to business decisions and at effectively analyzing large data sets to inform decisions about business problems.

1 Course Unit
OIDD 2550 Artificial Intelligence, Business, and Society
The progression of AI-based technologies promises to transform many aspects of business, labor, and even society. The goal of this course is to provide students with an understanding of the capabilities of modern AI technologies, with an emphasis on being able to critically assess where they can provide business and societal value, and where they may create new challenges. This course is intended to provide a framework for people who may have to confront the legal, ethical, and economic challenges that are likely to arise around AI. A goal of the course is to ensure that students who complete the course are comfortable enough in the inner-workings of these technologies to think critically across many AI contexts as well as different domains ranging from public policy, to criminal justice, to health inspections, HR, and marketing. The course is oriented around hands-on labs, exams, discussions, and presentations. Labs will reinforce your learning of how AI works, and how it is being used to solve business problems. A coding background is not required, but students should be willing to engage with code to a limited degree in order to complete the labs. During labs, students will combine data and algorithms to provide a foundation for understanding the deep challenges that AI brings to organizations. The class is particularly suitable for students who will be searching for jobs in the business of technology, such as product management and business analytics, as well as those interested in the larger social implications of AI technologies.

1 Course Unit

OIDD 2610 Risk Analysis and Environmental Management
This course will introduce students to concepts in risk governance. We will delve into the three pillars of risk analysis: risk assessment, risk management, and risk communication. The course will spend time on risk financing, including insurance markets. There will be particular emphasis on climate risks, although the course will also discuss several other examples, including pandemics, biodiversity loss, and systemic risks, among others. The course will cover how people perceive risks and the impact this has on risk communication and management. We will explore public policy surrounding risk management and how the public and private sectors can successfully work together to build resilience, particularly to changing risks.

Fall or Spring

Also Offered As: BEPP 2610

1 Course Unit

OIDD 2630 Environmental & Energy Economics and Policy
This course examines environmental and energy issues from an economist’s perspective. Over the last several decades, energy markets have become some of the most dynamic markets of the world economy, as they experienced a shift from heavy regulation to market-driven incentives. First, we look at scarcity pricing and market power in electricity and gasoline markets. We then study oil and gas markets, with an emphasis on optimal extraction and pricing, and geopolitical risks that investors in hydrocarbon resources face. We then shift gears to the sources of environmental problems, and how policy makers can intervene to solve some of these problems. We talk about the economic rationale for a broad range of possible policies: environmental taxes, subsidies, performance standards and cap-and-trade. In doing so, we discuss fundamental concepts in environmental economics, such as externalities, valuation of the environment and the challenge of designing international agreements. At the end of the course, there will be special attention for the economics and finance of renewable energy and policies to foster its growth. Finally, we discuss the transportation sector, and analyze heavily debated policies such as fuel-economy standards and subsidies for green vehicles. Prerequisites: An introductory microeconomics course (ECON 1, or another course approved by the instructor) will be sufficient in most cases; BEPP 250 or an equivalent intermediate microeconomics course is recommended.

Also Offered As: BEPP 2630

1 Course Unit

OIDD 2900 Decision Processes
This course is an intensive introduction to various scientific perspectives on the processes through which people make decisions. Perspectives covered include cognitive psychology of human problem-solving, judgment and choice, theories of rational judgment and decision, and the mathematical theory of games. Much of the material is technically rigorous. Prior or current enrollment in STAT 101 or the equivalent, although not required, is strongly recommended.

Prerequisite: STAT 1010

1 Course Unit

OIDD 2910 Negotiations
This course examines the art and science of negotiation, with additional emphasis on conflict resolution. Students will engage in a number of simulated negotiations ranging from simple one-issue transactions to multi-party joint ventures. Through these exercises and associated readings, students explore the basic theoretical models of bargaining and have an opportunity to test and improve their negotiation skills.

Fall or Spring

Also Offered As: LGST 2910, MGMT 2910

1 Course Unit

OIDD 2920 Advanced Negotiation
This course is designed to teach negotiation principles and to enable students to develop their negotiation skills. This course assumes familiarity with the basic negotiation concepts covered in the prerequisite for this course: Negotiations. In this course, we extend the study and practice of negotiations and we develop a deeper understanding for how specific aspects of the negotiation process (e.g., emotions, deadlines, trust violations) impact outcomes. Through course lectures, readings, and case exercises, students will develop a rich framework for thinking about the negotiation process and acquire tools for guiding the negotiation process.

Fall or Spring

Also Offered As: LGST 2920, MGMT 2920

Prerequisite: LGST 2910 OR OIDD 2910 OR MGMT 2910

1 Course Unit
OIDD 2930 People Analytics
This course examines the use of data to understand and improve how people are managed in organizations. People really are organizations’ most important asset, providing the critical link in converting strategy and capital into value. Yet throughout most of our history, most organizations have relied on long-standing traditions, hearsay, political expediency, prejudice and gut instinct to make decisions about how those people should be managed. Recent years have seen a growing movement to bring more science to how we manage people. In some cases, that means ensuring that whatever practices and approaches we adopt are backed up by solid evidence as to their effectiveness. Often, organizations will seek to go further, analyzing their own data to identify problems and learn what is working and what is not in their own context. This course applies the insights of the people analytics movement to help students become better managers and more critical analysts within their organizations. The course aims to develop students in three specific ways. First, it will provide students with an up-to-the-minute grounding in current evidence about managing people, providing a knowledge base that can ensure that their future management is guided by best practices. Second, we will develop the skills and understanding necessary to be thoughtful, critical consumers of evidence on people management, allowing them to make the most of the analysis available to them as they make people decisions. Third, we will provide guidance and practice in conducting people analytics, preparing students to gather data of their own, and making them more skilled analysts. We will pursue these goals through a mixture of lecture, case discussion, and hands-on exploration of a variety of data sets.

Spring
Also Offered As: MGMT 2930
1 Course Unit

OIDD 2990 Judgment & Decision Making Research Immersion
This class provides a high-level introduction to the field of judgment and decision making (JDM) and in-depth exposure to the process of doing research in this area. Throughout the semester you will gain hands-on experience with several different JDM research projects. You will be paired with a PhD student or faculty mentor who is working on a variety of different research studies. Each week you will be given assignments that are central to one or more of these studies, and you will be given detailed descriptions of the research projects you are contributing to and how your assignments relate to the successful completion of these projects. To complement your hands-on research experience, throughout the semester you will be assigned readings from the book Nudge by Thaler and Sunstein, which summarizes key recent ideas in the JDM literature. You will also meet as a group for an hour once every three weeks with the class’s faculty supervisor and all of his or her PhD students to discuss the projects you are working on, to discuss the class readings, and to discuss your own research ideas stimulated by getting involved in various projects. Date and time to be mutually agreed upon by supervising faculty and students. the 1CU version of this course will involve approx. 10 hours of research immersion per week and a 10-page paper. The 0.5 CU version of this course will involve approx 5 hours of research immersion per week and a 5-page final paper. Please contact Professor Joseph Simmons if you are interested in enrolling in the course: jsimmo@wharton.upenn.edu

Fall
0.5-1 Course Unit

OIDD 3110 Business Computer Languages
This course is taught with the more descriptive title of "Scripting for Business Analytics." "Business Analytics" refers to modeling and analysis undertaken for purposes of management and supporting decision making. The varieties of techniques and methods are numerous and growing, including simple equational models, constrained optimization models, probabilistic models, visualization, data analysis, and much more. Elementary modeling of this sort can be undertaken in Excel and other spreadsheet programs, but "industrial strength" applications typically use more sophisticated tools, based on scripting languages. Scripting languages are programming languages that are designed to be learned easily and to be used for special purposes, rather than for large-scale application programming. This course focuses on the special purposes associated with business analytics and teaches MATLAB and Python in this context. MATLAB and Python are widely used in practice (both in management and in engineering), as are the business analytic methods covered in the course. Prior programming experience is useful, but not required or presumed for this course.

Fall or Spring
1 Course Unit

OIDD 3140 Enabling Technologies
Conducting business in a networked economy invariably involves interplay with technology. The purpose of this course is to improve understanding of technology (what it can or cannot enable), the business drivers of technology-related decisions in firms, and to stimulate thought on new applications for commerce (including disruptive technologies). The class provides a comprehensive overview of various emerging technology enablers and culminates in discussion of potential business impact of these technologies in the near future. No prior technical background is assumed and hence every effort is made to build most of the lectures from the basics. However, the Fall semester class will assume basic understanding of statistics and will focus more on big data analytics. Some assignments in the fall will involve data analytics using Python or R.

Fall or Spring
Mutually Exclusive: OIDD 6620
0.5-1 Course Unit

OIDD 3150 Databases for Analytics
Relational databases are the primary way in which business data is stored and processed. This course focuses on the analysis of data in databases and the development of databases to support analytical tasks. Over the course of the semester, students will learn the database language SQL and use this language to perform analytical tasks on existing and self-created databases. In addition, we will cover database scripting languages and extensions. The course is intended as students with little or no database background and does not presume prior computer science or coding experience. This course is nearly all hands-on coding. Students interested in more conceptual discussions of technology should consider other OIDD offerings.

0.5 Course Units
OIDD 3190 Advanced Decision Systems: Evolutionary Computation
This course is taught with the more descriptive title of “Agents, Games, and Evolution.” It explores applications and fundamentals of strategic behavior. Strategic, or game-theoretic, topics arise throughout the social sciences. The topics include—and we discuss—trust, cooperation, market-related phenomena (including price equilibria and distribution of wealth), norms, conventions, commitment, coalition formation, and negotiation. They also include such applied matters as design of logistics systems, auctions, and markets generally (for example, markets for electric power generation). In addressing these topics we focus on the practical problem of finding effective strategies for agents in strategic situations (or games). Our method of exploration will be experimental: we review and discuss experiments, principally computational experiments, on the behavior of boundedly rational agents in strategic (or game-theoretic) situations. Course work includes readings, discussions in class (organized as a seminar), examinations, and a course project on a topic chosen by the participants.
Fall or Spring
1 Course Unit

OIDD 3210 Introduction to Management Science
Understanding how to use data and business analytics can be the key differential for a company’s success or failure. This course is designed to introduce fundamental quantitative decision-making tools for a broad range of managerial decision problems. Topics covered include linear, nonlinear, and discrete optimization, dynamic programming, and simulation. Students will apply these quantitative models in applications of portfolio management, electricity auctions, revenue management for airlines, manufacturing, advertising budget allocation, and healthcare scheduling operations. Emphasis in this course is placed on mathematical modeling of real world problems and implementation of decision making tools.
Fall or Spring
1 Course Unit

OIDD 3250 Computer Simulation Models
This course focuses on agent-based computational models in the social sciences, especially in economic, in commercial and in strategic (game-theoretic) contexts. This relatively recent and now rapidly-developing form of computer simulation seeks to explain and predict complex social phenomena “from the ground up”, through interactions of comparatively simple agents. The course reviews experimental and theoretical results, and exposes the students to modern development environments for this form of simulation. Students have the opportunity to design and implement agent-based simulations. Programming, however, is not required. This course aims to integrate various topics in agent-based simulation, while developing an appreciation of the problems that are particularly characteristic of this form of simulation so that students will understand its promise and potential.
Fall or Spring
1 Course Unit

OIDD 3530 Mathematical Modeling and its Application in Finance
Quantitative methods have become fundamental tools in the analysis and planning of financial operations. There are many reasons for this development: the emergence of a whole range of new complex financial instruments, innovations in securitization, the increased globalization of the financial markets, the proliferation of information technology and the rise of high-frequency traders, etc. In this course, models for hedging, asset allocation, and multi-period portfolio planning are developed, implemented, and tested. In addition, pricing models for options, bonds, mortgage-backed securities, and other derivatives are studied. The models typically require the tools of statistics, optimization, and/or simulation, and they are implemented in spreadsheets or a high-level modeling environment, MATLAB. This course is quantitative and will require extensive computer use. The course is intended for students who have strong interest in finance. The objective is to provide students the necessary practical tools they will require should they choose to join the financial services industry, particularly in roles such as: derivatives, quantitative trading, portfolio management, structuring, financial engineering, risk management, etc. Prospective students should be comfortable with quantitative methods such as basic statistics and the methodologies (mathematical programming and simulation) in OIDD6120 Business Analytics and OIDD3210 Management Science (or equivalent). Students should seek permission from the instructor if the background requirements are not met.
Fall or Spring
Mutually Exclusive: OIDD 6530
Prerequisite: OIDD 3210
1 Course Unit

OIDD 3800 Operations Strategy Practicum
This course focuses on the management of operations at manufacturing and service facilities located in Israel that are used either by domestic corporations or by multinational companies. The emphasis is on the evolving patterns of operations strategies adopted by firms for producing products, sourcing manufacturing, distributing products, delivering services and managing product design as well as on programs for enhancing quality, productivity and flexibility and managing technology. We will focus on formulation and execution of such strategies for established Israeli multinationals with world class operations and innovative strategies as well as start-ups and smaller companies that are scaling their global supply chain infrastructure to support growth. The course will consist of a set of site visits in Israel during Winter Break that will provide the opportunity to observe company processes directly and in-class sessions which include lectures, case discussions and management speakers who will describe their companies’ current strategy. NOTE: THIS COURSE REQUIRES YOU TO SUBMIT AN APPLICATION FOR ADMISSION. Enrollment will be limited. Please contact Ramon Jones at ramjones@wharton.upenn.edu for more information. Application available at https://global.upenn.edu/pennabroad/pgs OIDD 1010 is recommended but not required.
1 Course Unit
OIDD 3970 Retail Supply Chain Management
This course is highly recommended for students with an interest in pursuing careers in: (1) retailing and retail supply chains; (2) businesses like banking, consulting, information technology, that provides services to retail firms; (3) manufacturing companies (e.g. P&G) that sell their products through retail firms. Retailing is a huge industry that has consistently been an incubator for new business concepts. This course will examine how retailers understand their customers’ preferences and respond with appropriate products through effective supply chain management. Supply chain management is vitally important for retailers and has been noted as the source of success for many retailers such as Wal-mart and Home Depot, and as an inhibitor of success for e-tailers as they struggle with delivery reliability. See M. L. Fisher, A. Raman and A. McClelland, "Rocket Science Retailing is Coming - Are You Ready?", Harvard Business Review, July/August 2000 for related research. Mutually Exclusive: OIDD 6970
0.5 Course Units

OIDD 3990 Supervised Study
This course number is currently used for several course types including independent studies, experimental courses and Management & Technology Freshman Seminar. Instructor permission required to enroll in any independent study. Wharton Undergraduate students must also receive approval from the Undergraduate Division to register for independent studies. Section 002 is the Management and Technology Freshman Seminar; instruction permission is not required for this section and is open only to M&T students. For Fall 2020, Section 004 is a new course titled AI, Business, and Society. The course provides a overview of AI and its role in business transformation. The purpose of this course is to improve understanding of AI, discuss the many ways in which AI is being used in the industry, and provide a strategic framework for how to bring AI to the center of digital transformation efforts. In terms of AI overview, we will go over a brief technical overview for students who are not actively immersed in AI (topic covered include Big Data, data warehousing, data-mining, different forms of machine learning, etc.). In terms of business applications, we will consider applications of AI in media, Finance, retail, and other industries. Finally, we will consider how AI can be used as a source of competitive advantage. We will conclude with a discussion of ethical challenges and a governance framework for AI. No prior technical background is assumed but some interest in (and exposure to) technology is helpful. Every effort is made to build most of the lectures from the basics.
Fall or Spring
0.5-1 Course Unit

OIDD 4100 Decision Support Systems
The past few years have seen an explosion in the amount of data collected by businesses and have witnessed enabling technologies such as database systems, client-server computing and artificial intelligence reach industrial strength. These trends have spawned a new breed of systems that can support the extraction of useful information from large quantities of data. Understanding the power and limitations of these emerging technologies can provide managers and information systems professionals new approaches to support the task of solving hard business problems. This course will provide an overview of these techniques (such as genetic algorithms, neural networks, and decision trees) and discuss applications such as fraud detection, customer segmentation, trading, marketing strategies and customer support via cases and real datasets.
Fall or Spring
Mutually Exclusive: OIDD 6720
1 Course Unit

OIDD 4110 How to Make Things: Production Prototyping Studio
The course centers around a sequence of three projects that each culminate in the design and fabrication of functional objects. A 2D Design, 3D Design, and final "Micro-Manufacturing" project will introduce students to a wide variety of design, engineering, and fabrication skills made possible by the new Studios @ Tangen Hall. The micro-manufacturing final project will task interdisciplinary student teams to create a "micro-business" where they will design and utilize 3D printed molding and casting techniques to create a small-scale run of functional products. These products will then be showcased in an end of semester exposition, where the teams will merchandise and market their products to the Penn community. This exposition will also be a wonderful inaugural use of the student and alumni retail space on the 1st floor of Tangen Hall and serve as a great university-wide event to show case the work of SEAS students. Requires proficiency in solid modeling software (e.g., SolidWorks, Maya, Rhino), practice with design process, and hands-on fabrication experience.
Also Offered As: MEAM 4110
1 Course Unit

OIDD 4150 Product Design
This course provides tools and methods for creating new products. The course is intended for students with a strong career interest in new product development, entrepreneurship, and/or technology development. The course follows an overall product design methodology, including the identification of customer needs, generation of product concepts, prototyping, and design-for-manufacturing. Weekly student assignments are focused on the design of a new product and culminate in the creation of a prototype, which is launched at an end-of-semester public Design Fair. The course project is a physical good - but most of the tools and methods apply to services and software products. The course is open to any Penn sophomore, junior, senior or graduate student. The course follows a studio format, in which students meet for three hours each week with Professor Marcovitz for lectures and hands-on making, and students will complete 90 minutes of asynchronous, self-paced content from Professor Ulrich on their own time each week. Professor Ulrich gives one in-person lecture during the semester and attends the Design Fair, but is not present at the weekly studio sessions.
Also Offered As: MEAM 4150
1 Course Unit

OIDD 4180 The India Startup Ecosystem
The objective of OIDD/MGMT 418 and the Wharton India Fellows program is to introduce Penn juniors to the entrepreneurship and innovation ecosystem in India through a course covering topics in entrepreneurship, innovation, venture capital and technology in India and then matching students to a specific short-term project with a Bangalore-based early-stage startup or rapidly scaling company. Students will complete preliminary work on the project assignment during the course, and then travel as a group to Bangalore with the instructor for a two week immersion in the company to which they have been assigned for their entrepreneurship project. Penn Wharton Entrepreneurship will cover airfare and lodging expenses for students selected as Wharton India Fellows for the duration of the 2 week immersion in India. For more information: https://entrepreneurship.wharton.upenn.edu/wharton-india-fellows/
Also Offered As: MGMT 4180
0.5 Course Units
OIDD 4690 Information Strategy and Economics
This course is devoted to the study of the strategic use of information and the related role of information technology, and designed for students who want to manage and compete in technology-intensive businesses. The topics of the course vary year to year, but generally include current issues in selling digital products, intermediation and disintermediation, competing in online markets, emerging technologies, managing artificial intelligence and data science for business, and technology project management. Heavy emphasis is placed on utilizing information economics to analyze businesses in information-intensive industries. Technology skills are not required, although a background in information technology management, strategic management or managerial economics is helpful. The course is designed to complement OIDD 2100, OIDD 2150, OIDD 2450, and OIDD 255X.
Fall or Spring
0.5-1 Course Unit
OIDD 4770 Introduction to Python for Data Science
The goal of this course is to introduce the Python programming language within the context of the closely related areas of statistics and data science. Students will develop a solid grasp of Python programming basics, as they are exposed to the entire data science workflow, starting from interacting with SQL databases to query and retrieve data, through data wrangling, reshaping, summarizing, analyzing and ultimately reporting their results. Competency in Python is a critical skill for students interested in data science. Prerequisites: No prior programming experience is expected, but statistics, through the level of multiple regression is required. This requirement may be fulfilled with Undergraduate courses such as Stat 1020, Stat 1120.
Also Offered As: STAT 4770
Mutually Exclusive: PHYS 1100
0.5-1 Course Unit
OIDD 4900 The Science of Behavior Change
The objective of this 14-week discussion-based seminar for advanced undergraduates is to expose students to cutting-edge research from psychology and economics on the most effective strategies for changing behavior sustainably and for the better (e.g., promoting healthier eating and exercise, encouraging better study habits, and increasing savings rates). The weekly readings cover classic and current research in this area. The target audience for this course is advanced undergraduate students interested in behavioral science research and particularly those hoping to learn about using social science to change behavior for good. Although there are no pre-requisites for this class, it is well-suited to students who have taken (and enjoyed) courses like OIDD 2900: Decision Processes, PPE 2030/PSYC 2650: Behavioral Economics and Psychology, and MKTG 2660: Marketing for Social Impact and are interested in taking a deeper dive into the academic research related to promoting behavior change for good. Instructor permission is required to enroll in this course.
Please complete the application if interested in registering for this seminar: http://bit.ly/bcfg-class-2020. The application deadline is July 31, 2020. Prerequisite: Permission of instructor required.

1 Course Unit
OIDD 5250 Thinking with Models: Business Analytics for Energy and Sustainability

Models are lenses. They are instruments with which we view, interpret, and give meaning to data. In this course, students will be exposed to and do work in all phases of the modeling life-cycle, including model design and specification, model construction (including data gathering and testing), extraction of information from models during post-solution analysis, and creation of studies that use modeling results to support conclusions for scientific or decision making purposes. In addition, the course will cover critical assessments of fielded models and studies using them. The course will focus broadly on models pertaining to energy and sustainability. This is not only an inherently interesting and important area, but it is very much a public one. In consequence, models, data, and studies using them are publicly and profusely available, as is excellent journalism, which facilitates introductions to specific topics. The course covers selected topics in energy and sustainability. Essential background will be presented as needed, but the course is not a comprehensive overview of energy and sustainability. Modeling in the area of energy and sustainability analytics is rife with uncertainty, and yet decisions must be made. Uncertainty, and how to deal with it in model-based decision making, is an overarching theme of the course. We will focus on energy and sustainability, but that area is hardly unique in being beset with deep and vexing uncertainties. The lessons we learn will generalize. The overall aim of the course is to teach facility with modeling and to use real-world data, models, and studies in doing so. In addition, students with interests in investment or policy analysis in the energy sphere will find the course’s subject area focus useful. OIDD 325 is not a prerequisite for this course, but it’s helpful if you have already taken it.

1 Course Unit

OIDD 6110 Quality and Productivity

Matching supply with demand is an enormous challenge for firms: excess supply is too costly, inadequate supply irritates customers. In the course, we will explore how firms can better organize their operations so that they more effectively align their supply with the demand for their products and services. Throughout the course, we illustrate mathematical analysis applied to real operational challenges—we seek rigor and relevance. Our aim is to provide both tactical knowledge and high-level insights needed by general managers and management consultants. We will demonstrate that companies can use (and have used) the principles from this course to significantly enhance their competitiveness.

Fall

0.5 Course Units

OIDD 6120 Business Analytics

"Managing the Productive Core: Business Analytics" is a course on business analytics tools and their application to management problems. Its main topics are optimization, decision making under uncertainty, and simulation. The emphasis is on business analytics tools that are widely used in diverse industries and functional areas, including operations, finance, accounting, and marketing.

Spring

0.5 Course Units

OIDD 6130 Online Business Models and the Information-Based Firm

This course is devoted to the study of the strategic use of information and the related role of information technology. It is designed for students who want to manage and compete in technology-intensive businesses. Heavy emphasis is placed on applying information economics principles and theoretical rigor to analyze businesses in information-intensive industries using both qualitative and quantitative techniques. We will study information-based industries like digital media, social networks, financial services, and online retail as well as traditional businesses that are being changed by new digital capabilities. There are four broad themes for the course: the economics of information goods and services, information and consumer behavior, markets and market design, and network economics. Each day we will discuss a core topic in one or more of these themes, with an emphasis on bridging theoretical ideas to real world applications. Application topics might include applying artificial intelligence, platform economics, and cryptocurrencies. Technology skills are not required, although a background in information technology management, strategic management, data science, or managerial economics is helpful.

Spring

0.5 Course Units

OIDD 6140 Innovation

The course is first and foremost an intensive, integrative, project course in which student teams create one or more real businesses. Some businesses spun out of the course and now managed by alumni include Terrapass Inc. and Smatchy Inc. The project experience is an exciting context in which to learn key tools and fundamentals useful in innovation, problem solving, and design. Examples of these tools and fundamentals are: problem definition, identification of opportunities, generating alternatives, selecting among alternatives, principles of data graphics, and managing innovation pipelines. The course requires a commitment of at least 10 hours of work outside of class and comfort working on unstructured, interdisciplinary problems. Students with a strong interest in innovation and entrepreneurship are particularly encouraged to enroll. Please read carefully the syllabus posted on-line before registering for this course.

Fall

0.5 Course Units

OIDD 6150 Operations Strategy

Operations strategy is about organizing people and resources to gain a competitive advantage in the delivery of products (both goods and services) to customers. This course approaches this challenge primarily from two perspectives: 1) how should a firm design their products so that they can be profitably offered; 2) how can a firm best organize and acquire resources to deliver its portfolio of products to customers. To be able to make intelligent decisions regarding these high-level choices, this course also provides a foundation of analytical methods. These methods give students a conceptual framework for understanding the linkage between how a firm manages its supply and how well that supply matches the firm’s resulting demand. Specific course topics include designing service systems, managing inventory and product variety, capacity planning, approaches to sourcing and supplier management, constructing global supply chains, managing sustainability initiatives, and revenue management. This course emphasizes both quantitative tools and qualitative frameworks. Neither is more important than the other.

Spring

0.5 Course Units
OID 6360 Scaling Operations: Linking Strategy and Execution
The goal of this course is to make strategic scaling decisions that are grounded in operational reality. We study how to build and evaluate the operational business model of a firm to maximize value with the focus on scaling the firm’s operations. We will approach the challenge of scaling by taking a holistic view that incorporates competitive strategy, financial evaluation, and the customer experience. We focus on decisions and challenges that many firms that try to scale their operations face with the focus on assessing the readiness of the firm to scale, and the required steps to scale. In particular, we will discuss whether the firm should build competencies in-house (i.e., investing in a portfolio of assets) or buy them (i.e., developing and implementing a global sourcing strategy and integrating external partners) and the risks associated with scaling these. We will also discuss the organizational implications of scaling. There are no formal pre-requisites to the class. Students who have already taken OIDD 611, OIDD 615, and STAT 613 should be equipped for the class. Other students should have a solid understanding of elementary probability and statistics. For questions regarding the specifics of your background, please contact the instructor.
0.5-1 Course Unit

OID 6420 Analytics for Services
This course covers a range of analytical methods that are useful tools for capacity management in services, and it will provide you with insights into the economics of a range of services businesses including (i) High-level planning models that account for multiple dimensions of service capacity, (ii) Low-level models of system congestion that capture the relationship between capacity choices, quality of service and, in some cases, system revenue, (iii) Statistical estimation and forecasting models to characterize key measures of future supply and demand. Students who have already taken OIDD 611, OIDD 612, and STAT 613 should be well equipped for the class. Other students should have a solid understanding of elementary probability, statistics and linear programming. For questions regarding the specifics of your background, please contact the instructor.
0.5 Course Units

OID 6430 Analytics for Revenue Management
This course introduces you to the essential concepts and techniques required to understand and implement revenue management (RM). The need for repeated, rapid and cycles of estimation and optimization has driven the development of a set of analytical tools that are particularly well suited for RM. This course focuses on those tools. Prerequisites: Students who have already taken OIDD 612 and STAT 613 should be well equipped for this class. Other students should have a solid understanding of elementary probability, statistics and constrained optimization. For questions regarding the specifics of your background, please contact the instructor.
0.5 Course Units

OID 6520 Design and Development of Web-Based Products and Services
This course is designed as an introduction to the process of product design with a focus on Web-based desktop and mobile consumer products and services. This is a course on designing products as distinct from (and complementary to) building a business. The course is implemented as a team-based experiential learning exercise; students learn the design process by developing multiple prototypes of a Web/mobile-based product or service. Teams will apply different prototyping techniques (paper, wireframes, landing pages) over multiple iterations of their project. This is not a course on Web engineering. Technical skills are not a prerequisite. Neither should students expect to learn specific programming tools or techniques. This is not an entrepreneurship course. Students do not analyze business models, market size, pricing, costs, etc. This class introduces an iterative, data-driven, experiment-based design process. Through their project, students will practice multiple design iterations and gain exposure to tools for designing digital products and services.
Not Offered Every Year
Prerequisite: OIDD 6140
0.5 Course Units

OID 6530 Mathematical Modeling and its Application in Finance
Quantitative methods have become fundamental tools in the analysis and planning of financial operations. There are many reasons for this development: the emergence of a whole range of new complex financial instruments, innovations in securitization, the increased globalization of the financial markets, the proliferation of information technology and the rise of high-frequency traders, etc. In this course, models for hedging, asset allocation, and multi-period portfolio planning are developed, implemented, and tested. In addition, pricing models for options, bonds, mortgage-backed securities, and other derivatives are studied. The models typically require the tools of statistics, optimization, and/or simulation, and they are implemented in spreadsheets or a high-level modeling environment, MATLAB. This course is quantitative and will require extensive computer use. The course is intended for students who have strong interest in finance. The objective is to provide students the necessary practical tools they will require should they choose to join the financial services industry, particularly in roles such as: derivatives, quantitative trading, portfolio management, structuring, financial engineering, risk management, etc. Prospective students should be comfortable with quantitative methods, such as basic statistics and the methodologies (mathematical programming and simulation) taught in OIDD 612 Business Analytics or OIDD 321 Management Science (or equivalent). Students should seek permission from the instructor if the background requirements are not met.
Fall or Spring
Mutually Exclusive: OIDD 3530
Prerequisite: OIDD 3210 OR OIDD 6120
1 Course Unit
OIDD 6540 Product Management
The course provides the student with a number of tools and concepts necessary for the contemporary practice of product management. The course is most relevant to those who hope to work as product managers, as well as for entrepreneurs who will typically serve as their venture’s initial product managers. General managers and other functional managers may also find the course valuable to better understand the product management function. The key modules in the course comprise (a) creating something from nothing, (b) design and design thinking, (c) performance measurement and the communication of quantitative information, (d) agile development processes, and (e) managing growth. Alumni guest speakers in interesting product management roles will typically be scheduled weekly in the course. Many examples, tools, and methods will come from technology-based industries, but applications will also be drawn from financial services and consumer products. Most assignments will be completed for a focal product selected by each student, which could be an entrepreneurial project, something related to current or prior employment, or simply a product of personal interest. A recent Canvas site for the course is here, and should be viewable by the public. https://canvas.upenn.edu/courses/1575358 Other Information: Pedagogy includes lectures, small-group discussion, current and historical cases, podcasts, documentary films, and application of tools to a focal product. Most assignments are individual. PLEASE NOTE: Only Wharton MBA students may register for OIDD 6540.

Spring
0.5 Course Units

OIDD 6580 Service Operations Management
The service sector represents the largest segment of most industrial economies. In the U.S., for example, it accounts for approximately 70% of GDP and 70% of employment. In addition to this “pure” service sector, the operations and competitive positions of many manufacturing firms are becoming increasingly service-oriented. While operational excellence is critical for success in most industries today, in a wide range of service industries this is particularly true. For example, recent, significant deregulation in banking, health care, and communications has led to intensified competition and pressure on operations. At the same time, the rapid evolution of information technology has enabled firms to operate in a fashion that offer a level of service that has not been previously possible. Elements common to most services make the management of their operations complex, however. In particular, services are intangible, not storable or transportable, and often highly variable. Frequently their delivery involves distributed operations with a significant amount of customer contact. All of these factors make service operations end up looking quite a bit different than manufacturing operations, and the task of achieving excellence in them requires specialized analysis frameworks and tools. This course covers a mix of qualitative and quantitative models that provide the necessary tools. The class will focus on simple models that should help you to better understand both the difficulty of managing and the underlying economics of the service operations being considered. You will have the opportunity to apply these course tools in a group service assessment field project. Prerequisite: Courses in operations management, linear programming, probability and statistics

Fall or Spring
0.5 Course Units

OIDD 6590 Advanced Topics
The specific content of this course varies from semester to semester, depending on student and faculty interest. Recent topics have included global operations, product design and development, quality management, and logistics strategy. See department for course description. Prerequisites for the course change semester to semester depending on the course content.

Fall or Spring
1 Course Unit

OIDD 6620 Enabling Technologies
This course is about understanding emerging technology enablers with a goal of stimulating thinking on new applications for commerce. The class is self-contained (mainly lecture-based) and will culminate in a class-driven identification of novel businesses that exploit these enablers. No prerequisite or technical background is assumed. Students with little prior technical background can use the course to become more technologically informed. Those with moderate to advanced technical background may find the course a useful survey of emerging technologies. The course is recommended for students interested in careers in consulting, investment banking and venture capital in the tech sector. OIDD 6620 will be taught in the regular 1 CU format by Prof Lynn Wu. When taught by Prof Hosanagar, OIDD 6620 will be delivered in a 0.5 CU format. The shorter course will focus primarily on Mobile, Data/Al, and Web3.

Mutually Exclusive: OIDD 3140
0.5-1 Course Unit

OIDD 6630 Databases for Analytics
Relational databases are the primary way in which business data is stored and processed. This course focuses on the analysis of data in databases and the development of databases to support analytical tasks. Over the course of the semester, students will learn the database language SQL and use this language to perform analytical tasks on existing and self-created databases. In addition, we will cover database scripting languages and extensions. The course is intended as students with little or no database background and does not presume prior computer science or coding experience. This course is nearly all hands-on coding. Students interested in more conceptual discussions of technology should consider other OIDD offerings such as OIDD 662.

0.5 Course Units

OIDD 6670 A.I., Business, and Society
The course provides an overview of AI and its role in business transformation. The purpose of this course is to improve understanding of AI, discuss the many ways in which AI is being used in the industry, and provide a strategic framework for how to bring AI to the center of digital transformation efforts. In terms of AI overview, we will go over a brief technical overview for students who are not actively immersed in AI (topics covered include Big Data, data warehousing, datamining, machine learning, etc). In terms of business applications, we will consider applications of AI in Media, Finance, Healthcare, Retail, and other industries. Finally, we will consider how AI can be used as a source of competitive advantage. We will conclude with a discussion of ethical challenges and a governance framework for AI. No prior technical background is assumed but some interest in (and exposure to) technology is helpful. Every effort is made to build most of the lectures from the basics.

0.5 Course Units
OIDD 6730 Global Supply Chain Mgmt.
Several forces, ranging from technology that has dramatically reduced
the cost of communication, to political developments such as the
opening up of China, Vietnam, and Eastern Europe, have created an
avalanche of outsourcing and offshoring and lead to supply chains
that stretch halfway around the world. This course will study the many
questions that arise in the management of such global supply chains,
including: Which design and production activities to do in-house and
which to outsource? Where to locate various activities around the
world? How to forecast the many factors that influence these decisions,
including inflation in cost factors such as labor and freight, and the
likelihood of future government regulation or political instability?
How to keep the supply chain flexible so as to adapt to change? How
to manage a geographically disbursed supply chain, including what
relationships to have with vendors to ensure low cost, high quality,
flexibility, safety, humane labor practices and respect for sustainability of
the environment? The course is highly interactive, using case discussions
in most classes and senior supply chain executives in many sessions.
Grades are based one-third each on class participation, individual write-
ups of the discussion questions for 3 of the class sessions, and a course
paper.
0.5 Course Units

OIDD 6800 Operations Strategy Practicum
This course will focus on the management of operations at
manufacturing and service facilities of domestic corporations and foreign
multinational companies. Our emphasis will be on the evolving patterns
of operations strategies adopted by firms for producing products,
sourcing manufacturing, distributing products, delivering services and
managing product design as well as on programs for enhancing quality,
productivity and flexibility. The course will focus on the formulation and
execution of such strategies for a collection of firms in the context of the
current dynamics of global competition. The course consists of a set of
site visits and in-class sessions which include lectures, case discussions
and management speakers who will describe their company’s current
strategy.
0.5-1 Course Unit

OIDD 6900 Managerial Decision Making
The course is built around lectures reviewing multiple empirical studies,
class discussion, and a few cases. Depending on the instructor, grading
is determined by some combination of short written assignments, tests,
class participation and a final project (see each instructor’s syllabus for
details).
Fall or Spring
Also Offered As: MGMT 6900
1 Course Unit

OIDD 6910 Negotiations
This course examines the art and science of negotiation, with additional
emphasis on conflict resolution. Students will engage in a number of
simulated negotiations ranging from simple one-issue transactions
to multi-party joint ventures. Through these exercises and associated
readings, students explore the basic theoretical models of bargaining and
have an opportunity to test and improve their negotiation skills. Cross-
listed with MGMT 6910/OIDD 6910/LGST 8060. Format: Lecture, class
discussion, simulation/role play, and video demonstrations. Materials:
Textbook and course pack.
Fall or Spring
Also Offered As: LGST 8060, MGMT 6910
1 Course Unit

OIDD 6920 Advanced Topics Negotiation
This is a course the builds on the basic Negotiation course. In this course,
we explore a wide range of negotiation topics from crisis and hostage
negotiations, to the role of emotions including anxiety, envy and anger
in negotiations, to backlash effects for women in negotiations, and the
role of alcohol in negotiations. We will survey many aspects of current
negotiation research, discuss historic negotiation cases, and students
will participate in role-play exercises. Many of the role play exercises will
involve multi-party negotiations and afford opportunities to hone skills in
team-based negotiations.
Fall or Spring
Also Offered As: LGST 6920, MGMT 6920
0.5-1 Course Unit

OIDD 6930 Influence
Building, protecting and using influence is critical for achieving
your goals. This requires good personal decision making as well as
understanding others’ decision-making, proficiency at the negotiation
table as well as with the tacit negotiations before and after sitting at the
table. In this course, we focus on building your facility with a wide range
of influence tools to help with these efforts. Topics include power and
status, informal networks, coalitions and persuasion.
Fall or Spring
Also Offered As: LGST 6930
0.5 Course Units

OIDD 6950 Semester in San Francisco Regional Seminar
As part of the Wharton Semester in San Francisco (SSF) program, this
course is designed to (i) provide integrative material that emphasizes
links between finance, marketing, product design, negotiations, and other
themes in the SSF academic curriculum; (ii) link classroom theories and
principles to actual practice by reflecting on the academic literature and
(iii) highlight the unique characteristics of, and the programs proximity to,
the Bay Area economy. All students participating in the SSF are required
to register for this Regional Seminar.
Fall or Spring
0.5 Course Units

OIDD 6970 Retail Supply Chain Management
This course is highly recommended for students with an interest in
pursuing careers in: (1) retailing and retail supply chains; (2) businesses
like banking, consulting, information technology, that provides services
to retail firms; (3) manufacturing companies (e.g. P&G) that sell their
products through retail firms. Retailing is a huge industry that has
consistently been an incubator for new business concepts. This course
will examine how retailers understand their customers’ preferences
and respond with appropriate products through effective supply chain
management. Supply chain management is vitally important for retailers
and has been noted as the source of success for many retailers such as
Wal-mart and Home Depot, and as an inhibitor of success for e-tailers
as they struggle with delivery reliability. See M. L. Fisher, A. Raman
and A. McClelland, “Rocket Science Retailing is Coming - Are You Ready?”
Fall or Spring
Mutually Exclusive: OIDD 3970
0.5 Course Units
OIDD 7050 Leading With Grit: How to Inspire with Passion and Perseverance for Long-Term Goals
The aims of Leading With Grit are two-fold: (1) to help students apply scientific insights about passion and perseverance for long-term goals to their own career, and (2) to prepare them to lead an organization that encourages grit among its employees. At the heart of this course are cutting-edge scientific insights on the mindsets, strategies, and contextual factors that incline individuals to pursue challenges that take years (or more) to complete. Each week, in addition to a three-hour seminar, students will complete an experiential activity, a brief written reflection, and readings. Most weeks, we will welcome a Grit Guest, an outside speaker who exemplifies grit, for a fireside chat on that week’s topic.
1 Course Unit

OIDD 7610 Risk Analysis and Environmental Management
This course will introduce students to concepts in risk governance. We will delve into the three pillars of risk analysis: risk assessment, risk management, and risk communication. The course will spend time on risk financing, including insurance markets. There will be particular emphasis on climate risk management, including both physical impact risk and transition risk, although the course will also discuss several other examples, including management of environmental risks, terrorism, and cyber-security, among other examples. The course will cover how people perceive risks and the impact this has on risk management. We will explore public policy surrounding risk management and how the public and private sector can successfully work together to build resilience, particularly to changing risks.
Fall or Spring
Also Offered As: BEPP 7610, ESE 5670

OIDD 7630 Energy Markets & Policy
Over the last several decades, energy markets have become some of the most dynamic markets of the world economy. Traditional fossil fuel and electricity markets have been seen a partial shift from heavy regulation to market-driven incentives, while rising environmental concerns have led to a wide array of new regulations and "environmental markets". The growth of renewable energy could be another source of rapid change, but brings with it a whole new set of technological and policy challenges. This changing energy landscape requires quick adaptation from energy companies, but also offers opportunities to turn regulations into new business. The objective of this course is to provide students with the economist’s perspective on a broad range of topics that professionals in the energy industry will encounter. Topics include the effect of competition, market power and scarcity on energy prices, the impact of deregulation on electricity and fossil fuel markets, extraction and pricing of oil and gas, geopolitical uncertainty and risk in hydrocarbon investments, the environmental impact and policies related to the energy sector, environmental cap-and-trade markets, energy efficiency, the economics and finance of renewable energy, and recent developments in the transportation sector.
Also Offered As: BEPP 7630
1 Course Unit

OIDD 7770 Introduction to Python for Data Science
The goal of this course is to introduce the Python programming language within the context of the closely related areas of statistics and data science. Students will develop a solid grasp of Python programming basics, as they are exposed to the entire data science workflow, starting from interacting with SQL databases to query and retrieve data, through data wrangling, reshaping, summarizing, analyzing and ultimately reporting their results. Competency in Python is a critical skill for students interested in data science. Prerequisites: No prior programming experience is expected, but statistics, through the level of multiple regression is required. This requirement may be fulfilled with MBA courses such as STAT 6130/6210; or by waiving MBA statistics.
Also Offered As: STAT 7770
0.5-1 Course Unit

OIDD 7930 People Analytics
This course applies the insights of the people analytics movement to help students become better managers and more critical analysts within their organizations. The course aims to develop students in three specific ways. First, it provides students with an up-to-the-minute grounding in current evidence about managing people, providing a knowledge base that can ensure that their future management is guided by best practices. Second, it develops the skills and understanding necessary to be thoughtful, critical consumers of evidence on people management, allowing them to make the most of the analysis available to them as they make people decisions. Third, it provides guidance and practice in conducting people analytics, preparing students to gather data of their own, and making them more skilled analysts. The course addresses these topics through a mixture of lecture, case discussion, and hands on exploration of a variety of data sets.
Also Offered As: MGMT 7930
0.5 Course Units
OIDD 8950 Global Business Week
0.5 Course Units

OIDD 8980 Advanced Topics
The specific content of this course varies from semester to semester, depending on student and faculty interest.
Not Offered Every Year
1 Course Unit

OIDD 9000 Foundations of Decision Processes
The course is an introduction to research on normative, descriptive, and prescriptive models of judgement and choice under uncertainty. We will be studying the underlying theory of decision processes as well as applications in individual group and organizational choice. Guest speakers will relate the concepts of decision processes and behavioral economics to applied problems in their area of expertise. As part of the course there will be a theoretical or empirical term paper on the application of decision processes to each student's particular area of interest.
Fall or Spring
1 Course Unit

OIDD 9010 Introduction to OID Faculty and Their Research
This course introduces first-year Operations, Information and Decisions (OID) PhD students to OID Department faculty members and their research. The course is designed to meet once a week, both in the fall and the spring, allowing most (if not all) OID faculty to present to first-year PhD students either classic or current research in their fields of expertise. The course's goals are twofold. First, it seeks to introduce first-year PhD students to OID faculty in a substantive (as opposed to social) manner and to expose students to the breadth of research conducted in the department. Second, through early exposure, the course aims to pique students' interest in the department's foundational courses in decision making, information systems, and operations management.
0.5-1 Course Unit

OIDD 9040 Experimental Economics
This course will help prepare you to run your own economics laboratory and field experiments. Experimental methods have been widely adopted by economists to develop new insights, and some economic theories and hypotheses are uniquely well-suited for testing with experimental tools and data. Achieving high internal and external validity requires careful experimental design. Substantive areas of application in the course will include market equilibrium, asset bubbles, learning in games, public good provision, and labor market relationships. Additional topics may include biases in individual decision-making; field experiments in development economics; and happiness, neuroeconomics, and behavioral/experimental welfare economics. Economists’ typical interests in strategic and market-based interactions raise particular methodological challenges and opportunities.

Also Offered As: BEPP 9040
1 Course Unit

OIDD 9060 Proseminar in Operations and Information Management
Advanced seminar focusing on topics in Operations, Information and Decisions research.
Not Offered Every Year
1 Course Unit

OIDD 9120 Introduction to Optimization
This course constitutes the second part of a two-part sequence and serves as a continuation of the summer math camp. Mathematical optimization provides a unifying framework for studying issues of rational decision-making, optimal design, effective resource allocation and economic efficiency. It is a central methodology of many business-related disciplines, including operations research, marketing, accounting, economics, game theory and finance. In many of the disciplines, a solid background in optimization theory is essential for doing research. This course provides a rigorous introduction to the fundamental theory of optimization. It examines optimization theory in two primary settings: static optimization and optimization over time (dynamic programming). Applications from problem areas in which optimization plays a key role are also introduced. The goal of the course is to provide students with a foundation sufficient to use basic optimization in their own research work and/or to pursue more specialized studies involving optimization theory. The course is designed for entering doctoral students. The prerequisites are calculus, linear algebra and some familiarity with real analysis, as covered in summer math camp. Other concepts are developed as needed throughout the course.
Prerequisite: OIDD 9100
0.5 Course Units

OIDD 9130 Advanced Linear Programming
Not Offered Every Year
Prerequisite: OIDD 9100 OR ESE 5040
1 Course Unit

OIDD 9140 Advanced Non-Linear Programming
Not Offered Every Year
Prerequisite: OIDD 9100
1 Course Unit

OIDD 9150 Advanced Graph Theory
Deals mainly with algorithmic and computational aspects of graph theory. Topics and problems include reachability and connectivity, setcovering, graph coloring, location of centers, location of medians, trees, shortest path, circuits, traveling salesman problem, network flows, matching, transportation, and assignment problems.
Not Offered Every Year
1 Course Unit

OIDD 9160 Advanced Integer Programming
In-depth review of solution methods: Lagrangean relaxation and column generation, Benders partitioning, cross-decomposition, surrogate relaxation, cutting planes and valid inequalities, logical processing, probing, branch-and-bound, branch-and-price. Study of special problems and applications: matching, location, generalized assignment, traveling salesman, forest planning, production scheduling. Prerequisite: OIDD 910/ESE 504 or equivalent. Please email the instructor for any questions regarding the prerequisite.
Not Offered Every Year
Prerequisite: OIDD 9100 OR ESE 5040
1 Course Unit
OIDD 9200 Empirical Research in Operations Management
Empirical research in Operations Management has been repeatedly called for over the last 10-15 years, including calls made from the academic thought leaders in the field as well as by many of the editors of the top academic journals. Remarkably though, most researchers in the field would be pressed to name even three empirical papers published in such journals like Management Science or Operations Research. But, has there really been so little published related to Empirical Operations Management (you might be surprised to learn that all five bullets listed above has been addressed by Management Science papers)? What types of problems in operations are interesting and worthwhile studying from an empirical viewpoint? How can one get started with an empirical research project in Operations Management? These are the questions that are at the heart of this course. Specifically, the objective of this course is to (a) expose doctoral students to the existing empirical literature and (b) to provide them with the training required to engage in an empirical study themselves.
0.5 Course Units

OIDD 9300 Stochastic Models
This course introduces mathematical models describing and analyzing the behavior of processes that exhibit random components. The theory of stochastic processes will be developed based on elementary probability theory and calculus. Topics include random walks, Poisson processes, Markov chains in discrete and continuous time, renewal theory, and martingales. Applications from the areas of inventory, production, finance, queueing and communication systems will be presented throughout the course.
Fall
Prerequisite: STAT 5100 OR STAT 5500
0.5 Course Units

OIDD 9310 Stochastic Processes II
Extension of the material presented in OIDD930 to include renewal theory, martingales, and Brownian motion.
Spring
Prerequisite: OIDD 9300
0.5 Course Units

OIDD 9320 Queuing Theory
This course presents the mathematical foundations for the analysis of queueing systems. We will study general results like Little’s law and the PASTA property. We will analyze standard queueing systems (Markovian systems and variations thereof) and simple queueing networks, investigate infinite server models and many server approximations, study GI/G/1 queues through random walk approximations, and read papers on applied queueing models.
Spring, odd numbered years only
Prerequisite: OIDD 9300
0.5 Course Units

OIDD 9340 Dynamic Programming and Stochastic Models
The course goal is to provide a brief but fairly rigorous introduction to the formulation and solution of dynamic programs. Its focus is primarily methodological. We will cover discrete state space problems, over finite or infinite time horizon, with and without discounting. Structured policies and their theoretical foundation will be of particular interest. Computational methods and approximation methods will be addressed. Applications are presented throughout the course, such as inventory policies, production control, financial decisions, and scheduling.
Spring
Prerequisite: OIDD 9300
0.5 Course Units

OIDD 9370 Methods Stumblers: Pragmatic Solutions to Everyday Challenges in Behavioral Research
This PhD-level course is for students who have already completed at least a year of basic stats/methods training. It assumes students already received a solid theoretical foundation and seeks to pragmatically bridge the gap between standard textbook coverage of methodological and statistical issues and the complexities of everyday behavioral science research. This course focuses on issues that (i) behavioral researchers are likely to encounter as they conduct research, but (ii) may struggle to figure out independently by consulting a textbook or published article.
Fall or Spring
0.5 Course Units

OIDD 9400 Operations Management
Concepts, models, and theories relevant to the management of the processes required to provide goods or services to consumers in both the public and private sectors. Includes production, inventory and distribution functions, scheduling of service or manufacturing activities, facility capacity planning and design, location analysis, product design and choice of technology. The methodological basis for the course includes management science, economic theory, organization theory, and management information system theory.
Fall or Spring
1 Course Unit

OIDD 9410 Distribution Systems Seminar
Seminar on distribution systems models and theory. Reviews current research in the development and solution of models of distribution systems. Emphasizes multi-echelon inventory control, logistics management, network design, and competitive models.
Spring
Prerequisite: OIDD 9400
0.5-1 Course Unit

OIDD 9430 Retail Operations
0.5 Course Units

OIDD 9450 Perspectives on Information Systems
Provides doctoral students in Operations and Information Management and other related fields with a perspective on modern information system methodologies, technologies, and practices. State-of-the-art research on frameworks for analysis, design, and implementation of various types of information systems is presented. Students successfully completing the course should have the skills necessary to specify and implement an information system to support a decision process.
Fall or Spring
1 Course Unit

OIDD 9510 Seminar on Logic Modeling
Seminar on the elements of formal logic necessary to read and contribute to the Logic modeling literature, as well as the implementation principles for logic models. The primary topics include elements of sentence and predicate logic, elements of modal logics, elements of semantics, mechanical theorem proving, logic and database, nonmonotonic reasoning, planning and the frame problem, logic programming, and metainterpreters. Permission of the instructor and some prior knowledge of logic or Prolog.
Not Offered Every Year
1 Course Unit
OIDD 9520 Computational Game Theory
Seminar on principles of knowledge-based systems including expert systems. Topics include basics of expert systems, knowledge representation, meta-level reasoning, causal reasoning, truth maintenance systems, model management, planning systems and other applications. Permission of instructor and knowledge of logic and Prolog or Lisp.
Not Offered Every Year
1 Course Unit

OIDD 9530 Explaining Explanation
In the social sciences we often use the word "explanation" as if (a) we know what we mean by it, and (b) we mean the same thing that other people do. In this course we will critically examine these assumptions and their consequences for scientific progress. In part 1 of the course we will examine how, in practice, researchers invoke at least three logically and conceptually distinct meanings of "explanation:" identification of causal mechanisms; ability to predict (account for variance in) some outcome; and ability to make subjective sense of something. In part 2 we will examine how and when these different meanings are invoked across a variety of domains, focusing on social science, history, business, and machine learning, and will explore how conflation of these distinct concepts may have created confusion about the goals of science and how we evaluate its progress. Finally, in part 3 we will discuss some related topics such as null hypothesis testing and the replication crisis. We will also discuss specific practices that could help researchers clarify exactly what they mean when they claim to have "explained" something, and how adoption of such practices may help social science be more useful and relevant to society.
Also Offered As: CIS 7980, COMM 8980
1 Course Unit

OIDD 9550 Research Seminar in Information Systems
This course provides an overview of some of the key Information Systems literature from the perspective of Insormation Strategy and Economics (ISE) and Information Decision Technologies (IDT). This course is intended to provide an introduction for first year OIDD doctoral students, as well as other Wharton doctoral students, to important core research topics and methods in ISE and IDT in order for students to do research in the field of Information Systems. While it is intended as a "first course" for OPIM doctoral students in ISE and IDT, it may also be useful for students who are engaged in research or plan to perform information technology related research in other disciplines.
1 Course Unit

OIDD 9600 Research Seminar in Information Technology - Economic Perspectives
Explores economic issues related to information technology, with emphasis on research in organizational or strategic settings. The course will follow a seminar format, with dynamically assigned readings and strong student contribution during class sessions (both as participant and, for one class, as moderator.)
Fall
1 Course Unit

OIDD 9610 Research Seminar in Information: Strategy, Systems and Economics
This is the advanced doctoral-level research research in information strategy and economics that builds on the foundations developed in OPIM960. Much of the content will be focused on current research areas in information strategy such as the information and organizational economics, information technology and firm performance, search cost and pricing, information and incentives, coordination costs and the boundary of the firm, and the economics of information goods (including pricing and intellectual property protection). In addition, promising empirical approaches such as the use of intelligent agents for data collection or clickstream data analysis will be discussed.
1 Course Unit

OIDD 9890 Topics in Operations and Information Management
The specific content of this course varies form semester to semester, depending on student and faculty interests.
Not Offered Every Year
0.5-1 Course Unit

OIDD 9920 Conflict Mgmt Seminar
This seminar exposes students to the central issues in conflict management research. This course covers both analytic and behavioral perspectives of conflict management, and describes how the field has developed. Through discussions of theory and empirical research, the course aims to develop a foundation for understanding the extant literature and how common methodological tools have shaped the types of questions conflict management scholars have investigated - and neglected.
Spring
1 Course Unit

Organizational Anthropology (ORGC)

The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

ORGC 1600 Introduction to Team Culture
In this course, students learn about the basics of team dynamics. Students explore the foundations of effective teams, and understand why they inevitably become misaligned. Students then step through a process for generating passion and high-performance in any group that has to work together toward a common goal. Through engaging case studies and role plays, students get practice diagnosing and managing interpersonal issues that can derail teams.
1 Course Unit
ORGC 2010 Virtual Collaboration
Collaboration is an essential ingredient for human growth, learning, and success. Today, there are endless possibilities for collaboration across the globe with colleagues. Course participants will explore the relationship between the technologies, tools, and the human factors associated with the cultural/social frameworks necessary for effective collaboration. Course topics include navigating, learning, collaborating, and leading in today’s complex, socially and technologically interconnected world. Complexity and interdependence are key concepts for virtual teams, virtual leaders, and virtual organizations. Guests from multiple organization will share their own experiences and best practices that made their virtual teams and operations successful. The course foundations are built upon cultural and social sciences that explain how organizations and social order are constructed, sustained and changed. This is a highly practical course, where everything studied can be observed, tested, applied, and interpreted for results.
1 Course Unit

ORGC 3010 Anthropology of Corporations
In this course, students learn what organizational culture is and how it affects performance. Students step through foundational theories that explain how and why culture moves through organizations and changes. Students also learn to identify the drivers of cultural conflict that can hinder strategies and reduce collaboration. Drawing on anthropological frameworks and theories, students develop skills for understanding an organization’s particular cultural characteristics and creating sustainable change.
1 Course Unit

ORGC 3300 Building Influence Across Cultural Boundaries in Organizations
Every organization has subcultures defined by different divisions, departments, and teams that make it difficult to collaborate and get things done. In this course, students develop the ability to communicate across these cultural boundaries to build influence and effectiveness. Drawing on current insights from psychology, anthropology, and behavioral economics, students learn to use practical, field-tested frameworks for connecting with people who have different perspectives and winning support for their ideas. Through interactive discussions and exercises, students master the similarities and differences among influencing, persuading, and negotiating.
1 Course Unit

Organizational Dynamics (DYNM)

DYNM 5010 Perspectives on Organizational Dynamics
"Perspectives" is both a fundamental and integrating course intended for MSOD students at any point in the program who wish to understand and deploy a multiplicity of dynamics operative in organizations and in the minds that create and inhabit them. It is particularly useful for those in their first year and for non-MSOD students. One key focus is on understanding the implicit mental and emotional frameworks or metaphors that "inform" organizing so that we can virtually see more robust and complex approaches to effectiveness and to leadership within them. Several faculty members highlight their specialties. One special theme examines new management models and thinking frameworks designed to prevail in a 21st century context. Lectures, discussion, and experiential learning are used to build an informed grounding in the history, philosophy, theory and practice of Organizational Dynamics. The course requirements are active class participation, potential application projects/weekly journal, a midterm paper and a final paper. Non-Dynamics students: please include a brief job description in your Permissions Request.
Fall or Spring
1 Course Unit

DYNM 5420 Theories, Models, and Practices that Inform Coaching
This course will examine how theory guides the effective practice of coaching. Students will be introduced to a theory and model that encompasses a multi-disciplinary approach to coaching in an organizational setting. With this framework as a basis, students will select, research, and present a theoretical model of their own choosing and design a coaching application that demonstrates theory in action. Students will leave the course with an array of theoretical frameworks and practical techniques that will enhance their own coaching capabilities as managers and consultants. Undergraduates may enroll in 500-level courses only with permission of the instructor. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.
Fall or Spring
1 Course Unit

DYNM 5510 Devil’s Advocate: The Power of Divergent Thinking
Short-term or long-term? Us or them? Build or buy? Margin or volume? My way or the highway! Ad infinitum, apparent forced choices—or no choice—and limited perspectives can create costly tugs of war or constricted judgment without our minds (and hearts) and in organization dynamics, persuasive, and often hidden, divergence in thinking offers great opportunity for learning, creativity, and sound decision-making. This course offers several robust, practical techniques for bringing the value of divergent perspectives in politically productive ways to leadership thinking, communications, and organization dynamics. Non-Dynamics students: please include a brief job description in your Permissions Request.
Summer Term
1 Course Unit
DYNM 5550 The Idea of Nationalism
Nationalism has been the most important geo-political phenomenon of the past two hundred years. Its continuing power has been amply demonstrated by recent events in many parts of the world. The principle of national self-determination and closely related notions of individualism and human rights shape the global context in which businesses, governments, organizations, and individuals must operate in the 21st century. This seminar course will explore the ideology of nationalism through the lens of institutions and organizations, corporations, nonprofits, government, NGOs, unions, religious communities, etc. Starting with concrete examples from students own experiences and the contemporary conflicts confronting governments, organizations, and businesses, we will examine the ideology of nationalism, its meaning and content, its philosophical foundations, its underlying assumptions about the nature of human identity, and its contemporary expressions in nationalist movements and ethno-political conflicts around the world. In the process, we will explore such questions as: What is a nation? Does every identifiable ethnic or national group have a valid claim to a nation-state of its own? How are claims to national self-determination justified? Why do nationalist movements seem so often to engender political extremism and violent ethno-political conflicts? Is national self-determination compatible with our commitments to individualism, rationality, and universal human rights? What are the best strategies to cope with the persistence of nationalism in the 21st century? Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

Fall or Spring
1 Course Unit

DYNM 5580 Social Media and the Organization
This course explores the use of social media platforms in organizations to achieve varied goals. The course covers topics such as how to use social media for marketing and advertising, how to create and manage social media content, and how to engage with customers and stakeholders on social media platforms. We will explore the virtual, visual, and AI tools that can create a social media campaign. In addition, the course provides academic preparation on the social neuroscience behind the ways that social media platforms attract, engage, and use information generated by user content for their own purposes. This includes the impact of social media on organizational communication and culture, including issues related to privacy, data security, and online reputation management. Students will develop skills in social media strategy development, content creation, and community management, as well as critical thinking and analysis. Non-Dynamics students: please include a brief job description in your Permissions Request.

Spring
1 Course Unit

DYNM 6010 Gender, Power, and Leadership in Organizations
For the last several years, issues related to gender in organizations and organizational leadership have not been hot topics of discussion in the popular media, in organizations themselves, or in academia. That is no longer true. The advent of #metoo and the revelation of sexual harassment in corporations, government sector organizations, and nonprofits has highlighted the ways in which those with more power have been using their power to both harass and silence their victims, many of whom are women—although this dynamic is true for others belonging to groups with less power. Addressing these issues effectively will require more than lawsuits and more than sexual harassment and bystander training. This course will explore what will be required if we are to have organizations that effectively leverage the skills and talents of both men and women. Although in the last 30 years there has been some significant progress made in placing women in leadership roles in organizations, we will take a deep look at the data about where and how gender differences continue to exist in organizations including differences in both professional and outcomes. This class will examine the social, cultural, and structural dynamics within organizations that unintentionally, but differentially, affect women and men. In particular, we will consider how men and women are viewed, how their contributions are evaluated, and the opportunities that are available to them. Specific topics that will be addressed include exploration of theories explaining the development of gender identity and related behaviors that appear to be gender-based; the social construction of gender; the intersectionality of gender, race, and class in terms of power and organizational dynamics; the various explanations for gender differences in organizational life; the theories that connect gender and leadership; policies and practices that reinforce gendered dynamics; how sexual harassment, long illegal, has quietly persisted in organizations and why now new instances of harassment are being revealed nearly every day; methods for understanding the multiple sources of gender inequities in organizations; and methods for changing organizations to create equity in terms of the roles and treatment of women and men. The seminar will involve a substantial amount of reading from required books and articles. Assignments will focus on students’ examination and assessment of gender-linked dynamics in their own workplaces. Classroom time will be structured in a seminar format, including presentation of material by the instructor, group discussions of readings, experiential learning activities, student presentations, and group discussions, and examination of students’ own organizational experiences as they relate to the course material. A significant portion of the learning will result from discussions in class, so attendance is important. The course is structured to first address the development of a theoretical framework for understanding gender issues in the workplace from personal, interpersonal, group, and organizational perspectives. During the second section of the course, we will explore more specific ways in which policies and practices have differential effects on employees and managers by virtue of gender. In the last section, we will focus on alternative conceptualizations, structures, policies, and practices that could enable both men and women to be successful in the workplace and to avoid gender-based inequities. In this last section we will specifically discuss interventions and strategies for enhancing gender equity. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

Fall or Spring
1 Course Unit
DYNM 6020 Leader-Manager as Coach
New work technologies, increased competition, and employees’ desire for more involvement in their work are changing the traditional role of the manager. Rather than directing, planning, and controlling the work, managers and leaders are facilitating processes and coaching and developing their employees. Team-based organizations are built on coaching as a core requirement of the team leader role. This course explores the theory and practices of individual coaching as leadership behavior. The focus is on helping managers develop their skills and improve their performances as coaches. We will examine the need to provide others with successful performance strategies, timely feedback on strengths and on development needs, and growth opportunities in order to challenge others to reach their potential. We will explore workplace environments that foster the growth and achievement of those we lead. Non-Dynamics students: please include a brief job description in your permission request.
Fall or Spring
1 Course Unit

DYNM 6030 Leading Emergence: Creating Adaptive Space in Response to Complex Challenges
This seminar is designed to be highly experiential so that participants can engage in the practices necessary to enable innovation and adaptation. Participants will examine emergent innovation theory by addressing the dynamics and conditions in which ideas emerge in an informal manner, garner organizational attention, and gain momentum towards becoming successful innovations or bold changes within complex organizations. This will include examining the need for adaptive space in generating value that drives growth by enabling an environment of idea generation, entrepreneurship and innovation while leveraging the benefits of existing, formal systems to scale these ideas. Participants will explore and engage in such topics as creative experimentation, idea emergence, organizational network analysis, social capital, design thinking, organizational analytics and complexity leadership. Non-Dynamics students: please include a brief job description in your permission request.
Fall or Spring
1 Course Unit

DYNM 6050 Organizational Project Risk and Uncertainty
DYNM 605 is a uniquely blended content of thought leadership vetted by subject matter experts worldwide adapted to today’s constraints and challenges of virtual communications. This participant-centered set of seminars is an opportunity to increase both awareness and knowledge of risk and uncertainty by examining causes of unexpected events in predictive (classic) and adaptive (agile) project frameworks. Successful applications of non-deterministic approaches are explored as antidotes to constrained command and control project environments. Course content is valuable in roles, organizations, and sectors of all types. Prominent project/operational risk management methodologies are included in this seminar. Processes advanced by the Project Management Institute, AACE International, U.K. Association for Project Management, International Council on Systems Engineering, and by the International Organization for Standardization are contrasted with industry specific practices, including the U.S. Food and Drug Administration, NASA, and the Departments of Defense and Energy. Case examples are based on relevant experience. Participants perform hands-on implementation of processes in realistic team working sessions and facilitated dialogue. Spreadsheet/network analysis using Monte Carlo Simulation tools will be included in the course and clinics (see syllabus). Permits for non-DYMN students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit
Fall
1 Course Unit

DYNM 6060 Leading from the Center: Unleashing Your Leadership Potential
This seminar is designed to support existing and emerging leaders who recognize their need for more adaptive leadership skills to effectively respond to rapidly changing environments. We will weave leadership theory and practice in a highly experiential seminar so that participants can actively engage in a leadership lab including deep reflective thinking, rapid prototyping and experimenting with new behaviors and practices. The purpose of the seminar is to evoke personal leadership at more impactful levels and improve organizational performance and personal satisfaction. Participants will examine their own, and others’, leadership theories by identifying assumptions about leading, creating a preferred model for individual leadership, and field testing actual shifts in behavior. Participants will engage in a three-part exploration over the course of the seminar: first, we will have an opportunity to examine our own models and those of the leading theorists in the field; second, participants will be asked to articulate and improve their own model; and finally, participants will be asked to activate and test their model and report back on the experience. This course is designed to create an ‘action-learning’ community in which you will integrate your professional experience, this class, and other graduate course work with a final exploration of leadership concepts, theory, and applied practice. This course is also designed to strengthen your ability to lead, including as a colleague who can support leadership behavior in peers and as one who can promote leadership behavior in supervisors and subordinates. Permission requests from Non-DYMN students: please include a brief job description. Not Offered Every Year
1 Course Unit

DYNM 6070 Psychodynamics of Organizations
As an area of study, the psychodynamics of organizations draws out attention to the tacit, implicit, and unconscious dimensions of organizational life. It presumes that a person takes up his or her role at work by drawing on both individual history and the organizational context that helps define a role, its boundary, and the resources available to take it up. In both these aspects, the organizational context, and one’s individual biography, people are often unaware of the thoughts and feelings that animate their behavior. This course will introduce students to some basic concepts of psychoanalysis, which focuses on individual motivation, and systems psychodynamics, which focuses on group dynamics and group psychology. System psychodynamics also emphasizes how an organization’s primary task, or its “reason for being” influences individual experience. Readings include case studies as well as expositions of theory. The instructor will also draw on his own consulting cases. Course permits for non-DYMN students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit
Fall or Spring
1 Course Unit
DYNM 6090 Critical Imagination: Diverse Strategies for Meaningful Change

In her novel Parable of the Sower, MacArthur “Genius Grant” awardee Octavia E. Butler reminds us that “the only lasting truth is change.” While this mantra comes from the pages of science fiction, it speaks to an important fact about the shifting social realities that affect organizations in our technological age. If we want to develop lasting strategies for leading through change, we must think carefully about the resources we turn to for guidance—including which perspectives are represented in those resources. Critical imagination can help us do this work by encouraging creative thinking that fosters substantive change. We’ll begin this project-based course by asking how work within organizations can better reflect the diversity of perspectives and research which have already transformed our world. This will involve looking closely at a range of case studies and scholarship across disciplines—as well as speculative texts that invite us to think about the future of work within agile teams. We’ll discuss models for inclusive leadership, adaptive facilitation, and intercultural collaboration which highlight emergent strategies for change. This means turning to research on organizational dynamics in our digital era—where science fiction is closer to social and technological fact than ever before. This also means exploring questions like: • How can we leverage critical imagination as a practical tool within organizational dynamics? • How do we design for equity and justice that goes deeper than representation, toward systemic and structural change? • What meaningful outcomes can we articulate and build towards within our projects? • Which personal and professional communities do we hope to serve through our work? • What do we need to unlearn, and which methodologies will support this process? • Which strategies can we use to foster mission-oriented thinking that’s specific to our roles within organizations? Our culminating efforts will include projects that we will develop throughout the course via discussion posts, reflective activities, collaborative presentations, simulations, and reading groups. Much of this will entail using imaginative work to think critically about what’s possible, as we advocate for meaningful change within diverse organizations. Permission requests from Non-DYNM students: please include a brief job description.

DYNM 6100 Knowing Yourself: The Coach as an Instrument of Change

Note: This class is predicated on the assumption that prior to offering coaching assistance, a coach should have a deep understanding of his or her own behavior and its impact on a client. Utilizing validated tools and strategies available for coaches, the students practice sets of coaching skills on each other. This includes practice in interviewing and observational skills. In addition, students will have the opportunity to give and analyze 360 degree feedback data, as well as use a variety of other instruments that can be foundational for a useful coaching experience. Premise: Coaching others is very serious business. Intrepid individuals willing to take on this responsibility should be willing to answer the following questions: Who am I as a leader and helper? What are the assets I bring to the coaching relationship? What are my deficits, overused strengths, or underutilized skills and behaviors? What historical influences from my family of origin influence my capacity to build a positive relationship with my coaching client? Are there discrepancies in relation to my self-perceptions and those who know me well—family members, peers, colleagues, friends, boss, and direct reports? As a result, are these specific areas of personal development that I need to address as I move? Similar to most traditional programs where the focus is on the management of change, the course is organized to: 1) A diagnostic phase in which the values, history, assumptions, and behaviors of the client will be assessed. In this case the client will be the student/coach. 2) The applied phase in which analysis, interpretation, and formal learning will be the central focus. The end result will be individuals with a deep and abiding understanding of their own psychodynamics and their personal impact. Finally, by modeling many of the tools and strategies useful in any effective coaching effort and practicing them on themselves and their student peers, it is hoped that the experiential nature of the course will allow maximum transference to the real work of coaching. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

DYNM 6110 Effective Collaboration for a Changing Global Workplace

Effective collaboration requires a combination of strong self-awareness and an ability to make adjustments at the individual and group level. This course provides tools for building teams that leverage individual strengths and a mutual learning process of continuously addressing collaboration barriers to improve team performance. This seminar/lab is designed to extend each participant’s analytical skills and gain practice implementing high performance practices through a team-based simulation. Specific learning objectives are to: 1. Understand leading-edge frameworks for building effective teams. 2. Learn and apply tools for diagnosing barriers to collaboration. 3. Develop implementation plans for teams and organizations consistent with best practices. 4. Provide tools for self-assessment of participants to leverage their strengths for teamwork success. 5. Apply learning from classroom-based teamwork simulation to participants’ real life experiences. The course will be conducted in a university classroom and use several breakout rooms for teamwork among participants. Case study teams will use web-based communication software (TBD) for inter-session collaboration on projects. Weekly facilitated discussions by course instructors will be conducted at each weekend session. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

Not Offered Every Year
1 Course Unit
DYNM 6120 Mastering Organizational Politics and Power
The purpose of this course is to explore, enhance, and expand the participants' competence in organizational politics. Students will observe political dynamics as they occur in their own organizations and will interview senior managers in other organizations to learn how political realities vary from one organization to another. Theoretical ideas about a dimension of organizational politics of particular interest to each individual participant will be analyzed in a term paper. In addition, each participant will keep a personal diary of political dynamics in his or her own workplace. The course will also explore ways to master the political skills of networking, negotiating, influencing, leading, and following, as well as developing a political strategy. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

Fall
1 Course Unit

DYNM 6130 Is Bigger - Inevitable, Better or Worse in Organizations?
Is the modern large corporation alienating, inflexible, unproductive? Is the small organization or work team engaging, innovative or creative, productive? Has it always been this way in the U.S.? Is change possible? In this unique, informal, "turbo" seminar, we will examine the large corporation in terms of history, governance and control, and delivery of (office) work. We will consider whether "bigness" and bureaucracy are inevitable, and how organizations of the present, and probably the future, are affected by those of the past. This seminar has been structured to cover a good deal of ground in a short time. The seminar will meet on six Saturdays. The subject matter of these seminar is the large-scale organization. Questions to be raised include: 1) Is the modern large corporation alienating, inflexible, and unproductive? 2) Are bigness and bureaucracy inevitable? 3) Is the small organization or work team engaging, innovation, creative, and productive? 4) What does the historical record for the United States reveal? 5) Are organizational alternatives and change possible? Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

DYNM 6140 Consulting/Coaching Tools and Techniques
This course will offer a conceptual comprehension of the tools and techniques used in effective internal and external organizational consulting engagements. By contrasting the theory and practice of alternative coaching models, we will build tools and techniques for effective coaching as a leadership competency. Through an analysis of the coaching relationships in your organization, you will learn to develop a personalized approach to coaching and expand upon and within organizational settings. Participants learn the "how and why" as well as consulting frameworks. Additionally, the relevant and often symbiotic connection between consulting and coaching will be studied. What process tools are most useful to today’s executive coach in a consultative environment? How do approaches to consulting and coaching differ? How are they similar? How can a confluence of coaching and consulting lead to more effective decision-making and wide-scale organizational performance? This course will be presented over five class meetings. The class sessions will be taught utilizing lectures, case studies, structured small group discussions, individual and team presentations, faculty and participant experience, and guest speakers. In addition to textbooks for this course, students will also need to purchase an assessment. Details on this process will be provided to students before the course start. Permission requests from Non-DYNM students: please include a brief job description.

DYNM 6150 Global PENNovation
Environmentalist Paul Hawken challenged a class of college graduates that they would have to "figure out what it means to be a human being on earth at a time when every living system is declining, and the rate of decline is accelerating." That theme is at the heart of this course. While we have seen the notion of sustainability gaining traction in recent years, our quality of life in the near future hinges on the development and implementation of sustainable solutions to enormously complex global environmental and social problems. This course is designed to foster the thinking that is needed to address those enormous problems. It involves focusing on a critical global problem with sustainability and social dimensions - this course, the rapid shift of an increasing global population to cities - and providing the framework for students to take a deep dive into evaluating and recommending solutions to meet that challenge. The World Health Organization (WHO) estimates that in 1990, less than 40% of the global population lived in cities, and that figure is expected to grow to 60% by 2030 and 70% by 2050. Such growth brings tremendous sustainability and design challenges in both developed and developing countries in terms of resource consumption, food security, water security, energy security, air quality, transportation, re...
**DYNM 6160 Myths to Media: Stories on a Mission**
What determines our behavior? How do we come to understand? Who determines our purpose? Is now the only time? When asked “What if there were nothing in the universe,” one professor replied, “How do we know there isn’t?” The more our world seems to dis-integrate into discrete and unpredictable units and actors, the more we crave guidance from robust human models and conceptual frameworks of intellect, emotion, psyche, and action. Fortunately, our 100,000-year-old brains retain mechanisms enabling us even now to enhance our choice using the “stories beneath the stories” that—in form and content—have driven our purposes and actions since sentient beings could communicate. Yoda you should ask. This course offers several means of deploying these powerful ancient sense-making tools—myths and stories—to purposefully communicate and foment action with individuals, groups, and organizations, particularly in our global social media milieu. We will learn many practical story-based ways to apply this power to several “missions”: engaging others in individual and collective action, increasing understanding of patterns in human behavior, and harnessing the driver of purpose for business and social enterprise. Seek help from Prometheus. Non-Dynamics students: please include a brief job description in your Permissions Request. Fall or Spring 1 Course Unit

**DYNM 6170 Economics of Human Behavior and Organizational Life**
As a society, we choose many different ways to organize different aspects of our lives. The institutions and organization we choose to provide us with the necessities and comforts of life range from the fundamental institutions of family and religious organizations, to firms in the capitalistic market and democratically elected governments. We respond to this environment in unique ways: we marry, we worship, we buy and sell goods and services, and we vote. The primary goal of this course is an examination of the various aspects of human behavior in the context of organizational and institutional life from an economic perspective. We recognize that the choices we make are sensitive to the costs and benefits of different actions and use this economic perspective to gain insights into social, economic and political behavior in our daily lives. We start the course with an examination of how micro economists view the world and examine their favorite toolkit. We discuss concepts such as: efficiency, opportunity cost, marginal analysis, externalities, incentives, free-riding, rent-seeking, and transaction costs. These concepts are fundamental if an economic perspective and they will be presented using everyday examples. Before concluding the course, we will look at several topics such as: Human capital and investment in education (Should you invest in an Ivy League school education?); Law and enforcement (When is it profitable to break the law?); Bribes and gifts (Quid pro quo?); Economics of information (Used cars and the market for “lemons”); Why do we discriminate against minorities?; Property rights and externalities (The tragedy of the commons: Should we have smoke-free environments?); and Free-riding (Should I vote in the next election? Should I volunteer to clean up?) Non-Dynamics students: please include a brief job description in your Permissions Request. Summer Term 1 Course Unit

**DYNM 6180 Social Dynamics and the Future of Work in Hybrid**
This course will focus on the social dynamics of work in both a face-to-face and virtual environment. Grounded in much of the early work from Kurt Lewin at the Research Center for Group Dynamics (RCGD) on group productivity, communication, social perception, intergroup relations, and group membership participants will look backwards to propel forward on the landscape of the future of work. The COVID-19 pandemic has led organizations to embrace virtual work, with some initial data suggesting that productivity may have increased. But these short-term gains may mask longer-term threats to the ability of organizations to innovate and actively cultivate culture. Drawing on social network theory, participants will explore alternative approaches of work. An approach that recognizes the value of various types of network connections and different types of social capital to help managers identify a blend of virtual and face-to-face work to avoid the loss of connections and social capital that virtual work brings. This seminar is designed to be highly experiential so that participants can engage in the practices necessary to enable productivity, innovation and adaptation. Non-Dynamics students: please include a brief job description in your Permissions Request. Fall 1 Course Unit

**DYNM 6190 Organizational Project Management**
The course provides an overview of the concepts, procedures, and fundamental processes of project management for working professionals. Participants are introduced to the principles, tools, and techniques of project management within an integrative framework. The course emphasizes that, for most organizations, projects are the primary means for implementing strategic initiatives. Course Objectives:
1) Understand and critically evaluate expectations, procedures and processes of program management as currently practiced in large for-profit enterprises; 2) Understand the content and processes and standards of practice as defined by the Program Management Institute (PMI); 3) Understand how to build and manage effective project teams; 4) Become familiar with the critical components of effective project plans. In addition to the scheduled meeting dates, additional class activities will be planned between faculty and students. Non-Dynamics students: please include a brief job description in your Permissions Request. Fall or Spring 1 Course Unit
DYNM 6200 The Art and Science of Understanding Paradox in Organizations
This course introduces multiple approaches to understand and interpret the paradoxes that baffle us, such as: 1) Why is it that we go to hospitals to be healed and get well, but we leave sick and infected? 2) How is it that we come together to do purposeful work and end up doing mundane, boring tasks? 3) Why is it that banks were created to protect and ensure financial security, but banks have caused a global recession? 4) Why do we not learn from history? Why do we repeat the mistakes we have made before? 5) Why is it that the "Developed and Advanced" countries of the world are destroying the planet? This highly interactive, flexible, and remarkably diverse online course will offer frames to observe the paradox in ourselves, our families, our friendships, our workplace, and our relationships with individuals, teams, and systems—the three units of analysis that constitute every paradoxical situation. Paradox appears in our organizations, our relationships, and our experience as contributing members and leaders of our society. The value proposition of this course is for managers, leaders, and strategic thinkers who wish to understand the art and science behind the paradoxes in the systems within which we live and operate—the visible and the invisible and the rational and irrational. Understanding the unconscious forces that lead to inconsistencies and contradictions will help us be resilient in the face of paradox. This online course will have weekly synchronous and asynchronous sessions of 2-3 hours in length. Through guest speakers and multiple interdisciplinary discussions, we will explore many angles of our understanding of paradoxes. Course grading will be based on class participation, contribution to the collective wisdom, and academic excellence in written assignments. DYNM 6220 Diversity and Inclusion: Strategies to Confront Bias and Enhance Collaboration
In the workplace it is inevitable that difference between individuals will cause conflict—whether explicit or beneath the surface. Denial and unconscious bias will prevent issues from being addressed. This course will expand participant perspectives about strategies for addressing bias and for creating effective collaborations that bridge difference. The approach of the course is based heavily in experiential learning, structured reflection, and practical application. Through a self-assessment and group reflection, participants will create, implement, and adjust action plans for addressing unconscious bias and for enhancing communication that drive inclusive goal and norm setting. A live, building case provides an opportunity to apply the course concepts in a dynamic team setting. One additional facilitator per weekend will be brought in for short guest lectures and team observation/debriefing to provide an appropriate and relevant source of challenge to work through difficult issues raised through course concepts. The overall course structure will combine three intensive on-site Saturday meetings with opportunities for remote collaboration to create a seamless and continuous learning community. To maximize collaboration and networking opportunities, students will participate in two teams: one in which they will be tasked to solve a business challenge related to diversity and inclusion and the other for discussing strategies to implement course learning within their workplace or organization. DYNM 6230 Building Intercultural Competence in A Global Work Environment
This engaging course will promote intercultural competence and heighten cross-cultural awareness. You will engage in activities, simulations, and discussion about culture, values, perceptions, communication styles, and cultural patterns of thought and behavior that will help you understand the basic concepts, theories, and issues of intercultural communication related to intercultural relationships and how these concepts apply to your personal and professional lives. This fun and stimulating course will also explore ways to create an interculturally-competent work environment. Learning opportunities will examine tools to interact more positively with each other. As we build intercultural competence, we will sometimes encounter barriers as we interact with people whose cultural backgrounds vary from our own. As learners of intercultural communication, we will be bringing different cultural experiences and perspectives. As we interact and learn together, you will be exposed to different viewpoints and cultural lenses. We will all realize that as we unravel differences, you will find that what is acceptable and appropriate in one culture may be disrespectful from another cultural vantage point. As we cultivate, learn, and shape our intercultural competences, we may need to have an open mindset to learn new things and unlearn misinformation. The cultural competency of learning and unlearning, shaping and reshaping is a life skill that will be useful and extended well beyond the course to our work settings and personal lives. Finally, this real-life application course will help you develop a greater understanding of the behaviors and practices other individuals from your workplace may bring with them from their cultural backgrounds. Areas that will be tackled will include: 1) practical tips for working with diverse cultures and individuals, 2) how values, perceptions, and expectations differ between cultures, 3) how to manage conflicts and problems with other individuals, and 4) what you need to know about the workplace dynamics, behaviors, and practices in international cultures. DYNM 6240 Leadership: Mindset to Action
In this experiential course, theory and learning are put to work towards action in consideration of your personal context. We will examine various mindsets for leadership such as systems thinking, appreciative inquiry, servant leadership, feedback, and reflection. Through discussions and assignments, you will strengthen and deepen your knowledge of leadership styles, develop and refine your leadership style, and better articulate who you are as a leader. Throughout the course, you will assess and reflect on your leadership mindsets to explore how those mindsets are manifested in your actions; identify areas to explore and develop; and determine ways to experiment with and implement new approaches. You will reflect upon and reconcile what your leadership mindsets offer with what you do in your actions. A personal leadership narrative will be created, incorporating analysis of your past and present leadership mindsets with your plan for moving forward. Theory and practice unite to support you wherever you are on your leadership journey: whether you are an emerging leader, a new leader, a transitioning leader, or a leader of leaders. 1 Course Unit
DYNM 6250 Ethnography of Everyday Life: A Master Class
Ethnography is a fundamental method within the social sciences that concerns the systematic study of culture. It involves a "thick description" of how people actually live their everyday lives, personal or professional. Ethnographers study how human groups form institutions and how these structures grow, function, maintain themselves, and persist. Also at issue is how people share their understandings and develop ideologies pertaining to these processes. Social negotiation and the development of "local knowledge" in the culture of interpersonal affairs will be emphasized, particularly as it is transmitted from one generation to the next. Through direct observation and discussion, students will treat Philadelphia as an "urban laboratory" and seek to identify, to study, and to learn about local people and places. In this vein, the class will visit communities and organizational settings to gain exposure to ordinary people but, particularly, to apply ethnographic methods to the complexities of the modern workplace as well as to everyday life of the city. The final paper will be a synthesis of ethnographic literature and observations of local urban life and culture, particularly as these issues apply to understanding and organization or a local community. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.
Summer Term
0.5 Course Units

DYNM 6260 Navigating the Post-Professional World
This course will explore the emerging space between virtual reality and augmented reality as they manifest themselves in the marketplace shifts in both startups and large corporations. The goal of this course is to design, from the future back to the present, a graduate curriculum that supports the evolution and transformation of traditional professional training and development. Leaders of professional services from disparate fields, including health/medicine, law, architecture/design, information technology, and spirituality/religion will be engaged to participate in identifying trends for future professional enhancement. These representatives would be asked to be both resources to the class and recruiters within their own organizations so we can obtain participants for a Delphi study for the future of that profession. Course work will include the literature on the post-professional world as well as the use of both virtual reality and augmented reality. A capstone quality paper will be supported as a project group and could serve as a pre-capstone individual project. A particular focus will be on the trend of white-collar automation and its impact on the professions. Students interested in engaging with colleagues around the future and trend of white-collar automation and its impact on the professions. A particular focus will be on the evolution and transformation of traditional professional training and development of "local knowledge" in the culture of interpersonal affairs. Social negotiation and the development of "local knowledge" in the culture of interpersonal affairs will be emphasized, particularly as it is transmitted from one generation to the next. Through direct observation and discussion, students will treat Philadelphia as an "urban laboratory" and seek to identify, to study, and to learn about local people and places. In this vein, the class will visit communities and organizational settings to gain exposure to ordinary people but, particularly, to apply ethnographic methods to the complexities of the modern workplace as well as to everyday life of the city. The final paper will be a synthesis of ethnographic literature and observations of local urban life and culture, particularly as these issues apply to understanding and organization or a local community. 1 Course Unit

DYNM 6280 Organizational Diagnosis: Diagnostic Strengths for Effectiveness
This seminar introduces participants to multiple approaches to diagnosing organizations to understand the complex ways issues show up and how to work through them. When organizations find themselves in trouble, i.e., rumblings about lack of leadership, cultural challenges, poor communication, diminished productivity, low morale, etc., they tend to frame the problem(s) simplistically or locate blame in a few difficult individuals or groups. On closer examination, problematic issues are often found to be symptomatic of multiple systemic or cultural issues within the organization. Change can only be successful when it starts from a clear evidence-based assessment. The course provides students with tools, frameworks, and theories to understand these organizational challenges and opportunities, focusing on systems thinking, culture/ethnography, and group dynamics, as well as application skills necessary for identifying and framing problem areas, collecting data, and organizing feedback to the client system. Real-time examples, case simulations, enactments and diagnostic project work will inform our discussions as we consider the relationships between diagnosis, organizational reflection and appropriate action. Non-Dynamics students: please include a brief job description in your Permissions Request.

DYNM 6300 Digital Business Transformation: A Process Approach to Results at Minimum Risk
According to newest research, over 70% of organizations worldwide have started digital transformation initiatives or at least plan for them. New digital tools are available almost daily - and many of them have the potential of a major business impact. They enable high performance practices and often even new business models. The resulting transformation of business processes leads to superior customer or supplier experience and organizations become more efficient, agile, meet compliance requirements, or improve the quality of products and services. They help achieving a level of process performance you would never have thought of before. Robotic Process Automation (RPA), Blockchain, Artificial Intelligence, the Internet of Things and Cloud-based software architectures with next generation automation approaches are some examples. However, many organizations underestimate the challenges of digital business transformation resulting in initiatives delivering little or no business value. A major financial organization, for example, stopped the use of over 1000 robots since that digital workforce had created severe issues: processes changed more frequently than expected - the robots didn't which led to numerous exception cases that had to be handled manually. The elimination of bottlenecks created more severe issues downstream. Value-driven Digital Business Transformation addresses those challenges. It proposes approaches, methods and tools that help to focus on the right sub-processes to transform and improve those areas considering the end-to-end business context as well as sustain the results through appropriate governance. The systematic use of digital technologies requires a hybrid workforce management aligning people, robots and other technologies through appropriate business processes management practices. A value-driven digital transformation prepares for this situation. The course discusses design and execution principles as well as related methods and tools to realize the full business value of digital business transformations, delivering results fast and at minimal risk. It combines newest case studies with current research findings to master business impacts of digitalization. Non-Dynamics students: please include a brief job description in your Permissions Request.

DYNM 6310 Everyday Intergenerational Conversations: Baby Boomers and Millennials
This hybrid course delves into three big questions around the burning theme of everyday intergenerational conversations. The class experience will be a living such conversation with Dr. Barstow, a Baby Boomer, and Amrita Subramanian, a millennial. The course format is 20% in person and 80% on a virtual platform. It’s a learner-centric and a learner-driven course. It is to mine the practical know-how and life experiences of all participants, so all generations within the class can have a revealing experience that they can immediately apply at work and their personal relationships in life. At this exact point in time there are 300+ million people in the workforce and four generations at play. We begin to see the tiers of own understanding falling apart. It’s no longer about stereotyping or simply managing by default or banking on quick-recall labels—and here’s why—workplace performance or productivity or engagement or intergenerational respect and trust cannot be left to chance or opinions. We have to pause and consider the following questions: 1) What: What are the generation names and labels we use? What purpose do they serve? How do they help and how do they hurt? What do they help us see? What do they hide, obstruct or make us miss? 2) So what? Intergenerational communication is poor and we can do better. Understand it and skills (strategies and tactics) to prosper and cope. How to use agency and brokerage? What of cognitive dissonance? Responding versus reacting to Fake News? 3) What’s next? What have we learned from this whole century about the 4 generations at work? At home? At meetings or webinars or potluck parties? What of families at Thanksgiving? How can we expect to have valuable and meaningful conversations and relationships with all generations—current and future? The primary goal is not to make up our minds just yet or have cookie-cutter retorts. It’s not just what to think but how to think about this very pertinent issue at hand for all practitioners, leaders, managers, and folks from all walks of life. There are bound to be far more questions than answers as we begin, and by the time we close, we would have configured our own responses to these questions that appreciate the context of our own unique lives. DYNM 6320 Coaching and Developing the Agile Leader and Their Organization
By taking the essence of the Agile practices used in IT and removing the technical requirements, this course explores an innovative way to create a more humanistic approach to complex organizational change. Students will learn how to apply these mindset and methods effectively, including focused attention on: (1) effectively probing, sensing, and responding to wicked problems; (2) promoting the right conversations to increase engagement and opt-in-to-change initiatives; (3) identifying and then using patterns and anti-patterns that can make or break organizational transformation; (4) obtaining alignment, agreement and accountability around goals; (5) implementing new ways of thinking and working in an Agile-like way; (6) developing open, inclusive teams; and (7) creating a more generative culture that embraces continuous learning. Students will have an opportunity to learn from, and work directly with, senior-level leaders at organizations such as Neiman Marcus, Facebook, ServiceNow, MUFG, AT&T, and Unilever who will share with the class their own stories of transformation through Agile mindset and methods. The final project will be a comprehensive transformation plan that students will present to a live panel of business leaders who will serve as judges and mentors for students’ transformation plans. Spring
1 Course Unit

DYNM 6340 Process Improvement Tools and Strategies
Process improvement as taught in this course often provides high-leverage, high-visibility opportunities for showcasing coaching and leadership skills as a member, coach, or leader of cross-functional process improvement teams. Cross-functional process improvement teams (running lean and six sigma projects) have evolved into a major pathway for developing leadership and coaching talent in such organizations as Baptist Healthcare, Federal Express, Ritz Carlton, Toyota Motor Co., and General Electric. Process improvement project leaders and team members use specific tools and capabilities to analyze as-is processes and to define and deploy new or improved processes that deliver better outcomes and customer satisfaction with less non-value added effort. Leading or serving on cross-functional process improvement teams creates opportunities to work and network with people from other parts of your organization and creates opportunities for visibility to executives and managers sponsoring strategic improvements. Participating in or leading process improvement is also a great leadership, coaching and professional development activity. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

DYNM 6350 Organizational Essentials for Leadership

Through presentations by expert speakers, case discussions, and participation in team projects, students will review and evaluate critical issues from across the frames of business, including general; human resource; marketing; information and stakeholder management; leadership; corporate culture; communications; organizational behavior; sales, marketing and public relations; finance and financial reporting; ethics and social responsibility; unions and government relations; and business law. Each of these elements will be studied in light of changing environmental conditions, including the economy; society; consumer behavior; market trends; regulation; politics, unpredictable events such as 9/11; organizational change; history; and internationalism. Non-Dynamics students: please include a brief job description in your Permissions Request.

Summer Term
1 Course Unit

DYNM 6360 Frontiers of Leadership Development

The best organizations for leadership development use a blend of internal and external coaching to a.) Support leadership performance; b.) Develop high-potential talent capabilities; c.) Accelerate individual, team, and organizational agility; and d.) Support strategy execution. Leaders must navigate increasingly complex and volatile global environments and rapid technological developments that are accelerating the pace of change in the nature of work, organizational arrangements, and workforce compositions. This context demands agility, resilience, proactive, continuous learning, and the ability to cultivate diverse relational networks. Coaching must support these capabilities. This course is intended for students with an interest in culturally complex leadership development and organizational change. Existing coaching models focus on a variety of "soft" skills, but few focus directly on culture learning and the ability to lead in a variety of cultural environments. The course is based on the premise that our current workplaces require an ability to function effectively in a variety of cultural environments and that leadership requires an ability to recognize and leverage "cultural diversity" in teamwork, communication, collaboration, conflict, and change. Coaching, as a leadership development practice, must help leaders grow in their ability to recognize and leverage the national, professional, functional, and organizational cultures that influence workforce engagement, productivity, satisfaction, and innovation. The purpose of this course is to enhance student understanding of coaching models, methods, and cases informed by cross-cultural psychology, intercultural communication, anthropology, and international business disciplines. Through reading, class discussion, written reflection, and guided practice, students will develop their skills in coaching across cultural differences. Students will co-facilitate organization development exercises designed to illustrate how to leverage cultural differences. Using Rosinsky's global coaching process as an illustrative example of this kind of coaching, students will coach one another through a self-assessment, development planning process, and initial movement toward their objectives using a global scorecard. Students will then apply what they learned in a final coaching project. Course permits for non-DYM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

DYNM 6380 Organizing for Entrepreneurial Effectiveness

This course is a mix of in-person and virtual sessions. In-person meeting dates are 9/5, 10/3, 11/14, 12/12. Entrepreneurship has become a popular aspiration for many individuals in the United States and around the world. In fact, a recent survey by UK Trade & Investment confirmed that roughly 1 in 3 individuals under the age of 34 have expressed a desire to form their own new venture within the next five years. This represents a marked increase in aspirational levels over the past two decades. Although not all new ventures are entrepreneurial in nature, the motivation for starting a new venture is ultimately rooted in a desire to change one's professional and/or personal circumstances. Most individuals never achieve this objective because they fail to take the first step in organizing their entrepreneurial aspirations into an effective plan. This course is designed for mid-career professionals who aspire to either form an independent new venture (i.e., entrepreneurial venture) or lead the creation of a new venture within their existing organization (i.e., intrapreneurial venture). Participants in this course will: 1) learn the internal and external motivational forces that drive individuals in general and themselves in particular; 2) become familiar with the general competencies and skills needed for a new venture to be effective; 3) understand the unique needs associated with creating a balanced team for the new venture; 4) cover the practical aspects of developing an effective new venture; and 5) prepare a formal plan designed to marshal the necessary resources and support the new venture. The course will culminate with each student preparing a formal executive summary and professional presentation to support the creation of a new venture in a new or existing organization.

1 Course Unit

DYNM 6390 Sustainable Change: Managing Organizational Culture to Achieve Leadership Goals

"Culture eats strategy for breakfast," as management guru Peter Drucker famously said. We know that leaders who can effectively manage their organization's culture are better at adapting to market trends, retaining employees, and engaging external stakeholders who demand more corporate transparency and social responsibility. Yet most of us find it difficult to understand what culture really is, let alone manage it successfully. This challenge is magnified at a time when technological and demographic trends have made organizational boundaries more porous and ambiguous than ever, threatening to make traditional models of top-down change management ineffective. This course will therefore take a bottom-up, contextual approach to helping students understand and manage organizational culture in order to achieve their strategic and career goals. We will start with the individual, learning how culture works to shape organizational politics. We will discuss ways in which students can develop strategies for navigating organizational culture to achieve their career goals. We will then move to the group level, examining how cultural barriers form between teams, functions, and divisions, harming communication and coordination. The final section of the course will build to the organization level and provide students with a toolkit for creating strategies to achieve sustainable cultural change. The course will be heavily focused on practical application: students will conduct semester-long cultural research/consulting projects with organizations located in Philadelphia. We will also apply course frameworks and tools to case studies of leaders attempting to create sustainability-oriented cultures in their organizations. Course permits for non-DYM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

1 Course Unit
DYNM 6400 Virtual Collaboration
NOTE: Logitech ClearChat Headphones and Logitech QuickCam Pro9000 are required for this course. Please see the syllabus for other requirements. Across the globe companies, both large and small, are increasingly conducting culturally complex work through technology channels and virtual personnel transfers, making multicultural organization and virtual work inextricably intertwined. In this context electronically mediated collaboration and communication capabilities across time, distance, organization, culture, and other knowledge boundaries have become necessary for the everyday work of telecommuters, virtual teams, remote managers, professional knowledge communities, and electronic marketplaces. This course is primarily intended for students with an interest in globally distributed work and collaborative virtual organizations. The purpose of this elective is to enhance student understandings of virtual forms of human collaboration and to develop student abilities to work jointly with others via electronic tools. This course design makes typical social patterns encountered in virtual organizations visible so that students can learn from participating and collectively reflecting on their course experiences. This course has an online course fee of $150. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

DYNM 6410 The Art and Science of Organizational Coaching
Coaching has become a primary tool for consultants, human resources professionals and administrators interested in promoting and sustaining leadership and executive development, behavioral change, and role transition. This course explores the theory and practices associated with organizational coaching. We examine and practice the steps of the normative coaching process, the issues and boundaries that effect coaching, and pitfalls to avoid. This is an introductory course that follows a hybrid model of instruction, learning and application in class and in virtual class. The first class will be a weekend face-to-face experience followed by consecutive virtual classroom sessions with a variety of different applications. Students will practice phone coaching and virtual coaching as well as virtual group written discussion. Throughout the course we will contrast theory and practice through our own experience and observation via assignments and behavioral experimentation. Non-Dynamics students: please include a brief job description in your Permissions Request.

DYNM 6420 A Cognitive Playbook: Frames for Smart Thinking
This course integrates strategy and organization through abstract thinking—what psychologists call metacognition. You will gain both big-picture scope and nitty-gritty tools for organizational analysis, planning, and change. You will learn how to speed-read the literature on strategy, organization, leadership, management, and the like—because so much of it is derivative and redundant. Old wine in new bottles. At the core of DYNM 6420 are five “cognitive plays,” or geometries of thinking: point, linear, curvilinear, angular, and triangular. Each play has its time and place. The challenge is to mix and match appropriately. Playbook shows how.
Fall or Spring
1 Course Unit

DYNM 6430 Trappings, Substance, & Memories: Effective Public Presentations in Orgs
In spite of the technological advances that have transformed organizational communication, the ability to articulate and present ideas, arguments, and positions in a face-to-face context remains a vital skill. At the same time, the opportunities to develop fundamentally sound presentation skills are rather limited, and, in many cases, organizations don’t train their employees to do so. In this very hands-on course, we will resurrect this age-old practice by exploring the tried and true presentation methods and approaches while simultaneously making direct connections to how technology has transformed presentation speaking in organizations. We will initially explore the fundamentals of public presentations: what makes an effective presentation, the arguments for developing strong presentation skills, and specific analysis of business speech. How does one establish proper credibility and build the trust necessary for success? Where does structure play a role and how can certain elements from theater, storytelling, and narrative help create highly impactful organizational presentations. We’ll explore what determines ethical presentations, where charisma (or lack thereof) plays a role, and how to most effectively incorporate visual accompaniments such as PowerPoint into presentations. We will dig much deeper into the development of strong persuasive arguments with emphasis on how social media has impacted credibility in novel ways. Finally, we will use improvisational techniques as a way to prepare for those sudden moments when one is called upon to make a quick presentation. Non-DYNM students: please include a brief job description in your permissions request.
Fall or Spring
1 Course Unit
DYNM 6440 Applied Organizational Change: Methods Dojo
This seminar is designed to support existing and emerging leaders who recognize their need for more adaptive practices to effect organizational and individual change in complex and rapidly changing environments. Building on a strong base of theory, this seminar is largely experiential. Students are expected to identify a real need in a system (work, internship, or volunteer), which, if improved, would have a substantial improvement on overall organizational performance and satisfaction. Beginning with this problem or dilemma, the seminar is designed as a ‘dojo’ or practice space, where students can clarify their own assumptions about how and why change occurs and practice new techniques and approaches for elicit change. Theory provides the foundation for our work and students will be expected to recognize and be able to articulate how they are operationalizing theory in their setting. The purpose of the seminar is to evoke change at more impactful levels and improve organizational performance and personal satisfaction. Participants will examine their own and others’ change theories by identifying assumptions about change, testing methods that evoke change, and field-testing actual shifts in behavior. Participants will engage in a four-phase exploration over the course of the seminar: first, participants will have an opportunity to articulate their mental models about how change occurs and examine those of a few cutting-edge theorists; second, participants will be asked to learn and practice a minimum of 16, and possibly up to 25, organizational change micro-methods in class; third, participants will be asked to activate and test their change model using some selection of these methods learned in class on the problem they identified at the beginning of class real-time; and finally, participants will be asked to report on their experiences and re-examine their own models for possible revisions. This course is designed to create an ‘action-learning’ community in which participants will gain new knowledge and applied skills and give and receive feedback while weaving their professional experience, this class, and other graduate course work into a new, more robust toolkit of change methodology. This course is also designed to strengthen students’ ability to lead change from wherever they find themselves in a system. Non-DYNAM students: please include a brief job description in your permissions request.

1 Course Unit

DYNM 6460 Race, Ethnicity, and the American Workplace
The U.S. workplace has long been one of the foremost spheres in which racial and ethnic inequality is created and perpetuated. This course investigates how racial and ethnic inequality affect our experiences in the workplace as well as how we as employees, managers, and the like, can positively impact upon our work environments against bias to promote equality and inclusion. Although most Americans largely perceive the employment relationship as one’s personal relationship with his/her “boss,” one’s occupation and/or “job” encompasses much more than that. How we come to work at the jobs that we do is about our access to larger institutional structures within society including education, family background, and, importantly our ascribed location within the social hierarchy. At the beginning of the course, we will spend time studying race and ethnicity as dynamic social and political constructs that evolve through time and space. We will examine how these constructs relate to social stratification, intergroup and intragroup relations, and economic and political hierarchies within U.S. society. The objective here is to provide you with a better understanding of how and why race continues to be such a powerful stratifying agent in contemporary America. We will spend time discussing the enduring power of structural racism in U.S. society—it’s evolution since slavery, and its ability to restrict Black & Brown achievement and success within all spheres. How has the Covid-19 pandemic and the BLM movement further brought to light the rigidity of our peculiar system of racial stratification? How can we work to promote true equity and inclusion now? How can we come to work as our “authentic selves” where everyone has a seat at the table? What has history taught us about these issues? And, how can we learn both as individuals and members of organizations to make racial diversity, equity, and inclusion normative experiences for all? Work is a microcosm of our broader lived experiences and it is likely the most “diverse” place we experience in our lifetime. Simultaneously, we will focus on understanding history and evolution of diversity, equity and inclusion practices in the workplace as they relate to addressing racial and ethnic inequality. How have diversity and inclusion practices in the private and public sector evolved over time? How do these practices reflect broader historical and societal trends concerning social and racial inequality? What does it mean to go from compliance to commitment? Have we moved from “diversity for its own sake” to true and meaningful inclusion? What kinds of new initiatives and commitments have organizations made since the BLM protests this summer? How has BLM impacted the experiences of employees of color to-date and where are things headed now? For the rest of the semester, we will examine how workplace inequality gets produced and reproduced along racial and ethnic fault lines. Do D, E, & I programs tailored to distinct groups alleviate issues of marginalization for employees? Why are successful D, E, & I programs profitable for big business? In addition, we will examine the intersections of race, gender, and class in the workplace; how do these intersections impact how we address inequality in hiring, promotions, and recidivism? We will study in-depth how and why personal and organizational biases remain mechanisms of inequity as well as how social class and gender intersect with race/ethnicity to contribute to workplace discrimination. We will host several guest lecturers throughout the semester. Non-Dynamics students: please include a brief job description in your Permissions Request.
1 Course Unit
DYNM 6470 Influence and Persuasion

Former Chrysler chairman Lee Iacocca once noted, “You can have brilliant ideas; but if you can’t get them across, your ideas won’t get you anywhere.” This course builds on Iacocca’s insight, helping students develop the ability to win support for their perspectives, proposals, and projects from key people in the workplace. Everyone needs to know how to sell ideas. Sales people obviously need this skill and so do managers of all kinds. Even CEOs need it to gain buy-in for a vision. Influence and persuasion help you work with and through others—customers, teammates, colleagues, direct reports, and stakeholders—who have different professional backgrounds, roles, opinions, and agendas. In highly interactive discussions and exercises, students will learn about practical field-tested frameworks that draw on current insights from psychology, anthropology, and behavioral economics. When the course is completed, students will have mastered the latest thinking about:

1) Persuasion styles and how they can adapt them to achieve desired outcomes. 2) The five barriers to communication and collaboration and methods for overcoming the barriers. 3) The systematic steps in the process of selling ideas and negotiating when you need to. 4) The similarities and differences among influencing, persuading, and negotiating. 5) Ways to build momentum for ideas. 6) Techniques for motivating others to take action. 7) Winning support for culture change. These insights will enable students to work across the boundaries that create warring workplace tribes. Nearly every organization contends with this tribal warfare and leaders need to know how to counteract the natural human tendency to square off against co-workers who have different professional backgrounds or roles. Non-DYNM students: please include a brief job description in your permissions request.

1 Course Unit

DYNM 6490 From Compliance to Commitment: Positioning Organizations to Develop Authentic DEI Initiatives

Following the 2020 social justice uprising, many organizations have created and/or expanded their efforts to develop diversity, equity, and inclusion programs and initiatives, without much large-scale success. To implement these programs and initiatives, organizations have hired executive coaches and consultants to help them implement a top-down approach to create effective and sustainable DEI programs; however, sustainable efforts must focus on the intentional inclusion of historically underrepresented communities while drawing on established best practices of organizations that remain successful within this longitudinal agenda. Specifically, this course will provide scholars-practitioners with an overview of relevant social science research and organizational development literature that can inform organizational approaches to the multidimensional corporate workforce of the 21st century. In addition, it will provide case studies of organizations within the technology and financial services industries that have been traditionally ahead of the curve in creating and sustaining diverse and equitable environments before Black Lives Matter, COVID-19, and the overwhelming adoption of remote work. Lastly, this course will provide practitioners insights to qualitative methods, as they are a critical piece in allowing practitioners to assess the authentic needs of their stakeholders (leadership, employees, and consumers) and developing tailored strategies for the environment that plans to implement them.

Spring
1 Course Unit

DYNM 6500 Outdoor Dynamics

This course will have a course fee to support the travel logistics. This course explores the implications of past and future changes in land use and population changes over time in one of the least densely populated areas of the country, but which serves as both a winter and summer playground for millions of urban residents each year. Set in the White Mountains of New Hampshire, only a day’s drive for over 10 million Americans, the area boasts some of the most pristine and exotic microenvironments in the world, left from the last Ice Age. Over 250,000 people visit the summit of Mt. Washington, the region’s highest peak, every year, driving, hiking or riding the cog railway to the top. The focus of this course is the growing interest in promoting “sustainable development,” which most people envision as protecting the environment and wild species from human encroachment and pollution. The course will examine the human sphere and the natural sphere as common ground in the analysis of competing issues; areas of compatibility; and future plans to promote a sustainable environment in this region. The course will focus on three themes: 1) how the people and institutions tasked with being the environment’s guardians go about their jobs; 2) how the area is used by visitors; and 3) how industry and its stakeholders have worked with local regulators and politicians to create jobs and promote growth. The course will ask students to overlay the principles of sustainability and issues management, in managing the increasing concern that the trajectory of land use and industrial growth will compromise the region’s native ecology and wilderness and backcountry attractiveness. Left to its own momentum, how will the future of the area fare versus promoting and implementing more sustainable goals? Changes in behavior will be needed to bring the two into line, and that leads to organizational dynamics. How will stakeholders resolve the natural tensions of the institutions’ (primarily those that operate in the region) mission and development goals with outsiders’ desires? What leverage do they and others have in the debate over the future of the region? In addition to an active outdoor week in the White Mountains, participants will meet with key players and leaders from the area and come away with a deeper understanding of the major issues in the tensions between “the place no one knew and the place that got loved to death.” Interested students must: 1. complete a course application:

Summer Term
1 Course Unit
DYNM 6510 Group and Team Dynamics

Although groups and teams are often lauded as the mechanisms that provide the competitive edge for organizations in today's challenging economic environment, there is often little attention paid to the deeper social and psychological currents influencing group and team dynamics. Organizational leaders and facilitators frequently lack an in-depth understanding of how work groups, multifunctional teams, and cross-national executive groups develop, operate, accomplish their goals—or not—and end. Team members often struggle to make meaning of the myriad spoken, as well as unexpressed, factors influencing the process and outcomes of the groups of which they are a part. This course, by emphasizing both theory and practice, provides students with a thorough grounding in the ways groups and teams develop and learn. The class will also examine approaches to building group and team competencies related to effective communication, conflict-resolution, and solving complex strategic problems as well as ways to manage the range of intentional and more hidden dynamics that both support and challenge high performance. In addition to drawing on the extensive literature and research in group dynamics and team building, the class will rely on experiential methods to help students develop keener understanding and insight into the ways in which their own leadership and followership dynamics, as well as the dynamics of the group-as-a-whole, influence their team's ability to accomplish its tasks. Non-DYNM students: please include a brief job description in your permissions request.

Fall or Spring
1 Course Unit

DYNM 6530 Coaching Others to Manage Conflict

Not a day goes by when you or I, or a person we are coaching, is not faced with some tantalizing, challenging conflict. It may be with someone we love, a conflict in a team, a struggle between two direct reports, a difference with our boss, or the challenge of a difficult, perhaps aggressive persona in a meeting we facilitate. The problem is not that there is a conflict. The problem is that most of us have a very thin, often inadequate repertoire of responses to the conflicts that engage us on a daily basis. The result is that all too often we are predictable in our responses. Thus, if we take these same limited skills and attempt to provide them to a client in our role as a coach, the consequences will more than likely be similar. This course is about expanding your repertoire of responses to a wide array of conflict situations. In the process, you will increase your understanding of the theoretical constructs that underlie successful conflict management. Not only will your strategies for managing a variety of conflicts expand, but you will be better able to design unique responses that relate to the particular situation with which your client is faced. How you translate these ideas to your clients and, in the process, provide them the confidence to use them, will be a central theme throughout the course. This course provides a balance between intellectual theory, skills, and applied strategies along with the time to practice them. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

Fall or Spring
1 Course Unit

DYNM 6540 Crisis Communications and Reputation Risk

All organizations confront crises, either of their own making or from external events. To be ready, equipped, and able to extricate itself from a potential calamity, major or minor, can mean the difference between continued operation and obsolescence. This course focuses on strategies for managing communications during times of organizational crisis by exploring topics such as crisis planning and preparedness, crisis communication strategies, and reputation management techniques as well as the use of social media and other digital platforms in these communications. The course uses case studies of organizations that have faced crises and examines the communication strategies that were employed, both effectively and ineffectively. Outside speakers will include serving and former senior officials in government whose positions required crisis communication skills and expertise. These include Penn's VP of Public Safety, the Philadelphia Fire Commissioner, and the former Director of the U.S. Secret Service. Students will develop skills in crisis-communication planning, message development, and crisis response coordination. They will learn to analyze and evaluate the effectiveness of crisis communication strategies in real-world scenarios. As part of these learned competencies, students will be media-trained in bridging techniques, smart brevity presentation and writing principles, and message development. As a wrap-up of these acquired skills and techniques, students will be presented with an actual crisis case and serve as the company spokesperson. Non-Dynamics students: please include a brief job description in your Permissions Request.

1 Course Unit
DYNM 6550 Using the Political Process to Effect Organizational Change
At one time or another, each of us has said something like, "I know what to do, but it’s hard to make it happen" or "I have great ideas, but it’s almost impossible to get anything done." The sense is that, although there are changes that could be made to improve organizational performance, politics (internal, external, governmental) simply obstruct our ability to make a difference. Frustrations notwithstanding, depending on how it is employed, politics can be either an impediment or, more importantly, a source of opportunities for improving organizations. Politics is the art and science of coordinating individuals, departments, management, markets—the entire organizational environment—to effect a balance between the organization’s objectives and the means used to achieve them. As with the other factors that are employed to affect organizational performance—the methods used to improve manufacturing, marketing, sales, finance, and so on—politics is a means that organizations can use to initiate and maintain critical personal and institutional relationships. One of the seminar readings—Latimer’s "Why Do They Call It Business If It’s Mostly Politics?"—is used to provide illustrations of the ambiguous nature of much of what is regarded as organizational politics. What is critical to understand and appreciate from the outset, however, is that politics is not an external factor that is imposed on organizations. Politics is not only a means for achieving personal or institutional power; it is also a method for developing and maintaining personal and institutional relationships within and among individuals and organizations of all types. This seminar will discuss organizational politics and the ways that it is used to identify, characterize, and effect change—both within and among organizations. After reviewing several perspectives on organizations and the roles that political processes play in decision-making, a series of cases is presented that illustrate the contexts and conditions for effective political communication and coordination. Prerequisite: Course Permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit
Fall or Spring
Also Offered As: GAFL 5550
1 Course Unit

DYNM 6560 The New Normal: Racial and Ethnic Diversity in the 21st Century Workplace
This course examines the social construction of race and ethnicity, including relations within and across groups, with a particular focus on their implications for organizational culture and management. In a very real sense, the workplace is a microcosm of the larger society; a place where our individual experiences, beliefs, and biases related to race and ethnicity intersect, creating both opportunities and challenges. Our capacity to understand the different backgrounds and experiences that individuals and groups bring to the organization, as well as recognizing our own biases and the biases of others are directly implicated in our ability to both manage and be managed in the organizations that we are a part of. A primary objective in this course is to increase our capacity to first understand the contours of racial and ethnic diversity in twenty-first century America by investigating (1) the historical context that influences present-day understandings of racial/ethnic diversity (2) how and why individuals from different racial/ethnic backgrounds can "see" the same thing but interpret it very differently, depending on experience, culture, and social position relative to race/ethnicity (3) the meaning and importance of dominant and minority groups, the degree to which a racial hierarchy exists, and the implications of that hierarchy for important outcomes (4) the degree to which the workplace is, indeed, a microcosm of the larger society (5) the pitfalls of "colorblindness" (6) the nature of stigma and its workplace implications and (7) the benefits and drawbacks of affirmative action policy in the workplace.
Summer Term
1 Course Unit

DYNM 6570 Strategic Engagement with Government
Strategic Engagement with Government will be offered as an intensive one-week course during spring break 2024. The course will meet for three days on campus and will then shift to Washington, DC, for the final three days. Government actions play a major role in business and most other organizations, shaping the environment in which organizations operate and making direct purchasing and investment decisions. Effective organizations consider, respond to and shape government decisions that impact them. This course will explore ways in which the private and public sectors interact and which organization leaders to engage strategically with governments around the world. Students will study how government actions influence results and will learn proven methods for optimizing growth and reducing risk from interaction with governments. Students will engage with business, non-profit and government leaders, who will discuss challenges they currently face and successful approaches to addressing those challenges. The course uses case studies and small group exercises to illustrate and emphasize key points. Non-Dynamics students: please include a brief job description in your Permissions Request.
Spring
1 Course Unit
DYNM 6580 Fundamentals of Sustainability
This course is designed to provide an introduction to sustainability concepts and challenges through the lens of the world’s most significant framework to address them: the United Nations’ Sustainable Development Goals (UN-SDGs). The UN-SDGs serve as a blueprint for addressing the world’s most critical social and environmental challenges, calling for urgent collaboration and change to reset the world on a path that operates within planetary boundaries and promotes global prosperity and security. This course will explore extraordinarily significant threats to the way of life of future generations—such as climate change, ecosystem degradation, health and nutrition, pollution, and resource depletion—with specific attention to sustainability challenges and solutions involving food, water, energy, oceans, waste, plastics, biodiversity loss, and urbanization. Further, the course will include focus on the importance of transitioning from linear to circular systems and maximizing life cycle resource utilization. Case studies of scalable sustainability practices and organizational leadership for sustainability will be reviewed with additional input from global thought leaders. Course permits for students outside of the DYNM, MES, or MSAG programs: please include a brief job description in your permissions request.
Fall or Spring
1 Course Unit

DYNM 6590 Art and Relational Skills
Art and creativity offer a rich experiential learning opportunity to develop personal and interpersonal skills. This understanding builds on existing research and literature as well as in the experience of the instructors implementing art and creativity. This course offers an opportunity to create a safe environment to learn, practice and develop key relational skills using art and creativity, shared learning experiences and reflection, modeling newly acquired skills for the participants’ professional and personal practice. This experiential course will support the development of relational skills, such as interpersonal connection, presence, and empathy using art and creativity. It is a 100% hands-on course that requires personal commitment, an open mind, and a desire to learn and grow in new, non-traditional and effective ways. Throughout the course, participants will assess their own relational skills, choose areas for development, and work on enhancing their continuing growth and development using the means provided. Participants will be able to use the tools and models to continue their development after the course as well as for implementing them in their coaching practice or leadership roles. Non-DYNM students: please include a brief job description in your permissions request.
Summer Term
1 Course Unit

DYNM 6610 Organizational Culture Change: Theory and Practice
Organizational culture influences organizational performance. The success of high-profile firms with “quirky cultures,” such as Southwest Airlines and various big tech firms, have led to the creation of “Great Places to Work” lists and associated awards recognizing healthy organizational cultures. These accolades contribute to organizational performance. The related acknowledgment that organizational culture can trump the organizational strategy has led to competition among companies to attract and retain the best employees. More recently, events related to the MeToo Movement and Black Lives Matter have focused our attention on the degree to which all members of an organization are welcomed, respected, valued and heard. And COVID-19 has had a substantial impact on many organizations’ cultures. The response of each organization’s leaders has either reinforced the culture of the organization or revealed underlying values different from those that were espoused. This course addresses such complexities within organizational cultures and explores the ways we can change deep-rooted cultures that favor some groups over others. We will also consider the relationship that formal policies and informal practices have on reinforcing or shifting cultures as well as the daily form of interactions among organization members that may be ignored. We will discuss what is meant by “inclusive culture” and how organizations can become more inclusive and equitable. Finally, this course will provide students with tools for assessing and understanding organizational culture and change. Non-Dynamics students: please include a brief job description in your Permissions Request.

1 Course Unit

DYNM 6620 Entrepreneurship and Leadership: Creating Winners
Peter Drucker once famously said that “entrepreneurs innovate.” The course looks at how innovation drives the entrepreneurial process in both large organizations and in startup ventures. It stresses the importance of bringing entrepreneurial vision and energy to all organizations: profit and non-profit, as well as government and institutional. The course examines the characteristics of successful entrepreneurs. Participants will learn how to develop their own entrepreneurial instincts and how to encourage an entrepreneurial culture in their organizations. The course examines the challenges of startup ventures and provides practical information to participants who are considering an entrepreneurial venture. It explores strategies for identifying opportunities, creating successful business models, valuing a business, raising capital and managing the business. The course builds understanding of how a culture of entrepreneurship and innovation are critical to any organization that wants to survive and prosper in the future. The course discusses how sustainability is becoming a global force for change, creating exceptional entrepreneurial opportunities. The course looks closely at the leadership roles of both the CEO in a large organization and the entrepreneur in a venture. The course examines how leaders in all kinds of organizations set priorities, identify game-changing opportunities, shape the organizational culture and motivate their teams to achieve outstanding performance or, sometimes, fail. The course stresses the leadership responsibilities of the board of directors in providing governance and oversight in both for-profit and non-profit organizations. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.
Fall or Spring
1 Course Unit
DYNM 6630 Green Skepticism: Communicating and Implementing Sustainable Business

Green initiatives are creating competitive advantage for businesses. Smart companies are integrating environmental stewardship into their strategies, operations, marketing, and product innovation. Companies that successfully embed sustainability in their core business strategy and culture—rather than "bolting it on" as a peripheral activity— are gaining the most value added. Embedding sustainability requires the active engagement of all organizational stakeholders, many of whom may be green skeptics, dubious of the need to change. "Many people who feel passionately about sustainability cannot relate to those who have a harder time understanding the need for a change..." - Corporate associate & MBA candidate. The business case for sustainability has been made many times, yet skepticism about the need for change remains widespread. While adopting sustainable business practices must make sense financially, an economic argument alone may not be enough to convince people to purchase green business products and services or to implement sustainability practices. The course is based on the assumption that "task significance" is an important factor for implementing sustainable business practices. This means helping people see the connection between small tasks they are being asked to do and the big picture of global sustainable business. The first part of the course focuses on understanding sustainability driven changes in the global business landscape through a coherent framework. The second part of the course focuses on what those changes mean for business fundamentals: consumption, production systems, innovation, and emerging economies. The third part of the course focuses on communicating and implementing sustainable business strategies and initiatives. Students will have the opportunity, with a team, to design a communication and implementation program for an organization. Throughout the course, strategies and tactics that work to engage skeptics who do not understand the need for change, as well as tactics that don't work, will be studied. The course is based on the instructor's experience leading hundreds of business and environmental professionals from skepticism to enthusiasm for sustainable business over the past decade. This course is designed for everyone tasked with engaging others in implementing sustainable business practices and for entrepreneurs selling green business products and services. It will provide strategies for enhancing a technical and economic sales pitch. The course is also for those who may be skeptical themselves, and want to reconsider their skepticism. Categories: A Concentrations LMC, SD Fall or Spring

1 Course Unit

DYNM 6660 Systems and Design Thinking

This course is designed to challenge the traditional thinking of basic management strategy and practice and to show why organizations must learn to think differently. This course takes a multidisciplinary approach to challenge participants to rethink their assumptions and move beyond the traditional practice of complex problem formulation and execution. The course will look at the challenges and opportunities that come from integrating Systems and Design Thinking to create more sustainable solutions. The prevailing pattern of thought employed by management is analytical. A new pattern of thought is required: synthetic. Systems thinking involves both analysis - to produce knowledge of organizations (systems) - and synthesis to provide understanding. Without both, effective solutions to problems cannot be obtained. To go beyond understanding to wisdom requires awareness of the difference between doing things right (efficiency) and doing the right thing (effectiveness). The better we do the wrong thing, the more wrong we become. Today a great deal of energy is expended by organizations in an effort to increase the efficiency with which wrong things are done. This course looks at how systems and design thinking can increase the chances of making the right decisions; doing the right thing. Non-Dynamics students: please include a brief job description in your Permissions Request.

DYNM 6640 Organizational Culture and Learning

What is organizational culture? What is organizational learning? How do organizations learn effectively and change their culture? A learning organization is skilled at creating, acquiring, and transferring knowledge, and at modifying its behavior to reflect new knowledge (Garvin, 1993). According to Ray Stata, Chairman of Analog Devices, "The rate at which individuals and organizations learn may become the only sustainable competitive advantage." However we define and prioritize organizational learning, we must still struggle with how to do it. This is a tougher question. The thesis of this seminar is that an enriched understanding of culture can enhance organizational learning. Participants will explore the concept of culture, study the work of Chris Argyris, and discover practices and behaviors that promote organizational learning and culture change. The objective of this seminar is to help participants get beyond highly abstract philosophy and develop a deeper understanding and useful skills based on these concepts. This course will meet on the following Wednesdays: May 27th; June 3rd, 10th, and 17th; July 22nd and 29th. Fall or Spring

1 Course Unit
DYNM 6690 The Power of Confusion
Confusion is a lack of clarity about some situation that matters to you, which causes you to feel so uncertain or uncomfortable that you have a hard time making decisions. You may be confused about whether you fit into an organization; or about what work makes you feel great versus work that you are good at or about the right thing to do when you are frightened. The power of confusion is that it forces you to stop and seek clarity in your life and career. This seminar addresses seven types of personal and organizational confusion encountered in organizational life during a professional career: 1) confusion over which personal ethics, skills, and talents you find most meaningful; 2) confusion over discovering what is really going on in an organization; 3) confusion of who is in charge—leadership and which direction ‘we’ are moving toward? 4) confusion over ‘what’s in it for me?’ How motivation and satisfaction relate to incentives and pay schemes; 5) confusion caused by blaming, rather than developing skills needed to make lasting changes and improvements; 6) confusion about how teams pull together; 7) confusion caused by committing random acts of improvement instead of building a system for making customer-oriented organizational innovations and improvements. You were not born with any inherited knowledge or wisdom, yet you are certain to face fear and confusion during your lifetime. You were born with curiosity and the ability to ask ‘why?’ when you face a confusing situation. You were also born with the ability to think for yourself, listen to others, and learn from experience. Confusion spurs you to use these abilities to gain the clarity that leads to understanding and wisdom; you will need tools to guide your learning. This seminar will show you how to use simple tools to achieve that clarity. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

1 Course Unit

DYNM 6710 Workplace Ethics: Ownership, Participation, Productivity
In this course, you will have the opportunity to: 1) examine ethical, religious, legal, technological, and economic bases for different ownership systems from early human history through the 20th century; 2) develop a theoretical framework for understanding ownership issues in the contemporary workplace; 3) review social science concerning ownership and the related organizational issues of motivation, performance, productivity, profitability, culture, diversity, and equity; 4) analyze a variety of cases to measure ownership’s effects across many industries and business situations; 5) learn about various forms of ownership and compensation in use today in small and large organizations, both public and private; 6) utilize a diagnostic tool for assessing the ways in which your own organization’s culture and business outcomes are impacted by the firm’s ownership system; 7) describe your own experiences of the different ownership systems with which you may have engaged, including: family, schools, little leagues and professional sports, volunteer service organizations, charities, religious institutions, professional service providers (e.g., doctors, lawyers, veterinarians), the places where you shop (e.g., think about Genuardi’s before and after it was sold to Safeway), and the different places you have worked...as a way of systems; 8) assess and refine your views regarding ownership in light of your own social, political, religious, and ethical commitments. Who is going to own what we all have a part in creating? The history of American business is an evolving answer to the question of ownership. Of all the issues relevant to organizational dynamics, ownership is arguably the most important and least understood. Matters of ownership have also been and remain of intimate concern to ordinary Americans—the slave yearning to be free, the young couple with a dream of home ownership, the entrepreneur who wants to be his own boss, the consultant who wants to form a partnership with her best friends, and the indebted, mid-level manager reviewing last year’s 401(k) statement. Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit.

DYNM 6730 Stories in Organizations: Tools for Executive Development
As we all know, living in–and out–of organizations is getting exponentially harder. Things seem to be multiplying, splintering, and coalescing kaleidoscopically, and each of us is increasingly taxed to make sense of it all, let alone create meaning for ourselves and those we manage and care about. Remarkably, a powerful tool for helping us is one we have already mastered: stories. As humans we think, feel, speak, listen, explain, and believe in narrative form. Yet this capability is dramatically under-exploited at work. This course examines a variety of ways to bring the power of stories to organizational life. We will look at how stories enhance communication, support change, and intensify learning and development in individuals and organizations, thus informing your leadership style and effectiveness. We will have many opportunities in class to apply "story-based technologies" to issues you face in personal or professional life. Readings come from the literatures of human development, narrative psychology, organizational change, executive learning, and, of course, from literature itself. Non-DYNM students: please include a brief job description in your permissions request.
Not Offered Every Year
1 Course Unit
DYNM 6750 Advanced Seminar in Organizational Politics
This course will meet both synchronously and asynchronously. The synchronous sessions will be Tuesday evenings from May 19th to July 7th. The goal of this course is to assess/advance the participant's competence in applying the "eighth habit"—that of organizational politics and power, in a variety of organizational settings, system levels and contexts. Course requirements are: 1) a detailed learning log (to be supplied and reviewed weekly; 2) A political autobiography (guide to be supplied); 3) Active participation in all sessions; 4) Three interviews of senior managers on the topic of politics (interview guide to be supplied;Note: Additional interviews may be done for extra credit; 5) An assessment of the political map of a complex organization (map to be developed in class; 6) A peer completed assessment using the "political skills inventory" (see Ferris). Course permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit. Not Offered Every Year
1 Course Unit

DYNM 6760 Communication Competence: Extracting Value in Key Organizational Interactions
This course explores the direct and indirect relationships between interpersonal communication skills and the ability to derive increased value from organizational interactions. Participants will assess their own interpersonal communication skills while expanding their own communication practices within organizational contexts. At the same time, students will develop greater insights into their own organization's communication norms. Students should prepare to be co-collaborators throughout the semester, adding personal insights and expertise to the conversation. Through this course, class participants will work to expand their personal communication repertoire as they develop critical listening and empathy skills. Participants will conduct their own communication skills assessment, determining their own communication strengths and identify specific areas for improvement. Finally, throughout the semester participants engage in creative multi-modal research projects, the findings of which will be presented in class. Non-Dynamics students: please include a brief job description in your Permissions Request.

1 Course Unit

DYNM 6770 Post-Disruptive Growth: Scaling and Growing for Individuals and Systems
Reality has moved from a physical location to a cognitive location—in our minds. An exceptionally hands-on course that brings in the intellectual discipline with real-time application to look at the shattering of assumptions in face of crisis (as the current one) and what happens to individuals, groups, communities, and systems—when the world takes the blue pill overnight (goes virtual and hyperreal). The interaction with the altered reality is often hindered by cognitive traps of ghost structures (i.e. only stay in memory but have disappeared from concrete reality) that lead to counter-productive decisions by individuals (personal and professional) and systems. The course is highly recommended for leaders and managers of complex organizational structures who must continue to create a "holding environment" for psychological safety for their teams, managers, leaders, customers, vendors, and themselves in redefining post-disruptive growth in micro-and-macro decisions for Value Creation in everyday interactions. There will be conceptual and experiential assignments that will enable rich scrutiny with immediate application in their work and life. This course will have both synchronous and asynchronous sessions. Non-DYNM students: please include a brief job description in your permissions request.

DYNM 6800 Developing Emotional Intelligence through Art
This course is designed for those who want to increase their emotional intelligence awareness and understanding and develop their emotional intelligence skills. Students will explore the five competencies of emotional intelligence - self-awareness, self-management, motivation, empathy, and relationship management - using art as a creative tool for experiential learning. The course is a deep and innovative way of learning. It will engage students in an interactive and reflective way. It is a highly experiential, 100% hands-on course that requires personal commitment, an open mind and a desire to learn and grow in new, non-traditional and effective ways. Participants will be able to use the tools and models to continue their development after the course as well as for implementing them in their coaching practice or leadership roles. This course is designed to: Develop emotional intelligence skills for successful relationship building and transformational actions such as coaching, leadership, management and consulting. Support participant transformation based on strength-building. Provide effective and creative tools for experiential learning in the areas of coaching and leadership stimulate and encourage creativity and innovation in coaching practices and in the leadership space. Provide tools for ongoing self-assessment and reflection, action planning and continuous development. Non-DYNM students: please include a brief job description in your permission request.

DYNM 6810 Diversity Beyond Lip Service: The Evolution of the Corporate Experience
The COVID-19 pandemic accelerated the future of work trends. The world has changed in ways that can't be undone. We must consider the new context for how we work inclusively in organizations, and the efficacy of our systems and practices to best serve internal and external stakeholders. This course is designed to help students navigate the cutting-edge of this corporate evolution. We will analyze theoretical approaches and practices for DEI strategy and implementation. Class sessions, case studies, everyday culture scenarios, group projects, DEI strategy proposals, and discussions will examine practical approaches to address the dynamics that create discomfort, fear, and apathy in organization leaders. Students will be encouraged to develop proactive and innovative solutions integrating modern theories and practical application to help mitigate this discomfort and fear; while also cultivating sustainable accountability and tangible outcomes. Students will gain practical skills to join the movement of the post-COVID workforce towards creating the long overdue—and lasting—social, cultural, organizational change, and evolution. DYNM Category: DE, A; DYNM Concentrations: LMC, GL, OC.

1 Course Unit
DYNM 6930 The Global Leader
The "Global Leader" is a co-listed INTS/DYMN course, developed as part of the Lauder Institute's new Global Program that will prepare students for leadership roles in international and culturally diverse environments. The course will focus on developing skills through a hands-on approach that includes using case studies, in-class exercises, movie clips, and class discussion, with readings that emphasize theory and application. The course is comprised of two modules. The first module - Globally Capable Leadership - will introduce students to the core qualities of leadership that transcend cultural contexts, as well as examine how cultural context influences leadership efficacy. The second module - Managing Across Borders - will teach students how to negotiate effectively in a variety of contexts, including conflict resolution, transactional settings, conflict resolution, and across borders, such as those of gender, ethnic identity, national culture, and differences in values and beliefs.

DYNM 7200 Foundations of Leadership Coaching
This five and a half-day intensive is the first in a cohort program in Leadership and Executive Coaching. During this course, students will experience the formation of a learning cohort, explore the foundational elements of helping relationships and the adult developmental journey, observe and respond to the dynamics that commonly affect groups, and begin applying coaching concepts and skills through interactive live coaching sessions. DYNM 7200 is wholly experiential, meaning learning will occur through students’ direct interaction with course exercises, and with peers in the class. The core requirement is a willingness and courage to “be yourself” and to be open to the impact your being has on others. This course is open to LCC members only.
Fall
1 Course Unit

DYNM 7220 The Four Provinces of Coaching
The territory of professional coaching spans four distinct provinces: The Coaching Context, The Coaching Relationship, The Coaching Process, and the Coaching Self. Each of these provinces represents a special area of interest and responsibility for practitioners, as well as an area of intellectual inquiry. This course continues to build on the foundational skills established in DYNM 7200 and DYNM 7230 through a practical exploration of the core theoretical perspectives that underlie and inform coaching practice. Knowledge of coaching theory serves to illuminate complex social phenomena, provides a sense of direction for your actions and choices in coaching, and helps you evaluate the results of your efforts in terms of client outcomes and progress. DYNM 7220 culminates with cohort members working together in small groups to research and execute a high-level presentation of the theoretical perspectives underlying each of the Four Provinces, as well as their applications in practice. This course is open to LCC students only.

1 Course Unit

DYNM 7230 Becoming a Coach
The territory of professional coaching spans four distinct provinces: The Coaching Context, The Coaching Relationship, The Coaching Process, and the Coaching Self. Each of these provinces represents a special area of interest and responsibility for practitioners, as well as an area of intellectual inquiry. This course continues to build on the foundational skills established in DYNM 7200 and DYNM 7230 through a practical exploration of the core theoretical perspectives that underlie and inform coaching practice. Knowledge of coaching theory serves to illuminate complex social phenomena, provides a sense of direction for your actions and choices in coaching, and helps you evaluate the results of your efforts in terms of client outcomes and progress. DYNM 7220 culminates with cohort members working together in small groups to research and execute a high-level presentation of the theoretical perspectives underlying each of the Four Provinces, as well as their applications in practice. This course is open to LCC students only.
Spring, even numbered years only
1 Course Unit

DYNM 7240 Beyond the Dyad: Group Coaching Theory and Practice
This course explores the application of coaching principles, models, and techniques in the context of groups and teams. While most coaching is dyadic in nature, coaching in group or team settings requires an understanding of the complex social dynamics that shape learning and change in groups, as well as the levers and mechanisms that enable collective action toward common goals. The course is designed to build on and complement your growing base of scholarship and practice from 7200, 7220, and 7230. This hybrid course blends synchronous virtual class sessions and team meetings with asynchronous learning, readings, and other self-study activities. It is a highly experiential course combining conceptual knowledge, integrated practice, and interactive sessions that serve the development of group and team coaching competency, capability, and capacity. Learners will participate in real-time collaborative team projects, through which they will experience team coaching as both client and coach. They will also meet regularly in peer coaching groups to reflect on their personal learning, emergent challenges, and achievements in the course. Course limited to those in the LCC concentration.

DYNM 7580 Sweden: Strategies for Thriving in the 21st Century
Neutral during WWII, and claiming a "Middle Way" between east and west in the post-war twentieth century, Sweden - its people, institutions, and culture - has left its mark on our global society. In today’s world, the influence of Swedish ideas and innovations can be seen in government structures, health and social policies, business organizations, working life, education, science, art, literature, and, of course, the design and style of many products and services which enjoy high demand. These are impressive impacts from a nation-state of only eight million people. What lessons are there for Americans and our institutions as we enter the twenty-first century where our leadership position, ability to determine the rules and control the agenda of world economic and political affairs are diminished? In this course, we focus on "the people philosophy" of Sweden, its government, businesses and organizations. We cover healthcare issues and policy, sustainable development, the European Community and the human relations issues in organizations. This course will include meetings with academics and leaders from industry, government, health care, science, media, arts and culture. Students will meet with and learn from these representatives in order to explore Swedish organizational dynamics, both in terms of its economic prosperity and the problems Swedish society faces today.

Summer Term
1 Course Unit

DYNM 7660 Global Collaboration for Sustainability - The Food-Water-Energy Nexus in Italy
Environmentalist Paul Hawken challenged a class of 2009 college graduates that they would have to "figure out what it means to be a human being on earth at a time when every living system is declining, and the rate of decline is accelerating." That theme is at the heart of this course. Our quality of life in the near future hinges on the development and implementation of sustainable solutions to the enormously complex environmental and social problems embodied in the Sustainable Development Goals – particularly around food, water, energy, and waste. This course is designed to foster the thinking, and the collaborative spirit, that is needed to address those enormous problems. It involves focusing on a critical global sustainability problem with vast social, cultural, and environmental dimensions – in this case, the need to balance global food, water, and energy needs in a manner that allows the world to feed 9.6 billion citizens by 2050 while preserving the environment for future generations. It also involves collaboration and the exchange of ideas between multi-disciplinary leaders and students from multiple countries, and perspectives on how to manage diverse views and sustainability initiatives that are extremely relevant to the success of today’s organizations (i.e., how to lead "big change" for competitive advantage). DYNM 7660 will explore the food-water-energy nexus in Italy amid a culture that literally celebrates food, with special emphasis on the systemic challenge of global food loss and waste. The course will involve a special session with experts at the Food and Agriculture Organization (FAO) of the United Nations in Rome – the hub of agriculture and food security research for the world – and additional sessions on food, water, energy, SDG and innovation topics with international students and food system experts at the University of Bologna (the oldest University in the world) and the Food Innovation Program led by food system leader Sara Roversi. Potential side trips include tours of Parmigiano-Reggiano cheese and balsamic vinegar producers, a pasta producer, an Italian supermarket, FICO/Eataly, and Food For Soul (Modena). Students will have some time to explore the wonders of Rome and Bologna on their own as well.

Summer Term
1 Course Unit

DYNM 7700 Process Excellence in South America: Chile on Its Journey to Productivity and Performance
This course will travel to Chile July 21st through 29th. The class will meet on campus before and after departure on dates to be determined. This course will have an additional course fee to cover lodging and other program logistics. Registration permits will be issued upon a signed Travel Agreement being returned to the Organizational Dynamics program office. Chile is a long and narrow strip of land along the pacific coast of South America. It is the longest country in the world, 2,700 miles in length, which is about the distance from San Francisco to New York. In 1973 the military imposed a dictatorship, led by Augusto Pinochet, who ruled the country until 1990. The Chilean strategy to be part of the world economy has been based on open markets and the development of Free Trade Agreements. A report by The Economist Intelligence Unit shows Chile has the best environment in the region for business and is among the top 20 countries worldwide. Chile stands out for the effectiveness of its policies, labor, and infrastructure. The strength and stability of its banking and financial systems have generated high credibility indexes in foreign markets, which has meant that big companies want to invest in the country, improving access to goods and services. Chilean companies have started improving the way they organize themselves. Business Process Management and Digitalization have become important topics in many organizations. The Universidad de Chile offers numerous courses and certificates in that field. Chile is making good progress on its journey to productivity and performance. Students will meet with academics and business leaders and observe the organizational dynamics. Students will also learn Chile’s journey to high performance and what it means to do business with organizations in this emerging market.

DYNM 7810 Dynamic Hub of the Americas: Entrepreneurship & Sustainable Development on the

Creating meaningful solutions to the biggest challenges facing humanity today requires diverse interventions at all scales: macro, micro, and everything in between. The projects reshaping business as usual and driving more sustainable cooperation at the highest levels and place-specific interventions at the scale of individuals, families, and communities. This course will explore innovative, cross-scale initiatives through which Central America’s largest and fastest growing economy is tackling sustainability challenges while balancing cultural values and conservation of biodiversity with economic growth and exploitation of natural resources. On the international stage, the Republic of Panama leads the way on environmental conservation, even surpassing ambitious global targets by protecting more than 50 percent of its oceans and becoming one of the first certified carbon-negative countries. The globalization-defining Panama Canal epitomizes human efforts to make something happen that was colossal in scale and macro in scope. Today’s Panama also offers opportunities to study bright spots, positive deviance, and the emergence of new economic initiatives based on diverse worldviews—despite the micro scale of some of these projects, they too have the potential to change world order. Geographically, politically, culturally, and economically, Panama is an excellent place to prototype. Underdeveloped relative to its potential, the nation provides a fruitful environment for Panamanian and expatriate entrepreneurs alike to develop new ventures, organize from the ground up, and intentionally design for sustainable scalability. At the core of this experiential travel course is the opportunity to visit a range of Panama’s land, sea, and cityscapes and interact with pioneering companies, entrepreneurs, policymakers, NGOs, and scientists. Organizational Dynamics students will be challenged to create and contribute while learning in this dynamic environment. Travel abroad will take place in Panama over Penn’s Spring Break (March 1-10, 2024), with pre-departure and post-trip sessions TBD. Students are expected to complete readings in advance of the trip, keep a field journal, participate in scheduled meetings and activities, complete a paper or applied project synthesizing their learning, and give a presentation on their work during the final session. Interested students will sign a travel agreement. There will be an additional course fee to cover logistics. Summer Term
1 Course Unit

DYNM 7860 European Approaches to Multi-Stakeholder Project Management

In the interconnected world of global corporations, studying Project Management from the standpoint of U.S. firms is not enough. Broadening perspectives is the goal of the seminar in Paris, France. Dr. Jean-Marc Choukroun will lead Organizational Dynamics students in a study of European approaches to the challenges of large project management, particularly those involved in public-private and other multi-group projects. Dr. Choukroun notes that “In today’s global economy, managing multi-national, multi-cultural teams, devising innovative financing arrangements and securing public-private cooperation are increasingly becoming standard requirements for complex projects. European integration has made dealing with these issues a priority with many European organizations. Students will be exposed to new ideas, and new ways of applying time-tested methods and techniques that European organizations in general, and more specifically French organizations, have developed to address these issues. Properly adapted, some of these ideas should prove to be readily applicable in the US context. In addition, students will discover how French managers in the public and private sectors frame issues, approach problems and implement solutions.” Summer Term
1 Course Unit

DYNM 7870 The Intersection Between Business Agility and Sustainability and Its Impact on Organizational Design

This course requires a signed Travel Agreement prior to registration. This course will have an additional course fee to cover logistical arrangements. For the last three years, Organizational Dynamics has partnered with Human Resources at ING, a global financial services firm headquartered in Amsterdam, Netherlands, through our course “Developing the Agile Leader and Their Organization.” Our partnership with ING has allowed our students to learn and gain practical experience with Agile mindset and methods. ING is a pioneer in the implementation of agile business practices especially in their HR programs. Climate change is one of the biggest challenges of our time. As a financial institution, ING can play a role by financing change, sharing knowledge, and using their influence. Being sustainable is not just about reducing their own impact, it’s in all the choices they make—as a lender, in their financing and through the services they offer their customers. That’s why sustainability is inherent to their purpose of empowering people to stay a step ahead in life and in business. At ING in the Netherlands (DBNL), they have sharpened their Vision ‘Sustainable progress for all.’ They have set extra ambitions and targets on sustainability and launched a program to deliver new sustainable propositions. ING calls on all domains to create a roadmap by which they will be able to achieve its sustainability goals and ambitions. But how does such a central program relate to their Agile way of working where tribes have a lot of autonomy? ING is looking forward to expanding their relationship with Organizational Dynamics at Penn by inviting our students to join with their team to identify potential strategies for moving ahead with their sustainability efforts using an agile framework. The course includes daily meetings, seminars, tours, and networking with ING leaders and staff. In addition, the participants will also have an opportunity to meet with and learn from Dutch representatives involved in academia, government, healthcare, art, science, culture, and the media. Pashto (PASH)

PASH 0100 Elementary Pashto I
The first semester is focused on mastering the writing system, basic structures, and simple conversation using texts, writing samples, and numerous structure and dialogue drills. We remain within the present and future tenses only, developing vocabulary with lessons and discussions centered around greetings, family, weather, foods, and directions. Students use authentic online and textbook materials.
Fall
1 Course Unit

PASH 0200 Elementary Pashto II
The second semester covers more advanced structures with reinforcing drills, and begin reading longer texts of an assorted variety, mostly short stories and some news articles. The past tense is introduced, as well as longer more complex texts. Topics within simple simulated contexts (taxi, hotel, restaurant, food shopping, time, family). Short writing exercises and dictations are expected at this time, as well as simultaneous translations to and from Pashto.
Spring
Prerequisite: PASH 0100 OR PASH 5100
1 Course Unit

PASH 0300 Intermediate Pashto I
A more in-depth study of the Pashto language. Reading, writing, speaking, and listening comprehension are all stressed in this more advanced course which also builds on the grammar of beginning level.
Fall
Prerequisite: PASH 0200 OR PASH 5200
1 Course Unit

PASH 0400 Intermediate Pashto II
The second semester of intermediate study and a more in-depth study of the Pashto language. Reading, writing, speaking, and listening comprehension are all stressed in this more advanced course which also continues to build on grammar skills.
Two Term Class, Student must enter first term; credit given after both terms are complete
Prerequisite: PASH 0300 OR PASH 5300

Persian (PERS)

PERS 0100 Elementary Persian I
This course is designed to help you start learning Persian and to give you the necessary tools to continue your study of Persian. This course introduces the Persian alphabet alongside grammar and vocabulary. Emphasis is placed on actively using the language for interpersonal, interpretive, and presentational modes of communication. The four language skills (i.e., listening, speaking, reading and writing) as well as pronunciation and culture are integrated into the curriculum. There is no prerequisite.
Fall
1 Course Unit

PERS 0180 Introduction to Sorani Kurdish
Introduction to Sorani Kurdish is an introductory-level course designed to help you start learning Sorani Kurdish and to give you the necessary tools to continue your study of Kurdish language. This course introduces the Kurdish alphabet (Arabic script) alongside grammar and vocabulary. Toward the end of the semester, the course will also involve some Kurdish classical and modern poetry. Emphasis is placed on actively using the language for interpersonal, interpretive, and presentational modes of communication. The four language skills (i.e., listening, speaking, reading and writing) as well as pronunciation and culture are integrated into the curriculum. There is no prerequisite.
Fall
1 Course Unit
PERS 0200 Elementary Persian II
This course is designed to help you build upon what you have learned in Elementary Persian I. Emphasis is placed on using the language for interpersonal, interpretive, and presentational modes of communication. Therefore, use of English is restricted. Listening, speaking, reading, and writing-as well as culture, vocabulary, grammar, and pronunciation—are integrated into the course. Students must either have successfully completed Elementary Persian I or take the departmental exam.
Fall
Prerequisite: PERS 0200
1 Course Unit

PERS 0300 Intermediate Persian I
This course is conducted in Persian and designed to help you continue expanding upon what you have learned in Elementary Persian II. In this course, we will begin to address a variety of topics in order to increase your proficiency in linguistic as well as cultural terms. Emphasis is placed on actively using the language for interpersonal, interpretive and presentational modes of communication. Therefore, use of English is restricted. Listening, speaking, reading, and writing are integrated into the course, as are culture, grammar, vocabulary, and pronunciation. Students must either have successfully completed Elementary Persian II or take the departmental placement exam.
Fall
Prerequisite: PERS 0200
1 Course Unit

PERS 0390 Persian for Heritage Speakers I
Persian for Heritage Speakers is conducted in Persian and designed to help you strengthen your skills by learning not only to read and write, but also to engage in more complex forms of discourse in Persian. In this course, we will begin to address a variety of topics in order to increase your proficiency in linguistic as well as cultural terms. Emphasis is placed on actively using the language for interpersonal, interpretive and presentational modes of communication. Therefore, use of English is restricted. Listening, speaking, reading, and writing are integrated into the course, as are culture, grammar, vocabulary, and pronunciation. Prerequisite: Students must be proficient in spoken Persian (whether Farsi or Dari), and lack reading and writing skills.
Fall
1 Course Unit

PERS 0400 Intermediate Persian II
In this course, we will continue to address a broader variety of cultural topics in order to increase your proficiency in linguistic as well as cultural terms. Emphasis is placed on actively using Persian for interpersonal, interpretive and presentational modes of communication. Therefore, use of English is restricted. Listening, speaking, reading, and writing are integrated into the course, as are culture, grammar, vocabulary, and pronunciation. Students must have successfully completed either Intermediate Persian I or Persian for Heritage Speakers I, or take the departmental placement exam.
Spring
Prerequisite: PERS 0300 AND PERS 0390
1 Course Unit

PERS 0600 Persian for Heritage Speakers II
A course designed to develop greater skills in reading and writing standard modern Persian for those with a competency in spoken Persian. The course will focus on the lexical and syntactic differences between written and spoken Persian, and the problems of Persian spelling.
Fall or Spring
Prerequisite: PERS 0500
1 Course Unit

PERS 2000 Advanced Persian I
A continuation of Intermediate Persian II, students will advance their skills in reading and listening, as well as in writing and speaking.
Fall
Prerequisite: PERS 0400 OR PERS 0600
1 Course Unit

PERS 2100 Advanced Persian II
A continuation of Advanced Persian I, students will advance their skills in reading and listening, as well as in writing and speaking near fluency.
Spring
Prerequisite: PERS 2000
1 Course Unit

PERS 2300 Advanced Persian in the Media
This course is designed for advanced students of Persian interested in contemporary Persian media from Iran as well as Afghanistan and abroad, who wish to gain a deeper understanding of contemporary Persian-speaking societies and politics. Students will advance their skills in reading and listening, as well as in writing and speaking.
Spring
Prerequisite: PERS 2100
1 Course Unit

PERS 4000 Persian Culture, Literature and Film for Advanced Learners I
This course is designed for those undergraduate students who have successfully passed the intermediate Persian course. Undergraduate students who take this course must either have successfully completed Intermediate Persian II, or take the placement exam. The main objective of this course is to further enhance the students' knowledge about the millennium-old Persian literary tradition and culture as well as its world-renowned cinema through reading primary sources or watching Iranian films in original Persian. Students who take this course are expected to use Persian language at all times during their time in class. Using English inside the classroom is restricted in order to improve the students' proficiency in Persian language.
1 Course Unit

PERS 5100 Elementary Persian I
This course is designed to help you start learning Persian and to give you the necessary tools to continue your study of Persian. This course introduces the Persian alphabet alongside grammar and vocabulary. Emphasis is placed on actively using the language for interpersonal, interpretive, and presentational modes of communication. The four language skills (i.e., listening, speaking, reading and writing) as well as pronunciation and culture are integrated into the curriculum. There is no prerequisite.
Fall
1 Course Unit

PERS 5101 Persian for Heritage Speakers I
Persian for Heritage Speakers is conducted in Persian and designed to help you strengthen your skills by learning not only to read and write, but also to engage in more complex forms of discourse in Persian. In this course, we will begin to address a variety of topics in order to increase your proficiency in linguistic as well as cultural terms. Emphasis is placed on actively using the language for interpersonal, interpretive and presentational modes of communication. Therefore, English is restricted. Listening, speaking, reading, and writing are integrated into the course, as are culture, grammar, vocabulary, and pronunciation. Prerequisite: Students must be proficient in spoken Persian (whether Farsi or Dari), and lack reading and writing skills. Placement test or instructor permission required.
Fall
1 Course Unit
PERS 5200 Elementary Persian II
This course is designed to help you build upon what you have learned in Elementary Persian I. Emphasis is placed on using the language for interpersonal, interpretive, and presentational modes of communication. Therefore use of English is restricted. Listening, speaking, reading, and writing—as well as culture, vocabulary, grammar, and pronunciation—are integrated into the course. Students must either have successfully completed PERS-011, or take the departmental exam. Spring
Prerequisite: PERS 0100
1 Course Unit

PERS 5300 Intermediate Persian I
This course is conducted in Persian and designed to help you continue expanding upon what you have learned in Elementary Persian II (PERS-012). In this course, we will begin to address a broader variety of cultural topics in order to increase your proficiency in linguistic as well as cultural terms. Emphasis is placed on actively using the language for interpersonal, interpretive and presentational modes of communication. Therefore use of English is restricted. Listening, speaking, reading, and writing are integrated into the course, as are culture, grammar, vocabulary, and pronunciation. Students must either have successfully completed Elementary Persian II at the graduate level, or take the departmental placement exam. Fall
Prerequisite: PERS 0200
1 Course Unit

PERS 5400 Intermediate Persian II
In this course, we will continue to address a broader variety of cultural topics in order to increase your proficiency in linguistic as well as cultural terms. Emphasis is placed on actively using Persian for interpersonal, interpretive and presentational modes of communication. Therefore use of English is restricted. Listening, speaking, reading, and writing are integrated into the course, as are culture, grammar, vocabulary, and pronunciation. Students must either have successfully completed PERS 613 or PERS 617, or take the departmental placement exam. Spring
Prerequisite: PERS 0300
1 Course Unit

PERS 5550 Introduction to Kurdish
Introduction to Kurdish is an introductory-level course designed to help you start learning Kurdish and to give you the necessary tools to continue your study of Kurdish language. This course introduces the Kurdish alphabet (Arabic script) alongside grammar and vocabulary. Toward the end of the semester, the course will also involve some Kurdish classical and modern poetry. Emphasis is placed on actively using the language for interpersonal, interpretive, and presentational modes of communication. The four language skills (i.e., listening, speaking, reading, and writing) as well as pronunciation and culture are integrated into the curriculum. There is no prerequisite. The course will focus on a variety of Kurdish dialects as well. Spring
1 Course Unit

PERS 5650 Elementary Kurdish Part II
This course is designed to help you build upon what you have learned in Elementary Kurdish I (Introduction to Kurdish). Emphasis is placed on using the language for interpersonal, interpretive, and presentational modes of communication. Therefore, use of English is restricted. Listening, speaking, reading, and writing—as well as culture, vocabulary, grammar, and pronunciation—are integrated into the course. Students should have fulfilled the prerequisite (PERS-5550-680 202230) with a grade of C better, or taken the placement exam, in order to take this course. Spring
Prerequisite: PERS 5550 or permission of instructor
1 Course Unit

PERS 6200 Advanced Persian I
A continuation of Intermediate Persian II, students will advance their skills in reading and listening, as well as in writing and speaking. Graduate students may have additional assignments. Fall
Prerequisite: PERS 5400 OR PERS 0600
1 Course Unit

PERS 6250 Advanced Persian II
A continuation of Advanced Persian I, students will advance their skills in reading and listening, as well as in writing and speaking to near fluency. Graduate students may have additional assignments. Spring
Prerequisite: PERS 6200
1 Course Unit

PERS 6300 Persian for Heritage Speakers
This course is conducted in Persian and designed to help you strengthen your skills by learning not only to read and write, but also to engage in more complex forms of discourse in Persian. In this course, we will begin to address a variety of topics in order to increase your proficiency in linguistic as well as cultural terms. Emphasis is placed on actively using the language for interpersonal, interpretive and presentational modes of communication. Therefore, English is restricted. Listening, speaking, reading, and writing are integrated into the course, as are culture, grammar, vocabulary, and pronunciation. Students must be proficient in spoken Persian (whether Farsi or Dari), and lack reading and writing skills. Fall or Spring
1 Course Unit

PERS 6700 Persian Culture, Literature and Film for Advanced Learners I
This course is designed for those graduate students who have successfully passed the intermediate Persian course. Undergraduate students who take this course must either have successfully completed Intermediate Persian II, or take the placement exam. The main objective of this course is to further enhance the students’ knowledge about the millennium-old Persian literary tradition and culture as well as its world-renowned cinema through reading primary sources or watching Iranian films in original Persian. Students who take this course are expected to use Persian language at all times during their time in class. Using English inside the classroom is restricted in order to improve the students’ proficiency in Persian language. Fall or Spring
1 Course Unit
Pharmacology (PHRM)

PHRM 4950 High Throughput Discovery: A Multidisciplinary Approach to Cancer
The newly developed massively parallel technologies have enabled the simultaneous analysis of many pathways. There are several large scale international efforts to probe the genetics and drug sensitivity of cancer cell lines. However, there are some rare cancers that have not been analyzed in depth. One of these rare cancers is malignant peripheral nerve sheet tumors (MPNST). MPNST, although a rare cancer, are common in patients with neurofibromatosis type. In the course, students will take part in a high throughput discovery effort in two phases. Phase 1 is a training phase, which will consist of quantitative profiling the sensitivity of MPNST cell lines to a library of >120 common and experimental cancer drugs. These will be conducted in the UPenn High Throughput Screening Core. (http://www.med.upenn.edu/cores/HighThroughputScreeningCore.shtml). While we call this a training phase, the data from this will be subject to rigorous quality control for eventual publication and development of a public database for rare tumors. Phase 2 is an independent research project. Examples of projects include, but are not limited to: Combinatorial screens (synthetic lethal); siRNA screens; novel compound screens; determining mechanisms of cell death; developing tools for data analysis and database development. During phase 2, students will also modify compounds of interest using the Penn Chemistry: Upenn/Merck High Throughput Experimentation Laboratory (https://www.chem.upenn.edu/content/penn-chemistry-upenn-merck-high-throughput-experimentation-laboratory), and then retest them for activity to determine structure activity relationships. We will sponsor phase 2 projects relevant to neurofibromatosis. However, in phase two students can also research other areas if they develop sponsorships from professors. We expect the course to be a hypothesis engine that generates ideas for further research. Prerequisites include a strong foundation in biology and chemistry. Students will prepare an abstract proposal by week three on their phase 2 project, and a report, in scientific paper style, due on the last day of the semester.

Spring
Also Offered As: CHEM 4950
1 Course Unit

PHRM 5100 Neurotransmitter Signaling & Neuropsychopharmacology
The goals of this course are three-fold: 1) Provide an overview of major psychiatric disorders. 2) Provide in-depth information on neurotransmitters, emphasizing the wealth of new molecular information on how neurons function and communicate, as well as the basis for psychotherapeutics (one class per week). 3) Develop skills to appreciate, present and critically evaluate the the current literature in neurotransmitter signaling and neuropsychopharmacology (one class per week). Prerequisite: Permission of course director
Spring, odd numbered years only
Also Offered As: NGG 5100
1 Course Unit

PHRM 5320 Human Physiology
This course will present a survey of the physiology of most of the major organ systems. It will integrate knowledge of cellular and molecular mechanisms into an understanding of function at the tissue, organ, and organism levels. It will begin with a brief review of membrane physiology, followed by electrophysiology and signaling in nerve. Then, after a brief outline of neural control systems and their role in homeostasis, it will present motility and muscle, the cardiovascular system, respiration, the renal and gastrointestinal systems, and selected topics from the endocrine system, the reproductive systems, environmental and exercise physiology. As well as providing a basis of integrative physiology for students in fields such as physiology, bioengineering and pharmacology, it should be of interest to students of cellular and molecular biology and genetic engineering who will need to appreciate the roles of specific systems and molecules at higher levels of organization. Prerequisite: Although not a formal prerequisite, a good foundation in cell bio level of BIOM/CAMB 6000 (or an equivalent upper level undergraduate strongly recommended. A general understanding of the chemistry a biochemistry of macromolecules, and of basic molecular biology is assumed. This course is primarily designed for 2nd year BGS study students in BGS or other programs will require the permission instructor. This course is not open to undergraduates.
Fall
Also Offered As: CAMB 5320
1 Course Unit

PHRM 5340 Experimental Genome Science
This course will survey methods and questions in experimental genomics, including next generation sequencing methods, genomic sequencing in humans and model organisms, functional genomics, proteomics, and applications of genomics methods. Students will be expected to review and discuss current literature and to propose new experiments based on material learned in the course. Prerequisite: Undergraduates and Masters students need BIOL 431.
Also Offered As: GCB 5340
Prerequisite: BIOL 4231
1 Course Unit

PHRM 5350 Advanced Epigenetics Technology
Second year students in GCB, CAMB (G&E), or IGG programs using genomics methods to measure transcriptomics and epigenomics changes in their experimental systems. The goal is to familiarize students with the latest cutting-edge genomics tools and cover solutions to major experimental and computational challenges in the investigation of genome-wide epigenetic data sets. Students will develop competence in (i) variations of experimental techniques improving resolution and throughput, (ii) issues related to the computational analyses closely related to the various genome-wide assays used to probe epigenetic processes and signals, (iii) computational approaches useful to overcome pitfalls associated to the analysis of a given epigenetic data modality, (iv) methods, techniques and studies on the integration of multi-layer epigenetic data sets.
Spring
Also Offered As: CAMB 5770, GCB 5770, MTR 5350
Prerequisite: (BIOL 4234 OR BIOL 4244) AND GCB 5340 AND (GCB 5350 OR GCB 5360)
1 Course Unit
**PHRM 5420 Topics in Molecular Medicine**
TiMM is planned as a once-weekly seminar course whose goal is to introduce students to the ways in which biomedical research can provide new insights into clinical medicine and, conversely, how knowledge of clinical disease impacts scientific discovery. There are two sections for the course – 401 and 402. Section 401 is for first year MD/PhD students only and section 402 is for VMD/PhD and PhD students.

Fall
Also Offered As: CAMB 5420
1 Course Unit

**PHRM 5640 Drug Delivery Systems: Targeted Therapeutics and Translational Nanomedicine**
The topics include the need for new drug delivery systems (DDS), advantages and applications of biotherapeutic drugs, routes for drug transport in the body, pharmacokinetics and biodistribution, nanocarriers as DDS, targeted drug delivery, challenges with developing new DDS, and translational aspects of new DDS. Directors of the course are Miriam Wattenbarger and Vladimir Muzykantov (Pharmacology). In addition to lectures from the course directors, faculty from engineering and medicine will give guest lectures related to their research interests. The students read current journal articles on DDS. The major group assignment for the course is a written and oral group proposal on a new drug delivery system. Technical communication skills and working with students from different disciplines are an important aspects of the course.

Spring
Also Offered As: CBE 5640
1 Course Unit

**PHRM 5700 Principles of Cardiovascular Biology: Vascular biology, medicine and engineering**
Lectures to be presented by various Medical School faculty members.
Topics covered include: general principles of vascular biology and hemodynamics, endothelial cells and integral vascular functions, signaling in the cardiovascular system, angiogenesis, hemostasis and thrombosis, platelets, platelet/vascular interactions, vascular integrins and adhesion molecules, vascular inflammation and oxidative stress, white blood cells, vasoactive compounds and drugs, mechanisms of atherosclerosis, cholesterol and lipid metabolism, hypertension, novel vascular directed gene and enzyme therapies. Permission of course director required to enroll.

Spring
1 Course Unit

**PHRM 5800 Pharmacogenetics**
This is a "literature-based" course (i.e. a seminar course/literature survey). It will survey the emerging technologies and computational advances that have permitted the field of Pharmacogenomics to mature into a major biomedical discipline over the past few years. It will consider the likely impact on disease target identification; the development of new drugs for established and "niche" markets; the advent of "personalized medicine" including the selection of therapies that have maximum efficacy and minimum side-effect profiles. This course will also touch on some of the ethical issues associated with the routine genetic testing of patients to facilitate treatment choices and clinical monitoring.

Spring
1 Course Unit

**PHRM 5900 Molecular Toxicology: Chemical and Biological Mechanisms**
Course Goals: Exposures to foreign compounds (drugs, carcinogens, and pollutants) can disrupt normal cellular processes leading to toxicity. This course will focus on the molecular mechanisms by which environmental exposures lead to end-organ injury and to diseases of environmental etiology (neurodegenerative and lung diseases, reproduction disruption and cardiovascular injury). Students will learn the difficulties in modeling response to low-dose chronic exposures, how these exposures are influenced by metabolism and disposition, and how reactive intermediates alter the function of biomolecules. Mechanisms responsible for cellular damage, aberrant repair, and end-organ injury will be discussed. Students will learn about modern predictive molecular toxicology to classify toxicants, predict individual susceptibility and response to environmental triggers, and how to develop and validate biomarkers for diseases of environmental etiology. Students are expected to write a term paper on risk assessment on an environmental exposure using available TOXNET information. Pre-requisites: Must have taken or will take Fundamentals of Pharmacology concurrently. Undergraduate course work in biochemistry and chemistry essential. Exceptions allowed based on past course work. Please consult with students with required prerequisites; residents in in Environmental and Occupational Health, and professional masters students (MPH and MTR).

Spring
Also Offered As: REG 5900
1 Course Unit

**PHRM 5990 Pharmacology Graduate Group Journal Club**
The major goals of this journal club are 1) to gain experience presenting recent original research articles from the primary scientific literature, and 2) to learn to critically evaluate the research contained in these articles with respect to their context, documentation, authentication, presentation, scientific rigor, reproducibility, inferences, and any other factors that contribute to the quality of the research and its communication. This class is open ONLY to students in the Pharmacology Graduate Group
Two Term Class, Student may enter either term; credit given for either 0.5 Course Units

**PHRM 6050 Drug Discovery and Development**
This course will expose graduate-level students to the process of drug discovery and development. The course will be structured to cover topics from the identification of a disease-relevant target through to Phase III Clinical Trials. The course will be lecture based and there will also be student-led journal club presentations as part of the course. There will also be a writing project consisting of a 3 page proposal of how to advance one of the areas of Drug Discovery & Development covered in the course.

Spring
Also Offered As: BMB 6050, CAMB 7100
1 Course Unit

**PHRM 6230 Fundamentals of Pharmacology**
This course is designed to introduce students to basic pharmacological concepts with special emphasis on the molecular actions of drugs. Subject matter includes use of microcomputers to analyze pharmacological data. Prerequisite: Permission of course director
Fall
Also Offered As: REG 6230
1 Course Unit
PHRM 6240 Medical Pharmacology
This course surveys the major classes of drugs used to treat human conditions, and focuses on their molecular mechanisms of action. It consists of two 2-hour lectures per week and problem sets. Student evaluation is based 50% on exams and 50% on problem sets. Prerequisite: BIOM 6000

PHRM 6285 Introduction to Superfund Sites and Health Effects of Hazardous Waste
Superfund hazardous waste sites are prevalent in our nation and the exposures to toxicants from these sites raise immediate health concerns. The aims of this course are to educate students about such sites and provide a scientific basis for hazard identification, hazard characterization, risk communication and risk management. The course will describe the effect of these hazardous chemicals on the ecosystem and vice-versa, and remediation and mitigation approaches. These environmental science issues will lead into the environmental health aspects of exposures including: biomonitoring (external and internal dose, biomarkers and the exposome), toxicological properties of contaminants and mode-of-action. The course will be complemented with visits to two Superfund sites in the region: Ambler (asbestos) and Palmerton (heavy metals). Prerequisite: 400 level course in Biology/Chemistry and Biochemistry

PHRM 6320 Cell Control by Signal Transduction Pathways
This course, "Targeting the cancer cell: from mechanism to precision medicine", will examine how various signal transduction mechanisms influence cell functions including replication, growth, transcription, translation and intracellular trafficking. We will also consider how non-cell autonomous mechanisms, such as the tumor microenvironment and the immune system influence cancer cell signaling. We will consider how important signaling pathways, such as Ras, Raf, Notch, Wnt, TGF beta, and various kinases/phosphatases become dysregulated in cancer, as well as delve into how the DNA damage response, immune system, and tumor microenvironment exert important influences on oncogenic signaling. In the first half of the course, invited faculty members will pick 2 relatively recent papers from their field that highlight important areas. Each paper will be assigned to a student, who will meet with the faculty mentor prior to the class to discuss the paper and their presentation. During the class, students will present each paper for approximately 45 minutes with time for discussion. Students will present the important background, break down the paper, look for strengths and weakness and come up with a plan of what the next set of experiments could or should be. In the second half of the course, students will independently pick a relevant paper for class presentation and will also write a short "News and Views" style article based on the paper they have chosen. The goal of the course is to provide students with a view of the cancer cell that integrates both cell autonomous and non-cell autonomous signals and to use this information to consider how to successfully treat cancer.

PHRM 6570 Introduction to Superfund Sites and Health Effects of Hazardous Waste
Superfund hazardous waste sites are prevalent in our nation and the exposures to toxicants from these sites raise immediate health concerns. The aims of this course are to educate students about such sites and provide a scientific basis for hazard identification, hazard characterization, risk communication and risk management. The course will describe the effect of these hazardous chemicals on the ecosystem and vice-versa, and remediation and mitigation approaches. These environmental science issues will lead into the environmental health aspects of exposures including: biomonitoring (external and internal dose, biomarkers and the exposome), toxicological properties of contaminants and mode-of-action. The course will be complemented with visits to two Superfund sites in the region: Ambler (asbestos) and Palmerton (heavy metals). Prerequisite: 400 level course in Biology/Chemistry and Biochemistry

Pre-dissertation research lab rotation.

PHRM 9700 Candidacy Examination
Fall or Spring

PHRM 9950 Dissertation

Philosophy (PHIL)

PHIL 0210 First Year Seminar: Philosophy and Autobiography
In this course, we will study the interaction of autobiography and philosophy. We will read some autobiographies written by philosophers to understand how their philosophical thinking and commitments arose and how these commitments shaped their lives. We will also read texts that examine philosophical issues related to the phenomenon of writing autobiographies, including the nature of the self, questions surrounding interpretation and understanding, the paradoxes of self-deception, and the meaning and narrative structure of human life.

PHIL 0220 Knowledge, Religion, and Values
This First Year Undergraduate Seminar is an introduction to Philosophy organized around the topics of knowledge (epistemology), religion (metaphysics) and values (ethics). We will examine questions such as what is the difference between true knowledge and mere beliefs, the challenge of skepticism, the nature of the human mind, the nature of God and arguments for and against the existence of God, and ethical questions such as how should I live and what do I owe to others. We will draw on a range of philosophical writings, historical and contemporary, from different philosophical traditions. Examples of authors we will read include Plato, Descartes, Hume, Zhuangzi and Mengzi.

PHIL 9950 Dissertation
PHIL 0330 Seminar in Moral Philosophy
Four sorts of questions belong to the study of moral philosophy in the analytic tradition: (1) Practical ethics discusses specific moral problems, often those we find most contested (e.g. abortion, euthanasia, killing noncombatants in war). (2) Ethical theory tries to develop systematic answers to moral problems, often by looking for general principles that explain moral judgments and rules (e.g. consequentialism, contractarianism). (3) Meta-ethics investigates questions about the nature of moral theories and their subject matter (e.g. are they subjective or objective, relative or non-relative, related to a deity or not?). (4) Finally, there are questions about why any of this does, or should, matter to us (e.g. what kind of reason for acting is a moral reason and how is it related to a prudential reason?). We will investigate all four of these types of questions. A large part of the course will be focused on two highly contentious moral problems, abortion and killing noncombatants in war. The central aims of the required readings and discussion are: a) to develop each question deeply and sharply enough for us to understand why it has been contentious; b) to see what new evidence could change the nature of the problem; and c) to suggest how to seek that further evidence. We will focus on how to read complex contemporary philosophical prose in order to outline and evaluate the arguments embedded within it. This will provide the basis for writing papers in which you defend a position with evidence and arguments. These skills are central to the practice of Philosophy. This course does not presuppose that students already have these skills. It is intended to teach them and presupposes a willingness on the part of students to do what is necessary to learn them. What this involves is detailed in “Success in this Course”. You should read this note to understand the commitment this course involves.
Fall
1 Course Unit

PHIL 0340 The Self: Aspiration and Transformation
Novels, memoirs, and alles of self-help books attest to our desire to transform ourselves. Yet, the idea of self-transformation is puzzling. If a person decides to embark on a new adventure in the hopes of transforming herself, can she really become a new self or is she merely exhibiting her preexisting adventurousness? What about the aspiring college student who is hoping that college will change him? How can we make sense of his aspiration? In this class, we will critically examine the idea of aspiration and transformation. Readings for this course will be drawn from philosophy, fiction, and literary criticism.
1 Course Unit

PHIL 0341 Ethics of Artificial Intelligence
This course surveys some ethical issues related to artificial intelligence (AI) and related technologies. We’ll investigate such questions as: Can a machine learning algorithm be fair? When is an AI trustworthy? What privacy and other rights do people have to their data? How much autonomy in weapons is too much? When Als make mistakes, who should be held responsible? What risks are there for Al to exacerbate gender and racial oppression and how can we mitigate those risks? What are the potential benefits and risks of increased societal integration with social AIs and robots, for example in healthcare? How can policy keep up with rapidly advancing and changing technology?
1 Course Unit

PHIL 0430 Markets and Morality First-Year Seminar
Market exchange, where the seller provides a good or service at a price the buyer accepts, serves as a basic element of our society. It embodies certain values of freedom of exchange, and, when well-functioning, promotes economic efficiency. We also know there are illegal markets for human organs, an enormous amount of money is spent to influence our democratic elections, and that giving a friend a loan can change the dynamics of your relationship. Should everything be for sale? How should we balance the benefits and values of free market exchange with other values? What influence do markets have in shaping the way we relate to one another? This course will consider questions like these to explore when and what kind of moral limits should be placed on markets.
1 Course Unit

PHIL 0700 Critical Thinking
This course will provide the student with informal techniques for identifying and analyzing arguments found in natural language. Special attention will be paid to developing the ability to assess the strength of natural language arguments, as well as statistical arguments.
1 Course Unit

PHIL 0710 Logic and Formal Reasoning
This course offers an introduction to three major types of formal reasoning: deductive, inductive (probabilistic and statistical), and practical (decision-making). The course will begin with the study of classical sentential and predicate logics. It will move on to elementary probability theory, contemporary statistics, decision theory and game theory.
Spring
1 Course Unit

PHIL 0901 Philosophy for the Young
This Academically Based Community Service course brings philosophy to Philadelphia area schools (K-12). Anyone who has pondered questions about goodness, value, personal identity, justice, how to live well, or how to do the right thing, has thought philosophically. These issues are important not just to adults, but to children and teenagers. Introducing younger students to philosophical thought involves showing them the ways in which they are already thinking philosophically. In this course, Penn students will study selected topics in philosophy with the aim of developing curricula and lesson plans for delivery students in local Philadelphia schools. Part of the course will be held on the Penn campus and part will be held on site in our partner schools. Registration is by permit only, after an interview with the instructor.
1 Course Unit

PHIL 0902 High School Ethics Bowl
In this course, teams of Penn undergraduates, each joined by a graduate student in philosophy, will coach teams of high school students for participation in the National High School Ethics Bowl, an annual competitive yet collaborative event in which teams analyze and discuss complex ethical dilemmas. Cases for the Ethics Bowl will will serve as a foundational starting point for the undergraduate students’ investigations into ethical theory, and the study of the Ethics Bowl itself will develop the capacities to provide coaching and mentorship to the teams of high school students from West Philadelphia and across the city. Undergraduates will travel to these school as part of the course, and there will be one or two Saturday sessions. This course will introduce the ethics bowl to many new Philadelphia School District schools and students, and it will provide Penn students with the opportunity to develop their teaching and communication skills, build collaborative relationships with community schools, and solidify their knowledge of ethical theory through coaching.
1 Course Unit
PHIL 0903 Public Philosophy & Civic Engagement
In recent years professional philosophy has witnessed numerous efforts to breakdown the barriers that stand between the academy and its neighboring communities. Such work has invited a lively debate across the discipline about the role philosophy can and should play outside the classroom. This course gives students the opportunity to make a substantive contribution to this timely issue both by reflecting upon and by engaging in 'public philosophy.' Undergraduates will have the opportunity to read, discuss, and distill philosophical texts on a range of topics in moral and political philosophy, especially topics that pertain to civic life in democratic society. Topics include duties and obligations (e.g., the duty to vote), oppression and injustice, cosmopolitanism, patriotism, civil disobedience, propaganda, and political liberalism. Students will also engage with public-facing work done by philosophers on these topics, with the aim of preparing students from a West Philadelphia high school (details TBA) to produce a written piece of public philosophy of their own at the end of the semester. Guest speakers will on occasion visit the seminar to discuss public philosophy or pre-college pedagogy. This course is an Academically Based Community Service course.
1 Course Unit

PHIL 0990 Communicating in Philosophy
The subject of this CWiC seminar will vary. It stresses the comprehension and expression of philosophical ideas in both oral and written presentation. Grades will be based on at least two oral presentations, as well as general participation in other classroom activities.
Not Offered Every Year
1 Course Unit

PHIL 0991 Topics in Philosophy
This first-year seminar presupposes no background in philosophy. Topic will vary by semester.
Not Offered Every Year
1 Course Unit

PHIL 1000 Introduction to Philosophy
Philosophers ask difficult questions about the most basic issues in human life. Does God exist? What can we know about the world? What does it mean to have a mind? How should I treat non-human animals? Do I have free will? This course is an introduction to some of these questions and to the methods philosophers have developed for thinking clearly about them.
Fall or Spring
1 Course Unit

PHIL 1110 Ancient Greek Philosophy
What is philosophy? How does it differ from science, religion, literature, and other modes of human discourse? This course traces the origins of philosophy as a discipline in the Western tradition, looking to thinkers of Ancient Greece and Rome. We will examine how natural philosophers such as Thales, Anaximander, and Heraclitus distinguished their inquiries from the teachings of poets such as Homer and Hesiod; how ancient atomism had its origins in a response to Parmenides' challenge to the assumption that things change in the world; how Socrates reoriented the focus of philosophy away from the natural world and toward the fundamental ethical question, how shall I live? We will also examine how his pupil, Plato, and subsequently Aristotle, developed elaborate philosophical systems that address the nature of reality, knowledge, and human happiness. Finally, we will examine the ways in which later thinkers such as the Epicureans and Stoics transformed and extended the earlier tradition.
Fall
Also Offered As: CLST 1501
1 Course Unit

PHIL 1111 Greek and Roman Moral Philosophy
A survey of ethical philosophy in the Ancient Greek and Roman tradition. Works studied will include those of Plato, Aristotle, Epicurus, and the Stoics, including writings of later Roman authors such as Cicero, Seneca, Epictetus, and Marcus Aurelius. The class will be run as a seminar. All works will be read in English translation.
Not Offered Every Year
Also Offered As: CLST 1502
1 Course Unit

PHIL 1170 History of Modern Philosophy
This course is an introduction to a few central themes in philosophy in the 17th and 18th centuries, and to some of the crucial thinkers who addressed those themes. Topics to be covered may include, among others, the nature of the human being (including the human mind), the relationship between God and the created world, the nature of freedom, and the relations among natural sciences, philosophy and theology in this rich period of human history.

PHIL 1180 Benjamin Franklin and His World
Benjamin Franklin was a preternaturally talented Renaissance man. He was a world-famous scientist whose insights into electricity are still relevant today; a leading citizen and civic leader; a first-class printer who helped define and expand the world of letters; a preeminent printer, essayist, and aphorist; a skilled politician and diplomat. His tremendous legacy of political, cultural, scientific and civic organizations continues to influence his city and his country. His Autobiography is an essential feature of the American literary canon. But Benjamin Franklin's life also raises deep and disturbing questions for students. He owned slaves and profited from the sale of enslaved persons. He copied and reworked many of his most famous phrases. His sexual habits and behavior are incompatible with the character of the "Me Too" era. He broke promises, circulating - knowing they would become public- personal letters of great political import, which he had pledged to keep private. Through examining Franklin's life, we will consider weighty questions in history, citizenship, ethics, and science. This course will explore the life and ethos of Benjamin Franklin. We will study the history of the 18th century, including the American Revolution, the details of Franklin's life and accomplishments, and six major ethical issues he confronted. Over the course, students will follow Franklin's own advice for establishing order in life. Students will keep a detailed moral diary modeled on Franklin's. For a 5-day period, students will emulate the diet he had as a young and low-paid-adult. The course will encourage students to critically examine the 18th Century, the "great man" theory, and the ability to make moral evaluation of people living in other times. They will critically examine the relevance of the life of a world historical figure for how to lead their own civicly engaged, ethical life.
1 Course Unit

PHIL 1220 World Philosophies
In this Benjamin Franklin Seminar, we will study philosophies or thought systems from around the world. Placing these philosophies within historical, cultural and political contexts, we will study the theoretical bases (including questions regarding the nature of reality, human nature, claims about knowledge and memory) of practical engagement with the world (including concerns with individual human interactions, social-political structures, educational theory, the nature of history, the nature of the arts and the like). Philosophies or thought systems we will study will come from across Africa and Asia, and from native peoples of the Americas, the South Pacific, New Zealand, and Australia.
Not Offered Every Year
1 Course Unit

PHIL 1221 World Philosophies
In this seminar, we will study philosophies or thought systems from around the world. Placing these philosophies within historical, cultural and political contexts, we will study the theoretical bases (including questions regarding the nature of reality, human nature, claims about knowledge and memory) of practical engagement with the world (including concerns with individual human interactions, social-political structures, educational theory, the nature of history, the nature of the arts and the like). Philosophies or thought systems we will study will come from across Africa and Asia, and from native peoples of the Americas, the South Pacific, New Zealand, and Australia.
1 Course Unit

PHIL 1225 Environmental Ethics
We investigate some of the ethical issues that arise from our relationship with the environment. Topics may include: What are our responsibilities toward the environment, as individuals and as members of institutions? How do our responsibilities toward the environment relate to other ethical considerations? Do non-human animals/species/ecosystems have intrinsic value? What should conservationists conserve? What is the appropriate response to climate change?
Not Offered Every Year
1 Course Unit

PHIL 1226 Environmental Ethics
We investigate some of the ethical issues that arise from our relationship with the environment. Topics may include: What are our responsibilities toward the environment, as individuals and as members of institutions? How do our responsibilities toward the environment relate to other ethical considerations? Do non-human animals/species/ecosystems have intrinsic value? What should conservationists conserve? What is the appropriate response to climate change?
Not Offered Every Year
1 Course Unit

PHIL 1241 Introduction to Bioethics
This course is an introduction to bioethics, focusing on ethical questions arising at the beginning and end of life. Topics will include procreative responsibilities, the question of wrongful life, and prenatal moral status as well as questions of justice related to markets for sperm, eggs and gestation. We will also attend to dilemmas at the end of life, including the authority of advance directives, euthanasia and the allocation of life-saving therapies.
Not Offered Every Year
1 Course Unit

PHIL 1242 Bioethics
This course is an introduction to bioethics, focusing on ethical questions arising at the beginning and end of life. Topics will include procreative responsibilities, the question of wrongful life, and prenatal moral status as well as questions of justice related to markets for sperm, eggs and gestation. We will also attend to dilemmas at the end of life, including the authority of advance directives, euthanasia and the allocation of life-saving therapies.
Not Offered Every Year
1 Course Unit

PHIL 1251 Yoga and Philosophy
"Yoga" means to yoke in Sanskrit. Metaphorically, this is often interpreted as union, or integration. This course will explore central aspects of yogic philosophy and practice, and how they relate to, and might be integrated with, contemporary analytic philosophy, college life, and beyond. We will focus on three key issues: (1) What is yogic philosophy? How does it relate to the western philosophical tradition more commonly taught in philosophy departments in the U.S.? (2) What does the practice of yoga have to do with theoretical understanding? (3) Is it possible to integrate a yogic worldview and a scientific worldview? Is there scientific evidence that yoga "works"? What does that even mean? This course will contain both a theoretical component and a practice component. In addition to writing analytical essays on these topics, students will maintain a yoga practice and a reflective journal throughout the course. No prior experience with yoga is required.
1 Course Unit

PHIL 1252 Introduction to Indian Philosophy
This course will take the student through the major topics of Indian philosophy by first introducing the fundamental concepts and terms that are necessary for a deeper understanding of themes that pervade the philosophical literature of India -- arguments for and against the existence of God, for example, the ontological status of external objects, the means of valid knowledge, standards of proof, the discourse on the aims of life. The readings will emphasize classical Hindu, Buddhist, and Jain philosophical articulations (from 700 B.C.E to 16th century CE) but we will also supplement our study of these materials with contemporary or relatively recent philosophical writings in modern India.
Fall or Spring
Also Offered As: RELS 0055, SAST 0050
1 Course Unit

PHIL 1253 Ethics
Ethics is the study of right and wrong. This introductory course will introduce students to major ethical theories, the possible sources of normativity, and specific ethical problems and questions. Topics may include euthanasia, abortion, animal rights, the family, sexuality, bioethics, crime and punishment, and war.
Fall or Spring
1 Course Unit

PHIL 1254 Bioethics
This course is an introduction to bioethics, focusing on ethical questions arising at the beginning and end of life. Topics will include procreative responsibilities, the question of wrongful life, and prenatal moral status as well as questions of justice related to markets for sperm, eggs and gestation. We will also attend to dilemmas at the end of life, including the authority of advance directives, euthanasia and the allocation of life-saving therapies.
Not Offered Every Year
1 Course Unit

PHIL 1255 Environmental Ethics
We investigate some of the ethical issues that arise from our relationship with the environment. Topics may include: What are our responsibilities toward the environment, as individuals and as members of institutions? How do our responsibilities toward the environment relate to other ethical considerations? Do non-human animals/species/ecosystems have intrinsic value? What should conservationists conserve? What is the appropriate response to climate change?
Not Offered Every Year
1 Course Unit
PHIL 1345 Business Ethics
We will examine practical ethical issues facing businesses, and the philosophical tools for addressing them. Topics may include corporate responsibility, shareholders vs. stakeholders, whistle blowing, raiding and restructuring, the morality of markets, fair hiring practices, workers rights, sexual harassment, environmental impact.
Not Offered Every Year
1 Course Unit

PHIL 1360 Philosophy of Sport
This is an introductory philosophy course that uses philosophical tools to understand and answer questions that arise in and about sports. Is there a principled basis for determining which methods of performance enhancement are acceptable? Developing a framework to answer this question will take us through: 1) questions about rules: what is their point in sports and what are appropriate reasons to change them; 2) questions about the point of participation in a sport; 3) questions about the kinds of virtues sports participants can demonstrate; and 4) questions about integrity of participants and a sport itself. A related set of questions concerns the appropriate competitors in sporting events: Should competition be restricted to single sex categories; Should competition be divided into disabled and non-disabled categories?
Not Offered Every Year
1 Course Unit

PHIL 1380 Aesthetics
This course examines philosophical issues centering on the nature and value of the arts. What is art? What does it mean to have an aesthetic experience? How are aesthetic experiences different from non-aesthetic ones? What is the relation between art and truth? How do the moral qualities in a work of art affect its aesthetic qualities? Why are emotions important in our interpretations of artworks? What is the relation between art and expression? Do forgeries necessarily have less aesthetic value than original artworks? What are aesthetic judgments, and are they merely expressions of taste? Lecture and discussion will center on both classical and contemporary works in aesthetics.
Not Offered Every Year
1 Course Unit

PHIL 1430 Political Philosophy
An introduction to some central issues in social and political philosophy: liberty, equality, property, authority, distributive justice. Readings may be from Hobbes, Locke, Mill, Marx, and more recent theorists such as Rawls and Nozick.
Not Offered Every Year
1 Course Unit

PHIL 1433 The Social Contract
This is a critical survey of the history of western modern political philosophy, beginning from the Early Modern period and concluding with the 19th or 20th Century. Our study typically begins with Hobbes and ends with Mill or Rawls. The organizing theme of our investigation will be the idea of the Social Contract. We will examine different contract theories as well as criticisms and proposed alternatives to the contract idea, such as utilitarianism. Besides the above, examples of authors we will read are Locke, Rousseau, Hume, Mill and Marx.
Spring
1 Course Unit

PHIL 1439 Marx, Marxism, and the Culture of Revolution
Capitalist society is the object of Karl Marx’s analysis and critique—a society that is the product of history and may one day vanish. This course will trace Marx’s critique by moving between the fields of philosophy, economics, and politics. We will locate key interventions of Marx’s thought that transform modern conceptions of history, the relation between economics and politics, and the limits of struggle and emancipation in capitalist society. We will consider the historical conditions of Marx’s writing and the development of his thought to discover many sides of Marx and many divergent Marxisms (humanist, post-structuralist, feminist, and others) that follow, often at odds with each other. Further, we will ask about what kind of horizons Marx’s and Marxist interventions open up for critique and analysis of capitalist society with respect to gender, race, class, and nation. “Theory becomes a material force when it has seized the masses,” argues the young Marx; indeed, his theories have fueled emancipatory movements and propped up tyrannical regimes, substantiated scientific theories and transformed philosophical debates. In examining Marx’s legacy, we will focus on the elaborations and historical limitations of his ideas by examining the challenges of fascism, the communist experiment in the Soviet Union and its collapse, as well as the climate and other crises currently taking place. In conclusion, we will turn to the question of whether and to what extent Marx’s ideas remain relevant today, and whether it is possible to be a Marxist in the contemporary world dominated by global capital.
Not Offered Every Year
Also Offered As: COML 1020, GRMN 1020, REES 1172
1 Course Unit

PHIL 1440 Machine Fairness: Algorithms and the Theory of Justice
Artificial intelligence is causing unprecedented changes and disruptions in many sectors of society, raising fundamental ethical and philosophical questions. Although many researchers are currently studying how tasks can be automated efficiently, only a few have discussed how tasks can be automated fairly, to produce the best possible outcome for society. Machine Fairness is an emerging area of research at the intersection of philosophy, machine learning, computer science, statistics, and psychology. This course is designed as a non-technical introduction to the basic problems involved in answering questions about machine fairness. It focuses on a number of applications, including criminal sentencing, predictive policing, self-driving vehicles, autonomous weapons, and healthcare. Although these areas are quite different, they involve similar questions. What biases might enter into algorithms, and what is their origin? How should we evaluate whether the outcomes of an algorithmic process are just? When things go wrong, who should be held accountable? The course addresses these questions by using methods from philosophical ethics.
Fall or Spring
1 Course Unit

PHIL 1450 Philosophy of Law
An introduction to some of the central philosophical problems of law: What is law? What makes law? What is the relationship between law and morality? Can laws be unjust? Is there a moral obligation to obey the law? We will look at different theories of law, such as positivism and natural law theory, and discuss topics like civil disobedience, liberty and the law, and punishment and the law, and the special status of constitutional law. Readings from both classic and contemporary philosophers such as Michelle Alexander, Jeremy Bentham, Angela Davis, Ronald Dworkin, John Hart Ely, H.L.A. Hart, Thomas Hobbes, John Locke, John Stuart Mill, Robert Nozick, Martha Nussbaum, Richard Posner, and Jeremy Waldron.
Not Offered Every Year
1 Course Unit
PHIL 1510 Black Philosophy
This is a survey course that will cover issues in the Black and African American philosophical tradition. The course will give an overview of the ethics, political theory, epistemology, metaphysics, and philosophy of language relevant to the experience of Black people with an aim of understanding the distinctive and important contributions of the Black intellectual tradition. Topics covered may include race, culture, racism, justice, oppression, agency, violence, class, identity, nationalism, white supremacy, intersectionality, and power. Readings may include work by Martin Delaney, Frederick Douglass, Sojourner Truth, W.E.B. DuBois, Marcus Garvey, Alain Locke, Martin Luther King Jr., Malcolm X, James Baldwin, Angela Davis, Anthony Appiah, Bernard Boxill, Cornell West, Tommie Shelby, bell hooks, Charles Mills, and related authors. 
1 Course Unit

PHIL 1540 Introduction to Feminist Philosophy
This course is an introduction to feminist thought, both in theory and in practice. We will consider how feminist thought emerged and evolved, as well as how feminist theories respond to various intellectual, social and political challenges. Questions we will address may include: What exactly is feminism? How does one's gender identity impact one's lived experiences? How should we revise, reformulate, or rethink traditional answers to political and ethical issues in light of feminist theories? How can feminist analyses contribute to the development of better science, and our conceptions of knowledge? 
Not Offered Every Year
1 Course Unit

PHIL 1571 Repairing the Planet: Tools for the Climate Emergency
This course is a comprehensive introduction to the climate emergency and the tools with which we can fight it. It will integrate natural science, social science, philosophy of science, history, ethics, and policy. The course opens with an overview of the historical discovery of global warming and our contemporary understanding of climate change. We then turn to the framework that the United Nations’ Intergovernmental Panel on Climate Change has developed to study climate risks, focusing on both general issues and case studies throughout the world. The existence and severity of these risks raises questions of climate justice at many levels: individuals to individuals, countries to countries, and the present generation to future generations. We will study these issues in detail, and then examine the policy tools developed to address them. Although we will discuss national and sub-national policy and policy proposals such as the Green New Deal, special attention will be given to global policy tools, especially the Framework Convention on Climate Change and the Paris Agreement. In addition to standard writing assignments, students will have a chance to develop policy proposals that address the core issues of the class. 
Also Offered As: ENVS 1043
1 Course Unit

PHIL 1580 Philosophy of Religion
An introduction to philosophical questions regarding the nature of religious experiences and beliefs; arguments for and against the existence of God; the problem of evil; the relationships of faith, reason and science, the possibility of religious knowledge, the role of religious communities, etc. Readings from the history of philosophy as well as from 20th century and contemporary philosophy. 
Not Offered Every Year
1 Course Unit

PHIL 1581 Jewish Philosophy
This course is an inquiry into questions that lie in the intersection of philosophy and Jewish thought, and it approaches these questions through the writings of classical Jewish philosophers. Topics to be covered include: The problem of evil, the problem of divine foreknowledge and free will, the nature of the human being and the immortality of the soul, the existence and nature of God, the origins of the universe and the possibility of miracles, prophecy, what constitutes the good life and human perfection, and the purpose and nature of divine law. Readings will be drawn from traditional Jewish texts, from medieval and modern Jewish and non-Jewish philosophers, and from contemporary analytic philosophy. 
1 Course Unit

PHIL 1710 Introduction to Logic
This course provides an introduction to some of the fundamental ideas of logic. Topics will include truth functional logic, quantificational logic, and logical decision problems. 
Fall or Spring
Also Offered As: LGIC 1710
Mutually Exclusive: PHIL 5710
1 Course Unit

PHIL 1800 Philosophy of Science
What counts as a scientific theory? What counts as evidence for a scientific theory? Are scientific inferences justified? Does science give us truths or approximate truths about a world that exists independently of us? How can we know? Does it matter? These are all perennial questions in the philosophy of science, and the goal of this course is to look at how philosophers have answered these questions since the scientific revolution. In addition to reading classic work by philosophers of science, we will read material from living and dead scientists in order to gain a deeper appreciation of the philosophical questions that have troubled the most brilliant scientists in Western science. 
Fall or Spring
1 Course Unit

PHIL 1810 Philosophy of Space and Time
This course provides an introduction to the philosophy and intellectual history of space-time and cosmological models from ancient to modern times with special emphasis on paradigm shifts, leading to Einstein’s theories of special and general relativity and cosmology. Other topics include Big Bang, black holes stellar structure, the metaphysics of substance, particles, fields, and superstrings, unification and grand unification of modern physical theories. No philosophy of physics background is presupposed. 
Fall or Spring
1 Course Unit

PHIL 1830 Philosophy of Biology
This course will examine evolutionary theory and its philosophical foundations. We begin with Darwin’s formulation of evolutionary theory and the main influences on Darwin. We then consider two contemporary presentations of the theory, by Richard Dawkins and Richard Lewontin. The rest of the course addresses a number of foundational issues including adaptation, the units of selection, the evolution of altruism, and the possibility of grounding ethics in evolutionary theory. 
Not Offered Every Year
1 Course Unit
PHIL 1831 Evolution's Laboratory
This Global Seminar is a version of PHIL 1830 and will conclude with field work in the Galapagos Islands. This course is a Penn Global Seminar, which includes a travel component. An application is required. For more information and to apply, visit: https://global.upenn.edu/pennabroad/pgs
Not Offered Every Year
1 Course Unit

PHIL 1840 Introduction to Cognitive Science
How do minds work? This course surveys a wide range of answers to this question from disciplines ranging from philosophy to neuroscience. The course devotes special attention to the use of simple computational and mathematical models. Topics include perception, learning, memory, decision making, emotion and consciousness. The course shows how the different views from the parent disciplines interact and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of computation in such theories and provides an introduction to some of the main directions of current research in the field. It is a requirement for the BA in Cognitive Science, the BAS in Computer and Cognitive Science, and the minor in Cognitive Science, and it is recommended for students taking the dual degree in Computer and Cognitive Science.
Fall
Also Offered As: CIS 1400, COGS 1001, LING 1005, PSYC 1333
1 Course Unit

PHIL 1850 Philosophy of Social Science
This course discusses the foundations of contemporary social science. It focuses on the nature of social systems, the similarities and differences between social and natural sciences, the construction, analysis, and confirmation of social theories, and the nature of social explanations. Specific topics may include: What are social norms and conventions? What does it mean to have one gender rather than another, or one sexual orientation rather than another? Should social systems be studied quantitatively or qualitatively?
Not Offered Every Year
Prerequisite: PHIL 1433 OR PHIL 1800 OR PSYC 2737 OR ECON 0100 OR ECON 0200
1 Course Unit

PHIL 1860 Philosophy of Environmental Science
This course studies the conceptual foundations and methods of the environmental sciences including Geology, Environmental Chemistry, Oceanography, and Climate Science. We will study the methods deployed in understanding the complex interactions between land, atmosphere, and ocean, and look at the ways that predictions can be made about the future. The course will also address issues of ethics and global justice raised by the earth's rapidly changing climate.
Fall or Spring
1 Course Unit

PHIL 2112 Introduction to Plato
A survey of selected dialogues of Plato, an Athenian philosopher of the fourth century BCE. Works read may include the Euthyphro, Crito, Gorgias, Laches, Charmides, Phaedo, Philebus, Statesman, and Laws. The course will be run as a seminar. All works will be read in English translation.
Topics to be discussed may include metaphysics, epistemology, psychology, ethics, and political theory.
Not Offered Every Year
1 Course Unit

PHIL 2113 Introduction to Aristotle
Aristotle (384-323 BCE) was one of the most important philosophers in Classical Greece, and his legacy had unparalleled influence on the development of the Western philosophical thought through the medieval period. We will study a selection of his works in natural philosophy, metaphysics, epistemology, psychology, ethics and politics. All texts will be read in English translation. No background in Greek philosophy or knowledge of Greek is required.
Not Offered Every Year
1 Course Unit

PHIL 2200 Continental Philosophy
This course is an introduction to 20th-century continental European philosophy, focusing on the origins and development of phenomenology, existentialism, hermeneutics, and deconstruction. The centrality of phenomenology to an understanding of these movements and other contemporary trends in European thought will be emphasized throughout. No previous background in philosophy is required.
Not Offered Every Year
1 Course Unit

PHIL 2221 Philosophy East and West
Our goal in this course is to bring Western Philosophy and Eastern Philosophy into dialogue. Topics will include skepticism and knowledge, ethics and the good life, moral responsibility and personal relationships, and political obligations and justice. Do the Western and Eastern philosophical traditions approach these topics in the same way? Do they even share an understanding of what the problems and issues at stake are? And what can we learn from comparative philosophy? This seminar does not presuppose prior knowledge of philosophy. Examples of authors we will study include Descartes, Aristotle, Mencius, and Confucius.
Not Offered Every Year
1 Course Unit

PHIL 2430 Global Justice
This course is an introduction to some of the central problems in global justice. Samples of these topics include: What are our duties to respond to world poverty and what is the basis of this duty? Is global inequality in itself a matter of justice? How universal are human rights? Should human rights defer to cultural claims at all? Is there a right to intervene in another country to protect human rights there? Indeed can intervention to protect human rights ever be a duty? Who is responsible for the environment? We will read some influential contemporary essays by philosophers on these topics with the goal of using the ideas in these papers as a springboard for our own further discussion and analysis.
Not Offered Every Year
1 Course Unit

PHIL 2450 Justice, Law and Morality
The course will focus on the philosophical background to the individual rights protected by the U.S. Constitution, including 1st Amendment freedoms of religion, expression, and association; the 14th amendment guarantee of Due Process and the rights of privacy; abortion, assisted suicide, and marriage; the Equal Protection clause and equal political rights and the legitimacy of affirmative action; and the Takings and Contract clauses and their bearing on rights of private property and economic freedoms. In addition to Supreme Court decisions on these issues, we will read works by political philosophers and constitutional theorists, including J.S. Mill, Ronald Dworkin, Cass Sunstein, Martha Nussbaum, Katherine MacKinnon and others.
Not Offered Every Year
1 Course Unit
PHIL 2510 Philosophy of Race
Historically, philosophical questions about race have been about the nature and reality of race, the nature of racism, and social or political questions related to race or racism. In fitting with that history, the first part of the course will focus on the nature and reality of race, as understood in biology and as understood by ordinary people. We will begin by looking at biological race theories from Francois Bernier in 1684 to Pigliucci and Kaplan in 2003. Next, we will look at the philosophical work that has been done on the nature and reality of race as ordinarily understood in the contemporary United States. We will discuss racial anti-realism, social constructionism about race, and biological racial realism from well-known philosophers of race like Anthony Appiah, Sally Haslanger, and Joshua Glasgow. The second part of the course will focus on the nature of racism and social or political questions related to race or racism. In our discussion of racism, we will cover, at least, intrinsic racism, extrinsic racism, and institutional racism. In our discussion of social or political issues related to race or racism, we will look at whether any US racial groups should be used to diagnose, study, or treat genetic disorders.
Not Offered Every Year
1 Course Unit

PHIL 2511 Racial Justice
This course will focus on contemporary philosophical debates around racial justice. Some of the themes for this course are quite obvious: the nature of racism and discrimination, for example, will recur. But the main focus of the course will be on debates about politically pertinent policy issues, such as racial segregation, reparations, and mass incarceration. A guiding question in the course will be whether in these areas we should think that certain moral duties are owed to racial groups, or only to particular individuals.
Not Offered Every Year
1 Course Unit

PHIL 2540 Philosophical Issues around Love and Sex
This is a course on philosophical topics surrounding love and sex. We will touch on issues in all areas of philosophy including ethics, political philosophy, metaphysics, philosophy of language, and epistemology. You will develop the sorts of skills fundamental to philosophy: understanding and reconstructing arguments, evaluating arguments, and developing your own argumentative abilities. You will also acquire theoretical tools that might be useful for thinking about your own love and sex lives, and the lives of those around you.
Spring, odd numbered years only
1 Course Unit

PHIL 2560 Philosophy of Education
The philosophy of education asks questions about the foundational assumptions of our formal institutions for the reproduction of culture. It ranges therefore, from epistemology and philosophy of mind to ethics and political philosophy. For instance: What is the nature of learning and teaching? How is it possible to come to know something we did not know already—and how can we aid others in doing that? How, if at all, should formal institutions of education be concerned with shaping students’ moral and civic character? What is the proper relation between educational institutions and the state? We also ask questions more specific to our own time and context. For example: how, in a multicultural state, should we educate students of varied social identities, like race, gender, and religion? What is the relationship between education and justice.
Not Offered Every Year
Also Offered As: GSWS 2490
1 Course Unit

PHIL 2620 Introduction to Epistemology and Metaphysics
Two basic assumptions of academic research are that there are truths and we can know them. Epistemology is the study of knowledge, what it is, how it is produced, and how we can have it. Metaphysics, the study of the basic constituents of reality, the study of being as such. In this introduction to metaphysics and epistemology, we will ask hard questions about the nature of reality and knowledge. No philosophy background is required for this course.
Not Offered Every Year
1 Course Unit

PHIL 2640 Introduction to Philosophy of Mind
This course will survey several central topics in philosophy of mind, as well as investigate how philosophy of the mind interacts with scientific study of the mind. Among the questions we’ll be asking are: What is it to have a mind? What is the relationship between the mind and the brain? Can there be a science of the mind? What can can philosophy contribute to a science of the mind? What is consciousness? What is it to think, to perceive, to act? How are perception, thought, and action related to one another?
Fall or Spring
Also Offered As: VLST 2210
1 Course Unit

PHIL 2660 What is Meaning?
We will survey of central topics in philosophy of mind and language, and investigate how these areas of philosophy interact with the scientific study of the mind. Questions addressed may include: What is it to have a mind? What is consciousness? What is it to think, to perceive, to act, to communicate, to feel emotions? What is the relationship between the mind and the brain? Can there be a science of the mind? Of language? What can it tell us? What can philosophy contribute to cognitive science?
We will look for more precise ways of asking these questions, and we will study some canonical answers to them.
Not Offered Every Year
1 Course Unit

PHIL 2680 Introduction to Metaphysics
In this class we reflect on questions like: What is reality? What is causality? What is the nature of the self and mind? Might you be in a computer simulation (e.g., as in In The Matrix)? Is time travel possible? Can your mind survive the death of your brain by uploading? Is time real or is it merely an illusion?
Not Offered Every Year
1 Course Unit

PHIL 2684 Philosophy and Visual Perception
In this course, we'll use the biology, psychology and phenomenology of vision to explore philosophical questions about color, such as these: Color vision helps us get around in our environments, but in what sense is it a window onto reality, if it is? Are colors properties of objects, or are they inherently private, subjective properties of minds? What can non-human forms of color vision teach us about the nature of color, and how should we empirically study color vision? Do we need to see in color to understand it? How do our ordinary ways of talking and thinking about colors relate to the experiences we have in color? How does color vision figure in aesthetic judgment? And to what degree can it be influenced by learning, or by social biases like sexist or racist prejudices?
Also Offered As: VLST 2230
1 Course Unit
PHIL 2851 Philosophy of Economics
In this course, general philosophy of science issues are applied to economics, and some problems specific to economics are tackled. While analytical questions like "What is economics?" or "What is an economic explanation" must be pursued, the ultimate goal is practical: What is good economics? How can economists contribute to a better understanding of society, and a better society? How can we make economics better? Topics to be discussed include the following: specific object and method of economics as a social science; its relation with other disciplines (physics, psychology and evolutionary theory); values in economics (welfare, freedom, equality and neutrality); the role of understanding and possible limits of a quantitative approach to human behavior (purposefulness, freedom, creativity, innovation); prediction, unpredictability and the pretension of prediction; causation in econometrics and in economic theory (equilibrium); selfishness and utility maximization (cognitive and behaviorist interpretations); economic models and unrealistic assumptions (realism and instrumentalism); empirical basis of economics (observation and experiment); microeconomics and macroeconomics (reductionism and autonomy); pluralism in economics (mainstream economics and heterodox schools).
Not Offered Every Year
1 Course Unit

PHIL 2991 Topics in Philosophy
This seminar is open to all undergraduates. Topic will vary by semester.
Not Offered Every Year
1 Course Unit

PHIL 2999 Independent Study
Student arranges with a faculty member to pursue a program of reading and writing on a suitable topic.
Fall or Spring
1 Course Unit

PHIL 3110 Ancient Philosophical Figures
A study of selected topics, texts, and figures from Greek and Roman philosophy in the Classical and Hellenistic periods. Topics will vary from term to term.
Not Offered Every Year
1 Course Unit

PHIL 3170 Modern Philosophical Figures
This seminar for philosophy majors will study selected topics, texts, and figures from 17th and 18th century European philosophy.
Not Offered Every Year
1 Course Unit

PHIL 3330 Topics in Ethics
This seminar for philosophy majors will cover selected topics in ethics. The content will vary from semester to semester.
Not Offered Every Year
1 Course Unit

PHIL 3340 Philosophical Issues Surrounding the Ethics of Social Media
In this course, we will look at some of the key moral issues that are raised by our current social media landscape: topics include moral epistemology and echo chambers, civility and cancel culture, authenticity and self-construction, sex work and OnlyFans, and the effects of Instagram culture on body image.
1 Course Unit

PHIL 3341 Philosophy of Food and Fat
This majors seminar will explore some of the philosophical issues related to obesity and food. We’ll discuss a number of related topics, such as the nature and causes of obesity, how food relates to personal identity, gender, and religion, questions about whether the government or society as a whole should be trying to fix the obesity epidemic, whether corporations are responsible for the problem, and the ethics and possible outcomes of different kinds of food fetishism (such as only eating locally-produced food). Because of the interdisciplinary nature of the topic, the readings will come from philosophy as well as other fields including sociology, public health, and complex systems research. There will be popular pieces as well as full philosophy articles. The class will be structured as a cooperative learning seminar, where everyone in the class is expected to help everyone else learn. The course will push you to understand and communicate clearly about material that is often difficult to understand. Along with introducing you to some topics in philosophy, this course will help students become better skilled in understanding and intelligently questioning sophisticated arguments, which can come in handy in a large number of pursuits.
1 Course Unit

PHIL 3343 Marx’s Moral, Social, and Political Philosophy
A majors seminar in Philosophy. Karl Marx is one of the most politically and intellectually influential philosophers of the modern period. Even today, in the aftermath of Soviet Communism, but also in the aftermath of the Great Recession, his ideas continue to be debated in academic circles, in the financial press, and among pundits, activists, and politicians. This seminar will survey his canonical writings roughly in chronological order. We will focus thematically on: Marx’s views on morality and ideology; his theories of history, the modern capitalist economy, and the modern state; his views on political change and political agency; and on the few but suggestive passages in which he imagined what a post-capitalist society might look like. Readings will span from the Economic and Philosophic Manuscripts of his youth to the Ethnological Notebooks written during the last decade of his life.
Not Offered Every Year
1 Course Unit
PHIL 3510 Topics in Philosophy of Race
In this seminar for Philosophy Majors, we will examine different topics and issues in the philosophy of race. Topics we will address can range from the metaphysics of race (e.g., are racial categories real?) to the moral and political philosophy of race (e.g., is affirmative action justifiable?)
1 Course Unit

PHIL 3600 Topics in Theoretical Philosophy
This seminar for philosophy majors will cover selected topics in metaphysics, epistemology, philosophy of mind, philosophy of science, or philosophy of language. Topics will vary from term to term.
1 Course Unit

PHIL 3620 Topics in Epistemology
A seminar for philosophy majors, on selected topics in contemporary epistemology (theory of knowledge).
Not Offered Every Year
1 Course Unit

PHIL 3623 Philosophy of Perception
A seminar for majors in Philosophy. Taking our perceptual experience as a given, what causes it? In a realistic mood, we accept that objects in the environment, or in the "external world," cause us to have the perceptual experiences that we do (as of a table with food, or as of a garden with flowers in it). Yet on this realistic view, our perception is the result of a causal chain that leads from object to eye to brain to experiences, and we are only given the last element: the experience. So how do we really know how our experiences are caused, and where do we get the idea that they are caused by an external world of physical objects? The seminar will focus on the problem of the external world as examined by David Hume, Thomas Reid, G. E. Moore, and Bertrand Russell, along with recent authors.
Not Offered Every Year
Also Offered As: VLST 2220
1 Course Unit

PHIL 3640 Philosophy of Mind
This seminar for philosophy majors will focus on selected topics in philosophy of mind.
Not Offered Every Year
1 Course Unit

PHIL 3800 Topics in Philosophy of Science
A seminar for philosophy majors on selected topics in the Philosophy of Science.
Fall or Spring
1 Course Unit

PHIL 3991 Topics in Philosophy
This seminar is restricted to philosophy majors (all others require a permit). Topic will vary by semester.
Not Offered Every Year
1 Course Unit

PHIL 4112 Plato’s Selected Dialogues
A graduate-level study of selected dialogues of Plato. All texts will be read in translation. No prior experience in Plato is required, but students should have some background in philosophy. Dialogues studied will vary from term to term.
Not Offered Every Year
1 Course Unit

PHIL 4113 Aristotle
A study of Aristotle’s main writings on language, reality, knowledge, nature and psychology. All texts will be read in English translation. No background in Greek philosophy or knowledge of Greek is required, although previous work in philosophy is strongly recommended.
Not Offered Every Year
1 Course Unit

PHIL 4181 Kant I
The course will concentrate on the Critique of Pure Reason and discuss in detail Kant’s conception of knowledge and experience, his criticism of traditional metaphysics and the resulting project of a system of transcendental philosophy.
Not Offered Every Year
1 Course Unit

PHIL 4182 Kant II
This course is a study of Kant’s moral and political philosophy. Texts may include Kant’s Lectures on Ethics, Groundwork for the Metaphysics of Morals, Critique of Practical Reason, Religion within the Boundaries of Mere Reason, and Metaphysics of Morals.
Not Offered Every Year
1 Course Unit

PHIL 4191 Hegel
A study of Hegel’s philosophy, focusing primarily on his Phenomenology of Spirit, with attention to relevant passages in other works such as Hegel’s Logic and Philosophy of Right. Topics may include: (1) Hegel’s conception of philosophy, (2) the development of his system, (3) the problem of an introduction to his system (Phenomenology of Spirit), (4) Hegel’s criticism of traditional metaphysics, (5) his notion of a ‘concept’ (Begriff), his theory of the Idea. The seminar will focus primarily on some of Hegel’s early Jena writings, his Phenomenology of Spirit, on passages from different versions of Hegel’s Logic and (maybe) on aspects of his Philosophy of Right. Topics that are dealt with include: (1) Hegel’s conception of philosophy, (2) the development of his system, (3) the problem of an introduction to his system (Phenomenology of Spirit), (4) Hegel’s criticism of traditional metaphysics, (5) his notion of a ‘concept’ (Begriff), his theory of the Idea. Other topics might become of interest as well.
Not Offered Every Year
1 Course Unit

PHIL 4330 Metaethics
This course is an investigation of the main questions and problems in metaethics since the turn of the 20th century. We will investigate questions about the metaphysics of morality, the philosophy of language of moral talk, the philosophy of mind of moral thought, the epistemology of morality, and the objectivity of morality.
Not Offered Every Year
1 Course Unit
PHIL 4331 Normative Ethics
Some particular acts are morally right; other acts are morally wrong. The task of normative ethics is to provide a general account of which acts are morally right or wrong and why they are morally right or wrong. The primary goal of this course is to provide an advanced survey of two theories that dominate contemporary ethics: consequentialism and deontology. Consequentialists - such as, most famously, the British utilitarians: Bentham, Mill and Sidgwick - hold that acts are right or wrong because of their good or bad consequences. Consequentialism faces numerous objections: that it is wrong to make trade-offs between benefits and harms to different individuals; that it requires us to violate rights; that it is too demanding; and that it does not respect our special obligations to our friends and family. These objections are used to motivate deontology. We will explore Immanuel Kant’s influential version deontology, and the challenges that it faces in relation to the prohibition on lying, on how we should treat the risk of wrong-doing, and on the moral status of animals. The secondary goal of this course is to develop the philosophical skills that we use to understand, evaluate, and defend moral theories.
Spring
1 Course Unit

PHIL 4360 Sports as Legal Systems: An Investigation into Law and Legal Thinking
Formal organized sports - from the NFL to NASCAR to the LPGA - are either genuine legal systems of a specialized kind or close analogues to legal systems. Like ordinary legal systems, they use general rules, promulgated by rule-making bodies and enforced by impartial adjudicators, to facilitate or incentivize desired behaviors and to prevent or deter undesired behaviors. As such, sports are proper subjects of study by legal scholars and philosophers. A standard course on "sports law" examines the regulation of sports by law. This course, in contrast, examines sports as legal systems in their own right. A small sample of the topics to be addressed includes: (1) What are sports, and what is their relationship to games? (The IOC has determined that bridge and chess are sports. Is this correct? Does it matter?) (2) What form should the rules take? (For example, should sports rules contain "mens rea" terms? Should they be more "rule-like" or more "standard-like"?) (3) How much discretion do and should officials have? (Chief Justice Roberts said that "judges are like umpires." Is this true? In what ways?) (4) Should on-field decisions be appealable and, if so, what should the procedures and standards of appellate review be? (For example, is the "indisputable visual evidence standard" of review in the NFL and NCAA football justified?) (5) What is cheating? (Did the badminton players at the London Olympics who tried to lose "cheat"? Do baseball players cheat when they falsely claim to be hit by a pitch?) (6) What should the rules of eligibility be? (Should women be allowed to compete against men? Should MTF transgender athletes be allowed to compete against cisgender women? Should double amputees like the South African Oscar Pistorius be allowed to compete against non-disabled runners?) In exploring questions like these, the course will, where appropriate, draw upon, and examine possible lessons for, ordinary law. The course is therefore both an in-depth and rigorous investigation into sports and a vehicle for deepening one's understanding of law. It is appropriate for law students and for non-law students seeking an engaging and accessible introduction to legal systems and legal analysis. Mutually Exclusive: LAW 7150
1 Course Unit

PHIL 4430 Modern Political Philosophy
A survey of several significant works in modern political philosophy, including Thomas Hobbes's, Leviathan; John Locke's, Second Treatise on Government and Letter Concerning Toleration; David Hume's 'Of the Original Contract' and 'On Justice'; John Stuart Mill's Utilitarianism, On Liberty, and The Subjection of Women; excerpts from Karl Marx's Capital and other writings; and John Rawls's A Theory of Justice.
Not Offered Every Year
1 Course Unit

PHIL 4470 Norms and Nudges
Social norms are the rules we live by, and we encounter them in any area of our lives. Social norms often guarantee the smooth functioning of a group or organization. Sometimes, however, these norms are inefficient or do not benefit society at large. What can we do to change these harmful collective behaviors? Social psychology, philosophy, sociology, rational-choice, legal theory, and even economics, are investigating and theorizing pro-social behavior, justice motivation, and moral and social norms. In this course, we will examine the latest and best in this emerging multidisciplinary field. Students will be encouraged to apply its findings and methods to their area of interest.
Mutually Exclusive: BDS 5020
Prerequisite: ECON 4100 OR ECON 4101 OR MATH 4320 OR PSCI 5800 OR PSYC 2737 OR PSYC 1440
1 Course Unit

PHIL 4510 Metaphysics of Race
Historically, philosophical questions about race have been about what race is and whether it exists, the nature of racism, and social or political questions related to race or racism. This course focuses squarely on what race is and whether it exists. The first part of the course will focus on race theories and race-related debates by biologists, anthropologists, and philosophers of biology. The second part of the course will focus on race theories from philosophers of race and sociologists about race from an ordinary folk perspective. We will begin by looking at biological race theories from Francois Bernier in 1684 to J.F. Blumenbach in 1795. Next, we will study the epistemological debate about Samuel Morton's craniometry. Finally, we will explore folk race theories from W.E.B. DuBois in 1897 to present-day work from philosophers of race like Sally Haslanger, Michael Hardimon, and Joshua Glasgow. Topics covered will include, but not be limited to, classical biological race theories, experimentation and measurement in race science, biological anti-realism about race, non-biological realism about race, and meta-metaphysical issues about race theory.
Spring, odd numbered years only
1 Course Unit

PHIL 4515 Existence in Black
Racial, colonial, and other political formations have encumbered Black existence since at least the fifteenth-century. Black experiences of and reflections on these matters have been the subject of existential writings and artistic expressions ranging from the blues to reggae, fiction and non-fiction. Reading some of these texts alongside canonical texts in European existential philosophy, this class will examine how issues of freedom self, alienation, finitude, absurdity, race, and gender shape and are shaped by the global Black experience. Since Black aliveness is literally critical to Black existential philosophy, we shall also engage questions of Black flourishing amidst the potential for pessimism and nihilism.
Spring
Also Offered As: AFRC 4406, HIST 0873
1 Course Unit
PHIL 4620 Theory of Knowledge
Selected topics in Epistemology such as: bridging the gap between mainstream and formal epistemology, the familiar tripartite definition of knowledge (knowledge as justified true belief), basic logical and probabilistic models of knowledge (Hintikka, Aumann, and Bayesian) and their multi-agent variants, logical omniscience and other problems (including the epistemic closure principle), attempts at formalizing joint and common knowledge, resource-bounded knowledge, knowledge under limited logical powers, and empirical knowledge obstructed by system complexity.
Not Offered Every Year
1 Course Unit

PHIL 4640 Philosophy of Mind
This course studies particular topics in contemporary philosophy of mind and cognitive science. Examples include: the nature of consciousness, naturalistic accounts of intentionality, the nature scope of scientific explanation in studying the mind, the intersection of philosophy of mind and epistemology, and theories of agency. Typically, readings include both philosophy and empirical work from relevant sciences.
Not Offered Every Year
1 Course Unit

PHIL 4660 Philosophy of Language
This course provides an overview of 20th century analytic philosophy of language. Questions we will ask may include: How do words refer? How do they combine to express thoughts? How do words relate to concepts or to thoughts more generally? What do words and sentences mean? How do we use them to communicate with each other? How does word and sentence meaning depend on the contexts in which they are spoken or heard, or on stable features of environments of linguistic speakers?
Not Offered Every Year
Prerequisite: PHIL 1710 OR PHIL 5710
1 Course Unit

PHIL 4670 Philosophy of Mathematics
An advanced introduction to the central philosophical questions concerning the nature of scientific knowledge and its relation to experience, and the metaphysical assumptions underlying the natural sciences. Topics to be covered include: science versus pseudoscience, laws of nature, causation, determinism and randomness, theories and models in science, scientific explanation, underdetermination of theories by observation and measurement, realism and antirealism, reductionism and intertheory relations, objectivity and value judgments in science, hypothesis testing and confirmation of scientific theories, and classical paradoxes in scientific methodology.
Fall or Spring
1 Course Unit

PHIL 4680 Philosophy of Science.
An advanced introduction to the central philosophical questions concerning the nature of scientific knowledge and its relation to experience, and the metaphysical assumptions underlying the natural sciences. Topics to be covered include: science versus pseudoscience, laws of nature, causation, determinism and randomness, theories and models in science, scientific explanation, underdetermination of theories by observation and measurement, realism and antirealism, reductionism and intertheory relations, objectivity and value judgments in science, hypothesis testing and confirmation of scientific theories, and classical paradoxes in scientific methodology.
Fall or Spring
1 Course Unit

PHIL 4684 Philosophy of Psychology
An examination of major trends of thought in experimental psychology in relation to philosophy and the philosophy of science. What is the subject matter and object of explanation of experimental psychology? What is the relation between psychology and neuroscience? How is scientific psychology related to traditional philosophical investigations of the mental? The course covers the classical systems and schools of psychology (Wundt, James, behaviorism, Gestalt psychology, cognitive and perceptual psychology, and cognitive science) and such contemporary problems as consciousness, philosophical foundations of cognitive science; theories of the extended and embodied mind; and the relation between neuroscience and psychology.
Not Offered Every Year
1 Course Unit

PHIL 4684 Philosophy and Visual Perception
Central issues in the philosophy of perception from the modern period, including: what we perceive, the meaningful content of perception, and its relation to a mind-independent external world. Additional topics may include: (1) color perception and color metaphysics; (2) object perception in its interplay between Gestalt organizational factors and background knowledge; (3) the role of ecological regularities in the formation of our visual system and in the ongoing tuning of the system to the environment; (4) the geometry of visual space and the phenomenology of visual appearances of size and shape; (5) the problem of how visual scenes are experienced by means of images. Readings from authors such as Bertrand Russell, R. W. Sellars, Tim Crane, Evan Thompson, Robert Swartz, Wolfgang Metzger, Nelson Goodman, Richard Wollheim, and William Hopp, among others.
Fall or Spring
1 Course Unit

PHIL 4720 Topics in Mathematical Logic
The course focuses on topics drawn from the central areas of mathematical logic: model theory, proof theory, set theory, and computability theory.
Not Offered Every Year
Also Offered As: LGIC 4960
1 Course Unit

PHIL 4721 Logic and Computability 1
This graduate course focuses on topics drawn from the central areas of mathematical logic: model theory, proof theory, set theory, and computability theory.
Not Offered Every Year
Also Offered As: LGIC 3100
Prerequisite: MATH 3710 OR MATH 5030
1 Course Unit

PHIL 4722 Logic and Computability 2
The course is a continuation of PHIL 4721. Cross-list with MATH5710 and LGIC3200.
Not Offered Every Year
Also Offered As: LGIC 3200
Prerequisite: PHIL 4721 OR PHIL 6721 OR MATH 5700
1 Course Unit

PHIL 4723 Introduction to Mathematical Logic
An introduction to first-order logic including the completeness, compaракtness, and Lоwenheim-Skolem theorems, and Godel's incompleteness theorems.
Spring
1 Course Unit

PHIL 4770 Philosophy of Mathematics
The course will focus on the development of the foundations and philosophy of mathematics from the late nineteenth-century through the present day. Topics may include logicism, formalism, intuitionism, and the foundations of set theory. Ample consideration will be given to some of the fundamental results of mathematical logic, such as the Godel incompleteness theorems and the independence of the Continuum Hypothesis from Zermelo-Fraenkel set theory, that have had a profound impact on contemporary approaches to the philosophy of mathematics.
Not Offered Every Year
1 Course Unit

PHIL 4800 Philosophy of Science.
An advanced introduction to the central philosophical questions concerning the nature of scientific knowledge and its relation to experience, and the metaphysical assumptions underlying the natural sciences. Topics to be covered include: science versus pseudoscience, laws of nature, causation, determinism and randomness, theories and models in science, scientific explanation, underdetermination of theories by observation and measurement, realism and antirealism, reductionism and intertheory relations, objectivity and value judgments in science, hypothesis testing and confirmation of scientific theories, and classical paradoxes in scientific methodology.
Fall or Spring
1 Course Unit

PHIL 4840 Philosophy of Psychology
An examination of major trends of thought in experimental psychology in relation to philosophy and the philosophy of science. What is the subject matter and object of explanation of experimental psychology? What is the relation between psychology and neuroscience? How is scientific psychology related to traditional philosophical investigations of the mental? The course covers the classical systems and schools of psychology (Wundt, James, behaviorism, Gestalt psychology, cognitive and perceptual psychology, and cognitive science) and such contemporary problems as consciousness, philosophical foundations of cognitive science; theories of the extended and embodied mind; and the relation between neuroscience and psychology.
Not Offered Every Year
1 Course Unit

PHIL 4843 Philosophy and Visual Perception
Central issues in the philosophy of perception from the modern period, including: what we perceive, the meaningful content of perception, and its relation to a mind-independent external world. Additional topics may include: (1) color perception and color metaphysics; (2) object perception in its interplay between Gestalt organizational factors and background knowledge; (3) the role of ecological regularities in the formation of our visual system and in the ongoing tuning of the system to the environment; (4) the geometry of visual space and the phenomenology of visual appearances of size and shape; (5) the problem of how visual scenes are experienced by means of images. PHIL 4991 Topics in Philosophy
This advanced undergraduate topics seminar meets with the graduate seminar PHIL 5991. Topic will vary by semester.
Not Offered Every Year
1 Course Unit

PHIL 4998 Directed Honors Research
Open only to senior majors in philosophy. Student arranges with a faculty member to do an honors thesis on a suitable topic.
Fall or Spring
1 Course Unit

PHIL 5113 Aristotle's Ethics
A study of Aristotle's ethical works, with emphasis on the NICOMACHEAN ETHICS. Topics may include moral psychology, practical reasoning, the nature of the good, emotion and reason, responsibility, and friendship.
Not Offered Every Year
1 Course Unit

PHIL 5114 Topics in Aristotle
Graduate seminar focusing on Aristotle. Topic will vary by semester.
1 Course Unit

PHIL 5115 Stoicism
A study of some major texts in Ancient Greek Stoicism, the school founded by Zeno of Citium in the post-Aristotelian period. Topics may include: ethics, natural philosophy, epistemology, and metaphysics. Authors may include: Cicero, Seneca, Epictetus, and Marcus Aurelius. All works will be read in English translation.
Not Offered Every Year
1 Course Unit

PHIL 5116 Topics in Hellenistic Philosophy
Selected topics in the philosophy of the ancient Academicians, Stoics, Epicureans, and their later successors in the Roman world.
Not Offered Every Year
1 Course Unit

PHIL 5150 Topics: Renaissance Culture
Please see department website for a current course description at: http://www.sas.upenn.edu/italians/graduate/courses
Not Offered Every Year
Also Offered As: CLST 7704, COML 5450, ITAL 5400
1 Course Unit

PHIL 5170 Topics in Early Modern Philosophy
This course addresses topics in European philosophy of the 17-18th centuries. Topics may include the natural philosophy in the early modern period, the relation of metaphysics to the 'sciences' (including what is meant by "metaphysics", and what falls under the scope of the various sciences) as well as social, political, and ethical issues, including the role that women played, and the nascent forms of feminist that emerged in the early modern era.
Not Offered Every Year
1 Course Unit

PHIL 5199 Nietzsche's Modernity and the Death of God
"God is dead." This famous, all too famous death sentence, issued by the 19th-century German philosopher Friedrich Nietzsche, also signaled the genesis of a radical challenge to traditional notions of morality, cultural life, and the structure of society as a whole. In this course we will examine both the "modernity" of Nietzsche's thought and the ways in which his ideas have helped to define the very concept of Modernity (and, arguably, Postmodernity) itself. In exploring the origin and evolution of Nietzsche's key concepts, we will trace the ways in which his work has been variously revered or refuted, championed or co-opted, for more than a century. We will survey his broad influence on everything from philosophy and literature to music and art, theater and psychology, history and cultural theory, politics and popular culture. Further, we will ask how his ideas continue to challenge us today, though perhaps in unexpected ways. As we will see, Nietzsche wanted to teach us "how to philosophize with a hammer."
Not Offered Every Year
1 Course Unit

PHIL 5200 Topics in Continental Philosophy
This graduate seminar will examine different traditions and topics in contemporary Continental philosophy, such as phenomenology, structuralism and post-structuralism, hermeneutics, genealogy, and deconstruction. Examples of authors we will read can include Husserl, Heidegger, Merleau-Ponty, Levinas, Gadamer, and Foucault.
1 Course Unit

PHIL 5330 Contemporary Ethics
Selected topics in contemporary ethical theory. Recent topics have included rationality and sources of normativity. Semester-specific description available in course syllabus.
Not Offered Every Year
1 Course Unit

PHIL 5331 Virtue Ethics, Ancient and Modern
This will be a survey of Ancient Greek theories of virtue ethics, as well as an examination of contemporary Neo-Aristotelian developments of the virtue ethical tradition.
1 Course Unit

PHIL 5389 Topics In Aesthetics
Topic title for Spring 2018: Walter Benjamin. Walter Benjamin (1892-1940) is a philosopher whose writings on art, literature, and politics have had tremendous influence on many disciplines in the Humanities and Social Studies. He has been variously described as one of the leading German-Jewish thinkers, and a secular Marxist theorist. With the publication of a four-volume collection of this works in English, many more of his writings have been made accessible to a wider public. Our seminar will undertake a survey of his work that begins with his studies on language and allegory, and continues with his autobiographical work, his writings on art and literature, and on the imaginary urban spaces of the nineteenth-century.
Not Offered Every Year
Also Offered As: ARTH 5871, COML 5800, GRMN 5800, JWST 5800
1 Course Unit

PHIL 5430 Topics in Political Philosophy
This is a topics-based graduate seminar in political philosophy. Examples of topics we can examine in this course include distributive justice, liberty, equality, and global justice. Course readings will be drawn from a combination of classic and more recent works on the selected topics.
Not Offered Every Year
1 Course Unit
PHIL 5431 Contemporary Political Philosophy
A discussion of selected works and topics in contemporary political theory.
Not Offered Every Year
1 Course Unit

PHIL 5439 Hannah Arendt: Literature, Philosophy, Politics
The seminar will focus on Arendt's major work, The Origins of Totalitarianism (and its three parts, Anti-Semitism, Imperialism, Totalitarianism). We will also discuss the reception of this work and consider its relevance today.
Not Offered Every Year
Also Offered As: COML 6120, ENGL 6120, GRMN 6120, JWST 6120
1 Course Unit

PHIL 5450 Philosophy of Law
This seminar will examine leading academic theories of constitutional interpretation, starting with classic texts by (for illustration) Thayer, Wechsler, Ely, Bobbitt, Dworkin, and Scalia, and emphasizing current debates within originalism and between originalists and their critics. While the focus will be on American constitutional interpretation, we will also see how that literature relates to more "philosophical" or "jurisprudential" accounts of the contents of law.
Not Offered Every Year
1 Course Unit

PHIL 5451 Rationality, Morality and Law
This class will be dedicated to investigating topics related to rationality in its many forms. Potential areas of study are metaethics, epistemology, moral psychology, and the philosophies of mind, language, and action.
UNDERGRADUATES NEED PERMISSION.
Not Offered Every Year
1 Course Unit

PHIL 5455 Law and Philosophy
This graduate seminar explores recent work at the forefront of legal philosophy and adjacent fields, particularly moral, social, and political philosophy. In two-week units, seminar participants will discuss a recently published paper (in the first week) and in the second week, participants (along with other faculty) will meet with the paper's author for further discussion in which students will be given priority. The goal is to explore new work in the field in great depth, and in so doing develop students' analytic skills and their knowledge of the present state of the literature.
Fall
1 Course Unit

PHIL 5560 Topics in Philosophy of Education
In this course, we will examine problems in contemporary philosophy of education, including: how much control over a child's education ought to be allocated to parents and how much to the state; what role, if any, ought religion to play in education; how do race and gender impact individuals' educational experiences and how should such issues should be addressed in the classroom; what sort of (if any) civic education ought to be taught in schools (especially in wartime such as in the post 9-11 USA); and how should schools be funded? We will deal with a number of case studies, mostly recent, but some crucial historical cases as well. Our readings will be primarily philosophical texts, supplemented with those from other fields, such as psychology, history and sociology, in order to provide empirical context to the theoretical problems facing education today.
Not Offered Every Year
1 Course Unit

PHIL 5561 Equality, Justice, and Inclusion in Higher Education
Higher education has recently been a topic of intense discussion and attention. While many more people are entering colleges and universities, these institutions have come under scrutiny for perpetuating and entrenching inequality even as students turn to them as sites of social mobility. In this class, we will look at empirical and philosophical work on higher education to consider questions such as: What are the aims of higher education? How should we conceptualize the role of universities in colleges in promoting (or undermining) justice? Who should universities serve (and who have universities typically served)? Are universities sites of upward mobility or do they entrench existing inequalities? Do elite universities have special civic or political obligations? How should we balance academic freedom and inclusivity on college campuses? We will read recent work from Sigal Ben-Porath, Harry Brighouse, Anthony Jack, Amy Gutmann, Sara Goldrick-Rab, Michael Sandel, Gina Schouten, Nicole Stephens, Paul Tough, among others.
1 Course Unit

PHIL 5562 Topics in Epistemology
This seminar will cover topics of interest to contemporary epistemologists. Possible topics may include skepticism, accounts of knowledge and justification, virtue epistemology, formal epistemology, social epistemology, feminist epistemology, meta-epistemology and epistemic normativity.
Not Offered Every Year
1 Course Unit

PHIL 5563 Philosophy of Action
This course will cover debates in contemporary action theory. Some possible topics include intentional action, practical knowledge, freedom of action, long-term planning, commitment, reasons for action, self-governance, practical reasoning, and collective agency.
1 Course Unit

PHIL 5564 Philosophy of Mind
This course explores core issues in philosophy of mind, such as: the nature of mental states and events, the mind-body problem, and the relationship between philosophy of mind and related disciplines, such as cognitive science. Specific topics may include: identity theories, grounding physicalism, functionalism, computationalism, disjunctivism and knowledge-first theories, internalism and externalism, consciousness, self-knowledge, perception, emotion, action, representationalism, mental causation, and intersections with psychology, artificial intelligence, linguistics, and neuroscience.
UNDERGRADUATES NEED PERMISSION.
Not Offered Every Year
1 Course Unit

PHIL 5565 Topics in Philosophy of Language
This course explores core issues in philosophy of language, such as: meaning, reference, truth, communication, speech acts, the norms governing language use, and the relationship between philosophy of language and related disciplines, such as linguistics. Specific topics may include: the nature of propositions, truth, context-sensitive expressions, the relationship between logical structure and linguistic structure, the relationship between mental and linguistic meaning, the mechanisms of communication, the semantic/pragmatic distinction, the norms of assertion, relativism, expressivism, injustice in linguistic communication.
Not Offered Every Year
1 Course Unit
PHIL 5710 Introduction to Logic
This graduate-level course provides an introduction to some of the fundamental ideas of logic. Topics will include truth functional logic, quantificational logic, and logical decision problems.
Fall or Spring
Mutually Exclusive: PHIL 1710
1 Course Unit

PHIL 5800 Topics in the Philosophy of Science
A graduate seminar on selected topics in the philosophy of science. Undergraduates need permission.
Not Offered Every Year
1 Course Unit

PHIL 5840 Philosophy of Psychology
An investigation of issues that arise from scientific psychology and are investigated philosophically or have implications for philosophy. Specific topics vary by semester.
Not Offered Every Year
1 Course Unit

PHIL 5950 MLA Proseminar in Philosophy: World Philosophies
Most philosophy as it is taught in universities in the USA focuses on western philosophy. But people across the globe practice philosophy, often in a wide variety of genres and using a range of methods, and sometimes to grapple with problems and questions that grow out of local lived experience. This course focuses on a range of philosophies from around the world, including texts from Latin America, Indigenous North and South America, Africa and Asia. In addition to gaining a broader understanding of how philosophy has been practiced, and continues to be practiced, around the world, we will spend time interrogating the nature of philosophy itself, and what we can learn about our discipline by expanding our view of its practitioners and the modes in which it is practiced.
1 Course Unit

PHIL 5955 Contemporary Continental Philosophy
This MLA seminar is an introduction to 20th-century continental European philosophy, focusing on the origins and development of phenomenology, existentialism, hermeneutics, and deconstruction. No previous background in philosophy is required. We will begin with an introduction to the phenomenology of Edmund Husserl and the contemporary debate over its proper interpretation. Then we will examine three existentialist critics of Husserl, whose philosophies have influenced much of recent continental thought: Martin Heidegger, Jean-Paul Sartre, and Maurice Merleau-Ponty. Finally, we will examine the important influence of phenomenology and existentialism on contemporary trends in continental philosophy as exhibited in works by Paul Ricoeur, Hans Georg Gadamer, Jacques Derrida, Hannah Arendt, and Emmanuel Levinas. Finally, we will examine the important influence of phenomenology and existentialism on contemporary trends in continental philosophy as exhibited in works by Paul Ricoeur, Hans Georg Gadamer, Jacques Derrida, Hannah Arendt, and Emmanuel Levinas.
1 Course Unit

PHIL 5956 MLA Seminar Philosophy & Psychoanalysis: Freud & the Interpretation of Culture
MLA proseminar. More than a century after Sigmund Freud transformed - for better or worse - our understanding of what it means to be human, Freudian psychoanalysis still exerts a profound influence in our culture. This seminar course is an exploration of the philosophical issues raised by Freudian psychoanalysis as a theory of mind and culture. After a close reading of Freud’s theoretical writings on the nature of the mind and human behavior, we will explore why Freud’s theories - despite more than a century of criticism - remain highly influential as a framework for the interpretation of art, literature, religion, society, politics, and history. Readings from Freud’s “meta-psychological”, cultural, and social writings, Paul Ricoeur’s Freud and Philosophy, and other contemporary authors in philosophy, psychoanalysis, and other fields. No previous knowledge of psychoanalysis, psychology, or philosophy required.
1 Course Unit

PHIL 5960 MLA Seminar in Political Philosophy
This is a topics-based MLA proseminar in political philosophy. Examples of topics we can examine in this course include distributive justice, liberty, equality, and global justice. Course readings will be drawn from a combination of seminal and more recent works on the selected topics.
1 Course Unit

PHIL 5961 MLA Seminar: The Idea of Nationalism
Nationalism has been the most important geo-political phenomenon of the past two hundred years. This MLA proseminar course will explore the ideology of nationalism, what it means, its philosophical foundations, underlying assumptions about the nature of human identity, moral implications, and political consequences. What is a nation? Does every identifiable ethnic or national group have a valid claim to a nation-state of its own? How are claims to national self-determination justified? How do nations differ from states, peoples, groups, communities, and citizenries? How does nationalism relate to notions of “chosenness” or ethnic and cultural superiority? Why do nationalist movements seem to so often engender political extremism and violent ethno-political conflicts? Is national self-determination compatible with our commitments to individualism, rationality, and universal human rights?
1 Course Unit
PHIL 5962 Ethnicity, Identity and Nationhood
This MLA seminar will deepen our understanding of the role that political and cultural ideologies -- such as liberalism, conservatism, nationalism, totalitarianism, fundamentalism, etc. -- play in contemporary public discourse and the psychology of ideological thinking that makes political conflicts so difficult to resolve. Drawing on a series of case studies in contemporary political, social and cultural conflict such as recent political campaigns and nationalist movements around the globe, we will identify and examine the ideologies driving such conflicts, and from these we will draw out the common philosophical characteristics and psychological features of ideological thinking. We will begin by considering a series of case studies in contemporary political, social and cultural conflict, drawn from contemporary events such as the 2012 political campaigns, the 2011 debt ceiling debate in Congress, nationalist movements around the globe, etc. We will identify and examine the ideologies driving such conflicts, and from these we will draw out the common philosophical characteristics and psychological features of ideological thinking. Throughout, we will seek to understand the deep attraction of ideological commitments and why they tend to push public discourse and behavior to extremes and even violence. Finally, we will consider efforts to reduce or resolve ideological conflicts through strategies of political compromise, dialogue, tolerance, and democratic deliberation.
1 Course Unit

PHIL 5966 MLA Seminar in Philosophy of Education
In this MLA proseminar course, we will examine some of the most pressing problems in contemporary philosophy of education. These problems include: how much control over a child's education ought to be allocated to parents and how much to the state; what role, if any, ought religion to play in education; how do race and gender impact individuals' educational experiences and how should such issues should be addressed in the classroom; what sort of (if any) civic education ought to be taught in schools (especially in wartime such as in the post 9-11 USA); and how should schools be funded? We will deal with a number of case studies, mostly recent, but some crucial historical cases as well. Our readings will be primarily philosophical texts, supplemented with those from other fields, such as psychology, history and sociology, in order to provide empirical context to the theoretical problems facing education today. As a seminar, the instructor welcomes student participation, including students bringing their own interests in educational theory to the classroom. At the same time, the instructor will lecture to the extent necessary to make classroom discussion especially rich.
1 Course Unit

PHIL 5970 Philosophy of Science
An MLA seminar. For the last four centuries, scientific research has provided our most reliable understanding of the world. Although the scientific revolution started modestly with attempts to understand stellar movement, we now know the age and constitution of the universe, the basis of heredity, and we can make and break chemical bonds at will. By all appearances, science seems to have made substantial progress from the scientific revolution to the global scientific enterprise of the 21st century. This course is about how science has generated this knowledge, and whether it has been as progressive and reliable as it seems. We will consider methodological issues such as the sources of scientific knowledge, objectivity, the growing importance of computation in the natural sciences, and the nature of modeling. We will examine products of scientific research: explanations, models, theories, and laws of nature. And we will discuss questions about science and values, including whether non-scientific values can and should enter scientific research, the relationship between science and religion, and the role of the public in guiding the scientific enterprise.
1 Course Unit

PHIL 5991 Topics in Philosophy
This topics seminar is restricted to philosophy graduate students (undergraduates require permission from the department). Topic will vary by semester.
Not Offered Every Year
1 Course Unit

PHIL 6000 Proseminar
An intensive seminar for first-year doctoral students, with readings drawn from recent and contemporary epistemology and metaphysics, broadly construed. Students will develop their abilities to present and discuss philosophical texts, and to write and revise their own papers.
Fall
1 Course Unit

PHIL 6112 Plato's Selected Dialogues
A study of selected dialogues of Plato. All texts will be read in translation. No prior experience in Plato is required, but students should have some background in philosophy. Dialogues studied will vary from term to term.
Not Offered Every Year
1 Course Unit

PHIL 6113 Aristotle
Graduate seminar focusing on the study of Aristotle's main writings on language, reality, knowledge, nature and psychology. All texts will be read in English translation. No background in Greek philosophy or knowledge of Greek is required, although previous work in philosophy is strongly recommended.
Not Offered Every Year
1 Course Unit

PHIL 6181 Kant I
The graduate course will concentrate on the Critique of Pure Reason and discuss in detail Kant's conception of knowledge and experience, his criticism of traditional metaphysics and the resulting project of a system of transcendental philosophy.
Not Offered Every Year
Also Offered As: GRMN 5510
1 Course Unit
PHIL 6182 Kant II
This graduate course is a study of Kant’s moral and political philosophy. Texts may include Kant’s Lectures on Ethics, Groundwork for the Metaphysics of Morals, Critique of Practical Reason, Religion within the Boundaries of Mere Reason, and Metaphysics of Morals.
Not Offered Every Year
Also Offered As: GRMN 5520
1 Course Unit

PHIL 6191 Hegel
A graduate seminar on Hegel’s philosophy, focusing primarily on his Phenomenology of Spirit, with attention to relevant passages in other works such as Hegel’s Logic and Philosophy of Right. Topics may include: (1) Hegel’s conception of philosophy, (2) the development of his system, (3) the problem of an introduction to his system (Phenomenology of Spirit), (4) Hegel’s criticism of traditional metaphysics, (5) his notion of a ‘concept’ (Begriff), his theory of the Idea. The seminar will focus primarily on some of Hegel’s early Jena writings, his Phenomenology of Spirit, on passages from different versions of Hegel’s Logic and (maybe) on aspects of his Philosophy of Right. Topics that are dealt with include: (1) Hegel’s conception of philosophy, (2) the development of his system, (3) the problem of an introduction to his system (Phenomenology of Spirit), (4) Hegel’s criticism of traditional metaphysics, (5) his notion of a ‘concept’ (Begriff), his theory of the Idea. Other topics might become of interest as well.
Not Offered Every Year
Also Offered As: GRMN 5520
1 Course Unit

PHIL 6330 Metaethics
This graduate course is an investigation of the main questions and problems in metaethics since the turn of the 20th century. We will investigate questions about the metaphysics of morality, the philosophy of language of moral talk, the philosophy of mind of moral thought, the epistemology of morality, and the objectivity of morality.
Not Offered Every Year
1 Course Unit

PHIL 6331 Normative Ethics
A discussion of contemporary debates in normative ethical theory.
Spring
1 Course Unit

PHIL 6430 Modern Political Philosophy
A graduate-level survey of several works in modern political philosophy, including Thomas Hobbes’s, Leviathan; John Locke’s, Second Treatise on Government and Letter Concerning Toleration; David Hume’s ‘Of the Original Contract’ and ‘On Justice’; John Stuart Mill’s Utilitarianism, On Liberty, and The Subjection of Women; excerpts from Karl Marx’s Capital and other writings; and John Rawls’s A Theory of Justice.
Not Offered Every Year
1 Course Unit

PHIL 6510 Metaphysics of Race
Historically, philosophical questions about race have been about what race is and whether it exists, the nature of racism, and social or political questions related to race or racism. This course focuses squarely on what race is and whether it exists. The first part of the course will focus on race theories and race-related debates by biologists, anthropologists, and philosophers of biology. The second part of the course will focus on race theories from philosophers of race and sociologists about race from an ordinary folk perspective. We will begin by looking at biological race theories from Francois Bernier in 1684 to J.F. Blumenbach in 1795. Next, we will study the epistemological debate about Samuel Morton’s craniometry. Finally, we will explore folk race theories from W.E.B. DuBois in 1897 to present-day work from philosophers of race like Sally Haslanger, Michael Hardimon, and Joshua Glasgow. Topics covered will include, but not be limited to, classical biological race theories, experimentation and measurement in race science, biological anti-realism about race, biological realism about race, non-biological realism about race, and meta-metaphysical issues about race theory.
Spring, odd numbered years only
1 Course Unit

PHIL 6515 Existence in Black
Racial, colonial, and other political formations have encumbered Black existence since at least the fifteenth-century. Black experiences of and reflections on these matters have been the subject of existential writings and artistic expressions ranging from the blues to reggae, fiction and non-fiction. Reading some of these texts alongside canonical texts in European existential philosophy, this class will examine how issues of freedom, self, alienation, finitude, absurdity, race, and gender shape and are shaped by the global Black experience. Since Black aliveness is literally critical to Black existential philosophy, we shall also engage questions of Black flourishing amidst the potential for pessimism and nihilism.
Spring
1 Course Unit

PHIL 6620 Theory of Knowledge
Graduate seminar focusing on elected topics in Epistemology such as: bridging the gap between mainstream and formal epistemology, the familiar tripartite definition of knowledge (knowledge as justified true belief), basic logical and probabilistic models of knowledge (Hintikka, Aumann, and Bayesian) and their multi-agent variants, logical omniscience and other problems (including the epistemic closure principle), attempts at formalizing joint and common knowledge, resource-bounded knowledge, knowledge under limited logical powers, and empirical knowledge obstructed by system complexity.
Not Offered Every Year
1 Course Unit

PHIL 6640 Philosophy of Mind
This graduate course studies particular topics in contemporary philosophy of mind and cognitive science. Examples include: the nature of consciousness, naturalistic accounts of intentionality, the nature scope of scientific explanation in studying the mind, the intersection of philosophy of mind and epistemology, and theories of agency. Typically, readings include both philosophy and empirical work from relevant sciences.
Not Offered Every Year
1 Course Unit
PHIL 6660 Philosophy of Language
This graduate-level course provides an overview of 20th century analytic philosophy of language. Questions we will ask may include: How do words refer? How do they combine to express thoughts? How do words relate to concepts or to thoughts more generally? What do words and sentences mean? How do we use them to communicate with each other? How does word and sentence meaning depend on the contexts in which they are spoken or heard, or on stable features of environments of linguistic speakers?
Not Offered Every Year
1 Course Unit

PHIL 6720 Topics in Logic
This graduate course focuses on topics drawn from the central areas of mathematical logic: model theory, proof theory, set theory, and computability theory.
Not Offered Every Year
Also Offered As: MATH 6770
1 Course Unit

PHIL 6721 Logic and Computability 1
The course focuses on topics drawn from the central areas of mathematical logic: model theory, proof theory, set theory, and computability theory.
Not Offered Every Year
Also Offered As: MATH 5700
1 Course Unit

PHIL 6722 Logic and Computability 2
A continuation of PHIL 6721.
Not Offered Every Year
Also Offered As: MATH 5710
1 Course Unit

PHIL 6723 Introduction to Mathematical Logic
A graduate-level introduction to first-order logic including the completeness, compactness, and Lowenheim-Skolem theorems, and Godel's incompleteness theorems.
Spring
1 Course Unit

PHIL 6770 Philosophy of Mathematics
This graduate course will focus on the development of the foundations and philosophy of mathematics from the late nineteenth-century through the present day. Topics may include logicism, formalism, intuitionism, and the foundations of set theory. Ample consideration will be given to some of the fundamental results of mathematical logic, such as the Godel incompleteness theorems and the independence of the Continuum Hypothesis from Zermelo-Fraenkel set theory, that have had a profound impact on contemporary approaches to the philosophy of mathematics.
Not Offered Every Year
1 Course Unit

PHIL 6800 Philosophy of Science.
This graduate seminar is an advanced introduction to the central philosophical questions concerning the nature of scientific knowledge and its relation to experience, and the metaphysical assumptions underlying the natural sciences. Topics to be covered include: science versus pseudoscience, laws of nature, causation, determinism and randomness, theories and models in science, scientific explanation, underdetermination of theories by observation and measurement, realism and antirealism, reductionism and intertheory relations, objectivity and value judgments in science, hypothesis testing and confirmation of scientific theories, and classical paradoxes in scientific methodology.
Fall or Spring
1 Course Unit

PHIL 6843 Philosophy and Visual Perception
Graduate seminar exploring central issues in the philosophy of perception from the modern period, including: what we perceive, the meaningful content of perception, and its relation to a mind-independent external world. Additional topics may include: (1) color perception and color metaphysics; (2) object perception in its interplay between Gestalt organizational factors and background knowledge; (3) the role of ecological regularities in the formation of our visual system and in the ongoing tuning of the system to the environment; (4) the geometry of visual space and the phenomenology of visual appearances of size and shape; (5) the problem of how visual scenes are experienced by means of images. Readings from authors such as Bertrand Russell, R. W. Sellars, Tim Crane, Evan Thompson, Robert Swartz, Wolfgang Metzger, Nelson Goodman, Richard Wollheim, and William Hopp, among others.
Fall or Spring
1 Course Unit

PHIL 6991 Consortium Course
For graduate students taking courses at other institutions belonging to the Philadelphia area Philosophical Consortium.
Fall or Spring
1 Course Unit

PHIL 6999 Independent Study
Directed readings in consultation with individual faculty members.
Fall or Spring
1-3 Course Units

PHIL 7000 Dissertation Workshop
Registration required for all third-year doctoral students. Third-year students and beyond attend and present their dissertation work or their preliminary exam prospectus. From time to time, topics pertaining to professional development and dissertation writing will be discussed.
Two Term Class, Student must enter first term; credit given after both terms are complete
1 Course Unit

PHIL 9900 Masters Thesis
Coursework at the masters thesis level.
Fall or Spring
0 Course Units

PHIL 9990 Masters Thesis
Ph.D. candidates, who have completed all course requirements and have an approved dissertation proposal, work on their dissertation under the guidance of their dissertation supervisor and other members of their dissertation committee.
Fall or Spring
0 Course Units
**PHIL 9998 Teaching Practicum (Independent Study)**
Supervised teaching experience. Four semesters are required of all Doctoral students in philosophy.
Fall or Spring
1 Course Unit

**PHIL 9999 Independent Study**
Directed readings in consultation with individual faculty members.
Fall or Spring
1-3 Course Units

---

**Philosophy, Politics, Economics (PPE)**

**PPE 0999 Transfer Credit**
Transfer credit for course that we do not have a direct equivalent in our published curriculum but which meets the spirit of the major. For the PPE major.
1 Course Unit

**PPE 1001 Introduction to PPE: Ethics and Economics of Wealth Creation**
This interdisciplinary course provides an overview of how markets work, and under what conditions they create wealth and prosperity. We will also consider when markets fail to create wealth or function well. Along the way, we will think about the role of political institutions in structuring market exchange and allocating resources. (For Penn PPE majors, this class will satisfy the philosophy foundation, or a thematic concentration class for Choice and Behavior or Distributive Justice).
Not Offered Every Year
1 Course Unit

**PPE 2355 Introduction to Political Psychology**
This course will explore psychological approaches to understanding political beliefs, attitudes, and actions at the levels of both individual citizens and national leaders. It will also explore the possibility that psychological science itself is not immune to the political debates swirling around it. Specific topics will include: the workings of belief systems (and their power to shape what we "see"), cognitive biases (and their power to cause miscalculations), sacred values and their role in stabilizing belief systems and social interaction, personality and ideology (the linkages between the personal and the political), and clashing conceptions of morality and distributive and corrective justice (striking variations among people in what they consider to be fair). We shall also explore some topics that have sparked controversy in the psychological research literature and that tend to polarize opinion along political lines, including work on intelligence and unconscious bias.
Fall or Spring
Also Offered As: PSYC 2355
Prerequisite: PSYC 0001 OR COGS 1001
1 Course Unit

**PPE 3001 Strategic Reasoning**
This course is about strategically interdependent decisions. In such situations, the outcome of your actions depends also on the actions of others. When making your choice, you have to think what the others will choose, who in turn are thinking what you will be choosing, and so on. Game Theory offers several concepts and insights for understanding such situations, and for making better strategic choices. This course will introduce and develop some basic ideas from game theory, using illustrations, applications, and cases drawn from business, economics, politics, sports, and even fiction and movies. Some interactive games will be played in class. There will be little formal theory, and the only pre-requisites are some high-school algebra and having taken Econ 1. However, general numeracy (facility interpreting and doing numerical graphs, tables, and arithmetic calculations) is very important. This course will also be accepted by the Economics department as an Econ course, to be counted toward the minor in Economics (or as an Econ elective).
Fall
Also Offered As: ECON 0120
Prerequisite: ECON 0100
1 Course Unit

**PPE 3002 Public Policy Process**
This course introduces students to the theories and practice of the policy-making process. There are four primary learning objectives. First, understanding how the structure of political institutions matter for the policies that they produce. Second, recognizing the constraints that policy makers face when making decisions on behalf of the public. Third, identifying the strategies that can be used to overcome these constraints. Fourth, knowing the toolbox that is available to participants in the policy-making process to help get their preferred strategies implemented. While our focus will primarily be on American political institutions, many of the ideas and topics discussed in the class apply broadly to other democratic systems of government.
Spring
Also Offered As: PSCI 1200
1 Course Unit

**PPE 3003 Behavioral Economics and Psychology**
Our understanding of markets, governments, and societies rests on our understanding of choice behavior, and the psychological forces that govern it. This course will introduce you to the study of choice, and will examine in detail what we know about how people make choices, and how we can influence these choices. It will utilize insights from psychology and economics, and will apply these insights to domains including risky decision making, intertemporal decision making, and social decision making.
Fall
Also Offered As: PSYC 2750
1 Course Unit
PPE 3950 Center for Social Norms & Behavioral Dynamics Research Seminar
This “research seminar” takes its model from the Penn Independent Study and pairs interested students with researchers at the Center for Social Norms & Behavioral Dynamics sited here at Penn. SNOBED fellows work with organizations across the world to identify, measure, and influence norms and behaviors at scale. PPE majors will be paired with SNOBED-affiliated researchers and faculty and work as junior research fellows, learning fundamental approaches and the basics of research methods in the day-to-day environment of an active research center with mentors working on cutting edge research. Examples of current projects include: research on poverty in the US funded by the Templeton Foundation; on toilet use and sanitation in India funded by the Gates Foundation; and on corruption in Nigeria and Colombia funded by Chatham House and USAID.
Fall or Spring
1 Course Unit

PPE 3999 Independent Study
Student arranges with a faculty member to pursue a research project on a suitable topic. For more information about research and setting up independent studies, visit: https://ppe.sas.upenn.edu/study/curriculum/independent-studies
Fall or Spring
1 Course Unit

PPE 4000 Research in Philosophy, Politics & Economics
Led by fellows in the Philosophy, Politics and Economics program, this course teaches students how to conduct research in PPE with an emphasis on creating a well-formed research question, determining what kinds of data or scholarly research bears on that question, and how to carry out an interdisciplinary, research-driven project on that question.
Fall or Spring
1 Course Unit

PPE 4001 Experiments in Behavioral Ethics
In reality, our understanding of different mechanisms and (economic) relationships is hampered by the lack of data. More often than not, either the observation itself is difficult or the data is not reliable. Over the last decades, economic experiments have become a vital part of the scientific discourse, facilitating our understanding of the world we live in (much like in Biology, Chemistry, Physics or the like). Economic experiments allow exploring economic behavior under controlled conditions by generating observations under different experimental designs and controlled conditions. Pioneering this field of research, Daniel Kahneman and Vernon Smith were awarded the Nobel memorial prize in recognition of their work on behavioral and experimental economics. In this course, we provide you with the methodology of how to develop a research idea and a proper experimental design that allows to explore this idea. Essentially, you will learn how to think about ideas, generate predictions, and how to use economic experiments to test them.
1 Course Unit

PPE 4500 PPE Capstone: Philosophy
A PPE Capstone seminar offered by faculty in Philosophy. As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission). For a detailed course description visit: https://ppe.sas.upenn.edu/study/curriculum/advanced-interdisciplinary-courses

1 Course Unit

PPE 4801 PPE Capstone: Judgment and Decision Making
The interdisciplinary study of individual’s and groups’ judgments and decisions, including normative, descriptive, and prescriptive theories. As a PPE Capstone, this is an integrative senior seminar (open to others by departmental permission). For a detailed course description visit: https://ppe.sas.upenn.edu/study/curriculum/advanced-interdisciplinary-courses
Not Offered Every Year
1 Course Unit
PPE 4802 PPE Capstone: Obedience
Though almost half a century old, Milgram's 1961-1962 studies of "destructive obedience" continue to puzzle, fascinate, and alarm. The main reason for their continued grip on the field's attention (other than the boldness of the idea and elegance of execution) may be simply that they leave us with a portrait of human character that is radically different from the one that we personally wish to endorse or that the wider culture teaches us to accept. In this seminar, we will take an in-depth look at these famous studies (along with the more recent replications) and explore their various psychological, political and philosophical ramifications.
Not Offered Every Year
Also Offered As: PSYC 3780, PSYC 4780
1 Course Unit

PPE 4999 Advanced Research
This course may be taken by a PPE student for advanced research. Enrollment by permit only.

Physical and Life Sciences (PHYL)

PHYL 1200 Foundations of Life Sciences
Foundations of Life Sciences is a required course for students in the physical and life sciences concentration that also fulfills the Scientific Process foundational course requirement for those in other concentrations who are seeking a BAAS degree. This course will serve as an introduction to the life sciences and is concerned with the relationship of structure to function, the mechanisms underlying energy capture and retrieval, information storage and flow, and the regulation and coordination of these core activities in living systems with an eye to their evolutionary origins. In this course, students will gain exposure to topics such as metabolism, membrane transport, genetics, physiology and ecology. Each of the topics covered will involve an interactive lecture component, a discussion board prompt, a problem set, an activity centered on the scientific method, and a reading comprehension quiz. Note that this course is designed for students with a range of quantitative reasoning skills and those who have had no prior exposure to college-level science. Anyone who is interested in knowing more about the study of living things and in delving into how they do what they do is encouraged to take this course!
1 Course Unit

PHYL 1600 Foundations of Physical & Chemical Sciences
How do the microscopic particles and invisible forces interact to form the world we experience daily? This course serves as a college-level introduction to the physical and chemical sciences and uses an algebra-based approach to solving word problems in these disciplines. PHYL1600 will introduce students to how microscopic particles and their properties, motions and behaviors manifest in macroscopic realities. In this course, students gain exposure to topics in physics such as motion, force, energy, heat and electromagnetism. Students will also be introduced to the topics in chemistry of the periodic table, properties of molecules, chemical reactions and phases of matter. The rules that govern energy and matter transformations will be explored. Students will discover examples of how the physical laws of the universe apply to everyday realities like cooking, energy consumption in homes, materials used in daily life, exercise, and star gazing. Note that algebra proficiency is a pre-requisite for this course and is not taught in the course directly.
PREREQUISITES: This course requires algebraic manipulations, graphical analysis, and unit conversions. Students should purchase a scientific calculator like Ti-30Xa before the course. Either MTHS2000 or MTHS1000 or another equivalent Foundational Requirement in Quantitative Reasoning is required as a pre-requisite to registering for PHYL1600.
Foundations of Physical and Chemical Sciences is a required course for students pursuing a BAAS degree with a concentration in Physical and Life Sciences. The course also fulfills the Scientific Process foundational course requirement for students in the BAAS program who are pursuing other concentrations.
1 Course Unit
PHYL 2100 Fundamental Chemical Principles
This course covers general and organic chemistry topics to build a strong foundation for more advanced chemistry or biology courses. Students will become familiar with oxidation-reduction, equilibria, reaction rates, acid-base reactions, and nuclear chemistry. The structures and reactions of alkyl halides, ketones, aldehydes, carboxylic acids, and carboxylic acid derivatives will also be introduced. Emphasis will be placed on the curved arrow mechanisms for each reaction. This course requires algebraic manipulations, graphical interpretation, and chemical problem solving and as such PHYL 1200/1600, PHYL 2100 and a Quantitative Reasoning course are all required pre-requisites.
1 Course Unit

PHYL 2200 Biochemistry – Chemical Principles of Living Systems
This course builds on the principles of general and organic chemistry discussed in PHYL 2100 to build an understanding of the molecules and chemical reactions of living organisms specifically. Students will become familiar with the structures and functions of nucleic acid, proteins, polysaccharides, triglycerides and phospholipids. The processes and pathways that synthesize, catabolize, and transfer the information in these biomolecules will be discussed in detail. Particular emphasis is placed on the enzymatic mechanisms that allow for rapid production of molecules needed for life at just the right moment. This course requires algebraic manipulations, graphical interpretation, and chemical problem solving and as such PHYL 1200/1600, PHYL 2100 and a Quantitative Reasoning course are all required pre-requisites.
1 Course Unit

PHYL 2300 Physics with Python Applications: Mechanics
An introductory, algebra-based physics course with emphasis on applications. Topics include kinematics in 1D and 2D, Newton’s Laws, uniform circular motion, energy, momentum, rotation, and simple harmonic motion. Concurrently, students will be introduced to the basics of programming in Python and will be expected to apply their programming skills to the physics applications discussed. Pre-requisite: Requires basic knowledge of algebra, geometry, and trigonometry (functions and their graphs, linear and quadratic equations, exponents and logarithms, areas of planar shapes, Pythagorean theorem, right angle trigonometry, basic trigonometric functions), scientific notation, and unit conversions. Course Objectives • Define fundamental laws and principles which govern and give meaning to our physical world. • Describe and explain physical phenomenon using discipline specific vocabulary. • Apply basic physical principles to solve problems and demonstrate the procedural knowledge necessary to arrive at a solution for some desired “to finds” from the “givens”. • Develop basic programming skills and techniques necessary to model or simulate a physical situation, analyze results, and make predictions. Pre-requisite: PHYL 1600 AND PHYL 2300
1 Course Unit

PHYL 2400 Physics with Python Applications - Electromagnetism
An introductory, algebra-based physics course with emphasis on applications. Topics include electrostatics, current electricity, magnetism, electromagnetic induction, quantum mechanics, and nuclear physics. Concurrently, students will be introduced to the basics of programming in Python and will be expected to apply their programming skills to the physics applications discussed. Pre-requisite: This course requires basic knowledge of algebra, geometry, and trigonometry (functions and their graphs, linear and quadratic equations, exponents and logarithms, areas of planar shapes, Pythagorean theorem, right angle trigonometry, basic trigonometric functions), scientific notation, and unit conversions. Students must complete PHYL 2300 and any of its prerequisites (at least one Quantitative Reasoning course) before taking PHYL 2400. PHYL 1600 is strongly recommended Course Objectives • Define fundamental laws and principles which govern and give meaning to our physical world. • Describe and explain physical phenomenon using discipline specific vocabulary. • Apply basic physical principles to solve problems and demonstrate the procedural knowledge necessary to arrive at a solution for some desired ‘to finds’ from the ‘givens’. • Develop basic programming skills and techniques necessary to model or simulate a physical situation, analyze results, and make predictions. Pre-requisite: PHYL 1600 AND PHYL 2300
1 Course Unit

Physics (PHYS)

PHYS 0008 Physics for Architects I
An introduction to the classical laws of mechanics, including static equilibrium, elasticity, and oscillations, with emphasis on topics most relevant to students in architecture. Credit is awarded for only one of the following courses: PHYS 0008, PHYS 0101, PHYS 0151, or PHYS 0171. Students with AP or Transfer Credit for PHYS 091 or 093 who complete PHYS 0008 will thereby surrender the AP or Transfer Credit.
Fall, odd numbered years only
1 Course Unit

PHYS 0009 Physics for Architects II
Briefly reviews Newton’s laws, then introduces waves, sound, light, fluids, heat, electricity, magnetism, and circuits, with emphasis on topics most relevant to students in architecture. Illustrates physics principles using examples drawn from architecture. Students with a strong high-school physics background may take PHYS 0008 and PHYS 0009 in either order. Credit is awarded for only one of the following courses: PHYS 0009, PHYS 0102, PHYS 0151, or PHYS 0171. Students with AP or Transfer Credit for PHYS 092 or 094 who complete PHYS 0009 will thereby surrender the AP or Transfer Credit.
Fall, even numbered years only
1 Course Unit

PHYS 0016 Energy, Oil, and Global Warming
The developed world’s dependence on fossil fuels for energy production has extremely undesirable economic, environmental, and political consequences, and is likely to be mankind’s greatest challenge in the 21st century. We describe the physical principles of energy, its production and consumption, and environmental consequences, including the greenhouse effect. We will examine a number of alternative modes of energy generation - fossil fuels, biomass, wind, solar, hydro, and nuclear - and study the physical and technological aspects of each, and their societal, environmental and economic impacts over the construction and operational lifetimes. No previous study of physics is assumed.
Fall or Spring
1 Course Unit
PHYS 0050 Physics Laboratory I
Experiments in classical mechanics.
Fall or Spring
0.5 Course Units

PHYS 0051 Physics Laboratory II
Experiments in electromagnetism and optics.
Fall or Spring
0.5 Course Units

PHYS 0080 Physics and Consciousness
We will explore the basic classical and quantum physics concepts, and link them to newly observed physical phenomena and technologies, as well as to brain research, in the context of tools that physicists helped bring about like the seminal magnetic resonance imaging. The course content is mostly physics, although we link it to cognitive sciences, but the main focus is on motivating and explaining the basic physical laws behind new phenomena and related technologies. Examples include wave-particle duality and its relevance for technological applications, behavior of spin particles in a magnetic field to explain magnetic resonance imaging, ion flow through ion channels and ohm's law to explain electrical signal flow in our body, and other examples within the core of physics and bridging to interdisciplinary areas of material science and devices, biology and neuroscience. As we learn about particle spins, we will talk about brain imaging studies enabled by Nobel winning physics research. We will then discuss consciousness and free will, and read original texts by Schrodinger, Einstein and other physicists, and our course discussion will be uniquely motivated by related physical phenomena and experiments, including quantum entanglement and relativity of space and time. I will explain the basic ideas behind quantum computing and information processing, and we will learn about basic quantum logic gates and Dirac's matrix formalism in quantum mechanics. Fall
1 Course Unit

PHYS 0101 General Physics: Mechanics, Heat and Sound
An introduction to the classical laws of motion, including kinematics, forces in nature, Newton's laws of motion, conservation of energy and momentum, fluid statics and dynamics, oscillations, and waves. Suggested for students in a pre-health program. Credit is awarded for only one of the following courses: PHYS 0008, PHYS 0101, PHYS 0150, or PHYS 0170. Students with AP or Transfer Credit for PHYS 0101, or PHYS 0150 who complete PHYS 0101 will thereby surrender the AP or Transfer Credit. Fall, Spring, and Summer Terms
1.5 Course Unit

PHYS 0102 General Physics: Electromagnetism, Optics, and Modern Physics
A continuation of PHYS 0101 emphasizing an introduction to classical electricity and magnetism, light and optics, special relativity, the quantum theory of matter, and nuclear physics. Suggested for students in a pre-health program. Credit is awarded for only one of the following courses: PHYS 0009, 0102, 0151, 0171. Students with AP or Transfer Credit for PHYS who complete PHYS 0102 will thereby surrender the AP or Transfer Credit. Fall, Spring, and Summer Terms
Prerequisite: PHYS 0101 OR PHYS 0150 OR PHYS 0170
1.5 Course Unit

PHYS 0137 Community Physics Initiative
This is an Academically Based Community Service Course (ABCS). The central purpose is to work in partnership with a local high school to improve physics education outcomes for their students. An immersive classroom experience will be enriched through instructional design work and grounded in a study of science education scholarship. Fall
1 Course Unit

PHYS 0140 Principles of Physics I (without laboratory)
The topics of this calculus-based course are: Classical laws of motions; interactions between particles; conservation laws and symmetry principles; particle and rigid body motion; gravitation, harmonic motion, and applications of mechanics to real-world problems. Engineering students only. Fall or Spring
Prerequisite: MATH 1400
Corequisite: MATH 1400
1 Course Unit

PHYS 0141 Principles of Physics II (without laboratory)
The topics of this calculus-based course are electric and magnetic fields; Coulomb's, Gauss's, Ampere's, and Faraday's laws; DC and AC circuits; Maxwell's equations and electromagnetic radiation. Engineering students only. Fall, Spring, and Summer Terms
Prerequisite: PHYS 0140 AND MATH 1410
Corequisite: MATH 1410
1 Course Unit

PHYS 0150 Principles of Physics I: Mechanics and Wave Motion
This calculus-based course is recommended for science majors and engineering students. Classical laws of motion; interactions between particles; conservation laws and symmetry principles; particle and rigid body motion; gravitation, harmonic motion, and applications of mechanics to real-world problems. Credit is awarded for only one of the following courses: PHYS 0008, PHYS 0101, 0150, 0170. Students with AP or Transfer Credit for PHYS 0101, or PHYS 0150 who complete PHYS 0150 will thereby surrender the AP or Transfer Credit. Prerequisite: Students in PHYS 0150 should already have taken MATH 1400 or the equivalent, or be taking it simultaneously with PHYS 0150. Fall or Spring
1.5 Course Unit

PHYS 0151 Principles of Physics II: Electromagnetism and Radiation
The topics of this calculus-based course are electric and magnetic fields; Coulomb's, Gauss's, Ampere's, and Faraday's laws; DC and AC circuits; Maxwell's equations and electromagnetic radiation. Credit is awarded for only one of the following courses. PHYS 0009, PHYS 0102, PHYS 0151, PHYS 0171. Students with AP or Transfer Credit for PHYS 0102 or PHYS 0151 who complete PHYS 0151 will thereby surrender the AP or Transfer Credit. Prerequisite: Students in PHYS 0151 should already have taken MATH 1410 or the equivalent, or be taking it simultaneously with PHYS 0151. Fall, Spring, and Summer Terms
Prerequisite: PHYS 0150
1.5 Course Unit
PHYS 0170 Honors Physics I: Mechanics and Wave Motion
This course parallels and extends the content of PHYS 0150, at a significantly higher mathematical level. Recommended for well-prepared students in engineering and the physical sciences, and particularly for those planning to major in physics. Classical laws of motion: interaction between particles; conservation laws and symmetry principles; rigid body motion; non-inertial reference frames; oscillations. Prerequisite: Benjamin Franklin Seminar. Credit is awarded for only one of the following courses: PHYS 0008, PHYS 0101, PHYS 0150, PHYS 0170. Students with AP or Transfer Credit for PHYS 0101 or PHYS 0150 who complete PHYS 0170 will thereby surrender the AP or Transfer Credit.
Fall
Prerequisite: MATH 1400 AND (MATH 1410 OR MATH 1610)
1.5 Course Unit

PHYS 0171 Honors Physics II: Electromagnetism and Radiation
This course parallels and extends the content of PHYS 0151, at a somewhat higher mathematical level. Recommended for well-prepared students in engineering and the physical sciences, and particularly for those planning to major in physics. Electric and magnetic fields; Coulomb's, Ampere's, and Faraday's laws; special relativity; Maxwell's equations, electromagnetic radiation. Credit is awarded for only one of the following courses: PHYS 0009, PHYS 0102, PHYS 0151, or PHYS 0171. Students with AP or Transfer Credit for PHYS 0102 or PHYS 0151 who complete PHYS 0171 will thereby surrender the AP or Transfer Credit.
Spring
Prerequisite: (MATH 1410 OR MATH 1610) AND (PHYS 0150 OR PHYS 0170) AND (MATH 2400 OR MATH 2600)
1.5 Course Unit

PHYS 1100 Foundations of Data Science
This is a gateway course in programming, data analysis, and data science in Python appropriate for all College students. The course will cover a range of topics from basic programming, data manipulation, data visualization, randomness, probability, statistics, predictions, interpreting results, and data ethics. Some advanced topics including time-series and image analysis will also be covered. No prior exposure to programming is assumed. Registration for a separate coding lab section is required.
Spring
Mutually Exclusive: CIS 1050, ENGL 1670, PHYS 2260, STAT 4770
Prerequisite: MATH 1300
1.5 Course Unit

PHYS 1230 Principles of Physics III: Thermal Physics and Waves
Laws of thermodynamics, gas laws and heat engines. Waves on a string, electromagnetic waves including optical phenomena such as refraction, interference and diffraction. Introduction to special relativity including time dilation, length contraction, simultaneity, Lorentz transforms and relativistic energy and momentum. Students are encouraged but not required to take Math 2400 concurrently or in advance.
Fall
Prerequisite: (PHYS 0150 OR PHYS 0151 OR PHYS 0170 OR PHYS 0171) AND (MATH 1400 OR MATH 1410 OR MATH 1610)
Corequisite: MATH 2400
1 Course Unit

PHYS 1240 Principles of Physics IV: Modern Physics
An introduction to the experimental basis for and principles of quantum mechanics, properties of electrons, protons, neutrons, and the elements of atomic structure and nuclear structure. Electromagnetic radiation and photons; interaction of photons with electrons, atoms, and nuclei. Students are encouraged but not required to take MATH 2410 concurrently or in advance.
Spring
Prerequisite: (PHYS 0150 OR PHYS 0151 OR PHYS 0170 OR PHYS 0171) AND MATH 2400
1 Course Unit

PHYS 1250 Principles of Physics IV: Modern Physics (without laboratory)
An introduction to the experimental basis for and principles of quantum mechanics, properties of electrons, protons, neutrons, and the elements of atomic structure and nuclear structure. Electromagnetic radiation and photons; interaction of photons with electrons, atoms, and nuclei. Students are encouraged but not required to take MATH 2410 concurrently or in advance.
Spring
Prerequisite: (PHYS 0150 OR PHYS 0151 OR PHYS 0170 OR PHYS 0171) AND MATH 2400
1.5 Course Unit

PHYS 2260 Introduction to Computational Physics
This course will familiarize students with computational tools that are utilized to solve common problems that arise in physics. The programming language that will be used in this class is Python. No prior programming knowledge is assumed and the semester will begin with learning basic programming skills. This course will introduce computational methods for graphing and visualization of data, solving integrals, derivatives, systems of linear equations and differential equations.
Spring
Mutually Exclusive: PHYS 1100
Prerequisite: PHYS 0150 OR PHYS 0151 OR MATH 1410
1 Course Unit

PHYS 2280 Physical Models of Biological Systems
Classic case studies of successful reductionistic models of complex phenomena, emphasizing the key steps of making estimates, using them to figure out which physical variables and phenomena will be most relevant to a given system, finding analogies to purely physical systems whose behavior is already known, and embodying those in a mathematical model, which is often implemented in computer code. Topics may include bacterial genetics, genetic switches and oscillators; systems that sense or utilize light; superresolution and other newmicroscopy methods; and vision and other modes of sensory transduction.
Fall
Also Offered As: BCHE 2280
Prerequisite: (PHYS 0101 OR PHYS 0151) AND MATH 1400 AND (MATH 1410 OR MATH 1610)
1 Course Unit

PHYS 2999 Independent Study
Special projects and independent study under the direction of faculty member.
Fall or Spring
1 Course Unit
**PHYS 3314 Ocean-Atmosphere Dynamics and Implications for Future Climate Change**

This course covers the fundamentals of atmosphere and ocean dynamics, and aims to put these in the context of climate change in the 21st century. Large-scale atmospheric and oceanic circulation, the global energy balance, and the global energy balance, and the global hydrological cycle. We will introduce concepts of fluid dynamics and we will apply these to the vertical and horizontal motions in the atmosphere and ocean. Concepts covered include: hydrostatic law, buoyancy and convection, basic equations of fluid motions, Hadley and Ferrel cells in the atmosphere, thermohaline circulation, Sverdrup ocean flow, modes of climate variability (El-Nino, North Atlantic Oscillation, Southern Annular Mode). The course will incorporate student led discussions based on readings of the 2007 Intergovernmental Panel on Climate Change (IPCC) report and recent literature on climate change. Aimed at undergraduate or graduate students who have no prior knowledge of meteorology or oceanography or training in fluid mechanics. Previous background in calculus and/or introductory physics is helpful. This is a general course which spans many subdisciplines (fluid mechanics, atmospheric science, oceanography, hydrology).

- **Prerequisite:** MATH 1410
- **1 Course Unit**

**PHYS 3314 Ocean-Atmosphere Dynamics and Implications for Future Climate Change**

This course covers the fundamentals of atmosphere and ocean dynamics, and aims to put these in the context of climate change in the 21st century. Large-scale atmospheric and oceanic circulation, the global energy balance, and the global energy balance, and the global hydrological cycle. We will introduce concepts of fluid dynamics and we will apply these to the vertical and horizontal motions in the atmosphere and ocean. - **Prerequisite:** MATH 1410
- **1 Course Unit**

**PHYS 3359 Data Analysis for the Natural Sciences II: Machine Learning**

This is a course on data analysis and statistical inference for the natural sciences focused on machine learning techniques. The main topics are: Review of modern statistics, including probability distribution functions and their moments, conditional distributions and Bayes' theorem, parameter estimation, Markov chains; Fundamentals of machine learning, including training/validation samples, cross-validation, supervised vs. unsupervised learning, regularization and resampling methods, tree-based methods, support vector machines, neural networks, deep learning and image analysis with convolutional neural networks. Students will obtain both the theoretical background in data analysis and get hands-on experience analyzing real scientific data. This course forms a two-course sequence with PHYS 3358. Students must also have prior programming experience in python.

- **Spring**
- **1 Course Unit**

**PHYS 3361 Electromagnetism I: Electricity and Potential Theory**

First term course in intermediate electromagnetism. Topics include electrostatics, static potential theory, multipole expansions, Laplace equation, image solutions, fields in polarized matter.

- **Fall**
- **Prerequisite:** (PHYS 0151 OR PHYS 0171) AND MATH 2410
- **1 Course Unit**

**PHYS 3362 Electromagnetism II: Magnetism, Maxwell's Equations, and Electromagnetic Waves**

Second term course in intermediate electromagnetism. Topics include magnetostatic forces and fields, magnetized media, Maxwell's equations, Poynting and stress theorems, free field solutions to Maxwell's equations, and radiation from separable and nonseparable time dependent charge and current distributions.

- **Spring**
- **Prerequisite:** PHYS 3361
- **1 Course Unit**

**PHYS 3364 Laboratory Electronics**

A laboratory-intensive survey of analog and digital electronics, intended to teach students of physics or related fields enough electronics to be effective in experimental research and to be comfortable learning additional topics from reference textbooks. Analog topics include voltage dividers, impedance, filters, operational amplifier circuits, and transistor circuits. Digital topics may include logic gates, finite-state machines, programmable logic devices, digital-to-analog and analog-to-digital conversion, and microcomputer concepts. Recommended for students planning to do experimental work in physical science.

- **Fall or Spring**
- **1 Course Unit**

**PHYS 3370 Order of magnitude Physics: the art of approximation**

This course focuses on the art of estimating physical quantities. Problem solving techniques such as dimensional analysis, symmetry principles and scaling relations will be covered and applied to a range of topics including fluid mechanics, waves and sound, material properties, astrophysics, design principles of living organisms, and how to handle complexity. The course will teach tools for discarding less important aspects of a problem and for selecting the essential ones. The course is intended for undergraduate students with background in advanced first-year physics: mechanics, electromagnetism, waves and optics.

- **1 Course Unit**
PHYS 4401 Thermodynamics and the Introduction to Statistical Mechanics and Kinetic Theory
Entropy, temperature, and introduction to ensemble theory, distribution functions, and phase transitions.
Fall
Prerequisite: PHYS 1240 OR PHYS 1250
1 Course Unit

PHYS 4411 Introduction to Quantum Mechanics I
An introduction to the principles of quantum mechanics designed for physics majors and graduate students in physics-related disciplines. The Schrodinger equation operator formalism, central field problem, angular momentum, and spin. Application to one-dimensional and central field problems.
Fall
Prerequisite: (PHYS 0150 OR PHYS 0170) AND (PHYS 1240 OR PHYS 1250) AND (MATH 2400 OR MATH 2600)
1 Course Unit

PHYS 4412 Introduction to Quantum Mechanics II
Perturbation theory, variational principle, application of the quantum theory to atomic, molecular, and nuclear systems, and their interaction with radiation.
Spring
Prerequisite: PHYS 4411
1 Course Unit

PHYS 4414 Laboratory in Modern Physics
In this course you will have the opportunity to do a variety of experiments, ranging from "classic experiments" such as measuring G with a torsion balance, determining the relativistic mass of the electron, and muon lifetime, to experiments studying atomic spectroscopy, NMR, Optical pumping, Mossbauer effect, nuclear energy levels, interaction of gamma rays with matter, single photon interference, and magnetic susceptibility. There are also experiments using a High-Tc superconducting tunnel junction and a PET scanner. You will learn basic statistics, become proficient in analysis using Python, acquire an understanding of systematic errors, and learn how to write a professional report. Many of the laboratories provide excellent opportunities to exercise, and expand upon, the knowledge you have gained in your physics courses.
Spring
Prerequisite: PHYS 1250 OR PHYS 4411
1 Course Unit

PHYS 4421 Modern Optics
Not Offered Every Year
Prerequisite: (PHYS 1240 OR PHYS 1250) AND PHYS 3362
1 Course Unit

PHYS 4498 Senior Honor Thesis
Experimental and theoretical research projects in various areas of physics planned by student in consultation with a member of faculty. A journal-style written thesis is required.
Fall or Spring
Prerequisite: PHYS 4412 AND PHYS 4414
1 Course Unit

PHYS 4499 Senior Honor Thesis
Journal-style written thesis is required.
Fall or Spring

PHYS 5500 Mathematical Methods of Physics
A discussion of those concepts and techniques of classical analysis employed in physical theories. Topics include complex analysis, Fourier series and transforms, ordinary and partial equations, Hilbert spaces, among others.
Fall
Also Offered As: MATH 5940
1 Course Unit

PHYS 5501 Introduction to Research
Introduction to research in particle, nuclear, condensed matter and astrophysics. Selected current topics from journals.
Fall or Spring
0 Course Units

PHYS 5503 General Relativity
This is a graduate level, introductory course in general relativity. The basics of general relativity will be covered with a view to understanding the mathematical background, the construction of the theory, and applications to the solar system, black holes, gravitational waves and cosmology. The latter part of the course will cover some of the basic modern topics in modern cosmology, including the current cosmological model, the accelerating universe, and open questions driving current research.
Fall or Spring
1 Course Unit

PHYS 5505 Introduction to Cosmology
Introduction to physical cosmology emphasizing recent ideas on the very early evolution of the universe. The course will introduce standard big bang cosmology, new theories of the very early universe, and the key observations that have tested and will be testing these ideas. No prior knowledge of astrophysics, cosmology, general relativity, or particle physics will be assumed, although aspects of each will be introduced as part of the course. The course is intended for graduate students and advanced undergraduates.
Spring, even numbered years only
1 Course Unit

PHYS 5516 Electromagnetic Phenomena
Survey of electrodynamics, focusing on applications to research done in the Department. Topics include mathematical structure and relativistic invariance properties of Maxwell equations, tensor methods, and the generation and scattering of radiation, in vacuum and in materials. Applications vary from year to year but include optical manipulation, astrophysical phenomena, and the generalizations from Maxwell's theory to those of other fundamental interactions (strong, electroweak, and gravitational forces).
Spring
1 Course Unit

PHYS 5517 Particle Cosmology
This introduction to cosmology will cover standard big bang cosmology, formation of large-scale structure, theories of the early universe and their observational predictions, and models of dark energy. It is intended for graduate students or advanced undergraduates. No prior knowledge of general relativity or field theory will be assumed, although aspects of each will be introduced as part of the course.
Fall or Spring
1 Course Unit
PHYS 5518 Introduction to Condensed Matter Physics
An introduction to condensed matter physics designed primarily for advanced undergraduate and graduate students desiring a compact survey of the field. Band theory of solids, phonons, electrical magnetic and optical properties of matter, and superconductivity.
Spring
1 Course Unit

PHYS 5521 Advanced Laboratory
In this course you will have the opportunity to do a variety of experiments, ranging from "classic experiments" such as measuring G with a torsion balance, determining the relativistic mass of the electron, and muon lifetime, to experiments studying atomic spectroscopy, NMR, Optical pumping, Mossbauer effect, nuclear energy levels, interaction of gamma rays with matter, single photon interference, and magnetic susceptibility. There are also experiments using a High-Tc superconducting tunnel junction and a PET scanner. You will learn basic statistics, become proficient in analysis using Python, acquire an understanding of systematic errors, and learn how to write a professional report. Many of the laboratories provide excellent opportunities to exercise, and expand upon, the knowledge you have gained in your physics courses.
Spring
Prerequisite: PHYS 1250 OR PHYS 4411
1 Course Unit

PHYS 5522 Introduction to Elementary Particle Physics
An introduction to elementary particles (photons, leptons, hadrons, quarks), their interactions, and the unification of the fundamental forces.
Not Offered Every Year
1 Course Unit

PHYS 5526 Astrophysical Radiation
This is a course on the theory of the interaction of light and matter designed primarily for graduate and advanced undergraduate students to build the basic tools required to do research in astrophysics. Topics to be discussed include structure of single- and multi-electron atoms, radiative and collisional processes, spectral line formation, opacity, radiation transfer, analytical and numerical methods, and a selection of applications in astrophysics based on student research interest.
Fall, even numbered years only
1 Course Unit

PHYS 5528 Introduction to Liquid Crystals
Overview of liquid crystalline phases, their elasticity, topology, and dynamics.
Fall or Spring
1 Course Unit

PHYS 5529 Modern Optics
Spring, odd numbered years only
Prerequisite: (PHYS 1240 OR 1250) AND PHYS 3362
1 Course Unit

PHYS 5530 Modern Optical Physics and Spectroscopy
Introduction to contemporary optics. Topics include propagation and guiding of light waves, interaction of electromagnetic radiation with matter, lasers, non-linear optics, coherent transient phenomena, photon correlation spectroscopies and photon diffusion.
Not Offered Every Year
1 Course Unit

PHYS 5531 Quantum Mechanics I
Graduate-level introduction to quantum theory. Topics covered include the postulates of quantum mechanics, unitary operators, time evolution and Schrodinger's equation, theory of angular momentum, density matrices, and Bell's inequalities. Other topics may include semi-classical (WKB) approximation, bound state techniques, periodic potentials and resonance phenomena.
Fall
1 Course Unit

PHYS 5532 Quantum Mechanics II
Continuation of PHYS 5531. Topics covered include the path integral formulation, symmetries in quantum mechanics, scattering theory, and decoherence. Other topics may include time independent and time dependent perturbation theory, and atomic and molecular systems.
Spring
Prerequisite: PHYS 5531
1 Course Unit

PHYS 5533 Topics in Cosmology
This course aims to survey three or four topics of current research interest in cosmology, mostly at the level of review articles. The topics will be covered in greater depth and with more connections to ongoing research than an introductory cosmology course. The course will be largely accessible to first and second year graduate students. Some exposure to cosmology and general relativity will be helpful but the first two weeks will attempt to bridge that gap. The topic selection will be done in part with input from the students.
Not Offered Every Year
1 Course Unit

PHYS 5561 Electromagnetism I
First term course in intermediate electromagnetism. Topics include electrostatics, static potential theory, multipole expansions, Laplace equation, image solutions, fields in polarized matter.
Fall
Prerequisite: (PHYS 0151 OR PHYS 171) AND MATH 2410
1 Course Unit

PHYS 5562 Electromagnetism II: Magnetism, Maxwell's Equations, and Electromagnetic Waves
Second term course in intermediate electromagnetism. Topics include magnetostatic forces and fields, magnetized media, Maxwell's equations, Poynting and stress theorems, free field solutions to Maxwell's equations, and radiation from separable and nonseparable time dependent charge and current distributions.
Spring
Prerequisite: PHYS 3361
1 Course Unit

PHYS 5564 Laboratory Electronics
A laboratory-intensive survey of analog and digital electronics, intended to teach students of physics or related fields enough electronics to be comfortable learning additional topics on their own from a reference such as Horowitz and Hill. Specific topics will vary from year to year from the selection of topics listed below. Analog topics may include voltage dividers, impedance, filters, operational amplifier circuits, and transistor circuits. Digital topics may include logic gates, finite-state machines, programmable logic devices, digital-to-analog and analog-to-digital conversion, and microcomputer concepts. Recommended for students planning to do experimental work in physical science. Prerequisite: Familiarity with electricity and magnetism at the level of PHYS 0102, PHYS 0141, PHYS 0151, and PHYS 0171.
Fall or Spring
1 Course Unit
PHYS 5566 Machine Learning Methods in Natural Science Modeling
This is a course for PhD students in natural sciences with interests in applying latest machine learning and AI approaches to their problem domains. The course will consist of directed readings and covering available tutorials with weekly discussions. The goal is to motivate mutual self-learning through guided discussions. Weekly participation and completion of readings or other assigned materials is essential and lack of attendance will be graded. Topics to be covered will be decided after the first meeting. Prerequisites: multivariate calculus, linear algebra, statistics, and probability.
Not Offered Every Year
Also Offered As: BIOL 5566
1 Course Unit

PHYS 5570 Physical networks: living matter to data science
Physics, engineering, and biology are rife with examples of physical, or material, networks, such as mechanical networks, resistor networks, and flow networks. In these structures, the networks are geometrically embedded, and the physical limitation of space, the position of the nodes, is an important consideration. This course provides an introduction to such systems. The course will cover the basic mathematical tools for network theory, graph theory, and the physics of flow and mechanical networks. Specific systems of great relevance to physics, engineering, and biology, such as mechanical (spring) networks, force chains in jammed packings, the cytoskeleton and other intercellular structural networks, (biological) flow networks, resistor networks, and truss systems will be discussed, as well as dynamics and optimization as applied to these structures. Since these networks are typically complex, the second part of the course will cover a broad array of data analytic techniques to characterize and quantify these structures, such as topological data analysis (TDA) and machine learning.
Spring, odd numbered years only
1 Course Unit

PHYS 5580 Biological Physics
The course will explore the basic physical principles behind the structure and function of life across many length and time scales (molecule, cell, organism, population). Emphasis will be given on overarching physical themes such as entropy and biological noise, and how they affect the organization of living matter and its emergent properties. Topics may include biopolymers and single molecule biophysics, molecular motors, gene and transcription networks, pattern formation in biological systems, phyllotaxis, neural computing and evolution.
Not Offered Every Year
Prerequisite: MATH 2400 AND MATH 2410 AND PHYS 4401
1 Course Unit

PHYS 5581 Thermodynamics
Entropy, temperature, and introduction to ensemble theory, distribution functions, and phase transitions.
Fall
Prerequisite: PHYS 1240 OR PHYS 1250
1 Course Unit

PHYS 5585 Theoretical and Computational Neuroscience
This course will develop theoretical and computational approaches to structural and functional organization in the brain. The course will cover: (i) the basic biophysics of neural responses, (ii) neural coding and decoding with an emphasis on sensory systems, (iii) approaches to the study of networks of neurons, (iv) models of adaptation, learning and memory, (v) models of decision making, and (vi) ideas that address why the brain is organized the way that it is. The course will be appropriate for advanced undergraduates and beginning graduate students. A knowledge of multi-variable calculus, linear algebra and differential equations is required (except by permission of the instructor). Prior exposure to neuroscience and/or Matlab programming will be helpful.
Spring
Also Offered As: BE 5300, NGG 5940, NRSC 5585, PSYC 5390
1 Course Unit

PHYS 5598 Senior Honors Thesis for Submatriculants
Experimental and theoretical research projects in various areas of physics planned by student in consultation with a member of faculty. A journal-style written thesis is required. This course is the graduate-level version of PHYS4498 for students who are submatriculating in Physics and counting this course towards that requirement.
1 Course Unit

PHYS 6601 Introduction to Field Theory
Elementary relativistic quantum field theory of scalar, fermion, and Abelian gauge fields. Feynman Diagrams.
Fall
1 Course Unit

PHYS 6611 Statistical Mechanics
Fall
Prerequisite: PHYS 4401 AND PHYS 5531
1 Course Unit

PHYS 6612 Advanced Statistical Mechanics
In depth study of classical and quantum lattice spin models, perturbation techniques, and the renormalization group.
Not Offered Every Year
Prerequisite: PHYS 6611
1 Course Unit

PHYS 6622 Introduction to Elementary Particle Physics
Introduction to the phenomenology of elementary particles, strong and weak interactions, symmetries.
Not Offered Every Year
Prerequisite: PHYS 6601
1 Course Unit

PHYS 6632 Relativistic Quantum Field Theory
Advanced topics in field theory, including renormalization theory.
Not Offered Every Year
Prerequisite: PHYS 6601
1 Course Unit

PHYS 6633 Relativistic Quantum Field Theory
A continuation of PHYS 6632, dealing with non-Abelian gauge theories.
Not Offered Every Year
Prerequisite: PHYS 6632
1 Course Unit
PHYS 6661 Solid State Theory I
This course is intended to be an introductory graduate course on the physics of solids, crystals and liquid crystals. There will be a strong emphasis on the use and application of broken and unbroken symmetries in condensed matter physics. Topics covered include superconductivity and superfluidity.
Not Offered Every Year
1 Course Unit

PHYS 6662 Solid State Theory II
A continuation of PHYS 6661.
Not Offered Every Year
1 Course Unit

Polish (PLSH)

PLSH 0100 Polish I
This course is the first in a series of first-year courses, intended for students with no previous background in Polish. The course develops competence in speaking, reading, writing, and understanding contemporary Polish. It will also introduce you to Polish culture through exciting authentic materials, Polish films, history and contemporary affairs. Class work emphasizes development of communicative competence in real-life situations, spontaneous interactions, pair and group work and is conducted almost entirely in Polish. By the end of the course, you will be able to engage in simple conversations in Polish on topics concerning your daily life. You will also be able to write short personalized messages in Polish.
Two Term Class, Student may enter either term; credit given for either
1 Course Unit

PLSH 0200 Polish II
This course is the second in a series of first-year courses, continuation of Polish I. The course continues to develop competence in speaking, reading, writing, and understanding contemporary Polish. We will continue the exploration of Polish culture through exciting authentic materials, including Polish films, history and contemporary affairs. Class work emphasizes development of communicative competence in real-life situations, spontaneous interactions, pair and group work and is conducted almost entirely in Polish. By the end of the course, you will be able to engage in simple conversations in Polish on many topics in informal and some formal contexts concerning your daily life. You will also be able to write longer personalized messages in Polish.
Two Term Class, Student may enter either term; credit given for either
Prerequisite: PLSH 0100
1 Course Unit

PLSH 0201 Polish for Heritage Speakers I
This is the first in the series of literacy courses for students who have spoken Polish at home and seek to improve literacy skills and language competence. The course aims to enhance linguistic accuracy in spelling, grammar, word choice and pronunciation, as well as fluency and narrative structure in both speaking and writing. We will also focus on developing effective reading and listening strategies and expanding students’ active and passive vocabulary through interpretation and analysis of various literary genres and a broad variety of cultural themes.
Not Offered Every Year
1 Course Unit

PLSH 0300 Polish III
This course is the first in a series of second-year courses, continuation of Polish II. The course will strengthen students’ competence in speaking, reading, writing, and understanding contemporary Polish and will expand students’ active and passive vocabulary on a variety of topics. We will continue the exploration of Polish culture through exciting authentic materials, including Polish films, history and contemporary affairs. Class work emphasizes development of communicative competence in real-life situations, spontaneous interactions, pair and group work and is conducted almost entirely in Polish. By the end of the course, you will be able to engage in increasingly complex conversations in Polish on many topics in informal and formal contexts concerning your daily life, significant personal and cultural events and situations, important cultural figures. You will be able to write longer messages in a variety of informal and formal contexts.
Two Term Class, Student may enter either term; credit given for either
Prerequisite: PLSH 0200

PSCI 0014 First-Year Seminar: The Contemporary American City
This course explores the economic and social challenges facing large US cities since roughly 1965 as well as the cities' political and policy responses. Its major topics include the changing relations between racial and ethnic groups, the political impact of suburbanization, and the political effects of deindustrialization and economic transformation. The course readings are drawn from recent urban political history, economics, and sociology as well as political science. The course pays special attention to the changing distribution of political and economic power in US metropolitan areas, and considers regional coordination and other potential policy responses.
Fall or Spring
1 Course Unit

PSCI 0015 First-Year Seminar: The Rise of Authoritarianism
Recent political developments in Turkey, Hungary, and even the United States have provoked debate about the rise of authoritarian leaders in western democracies. In this seminar, we will examine the politics of non-democracies to help us understand the new and growing global wave of authoritarianism. How do dictatorships work? When do democracies break down and when do autocracies collapse? How do non-competitive elections affect authoritarian rule? Do competitive elections strengthen civil liberties? Are democracies more or less susceptible to corruption, property expropriation, nationalism, or xenophobia? Do non-democracies produce higher economic growth? Throughout the course, we will also build empirical knowledge about the politics of particular authoritarian regimes.
Fall or Spring
1 Course Unit

PSCI 0016 First-Year Seminar: Globalization
This course addresses the political economy of globalization. We will discuss what the term globalization means and why many observers argue that the current era is marked by globalization. We will also examine the factors that have contributed to the emergence of globalization. We will consider its political and economic implications, both the benefits of globalization and the challenges that it poses for contemporary society. Finally, we will analyze the sources of resistance to globalization and the extent to which it can be reformed.
Fall or Spring
1 Course Unit

PSCI 0100 Introduction to Comparative Politics
This course is designed to introduce students to comparative political analysis. How can the political behavior, circumstances, institutions, and dynamic patterns of change that people experience in very different societies be analyzed using the same set of concepts and theories? Key themes include nationalism, political culture, democratization, authoritarianism, and the nature of protracted conflict.
Fall or Spring
1 Course Unit
PSCI 0101 Comparative Politics of Developing Areas
This is a comparative politics course that examines political and socio-economic change in the so-called "Third World," defined here as post-colonial developing areas in Asia, Africa and Latin America. The course is not as concerned with keeping up with current events as with analyzing the relationships between colonial legacies, the initial challenges of post-colonial political and socioeconomic development, and how these interact with contemporary problems and global trends. Although chiefly concerned with "political change" within countries, it will also devote substantial attention to economic, socio-cultural and international factors. The course is divided into three parts. The first examines the common and distinctive features of colonial rule in different regions as well as the varying challenges of political and economic development in diverse post-colonial settings. The second part focuses on elaborating on the themes developed in the first by looking more closely at the developmental experiences of Brazil, India, Algeria, Iran, Nigeria, and South Korea (with passing references to other countries as comparative referents). The third part focuses on trends and challenges that have emerged over the last two decades - including market reforms, democratization, and problems related to gender and the environment.
Fall, odd numbered years only
1 Course Unit

PSCI 0102 Communism
The rise and fall of Communism dominated the history of the short twentieth century from the Russian revolution of 1917 to the collapse of the Soviet Union in 1991. As a system of government, Communism is more or less dead, but its utopian ideals of liberation from exploitation and want live on. Communism remains the one political-economic system that presented, for a time, an alternative to global capitalism. In this course, students will gain an introduction to socialist and Communist political thought and explore Communist political and economic regimes their successes and failures, critics and dissidents, efforts at reform, and causes of collapse. We will learn about the remnants of Communism in China, North Korea, and Cuba and efforts of contemporary theorists to imagine a future for Communism.

PSCI 0200 Introduction to American Politics
This course is intended to introduce students to the national institutions and political processes of American government. What are the historical and philosophical foundations of the American Republic? How does American public policy get made, who makes it, and who benefits? Is a constitutional fabric woven in 1787 good enough for today? How, if at all, should American government be changed, and why? What is politics and why bother to study it? If these sorts of questions interest you, then this course will be a congenial home. It is designed to explore such questions while teaching students the basics of American politics and government.

1 Course Unit

PSCI 0400 Introduction to International Relations
This course is an introduction to the major theories and issues in international politics. The goals of the course are to give students a broad familiarity with the field of international relations, and to help them develop the analytical skills necessary to think critically about international politics. The course is divided into four parts: 1) Concepts and Theories of International Relations; 2) War and Security; 3) The Global Economy; and 4) Emerging Issues in International Relations.
Fall or Spring
1 Course Unit

PSCI 0401 Russia and Eastern Europe in International Affairs
Russia and the European Union (EU) are engaged in a battle for influence in Eastern Europe. EU foreign policy towards its Eastern neighbors is based on economic integration and the carrot of membership. With the application of this powerful incentive, Central and Southeastern European countries such as Poland, Hungary, the Czech Republic, and Croatia have progressed rapidly towards integration with the EU (and NATO). Yet, given Russia's opposition to the further enlargement, membership is off the table for the large semi-Western powers such as Russia itself and Turkey and the smaller countries inhabiting an emerging buffer zone between Russia and the EU, such as Georgia, Ukraine, Azerbaijan, Moldova, and Belarus. These in-between countries find themselves subject to intense competition for influence between Eastern and Western powers. In this context, EU countries must balance their energy dependence on Russia and need for new markets and geopolitical stability with concern for human rights, democratic governance, and self-determination. What are the trade-offs implicit in the foreign policies of Russia, EU member states, and Eastern Europe? What are the best policy approaches? What are the main opportunities and obstacles?

PSCI 0600 Ancient Political Thought
Through reading texts of Plato (Socrates), Aristotle, Augustine and Aquinas, the student encounters a range of political ideas deeply challenging to--and possibly corrosive of--today's dominant democratic liberalisms. Can classical and medieval thinking offer insight into modern impasses in political morality? Is such ancient thinking plausible, useful, or dangerous?
Not Offered Every Year
Also Offered As: CLST 1503
1 Course Unit

PSCI 0601 Modern Political Thought
This course will provide an overview of major figures and themes of modern political thought. We will focus on themes and questions pertinent to political theory in the modern era, particularly focusing on the relationship of the individual to community, society, and state. Although the emergence of the individual as a central moral, political, and conceptual category arguably began in earlier eras, it is in the seventeenth century that it takes firm hold in defining the state, political institutions, moral thinking, and social relations. The centrality of "the individual" has created difficulties, even paradoxes, for community and social relations, and political theorists have struggled to reconcile those throughout the modern era. We will consider the political forms that emerged out of those struggles, as well as the changed and distinctly "modern" conceptualizations of political theory such as freedom, responsibility, justice, rights and obligations, as central categories for organizing moral and political life.
Not Offered Every Year
1 Course Unit
PSCI 0602 American Political Thought
Whether America begins with the Puritans and the Mayflower Compact, or with the Declaration of Independence and the Revolution, it is founded in resistance to empire. In the generations between, Americans have desired, dreaded and debated empire. This course will focus on empire and imperialism in American political thought. We will read primary texts addressing empire: from the departure and dissent of the Puritans, and Burke’s Speech on Conciliation with the Colonies, to twentieth and twenty-first century debates over America’s role in the world. These texts will include political pamphlets and speeches, poetry, novels, policy papers and film.
Not Offered Every Year
1 Course Unit

PSCI 0680 Feminist Political Thought
This course is designed to provide an overview of the variety of ideas, approaches, and subfields within feminist political thought. Readings and divided into three sections: contemporary theorizing about the meaning of “feminism”; women in the history of Western political thought; and feminist theoretical approaches to practical political problems and issues, such as abortion and sexual assault.
Not Offered Every Year
Also Offered As: GSWS 0680
1 Course Unit

PSCI 1100 Ethnic Conflict
This course explains ethnic conflict, focusing on its most violent form, civil war. There have been more than 170 civil wars and many more episodes of lower-level armed conflict around the world since 1945. Most of these conflicts have been fought along ethnic lines. Antipathies and competition between ethnic groups are a constant feature of human history. Across societies, there is evidence of in-group bias and out-group prejudice in human behavior. Some theorists argue that people are hard-wired to dislike, and even fight against, members of ethnic out-groups. But large-scale ethnic violence is relatively rare. Under what conditions does ethnic conflict become violent and when does that violence rise to the level of civil war? What interventions are effective in ending these wars and returning countries to peace? Is ethnic conflict rooted in economic factors, such as poverty, growth decline, commodity price shocks, or dependence on mineral wealth? Or is it due to political reasons, such as repression, authoritarianism, or political exclusion of minority groups? This course addresses these questions from an interdisciplinary perspective, drawing on quantitative political science, history, social psychology, and behavioral economics. By the end of the course, students should be able to discuss these questions with reference to ongoing cases of civil war in Iraq, Afghanistan, and Syria as well as historical cases such as Bosnia and Rwanda.
Spring
1 Course Unit

PSCI 1101 The Politics of Slow Moving Crises
Slow-moving policy crises like climate change, population growth/ change (aging, immigration, pensions), and water availability involve policy areas with a seemingly high probability of negative consequences, where the need for policy coordination seems clear but the pressures for coordination are often somewhat removed, since the consequences of policy action or inaction may be felt only years down the road. The questions underlying these cases are: how does a democratic political system, which operates on the short time horizon of elections, complicate policy decisions regarding social and natural processes with much longer time horizons (say decades rather than years), and for which the policy consequences may be quite serious, not to say catastrophic, but far removed from the political timeframe. How do politicians and policy makers evaluate the appropriate response to the problems posed by these processes? If the usual policy making framework is inadequate to responding to these kinds of processes and the problems they pose, then how can the institutions and processes of policy-making be amended to allow for improvement? What lessons can be drawn from other fields (psychology, economics, political science, sociology, etc.) and other decision-making arenas? On one level the goal of this course is to introduce students to key concepts of rational choice, externalities, risk assessment, time horizons, event probabilities, path dependency and unintended consequences through readings in political science, economics and sociology; and on another level to give students the tools to evaluate failures (and successes) of policy responses in areas in which policy consequences are often far removed, temporally and otherwise, from those making decisions.
Spring, even numbered years only
1 Course Unit

PSCI 1102 Political Economy of Development
Why are some countries rich and some poor? Why are some households rich and some poor? This course introduces students to the intellectual tools for understanding why development varies across the globe and the practical tools for designing and evaluating policies aimed at alleviating poverty. To that end, the course is organized into three parts. The first part focuses on the big picture: the macroeconomic and political foundations for sustained economic growth, including historical legacies, technological innovation and political institutions. The second part focuses on the micro-picture: the household-level dynamics of poverty and development, including access to food and credit, the role of health and education, the transition from village to city life, and day-to-day governance. The third part of the course introduces students to the practicalities of designing and evaluating the efficacy of governance and poverty relief interventions and policies. The focus will be on the use of field experiments to study interventions to promote better governance and household wellbeing.
Spring
1 Course Unit
PSCI 1103 Dilemmas of Immigration
Beneath the daily headlines about refugees blocked entry, and undocumented migrants deported there is a set of hard questions which deserve closer attention: Should countries have borders? If countries have borders, how should they decide who is kept out and who is allowed in? How many immigrants is ‘enough’? Are immigrants equally desirable? What kinds of obligations do immigrants have to their receiving society? What kinds of obligations do host societies have to immigrants? Should there be ‘pathways’ to citizenship? Can citizenship be earned? Should citizenship be automatic? This course explores these and other dilemmas raised by immigration.
Spring, odd numbered years only
Also Offered As: LALS 1103
1 Course Unit

PSCI 1104 Socialism
Socialism has become a hot topic in US politics. Some advocate it as an ideology that supports economic equality; others decry it as a path towards excessive state control. But what does the word socialism really mean? Why does it seem to mean different things to different people? What is the historical background of socialism? Are there meaningful differences between different forms of socialism or are they more or less the same thing? Which societies are socialist in practice, both past and present? What about the US? What are the different proposals US and other Socialists make today? What is their logic? How socialist are they? Are their policy ideas or bad? What effects would they have? This course will introduce students to socialism in theory and practice, with an emphasis on different models of Western social democracy and how they are impacting political discourse right now.
Fall or Spring
Also Offered As: REES 1531
1 Course Unit

PSCI 1120 Latin American Politics
This course examines the dynamics of political and economic change in twentieth century Latin America, with the goal of achieving an understanding of contemporary politics in the region. We will analyze topics such as the incorporation of the region to the international economy and the consolidation of oligarchic states (1880s to 1930s), corporatism, populism, and elict pacts (1930s and 1940s), social revolution, democratic breakdown, and military rule (1960s and 1970s), transitions to democracy and human rights advocacy (1980s), makret-oriented reforms (1990s), and the turn to the left of current governments (2000s). The course will draw primarily from the experiences of Argentina, Brazil, Colombia, Chile and Mexico. No prior knowledge of the region is required.
Fall or Spring
Also Offered As: LALS 1120
1 Course Unit

PSCI 1121 U.S. Intervention in Latin America
Why has the United States government participated in regime change in Latin America? How have these interventions affected Latin American political and economic outcomes? What have they helped or hurt U.S. interests in the region? This lecture course provides an introduction to the history and politics of U.S. participation in regime change in Latin America since 1949. For each event, the course will help students understand (1) the goals of the U.S. government; (2) the historical and political context of the intervention; and (3) the outcomes and consequences, both in Latin America and for the United States. One set of short writing assignments will train students to identify the main argument of a reading and assess the quality of the evidence presented in support of that argument; a second set of short writing assignments will train students to make and defend their own argument (see draft syllabus for details).
Spring, odd numbered years only
Also Offered As: LALS 1121
1 Course Unit

PSCI 1130 Contemporary African Politics
This class provides an introduction to contemporary African politics. The core questions that motivate the course are (i) to what extent are political outcomes in contemporary Africa a consequence of its history, culture and geography? (ii.) Why are state structures and institutions weaker in Africa than elsewhere? (iii.) What accounts for Africa's relatively slow economic growth? (iv.) Why have some African countries been plagued by high levels of political violence while others have not? (v.) What explains the behavior of key African actors: parties or politicians?
Fall or Spring
Also Offered As: AFRC 1130
1 Course Unit

PSCI 1140 Politics in the Contemporary Middle East
This course is an introduction to the most prominent historical, cultural, institutional, and ideological features of Middle Eastern politics. Typical of the questions we shall address are why processes of modernization and economic change have not produced liberal democracies, why Islamic movements have gained enormous strength in some countries and not others, why conflicts in the region–between Israel and the Arabs, Iran and Iraq, or inside of Lebanon–have been so bitter and protracted; why the era of military coups was brought to an end but transitions to democracy have been difficult to achieve; why Arab unity has been so elusive and yet so persistent a theme; and why oil wealth in the Gulf, in the Arabian Peninsula, and in North Africa, has not produced industrialized or self-sustaining economic growth.
Fall or Spring
1 Course Unit

PSCI 1141 The Making of Modern Israel and Palestine
This course analyzes the making of a modern Jewish state in the land of Israel/Palestine and the role of Zionism, Palestinian nationalism, and global politics in that process. Beginning in 19th-century Europe and the Middle East, we will study the ideas, movements, and people that shaped what has come to be known as the Arab-Israeli conflict. Students will explore the impact of international factors on the struggles that resulted from the Zionist project in Israel/Palestine and Arab reactions to it across three periods: imperialism and world wars (1860s-1940s), cold war (late 1940s-1990), and multi-polarity (1990s-present).
Also Offered As: HIST 1362, JWST 1362
1 Course Unit
PSCI 1150 Contemporary Chinese Politics
This lecture course introduces students to the politics of the People's Republic of China. Complementing offerings in other departments, this course emphasizes events in the period since the Chinese Communist Party established its regime in 1949. In addition to surveying the political history of contemporary China, we will assess the meaning of these events by drawing upon theories about the nature and significance of ideology and organization in communist regimes, factionalism and its relationship to policy formulation and implementation, and general issues of political and economic development. Although the principal focus is on the domestic politics of the People's Republic of China, the course includes several lectures examining China's international relations.
Fall or Spring
1 Course Unit

PSCI 1160 Democracy and Development in India
This course introduces students to the complex issues surrounding questions of political and economic development in India, the world's largest democracy, and home to a large chunk of the globe's low-income population. Not surprisingly, the successes and failures of India are tremendously important to the study of democracy and development. The experiences of countries in this region have given rise to influential theories of development. The policy prescriptions these theories have produced have in turn been applied back onto India, with spectacular results—both positive and negative. Over the course of the semester, we will use the concrete experiences from the past seven decades in India to ask and answer fundamental questions about development, including: Does democratic politics help or hurt prospects for economic development? Why are some poor countries like India able to maintain democracies, while equally poor countries in the region, such as Pakistan, are not? How did British colonialism shape the nature of post-colonial development? Should the state or the market play a dominant role in the economies of newly independent nations? How can we best measure poverty, and what have been the challenges to reducing it in the developing world? What are the challenges and opportunities produced by rapid international migration to rich countries? The course is divided into four thematic units, which build upon one another. Within each theme, we draw from a wide array of source materials, reading scholarship in political science, economics, sociology, and anthropology, journalistic non-fiction, and even film. While empirically focusing on India, we will also read about the experiences of other countries in South Asia, and also from East Asia, Latin America, and sub-Saharan Africa in specific weeks. This will help students place the experiences of South Asian countries in a broader comparative perspective.
Also Offered As: SAST 1160
1 Course Unit

PSCI 1170 Politics of Post War Western Europe
This course examines political institutions, processes and events in postwar Western Europe. The focus will be a comparative analysis of such topics as political parties and systems, electoral behavior, as well as social and economic policy. We will also examine the way in which domestic processes and policies interact with membership in the European Union.
Not Offered Every Year
1 Course Unit

PSCI 1171 The European Union
This lecture course, after introductory sessions which outline the EU's core institutions, is built on an exposition of the works of major thinkers who have reflected on the European Union's origins, outcomes and significance. It critically reviews their arguments, especially their relevance to major recent crises, notably: the failure of the European Constitution, the current crisis of credibility facing the Euro. Whether the European Union is a confederation, a federation, an empire, or a novel political formation shall be examined. Whether its recent major widening signals an end to its institutional deepening will be discussed. Whether the Union has "a democratic deficit" is examined, as is the claim that in external relations it represents a novel form of soft power.
Not Offered Every Year
1 Course Unit

PSCI 1172 Russian Politics
This course will present an in-depth examination of political, economic and social change in post-Soviet Russia within a historical context. After a brief discussion of contemporary problems in Russia, the first half of the course will delve into the rise of communism in 1917, the evolution of the Soviet regime, and the tensions between ideology and practice over the seventy years of communist rule up until 1985. The second part of the course will begin with an examination of the Gorbachev period and the competing interpretations of how the events between 1985 and 1991 may have contributed to the collapse of the Soviet Union. We will then proceed to make sense of the continuities and changes in politics, economics and society in contemporary Russia. Important topics will include the confrontations accompanying the adoption of a new constitution, the emergence of competing ideologies and parties, the struggle over economic privatization, the question of federalism and nationalism, social and political implications of economic reform, and prospects for Russia's future in the Putin and post-Putin era.
Spring
Also Offered As: REES 1535
1 Course Unit

PSCI 1173 Comparative Health Politics
This course examines the relationship between politics and the health of populations in the world's rich democracies, including the Unites States. The key questions the course addresses are how and why countries differ in their health care policies, public health policies, and policies that affect the social determinants of health. There are no prerequisites, but prior coursework in comparative politics at the 100 or 200 level will be helpful.
Not Offered Every Year
1 Course Unit
PSCI 1180 Sex and Power
Gender has been a primary way of organizing power relations throughout history. This class asks how transformations in the global economy, technological change, new patterns of household formation, and social movements, have influenced women's access to economic and political positions over the past two centuries. We will examine how women's mobilization contributed to the abolition of slavery, reform of property and franchise laws, and to the formation of the welfare state. Next, we turn to thinking about how women's increasing labor force participation was hindered by institutions like marriage bars and union policy. Third, we look at cross-national patterns of women's political participation and descriptive representation including whether and how the adoption of electoral quotas influences gender equality more generally. Finally we study how institutional norms and gender stereotypes affect political representation. This class will draw on examples from around the world, and will look at experiences of women from all economic, social, and aspirative backgrounds.
Not Offered Every Year
1 Course Unit

PSCI 1181 Gender and Elections in America and Beyond
This course tackles four theoretical and empirical challenges related to gender and political equality: the extension of citizenship rights and voting rights to women; the problem of women's persistent under-representation in politics; the nature of the gender gap in preferences across time and space; and the possibilities for substantive representation. We will focus about half the class on the US (contrasting the experiences of white and black women and men in politics) and the other half on other countries, detailing how different party systems, variation in electoral rules (like proportional representation), and institutional innovations such as gender quotas, enable or constrain gender equality in politics.
Fall or Spring
Also Offered As: GSWS 1181
1 Course Unit

PSCI 1200 Public Policy Process
This course introduces students to the theories and practice of the policy-making process. There are four primary learning objectives. First, understanding how the structure of political institutions matter for the policies that they produce. Second, recognizing the constraints that policy makers face when making decisions on behalf of the public. Third, identifying the strategies that can be used to overcome these constraints. Fourth, knowing the toolbox that is available to participants in the policy-making process to help get their preferred strategies implemented. While our focus will primarily be on American political institutions, many of the ideas and topics discussed in the class apply broadly to other democratic systems of government.

Also Offered As: PPE 3002
1 Course Unit

PSCI 1201 Public Opinion and American Democracy
This course examines public opinion in the American political system. We will discuss how to measure public opinion, how citizens formulate opinions, and the role of public opinion in campaigns, elections, and policymaking. We will also consider normative questions, including the role opinion should play in American democracy. Additionally, over the course of the semester we will track public opinion polls related to ongoing elections as well as develop analytical skills to answer questions using public opinion.
Not Offered Every Year
1 Course Unit

PSCI 1202 Changing American Electorate
In 1960, a Democratic candidate won a very narrow Presidential victory with just 100,000 votes; in 2000, the Democratic candidate lost but received 500,000 more votes than his opponent. Still, contemporary scholars and journalists have made a variety of arguments about just how much the American political landscape changed in the intervening 40 years, often calling recent decades a transformation. This course explores and critically evaluates those arguments. Key questions include: how, if at all, have Americans political attitudes and ideologies changed? How have their connections to politics changed? What has this meant for the fortunes and strategies of the two parties? How have the parties base voters and swing voters changed? What changes in American society have advantaged some political messages and parties at the expense of others? Focusing primarily on mass-level politics, we consider a wide range of potential causes, including the role of race in American politics, suburbanization, economic transformations, the evolving constellation and structure of interest groups, declining social capital, the changing role of religion, immigration, and the actions of parties and political elites. For three weeks in the semester, we will take a break from considering broader trends to look at specific elections in some depth.
Not Offered Every Year
1 Course Unit

PSCI 1203 The American Presidency
This course surveys the institutional development of the American presidency from the Constitutional convention through the current administration. It examines the politics of presidential leadership, and how the executive branch functions. An underlying theme of the course is the tension between the presidency, leadership, and democracy.
Fall
1 Course Unit

PSCI 1205 Constitutional Law
This class introduces students to the United States Constitution, specifically Articles I, II, III, the Tenth Amendment, Equal Protection Clause, and the First Amendment. The format for each class will consist of a 45-minute lecture followed by small group discussions on assigned issues and questions.
Fall or Spring
Also Offered As: AFRC 1205
1 Course Unit

PSCI 1206 American Constitutional Law II
This course examines American constitutional development from the eve of WWI through the second Obama administration. Topics include the growth of the New Deal and a Great Society regulatory and redistributive state, struggles for equal rights for racial and ethnic minorities, women and GLBT Americans, contests over freedoms of religion and expression, criminal justice issues, the Reagan Revolution and the revival of federalism and property rights, and issues of national security powers after September 11, 2001.
Also Offered As: AFRC 1206
1 Course Unit
PSCI 1207 Who Gets Elected and Why? The Science of Politics
What does it take to get elected to office? What are the key elements of a successful political campaign? What are the crucial issues guiding campaigns and elections in the U.S. at the beginning of the 21st century? This class will address the process and results of electoral politics at the local, state, and federal levels. Course participants will study the stages and strategies of running for public office and will discuss the various influences on getting elected, including: Campaign finance and fundraising, demographics, polling, the media, staffing, economics, and party organization. Each week we will be joined by guest speakers who are nationally recognized professionals, with expertise in different areas of the campaign and election process. Students will also analyze campaign case studies and the career of the instructor himself. Edward G. Rendell is the former Mayor of Philadelphia, former Chair of the Democratic National Committee, and former Governor of Pennsylvania.
Fall
Also Offered As: URBS 3200
1 Course Unit

PSCI 1208 The Politics of Food and Agriculture
Students will use course readings and their community service to analyze the institutions, ideas, interests, social movements, and leadership that shape the "politics of food" in different arenas. Service opportunities include work with the Urban Nutrition Initiative, Community School Student Partnerships, and the possibility of other placements as approved by the professors.
Not Offered Every Year
1 Course Unit

PSCI 1209 American Campaigns and Elections
This lecture course will teach students about American campaigns and elections, from the local level to the presidential level. We will cover as many topics as possible including: the nominating process, the general campaign, campaign strategy, turnout, campaign finance, the role of issues, the importance of the economy, the power of party identification, and the role of data analysis used by campaign professionals. We will also consider how these factors matter in terms of who wins the election. In addition to the literature on campaigns and election, this lecture will put minor focus on the most recent 2016 presidential election relative to what the literature would have predicted. After the first part of the course about presidential elections, the second part will focus on Congressional elections (and a bit about state and local elections). Lastly, the third part of the course will examine how data analytics that originated in political science are now being used by campaign practitioners to win elections.
Not Offered Every Year
1 Course Unit

PSCI 1210 Introduction to Political Communication
This course is an introduction to the field of political communication and conceptual approaches to analyzing communication in various forms, including advertising, speech making, campaign debates, and candidates' and office-holders' uses of social media and efforts to frame news. The focus of this course is on the interplay in the U.S. between media and politics. The course includes a history of campaign practices from the 1952 presidential contest through the election of 2020.
Fall
Also Offered As: COMM 2260
1 Course Unit

PSCI 1290 Race and Ethnic Politics
This course examines the role of race and ethnicity in the political discourse through a comparative survey of recent literature on the historical and contemporary political experiences of the four major minority groups (Blacks or African Americans, American Indians, Latinos or Hispanic Americans, and Asian Americans). A few of the key topics will include assimilation and acculturation seen in the Asian American community, understanding the political direction of Black America in a pre and post Civil Rights era, and assessing the emergence of Hispanics as the largest minority group and the political impact of this demographic change. Throughout the semester, the course will introduce students to significant minority legislation, political behavior, social movements, litigation/court rulings, media, and various forms of public opinion that have shaped the history of racial and ethnic minority relations in this country. Readings are drawn from books and articles written by contemporary political scientists.
Not Offered Every Year
Also Offered As: LALS 1290
1 Course Unit

PSCI 1401 International Security
This lecture course introduces students to the subfield of international security or strategic studies. In order to grasp the usefulness of the theoretical ideas presented in readings and lectures, abstract concepts are linked with a study of the national security policies states have adopted in the decades following World War II. Topics include current debates about nuclear proliferation, terrorism, the Iraq war, Europe's changing international role, the rise of China, Asian "flashpoints" (Korea, the Taiwan Strait), and US security policy for the 21st century - considering some of the main strategic alternatives to the US as well as their implications for the types of forces deployed (the impact of the "revolution in military affairs," the future of missile defense, and the economic burden to be shouldered).
Fall or Spring
1 Course Unit

PSCI 1402 International Political Economy
This course examines the politics of international economic relations. The course will analyze the interplay between politics and economics in three broad areas: international trade, international finance, and economic development. In each section, we will first discuss economic theories that explain the causes and consequences of international commerce, capital flows, and economic growth. We will then explore how political interests, institutions, and ideas alter these predictions, examining both historical examples and current policy debates.
Not Offered Every Year
1 Course Unit
PSCI 1403 International Law & Institutions
This lecture course examines the role that international law and institutions play in international relations. The course begins by exploring broad theoretical questions - questions about why states create international law and international institutions; how states design institutions; the impact that institutional design may have on the effectiveness of international institutions; and the conditions under which states are likely to comply with the rules set out by international institutions and the dictates of international law. Specific topics include collective security institutions such as the League of Nations, the United Nations, and NATO; human rights law; the laws of war; international intervention and peacekeeping; international justice and the International Criminal Court; environmental law; international trade law and the World Trade Organization; economic development and the World Bank; and international finance and the role of the International Monetary Fund.
Fall or Spring
1 Course Unit

PSCI 1404 American Foreign Policy
This course analyzes the formation and conduct of foreign policy in the United States. The course combines three elements: a study of the history of American foreign relations; an analysis of the causes of American foreign policy such as the international system, public opinion, and the media; and a discussion of the major policy issues in contemporary U.S. foreign policy, including terrorism, civil wars, and economic policy.
Fall or Spring
1 Course Unit

PSCI 1406 International Human Rights
What exactly should be considered a fundamental "human right"? What is the basis for something is a fundamental human right? This course will examine not only broad conceptual debates, but will also focus on specific issue areas (e.g., civil rights, economic rights, women's rights), as well as the question of how new rights norms emerge in international relations.
Fall or Spring
1 Course Unit

PSCI 1407 Ethics and International Relations
This course offers an introduction to ethical issues in international relations. In it, we ask whether morality, as opposed to interests, should play any role in international affairs – and if so, which morality and what rules should apply, and what we should do in response to the challenges of war, violence, poverty, and environmental destruction. The course is organized in four parts. The first part provides a general introduction to ethical theory, followed by an examination of the major schools of thought regarding the possibility or impossibility of ethical conduct in international relations. The second part of the course focuses on ethical issues concerning the use of force, and examines the ethical problems of military force in places such as Bosnia, Rwanda, Iraq, Libya, Syria, and Myanmar, as well as at the questions of international terrorism and humanitarian intervention. The third part looks at issues of human rights, global distributive justice, and the global environment. A fourth section, to be fleshed out during the term, will examine "contemporary challenges" of international ethics in the Trump era. Taken as a whole, the aim of the course is to explore and debate the great moral dilemmas of our time, allowing each student to make her or his own informed, deliberate moral choices.
Not Offered Every Year
1 Course Unit

PSCI 1408 War, Strategy and Politics
This class examines the strategy and politics of warfare, focusing on the way actors plan military campaigns and the factors that are likely to lead to victory and defeat. The course readings center in particular on the factors driving changes in warfare and civil-military relations. The course will cover a wide range of topics from theories of war-fighting to historical military campaigns to insurgency warfare, terrorism, and the future of war.
Fall or Spring
1 Course Unit

PSCI 1440 International Politics of the Middle East
This course will focus primarily on episodes of external intervention by Great Powers in the politics of Middle Eastern states. We shall begin by examining the emergence of the Middle Eastern state system after the disappearance of the Ottoman Empire in the early part of the 20th century. This discussion will provide opportunities to develop key concepts in the study of international politics and will serve as crucial historical background. We shall then turn our attention to the primary concern of the course - a systematic consideration of the motives, operational results, and long-term implications of a number of important examples of intervention by Great Powers in the Middle East. Among the episodes to be considered will be British policies toward the end of World War I, in Palestine in the 1930s, and, along with the French, in Suez in 1956. Soviet intervention in the first Arab-Israeli war, in 1948, will be analyzed along with Soviet policies toward Egypt in the early 1970s. American intervention in Iran in 1953 and in the Gulf War in 1991 will also be examined.
Spring
1 Course Unit

PSCI 1441 Arab Israeli Relations
In this course the Arab-Israeli dispute from 1948 to the present will serve as a vehicle for understanding how domestic and global political processes interact to shape, contain, or aggravate Middle Eastern wars between states and non-state actors. Particular stress will be placed on understanding how wars affect international politics in states and political organizations and how ideological and structural features of states and organizations find expression in wars and complicate or enable the search for peace. In addition, the key features of the conflict will be interpreted as both a clash between the political interests of national and/or religious groups and as a reflection of global political power struggles. Attention will be given toward the end of the course to alternative ideas about possible resolution of the conflict as well as to the increasingly prominent argument that, in this case, there is no solution.
Fall or Spring
1 Course Unit

PSCI 1600 Contemporary Political Thought
This course is intended as a general introduction to political theory since 1900. The theme for the Spring 2023 will be: Power and Politics, and the theorists examined will include Hannah Arendt, bell hooks, Michel Foucault, Bertrand de Jouvenel, and James C. Scott. Questions include: What is political power? How has it been exercised and by whom? Who should have power? Are power and violence inescapably intertwined? Do those without conventional political power understand and exercise power differently from those who traditionally wield it? How have technologies of surveillance and control by medical, psychiatric, computer and security experts altered where power is and how it operates?
Fall
1 Course Unit
PSCI 1602 Political Action and Dissent
An introduction to the study of political theory, and specifically to the problems of political action. Exploration of questions about civil disobedience, legitimate authority, ethics and politics, and the challenge of creating a just order in a world characterized by multiple beliefs and identities. Discussion of the social contract, liberalism, democracy, decolonization, violence, revolution, globalization, universalism, and cultural relativism, and differences of race, class, and gender. Authors include Sophocles, Plato, Martin Luther King, Jr., John Locke, Niccolo Machiavelli, Max Weber, Malcolm X, Mohandas Gandhi and Frantz Fanon. Not Offered Every Year
1 Course Unit

PSCI 1606 Freedom, Power, and Equality
The concepts of freedom, power and equality are what have been called “essentially contested concepts.” These three concepts take a particular significance in the 20th and 21st centuries due to the proliferation of war, industrialization, technology, as well as the growth of democracy and the accompanying shifts in social relations these have all brought about. We think that we have a pretty clear and straightforward understanding of what they mean—freedom means doing what I want, power is domination, equality is sameness. But when we look at how these ideals are lived in real life, we can see that they are in fact a lot more complicated than that. For instance, does poverty reduce freedom and wealth enhance it, or is really only a matter of inequality and people’s choices as many maintain? How do categories like race, gender, and sexuality affect the ways that freedom, power, and equality are experienced? Can power be exercised in relations of equality or does it always suggest inequality? How do we know when power is a hindrance to freedom, or when it is an enhancement of it? How do these three concepts intersect and intertwine to alter their meanings in different settings and in response to different sorts of events?
Fall
1 Course Unit

PSCI 1640 Islamist Political Theory: from al-Banna to bin Laden
This course focuses on one of the most important but least understood strands of Muslim political theory: Islamist political thought. We begin by defining such politically-laden terms as Islam, Islamicism, the West, terrorism, jihadism, etc. We then systematically analyze the arguments of a range of Islamist thinkers and organizations, including al-Banna, Qutb, Mawdudi, al-Ghazali, Khomeini, al-Qaradawi, bin Laden, Hamas and ISIS. Among the questions central to the course are: what is the relationship, if any, between Islamism and democracy? How do Islamists seek to remake the modern state? What explicit claims about women, and implicit assumptions about gender, characterize the work of many Islamist thinkers, and why does this matter? What does jihad mean, and does it necessarily legitimate violence? Relatedly, is violence ever justifiable, and under what conditions? What are the arguments for globalizing jihad? And importantly: why ask these questions rather than others; what assumptions are built into them; and what kinds of political dangers do they court?
1 Course Unit

PSCI 1800 Introduction to Data Science
Understanding and interpreting large datasets is increasingly central in political and social science. From polling, to policing, to economic inequality, to international trade, knowing how to work with data will allow you to shed light on a wide variety of substantive topics. This is a first course in a 4-course sequence that teaches students how to work with and analyze data. This class focuses on data acquisition, management, and visualization, the core skills needed to do data science. Leaving this course, students will be able to acquire, input, format, analyze, and visualize various types of political and social science data using the statistical programming language R. While no background in statistics or political science is required, students are expected to be generally familiar with contemporary computing environments (e.g. know how to use a computer) and have a willingness to learn a variety of data science tools. Leaving this class, students will be prepared to deepen their R skills in PSCI 3800, and then use their R skills to learn statistics in PSCI 1801 and 3801. They will also be ready to use their R skills in courses in other disciplines as well.
Not Offered Every Year
1 Course Unit

PSCI 1801 Statistical Methods PSCI
This course is designed as a follow-up to PSCI 1800. In that class students learn a great deal about how to work with individual data sets in R: cleaning, tidying, merging, describing and visualizing data. PSCI 1801 shifts focus to the ultimate goal of data science: making inferences about the world based on the small sample of data that we have. Using a methodology that emphasizes intuition and simulation over mathematics, this course will cover the key statistical concepts of probability, sampling, distributions, hypothesis testing, and covariance. The ultimate goal of the class is for students to have the knowledge and ability to perform, customize, and explain bivariate and multivariate regression. Students who have not taken PSCI-1800 should have basic familiarity with R, including working with vectors and matrices, basic summary statistics, visualizations, and for() loops.

PSCI 2103 Information Communication Technologies for Development
The seminar will focus on the role that innovations in Information Communication Technologies can play in improving development outcomes in low-income countries. The seminar will focus especially on the promises and perils for utilizing mobile technologies and GIS for better governance: to improve citizen voice and government accountability. This is an exciting area of research that brings together tech gurus, policy makers, Non-government organizations and researchers. The seminar will be of interest to undergraduates from diverse backgrounds, such as political science, engineering, communication, sociology and business administration. The idea will be to highlight not only the promise of ICT4D but also the challenges (e.g., that it widen participation, since it tends to exclude marginalized populations). The course will survey innovative applications in agriculture, financial services, health services, but also governance. The trip to Uganda during spring semester will allow students to meet with NGOs and local governments that are experimenting with new products and applications; hear their challenges and participate in meetings to brainstorm new apps. Spring
1 Course Unit

PSCI 2120 Democracy in Latin America
Since the inception of the twenty first century, Latin America has undergone major economic, social, and political transformations. Many of the neoliberal policies of the last quarter of the twentieth century were reversed or revisited, economic inequality decreased significantly across the region, and anumber of governments turned to the left of the political spectrum, often instituting major public policy and constitutional reforms. How have those changes affected citizenship and democracy in the region? In particular, have citizens' channels for representation and participation changed in the recent past? What has happened to local participatory institutions since the return to the right in some countries of the region? The course will explore these and related questions. Students will develop their own research projects throughout the semester. While not a requirement, the ability to read Spanish or Portuguese will significantly enhance students’ learning experience.

1 Course Unit

PSCI 2121 People of the Land: Indigeneity and Politics in Argentina and Chile
This undergraduate seminar compares the evolution of relations between settler colonial nation-states and indigenous peoples and movements throughout the Americas, with a particular focus on the Mapuche people of the Patagonia region, in the south of nowadays Argentina and Chile. The main goal of the course is to comparatively study the organization of indigenous communities and analyze their political demands regarding plurinationality, self-determination, territory, prior consultation, living well, and intercultural education and health care, as well as the different ways in which settler colonial nation-states accommodate or respond to such demands. The course is organized in three parts. The first part of the course studies indigenous rights in international law and in global affairs, particularly in the United Nations, the Organization of American States, and the International Labor Organization. The second part of the course studies indigenous organization, movements, parties, and political representation, in Latin America since the 1990s, when indigenous demands acquired national and international notoriety throughout Latin America. The third part of the course zooms in a comparative analysis of the relationship between the Mapuche (Mapu: land; -che: people) and the formation and evolution of the settler colonial nation-states in Argentina and Chile. Once international travel resumes, the course will have an eight-day travel component. Students will travel to the south of Argentina to visit indigenous Mapuche communities to experience and learn first-hand about their culture, intercultural education and health, recuperation of identity and language practices, different models of economic sustainability, and of territorial claims and arrangements - including co-management between indigenous communities and the National Parks system.

PSCI 2160 Modern India
This course attempts to examine the experience of representative democracy in India and the country's development record in a historical framework. It will ask questions such as: How did representative democracy emerge in India and what explains its persistence? What are the sources of its vulnerability? What kind of a sense of nationhood does this democratic experience rest upon? What are the exclusions built into this conception of nationhood? What is the relationship between India's development experience and its democratic experiment? How have India's "traditional" institutions adapted or failed to adapt to modern circumstances? Why has India performed well in certain economic sectors such as IT even while its record in providing basic social services has been poor? How has India's self-perception about its place in the world changed in recent years and what are its implications?

1 Course Unit

PSCI 2206 Race, Ethnicity and Constitutional Law
What are "race" and "ethnicity"? How have American constitutional politics been shaped by issues of racial and ethnic statuses? How have American racial and ethnic identities and statuses been shaped by American constitutional politics? Have the nation's basic conflicts been at bottom economic, sometimes expressed via racial and ethnic antagonisms, or do racial and ethnic identities and conflicts have "a life of their own"? Has an "American Creed" of democratic liberalism dominated American culture, with racial hierarchies a frustrating exception? Or have ideologies of racial and ethnic identity and struggles over racial and ethnic statuses instead been central to American constitutional development? This seminar explores these questions by examining the role of race and ethnicity in many constitutional controversies, carried out in courts, legislatures, and popular debates. Secondary historical, legal, political and economic analyses will also be considered.

PSCI 2210 Balance of Power in American Politics (PIW)
How do the Constitution's checks and balances work in practice? And where are they not working? This course examines the fault lines between Washington's two most powerful institutions - Congress and the President - how they clash, and where they work together. Students learn how Congress and the President share and compete for power in lawmaking, spending, investigations, nominations, foreign policy, and impeachment. The course is designed to foster skills in formulating strategies for conducting policy in an environment of institutions competing for power.
Fall or Spring
1 Course Unit

PSCI 2211 The Mechanics of American Foreign Policy (PIW)
The Trump Presidency has profoundly shifted America's role in the world and the way in which key institutions of foreign policy making are staffed and positioned to advance America's interests. The ascent of extreme nationalists and nationalism in other power centers in the world along with growing distrust in government and public institutions may have marked the close of the two-decade post 9/11 era. Indeed, the global COVID-19 pandemic and the ways in which actors across the international spectrum have responded (or failed to respond) has led many to question the assumptions inherent in the post-9/11 international order and has marked the beginning of a new era of competition, a return to great-power politics, and the diminishing power of traditional actors, systems, and ideals on the global stage. This course will provide students with an in-depth, practical analysis of foreign policy and foreign policy making, with a view from Washington. It will also provide a baseline global literacy, through the lens of emerging ideas, institutions, interests, and actors, and focus on a framework for understanding shifts already underway in how Washington views the world. We will utilize less traditional resources, and instead focus on practical and "real-world" course material as well as less traditional instruction methods - utilizing and analyzing the sources and resources that policy makers in Washington rely upon. These include long-form journalism, official government documents, hearings and Congressional debate, think tank products, and news sources. Students will have the opportunity to engage with a variety of guest-speakers, all of whom have held senior official and non-governmental roles in American foreign policy making and influencing. Guest speakers will provide unique insight into their own experiences at the highest levels of foreign policy making and advocacy, and offer guidance as to how to pursue careers in foreign policy, national security, and international development. In the past, guest speakers have included: Former Deputy Secretaries of State William Burns and Heather Higginbottom; Executive Director of the ONE Campaign; Former Director of Policy Planning at the State Department; Former Ambassadors, Senior Professional Staff from the House Committee on Foreign Affairs and Senate Foreign Relations Committee, former Assistant Secretary of Population, Refugees, and Migration, among others.

1 Course Unit

PSCI 2401 Emerging Technologies and the Future of the World
Technological change is always occurring, but the rate of change seems to be accelerating. Advances in robotics, artificial intelligence, cyber, biotechnology, and other arenas generate promise as well as peril for humanity. Will these emerging technologies unleash the innovative capacity of the world, generating new opportunities that help people live meaningful lives? Alternatively, are automation and other technologies chipping away at the labor market in a way that could create severe generational dislocation at best, and national and international turmoil at worst? These questions are important, and have consequences for how we live our lives, how nations interact, and the future of the world writ large. Emerging technologies could shape public policy at the local, national, and international level, and raise questions of fairness, ethics, and transparency. This course takes a unique approach, combining insights from engineering, political science, and law in an interdisciplinary way that will expose students both to the key technologies that could shape the future and ways to think about their potential politics, and society.

1 Course Unit
PSCI 2420 Diplomacy in the Americas - The Penn Model OAS Program
“Diplomacy in the Americas” an academically based community service course in which students work with Philadelphia and Norristown public school students to explore solutions to critical problems facing the Americas. Entrenched political, economic, and social inequality, combined with environmental degradation, weak institutions, pervasive health epidemics, weapon proliferation, and other issues pose formidable hurdles for strengthening democratic ideals and institutions. The Organization of the American States (OAS), the world’s oldest regional organization, is uniquely poised to confront these challenges. “Diplomacy in the Americas” guides students through the process of writing policy resolutions as though the students were Organization of the American States (OAS) diplomats, basing their research and proposals on democracy, development, security, and human rights - the four pillars of the OAS. Students will also read literature about what it means to educate for a democracy and global citizenry, and they will have the opportunity to turn theory into practice by creating and executing curriculum to teach and mentor the high school students through interactive and experiential pedagogies.

PSCI 2421 International Organizations in Latin America
International Organizations play a powerful role in mitigating conflict at the global level. What role do they play in solving problems related to global politics, economic development, corruption, inequality and civil society in Latin America? How much power, influence and control do they possess in the region? This course examines the role and impact international organizations have had on Latin America since the mid-20th century. After a review of theoretical and methodological perspectives on the significance of IOs in international relations, students will examine the workings, issues and often controversies surrounding IOs in Latin America, including the IMF, World Bank, UN, OAS and ICC as well as regional organizations such as the Inter-American Court of Human Rights and area trade blocs and agreements of Mercosur, NAFTA and others. Students will also explore the regional impact of transnational civil society organizations, such as human rights organizations and the International Olympic Committee. Students will be invited to participate in the Washington Model OAS from April 10-17.

PSCI 3151 Politics, Geopolitics, and China's Role in the World's Renewable Energy Revolution
This class looks at one of the most important issues facing the world today: China's climate policy and energy transition, and its impact on global climate change. The course aims to expose students to the driving forces behind China's position and policy related to climate change, with a strong emphasis on political economy. The course will also examine barriers and challenges related to meeting China's ambitious climate commitments. An important part of the course will be guest speakers representing the U.S. and Chinese government officials; multilateral institution officials; researchers; journalists; and civil society.
1 Course Unit
PSCI 3170 Comparative Politics of the Welfare State in Rich Democracies
This seminar provides an overview of the structure and functions of welfare states in the rich, industrialized democracies, and covers key arguments and debates about the emergence and contemporary fate of these welfare states. The approach is broadly comparative, but throughout the course discussions will often emphasize drawing ideas from the experiences of other countries to inform policy solutions to problems we confront in the US. The course covers the varieties and tasks of modern welfare states; classic theories about the relationship between markets, classes, and social protection; competing explanations for why modern welfare states emerge and why they differ from one another; how welfare states are shaped by social forces such as organized labor and the self-employed, political institutions, and societal views of appropriate gender relationships; challenges to the welfare state that emerge from changing labor market, demographic, and social conditions in the highly industrialized nations; and the political dynamics of reforms to the welfare state. Students will participate actively in seminar discussions and complete a major research paper. Graduate students will complete additional readings as noted and will write an article-length paper. Fall, even numbered years only
1 Course Unit

PSCI 3200 Global Development: Intermediate Topics in Politics, Policy, and Data
New sources of data (big data, small data and everything in between) raise the exciting possibility that such data could benefit the world’s poor. This course provides students with an intermediate-level review of recent research that deploys new data for insights on development and hands-on analysis of different kinds of datasets. Students will investigate key themes in development – citizen tech for accountability, corruption, household economics, climate change resilience and press freedom. As we explore these topics, students will develop data analytical skills that are useful across a wide range of research and real-world applications. As such, students will come face-to-face with the opportunities and challenges for data-intensive approaches to international development. Students should have taken PSCI 1800 or an equivalent course and be ready to both discuss course readings and engage with data assignments in the programming language R (students more comfortable in Python are welcome). This class is also designed as a follow-up to PSCI 1102, and students are encouraged (but not required) to take that course before this one. Spring
Prerequisite: PSCI 1800
1 Course Unit

PSCI 3400 The Causes of War & Peace
The existence and endurance of war provides one of the most important puzzles of politics: why is it that people keep making use of such a destructive and painful way of resolving their disputes? This course addresses this question and the related question of what factors contribute to peace, focusing on both academic and popular explanations for conflict, including among others anarchy, over-optimism, shifting power, diversionary war, the malevolent influence of war profiteers, and a variety of explanations grounded in culture, religion and other ideational variables. In this discussion, we will focus on both interstate and civil wars, and on both the onset and the eventual termination of war. At various points in the course we will discuss a wide range of historical and contemporary cases, including the World Wars, Vietnam, the Gulf War, the Iraq War, the various Arab-Israeli wars, the India-Pakistan rivalry, and a number of recent civil conflicts such as the wars in Yugoslavia, Congo, and Sudan. The course concludes with a discussion of strategies for managing ongoing conflicts and for securing peace in post war settings. Fall or Spring
1 Course Unit

PSCI 3401 International Law
Do legal rules really affect international politics? This course explores why international law has the form and content it does, and its role in shaping how states and other actors behave. It combines law and social science to examine important issues of the day, including security policies, human rights, and economic relationships. Fall
1 Course Unit

PSCI 3600 Democracy and Disagreement (SNF Paideia Program Course)
When and how can we justify using the power of the government to force our fellow citizens to follow rules with which they disagree? In attempting to answer this question, we will pay special attention to (1) the various different types and sources of political disagreement and (2) the role of deliberation and reason-giving in a democracy. Through reading and debating works of contemporary political theory and philosophy, this course should help you to reflect on some fundamental but easily neglected questions about your own civic attitudes and behavior. What beliefs underpin your political commitments, why do you hold those beliefs, and why do other people see things differently? What makes you so sure that you’re right and they’re wrong? How, if at all, should you try to change their minds? When, if ever, should you refrain from supporting legal prohibition of actions that you feel sure are morally wrong? The course will be taught in a hybrid lecture/discussion format. Students will be expected to take a short quiz at the start of many class sessions and to write at least three short papers. Fall
1 Course Unit

PSCI 3800 Applied Data Science
Jobs in data science are quickly proliferating throughout nearly every industry in the American economy. The purpose of this class is to build the statistics, programming, and qualitative skills that are required to excel in data science. The substantive focus of the class will largely be on topics related to politics and elections, although the technical skills can be applied to any subject matter.
Not Offered Every Year
Prerequisite: PSCI 1800 OR PSCI 1801
1 Course Unit
PSCI 3801 Survey Research and Design
Survey research is a small but rich academic field and discipline, drawing on theory and practice from many diverse fields including political science, communication, sociology, psychology, and statistics. Surveys are perhaps the most ubiquitous tool of measurement in the social sciences today. Successful practitioners develop expertise in the art and science of survey methodology, including sampling theory and practice, questionnaire instrument development and operationalization, and the analysis and reporting of survey data. Survey researchers are scientists of the method itself, testing various practices by which surveys can be improved upon, as well as developing a keen understanding of the nature of error in surveys and how to control it.
Spring
Prerequisite: PSCI 1800
1 Course Unit

PSCI 3802 Political Polling
Political polls are a central feature of elections and are ubiquitously employed to understand and explain voter intentions and public opinion. This course will examine political polling by focusing on four main areas of consideration. First, what is the role of political polls in a functioning democracy? This area will explore the theoretical justifications for polling as a representation of public opinion. Second, the course will explore the business and use of political polling, including media coverage of polls, use by politicians for political strategy and messaging, and the impact polls have on elections specifically and politics more broadly. The third area will focus on the nuts and bolts of election and political polls, specifically with regard to exploring traditional questions and scales used for political measurement; the construction and considerations of likely voter models; measurement of the horserace; and samples and modes used for election polls. The course will additionally cover a fourth area of special topics, which will include exit polling, prediction markets, polling aggregation, and other topics. It is not necessary for students to have any specialized mathematical or statistical background for this course.
Fall
Prerequisite: PSCI 1800
1 Course Unit

PSCI 3991 Selected Topics in Political Science
Consult department for detailed descriptions. More than one course may be taken in a given semester. Recent titles have included: Sustainable Environmental Policy & Global Politics; Shakespeare and Political Theory.
Fall or Spring
1 Course Unit

PSCI 3992 Selected Topics in Political Science (SNF Paideia Program Course)
Consult the political science department or Paideia program for detailed descriptions. More than one course may be taken in a given semester.

PSCI 3995 Selected Topics in Political Science (Comparative Politics)
Consult the department for detailed descriptions or if you think the course could count toward a subfield other than Comparative Politics. More than one course may be taken in a given semester.
Fall or Spring
1 Course Unit

PSCI 3996 Selected Topics in Political Science (Political Theory)
Consult the department for detailed descriptions or if you think the course could count toward a subfield other than Political Theory. More than one course may be taken in a given semester.
Fall or Spring
1 Course Unit

PSCI 4100 Power Sharing in Deeply Divided Places - BFS
This course examines conceptual, explanatory and normative debates over power-sharing systems. We explore the circumstances in which federal, consociational and other power-sharing institutions and practices are proposed and implemented to regulate deep national, ethnic, religious or linguistic divisions. We evaluate these systems, seeking to explain why they are formed or attempted, and why they may endure or fail, paying special attention to bi- and multi-national, multi-ethnic, multi-religious and multi-lingual environments.
1 Course Unit

PSCI 4102 Global Development: Intermediate Issues in Politics, Policy and Data
New sources of data (big data, small data and everything in between) raise the exciting possibility that such data could benefit the world's poor. This course is designed to provide students with an intermediate-level review of recent research that deploys new data for insights on development and hands-on analysis of different kinds of datasets. Students will investigate 3 key themes in development: corruption and accountability, migration, and Authoritarian Backsliding. As we explore these topics, students will develop data analytical skills that are useful across a wide range of research and real-world applications. Students will learn how to implement four of the most common research designs in the social sciences: observational studies, randomized experiments (in particular, survey experiments), regression discontinuity designs, and difference-in-difference designs. Students will have the opportunity to work with a wide variety of data types, from survey and government-produced administrative data to text as data. As such, students will come face-to-face with the opportunities and challenges for data-intensive approaches to international development.
Spring
Prerequisite: PSCI 1800 AND PSCI 1102
1 Course Unit
PSCI 4130 Oil to Diamonds: The Political Economy of Natural Resources in Africa
This course examines the ways in which the processes of the extraction, refining, sale and use of natural resources — including oil and diamond — in Africa produce complex regional and global dynamics. We explore how values are placed on resources, how such values, the regimes of valuation, commodification and the social formations that are (re)produced by these regimes lead to cooperation and conflict in the contemporary African state, including in the relationships of resource-rich African countries with global powers. Specific cases will be examined against the backdrop of theoretical insights to encourage comparative analyses beyond Africa. Some audio-visual materials will be used to enhance the understanding of the political economy and sociality of natural resources.
Fall
Also Offered As: AFRC 4500, ANTH 3045, SOCI 2904
Mutually Exclusive: AFRC 5700
1 Course Unit

PSCI 4170 Comparative Politics of the Welfare State
This class explores the origins, development, and possible futures of social policy regimes in the industrialized countries, in the context of broader political and historical trends. Topics include pensions, health care, and poverty alleviation; “families” of welfare states; the relationship between labor markets and social policy; feminist and Marxist critiques of welfare states and welfare state studies. Open to graduate students and qualified undergraduates with permission of the instructor.
1 Course Unit

PSCI 4180 Issues Comp Pol/Gender
Struggles over gender roles and rights have been prominent in the Middle East and North Africa since the 19th century and continue to mark contemporary political and social discourses. Since the colonial period, gender categories and sexualities have been critiqued and negotiated on behalf of empire, the nation, modernity, personal freedom; today debates and struggles over global rights, islamic law, and modernity continue to mark politics. Despite the particularity of ideas and events in the region, a comparative framework helps to overcome exoticization of the region and develop a more acute understanding. The topics of the course include engagement with the discourse of the Exotic Other, the effects of modernity, the role of nationalism and the state, state-society negotiation, islamic formulations, and continuously, the question: where does change come from? Issues of the veil and islamic dress the expansion of anti-gay laws, the disciplining of bodies in state and social settings - these issues of gender and sexuality extend the realm of the political into intimate spaces. Assignments include a midterm and a short paper that develops research and analytical skills. The course is 200 level. While background in the study of the Middle East or gender is not necessary, an introductory political science or social science course is required.
Not Offered Every Year
1 Course Unit

PSCI 4190 Race and Racism in the Contemporary World
This undergraduate seminar is for advanced undergraduates seeking to make sense of the upsurge in racist activism, combined with authoritarian populism and neo-fascist mobilization in many parts of the world. Contemporary manifestations of the phenomena noted above will be examined in a comparative and historical perspective to identify patterns and anomalies across various multiple nation-states. France, The United States, Britain, and Italy will be the countries examined.
Not Offered Every Year
Also Offered As: AFRC 4650, LALS 4650
1 Course Unit

PSCI 4200 Political Psychology
How do campaign advertisements influence voters’ perceptions and behavior? What roles do emotions play in politics? Do we all harbor some measure of racism, sexism, or homophobia, and what role do these stereotypes play in political behavior? How and why do ideologies form, and how does partisanship influence the way that voters understand the political world? How do people perceive threat, and what are the psychological consequences of terrorism? These questions, and many others, are the province of political psychology, an interdisciplinary field that uses experimental methods and theoretical ideas from psychology as tools to examine the world of politics. In this course, we will explore the role of human thought, emotion, and behavior in politics and examine the psychological origins of citizens’ political beliefs and actions from a variety of perspectives. Most of the readings emphasize politics in the United States, though the field itself speaks to every aspect of political science.
1 Course Unit

PSCI 4201 Political Empathy & Deliberative Democracy in the US
This course seeks to understand contemporary political divisions in the United States. Guiding our analysis will be scholarship from the discipline of political science, with particular attention given to political culture, American political development and federalism while incorporating scholarship from several other disciplines. As we study political culture at the national level, we will unpack our own individual attitudes towards politics. There will be an emphasis throughout the course on personal wellness during dialogue with assignments ranging from written reflections on experiences to textual analysis to their combination.
Spring
1 Course Unit

PSCI 4203 The Future of Conservatism and the GOP: Radicalization, Renewal or Replacement (SNF Paideia Course)
In this on campus course, students will explore both the roots and the evolution of conservative thought by engaging with readings and directly with the prominent leaders on the right. Co-faculty Miles Taylor, co-creator of the Forward Party and author of A Warning and Blowback will join us via Zoom, along with a range of some of the most important thought leaders on conservatism in America. Course is open to all students and is offered on campus.
Fall
1 Course Unit
PSCI 4205 American Conservatism From Taft to Trump
The early 1950s may have been the nadir for modern American conservatism. Conservative hero Robert Taft had lost the Republican nomination for President to a more moderate candidate for the third time, many in the Republican Party had moved to accept some of the most popular New Deal programs, and a moderate, internationalist consensus had taken hold in the country. Yet, from these ashes, conservatism rose to become a potent political force — maybe the driving force — in the United States over the last half century. This seminar explores the contours of that rise, beginning with infrastructure laid and coalitions forged in the 1950s and early 1960s. We will see how conservatives built upon this infrastructure to overcome Barry Goldwater’s crushing 1964 defeat to elect one of their own, Ronald Reagan, president in 1980. Reagan’s presidency transformed the public philosophy and helped shape subsequent American political development. Our study of conservatism will also include the struggles that conservatives confronted in trying to enact their ideas into public policy, and the repercussions of those struggles. We will explore conservatism’s triumphs and failures politically, as well as the cultural changes that have helped, hindered, and shaped its rise. In many ways, this class is a study in the transformation of American politics and in American culture over the last sixty-five years. Its focus is on the hows and the whys of the rise of conservatism from the low point of the early 50s to the rise of Trumpism in the 2010s. In many places, we will discover a surprisingly complex story. This complexity means that we must grapple with clashing interpretations as to why and how conservatism developed, why conservatism appealed to many Americans at various points in time, and even whether there was an agreed upon conservative vision unifying the forces pushing America rightward. The seminar will be oriented chronologically to the degree that it is possible, spending several weeks on each decade between the 1960s and the 2010s, Yet, we will also focus on several themes and relationships throughout the class. These include the role played by certain pivotal political figures, the ideas that propelled conservatism and bound the conservative movement together, the relationship between conservatives and the Republican Party, the tensions within the diverse Reagan coalition (which have spilled over with increasing regularity, especially during the 2010s) and the impact of the courts and the conservative legal movement in seeding conservatism over the last 30 years. We will ask critical and often difficult questions involving topics such as the role of racism and bigotry in the rise of conservatism. We will also consider the big picture—is the United States really any more conservative in 2023 than it was in 1950? If not, why do many consider conservatism to have risen politically? At the end of the semester we will ponder whether some of the current conservative divisions are new, or continuations of fissures that have long existed and we will consider the big picture in American politics: are our divisions too big to foster functional governance?
Spring, even numbered years only
1 Course Unit

PSCI 4206 How Divided Is America? Polarization in the United States
This class explores whether or not America, and its politics, are divided. Is the American public polarized? What about political elites? Is there any connection between mass and elite polarization? What do we even mean when we say some group is “polarized”? This class will explore these questions in some detail. We will begin at the elite level and ask whether or the political class is now more divided than it was a half century ago. The answer will be a fairly unambiguous “yes.” We’ll then explore several different explanations for why elites have become more divided since mid-century. After that, we’ll turn our attention to the mass public. The situation there will be considerably more complicated, with evidence both for and against polarization. We’ll explore this evidence in some detail and try to document the ways in which the American public has—and has not—become more polarization over time, paying attention to differences based on issues as well as affect/sentiment toward the other party. Finally, we’ll conclude by exploring the effects of polarization on the legislative process and the mass electorate, and ask what (if anything) can or should be done about polarization.
Fall, odd numbered years only
1 Course Unit

PSCI 4208 Media and Politics
Media and Politics will examine multiple issues specific to the past and present political media environment in the United States. Focus will be primarily, though not exclusively, on the contemporary news media. Topics covered will include political primaries, how elections have been influenced by the rise of partisan media, selective exposure, freedom of political speech as it relates to elections, the theoretical purpose of elections, money and media, political targeting, etc. We will also explore the quantitative and qualitative methods underlying what is and is not known about how elections work. Under the supervision of the professor, students will write an original research paper examining a specific topic in greater depth.
Not Offered Every Year
Also Offered As: COMM 4040, PSCI 2208
1 Course Unit

PSCI 4209 Media, Public Opinion, and Globalization
This seminar will examine American attitudes toward globalization and the role of the media in shaping public opinion toward events and people beyond our borders. Students will participate in original research on attitudes toward issues tied to globalization such as immigration, international trade, support for international organizations, isolationism, and so forth. Students will also spend time systematically studying the implications of American media coverage of these issues.
Not Offered Every Year
Also Offered As: COMM 4050
1 Course Unit

PSCI 4290 Race & Criminal Justice
Why are African Americans and some other minority groups disproportionately incarcerated and subjected to penal sanctions? What are the political, social and economic consequences for individuals, communities, and the wider society of mass incarceration in the United States? What types of reforms of the criminal justice system are desirable and possible? This advanced seminar analyzes the connection between race, crime, punishment, and politics in the United States. The primary focus is on the role of race in explaining why the country’s prison population increased six-fold since the early 1970s and why the United States today has the highest incarceration rate in the world. The class will likely take field trips to a maximum-security jail in Philadelphia and to a state prison in the Philadelphia suburbs.
1 Course Unit
PSCI 4291 Social Movements
Social movements and political protest have become some of the most effective tools for citizens and non-citizens to influence the political system. This course is designed to introduce students to the theoretical and methodological approaches taken in understanding these behaviors. Analyzing social movements that range from civil discontent to contentious political protest, the course will address a variety of questions: What is the origin of movement behavior and why do individuals turn to these actions in lieu of simply engaging in institutional modes of political action such as voting? What were the strategies of these movements? What are the political conditions that allow social movements to resonate with the American public? In addition to addressing these topics, this course surveys the policy successes of major social and political movements. From the Civil Rights and Women's Right Movement to the recent Tea Party movement and Hong Kong demonstrations over democracy, this course explores the various public policies that have resulted from citizens’ protest actions. While state level and local level government responsiveness will be addressed, special attention will be given to how political protest influences public policy in all three branches of the federal government.
1 Course Unit

PSCI 4292 Modern Presidency & Race
This course will examine the role of race in shaping presidential actions and public policy from Dwight Eisenhower to the current era. A few of the major topics that the course will address are Eisenhower and school integration, Kennedy/Johnson and civil rights’ voices, Nixon and the Chicano movement, Reagan and immigration, and Obama and descriptive representation in the executive. This course will offer a broad understanding of race by examining how various presidents have addressed concerns in the African-American, Asian-American, and Latino communities. Readings are drawn from the Federal Register and volumes of the Public Papers of the President series as well as from books and articles written by contemporary political scientists.
1 Course Unit

PSCI 4450 Chinese Foreign Policy
This seminar examines the influences on and patterns of China’s international relations. Topics to be covered include the following: theoretical approaches to analyzing foreign policy; the historical legacy and evolution of China’s foreign policy; contemporary China’s foreign policy on traditional national security concerns as well as economic, environmental, and humanitarian issues; China’s military modernization; China’s foreign policy in Asia, Africa, Europe, and Latin America; China’s rise and its implications for relations with the United States. The class is a seminar in which student preparation and participation will essential. Students planning to enroll in the course must have taken PSCI 1150 (or, with the instructor’s permission, its equivalent). You are expected to complete all required readings each week and come to seminar meetings prepared to discuss them.
Not Offered Every Year
Prerequisite: PSCI 1150
1 Course Unit

PSCI 4400 Security & Anxiety at International Borders: Turkey & USA in Global Perspective
Borders are increasingly contested in global order, yet function as distinct markers of statehood and sovereignty. How states control their borders physically is an important manifestation of their sovereign rights. In this course, we explore the meaning attached to international borders for two allies in very different regions of the world, Turkey and the United States. We inquire into the role that national territorial and international borders shave come to play in their national identities. We will place these two countries in the context of their “neighborhoods” to understand the threats and opportunities seem to attend border spaces. With their extensive coastlines and land boundaries, these states are subject in different ways to external influences. Both have extensive trade relations with the rest of the world, as well as extensive illicit economies along their borders. The United States is "a nation of immigrants" currently questioning the value of immigration. Turkey is host to the largest number of refugees in the world. Each state faces its own version of an ontological crisis, as they decide how to engage, filter or deflect extraterritorial flows and influences. These developments raise intense issues of identities and boundaries - in particular the question of how different societies engage in border protection. This seminar focuses on the comparative experiences of Turkey and the USA in their methods of maintaining borders and dealing with anxiety about uncontrolled transnational flows of products and people across their borders. The seminar explores how security and insecurity are understood, produced, and implemented in the form of border security policies. The comparative study of American and Turkish border control will uncover both similarities in the framing of border policies, but also distinct differences on how these two countries deal with border security. The international focus will enable students to appreciate the global aspect of border security issues, and research multiple questions on the extent to which what is facing the USA in terms of border security is not unique on its own. This course will be co-taught with a professor and students at Sabanci University. We will overlap with their classroom for roughly half of out three hour seminar meeting, and the professors will co-teach the course. Common readings will be discussed each week, but each Professor will assign additional readings of her choice to complement the common discussions. In the Penn seminar, we will aim to produce a research paper, so in addition to discussing the substantive readings, we will concentrate on formulating interesting research questions, think carefully about how to bring data to bear on specific questions or hypotheses, become familiar with data sources, and discuss research design.
1 Course Unit
PSCI 4600 Meaning of Democracy
This course provides a broad, humanistic survey to some of the most important ideas, debates, and problems connected to the study of democracy. The course is divided into three segments: the democratic citizen (in which we explore ethical issues pertaining to the experience of democracy as a way of life); the democratic People (in which we investigate some of the best and most recent attempts to come to grips with the difficult, yet fundamental, notion of the People); and the democratic world (in which we examine issues pertaining to democratization and development, including the tension between democracy and individual liberty and the relationship between democracy and global capitalism).
1 Course Unit

PSCI 4601 Key Questions in Political Theory
This course is a basic introduction to certain fundamental topics in political theory. It aims to provide students with concepts and ideas by which to more clearly make sense of political reality. In general, the course proceeds by elucidating major distinctions, such as: ancient vs. modern; deontology vs. consequentialism; “Athens” vs. “Jerusalem” (or: reason vs. revelation); thinking vs. knowing; liberalism vs. democracy; sovereign power vs. disciplinary power; being secular vs. being a secularist; politics as subset of morality vs. political responsibility as requiring the transgression of morality; the grounds of legitimate authority (tradition vs. legal-rational vs. charisma); etc. Overall, the course has three goals: (i) to introduce students to alternate approaches to the practice of political theory; (ii) to introduce students to numerous relatively self-contained debates important to contemporary political theorists; and (iii) to address major figures from the history of political thought, with an eye toward explaining what makes them vital to political theorists today.
Spring
1 Course Unit

PSCI 4800 Evidence Based Policies of Economic and Political Development
This class provides a "hands-on" introduction to the promises and limitations of using Randomized Control Trials (RCTs) to inform policy makers, practitioners, and academics of the conditions under which policies likely would have a positive effect on economic and political outcomes, in the context of international development. This course has three parts: the first is devoted to understanding the "nuts and bolts" of running field experiments / RCTs in developing countries. In part, we will be reading Glennester and Takavarasha’s Running Randomized Evaluations: A Practical Guide. In addition, we will discuss core behavioral concepts from both behavioral economics and social psychology (prospect theory). The second part of the course will be devoted to demonstrating how schools have used RCTs to inform core policy debates (e.g. What are some effective ways to reduce corruption? How can we improve the performance of frontline service providers? How can politicians be more responsive to their constituents?) In the third part, students will be presenting their own research proposals, explicitly designed to address either a core policy question in the developing world or—for those interested—in the USA. Here students will have an opportunity to partner with the Social and Behavioral Sciences Team (https://sbst.gov), which is under the National Science and Technology Council.

PSCI 4997 Political Science Honors
This is a mandatory seminar for all students planning to submit an honors thesis for the purpose of possibly earning distinction in Political Science upon graduation. The course is aimed at helping students identify a useful and feasible research question, become familiar with the relevant literatures and debates pertaining to that question, develop a basic understanding of what might constitute “good” and “original” research in different subfields, and set up a plan for conducting and presenting the research. The course is also aimed at building a community of like-minded student researchers, which can complement and enrich the honor student's individual experience of working one-on-one with a dedicated faculty thesis advisor. Students apply in the spring of their junior year for admissions to the honors program and enrollment in PSCI497.
Fall or Spring
1 Course Unit
PSCI 4999 Honors Thesis Independent Study
This is the honors independent study portion of the PSCI honors program. Students may apply for the program in the spring of their junior year.
Fall or Spring

PSCI 5120 Latin American Politics
This graduate level course will be embedded in course PSCI/LALS 213. In other words, graduate students taking this course will have to attend lectures twice a week, but instead of discussing materials in recitations will meet with the professor either weekly (one hour) or biweekly (two hours), to discuss the main topics of the course and research questions and proposals related to the course.
Fall
Also Offered As: LALS 5120
1 Course Unit

PSCI 5160 Society and Politics in India
This course examines the experience of representative democracy in India and the country's development record in a historical framework. It will ask questions such as: How did representative democracy emerge in India, and what explains its persistence? What are the sources of its vulnerability? What kind of a sense of nationhood does this democratic experience rest upon? What are the exclusions built into this conception of nationhood? What is the relationship between India's development experience and its democratic experiment? How have India's "traditional" institutions adapted or failed to adapt to modern circumstances? Why has India performed well in certain economic sectors even while its record in providing basic social services has been dismal? How have the Indian State and its public institutions managed and coped with these changes? And how has India's self-perception about its place in the world changed in recent years, and what are its implications?
Not Offered Every Year
1 Course Unit

PSCI 5172 Russian Politics in Comparative-Historical Perspective
Course examines Russian politics, with an eye to how political, economic and social changes have been engineered, experienced, and perceived by Russians. For those with graduate standing or advanced background in Russian studies, graduate credit is available for additional readings and research to be discussed with the professor. For either version, the goal is to gain an in-depth understanding of contemporary Russia, its regime, its economy, its society, and its foreign policy (the latter being especially critical against the backdrop of the war in Ukraine). This process begins with a consideration of the historical inheritance bequeathed by the Soviet era. Thus, the first part of the course examines the origins and evolution of the Soviet regime from Lenin to Gorbachev. The point is not to master historical details but to grasp the continuities and changes in political dynamics, social conditions, and planned economic development, since some of these would shape aspects of the post-Soviet transition. The second part delves into the evolution of Russia's politics, economics, society and foreign policy, first during the early years of transition under Boris Yeltsin (1992-99), and then primarily under Vladimir Putin (2000- ). In this section, we cover Russia's state and political system, the fluctuations in economic growth, changing social conditions over time, as well as foreign policy. In the process, we will also consider the origins and role of oligarchs, patterns of political protest, social/demographic trends and the management of Russia's energy resources. We will also seek to better understand the shifts in Russia's foreign policy over time and the sources of the sharp decline in US-Russia relations, with a focus on the conditions leading up to the Ukraine war and the increasing alienation of Russia from the West. In all these domains, we will consider what the empirical evidence suggests about Russia relative to conventional images as presented in the West and also in comparison to the trajectories of other non-Western countries (e.g. China, Turkey, India).

1 Course Unit

PSCI 5180 The Political Economy of Gender
Over the past two hundred years, with the rise industrial production, growing educational attainment, and availability of contraception, women have entered the formal labor market in vast numbers. Yet despite advances, there are still important disparities between the sexes, often exacerbated by class and racial politics. This course unpacks the elements of the transition in the political economy of gender and examines its limits. We set out to understand women's labor in emerging industrial and post-industrial economies; the causes and consequences of women's political inclusion; gendered opportunities in the labor force including the persistence of pay gaps; and the formation of economic and political preferences across the genders. Theoretically, we will engage with Marxian political economy, and new institutionalist approaches to understand how political and economic institutions reproduce or remedy contemporary problems including the gender gap in wages, in political representation, and in women's economic opportunities. Throughout the course we will pay special attention to challenges faced by minority groups and by women in developing countries.
Fall
1 Course Unit
PSCI 5200 Public Opinion & Elections
This course is designed to give advanced undergraduates and graduate students exposure to the literature on political behavior in American politics (the course is part of the departments 3-course graduate sequence in American politics). The course will cover both the classics of public opinion and political behavior from the Columbia, Michigan, and Rochester schools, as well as more current topics and debates in the literature. Topics include (but are not limited to) the early voting studies, the role of partisanship, the nature and origins of ideology, mass-elite interactions, heuristics and low information rationality, the nature of the survey response, campaign and media effects, framing effects, and the role of institutions in structuring behavior. Undergraduates are welcome in the class, but they should know that the class assumes familiarity with quantitative approaches to studying politics.
Fall or Spring
1 Course Unit

PSCI 5290 Inequality & Race Policy
There is little question that inequality along the lines of race and ethnicity remain a constant problem in American society. And over time, the federal government has implemented several policy initiatives to address these inequities. However, less well understood is the success of these federal policies or the process in which they emerge from government as a viable solution. This course will provide an overview of the link between federal government action and changes in minority inequality. We will analyze several issue spaces that cover health, crime and incarceration, social policy and equal rights, education, welfare, and economics. We will take a multi-method approach to exploring the success of federal policies by conducting historical assessments and statistical analysis. Advanced undergraduates are welcome to take the course with permission.

Also Offered As: AFRC 5240
1 Course Unit

PSCI 5400 Borders & Boundaries in IR
This research seminar is designed for graduate students and advanced undergraduates. It explores the meaning and consequences of borders and boundaries in international relations. How do borders, border regions, and border activities speak to national encounters with neighbors and the rest of the world? How do international borders influence war and peace between states? How do they affect international trade and development? When and how are international borders “securitized,” and how does this affect the flow of goods, people, and illicit activities around and across the border? How do states cooperate across international borders? While this course is designed primarily as a seminar in international relations, we will examine the meaning and function of boundary-making between states from multiple perspectives. Borders, border regions and border crossings have multiple significance as designations of state authority, security buffers, expressions of social meaning and opportunities for economic integration. As a seminar designed primarily to stimulate research ideas, this course will be concerned with historical and current problems relating to international borders around the world. We will concentrate on formulating interesting research questions, bringing data to bear on specific hypotheses, becoming familiar with data sources, and designing our own research. All assignments are related to developing research skills; there are no in-class exams.
Not Offered Every Year
1 Course Unit

PSCI 5401 Human Rights
This course will examine the theoretical, historical and political foundations of contemporary human rights debates. The course will cover not only broad conceptual issues, but also specific issue areas (e.g., civil rights, economic rights, women’s rights, business and human rights), as well as the question of how new rights norms emerge and diffuse in the international arena. Undergraduates are not permitted.
1 Course Unit

PSCI 5450 Politics and Education
How is education a form of political action? In this course we look at the governance of schools, the trust in them and their relations to socioeconomic conditions in society, among other topics, using research in education, political science, and political theory.
Fall
Also Offered As: EDUC 5451
1 Course Unit

PSCI 5680 Gender, Power & Feminist Theory
This seminar will examine the theme of power as it engages questions of sex and gender. Subsidiary themes that will be developed over the course of the semester include: the modernism/postmodernism debate as it particularly relates to feminism, the intersectionality of race, gender, sexuality and class and how feminists can and do talk about "women"; the relevance of feminist theory to policy issues, and which theoretical approaches are the most appropriate or have the most potential. The readings will start with “foundational” texts in feminist theory--texts that anyone who wants to work in or teach feminist theory needs to have in their repertoire, they set out the background and history of contemporary feminist theory, and they operate from a variety of disciplinary frameworks. We then will move onto some newer scholarship and some more specific political issues and topics, depending on what students in the course are interested in studying. This course is open to undergraduates who have had some prior course work in feminist theory, gender and sexuality studies, and/or political theory, in consultation with the professor.
Not Offered Every Year
Also Offered As: GSWS 5680
1 Course Unit

PSCI 5681 Sex, Gender, History in Political Theory
This course will examine the treatment and meaning of sex and gender in selected canonical works in the history of political thought from Plato to the 20th century, as well as works by women not generally included in “the canon”. Themes to be considered include the role of women and men in the family and the state, the meanings of femininity and masculinity that emerge as a result, the role of sex in defining the family and gender, and the implications of these meanings for the different theorizations of politics and power that have developed over time.
Not Offered Every Year
1 Course Unit
PSCI 5800 Game Theory
This course provides an introduction to non-cooperative game theory and its applications to political science. The goal of the course is to provide students with the background and understanding necessary to read published game-theoretic work in political science journals. To that end, the course covers the basic concepts of game theory, including Nash equilibrium and its main refinements, simultaneous and sequential games, repeated games, evolutionary game theory, and games of incomplete and private information. In addition, we will cover some of the central models used in political science, notably models of public choice (such as the median voter theorem) and models of bargaining.

1 Course Unit

PSCI 5991 Selected Topics
Consult department for detailed descriptions. More than one course may be taken in a given semester. Recent titles have included: Race Development and American International Relations, Hegel and Marx, and Logic of the West.
Fall or Spring
1 Course Unit

PSCI 6100 Comparative Political Analysis
This seminar is aimed primarily at graduate students planning to take doctoral exams in comparative politics. It provides a critical survey of the field of comparative politics, tracing the intellectual history of the field, examining shifts in conceptual frameworks and research traditions, and comparing alternative methodological approaches. The first half of the course generally examines how processes of political, economic, and social change have been theorized in the social sciences from the mid-19th century to the present. In this process, particular attention is paid to the bifurcation between theories that emphasize the "universal" (e.g. the homogenizing effects of specific processes or variables) and the "particular" (e.g. the persistence of distinctive historical legacies and trajectories). Since this bifurcation is reinforced by distinct styles and methods of research, the seminar also probes the recent battles between rational-choice, cultural, and structuralist scholars, while considering the trade-offs between varieties of formal, quantitative, and qualitative methods. In the second half, the focus shifts to the range of substantive problems investigated by scholars in the field of comparative politics. These topics cover the complex relations among nations, states and societies; the origins, consolidation, and patterns of democratic governance; political economy in relation to development processes and social policies; the intersection of international/global economy and domestic politics; the dynamics of revolutions and social movements; and alternative problematiques constructed from the point of view of real actors such as workers, women, and local communities. In all cases, As a whole, the course is designed to provide an introduction to important issues and debates that comparativists have regularly engaged in; to help you understand the assumptions behind, and differences between, particular approaches, methods, and styles of research; to examine whether current debates are spurring new or better research in a given field in light of past approaches; and to gauge whether there has been progress, fragmentation, or stagnation in the field of comparative politics as a whole.
Not Offered Every Year
1 Course Unit

PSCI 6101 Great Books in Comparative Politics
This seminar has two central purposes. One is to learn from books that have shaped fundamental conversations in the field of comparative politics about the domains, concepts, and theories analyzed and presented in the texts. The other is to gain a deep and detailed appreciation of authorial strategies by examining the relationship between the organization and presentation of arguments and the motivation and claims of the authors. The fact that a book is assigned in this course does not make it "Great" in every respect. Nor does its inclusion reflect a judgment by the instructor that it represents the truth, or even a treatment of its topic that is more effective than anything else available. It does represent a judgment that it is a text whose study can help provide, refine, and/or greatly improve the cognitive maps that graduate students specializing in comparative politics are each trying to construct. The books we read will be studied under three categories: How we got here? How Things Work? and How Do We Know Things?
1 Course Unit

PSCI 6103 Identity Politics
This course is a graduate seminar intended to introduce Ph.D. students to the study of identity politics within political science. The course is primarily divided into two sections. The first section focuses on identity as a dependent variable. Each week, we read a distinct theoretical approach to the study of when, when, and how certain identities become politically salient. The second section focuses politicized identities as an independent variable. Readings in this section assess how such identities affect a range of outcomes, including policy preferences, intergroup cooperation, patronage, and violence.
Not Offered Every Year
1 Course Unit

PSCI 6104 Political Economy of Development
This course examines the debate in development studies arising from recognition that economic models, theories, methods, and strategies abstracted from the specific experience of western societies and cultures do not have general applicability. A broader social science approach is adopted, one which emphasizes the need to understand the social structures and cultures of the developing countries, the capabilities of weak versus strong states, and the links with the international system that influence transformative processes to which industrializing economies are subjected. The readings offer an overview of the most influential theories of development and underdevelopment that structured debate from the 1960's through the 1990's, and focus on the elements of these approaches that advance understanding of development and stagnation in several key countries, including Brazil, Mexico, India and selected countries in East and Southeast Asia.
Not Offered Every Year
1 Course Unit
PSCI 6105 Hegemonic Analysis: Theories and Applications
An important strain within contemporary political science has been the attempt to explain how power is exercised through the manipulation or exploitation of consciousness, habits, and cultural predispositions. One of the key concepts in the study of these issues is that of “hegemony” -- the establishment of particular beliefs as commonsensical presumptions of political life. In this course that notion will be systematically explored. Of particular interest will be how authors who conduct hegemonic analysis cope with the problem of analyzing the effect of what the objects of their analysis, by definition, do not and, in some sense, cannot think about. Illustrations of hegemonic phenomena and attempts to analyze them will be drawn from a variety of fields, such as political theory, historiography, comparative politics, American politics, rational choice theory, agent based modeling, and epistemology.
Not Offered Every Year
1 Course Unit

PSCI 6106 Democracy in Comparative Perspective
This graduate seminar focuses on issues of political regime change and democratization, as studied in the comparative politics literature. The course is structured in three parts. In the first part, we scrutinize conceptualizations and measurements of democracy that are used in comparative politics. In the second part, we study political economy and comparative historical theories about the causes of democratization. We assess the relative strength of theories that focus on economic development, inequality (whether of income, land, or labor), social class actors, insurgency, institutions, and/or strategic choices and interactions. In the final part of the course, political regimes in action, we study different aspects of democratization as they relate to current and salient issues of comparative politics.
Not Offered Every Year
1 Course Unit

PSCI 6120 Politics and Social Movements in Contemporary Afro-Latin America
Over the past two decades there has been an explosion of research into Afro-Latin American populations in South America and the Caribbean. During this period a generation of scholars who were largely unsatisfied with the research methods and normative agendas of many scholars, activists and politicians of prior eras began to pose distinct research questions and methodological approaches to various subject matter. Afro-Latin identification and identity (as both separate from and entangled with national identity) is a major theme in the new literature. Race, racism and inequality, Afro-Latin involvement in social movements, political parties and other forms of political articulation have also been prominent themes. In previous eras, scholars largely emphasized various iterations of purportedly racial and ostensibly cultural mixture such as Mestizaje and Democracia Racial to explain why race and racism did not play a prominent role in social and political mobilization. Contemporary sociologists and anthropologists, however, have found ways to identify attitudes, behaviors, demographic and socio-economic indicators that belie imagery and ideologies of social and political equality achieved through miscegenation (cultural and physical) in Latin America.

Also Offered As: AFRC 6560, LALS 6560
1 Course Unit

PSCI 6200 Survey of American Institutions
This course is designed to introduce students to the scholarly study of American political institutions. The course is intended for students who intend to specialize in American politics as well as those who want a basic overview of this work. It is a part of the sequence in the political science department at Penn that serves as the basic preparation for the American politics field exam and more broadly for expertise in the academic study of American politics.
Not Offered Every Year
1 Course Unit

PSCI 6201 American Political Development
Analyzes important patterns of continuity and change in American politics by examining the development of the American State from a comparative and historical perspective. Covers issues and debates central to not only the subfield of American politics, but also the discipline of political science more broadly. These include the role of the state, political culture, interests, ideas, and institutions in political development, and the role of history in political analysis. Open to advanced undergraduates with the permission of the instructor.
Fall or Spring
1 Course Unit

PSCI 6350 Experimental Design and Issues in Causality
The main goal of this course is to familiarize students with experiments, quasi-experiments, survey experiments and field experiments as they are widely used in the social sciences. Some introductory level statistics background will be assumed, though this is a research design course, not a statistics course. By the end of the course, students will be expected to develop their own original experimental design that makes some original contribution to knowledge. Throughout the course of the semester, we will also consider how to deal with the issue of causality as it occurs in observational studies, and draw parallels to experimental research.
Fall or Spring
1 Course Unit

PSCI 6400 International Relations Theory
This purpose of this course is two-fold. First, the survey course is designed to introduce students to a wide range of theories of international politics. During the course of the semester we will examine neo-realism, power transition theory, hegemonic stability theory, the modern world system, international regimes and inter dependence, the democratic peace, bureaucratic politics, organizational theory, constructivism, and decision making theory. Second, the course will sharpen students’ research design skills. The written assignments require students to take the often abstract theories presented in the readings and develop practical research designs for testing hypotheses derived from the theories. The papers will not include data collection or the execution of actual tests. Rather, they will focus on the conceptual problems of designing tests which eliminate competing hypotheses, operationalizing variables, and identifying potential sources of data. Student’s grades will be based on five short research designs and discussion leadership.
Not Offered Every Year
1 Course Unit
PSCI 6401 Strategic Studies Seminar
This seminar offers graduate students an introduction to the subfield of international relations labeled strategic studies (or security studies). In addition to exploring key theoretical issues, we consider their usefulness for understanding relevant events in international politics since World War II. Although the course emphasizes the distinctive features of great power strategy in the nuclear age, we also look at the continuing role of conventional forces, the strategic choices of lesser powers, and selected security problems in the post-Cold War world (e.g., proliferation, terrorism).
Not Offered Every Year
1 Course Unit

PSCI 6402 International Political Economy
Examination of the relationship between the international, political, and economic systems from a variety of theoretical perspectives that have emerged in the postwar period, including liberalism, transnationalism, statism, Marxism, and dependency.
Not Offered Every Year
1 Course Unit

PSCI 6800 Advanced Statistical Analysis
The objective of this course is to provide Political Science Ph.D. students with statistical tools useful for making inferences about politics. We will cover fundamentals of probability theory, estimation, and hypothesis testing, emphasizing application to research questions in American Politics, positive Political Theory, Comparative Politics, and International Relations.
Not Offered Every Year
1 Course Unit

PSCI 6802 Qualitative Methods
This seminar is an introduction to principles of research design and to the collection and analysis of qualitative data in the social sciences. It is worth noting that many of the methods traditionally considered to be qualitative actually employ quantitative data, and vice versa; and that many of the principles underlying research design, case selection, and the process of data collection are common across empirically-oriented research methods, whether qualitative, quantitative, or formal. Hence, the course should be useful to students planning to utilize a variety of different kinds of research tools. Readings encompass theory, how-to, and examples drawn from political science and cognate social science disciplines. There are no prerequisites for the course, but some background in statistics and/or an idea of the substantive research questions you would like to pursue will be helpful.
Not Offered Every Year
1 Course Unit

PSCI 7150 Political Communication
This course examines the role of political communication in influencing political attitudes and behaviors. Because of the broad nature of the topic, course readings and lectures will be interdisciplinary, drawing on research in sociology, history, psychology, political science and communication research. There are two primary goals for the course. One goal is to acquaint graduate students with the wide-ranging literature on political communication. A second major goal is to stimulate ideas for original research in the field of political communication. Toward this end, by the end of the semester students will be expected to be sufficiently familiar with the field to propose original studies on topics of their choosing. The formulation of an original research question and research design will be an important component of the final examination.

Fall or Spring
1 Course Unit

PSCI 8050 Analysis of Election Data
This course is intended to serve as a workshop for students interested in the empirical analysis of elections, public opinion and political communication more generally. The centerpiece of the course will be an original research paper produced by each student on a topic of his or her own choosing. The requirements for these papers are fairly open, but demanding: the research papers must a) involve empirical analysis of a major election data set, b) be oriented toward answering an original research question selected with the guidance of the instructor, and c) aim to be of publishable quality. There are no formal prerequisites for the course. However, if you have less than two semesters of statistical training, and/or no formal background in the study of elections, public opinion or political communication, then this is probably not the right course for you. In order to be able to formulate an original research question, you need some background in the literature, which is provided by other courses, but is not a formal part of this course.
Fall or Spring
Also Offered As: COMM 7060

PRTG 0090 Clarice Lispector
This seminar focuses on the work of Clarice Lispector, the Ukrainian-born Brazilian novelist and short story writer (1920-1977). See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: COML 2390, ENGL 2390, GSWS 2390, LALS 2390
1 Course Unit
PRTG 0100 Elementary Portuguese I
Portuguese 0100 is a first-semester introductory language course for students who have not studied Portuguese before, or who have had little exposure to the language. The course will emphasize the development of foundational reading, writing, listening and speaking abilities within a cultural context. Students will participate in paired and group activities designed to elicit meaningful and accurate exchanges of information. The course will introduce students to Portuguese and Lusophone culture through a variety of authentic materials, including texts, songs, films and other audio and video material. Classes will be conducted in Portuguese.
Fall
1 Course Unit

PRTG 0104 Portuguese for Spanish Speakers I
This course is designed for students who have studied Spanish. The course begins with exposure to basic vocabulary and structures, advancing at an accelerated pace. Classroom activities will emphasize pronunciation, spoken production as well as language structures and vocabulary. Students will participate in pairs, small groups and whole-class activities that focus on the meaningful and accurate exchange of information. The class will be conducted in Portuguese.
Fall or Spring
1 Course Unit

PRTG 0200 Elementary Portuguese II
This class continues the development of a basic proficiency that will help reinforce the student’s abilities and confidence. A broad range of lively, high-interest readings such as newspaper and magazine articles in current events on Brazilian culture will allow the student to gain a genuine sense of current usage. A Brazilian movie is presented and discussed in groups. Daily homework assignments involve writing exercises, short compositions and group projects.
Spring
Prerequisite: PRTG 0100
1 Course Unit

PRTG 0300 Intermediate Portuguese I
This is a third-semester intermediate course, in a four-course strand, designed for students who have taken at least two semesters of Portuguese. Classroom activities will emphasize pronunciation, spoken production, language structures and vocabulary, as students explore movies, music and other authentic media to further develop their ability to communicate in Portuguese. The course will be conducted in Portuguese.
Fall
Prerequisite: PRTG 0200
1 Course Unit

PRTG 0340 Portuguese for Spanish Speakers II
Portuguese 0340 is an accelerated intermediate course designed for students who have taken Portuguese for Spanish Speakers I, or its equivalent. Classroom activities will emphasize the development of pronunciation and spoken production, the use of language structures and vocabulary at the intermediate level. In addition, students will explore movies, music, short stories, and other media as they further develop reading, speaking and interpretive skills in Portuguese. The course will be conducted in Portuguese.
Fall or Spring
Prerequisite: PRTG 0104
1 Course Unit

PRTG 0400 Intermediate Portuguese II
This is a forth-semester intermediate course, in a four-course strand, designed for students who have taken at least three semesters of Portuguese. Classroom activities will emphasize pronunciation, spoken production, grammar and language structures, and vocabulary at the advanced intermediate level. Students will explore movies, readings, news, music and other media as they further develop speaking, writing, reading and interpretive skills in Portuguese. The course will be conducted in Portuguese.
Spring
Prerequisite: PRTG 0300
1 Course Unit

PRTG 1000 Advanced Portuguese
This course is designed for students who have already taken basic and intermediate levels of Portuguese. It complements students’ knowledge of Portuguese by emphasizing the use of advanced grammatical structures and vocabulary. Classes will focus on practicing such advanced language structures by reading a diverse range of texts, including short stories by different authors of the Lusophone countries, and one novel; speaking and writing about a variety of contemporary texts; watching movies and documentaries; and listening to news, songs and other authentic audio material. The emphasis will be on language usage and culture. This course will be conducted in Portuguese.
Fall or Spring
Prerequisite: PRTG 0340 OR PRTG 0400
1 Course Unit

PRTG 1320 Portuguese for the Professions
Portuguese for the Professions is designed for advanced-level students to develop their ability to use a wide technical vocabulary. The course will cover an array of topics in the areas of Economy, Politics, Science, Technology, Law and others as they pertain to the societies and cultures of the Lusophone countries, with particular emphasis placed on Brazil. Through readings, movies, discussions, essays and presentations, students will enhance their ability to write about and discuss these topics while employing the appropriate technical vocabulary.
Fall or Spring
Also Offered As: LALS 1320
Prerequisite: PRTG 1000
1 Course Unit

PRTG 1340 Portuguese for the Professions II
Portuguese for the Professions II is a second-semester course designed to provide advanced-level students with exposure to, and practice in, a wide variety of technical vocabulary, and to develop their communicative skills on topics related to Brazil’s economic, social and historical context. Classroom activities will be based on the readings and discussions of articles, papers, the viewing of documentaries and other visual media, covering an array of topics within the proposed themes. The course will be conducted in Portuguese.
Fall
Also Offered As: LALS 1340
Prerequisite: PRTG 1000
1 Course Unit
PRTG 1800 Perspectives in Brazilian Culture
This course is designed to provide advanced-level students with additional exposure to Portuguese language and culture, as they broaden their knowledge of the Lusophone world and its identity. Classes will focus on discussions and students presentations based on articles, literary texts, and movies or documentaries from, and about, the different regions of the world where Portuguese is spoken. We will start with Portugal and Brazil, and end with Angola and Mozambique, and their cultural expressions. A series of important themes related to the Lusophone world, its history, the dialogues among its different countries, and contemporary challenges will be incorporated in this course as a way to familiarize students with key themes. At the end of this course, students should 1) have developed their oral and written expressions in Portuguese, at the advanced-level, and 2) be able to recognize and discuss important themes, historical figures, and cultural characteristics of the Lusophone world.

Professional Writing (PROW)

The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

PROW 1000 Fundamentals of Professional Writing
Using an immersive, scenario-based teaching style, this course is an introduction to critically analyzing any writing situation and making your writing a purposeful act of communication. You engage in a series of authentic writing scenarios and a range of activities that provide hands-on practice and instructor coaching and feedback. Coursework includes targeted exercises for improving grammar, mechanics, clarity, precision, and persuasiveness. This collaborative, problem-based learning approach provides you with the strategies and flexibility you need to adapt to an ever-changing multimedia communication environment. Fundamentals of Professional Writing serves as the foundation course for the Certificate in Professional Writing. It introduces the basic concepts and vocabulary that students will draw upon in all future writing tasks and build upon throughout the remainder of the certificate. You do have the option to enroll in this individual course without committing to the entire Certificate in Professional Writing.
1 Course Unit

PROW 1010 Fundamentals of Academic Reading and Writing
This course focuses on the fundamentals of academic writing and is designed to accommodate differing levels of expertise, from undergraduates who are new to academic writing, to those who are returning to college to complete their degrees and need a refresher, and to those who work with academic writers or are engaged in professional academic writing and seek individualized guidance and feedback. The course will introduce participants to the key knowledge domains in academic writing, including a review of academic genres. We will explore planning, reading, and research writing strategies, modes of academic reasoning and rhetoric; writing in the disciplines; context-specific writing processes; collaborative writing, and giving, receiving, and revising in response to professional-style peer review. All students will receive individualized feedback from the instructor as well as peer reviews from colleagues as a means of applying and accelerating skills by working with diverse readers and writers. Assignments will include readings drawn from different genres across the disciplines; writing assignments will be a mix of short, targeted pieces along with some source-based work.
1 Course Unit

PROW 1020 The Elements of Style
This course is for anyone who has been charmed by a novel, article, or tweet and wanted to have similar power as a writer. What makes a sentence pop? What makes a piece of writing seem effortless? Effective writers use words purposefully and grab their reader’s attention by fulfilling—and sometimes disrupting—expectations. Grammar is not a set of rules so much as it is a set of tools that enable us to make meaning; it allows us to appeal to the senses by creating rhythm and helping readers to “feel” and “see” our ideas. In this course, we fill our collective toolbox through sentence-level choices such as arrangement of words, concrete versus abstract language, and sentence length. We provide customized exercises for those who wish to work on their grammar and mechanics alongside developing other strategies for powerful, effective writing. You have the option to enroll in the individual course without committing to the entire Certificate in Professional Writing, enjoying the flexibility and expertise offered by Penn LPS Online to suit your schedule and interests.
1 Course Unit

PROW 1030 Introduction to Academic Reading, Writing, & Research
This course is designed to prepare students for the kinds of assignments they will encounter in college. The goal of the course is to expand your skills and build your self-confidence as academic readers, researchers, and writers. The course will provide a series of short written exercises that cover the fundamentals: how to read scholarly texts; how to read for and write with a focus on logical validity and coherence as an academic writer; how to plan and organize a well-structured argument or explanation; how to find, synthesize, and cite sources; and how to edit, polish, and proofread your final draft to ensure readability. The final project will be a letter of reflection and a 3-5 pp research-based paper. Note: Experienced academic writers (e.g., post-bacs, graduate students, those with advanced degrees should take PROW 3030, Advanced Academic Writing)
1 Course Unit

PROW 1990 Independent Study in Professional Writing
Independent Study in Professional Writing
Fall or Spring
1 Course Unit
PROW 2000 Writing with Data
The rise of data-driven communication has placed increasing emphasis on data literacy—namely, the ability to produce and analyze a wide range of data visualizations, from illustrations and technical diagrams to complex graphs and tables. Many academic disciplines and professions rely on data as the basis for acquiring, building, and disseminating knowledge in their fields. Institutions and corporations, in turn, now collect data about individuals for everything from supporting students’ learning to developing ever more targeted marketing campaigns. Others use open-access data for advocacy work, using data-based graphics to advance social and political causes. This course is designed to help you think critically and ethically about data and gain practical data literacy skills. Students learn how to use online data visualization tools to make data more understandable and develop rhetorical skills to make data more meaningful, by identifying and presenting the story they tell.
1 Course Unit

PROW 2010 Designing Effective Presentations
This class focuses on how to build powerful, persuasive presentations as well as to provide advanced insight and practice in the fundamentals of professional writing. We study the genre of presentations to familiarize you with major applications—PowerPoint, Keynote, and Google Slides—as well as basic presentation formats, including live group delivery; pre-recorded narration (for asynchronous presentations); and the recent trend of slides used on corporate and other websites to provide more detailed information about the organization or its products. We also explore different presentation subgenres, such as the Ted Talk, lightning talks, and Pecha Kucha (20 slides, 20 seconds each, auto-advance).
Throughout, we focus on tailoring your presentation to target audiences and purposes as we explore and practice the design elements of building presentation: space, grids, choice of fonts, images, and animation.
Finally and most importantly, we work on building a powerful message, teaching you how to develop ideas and translate content into a deck that exemplifies your understanding of information hierarchies and human cognition with the goal of engaging, informing, and persuading your audiences.
1 Course Unit

PROW 2020 Strategic Communication Skills for Fundraisers
Developing a targeted strategy for every prospect and/or donor is critical, but communicating it effectively is what gets you over the finish line. In this course, we will explore how strategic communications approaches were applied successfully to real-life scenarios. You will learn about and practice the full spectrum of donor-centric communication vehicles, from writing the email that gets past a gatekeeper, developing an executive briefing, and drafting a proposal, to preparing a press release, writing a formal thank you and stewarding a donor after the gift has closed. This course will be taught by seasoned development professionals. They will walk you through actual case studies, share some tricks of the trade, focus on specific challenges identified by class members, and provide feedback on assignments from their unique perspectives. Expect to be enlightened, entertained and pushed to think hard about how you communicate to build the productive relationships that result in impactful philanthropy.
Fall or Spring
1 Course Unit

PROW 2030 Writing to Diverse Audiences: Global English
Course designed for students to develop skills to communicate effectively to diverse audiences across the globe.
Fall or Spring
1 Course Unit

PROW 2040 Promotional Writing
Includes emails, brochures, advertisements, and customer service.
Fall or Spring
1 Course Unit

PROW 2050 The Elements of Style
This course is for anyone who has been charmed by a novel, article, or tweet and wanted to have similar power as a writer. What makes a sentence pop? What makes a piece of writing seem effortless? Effective writers use words purposefully and grab their reader’s attention by fulfilling—and sometimes disrupting—expectations. Grammar is not a set of rules so much as it is a set of tools that enable us to make meaning; it allows us to appeal to the senses by creating rhythm and helping readers to “feel” and “see” our ideas. In this course, we fill our collective toolbox through sentence-level choices such as arrangement of words, concrete versus abstract language, and sentence length. We provide customized exercises for those who wish to work on their grammar and mechanics alongside developing other strategies for powerful, effective writing. You have the option to enroll in the individual course without committing to the entire Certificate in Professional Writing, enjoying the flexibility and expertise offered by Penn LPS Online to suit your schedule and interests.
Fall

PROW 3000 Academic Writing
TBD
Fall or Spring
1 Course Unit

PROW 3010 The Power of Storytelling
From business and science to medicine and nonprofit organizations, storytelling is increasingly recognized as one of the strongest tools of communication and persuasion. This course introduces students to the use and art of storytelling, also known as narrative studies. Students review storytelling in academic and professional communities as both a research tool for gathering information about particular communities or types of individuals, and as an effective rhetorical strategy for generating emotional appeal and action, and brand identity. They also explore storytelling as a compelling means of conveying complex and memorable information. This course explores how storytelling may be variously used for inquiry, evidence gathering and persuasion. Lessons are reinforced through the examination of business anecdotes, case studies, narrative medicine, biographical notes, personal statements, and cover letters.
1 Course Unit

PROW 3020 Strategic Writing for Fundraising
Developing a targeted strategy for individual prospects and/or donors is critical, but communicating it effectively is what gets you over the finish line. In this course, we will explore how to successfully apply strategic communications approaches to real-life scenarios. You will learn about the continuous cycle of fundraising and practice writing the full spectrum of donor-centric communication vehicles relevant to each cycle. This course will be taught by two seasoned development professionals from the University of Pennsylvania who have collaborated on communicating with the University’s highest-level prospects and donors to raise millions of dollars across multiple schools and centers. They will walk you through case studies, share some tricks of the trade, focus on specific challenges, and provide feedback on assignments from their unique perspectives. Expect to be enlightened, entertained, and pushed to think hard about how you communicate to build the productive relationships that result in impactful philanthropy.
1 Course Unit
PROW 3030 Advanced Academic Reading and Writing
This course is intended for advanced academic writers, from undergraduates in the advanced year of their major to graduate students who wish to write an effective paper, to practitioners and others with terminal degrees who wish to write an effective manuscript for publication. The ability to translate your readings, research, and findings into meaningful academic content is a challenging, skill-intensive process that pivots upon learning good time management and mindfulness strategies, as well as grasping the nuances of academic genres and styles of writing and documentation. Our course will focus on these concerns, along with providing some strategies for efficient reading of densely written academic texts. (For students seeking an introduction to college writing, please see PROW 1030: Introduction to Academic Reading, Writing, and Research).
1 Course Unit

PROW 4000 Writing for Social Media
This course explores the use of social media campaigns for building organizational or brand identities for audiences including customers, interest groups and followers on Facebook, Twitter, and Instagram. We look at how to use social media to create coherent messaging, build a reputation and cultivate reader loyalty. We also explore how readers and designers approach multimedia texts as complex entities that bring together language, image, sound, and gesture to produce a coherent message. With its multiple modalities—visual, aural, and somatic—social media makes different types of demands of its creators and its audiences than those imposed by conventional top-down, left-to-right texts that one encounters in books, essays or letters, requiring an expanded understanding of rhetorical strategies and contexts. By the end of the course, students will have multiplatform portfolio of social content to show employers, colleagues, or clients.
1 Course Unit

PROW 4010 Composing a Professional Identity
This course is intended for those who would like to focus on building their individual professional identity for job searches as well as professional recognition and advancement. The course will examine how professional identities are constructed and networked across different media within professional communities of practice. Our particular focus will be on the primary discourse communities, genres, and media involved in professional identity construction, including cover letters, resumes, LinkedIn profiles, and web-portfolios; we will also touch upon the role of other social media in creating a professional identity. The course will support students in developing rhetorical fluency with regard to job searches and career advancement, including identifying and researching potential employers, networking, and cultivating mentors. This writing-intensive course will be a combination of theory, acquired through a series of readings and analysis, and practice, implemented through hands-on guided writing exercises, peer and professor feedback, and reflection. By the end of the course, students will have developed a professional profile, including a foundational cover letter and resume, a LinkedIn profile, and a web-portfolio (whether published or not will be up to the individual student).
1 Course Unit

PROW 4040 Advanced Academic Writing
Advanced Academic Writing
Fall or Spring
1 Course Unit

PSYC 0400 Grit Lab: Fostering Passion and Perseverance in Ourselves and Others (SNF Paideia Program Course)
At the heart of this course are cutting-edge scientific discoveries about passion and perseverance for long-term goals. As in any other undergraduate course, you will learn things you didn’t know before. But unlike most courses, Grit Lab requires you to apply what you’ve learned in your daily life, to reflect, and then to teach what you’ve learned to younger students. The ultimate aim of Grit Lab is to empower you to achieve your personal, long-term goals—so that you can help other people achieve the goals that are meaningful to them. LEARN -> EXPERIMENT -> REFLECT -> TEACH. The first half of this course is about passion. During this eight-week period, you’ll identify a project that piques your interest and resonates with your values. This can be a new project or, just as likely, a sport, hobby, musical instrument, or academic field you’re already pursuing. The second half of this course is about perseverance. During this eight-week period, your aim is to develop resilience, a challenge-seeking orientation, and the habits of practice that improve skill in any domain. By the end of Grit Lab, you will understand and apply, both for your benefit and the benefit of younger students, key findings in the emerging science on grit.
Fall
Also Offered As: OIDD 0050, OIDD 2000
1 Course Unit

PSYC 0986 Study abroad College elective
Non-major elective in the College study abroad
Fall or Spring
1 Course Unit

PSYC 0996 Transfer College elective
Non-major elective in the College transfer
Fall or Spring
1 Course Unit
PSYC 1210 Introduction to Brain and Behavior
Introduction to the structure and function of the vertebrate nervous system. We begin with the cellular basis of neuronal activities, then discuss the physiological bases of motor control, sensory systems, motivated behaviors, and higher mental processes. This course is intended for students interested in the neurobiology of behavior, ranging from animal behaviors to clinical disorders.
Fall or Spring
Also Offered As: BIOL 1110, NRSC 1110
1 Course Unit

PSYC 1212 Physiology of Motivated Behavior
This course focuses on evaluating the experiments that have sought to establish links between brain structure (the activity of specific brain circuits) and behavioral function (the control of particular motivated and emotional behaviors). Students are exposed to concepts from regulatory physiology, systems neuroscience, pharmacology, and endocrinology and read textbook as well as original source materials. The course focuses on the following behaviors: feeding, sex, fear, anxiety, the appetite for salt, and food aversion. The course also considers the neurochemical control of responses with an eye towards evaluating the development of drug treatments for: obesity, anorexia/cachexia, vomiting, sexual dysfunction, anxiety disorders, and depression.
Fall or Spring
Also Offered As: NRSC 2227
Prerequisite: PSYC 0001
1 Course Unit

PSYC 1230 Cognitive Neuroscience
The study of the neural systems that underlie human perception, memory and language; and of the pathological syndromes that result from damage to these systems.
Fall or Spring
Also Offered As: NRSC 2249
Prerequisite: PSYC 0001 OR COGS 1001
1 Course Unit

PSYC 1310 Language and Thought
This course describes current theorizing on how the human mind achieves high-level cognitive processes such as using language, thinking, and reasoning. The course discusses issues such as whether the language ability is unique to humans, whether there is a critical period to the acquisition of a language, the nature of conceptual knowledge, how people perform deductive reasoning and induction, and how linguistic and conceptual knowledge interact.
Fall or Spring
Also Offered As: LING 0750
Prerequisite: PSYC 0001 OR COGS 1001
1 Course Unit

PSYC 1333 Introduction to Cognitive Science
How do minds work? This course surveys a wide range of answers to this question from disciplines ranging from philosophy to neuroscience. The course devotes special attention to the use of simple computational and mathematical models. Topics include perception, learning, memory, decision making, emotion and consciousness. The course shows how the different views from the parent disciplines interact and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of computation in such theories and provides an introduction to some of the main directions of current research in the field. It is a requirement for the BA in Cognitive Science, the BAS in Computer and Cognitive Science, and the minor in Cognitive Science, and it is recommended for students taking the dual degree in Computer and Cognitive Science.
Fall
Also Offered As: CIS 1400, COGS 1001, LING 1005, PHIL 1840
1 Course Unit

PSYC 1340 Perception
How the individual acquires and is guided by knowledge about objects and events in their environment.
Fall
Also Offered As: VLST 2110
Prerequisite: PSYC 0001 OR COGS 1001
1 Course Unit

PSYC 1440 Social Psychology
An overview of theories and research across the range of social behavior from intra-individual to the group level including the effects of culture, social environment, and groups on social interaction.
Fall or Spring
Prerequisite: PSYC 0001
1 Course Unit

PSYC 1450 Personality and Individual Differences
This course provides an introduction to the psychology of personality and individual differences. Many psychology courses focus on the mind or brain; in contrast to those approaches of studying people in general, the focus in this course is on the question "How are people different from each other?" It will highlight research that take a multidimensional approach to individual differences and attempts to integrate across the biological, cognitive-experimental, and social-cultural influences on personality.
Fall or Spring
Prerequisite: PSYC 0001
1 Course Unit

PSYC 1462 Abnormal Psychology
The concepts of normality, abnormality, and psychopathology; symptom syndromes; theory and research in psychopathology and psychotherapy.
Fall or Spring
Prerequisite: PSYC 0001
1 Course Unit

PSYC 1530 Memory
This course presents an integrative treatment of the cognitive and neural processes involved in learning and memory, primarily in humans. We will survey the major findings and theories on how the brain gives rise to different kinds of memory, considering evidence from behavioral experiments, neuroscientific experiments, and computational models.
Also Offered As: NRSC 1159
1 Course Unit
PSYC 1777 Introduction to Developmental Psychology
The goal of this course is to introduce both Psychology majors and non-majors majors to the field of Developmental Psychology. Developmental Psychology is a diverse field that studies the changes that occur with age and experience and how we can explain these changes. The field encompasses changes in physical growth, perceptual systems, cognitive systems, social interactions and much more. We will study the development of perception, cognition, language, academic achievement, emotion regulation, personality, moral reasoning, and attachment. We will review theories of development and ask how these theories explain experimental findings. While the focus is on human development, when relevant, research with animals will be used as a basis for comparison.
Fall or Spring
Prerequisite: PSYC 0001
1 Course Unit

PSYC 2220 Evolution of Behavior: Animal Behavior
The evolution of behavior in animals will be explored using basic genetic and evolutionary principles. Lectures will highlight behavioral principles using a wide range of animal species, both vertebrate and invertebrate. Examples of behavior include the complex economic decisions related to foraging, migratory birds using geomagnetic fields to find breeding grounds, and the decision individuals make to live in groups. Group living has led to the evolution of social behavior and much of the course will focus on group formation, cooperation among kin, mating systems, territoriality, and communication.
Fall
Also Offered As: BIOL 2140, NRSC 2140
Prerequisite: BIOL 1102 OR BIOL 1121 OR PSYC 0001
1 Course Unit

PSYC 2240 Visual Neuroscience
An introduction to the scientific study of vision, with an emphasis on the biological substrate and its relation to behavior. Topics will typically include physiological optics, transduction of light, visual thresholds, color vision, anatomy and physiology of the visual pathways, and the cognitive neuroscience of vision.
Spring
Also Offered As: NRSC 2217, VLST 2170
Prerequisite: NRSC 1110
1 Course Unit

PSYC 2250 Drugs, Brain and Mind
The course will begin with a review of basic concepts in pharmacology including: routes of drug administration, drug metabolism, the dose response curve, tolerance, and sensitization. Following a brief overview of cellular foundations of neuropsycharmacology (neuronal biology, synaptic and receptor function), the course will focus on several neurotransmitter systems and the molecular and behavioral mechanisms mediating the mind-altering, addictive and neuropsychiatric disorders, including depression, schizophrenia, and anxiety with an emphasis on their underlying neurobiological causes, as well as the pharmacological approaches for treatment.
Fall
Also Offered As: NRSC 2270
Prerequisite: NRSC 1110
1 Course Unit

PSYC 2260 Neuroendocrinology
This course is designed to examine the various roles played by the nervous and endocrine systems in controlling both physiological processes and behavior. First, the course will build a foundation in the concepts of neural and endocrine system function. Then, we will discuss how these mechanisms form the biological underpinnings of various behaviors and their relevant physiological correlates. We will focus on sexual and parental behaviors, stress, metabolism, neuroendocrine-immune interactions, and mental health.
Fall or Spring
Also Offered As: NRSC 2260
Prerequisite: NRSC 1110
1 Course Unit

PSYC 2288 Neuroscience and Society
Cognitive, social, and affective neuroscience have made tremendous progress in the last two decades. As this progress continues, neuroscience is becoming increasingly relevant to all of the real-world endeavors that require understanding, predicting and changing human behavior. In this course we will examine the ways in which neuroscience is being applied in law, criminal justice, national defense, education, economics, business, and other sectors of society. For each application area we will briefly review those aspects of neuroscience that are most relevant, and then study the application in more detail.
Fall or Spring
Prerequisite: NRSC 1110 OR PSYC 1230
1 Course Unit

PSYC 2310 Psychology of Language
This course describes the nature of human language, how it is used to speak and comprehend, and how it is learned. The course raises and discusses issues such as whether language ability is innate and unique to humans, whether there is a critical period for the acquisition of a language, and how linguistic and conceptual knowledge interact.
Fall or Spring
Also Offered As: LING 1750
Prerequisite: PSYC 1310 OR LING 0001
1 Course Unit

PSYC 2314 Data Science for Studying Language and the Mind
Data Science for studying Language and the Mind is an entry-level course designed to teach basic principles of data science to students with little or no background in statistics or computer science. Students will learn to identify patterns in data using visualizations and descriptive statistics; make predictions from data using machine learning and optimization; and quantify the certainty of their predictions using statistical models. This course aims to help students build a foundation of critical thinking and computational skills that will allow them to work with data in all fields related to the study of the mind (e.g., linguistics, psychology, philosophy, cognitive science).
Fall
Also Offered As: LING 0700
1 Course Unit
PSYC 2355 Introduction to Political Psychology
This course will explore psychological approaches to understanding political beliefs, attitudes, and actions at the levels of both individual citizens and national leaders. It will also explore the possibility that psychological science itself is not immune to the political debates swirling around it. Specific topics will include: the workings of belief systems (and their power to shape what we “see”), cognitive biases (and their power to cause miscalculations), sacred values and their role in stabilizing belief systems and social interaction, personality and ideology (the linkages between the personal and the political), and clashing conceptions of morality and distributive and corrective justice (striking variations among people in what they consider to be fair). We shall also explore some topics that have sparked controversy in the psychological research literature and that tend to polarize opinion along political lines, including work on intelligence and unconscious bias.
Fall or Spring
Also Offered As: PPE 2355
Prerequisite: PSYC 0001 OR COGS 1001
1 Course Unit

PSYC 2377 Cognitive Development
What infants and young children come to know about the world, and how they learn it. Topics will include changes in children’s thinking, perceptual development, language acquisition, and current theories of cognitive development.
Not Offered Every Year
Prerequisite: PSYC 0001 OR COGS 1001
1 Course Unit

PSYC 2400 Introduction to Positive Psychology (SNF Paideia Program Course)
An introduction to the study of positive emotions, positive character traits, and positive institutions. The positive emotions consist of emotions about the past (e.g., serenity, satisfaction, pride), about the future (e.g., hope, optimism, faith), and emotions about the present (pleasure and gratification). The distinction among the pleasant life, the good life, and the meaningful life is drawn. The positive traits include wisdom, courage, humanity, justice, temperance, and spirituality, and the classification of these virtues is explored. The positive institutions are exemplified by extended families, free press, humane leadership, and representative government.
Spring
Prerequisite: PSYC 0001
1 Course Unit

PSYC 2477 Social and Emotional Development
This course will cover theory and research related to the development of attachment, emotional regulation, peer and intimate relationships, personality, moral reasoning, and emotional and behavioral disorders. The course will emphasize the degree to which family, peer, and community contexts influence development from infancy into adulthood. Efforts will be made to integrate biological and environmental accounts of development across the lifespan.
Not Offered Every Year
Prerequisite: PSYC 0001
1 Course Unit

PSYC 2555 Neuroeconomics
This course will introduce students to neuroeconomics, a field of research that combines economic, psychological, and neuroscientific approaches to study decision-making. The course will focus on our current understanding of how our brains give rise to decisions, and how this knowledge might be used to constrain or advance economic and psychological theories of decision-making. Topics covered will include how individuals make decisions under conditions of uncertainty, how groups of individuals decide to cooperate or compete, and how decisions are shaped by social context, memories, and past experience.
Also Offered As: NRSC 2273
1 Course Unit

PSYC 2737 Judgment and Decisions
Thinking, judgment, and personal and societal decision making, with emphasis on fallacies and biases.
Fall or Spring
1 Course Unit

PSYC 2750 Behavioral Economics and Psychology
Our understanding of markets, governments, and societies rests on our understanding of choice behavior, and the psychological forces that govern it. This course will introduce you to the study of choice, and will examine in detail what we know about how people make choices, and how we can influence these choices. It will utilize insights from psychology and economics, and will apply these insights to domains including risky decision making, intertemporal decision making, and social decision making.
Fall
Also Offered As: PPE 3003
1 Course Unit

PSYC 2760 How We Change: Social-Psychological and Communication Dynamics (SNF Paideia Program Course)
Have you wondered why people undergo religious conversion, change their political affiliation, suddenly endorse conspiracy theories, alter their taste in music, or seek hypnosis to quit smoking? What is common to these processes of change, and how does resistance to change play out across these seemingly different contexts? In “Why We Change,” we will ask unique questions such as how religious change might highlight methods of transforming public health communications or how the study of attitude change might yield new theories about the impact of life experiences on personality. Broadly speaking, the class will provide an opportunity for students to learn theories of belief formation, attitudes and persuasion, normative influence, and behavioral change. For example, we will work to understand how specific beliefs, such as group stereotypes, or specific attitudes, such as trust and values, change in response to variations in the environment and communication with other people. We will cover culturally based and professional approaches to change, from fear appeals to motivational interviewing, to hypnosis. Students will read empirical studies and conduct observational projects about potential sources of social, cultural, or psychological change and resistance to change in Philadelphia.
Also Offered As: COMM 2760, NURS 2760
1 Course Unit

PSYC 2770 Introduction to Positive Psychology (SNF Paideia Program Course)
PSYC 2900 Evolutionary Psychology
This course introduces the field of evolutionary psychology, which is an approach to the study of human behavior. We will consider the theoretical underpinnings of the field, including evolutionary theory, development, kinship, and adaptations for social life, and will sample some of the recent empirical contributions to this growing area.
Fall or Spring
Prerequisite: PSYC 0001
1 Course Unit

PSYC 3100 Being Human: The Biology of Human Behavior, Cognition, and Culture
This course will examine the biological basis of human behavior and culture as an emergent product of the brain and its interactions with the physical and social environment. As we explore this topic, we will emphasize human brain function at the level of neural systems and the neural networks they supply, how these systems may have evolved, how they change depending on experience, and what dysfunction of these circuits as occurs in neuropsychiatric and neurodevelopment disorders reveals about human thought and behavior. We will focus on key features of human nature, including language, mathematics, creativity and innovation, empathy, strategic thinking, cooperation, deception, economic behavior, and technology, amongst others.
Prerequisite: PSYC 0001
1 Course Unit

PSYC 3220 Neural Systems and Behavior
This course will investigate neural processing at the systems level. Principles of how brains encode information will be explored in both sensory (e.g. visual, auditory, olfactory, etc.) and motor systems. Neural encoding strategies will be discussed in relation to the specific behavioral needs of the animal. Examples will be drawn from a variety of different model systems.
Spring
Also Offered As: BIOL 4110, NRSC 4110
Prerequisite: BIOL 2110
1 Course Unit

PSYC 3230 Neuroscience for Policymakers: Cognitive Neuroscience Seminar
Topics vary each semester.
Prerequisite: PSYC 1230
1 Course Unit

PSYC 3231 Consciousness Seminar in Cognitive Neuroscience
Consciousness is our subjective experience of the world, including both perceptions and felt internal states. In this seminar, we will explore the burgeoning scientific literature on the neural basis of consciousness. We will focus in particular on three topics: What are the neural systems underlying visual awareness? What are the mechanisms that control the progression of conscious contents to create our stream of thought? What is the relationship between consciousness and behavior?
1 Course Unit

PSYC 3232 The Social Brain Seminar
This seminar examines the cognitive and neural mechanisms that enable humans to predict and understand people's behavior. We will be propelled throughout the course by fundamental questions about the human social brain. For example, why are humans so social? Does the human brain have specialized processes for social thought? Consideration of these questions will involve advanced treatment of a range of topics.
1 Course Unit

PSYC 3233 Seminar in Cognitive Neuroscience: Brain Development
This discussion-based seminar will focus on the neural bases of cognitive development. Each week the class will discuss a selection of papers that consider the roles of genes and environment on topics including the development of perceptual abilities, language, and cognition. The course will cover several aspects of pre- and postnatal brain and behavioral development with particular emphasis on animal models. This course is intended for students interested in neurobiology, cognitive psychology, evolutionary psychology and development.
Fall
Also Offered As: NRSC 4233
Prerequisite: PSYC 1230
1 Course Unit

PSYC 3260 Neuroendocrinology Seminar
This course is an upper-level seminar, designed to examine the various roles played by the nervous and endocrine systems in controlling both physiological processes and behavior. We will focus on sexual and parental behaviors, stress, metabolism, neuroendocrine-immune interactions, and mental health. The format will be a mixture of lectures and journal club discussions based on recent primary literature in the field of neuroendocrinology. Students will also write several short papers based on the clinical neuroendocrinology.
Fall or Spring
Also Offered As: NRSC 4460
Prerequisite: NRSC 1110
1 Course Unit

PSYC 3280 Neurological Insights into Cognition and Behavior Seminar
Our modern understanding of the brain began with very humble foundations. Long before transgenic mice, MRI scans, and neuronal recordings, most knowledge about brain function was based on clinical observations of human patients with neurological lesions. This advanced seminar will focus on the cognitive neuroscience of perception, emotion, language, and behavior – through the unique perspective of real-life patients – to illustrate fundamental concepts of brain function. Tuesday classes will explore different cognitive neuroscience topics through student presentations and discussion. Thursday classes will involve observing medical history taking and examination of a patient with cognitive deficits pertinent to the Tuesday topic, with opportunity for students to interact with the patient. Pre-requisites: Instructor permission required and PSYC 109 OR PSYC 149 OR PSYC 159
Spring
Prerequisite: NRSC 1110
1 Course Unit

PSYC 3281 Computational Neuroscience Lab
This course will focus on computational neuroscience from the combined perspective of data collection, data analysis, and computational modeling. These issues will be explored through lectures as well as Matlab-based tutorials and exercises. The course requires no prior knowledge of computer programming and a limited math background, but familiarity with some basic statistical concepts will be assumed. The course is an ideal preparation for students interested in participating in a more independent research experience in one of the labs on campus.
Spring
Also Offered As: NRSC 3334
Prerequisite: NRSC 1110
1 Course Unit
PSYC 3300 Seminar in Sleep and Memory
Why do we sleep? This question has puzzled scientists for centuries, but one reason emerging from research in the area is that sleep is critical for forming, retaining, and transforming our memories. This seminar explores human and animal research in psychology and neuroscience that has shed light on how sleep carries out these functions. Topics will include the different stages of sleep and their roles in memory consolidation, its neural systems involved in representing memory at different timescales, and the role of dreams in processing memories.
Fall
Also Offered As: PSYC 4429
Prerequisite: CIS 1210
1 Course Unit

PSYC 3301 Neurobiology of Learning and Memory
This course focuses on the current state of our knowledge about the neurobiological basis of learning and memory. A combination of lectures and student seminars will explore the molecular and cellular basis of learning in invertebrates and vertebrates from a behavioral and neural perspective.
Fall
Also Offered As: BIOL 4142, NRSC 4442
Prerequisite: BIOL 2110
1 Course Unit

PSYC 3310 Psycholinguistics Seminar
This course examines how people use language. We will focus on Herb H. Clark's book "Using Language" (1996). In this book, Clark proposes that language use is a form of joint action, and extensively develop what this claim entails and how it accounts for people's linguistic behavior. The course will consist of a detailed examination of Clark's thesis.
Also Offered As: LING 3750
Prerequisite: PSYC 1310 OR PSYC 2310 OR LING 0001
1 Course Unit

PSYC 3400 Positive Psychology Seminar: Positive Education
This intensive, discussion-based seminar will equip you with useful insight and critical analysis about Positive Psychology by emphasizing scientific literacy. The workload for this seminar requires intensive reading. To excel in this seminar, students must be willing to enthusiastically read, dissect, and critique ideas within Positive Psychology. This requires students to articulate various ideas in verbal and written form.
Fall
Prerequisite: PSYC 0001
1 Course Unit

PSYC 3440 Friendship and Attraction Seminar
This seminar primarily focuses on heterosexual friendship between men and women, and the methodological issues of investigating such relationships. The scope for sexuality and romance in heterosexual opposite-sex friendship will be explored, as well as the possibility that men and women perceive opposite-sex friendship differently from each other. The ramifications of sex, romance, and incongruent perspectives in these relationships will be discussed, as will intimacy, competition, homosexual friendship, and same-sex friendship.
Fall or Spring
Prerequisite: PSYC 1440
1 Course Unit

PSYC 3441 Psychology and Religion Seminar
The purpose of the seminar is to introduce the relationship between psychology and religion in a balanced fashion. I do not assume that either of these two powerful forces in the world has the last word on the other. Not do I assume that they can hide behind their typical assumptions without offering good reasons for them. So the seminar offers the opportunities for a disciplined personal engagement with the material. Almost everyone brings personal background and emotion as well as intellectual curiosity to religion and its relationship to human nature; this is the relationship that we will take seriously, pondering the emotional and immediately experiential as well as the cognitive and distanced aspects of the topics we study.
Fall or Spring
1 Course Unit

PSYC 3442 Moral Psychology Seminar
This seminar will cover a range of topics within contemporary moral psychology, including: the nature of morality, the extent to which moral beliefs are based on reasoning as opposed to more intuitive or affective processes, the extent to which moral values can be traded off, the role of justice and blame in moral thinking, moral self-identity, the causes of immoral behavior, and the cultural, political, and personal significance of people's moral beliefs. Students will be expected to read and actively discuss selected papers, and will be asked to present readings at various points. There will be mid-term and final paper assignments.
Fall or Spring
1 Course Unit

PSYC 3443 Psychology and Law Seminar
During the past several years, this seminar has emphasized criminal law, procedure, and social justice issues. The emphasis in each year's course varies somewhat with what is going on "in the real world" outside of the classroom.
Fall or Spring
1 Course Unit

PSYC 3444 Evolutionary Perspectives in Social Psychology
This discussion-based seminar uses evolutionary (Darwinian) perspectives to examine selected topics central to social psychology. Topics will include: Fundamental theories of evolutionary psychology; the self; prosocial behavior and altruism; aggression and violence; love, attraction, and mating; human sex differences in social behavior; religion and morality; and group behavior.
Not Offered Every Year
1 Course Unit

PSYC 3461 Survey of Mood Disorders Seminar
Mood disorders are common, sometimes debilitating, mental health conditions with considerable societal costs. These disorders include depression, bipolar disorder, and several variants of these disorders. In industrialized nations, depression alone ranks among the leading causes of disability. Bipolar disorder, while less common, is associated with even more marked impairments. In this course, we will examine mood disorders in depth, covering historical, cross-cultural, diagnostic, developmental, neuroscientific, etiological, and therapeutic issues. Throughout the course, I hope to encourage students to appreciate what we know about problems of mood, how we have acquired this knowledge, and how much we still do not understand.
Prerequisite: PSYC 1462
1 Course Unit
PSYC 3462 Gender and Psychopathology Seminar
This course will explore contemporary theory and research on the role of gender in vulnerability to and expression of psychopathology. In the beginning of the course, we will explore and critique definitions of sex and gender and methodological approaches to the study of gender differences. This will include considering strong challenges to our conceptions of identity categories such as sex and gender. For instance, we will examine the evolution and controversies surrounding the diagnosis of Gender Dysphoria. Next, we will explore literature on gender differences in emotional expression, coping, and several forms of psychopathology, including mood disorders, eating disorders, disorders related to anxiety and trauma exposure, substance-related disorders and aggressive disorders. Finally, we will consider the role of gender in help-seeking behavior.
1 Course Unit

PSYC 3463 Seminar in Abnormal Psychology: Developmental Psychopathology
Developmental psychopathology has been defined as "the study of the origins and course of individual patterns of behavioral maladaptation, whatever the age of onset, whatever the causes, whatever the transformations in behavioral manifestation, and however complex the course of the developmental pattern may be." (Sroufe & Rutter, 1984, p. 18). We will read and discuss seminal papers in the field of developmental psychopathology, case studies, memoirs, and sociological writings with the goal that students will acquire a deep understanding of the historical and theoretical origins of the field, key concepts, popular methodological approaches, and well-replicated findings.
Fall, even numbered years only
Prerequisite: PSYC 1462
1 Course Unit

PSYC 3464 Seminar in Clinical Psychology: Theories of Psychotherapy
This seminar provides an introduction to several major theoretical approaches to psychotherapy, such as psychodynamic/psychoanalytic, behavioral and cognitive-behavioral, humanistic, and interpersonal/group therapy models. Students will learn how these theoretical frameworks differentially influence assessment, case conceptualization, treatment planning, style of the therapeutic relationship, intervention techniques, and methods of evaluating therapy process and outcomes. Using case vignettes, film demonstrations, classroom role playing, and other experiential exercises, students will learn how these models are applied in real world settings and begin to develop an awareness of their own therapeutic philosophy. Critical analysis of the models will be advanced through ethical considerations and the application of multicultural and feminist perspectives.
Fall
Prerequisite: PSYC 1462
1 Course Unit

PSYC 3730 Three Perspectives on Judgment and Decision Making: Seminar
This course is designed to help you become a better decision maker. By the end of the semester, you should have the skills to approach decision making from a broader perspective with new tools and a new awareness of many common errors and biases. You will learn about normative decisions (how people should make choices if they want to use principles of rationality, logic and probability), descriptive decisions (how people really do make decisions) and prescriptive decisions (how people can make better decisions given normative principles and what we know about human behavior). We'll discuss the theoretical foundations of the field, some of the key empirical insights. We'll discuss what it means to have good judgment and how experts and novices differ. We look at decision making in such as public policy, medicine, the law, business, and intelligence analysis. Decision making is something we do every day, many times a day. It is so natural that some people don't even realize they are doing it. Many of the insights from this field have real-world implications.
Fall or Spring
Prerequisite: PSYC 2737 OR PPE 3003
1 Course Unit

PSYC 3766 Inside the Criminal Mind
This seminar explores the development of antisocial behavior including psychopathy, aggression, and violence. At its core, this course examines what increases the risk that children will develop behavior problems and go onto more chronic and extreme forms of violence and psychopathic personality that results in harm to others. We will examine psychiatric diagnoses associated with these antisocial behaviors in both childhood and adulthood and how they link to other relevant forms of psychopathology (e.g., substance use, ADHD). We will explore research elucidating the neural correlates of these behaviors, potential genetic mechanisms underlying these behaviors, and the environments that increase risk for these behaviors. Thus, there will be a focus on neurobiology and genetics approaches to psychiatric outcomes, as well as a social science approach to understanding these harmful behaviors, all while considering development across time. We will also consider ethical and moral implications of this research.
Prerequisite: PSYC 1462 AND PSYC 1777
1 Course Unit

PSYC 3770 Educational Neuroscience Seminar
The field of educational neuroscience is an emerging field with the goal of joining knowledge gained from the disciplines of neuroscience, cognitive science, developmental psychology, and education. This interdisciplinary course will focus on how scientific exploration of the mind and brain can inform educational practices. PSYC 480-302 (Connolly): This advanced discussion-based seminar will focus on approaches to success in domains of modern life such as social living and academia. The first portion of this seminar will be a psychology book club where we read various books written by psychology researchers. This will contribute to an ongoing discussion about scientific communication, and the presentation of psychological research to various audiences. From there, students will focus on a specific area of interest, and write a literature review based on contemporary empirical research critiquing their given topic. Students must understand the workload for this seminar requires intensive reading culminating in a large written assignment.
Prerequisite: PSYC 0001
1 Course Unit
PSYC 3771 Psychology of Modern Life: Success and Achievement
This intensive, discussion-based seminar focuses on the utility of Psychology in modern life. We will take a top-down approach to a range of contemporary ideas that could be described as practical: useful and applicable. Broadly, we will investigate the concepts of success and achievement to this end. This includes topics such as intelligence, grit, self-control, growth mindset, expertise, flow, and creativity. This will equip you with useful insight and critical analysis about various iterations of success, and how the field of Psychology conceptualizes how to achieve success. This seminar emphasizes scientific literacy.
1 Course Unit

PSYC 3780 PPE Capstone: Obedience
Though almost half a century old, Milgram's 1961-1962 studies of "destructive obedience" continue to puzzle, fascinate, and alarm. The main reason for their current grip on the field's attention (other than the boldness of the idea and elegance of execution) may be simply that they leave us with a portrait of human character that is radically different from the one that we personally wish to endorse or that the wider culture teaches us to accept. In this seminar, we will take an in-depth look at these famous studies (along with the more recent replications) and explore their various psychological, political and philosophical ramifications.
Not Offered Every Year
Also Offered As: PPE 4802, PSYC 4780
1 Course Unit

PSYC 3790 Neuroeconomics Seminar
This seminar will review recent research that combines psychological, economic, and neuroscientific approaches to study human and animal decision-making. The course will focus on our current state of knowledge regarding the neuroscience of decision-making, and how evidence concerning the neural processes associated with choices might be used to constrain or advance economic and psychological theories of decision-making. Topics covered will include decisions involving risk and uncertainty, decisions that involve learning from experience, decisions in strategic interactions and games, and social preferences. Prerequisite: Psychology 149, 153, or 165, or permission of the instructor.
Fall or Spring
Also Offered As: NRSC 4473
Prerequisite: PSYC 1230 OR PSYC 2737 OR PPE 3003
1 Course Unit

PSYC 3900 Behavioral Biology of Women Seminar
A course that explores female behavior focusing on evolutionary, physiological, and biosocial aspects of women's lives from puberty, through reproductive processes such as pregnancy, birth, lactation to menopause and old age. Examples are drawn from traditional and modern societies and data from nonhuman primates are also considered.
Fall or Spring
Prerequisite: PSYC 2900 OR BIOL 1102 OR ANTH 1040 OR ANTH 1430
1 Course Unit

PSYC 3990 Sleep and Sleep Disorders
This class will provide an introduction to sleep and sleep disorders, focusing on current research in the field. Students will learn about the neurobiology of sleep/wake regulation, the relationship between sleep and memory and how sleep is related to physical and mental health. Sleep disorders, including sleep apnea, insomnia, and narcolepsy will be covered in terms of pathophysiology, assessment and treatment.
Summer Term
Prerequisite: PSYC 0001
1 Course Unit

PSYC 4290 Big Data, Memory and the Human Brain
This course fulfills the research experience requirement in the psychology major. Advances in brain recording methods over the last decade have generated vastly more brain data than had been collected by neuroscientists during the previous century. To understand the human brain, scientists must now use computational methods that exploit the power of these huge data sets. This course will introduce you to the use of big data analytics in the study of human memory. Through hands-on Python-based programming projects, we will analyze large data sets both to replicate existing phenomena and to make new discoveries. Programming experience in python is required for this course.
Fall, even numbered years only
Also Offered As: COGS 4290
1 Course Unit

PSYC 4310 Research Experience in Cognitive Psychology
Students will work in small groups to develop, empirically test, and report on a research question in the field of cognitive psychology. Through this process, students will learn how to conduct and report a psychological study, including the appropriate statistical tests. Class discussions will help students craft their projects, and in-class presentations will provide the opportunity to develop and refine presentation skills. Psychology majors only. Class size is limited to 16 students.
Fall or Spring
1 Course Unit

PSYC 4340 Research Experience in Perception
In this research course, students will begin by first replicating earlier experiments to measure human visual memory capacity. After several class discussions to discuss ideas, each student will design and conduct their own experiment to further investigate visual and/or familiarity memory.
Fall or Spring
Also Offered As: VLST 2120
1 Course Unit

PSYC 4440 Sexuality and Attraction Research Experience Course
The overarching goal of this course is to offer a practicum (hands-on experience) in designing, conducting, and reporting a piece of psychological research. This objective will be met principally through participation in a group research project, class discussions related to the project and various exercises focusing on individual components of the research process. There are additional goals as well. One is to enable you to think critically (though not disparagingly) about other people's research, all with the hope of eventually applying the self-same critical acumen to some future work of your own. This objective will be met primarily through class lectures and discussions of the assigned readings. I also hope that our interactions throughout the course will be conducive to developing (and exchanging) creative ideas of your own. Lastly, the course aims to offer an informal introduction to research design and research ethics. This objective will be met primarily through class discussions, group project, exercises, and some additional readings.
1 Course Unit

PSYC 4442 Research Experience in Abnormal Psychology
This is a two-semester course starting in the Fall. Class size limited to 8-10 students.
1 Course Unit
PSYC 4463 Research Experience Course in Clinical Psychological Data Analysis
This is a semester-long research experience course on the analysis of data from clinical trials and epidemiological studies to better understand topics relevant to clinical psychology and mental health. The class will primarily focus on practical application of data analytic skills to understand psychological phenomenon, including analysis of existing clinical datasets using statistical analysis tools such as R
Not Offered Every Year
1 Course Unit

PSYC 4900 The Science of Behavior Change
The objective of this 14-week discussion-based seminar for advanced undergraduates is to expose students to cutting-edge research from psychology and economics on the most effective strategies for changing behavior sustainably and for the better (e.g., promoting healthier eating and exercise, encouraging better study habits, and increasing savings rates). The weekly readings cover classic and current research in this area. The target audience for this course is advanced undergraduate students interested in behavioral science research and particularly those hoping to learn about using social science to change behavior for good. Although there are no pre-requisites for this class, it is well-suited to students who have taken (and enjoyed) courses like OIDD 2900: Decision Processes, PPE 2030/PSYC 2650: Behavioral Economics and Psychology, and MKTG 2660: Marketing for Social Impact and are interested in taking a deeper dive into the academic research related to promoting behavior change for good. Instructor permission is required to enroll in this course. Please complete the application if interested in registering for this seminar: http://bit.ly/bcfg-class-2020. The application deadline is July 31, 2020. Prerequisite: Permission of instructor required.
Fall or Spring
Also Offered As: OIDD 4900
1 Course Unit

PSYC 4997 Senior Honors Seminar in Psychology
Open to senior honors candidates in psychology. A two-semester sequence supporting the preparation of an honors thesis in psychology. Students will present their work in progress and develop skills in written and oral communication of scientific ideas. Prerequisite: Acceptance into the Honors Program in Psychology.
0.5 Course Units

PSYC 4998 Mentored Research
Mentored research involving data collection. Students do independent empirical work under the supervision of a faculty member, leading to a written paper. Normally taken in the junior or senior year.
Fall or Spring
1-2 Course Units

PSYC 4999 Honors Thesis Empirical Research
The Honors Program has been developed to recognize excellence in psychology among Penn undergraduates and to enhance skills related to psychological research. The 4998 credit signifies an Honors Independent Study, completed as part of the Honors Program. The honors program involves: (a) completing a year-long empirical research project in your senior year under the supervision of a faculty member (for a letter grade). This earns 2 cu’s. (b) completing a second term of statistics (for a letter grade) before graduation. (c) participating in the year-long Senior Honors seminar (for a letter grade). This seminar is designed especially for Psychology Honors majors; this receives a total of 1 cu. (d) participating in the Undergraduate Psychology Research Fair in the Spring semester, at which honors students present a poster and give a 15-minute talk about their research. (e) a total of 15 cu’s in psychology is required. Students will be selected to be part of the Honors Program in the Spring of their junior year (see application process online)
Fall or Spring
1-2 Course Units

PSYC 5110 Probabilistic Models of Perception
How does vision work? What computations should be performed on images to support visual tasks? What computations do biological and engineered vision systems actually use? This course will provide an in-depth treatment of several topics in vision with implications for both biological and human-engineered systems. We will develop an understanding of select visual abilities in humans and in other creatures from around the animal kingdom (praying mantises, cuttlefish, etc.) and we will show how computational solutions that emerge from the study of biological systems can improve performance in engineered systems like smartphone cameras. The course will provide an introduction to useful tools like signal detection theory, dimensionality reduction, and optimal estimation theory and show how these tools are applied to the covered topics. Some programming experience is desirable.
1 Course Unit

PSYC 5210 Judgment & Decisions
Thinking, judgment, and personal and societal decision making, with emphasis on fallacies and biases.
1 Course Unit

PSYC 5250 Controversies in Psychology and Neuroscience
In this seminar, we will discuss several recent controversies in psychology and neuroscience, for example: “p-hacking” replicability, methodological terrorists, neural activity in dead salmon and failures to control the false positive rate in neuroimaging, “voodoo correlations” and double dipping, whether Tic-Tacs can improve self-control and whether reading “old” makes you walk slower. Our goal is not just to engender ennui and/or schadenfreude, but also to ask what we can learn from these discussions about how to do science in the most rigorous, reproducible manner possible.
1 Course Unit
PSYC 5390 Theoretical and Computational Neuroscience
This course will develop theoretical and computational approaches to structural and functional organization in the brain. The course will cover: (i) the basic biophysics of neural responses, (ii) neural coding and decoding with an emphasis on sensory systems, (iii) approaches to the study of networks of neurons, (iv) models of adaptation, learning and memory, (v) models of decision making, and (vi) ideas that address why the brain is organized the way that it is. The course will be appropriate for advanced undergraduates and beginning graduate students. A knowledge of multi-variable calculus, linear algebra and differential equations is required (except by permission of the instructor). Prior exposure to neuroscience and/or Matlab programming will be helpful.

Spring
Also Offered As: BE 5300, NGG 5940, NRSC 5585, PHYS 5585
1 Course Unit

PSYC 5410 Sleep and Memory
Why do we sleep? This question has puzzled scientists for centuries, but one reason emerging from research in the area is that sleep is critical for forming, retaining, and transforming our memories over time. This seminar explores human and animal research in psychology and neuroscience that has shed light on how sleep carries out these functions. Topics will include the different stages of sleep and their roles in memory consolidation, the neural systems involved in representing memory at different timescales, and the role of dreams in processing memories.

1 Course Unit

PSYC 5470 Foundations of Social, Cognitive, and Affective Neuroscience
This course is designed to introduce students to the interdisciplinary field of social, cognitive and affective neuroscience. We begin with the basics of neurons, synapses and neurotransmission and the functional anatomy of the human brain. We then move on to neuroscience methods including cellular recordings, EEG/ERP, lesion methods, structural and functional neuroimaging and brain stimulation. The remainder of the course covers the neural systems involved in emotion, social cognition, executive function, learning and memory, perception and development. We focus on how our understanding of these systems has emerged from the use of the methods studied earlier.

1 Course Unit

PSYC 5490 A Neuroscience Perspective of Artificial Intelligence
This seminar course asks what would be required to achieve Strong Artificial Intelligence, also referred to as Artificial General Intelligence (AGI), in light of what we know about the emergence of life and mind in the universe. Specifically, we will consider the question whether it is possible for machines to become self-aware by asking what Natural Intelligence is, and considering what it implies about whether and how AGI can be achieved. To grapple with this question, in Part I of the course we will examine what is known about the emergence of Natural Intelligence in the universe. This study includes the phenomena of: (1a) Abiogenesis, (1b) The Universal Role of Entropy and Information in Evolution, (1c) Signal Transduction, intracellular signaling, and Mechanism of Stimulus-Response Coupling in Unicellular Organisms; (2a) The Evolution of the Metazoa during the Cambrian Explosion, (2b) The Consequences of Motility and Prey - Prey Dynamics in the Metazoa for the Evolution of Complex Nervous Systems and Behaviors; (3a) The Implications of Invertebrate Navigation by Dead Reckoning for Understanding Insect Behavior, (3b) Insect Behavior in Relation to Robotics; (4a) Origin of the Vertebrates and the Evolution of the Vertebrate Nervous System, (4b) The Mammalian Neocortex; (5) Molecular Mechanisms of Synaptic Plasticity; (6) The Evolution of the Hominins and the Hominin Brain; (7) Higher-Order Thinking and Epistemology; (8a) Meta-awareness as the Foundation of Human Consciousness, (8b) The Fluidity of Mind Embodiment, (8c) Theories and Philosophy of Human Consciousness. (9a) Other Minds: The Atypical Intelligence in the universe. This study includes the phenomena of:

1 Course Unit

PSYC 5510 Eye Movements in Perception, Language and Cognition
In this course, we examine how the recording of eye movements can provide a moment-by-moment record of perceptual, cognitive and linguistic processes. Four areas of research will be discussed: (1) task-based scene perception; (2) language processing (in both reading and spoken language); (3) category learning, and (4) decision making. In all of these domains, eyetracking research has led to a greater understanding of how attention and information selection supports real-time cognitive processes. Students will have access to eyetracking systems, giving them hands-on experience in designing, running, and analyzing eyetracking experiments. By the end of the semester, students will have collected pilot eyetracking data. Projects will be done individually or within small research teams. Requirements: Weekly readings; class presentations and discussion; and a paper.

Fall
1 Course Unit

PSYC 5570 Neuroscience, Ethics & Law
How does the neuroscience of human decision-making and emotion impact our understanding of ethics and law? What can neuroscience tell us about why people find actions moral or immoral, worthy of praise or punishment? What, if anything, can it tell us normatively about morality, agency and responsibility? And what other insights might neuroscience offer regarding other morally and legally relevant phenomena such as stereotyping and bias, the causes of antisocial behavior and the detection of deception?

1 Course Unit
PSYC 5620 Anxiety Disorders, OCD, and PTSD: Theory, Diagnosis, and Evidence
Schizophrenia is the same as “split personality”... or is it? People with mental illness are frequently violent... or are they? “Shock” therapy is barbaric...or is it? The “answers” to these questions as portrayed by the media often reinforce common myths and stereotypes about psychopathology, its treatments, and its treatment providers. These myths can have a tremendous impact on individuals and society. This course was designed to help students develop awareness of popular myths and stereotypes depicted in the media about psychopathology, and its relationship to stigma. By the end of the course, students should be able to identify the many forms of media in which psychopathology is depicted; recognize common myths; critique the common and specific ways in which particular mental disorders are inaccurately or stereotypically portrayed in the media; evaluate the potential impact of psychopathology depictions on individuals and society; and describe current efforts to assess and reduce the stigmatization of mental health through the media.
1 Course Unit

PSYC 5730 Seminar in Neuroeconomics
This seminar will review recent research that combines economic, psychological, and neuroscientific approaches to study decision-making. The course will focus on our current state of knowledge regarding the neuroscience of decision-making, and how evidence concerning the neural processes associated with choices might be used to constrain or advance economic and psychological theories of decision-making. Topics covered will include decisions involving risk and uncertainty, decisions that involve learning from experience, decisions in strategic interactions and games, and social preferences.
Not Offered Every Year
1 Course Unit

PSYC 5790 Experimental Methods of Perception
The course will be lab based, and designed to introduce students to the major experimental
1 Course Unit

PSYC 6000 Proseminar in General Psychology
Choice of half or full course units each sem. covering a range of subjects and approaches in academic psychology.
Fall or Spring
0.5-1 Course Unit

PSYC 6090 Systems Neuroscience
This course provides an introduction to what is known about how neuronal circuits solve problems for the organism and to current research approaches to this question. Topics include: vision, audition, olfaction, motor systems, plasticity, and oscillations. In addition, the course aims to provide an overview of the structure of the central nervous system. A number of fundamental concepts are also discussed across topics, such as: lateral inhibition, integration, filtering, frames of reference, error signals, adaptation. The course format consists of lectures, discussions, readings of primary literature, supplemented by textbook chapters and review articles.
Spring
Also Offered As: NGG 5730
1 Course Unit

PSYC 6100 Applied Regression and Analysis of Variance
An applied graduate level course in multiple regression and analysis of variance for students who have completed an undergraduate course in basic statistical methods. Emphasis is on practical methods of data analysis and their interpretation. Covers model building, general linear hypothesis, residual analysis, leverage and influence, one-way anova, two-way anova, factorial anova. Primarily for doctoral students in the managerial, behavioral, social and health sciences. Permission of instructor required to enroll.
Fall
Also Offered As: BSTA 5500, STAT 5000
1 Course Unit

PSYC 6120 Introduction to Nonparametric Methods and Log-linear Models
An applied graduate level course for students who have completed an undergraduate course in basic statistical methods. Covers two unrelated topics: loglinear and logit models for discrete data and nonparametric methods for nonnormal data. Emphasis is on practical methods of data analysis and their interpretation. Primarily for doctoral students in the managerial, behavioral, social and health sciences. Permission of instructor required to enroll.
Spring
Also Offered As: STAT 5010
1 Course Unit

PSYC 6980 Laboratory Rotation
Lab rotation for psychology grad students.
Fall or Spring
0.5-3 Course Units

PSYC 6999 Individual Research for First-Year Graduate Students
Individual Research for First-Year Graduate Students
Two Term Class, Student must enter first term; credit given after both terms are complete
0.5-4 Course Units

PSYC 7030 Special Topics in Psychology
Special Topics in Psychology.
Fall or Spring
1 Course Unit

PSYC 7040 Research Methods and Statistical Procedures for Social and Clinical Sciences
This course has three primary objectives: 1) developing criteria and strategies for strong inference of causal relationships in social and clinical psychology research; 2) examining the array of research designs employed in the social/clinical sciences together with the threats to internal and external validity associated with each; 3) learning and applying statistical analytical methods appropriate for questions in the social/clinical sciences. The course will employ a seminar format and a project-oriented approach to learning. Students will be encouraged to utilize examples from their own research programs in applying the design and analysis concepts covered in the course.
Fall or Spring
1 Course Unit
PSYC 7050 Neuroethics
Neuroscience is increasingly affecting all aspects of human life, from the relatively familiar medical applications in neurology and psychiatry, to new applications in education, business, law, and the military. Today’s neuroscience graduate students will be among the scientists, citizens, and policymakers who will lead society through the maze of decisions regarding the appropriate use of neuroscience. This course provides a survey of the key ethical, legal, and social issues at the intersection of neuroscience and society. It will include a combination of traditional classroom lectures, discussion, and debates, as well as an online component coordinated with a course at Wisconsin’s Neuroscience and Public Policy graduate program.
Fall or Spring
1 Course Unit

PSYC 7090 Special Topics in Clinical Psychology
A developmental approach to the study of psychopathology focuses on how psychological processes form normal to abnormal developmental trajectories. In this seminar, we will cover theory, methods, and key constructs in the study of developmental psychopathology. Readings will include seminal empirical papers and chapters.
Fall or Spring
1 Course Unit

PSYC 7110 Regression & ANOVA
A graduate-level course on the theory and application of multiple regression and analysis of variance.
Fall or Spring
1 Course Unit

PSYC 7120 Regression & ANOVA II
An advanced graduate-level course on the theory and application of multiple regression and analysis of variance.
Fall or Spring
1 Course Unit

PSYC 7440 Brain Development & Society
In this seminar, we will explore a series of topics in developmental neuroscience, focusing on recent scientific progress and its social relevance. Two major topics will be covered: Autism and other forms of “neurodiversity”, including gender-nonconformity, and socioeconomic status. For both of these topics we will examine the state of the fast-developing science, the implications of the science for policy, and the relations between the developmental neuroscience and society more broadly (issues such as identity, stigma, and politics).
1 Course Unit

PSYC 7450 Special Topics in Cognitive Neuroscience
Special Topics in Cognitive Neuroscience
Fall or Spring
1 Course Unit

PSYC 7470 Contemporary Research Issues in Social, Cognitive and Affective Neuroscience
This course is intended to take you from a textbook-level acquaintance with psychology and neuroscience to critical engagement with the primary literature, through lectures, discussion, and short written assignments. You will learn to extract, from the dense and detail-laden pages of a journal article, its contribution to the “big picture” of human neuroscience. You will also learn to recognize problematic research practices when they arise, and to analyze and communicate about the strengths and weaknesses of research articles.
Spring
Also Offered As: BIOE 7470
1 Course Unit

PSYC 8100 Psychodiagnostic Testing
This course provides a basic introduction to the theories and tools of psychological assessment. Students learn how to administer and interpret a number of standard cognitive, neuropsychological and personality tests including the WAIS-III, WMS-III, WJAT-II, Wisconsin Card Sort, Minnesota Multiphasic Personality Inventory (MMPI) and the Millon Index of Personality Styles. Attention is given to serving as a consultant, differential diagnosis, case conceptualization, and integrating test results into formal but accessible reports.
Fall
1 Course Unit

PSYC 8110 Psychodiagnostic Interviewing
This course, usually taken simultaneously with Psychology 810, provides a basic introduction to psychodiagnostic interviewing and differential diagnosis. Students learn to take clinical histories and to administer a number of standardized diagnostic interviews, including the mental status exam, the SCID I and II for DSM-IV, the ADIS, and various clinician rating scales such as the Hamilton Depression Inventory and the Symptom Checklist-90-Revised as well as to computerized diagnostic tools.
Fall
1 Course Unit

PSYC 8150 Introductory Practicum
Students typically complete 8-10 full assessment batteries on complex patients referred from a number of different sources in the community. This practicum offers intensive supervision, with live (in the room) supervision of every trainee’s first case, and live peer-supervision of their second case. Throughout their time in the practicum they receive close supervision of every case, including checking the scoring of tests and measures, and close reading and editing of every report. Students do a final feedback session with every patient which the supervisor co-leads at the beginning of the year, and observes in the room throughout the rest of the year, thus ensuring direct observation of every trainee throughout the year.
Spring
1 Course Unit

PSYC 8200 Advanced Practicum
Intensive studies of single individuals including interviews, tests, and experiments; also clinical experience at appropriate community agencies.
Fall or Spring
1 Course Unit

PSYC 9999 Individual Study and Research
Individual Study and Research
Fall or Spring
0.5-4 Course Units

Psychology, Behavior & Decision Sciences (PBDS)

The courses listed on this page are exclusive to the LPS BAAS degree (https://lposonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lposonline.sas.upenn.edu/academics/certificates/).
PBDS 1010 Introduction to Psychology and Behavioral Sciences
This course will provide students with a foundation in the history of the development of the psychological and behavioral sciences, with attention to the evolution of theories and approaches to research design.
Fall or Spring
1 Course Unit

PBDS 1500 Social Psychology
Study of the theories and research methodologies of the field of social psychology.
Fall or Spring
1 Course Unit

PBDS 1600 Developmental Psychology
A study of the theories and methods of the field of developmental psychology, including attention to development over the lifespan from Infancy to adolescence to adulthood to aging.
Fall or Spring
1 Course Unit

PBDS 2000 Personality Psychology
In this course, students will learn about theories and methods in the psychological study of personality, which focuses on individual differences in characteristic patterns of thinking, feeling and behaving.
In addition to studying foundational theories and recent developments in the field, students will also learn about the application of instruments to test personality in the workplace and other organizations.
Fall or Spring
1 Course Unit

PBDS 2100 Group Processes
In this course, students will learn the theories and methods applied by behavioral scientists to the behavior of small groups in settings such as workplaces. Topics may include patterns of communication, group hierarchies and influence, metrics of group effectiveness, and approaches to handling conflict.
Fall or Spring
1 Course Unit

PBDS 2200 Industrial and Organizational Psychology
This course will introduce students to primary research theories, methods, and findings in the fields of industrial and organizational psychology, which focus on the behavior of employees in the workplace. Topics may include factors influencing employee performance, communication, professional satisfaction and safety.
Fall or Spring
1 Course Unit

PBDS 2500 Topics in Psychological, Behavioral, and Decision Sciences
Topics in Psychological, Behavioral, and Decision Sciences
Fall or Spring
1 Course Unit

PBDS 3600 Psychology of Social Difference and Diversity
This course will explore theories and methods used by behavioral scientists to understand the psychology of social difference, with attention to how theories and research in the behavioral sciences provide strategies to address issues of diversity, equity, and inclusion.
Fall or Spring
1 Course Unit

PBDS 4500 Advanced Topics in Psychological, Behavioral, and Decision Sciences
Advanced Topics in Psychological, Behavioral, and Decision Sciences.
Fall or Spring

Public Health Studies (PUBH)

PUBH 5010 Introduction to Biostatistics
This course is designed to provide a broad overview of biostatistics and its applications to public health research and practice. Topics covered will include techniques for describing and summarizing observations, for assessing associations among variables, and for determining the extent to which chance may be explaining and/or influencing the observed results. An emphasis will be placed on the practical application of biostatistics to address public health issues, rather than the underlying theoretical and mathematical concepts. Students will learn how to choose, apply, and interpret commonly used statistical tests. In addition, students will gain experience using STATA, a statistical software package, to analyze data. Upon completion of this course, students will be able to explain the (1) role of quantitative methods and sciences in describing and assessing a population’s health and (2) the critical importance of evidence in advancing public health knowledge.
Not Offered Every Year
1 Course Unit

PUBH 5020 Introduction to the Principles and Methods of Epidemiology
This course is designed to introduce students in all branches of public health to the principles and methods of epidemiology and its approaches and applications. The course introduces the basic epidemiological study designs, including randomized trials and observational studies (cohort, case-control, cross-sectional, ecological), and presents the foundations to understand risk, disease surveillance, and modeling. At the completion of this course, the student will be able to: (1) identify key data sources for epidemiology; (2) understand the principles of public health screening and surveillance programs; (3) describe public health problems in terms of magnitude, people, time, and place; (4) explain the importance of epidemiology for informing scientific, ethical, economic, and political discussions on health issues. Homework and in-class assignments focus on building skills in locating, interpreting, assessing, synthesizing, and communicating evidence from the epidemiologic literature, with an emphasis on critical thinking, causal inference, and understanding bias and confounding.
Not Offered Every Year
1 Course Unit

PUBH 5040 Public Health Theories & Frameworks
This introductory course is intended to provide students with a foundation in behavioral and social science theory in the context of public health research, policy, and practice. The content of this course will provide exposure to a broad range of theories and frameworks commonly employed in the field of public health for understanding health behaviors. These theories will be discussed using examples of their applications to numerous public health problems including, but not limited to: tobacco use, exercise, obesity, HIV/AIDS, violence, cancer, cardiovascular disease, diabetes, environmental hazards, COVID-19, and global health. Importantly, in order to consider the value and application of the theories and frameworks to these various health behaviors, this class also encourages students to critically consider the role of larger structural influences such as racism and other forms of discrimination on health behaviors.
Fall, Spring, and Summer Terms
1 Course Unit
PUBH 5050 Public Health Policy & Administration
This course is an introduction to health policy and management. It examines both the historical and current state of health policy in America and integrates these concepts within the context of public health practice. We will examine key concepts in understanding US health care organization, financing and delivery, the Patient Protection and Affordable Care Act (PPACA) examining the role and management issues of public health departments, and case studies in public health policy and management. At the completion of this course, the student will be able to: (1) understand the policymaking process—both legislative and administrative; (2) understand the major national health and health insurance programs: Medicare and Medicaid, PPACA and private insurance; (3) explain current concepts of health policy around costs, quality and access to care; (4) describe the current problems in public health at clinical and system levels and discuss future needs; (5) introduce management skills in evidence-based health policy, budgeting, and legislative and administrative policymaking and advocacy.
Fall, Spring, and Summer Terms
1 Course Unit

PUBH 5060 Methods for Public Health Practice
This course provides students with a foundation in public health practice methods with a focus on program planning. The course leads the student through the key phases of program planning from the identification of the public health problem, to assessing community needs, designing an intervention, and planning for implementation and evaluation. Public health practice methods employed throughout the course include: locating evidence through a variety of search mechanisms; collecting and assessing community data via qualitative research methods, surveys, and geo-spatial mapping; and planning and pitching intervention ideas via logic models, project narratives, and elevator speeches. This course is intended to provide an overview of the methods employed in public health and does not go into detail about one method verse the other. Students will have the opportunity to explore methods of their own through the design and presentation of a unique intervention targeting a health problem of their choice. Group work and case studies are used to compliment material. Course assignments are designed to add practical examples to the student’s public health career portfolio.
Fall, Spring, and Summer Terms
1 Course Unit

PUBH 5070 Public Health Law & Ethics
Law has played an indispensable role in the promotion of population health over the last hundred years. Legal interventions represent some of the most popular tools for increasing the quality and length of life. Law also plays an important role in structuring the delivery of health services including but not limited to the financing and regulation of health professionals working within hospitals and out in the community. This course introduces legal, ethical, and political concepts essential to the use of law and legal reform in promoting public health. Using current examples, the course introduces the authority of government to act, the limits on government action, and the legal and ethical implications when that authority and those limits collide. While exploring the tension between individual liberty and community health, it introduces the distinction between government action and inaction, the distribution of power and responsibility between levels and branches of government, and principles like consent. The course combines lecture, interactive class exercises, and group discussion.
Fall, Spring, and Summer Terms
1 Course Unit

PUBH 5170 Geography & Public Health
Geography can have a profound effect on health. Through this class, students will gain conceptual and technical understandings of: (1) how geography and health are related; and (2) how the public health toolbox, including geographic information systems (GIS) and spatial epidemiology, can be used to understand the places people live, work, and play and how these places either add to or detract from health. This class combines GIS laboratories and select lectures demonstrating how geographic methods can be used to address public health issues, hands-on computer and small group activities, and in-class training in ArcGIS software. Students will learn through an overt multidisciplinary approach that connects public health, geography, epidemiology, planning, medicine, and the social sciences.
Spring
Also Offered As: EPID 5180
1 Course Unit

PUBH 5190 Foundations of Global Health
This course provides an introductory overview of global health, with the primary aim to engage and inspire students about the opportunities and challenges of global health. Using an interdisciplinary approach to global health with an emphasis on addressing both global and local health disparities, learning formats include case-based analysis, small group discussion, faculty presentations, panels, and debates. Using the lens of health equity, this course provides an overview of many current issues in global public health and frameworks to address them, including: measures of disease burden; frameworks for health equity and rights; determinants of health; environmental health and safe water; control of infectious diseases; non-communicable disease programs, nutritional challenges; harm reduction and behavioral modifications; women’s reproductive rights; health economics and cost-effective interventions; health manpower and capacity development; globalization challenges and potentials. At the completion of this course, the student will be able to: (1) understand that global health involves multiple academic disciplines, and identify many of these; (2) understand that global health theory involves many, sometimes conflicting, belief systems, and identify some of these; (3) understand that global health can be conceived as a complex ecosystem, which involves issues that are much broader than the traditional health disciplines; (4) cite examples of specific issues and case studies in global health; (5) understand some of the potential interventions that can be used to ameliorate problems in global health, particularly in low-income countries.
Fall
1 Course Unit
PUBH 5230 Epidemics, Emergencies, and Environmental Threats
This course will examine the fundamental challenges of public health, focusing on outbreaks, emergencies, and environmental threats, as well as the actions required to remedy those threats. Using a case-based framework, the class will study historical and recent epidemics, methods used to identify the sources of those epidemics, actions taken to protect the public, and the social and economic ramifications of each epidemic. The course will center on the actions and policies that are central to public health. Course readings and cases are designed to illustrate a major challenge of public health: that policy decisions often must be made in the setting of sparse or inadequate data. How do researchers, practitioners, and policymakers weigh the information available, secure necessary resources, build political will, and confront vested interests in order to protect or promote population health? Students who participate in this class will become proficient in applied epidemiological reasoning. The emphasis will be on evaluating the empirical base for public health decision-making. What data are available? Can we trust the quality of those data? What additional information would be desirable/essential? Research methods training will be embedded as the students learn to critique the quality of evidence used to support public actions. Students will develop (1) an understanding of basic epidemiological concepts, (2) familiarity with major historical and recent epidemics and the social forces that shaped those epidemics, (3) an ability to evaluate data critically and present data clearly, and (4) a capacity to apply a range of data sources to inform appropriate public health action.

Not Offered Every Year
1 Course Unit

PUBH 5250 Health & Human Rights
This course will explore the interplay between health and human rights, enabling students to critically apply human rights to public health practice, particularly in the global health domain. We will explore the development of health as a human right and how public health research and policy can affect human rights. Students will learn about core human rights principles and mechanisms and the international development agenda. The class will examine topics at the intersection of global health and human rights including HIV/AIDS, harm reduction, migration, sexual and reproductive health, and climate change. Class material will primarily focus on public health challenges internationally; however, we will also discuss health and human rights issues faced by vulnerable populations in the United States.

Fall
1 Course Unit

PUBH 5310 Public Health Nutrition
The course is designed to introduce students to the core concepts, policies, and practice of public health nutrition using an explicitly antiracist, non-diet framework. Drawing upon real world examples, the lived experience of course participants, and guest speakers, we will interrogate the current and historic events, forces, and policy changes that have shaped the traditional diet-culture paradigm used throughout the field and the inequalities and injustices this paradigm has perpetuated. In addition to an introduction to nutrition science, students will be offered a foundational understanding of federal, state, and local agriculture, nutrition, and emergency food related legislation and policy—including, but not limited to—the Farm Bill, Child Nutrition Reauthorization, the Pennsylvania Fresh Food Financing Fund, the State Food Purchase Program, and Philadelphia’s citywide sugar sweetened beverage tax. Together, we will examine and critically analyze the intention, implementation, and impacts of these policies and their resulting programs. Throughout the course we explore topics and issues including hunger and food insecurity, diet and wellness culture, disordered eating and eating disorders, the “obesity epidemic,” as well as alternative frameworks, approaches, and movements such as Health at Every Size, Intuitive Eating, and the food justice and sovereignty movements.

Summer Term
1 Course Unit

PUBH 5350 Race & Public Health
This seminar course will provide a broad overview of the social conditions that engender racial health disparities in the United States. Using the concept of racial capitalism and the fundamental cause of disease theory as starting points, we will explore the ways in which racism and capitalism have shaped the social conditions we swim in; how those social conditions have produced what Ruth Wilson Gilmore calls “group-differentiated vulnerability to premature death”; and how collective action and policy have, both historically and in the present moment, aimed to address racialized health inequities. We will draw from writings in public health, economics, history, sociology, feminist studies, and critical geography studies; grey literature from community organizations, government agencies, and non-profit organizations; and various media, including news, books, music, and film. Students will engage in active student participation and leadership, self-reflection, and intensive reading that emphasizes foundational texts. Ultimately, this course aims to give students the competency to use racial capitalism as a lens to identify, make sense of, and address racial health disparities in their areas of public health interest.

Fall
1 Course Unit
PUBH 5420 Parallel Plagues: Infectious Diseases and their Control in Peru and The United States

Infectious agents continue to emerge, killing and harming humans and animals with unrelenting regularity. The emergence and control of these agents are, in some ways, remarkably different in different geographies. In other ways the patterns and consequences of infectious agents are very similar. The course will be structured around a series of pairings of infectious disease problems that affect Peru and the United States. Some pairings will be in terms of the agents themselves; others will be more thematic. In each case we will trace two lines of inquiry, one in each country, but always with an eye to the harmonics—where these lines resonate—even if they do not interact. The primary goal of the course is to investigate the historical, political and economic forces driving infectious disease in Peru and the US. A co-primary goal is to bring students and faculty from Penn and our partner institutions in Peru, Universidad Peruana Cayetano Heredia, to work their way through topics in infectious disease control, which are inherently challenging. The course will be taught in English but a workable knowledge of Spanish will be helpful.

Fall
Also Offered As: LALS 5420
1 Course Unit

PUBH 5510 Global Health Policy & Delivery

This participatory, interdisciplinary seminar course examines contemporary issues in global health policy and delivery. Students will develop skills in policy analysis, development of evidence-based policy, and effective delivery of global health interventions. The class will explore the health delivery and policy process using a variety of contemporary global health case studies, which focus on content areas such as maternal health, HIV policy, global child health, family planning and medication access. At the completion of this course, the student will be able to: (1) critically examine key issues in global health policy and delivery; (2) understand how epidemiology and various factors influence the design of evidence-based policy and interventions; (3) analyze frameworks for effective health intervention delivery in low-resource and middle-income countries; (4) develop skills to assess policy and program impact for continuous improvement and best practice dissemination.

Spring
Also Offered As: NURS 6400, SWRK 7930
1 Course Unit

PUBH 5530 Science & Politics of Food

This course explores the many complex forces that shape what we eat and why. We will examine the relationships between individual-level influences like our biology and psychological make-up and broader, societal influences like culture, policy and politics, economics, and structural racism and bias. We will discuss and critically evaluate scientific research on food policies and interventions designed to prevent nutrition-related chronic diseases. This course has a strong focus on understanding how we can create a more just and equitable food system. In addition, course assignments, activities, and lectures are designed to help students develop skills related to critiquing research and communicating evidence-based opinions in a clear and compelling manner.

Not Offered Every Year
1 Course Unit

PUBH 5550 A Public Health Approach to Behavioral Health

This course is designed to focus on the public health issue of behavioral health, with a focus on mental health and its relation to substance use. The course will apply public health approaches beyond individual clinical treatment to take a population level approach to behavioral health. In addition to learning the prevalence and impact of behavioral health conditions, this course will also look at: the historical impact of mental health policy, including the Community Mental Health Services Act of 1963, on behavioral health services and public health issues like homelessness; strategies to address behavioral health taking a public health approach, e.g., widespread universal screening, community activation, community level interventions, and health promotion in addition to prevention; and local examples of community level interventions to address behavioral health including Mural Arts’ Porch Light Program, a partnership with the City of Philadelphia Department of Behavioral Health.

Fall
1 Course Unit

PUBH 5550 Philanthropy & Public Health Justice

There has been a long history of systemic racism that has marginalized Black and Brown communities from accessing capital and philanthropic resources to support their communities, institutions, and organizations. The internal structures, processes, and approach of philanthropy can work to break down these barriers or they can work to perpetuate these harms and injustices. The philanthropic sector has been actively reflecting and working on how best to breakdown these barriers and identify avenues to leverage their resources to support justice and equity. This course will aim to understand how the history of philanthropy has a direct impact on our current non-profit and public health landscape and infrastructure. The course will lift up contemporary discussions regarding the role of philanthropy in public health justice and power building. This course will also explore the role of philanthropy in changing systems as complex as early childhood education, food justice, and health care. Some of the questions this course will explore include: How do funders understand and define racial equity, racial justice, and power building? How do funders hold themselves accountable to transformative racial justice goals? What do public health justice activists want funders to know and change to increase effective and sustainable support for their work? How do funders center power-building in grantmaking? How are funders dismantling inequities in grantmaking processes and decision making? What is trust-based philanthropy? The role of intersectionality, race, and power in philanthropy? What is the difference between private, public, and corporate philanthropy? How can we leverage grantmaking tools and approaches, like communications, research, and evaluation, to center the voice and experience of those directly impacted? How do we transition from charity to justice? Guest lectures will include philanthropic experts working locally, nationally, and globally. In addition the course will highlight the voice of grassroot activists and organizers leveraging philanthropic investments to bring about social change. This course will be of interest to students wanting to learn more about philanthropy, non-profits, social justice, and power building.

Not Offered Every Year
1 Course Unit
PUBH 5700 Evidence-Based Strategies to Improve Adolescent and Young Adult Health

This course examines the health and well-being of young people between 10 and 26 years of age in the United States and the influence of evidence-based practice, programs, and policy within a life-course and socio-ecological framework. In this class we will underscore the importance of public health professionals’ role in seeking solutions to improve health outcomes for disadvantaged adolescents and develop and advocate for structures and processes that support health equity. Using intersectionality as a lens, we will examine how racism and systemic discrimination combine with multiple aspects of identity, such as gender, sexual orientation, socio-economic status, and ability, resulting in health disparities among adolescents. The focus on health equity requires evidence-based solutions to health differences that are a result of social-ecological factors. We will examine the influence of systems (family, school, community, health care systems) and policy on key adolescents and young adults (AYA) health issues. Specific seminars will be dedicated to examining the impact of positive youth development and trauma-informed care, AYA and their families and advocacy and policy related to topics such as reproductive health, substance use, suicide and depression and motor vehicle accidents. Didactic topical presentations will be followed by student discussions and guided small group conversations.

Spring
1 Course Unit

PUBH 5730 Substance Use as a Public Health Issue

Over 70,000 people died from drug overdoses in the US in 2017 alone, exceeding the number of US soldiers who died in the Vietnam War. This course will provide an overview of the contemporary challenges in addressing substance use as a public health problem. Students will learn about the personal and environmental factors that often contribute to substance use, as well as the downstream consequences, including HIV and hepatitis C. Students will also learn public health strategies to address substance use, including primary prevention and ahrm reduction. Finally, issues around drug policy at the local, state, and federal level will be discussed. While this course will use opioids and the crisis in Philadelphia as the primary case study, other drugs will be touched upon as well. The course combines lecture, interactive class exercise, and group discussion.

Not Offered Every Year
1 Course Unit

PUBH 5750 Intimate Partner Violence

Intimate partner violence (IPV), defined as physical, sexual or psychological harm imposed by a current or former intimate partner, is a public health problem leading to increased morbidity and mortality worldwide. The purpose of this course is to familiarize students with the definition, theories, dynamics, scope, consequences of, and interventions to prevent and address, violence among intimate partners. Through this course, students will gain insight into the epidemiology of IPV across the life course, including risk and protective factors and examine unique considerations for vulnerable populations. The course will highlight current measurement issues in the field of IPV assessment and address IPV-related policies to address screening, prevention, and response to IPV. Using a social-ecological framework, we will examine the issue of IPV prevention and intervention from the individual, relationship, community, and societal perspectives, and explore approaches to and need for screening, as well as universal, selected, and indicated prevention efforts.

Spring
Also Offered As: SWRK 7750
1 Course Unit

PUBH 5780 Advanced Leadership Skills in Community Health

Grounded in a social justice perspective, this course aims to provide the student with a foundational overview of the field of community health and leadership skills in public health advocacy. The course encourages critical thinking about health outcomes framed by the broad context of the political and social environment. This course analyzes the range of roles and functions carried out by leaders in healthcare advocacy for marginalized communities; integrates knowledge of health policy and the key influence of government and financing on health outcomes; explores community-based participatory research and interventions as tools for change; and discusses ways to develop respectful partnerships with community organizations. An assets-based approach that draws upon the strengths of communities and their leaders provides a foundation for community-engagement skill building. The course emphasizes the development of skills and techniques to lead effective, collaborative, health-focused interventions for disenfranchised groups, including residents of urban neighborhoods. Prerequisite: Undergraduates with permission of the instructor

Spring
Also Offered As: HPR 5880, NURS 5870
1 Course Unit

PUBH 5890 The Public Health Challenges of Alzheimer’s Disease and Cognitive Aging

Once upon a time, Alzheimer’s disease was a rare disease, and then it became common, but soon thereafter, it turned into a crisis. What happened, and what do we need to do? This course will lead students to find the answers to this question, answers that are at the intersections of medicine, ethics, public policy, culture and health care. Topics covered include the histories of Alzheimer’s disease and cognitive aging and their changing definitions, the concepts of cognition and function and how they are assessed, the contested science and practice of measuring the disease’s prevalence and mortality, autonomy and capacity, risk and preventative factors for cognitive decline, the demography and economics of caregiving, and the creative public health initiatives and models of care that could reduce stigma, enhance cognition and maintain independence. Students will apply biostatistical and epidemiological methods to critique papers, close textual analysis to understand concepts and their shifting meanings, and writing to clearly and succinctly frame a problem, its costs and solutions. The course will include lectures, readings from the literature, group discussions and in-class exercises, and interviews with guest experts. Evaluation will be based on participation, presentations, written assignments, and exam results.

1 Course Unit

PUBH 5950 Special Topics in Public Health

This course is a place holder for unique public health courses, created in collaboration with the program and instructor/s, that will run for one semester only. Topics can range from community engagement to education to global health to policing and carceral spaces to policy and advocacy. If offered in a given semester, students should refer to the specific section of a Special Topics course on Path@Penn for more information.

1 Course Unit
PUBH 6040 Qualitative Research Methods in Public Health
This elective course explores the theories, methods, ethics, and practical applications of qualitative research. It builds upon the foundational research methodology taught in the MPH core curriculum with the central goal of preparing students to lead their own qualitative projects, including capstones, theses, or future research. Qualitative analysis is utilized broadly throughout various fields, such as anthropology, sociology, psychology, communications, business, medicine, and public health. Through readings from diverse disciplines, students will explore how qualitative approaches have been applied in different settings to address diverse research questions. The course begins by clarifying the knowledge generated by qualitative methods and demystifying the role of theory, emphasizing its importance in project quality. It then covers key aspects of preparing a qualitative study; identifying suitable sites and samples, effectively communicating with stakeholders, and ensuring a reflexive mindset attuned to the ethical issues. Students will learn various methods for collecting qualitative data, such as observation, interviews, virtual ethnography, document analysis, and photo-elicitation. The course also includes instruction on analyzing the data using an iterative coding process facilitated by software. Finally, students will work on developing explanatory theory from this analysis in order to engage meaningfully with the research community about a given topic.
Spring
Prerequisite: PUBH 5060
1 Course Unit

PUBH 6050 Epidemiology & Control of Infectious Diseases
This course will focus on the application of epidemiological methods to the discovery, detection, and evaluation of infectious disease threats together with an evidence based assessment of the value of public health interventions intended to reduce prevalence and severity of disease in people. In-class assignments are intended to build skills in location, interpreting, assessing, and synthesizing evidence from the epidemiologic literature, with an emphasis on critical thinking, causal inference, and understanding bias and confounding.
Prerequisite: PUBH 5020
1 Course Unit

PUBH 6060 Interpreting Epidemiologic Literature to Inform & Influence
This course is designed for students interested in further exploration of epidemiologic methods and the challenge of establishing a causal relationship between exposure and outcome using an observational science. We will utilize case studies to address the application of epidemiologic data to specific issues of relevance to public health. The nature of observational data will be explored through these case studies and specific methodological challenges will be highlighted and examined.
Also Offered As: NURS 6160
Prerequisite: PUBH 5020
1 Course Unit

PUBH 6070 Advanced Local Policymaking
This course is designed to simulate the local public health policymaking process, providing the foundational context and practical skills necessary to effectively advocate for evidence-based policy change in furtherance of public health objectives. The class will be interactive in nature and will require participation in public health advocacy exercises in order to hone advocacy skills. There will also be a focus on persuasive communication, both oral and written. We will explore the entire advocacy process from the identification of a problem and evaluation of possible policy solutions to utilizing the full range of advocacy tools to promote policy change. We will be using real-time examples of public health challenges affecting the health, safety and well-being of children and families here in Philadelphia and in communities across the country. The goal of the course is to prepare students to participate meaningfully in policymaking during their public health careers, regardless of whether or not they plan to work directly in policy or law.
Summer Term
Prerequisite: PUBH 5050 AND PUBH 5070
1 Course Unit

PUBH 6080 Behavioral Economics & Health
Among the many determinants of health outcomes around the world, human behavior plays a central role. Examples abound in many different areas of health: smoking and exercise can have an impact on the burden of chronic diseases globally; utilization of vaccination services can affect the spread of infectious diseases; decisions made by providers can affect the health outcomes of patients. Understanding human behavior – specifically how people make health-related decisions – is therefore essential for learning how we might develop interventions and policies that have the potential to improve health outcomes. This understanding can be advanced and enriched using behavioral economics. Behavioral economics, a field at the intersection of psychology and economics, suggests that humans rarely behave rationally when making health-related decisions. Instead, a collection of fundamental psychological forces – including cognitive biases, mental shortcuts, and inconsistent time preferences – lead us to act against our best interest (and sometimes the interests of our patients, family members, or communities that we care for.) The course will take a very pragmatic, hands-on orientation to behavioral economics and health research and practice. Examples of public health related questions that this course will address include: How can we convince smokers to quit smoking permanently? What’s the best way to get employees to show up to a flu vaccine clinic? How can we encourage patients to take their medications regularly? How can we increase the utilization of health products like bednets in low-income countries? How can we reduce health care costs through increased prescription of generic medications?
Fall
Also Offered As: NURS 6130
Prerequisite: PUBH 5060 OR PUBH 5040
1 Course Unit
PUBH 6100 Mathematical Modeling of Infectious Diseases
As infectious diseases are transmitted from one host to another, the dynamics of transmission in the population of hosts follow certain basic rules. If one knows and understands these rules, one can plan rational strategies to prevent or control infections. One of the principal tools of those interested in public health interventions to control or ameliorate infectious diseases is the mathematical model. A model is just a means of representing and manipulating something that would not otherwise be accessible. This course provides students with the opportunity to construct models of the transmission of infectious diseases and to use these models to plan or control disease control strategies. The course is predicated upon the notion that the act of building a mathematical model of disease transmission is often the best way of understanding what is going on. This understanding will be further refined by the examination of more complicated and sophisticated model structures as they appear in the recent published literature. A disproportionate number of emerging infectious diseases and recent disease outbreaks in the United States and elsewhere have shared a common characteristic; they affect veterinary as well as human populations. Many are also vector-borne, passing between different species of hosts through insects and other invertebrates. In some cases, humans are only “spillover hosts” whose infection is incidental to the transmission cycle. Interdisciplinary approaches are especially important to control such diseases. As a particular focus of the course, students will learn the tools needed for successful collaborations to address the growing problem of zoonotic and vector-borne diseases.
Fall, odd numbered years only
Also Offered As: EPID 5160
Prerequisite: PUBH 5020
1 Course Unit

PUBH 6150 Principles of Injury & Violence Prevention
This course will introduce students to the principles of injury and violence prevention broadly with a focus on the various study designs used in injury and violence research, and important concepts used in designing, analyzing, and interpreting these studies. The course will analyze analyze injury/violence as a preventable public health issue by synthesizing information on historical, cultural, systemic, structural, and other deterministic causes including implicit bias and structural racism. Students will be taught how to access interpret public-access injury and violence data, and as identify the magnitude of the problem to the degree that it is known, based on peer-reviewed literature and other resources. In addition, they will learn how to identify and prioritize injury/ violence problems based on specific sub-populations, and also how to assess the consequences of injury & violence to individuals, families, and communities by integrating information from peer-reviewed literature. The course will also critique strategies to prevent injury and violence. Finally, students will have the opportunity to focus on one specific injury/violence topic and delve into its problem, causes, and public health intervention/prevention best practices.
Fall
Prerequisite: PUBH 5020
1 Course Unit

PUBH 6210 Program Evaluation in Public Health
There are many public health programs developed to promote change. The question most funders, participants, and organizations have for public health programs is: Did it work? And how do we know? This course is designed to review the principles of identifying short-term, mid-term, and long-term outcomes and methods of measurement, with a focus on equity in evaluation. Students learn about the application of data collection skills to all phases of developing a public health program or service innovation, from stakeholder engagement to analysis of findings to implementation of changes based on results. Students learn to appreciate how these skills can be used as practical tools for identifying public health problems, program development, program implementation, including taking a reflective practice approach, ensuring equity and fairness in program delivery (i.e. combating disparities), and generally promoting public health through effective and efficient programmatic efforts. Students will participate in a field exercise by developing an evaluation plan for a local nonprofit program.
Spring
Prerequisite: PUBH 5060
1 Course Unit

PUBH 6250 Public Health, Cities, & the Climate Crisis
Climate change has been called the most pressing public health crisis of the 21st century. The impact of climate change can be seen directly, through elevated temperatures that exacerbate chronic disease to an increase in severe storms that dramatically increase the risk of injury. But there are also indirect effects, from the increase in vector-borne diseases to the disruption of food production. These health impacts are not felt equally, with a greater brunt on disadvantaged, vulnerable, and/or marginalized populations. Given the current state, we need to think about climate mitigation and climate adaptation, with an eye towards strategies that address health impacts. We must consider how to reduce further climate change while recognizing that some change is already irreversible and in doing so, improve our ability to protect the health, safety, and welfare of the public. The breadth of this issue will require collaboration from diverse sets of professionals who understand design, engineering, policy, and health. This course will tackle the intersectional issues that climate change requires us to consider for public health and the design of cities. As such, the course will be offered jointly between the MPH program and the School of Design. The course will be purposefully interdisciplinary, recognizing that initial group projects must include developing a shared vocabulary between the different students. Key to our success is a more holistic integration of climate change thinking into professional student training and a common ground on which to collaborate both to raise climate change risk awareness across disciplines and to identify strategies (policies, programs, projects) to ameliorate or adapt to those risks with health outcomes used as the benchmark for success. In this way, the course touches on both Climate Action and Societal Resilience. The geographic focus of the course will be the Urban environment, with a strong focus on Philadelphia through projects related to the Hazard Mitigation Plan from the Office of Emergency Preparedness.

Prerequisite: PUBH 5060
1 Course Unit
PUBH 6320 Using Public Health Innovation to Achieve Equity & Impact
This course is an introduction to innovation across public health and the delivery of health and social services in the US system. It examines ideas of what innovation can be and explores methods for how to achieve them. The lessons in this seminar course seek to broaden the student's understanding of the macro-level role of the public and private sectors in health care innovation, and determine ways of evaluating “impact” and “equity.” As a seminar, students will participate in robust discussions about various topics in public health innovation, including with guest speakers who represent their respective domains. They will also learn how to craft an innovation proposal and mock pitch it by the end of the semester.
Summer Term
Prerequisite: PUBH 5050
1 Course Unit

PUBH 6370 Advocacy & Public Health: Turning Knowledge into Action
This course is designed to provide the foundational context and practical skills necessary to effectively identify public health problems, craft evidence-based solutions and advocate for those solutions in furtherance of public health objectives. The class will be interactive in nature and will require participation in public health advocacy exercises in order to hone advocacy skills. There will also be a focus on persuasive communication, both oral and written. We will explore the entire advocacy process from the identification of a problem and evaluation of possible public health policy solutions to utilizing the full range of advocacy tools to promote policy change. We will be using real-time examples of public health challenges affecting the health, safety and well-being of children and families here in Philadelphia and in communities across the country. Students will apply advocacy skills during an Injury & Violence Prevention Hill Day in Washington, D.C. with national partners.
Not Offered Every Year
Also Offered As: HPR 6370, NURS 5650
Prerequisite: PUBH 5050 OR PUBH 5070
1 Course Unit

PUBH 6450 Law as an Instrument of Behavior Change
Law has long been one of the most important tools for promoting public health. Deployed effectively, laws can make environments healthier and instigate healthier behavior. But law doesn’t work automatically let alone universally. Few laws are enforceable at scale. Instead, people often must choose to comply with legal prescriptions, and that is far from certain. Driver use of phones, for example, remains widespread despite bans. The effect of laws depends in important ways on social context and on other factors, explaining why the same law can simultaneously benefit some while harming others. A law requiring bicycle helmets can reduce head trauma while increasing racialized policing. Successful implementation of laws relies on societal trust and on credibility, which are finite, meaning that overuse of law can undermine its efficacy both for a particular purpose but also more broadly. This class explores the use of law as an interventional tool. Assigned reading and discussion will be organized around different mechanisms through which law is thought to change behavior (e.g., deterrence, signaling) and around different subjects of legal intervention (e.g., reduction of road fatalities, pandemic response). There are two overarching goals for the semester. The first is to development a practical skillset to determine whether legal intervention is appropriate to address a particular problem and, if so, how to define and evaluate its implementation. The second is to develop a deeper understanding of the role of law in the public health toolset and in a healthy society more broadly. Class meetings will include interactive discussion of assigned reading followed by recitation exercises.
Not Offered Every Year
Prerequisite: PUBH 5070
1 Course Unit

PUBH 6950 Advanced Special Topics in Public Health
This course is a placeholder for unique public health courses, created in collaboration with the program and instructor/s, that will run for one semester only. Topics can range from community engagement to education to global health to policing and carceral spaces to policy and advocacy. As an Advanced-level Special Topics class, there will be prerequisite coursework specified at the section level. If offered in a given semester, students should refer to the specific section of a Special Topics course on Path@Penn for more information.
1 Course Unit

PUBH 7080 Capstone Seminar I
The Capstone Project is the culminating experience for the Master of Public Health degree in which MPH students apply the knowledge and skills learned throughout the curriculum to public health problems in a chosen area of interest or skillset. To support this process, students are required to take two semester-long Capstone courses, Capstone I and Capstone II. During Capstone I, students will identify, design, and plan their project under the guidance of their Capstone Instructor. Students will also identify a Capstone Mentor/s, a public health professional with expertise in the field who will oversee the design and development of the project. Each student is required to conduct a comprehensive review of the relevant literature to ensure they understand the social, cultural, and environmental context of their public health problem of interest. Additionally, students are asked to pay particular attention to the relevant policy environment, the concept of evidence-based practice, and to the needs of vulnerable populations. The nature and scope of the project is determined jointly by the student, Capstone Mentor, and Capstone Instructor. By the end of Capstone I, students should have a solid idea of what their Capstone Project is and how to complete it.
Fall, Spring, and Summer Terms
1 Course Unit
PUBH 7090 Capstone Seminar II
Upon completion of Capstone I, students in Capstone II will finally carry out their planned Capstone Project. Throughout the course, students will engage their peers in scholarly discussion to workshop overcoming project hurdles. At the end of the course, students will deliver a professional presentation to public health practitioners and submit a written paper on their Capstone Project.
Fall, Spring, and Summer Terms
1 Course Unit

Punjabi (PUNJ)

PUNJ 0100 Beginning Punjabi Part I
This course emphasizes speaking and reading skills in Punjabi.
Upon completion of this course, students should be able to interact meaningfully and in a socially acceptable manner in a variety of simple situations involving everyday conversational topics. Further, students should be able to read and understand the main idea and most details of simple connected texts. This course will utilize authentic printed, audio, and video materials and will provide opportunities for natural communication both within and outside the classroom.
Fall

Quechua (QUEC)

QUEC 0100 Elementary Quechua I
Quechua, the language of the Inca Empire and still spoken by approximately 6 million people throughout the Andes, is the most popular indigenous language of South America. The program focuses on the development of written and oral communicative abilities in Quechua through an interactive activity-based approach. Course includes an introduction to Quechua and Andean culture. Students will participate in pair, small-group and whole-class activities. Assessment is based on both students ability to use the language in written and oral tasks and understanding the language and culture. This beginning level Quechua course is designed for students who have little or no previous knowledge of the language. Lectures will be delivered in English and Quechua.

Real Estate (REAL)

REAL 2040 Real Estate Law
This course examines the fundamentals of real estate finance and development from a legal and managerial perspective. The course serves as a foundation course for real estate majors and provides an introduction to real estate for other students. It attempts to develop skills in using legal concepts in a real estate transactional setting. The course will be of interest to students contemplating careers in accounting, real estate development, real estate finance, city planning, or banking. The main topics covered may include the following: land acquisition, finance; choice of entity; tax aspects; management (leasing, environmental); disposition of real property (sale of mortgaged property, foreclosures, wraparound mortgages, sale-leasebacks); and recent legal developments. Lectures and class discussion required.

Fall or Spring
Also Offered As: LGST 2040
1 Course Unit
REAL 2050 Global Real Estate: Risk, Politics and Culture
This is an introductory course to global real estate markets, with a focus on income-producing real estate assets. Globally, estimates suggest the value of investable real estate assets in the world exceeds $60 trillion. We will discuss the basics of valuation and risk management, emphasizing concepts that are salient in the global context, including political risk, currency risk, property rights and culture. The course will cover markets outside the United States, except for one special topic on international investors in the United States. We will focus more on the qualitative aspects of real estate investment analysis and less on quantitative aspects. As firms expand their ventures across borders, there is a growing emphasis on the ability to assess and manage risk in a global business environment. Many of these decisions have implications on real estate assets. In this class, we will discuss the real estate business decisions of global firms, such as Blackstone, Hilton, AirBNB, WeWork, Prologis, Walmart and Amazon. This is a full semester course, open to undergraduates and MBA’s. Lecture with discussion required.
Fall
Mutually Exclusive: REAL 7050
1 Course Unit

REAL 2080 Housing Markets
This course is designed for students interested in the economics and operations of housing markets. It is primarily a U.S. focused course, but does include a limited amount of international material for comparative purposes. The class is divided into four sections: (1) supply and demand for housing, including the operations of homebuilders and rental landlords; (2) house prices, including cycles and price dynamics; (3) international comparisons; and (4) public policy analysis applied to a current housing markets-related issue. This course presumes knowledge of intermediate economics, as we will apply that knowledge throughout the semester. For Wharton students, this means you must have passed BEPP 2500 (undergrads) or MGEC 6100 and 6120 for MBA’s. Non-Wharton students should have taken the equivalent course in the College. Lecture with discussion required.
Spring
Also Offered As: BEPP 2080
Prerequisite: BEPP 2500
1 Course Unit

REAL 2090 Real Estate Investment: Analysis and Financing
This course provides an introduction to real estate with a focus on investment and financing issues. Project evaluation, financing strategies, investment decision making and real estate capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format with discussion required. The course contains cases that help students evaluate the impact of more complex financing and capital markets tools used in real estate. There are case studies and two midterms, (depending on instructor).
Fall or Spring
Also Offered As: FNCE 2090
Prerequisite: FNCE 1000
1 Course Unit

REAL 2150 Urban Real Estate Economics
Urban Real Estate Economics uses economic concepts to analyze real estate markets, values, and trends. The course focuses on market dynamics in the U.S. and internationally, with an emphasis on how urban growth and local and federal government policies impact urban development and real estate pricing. A group development project gives hands on experience, and invited guest speakers bring industry knowledge. Besides the group project and presentation, problem sets are required along with a midterm and optional second exam. Lecture with discussion required.
Fall or Spring
1 Course Unit

REAL 2300 Urban Fiscal Policy
This course will examine the provision of public services for firms and people through cities. Why cities exist, when fiscal policy fails, investments in infrastructure, realities of local governments such as inequality, crime, corruption, high cost of living, congestion, and unfunded pensions and debt, will be covered. We will pay special attention to recent topics, such as partnerships with the private sector, enterprise zones, the role of technology, environmental challenges, and real estate policies that promote housing affordability, such as rent control and inclusionary zoning.
Spring
Also Offered As: BEPP 2300, FNCE 2300
1 Course Unit

REAL 2360 International Housing Comparisons
This course analyzes housing finance systems and housing market outcomes across the globe. In the US, the course focuses on the development of securitization markets and addresses the current challenges of housing finance reform, including the future of Fannie Mae and Freddie Mac. Internationally, the course covers issues of access to housing and housing informality in developing countries, financial crises arising out of the housing sector, and market-oriented and public policy solutions. The course features a wide array of speakers in finance, government and academia who contribute their perspectives to pressing issues of mortgage market design.
Spring
Also Offered As: BEPP 2360
1 Course Unit

REAL 2400 Advanced Real Estate Investment and Analysis
This course is designed for majors in Real Estate, but is also open to finance-oriented students who wish a deeper analysis of real estate investment and investment analysis issues than that offered in REAL 209. The class will contain a mixture of lectures, guest speakers and case discussions. Academic research is paired with recent industry analysis of key issues in order to marry sound theory and empirical results with current events and practices. Several classes will include lectures outlining what economics and finance tell us about a number of topics. Generally, these will be followed by guest lectures from industry professionals who will focus on a specific application of the principles introduced in the lectures.
Spring
Mutually Exclusive: REAL 8400
Prerequisite: REAL 2090 OR FNCE 2090
1 Course Unit
REAL 3210 Real Estate Development
This course evaluates "ground-up" development as well as re-hab, re-development, and acquisition investments. We examine raw and developed land and the similarities and differences of traditional real estate product types including office, R & D, retail, warehouses, single family and multi-family residential, mixed use, and land as well as "specialty" uses like golf courses, assisted living, and fractional share ownership. Emphasis is on concise analysis and decision making. We discuss the development process with topics including market analysis, site acquisition, due diligence, zoning, entitlements, approvals, site planning, building design, construction, financing, leasing, and ongoing management and disposition. Special topics like workouts and running a development company are also discussed. Course lessons apply to all markets but the class discusses U.S. markets only. Throughout the course, we focus on risk management and leadership issues. Numerous guest lecturers who are leaders in the real estate industry participate in the learning process. Format: predominately case analysis and discussion, some lectures, project visits.
Prerequisite: REAL 2090 OR FNCE 2090
1 Course Unit

REAL 3750 Real Estate Disruptions
Real Estate is changing dramatically for the first time in perhaps one hundred years. This class will examine how technology is changing in many facets (all) of the industry. This course will address how technology has already changed the demand for real estate, how it will likely change in the future the way real estate is used, designed, developed, constructed, managed, leased, maintained and financed. Among many questions to be considered: Can you crowd fund real estate development? Will the office business become a part of hospitality? Can we build new buildings like we assemble legos? How will autonomous vehicles affect the demand for space and property values? What is the future of new data analytics services? This is a team taught mini, half-credit course that will bring together a recognized industry leader and Wharton faculty. Includes a broad set of guest lecturers (Start-up entrepreneurs, incumbents, non-RE technology specialists, etc). We believe there is no one single approach to gain insight into disruptions and change under uncertainty so we will propose a mix of approaches including, in-depth case-studies, interactions with guest lecturers who handle those issues daily, learning from economic history and other industries, and drawing from core economic concepts.
Fall
Mutually Exclusive: REAL 8750
Prerequisite: REAL 2090 OR FNCE 2090
1 Course Unit

REAL 3900 International Real Estate Comparisons
As a truly non-U.S. focused course, we explore the world of cross-border real estate development, with a focus on fast growing emerging market economies. Topics will emphasize the importance of strategy and implementation in cross-border real estate investment and include: the rationale, opportunities and risks of international real estate investing; the macro factors that influence the performance of real estate markets across countries; market specific factors that impact RE investment performance (property rights, taxes, transparency, planning procedures); the qualitative aspects of identifying and achieving successful projects; and the growing market for international RE securities and strategies for portfolio management. Classes will combine a lecture on specific aspects of global cross-border RE in the first half of the class and international case presentations in the second half. Cases will be presented by leading executives in charge of major international RE projects or funds. Cases have been selected to cover different types of RE development-residential, office, retail, hospitality and logistics-important emerging market countries/continents (East/South Asia, Latin America, Sub-Saharan Africa, the Middle East) and different development and investment strategies. This class is offered in the second half of the semester.
Fall
Mutually Exclusive: REAL 8900
Prerequisite: REAL 2090 OR FNCE 2090
0.5 Course Units

REAL 3960 Real Estate Entrepreneurship
This half-semester course will focus on entrepreneurial aspects of the real estate investment business. The course structure is designed to track the life cycle of real estate investing with different units focusing on discrete stages of the deal process from sourcing and capital raising through asset management and property disposition. At each juncture, granular attention will be paid to real-life deal making skills, all from the perspective of an entrepreneur operating with limited resources in different economic environments. As part of the class, you will analyze deals, models and investment documentation that, once assembled, will arm you with a "deal tool kit" that you can reference as you engage in real estate transactions throughout your career. At the end of the course, time will be allocated to discuss the trajectory of entrepreneurship and how it corresponds to careers in the real estate business.
Fall or Spring

REAL 8900 International Real Estate Comparisons
As a truly non-U.S. focused course, we explore the world of cross-border real estate development, with a focus on fast growing emerging market economies. Topics will emphasize the importance of strategy and implementation in cross-border real estate investment and include: the rationale, opportunities and risks of international real estate investing; the macro factors that influence the performance of real estate markets across countries; market specific factors that impact RE investment performance (property rights, taxes, transparency, planning procedures); the qualitative aspects of identifying and achieving successful projects; and the growing market for international RE securities and strategies for portfolio management. Classes will combine a lecture on specific aspects of global cross-border RE in the first half of the class and international case presentations in the second half. Cases will be presented by leading executives in charge of major international RE projects or funds. Cases have been selected to cover different types of RE development-residential, office, retail, hospitality and logistics- important emerging market countries/continents (East/South Asia, Latin America, Sub-Saharan Africa, the Middle East) and different development and investment strategies. Prerequisite: This class is offered in the second half of the semester.
Fall
Mutually Exclusive: REAL 3900
Prerequisite: REAL 7210 OR FNCE 7210
0.5 Course Units
REAL 8910 Real Estate Entrepreneurship
This half-semester course will focus on entrepreneurial aspects of the real estate investment business. The course structure is designed to track the life cycle of real estate investing with different units focusing on discrete stages of the deal process from sourcing and capital raising through asset management and property disposition. At each juncture, granular attention will be paid to real-life deal making skills, all from the perspective of an entrepreneur operating with limited resources in different economic environments. As part of the class, you will analyze deals, models and investment documentation that, once assembled, will arm you with a “deal tool kit” that you can reference as you engage in real estate transactions throughout your career. At the end of the course, time will be allocated to discuss the trajectory of entrepreneurship and how it corresponds to careers in the real estate business.
Fall
Mutually Exclusive: REAL 3960
Prerequisite: FNCE 6110
0.5 Course Units

REAL 8990 Independent Study
All independent studies must be arranged and approved by a Real Estate Department faculty member.
Fall or Spring
0.5-1 Course Unit

REAL 9450 Urban Real Estate Economics
Urban Real Estate Economics uses economic concepts to analyze real estate markets, values, and trends. The course focuses on market dynamics in the U.S. and internationally, with an emphasis on how urban growth and local and federal government policies impact urban development and real estate pricing. A group development project gives hands on experience, and invited guest speakers bring industry knowledge. Besides the group project and presentation, problem sets are required along with a midterm and optional second exam. Lecture with discussion required.
Fall or Spring
Also Offered As: REAL 7240
Prerequisite: MGEC 6110 AND MGEC 6120
1 Course Unit

REAL 9460 Advanced Topics in Urban Economics
This course addresses advanced topics in urban and real estate economics. The course will mix theory and empirics and will cover a broad range of topics including the modeling and estimation of agglomeration economies, land use and urban costs, transportation in cities, urban growth, migration between cities etc. The classes will mix formal presentations made by the instructor and student-led discussions of recent academic papers. In addition to presentations, students will be expected to complete a series of assignments including a short original research paper. PhD students will be expected to complete a research paper in addition to the successful completion of the course examination requirements. Prerequisites: The course assumes that students have familiarity with standard first year econometrics and microeconomics.
Fall or Spring
0.5-1 Course Unit

REAL 9460 Advanced Real Estate and Urban Economics
This course covers fundamental topics in the broad fields of urban economics and real estate. We will focus on the application of econometric methods and economic modelling to analyze important issues, such as household sorting and valuation of local amenities, racial segregation, and the provision of local public goods.
Not Offered Every Year
0.5-1 Course Unit

REAL 9480 Household Real Estate Decision-Making
In this course we will study theory and evidence of how households make decisions surrounding real estate, how they interact with the financial sector, and how housing and mortgage choices influence urban markets and household balance sheets. We will examine real estate decisions from both supply and demand perspectives. There will be a special focus on the tools of modern empirical research, emphasizing the many challenges to causal identification and popular methodologies to overcome and address these challenges. The course will cover topics in mortgage choice, refinancing, renegotiation, default and foreclosure, discrimination, housing search, and market segmentation. Prerequisites: The course assumes that students have familiarity with standard first year econometrics and microeconomics.
Spring
0.5 Course Units

REAL 9620 Applied Economics Seminar
The goal of this course is to help doctoral students develop critical thinking skills through both seminar participation and writing of referee reports. To this end students will attend the Wharton Applied Economics seminar each Wednesday at noon seminar when it meets; prepare two written referee reports on WAE papers per semester, due before the seminar is presented. After attending the seminar and the ensuing discussion of the paper, students will prepare follow-up evaluations of their referee report, due one week after the seminar.
Two Term Class, Student may enter either term; credit given after both terms are complete

Regulatory (REG)

REG 5100 Introduction to Clinical and Translational Research
This introductory course lays the foundation for understanding practical aspects of conducting clinical research in an academic environment. The course is divided into two modules: Module 1: Research Methods & Protocol Development and Module 2: Regulatory Environment for Clinical Trials. The first module introduces clinical research, clinical protocols, study designs and biostatistics that underlie such studies. The second module covers ethical considerations in clinical research, study execution and oversight, and the regulatory environment for clinical research. Upon completion, students should have a strong foundation in the fundamentals of clinical research and should be able to apply contemporary research tools to clinically relevant areas of investigation.
Fall
Also Offered As: MTR 5100
1 Course Unit
REG 5900 Molecular Toxicology: Chemical and Biological Mechanisms
Course Goals: Exposures to foreign compounds (drugs, carcinogens, and pollutants) can disrupt normal cellular processes leading to toxicity. This course will focus on the molecular mechanisms by which environmental exposures lead to end-organ injury and to diseases of environmental etiology (neurodegenerative and lung diseases, reproduction disruption and cardiovascular injury). Students will learn the difficulties in modeling response to low-dose chronic exposures, how these exposures are influenced by metabolism and disposition, and how reactive intermediates alter the function of biomolecules. Mechanisms responsible for cellular damage, aberrant repair, and end-organ injury will be discussed. Students will learn about modern predictive molecular toxicology to classify toxicants, predict individual susceptibility and response to environmental triggers, and how to develop and validate biomarkers for diseases of environmental etiology. Students are expected to write a term paper on risk assessment on an environmental exposure using available TOXNET information. Pre-requisites: Must have taken or will take Fundamentals of Pharmacology concurrently. Undergraduate course work in biochemistry and chemistry essential. Exceptions allowed based on past course work. Please consult with students with required prerequisites; residents in in Environmental and Occupational Health, and professional masters students (MPH and MTR).
Spring
Also Offered As: PHRM 5900
1 Course Unit

REG 6000 Introduction to Biostatistics
The goal of this course is to develop translational scientists who are able to apply the necessary statistical methods to their thesis project, critically assess the application of statistical methods in the literature, and collaborate with biostatisticians. The course will be designed to include weekly seminars to teach introductory biostatistics concepts and group assignments applying the principles through critically assessing the literature.
Fall
Also Offered As: MTR 6000
1 Course Unit

REG 6010 Practical Scientific Writing
Students should expect this process to be iterative. Students will learn, and practice in class, multiple techniques that they can apply in the future to improve their scientific writing. These include how to: (a) define the scope of a scientific document; (b) save time organizing, navigating, and formatting scientific documents; (c) read scientific articles efficiently; (d) establish a workflow for reading large volumes of scientific material; (e) efficiently find the most relevant articles in biomedical databases include PubMed, Embase, Scopus, Web of Science; (f) use large language models like Chat GPT as tools; (g) improve writing mechanics to craft clear and compelling scientific discourse. Note: point (g) encompasses ~15 different writing mechanical techniques taught and practiced over multiple class sessions. This is a hands-on course during which students will develop a solid draft of the introduction to their master’s thesis; sometimes this introduction is referred to as a ‘literature review’ (~3-6 pages double-spaced, >100 references).
Summer Term
Also Offered As: MTR 6010
1 Course Unit

REG 6020 Proposal Development and Study Design
This course has two primary areas of focus: (i) proposal development and enhancement; and (ii) a focus on research and study design. (i) Proposal Development and Enhancement: Students apply foundational concepts by revising and refining their written proposal and presenting their research project throughout the course. Students receive an overview of approaches to developing an effective proposal; and guidance on how to write and present their hypothesis, specific aims, research strategy, significance, innovation, and approach using the general NIH application format. (ii) Research and Study Design: Students receive an overview of translational research principals and clinical study design approaches relevant to thesis projects designed to probe mechanisms of disease and translate results in basic research into investigations in humans. Topics include clinical and translational research methods, and study design and execution. Students are introduced to these topics through asynchronous and synchronous learning environments. At the end of the course, each student submits and presents their written proposal to their peers and a panel of reviewers for critique and feedback. Members of the panel include the students’ research mentor(s), program mentor, and thesis committee. The panel provides feedback on the proposal which the student will then incorporate into the written proposal. Students submit their final revised proposal to be reviewed and graded by their program mentor.
Fall
Also Offered As: MTR 6020
1 Course Unit

REG 6040 Scientific & Ethical Conduct
In this course, students will learn the foundational principles of scientific, operational and ethical conduct of research, complete directed experience in evaluating ethical principles through IRB membership and ultimately be able to apply all principles to their own work. By the end of the foundational class sessions, students will understand scientific conduct, ethical considerations of human subject’s research, good clinical practices (GCP), good laboratory practices (GLP), conflict of interest, and budgetary concepts. The directed experience will include becoming a member of an Institutional Review Board (IRB) (Penn or CHOP) and participating as an active member in 6 meetings.
Spring
Also Offered As: MTR 6040
1 Course Unit

REG 6100 Fundamentals of FDA Regulation
This introductory course provides an overview of Regulatory Affairs in relation to three key areas of development: Drugs, Biologics, and Medical Devices. The course will look at the rules governing prescription and over-the-counter drugs as well as the changes introduced by the influence of genetic engineering and biological product development. Throughout the course, practical issues facing regulatory specialists as they work with the FDA and other international regulatory bodies to secure and keep product approval will be addressed.
Summer Term
1 Course Unit
REG 6110 Clinical Trial Management
This course will focus on the practical aspects of executing clinical trials in an academic environment in a GCP compliant fashion. Upon course completion students will be able to effectively implement and manage both investigator-initiated and industry-sponsored clinical research studies. This course is divided into three segments. In the first segment, students will be guided through the operational aspects and regulatory processes of clinical trial management across the clinical trial life style from pre-study activities through study start-up and implementation, and ongoing compliance through study close out. Students will learn strategies for navigating the complex regulatory/operational clinical research environment and for successful protocol development and approval, subject recruitment, data management and IRB/FDA interactions. In the second segment of the course, students will learn about specific trial management challenges that may arise based on study type and will learn skills for navigating these challenges for investigator-initiated studies, federally-funded and commercially-sponsored research and research with unique trial management concerns such as conflicts of interest and the use of new technologies. Finally students will have the opportunity to apply the skills they have learned through a final course project which includes identification of a trial management challenge and a proposal for solutions to address that challenge. Protection of human research subjects and adherence to good clinical practices guiding research in humans is a critical concept that will be integrated throughout each of the lectures and course assignments.
1 Course Unit

REG 6120 Introduction to Drug Development
This introductory course lays the foundation for conducting pharmaceutical research in many ways. It begins with a brief review of the history of drug development and explains the phases of drug development in detail. The decision making process, drug development milestones and compound progression metrics are defined and explained with examples. At the conclusion of this course, students should have a working knowledge of the drug development process, understand the regulatory basis by which new chemical entities are evaluated and ultimately approved, and appreciate the time and expense of drug development. Undergraduates and graduate students from other departments are welcome.
Fall or Spring
1 Course Unit

REG 6150 Post-Approval Maintenance of Drugs, Biologics, and Devices
Drug development is complex, time consuming, and resource intense across multiple disciplines that require subject matter expertise. The goal is to obtain FDA-approval of a marketing application, which, once achieved, is a major accomplishment. However, marketing approval brings significant Sponsor responsibilities as the FDA continues to enforce strict regulatory requirements to ensure marketed products maintain their favorable benefit/risk profiles and therefore continue to offer safe and effective options for patients. This course is designed to provide students with an in depth understanding of the multiple regulatory requirements and marketing activities that take place following FDA approval, throughout the lifecycle of a marketed product. Topics include: • Post-marketing requirements • Pharmacovigilance/safety surveillance • Manufacturing throughout product lifecycle • Device regulations • Labeling considerations • Sales, marketing, advertising, and promotional activities • FDA inspections • General lifecycle management, label expansion, patent and exclusivity considerations
Spring
1 Course Unit

REG 6160 Quality Assurance
Quality assurance (QA) plays a critical role in the reliability and reproducibility of product development and, manufacturing. As a component of the Quality Management System, quality assurance includes all activities performed by an organization for the prevention of errors and defects. This course intends to focus on QA principles, standards and requirements, with regard to the FDA-regulated product development lifecycle. Further, the course aims to offer examples of QA and quality control measures through auditing and risk management. Application of quality assurance and the interfaces between GLP, GTP/GMP-and Pharmacovigilance regulatory regulated activities during product development and manufacturing will also be addressed.
Fall
1 Course Unit

REG 6180 Introduction to Vaccine Development
Vaccine development is the process by which new vaccines are discovered, studied in laboratory and preclinical models and investigated clinically in patients to determine if they are safe and efficacious. Assuming the vaccine under investigation passes systemically defined milestones, submission of all documentation to regulatory authorities (e.g., US FDA and equivalent global regulatory authorities) can ensue and, pending a favorable review, market access can be granted. The process is highly regulated and there is significant cost involved for pharmaceutical sponsors to research and develop vaccines with the entire process averaging around 12 years once a product is discovered. This introductory course lays the foundation for conducting vaccine research in many ways. It begins with a brief review of the history of vaccine discovery and development and explains the phases of vaccine development in detail. Global Health history and impact of vaccines is described as well as the various stakeholders (e.g., WHO and World Bank) involved which distinguish vaccine from drug development. The decision-making process, vaccine development milestones and compound progression metrics are defined and explained with examples. At the conclusion of this course, students should have a working knowledge of the vaccine development process, understand the regulatory basis by which new vaccines are evaluated, ultimately approved and distributed around the world.
1 Course Unit

REG 6190 Research Ethics in Regulatory Affairs
This course will focus on the connection between research ethics and aspects of regulatory affairs. Students will review core methodological aspects of research, trace the history of research ethics, and describe systematic approaches to designing ethical research. Students will cultivate competency in the development, implementation, and limitation of US human subjects regulation. This course will prepare students to critically evaluate the ethics of specific research designs and apply ethics-informed decision-making in the regulatory affairs domain. The course also includes analysis of regulatory bodies governing biomedical and behavioral research. Additional topics may include (but are not limited to) conflicts of interest, ethics codes and regulation, IRBs, informed consent, working with vulnerable populations, privacy/confidentiality. The course will implement asynchronous videos and readings and interactive synchronous sessions; assignments include quizzes, discussions (in-class and online), and a generative final project.
1 Course Unit
REG 6210 Cell and Gene Therapy
This course will provide students with a general overview of translational research in the area of gene and cell therapy. This includes technical considerations, translating preclinical investigation into therapeutics, the execution of gene and cell therapies clinical trials, and key regulatory issues. Entrepreneurial considerations will be discussed as well. By the end of this course, students will understand the basic technologies employed for gene and cell therapy along with approaches and pitfalls to translating these therapies into clinical applications including regulatory and commercial aspects of this emerging area. Prerequisite: For graduate students, at least one prior course in immunology. An undergraduate-level or medical school immunology course is sufficient to meet the prerequisite.
Spring
Also Offered As: CAMB 7070, MTR 6210
1 Course Unit

REG 6220 New Trends in Medicine and Vaccine Discovery
Modern drug discovery has evolved to include human genetic diagnosis and various biological approaches which has enabled progress in a variety of fields, including rare diseases, immuno-oncology, precision medicine, and biomarkers. The goal of this course is for students to understand newer treatment modalities and approaches beyond one size fits all small molecule drugs, as well as the technologies that empower them. Students will learn regulatory processes that govern medicine discovery and development and also consider business and societal aspects of medical progress. Students will be able to apply concepts directly to work in the healthcare industry. Students will be taught by experts in the field internal and external to Penn.
Fall
Also Offered As: MTR 6220
1 Course Unit

REG 6230 Fundamentals of Pharmacology
This course is designed to introduce students to basic pharmacological concepts with special emphasis on the molecular actions of drugs. Subject matter includes use of microcomputers to analyze pharmacological data. Prerequisite: Permission of course director
Fall
Also Offered As: PHRM 6230
1 Course Unit

REG 6240 Applied Regulatory Processes of Vaccines and Biologics
Drug development is at a turning point in human medicine. Over the past three decades, the development of biotherapeutics has revolutionized innovation in medicines. Efficiency and Quality Compliance are critical to achieving innovation and affordability. This course will provide an overview of the multi-dimensional nature of drug development, which involves regulatory, new technologies, statistical, and quality considerations. This 6-week course will introduce the concepts of drug development, which include pharmacology, toxicology, product development, clinical trials. All of these topics will be addressed based on regulatory requirements by the FDA. Risk assessment and mitigation will be discussed using a role-play process. The content of the course includes seminars, case studies, project reports, and journal article-reviews.
Summer Term
1 Course Unit

REG 6250 Manufacturing Novel Therapies & Imaging Agents
Novel therapeutic and diagnostic agents (eg. CAR T cells, gene therapy for sickle cell disease, radionuclides etc.) have revolutionized modern clinical medicine. Historically, these agents were first developed in academia then transferred to industry for clinical scale manufacturing. Recently, however, some academic centers have developed clinical scale biomanufacturing facilities. Operation of these new facilities requires a unique blend of manufacturing, clinical, basic, regulatory and laboratory sciences. Examples of areas in which academic medical centers have developed in-house manufacturing include cell therapy, gene therapy and novel imaging agents. This course will cover manufacturing approaches, challenges, and controversies in each of these domains. At the completion of this course students will understand: -The general approach to development, manufacturing, quality control and regulatory compliance in academic manufacturing facilities -Critical steps in the manufacturing cycles of cell therapies, gene therapies and imaging agents -Current challenges in development, manufacturing, and maintaining regulatory compliance in academic manufacturing -Key considerations and relative merits of different positions in the current controversies surround these agents Each week includes a combination of synchronous and asynchronous work. Synchronous sessions will include instructor led discussions based on pre-recorded lectures or case-based discussions. Asynchronous material includes pre-recorded lectures and discussion board prompts to which students will respond throughout the week. One unique aspect to this course are the debates. For each debate week, two students will be assigned as debaters and will represent opposing points of view. All students will be provided with required pre-reading and pre-recorded lectures relevant to the debate topic. Ahead of the debate, the debaters will meet with an assigned faculty advisor to help to prepare. Students who are not assigned as debaters for that week will post questions to the discussion board ahead of the debate. The debate will occur during a synchronous session. The debaters will deliver a short introductory statement. This will be followed by QA with the audience. Finally, the debates will deliver a closing statement. These debates are a fun and interactive way for students to engage with controversial and evolving topics in the field. By the end of the course, students will appreciate the academic perspective on core elements of therapeutic and diagnostic agent manufacturing.
Fall
1 Course Unit

REG 6250 Patent Law for Drug Development
This course will examine the role and impact of patent law on the behavior of major players in the biotechnology and pharmaceutical industries as they navigate the regulatory process. This course begins with an overview of the current patent laws in the U.S. and how policies and recent changes to those laws affect the research and development of new medicines. This course will also examine the dilemmas created by patents as patent holders seek to bring their technology on to the market. The course will consist of synchronous and asynchronous materials and readings that will conclude with a paper and presentation analyzing a complex issue facing drug innovation and regulatory affairs.
1 Course Unit
REG 6300 Clinical Trials
This course is to serve as a general introduction to clinical trials and will emphasize trial design issues. This is not a course on the biostatistics of clinical trials. It is expected that at the conclusion of the course, a student will be able to plan a clinical trial. Each class will consist of a two-hour lecture followed by a one-hour discussion. The weekly session will focus on either a group discussion of the assigned reading or a practical application based on the material presented during the two-hour lecture. Students will be evaluated on their participation in class (20%); a clinical trial document (50%), which should include the rationale for the study, study design, objectives and endpoints, sample size and analysis sections, and consent form; and a class presentation of their trial or another topic (30%). Prerequisite: Permission of instructor.

Religion and Culture (RELC)
The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

RELC 1010 Greek and Roman Mythology
Myths are traditional stories that have endured many years. Some of them have to do with events of great importance, such as the founding of a nation. Others tell the stories of great heroes and heroines and their exploits and courage in the face of adversity. Still others are simple tales about otherwise unremarkable people who get into trouble or do some great deed. What are we to make of all these tales, and why do people seem to like to hear them? This course will focus on the myths of ancient Greece and Rome, as well as a few contemporary American ones, as a way of exploring the nature of myth and the function it plays for individuals, societies, and nations. We will also pay some attention to the way the Greeks and Romans themselves understood their own myths. Are myths subtle codes that contain some universal truth? Are they a window on the deep recesses of a particular culture? Are they entertaining stories that people like to tell over and over? Are they a set of blinders that all of us wear, though we do not realize it? We investigate these questions through a variety of topics creation of the universe between gods and mortals, religion and family, sex, love, madness, and death.
1 Course Unit

RELC 2000 Gods, Ghosts, Monsters
This course seeks to be a broad introduction. It introduces students to the diversity of doctrines held and practices performed, and art produced about “the fantastic” from the earliest times to the present. The fantastic (the uncanny or supernatural) is a fundamental category in the scholarly study of religion, art, anthropology, and literature. This course focuses on both theoretical approaches to studying supernatural beings from a religious studies perspective while drawing examples from Buddhist, Shinto, Christian, Hindu, Jain, Zoroastrian, Egyptian, Central Asian, Native American, and Afro-Caribbean sources from earliest examples to the present—including mural, image, manuscript, film, codex, and even comic books. It also introduces students to related humanistic categories of study: material and visual culture, theology, cosmology, shamanism, transcendentalism, soteriology, eschatology, phantasmagoria, spiritualism, mysticism, theophany, and the historical power of rumor.
1 Course Unit

RELC 2010 Monsters of Japan
This course focuses on both theoretical approaches to studying supernatural beings from a religious studies perspective while drawing examples from Buddhist, Shinto, Christian, Hindu, Jain, Zoroastrian, Egyptian, Central Asian, Native American, and Afro-Caribbean sources from earliest examples to the present—including mural, image, manuscript, film, codex, and even comic books. It also introduces students to related humanistic categories of study: material and visual culture, theology, cosmology, shamanism, transcendentalism, soteriology, eschatology, phantasmagoria, spiritualism, mysticism, theophany, and the historical power of rumor.
1 Course Unit

RELC 2500 Asian Religions
This course is an introduction to the wide variety of religious beliefs, practices, and ritual technologies in Asia. These religious traditions will not be investigated in isolation. Each Asian tradition, like each Western religion, is syncrctic and multiple, full of internal contradictions and presenting diverse definitions of the sacred and profane. They each “structure” and are often comfortable with “their own multiplicity.” While we will look at traditions such as Jainism, Buddhism, Hinduism, Taoism, Zoroastrism, Sikhism, Zen, and Shinto, we will constantly question their boundaries and integrity. Week by week the panoply (or perhaps cacophony) of types and perceptions of religious experience, ritual, knowledge, directives, motives, and aspirations as displayed in these traditions will be touched upon. We will also think hard about the ways we approach the study of religion and question the very study of “Asian Religions” and “World Religions” in general. This course seeks to generate questions, promote critical inquiry and elaborate on ways the sacred has been made and continues to be made tangible and the vicissitudes of life made meaningful in Asia.
1 Course Unit
RELS 0003 History, Culture, and Religion in Early India
This course surveys the culture, religion and history of India from 2500 BCE to 1200 CE. The course examines the major cultural, religious and social factors that shaped the course of early Indian history. The following themes will be covered: the rise and fall of Harappan civilization, the "Aryan Invasion" and Vedic India, the rise of cities, states and the religions of Buddhism and Jainism, the historical context of the growth of classical Hinduism, including the Mahabarata, Ramayana and the development of the theistic temple cults of Saivism and Vaisnavism, processes of medieval agrarian expansion and cultic incorporation as well as the spread of early Indian cultural ideas in Southeast Asia. In addition to assigned secondary readings students will read select primary sources on the history of religion and culture of early India, including Vedic and Buddhist texts, Puranas and medieval temple inscriptions. Major objectives of the course will be to draw attention to India’s early cultural and religious past and to assess contemporary concerns and ideologies in influencing our understanding and representation of that past.
Fall or Spring
Also Offered As: HIST 0755, SAST 0003
1 Course Unit

RELS 0004 Myths and Religions of the Ancient World
This course will survey the religions of the ancient Middle East, situating each in its historical and socio-cultural context and focusing on the key issues of concern to humanity: creation, birth, the place of humans in the order of the universe, death, and destruction. The course will cover not only the better-known cultures from the area, such as Egypt and Mesopotamia, but also some lesser-known traditions, such as those of the Hittites, or of the ancient Mediterranean town of Ugarit. Religion will not be viewed merely as a separate, sealed-off element of the ancient societies, but rather as an element in various cultural contexts, for example, the relationship between religion and magic and the role of religion in politics will be recurring topics in the survey. Background readings for the lectures will be drawn not only from the modern scholarly literature, but also from the words of the ancients themselves in the form of their myths, rituals, and liturgies.

1 Course Unit

RELS 0006 Hindu Mythology
Premodern India produced some of the world’s greatest myths and stories: tales of gods, goddesses, heroes, princesses, kings and lovers that continue to capture the imaginations of millions of readers and hearers. In this course, we will look closely at some of these stories especially as found in Purana-s, great compendia composed in Sanskrit, including the chief stories of the central gods of Hinduism: Visnu, Siva, and the Goddess. We will also consider the relationship between these texts and the earlier myths of the Vedas and the Indian Epics, the diversity of the narrative and mythic materials within and across different texts, and the re-imagining of these stories in the modern world.

Also Offered As: COML 0006, SAST 0006
1 Course Unit

RELS 0008 India: Culture and Society
What makes India INDIA? Religion and Philosophy? Architectural splendor? Kingdoms? Caste? The position of women? This course will introduce students to India by studying a range of social and cultural institutions that have historically assumed to be definitive India. Through primary texts, novels and historical sociological analysis, we will ask how these institutions have been reproduced and transformed, and assess their significance for contemporary Indian society.
Fall or Spring
Also Offered As: HIST 0851, SAST 0008
1 Course Unit

RELS 0020 Religions of the West
This course surveys the intertwined histories of Judaism, Christianity, and Islam. We will focus on the shared stories which connect these three traditions, and the ways in which communities distinguished themselves in such shared spaces. We will mostly survey literature, but will also address material culture and ritual practice, to seek answers to the following questions: How do myths emerge? What do stories do? What is the relationship between religion and myth-making? What is scripture, and what is its function in creating religious communities? How do communities remember and forget the past? Through which lenses and with which tools do we define "the West"?
Fall or Spring
Also Offered As: JWST 0020
1 Course Unit

RELS 0040 Art and Religion
What is religious art and what makes art religious? This course will survey a wide variety of artistic expressions from a number of religious traditions which draw on spiritual themes, are inspired by religious experiences or texts, and which serve an important role in religious practice and belief. Some of the themes which this course will explore are: visualization and action within the cosmos, passion and religious ecstasy, the material culture of personal devotion, icons and iconoclasm, depictions of the miraculous, and the relationship between word and image. Objects and images from Christianity, Islam, Judaism, and Buddhism and will be explored along with examples from other traditions.
Fall or Spring
1 Course Unit
REL 0050 Gender, Sexuality, and Religion
What does it mean to be a gendered individual in a Muslim, Hindu, Jewish, Christian, Buddhist, or Sikh religious tradition? How important are gender differences in deciding social roles, ritual activities, and spiritual vocations? This course tackles these questions, showing how gender - how it is taught, performed, and regulated - is central to understanding religion. In this course we will learn about gendered rituals, social roles, and mythologies in a range of religious traditions. We will also look at the central significance of gender to the field of religious studies generally. The first part of the course will be focused on building a foundation of knowledge about a range of religious traditions and the role of gender in those traditions. This course emphasizes religious traditions outside the West. Although it is beyond the scope of this class to offer comprehensive discussions of any one religious tradition, the aim is to provide entry points into the study of religious traditions through the lens of gender. This course will emphasize both historical perspectives and contemporary contexts. We will also read religion through feminist and queer lenses - we will explore the key characteristics of diverse feminist and queer studies approaches to religion, as well as limits of those approaches.

REL 0055 Introduction to Indian Philosophy
This course will take the student through the major topics of Indian philosophy by first introducing the fundamental concepts and terms that are necessary for a deeper understanding of themes that pervade the philosophical literature of India - arguments for and against the existence of God, for example, the ontological status of external objects, the means of valid knowledge, standards of proof, the discourse on the aims of life. The readings will emphasize classical Hindu, Buddhist, and Jain philosophical articulations (from 700 B.C.E to 16th century CE) but we will also supplement our study of these materials with contemporary or relatively recent philosophical writings in modern India.

REL 0088 Penitentiaries to PILOTs: Religion and Institutions in Pennsylvania
This first-year seminar examines how religion works through institutions such as penitentiaries, residential facilities for Native children, private universities, for-profit corporations, and public schools. Focusing on the State of Pennsylvania and the City of Philadelphia as examples of broader national trends in the US, over the course of the term we investigate the fraught religious history of many local educational and correctional institutions. We consider topics such as the role of religion in prison culture, perceptions of public education as a right and as a duty, federal and supreme court cases related to schoolhouse ritual, the 1985 MOVE bombing and its aftermath, and the public consequences of tax exemption for private mega-nonprofits.

Fall, odd numbered years only
1 Course Unit

REL 0130 Gods, Ghosts, and Monsters
This course seeks to be a broad introduction. It introduces students to the diversity of doctrines held and practices performed, and art produced about "the fantastic" from earliest times to the present. The fantastic (the uncanny or supernatural) is a fundamental category in the scholarly study of religion, art, anthropology, and literature. This course will focus both theoretical approaches to studying supernatural beings from a Religious Studies perspective while drawing examples from Buddhism, Shinto, Christian, Hindu, Jain, Zoroastrian, Egyptian, Central Asian, Native American, and Afro-Caribbean sources from earliest examples to the present including mural, image, manuscript, film, codex, and even comic books. It will also introduce students to related humanistic categories of study: material and visual culture, theodicy, cosmology, shamanism, transcendentalism, soteriology, eschatology, phantasmagoria, spiritualism, mysticism, theophany, and the historical power of rumor. It will serve as a gateway course into the study of Religion among numerous Asian, and East Asian Studies, as well as Visual Culture and Film Studies. It will include guest lectures from professors from several departments, as well as an extensive hands-on use of the collections of the Penn Museum of Archaeology and Anthropology and the manuscripts held in the Schoenberg Collection of Van Pelt Library. It aims to not only introduce students to major, approaches, and terms in the study of religion and the supernatural, but inspire them to take more advanced courses by Ilya Vinitsky, Liliane Weissberg, Projit Mukharji, Talya Fishman, Annette Reed, David Barnes, David Spafford, Frank Chance, Michael Meister, Paul Goldin, Renata Holod, Paul Rozin, among several others.

REL 0180 Saints and Devils in Russian Literature and Tradition
This course is about Russian cultural imagination, which is populated with "saints" and "devils": believers and outcasts, the righteous and the sinners, virtuous women and fallen angels, holy men and their most bitter adversary - the devil. In Russia, where people's frame of mind has been formed by a mix of Eastern Orthodox Christianity and earlier pagan beliefs, the quest for faith, spirituality, and the meaning of life has invariably been connected with religious matters. How can one find the right path in life? Can a sinner be redeemed? Should one live for God or for the people? Does God even exist? In "Saints and Devils," we read works of the great masters of Russian literature and learn about the historic trends that have filled Russia's literature and art with religious and mystical spirit. Among our readings are old cautionary tales of crafty demons and all-forbearing saints, about virtuous harlots and holy fools, as well as fantastic stories by Nikolai Gogol about pacts with the devil, and a romantic vision of a fallen angel by Yury Lermontov. We will be in awe of the righteous portrayed by Nikolai Leskov and follow the characters of Fedor Dostoevsky, Leo Tolstoy and Anton Chekhov, as they ponder life and death and search for truth, faith, and love. In sum, over the course of this semester we will talk about ancient cultural traditions, remarkable works of art, and the great artists who created them. In addition to providing a basic introduction to Russian literature, religion, and culture, the course introduces students to literary works of various genres and teaches basic techniques of literary analysis. (No previous knowledge of Russian literature necessary. All readings are in English).

RELS 0300 Gurus, Prophets & Aliens: Understanding New Religious Movements
This course offers a thematic introduction to the history of New Religious Movements (NRM) from the mid-19th century to the present day. Often labeled as "cults" by the state and established religious institutions, new religions offer modern believers alternative spiritual and ideological solutions to age-old problems. In this class, students will be introduced to the teachings and practices of prominent NRMs in North America, Europe, Asia, and Australia, from wide-spread movements such as Scientology, Mormonism, and the Unification Church to lesser known groups such as the Church of the Almighty God, Neo-Paganism, and Raelism. We will explore the emergence of the anti-cult campaign in the second half of the 20th century, the relationship between apocalyptic sects such as the Peoples Temple and the Branch Davidians and political and social protest, and the role of Asian religions such as the Maharishi Mahesh Yogi's Transcendental Meditation in the development of New Age religiosity. In addition, we will learn how new religious movements such as Wicca and the Children of God helped reshape gender roles and changed mainstream views about sexuality, and how developments in mass media and popular culture contributed to the creation of new groups such as the Star Wars inspired Temple of the Jedi Order (Jedism), the Church of the Latter-Day Dude (Dudeism), as well as UFO religions such as Heaven's Gate. Throughout the semester, students will be exposed to a wide variety of primary and secondary sources, from academic articles and scholarly essays to documentaries, feature films, and TV shows. No previous knowledge in Religious Studies is required. 1 Course Unit

RELS 0301 Introduction to the Bible: The Old Testament
An introduction to the major themes and ideas of the Hebrew Bible (the Old Testament), with attention to the contributions of archaeology and modern Biblical scholarship, including Biblical criticism and the response to it in Judaism and Christianity. All readings are in English.

RELS 0305 Great Books of Judaism
Since the early medieval period, Jews have been known as "the People of the Book". Yet the books they produced and consumed changed drastically over time and place, spanning a variety of known genres and inventing new ones. These works, in turn, shaped the texts, ideas, and lives of Jews and others for millennia, spawned vast commentary traditions, and inspired new works. This course engages prominent Jewish texts, such as the Hebrew Bible, Rabbinic Literature, the works of major medieval philosophers, pre-modern intellectuals, and modern authors, situating them in their literary, cultural, and social contexts, and examining their later reception.

RELS 0310 Religion and Violence
Perhaps nothing haunts modern politics more than religious violence. Killing sprees done in the name of God reveal the limits of political power. What space is left for the rule of law when appeals to dogma and the divine supersede reason? The causes and nature of divinely motivated violence are so mystifying that they are a constant topic of debate among academics, political parties, and news commentators. What really motivates religious violence? Is it just economic of class grievances in disguise? Are all religions prone to violence? Are some religions more violent than others? Or, are religions only violent when they go awry, denying their true messages? And does religion need to be quarantined and privatized, to keep us all safe? In this course, we'll probe the dividing line separating religion from politics in an effort to better understand the causes and nature of religious violence. How do we know the difference between religious violence and political violence? What makes religion violent, and what makes violence religious?
1 Course Unit

RELS 0315 Jewish Literature in the Middle Ages in Translation
Course explores the cultural history of Jews in the lands of Islam from the time of Mohammed through the late 17th century (end of Ottoman expansion into Europe) – in Iraq, the Middle East, al-Andalus and the Ottoman Empire. Primary source documents (in English translation) illuminate minority-majority relations, internal Jewish tensions (e.g., Qaraism), and developments in scriptural exegesis, rabbinic law, philosophy, poetry, polemics, mysticism and liturgy.

1 Course Unit
RELS 0330 Modern Catholic Christianity
At the turn of the twentieth century, Sigmund Freud hypothesized that religion was a dead duck. Many other thinkers of "modernity" have agreed with his thesis; and yet, over a century later, it is clear that religion is still a forceful presence in human culture. One religious tradition that has survived to the surprise (and even consternation) of some critics, is Roman Catholic Christianity. This first-year seminar will look closely at the Catholic Church in the twenty-first century, to explore the ways in which Catholicism has (and has not) adapted to modernity. We will begin with an investigation into the history of Roman Catholicism; how it is defined, and how it developed in relation to politics and culture in the Roman Empire, medieval and early modern Europe, and in the Americas; but most of the semester will focus on the Catholic Church of the past 200 years, especially as it appears in the United States. We will consider the relationship of Catholicism to many aspects of modern life, including science and technology, political systems and leaders, aesthetics (visual arts, music, literature and film), and understandings of gender and sexuality. There will be a mid-term examination and a final paper of 6 to 10 pages.
1 Course Unit

RELS 0335 Themes Jewish Tradition: Iberian Conversos: Jew-Christian?
Course topics will vary; they have included The Binding of Isaac, Responses to Catastrophes in Jewish History, Holy Men & Women (Ben-Amos); Rewriting the Bible (Dohrmann); Performing Judaism (Fishman); Jewish Political Thought (Fishman); Jewish Esotericism (Lorberbaum) Democratic culture assumes the democracy of knowledge - the accessibility of knowledge and its transparency. Should this always be the case? What of harmful knowledge? When are secrets necessary? In traditional Jewish thought, approaching the divine has often assumed an aura of danger. Theological knowledge was thought of as restricted. This seminar will explore the "open" and "closed" in theological knowledge, as presented in central texts of the rabbinic tradition: the Mishnah, Maimonides and the Kabbalah. Primary sources will be available in both Hebrew and English.

1 Course Unit

RELS 0500 East Asian Religions
This course will introduce students to the diverse beliefs, ideas, and practices of East Asia's major religious traditions: Buddhism, Confucianism, Daoism, Shinto, Popular Religion, as well as Asian forms of Islam and Christianity. As religious identity in East Asia is often fluid and non-sectarian in nature, there religious traditions will not be investigated in isolation. Instead, the course will adopt a chronological and geographical approach, examining the spread of religious ideas and practices across East Asia and the ensuing results of these encounters. The course will be divided into three units. Unit one will cover the religions of China. We will begin by discussing early Chinese religion and its role in shaping the imperial state before turning to the arrival of Buddhism and its impact in the development of organized Daoism, as well as local religion. In the second unit, we will turn eastward into Korea and Japan. After examining the impact of Confucianism and Buddhism on the religious histories of these two regions, we will proceed to learn about the formation of new schools of Buddhism, as well as the rituals and beliefs associated with Japanese Shinto and Korean Shamanism. The third and final unit will focus on the modern and contemporary periods through an analysis of key themes such as religion and modernity, the global reception and interpretation of East Asian religions, and the relationship between religion and popular culture. The class will be conducted mainly in the form of a lecture, but some sessions will be partially devoted to a discussion of primary sources in translation. The course assignments are designed to evaluate the development of both of these areas. No previous knowledge of East Asian languages is necessary, and all readings will be available in English on the Canvas site in PDF form.

RELS 0666 Satan: History, Poetics, and Politics of the Archenemy
This course explores the oldest and the most powerful antagonist of human history. Satan, the Devil, referred with many other names in different religious traditions, has a rich history from ancient dualist cosmologies, through the monotheistic traditions, up to the modern day. In this course, we will survey the many expressions of human creativity that underlies the emergence and development of this character. We will study mythology, scripture, philosophy, medicine, material culture, ritual practice, and iconographic representations to discover the many dimensions of the archenemy over the course of two millennia. Through an extensive study of Satan, we will see the ways in which people answered some perennial questions, such as: What is a human? How do we relate to the cosmos and nature? How do we make meaning of suffering? What is morality?

1 Course Unit
RELS 0690 Love and Hate
This course focuses on important constants of human life as they are grappled with across religious traditions. Drawing on data across a range of religious traditions (such as Christianity, Hinduism, Judaism, Islam, Buddhism and Mesoamerican Religion), we will explore topics such as sexual identity, politics, religion and the individual in contemporary life; and eroticism, sex and love as they are reflected in religious literature, art and history. Divine love and religious devotion will be examined in relation to acts of violence, including human sacrifice and self-sacrifice in the past as well as the present. Other important questions considered in this course include: how does the body function as the locus in which religion is enacted? What is the conflict between our agency over our bodies and socioreligious claims over individual autonomy? Is violence an integral part of religion? What are religious understandings of the relationship between our agency over our bodies and socioreligious claims over individual autonomy? Is violence an integral part of religion? What are religious understandings of the relationship between love and sex? What does it mean for human beings to love God?

RELS 1010 Religion and Evolution
This class will explore encounters between religion and evolutionary sciences, from the 19th century to the present. We will consider the history of evolutionary biology’s entanglements with faith, from the initial explosion of interest in the wake of Darwin’s Origin of the Species in 1859 to contemporary debates about creationism and intelligent design here in Pennsylvania in the 21st century. In the first half of the class, we will look at how writers, philosophers, and theologians from around the world and a range of religious traditions have assessed the evolution-religion relationship — some seeing conflict, others cord. In the second half, we will consider evolutionary approaches to the origins of religion, from late-19th century accounts to modern cognitive science and group selection theories. Topics covered will include scientific racism, sociobiology and the evolutionary origins of morality, primate religion, and the relationship between science, religion, and politics.

RELS 1050 Virtual Religion: Religion in the Digital Age
How has religion responded and adapted to modern technology? How has the internet impacted our understanding of community, religion, morality, and embodiment? Can piety be digitized; can artificial intelligence be religious? In the new world in which we are discussing the advantages and perils of automatization, humans vs. robots, advanced medical practices, and the like, where does religion fit in? How to understand the discussions around virtual religious gatherings during the global pandemic? This course explores the ways in which religion is expressed and experienced through digital media around the globe. We will read literature on philosophy of technology, environment, and material aspects of religion. In light of such theoretical frameworks, we will analyze media that have been changing the paradigms of religious practice, such as the internet, digitization of texts and objects, 3-d printing, virtual reality experiments, artificial intelligence, and the recent global health crisis. The course will draw examples from a variety of religious traditions and will study various conversations taking place between religion and technology. We will give special attention to the on-going debates about virtual religion in connection to the Covid-19 pandemic, and will speak about the future of religious communities and practice.

RELS 1440 The Making of Scripture: From Revelation to Canon
The Bible as we know it is the product of a lengthy process of development, elaboration, contest, and debate. Rather than a foregone conclusion, the process by which the texts and traditions within the Bible, and the status ascribed to them, was turbulent and uncertain. This course examines that process, examining the Bible, traditions and communities from the Second Temple Period - such as the Dead Sea Scrolls and Community - that rewrote, reconsidered, revised, or rejected now well-recognized figures and stories, and constructed distinct ideas of what was considered scripture and how it should be approached. Even as the bible began to resemble the corpus as we now know it, interpretive strategies rendered it entirely different, such as Hellenistic Allegorizers, working from the platonic tradition, rabbinc readers who had an entirely different set of hermeneutics, early Christians, who offered different strategies for reading the "Old" and "New" Testaments alongside one another (and employing categories like "Old" and "New," themselves constituting a new attitude and relationship to and between these texts), and lastly early Muslim readers, who embraced many of the stories in the Bible, altered others, and debated the status of these corpuses under Islam.

1 Course Unit

RELS 1430 Introduction to Islam
This course is an introduction to Islam as a religion as it exists in societies of the past as well as the present. It explores the many ways in which Muslims have interpreted and put into practice the prophetic message of Muhammad through historical and social analyses of varying theological, philosophical, legal, political, mystical and literary writings, as well as through visual art and music. The aim of the course is to develop a framework for explaining the sources and symbols through which specific experiences and understandings have been signified as Islamic, both by Muslims and by other peoples with whom they have come into contact, with particular emphasis given to issues of gender, religious violence and changes in beliefs and behaviors which have special relevance for contemporary society.

RELS 1440 From Jesus to Muhammad: History of Early Christianity
"Jesus and Muhammad walk into a bar..." We can think about multiple ways to complete the joke. They could talk about prophecy and prophetic succession, God’s word, women, pagans and Jews, state authority, among others. This course traces the long arc of religious history, from the Jesus movement to the rise of Islam. Through texts, objects, buildings, and artistic representations we will study the time period that connects these two significant developments that majorly changed world history. Lectures and discussions will consist of close reading, analysis, and discussion of primary sources, analysis of non-literary media, and engagement with modern scholarship. We will raise questions about ancient and modern perspectives on religious practice, representation, authority, gender, race/ethnicity, memory, and interreligious encounters.

RELS 1520 What is Taoism?
This course introduces a wide variety of ideas and practices that have at one time or another been labeled as Daoist (or "Taoist" in the Wade-Giles Romanization), in order to sort out the different senses of the term, and consider whether these ideas and practices have had any common features. We will begin with the two most famous Daoist works—the Zhuangzi and the Daodejing (or Laozi). We will also survey other bio-spiritual practices, such as the meditational techniques of Inner Alchemy and the self-cultivation regimens known today as Qigong and Tai-chi, as well as the theological and ritual foundations of organized Daoist lineages, many of which are still alive across East Asia. We will conclude with a critical review of the twentieth-century reinvention of "Daoism," the scientization of Inner Alchemy, and the new classification of "religious" versus "philosophical Daoism." While familiarizing ourselves with the key concepts, practices, and organizations developed in the history of Daoism, this course emphasizes the specific socio-political context of each of them. Throughout the course, we will think critically about the label of "Daoist" (as well as "Confucian" and "Buddhist") in Chinese history and in modern scholarship. We will also question modern demarcations between the fields of philosophy, religion, and science.

RELS 1605 Muslims, Christians, and Jews in the Middle East: Historical Perspectives
A reading- and discussion-intensive seminar that addresses several recurring questions with regard to the Middle East and North Africa. How have Islam, Judaism, and Christianity influenced each other in these regions historically? How have Jews, Christians, and Muslims fared as religious minorities? To what extent have communal relations been characterized by harmony and cooperation, or by strife and discord, and how have these relations changed in different contexts over time? To what extent and under what circumstances have members of these communities converted, intermarried, formed business alliances, and adopted or developed similar customs? How has the emergence of the modern nation-state system affected communal relations as well as the legal or social status of religious minorities in particular countries? How important has religion been as one variable in social identity (along with sect, ethnicity, class, gender, etc.), and to what extent has religious identity figured into regional conflicts and wars? The focus of the class will be on the modern period (c. 1800-present) although we will read about some relevant trends in the early and middle Islamic periods as well. Students will also pursue individually tailored research to produce final papers. Prior background in Islamic studies and Middle Eastern history is required. Middle Eastern history is required. This class is intended for juniors, seniors, and graduate students.

RELS 1630 Witchcraft and Possession
This course explores world witchcraft and possession from the persecutions of the early seventeenth century through the rise of Wicca in the twentieth century. The mere mention of these terms, or of such close cousins as demonology, sorcery, exorcism, magic, and the witches Sabbath, raises clear ethnographic and historical challenges. How can the analysis of witchcraft— including beliefs, patterns of accusation, the general social position of victims, the intensity and timing of witch hunts, and its relation to religious practice, law, language, gender, social marginalization, and property—lead us to a more humane understanding of belief and action? Films such as The Exorcist, The Blair Witch Project, The Crucible, and Three Sovereigns for Sarah will focus discussion.

RELS 1640 Devotion's New Market: Religion, Economics, and the City
This graduate and undergraduate level course introduces students to the new forms of devotion as circulated in various urban centers in South Asia with a focus on growing market economy and urbanization. This course will particularly discuss case studies of how different modes of Hinduism, Islam, Christianity and other minor religions operate in an urbanized middle-class and educated communities. We will read theoretical and ethnographical works of contemporary research in religious studies and anthropology that deal with the questions of modernity, reformism and economic developmentalism. Throughout the semester, we focus on 1) how does religious forms such as sainthood practices, private and public rituals, narrative modes and everyday life evolve in the background of growing politics of development; 2) we discuss the tensions between classical notions of devotion and their new transformations in the city life, and finally 3) theoretically, we analyze concepts such as reformism, fundamentalism, recent discourses on identity politics and gender implications as connected to urban religious life.

RELS 1730 Introduction to Buddhism
This course seeks to introduce students to the diversity of doctrines held and practices performed by Buddhists in Asia. By focusing on how specific beliefs and practices are tied to particular locations and particular times, we will be able to explore in detail the religious institutions, artistic, architectural, and musical traditions, textual production and legal and doctrinal developments of Buddhism over time and within its socio-historical context. Religion is never divorced from its place and its time. Furthermore, by geographically and historically grounding the study of these religions we will be able to examine how their individual ethic, cosmological and soteriological systems effect local history, economics, politics, and material culture. We will concentrate first on the person of the Buddha, his many biographies and how he has been followed and worshipped in a variety of ways from Lhasa, Tibet to Phrae, Thailand. From there we touch on the foundational teachings of the Buddha with an eye to how they have evolved and transformed over time. Finally, we focus on the practice of Buddhist ritual, magic and ethics in monasteries and among lay communities in Asia and even in the West. This section will confront the way Buddhists have thought of issues such as “Just-War,” Women’s Rights and Abortion. While no one quarter course could provide a detailed presentation of the beliefs and practices of Buddhism, my hope is that we will be able to look closely at certain aspects of these religions by focusing on how they are practiced in places like Nara, Japan or Vietnam, Laos.

RELS 2040 Ancient Iranian Empires

Iran - as a landmass and a political entity - was central to the ancient world in a variety of ways. Ancient Iranian Empires were of central importance to - and centrally located in - the ancient world. It was the successor kingdom to the Assyrians and Babylonians; the power against which Greece and Rome defined themselves; and the crucible in which various communities and models of rule developed. This course offers a survey of the history of the ancient Persianate world, focusing in particular on the political and imperial entities that rose to power, the cultural, political, mercantile, and other contacts they shared with their neighbors to the East and West, and the communities and religious groups that arose and flourished within their lands. Ancient Iranian empires rivaled the Greek and Roman Empires to their West, and the central and eastern Asian Empires to their east, and the ongoing history of diplomacy, cultural contact, and war between these regions was formative to each and to the ancient world as a whole. Iran was home to and similarly formative for a variety of religions, including Zoroastrianism, Judaism, Christianity, Manichaeism, and Islam, and a central question of the course is the category of whiteness for understanding Jewish identity, and what does their association in the U.S. mask about Jews and Jewish life today? And what are the roles of Jews in the continuing struggle for racial justice now underway in the world? This course aims to address these questions in light of a range of intellectual perspectives and disciplinary approaches. It will be built around a series of weekly guest lectures by leading scholars of Jews, race and/or religion, and will include among the questions and topics that it explores opportunities to explore connections among scholarship, personal experience and activism.

RELS 2070 Jews, Race and Religion

Contemporary Jewish identity exists at an uneasy cross-section of race, religion and ethnicity. This course aims to expose students to the diversity of Jewish experience through the lenses of race and religion, examining the various ways these categories intersect and complicate each other. How can the study of race and religion help us to understand the present and future of Jewish life? How do Jews figure in the study of race and race relations in North America and Israel? Of what relevance is the category of whiteness for understanding Jewish identity, and what does their association in the U.S. mask about Jews and Jewish life today? And what are the roles of Jews in the continuing struggle for racial justice now underway in the world? This course aims to address these questions in light of a range of intellectual perspectives and disciplinary approaches. It will be built around a series of weekly guest lectures by leading scholars of Jews, race and/or religion, and will include among the questions and topics that it explores opportunities to explore connections among scholarship, personal experience and activism.

RELS 2070 Animals and Religion

Religion is full of animals—lions and lambs, monkeys and elephants, buffalo and snakes, even mythical beasts. The identity of the human being is explained, in many traditions, by contrast with the identity of other species. We know who we are because we know who they are, or do we? This course interrogates—through an exploration of sacred texts, art, film, and museum artifacts—the tension present in many traditions between an anthropocentric prioritization of the human being and religious resources that encourage a valuing of other animal species. We'll explore the way animals function both as religious objects and as religious subjects across diverse traditions, asking how human-animal relationships have shaped religion and how religion has shaped the way we think about and interact with other animals. We'll ask how religion has engaged with animals over time and across global cultures, understanding them as symbols, messengers, and manifestations of the divine; as material for ritual and sacrifice; as kin and subordinates; as food and as filth; as helpmeets and as tempters. How have these perspectives shaped animal ethics, influencing the treatment, use, and consumption of animals and their bodies? Finally, we'll ask what it means that we ourselves are evolved animals. How does our own animality factor into the practice of human religion? Is our religious capacity part of what sets us apart from other animals or is religiosity a trait we might expect to find in other species? To what extent is religion a function of the animal?

RELS 2110 Religion and Ecology

This course will explore the history of the religion(s) designated by the term 'Hinduism' from their earliest articulations down to the rise of modern reforms in the nineteenth century. The study of Hinduism is perhaps unique among the scholarly traditions on world religions in that it has to date had no serious connected account of its historical development, as scholars have preferred to take structural, sociological, phenomenological, and doctrinal approaches to the religion. The course, after a brief review of scholarly approaches to Hinduism and their interpretive legacies, will seek to develop a historical sense of the religion through attention to shifts in liturgy, ritual, theology, doctrine, sacral kingship, and soteriology. The course will include the reading of primary sources relevant to understanding these changes a well as highlight both modern and premodern traditions of their interpretation. It will also consider and assess some of the key interpretive ideas in the study of Hinduism, including, Sanskritization, Great and Little Traditions, cult formation, regional and popular religious movements, and canon formation. There will also be sustained consideration of the question of religion and socio-political power as well as relations between Hinduism and other religions like Buddhism and Islam.

RELS 2270 Queer and Religious in Israel
This course explores intersections of gender and religion among Jewish LGBTQ+ people in contemporary Israel. Using case studies, the course investigates the struggle for recognition, the creation of new ritual practices, and other dimensions of religious LGBTQ+ experience, both within Israel and in comparison to the United States. The course is offered at an introductory level and is meant for all students interested in the way gender and religion combine in the formation of identity. Not Offered Every Year
1 Course Unit

RELS 2350 Eastern Christianities
The history of Christianity is often told from the perspective of its spread westward from Israel to Rome. Yet, in the first millennium, there were more Christians living in the East, in places as far away as Persia, Yemen, India, China, and Mongolia, than in the West. Spread across the Asian continent, these Christians were actively involved in local and imperial politics, composed theological literature, and were deeply embedded in the cultural fabric of their host societies. This course traces the spread of Christianity eastward, paying particular attention to its regional developments, its negotiations with local political powers, and its contact with other religions, including Buddhism, Manichaism, and Islam. Readings will cover a broad range of sources, including selections from classical Syriac literature, Manichaean texts, Mesopotamian magic bowls, the so-called “Jesus Sutras,” and the Quran. All readings will be provided in English, and no background is presumed. Not Offered Every Year
Also Offered As: NELC 3260, SAST 2350
1 Course Unit

RELS 2390 Death, Disease & Demons in the Medieval World
How did life end for people in the medieval world? For most, death was not considered an end point because the soul journeyed on after the end of the body. But to where did it journey? And how would it be re-united with the body in the future? Between the classical period and the High Middle Ages, death shifted from a moment of quiet release to a frightening struggle in which angels and demons lay in wait for a soul as soon as it exited the body. This course will examine these changing beliefs about dying, focusing primarily on Christian medieval Europe but drawing comparative examples from Judaism, the Roman world, and Byzantine Christianity. Other topics we’ll consider include martyrdom and fears of bodily disembention; the emergence of purgatory and depictions of the afterworld; and the development of Christian rites for the dead. We’ll also investigate beliefs about the invisible powers of demons and the apocalyptic end of times. The course will also explore not only the process by which people entered the afterlife in the Middle Ages but also the causes of their deaths—what kinds of disease primarily afflicted medieval society, and how did age, class and gender intersect with disease to affect certain populations? We will end the semester by examining that most apocalyptic of Medieval events—the Black Death—in light of recent scientific discoveries, medieval medical explanations, and social changes brought on by this demographic catastrophe. Students will be exposed to a range of primary sources as well as evidence from tombstone inscriptions, architecture and manuscript illuminations, and archaeology. No prior knowledge of Medieval history is necessary. Not Offered Every Year
1 Course Unit

RELS 2440 From Miracles to Mindfulness
In 1902, the most famous philosopher in America, William James, revolutionized the study of religion by analyzing religion as an experience rather than as a set of doctrines or scriptures. In this course, we will pick up the inquiry that James and scholars such as Sigmund Freud began by exploring new approaches to the science and philosophy of religious experience. We will invite a series of experts from a wide range of fields—neuroscience, psychoanalysis, phenomenology, psychology, anthropology, to name only a few—to present their cutting-edged research on the nature of religious experience. How can religious experience be studied? What does the research reveal about religious experience? And what can we learn from such experiences about the workings of the human mind and human society? The course has two components: 1) a discussion-centered mini-seminar from 3:30-5:00 will open consideration of the subject with help from relevant readings 2) a lecture series every Tuesday from 5:00-6:30, featuring leading scholars who approach religious experience from different disciplinary angles or in light of different questions.
Also Offered As: JWST 2440
1 Course Unit

RELS 2450 Sufism
This course is a survey of the large complex of Islamic intellectual and social perspectives subsumed under the term Sufism. Sufi philosophies, beliefs, practices, and social organizations have been a major part of the Islamic tradition in all historical periods and Sufism has also served as a primary muse behind Islamic aesthetic expression in poetry, music, and the visual arts. In this course, we will attempt to understand the nature and importance of Sufism by addressing both the world of ideas and socio-cultural practices. We will trace the development of Sufism as a form of Muslim piety linked to key notions in the Quran as well as living practices of venerating the Prophet Muhammad. We will then immerse ourselves in Sufi theoretical writings through a select list of primary sources introducing foundational Sufi concepts concerning the annihilation of oneself in God, and the various stages of the Sufi quest for spiritual union. From there, we will shift to a discussion of the interactions between Sufism and philosophy by looking at the writings of two of the most influential Sufi thinkers, Al-Ghazali and Ibn al-Arabi. We will also study the important role of Sufi poetry through a close reading of a selection of Rumi’s works. In our discussion of the social and political dimensions of Sufism, we will explore the relations between Sufi movements and religious and political authority, focusing on antimonianism and patronage in the Ottoman Empire, and on Sufi responses to colonial rule. The last part of the course will look at the roles of Sufis and Sufism in contemporary societies from South Asia to North America.

1 Course Unit
REL 2460 Spirituality in the Age of Global Warming: Designing a Digital Mapping Project in Scalar
We are living in the midst of one of the most severe crises in the Earth’s history. Science confirms the glaciers are melting, hurricanes are growing more intense, and the oceans are rising. But there is also a deeply spiritual dimension to global warming that does not factor into the scientific explanations of the Anthropocene. “Spirituality” will be defined not in terms of one particular religion, but in relationship to a passionate study of the environment and nature. Readings will include materials from both the sciences and the humanities such as Donella Meadows’s Thinking in Systems, Elizabeth Kolbert’s The Sixth Extinction, Barbara Kingsolver’s Flight Behavior, and films such as Black Fish and Wale Rider. The theoretical focus of the course will be how “multispecies partnerships” can help us better understand and mitigate the effects of Climate Change. This class will work collaboratively on a digital archive with an interactive mapping interface designed in Scalar. This newly developed platform allows for the creation of multimedia exhibits that will document how Global Warming is affecting coral reefs in the tropics, glaciers in the Arctic and Antarctic, rainforests in the Amazon and rivers of Philadelphia. Students will also work individually to design interactive maps on the Scalar platform documenting their own personal interactions with the environment.

REL 2531 Religion in Modern China
This course focuses on the history and role of religion in the Chinese cultural sphere (Mainland China, Taiwan, and the Diaspora) from the mid-19th century to the present day, focusing on the relationship between religious institutions and the state during the imperial, republican, and communist regimes. We will learn about the impact of religious ideas, practices, and organizations on social, political and economic processes and inspect the role of religion in the consolidation of individual, communal, and national identity. Adopting a comparative and interdisciplinary approach, we will attempt to ascertain the impact of the various Chinese religious traditions: Confucianism, Daoism, Buddhism, and popular sects, as well as global religions such as Islam and Christianity, on the internal sociopolitical structure of the Chinese state and their role in shaping power relations on a transregional, national, and local level. Special emphasis will be given to the role and use of the grand narratives of secularism and modernity in the shaping of the Chinese nation-state, as well as the value of using these frameworks in the study of modern China. The class is discussion based, supplemented by lectures, student presentations, and documentary films. No knowledge of Chinese is presumed. All readings will be in English.

1 Course Unit

REL 2550 Media and Religion
This course will look at the ways that religion intersects with media in South Asia—exploring how the medium is the message. The class begins with a discussion of how it is difficult to define “religion” and “media” in the Global South, specifically in South Asia. We will analyze how religion and media are inextricable, and also how news media has gone about the business of turning religion into news. The class will familiarize students with a variety of media forms aside from the obvious sources of internet, TV and newspaper—these include traditional architecture, devotional texts, devotional poetry, music, visual-sensory worship, modern film, recorded music, clothing, and live performance. We will conclude with a look at religion in forms of contemporary media, with particular attention to new media (TV, radio, internet). The course also offers students lectures providing a foundation of knowledge on a few of the primary religious traditions that will be central to the regions under discussion: Islam, Hinduism, Sikhism, Jainism, Zoroastrianism, and Christianity. There will be guest speakers and a visit to Penn Museum. While much of the course will be immersed in the history and the past, we will conclude by considering contemporary contexts, both globalized and local. There is no prerequisite for the course. All students are welcome.

REL 2560 Existential Despair
This is an experimental course that seeks to combine creative pedagogical methods and alternative scheduling to encourage intellectual reflection and emotional vulnerability through an in depth study of the way people cope with existential despair. Through a reading of memoirs, novels, poetry, and essays in an atmosphere conducive to close-reading and full-participation students will explore a wide-range of ways of coping with, describing, and comprehending moments of great despair. Lectures will explain the ritual, liturgical, homiletic, meditative, reflective, self-destructive, psycho-somatic, and ascetic ways despair is both conditioned and mitigated by different thinkers from various traditions over time. Format: This course is different from most others in that there is no homework, no outside reading, and no research papers. There will be no work given to students or expected of them outside of class. All work is done in class and class is very long (8 hours straight, once a week, from four PM to midnight). Students will eat together in class, there will be three bathroom breaks, but there will be no internet, no phones, no computers, and no auditors. Each student must be fully committed to the class and 75% of the grade will be determined by class participation.
1 Course Unit

REL 2710 The Politics of Shinto
Shinto-derived images and ideas frequently appear in Japanese anime and film, and journalists and academics frequently mobilize the term Shinto as a way of explaining Japan’s past or envisioning its future. The environmentalist left champions a green Shinto while Shinto-derived ideas serve as red meat for politicians pandering to Japan’s nationalist right. While the influential position Shinto occupies in Japanese sociopolitical life is therefore clear, the term Shinto itself is actually not. Depending on who one asks, Shinto is either the venerable indigenous religion of the Japanese archipelago, the irrefutably core of Japanese culture, a tiny subset of Japanese Buddhism, an environmentalist ethic, or some combination of these. This course investigates the multifarious types of Shinto envisioned by these competing interests groups.

RELS 3100 Orthodox America (SNF Paideia Program Course)
This course surveys the rich history of Orthodox Christian communities in North America from the early 19th century to the present day. Orthodox Christians from the Middle East, eastern Europe, Russia, Ethiopia, India, and elsewhere have immigrated to America for more than two hundred years, and contributed to the American religious, political, legal, literary, and material landscapes. Their stories are, however, rarely incorporated into the often Protestant-centric grand narratives of the history of religion in America. Through the lenses of post-colonial, immigration and diaspora, gender, media, and religious studies, this course surveys the literature, art, material culture, and religious practice of various Orthodox Christian communities, highlighting the multifaceted ways Orthodox Christianity shaped America. The classes will consist of robust study of primary sources and scholarly works (including theoretical, historical, and ethnographic works), critical engagement with representations of Orthodox Christians in mass media, social media, and popular culture, and museum and church visits. The course is offered both at graduate and advanced undergraduate level.
Mutually Exclusive: RELS 6100

RELS 3110 Religion & Politics in America
For over a century, scholars predicted religion’s influence in the public sphere would decline due to the forces of modernization and secularization. They were wrong. Religion remains a strong influence on politics in America, shaping laws on the state and national level. This seminar analyzes the relationship between religion and politics in the United States from a historical and contemporary perspective. Students will examine liberal and conservative viewpoints regarding religion on a range of topics, including abortion, gay rights, race, the environment and capitalism
1 Course Unit

RELS 3170 “Black Spiritual Journeys: Modern African American Religious Memoir”
This seminar presents African Americans who have created religious and spiritual lives amid the variety of possibilities for religious belonging in the second half of the twentieth century and the early twenty-first century. By engaging an emerging canon of memoirs, we will take seriously the writings of Black spiritual gurus, theologians, hip hop philosophers, religious laity, activists, LGBTQ clergy, religious minorities, and scholars of religion as foundational for considering contemporary religious authority through popular and/or institutional forms of African American religious leadership. Themes of spiritual formation and religious belonging as a process—healing, self-making, writing, growing up, renouncing, dreaming, and liberating—characterize the religious journeys of the African American writers, thinkers, and leaders whose works we will examine. Each weekly session will also incorporate relevant audiovisual religious media, including online exhibits, documentary films, recorded sermons, tv series, performance art, and music.

RELS 3203 Power and Peril: The Paradox of Monarchy among Ancient Greeks, Romans, and Jews
We imagine ancient Greece and Rome as the cradles of democracy and republicanism, early Judea as a pious theocracy, but monarchy was the most common and prevalent form of government in antiquity (and the premodern world in general). In this class, we will take a special look at kinship among the Jews, Greeks, and Romans to assess and discuss similarities, differences, and mutual influences. In all these cultures, the king was a polarizing figure in reality and in conception. On the one hand, some revered the monarch as ideal leader, and monarchy provided the language with which to describe and even imagine the very gods. On the other, monarchs were widely reviled in both theory and practice, from the Greek tyrants to biblical Saul. The Emperor Augustus loudly denied his own affinity to the office of king, even as he ruled alone and was revered as a god. In other words, kings stood both for the ideal and the worst form of government. This class confronts the paradox of monarchical rule and will, through the lens of the king, explore ideas of god, government, human frailty, and utopianism.

RELS 3330 Material Christianities
What can objects tell us about Christianity? How might a lavish mosaic, a withered body part, a dark crypt, or a pilgrim’s oil lamp challenge and complicate visions of the past extracted from texts? This course investigates the first thousand years of Christianity through the lens of material culture. The history of Christianity - from its nebulous beginnings in Palestine to its recognition as the official religion of the Roman Empire and subsequent expansion - is often narrated from a perspective that privileges the writings of elite men. To capture the rich diversity in Christian experience and expression, we will turn to the material practices of religion and explore how things, places, and bodily acts shaped what it meant to be Christian. Building on insights drawn from archaeology, art history, anthropology, and religious studies, we will seek to recover the experiences of diverse and often marginalized subjects and communities, and in the process, will problematize the categories of religion, authority, and identity. Regular visits to the Penn Museum and other collections in Philadelphia will complement lectures and group discussions.

RELS 3425 Gender, Religion, and China
This course examines the interrelationship among "gender," "religion," and "China" as conceptual and historical categories. We ask, for example, how gender plays critical and constitutive roles in Chinese religious traditions, how religion can be used both to reinforce and to challenge gender norms, how religious women impact Chinese society and culture, and what the construction of "China" as a cultural identity and as a nation-state has to do with women, gender, and religion. We will also think about what assumptions we have when speaking of gender, religion, and China, and the infinite possibilities when we strive to think beyond. We will read three kinds of materials: (1) scholarship on gender and religion in historical and contemporary China as well as the Chinese-speaking world, (2) scholarship concerning theories and methodology of gender and religious studies not necessarily focused on China, and (3) historical record of religious women in English translation.
Spring

1 Course Unit

RELS 3524 Daoist Traditions
This course examines the history of various intellectual and religious traditions that came to be known as Daoist (or Taoist in the Wade-Giles Romanization). We will begin with a critical review of the twentieth-century reinvention of Daoism and the new classification of religious versus philosophical Daoism, before tracing chronologically the textual, institutional, and social history of Daoist traditions from the fourth century B.C.E. While familiarizing students with the key concepts, practices, and organizations developed in the history of Daoism, this class emphasizes the specific socio-political context of each of them. Throughout the course, we will think critically about the labeling of Daoist (as well as Confucian and Buddhist) in Chinese history and in modern scholarship. We will also question modern demarcations between philosophy, religion, and science, as well as that between the spiritual and the physical.

RELS 3560 Living Deliberately: Monks, Saints, and the Contemplative Life
Students who are not Religious Studies Majors and are not honors students must gain permission from instructor to enroll in this course. This is an experimental course in which students will experience monastic and ascetic ways of living. There will be no examinations, no formal papers, and very little required reading. However, each participant will need to be fully committed intellectually and participate in the monastic rules in the course involving restrictions on dress, technology, verbal communication, and food. The course subject matter is about ways in which nuns, monks, shamens, and swamis in various religious traditions (Buddhist, Muslim, Catholic, Jain, Taoist, Hindu, Animist, among others) have used poetry, meditation, mind-altering chemicals, exercise, magic, and self-torture to cope with pain and suffering, as well as struggle with spiritual, ethical, and metaphysical questions concerning the nature of the soul, the afterlife, and reality. Through monastic and spiritual practice, this course hopes to provide students with an opportunity to struggle with these questions themselves.

RELS 4050 Religion, Social Justice & Urban Development
Urban development has been influenced by religious conceptions of social and economic justice. Progressive traditions within Judaism, Christianity, Islam, Buddhism, Hinduism, Jainism, Baha’i, Humanism and other religions and systems of moral thought have yielded powerful critiques of oppression and hierarchy as well as alternative economic frameworks for ownership, governance, production, labor, and community. Historical and contemporary case studies from the Americas, Europe, Africa, Asia, and the Middle East will be considered, as we examine the ways in which religious responses to poverty, inequality, and ecological destruction have generated new forms of resistance and development.

RELS 4140 Creating a Constitution in Israel
Why does the State of Israel not have a constitution? If it ever establishes a constitution, what will it consist of? How would it impact contemporary Israeli politics if it voted to accept one? The aim of this course, offered in conjunction with Penn's law school, is to explore the attempt to write a constitution for Israel in light of readings and the instructor's personal experience as a member of Israel's parliament (the Knesset) and chair of its Constitution, Law and Justice Committee at the time that it drafted a full Israeli constitution. We will explore legal and political issues and controversies involved in the effort to create a constitution, including issues bearing on the relationship of religion and the state in Israel, and will seek to understand the process in light of larger social, historical and philosophical contexts.

RELS 4300 Rabbinic Writers on Rabbinic Culture
This course traces reflections on rabbinic culture produced within Jewish legal literature of the classic rabbinic period - - Midrash, Mishna, and Talmud - - and in later juridical genres - - Talmudic commentary, codes and responses. Attention will be paid to the mechanics of different genres, the role of the underlying proof text, the inclusion or exclusion of variant opinions, the presence of non-legal information, the balance between precedent and innovation. Reading knowledge of Hebrew is required.

1 Course Unit

RELS 4305 Spirit and Law
While accepting "the yoke of the commandments", Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from overtly polemical challenges to the law, such as those leveled by Paul, medieval Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law's meaning and purpose, by examining a range of primary sources within their intellectual and historical contexts. Texts (in English translation) include selections from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic homilies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.

RELS 5000 Theory and Method in the Study of Religion
This graduate seminar will map the theories and methods underpinning the contemporary study of religion. To draw this map, we will consider the history of the field. We'll proceed by examining how problems within religious studies have been resolved in different ways at different times, constructing a web of dialogs and debates between different figures across history. Specific topics to be considered will include experience, discourse, embodiment, feminism, postcolonialism, science, and materiality.

RELS 5010 Sacred Stuff in Medieval & Early Modern Europe
During devotional activities people engage with various objects and believe that they are imbued with religious significance. In this seminar, we will explore the material culture of religion across medieval and early modern Europe. From rosary beads and crucifixes to devotional books, prints, and paintings, a range of "sacred stuff" populated the lives of medieval and early modern Europeans. We will consider objects associated with daily life as well as rites of passage. We will study objects of Christian devotion and will consider how the advent of Protestantism and the Catholic Reformation influenced the types of objects devotees used for their devotion. In this seminar, we will discuss the material culture of Judaism and Islam, religions also practiced in medieval and early modern Europe. We will engage with "sacred stuff" from a variety of disciplinary perspectives, including art history, literature, archaeology, social history, and cultural history. We will then hone these skills with visits to local museums and libraries where we will view medieval and early modern books, objects and images. Course assignments will include an in-depth analysis of a devotional object from medieval or early modern Europe chosen by the student.

RELS 5022 The Icon
This seminar explores the Byzantine icon and its legacy. Spanning nearly two millennia, from the emergence of Christian sacred portraiture to the reception of icon painting by the early twentieth-century Russian avant-garde, the seminar will introduce you to the history, historiography, and theories of the icon. While our focus will be on Byzantium and the wider world of Orthodox Christianity, especially in the Slavic Balkans and Eastern Europe, the seminar will also engage with fundamental questions concerning the nature, status, and agency of images across cultures. Topics to be addressed include iconoclasm and the problem of idolatry; the social and ritual lives of icons; authorship, originality, and replication; viewer response and the cultural construction of vision; the frontier between art and the sacred image; and the afterlife of the icon in modernity. Open to graduate and undergraduate students.

RELS 5090 Teaching Religion
Many faculty in academia, especially at a research university, think of themselves as scholars first and teachers second. The emphasis on scholarship is essential for a position at a research university, but what the culture of such institutions can obscure is the importance of teaching as part of the academic vocation. The purpose of this course is to help prepare graduate students to teach academic religious studies, not to teach them how to teach, a skill developed through experience and feedback, but to encourage students to plan in advance for their work as educators and to develop their teaching aspirations and approach in dialogue with issues and debates in Religious Studies, the Humanities and the field of Education.
Fall
1 Course Unit

RELS 5100 Civil Religion
In the first half of the course, we will examine the theoretical question of whether modern liberal societies need a civil religion - an idea first proposed in the late eighteenth century by writer who feared that without some unifying ideal or principle the centrifugal forces at work in modern societies would lead them to disintegrate. We will examine various authors who have defended the idea of civil religion in these terms (including J.J. Rousseau, J.G. Herder, and G.W.F. Hegel) as well as several who (implicitly or explicitly) have rejected the argument (Max Weber, Michael Oakeshott, Daniel Bell, and Niklas Luhmann). In the second half of the class, we will turn to the American context and explore the way these arguments have played themselves out from the time of the constitutional frames to today. In this part of the class, we will read and discuss excerpts from the Federalist Papers and Tocqueville’s Democracy in America, selected presidential speeches, nineteenth- and twentieth-century debates surrounding Manifest Destiny and American Exceptionalism, John Dewey/Richard Rorty’s proposal for a religion of democratic “common faith,” and the neoconservative case for a civil religion of “national greatness.” Along the way we will also have occasion to examine sociological treatments of civil religion by such authors as Emile Durkheim, Robert Bellah, and Seymour Martin Lipset.

RELS 5150 Syriac Christianity Past and Present
This course surveys the long and diverse history of Syriac-speaking Christianity, from the 4th century CE to the modern era. Syriac Christianity refers to the individuals and groups that identify with the linguistic, liturgical, and cultural traditions of the Syriac language, a dialect of Aramaic that has been spoken in Mesopotamia, Syria and beyond in late antiquity, through the Middle Ages until today. We will study the literature, material culture, ritual practice, theology, and other aspects of the Syriac Church, as well as its encounters with other religious communities. While we will explore the key figures and formative events that are remembered as foundational, we will incorporate the understudied elements of Syriac Christianity, such as gender, non-elite forms of piety and devotion, and music and aesthetics. Through the lens of Syriac Christianity, we will analyze the relationships between religion and language, scripture, myth-making, human body, race, state, geography, and movement. Knowledge of the Syriac language is not required for this course.

RELS 5250 Cults and New Religious Movements
This course offers a thematic introduction to the history of New Religious Movements (NRM) from the mid-19th century to the present day. Often labeled as “cults” by the state and established religious institutions, new religions offer modern believers alternative spiritual and ideological solutions to age-old problems. In this class, students will be introduced to the teachings and practices of prominent NRMs, from global movements such as Scientology, Mormonism, and Hare Krishna to lesser known groups such as the Source Family, the Church of All Worlds, and Raëlianism. Main topics will include the emergence of the public discourse on cults, brainwashing, and deprogramming, the role of mass media in framing the relationship between NRMs such as the Peoples Temple and the Branch Davidians and violence, and the rise of populist cults of personality in the 21st century. In addition, we will learn how NRMs such as Wicca and the Children of God helped reshape gender roles and change mainstream views about sexuality, and explore the role played by race in shaping public perception of Asian-inspired religions such as Transcendental Meditation and the Unification Church. Throughout the semester, students will be exposed to a wide variety of primary and secondary sources, from academic articles and scholarly essays to documentaries, feature films, and TV shows.

RELS 5340 Christian Thought From 1000 to 1800
This course will trace the development of Christian thought (including philosophy, theology, spirituality and mysticism) from the early Scholastic period to early Methodism. Readings will be from both primary and secondary sources. A research paper will be required of each student. Spring 2014: This course will give an overview of the main currents of Western Christian thought from the first age of reform (that is, the Central Middle Ages) through the Reformations of the sixteenth century, to the eve of the Enlightenment. In these centuries, "Christendom" underwent an almost constant process of internal and external self-definition. The most striking results of this process were the definitive separation of eastern and western Christianity and the division of the western church into what became known as Protestant and Catholic Christianity. Our focus will be on the changing definitions of Christian culture, including theological formulations (definitions of orthodoxy and heterodoxy), trends of spirituality and mysticism, forms of worship, and gender roles and definitions. Attention will also be given to institutional questions such as ecclesiastical hierarchy, monasticism, scholasticism and the rise of universities, and the changing relationship between the secular and religious worlds. Readings will be from both original and secondary sources. Additional primary sources will be available online, attached to the course Blackboard page. I will supply copies of other readings. Students will write two papers. The first (due Feb. 8) is a 5-7 pp. analysis of a primary source from the class, for which another text may be substituted by permission of the instructor. The second paper, due at the end of the course, should be a more ambitious research paper (at least 10 pp. for undergraduates, longer for graduate students) that includes some aspect of this history we did not directly study in class. Prerequisite: Some background in European history is helpful. Not Offered Every Year
1 Course Unit

RELS 5380 Topics in Medieval History
This course introduces students to the development of Christian biblical interpretation by focusing on ancient, medieval, and modern interpretations of the Sermon on the Mount. Students will encounter a variety of important interpreters (including Origen, Tertullian, Gregory of Nyssa, John Chrysostom, Augustine, Thomas Aquinas, Luther, Leo Tolstoy, Albert Schweitzer, Dietrich Bonhoeffer, and Hans Dieter Betz), guided by appropriate secondary materials. The Sermon on the Mount is part of the Gospel of Matthew and is often considered to summarize the essential teachings of Jesus of Nazareth. This course has no prerequisites. Readings will be made available in English. Students will be encouraged to do original research in the primary sources. Fall or Spring
1 Course Unit

RELS 5410 Religion and the Visual Image: Seeing is Believing
Seeing is Believing engages in a historical, theoretical, and cross-cultural analysis of the place of visuality in religion and of religion in visual culture. We will examine images, buildings, places, objects, performances and events. The geographical, cultural and historical scope of the material is broad, including subjects from Europe, the Islamic World, non-Muslim South Asia, the US and Latin America from the medieval period until the present. Theoretical works will be read in conjunction with representative examples to invite intellectual engagement in a socially and historically grounded way. Important issues to be covered include the relationship of visual to material culture; visual theories versus theories of vision; locating religion in human sensory experience; perception at individual and collective levels; authentics, fakes and simulacra; iconoclasm and image veneration; aesthetics, use and utility, and things. Not Offered Every Year

1 Course Unit

RELS 5450 Sufi Thought and Literature
This course is an intensive survey of the rich variety of Islamic intellectual, literary and cultural phenomena subsumed under the term Sufism. Sufi philosophies, liturgical practices, and social organizations have been a major part of the Islamic tradition in all historical periods, and Sufism has also served as a primary muse behind Islamic aesthetic expression in poetry, music, and the visual arts. In this course, we will explore the various significations of Sufism by addressing both the world of ideas and socio-cultural practices. The course is divided into three broad sections: central themes and concepts going back to the earliest individuals who identified themselves as Sufis; Sufi metaphysics and epistemology as exemplified in the work of Ibn al-'Arabi and his school, and literary expressions as exemplified in the epic poem Layla and Majnun by Nizami, The Conference of the Birds by Attar, and in the life and poetry of Mawlana Jalaluddin Rumi. In studying this material, we will be concerned equally with establishing common patterns and seeing how being a Sufi has meant different things to various people over the course of history. RELS 5520 Affect Theory and Power
This seminar will examine contemporary affect theory and its relationship with Michel Foucault’s theory of power. We will begin by mapping out Foucault’s “analytics of power,” from his early work on power knowledge to his late work on embodiment, desire, and the care of the self. We will then turn to affect theory, an approach which centralizes the non-rational, emotive force of power. No previous knowledge of theory is required. Also Offered As: COML 5520, GSWS 5520
1 Course Unit
RELS 5555 History of Hinduism
This course will explore the history of the religion(s) designated by the term ‘Hinduism’ from their earliest articulations down to the rise of modern reforms in the nineteenth century. The study of Hinduism is perhaps unique among the scholarly traditions on world religions in that it has to date had no serious connected account of its historical development, as scholars have preferred to take structural, sociological, phenomenological, and doctrinal approaches to the religion. The course, after a brief review of scholarly approaches to Hinduism and their interpretive legacies, will seek to develop a historical sense of the religion through attention to shifts in liturgy, ritual, theology, doctrine, sacral kingship, and soteriology. The course will include the reading of primary sources relevant to understanding these changes as well as highlight both modern and premodern traditions of their interpretation. It will also consider and assess some of the key interpretive ideas in the study of Hinduism, including, Sanskritization, Great and Little Traditions, cult formation, regional and popular religious movements, and canon formation. There will also be sustained consideration of the question of religion and socio-political power as well as relations between Hinduism and other religions like Buddhism and Islam.

RELS 5570 An Intellectual History of Pakistan: Religion and politics
The course will introduce students to significant events in Pakistan's history, critical foundational moments, and key religious-political texts. To make the course theoretically rigorous, I have conceptualized it in a broader framework of intellectual history. My focus would be on probing an interrelated set of questions about class, postcoloniality, Cold War politics, worker mobilizations, Political Islam, a non-Western history of citizenship and democracy, decoloniality, and feminist movements. Thus, the course's focus is not on a chronology of events in Pakistan but on providing a reading praxis and a form of inquiry with which we should understand the postcolonial histories of the global South.
1 Course Unit

RELS 5600 Creating Black Sacred Cultures: Readings in African American Religious History
This graduate seminar entertains the history of African American cultural production primarily in the twentieth century through foundational and emerging works in the field. This seminar focuses on African American religious history, with a focus on the material, visual, auditory, and literary religious constructions of everyday worlds, lives, and professions. Our readings attend to intersectional dimensions of African American religious life, highlighting the connections of race, gender identity, sexual orientation, class, alternative religious identities, and region. A focus on Black cultural production and its producers enriches African American religious history. Seminar participants will engage the theoretical concerns and methodological approaches that illuminate the ways that Black women and men capture and (re)shape the meaning of their worlds in a variety of domestic, professional, social, and political settings. The seminar's primary aims are to help participants define interests within the field to pursue further study, to consider potential areas of research, and to aid preparation for doctoral examinations.

RELS 5710 Advanced Topics in Buddhism
This is an advanced course for upper level undergraduates and graduate students on various issues in the study of Buddhist texts, art, and history. Each semester the theme of the course changes. In recent years topics have included: Magic and Ritual, Art and Material Culture, Texts and Contexts, Manuscript Studies. Fall 2013 Topic: Buddhist repertoires (idosyncratic and personal assemblages of beliefs, reflections, wanderings, possessions, and practices) for a large part, material and sensual. Buddhists are often sustained by their collection, production, and trading of stuff amulets, images, posters, protective drawings, CDs, calendars, films, comic books, and even Buddha-inspired pillow cases, umbrellas, and coffee mugs. Aspirations are interconnected with objects. Beliefs are articulated through objects. Objects are not empty signifiers onto which meaning is placed. The followers and the objects, the collectors and their stuff, are overlooked in the study of religion, even in many studies in the growing field of material culture and religion. What is striking is that these objects of everyday religiosity are often overlooked by art historians as well. Art historians often remove (through photography or physical movement to museums or shops) images and ritual implements from their ritual context and are seen as objets d’art. While art historians influenced by Alfred Gell, Arjun Appadurai, and Daniel Miller have brought the study of ritual objects into the forefront of art historical studies, in terms of methodologies of studying Buddhist art, art historians have generally relegated themselves to the study of either the old and valuable or the static and the curated. This course aims to 1) bring a discussion of art into the study of living Buddhism. Art historians have primarily concentrated on the study of images, stupas, manuscripts, and murals produced by the elite, and primarily made before the twentieth century; 2) study art as it exists and operates in dynamic ritual activities and highly complex synchronic and diachronic relationships; 3) focus on the historical and material turn in the study of images, amulets, and murals in Buddhist monasteries and shrines.

RELS 5750 Religion in Eleven Objects
This advanced course for Religious Studies majors and minors approaches the study of religion through material objects. By looking at both sacred and everyday objects like rosaries melted in atomic blasts, magical amulets used in healing rituals, temple murals defaced by invading armies, manuscript stained by hold water, we will explore the many ways people express their spiritual aspirations and existential fears through objects. Not only will a different object from a variety of religious traditions be examined each week (eleven in total), but we will also explore different methodological and theoretical approaches to the study of religion. Psychological, phenomenological, bio-genetic, sociological, art historical, discursive, post-modern, and narrative approaches will be discussed.
1 Course Unit
RELS 5860 History of Islam in Asia
This class is designed to structure reflection on Islam and Islamic culture in South Asia-- Indonesia, Pakistan, India, and Bangladesh. Contrary to the popular perception that the Middle East defines Islam, Asian countries not only host the most Muslims in the world but have been the source of some of Islam's most important social and reform movements in the last three hundred years. This class looks at the history of Muslim societies across Asia not just as a religious community but also as a social and cultural bloc (a distinctive part of what Marshall Hodgson called the 'Islamicate' world, but also an area that challenges some of Hodgson's assumptions about the Islamicate world). This course allows for the study of the Muslim world between the years 1700 to present. The class will allow students to compare and contrast Muslim societies over the last three centuries, examine points of confluence for geographically- or culturally- distinct Muslim peoples in the last three centuries, and in their writing assignments focus on the history of one society in a wider Islamicate context. In the process students will gain a more nuanced awareness of how Islam has made an impact in Asian countries, and how Asian countries have in turn impacted Islam.

RELS 6080 Worlds of Late Antiquity
The period between the third and eighth centuries - from the Tetrarchy led by Diocletian to the rise of Umayyad Caliphate - is characteristically regarded as a period of ferment and change, whether that be on the still-influential model of Decline and Fall first proposed by Edward Gibbon in the eighteenth century or the somewhat less deterministic account of transformation favored by Peter Brown in the late twentieth. These narratives tend to emphasize the large-scale processes that played out over these centuries, such as the florescence and fragmentation of two world empires; the emergence of two highly influential monotheistic religions of the book; and the codification of legal systems that continue to dominate contemporary practices and theories of law. Equally, what characterizes these centuries is the particular granularity and character of the textual and archaeological evidence that exists for the functioning of this world at the micro-scale, as against the periods that preceded and followed. This course traces the social, economic, cultural, and religious institutions and processes that make this period distinctive, explores the nature of the evidence for those institutions and processes, and exposes to scrutiny the assumptions and preconceptions that underpin the scholarly narratives that have been constructed about them.

RELS 6100 Orthodox America
This course surveys the rich history of Orthodox Christian communities in North America from the early 19th century to the present day. Orthodox Christians from the Middle East, eastern Europe, Russia, Ethiopia, India, and elsewhere have immigrated to America for more than two hundred years, and contributed to the American religious, political, legal, literary, and material landscapes. Their stories are, however, rarely incorporated into the often Protestant-centric grand narratives of the history of religion in America. Through the lenses of post-colonial, immigration and diaspora, gender, media, and religious studies, this course surveys the literature, art, material culture, and religious practice of various Orthodox Christian communities, highlighting the multifaceted ways Orthodox Christianity shaped America. The classes will consist of robust study of primary sources and scholarly works (including theoretical, historical, and ethnographic works), critical engagement with representations of Orthodox Christians in mass media, social media, and popular culture, and museum and church visits. The course is offered both at graduate and advanced undergraduate level.

RELS 6101 Topics in Medieval Studies: Premodern Animals (c.500-c.1500)
From St. Cuthbert, whose freezing feet were warmed by otters, to St. Guinefort, a miracle-performing greyhound in 13th-century France, to Melusine, the half-fish, half-woman ancestress of the house of Luxembourg (now the Starbucks logo), medieval narratives are deeply inventive in their portrayal of human-animal interactions. This course introduces students to critical animals studies via medieval literature and culture. We will read a range of genres, from philosophical commentaries on Aristotle and theological commentaries on Noah's ark to werewolf poems, bestial fables, political satires, saints' lives, chivalric romances, bestiaries, natural encyclopaedias, dietary treatises and travel narratives. Among the many topics we will explore are the following: animals in premodern law; comfort and companion animals; vegetarianism across religious cultures; animal symbolism and human virtue; taxonomies of species in relation to race, gender, and class; literary animals and political subversion; menageries and collecting across medieval Europe, the Near East, and Asia; medieval notions of hybridity, compositeness, trans-species identity, and interspecies relationships; art and the global traffic in animals (e.g., ivory, parchment); European encounters with New World animals; and the legacy of medieval animals in contemporary philosophy and media. No prior knowledge of medieval literature is required. Students from all disciplines are welcome.

RELS 6333 Love and Sex in Buddhism
From monastic celibacy to sanctified sex, this course examines the wide variety of attitudes and practices towards love, desire, attachment, and pleasure in the Buddhist tradition. Readings include primary sources from South, Southeast, and East Asia, secondary scholarship on Buddhist social history and doctrine, and theoretical literature on gender, sex, and the body.
Spring, odd numbered years only
Mutually Exclusive: RELS 3333
1 Course Unit

RELS 6510 Approaches to Islamic Law
This course aims to introduce students to the study of Islamic law, the all-embracing sacred law of Islam. In this course we will attempt to consider many different facets of the historical, doctrinal, institutional and social complexity of Islamic law. In addition, the various approaches that have been taken to the study of these aspects of Islamic law will be analyzed. The focus will be mostly, though not exclusively, on classical Islamic law. Specific topics covered include the beginnings of legal thought in Islam, various areas of Islamic positive law (substantive law), public and private legal institutions, Islamic legal theory, and issues in the contemporary development and application of Islamic law.

RELS 6560 Religion in Modern South Asia
This core seminar introduces graduate students to key themes in the study of religion in modern South Asia, with a focus on debates related to Hinduism, Islam, and Christianity in India from the nineteenth century to the present. Drawing upon a range of methodological and theoretical approaches, the seminar covers themes such as colonial and missionary constructions of religious categories, Orientalism and textual authority, social and religious "reform" movements, questions of caste and gender, and debates about religious nationalisms, democracy, and secularism.

1 Course Unit

RELS 6632 Hinduism and Colonial Modernity
This seminar deals with the question of modernity in South Asia, with a specific focus on the construction, dissemination, and politicization of Hinduism in nineteenth and twentieth century India. It focuses on three central heuristic lenses—namely those of European imperialism, Orientalism, and nationalism—to study modernity and its discontents. What was at stake in the encounter between colonial modernity and India's religions in nineteenth and early twentieth centuries? How did colonial and native discourses on "reform" and "revival" shape Indian religions as we understand them today? How is modern "Hinduism" inextricably hinged to early forms of cultural transnationalism, Orientalism, and incipient forms of nationalism? This seminar approaches questions such as these and others, with an eye to understanding how nineteenth and early twentieth century discourses continue to shape contemporary understandings of Hinduism in deep and highly politicized ways.

RELS 6710 The Politics of Shinto
Shinto-derived images and ideas frequently appear in Japanese anime and film, and journalists and academics frequently mobilize the term Shinto as a way of explaining Japan's past or envisioning its future. The environmentalist left champions a green Shinto while Shinto-derived ideas serve as red meat for politicians pandering to Japan's nationalist right. While the influential position Shinto occupies in Japanese sociopolitical life is therefore clear, the term Shinto itself is actually not. Depending on who one asks, Shinto is either the venerable indigenous religion of the Japanese archipelago, the irreducible core of Japanese culture, a tiny subset of Japanese Buddhism, an environmentalist ethic, or some combination of these. This course investigates the multifarious types of Shinto envisioned by these competing interest groups.

RELS 7420 Qur'anic Studies
This seminar explores the nature and uses of the Qur’an. It focuses on the practice and theory of Qur’an commentary and interpretation (safsir and ta’wil). A major portion of the course will involve a close examination of manuscripts of the Qur’an at the Philadelphia Museum of Art and the Kislak Center at the University of Pennsylvania, concentrating on the relationship between the text and marginalia as well as on the peculiarities of individual manuscripts. The rest of the course will center around reading commentaries on the Qur’an in manuscript as well as print. In addition, we will read and discuss theoretical works on the history and nature of Qur’an commentary, literary criticism and textual analysis, and spend some of the later section of the course discussing issues of translation and editorial processes involved in popularizing Qur’an commentaries on the internet. READING KNOWLEDGE OF ARABIC REQUIRED.

Also Offered As: NELC 7550
1 Course Unit

RELS 7425 Gender, Religion, and China
This course examines the interrelationship among "gender," "religion," and "China" as conceptual and historical categories. We ask, for example, how gender plays critical and constitutive roles in Chinese religious traditions, how religion can be used both to reinforce and to challenge gender norms, how religious women impact Chinese society and culture, and what the construction of "China" as a cultural identity and as a nation-state has to do with women, gender, and religion. We will also think about what assumptions we have when speaking of gender, religion, and China, and the infinite possibilities when we strive to think beyond. We will read three kinds of materials: (1) scholarship on gender and religion in historical and contemporary China as well as the Chinese-speaking world, (2) scholarship concerning theories and methodology of gender and religious studies not necessarily focused on China, and (3) historical record of religious women in English translation.

1 Course Unit
RELS 7524 Daoist Traditions
This course examines the history of various intellectual and religious traditions that came to be known as Daoist (or Taoist in the Wade-Giles Romanization). We will begin with a critical review of the twelfth-century reinvention of Daoism and the new classification of religious versus philosophical Daoism, before tracing chronologically the textual, institutional, and social history of Daoist traditions from the fourth century B.C.E. While familiarizing students with the key concepts, practices, and organizations developed in the history of Daoism, this class emphasizes the specific socio-political context of each of them. Throughout the course, we will think critically about the labeling of Daoist (as well as Confucian and Buddhist) in Chinese history and in modern scholarship. We will also question modern demarcations between philosophy, religion, and science, as well as that between the spiritual and the physical.

RELS 7537 Asian Religions in the Global Imagination
This seminar critically examines the missionary impulses, colonial exploits, and translation endeavors that contributed to the rise of Asian studies and the emergence of the scholarly notion of "Asian religions." It shows the crucial roles played by Asian agents and their European counterparts in the formation of modern conceptions of "religion"; it also engages reflexive questions regarding theory, method, and the geopolitical underpinnings of both Asian studies and the non-confessional academic study of religion. Students will conduct sustained research projects on the country or region of their choice.

RELS 7710 Readings Pali Buddhism
This course is an intensive reading course in Pali literature from South and Southeast Asia. Students who wish to take the course must have at least 3 years of Sanskrit and a knowledge of at least one Southeast Asian language. Reading will be in philosophical, narrative, magical, medical, historical, and ritual texts.
1 Course Unit

RELS 7720 Islam, Gender, and Colonialism
In the latter 19th and early 20th centuries South Asians became increasingly concerned with women's education and other social issues related to gender. Following the fall of the Mughal Empire in 1857, the class of urban gentry previously associated with government service and land ownership struggled to shore up the boundaries of their communities. For Muslims particularly, as the place of religion was pushed from the public to the private sphere, the middle class sought to ground itself in a discussion of what constituted proper female behavior. Influenced by the advent of the Victorian purity text in the same period, Indian authors (primarily male) began to weigh in on female propriety. Nazir Ahmed is the most prominent author of 19th century Urdu purity texts, which sought to demonstrate praiseworthy female behavior. Students will have a chance to look at theoretics texts related to gender, as well as read primary sources of influential purity texts written by Nazir Ahmed and Ashraf 'Ali Thanawi. Playful and subversive fictional accounts challenged some of these reformist mores. Newspaper accounts contemporary to the period will also provide context on the gender debate. Male norms of comportment were equally crucial in the debate regarding gender boundaries – our discussion of purity texts will include the importance of male behavior, and the pleasure of transgression associated with crossing gender boundaries.
Spring, odd numbered years only
1 Course Unit

RELS 7730 Southeast Asian Manuscript Traditions
This is an advanced PhD seminar in which the students will need advanced proficiency in Pali and at least one Southeast Asian Language (Burmese, Thai, Khmer, Lao, Leu, Khoen, Shan, and/or Lanna). Original manuscripts from Penn's collection of Southeast Asian religious, medical, botanical, historical, art, and literary archives will be examined and discussed.

**Romance Languages (ROML)**

**ROML 0100 Beginning Haitian Creole**  
This course serves as an introduction to communicating in the Haitian Creole language ("kreyol," for short), which we will use to explore the complex narrative of Haiti and its people. The class is designed for students with no prior knowledge of Haitian Creole and draws on a variety of methods and media utilizing the Penn Language Center’s innovative online learning platform. Using these tools, students will develop their abilities in oral and written communication throughout the semester, establishing a firm foundation for further study of the language. Students with research, professional, or personal interests in Haiti or the Haitian Diaspora are encouraged to enroll. Haitian Creole is spoken by over 12 million people around the world (including many in cities across the Eastern seaboard) and serves as a wholly developed language with a complete orthography capable of fulfilling the full range of expressive and communicative needs of its speakers. It is also a language with a relatively recent history, dating back to the French colonization of Haiti (then called "Saint-Domingue") in 1697, and has thus been shaped by the same cultural and social forces that define Haiti’s situation today. Students should, therefore, expect our immersive study of Haitian Creole to extend to historical examination of the economic, political, sociological, and spiritual spheres within which the language was borne. This course is intended for students with no past exposure to Haitian Creole. While prior experience with French, the language from which Haitian Creole derives most of its lexicon, may be advantageous, it is neither assumed nor preferred.

**ROML 6160 Approaches to Literary Texts**  
Most seminars focus on literary texts composed during a single historical period; this course is unusual in inviting students to consider the challenges of approaching texts from a range of different historical eras. Taught by a team of literary specialists representing diverse periods and linguistic traditions and conducted as a hands-on workshop, this seminar is designed to help students of literature and related disciplines gain expertise in analysis and interpretation of literary works across the boundaries of time, geography, and language, from classic to modern. Students will approach literature as a historical discipline and learn about key methodological issues and questions that specialists in each period and field ask about texts that their disciplines study. The diachronic and cross-cultural perspectives inform discussions of language and style, text types and genres, notions of alterity, fictionality, literariness, symbolism, intertextuality, materiality, and interfaces with other disciplines. This is a unique opportunity to learn in one course about diverse literary approaches from specialists in different fields.

**Russian (RUSS)**

**RUSS 0100 Russian I**  
This course is the first in a series of first-year courses in the traditional track, intended for students with no previous background in Russian. The course develops competence in speaking, reading, writing, and understanding contemporary Russian. It will also introduce you to Russian culture and Russian-speaking cultures around the world through exciting authentic materials, including internet sites and cultural artifacts, songs, videos, short stories, as well as conversations with native speakers. Class work emphasizes development of communicative competence in real-life situations, spontaneous interactions, pair and group work and is conducted almost entirely in Russian. By the end of the course, you will be able to engage in simple conversations in Russian on topics concerning your daily life. You will know greetings and everyday expressions, talk about people and objects in your life, your hobbies, likes and dislikes, past activities and your residence. You will also be able to write short personalized messages in Russian.  
Fall

Russian and Eastern European Studies (REES)

REES 0010 Central and Eastern Europe: Cultures, Histories, Societies
The reappearance of the concept of Central and Eastern Europe is one of the most fascinating results of the collapse of the Soviet empire. The course will provide an introduction into the study of this region - its cultures, histories, and societies - from the foundation of the Holy Roman Empire to the enlargement of the European Union. Students are encouraged to delve deeper into particular countries, disciplines, and sub-regions, such as Central Europe, Eastern Europe, and the Balkans, through an individual research paper and class presentations.
Spring
1 Course Unit
REES 0100 Portraits of Old Rus: Myth, Icon, Chronicle
Three modern-day nation-states – Russia, Ukraine, and Belarus – share and dispute the cultural heritage of Old Rus, and their political relationships revolve around interpretations of the past. Has the medieval Rus state been established by the Vikings or by the local Slavs? Is early Rus a mother state of Russia or of Ukraine, and, therefore, should it be spelled ‘Kyivan Rus,’ or ‘ Kievans Rus’ in English? Has the culture of Russian political despotism been inherited from the Mongols, or is it an autochthonous ideology? The constructed past has a continuing importance in modern Russia, Ukraine, and Belarus, and it is keenly referenced, often manipulatively, in contemporary social and political discourse. For example, President Putin invaded Ukraine under a pretense that its territory has “always” been an integral part of Russia and its history. The course covers eight centuries of cultural, political, and social history of the lands that are now within the borders of Russia, Ukraine, and Belarus, from early historical records through the 18th century, a period that laid the foundation for the Russian Empire and the formation of modern nations. Students gain knowledge about formative events and prominent figures, as well as social and cultural developments during this period. The course takes multidisciplinary approach by combining the study of textual sources, objects of art and architecture, music, ritual, and film in their social and historical contexts. Students learn to analyze and interpret primary sources (historical documents and literary texts), identify their intellectual issues, and understand the historical, cultural, and social contexts in which these sources emerged. While working with these primary sources students learn to pose questions about their value and reliability as historical evidence. By exposing students to the critical examination of “the uses of the past,” the course aims to teach them to appreciate the authoritative nature of historical interpretation and its practical application in contemporary social and political rhetoric. The study of pre-modern cultural and political history through the prism of nationalism theories explains many aspects of modern Belarusian, Russian, and Ukrainian societies, as well as political aspirations of their leaders. At the end of the course, students should develop understanding of the continuity and change in the history of Russia, Ukraine and Belarus, their belief systems, and nationalistic ideologies, and will be able to speak and write about these issues with competence and confidence.

REES 0105 Portraits of Tsarist Russia: Intrigue, Innovation, Institution
This course covers the history, literature, and culture of Russia from the accession of Ivan IV "the Terrible" in 1547 to the death of Catherine II "the Great" in 1796, representing the monumental period of transition whereby the Tsardom of Russia became the Russian Empire. It is organized chronologically in week-long units that each explore an aspect of social and cultural history through a primary focus on a single literary text, film, or historical document. Main texts will be supplemented with additional materials, including paintings, icons, historical readings, cultural-analytical readings, excerpts from other literary works, etc. Our aim is not only to understand the social codes and rituals that informed early modern Russian life as such, but also to investigate the symbolic value later taken on by the monarchs, historical events, and social conflicts of this era, employing a dual focus on literary interpretation and social history throughout.
1 Course Unit

REES 0110 Portraits of Russian Society: Art, Fiction, Drama
This course covers 19C Russian cultural and social history. Each week-long unit is organized around a single medium-length text (novella, play, memoir) which opens up a single scene of social history birth, death, duel, courtship, tsar, and so on. Each of these main texts is accompanied by a set of supplementary materials: paintings, historical readings, cultural-analytical readings, excerpts from other literary works, etc. The object of the course is to understand the social codes and rituals that informed nineteenth-century Russian life, and to apply this knowledge in interpreting literary texts, other cultural objects, and even historical and social documents (letters, memoranda, etc.). We will attempt to understand social history and literary interpretation as separate disciplines yet also as disciplines that can inform one another. In short: we will read the social history through the text, and read the text against the social history.
Not Offered Every Year
Also Offered As: HIST 0823
1 Course Unit

REES 0130 Portraits of Soviet Society: Literature, Film, Drama
How can art and literature open a window on Russian lives lived over the course of the tumultuous twentieth century? This course adopts a unique approach to questions of cultural and social history. Each week-long unit is organized around a medium-length film, text or set of texts by some of the most important cultural figures of the era (novella, play, memoir, film, short stories) which opens up a single scene of social history: work, village, avant-garde, war, Gulag, and so on. Each cultural work is accompanied by a set of supplementary materials: historical readings, paintings, cultural-analytical readings, excerpts from other literary works, etc. We will read social history through culture and culture through history.

1 Course Unit

REES 0131 Putin's Russia: Culture, Society and History
Winston Churchill famously said that Russia "is a riddle, wrapped in a mystery, inside an enigma." Strikingly, today many informed Russians would agree: no one can provide definitive answers concerning what has driven Russian public life and politics over the past decade, as it ricocheted from the mass protests of 2011 and 2012, into the Pussy Riot scandal, then the intense patriotism that drove the Russian annexation of Crimea and intervention in Ukraine. In this course we will examine how Russians themselves communicate about and represent Russia and what this reveals about this complex society and its development. We will consider print journalism, novels, films, televised media, and the internet, paying close attention both to particular representations and to social institutions for their production, dissemination and consumption. Topics of special concern will include: conspiracy theories, representations of Russian history, collective identity and patriotism, intellectuals and elites, gender and sexuality, consumption and wealth. Putin's Russia is an introductory level course for which no prior knowledge of Russian history, culture or society is required. All readings and screenings will be in English.

1 Course Unit
REES 0150 Prague: The Making of a European Nation
The focus of the proposed course is Prague, the capital of the Czech Republic and the geographical center of Europe. From the 14th century, when it became a seat of the Holy Roman Emperor, to the Hussite Revolution; from the 19th-century national revival and the birth of the independent Czechoslovakia in 1918, to the "Prague Offensive," the last major operation of the Soviet Army in World War II and the re-appearance of the Soviet tanks after the "Prague Spring" in 1968, to the "Velvet" Revolution in 1989, and on to the present day as an EU member, Prague has been the site of major European developments and is where the Czech national identity was forged. Today a popular tourist destination with a uniquely preserved historical center that is part of the UNESCO World Heritage List, Prague combines national character with an increasingly cosmopolitan flavor. Focusing on what makes Prague a national capital, we will note how the "national" negotiates its place with the "global." As a cultural hub and political center, Prague is the repository of a cultural collective memory and of historical and emotional records. It thus presents an excellent case study of how a national identity could be formed around a single urban center. The study of the many layers of Prague's urban landscape allows us to observe how history is built into the physical environment, while the analysis of literary and artistic production reveals how the city has become perceived as a national shrine, embodied in word and image. Students will read the "Prague text" as humanists, anthropologists, and historians. They will learn to apply methods of literary, cultural, and historical analyses, and will ask questions of what it means to be a Czech, a Central European, a European, and even, perhaps, an American.

1 Course Unit

REES 0170 Europe: From an Idea to the Union
Employing the methods from the humanities and social sciences this interdisciplinary seminar will explore the variety of factors that contributed to dividing and uniting Europe. The continent will be considered as a geographical and cultural space and the construction of its identity will be examined through several historical periods from the Middle Ages to Modernism–comprising the rich layer of pan-European civilization across the ethnic or national borders. Finally, the structure of the European Union will be scrutinized including its institutions, decision-making mechanism, monetary union, collective security, Brexit, and Europe's changing relationship with Russia. Participants will be encouraged to select a particular topic in European studies and research it through assigned readings, film, literature, and other media.
1 Course Unit

REES 0171 The Socialist City
This course will explore the ideology and politics of the socialist city in the Soviet Union, East Europe, and the Second World. We will focus on how design professionals, politicians, and residents realized utopian socialist values in the face of national design traditions, local politics, and limited resources. Beginning with the Soviet case, the course will consider how planners and architects addressed modernization, multi-family housing, and neighborhood units in new city plans. We will consider capitals, like Moscow, as well as less well-known regional centers that had strong local identities, such as Tashkent, Belgrade, and Prague. We will examine the state’s use of public spaces for commemorations and preservationists’ reinterpretation of existing historic sites. In addition, we will consider how everyday residents experienced the socialist city, such as multi-family housing, shopping centers, and subway systems. We will address how citizens circumvented official state channels to obtain state housing and illegally build homes for themselves, sometimes in a folk style. The course will center on Soviet and East European cities, but also address socialist cities in Cuba and Africa whose design was influenced by transnational exchanges. Most broadly, this course explores the question, what was the socialist city? How did its planners, architects, and politicians understand it, and what did they intend to construct? And, what resulted? In the past fifteen years, North American scholars have begun to take seriously the study of the socialist city, and this course draws on the emerging scholarship on this exciting, cross-disciplinary topic. How do scholars understand the socialist city today? We will examine the shared legacies that socialist cities across East Europe shared with their Western European counterparts, as well as the particularities of design that have sparked North American scholars’ debates on what distinguished the socialist city from ones that emerged in a capitalist context. In our discussions, we will seek to understand how socialist design professionals understood their work and the emerging cities at the time, as well as how North American scholars view the socialist city today. Disciplinarily, the focus of the call will fall at the intersection of architectural history and politics.

REES 0172 Madness and Madmen in Russian Culture
Is "insanity" today the same thing as "madness" of old? Who gets to define what it means to be "sane," and why? Are the causes of madness biological or social? In this course, we will grapple with these and similar questions while exploring Russia's fascinating history of madness as a means to maintain, critique, or subvert the status quo. We will consider the concept of madness in Russian culture beginning with its earliest folkloric roots and trace its depiction and function in the figure of the Russian "holy fool," in classical literature, and in contemporary film. Readings will include works by many Russian greats, such as Pushkin, Gogol, Dostoevsky, Chekhov, Bulgakov and Nabokov.

REES 0180 Saints and Devils in Russian Literature and Tradition
This course is about Russian cultural imagination, which is populated with "saints" and "devils": believers and outcasts, the righteous and the sinners, virtuous women and fallen angels, holy men and their most bitter adversary - the devil. In Russia, where people's frame of mind has been formed by a mix of Eastern Orthodox Christianity and earlier pagan beliefs, the quest for faith, spirituality, and the meaning of life has invariably been connected with religious matters. How can one find the right path in life? Can a sinner be redeemed? Should one live for God or for the people? Does God even exist? In "Saints and Devils," we read works of the great masters of Russian literature and learn about the historic trends that have filled Russia's literature and art with religious and mystical spirit. Among our readings are old cautionary tales of crafty demons and all-forbearing saints, about virtuous harlots and holy fools, as well as fantastic stories by Nikolai Gogol about pacts with the devil, and a romantic vision of a fallen angel by Yury Lermontov. We will be in awe of the righteous portrayed by Nikolai Leskov and follow the characters of Fedor Dostoevsky, Leo Tolstoy and Anton Chekhov, as they ponder life and death and search for truth, faith, and love. In sum, over the course of this semester we will talk about ancient cultural traditions, remarkable works of art, and the great artists who created them. In addition to providing a basic introduction to Russian literature, religion, and culture, the course introduces students to literary works of various genres and teaches basic techniques of literary analysis. (No previous knowledge of Russian literature necessary. All readings are in English).

REES 0190 Russia and the West
This course will explore the representations of the West in eighteenth- and nineteenth-century Russian literature and philosophy. We will consider the Russian visions of various events and aspects of Western political and social life, revolutions, public executions, resorts, etc., within the context of Russian intellectual history. We will examine how images of the West reflect Russia's own cultural concerns, anticipations, and biases, as well as aesthetic preoccupations and interests of Russian writers. The discussion will include literary works by Karamzin, Pushkin, Gogol, Dostoevsky, Leskov, and Tolstoy, as well as non-fictional documents, such as travelers' letters, diaries, and historiosophical treatises of Russian Freemasons, Romantic and Positivist thinkers, and Russian social philosophers of the late Nineteenth century. A basic knowledge of nineteenth-century European history is desirable. The class will consist of lectures, discussion, short writing assignments, and two in-class tests.

REES 0191 Imagining Asia: Russia and the East
This course examines the important role of the East in Russian literature and nationalism. Focusing specifically on the Caucasus, Central Asia, Iran, and Turkey, this course will analyze how Russian writers connected the East to Russian identity, and how their approaches implicate different artistic periods (Romanticism, Realism, Socialist Realism, Post-Modernism) and different political atmospheres (Tsarist Russia, Soviet Union, Post-Soviet). Students will also ascertain how Russian literature on the East has affected and influenced literature and political movements produced in the East. In particular, students will analyze how Soviet Central Asian writers, Iranian Socialists, and contemporary Turkish writers were influenced by Russian literature and Soviet ideology. Ultimately, this course examines the impact of Russia's cultural and political history in 20th century Central Asia and the Middle East. Readings will include works by Pushkin, Lermontov, Tolstoy, Dostoevsky, Platonov, Chingiz Aitmatov, Sadek Hedayat, Orhan Pamuk, and others. All readings are in English.

REES 0230 Eastern and Central European Art, 1917 to the Present
This is a survey course examining the prolific and significant artistic production of the region in four parts: the rise and fall of the Avant-Garde (1917-1934), the development of Socialist Realism (1934-1953), the embrace of post-war Nonconformism (1953-1989); and the proliferation of contemporary art (1989 - 2023). The course will include Russian artists, where applicable; however, it will intentionally recenter the narrative around artists from the satellite states (Poland, Hungary, Romania) and republics of the Soviet Union (Latvia, Lithuania, Estonia, and Ukraine). In light of the war in Ukraine, additional emphasis on Ukrainian art will be provided. Subtopics will include architecture and graphic design; monuments and memory; colonialism and postcolonialism; feminism and LGBTQIA+; the environment; protest. All readings and lectures will be in English.

REES 0270 Russian History in Film
This course draws on fictional, dramatic and cinematic representations of Russian history based on Russian as well as non-Russian sources and interpretations. The analysis targets major modes of imagining, such as narrating, showing and reenacting historical events, personae and epochs justified by different, historically mutating ideological postulates and forms of national self-consciousness. Common stereotypes of picturing Russia from "foreign" perspectives draw special attention. The discussion involves the following themes and outstanding figures: the mighty autocrats Ivan the Terrible, Peter the Great, and Catherine the Great; the tragic ruler Boris Godunov; the brazen rebel and royal impostor Pugachev; the notorious Rasputin, his uncanny powers, sex-appeal, and court machinations; Lenin and the October Revolution; images of war; times of construction and times of collapse of the Soviet Colossus.

REES 0275 Montage and Revolution: Conceptual Cinema of Sergei Eisenstein
The 1917 Russian Revolution was to inaugurate a new epoch in human history. Working with and within this time of political and cultural upheaval, Sergei Eisenstein inaugurated a revolution in montage technique that would usher a new age of cinema, a new practice of art, and a new way of thinking in images. Eisenstein's cinematic techniques aimed at producing concepts in the language of film. It also sought modes of expression inaccessible to discursive thought. Navigating a tenuous line between art and politics, Eisenstein's works explore the social and political power of affectivity and expressivity, and the cinematic potential for both representing and eliciting emotion in individual viewers and masses alike. In conversation with the tumultuous political and cultural shifts of the Soviet society from the revolutionary 1920s to the age of Stalinism and the World War II, this course will follow Eisenstein's filmography, from his monumental reconstruction of the revolutionary Petersburg in October to the engagement with representations of history during the Stalinist era in Ivan the Terrible. We will engage with Eisenstein's theoretical writings, his cartoons and sketches, public speeches, and his lost and unrealized projects, such as his collaboration with Hollywood and a plan to film Marx's Capital. In this process, we will learn basic tenets of film and aesthetic theory, while practicing the analysis of film with attention to form and content. Following the lead of Eisenstein's artistic and theoretical production, we will engage with questions his work raises: How can cinematography elicit and manipulate the emotions of its viewer? What is expressivity? Can film represent philosophical concepts? What is cinema's relation to propaganda and politics? What is revolutionary about the medium of film, and what is film's role in the revolution? No prior knowledge of Russian history, culture or society is required, nor is specialized knowledge of film history or film analysis. All readings will be in English and all films will be subtitled in English.

REES 0280 Andrei Tarkovsky: Cinema, Spirit and the Art of the Long Take
Andrei Tarkovsky is universally acknowledged to be the greatest Soviet filmmaker of the last half of the twentieth century. Kurosawa claimed that Tarkovsky had "no equal among film directors alive now." Bergman called his work "a miracle." His films are beautiful, intellectually challenging, and spiritually profound. They also represent a prolonged exploration of the potential of the long take - unusually extended, continuous shots. Tarkovsky's works range from "Ivan's Childhood", a study of wartime experience through the eyes of a child; to "Solaris", a philosophical essay in the form of a science-fiction thriller; to "Andrei Rublev" an investigation of the power of art and spirituality. In this course, we will study Tarkovsky's films and life, with attention to his formal and artistic accomplishments, his thought and writings, and the cultural and political contexts of his work. Each student will learn to analyze film form and content and write two short and one longer paper on some longstanding aspect of Tarkovsky's work of the student's choice.

REES 0301 The Rise and Fall of the Russian Empire, 1552-1917
How and why did Russia become the center of the world's largest empire, a single state encompassing eleven time zones and over a hundred ethnic groups? To answer this question, we will explore the rise of a distinct political culture beginning in medieval Muscovy, its transformation under the impact of a prolonged encounter with European civilization, and the various attempts to re-form Russia from above and below prior to the Revolution of 1917. Main themes include the facade vs. the reality of central authority, the intersection of foreign and domestic issues, the development of a radical intelligentsia, and the tension between empire and nation.

REES 0310 The Rise and Fall of the Russian Empire, 1552-1917
Out of an obscure, backward empire, the Soviet Union emerged to become the great political laboratory of the twentieth century. This course will trace the roots of the world's first socialist society and its attempts to recast human relations and human nature itself. Topics include the origins of the Revolution of 1917, the role of ideology in state policy and everyday life, the Soviet Union as the center of world communism, the challenge of ethnic diversity, and the reasons for the USSR's sudden implosion at the end of the century. Focusing on politics, society, culture, and their interaction, we will examine the rulers (from Lenin to Gorbachev) as well as the ruled (peasants, workers, and intellectuals; Russians and non-Russians). The course will feature discussions of selected texts, including primary sources in translation.

REES 0430 Masterpieces of 20th-Century Russian Literature

"Only in Russia is poetry respected. They kill you for it," famously quipped the poet Osip Mandelstam, who died in Joseph Stalin's concentration camps. Russia is a society that takes literature seriously—one in which the pen is assumed to have direct historical consequences. In this course, we will study how twentieth century Russian literature actively participated in war, revolution, totalitarian dictatorship, and resistance. The masterworks we will study open windows into worlds of revolutionary rapture, moral uplift in the face of tyranny, courageous subversion of the repressive state, and historical reflection on its failures. Our readings will range from an avant-garde play intended to rewire your mind, to an epic representation of revolutionary social transformation, to surreal and absurdist representations of a world gone mad. In other words: fasten your seatbelts low and tight across your waist; turbulence ahead!

REES 0471 Russian Short Story

This course studies the development of 19th and 20th-century Russian literature through one of its most distinct and highly recognized genres – the short story. The readings include great masters of fiction such as Pushkin, Gogol, Dostoevsky, Tolstoy, Chekhov, Solzhenitsyn, and others. The course presents the best works of short fiction situating them in a larger cultural-political context. The students learn about the historical formation, poetic virtue, and thematic characteristics of major narrative modes such as sentimentality, romanticism, utopia, realism, modernism, and socialist realism. We study literary devices, styles, and trends of storytelling such as irony, absurd, satire, grotesque, anecdote, etc. Main topics include culture of the duel; the role of chance; the riddle of death; anatomy of madness; imprisonment and survival.

REES 0479 Literature of Dissent: Art as Protest in 20th-Century Poland and Czechoslovakia

Eastern and Central Europe was the site of monumental political changes in the twentieth century, including the disillusion of monarchical empires in the First World War and the expansion of Soviet-style communism. At every point, artists have taken part in political debates, sometimes advancing radical agendas, sometimes galvanizing movements, sometimes simply shouting into the void to register their own dissatisfaction. In this course, we will consider texts including literature, political philosophy and film that pushed back against the dominant political norms. In so doing, we will investigate Aesopian language, the mechanics of censorship, the repercussions of dissent, performativity, samizdat and the rise of an alternative culture. We will contextualize our readings of literature with the sociological and historical work of Benedict Anderson, Tony Judt, Jonathan Bolton, Shana Penn, Alexei Yurchak and the series Discourses of Collective Identity in Central and Southeast Europe. As well as becoming familiar with major thinkers and movements in Eastern and Central Europe, students will develop a sense of art as a tool of political protest.

REES 0480 Dostoevsky

This seminar is a survey of the life and works of Fyodor Dostoevsky (1821-1881). Focal texts include a selection of his major novels and a range of shorter works that span Dostoevsky's early career, his return from exile in Siberia, and the last years of his life. We will work together to understand Dostoevsky's career and self-conception as a writer, the wide-ranging philosophical implications of his work, and how his activity can be interpreted in the historical, ideological, and literary contexts of nineteenth-century Russia and Europe.

Also Offered As: COML 2007
1 Course Unit

REES 0481 Tolstoy

Leo Tolstoy is a figure who arguably needs little introduction, if only as an effigy for the kind of author who writes books like "War and Peace" — prime examples of what Henry James called the "large, loose, baggy monsters" of nineteenth-century Russian literature, the sprawling novels with several parallel plot lines and hundreds of characters who inhabit page numbers in the quadruple digits. In this seminar, we will grapple together with the intricacies of "War and Peace," learn about the social, cultural, and historical contexts not only of its depiction and genesis, but also of its wide-ranging reception, and consider the big questions that preoccupied Tolstoy throughout his lifetime. Working with a range of his texts including a wide spread of his shorter fiction and also a number of Tolstoy's non-literary writings on topics such as aesthetics, religion, education, and social and political problems, we will work toward understanding Tolstoy's work, how he became who he was, and the reverberations of his thought throughout the rest of the world.

REES 1172 Marx, Marxism, and the Culture of Revolution
Capitalist society is the object of Karl Marx's analysis and critique—a society that is the product of history and may one day vanish. This course will trace Marx's critique by moving between the fields of philosophy, economics, and politics. We will locate key interventions of Marx's thought that transform modern conceptions of history, the relation between economics and politics, and the limits of struggle and emancipation in capitalist society. We will consider the historical conditions of Marx's writing and the development of his thought to discover many sides of Marx and many divergent Marxisms (humanist, post-structuralist, feminist, and others) that follow, often at odds with each other. Further, we will ask about what kind of horizons Marx's and Marxist interventions open up for critique and analysis of capitalist society with respect to gender, race, class, and nation. "Theory becomes a material force when it has seized the masses," argues the young Marx; indeed, his theories have fueled emancipatory movements and propped up tyrannical regimes, substantiated scientific theories and transformed philosophical debates. In examining Marx's legacy, we will focus on the elaborations and historical limitations of his ideas by examining the challenges of fascism, the communist experiment in the Soviet Union and its collapse, as well as the climate and other crises currently taking place. In conclusion, we will turn to the question of whether and to what extent Marx's ideas remain relevant today, and whether it is possible to be a Marxist in the contemporary world dominated by global capital.

REES 1173 From Things Real to Things More Real: Symbolism and Spirituality in Russian Modernist Movements
The Latin motto 'a realibus ad realiora' ('from things real to things more real') coined by Russian Symbolist poet and philosopher V. Ivanov, encapsulates the spiritual orientation, developed by Russian Symbolist poetry and art at the turn of the 20th century. This spiritual search extended to the avant-garde movements that flourished throughout the Russian Empire in the early decades of the 20th century. Drawing from the spiritual wisdom of Russian realist writers, Christianity, Eastern religious teaching, and esoteric philosophies and mysticism, Russian iterations of international modernism went far beyond the ideas of aesthetic revolution and embraced a broader array of cultural phenomena from family relationships, sexual practices and gender identities to social utopianism. These modernist visions of the turn of the 20th century later supplied spiritual themes to the artistic and literary realms of the Soviet era. This course aims to explore the great masterpieces of Russian modernist art and poetry focusing on their underlying philosophical, spiritual, and esoteric content. In particular, we will delve into the history, international contexts and the intellectual foundations of significant modernist and avant-garde movements and forms, such as symbolism, futurism, cubism, abstraction, and other innovative geometric and non-figurative art forms. Additionally, we will examine how the intellectual and artistic syntheses that originated at the turn of the 20th century continued to manifest themselves in Soviet culture during the Soviet era, both through the works of non-conformist artists and writers, as well as the official culture.

1 Course Unit
REES 1174 National Antiquities: Genealogies, Hagiographies, Holy Objects

Human societies have always wanted to know about their origins, the reasons for their customs, the foundations of their social institutions and religious beliefs, and the justification of their power structures. They have conceived of creation myths and of origins stories for their communities in order to position themselves within the past and present of the natural and human worlds. The newly Christianized kingdoms of Medieval Europe faced the challenge of securing a place in the new vision of universal Providential history, and they inscribed their own histories into the narratives they knew from the authoritative sources of the time - biblical genealogies and heroic stories inherited from the poets of classical antiquity. The deeds and virtues of saintly kings and church hierarchs provided a continuity of historical narrative on the sacred map of time and space. In the 19th century, while interest in medieval antiquity as a source of inspiration for political and cultural renewal brought about a critical study of evidence, it also effected reinterpretation and repurposing of this evidence vis-a-vis a new political concept - that of a nation. This seminar will focus on central, eastern and southeast European nations and explore three categories of "national antiquities" that have been prominent in the workings of their modern nationalisms: (1) stories of ethnogenesis (so-called, origo gentis) that narrate and explain the beginnings and genealogy of peoples and states, as they are recorded in medieval and early modern chronicles, (2) narratives about holy people, who are seen as national patron-saints, and (3) material objects of sacred significance (manuscripts, religious ceremony objects, crowns, icons) that act as symbols of political, cultural and national identities. Our approach will be two-fold: On the one hand, we will read medieval sources and ask the question of what they tell us about the mindset of the authors and societies that created them. We will think about how the knowledge of the past helped medieval societies legitimize the present and provide a model for the future. On the other hand, we will observe how medieval narratives and artifacts have been interpreted in modern times and how they became repurposed - first, during the "Romantic" stage of national awakening, then in the post-imperial era of independent nation-states, and, finally, in the post-Soviet context of reimagined Europe. We will observe how the study of nationalistic mentality enhances our understanding of how the past is represented and repurposed in scholarship and politics.

REES 1177 Universal Language: From the Tower of Babel to Artificial Intelligence

This is a course in European intellectual history. It explores the historical trajectory, from antiquity to the present day, of the idea that there once was, and again could be, a universal and perfect language among the human race. If recovered, it can explain the origins and meaning of human experience, and can enable universal understanding and world peace. The tantalizing question of the possibility of a universal language have been vital and thought-provoking throughout the history of humanity. The idea that the language spoken by Adam and Eve was a language which perfectly expressed the nature of all earthly objects and concepts has occupied the minds of intellectuals for almost two millennia. In defiance of the Christian biblical myth of the confusion of languages and nations at the Tower of Babel, they have over and over tried to overcome divine punishment and discover the path back to harmonious existence. By recovering or recreating a universal language, theologians hoped to be able to experience the divine; philosophers believed that it would enable apprehension of the laws of nature, while mystic cabbalists saw in it direct access to hidden knowledge. In reconstructing a proto-language, 19th-century Indo-Europeanist philologists saw the means to study the early stages of human development. Even in the 20th century, romantic idealists, such as the inventor of Esperanto Ludwik Zamenhof, strived to construct languages to enable understanding among estranged nations. For writers and poets of all times, from Cyrano de Bergerac to Velimir Khlebnikov, the idea of a universal and perfect language has been an inexhaustible source of inspiration. Today, this idea echoes in theories of universal and generative grammars, in approaching English as a global tongue, and in various attempts to create artificial languages, even a language for cosmic communication. Each week we address a particular period and set of theories to learn about universal language projects, but above all, the course examines fundamental questions of what language is and how it functions in human society.

REES 1179 War and Representation
This class will explore complications of representing war in the 20th and 21st centuries. War poses problems of perception, knowledge, and language. The notional "fog of war" describes a disturbing discrepancy between agents and actions of war; the extreme nature of the violence of warfare tests the limits of cognition, emotion, and memory; war's traditional dependence on declaration is often warped by language games--"police action," "military intervention," "nation-building," or palpably unnamed and unacknowledged state violence. Faced with the radical uncertainty that forms of war bring, modern and contemporary authors have experimented in historically, geographically, experientially and artistically particular ways, forcing us to reconsider even seemingly basic definitions of what a war story can be. Where does a war narrative happen? On the battlefield, in the internment camp, in the suburbs, in the ocean, in the ruins of cities, in the bloodstream? Who narrates war? Soldiers, refugees, gossips, economists, witnesses, bureaucrats, survivors, children, journalists, descendants and inheritors of trauma, historians, those who were never there? How does literature respond to the rise of terrorist or ideology war, the philosophical and material consequences of biological and cyber wars, the role of the nuclear state? How does the problem of war and representation disturb the difference between fiction and non-fiction? How do utilitarian practices of representation--propaganda, nationalist messaging, memorialization, xenophobic depiction--affect the approaches we use to study art? Finally, is it possible to read a narrative barely touched or merely contextualized by war and attend to the question of war's shaping influence? The class will concentrate on literary objects--short stories, and graphic novels--as well as film and television. Students of every level and major are welcome in and encouraged to join this class, regardless of literacy experience. Fall or Spring

REES 1470 Chekhov: Stage & Screen
What’s so funny, Mr. Chekhov? This question is often asked by critics and directors who still are puzzled with Chekhov’s definition of his four major plays as comedies. Traditionally, all of them are staged and directed as dramas, melodramas, or tragedies. Should we cry or should we laugh at Chekhovian characters who commit suicide, or are killed, or simply cannot move to a better place of living? Is the laughable synonymous to comedy and the comic? Should any fatal outcome be considered tragic? All these and other questions will be discussed during the course. The course is intended to provide the participants with a concept of dramatic genre that will assist them in approaching Chekhov plays as comedies. In addition to reading Chekhov’s works, Russian and western productions and film adaptations of Chekhov’s works will be screened. Among them are, Vanya on 42nd Street with Andre Gregory, and Four Funny Families. Those who are interested will be welcome to perform and/or direct excerpts from Chekhov’s works.

REES 1471 Fate and Chance in Literature and Culture
In Fate and Chance in Literature and Culture, we will explore these two interrelated concepts in comparative perspective over a broad historical range. As a result, the students will learn how the philosophy of fate and chance has been reflected in works of different Russian authors and in different cultural and political environments. In Russian as well as western systems of belief fate and chance represent two extreme visions of the universal order, or, perhaps, two diametrically opposed cosmic forces: complete determinism, on the one hand, and complete chaos or unpredictability, on the other. These visions have been greatly reflected by various mythopoetic systems. In this course, we will investigate religious and folkloric sources from a series of Russian traditions compared to other Indo-European traditions (Greek, East-European). Readings will include The Song of Prince Igor’s Campaign, The Gambler by Dostoevsky, The Queen of Spades by Pushkin, Vîj by Gogol, The Black Monk by Chekhov, The Fatal Eggs by Bulgakov, and more.

REES 1530 Communism
The rise and fall of Communism dominated the history of the short twentieth century from the Russian revolution of 1917 to the collapse of the Soviet Union in 1991. As a system of government, Communism is more or less dead, but its utopian ideals of liberation from exploitation and want live on. Communism remains the one political-economic system that presented, for a time, an alternative to global capitalism. In this course, students will gain an introduction to socialist and Communist political thought and explore Communist political and economic regimes’ successes and failures, critics and dissidents, efforts at reform, and causes of collapse. We will learn about the remnants of Communism in China, North Korea, and Cuba and efforts of contemporary theorists to imagine a future for Communism.

REES 1531 Socialism
Socialism has become a hot topic in US politics. Some advocate it as an ideology that supports economic equality; others decry it as a path towards excessive state control. But what does the word socialism really mean? Why does it seem to mean different things to different people? What is the historical background of socialism? Are there meaningful differences between different forms of socialism or are they more or less the same thing? Which societies are socialist in practice, both past and present? What about the US? What are the different proposals US and other Socialists make today? What is their logic? How socialist are they? Are their policy ideas or bad? What effects would they have? This course will introduce students to socialism in theory and practice, with an emphasis on different models of Western social democracy and how they are impacting political discourse right now.

REES 1535 Russian Politics
This course will present an in-depth examination of political, economic and social change in post-Soviet Russia within a historical context. After a brief discussion of contemporary problems in Russia, the first half of the course will delve into the rise of communism in 1917, the evolution of the Soviet regime, and the tensions between ideology and practice over the seventy years of communist rule up until 1985. The second part of the course will begin with an examination of the Gorbachev period and the competing interpretations of how the events between 1985 and 1991 may have contributed to the collapse of the Soviet Union. We will then proceed to make sense of the continuities and changes in politics, economics and society in contemporary Russia. Important topics will include the confrontations accompanying the adoption of a new constitution, the emergence of competing ideologies and parties, the struggle over economic privatization, the question of federalism and nationalism, social and political implications of economic reform, and prospects for Russia’s future in the Putin and post-Putin era.

REES 1570 Russia and Eastern Europe in International Affairs
Russia and the European Union (EU) are engaged in a battle for influence in Eastern Europe. EU foreign policy towards its Eastern neighbors is based on economic integration and the carrot of membership. With the application of this powerful incentive, Central and Southeastern European countries such as Poland, Hungary, the Czech Republic, and Croatia have progressed rapidly towards integration with the EU (and NATO). Yet, given Russia’s opposition to the further enlargement, membership is off the table for the large semi-Western powers such as Russia itself and Turkey and the smaller countries inhabiting an emerging buffer zone between Russia and the EU, such as Georgia, Ukraine, Azerbaijan, Moldova, and Belarus. These in-between countries find themselves subject to intense competition for influence between Eastern and Western powers. In this context, EU countries must balance their energy dependence on Russia and need for new markets and geopolitical stability with concern for human rights, democratic governance, and self-determination. What are the trade-offs implicit in the foreign policies of Russia, EU member states, and Eastern Europe? What are the best policy approaches? What are the main opportunities and obstacles?

REES 1580 China & USSR Compared
A comprehensive and multi-faceted survey of China and Russia, mostly in the twentieth century, through examining preludes and postludes, but focusing above all on their time as Communist states and sometimes quarreling Cold War allies. Of course we will cover the history, the geography, the economics, the leaders (Stalin, Mao), and the great events - not least the Second World War in each - always comparing, contrasting, and drawing linkages. We will also examine, however, daily life and work for ordinary people, developments in society, and not least their common attempts at revolution, at somehow creating new and unprecedented polities, having populations of radically transformed new people. This informative, fascinating quest will take us from folklore to literature and the arts to dissent and religion and ecology, among other topics. As far as possible we will let their people speak for themselves, by assigning mostly translations of original sources including novels and memoirs, even poetry. A comprehensive assessment of the strategic critical Asian heartland - which at over 14 million square miles is larger than Canada, the United States, and Western Europe combined. Lectures, readings, midterm, short paper, and in-class final.

1 Course Unit

REES 1630 Soviet and Post-Soviet Economy
The course will cover the development and operation of the Soviet centrally planned economy - one of the grandest social experiments of the 20th century. We will review the mechanisms of plan creation, the push for the collectivization and further development of Soviet agriculture, the role of the Soviet educational system and the performance of labor markets (including forced labor camps - GULags). We will discuss the strengths and weaknesses of the Soviet system and the causes of its collapse. Privatization, called by some “piratization,” will be one of the central issues in our consideration of the transition from central planning to a market economy in the early 1990s. Even though our main focus will be on the Soviet economy and post-Soviet transition, we will occasionally look back in time to the tsarist era and even further back to find evidence to help explain Soviet/Russian economic development.
1 Course Unit

REES 1670 Population and Public Health in Eastern Europe
Since the collapse of communism in 1989 in Eastern Europe (and 1991 in the Soviet Union), many of the countries in the region have experienced public health crises and demographic catastrophe. Below replacement fertility rates and massive out migration have decimated the populations of these countries even as populations age and place unsustainable strains on pension systems and medical services. The demographic collapse has also been accompanied by falling male life expectancy and the rise of alcoholism, depression, domestic violence, and suicide. The economic exigencies of the transition from communism to capitalism dismantled welfare states at the exact moment when health services were most needed, leaving charities and nongovernmental organization to try to fill in the gaps. Through a combination of readings from the fields of epidemiology, demography, and medical anthropology, this course examines the public health implications of poverty and social dislocation in post-communist states. All readings and assignments are in English.
Also Offered As: ANTH 1670, SOCI 2950
1 Course Unit

REES 1680 Sex and Socialism
This seminar examines classic and current scholarship and literature on gender and sexuality in contemporary Eastern Europe, and examines the dialogue and interchange of ideas between East and West. Although the scholarly and creative works will primarily investigate the changing status of women during the last three decades, the course will also look at changing constructions of masculinity and LGBT movements and communities in the former communist bloc. Topics will include: the woman question before 1989; gender and emerging nationalisms; visual representations in television and film; social movements; work; romance and intimacy; spirituality; and investigations into the constructed concepts of "freedom" and "human rights."
Also Offered As: ANTH 1688, GSWS 1680, SOCI 2972

REES 2171 Russian Revolution
This course is a content-based course intended for students who speak Russian at home and seek to improve their command of formal and professional registers of the Russian language. Paying tribute to the centennial of the Russian Revolution, the course examines the sociopolitical milestone of the 20th century through the works of literature, art, music, film, and material culture that both refracted the revolutionary situation and responded to the revolutionary change. The course's primary sources include works of Russian symbolist poets (e.g. Blok) and realist writers (e.g. Korolenko, Chekhov, Gorky, Andrei Platonov), the music of modernist composers, Soviet montage films, and the Soviet architecture of the International Style. The specific attention will be on the relationship between sociopolitical transformation and the raise of avant-garde movements in visual arts and poetry known as the artistic revolution (e.g. Khlebnikov, Maiakovskii, Kandinskii, Goncharova, Malevich, Chagall).
Not Offered Every Year

REES 2177 Moscow and Muscovites in Russian History and Literary Imagination
This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and professional uses of the Russian language. Moscow is not only a city with rich history, but also a cultural myth, similarly to Rome, St. Petersburg or Paris. The memories of historical events and literary narratives, real and fictional biographies, existing and lost landmarks imbue the image of the city with multiple layers of meanings and symbolism. This course will examine the key components of Moscow myth: historical events and fictional stories that left their traces on the cultural map of Moscow throughout its history. We will also explore the material culture of the city. historic places, buildings, artifacts and locations that anchor historical memories and urban legends alike. The readings will include excerpts from Moscow chapters of such Russian classics, as Leo Tolstoy's War and Peace, Mikhail Bulgakov's Master and Margarita and Boris Pasternak's Doctor Zhivago, along with the work of contemporary Russian authors Victor Pelevin and Maya Kucherskaya.
Prerequisite: RUSS 0401
1 Course Unit

REES 2181 Masterpieces of Soviet Propaganda
The subject of this course is the history and evolution of Soviet propaganda and propaganda art from the Communist Revolution to Stalinism, World War II, and the Cold War. We will investigate major propaganda myths and rituals, and study different styles of propaganda art in a broad historical and political context, in particular, looking at historical events, government policies and political ideas that are associated with their creation and dissemination. We will also examine the impacts of the artistic culture of both the Russian Orthodox Church and the Russian avant-garde on the origin of the language and imagery of Soviet propaganda. Finally, we will compare methods and styles of Soviet propaganda and capitalist advertising.

**REES 2470 Fear and Loathing of Capitalism in Russian Literature of the 19th Century**
This course is a content-based course intended for students who speak Russian at home and seek to improve their command of formal and professional registers of the Russian language. Free trade and market relations were slowly developing in the 19th century Russia, rising against the inhibiting influence exerted by the institution of slavery and rigid social hierarchy. Russian classical realist literature is known for its fierce attacks on capitalism and capitalist values through literary characters and conflicts that prominently feature money and private property. Despite all their philosophical and ideological differences, great Russian writers signal their inherent opposition to capitalist mode of production and remain indifferent to liberal values and creative potential associated with capitalist competition. In this course we will explore what was the cultural and historical context for that palpable fear of capitalism and loathing of bourgeois values, and what was it in free market relations that scared so much all the grand authors of Russian 19th century canon. We will examine these questions through reading and analyzing the works of such authors as Pushkin, Turgenev, Ostrovsky, Tolstoy and Chekhov.
Not Offered Every Year
1 Course Unit

**REES 2345 Classic Russian Literature Today**
This course is intended for students who have spoken Russian at home and seek to improve their skills in formal and professional uses of the Russian language. A study of classic Russian literature in the original. Readings consist of some of the greatest works of 19th and 20th-century authors, such as Pushkin, Gogol, Tolstoy, Dostoevsky, and Bulgakov. Students will examine various forms and genres of literature, learn basic techniques of literary criticism, and explore the way literature is translated into film and other media. An additional focus of the course will be on examining the uses and interpretations of classic literature and elitist culture in contemporary Russian society. Observing the interplay of the "high" and "low" in Russian cultural tradition, students will develop methodology of cultural analysis.
Not Offered Every Year
Prerequisite: RUSS 0401
1 Course Unit
REES 2473 Fathers and Sons: an Encyclopedia of Generational Conflict in 19thC Russia
This course offers a close reading of one of the most exquisitely narrated novels of the Russian realist canon, Turgenev’s Fathers and Sons. Written in the early 1860s, the novel is set in an era of transition when progressive, enlightened liberalism of the Russian landed gentry clashed with the new revolutionary ideas espoused by young radicals. A simple tale of a generational conflict becomes a mirror in which the key social and political questions of the time are reflected and enlarged. The purpose of the course is to expand students’ knowledge of political and cultural history of the 19th century Russia through a close reading of the novel aided by an array of historical and literary sources, such a memoirs, literary fragments and journalism of the era.
Not Offered Every Year
Prerequisite: RUSS 0401

REES 2477 Science Fiction, Fantasy, and Fantastic Imagination in Russian Culture
This course explores masterpieces of Russian fantastic imagination from folklore and 19th-century classics to 20th and 21st-century dystopia, magic realism and science fiction. Readings include works by Nikolai Gogol, Mikhail Bulgakov, the Strugatsky brothers, and Victor Pelevin. Discussions focus on 1) the philosophical quest of Russian fantastic authors and their ideas about humanity, the meaning of existence, and human relationship with nature; 2) the texture of fantasy, including the absurd and surreal, the grotesque humor, and macabre irony.
Not Offered Every Year
Prerequisite: RUSS 0401
1 Course Unit

REES 2479 Anton Chekhov: Love and Death in Russian Culture
In this course we will study Anton Chekhov’s short prose and dramatic works exploring the significance of love and death in human experience. The first part of the course will be focused on examining existential, social and cultural aspects of these themes represented in Chekhov’s poignant and humorous short stories, such as “The Student,” “The Darling,” “About Love,” “House with a Mezzanine” and “The Bishop.” Then we will attempt a dramatic interpretation of Chekhov using the ideas we discovered while reading his short prose. We will create a stage version of Chekhov’s play or produce our own short play inspired by Chekhov’s themes and characters. As a group we will decide on the type of our performance, whether it will be a stage reading or staging a play, and each of the students will choose how to participate in it: whether by acting, directing, writing, project managing or tech work.
Prerequisite: RUSS 0401
1 Course Unit

REES 2630 Soviet Childhood
This course examines “Soviet childhood” as a changing historical and political concept, beginning with its incipient notions in the pre-revolutionary period and moving through the Soviet and post-Soviet eras in Russia. We will access the viewpoints of children and adults at various points in time, while engaging with educational theory and practices, legislation, societal norms, and cultural rituals associated with Soviet childhood. This course relies on the close study of literature, songs, films, artifacts of mass production, as well as documentary resources (diaries, recorded interviews, drawings, etc.), in addition to relevant scholarship.
Not Offered Every Year
Prerequisite: RUSS 1200
1 Course Unit

REES 2670 Shaping Russian Society: Soviet Heritage and Transformation
This Russian-language content course continues to develop students’ functional proficiency in speaking, writing, reading, and listening. The course is designed to familiarize students with contemporary Russian society and its historical background. It covers the current political, economic, and societal developments in Russia, focuses on a variety of issues central to Russian society since the fall of the Soviet Union, including the search for national identity, changing values, and popular perceptions of Westerners and Western practices. We will observe the business community and its relations with the government, trace the origin of Russian oligarchs and entrepreneurs and investigate how informal Soviet practices and the criminal world shaped the current business environment. Course materials will include interviews, articles, essays by leading Russian journalists and statesmen, and contemporary Russian movies.

REES 2671 Everyday Life in the Soviet Union
This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and professional uses of the Russian language. The course focuses on the history of everyday life in the Soviet Union during the twenty year period before the collapse of the communist system (1960s-1980s). We will examine experiences, practices and material culture related to various spheres of Soviet life including living arrangements, food, housekeeping, work and leisure, education and health. We will also study emotions and etiquettes associated with romantic, matrimonial and generational relationships and everyday communications. Finally, we will explore how ideas and practices of socialist living continue to influence younger generations of former Soviet families that have never lived under socialism. Course readings include films, literary texts, memoirs and history documents, social journalism and publications on statistics and social anthropology.
Not Offered Every Year
Prerequisite: RUSS 0401
1 Course Unit

REES 2673 Not by Bread Alone: Food in Russian History and Culture
The subject of this course is food culture in various eras of Russian and Soviet history. We will look at historical practices of food preparation and consumption, investigate the history of several important ingredients, and study the origin and history of Russian traditional dishes, while also discussing changes in tastes and attitudes to food over centuries. We will also examine how production, consumption and distribution of food reflected social and cultural distinctions, class hierarchies, and gender roles. Last but certainly not least, the students will get hands-on experience preparing a number of popular contemporary Russian dishes. The readings for this course range from fairy tales and myths to classical literature, from culinary journalism and advertising posters to excerpts from autobiographical writings and memoirs.
Fall or Spring
Prerequisite: RUSS 0401
1 Course Unit
REES 2770 The Russian Revolutions, 1905-1924: Brave New World?
Many believe that the 1917 Russian Revolution was the most significant event in the twentieth century, both as a rupture from the past and as a precursor of much that was to come in the twentieth century. The February Revolution of 1917 made the Russian Republic—at one stroke, in the midst of the world war—the world's most democratic state. The October Revolution of 1917, following it, was the world's first socialist revolution, and it established the world's first socialist state—the Soviet Union. Throughout the twentieth century and beyond, people have looked to it with either fear or with hope. It generated great dreams of equality and liberation—and great misery. This course will examine the causes, course and consequences of this crucial period, for the peoples of the Soviet Union and for the world. In some ways, the term "Russian Revolution" is in fact not entirely correct. First, there was not one Russian Revolution—were a series of overlapping revolutions in this period—labor, rural, nationalist, liberalization. And second, it was a revolution that was not limited to European Russia, but encompassed the entire space of Russian empire (the Caucasus, the Baltics, Poland, Central Asia), and had worldwide and global significance. How do programs for liberation produce both new possibilities and great misery?

REES 3170 Tears and Laughter in the World of Anton Chekhov
Chekhov's theatre has been an impartial and compassionate mirror not only for his generation but for human society across different eras and places for more than a century. The world-acclaimed writer began his literary career as an author of short humorous stories for entertainment and satire magazines. With time, as he brought a more complex emotional palette and existential themes to his oeuvre, he conceived his celebrated dramatic style that weds tragic and serious meanings with skeptical laughter. The visions of human loneliness, disconnectedness, boredom, unrequited love and existential meaninglessness in Chekhov's dramatic masterpieces are interspersed with humor and irony and combined with comedic presentations of characters. The purpose of this course is a hands-on examination of Chekhov's style through a practical attempt to stage Chekhov's work. The first part of the course will be focused on examining Chekhov's comedic style against the background of the tradition of laughter in Russian literature. Then we will attempt a dramatic interpretation of Chekhov's play or a theatrical adaptation of his short-stories, using the ideas we discovered while reading his short prose. The students will be able to choose how they would like to contribute to the project: by acting, directing, stage management or stage design. The play will be performed in front of a live audience at the end of the semester.

Prerequisite: At least one advanced Russian seminar
1 Course Unit

REES 3470 Poetry Matters: Russian Poetry of 18-21 Centuries
This is a content-based Russian language course that offers a general introduction to the study of Russian poetic tradition. We will survey key genres and trends of the almost three centuries of modern Russian poetry, focusing on several larger thematic questions: What ethical challenges loom large in poetic practice? How does poetry address experiences of trauma and harm? How do poems "do" things they do? Taking our cue from Daniil Kharms's famous dictum, "A poem should be written in such a way that if you throw it at a window, the window will break," we will consider poetic utterances in a variety of contexts and situations both private and public. Particular attention will be directed to the genre of elegy understood as a narrative of absence and loss. We will closely follow the transformations of the Russian elegiac tradition from 19th Romantic elegy to avant-garde experiments, blockade and prison poetry. The course will also introduce students to scansion and the study of prosody in verse. Course will be taught in Russian. Readings in Russian and English.
Fall or Spring
Prerequisite: At least one advanced Russian seminar

REES 5100 Old Church Slavonic: History, Language, Manuscripts
The language that we know today as Old Church Slavonic was invented, along with the Slavic alphabet(s), in the 9th century by two Greek scholars, Sts. Cyril and Methodius. They had been tasked by the Byzantine Emperor with bringing the Christian faith to the Slavic-speaking people of Great Moravia, a powerful medieval state in central Europe. From there, literacy, along with the Christian faith, spread to other Slavs, and even non-Slavic speakers, such as Lithuanians and Romanians. Church Slavonic and its regional variants were used to compose the oldest texts of the Slavic-speaking world, which today is comprised of Belarus, Bosnia, Bulgaria, Croatia, Czechia, Macedonia, Montenegro, Russia, Poland, Slovakia, Serbia, Slovenia, and Ukraine. Knowledge of this language and tradition aids in understanding the cultural, literary, and linguistic history of any modern Slavic language. For learners of Russian and other Slavic languages, Church Slavonic provides a layer of elevated stylistic vocabulary and conceptual terminology, similar to, and even greater than, the role of Latin and Greek roots in the English language. For historical linguists, Church Slavonic provides unique material for comparison with other ancient Indo-European languages, such as Latin, Greek, and Sanskrit. For medievalists and cultural historians, it opens the door into the Slavic Orthodox tradition that developed in the orbit of the Byzantine Commonwealth.

REES 5170 Tears and Laughter in the World of Anton Chekhov
Chekhov's theatre has been an impartial and compassionate mirror not only for his generation but for human society across different eras and places for more than a century. The world-acclaimed writer began his literary career as an author of short humorous stories for entertainment and satire magazines. With time, as he brought a more complex emotional palette and existential themes to his oeuvre, he conceived his celebrated dramatic style that weds tragic and serious meanings with skeptical laughter. The visions of human loneliness, disconnectedness and boredom, unrequited love and existential meaningfulness in Chekhov's dramatic masterpieces are interspersed with humor and irony and combined with comedic presentations of characters. The purpose of this course is a hands-on examination of Chekhov's style through a practical attempt to stage Chekhov's work. The first part of the course will be focused on examining Chekhov's comedic style against the background of the tradition of laughter in Russian literature. Then we will attempt a dramatic interpretation of Chekhov's play or a theatrical adaptation of his short-stories, using the ideas we discovered while reading his short prose. The students will be able to choose how they would like to contribute to the project: by acting, directing, stage management or stage design. The play will be performed in front of a live audience at the end of the semester.

REES 5172 Global Landscapes: Russia in XXI century
The goal of this course is to improve students' ability to engage in informed and articulate debate on a number of issues facing Russia and the world at large today, such as: political freedom, and the future of political protest, environmental problems and catastrophes and their aftermath (Chernobyl nuclear disaster), problems of social inequality and redistribution of wealth, national security, the economy, health care, international politics. This will be accomplished through intensive work on expanding lexical knowledge, increasing grammatical accuracy, and developing rhetorical skills. By the end of the course, students will be able to comprehend increasingly complex written and spoken texts on a range of topics and defend their own viewpoint in oral debate and persuasive essay formats.

REES 5175 Stalinist Culture
In the Soviet Union in the late 1920s the dynamic cultural life of the revolutionary era, characterized by avant-gardism, experimentation, and diversity, gave way to a new organization of Soviet cultural life-one dominated by the newly formulated official style of "Socialist Realism" and bureaucratic institutions such as the Soviet Writers Union. In this course we will study the conditions that gave rise to this new era, its institutional realities, and masterworks in film, photography and literature of official art, including those by Kavelin, Pasternak and Eisenstein. We will also examine the social phenomena of cultural resistance and non-conformism of this period and its works written "for the drawer" or for non-official consumption, such as those of Akhmatova, Mandelstam, Bulgakov, Kharmas and Druskin.
1 Course Unit
REES 5250 Russian Culture Through Art and Architecture: From Fin de Siecle to Perestroika
This course offers a general introduction to the history of Russian visual art and material culture. It surveys styles, traditions, and fashions in Russian visual culture from the Middle Ages to Perestroika, considering them in the context of Russian social and political history. The course examines the very important role that visual art played in the history of Russian culture, and seeks to arrive at a deeper understanding of the relationship between visual media and key aspects and events of Russian civilization, such as Orthodoxy, Westernization and Nationalism, Communist utopia, and political protest.

REES 5270 Russian History in Film
The course draws on the cinematic/fictional representation of the Russian/Soviet history based on Russian as well as non-Russian sources. The analysis targets major modes of imagining, staging and reenacting history, construction of images that satisfy dominant political, cultural and ideological stereotypes, and help create national identities. Bias, eye-witness accounts, propaganda uses and abuses of history, forgeries and the production of alt-facts become topics of particular interest. The discussions involve nation builders, iconic heroes and charismatic antiheroes, great commanders and revolutionaries such as Alexander Nevsky, Ivan the Terrible, Rasputin and the Fall of the Romanovs, Lenin and the October Revolution, Stalin and the construction of the Soviet Colossus, the Storming of the Winter Palace, the Civil War, the Great Purge, the Red Scare in the US, etc.

REES 5271 Post-Soviet Russia in Film
This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and professional uses of the Russian language. Film is arguably the most powerful medium for reflecting changes in modern society. This course will examine Russia’s transition to democracy and market economy through the eyes of its most creative and controversial cinematographers. The course will focus on the often agonizing process of changing values and attitudes as the country moves from Soviet to Post-Soviet society. Russian films with English subtitles will be supplemented by readings from contemporary Russian media sources. The course provides an excellent visual introduction to the problems of contemporary Russia society.

REES 5272 Nationalism and Ethnic Conflict in Film
This course studies political violence, terrorism, civil wars, ethnic conflicts, and genocidal policies as represented in the social media, cable news, documentaries, feature films. We discuss various techniques and strategies of the propaganda wars, post-truth media environment, etc. The regions of interest are Former Soviet Union, Russia, the Caucasus, and the Balkans, US homegrown political violence, and the Middle East. The students are expected to develop and demonstrate a critical approach to different aspects of the cinematic, news, and social media representation of ethnic conflict. We focus on the violent developments that took place in Russia and the Balkans after the collapse of the Soviet Bloc, conditioned by the geopolitical dynamics that the fall of communism had created. We study media broadcasts, documentaries, feature films representing both, the Eastern and the Western perspective.

REES 5310 The Rise and Fall of the Russian Empire, 1552-1917
How and why did Russia become the center of the world’s largest empire, a single state encompassing eleven time zones and over a hundred ethnic groups? To answer this question, we will explore the rise of a distinct political culture beginning in medieval Muscovy, its transformation under the impact of a prolonged encounter with European civilization, and the various attempts to re-form Russia from above and below prior to the Revolution of 1917. Main themes include the facade vs. the reality of central authority, the intersection of foreign and domestic issues, the development of a radical intelligentsia, and the tension between empire and nation.

1 Course Unit
REES 5470 Poetry Matters: Russian Poetry of 18-21 Centuries
This is a content-based Russian language course that offers a general introduction to the study of Russian poetic tradition. We will survey key genres and trends of the almost three centuries of modern Russian poetry, focusing on several larger thematic questions: What ethical challenges loom large in poetic practice? How does poetry address experiences of trauma and harm? How do poems “do” things they do? Taking our cue from Daniil Kharms’s famous dictum, “A poem should be written in such a way that if you throw it at a window, the window will break,” we will consider poetic utterances in a variety of contexts and situations both private and public. Particular attention will be directed to the genre of elegy understood as a narrative of absence and loss. We will closely follow the transformations of the Russian elegiac tradition from 19th Romantic elegy to avant-garde experiments, blockade and prison poetry. The course will also introduce students to scansion and the study of prosody in verse. Course will be taught in Russian. Readings in Russian and English.

REES 5471 Slavic Literary Theory in Western Context
This course will compare selected theoretical concepts advanced by Russian Formalists, Prague Structuralists, and the Bakhtin group (e.g., defamiliarization, aesthetic sign, dialogue) with similar or analogous notions drawn from Western intellectual tradition.
1 Course Unit

REES 5497 Fear and Loathing of Capitalism in Russian Literature of the 19th Century
This course is a content-based course intended for students who speak Russian at home and seek to improve their command of formal and professional registers of the Russian language. Free trade and market relations were slowly developing in the 19th century Russia, rising against the inhibiting influence exerted by the institution of slavery and rigid social hierarchy. Russian classical realist literature is known for its fierce attacks on capitalism and capitalist values through literary characters and conflicts that prominently feature money and private property. Despite all their philosophical and ideological differences, great Russian writers signal their inherent opposition to capitalist mode of production and remain indifferent to liberal values and creative potential associated with capitalist competition. In this course we will explore what was the cultural and historical context for that palpable fear of capitalism and loathing of bourgeois values, and what was it in free market relations that scared so much all the grand authors of Russian 19th century canon. We will examine these questions through reading and analyzing the works of such authors as Pushkin, Turgenev, Ostrovsky, Tolstoy and Chekhov.

1 Course Unit

REES 5550 Terrorism
This course studies the emergence of organized terrorism in nineteenth-century Russia and its impact on public life in the West, the Balkans, and America. We investigate the political and cultural origins of terrorism, its conspiratorial routine, structures, methods, manuals, and manifestoes. Historical and cultural approaches converge in the discussion of intellectual movements that forged the formula of terrorism and influenced the professionalization of the underground, such as nihilism, anarchism, and populism. We discuss the stern terrorist personality, self-denial, revolutionary martyrdom, and conspiratorial militancy. The theatricals of terrorism are of particular interest, its bombastic acts, mystification, and techniques of spreading disorganizing fear in the global media environment. We trace the creation of counterterrorism police in late imperial Russia and its methods to infiltrate, demoralize, and dismantle the terrorist networks, and reengineer their social base. First Red Scare and the formation of the FBI constitutes a unique case of managing rampant political violence and countering the asymmetrical threat of terrorism.

REES 5570 Russia and Eastern Europe in International Affairs
Russia and the European Union (EU) are engaged in a battle for influence in Eastern Europe. EU foreign policy towards its Eastern neighbors is based on economic integration and the carrot of membership. With the application of this powerful incentive, Central and Southeastern European countries such as Poland, Hungary, the Czech Republic, and Croatia have progressed rapidly towards integration with the EU (and NATO). Yet, given Russia’s opposition to the further enlargement, membership is off the table for the large semi-Western powers such as Russia itself and Turkey and the smaller countries inhabiting an emerging buffer zone between Russia and the EU, such as Georgia, Ukraine, Azerbaijan, Moldova, and Belarus. These in-between countries find themselves subject to intense competition for influence between Eastern and Western powers. In this context, EU countries must balance their energy dependence on Russia and need for new markets and geopolitical stability with concern for human rights, democratic governance, and self-determination. What are the trade-offs implicit in the foreign policies of Russia, EU member states, and Eastern Europe? What are the best policy approaches? What are the main opportunities and obstacles?

REES 5637 Gender and Health in Post-Socialist Society
In terms of gender and health arrangements, post-socialist societies have provided through the course of their history examples both of radical empowerment and of evident discrimination, rapid emancipation and conservative backlashes. Social policy researchers frequently refer to this as a sui generis social laboratory, where health and gender policy experiments have taken place. This course aims to examine the premises and societal outcomes of such ‘experiments’ both on the empirical and conceptual levels. The course pursues two interconnected goals (1) to explore the specificities of gender and health in post-socialist societies, i.e. to consider how these phenomena are grounded in and affected by the political and institutional transition from state socialism; (2) to explore theoretical insights that social studies of the post-socialist experience provide for our understanding of health and gender. The course is structured thematically and chronologically. By tracing transformations of socialist and post-socialist gender order the first part of the course introduces students to the political and institutional context of societies under consideration. The second part of the course discusses social science categories that are used to analyze gender and health (medical professionalism, medical knowledge, emotions in healthcare, etc.) and examines, how attention to socialist and post-socialist experience can enhance our conceptualizations. The third part is devoted to different dimensions of health and gender inequalities on post-socialist space. Empirical researches discussed in this part are mostly concerned with the case of Russia, but are not limited to it. Generally, the course builds into the discussion on what analytical results can be gained through comparing health and gender in post-socialist and ‘Western’ contexts, and what variations between and within post-socialist societies exist. This is an introductory level graduate course.

REES 5640 Geopolitics of Energy in Russia and Eurasia
Russia is one of the major players in the international energy market: third largest oil producer after the U.S. and Saudi Arabia and second-largest (after the U.S.) natural gas producers (2019). It is also a top coal and nuclear power producer. But the geopolitical might that the country holds with respect to energy markets stems not as much from how much energy it produces as from how much energy it exports. Today Russia leads global natural gas exports and trails only the Kingdom of Saudi Arabia in oil exports. Russia is also reliably one of the top coal-exporting countries. This class will explore the geopolitics of energy focusing on the role of Russia as a leading global energy supplier. In doing so, it hopes to provide a slightly different understanding of global energy that is usually taught from either the U.S. or OPEC angle.

REES 5670 Shaping Russian Society: Soviet Heritage and Transformation
This Russian–language content course continues to develop students’ functional proficiency in speaking, writing, reading, and listening. The course is designed to familiarize students with contemporary Russian society and its historical background. It covers the current political, economic, and societal developments in Russia, focuses on a variety of issues central to Russian society since the fall of the Soviet Union, including the search for national identity, changing values, and popular perceptions of Westerners and Western practices. We will observe the business community and its relations with the government, trace the origin of Russian oligarchs and entrepreneurs and investigate how informal Soviet practices and the criminal world shaped the current business environment. Course materials will include interviews, articles, essays by leading Russian journalists and statesmen, and contemporary Russian movies.

1 Course Unit
**REES 6100 Portraits of Old Russia: Myth, Icon, Chronicle**

This course covers eight centuries of Russia's cultural, political, and social history, from its origins through the eighteenth century, a period which laid the foundation for the Russian Empire. Each unit is organized around a set of texts (visual, literary, historical, cinematic, musical) which examine prominent historical and legendary figures as they represent chapters in Russia's history. Historical figures under examination include, among others, the Baptist of Rus, Prince Vladimir; the nation-builder, Prince Alexander Nevsky; the first Russian Tsar, Ivan the Terrible; the first Emperor and Westernizer, Peter the Great; the renowned icon painter Andrei Rublev; the epic hero, “bogatyr” Ilya Muromets; and the founder of Muscovite monasticism, St. Sergius of Radonezh. Three modern-day nation-states – Russia, Ukraine, and Belarus – share and dispute the cultural heritage of Old Rus, and their political relationships even today revolve around interpretations of the past and myths of ethnic descent. Has the Rus state been established by the Vikings or by the local Slavs? Is Russian political despotism an inheritance from the Mongols or a native ideology? Is Kievan Rus a mother state of Russia or Ukraine? The constructed past has a continuing influence in modern Russia, and is keenly referenced, sometimes manipulatively, in contemporary social and political discourse. Recently, for example, President Putin has justified the annexation of Crimea to Russia by referring to it as the holy site of Prince Vladimir’s baptism, from which Russian Christianity ostensibly originates. The study of pre-modern cultural and political history through the prism of nationalism theories explains many aspects of modern Russian society, as well as many political aspirations of its leaders. In this course, students gain knowledge about formative events and prominent figures, as well as social and cultural developments in Russia's pre-imperial history. The course takes multidisciplinary approach in that it combines the study of textual sources, objects of art and architecture, music, ritual, and film in their social and historical contexts. Students learn to analyze and interpret primary sources (historical documents and literary texts), identify their intellectual issues, and understand the historical, cultural, and social contexts in which these sources were created. While working with primary sources students learn to pose questions about their value and reliability as historical evidence. By exposing students to the critical examination of “the uses of the past” the course aims to teach them to appreciate the authoritative nature of historical interpretation and its practical application in contemporary social and political rhetoric. At the end of the course students should develop understanding of the continuity and change in Russia's history, its belief systems, and nationalistic ideologies, and will be able to speak and write about these issues with competence and confidence.

**REES 6101 Portraits of Russian Society: Art, Fiction, Drama**

This course covers 19C Russian cultural and social history. Each week-long unit is organized around a single medium-length text (novella, play, memoir) which opens up a single scene of social history birth, death, duel, courtship, tsar, and so on. Each of these main texts is accompanied by a set of supplementary materials paintings, historical readings, cultural-analytical readings, excerpts from other literary works, etc. The object of the course is to understand the social codes and rituals that informed nineteenth-century Russian life, and to apply this knowledge in interpreting literary texts, other cultural objects, and even historical and social documents (letters, memoraanda, etc.). We will attempt to understand social history and literary interpretation as separate disciplines yet also as disciplines that can inform one another. In short: we will read the social history through the text, and read the text against the social history.

**REES 6131 Putin's Russia: Culture, Society and History**

Winston Churchill famously said that Russia "is a riddle, wrapped in a mystery, inside an enigma. Strikingly, today many informed Russians would agree: no one can provide definitive answers concerning what has driven Russian public life and politics over the past three years, as it ricocheted from the mass protests of 2011 and 2012, into the Pussy Riot scandal, then the Olympics, and most recently to the intense patriotism driving the Russian annexation of Crimea and intervention in Ukraine. In this course we will examine how Russians themselves communicate about and represent Russia and what this reveals about this complex society and its development. We will consider print journalism, novels, films, televised media, and the internetpaying close attention both to particular representations and to social institutions for their production, dissemination and consumption. Topics of special concern will include: conspiracy theories, representations of Russian history, collective identity and patriotism, intellectuals and elites, gender and sexuality, consumption and wealth. Putin's Russia is an introductory level course for which no prior knowledge Russian history, culture or society is required. All readings and screenings will be in English. Prerequisite: No prior knowledge of Russian is required.

REES 6149 Socialist and Post-Socialist Worlds
In 1989-1991, a whole world, perhaps many worlds, vanished: the worlds of socialism. In this graduate seminar we will investigate key cultural works, theoretical constructs and contexts spanning the socialist world(s), focused around the USSR, which was for many the (not uncontested) center of the socialist cosmos. Further, we will study the cultural and political interrelationships between the socialist world(s) and anticolonial and left movements in the developing and the capitalist developed nations alike. Finally, we will investigate the aftermaths left behind as these world(s) crumbled or were transformed beyond recognition at the end of the twentieth century. Our work will be ramified by consideration of a number of critical and methodological tools for the study of these many histories and geographies. The purview of the course is dauntingly large - global in scale - and therefore "coverage" will of necessity be incomplete. In addition to the lead instructor, a number of guest instructors from Penn and from other institutions will join us to lead our investigations into specific geographies, moments and areas. Additionally, four weeks have been left without content, to be filled in via consensus decision by the members of the seminar.

REES 6151 Reading Marx's Capital: Divergent Traditions in Europe, the Soviet Union, and the Global South
Karl Marx's masterpiece Capital received little attention at the time of its publication, but gained new life in the twentieth and twenty-first centuries. The afterlives of Capital, however, took disparate forms across different regions and traditions globally: while working on the same text, these traditions gave rise to conflicting and contradictory interpretations, antagonistic dialogues, and cross-disciplinary encounters. This seminar will examine a series of exemplary interpretations of Capital with attention to detail in order to clarify the stakes of different readings and pose the question of relevance of Marx's masterpiece for the contemporary moment. We will investigate how political conjunctures, regional specificities, and ideological concerns shape disparate modes and cultures of reading. We will also examine how Capital is transfigured through the lens of disciplines such as literary studies and comparative literature, philosophy, political science, postcolonial studies, and economics. We will also pose the question of philosophical genealogies of Capital, tracing how divergent philosophical backgrounds inflect the reconfigurations of Marx's thought, e.g., in examining "Hegelian," "Spinozist," and "Epicurian" readings. The topics may include, but are not limited to, the following regions and traditions: France (Louis Althusser group), Italy (Mario Tronti and autonomia tradition), and Germany (Newe Marx Lektüre); Soviet Union (Isaak Rubin, Evald Ilyenkov); Bolivia (Alvaro Garcia Linera), and Argentina (Ernesto Laclau). Finally, we will engage with the most recent readings of Capital in the twenty-first century in the works of thinkers such as Sylvia Federici, Michael Heinrich, and A. Kiarina Kordela, among others.

REES 6400 Cultural History of Medieval Rus (800–1700)
This course offers an overview of the literary, cultural, and political history of Medieval Rus from its origins in the 9th century up to the reign of Peter the Great (early 18th century), the period that laid the foundation for the Russian Empire. The focus of the course is on the Kievan and Muscovite traditions but we also look at the cultural space of the Grand Duchy of Lithuania and Poland (i.e., the territory of today's Belarus and Ukraine).
The course takes a comparative and interdisciplinary approach to the evolution of the main cultural paradigms of Russian Orthodoxy viewed in a broader European context (vis-à-vis Byzantium and the Latin West). We learn about the worldview of Orthodox Slavs by examining their religion, ritual, spirituality, art, music, literature, education, and popular culture. Classes are conducted in English. Readings are in Russian and English. English translations of some primary sources are available for those with limited Russian competence.

REES 6410 Masterpieces of 19th Century Russian Literature
A bronze monument to an all-powerful emperor comes to life and pursues a poor everyman through the streets, driving him to his death. A studious young man kills an old woman as a philosophical experiment. A young woman at the height of aristocratic society abandons her husband and young son to devote herself to her lover. These and other tales from the classics of nineteenth-century Russian literature will touch and delight you, get under your skin, and even attempt to show you how to live.
We will read these tales in order to understand how books can become events in their own right, how Russian literature gained such power and prestige, and what it can still teach us today. Authors include Pushkin, Lermontov, Gogol, Pavlova, Turgenev, Dostoevsky, Tolstoy, and others.
Fall
1 Course Unit

REES 6431 Masterpieces of 20th Century Russian Literature
"Only in Russia is poetry respected. They kill you for it," famously quipped the poet Osip Mandelstam, who died in Joseph Stalin's concentration camps. Russia is a society that takes literature seriously - one in which the pen is assumed to have direct historical consequences. In this course, we will study how twentieth century Russian literature actively participated in war, revolution, totalitarian dictatorship, and resistance. The masterworks we will study open windows into worlds of revolutionary rapture, moral uplift in the face of tyranny, courageous subversion of the repressive state, and historical reflection on its failures. Our readings will range from an avant-garde play intended to rewire your mind, to an epic representation of revolutionary social transformation, to surreal and absurdist representations of a world gone mad. In other words: fasten your seatbelts low and tight across your waist; turbulence ahead!
Spring
1 Course Unit

REES 6435 Modern Literary Theory and Criticism
This course will provide an overview of major European thinkers in critical theory of the 20th and 21st centuries. We will pay particular attention to critical currents that originated in Eastern European avant-garde and early socialist contexts and their legacies and successors. Topics covered will include: Russian Formalism and its successors in Structuralism and Deconstruction (Shklovsky, Levi-Strauss, Jakobson, Derrida), Bakhtin and his circle, dialogism and its later western reception; debates over aesthetics and politics of the 1930s (Lukacs, Brecht, Adorno, Benjamin, Radek, Clement Greenberg); the October group; Marxism, new Left criticism, and later lefts (Althusser, Williams, Eagleton, Jameson, Zizek).

REES 6450 Approaches to Literary Texts
Most seminars focus on literary texts composed during a single historical period; this course is unusual in inviting students to consider the challenges of approaching texts from a range of different historical eras. Taught by a team of literary specialists representing diverse periods and linguistic traditions and conducted as a hands-on workshop, this seminar is designed to help students of literature and related disciplines gain expertise in analysis and interpretation of literary works across the boundaries of time, geography, and language, from classic to modern. Students will approach literature as a historical discipline and learn about key methodological issues and questions that specialists in each period and field ask about texts that their disciplines study. The diachronic and cross-cultural perspectives inform discussions of language and style, text types and genres, notions of alterity, fictionality, literariness, symbolism, intertextuality, materiality, and interfaces with other disciplines. This is a unique opportunity to learn in one course about diverse literary approaches from specialists in different fields.

REES 6530 Communism
The rise and fall of Communism dominated the history of the short twentieth century from the Russian revolution of 1917 to the collapse of the Soviet Union in 1991. As a system of government, Communism is more or less dead, but its utopian ideals of liberation from exploitation and want live on. Communism remains the one political-economic system that presented, for a time, an alternative to global capitalism. In this course, students will gain an introduction to socialist and Communist political thought and explore Communist political and economic regimes their successes and failures, critics and dissidents, efforts at reform, and causes of collapse. We will learn about the remnants of Communism in China, North Korea, and Cuba and efforts of contemporary theorists to imagine a future for Communism.

1 Course Unit

REES 6630 Soviet and Post-Soviet Economy
The course will cover the development and operation of the Soviet centrally planned economy—one of the grandest social experiments of the 20th century. We will review the mechanisms of plan creation, the push for the collectivization and further development of Soviet agriculture, the role of the Soviet educational system and the performance of labor markets (including forced labor camps—GULags). We will discuss the strengths and weaknesses of the Soviet system and the causes of its collapse. Privatization, called by some “piratization,” will be one of the central issues in our consideration of the transition from central planning to a market economy in the early 1990s. Even though our main focus will be on the Soviet economy and post-Soviet transition, we will occasionally look back in time to the tsarist era and even further back to find evidence to help explain Soviet/Russian economic development.

REES 6631 Anarchism: Theories and Ethnographies
"That we are Utopians is well known. So Utopian are we that we go the length of believing that the Revolution can and ought to assure shelter, food, and clothes to all..." -Pyotr Kropotkin, The Conquest of Bread. Although born in the West through the works of William Godwin and Pierre-Joseph Proudhon, anarchism as a political theory was subsequently developed by a variety of Russian and Ukrainian theorists and activists, including Mikhail Bakunin, Lev Tolstoy, Pyotr Kropotkin, Nestor Makhno, and Emma Goldman (in exile in the United States). Anarchism fundamentally questions the need for political power and authority, particularly as embodied in a state. As a political theory, anarchism makes moral claims about the importance of individual liberty and presents a positive theory of human flourishing that is based on ideals of non-coercive consensus building. This course investigates the 19th century theoretical foundations of Russian and Ukrainian anarchist theory through a close examination of key texts from the 19th and early 20th centuries and includes ethnographic explorations of anarchist practices in eastern Europe in the 21st century. All readings will be in English.

REES 6670 Population and Public Health in Eastern Europe
Since the collapse of communism in 1989 in Eastern Europe (and 1991 in the Soviet Union), many of the countries in the region have experienced public health crises and demographic catastrophe. Below replacement fertility rates and massive out migration have decimated the populations of these countries even as populations age and place unsustainable strains on pension systems and medical services. The demographic collapse has also been accompanied by falling male life expectancy and the rise of alcoholism, depression, domestic violence, and suicide. The economic exigencies of the transition from communism to capitalism dismantled welfare states at the exact moment when health services were most needed, leaving charities and nongovernmental organization to try to fill in the gaps. Through a combination of readings from the fields of epidemiology, demography, and medical anthropology, this course examines the public health implications of poverty and social dislocation in post-communist states. All readings and assignments are in English.

0 Course Units
**Sanskrit (SKRT)**

**SKRT 0100 Sanskrit 1st Year, Part I**
During the first semester of beginning Sanskrit, students will be introduced to the script, phonetics, and grammar of the Sanskrit language. By the end of the semester they will be able to begin to read Sanskrit texts and compose Sanskrit sentences in addition to carrying out simple conversation. They will build the requisite skills to read, by the second semester, simple inscriptions and sections from texts like the Ramayana, the Mahabharata, the Bhagavad Gita, Pancatantra, and Yoga Sutra. Students will also be introduced to many features of Sanskrit culture.

- **Fall**
- 1 Course Unit

**SKRT 0200 Sanskrit 1st Year Part II**
During the first semester of beginning Sanskrit, students will be introduced to the script, phonetics, and grammar of the Sanskrit language. By the end of the semester they will be able to begin to read Sanskrit texts and compose Sanskrit sentences in addition to carrying out simple conversation. They will build the requisite skills to read, by the second semester, simple inscriptions and sections from texts like the Ramayana, the Mahabharata, the Bhagavad Gita, Pancatantra, and Yoga Sutra. Students will also be introduced to many features of Sanskrit culture.

- **Spring**
- Prerequisite: SKRT 0100 OR SKRT 5100
- 1 Course Unit

**SKRT 0300 Sanskrit 2nd Year Part I**
This course will lead students to consolidate their knowledge of Sanskrit grammar and increase their familiarity with Sanskrit literature of all kinds, including epic, literary, philosophical, and narrative genres of texts. It will also introduce students to the study and reading of inscriptive materials.

- Two Term Class, Student must enter first term; credit given even if second term not complete
- 1 Course Unit

**SKRT 0400 Intermediate Sanskrit Part II**
This course will lead students to consolidate their knowledge of Sanskrit grammar and increase their familiarity with Sanskrit literature of all kinds, including epic, literary, philosophical, and narrative genres of texts. It will also introduce students to the study and reading of inscriptive materials.

- Two Term Class, Student must enter first term; credit given after both terms are complete
- Prerequisite: SKRT 0300 OR SKRT 5300
- 1 Course Unit

**SKRT 1000 Readings in Sanskrit Literature**
This course is for advanced students of Sanskrit. Designed as a seminar, the course aims to take students through the primary and secondary sources of Sanskrit literary and philosophical production. Each semester will focus on a different genre: epic, belles-lettres, lyric poetry, drama, philosophy, shastra, advanced grammar, history, poetics, and epigraphy. We will focus on original sources, secondary scholarship, and theoretical approaches toward the translation and study of Sanskrit texts.

- Fall or Spring
- Mutually Exclusive: SKRT 6000
- Prerequisite: (SKRT 0300 OR SKRT 5300) AND (SKRT 0400 OR SKRT 5400)

SSPP 6010 Comparative Urban and Distributive Politics
As of 2007, more than half of the world’s population resides in cities. Cities and metropolitan regions are much more unequal than the countries that host them. For example, income inequality in the New York Metropolitan Area parallels that of Rwanda at around 15 Gini points higher than the U.S. as a whole. Especially in the world’s developing regions, the onset of rapid urbanization occurs in tandem with environmental degradation that disproportionately affects impoverished and marginalized communities. This course provides an introduction to the observable patterns and challenges confronting cities and metropolitan areas and the policy remedies and options available to government, NGOs, and the private sector. First, the course will explore the political, social, and economic explanations for the origins and evolution of urban environments. We will trace the historical development of local government institutions, analyze how urban coalitions form, and investigate distributions of power. In the second half of the course, we will examine urban welfare policies in the areas of growth, housing, the distribution of public goods/services (e.g., education, public security, sanitation), identity politics and culture wars, and poverty. Focusing especially on cities in the Global South, the topics covered in this course include: poverty and urban slums, informal housing, informal labor markets, public goods and distributive justice, urban land rights and other “rights to the city” (RTC), climate change adaptation in cities, environmental risk and urban precarious settlements, gentrification and evictions, among other topics.
Fall
1 Course Unit

SSPP 6020 Applied Data Ethics, Law, and the Social Good
This course explores the applied use of civic data, specifically "using data for the social good." Data can help us understand needs, improve services, shift policies, and build stronger, healthier, and more just communities. However, use of data can also reinforce legacies of racist policies and produce inequitable resource allocation, access, and outcomes. These tensions are the crux of this course. We will interrogate assumptions and ask difficult questions of ourselves as we hold this duality—that data can be used for good and for harm. It is up to us as practitioners to weigh the risks and benefits to ensure that civic data use is legal, ethical, and a good idea.
Fall
1 Course Unit

SSPP 6030 Journey to Joy: Designing a Happier Life for Social Work, Social Policy and Non-Profit Leadership
What does joy really mean? Could joy be an intervention for complex trauma, pain, grief, and loss? How does joy show up in policy making and leadership? This innovative new course combines cutting-edge research, practical techniques, and real-world examples to help you understand the power of joy and develop community-informed, anti-racist strategies for promoting it. From exploring the latest in clinical intervention, popular ideas around manifestation, self-care, and #Blackjoy, to examining the role of technology and cultural differences, you will gain a culturally humble and comprehensive understanding of what it takes to design a happier life. This course includes a blend of immersive, hands-on activities, short lectures, and engaging reflective discussions that will leave you feeling inspired and empowered. Whether you are social work, non-profit leader or social policy student, or someone who wants to increase their own experiences of joy and happiness, this course is a perfect way to jump start your journey to joy.

Science, Technology & Society (STSC)

STSC 0100 Emergence of Modern Science
During the last 500 years, science has emerged as a central and transformative force that continues to reshape everyday life in countless ways. This introductory course will survey the emergence of the scientific world view from the Renaissance through the end of the 20th century. By focusing on the life, work, and cultural contexts of those who created modern science, we will explore their core ideas and techniques, where they came from, what problems they solved, what made them controversial and exciting and how they relate to contemporary religious beliefs, politics, art, literature, and music. The course is organized chronologically and thematically. In short, this is a "Western Civ" course with a difference, open to students at all levels.
Fall
Also Offered As: HSOC 0100
1 Course Unit

STSC 0228 Studying Sex
The concept of "sex" has meant multiple things to science and medicine over the last few hundred years: a way of sorting bodies, a behavior to observe, a driving force behind reproduction and evolution, and a yardstick by which to measure normality. It has been both a binary of male and female, and a spectrum; both separate from gender, and inseparably entwined with it. It has been defined at different moments by anatomy, hormones, chromosomes, and even metabolism. In this course, we will explore how scientists have studied—and perhaps produced—the many-faceted thing called sex, and how historians have come to understand that past. This first-year seminar introduces students to primary source research; historical writing; and methods from both Science and Technology Studies (STS), and queer, trans, and feminist studies. Course materials will focus mainly on the United States in the 19th and 20th centuries.
Fall

STSC 0313 Cane and Able: Disability in America
Disability is a near universal experience, and yet it remains on the margins of most discussions concerning identity, politics, and popular culture. Using the latest works in historical scholarship, this seminar focuses on how disability has been experienced and defined in the past. We will explore various disabilities including those acquired at birth and those sustained by war, those visible to others and those that are invisible. For our purposes, disability will be treated as a cultural and historical phenomenon that has shaped American constructions of race, class, and gender, attitudes toward reproduction and immigration, ideals of technological progress, and notions of the natural and the normal.

STSC 0387 Epidemics in History
The twenty-first century has seen a proliferation of new pandemic threats, including SARS, MERS, Ebola, Zika, and most recently the novel coronavirus called COVID-19. Our responses to these diseases are conditioned by historical experience. From the Black Death to cholera to AIDS, epidemics have wrought profound demographic, social, political, and cultural change all over the world. Through a detailed analysis of selected historical outbreaks, this seminar examines the ways in which different societies in different eras have responded in times of crisis. The class also analyzes present-day pandemic preparedness policy and responses to health threats ranging from influenza to bioterrorism.
Fall
Also Offered As: HSOC 0387
1 Course Unit

STSC 0400 Medicine in History
This course surveys the history of medical knowledge and practice from antiquity to the present. No prior background in the history of science or medicine is required. The course has two principal goals: (1) to give students a practical introduction to the fundamental questions and methods of the history of medicine, and (2) to foster a nuanced, critical understanding of medicine's complex role in contemporary society. The course takes a broadly chronological approach, blending the perspectives of the patient, the physician, and society as a whole—recognizing that medicine has always aspired to "treat" healthy people as well as the sick and infirm. Rather than history "from the top down" or "from the bottom up," this course sets its sights on history from the inside out. This means, first, that medical knowledge and practice is understood through the personal experiences of patients and caregivers. It also means that lectures and discussions will take the long-discredited knowledge and treatments of the past seriously, on their own terms, rather than judging them by today's standards. Required readings consist largely of primary sources, from elite medical texts to patient diaries. Short research assignments will encourage students to adopt the perspectives of a range of actors in various historical eras.
Fall
Also Offered As: HIST 0876, HSOC 0400
1 Course Unit
STSC 0490 Comparative Medicine
This course explores the medical consequences of the interaction between Europe and the "non-West." It focuses on three parts of the world Europeans colonized: Africa, South Asia, and Latin America. Today's healing practices in these regions grew out of the interaction between the medical traditions of the colonized and those of the European colonizers. We therefore explore the nature of the interactions. What was the history of therapeutic practices that originated in Africa or South Asia? How did European medical practices change in the colonies? What were the effects of colonial racial and gender hierarchies on medical practice? How did practitioners of "non-Western" medicine carve out places for themselves? How did they redefine ancient traditions? How did patients find their way among multiple therapeutic traditions? How does biomedicine take a different shape when it is practiced under conditions of poverty, or of inequalities in power? How do today's medical problems grow out of this history? This is a fascinating history of race and gender, of pathogens and conquerors, of science and the body. It tells about the historical and regional roots of today's problems in international medicine.

1 Course Unit

STSC 0600 Technology & Society
Technology plays an increasing role in our understandings of ourselves, our communities, and our societies, in how we think about politics and war, science and religion, work and play. Humans have made and used technologies, though, for thousands if not millions of years. In this course, we will use this history as a resource to understand how technologies affect social relations, and converse how the culture of a society shapes the technologies it produces. Do different technologies produce or result from different economic systems like feudalism, capitalism and communism? Can specific technologies promote democratic or authoritarian politics? Do they suggest or enforce different patterns of race, class or gender relations? Among the technologies we'll consider will be large objects like cathedrals, bridges, and airplanes; small ones like guns, clocks and birth control pills; and networks like the electrical grid, the highway system and the internet.

1 Course Unit

STSC 0823 Sport Science in the World
This seminar is designed for first-year students who are interested in some big questions related to the topic of "sport science." Sport science may seem to be just a niche field where teams of physiologists, psychologists, geneticists, engineers and others work to make already very athletic people go "faster, higher, stronger." On the other hand, the work of sport scientists intersects everyday with far-reaching questions about how categories of sex, age, race, disability, and nationality are defined, measured, challenged, or maintained. Sport scientists weigh in on debates over what kinds of physical activity or bodies are "clean," what kinds of performance are "natural" or even human, and what kinds of sporting spaces or equipment are fair. In this class we'll read and discuss historical and contemporary accounts of sport science in the world. My hope is that students will enter the class interested in sports and in gendered science, objectivity and standardization, the politics of big data and more.
Fall

STSC 1151 Modern Biology and Social Implications
This course covers the history of biology in the 19th and 20th centuries, giving equal consideration to three dominant themes: evolutionary biology, classical genetics, and molecular biology. The course is intended for students with some background in the history of science as well as in biology, although no specific knowledge of either subject is required. We will have three main goals: first, to delineate the content of the leading biological theories and experimental practices of the past two centuries; second, to situate these theories and practices in their historical context, noting the complex interplay between them and the dominant social, political, and economic trends; and, third, to critically evaluate various methodological approaches to the history of science.
Fall or Spring
Also Offered As: HIST 0877
1 Course Unit
STSC 1160 Sustainability & Utopianism
This seminar explores how the humanities can contribute to discussions of sustainability. We begin by investigating the contested term itself, paying close attention to critics and activists who deplore the very idea that we should try to sustain our, in their eyes, dystopian present, one marked by environmental catastrophe as well as by an assault on the educational ideals long embodied in the humanities. We then turn to classic humanist texts on utopia, beginning with More’s fictive island of 1517. The “origins of environmentalism” lie in such depictions of island edens (Richard Grove), and our course proceeds to analyze classic utopian texts from American, English, and German literatures. Readings extend to utopian visions from Europe and America of the nineteenth and twentieth centuries, as well as literary and visual texts that deal with contemporary nuclear and flood catastrophes. Authors include: Bill McKibben, Jill Kerr Conway, Christopher Newfield, Thomas More, Francis Bacon, Karl Marx, Henry David Thoreau, Robert Owens, William Morris, Charlotte Perkins Gilman, Ayn Rand, Christa Wolf, and others.

STSC 1201 Darwin’s Legacy: The Evolution of Evolution
Darwin’s conceptions of evolution have become a central organizing principle of modern biology. This lecture course will explore the origins and emergence of his ideas, the scientific work they provoked, and their subsequent re-emergence into modern evolutionary theory. In order to understand the living world, students will have the opportunity to read and engage with various classic primary sources by Darwin, Mendel, and others. The course will conclude with guest lectures on evolutionary biology today, emphasizing current issues, new methods, and recent discoveries. In short, this is a lecture course on the emergence of modern evolutionary biology—its central ideas, their historical development and their implications for the human future.

1 Course Unit

STSC 1600 The History of the Information Age
We are said to live in an “information age.” Information technologies have been credited with ushering in an era of unprecedented information creation, collection, storage, and communication. We experience the impact of this firsthand: these technologies increasingly pervade our homes, workplaces, our schools, our most private spaces. But what exactly do we mean when we speak of the information age? When and how did it come into being? What developments—social, economic, political, or technological—made the digital world possible? How do these fit in the longer history of technology and society? And how is all this different from earlier eras? In this course, we explore these questions by looking to the history of information, information technologies, and information sciences, a history that long precedes the digital computer. Although, at the center of our story will be the development of new information technologies—from the printing press and the telegraph to the computer and of course the Internet—our focus will not primarily be on machines, but on people and how individuals conceptualized, contributed to, made sense of, and dealt with the many transformational changes that have shaped the contours of our modern digital world.
We will explore forms of identity, knowledge, and community that have emerged within this information age. Our goal will be to deepen historical perspectives and build analytical tools to critically evaluate the role of information in our increasingly digital world today.

STSC 1761 Nature and the City: Place, Memory, and Environment
When news articles say that we’ve known about the climate crisis for decades, who is included in that “we”? What does place have to do with which events are memorialized and which are forgotten? In this course we’ll explore the relationships among cities, environments, and ideas about the past in the United States. From problems of drinking water to climate change, we’ll investigate how place and collective memory impact decisions and possibilities in facing environmental issues. Drawing on science and technology studies, anthropology, sociology, and history, this course offers students new ways to think about how people in the United States have understood their relationships to the places they live in and depend on. Using a combination of scholarly readings, primary sources, and field trips, this CWiC critical speaking seminar will focus on assignments designed to help students develop observation, critical reading, and public speaking skills to understand how stories about the past impact their lives.
1 Course Unit

STSC 1788 Everyday Technologies and the Making of the Modern World
Long before iPhones and Fitbits, personal technologies—small(ish), portable, purchasable—had a tremendous impact on the lives of people around the globe. Items such as wristwatches, bicycles, sewing machines, cars and radios could empower their users (or sometimes constrain them), creating economic, educational or recreational opportunities while also being associated with grander ideas and ideologies. This course will explore such everyday technologies across the nineteenth and twentieth centuries, in locations spanning the Americas, Europe, Africa and Asia. We will consider how the use and significance of particular technologies varied according to time and place; how these everyday items contributed to imperial and national identities and “self-fashioning” for individuals; and how, through use and modification, consumers themselves could become part of the story of technological change. In addition to reading a variety of classic and recent scholarship, students will work with a wide array of primary sources (newspapers, photographs, patent records, trade cards) and use digital tools to present their own research projects.
Fall
1 Course Unit

STSC 1880 Environment and Society
This course examines contemporary environmental issues such as energy, waste, pollution, health, population, biodiversity and climate through a historical and critical lens. All of these issues have important material, natural and technical aspects; they are also inextricably entangled with human history and culture. To understand the nature of this entanglement, the course will introduce key concepts and theoretical frameworks from science and technology studies and the environmental humanities and social sciences.
Fall or Spring
1 Course Unit
STSC 1897 Environmental History
This course provides an introduction to environmental history—the history of the interrelationship between humans and the rest of nature. In the words of historian J.R. McNeill, "Human history has always and will always unfold within a larger biological and physical context, and that context evolves in its own right. Especially in recent millennia, that context has co-evolved with humankind." In this course we will study this co-evolution between human actors and non-human actors in global history, analyzing political, social, cultural and economic factors that affect ideas about nature and material effects on nature. We will consider the concept of the Anthropocene and study current environmental changes and challenges.

1 Course Unit

STSC 2018 Science in the Public
How, where, and when does the public encounter knowledge generated by others? And what are the stakes of those encounters for knowledge and the public? This course examines the sites, methods, and media through which knowledge of the world (scientific and otherwise) is preserved, interpreted, and communicated to non-specialist audiences. We will consider what forms of knowledge are chosen for public dissemination, the expressive and affective dimensions of these encounters, and the ways in which cultures of public knowledge have changed over time. Possible topics include science journalism, nature films, World's Fairs, museums, parks, and historic sites. The course will also offer students the opportunity to develop skills and experience in the creation of a public-facing interpretive project.
1 Course Unit

STSC 2078 Agriculture & Science in the Pacific World
This course examines how agricultural science has shaped the modern world. It focuses on the lands touching the Pacific Ocean during the industrial era—from the late eighteenth century to the late twentieth century—to highlight how scientific knowledge of the natural world and regimes of agricultural production interacted to change spatial relations of power between distant places. We will explore the history of botany, chemistry, and entomology in the context of European and Euro-American exploration excursions into the Pacific. We will also explore the history of once-exotic but now commonplace things that sustain our existence, from sugar, rice, and palm oil to guano. In short, this course examines how ideas about nature, methods of converting nature into commodities, and nature itself all influence each other. Students will work throughout the semester to gain knowledge about the intersection of agriculture, science, and empire in the Pacific, while also developing and strengthening their ability to conduct historical research and produce original arguments.

STSC 2080 Science and Religion: Global Perspectives
This survey course provides a thematic overview of science and religion from antiquity to the present. We will treat well-known historical episodes, such as the emergence of Muslim theology, the Galileo Affair and Darwinism, but also look beyond them. This course is designed to cover all major faith traditions across the globe as well as non-traditional belief systems such as the New Age movement and modern Atheism
Not Offered Every Year
1 Course Unit

STSC 2097 Race and Gender in Global Science
This course critically examines the creation of scientific conceptions of 'race' and 'sex' in the modern era and their global impact. How did 'race' and 'sex' come to be the primary categories through which human variation has been classified in the modern West? What concepts of "race" and "sex" did colonial scientists, doctors, naturalists, and other experts invent, and how and why did they do this? How have scientific conceptions of 'race' and 'sex' been adapted to fit the sociopolitical projects of formerly colonized regions? And how have recent developments in genomic science sought to reinvent these categories? With these questions in mind, this course challenges us to think critically about the political contexts in which conceptions of 'race' and 'sex' have been crafted as well as how they have been contested and re-defined.

STSC 2146 Science and Technology in Modern East Asia
Technology from East Asia is ubiquitous in everyday life in the 21st century. You may be reading these very words on a device designed or assembled in Japan, China, South Korea, or Taiwan. The region, now a global center of research and innovation, contains some of the world's most impressive technological and scientific achievements. It also exhibits some of the most distressing—from mass facial recognition surveillance in China to nuclear disaster in Japan. This course explores how this state of affairs has taken shape from the 19th century through the present. Topics include industrialization, military technology, science and the rise of nationalism, the proliferation of consumer electronics, and environmental engineering in a warming world.
Also Offered As: EALC 2502
1 Course Unit

STSC 2167 Science in the Middle East
This course provides a long-term overview of science, learning and naturalistic practices in the Middle East, broadly defined, from the eighth to the present. The students may expect to read state-of-the-field analyses of some of the turning points and major debates, including the Graeco-Arabic translation movement, occultism, decline, colonization and modernity. The course is built on a mixture of primary and secondary sources. The students are expected to contribute to class discussion and to write a final research paper. Some knowledge of the history of the region is desirable, but not required.
Fall, odd numbered years only
1 Course Unit

STSC 2186 Climate Change: Science, Technology and Society
Climate change is a sign that humans have become a force with planet-altering power. We need to understand how human societies work if we hope to respond to its dangers effectively. This course will use history to help students see climate change's social and political aspects. We'll examine how previous societies have responded to episodes of non-anthropogenic climate change, exploring market-based policies, power imbalances, and vulnerability. Through the history of science, we will investigate and critique how the growth of scientific knowledge often led climate change to be framed as a techno-scientific problem, best addressed through research and technological innovation. Students will learn how climate politics have been pushed by environmental and social justice activists, as well as by anti-communist scientists and corporate-sponsored cultivation of public doubt. Assignments will help students learn how to translate scholarly insights into engaging media that can reach various publics.

1 Course Unit
STSC 2198 Race, Science, and Globalization
Why do racist ideologies persist when a majority of scientists and scholars reject the premises they rely upon? Since the end of WWII, major scientific organizations like UNESCO and the American Anthropological Association have published statements rejecting race as an accurate representation of human biological variation. Yet despite widespread scientific opposition to the validity of race as an object of study, troublesome issues concerning race and racism abound in Western societies. If not an accurate description of human biology then what is race? And is racism an inevitable feature of human societies?

STSC 2213 Herbs and Humors: Medieval and Early Modern Pharmacology
What do gold, mummies, and rhubarb have in common? All were important ingredients in premodern pharmacy! This course surveys the history of pharmacology in the Medieval and Early Modern periods, beginning with the earliest European universities, through the professionalization of the medical field in the High and Late Middle Ages, and into the chymical medicine of the Renaissance. By engaging with a selection of both primary and secondary sources, students will learn about the development of the field of pharmacology and its relation to the broader field of medicine during its formation. Students will also learn how other emerging fields, such as alchemy and chemistry, and new technological advances made the development and advancement of pharmaceuticals possible. By the end of the course, students should expect to be able to address the following questions: How do theory and practice converge in premodern medicine and pharmacology? What is the relationship between the pharmacist and the physician, and how does this relationship shape medical practice? How does the invention of new technology shape the development of pharmacology during this period? No prior knowledge of medical history is needed for this course.
Also Offered As: HSOC 2213
1 Course Unit

STSC 2296 Technologies of Self and Society
As European empires expanded in the late eighteenth century, "social science" began to emerge in the lexicons of Western societies. Since these early beginnings in European imperialism, the social sciences have sought to represent, alter, and govern human existence while struggling to define "society" as something separate from "nature". This class examines how questions concerning the proper management of self and society are central to the ambitions and dilemmas of modern social sciences. We begin by tracing the origins of social science in late-eighteenth century thought and their professionalization in the nineteenth century. Continuing through to the twentieth century, we will observe how core social science disciplines like sociology, anthropology, and psychology attempted - in the name of anti-racism - to carve out distinct niches in opposition to biology and genetics. The course also examines the dramatic growth of the social sciences during the cold war period thanks to military funds. Our examination of cold war social science will focus on how social scientists began carving up the world into different "areas" of study and how they became increasingly oriented towards re-making individual psyches and societies in the "third world" to fit the image of an industrialized "West". The course will conclude by examining calls from indigenous scholars and scholars in the global South to decolonize social science.

STSC 2303 Fundamentals of Epidemiology
This course introduces students to the basic tenets of epidemiology and how to quantitatively study health at the population level. Students learn about measures used to describe populations with respect to health outcomes and the inherent limitations in these measures and their underlying sources of data. Analytic methods used to test scientific questions about health outcomes in populations then are covered, again paying particular attention to the strength and weaknesses of the various approaches. Multiple large epidemiologic research and field studies are used as in-class exemplars.
Spring

1 Course Unit

STSC 2304 Insect Epidemiology Pests, Pollinators and Disease Vectors
Malaria, Dengue, Chagas disease, the Plague- some of the most deadly and widespread infectious diseases are carried by insects. The insects are also pernicious pests; bed bugs have returned from obscurity to wreak havoc on communities, invasive species decimate agricultural production, and wood borers are threatening forests across the United States. At the same time declines among the insects on which we depend- the honeybees and other pollinators--threaten our food security and ultimately the political stability of the US and other nations. We will study the areas where the insects and humans cross paths, and explore how our interactions with insects can be cause, consequence or symptom of much broader issues. This is not an entomology course but will cover a lot about bugs. It's not a traditional epidemiology course but will cover some fascinating epidemiological theory originally developed for the control of disease vectors. It will cover past epidemics and infestations that have changed the course of the history of cities and reversed advancing armies. HSOC 241. Stem Cells, Science and Society. Gearhart/Zaret.

1 Course Unit
STSC 2418 Engineering Cultures
Modern engineering, technology, science, and medicine converge with each other in countless places, landscapes, institutions, and households. The profession of the engineer has been distinct from that of the scientist, and the "doctor," since its inception in the 1880s, however. In our class we trace overlaps and boundaries among engineers and other key experts of modern society, government, and public health, covering spaces in the Americas, Asia, and Europe. We explore rivalries, the roles of management and the state, class status and prestige, and we listen to engineers themselves and their understandings of their roles, functions, and purpose in modern societies. We cover fields such as civil engineering, mining, chemical-industrial engineering (including pharmaceutics and oil refinery), mechanical engineering and machine design/maintenance, computer science, and the engineering of information technologies. No pre-requisites, no prior knowledge required.
Also Offered As: HSOC 2418
1 Course Unit

STSC 2421 Manufacturing Minds: From Babbage to ChatGPT
When asked to tell its own history, ChatGPT answers literally, describing (vaguely of course) its own training data set. When pressed to describe the longer history of "technology like you," it mentions early computer science, programs that played chess or solved math problems, before naming deep learning algorithms and big data as the key breakthroughs. This lineage is not untrue, but it ignores the wider context in which individuals and organizations have come to pursue this strange dream of crafting an intelligent object. As an uncannily lucid conversation partner who freely performs all manner of textual tasks, ChatGPT participates in a longstanding tension in the history of information technology between the goals of manufacturing minds and making mindless clerical workers. In this course we historicize that tension in three domains—calculation, knowledge work, and games—all of which directly inform our efforts to imagine what ChatGPT and its ilk might be. Throughout, we will attend to the ways machinery shaped specific tasks’ construction in relation to gender, race, and class identities. We will see how technologies often imagined as disembodied are always material, interacting with human bodies and physical environments.

STSC 2607 Cyberculture
Computers and the internet have become critical parts of our lives and culture. In this course, we will explore how people use these new technologies to develop new conceptions of identity, build virtual communities and affect political change. Each week we’ll see what we can learn by thinking about the internet in a different way, focusing successively on hackers, virtuality, community, sovereignty, interfaces, algorithms and infrastructure. We’ll read books, articles, and blogs about historical and contemporary cultures of computing, from Spacewar players and phone phreaks in the 1970s to Google, Facebook, World of Warcraft, WikiLeaks, and Anonymous today. In addition, we’ll explore some of these online communities and projects ourselves and develop our own analyses of them.

1 Course Unit

STSC 2644 Artificial Subjects: Golems, Homunculi, Robots, and Cyborgs
What is the difference between a cyborg and an automaton? How are golems and homunculi similar? Are the droids in “Star Wars” slaves? For at least three millennia, humans have been grappling with the idea of creating artificial people and animals. Exactly how life-like these creations are has never been constant, but neither have definitions and ideas about mimesis and life. How do artificial subjects enforce and expose the boundary between made and born? How are they used to configure or complicate notions of human subjectivity and autonomy? This course focuses on the relationship between the artificial and the natural, the representation of that relationship, and the various cultural meanings inscribed in the bodies of robots. Course materials will be drawn from literature, myth, religious texts, critical theory/STS, historiography, scientific treatises, images, and film/tv.
Not Offered Every Year
1 Course Unit

STSC 2607 Data and Death
Digital tools and data-driven technologies increasingly permeate twenty-first century life. But how have they affected death? Do we conceive of death differently in a digitally mediated world? How do we mourn in the age of Facebook? How is “big data” put to work in the medical world that seeks to diagnose and treat fatal illnesses? What new forms of death and violence have been imagined or developed with digital technologies in hand? And what of those who believe that they could live forever, defying death, by uploading "themselves" into some new digital form? This course offers a historical exploration of these questions, looking at different intersections between data and death. We will work with a range of different sources ranging from science fiction to medical journals to the often-controversial death counts that follow natural and political disasters. Our goal will be to map the many contours of death in a digital world, but also to recognize the longer histories of counting, mourning, diagnosing, dreaming, and dying that have shaped them.

1 Course Unit

STSC 2708 Digital Democracy
Technological infrastructure shapes what forms of political life are possible within a society. Political campaigns, investigative journalism, public engagement, protest, government - all unfold on different time scales, in different forms, and with different consequences depending on what machines mediate them. This course explores the forms of American political life that have taken shape in and through modern digital computing. We will investigate especially a perceived tension at the heart of computing technologies - from artificial intelligence to social media - as they have been introduced to so many corners of American political life: Are computing technologies agents of liberation, or of control? The internet, for example, was embraced by some as an inherently democratizing and liberating force, giving users equal access to voice and information. On the other hand, many feared the internet as an unprecedented platform for corporate and government surveillance and manipulation. This course will analyze and historicize this tension, looking to unpack the complex and controversial role of computers in American political life from the Cold War to @POTUS.
Fall or Spring
1 Course Unit
STSC 2757 Prove It: Mathematics and Certainty
Mathematical knowledge is often held up as our most reliable and certain knowledge. The truths of mathematics serve as exemplars of certainty that are not tied to any specific time and place. Yet, throughout history, mathematics has been understood and practiced in quite different ways, for quite different reasons, and by quite different people. Mathematical certainty has been shaped by different beliefs and practices. Mathematicians and their work have been shaped by rich interactions with different dimensions of social life from religion and politics to architecture and war. Mathematics is not simply surrounded by a society external to it, it is an integral and complex part of it. What concerns have motivated mathematical research through history? How has mathematics been put to work in different domains of culture? What does it mean to be a mathematician in different times and places? Does mathematical knowledge bear traces of the conditions in which it was produced? What counts as proof and to whom? How do we reconcile the changing character of mathematical research with the traditional understanding of mathematical knowledge as time and place independent? This course takes up these questions by looking to different worlds in which mathematics and mathematical certainty have taken shape.

1 Course Unit

STSC 2829 Nature's Nation: Americans and Their Environment
The United States is "nature's nation." Blessed with an enormous, resource-rich geographically diverse and sparsely settled territory, Americans have long seen "nature" as central to their identity, prosperity, politics and power, and have transformed their natural environment accordingly. But what does it mean to be "nature's nation?" This course describes and explores how American "nature" has changed over time. How and why has American nature changed over the last four centuries? What have Americans believed about the nation's nature, what have they known about the environment, how did they know it and how have they acted on beliefs and knowledge? What didn't or don't they know? How have political institutions, economic arrangements, social groups and cultural values shaped attitudes and policies? How have natural actors (such landscape features, weather events, plants, animals, microorganisms) played roles in national history? In addition to exploring the history of American nature, we will look for the nature in American history. Where is "nature" in some of the key events of American history that may not, on the surface, appear to be "environmental?"

STSC 3028 Normal People
For most of us, what's normal feels downright natural. The normal is our baseline, invisible and unconsidered until something abnormal draws our attention to it. But a little prodding shows the contradictions within bland, boring normality: it's defined by our internal feelings as much as by quantified standards, it describes individuals as well as populations, and it is intensely difficult to describe on its own merits without comparison. So what does it mean to be normal, anyway? This seminar examines "the normal" as a medical and scientific concept from the Renaissance until today. Has the concept of normal always existed? What makes a person or body normal? How has such a thing been assessed? Can the normal exist without deviance — and is this relationship inherently one about power? We will examine how scientific ideas of "the normal" — and its conflation with "the natural" — shaped medical knowledge and ideologies about racial difference, sex and gender, socioeconomic class, anatomical difference and disability, and human behavior. How have the "normals" of the past shaped our current scientific understandings of ourselves and the people around us? Our goal will be to make visible the ways that "normal" gets normalized in order to deepen our critical engagement with modern medicine, wellness culture, and racial and gender politics.

STSC 3087 Science and Spectacle: Seeing is Believing
In the 10th century, the Byzantine emperor received visitors on a levitating throne, surrounded by robotic animals. In the 17th century, Galileo gave public demonstrations to prove the existence of the moons of Jupiter (and the power of the telescope). In the 20th century, an estimated 650 million people watched the Apollo 11 moon landing. These are only a few examples of the ways that scientific and technological knowledge have been displayed for large numbers of people who are not themselves also involved in making scientific or technological knowledge. If seeing is believing, what do performances of scientific or technological virtuosity or discovery depict, and to what ends? This course explores the relationship between scientific and technological knowledge and public display, using examples taken from the medieval period to the 20th century.
Fall or Spring
1 Course Unit

STSC 3088 Science, Labor and Capital
This course looks at the intertwined history of science, labor and capital since the fifteenth century. Starting with the surge of patents for labor-saving devices in fifteenth century Italy and coming all the way down to the contemporary neoliberal university, the culture of science and the cultures of labor and capital have always remained in intense conversation. The first half of the course will focus on the early relations between science, labor and capital. We will discuss patterns of employment for scientists, the relationship between manual work and intellectual work, the scientific aspects of commercial capitalism as well as the debates on the transition to capitalism. The second half of the course will focus on the period from the nineteenth century to the present. We will talk about colonialism and science, the social ascendance of the scientist in relation to the technician, as well as the political economy of contemporary science and of the contemporary university. This is a seminar course and will require regular participation. Some knowledge of the existing literature on capitalism, especially the writings of Ellen Wood and E.P Thompson, are recommended but not required.
Also Offered As: HIST 0878
1 Course Unit
STSC 3097 Indigeneity in Health, Science, and Technology
In recent decades, Indigenous Studies has emerged as a trans-national and interdisciplinary academic discipline that seeks to understand the historical experience, social reality, and political aspirations of Indigenous peoples. This course examines how theories and methods from Indigenous Studies offer new perspectives on core issues in the social study of science and technology and of health and society. Through films, podcasts, literature, and academic articles we will examine the historical role that science, technology, and medicine have played in the colonization of Indigenous people in the Americas, Australia, and New Zealand. We will also examine how Indigenous groups have resisted scientific and technological projects and participated in their development in ways that foster self-governance and territorial sovereignty.

Also Offered As: HSOC 3097
1 Course Unit

STSC 3136 Queer Science
This course gives students a background in the development of sex science, from evolutionary arguments that racialized sexual dimorphism to the contemporary technologies that claim to be able to get at bodily truths that are supposedly more real than identity. Then, it introduces several scholarly and political interventions that have attempted to short-circuit the idea that sex is stable and knowable by science, highlighting ways that queer and queering thinkers have challenged the stability of sexual categories. It concludes by asking how to put those interventions into practice when so much of the fight for queer rights, autonomy, and survival has been rooted in categorical recognition by the state, and by considering whether science can be made queer. Along the way, students will engage with the tools, methods, and theories of both STS and queer studies that emphasize the constructed and political underpinnings of scientific thought and practice.

1 Course Unit

STSC 3145 The Universe: Historical Inquiries in Physics, Philosophy and Religious Belief
The National Science Foundation's decadal review states that "Today, astronomy expands knowledge and understanding, inspiring new generations to ask, How did the universe form and the stars first come into being? Is there life beyond Earth? What natural forces control our universal destiny?" Because of the remarkable scientific progress in recent decades, in particular the explosion over the last decade of interest in and urgency to understand several key areas in astronomy and astrophysics, scientists are now poised to address these and many other equally profound questions in substantive ways. The opportunities for the future fill us with awe, enrich our culture, and frame our view of the human condition. Undergraduates today encounter one of the most profound discoveries about the physical universe – discoveries of dark energy, quantum theory, exoplanets. These discoveries also prompt some of the most profound philosophical and theological questions. This course interrogates the astrophysical sciences and traditions of philosophy and religious belief in order to explore the universe, its nature, origins and destiny. It serves as an introductory course for undergraduates who are seeking a historical and philosophical context to scientific studies, especially in physics, and/or to develop their interdisciplinary skills of global thinking. This course does not attempt to resolve perennial questions about the universe, but rather to expose historical and scientific ways of reflecting on them.
Fall
1 Course Unit

STSC 3147 Scientific Instruments and the Making of Knowledge
This course surveys the history of scientific proof and authority through the instruments used to collect and interpret data. In stories of discovery, scientists' tools often take a back seat to their ideas, but instruments play a crucial role as physical intermediaries. All scientific instruments have been built and used by human beings according to their own ideas of what data are important to collect and how the data should be interpreted. How have the design and function of instruments affected scientists' perspectives, and vice versa? What intellectual, political, and symbolic roles have instruments played beyond simply collecting data, and how do they continue to do so? We begin by examining the instruments of the "Scientific Revolution" and the ways their owners put them to use constructing not just data sets, but a new scientific authority in describing previously invisible realms of nature. Next, we look at the reciprocal relationship between scientific theory and physical tools, assessing how each has shaped the other, both individually and for entire fields of study in the nineteenth and twentieth centuries. We conclude by expanding the view to include the ways instruments interact with and affect the general public, from doctor-patient interaction to national politics and policy.

STSC 3167 Global Radiation History: Living in the Atomic Age 1945-Present
In this Collaborative Online International Learning Seminar, students will engage with broad experiences of radiation risk since 1945. We will explore the history of the global rise of nuclear weapons and nuclear power with special attention to those exposed to radiation, including Navajo uranium miners, indigenous groups in Australia, atomic bomb survivors at Hiroshima and Nagasaki, Marshall Islanders, and residents near Fukushima and Three Mile Island. We also consider the work and experiences of scientists and physicians working with those exposed around the world, and look at artistic and literary responses to atomic bombs and radiation risk. We will engage with protracted and complex ethical debates about bombs and power plants. Our virtual meetings will include a visit to see the "Lucky Dragon" boat in Tokyo, to the Atomic Bomb Museum in Hiroshima, to visit with a "downwinder" in Eastern Washington State, go on a tour of the B-Reactor at Hanford Nuclear Facility, discuss the atomic bombings with survivors on the Peace Boat, and go on a virtual tour of the Daigo Fukuryu Maru Exhibition Hall, where artists inspired by survivor accounts produce murals that reflect their stories.

1 Course Unit

STSC 3183 Profit and Knowledge
The goal of capitalism is profit; the goal of science is knowledge. These pursuits may seem different on the surface, but they often overlap in surprising ways. This course uses the tools of science and technology studies to explore the relationship between capitalism and science. By examining how people have pursued both profit and knowledge in different times and places, we'll look at how financial interests have shaped the practice of science and how science has shaped the pursuit of wealth. We'll also consider efforts to imagine new possibilities for economic and knowledge systems that have generated both rewards and risks, both pleasures and pains. Topics include the public goals and values of capitalism and science; case studies such as global trade and logistics, biotechnology, and the service economy; and challenges such as white supremacy, violence, and climate change.

STSC 3216 Toxicity in Context
We live amidst a constant stream of messages, practices, and regulations about things, behaviors, or relationships deemed "toxic." Within environmental health in particular, all sorts of actors grapple with complex decisions about what it means to live with materials and anticipate the ways they can interact with human health and the environment - at present through the distant future. What exactly do we mean when we categorize some substances as toxic, and by extension others as safe? Are there other ways of managing uncertainty or conceptualizing harm? How are these concepts built into broader social structures, economics, and regulations? What other work are they used to do? In this course, we will explore major social science approaches to toxicity and apply these theories to our own analysis of examples from the contemporary United States, and in particular, to a robust oral history collection with residents, developers, and government scientists grappling with these questions just outside of Philadelphia. This course grows out of scholarship in the history and anthropology of environmental risk, and health, as well as direct ethnographic, historical, and oral history research at a site outside of Philadelphia grappling with the meaning of materials that remain on site after past industrial manufacturing. In this course, students will gain an introduction to oral history and analysis of in-depth interviews, and introduction to key approaches in theorizing toxicity. By connecting life experiences of residents, government scientists and others, at an actual site, with the literatures we read in class, students will think critically about the ways the literatures we engage do and do not fully encompass the experiences and concerns that are intertwined with toxicity for actual people grappling with making sense of uncertain harms amidst urban planning.
