What makes an exceptional socially-engaged public artwork or project? For those who practice in the field, the question invites careful consideration of aesthetics, process, participation, staging, and interpretation. Across the better part of the last decade, this line of inquiry has fueled the work of Monument Lab, a public art and history studio based in Philadelphia. With deep roots and close ties to the Department of Fine Arts’s Center for Public Art and Space, and methods interanimating contemporary art and pedagogy, Monument Lab works with artists, students, activists, municipal agencies, and cultural institutions on exploratory approaches to public engagement and collective memory. The Monument Lab course in Fine Arts explores the theoretical study and practical applications of public art. The course operates as a socially-engaged “civic studio” to engage case studies, debate key issues in the field, meet with artists and practitioners, conduct site and studio visits, and practice direct methods for producing individual and collaborative public projects. Focusing on the intersection of theory and practice, the praxis course highlights engaged methods piloted by Monument Lab in citywide exhibitions and special projects, especially to focus on themes and models for participation, public engagement, co-creation, curation, temporary installation, and socially engaged art-making. Each student will embark on a semester-long independent project, as well as participate in a group initiative centered on a current Monument Lab project in Philadelphia to gain experience in the field of socially-engaged public art.
1 Course Unit

FNAR 5064 Is This Really Happening? Performance and Contemporary Political Horizons
This class addresses the meeting points inside of and between a range of resistant performance practices with a focus on artists using performance to address political and social encounters in the contemporary moment. Performance, a chaotic and unruly category that slides across music, dance, theater and visual art, has long been a container for resistant actions/activities that bring aesthetics and politics into dynamic dialogue. Embracing works, gestures, movements, sounds and embodiments that push against and beyond the conventions of a given genre, performance can’t help but rub uncomfortably against the status quo. Scholars working across Performance Studies and Black Studies importantly expanded critical discourse around performance to address the entanglement of the medium with physical, psychic, spatial and temporal inhabitations of violence and power. Generating copious genealogies of embodied resistance, this scholarship instigates a complex, interdisciplinary and multidimensional perspective on intersections between art and life, performance and politics. The class hosts a series of public lectures, presentations and performances by visual artists, choreographers, theater artists, composers/musicians, performers, curators and activists engaged with the social and political moment. Presentations will be open to the public with students in the course developing in-depth research into the work of each visiting artist/performer/presenter to engage the larger context of each visitor’s scholarship and/or practice through readings, discussion and in-class presentations. This course is open to all interested students. No prior prerequisites or experience with performance or the performing arts is necessary.
1 Course Unit

FNAR 5065 Queer Imaginings
Queer is a fluid, unfixed and undefinable space offering endless utopian possibilities & potentials concerning gender, sexuality, personal autonomy and agency. Queer Imaginings is a forum for the reimagining of Queer representation/s. This course provides a safe space to mine, critique and analyze Queer imagery, both historical & contemporary. We will explore the ways in which Queerness is approached, represented & manipulated in pop culture, politics, society and the media. Students enrolled in this studio/seminar course will partake in discussions and research pertaining to Queer images and their intersections with race, trans/non-binary-equity, feminism, disability & class structure. These complex subjects will inspire respectful debate throughout the course, and most importantly, generate robust discussion about the work students create. Prompted through select readings and visual presentations, students will be guided to research, analyze and create artworks, which are inspired by various topics related to Queerness. A special emphasis will be placed upon issues arising around visibility, erasure & inclusivity. This forum offers a space to reexamine, research and propose new representations of Queerness. This is primarily a lens-based course with expansive possibilities (interdisciplinary, transdisciplinary, multidisciplinary)
1 Course Unit

FNAR 5066 Advanced Projects in Animation
This course will focus on developing and producing projects that utilize advanced approaches to 2D and 3D computer animation. We will engage emerging techniques of visualization such as data-driven animation, algorithmic animation, working in hybrid forms of stop-motion, hand-drawn and 3D computer animation, working with dynamic physical simulations, rigging animated characters, or structures. The meeting pattern of the course will enable members to complete ambitious independent or group based animation projects and share the methods that they develop along the way.
Not Offered Every Year
1 Course Unit

FNAR 5067 Experimental Clay
In this course students will examine and explore the sculptural foundations of clay in the world of contemporary art and design, by experimenting with its sculptural materiality, as a means to develop ideas in large-scale and unconventional ways. Through investigative and conceptually driven projects, students will use clay and other non-traditional materials to make modular structures that incorporate advanced mold-making, casting, and advanced building techniques to develop their own artistic voice through the expansive medium of clay.
1 Course Unit

FNAR 5068 Film Sound: History, Aesthetics and Subversion
Sound and Image as experienced in the cinema, are not divisible. One perception influences the other, and transforms it. While a preexisting harmony between these two senses may exist, its conventions are subject to manipulation and the whims of subversion. Film Sound tracks the technological and aesthetic history of sound for film including psychoacoustics, dialogue, music, sound fx and audio's gradual and triumphant march towards fidelity, stereo and surround sound. This lecture course, through an historical and pedagogical romp loaded with examples throughout film history and visits by lauded audio professionals from the film world, seeks to instruct students to engage in the process of sound perception, gaining an appreciation for the art of sound as it relates to the varied phenomenological dimensions of that unique audio-visual encounter we call movies.

FNAR 5120 Bodies Bodies Bodies: An Introduction to Performance Art
Theater, Dance, Music, Opera, Film, Reality Television, Installation, Intervention, Social Encounters, Protests, Lectures, Seminars...what are the edges and borders of what we call “performance”? What, exactly, makes something “performance art” a “performance” or “performative”? How does an artist employ time, space, site, and audience to create a performance work? What do we mean when we talk about “the body”? In this course, we’ll delve into a survey and practice of making performance. This course is intended to introduce students of various disciplines to the central components of performance art. Following a hybridized module, the class will present students with a cursory introduction to a history of performance art; its theoretical framings and critical inquiries and various approaches to making, through lecture, seminar, and in-class performance workshops. This introduction will invite students to make their own performance work using a variety of techniques and frameworks discovered through workshops, readings, and viewings of work by feminist, queer, anti-capitalist, and anti-colonial artists and theorists. Through solo and collective exercises in movement, installation, speech, sound, drama, and choreography, we will learn the basic tools of making a performance composition that challenges the boundaries of traditional dance and theater (while also welcoming any traditional training at one’s disposal.) Throughout the semester, students will attend performances and screenings, guest artist lectures, performance workshops, and present a final performance project utilizing personal research, skills, and interests discovered through our weekly sessions.
Mutually Exclusive: FNAR 1120
1 Course Unit

FNAR 5180 Paris Modern: Spiral City
Paris has been shaped by a mixture of organic development, which is still today perceptible in the “snail” pattern of its arrondissements whose numbers, from 1 to 20, coil around a central island several times so as to exemplify a “spiral city,” and of the violent cuts, interruptions and sudden transformations that again and again forced it to catch up with modern times, the most visible of which was Baron Haussmann’s destruction of medieval sections of the city to make room for huge boulevards. Thus Parisian modernism has always consisted in a negotiation between the old and the new, and a specific meaning of modernity allegorized for Louis Aragon, the Surrealists and Walter Benjamin consisted in old-fashioned arcades built in the middle of the 19th century and obsolete by the time they turned into icons of Paris. The aim of the class will be to provide conceptual and pragmatic (visual, experiential) links between a number of texts, theories and films deploying various concepts of the modern in Paris, with a guided tour of the main places discussed. The course that Professors Jean Michel Rabate (English) and Ken Lum (Fine Arts) will lead studies Paris as a work of science-fiction where its futures are embedded in its many pasts, where discontinuity is a continuous process and where the curving line of the snail’s shell is a line of ceaseless curling resulting in a perennial oscillation where an outside converts into an inside and an inside then converts to an outside. The course will travel to Paris over spring break to get an in-depth look at the topics discussed in class.
1 Course Unit

FNAR 5410 if night is a weed and day grows less
If Night Is A Weed And Day Grows Less The title of this class posits a shift in balance: of the natural order, of the built environment, of the body politic, of perception. The result is a creeping entropy that can either be embraced or redirected. Taking a morphological approach to image making students can use any variety of televisual image capture technologies. From analog to digital, satellite imagery to scanner. Time arrested or accelerated. Night for day and weeds for gardens, the work produced should ask us to slow down and reassess the objectives of form, language, image and place, to create new prototypes for engagement and new modes of understanding our environment and perhaps even to reinvent the conventions of landscape as a genre. Readings, screenings, discussions and critiques make up the curriculum along with studio time. Each student is required to complete a visual essay that addresses these themes using image capture technologies. Mutually Exclusive: FNAR 2410
1 Course Unit

FNAR 5750 Graduate Drawing Seminar
This seminar examines the essential nature of drawing has in an artist’s process. Direct visual perception, self-referential mark making, the viability of space and understanding it, and drawing from one’s own work are some of the drawing experiences encountered in the course. There are regular critiques and discussions based on the work and readings. Spring
1 Course Unit

FNAR 5760 Critical Issues Seminar
This seminar investigates issues concerning visual artists. Part one begins with Plato and Kant and progresses through a history of ideas in art, exploring the questions which concern artists today, including Modernism, post-modernism, abstraction and representation, appropriation, context, art and politics, identity, and the artist’s relationship to these subjects. Part two of the course will focus on current texts in contemporary art, the current dialogue(s), and issues specific to our time and place as artists. The seminar engages contemporary issues in a spirit of curiosity and critique, and relates them to our studio practice. Fall or Spring
1 Course Unit

FNAR 5940 Graduate Photography Seminar
This seminar will examine contemporary issues in photography from the point of view of the practicing artist. Students will meet with visiting critics during the semester, the course will also include student presentations, weekly discussions and group critiques, visits to artists’ studios and gallery and museum exhibitions. Texts for the seminar will be drawn from contemporary critical theory in art, philosophy, history and popular culture. Required for all graduate photographers.
1 Course Unit

FNAR 5980 Grad Sculpture Seminar
Sculpture instructor (to be announced) will lead this studio course based on improvisational approaches to developing individually made sculptural works, as well as works that are made in collaboration with others. As in Music or Theater, these works involve the collaboration of others, yet they are equally initiated by small thoughts, and carry those thoughts into a more public and interactive format of installation.

1 Course Unit

FNAR 6110 Don’t Forget: Inclusion, Exclusion, and Memory in the Contemporary City
What role do history and memory play in processes of community building? Do they promote solidarity, inflame division, or both? What are the relationships between a city’s built environment, commemorative landscape, and the circumstances that stimulate, or hinder, the growth of community? In this seminar students will tackle these questions in an effort to uncover some of the ways in which public space, memory, and community intersect. Through a series of case studies and texts we will examine the controversies, challenges, and community impact of commemorative projects in cities both in the U.S. and abroad. Each week we will focus on one city/region, theme, or commemorative project, and students will study design strategies, processes of development and construction, and theoretical concerns surrounding the role of memory and history in the public space. Drawing on discourse from art, architecture, urbanism, history, and preservation studies, this course brings these fields together in an effort to understand how communities can be strengthened through an engagement with, and examination of the past. For the final project, students will research a commemorative dilemma in a city of their choice, engaging with real-life debates and procedural processes to develop a more inclusive alternative to the status quo.
1 Course Unit

FNAR 6400 Teaching Artist Practicum
Teaching Artist Practicum supports artists engaging in education work, through the development of liberatory, expansive and justice-oriented teaching outlooks and approaches. Students in this course will gain context around forms of arts education through the lens of critical pedagogy. This course supports current/upcoming classroom experiences of participants (TA-ships and teaching appointments), and helps students prepare for teaching opportunities. This course will include readings/responses, creative and practical exercises, collaborative experiences, presentations, and a final project. This course is geared towards graduate students who are artists/cultural producers looking to teach in higher education, adult, community and young-adult (teen) learning, and alternative venues. Undergraduates may enroll with permission of the instructor.
1 Course Unit

FNAR 6664 Documentary Ethnography for Museum of Exhibition practices
This course will investigate research modalities that center around documentary storytelling in the museum context. During the semester, we will examine research strategies that collaborate with curatorial experts. The class will utilize cinematic techniques that investigate cultural narratives revolving around cultural heritage sites, rituals and ceremonies, artifacts, materials and living traditions. Students will engage Solomon’s process of her creation of the new digital and in-gallery content that will reframe the Metropolitan Museum’s African art galleries. 1 semester will culminate in students creating their own short film content that will screen publicly in the gallery at the end of the semester.

FNAR 7120 Visual Epistemologies for Creative Practices
In this joint seminar between Architecture and Fine Arts, we investigate the alternative modes of diagrammatic thinking that are influencing art and design disciplines. The course provides a historical perspective on the evolution of visual epistemologies from late 1950s and reviews its current state from the lens of contemporary representation theory, computation, fabrication and information technologies. The goal is to gain both theoretical and hands-on experience with the contemporary diagramming techniques in order to advance both designs and the thinking behind them.

FIGS 7770 Francophone, Italian and Germanic Proseminar
This proseminar will introduce first-year FIGS graduate students to doctoral studies in the humanities. It is organized into four parts. Part I, “Scholarly Habits and Resources,” introduces students to a variety of resources at Penn, discusses the scholarly habits that graduate students should develop, and covers strategies for promoting mental and physical well-being as a graduate student. Part II, “Intervening in the Field,” introduces students to the processes of conference participation and article publication. Part III, “The Dissertation,” covers the ins-and-outs of writing the dissertation. Part IV, “Awards, Networking, and Jobs,” addresses the importance of awards and networking as well as the academic and non-academic job markets. While DEI issues are constantly addresses throughout the course, also in the form of assignments, there are also bridge sessions to other courses, especially on pedagogy and recent research trends. In addition to weekly discussions and activities, this course will include a number of guest speakers who will share their expertise and give guidance on the how-tos of the field. Students will be given pre- as well as post-class activities to reflect on each week’s topic and begin to prepare a dossier for later use in their graduate studies. Much of the information in this proseminar becomes particularly relevant during the final years of coursework and your dissertation writing years, but it is important to be introduced to these topics and to begin to think about them now. This course is designed for PhD students in Francophone, Italian, and Germanic Studies. Many of the topics apply to all three fields; however, students will also have the opportunity to work on areas that are specific to their language for certain topics. They will also be able to add to the course materials for future graduate students in FIGS.

FREN 0080 Laughter and Tricky Topics
This course takes a comparative approach to studying the philosophy and praxis of laughter in a variety of artistic media — texts, films, performances and memes. We will seek to develop a critical apparatus to answer the following questions: How does laughter unite us? How does it divide us? How does it contribute to identity and community formation? We will focus on humoristic expression produced in contexts considered too serious for lightheartedness, such as death, race and gender-related oppression, and disenfranchisement. Together, we will wonder whether everything can be a laughing matter, if irony is even funny (and what does it mean anyway?), and whether humor has the potential to effect meaningful sociopolitical change. Our theoretical corpus will include works by Bakhtin, Baudelaire, Bergson, and Freud, who conceptualized laughter in wildly different ways—respectively as carnivalesque, satanic, social, and as a coping mechanism. In the 1940s, René Ménil, a Franco-Caribbean philosopher, synthesized these early theories and further developed them into a means of resistance for colonial subjects. To see these concepts in action, we will engage with materials spanning three centuries, from a short story written by Jonathan Swift to contemporary French comedies (subtitled in English). Should laughter occur throughout the semester, its causes will be dutifully analyzed and presented in diverse oral and written assignments.

FREN 0081 Decolonizing French Food
Wine and cheese, baguettes and croissants, multiple courses and fresh ingredients straight from the market—these are the internationally recognized hallmarks of French food. Yet, even as the practices surrounding the mythical French table have been deemed worthy of a place on UNESCO’s World Heritage List since 2010, culinary traditions in France remain persistently rooted in legacies of colonialism that are invisible to many. In order to “decolonize” French food, this seminar turns to art, literature, and film, as well as archival documents such as advertisements, maps, and cookbooks. In what ways do writers and filmmakers use food to interrogate the human, environmental, and cultural toll that French colonialism has taken on the world? How do their references to food demonstrate the complex cultural creations, exchanges, and asymmetries that have arisen from legacies of colonialism? We will interpret artworks, read literature (in English or in translation), and watch films (subtitled in English) that span the twentieth and twenty-first centuries by authors and directors from across the Francosphere—from Haiti, Guadeloupe, and Martinique in the Caribbean; to Mauritius in the Indian Ocean; from the Vietnamese diaspora in France, Canada, and the United States; to North, Central, and West Africa. Just as food can be examined from many angles, our discussions will focus on art, literature, and film, but also take into account perspectives from the fields of history, anthropology, and environmental studies. Moreover, we will employ the theoretical tools supplied by food studies, feminist and gender studies, critical race studies, and postcolonial studies.

FREN 0100 Elementary French I
This course is the first semester of the elementary-level sequence designed to develop functional proficiency in the four skills and gain familiarity with French and Francophone culture. The primary emphasis is on the development of the oral-aural skills, speaking and listening. Readings on topics in French culture as well as frequent writing practice are also included in the course. As in other French courses, class will be conducted entirely in French. You will be guided through a variety of communicative activities in class which will expose you to a rich input of spoken French and lead you from structured practice to free expression. You will be given frequent opportunity to practice your newly acquired vocabulary and grammatical structures in small group and pair work which simulate real-life situations. The course will introduce you to French and Francophone culture through authentic materials including written documents, simple articles, songs, films, videos and taped conversations between native speakers. Out-of-class homework will require practice with the online component of the textbook (MyFrenchLab) as well as regular writing practice. The course will also invite you to explore the Francophone world on the Internet.

FREN 0120 Intensive Elementary French for Beginners
This course is an intensive elementary language course for students who have not studied French, but who have met the language requirement in another foreign language. This course will provide an introduction of the basic structures of French, with intensive work on speaking and listening designed to prepare students to take Intermediate French. Due to the nature of the course, the first half will progress rapidly with the more difficult material presented after the midterm period. As in other French courses, class will be conducted entirely in French. You will be guided through a variety of communicative activities in class that will expose you to a rich input of spoken French and lead you from structured practice to free expression. You will have frequent opportunities to practice your newly acquired vocabulary and grammatical structures in small group and pair work that simulate real-life situations, so please prepare each day’s lesson attentively. The course will introduce you to French and Francophone culture through authentic materials including written documents, simple articles, songs, films, videos, and conversations between native speakers. Homework will consist of aural comprehension exercises in the online workbook as well as regular writing practice. The course will also invite you to explore the Francophone world by completing an engaging, interactive project in the final stage of the semester. By the end of this course, you should be able to meet a variety of day-to-day needs in a French-speaking setting and to handle a range of basic travel transactions. You will be able to engage in simple conversations on familiar topics such as family, lodging, daily routines, leisure activities, etc. You will begin to be able to speak and write in the past, present and the future, make comparisons, and describe people and things in increasing detail. You will develop reading skills that should allow you to get the gist of simple articles and you will more readily discern information when you hear native speakers talking in a simple fashion about topics familiar to you. Permit required.

FREN 0300 Intermediate French I
In French 0300, you will be "parachuted" to Paris where you will choose where you want to live and explore your chosen neighborhood in depth. Every week we will discuss a different theme of Parisian life and French culture. As you discover your arrondissement, you will share information about it with your classmates and develop a collective knowledge of the French capital. You will tell your imagined experiences through your journal and therefore as a class, we will "raconter Paris". French 130 is the first half of the intermediate sequence designed to help you attain a level of proficiency that should allow you to function comfortably in a French-speaking environment. This course will build on your existing skills in French, increase your confidence and ability to read, write, speak, and understand French, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. As in other French courses at Penn, class will be conducted entirely in French. In addition to structured oral practice, work in class will include frequent communicative activities such as role-plays, problem-solving tasks, discussions, and debates, often carried out in pairs or small groups. Through the study of authentic materials such as articles, literary texts, songs, films, videos, you will deepen your knowledge of the French language and culture.

FREN 0340 Accelerated Intermediate French
An intensive two-credit course covering the first and second semester of the intermediate year. See descriptions of French 0300 and 0400. Students must have a departmental permit to register. Also offered in the summer Penn-in-Tours program in France.

Spring
2 Course Units

FREN 0400 Intermediate French II
French 0400 is the second half of a two-semester intermediate sequence designed to help you attain a level of proficiency that should allow you to function comfortably in a French-speaking environment. You are expected to have already learned the most basic grammatical structures in elementary French and you will review these on your own in the course workbook. This course will build on your existing skills in French, increase your confidence and ability to read, write, speak and understand French, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. This course focuses on the culture of French-speaking countries beyond the borders of France. Along with your classmates, you will explore the cities of Dakar, Fort-de-France and Marrakesh, investigating the diversity of the Francophone world through film, literature and music. As in other French courses at Penn, class is conducted entirely in French. In addition to structured oral practice, work in class will include frequent communicative activities such as problem-solving tasks, discussions, and debates, often carried out in pairs or small groups. Daily homework will require researching in the library and on the Internet, listening practice with video clips, in addition to regular written exercises in the workbook.

1 Course Unit

FREN 0800 Advanced French in Residence
Open only to residents in La Maison Francaise. Participants earn 1/2 c.u. per semester. Course can be taken twice for credit.
Two Term Class, Student may enter either term; credit given for either 0.5 Course Units
FREN 1000 Advanced French
French 1000 is a third-year level course aimed at better understanding contemporary French society, language and culture, with a special focus on today's young generation. What defines a generation in the first place, and how do the lives of young people in France compare to those of their American counterparts? To answer these questions, students in this course will delve into numerous aspects of French youth experience from the school system to family life, and from the workplace to the political arena, with the aid of resources including contemporary films, news articles, songs, literary texts, and the recent sociological project "Generation Quoi." In addition, they will forge connections with the French community on Penn's campus, as they embark on a journey of cultural exploration and reflexive self-discovery. While this course is not a grammar-focused course, particular attention will be given to recognizing and employing the different registers of spoken and written French. The course constitutes excellent preparation for study abroad in a French-speaking region. Prerequisite: Open to students who have completed the language requirement. Students who are continuing from French 0340 or 0400 should take French 1000 before moving on to more advanced French courses.
Fall or Spring
1 Course Unit

FREN 1071 Fashion and Modernity
In this class we will study the emergence of the Modernist concept of the "new" as a term also understood as "new fashion." We will move back and forth in time so as to analyze today's changing scene with a view to identify contemporary accounts of the "new" in the context of the fashion industry. Our texts will include poetry, novels, and films. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ARTH 2889, COML 1072, ENGL 1071, GRMN 1065
1 Course Unit

FREN 1214 Advanced French Conversation and Composition
This course is intended to improve communicative skills through extensive practice in a variety of styles and forms. It aims to enhance student understanding of contemporary French culture, thought and modes of expression by promoting both cross-cultural understanding and critical thinking and developing students' communicative abilities (in the presentational, interpretive, and interpersonal modes). The specific language functions we will focus on are: narration; description; offering and soliciting advice and opinions; expressing feelings; critique and analysis; argumentation. It is organized around the themes of current events, identity and art. Activities include the study, analysis and emulation of model texts as well as discussion and debates about events and social issues as covered by the French news media (television, print, Internet sources). The oral work include video blogs and group presentations on selected topics and current events. Written practice will comprise reflective journals, essays and collaborative work on Web projects. On completing this course, students will feel more confident and be able to speak and write effectively on a range of contemporary issues. Recommended for students who are planning to study abroad in France.
Fall or Spring
Prerequisite: FREN 1000

FREN 1226 French History and Culture to 1774
This civilization course presents the fabric/fabrication of the so-called national memory through its places of memory (lieux de memoire), as well as its places of non-memory (lieux de non-memoire), going from the Gauls to the Enlightenment. As the course tells the story of the rise and fall of the French monarchy, one is encouraged to envision it as a palimpsest and to become aware of the roles played by myths and legends. It helps see how French history has been manipulated by the collective memory, how retrospection often redefines, fabricates events and people depending on the needs of the moment. This course is taught in French.
Fall
Prerequisite: FREN 1212 OR FREN 1214 OR DWTEST=5
1 Course Unit

FREN 1227 French History and Culture 1789-1945
This civilization course presents the creation of modern France from 1789 to 1945 through the omnipresence of the myth of Perseus and Medusa in the historical narrative. The objective of the course is to introduce students to a period in France's history that begins with the French Revolution and ends with Maréchal Pétain's National Revolution. It also helps them discover the intricacies of the slow construction of modern France. In this course, students are led to reflect on contemporary French culture and society that are the result and the remnants of the Revolution, and to make connections with American history. This course is taught in French.
Spring
1 Course Unit
FREN 1230 Masterpieces of French Cinema
This course will introduce students to key films of the French film canon, selected over a period ranging from the origins of French cinema to the present. Students will also be introduced to the key critical concepts (such as the notion of the “auteur” film genre) informing the discussion of films in France. The films will be studied in both a historical and theoretical context, related to their period styles (e.g. “le réalisme poétique,” “la Nouvelle Vague,” etc.), their “auteurs,” the nature of the French star system, the role of the other arts, as well to the critical debates they have sparked among critics and historians. Students will acquire the analytical tools in French to discuss films as artistic and as cultural texts. Please note: This course follows a Lecture/Recitation format. The Lecture (FREN 1230-401/CIMS 1230-401) is taught in English. For French credit: please register for both FREN 1230-401 (lecture) and FREN 1230-402 (recitation); the FREN 1230-402 recitation is conducted in French. For Cinema Studies credit: please register for CIMS 1230-401 (lecture) and CIMS 1230-403 (recitation); both are taught in English. Prerequisite: Two 200-level courses taken at Penn or equivalent.

FREN 1231 Perspectives in French Literature: Love and Passion
This basic course in literature provides an overview of French literature and acquaints students with major literary trends through the study of representative works from each period. Students are expected to take an active part in class discussion in French. French 1231 has as its theme the presentation of love and passion in French literature.
Fall
Also Offered As: COML 1231
1 Course Unit

FREN 1232 Perspectives in French Literature: The Individual and Society
This basic course in literature provides an overview of French literature and acquaints students with major literary trends through the study of representative works from each period. Special emphasis is placed on close reading of texts in order to familiarize students with major authors and their characteristics and with methods of interpretation. Students are expected to take an active part in class discussion in French. French 1232 has as its theme the Individual and Society.
Spring
Also Offered As: COML 1232
1 Course Unit

FREN 1233 Francophone Literature and Film
This course is designed to give students a basic historical and theoretical groundwork in Francophone and postcolonial studies, and to help them develop their skills in literary and filmic analysis. It will provide an introductory survey of the richly diverse literature and film of the French-speaking world, from the 1950s through to the 21st century. Beginning with the gradual breakup of the French colonial empire, we will investigate the construction of individual and collective Francophone identities in such regions as the Caribbean, Africa, and the Maghreb, while exploring an equally wide range of literary and cinematic genres. Other histories and regions such as Quebec and Lebanon will also be discussed. Throughout the course we will remain especially attentive to questions of space–public and private spheres, urban and rural topographies, borders and migrations, as well as the complex dynamics between the Francophone regions and France itself—and to the ways in which these tensions are mapped onto the textual and visual surfaces of the works studied.
Spring
1 Course Unit

FREN 2130 French for Business I
This content-based language course, taught in French, introduces economic, business and professional terminology through the study of the following topics: financial institutions (banking, stock market and insurance); business practices (business letters and resumes); trade and advertising; the internal structure and legal forms of French companies. The course also emphasizes verbal communication through three components: 1) In-class activities such as problem-solving tasks, discussions and debates. 2) The study of authentic materials such as newspapers and magazines’ articles, video clips, and radio shows. 3) A series of students’ presentations. Finally, in order to use and practice the new economic and business terminology studied in this course, and to also further explore the structure, the management, and the operations of the French companies, students will work in pairs on a research project about a major French company of their choice. One of the other goals of this course is to also prepare the students to take one of the exams offered by the Paris Chamber of Commerce and Industry: the Diplome de Francais Professionnel, Affaires, C1. This exam will be held on campus in April.
Fall or Spring
Prerequisite: FREN 1000
1 Course Unit

FREN 2170 French Phonetics
This course is designed to provide students with a solid foundation in French phonetics and phonology. Part of the course will be devoted to learning how to produce discourse with native-like pronunciation and intonation. The course will also focus on improving aural comprehension by examining stylistic and regional differences in spoken French.
Fall or Spring
Prerequisite: FREN 1000
1 Course Unit
FREN 2180 From West Africa to West Philadelphia: Creating Community in the Francophone Diaspora
This course explores the immigrant experience with a focus on migration from Francophone West Africa to this country, particularly the impact it has on children and young people. Through a close partnership with young Francophone immigrants at the Lea School, we will focus on the challenges they face adapting to a new cultural and linguistic environment. We will review the Francophone context in order to understand the place of the French language in Africa; look at the immigrant and refugee experience through a variety of texts in French; examine the issues of mono-, bi- and multilingualism both on an individual and a societal basis; look at the competing meanings the French language holds for Black Americans; and study the role of foreign languages in American schools. Students will participate in the weekly Francophone Community Partnership, an after-school program with 8 children at the Lea School which seeks to enhance the children's self-esteem and pride in their linguistic and cultural heritage.

Fall
1 Course Unit

FREN 2230 Advanced French Composition and Conversation
Summer in Tours course: Intensive language course complemented by various workshops to consolidate and deepen written and oral skills, do more targeted phonetic correction work (on expressive intonation, fluency and fluency) in a language lab or in class, discover different aspects of life in France, and to be open to the plurality of cultures. At the end of the program, students will be able to take the DELF.

Summer Term
2 Course Units

FREN 2250 Paris during the German Occupation and its Places of [Non-]memory
In this course, we will explore the dark years that characterized the Occupation of France by Nazi Germany and the Collaboration between the two countries supported by the Vichy Regime. A course to explore a past that none of us has directly lived. And not just any past. A repressed, masked, disguised past. A past inhabited by shadows. A past that is whispered. A holed memory. The myth of Marianne Resistance fascinates only for a while before the reality of the camps and the Collaboration looms up with a grimace and provokes fright in us. How to talk about what happened? With what words to recount the story of the disappeared? This was the challenge for the post-Auschwitz society. This is the challenge of this course. Paris will be our anchor point. Capital witness, capital executioner, capital victim. Its streets and walls will whisper to us the stories of that period as turbulent as it is rich in cultural production, and as complex as it is fascinating. Throughout the semester we will be especially attentive to images, in every sense of the word: the images of national identity that France projects to the world and to itself, but also pictorial representations of the country, its people and its territory. These images, and the stories they tell, will help us envision the kaleidoscopic portrait of a nation. The course will be conducted entirely in French.

Fall
1 Course Unit

FREN 2280 Contemporary France
In this course we will be exploring the transformations of French society since the Second World War and into the Millennium. From the legacy of decolonization to the multicultural fervor of the 1998 Soccer World Cup, from the May 1968 civil protests to the Republican marches of 2015, we'll be delving into the major historical and cultural movements that have marked the contemporary period. How did France recover from German occupation and cope with further wars in its colonial territories? How did unprecedented rates of urbanization and immigration change the face of the country over the ensuing decades? Who have been the major players on the historical stage? And what are the political, cultural, and socioeconomic challenges facing France at the outset of the 21st century? These are some of the questions that will guide our investigation into the past 70 years of French history, a period as turbulent as it is rich in cultural production, and as complex as it is fascinating. Throughout the semester we will be especially attentive to images, in every sense of the word: the images of national identity that France projects to the world and to itself, but also pictorial representations of the country, its people and its territory. These images, and the stories they tell, will help us envision the kaleidoscopic portrait of a nation. The course will be conducted entirely in French.

Fall
1 Course Unit

FREN 2500 The Novel and Marriage
This course will cover the novel and marriage from the turn of the 20th century to the present. We will study how authors have used the novel as a means to express their views on society, politics, and literature. The course will be conducted entirely in French.

1 Course Unit

FREN 3010 French Identity in the Twentieth Century
This course explores the immigrant experience with a focus on migration from Francophone West Africa to this country, particularly the impact it has on children and young people. Through a close partnership with young Francophone immigrants at the Lea School, we will focus on the challenges they face adapting to a new cultural and linguistic environment. We will review the Francophone context in order to understand the place of the French language in Africa; look at the immigrant and refugee experience through a variety of texts in French; examine the issues of mono-, bi- and multilingualism both on an individual and a societal basis; look at the competing meanings the French language holds for Black Americans; and study the role of foreign languages in American schools. Students will participate in the weekly Francophone Community Partnership, an after-school program with 8 children at the Lea School which seeks to enhance the children's self-esteem and pride in their linguistic and cultural heritage.

1 Course Unit
FREN 3110 French Thought After 1968
In American academia, French thought after May ’68 is often referred to as “French Theory,” a heterogeneous corpus of philosophical and critical texts compacted into a set of poststructuralist premises, first introduced by and grew within humanities departments, then identified as a luxury by-product of the “literary” people. This course proposes to unpack the notion of “French Theory” and re-anchor it into its original social/historical background. We will read some of the most influential texts of its key figures, study how a post May 68 revolutionary energy is transformed into various innovative but also destabilizing ways of rethinking power relations, gender, language and subjectivity, and finally, consider in what capacities and limits these diverse critical approaches go beyond the simple label of “post-structuralism” and relate to our own epoch and personal experiences. The readings and discussions will be divided into four axes: 1. Philosophy of Desire (Lacan, Deleuze/Guattari); 2. Sexual Revolt and Body Politics (Foucault, Hocquenghem, Barthes); 3. Deconstruction and Its Impact on Feminism (Derrida, Cixous, Irigaray); 4. Consumer Society and Society of the Spectacle (Lipovetsky, Baudrillard, Debrord). Several documentaries and feature films will be shown outside class time. Taught in English. Reading knowledge of French is welcome but not required.
Fall or Spring
Also Offered As: COML 3110
1 Course Unit

FREN 3130 French for Business II
The course, conducted entirely in French, emphasizes verbal communication in business professional situations through three components. First, a series of student’s presentations, in-class activities (using newspapers’ articles, technical readings, radio shows and films), and debates on the following topics (list not exhaustive) related to France’s economy and society: The role of the State in France’s economy; the French fiscal system; Labor (impact of the 35-hour work week, “conges,” women in the workplace, etc.); Regions of France (production); major French industries/companies/brands; France’s major imports/exports; “Green business”; Business of pop culture. Second, as effective communication is based not only on linguistic proficiency but also on cultural proficiency, cultural differences mostly between Americans and French will be explored. Finally, throughout the semester, students will work in groups on the creation of their own business, association, or other organization and will be invited to present their project to the class at the end of the semester. On completion of the course, students will also have the opportunity to take the Diplome de Francais Professionnel-DFP Affaires (C1) administered by the Paris Chamber of Commerce and Industry.
Spring
Prerequisite: FREN 2130
1 Course Unit

FREN 3220 France and the European Union
This course aims to provide an understanding of the European Union as a complex entity: its history, institutions, challenges and future. After reviewing the history of European integration and learning about the Community’s institutions, common programs and market, we will consider a wide variety of themes important to Europe: economics, education, immigration, the environment, social issues, national and European identities, the debate over a Federal Europe vs. a Europe of nations, European social/cultural models vs. American liberalism, relations between the EU and the rest of the world. Considering the acute and ongoing challenges facing the European community, we will focus on current events and discuss issues that are critical to the EU in general and to France in particular. Students will be responsible for pursuing substantive research on these and other topics and participating actively in debates. This class will be conducted entirely in French and is designed to improve cross-cultural understanding and communicative skills in the presentational, interpretive and interpersonal modes.
Fall
1 Course Unit

FREN 3250 Advanced French: Translation
This course provides an introduction to the theory and practice of translation and is designed to help foster a critical understanding of differences between French and English syntactical and lexical patterns. It will introduce students to theoretical concepts and problems of translation, with the ultimate goal being to improve their ability to communicate in more authentic-sounding French. Students will have the opportunity to practice translation individually and to work with their peers on a variety of projects (advertising, journalistic and literary texts, movie and broadcast news subtitling) and to engage in critique and discussion of others’ translations. This course will help students refine their language skills and navigate more proficiently between these cultures and language systems. (Designed for students who already have a solid foundation in French and English grammar)

1 Course Unit

FREN 3290 Le français dans le monde/French in the World
Where and how is French spoken in the world? Which variety (or varieties) of French represents "good" or standard language use? What does it mean to have an accent or to experience linguistic insecurity? To what extent have political forces and movements historically affected the evolution of French? How do language attitudes differ among French- and English-speaking regions of the world and what is the status of French in an era of globalization? In what ways does language shape our identities? Le Francais dans le monde/French in the World examines these questions by providing a survey of the sociolinguistics of the French language in the contemporary world. We will explore how societal changes influence the manner and the contexts in which the French language is spoken. Case studies focus on various parts of the Francophone world, including Europe (Belgium, Switzerland), New World (Quebec, Caribbean, Louisiana), Africa (North Africa, Sub-Saharan Africa), etc. Readings and class discussions are in French.

1 Course Unit

FREN 3710 Poe's French Legacies
Edgar Allan Poe was considered a vulgar hack by many of his fellow Americans, but in 19th-century France, he was touted as a misunderstood poetic genius, the original poete maudit. Through the translations of Charles Baudelaire, who found in Poe a kindred spirit in the "gout de l'infini," French intellectuals came to know the American writer as a fount of aesthetic wisdom, diabolical sensibility, and mystic mastery. In this course, we will study Baudelaire's poetry as well as the many literary and artistic movements in France that were directly inspired by Poe's uncanny mix of the macabre and the methodical: Symbolist poetry (Valery, Mallarme), the Scientific Fantastic (Maupassant, Villiers de l'Isle-Adam), fin-de-siecle Decadence (Huysmanns, Odilon Redon), Science Fiction (Verne), the detective novel (Gaboriau), and 20th-century Surrealism (Breton, Max Ernst).
Not Offered Every Year
1 Course Unit

FREN 3720 Crime and Punishment: Hugo's Les Misérables in Context
Long before the revolutionary ardor of Marius and the innocent longing of Cosette graced Broadway stages and Hollywood screens, the characters of Victor Hugo's Les Misérables (1862) tugged at the heartstrings of readers all over the world. Through this blockbuster novel, Hugo combined his Romantic aesthetics with political critique by exposing the ways in which French society oppressed its downtrodden members, the "misérables" of the title; he also called for a recognition that a noble spirit could inhabit unlikely figures like the prostitute and the ex-convict. In this class, we will read Les Misérables in its entirety, along with a few related texts on crime and punishment. We will ask questions such as these: how can literature contribute to debates about penal reform and the death penalty? What is divine justice? How does crime connect (or not) to political, collective forms of violence? How can we map the urban topographies of hygiene and violence in post-Revolutionary Paris? How does Hugo's novel relate to the sordid faits divers, gazette entries, and criminal memoirs whose lurid illustrations and sensationalism fascinated the nation's "respectable" citizens? Students will also be given the opportunity for guided original research on criminality and the popular press of 19th-century France, using online resources and the holdings of Penn's Rare Books and Manuscript library. [All readings, course discussion, and assignments in French]

FREN 3810 Animal Words, Animal Worlds: Introduction to Zoopoetics
We are surrounded by other living creatures, both in our daily lives and on the page, and yet that otherness has endless potential for surprise and wonder. The intensity of our encounters with animals generates a corresponding intensity in the language that tries to capture them. Even if language is unique to humans - a claim that is often disputed - what are we to make of animals' vital, vibrant place in the words we use and the texts we read? How do nonhuman forms of life help give shape to different forms, styles, even species of artistic expression? And what are the practical and ethical implications of focusing on animals' place in literature at a time when they are vanishing from the world around us at an ever-increasing rate? This course sets out on the trail of the animals that populate modern and contemporary French and Francophone writing. Taking as our starting point la zoopoétique, a term coined by French thinkers at the turn of this century to designate literature's many ways of relating to nonhuman life, we will discover a range of recent works whose diversity rivals that of the various species inhabiting them. From Henri Michaux's teeming assortment of nocturnal beasts to Marie Darrieussecq's (pig) tale of metamorphosis, and from Jean Echenoz's vivid portrayal of WWI trenches to Scholastique Mukasongola's rural Rwanda, each of these texts forms an ecosystem in which language itself behaves differently according to the life it encounters and embodies. We will adopt an interdisciplinary approach to these animal words and worlds, for zoopoetics is not confined to literary studies: it is inseparable from a host, not just of forms of life, but also of questions stemming from the fields of anthropology, ethology, history, natural science, and philosophy. As we investigate how our own reading practices are informed by human-animal relations going back to the earliest days of hunting and tracking, the trail through these texts will lead us to interrogate our very understanding of what it is to be human. The pre-requisite for this course is 3 French courses at the 200 level; any exceptions must be approved by the instructor.

1 Course Unit

FREN 3820 Horror Cinema
The purpose of this course is to provide an introduction to the history and main themes of the supernatural/horror film from a comparative perspective. Films considered will include: the German expressionists' masterworks of the silent era, the Universal classics of the 30's and the low-budget horror films produced by Val Lewton in the 40's for RKO in the US, the 1950's color films of sex and violence by Hammer studios in England, Italian Gothic horror or giallo (Mario Brava) and French lyrical macabre (Georges Franju) in the 60's, and on to contemporary gore. In an effort to better understand how the horror film makes us confront our worst fears and our most secret desires alike, we will look at the genre's main iconic figures (Frankenstein, Dracula, Dr. Jekyll and Mr. Hyde, etc.) as well as issues of ethics, gender, sexuality, violence, spectatorship through a variety of critical lenses (psychoanalysis, socio-historical and cultural context, aesthetics...).
Not Offered Every Year
Also Offered As: CIMS 3820
1 Course Unit
FREN 3830 French & Italian Modern Horror
This course will consider the horror genre within the specific context of two national cinemas: France and Italy. For France, the focus will be almost exclusively on the contemporary period which has been witnessing an unprecedented revival in horror. For Italy, there will be a marked emphasis on the 1960s-1970s, i.e. the Golden Age of Gothic horror and the giallo craze initiated by the likes of Mario Bava and Dario Argento. Various subgenres will be examined: supernatural horror, ghost story, slasher, zombie film, body horror, cannibalism, etc. Issues of ethics, gender, sexuality, violence, spectatorship will be examined through a variety of critical lenses (psychoanalysis, socio-historical and cultural context, aesthetics, politics, gender, etc.).

FREN 3860 Paris in Film
Latter-day examples like Christophe Honore's Dans Paris, Cedric Klapisch's Paris or the international omnibus Paris, je t'aime (with each director paying homage to a distinctive "arrondissement" of the capital), not to mention American blockbusters like The Da Vinci Code and Inception or Woody Allen's Midnight in Paris, are there to remind us that there is something special — indeed, a special kind of magic — about Paris in and on film. Despite the extreme polarization between Paris and provincial France in both cultural and socio-economic terms, cultural historians have argued that Paris is a symbol of France (as a centralized nation), more than Rome is of Italy and much more than Madrid is of Spain or Berlin of Germany, for example. The prevalence of the City of Lights on our screens, Gallic and otherwise, should therefore come as no surprise, be it as a mere backdrop or as a character in its own right. But how exactly are the French capital and its variegated people captured on celluloid? Can we find significant differences between French and non-French approaches, or between films shot on location that have the ring of "authenticity" and studio-bound productions using reconstructed sets? Do these representations vary through time and perhaps reflect specific historical periods or zeitgeists? Do they conform to genre-based formulas and perpetuate age-old stereotypes, or do they provide new, original insights while revisiting cinematic conventions? Do some (sub)urban areas and/or segments of the Parisian population (in terms of gender, race, or class, for example) receive special attention or treatment? These are some of the many questions that we will seek to address...with a view to offering the next best thing to catching the next non-stop flight to Paris! For French credit: Please register for both FREN 3860-401 (lecture) and FREN 3860-402 (recitation). The FREN 3860-402 recitation is conducted in French. For Cinema and Media Studies credit: Please register for CIMS 3860-401 (lecture) and CIMS 3860-403 (recitation). Both lecture and recitation are taught in English.

FREN 3900 Francophone Postcolonial Cultures
A brief introduction about the stages of French colonialism and its continuing political and cultural consequences, and then reading in various major works – novels, plays, poems – in French by authors from Quebec, the Caribbean, Africa (including the Maghreb), etc. Of interest to majors in International Relations, Anthropology and African Studies, as well as majors in French. Taught in French.
Not Offered Every Year
1 Course Unit

FREN 3905 French Caribbean Thought & Literature
This course will examine how the French Antilles, with their discrete set of sociohistorical coordinates, came to constitute an ideal laboratory for the elaboration of the concept of "Tout-Monde" — a way of thinking of the world as a productive, though necessarily chaotic, maelstrom of cultural changes and exchanges. How did this cluster of small islands birth a term that offers a radically different understanding of globalization? We will first survey early ethnographies and imagery documenting the multiple immigration waves of Guadeloupe and Martinique to understand how diverse ethnicities coalesced under the banner of the Republique francaise universelle. We will then explore how this sociohistorical landscape shaped and was in turn shaped by poetry, fiction, and political and theoretical texts. We will examine images, political speeches, ethnographic texts, essays, poetry, films, and novels to open up discussions on notions of Negritude/Antillanite/Creolite/ Litterature Monde, the particular and the universal; on the relationship between politics, identity politics and literary form; and on the role of the engaged author in producing and transmitting a multicultural Antillean ethos.

FREN 3920 Queering North African Subjectivities
This seminar will explore the ways in which literary and visual representations of sexual difference and gender roles disrupt the cultural imagination of everyday life in North Africa and its Diasporas. Special attention will be given to representations of Arab women and queer subjectivities as sites of resistance against dominant masculinity. We will analyze the ways in which representations of gender have allowed for a redeployment of power, a reconfiguration of politics of resistance, and the redrawing of longstanding images of Islam in France. Finally, we will question how creations that straddle competing cultural traditions, memories and material conditions can queer citizenship. Course taught in English.

FREN 5410 Transalpine Tensions: Franco-Italian Rivalries in the Renaissance
In the Middle Ages and Early Modern period, France and the Italian States were bound together by linguistic, economic, political, and religious ties, and intellectual developments never flowed unilaterally from one country to the other. On the contrary, they were transnational phenomena, and French and Italian thinkers and writers conceived of themselves and their work both in relation to and in opposition to one another. This course will consider the most fundamental aspects of Franco-Italian cultural exchange in the medieval and early modern period, with an emphasis on humanism, philosophical and religious debates, political struggles, and the rise of vernacular languages in literary and learned discourse. Authors to be studied include Dante, Petrarch, Boccaccio, Ficino, Pico della Mirandola, Castiglione, Bembo, Rabelais, Marguerite de Navarre, Du Bellay, Machiavelli, and Montaigne. In addition to learning the material covered in the course, students will gain expertise in producing professional presentations and research papers, and will also have the opportunity to consult original material from the Kislak Center. This course is open to undergraduates with permission of the instructor. It counts toward the undergraduate minor in Global Medieval Studies and the graduate certificate in Global and Medieval Renaissance Studies.

FREN 5460 Women's Writing in French, 1160–1823
In this course, we will examine a representative sample of premodern women's writing in French, beginning in the Middle Ages and concluding in the Revolutionary Era. The authors studied come from differing walks of life, social classes, and religious and political identifications, and they express themselves in a wide variety of genres, including short stories, fairy tales, lyric poetry, letters, plays, and novels. Despite their many differences, these authors are united by a common tendency to question a centuries-old tradition of misogynistic discourse, patriarchal social order, and gender normativity. Authors to be studied include: - Marie de France (ca. 1160), a brilliant storyteller and poet attached to the court of Henry II of England whose fabulous tales, arguably an early form of speculative fiction, imagine alternatives to the rigidity of arranged marriages and the heterosexual couple. - Christine de Pizan (1364—ca. 1430), a court writer for Charles VI of France and several other powerful patrons who is often considered France's first professional female writer. Her Livre de la Cité des Dames (Book of the City of Ladies) systematically refutes the misogynistic pronouncements of learned male authors and holds up devotion and religious life as alternatives to accepting the assigned role of wife and mother. - Marguerite de Navarre (1492–1549), the sister of Francis I of France and a prolific author of devotional poetry, plays, and the Heptameron, a collection of tales modeled on Boccaccio's Decameron and known for its often shocking subject matter. Throughout her oeuvre, she calls into question the social perception of women rooted in misogynistic discourse, as well as the tendency to blame sexual violence on women, while at the same time revealing the potential danger of masculinility for men and women alike and envisioning Pauline Christianity as a means of radical equality. - Perronneau Guillet (1520–1545), Louise Labé (c. 1524–1566), and Anne de Marquets (1533–1588), three poets who respond to and write against the male-centered tradition of Petrarchan love poetry. Guillet and Labé stand out for their frank and often sensual depictions of female desire and sexuality in spite of taboos against their public expression, while Marquets, a Dominican nun at the convent of Poissy, combines Petrarchan, devotional, and mystic tropes to envision religious life as an alternative to the heteronormativity of lay French society and the Protestant Reformation. - Madame de Lafayette (1634–1693) and Madame de Sévigné (1626–1696), whose writings are of monumental importance in the history of literature in French as well as invaluable testimonies to the role played by women in the intellectual developments of the early modern period, including salons, Jansenism, and free-thinking (libertinism). - Gabrielle-Suzanne de Villeneuve (1685–1755), author of the first known version of La belle et la bête (Beauty and the Beast), who, along with other female authors of fairy tales, used the conventions of the genre to challenge social conventions and criticize the treatment of women. - Claire de Duras (1777–1828), whose novel Ourika, much like Villeneuve's La belle et la bête, shows how feminist concerns might intersect with colonialism and race; a bestseller in its day, it is one of the first works in French to feature a complex and articulate black narrator and what many scholars consider to be a modern outlook on race and identity. To provide historical and theoretical context, these readings will be supplemented with relevant primary and secondary sources, as well as with modern and contemporary adaptations, such as illustrations and films. The course is open to graduate students and to advanced undergraduates with permission of the instructor. Discussions will be in English. Readings will be made available both in the original French and in English translation, and final papers may be written in English or in French.

FREN 5710 Literature and Multilingualism
Since several years, the societal and cultural reality of multilingualism has become an important research field in linguistics and literary studies, as in cultural studies more generally. This graduate course will investigate how multilingual poetics challenge and resist paradigms and ideologies of innate monolingualism, linguistic mastery, absolute translatability and monocultural nationalism. To begin with, the course will introduce central aspects of scholarship on literature and multilingualism, covering concepts such as heteroglossia, code switching, translanguaging and macaronic language, and debates such as those on world literature, global English, foreignization, (un)translatability and non-translation, including their political and ethical importance. After a brief historical overview, glancing at western literary multilingualism in the Middle Ages, Romanticism and the avantgarde, the course will mainly focus on literature of the late 20th and 21st centuries taken from Germanic and Romance linguistic contexts. Using an exemplary selection, the course will cover prose, poetry and drama, and include excerpts of texts by authors such as Andrea Camilleri, Gino Chiellino, Fikry El Azzouzi, Ernst Jandl, Jackie Kay, Çağlar Köseoğlu, Monique Mojica, Melinda Nadj Abonji, Emine Sevgi Özdamar, Olivier Rolin, Yoko Tawada, Nicoline van Harsskamp, and others. Reading these texts, we will try to determine how multilingualism manifests itself (linguistically, discursively, rhetorically, thematically, contextually etc.) and how the texts engage with linguistic, cultural and social pluralities. The course will conclude with a focus on the translator as a central character in fictional prose and movies. Classes will take place in an interactive format that stimulates discussion and exchange. Students will get the respective excerpts – both in the original version and in English translation – one week at a time so that they can prepare themselves each week for the discussion. Theoretical and contextual information will be provided via Power Point presentations.

FREN 5820 Fantastic Literature 19th/20th Centuries
This course will explore fantasy and the fantastic in short tales of 19th- and 20th-century French literature. A variety of approaches – thematic, psychoanalytic, cultural, narratological – will be used in an attempt to test their viability and define the subversive force of a literary mode that contributes to shedding light on the dark side of the human psyche by interrogating the "real," making visible the unseen and articulating the unsaid. Such broad categories as distortions of space and time, reason and madness, order and disorder, sexual transgressions, self and other will be considered. Readings will include "recits fantastiques" by Merimee, Gautier, Nerval, Maupassant, Breton, Pieyre de Mandiargues, Jean Ray and others.

FREN 5920 Life, Death, and Revolution in Haiti
In the last few decades, Haiti has been known on the global stage for its repeated calamities: earthquakes, hurricanes, droughts followed by floods and vice versa, dictatorships, cholera, civil unrest, etc. These media representations, which foreground trauma and failure, tend to overshadow a momentous revolutionary past as well as a long tradition of thriving avant-garde literary and artistic movements. These negative representations are part and parcel of a centuries-long practice of epistemic violence against Haiti that began well before it declared its independence from France in 1804, at the end of a bloody revolution. In this course, we will seek a more nuanced understanding of Haiti by exploring the concepts of life, death, and revolution in a selection of literary texts, essays, articles, documents, and films. Our interdisciplinary approach will allow us to discuss voodoo, the figure of the zombi, gender, the environment, modernity, and the relationship between politics and poetics. This course is taught in French and is open to advanced undergraduates and graduate students.

FREN 5950 Travel Literature
Within the context of the ill-defined, heterogeneous genre of the travelogue and of today's age of globalization, CNN and the Internet, this seminar will examine the poetics of travel writing based largely albeit not exclusively on travel notebooks, or journaux/carnets de voyage, spanning the 20th century from beginning to end. One of the principal specificities of the texts studied is that they all evince to a lesser or greater degree a paradoxical resistance both to the very idea of travel(ing) as such and to the mimetic rhetoric of traditional travel narratives. We will therefore look at how modern or postmodern texts question, revisit, subvert or reject such key notions of travel literature as exoticism, nostalgia, exile, nomadism, otherness or foreignness vs. selfhood, ethology and autobiography, etc. Authors considered will include Segalen, Morand, Michaux, Leiris, Levi-Strauss, Butor, Le Clezio, Baudrillard, Bouvier, Jouanard, Leuwers.

FREN 6090 Global France
The purpose of this course is to examine the various modalities of interaction between anthropology and literature in modern French culture. Our guiding thesis is that the turn toward other cultures has functioned as a revitalizing element in the production of cultural artifacts while providing an alternative vantage point from which to examine the development of French culture and society in the contemporary period. The extraordinary innovations of "ethnosurrealism" in the twenties and thirties by such key figures of the avant-garde as Breton, Artaud, Bataille, Caillois, and Leiris, have become acknowledged models for the postwar critical thought of Barthes, Derrida, and Foucault, as well as inspiring a renewal of "anthropology as cultural critique in the United States." Besides the authors just indicated, key texts by Durkheim, Mauss and Levi-Strauss will be considered both on their own terms and in relation to their obvious influence. The institutional fate of these intellectual crossovers and their correlative disciplinary conflicts will provide the overarching historical frame for the course, from the turn of the century to the most recent debates.

FREN 6200 Paris and Philadelphia: Landscapes and Literature of the 19th Century
This course explores the literal and literary landscapes of 19th-century Paris and Philadelphia, paying particular attention to the ways in which the built environment is shaped by and shapes shifting ideologies in the modern age. Although today the luxury and excesses of the "City of Light" may seem worlds apart from the Quaker simplicity of the "City of Brotherly Love," Paris and Philadelphia saw themselves as partners and mutual referents during the 1800s in many areas, from urban planning to politics, prisons to paleontology. This interdisciplinary seminar will include readings from the realms of literature, historical geography, architectural history, and cultural studies as well as site visits to Philadelphia landmarks, with a view to uncovering overlaps and resonances among different ways of reading the City. We will facilitate in-depth research by students on topics relating to both French and American architectural history, literature, and cultural thought.

FREN 6381 Troubadours at the Center
‘Troubadour’ is a term whose meaning has evolved from the eleventh century to our day. In the Middle Ages, a troubadour was a singer-songwriter (male or female) who composed in a language called Occitan, the language spoken in northern Italy, across southern France, and into today’s Catalonia. Medieval works in this language include epic poetry, didactic texts, lengthy romances, and love poetry. Renowned and imitated throughout medieval Europe — by authors from today’s Italy, Austria, Germany, France, Spain, and Portugal — the Occitan literary heritage cannot be ignored. Though sometimes presented as a dead language, Occitan is very much alive, and one purpose of this course is to introduce students to it and to its broad importance in European literary history. This course will present the literary and cultural history of the Occitan region, writ large, from the Middle Ages to the modern day. By the end of the course, students will be able to read Occitan with the aid of a dictionary; they will understand the culture of the French Midi as distinct from that of France; they will know something of the distinctive cultural elements of Occitania. They will also have a profound knowledge of at least one Occitan author, medieval, modern, or contemporary. The course will be taught in English. In addition to learning the material covered in the course, students will gain expertise in producing professional presentations and research papers.

FREN 6810 Studies in Modern French Poetry
How does one approach the modern poetic text which ever since the Mallarmean “crise du vers” appears to have cut loose from all referential anchoring and traditional markers (prosody, versification, etc.)? This course will present an array of possible methodological answers to this question, focusing on poetic forms and manifestations of brevity and fragmentation. In addition to being submitted to precise formal and textual inquiries, each text or work will be the point of departure for the analysis of a specific theoretical issue and/or an original practice — e.g., genetic criticism, translation theory, the poetic “diary”, aphoristic modes of writing, quoting and rewriting practices, etc. Texts by key modern poets (Ponge, Chazal, Du Bouchet, Jourdan, Jabes, Michaux).

FREN 6910 Transatlantic Black Feminisms in Francophone Literatures
This course explores the evolution of representations of the Black femme body in French and francophone imaginaries, tracing a chronological arc that begins with early colonial imagery and ends with the rise of a 2018 movement spearheaded by a collective of Black comediennes, denouncing exclusionary practices in the French entertainment industry. We will first focus on the male gaze — European, Caribbean and African — and the way it constructed the Black femme body, to better understand how Black female authors undermine, resist, parody, or continue to bear the weight of these early images when they take control of their own representation. While our primary readings will be authored by French-writing women, including Mayotte Capecia (Martinique), Marie Vieux-Chauvet (Haiti), Maryse Condé (Guadeloupe), Mariama Bâ (Senegal) and Marie Ndiaye (France), our theoretical foundation will include anglophone thinkers, such as bell hooks, Audre Lorde, Saidiya Hartman, and others. Readings and discussions will be in English.

FREN 7770 Francophone, Italian and Germanic Proseminar
This proseminar will introduce first-year FIGS graduate students to doctoral studies in the humanities. It is organized into four parts. Part I, “Scholarly Habits and Resources,” introduces students to a variety of resources at Penn, discusses the scholarly habits that graduate students should develop, and covers strategies for promoting mental and physical well-being as a graduate student. Part II, “Intervening in the Field,” introduces students to the processes of conference participation and article publication. Part III, “The Dissertation,” covers the ins-and-outs of writing the dissertation. Part IV, “Awards, Networking, and Jobs,” addresses the importance of awards and networking as well as the academic and non-academic job markets. While DEI issues are constantly addressed throughout the course, also in the form of assignments, there are also bridge sessions to other courses, especially on pedagogy and recent research trends. In addition to weekly discussions and activities, this course will include a number of guest speakers who will share their expertise and give guidance on the how-tos of the field. Students will be given pre- as well as post-class activities to reflect on each week’s topic and begin to prepare a dossier for later use in their graduate studies. Much of the information in this proseminar becomes particularly relevant during the final years of coursework and your dissertation writing years, but it is important to be introduced to these topics and to begin to think about them now. This course is designed for PhD students in Francophone, Italian, and Germanic Studies. Many of the topics apply to all three fields; however, students will also have the opportunity to work on areas that are specific to their language for certain topics. They will also be able to add to the course materials for future graduate students in FIGS.

Fall or Spring
1 Course Unit
First-Year Seminar (FRSM)

FRSM 0007 Research: From Curiosity to Knowledge
How does one act on curiosity about the physical and living world and the human cultures in it? This seminar will use case-study and brainstorming approaches to explore how people generate and define good questions, pitting curiosity against ignorance, and practice research to answer these questions in a wide range of disciplines, from the humanities and social sciences to natural sciences and engineering. We identify common components (e.g., evidence, method) and how they differ among a broad spectrum of phenomena and human behavior, and how might we observe and trace patterns in them to find new ideas and answers. We will also highlight field-specific approaches for translating evidence into knowledge. The seminar will be structured around readings, discussions, active learning activities and field trips to active research sites on campus (e.g., labs, archives and museums). Our goal is to enable students to participate in and appreciate how research is performed in a range of areas, as a stimulus to using the arts of observation and questioning for whatever might be their own objects of curiosity.

1 Course Unit

Gender, Sexuality & Women's Studies (GSWS)

GSWS 0002 Gender and Society
This course will introduce students to the ways in which sex, gender, and sexuality mark our bodies, influence our perceptions of self and others, organize families and work like, delimit opportunities for individuals and groups of people, as well as impact the terms of local and transnational economic exchange. We will explore the ways in which sex, gender, and sexuality work with other markers of difference and social status such as race, age, nationality, and ability to further demarcate possibilities, freedoms, choices, and opportunities available to people.
Fall or Spring
Also Offered As: ENGL 0159
1 Course Unit

GSWS 0003 Introduction to Sexuality Studies and Queer Theory
This course will introduce students to the historical and intellectual forces that led to the emergence of queer theory as a distinct field, as well as to recent and ongoing debates about gender, sexuality, embodiment, race, privacy, global power, and social norms. We will begin by tracing queer theory's conceptual heritage and prehistory in psychoanalysis, deconstruction and poststructuralism, the history of sexuality, gay and lesbian studies, woman-of-color feminism, the feminist sex wars, and the AIDS crisis. We will then study the key terms and concepts of the foundational queer work of the 1990s and early 2000s. Finally, we will turn to the new questions and issues that queer theory has addressed in roughly the past decade. Students will write several short papers.

GSWS 0031 Gender, Sexuality, and Social Change in the Middle East
This first year seminar introduces basic concepts, debates, and narratives pertaining to the histories of gender and sexuality in the Middle East by covering the period from the late eighteenth century until the present day. In an engagement with global historical contexts, the course aims to engage students with the history of women, gender, and sexuality as they informed and shaped political and social change in the Middle East and vice versa. This course will concentrate on selected themes such as modernity, nationalism, and colonization to encourage students to challenge preconceived assumptions about Middle Eastern women, discuss some of the many roles they have played in social change, and think comparatively and transnationally about gender, history, and social life. In doing so, the class provides a historical context pertaining to the region's history by presenting a chronologically and thematically organized analysis to scrutinize the decline of the Ottomans, the rise of nationalisms, the implications of Islamist reformism, colonial rules before and after World War I and their impact on shaping women's lives, gender dynamics and sexual politics, the age of decolonization and rise of state feminisms under colonial and authoritarian regimes, an historical inquiry of same-sex desire and the political activism organized around LGBTQI+ movements, and finally contemporary political movements such as the Iranian Revolution and Arab Uprisings in shaping present discourses and practices informing individual and collective social and political status along with gendered and sexual politics in contemporary Middle Eastern societies.

1 Course Unit
GSWS 0050 Gender, Sexuality, and Religion
What does it mean to be a gendered individual in a Muslim, Hindu, Jewish, Christian, Buddhist, or Sikh religious tradition? How important are gender differences in deciding social roles, ritual activities, and spiritual vocations? This course tackles these questions, showing how gender - how it is taught, performed, and regulated - is central to understanding religion. In this course we will learn about gendered rituals, social roles, and mythologies in a range of religious traditions. We will also look at the central significance of gender to the field of religious studies generally. The first part of the course will be focused on building a foundation of knowledge about a range of religious traditions and the role of gender in those traditions. This course emphasizes religious traditions outside the West. Although it is beyond the scope of this class to offer comprehensive discussions of any one religious tradition, the aim is to provide entry points into the study of religious traditions through the lens of gender. This course will emphasize both historical perspectives and contemporary contexts. We will also read religion through feminist and queer lenses - we will explore the key characteristics of diverse feminist and queer studies approaches to religion, as well as limits of those approaches.

GSWS 0051 Writing the Self: Life-Writing, Fiction, Representation
This course investigates how people try to understand who they are by writing about their lives. It will cover a broad range of forms, including memoirs, novels, essay films, and even celebrity autobiographies. The course will be international and in focus and will ask how the notion of self may shift, not only according to the demands of different genres, but in different literary, linguistic, and social contexts. Questions probed will include the following: How does a writer’s language—or languages—shape how they think of themselves? To what extent is a sense of self and identity shaped by exclusion and othering? Is self-writing a form of translation and performance, especially in multilingual contexts? What can memoir teach us about the ways writers navigate global literary institutions that shape our knowledge of World Literature? How do various forms of life-writing enable people on the margins, whether sexual, gendered, or racial, to craft narratives that encapsulate their experience? Can telling one’s own story bring joy, affirmation, and greater transcultural or even global understanding? In sum, this course proposes to illuminate the many ways in which writing becomes meaningful for those who take it up. The format of the seminar will require students to offer oral presentations on the readings and invite them to craft their own experiences and memories in inventive narrative forms.

GSWS 0087 Desire and Deception in Medieval Erotic Literature
In this course, we will investigate the ideology, content, and material forms of love literature from Dante Alighieri to Francesco Petrarch. Through close readings of such texts as Dante’s Vita nova (ca. 1295), Giovanni Boccaccio’s Decameron (ca. 1353), and Petrarch’s Rerum vulgarium fragmenta (often referred to as the poetry book par excellence: il canzoniere, ca. 1374), we will unveil the literary and fictitious nature of medieval erotic literature. We will explore the origins of love poetry in medieval France and its subsequent interpretation and rewriting in Italian courts and comuni. We will inquire into the cultural constructions of the medieval notion of lyrical self and how it still has an impact on our own notion of consciousness. We will study the forms, themes, and characters that populate ‘love stories’ in the Middle Ages. We will analyze the dynamics of composition, circulation, and reception in manuscript culture. Our close analysis of the texts as they have been preserved in manuscript form will help us gauge the differences between medieval and contemporary ways of writing, reading, and loving.

GSWS 0228 Studying Sex
The concept of "sex" has meant multiple things to science and medicine over the last few hundred years: a way of sorting bodies, a behavior to observe, a driving force behind reproduction and evolution, and a yardstick by which to measure normality. It has been both a binary of male and female, and a spectrum; both separate from gender, and inseparably entwined with it. It has been defined at different moments by anatomy, hormones, chromosomes, and even metabolism. In this course, we will explore how scientists have studied—and perhaps produced—the many-faceted thing called sex, and how historians have come to understand that past. This first-year seminar introduces students to primary source research, historical writing, and methods from both Science and Technology Studies (STS), and queer, trans, and feminist studies. Course materials will focus mainly on the United States in the 19th and 20th centuries.

1 Course Unit

GSWS 0860 Is This Really Happening? Performance and Contemporary Political Horizons
This class addresses the meeting points inside of and between a range of resistant performance practices with a focus on artists using performance to address political and social encounters in the contemporary moment. Performance, a chaotic and unruly category that slides across music, dance, theater and visual art, has long been a container for resistant actions/activities that bring aesthetics and politics into dynamic dialogue. Embracing works, gestures, movements, sounds and embodied gestures that push against and beyond the conventions of a given genre, performance can't help but rub uncomfortably against the status quo. Scholars working across Performance Studies and Black Studies importantly expanded critical discourse around performance to address the entanglement of the medium with physical, psychic, spatial and temporal inhabitations of violence and power. Generating copious genealogies of embodied resistance, this scholarship instigates how economic inequality shapes family life. Students will have the opportunity to apply key concepts to daily life.

GSWS 1010 Freud: The Invention of Psychoanalysis
No other person of the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This course will study his work, its cultural background, and its impact on us today. In the first part of the course, we will learn about Freud's life and the Viennese culture of his time. We will then move to a discussion of seminal texts, such as excerpts from his Interpretation of Dreams, case studies, as well as essays on psychoanalytic practice, human development, definitions of gender and sex, neuroses, and culture in general. In the final part of the course, we will discuss the impact of Freud's work. Guest lecturers from the medical field, history of science, psychology, and the humanities will offer insights into the reception of Freud's work, and its consequences for various fields of study and therapy.

GSWS 1011 The Family
Family life is deeply personal but at the same time is dramatically impacted by social forces outside of the family. In this course we will examine how families are organized along the lines of gender, sexuality, social class, and race and how these affect family life. We will consider how family life is continually changing while at the same time traditional gender roles persist. For example, how "greedy" workplaces, which require long work hours, create work-family conflicts for mothers and fathers. We will also examine diverse family forms including single-parent families, blended families, families headed by same-gender parents, and families headed by gender non-conforming parents. The lectures will also examine how economic inequality shapes family life. Students will have the opportunity to apply key concepts to daily life.
Fall or Spring
Also Offered As: SOCI 1010
1 Course Unit

GSWS 1027 Sex and Representation
This course explores literature that resists normative categories of gender and sexuality. By focusing on figures writing from the margins, we will explore how radical approaches to narrative form and subject-matter invite us to think in new ways about desire and identity. We will read texts that blur the boundaries between fact and fiction, hybridizing the genres of poetry, drama, and autobiography to produce new forms of expression, such as the graphic novel, auto-fiction, and prose poetry. From Virginia Woolf's gender-bending epic, Orlando, to Tony Kushner's Angels in America, this course traces how non-normative desire is produced and policed by social and literary contexts - and how those contexts can be re-imagined and transformed.

GSWS 1100 Women in Jewish Literature
"Jewish woman, who knows your life? In darkness you have come, in darkness do you go." J. L. Gordon (1890). This course will bring into the light the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres – devotional literature, memoir, fiction, and poetry – we will study women’s roles and selves, the relations of women and men, and the interaction between Jewish texts and women’s lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction and poetry from the past century. The course is divided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are portrayed in the Hebrew Bible, in rabbinc commentary, in pre-modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah’s daughter. Next we turn to the seventeenth century Glikl of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction written by women in Yiddish, Hebrew, and English.

1 Course Unit

GSWS 1101 Sociology of Gender
Gender is an organizing principle of society, shaping social structures, cultural understandings, processes of interaction, and identities in ways that have profound consequences. It affects every aspect of people’s lives, from their intimate relationships to their participation in work, family, government, and other social institutions and their place in the stratification system. Yet gender is such a taken for granted basis for differences among people that it can be hard to see the underlying social structures and cultural forces that reinforce or weaken the social boundaries that define gender. Differences in behavior, power, and experience are often seen as the result of biological imperatives or of individual choice. A sociological view of gender, in contrast, emphasizes how gender is socially constructed and how structural constraints limit choice. This course examines how differences based on gender are created and sustained, with particular attention to how other important bases of personal identity and social inequality—race and class-interact with patterns of gender relations. We will also seek to understand how social change happens and how gender inequality might be reduced.

GSWS 1122 Witches, Rebels, and Prophets: People on the Margins in Early America
This course explores the lost worlds of witches, sexual offenders, rebellious enslaved people, rebellious colonists, and Native American leaders from the seventeenth to the nineteenth centuries. Using the life stories of unusual individuals from the past, we try to make sense of their contentious relationships with their societies. By following the careers of the troublemakers, the criminals, the rebels, and other non-conformists, we also learn about the foundations of social order and the impulse to reform that rocked American society during the nineteenth century. The lives of these unique “movers and shakers” help us to understand the issues that Americans debated in the years leading up to the Civil War.

1 Course Unit
GSWS 1130 Discrimination: Sexual and Racial Conflict
This course is concerned with the structure, the causes and correlates, and the government policies to alleviate discrimination by race and gender in the United States. The central focus of the course is on employment differences by race and gender and the extent to which they arise from labor market discrimination versus other causes, although racial discrimination in housing is also considered. After a comprehensive overview of the structures of labor and housing markets and of nondiscriminatory reasons (that is, the cumulative effects of past discrimination and/or experiences) for the existence of group differentials in employment, wages and residential locations, various theories of the sources of current discrimination are reviewed and evaluated. Actual government policies and alternatives policies are evaluated in light of both the empirical evidence on group differences and the alternative theories of discrimination.

GSWS 1172 Bodies, Race and Rights: Sex and Citizenship in Modern American History
What did it mean to be a man or woman in the post-Civil War United States? Was being a man the same as being a citizen? If African-American men were to be fully embraced as both men and citizens in the aftermath of slavery, where did that leave women, white and black? Why did a nation born on immigration become so hostile to certain groups of immigrants during this period? In this course, we consider how the meanings and experiences of womanhood, manhood, citizenship, and equality before the law changed from the period immediately after the Civil War until the present day. We look at political battles over the meaning of citizenship, the use of terror to subdue African Americans politically and economically, and the fears of white Americans that they would lose their political and economic dominance to immigrant groups they deemed irreconcilably different from themselves. We also consider the repercussions of these conflicts for medical, legal, and economic efforts to regulate the bodies of women, children, poor people, immigrants, working class laborers, military men, and African Americans. Throughout the course, we will follow the state’s changing use of racial, sexual, and economic categories to assess the bodily and intellectual capacities of different groups of citizens. We will also note some of the popular cultural expressions of manhood, womanhood, and citizenship. The lectures and reading assignments are organized around a series of historical problems, dynamic leaders, and controversies that illuminate these issues.

GSWS 1181 Gender and Elections in America and Beyond
This course tackles four theoretical and empirical challenges related to gender and political equality: the extension of citizenship rights and voting rights to women; the problem of women’s persistent under-representation in politics; the nature of the gender gap in preferences across time and space; and the possibilities for substantive representation. We will focus about half the class on the US (contrasting the experiences of white and black women and men in politics) and the other half on other countries, detailing how different party systems, variation in electoral rules (like proportional representation), and institutional innovations such as gender quotas, enable or constrain gender equality in politics.

GSWS 1200 Sex and Gender in Ancient Greece and Rome
What is being a man, being a woman, being masculine, being feminine, being neither, being both? Is sex about pleasure, domination, identity, reproduction, or something else? Are sexual orientation and gender identity innate? How can words, myths and stories inform cultural assumptions about sex and gender? Did people in ancient times have a concept of sexuality? How do gendered English terms (like "girly", "effeminate", or "feisty") compare to gendered ancient Greek and Latin terms, like virtues, which connotes both "virtue" and "masculinity"? Why did the Roman and English speaking worlds have to borrow the word "clitoris" from the ancient Greeks? How did people in antiquity understand consent? Can we ever get access to the perspectives of ancient women? In this introductory undergraduate course, we will learn about sex and gender in ancient Greece and Rome. We will discuss similarities and differences between ancient and modern attitudes, and we will consider how ancient texts, ancient art, ancient ideas and ancient history have informed modern western discussions, assumptions and legislation. Our main readings will be of ancient texts, all in English translation; authors studied will include Ovid, Aristophanes, Plato, Euripides, and Sappho. Class requirements will include participation in discussion as well as quizzes, reading responses, and a final exam.

GSWS 1202 Divinities, Diviners and Divinations: Religions of the African Diaspora
This undergraduate course is designed to provide students with a broad introduction to major themes within African Diasporic Religions. This is an interdisciplinary course. We will be drawing upon various theoretical methods, i.e. historical, ethnographical, and autobiographical. Additionally, we will be examining visual media to understand the presence and value of African Diasporic Religions in the 20th/21st century. Special attention will be given to Vodou, Santeria, and Candomble in the Americas. Thematically, we will work through concepts of the diaspora; memory, myth and authenticity; ritual and material practices; borders, migration, gender and sexuality, religious commodities and exchange. As we traverse through these various religious traditions, it is through the readings, lectures, invited speakers, films and class discussions that we will develop a complex understanding of integrative religious worldviews that impacts every aspect of life: family structure, gender relations, education, healing, economics, politics, arts, and so on. It is with the hopes that we can apprehend how these traditions are indeed an American Religion.

GSWS 1215 Love, Lust and Violence in the Middle Ages
Medieval Europe was undoubtedly gruff and violent but it also gave birth to courtly culture - raw worries transformed into knights who performed heroic deeds, troubadours wrote epics in their honor and love songs about their ladies, women of the elite carved out a place in public discourse as patrons of the arts, and princely courts were increasingly defined by pageantry from jousting tournaments to royal coronations. This course will trace the development of this courtly culture from the eleventh to the sixteenth century, from its roots in Southern France to its spread to Northern France and then to various kingdoms in Europe. Central themes will include the transformation of the warrior into the knight, the relationship between violence and courtliness, courtly love, cultural production and the patronage, and the development of court pageantry and ceremony. This is a class cultural history and, as such, will rely on the interpretation of objects of art and material culture, literature as well as historical accounts.

GSWS 1242 Love and Loss in Japanese Literary Traditions: In Translation
How do people make sense of the multiple experiences that the simple words "love" and "loss" imply? How do they express their thoughts and feelings to one another? In this course, we will explore some means Japanese culture has found to grapple with these events and sensations. We will also see how these culturally sanctioned frameworks have shaped the ways Japanese view love and loss. Our materials will sample the literary tradition of Japan from earliest times to the early modern and even modern periods. Close readings of a diverse group of texts, including poetry, narrative, theater, and the related arts of calligraphy, painting, and music will structure our inquiry. The class will take an expedition to nearby Woodlands Cemetery to experience poetry in nature. By the end of the course, you should be able to appreciate texts that differ slightly in their value systems, linguistic expressions, and aesthetic sensibilities from those that you may already know. Among the available project work that you may select, if you have basic Japanese, is learning to read a literary manga. All shared class material is in English translation.

GSWS 1260 Latinx Literature and Culture
This course offers a broad introduction to the study of Latinx culture. We will examine literature, theater, visual art, and popular cultural forms, including murals, poster art, graffiti, guerrilla urban interventions, novels, poetry, short stories, and film. In each instance, we will study this work within its historical context and with close attention to the ways it illuminates class formation, racialization, and ideologies of gender and sexuality as they shape Latinx experience in the U.S. Topics addressed in the course will include immigration and border policy, revolutionary nationalism and its critique, anti-imperialist thought, Latinx feminisms, queer latinidades, ideology, identity formation, and social movements. While we will address key texts, historical events, and intellectual currents from the late 19th century and early 20th century, the course will focus primarily on literature and art from the 1960s to the present. All texts will be in English.

Also Offered As: ARTH 2679, COML 1260, ENGL 1260, LALS 1260
1 Course Unit
GSWS 1279 Women in Theatre and Performance
What is feminist theatre? How do artists use live performance to provoke not only thought and feeling, but also social, personal, and political change? This course will examine a wide array of plays and performances by and about women; these pieces are, in turn, serious, hilarious, outrageous, poignant—and always provocative. Our focus will be on English-language works from the late 20th century to the present (#metoo) moment. We will read these performance texts and/or view them on stage/screen; we will also read essays that provide contextual background on feminist theatre theory and history. Throughout the semester, we will engage diverse perspectives on women and race, ethnicity, class, sexuality, and gender identity; the issues we encounter will also include marriage and motherhood, career and community, feminism and friendship, and patriarchy and power. The class will take full advantage of any related events occurring on campus or in the city, and will feature visits with guest speakers. Students will have the opportunity to pursue research on their own areas of interest (some recent examples are "women in comedy," trans performance, drag kings, feminist directing, etc.).

GSWS 1300 Theories of Gender and Sexuality
What makes men and women different? What is the nature of desire? This course introduces students to a long history of speculation about the meaning and nature of gender and sexuality – a history fundamental to literary representation and the business of making meaning. We will consider theories from Aristophane’s speech in Plato’s Symposium to recent feminist and queer theory. Authors treated might include: Plato, Shakespeare, J. S. Mill, Mary Wollstonecraft, Sigmund Freud, Virginia Woolf, Simone de Beauvoir, Adrienne Rich, Audre Lorde, Michel Foucault, Gayle Rubin, Catherine MacKinnon, Eve Kosofsky Sedgwick, Judith Butler, bell hooks, Leo Bersani, Gloria Anzaldúa, David Halperin, Cherrie Moraga, Donna Haraway, Gayatri Spivak, Diana Fuss, Rosemary Hennesy, Chandra Tadpole Mohanty, and Susan Stryker. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

GSWS 1301 Writing Women, Part 1
This is a sophomore-level course designed for students who are curious about the literary and social history of women’s writing between 1660 and 1700. We’ll survey the work of influential writers of the time period who identified as female, and add a few texts by men writing about women. We’ll consider how women’s writing participated in the many worlds from which women were excluded — the worlds of inherited literary tradition, formal education, commerce, religious debate, and contemporary politics, to name a few. The course focuses on authors resident in “Great Britain” (a national entity still under development during this time, as we shall see) between the Restoration of Charles II in 1660 and the turn of the eighteenth century. Another course, ENGL 1331, focuses on 1700-1790. Students may take one or both of these stand-alone courses.
No prerequisites required. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ENGL 1330
1 Course Unit

GSWS 1301 Writing Women, Part 2: Sexuality and Power, 1700-1799
“Sexuality and Power” is an intermediate-level course organized as a collaborative seminar. The eighteenth century (1700-1799) in Britain was an exciting time. Literacy’s long-policed borders were being relaxed, and publication was allowed to flourish largely free of censorship. As the set of those allowed to participate in public discourse slowly expanded, new opportunities arose for literate women. We will focus on the work of important female-identified writers from the period. Students from all disciplines are welcome. There are no prerequisites. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ENGL 1331
1 Course Unit

GSWS 1351 Contemporary Fiction & Film in Japan
This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan’s war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, manga, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujirō, Naruse Mikio, Kurosawa Akira, Imamura Shohei, Koreeda Hirokazu, and Beat Takeshi.

1 Course Unit
GSWS 1361 Sex Matters: Politics of Sex in the Modern Middle East
The course concentrates on the history of sexuality as it informed and shaped political and social change in the Middle East, and vice versa, in an engagement with global historical contexts. What does sexuality have to do with power, political rule, and mass movements in the modern Middle East? What can the study of sexuality and body politics teach us about colonialism and state formation over centuries of imperial rules and colonial regimes, as well as in the contemporary context of neoliberal capitalism? What is the relationship between studying LGBTQIA+ movements alongside with feminism and the use of sex and sexuality as an analytical category? This course will investigate selected themes such as modernity, nationalism, and colonization and connect them to harem lives, politics of veiling/unveiling, reproductive rights, race, polygamy, masculinity, and early modern concepts of same-sex desire in connection with modern queer thought and activism to ask questions about the preconceived notions about “Middle Eastern sexualities.” The course focuses on discussing on some of the many roles that sex and gender politics have played in social and political change in the Middle East, while thinking about gender, history, and society comparatively and transnationally.

GSWS 1400 Asian American Gender and Sexualities
This course explores the intersection of gender, sexuality, and race in Asian America. Through interdisciplinary and cultural texts, students will consider how Asian American gender and sexualities are constructed in relation to racism while learning theories on and methods to study gender, sex, and race. We will discuss masculinities, femininities, race-conscious feminisms, LGBTQ+ identities, interracial and intraracial relationships, and kinship structures.
Spring
Also Offered As: ASAM 1400, SAST 1400
1 Course Unit

GSWS 1410 Asian American Women: Nation, Self and Identity
This course examines the literary constructions of Asian American Women’s identity in relation to the U.S. nation state. How have the figures of the tiger mother, the Asian nerd, the rice queen, the trafficked woman, the geisha, the war bride, emerged to represent Asian American women, and how have Asian American feminists responded to these problematic racial stereotypes? How does the scholarship on such racialized representations illuminate historical and contemporary configurations of gender, sexuality, race, class, nation, citizenship, migration, empire, war, neoliberalism and globalization as they relate to the lives of Asian American women? In exploring these questions, this course examines Asian American histories, bodies, identities, diasporic communities, representations, and politics through multi- and interdisciplinary approaches, including social science research, literature, popular representations, film, poetry and art.
Spring

1 Course Unit

GSWS 1411 Queer Chinas: Sexuality and Politics in the Sinophone World
This class examines queer phenomena in and around China, including Taiwan, Hong Kong, Singapore, and the queer Sinophone world more generally. Beyond seeking to understand sexual subcultures and sites of queer intimacies on their own terms, the course examines their relationship to political economy and geopolitics. In addition to filmic and literary texts, the course includes readings that are theoretical, anthropological, sociological, and comparative. While the focus is largely on modern China, the class also attends to historical reference points both inside and outside the Sinophone world. From a macro perspective, this course examines China’s place in discourses of development, focusing on the role of desire in constituting the sexual and political subject of modernity. The overall goal of this class is to develop alternative frameworks for understanding the relationship between sexuality and politics. The course does not require specialized knowledge of China.
Also Offered As: EALC 1411
1 Course Unit

GSWS 1427 Wild Things: Children’s Literature and the Psychoanalytic Study of the Child
This course, framed as a psychoanalytic study of the child, focuses on English-language children’s literature from the 19th Century to the present. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: COML 1427, ENGL 1427
1 Course Unit

GSWS 1490 Law and Social Policy on Sexuality and Reproduction
This course will examine how statutory law, court decisions and other forms of social policy encourage or discourage various forms of sexuality, reproduction and parenting. Such issues as contraception, abortion, gay and lesbian rights, reproductive technology, family violence, and welfare and family policies will be covered.
Fall or Spring
1 Course Unit

GSWS 1500 Introduction to Disability Studies: Form, Text, and Practices
Introduction to Disability Studies: Form, Text, and Practices is a class that fuses disability studies, queer theory, Black feminist theory, visuality studies, film theory, and disabled artistic practices. Centering the praxis of disability justice, this class asks students to think about practice and theory as an intertwined discipline. Students will study, write, and create works that looking towards models of production that center community-based and interdependent relationality. Some areas that this course covers includes but is not limited to disability studies vs. crip theory, the history and legacy of AIDS epidemic, disability justice and mutual aid organizing, multi sensorial artistic practice, as well as tending to questions of labor, pain, excess, and debilitation. Disability studies has a long and complicated history of centering whiteness, domesticity, and the West in its models of rights-based advocacy. This class turns away from the white independent disabled superstar and towards the teachings of crip of color critique and disability justice to think beyond the terms and conditions that have been rectified as productive models in uplifting the “good disabled person.” We will use texts and teachings from Sins Invalid, Leah Lakshmi Piepzna-Samarasinha, Octavia Butler, Audre Lorde, Park McArthur, Constantina Zavitsanos, Lochlann Jain, LaMarr Jurelle Bruce, Mel Chen, Kai Cheng Thom, and Sami Schalk to guide us in our efforts. Students will also engage with transformative justice and anticanonars of thought through Mia Mingus’s Care Pods Activity and a training from Health Justice Commons.
1 Course Unit
GSWS 1630 Witchcraft and Possession
This course explores world witchcraft and possession from the persecutions of the early seventeenth century through the rise of Wicca in the twentieth century. The mere mention of these terms, or of such close cousins as demonology, sorcery, exorcism, magic, and the witches Sabbath, raises clear ethnographic and historical challenges. How can the analysis of witchcraft— including beliefs, patterns of accusation, the general social position of victims, the intensity and timing of witch hunts, and its relation to religious practice, law, language, gender, social marginalization, and property—lead us to a more humane understanding of belief and action? Films such as The Exorcist, The Blair Witch Project, The Crucible, and Three Sovereigns for Sarah will focus discussion. Fall or Spring
Also Offered As: ANTH 1630, HIST 1630, RELS 1630
1 Course Unit

GSWS 1680 Sex and Socialism
This seminar examines classic and current scholarship and literature on gender and sexuality in contemporary Eastern Europe, and examines the dialogue and interchange of ideas between East and West. Although the scholarly and creative works will primarily investigate the changing status of women during the last three decades, the course will also look at changing constructions of masculinity and LGBT movements and communities in the former communist bloc. Topics will include: the woman question before 1989; gender and emerging nationalisms; visual representations in television and film; social movements; work; romance and intimacy; spirituality; and investigations into the constructed concepts of "freedom" and "human rights."
Also Offered As: ANTH 1688, REES 1680, SOCI 2972
1 Course Unit

GSWS 1800 Introduction to Queer Art
It’s no exaggeration to note that queers have long been at the forefront of innovation in the arts, and that the arts, generally, have been a comfortable home for queers, even at moments when society at large was distinctly hostile. In fact the concepts of modern art and homosexuality that we use today are twins, for they were both founded in the third quarter of the 19th century and grew up together. Introduction to Queer Art thus begins with the coinage of the word "homosexual" in 1869, and surveys how a range of mediums including painting, sculpture, poetry, music, and film shifted in response to new definitions of sexuality. Along the way, we will work towards answering two related questions: 1) Why were queer creators largely responsible for the introduction of modernity in the arts, and 2) why do we find so often that queer social and political dissent found form in, and as, aesthetic dissent as well? In creating new forms for art that often seem far removed from any traditional definition of sexuality, including non-objective and abstract art, queer artists pushed the boundaries of normativity, leading to new ways of seeing, hearing, feeling and thinking that often dared to encode queer meanings as part of their formal innovation. We will look into the politics of queer art, and how and why in the US, even amidst often dangerous homophobia, it was queer artists who represented America to itself. Thus, we will cover such key cultural figures such as Walt Whitman, Gertrude Stein, Georgia O’Keeffe, Frank O’Hara, Jasper Johns, Andy Warhol, and Agnes Martin. Throughout, new methods informed by queer, gender, and critical race theory will be utilized.

GSWS 2100 Trauma Porn to Title IX: Gender Based Violence at Penn
What does it mean to center survivors? Do safe spaces exist? How do institutions like Penn perpetuate gender based violence? How do we encounter and *counter* violence inside and outside the academic space? This course will explore these questions through the various lenses of academic research, literature, art, popular culture, and media, allowing for a nuanced and historically contextualized understanding of the challenging and enduring issue of gender based violence on college campuses, its prevalence, its causes, and its potential solutions. Students will participate in weekly guided discussions and the course will feature regular guest speakers who are involved in anti-violence work at Penn and in the broader community. Creative practices will be encouraged and centered each week, and course assignments will reflect this priority. Previous experience with Gender Studies is welcome but not required.
1 Course Unit
GSWS 2120 American Literature Seminar
This course explores an aspect of American literature intensively; specific course topics will vary, and have included "American Authors and the Imagined Past" and "American Gothic." See the English Department's website at www.english.upenn.edu for a description of the current offerings.

GSWS 2155 Gender History and American Film
More than any other medium, the motion pictures fostered new ideals and images of modern womanhood and manhood in the United States. Throughout the twentieth century, gender representations on the screen bore a complex relationship to the social, economic, and political transformations marking the lives and consciousness of American men and women. This course explores the history of American gender through film. It treats the motion pictures as a primary source that, juxtaposed with other kinds of historical evidence, opens a window onto gendered work, leisure, sexuality, family life, and politics. We will view a wide range of Hollywood motion pictures since 1900, as well as films by blacklisted artists, feminists, and independent producers.
Spring
Also Offered As: CIMS 2155, HIST 2155
1 Course Unit

GSWS 2159 The History of Family Separation
This course examines the socio-legal history of family separation in the United States. From the period of slavery to the present-day, the United States has a long history of separating and remaking families. Black, Indigenous, poor, disabled, and immigrant communities have navigated the precarious nature of family separation and the legal regime of local, state, and federal law that substantiated it. In this course, we will trace how families have navigated domains of family separation and the reasoning that compelled such separation in the first place. Through an intersectional focus that embraces race, class, disability, and gender, we will underline who has endured family separation and how such separation has remade the very definition of family in the United States.

1 Course Unit

GSWS 2219 Social Inequalities: Caste and Race
This course introduces students to two systems of inequity, caste in South Asia, particularly in India, and race in the United States. It’s main objective is to demonstrate how these modes of inequity, sometimes dismissed as outdated or irrelevant, continue to shape social and state institutions like family, law, and bureaucracy. The course will explore sociological literature on caste and race and examine how these systems existed in a range of historical contexts. It will examine how certain groups were recipients of economic, political, and social privilege, and how these groups othered communities such as Afro-Americans in the United States and Dalits in India. We will consider how privileged groups continue to represent modern institutions like state and law that fail to protect disadvantaged communities in both India and the United States. The course will also explore how privileged communities employ the tool of gendered violence of different kinds like physical violence against men and sexual violence against women of Afro-American communities and Dalit communities to maintain forms of social power and control. The final unit of the course will deal with the emerging and imagined solidarities between Afro-American social and political movements in the United States and Dalit movements in India.
Also Offered As: AFRC 2219, SAST 2219, SOCI 2970
1 Course Unit

GSWS 2220 African Women's Lives: Past and Present
Restoring women to African history is a worthy goal, but easier said than done. The course examines scholarship over the past forty years that brings to light previously overlooked contributions African women have made to political struggle, religious change, culture preservation, and economic development from pre-colonial times to present. The course addresses basic questions about changing women's roles and human rights controversies associated with African women within the wider cultural and historical contexts in which their lives are lived. It also raises fundamental questions about sources, methodology, and representation, including the value of African women's oral and written narrative and cinema production as avenues to insider perspectives on African women's lives.

GSWS 2320 Queer Life in U.S. History
Queerness has held a variety of meanings and queer life has looked different over the past several centuries of United States history, but it certainly isn’t new. This course traces queer existence—in terms of both gender and sexuality—from the seventeenth century through the present, and foregrounds lived experience, identity formation, community development, and political consciousness. We will attend closely to how race, class, immigration status, and ability shape and are shaped by queer life, and engage with current topics of concern in the field of queer history, like the rural/urban divide, capitalism and neoliberalism, and queer memory.
Also Offered As: HIST 0819
1 Course Unit

GSWS 2321 Criminality and Gender Deviance in Early America
This advanced seminar explores literary, cultural, and political expressions of gender and sexuality, with special foci on criminality and deviance. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ENGL 2321
1 Course Unit

GSWS 2353 Sex and Power in the Middle East: Unveiling Women's Lives
How did Islamic women really live? What were their attitudes toward veiling and politics? To what extent did family dynamics and sexuality inform social interactions? This course strives to answer these questions by offering a comparative perspective on the lives of women primarily in the Middle East and North Africa. It combines historical accounts with select fictional works to study women's social and cultural milieux under colonialism, as well as the evolution of women's roles in politics and society with the emergence of independent nation-states in the Middle East and North Africa. By crossing national boundaries, this course highlights the diversity of women's experiences. Active participation is critical to the success of this seminar. Every student is required to prepare a Powerpoint presentation on one week's readings. The presentation must be completed before the start of each class meeting and subsequently distributed to the members of the class. The PPT presentation should offer critical reflections on the topics discussed in the text. Rather than providing summaries, or personal commentary, students should attempt to raise questions and explain the arguments presented in the readings. In addition to the PPT presentation, students must complete a term paper (approx. 20-25 pages) by the end of the semester on a subject approved by the instructor. Students may select a primary text and discuss its relevance by drawing on the readings from the seminar. The text MUST be different from the text chosen for the PPT presentation. Required books are available for purchase at the Penn Book Center at 34th and Sansom Streets.
Fall or Spring
Also Offered As: HIST 2353, NELC 2567
1 Course Unit

GSWS 2354 The Body in Middle Eastern History
The body has long been the focus of social and scientific inquiry, as well as the foundation of religious, philosophical, and artistic thought. This seminar examines premodern and modern notions of the body in the Middle East as they intersect with colonialism, nationalism, religion, labor, law, military, gender, race, medicine, and art. Students use the notion of the body as a "useful" historical category to investigate the broader social, cultural, and political transformations occurring in the Ottoman Empire and Qajar Iran, followed by post-empire and colonial modern Middle Eastern contexts. The course addresses diverse views and theories as manifested in the constructions and practices over the body by using literary texts, primary sources, medical recipes, religious orders, and even public monuments to unearth the role of the body in the making of Middle Eastern history.
Also Offered As: HIST 2354, NELC 2354

GSWS 2390 Clarice Lispector
This seminar focuses on the work of Clarice Lispector, the Ukrainian-born Brazilian novelist and short story writer (1920-1977). See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: COML 2390, ENGL 2390, LALS 2390, PRTG 0090
1 Course Unit

GSWS 2400 Gender and Popular Culture
This course examines the representation of gender in American popular culture from the twentieth and twenty-first centuries. We will examine texts across television and film, pop music, popular print media, social media, advertising, and fashion, and we will engage the historic relationship between these pop texts and sociopolitical movements. We will also read critical texts from the feminist and queer tradition on desire and sexuality, race, religion, and political power. And we will consider how the methods and modalities of gender studies can inform our understanding of pop culture. Students are responsible for three short papers of 3-5 pages and a final paper of 10-15 pages that showcase their original research around the themes of the class.
Also Offered As: ENGL 1395
1 Course Unit

GSWS 2401 Indians, Pirates, Rebels and Runaways: Unofficial Histories of the Colonial Caribbean
This seminar considers the early history of the colonial Caribbean, not from the perspective of European colonizing powers but rather from “below.” Beginning with European-indigenous contact in the fifteenth century, and ending with the massive slave revolt that became the Haitian Revolution (1791-1804), we will focus on the different ways in which indigenous, African, European and creole men and women experienced European colonization in the Caribbean, as agents, victims and resisters of imperial projects. Each week or so, we will examine the experiences of a different social group and their treatment by historians, as well as anthropologists, archaeologists, sociologists, and novelists. Along the way, we will pay special attention to the question of primary sources: how can we recover the perspectives of people who rarely left their own accounts? How can we use documents and material objects—many of which were produced by colonial officials and elites—to access the experiences of the indigenous, the enslaved, and the poor? We will have some help approaching these questions from the knowledgeable staff at the Penn Museum, the Kislak Center for Special Collections, Rare Books and Manuscripts, and the Van Pelt Library.

**GSWS 2402 Faces of Love: Gender, Sexuality and the Erotic in Persian Literature**

Beloved, Lover and Love are three concepts that dominate the semantic field of eroticism in Persian literature and mysticism. The interrelation among these concepts makes it almost impossible to treat any one of the concepts separately. Moreover, there exists various faces and shades of love in the works of classical and modern Persian literature that challenges the conventional heteronormative assumptions about the sexual and romantic relationships between the lover and the beloved. A sharp contrast exists between the treatment of homosexuality and ‘queerness’ in Islamic law, on the one hand and its reflection in Persian literature, particularly poetry (the chief vehicle of Persian literary expression), on the other. This course introduces and explores different faces of love, eroticism and homoeroticism in the Persian literary tradition from the dawn of dawn of the Persian poetry in the ninth century all through to the twenty-first century. It offers a comprehensive study of representations and productions of heteronormativity, sexual orientation and gender roles with particular reference to the notion of love, lover and beloved in Persian literature.

Also Offered As: COML 2400, NELC 2400

1 Course Unit

**GSWS 2405 Global Feminisms**

Feminism has both united women and also generated debates between women of different races, locations and sexual orientations, across the world, and also within the US. Feminism means both understanding the construction of gender and sexuality in society, and challenging the oppressive structures that constrain people of all genders. As such, there can be no single feminism that is globally relevant. How should we, located in a prestigious US university, locate our own ideas about gender and sexuality in a global framework? Each week we will engage with a piece of work—fiction, autobiography, film, historical or activist writing—from a different part of the world. Through them we will explore how histories of colonialism, slavery and race, nation-making and war have led to very different conceptions of the family, sexuality, gender identities the body, labor, and agency around the world. Texts and films will likely include: Domitila Barrios de Chúngara, Let Me Speak; Angela Davis, Women, Race and Class; Urvashi Butalia, The Other Side of Silence; Veronique Tadjo, Queen Pokou; Saidiya Hartmann, Lose Your Mother; Joan Scott, The Politics of the Veil; Gaiutra Bahadur, Coolie Woman, The Odyssey of Indenture; Marjane Satrapi Persepolis; Marijie Meerman, Chain of Love; Ousmane Sembene Moolade; A. Revathi, The Truth About Me: A Hijra Life Story; Ama Ata Aidoo, Our Sister Killjoy. Satisfies the Cross-Cultural Requirement of the College's General Education Curriculum; Fulfills Sectors 1 and 2 of the English major.

1 Course Unit

**GSWS 2420 Science of Sex & Sexuality**

While sexual and gender diversity have been consistent features in most cultures throughout history, how such gender and sexual based discussion have been articulated, understood, condoned or condemned has varied. If medical historians and queer theorists have paid most obsessive attention to these subjects, bioethicists have intervened to a lesser degree and on only a handful of relevant subjects. Bearing in mind the social and medical legacies related to sexual and gender identities, this course will consider a range of historical and contemporary topics which speak to the intersection of bioethical dilemmas on medicine, sexuality and gender identity, including: the gay adolescent, the intersex person, gay-conversion therapies, the prospect of gay gene studies, sex addiction, queer blood/organ donation policies, and the wake of the global HIV/AIDS pandemic. Specifically, we will focus on literary sources (memoirs, diaries, and films) as well as non-literary accounts (medical texts, bioethical scholarship, and historical records) that explore the emotional and somatic aspects of matters related to sexuality, gender identity, and bioethics.

1 Course Unit

**GSWS 2490 Philosophy of Education**

The philosophy of education asks questions about the foundational assumptions of our formal institutions for the reproduction of culture. It ranges therefore, from epistemology and philosophy of mind to ethics and political philosophy. For instance: What is the nature of learning and teaching? How is it possible to come to know something we did not know already—and how can we aid others in doing that? How, if at all, should formal institutions of education be concerned with shaping students’ moral and civic character? What is the proper relation between educational institutions and the state? We also ask questions more specific to our own time and context. For example: how, in a multicultural state, should we educate students of varied social identities, like race, gender, and religion? What is the relationship between education and justice.

GSWS 2500 History of Private Life in China
Underneath the grandeur of empires, war, revolutions, history eventually is about people's life. This seminar explores how the boundaries of private life in China intersect with the public arena and how such an intersection has significantly re-shaped Chinese private life between the 16th century and the present. The first half of the seminar will explore how the private realm in late imperial China was defined and construed by Confucian discourses, architectural design, moral regulation, cultural consumption, and social network. Moving into the twentieth century, the remaining part of the seminar will examine how the advent of novel concepts such as modernity and revolution restructured the private realm, particularly in regard to the subtopics outlined above. Organizing questions include: How did female chastity become the center of a public cult which then changed the life paths of countless families? How did the practice of female foot-binding intersect with marriage choices, household economy, and social status? How did print culture create a new space for gentry women to negotiate the boundaries between their inner quarters and the outside world? What was the ideal and reality of married life in late imperial China? How did people's life change when the collective pursuit for Chinese modernity placed romantic love, freedom to marry and divorce at the center of public debates? How was "Shanghai modern" related to the emerging middle class life style as evidenced in advertisement posters? How has the ideal of gender equality been re-interpreted and realized under the Communist regime? How have the current market reforms reformulated the contours of private life in China? GSWS 2537 Gender and Health
Women's health is a constant refrain of modern life, prompting impassioned debates that speak to the fundamental nature of our society. Women's bodies are the tableaux across which politicians, physicians, healthcare professional, activists, and women themselves dispute issues as wide-ranging as individual versus collective rights, the legitimacy of scientific and medical knowledge, the role of the government in healthcare, inequalities of care, and the value of experiential knowledge, among many others. Understanding the history of these questions is crucial for informed engagement with contemporary issues.

GSWS 2545 Sex, Love, and Race in African American Life and History
This course discusses the political and social implications of sex, race and personal relationships in U.S. political and social history. In this class, we examine how so-called 'emotional,' human experiences such as falling in love, engaging in a sexual relationship, marriage, coming out of the closet, and other deeply personal events over the course of a lifetime are shaped by political, legal and historical forces. This course will examine the history of marriage rights, claims to ethnic and racial identity, activism among multiracial people in the United States, sex education in public schools, and debates about marriage and family rights in the 20th and 21st centuries.

GSWS 2600 Witches, Whores and Rogues
What should we make of the disorderly people of the past? Were they acting out their dissent against powerful customs and institutions in their lives? Or were they the victims of those customs and institutions? In this course, we consider the lives of these disorderly people: the witches, prostitutes, criminals, escaped servants and slaves, criminals, cross dressers, and rowdies of early modern Europe and the Americas. The course will focus on several case studies featuring people considered to be troublemakers, or at the very least, non-conformist, by their contemporaries. We will use films, primary sources, book-length studies, and works of theory to develop our analyses of the problem of dissent, disorder, and resistance in the early modern past.
Fall or Spring
Also Offered As: HIST 2600

GSWS 2601 Women and the Making of Modern South Asia
This course on women in South Asian history has four objectives - 1. To acquaint ourselves with the historiography on South Asian women. 2. To gain an understanding of evolving institutions and practices shaping women's lives, such as the family, law and religious traditions. 3. To understand the impact of historical processes - the formation and breakdown of empire, colonialism, nationalism and decolonization - upon South Asian women between the sixteenth and twentieth centuries. 4. To become familiar with some of the significant texts written about and by women in this period. We will read a wide variety of primary sources including a Mughal princess' account, devotional verse authored by women, conduct books, tracts, autobiographies and novels.
Spring
Also Offered As: HIST 3500, SAST 2260
1 Course Unit
GSWS 2610 The Asian Caribbean
Although Asians have lived in the Americas for centuries, the Asian American community and experience tends to be defined by the post-1965 wave of immigration to the United States. In an effort to correct this narrative this course will explore the histories, experiences, and contributions of some of the forgotten Asians of the Americas. In particular, we will focus on the earlier labor migrations of Chinese and South Asian individuals to the Caribbean and the United States. The experiences of these individuals, who built railroad, cut sugarcane, and replaced African slave labor, complicate our understandings of race today. By examining the legal and social debates surrounding their labor in the 19th century and exploring how their experiences are forgotten and their descendants are rendered invisible today, we will complicate what is Asian America and consider how this history shapes immigration policies today.

GSWS 2700 Folklore and Sexuality
Sexuality is usually thought of as being biological or social, divided into categories of natural and unnatural. Often missed are its creative and communicative aspects. Examining the constructed social elements of sexuality requires attention be paid to folklore in groups, between individuals and on the larger platform of popular technological media. The most interesting locations for exploration are those places where borderlands or margins, occur between genders, orientations and other cultural categories. A field-based paper will be required that must include documentary research.

GSWS 2770 Gender, Sex & Urban Life
Is urban space gendered? Do we change how it is gendered as we move through it? Does it change us? This course explores gender and sexuality in the contemporary global city through the study of urban spaces. We will consider feminist, queer, and transgender theories of the city, as we investigate how practices of using and making space are gendered and sexualized. Each week of the course will be organized around a type of space, including subway, school, and birthing center, nightclub, suburb, and park. Assignments will include an auto-ethnography, a short critical essay, and a final assignment that asks you to propose an additional type of space in which to study the intersections of sex, gender, and the urban built environment. In each space, we will conduct an interdisciplinary exploration, drawing from sociology, anthropology, geography, city planning history, feminist and queer theory, as well as from fiction, poetry, music videos, photography, and documentary film.
Spring

GSWS 2870 Postwar Art
At a time of seismic shifts in the American polity, postwar art has too often seemed above the fray. Even as New York came to replace Paris as the epicenter of art world in the post war period, the rapid succession of styles and movements from Abstract Expressionism to Neo-Dada, Pop Art, Minimalism, Conceptual Art and Happenings can seem to have their own internal logic, severed from the historical backdrop of the time. Some of the artists we’ll consider include Pollock, Krasner, Rauschenberg, Johns, Warhol, Kusama, Martin, Lichtenstein, Bearden, Oldenburg, LeWitt, Chicago and Judd. In this course, we’ll reexamine American art and art criticism in the postwar period alive to everything from the Cold War’s virulent anti-communism to the rise of progressive liberation movements around race, ethnicity, sexuality, and gender. In the process, we will repeatedly underscore how art both served, and bit, the hand that fed it.
Also Offered As: ARTH 2870
1 Course Unit
GSWS 2879 Global Queer History
Sexuality has a history that is both geographically and culturally specific. For this reason, this course aims to destabilize familiar sexual categories and identities by exploring how it was (and is) to be queer in different parts of the world. We will historicize sexual orientation as a category anchored in Western medical and legal discourses; we will link the history of sexuality with that of capitalism, colonialism, and racism; and we will evaluate the idea of “Gay Imperialism” and how it is resisted around the world. The course is not comprehensive either chronologically or geographically. Instead, it considers some key topics in the history of queer sexualities; it provides a general historiographical background; and it introduces a toolbox for doing critical queer history with a global perspective. Finally, we will address how contemporary LBGTQ+ issues around the world can be put into historical perspective, and why queer history is essential for achieving the goals of social justice.

1 Course Unit

GSWS 2940 Art Now
One of the most striking features of today's art world is the conspicuous place occupied in it by the photographic image. Large-scale color photographs and time-based installations in projections are everywhere. Looking back, we can see that much of the art making of the past 60 years has also been defined by this medium, regardless of the form it takes. Photographic images have inspired countless paintings, appeared in combines and installations, morphed into sculptures, drawings and performances, and served both as the object and the vehicle of institutional critique. They are also an increasingly important exhibition site: where most of us go to see earthworks, happenings and body-art. This course is a three-part exploration of our photographic present.

GSWS 2978 Just Futures Seminar II: Health and Healing in Abiayala (the Americas)
Health and Healing in Abiayala (the Americas) will introduce students to ecosocial notions of health, colonialism's contributions to ill-health, and colonial action as healing action. Part one of the course introduces general concepts of body, health, and illness in biomedical models. It then pivots to the relational and ecosocial practices of body, health, and wellbeing among many First Peoples of the Abiayala, highlighting "radical relationality." For many First Peoples, community includes humans, plants, animals, ancestors, and earth beings (such as the land, mountains, rivers, and lakes) that are materially, socially, and spiritually interdependent. These beings work together to maintain a “shared body” through practices of reciprocal care. Part two of the course examines how the shared body has been and is threatened by the colonization of Indigenous lands and bodies through (e.g.) land dispossession, pollution, extractive industry, lack of access to quality education and medical care, forced sterilization, forced removal of children, exploitative economic relations, and political violence. The third part of the course will follow how First Peoples of Abiayala are healing from the physical, social, and spiritual wounds of colonialism through decolonial action. First Peoples are creating their own healing centers and ecological protection agencies, engaging in Land Back movements, in legal and direct-action processes to protect the shared body from extractive industry, and reproductive justice movements. Healing is future oriented, powering the “radical resurgence” of First Peoples. Some questions addressed in this class include, where does the body begin and end? What constitutes personhood? How does continued colonization affect Indigenous peoples' health—and that of all peoples? How do Indigenous peoples use ancestral knowledges, relation ethics, and local ecologies to help heal historic and contemporary wounds to power their futures? Is there a political dimension to healing? How do autonomy and self-determination figure into healing and wellbeing?

GSWS 3020 Queer Cinema
Queer Cinema, in Theory. This course explores the role of cinema in shaping the history of gender and sexuality, at the same time introducing students to some of the most relevant texts in the field of queer, gender and trans studies. While the last decades have been characterized by increasing acceptance of gays, lesbians and trans people into mainstream society, this process has no doubt reproduced new inequalities and asymmetries — in terms of race, class, and gender presentation. Does “queer” still pose a threat to the mainstream or is it now part of the “normal”? Should one welcome the progressive acceptance or queer lives within the mainstream or should one reject it in the name of an indissoluble difference? How do whiteness and homonormativity participate in the structural marginalization of black and trans people? Some of the topics addressed by this course are the “closet” in classical Hollywood cinema and its critique in 1990s queer films such as Happy Together (Wong Kar-wai, 1997); the intersection of sexuality and race in black feminist films such as Born in Flames (Lizzie Borden, 1983) and Watermelon Woman (Cheryl Dunye, 1996); the treatment of reproductive labor in experimental feminist films such as Jeanne Dielman (Chantal Akerman, 1975); the representation of the AIDS crisis in new queer films such as The Living End (Gregg Araki, 1992); sex reassignment politics in 2000s Iranian films such as Sex My Life (Bahman Motemedian).

GSWS 3100 Politics of Political Writing: From
The Politics of Political Writing: From "We, the People" to "Power to the People" is a literary study and research course charting the development of liberatory politics, aesthetics and subjectivities in response to colony, capital and empire. Students will read anthology, collected essays, a novel, reportage, oral history, interviews, travel writing and memoir. We will look at works in which the authors articulate political stances that impact the public sphere and their literary craft as well as works in which they examine, often self-critically, the politics of writing as practice, career, advocacy, trickery, solace and pleasure. The works, including ones by June Jordan, Jean Genet, Patricia Galvao, and Claribel Alegria worry the divide between art and politics, and some trouble the notion that writing encapsulates an author’s politics and activism. Using the texts as models we will examine in lecture, discussion, and research projects the effect and impact of aesthetic acts on making trouble for state, social and financial structures as such trouble-making urged many of these works into inception, making difficult their production and reception. The Marxist theory of the dialectic and M. Jacqui Alexander’s configuration of palimpsestic time in the neo/post/anti-colonial Americas will serve as our theory touchstones. While some of the works are from the recent past and others far older, they touch on, and in many instances, speak to the histories of regions and countries currently in the news and in crisis (Central America, the Caribbean, the Middle East, France, the US and Brazil) contemporary movements (Black Lives Matter, international solidarity, undocuqueers) and problematics (migration, US financial intervention, imperialism).

1 Course Unit

GSWS 3130 Gender, Capitalism, and Environment
What is "the economy," and how is "it" gendered? How is access to land, resources, and livelihood options mediated by hierarchies of gender that are co-constituted with race, class, age, and ability? How are gender equality, economic justice, and environmental justice interrelated? This course grapples with these and other foundational questions concerning the ways that gender, economy, and environment are intimately linked. Using case studies from around the world, we will consider Marxist-feminist, ecofeminist, political ecology, queer, critical race, and postcolonial approaches to understanding how abstract economic processes are materialized in social relations and in human-environment interactions. From women peasant farmer’s online practices in Myanmar to land-grabs and contemporary witch-hunting in African countries, together we will engage with the material histories, politics, and power relations shaping the uneven distribution of wealth and resources among gendered populations — and how different social groups are mobilizing to contest these gender, economic, and environmental inequalities together. In addition to our core questions, this course asks: How is capitalism itself gendered, and with what effects? What is considered productive work, and how are categories of worker gendered? Why are women overrepresented as peasant farmers in global south countries? How and why is climate change gendered? How and why are solutions to climate change and other environmental problems gendered? What are the gendered benefits and costs of sustainable development, and who bears them? Most of these questions lack clear answers, but by the end of the semester you will be able to give compelling oral and written explanations in response to each. Using a diverse array of texts — including film, podcasts, poetry, and peer-reviewed academic literature — this course will equip students with tools to thoughtfully and ethically engage with academic, activist, policy, and development spaces that are concerned with the intersection of gender, economy, and the environment.
Also Offered As: ANTH 3130
1 Course Unit
GSWS 3136 Queer Science
This course gives students a background in the development of sex science, from evolutionary arguments that racialized sexual dimorphism to the contemporary technologies that claim to be able to get at bodily truths that are supposedly more real than identity. Then, it introduces several scholarly and political interventions that have attempted to short-circuit the idea that sex is stable and knowable by science, highlighting ways that queer and queering thinkers have challenged the stability of sexual categories. It concludes by asking how to put those interventions into practice when so much of the fight for queer rights, autonomy, and survival has been rooted in categorical recognition by the state, and by considering whether science can be made queer. Along the way, students will engage with the tools, methods, and theories of both STS and queer studies that emphasize the constructed and political underpinnings of scientific thought and practice.
Spring
Also Offered As: STSC 3136
1 Course Unit

GSWS 3150 Queer Modernisms
This course tracks the development of Modernism in America, Western Europe, and specific other locations around the globe, with particular emphasis as to how and why dissident sexualities so often found expression in and as aesthetic dissent. Creating new expressive forms and theories that often seem far removed from any traditional definition of sexuality, queer modernist artists often replaced dangerous forms of social dissent with more prudent forms of formal dissidence. In pursuing these questions, we will place art in its broader social context, seeking to answer such significant problems as how and why forms of artistic representation that were once transparent, eminently legible to all strata of society, increasingly became, under the avant garde, designed to speak only to an elect, to a select few in our culture. We will ask what happens when art deliberately narrows its audience, and how that narrowing is related to questions of sexual difference. What is the relationship between queerness and cultural elitism, a connection generally presumed in popular culture, but rarely examined academically? And finally we will ask about the utility of forms of queer political dissent if those forms remain illegible as queer to a wider audience. Throughout, new methods informed by queer, gender, and critical race theory will be utilized.

1 Course Unit

GSWS 3153 American Feminist and LGBT Movements, 1960s-1980s
This seminar explores the history of the feminist and LGBT movements from the mid-1960s to mid-1980s in Philadelphia. Although there will be some attention to national organizations, we will focus on social and political activism as it was made in local groups and spaces. We will explore the social and cultural web that fostered activism, for example, in gay and lesbian coffee houses, campus women's centers, bookstores, and radio shows. We will also pay attention to groups and actions that may not have been self-consciously defined as "feminist" or "gay liberationist," but had important effects on social change related to gender and sexuality; these include African American, Latino/a, and working-class organizations. This is a hands-on research seminar, with students exploring local archives and special collections to document and analyze these complex movements. Each student will conduct an oral history, analyze a set of published and printed sources, and write a paper based on archival research.

GSWS 3246 The Tale of Genji
"Crowning masterpiece of Japanese literature," "the world's first novel," "fountainhead of Japanese literary and aesthetic culture," "a great soap opera in the vein of Jacqueline Susann." Readers over the centuries have praised the Tale of Genji, the monumental prose tale finished just after the year 1000, in a variety of ways. In this course we will read the latest English translation of Murasaki Shikibu's work. We will watch as Genji loses his mother at a tender age, is cast out of the royal family, and begins a quest to fill the void she left. Along the way, Genji's loyalty to all the women he encounters forges his reputation as the ideal lover.
We will consider gender issues in the female author's portrayal of this rake, and question the changing audience, from bored court women to censorious monks, from adoring nationalists to comic book adaptors. Study of the tale requires consideration of poetry, imagery, costume, music, history, religion, theater, political and material culture, all of which will be components of the course. We will also trace the effect of the tale's many motifs, from flora and fauna to murderously jealous spirits, on later literature and conceptions of human emotions. All material is in English translation. There are no prerequisites.

GSWS 3340 Feminist Ethnography
This course will investigate the relationships among women, gender, sexuality, and anthropological research. We will begin by exploring the trajectory of research interest in women and gender, drawing first from the early work on gender and sex by anthropologists like Margaret Mead and Ruth Benedict; moving through the 1970s and 1980s arguments about gender, culture, and political economy; arriving at more current concerns with gender, race, sexuality, and empire. For the rest of the semester, we will critically read contemporary ethnographies addressing pressing issues such as nationalism, militarism, neoliberalism and fundamentalism. Throughout, we will investigate what it means not only to "write women's worlds", but also to analyze broader socio-cultural, political, and economic processes through a gendered lens. We will, finally, address the various ways feminist anthropology fundamentally challenged the discipline's epistemological certainties, as well as how it continues to transform our understanding of the foundations of the modern world.

From the earliest message boards and email chains, the internet has given people a way to connect, not just digitally but sexually. Porn, online dating, sex education: digital technology has made it easier for people to find each other and explore sexuality, but these same tools have also been used in relationships that are exploitative and criminal. In this course, we look at the different connections between sex, gender, queerness and the internet: changing policies regulating sex (like FOSTA and SESTA), the platforms that have created controversies around sex (for example, craigslist, tumblr and Grindr) and shifting norms around how sex and sexuality manifest online. This is an interdisciplinary course that brings together internet studies, queer theory, and cultural studies in order to understand the social and historical dimensions of sex, sexuality and digital technologies.

GSWS 3425 Gender, Religion, and China
This course examines the interrelationship among "gender," "religion," and "China" as conceptual and historical categories. We ask, for example, how gender plays critical and constitutive roles in Chinese religious traditions, how religion can be used both to reinforce and to challenge gender norms, how religious women impact Chinese society and culture, and what the construction of "China" as a cultural identity and as a nation-state has to do with women, gender, and religion. We will also think about what assumptions we have when speaking of gender, religion, and China, and the infinite possibilities when we strive to think beyond. We will read three kinds of materials: (1) scholarship on gender and religion in historical and contemporary China as well as the Chinese-speaking world, (2) scholarship concerning theories and methodology of gender and religious studies not necessarily focused on China, and (3) historical record of religious women in English translation.

GSWS 3440 Psychology of Personal Growth
Intellectual, emotional and behavioral development in the college years. Illustrative topics: developing intellectual and social competence; developing personal and career goals; managing interpersonal relationships; values and behavior. Recommended for submatriculation in Psychological Services Master's Degree program.
Fall or Spring
Also Offered As: EDUC 3545
1 Course Unit

GSWS 3447 From Puberty to Parenting: The Evolutionary Context of Reproduction
This course explores the processes that influence reproduction in human populations. We adopt an evolutionary perspective to examine the factors that have shaped human reproductive physiology and contribute to variation in reproductive parameters between populations. To place human reproduction in a broad evolutionary context, we will consider similarities and differences between humans and other apes in how ecology shapes reproduction. The biology of puberty, pregnancy, hormonal changes across the lifespan, the cessation of reproduction, the impact of parenting behavior on the biology of offspring and parents themselves, and the influence of sex and gender diversity on reproduction will be discussed. Both the ecological and sociocultural factors that influence the steps in the reproductive process will be considered.

GSWS 3448 The Future of Disability and the Afterlives of Epidemics
Medical framings of disease focus on "cure" narratives, but what does "getting better" really mean when examined from a patient perspective and how might epidemics challenge or reshape our relationships to concepts of health, illness, and disability? In this course, we will learn to examine stories of epidemics past and present through the lens of disability. In doing so, we will ask how epidemics in the past have shaped our ideas and experiences of disability, muddled our binary thinking about illness and wellness, and challenged the beliefs, epistemologies, and institutions that drive our approaches to caring for the body, the mind, and the spirit. Through an exploration of primary and secondary source readings, we will interrogate how these eras of crisis, and their aftermaths, have historically influenced the ways we think about and experience disability and its relationship to identity, family, culture, religion, society, and citizenship in the days, weeks, months, years, and decades that follow in their wake. Ultimately, we will draw upon the insights of the past to develop better questions about present epidemics, including COVID-19, Monkeypox, as well as the re-emergence of "old" epidemic diseases like measles and polio in order to think in novel and critical ways about how our ideas about wellness, disability, and society both shape and are shaped by our encounters with contagious epidemic diseases.

1 Course Unit

GSWS 3480 Gender, Sexuality, & Pop Music
How is popular music implicated in the representation, production, performance, and interpretation of gender and sexuality? How have musicians negotiated traditional categories of gender and sexuality? In this class, we will approach the study of popular music through the lens of feminist and queer theory, critical race theory, transnational feminist theory, and intersectional methodologies to articulate the ways in which gender and sexuality have shaped musical discourse and popular culture more broadly. Topics include: gay anthems, trans vocality, masculinities, boy bands, oral histories, queer(ing) methods, cover songs, censorship, musical borrowings & cultural appropriation, the politics of representation, and affective modes of listening. Students will learn about and be able to articulate the values and ideologies that are communicated in various subgenres of popular music, and how musical production impacts our understanding of cultural practices and social systems. *No prior musical knowledge required.*
Also Offered As: MUSC 3480
1 Course Unit

GSWS 3500 Trans Method
What are the subjects of trans studies? What does “trans” as a category afford us in looking at texts, people, systems, and objects? To what extent is trans an identity? What might it mean to think of it as a methodology? How might the tools of trans studies intervene in conversations and practices beyond the field itself? What are the stakes of such an expansive approach? This course introduces students to "trans" as a still-forming analytic that has emerged out of academic spaces, activist movements, and trans cultural production. We will engage with texts and questions that build on trans studies’ connections to (and divergences from) queer and feminist studies, history, critical race studies, disability studies, and science studies, among other fields, and we will also consider how trans knowledge can act beyond the theoretical.

1 Course Unit
GSWS 3501 Writing and Witnessing
This course will explore one of the fundamental questions we face as humans: how do we bear witness to ourselves and to the world? How do we live and write with a sense of response-ability to one another? How does our writing grapple with traumatic histories that continue to shape our world and who we are in it? The very word “witnessing” contains a conundrum within it: it means both to give testimony, such as in a court of law, and to bear witness to something beyond understanding. In this class, we will explore both senses of the term “witness” as we study work by writers such as Harriet Jacobs, Paul Celan, M. NourbeSe Philip, Bhanu Kapil, Layli Long Soldier, Claudia Rankine, Juliana Spahr, and others that wrestles with how to be a witness to oneself and others during a time of ongoing war, colonialism, racism, climate change, and other disasters. Students are welcome in this class no matter what stage you are at with writing, and whether you write poetry or prose or plays or make other kinds of art. Regardless of your experience, in this class you’ll be considered an “author,” which in its definition also means a “witness.” We will examine and question what authorship can do in the world, and we will analyze and explore the fine lines among being a witness, a bystander, a participant, a spectator, and an ally. In this class you will critically analyze and write responses to class readings; you’ll do writing exercises related to the work we read; and you’ll complete (and be workshopped on) a portfolio of creative writing (and/or art) that bears witness to events that matter to you.

GSWS 3508 Queer Forms
Queer and trans writers have always queered form, constantly inventing new ways to express new forms of becoming. And yet, much of the attention paid to LGBTQ+ writing has focused on identity and content rather than looking at the many innovations in form that queer and trans writers are always producing. This multi-genre creative/critical workshop will examine some of the methods contemporary LGBTQ+ writers have used to queer genre and form in their writing, whether they are working through fiction, poetry, essay, play/performance, or some combination thereof. Queer theorist José Esteban Muñoz's notions of disidentification and queer futurity will help guide our thinking in this course. Students will read and write creative/critical responses each week to a wide range of writing that queers form. The class will include weekly workshopping and students will work towards a final project that incorporates all they have learned over the term, generating ever new queer forms of making.
Also Offered As: COML 3508, ENGL 3508
1 Course Unit

GSWS 3510 Love, Anger, Madness: History and Silences in Modern Haiti
On the stage of modern world history, Haiti plays the unique role as both the exceptionally victorious and tragic character. This course interrogates archival documents, oral histories, historical texts, and prose created within the nation and her diaspora in order to establish a nuanced image of the projection of Haiti’s modern history. Using two classic Haitian texts, Marie Vieux-Chauvet’s Love, Anger, Madness (1968) and Michel-Rolph Trouillot’s Silencing the Past: Power and the Production of History (1995), this course examines how, why, and to what end Haiti’s history and popular narratives about the country have served to construct and dismantle global movements, popular culture, and meanings of race, gender, and citizenship in the Americas. In our historical examination, we will question some of the iconic representations of Haiti through literature that deepen the affective historical profile of Haiti with interrogations of culture, sexuality, political, and media performance. Students will become familiar with the post-colonial history of Haiti and the region, meanings of race, and the production of history. The course is a research and historical methods seminar. Students will conduct archival research and write narratives from primary source material. This course qualifies as a “methods” course for Africana Studies undergraduate majors and minors.

GSWS 3514 Writing Towards Transformation
Writing Towards Transformation is a critical and creative writing workshop focused on developing works across genres that express and elaborate upon current and historical conditions of crisis and injustice. Using guided meditation, critical feedback and healthy, ethical discussion, the students of the class will develop manuscripts of poems, short stories, essays, plays and/or screenplays that in some way articulate their analysis of the present and the past towards a transformative future. We will read essays, manifestos, theater and fiction as well as view films that will hopefully inspire each student to develop texts and scripts of hope. Writers used as models of inspiration will include Gary Indiana, Valerie Solanas, June Jordan, Bertolt Brecht, Cherrie Moraga, Leslie Feinberg and Toni Cade Bambara, among many others. This is a graduate level course open to undergraduates by permission of the instructor.
Also Offered As: ENGL 3514, LALS 3514
1 Course Unit

GSWS 3550 Latin American Cuir/Queer Critique
While certain debates around queer theory and queer studies have emphasized the problematics of a deployment of a North American field to other geopolitical spaces, this course takes a different approach by emphasizing how Latin America expands the notion of queerness while also contributes to the field of queer studies and queer theory at large. As such, the course emphasizes different manifestations of the non-normative from and within Latin America. Paying close attention to aesthetic practices as well as criticism, theory, and activism, students will be exposed to how Latin American literary and cultural practices labor a critique of hegemonic structures of visibility that simultaneously direct our senses to quotidian and communal strategies of survival. Students will engage with aesthetic artifacts, such as film, literature, manifestoes, poetry, performance, music, video and street art, and photography from Argentina, Brazil, Chile, Mexico, and Peru.
Also Offered As: LALS 3551
1 Course Unit
GSWS 3559 Gender and Sexuality in Japan
If you have ever wondered about the following questions, then this is the right course for you: Is Japan a hyper-feminine nation of smiling geisha and obedient wives? Is it a hyper-masculine nation of samurai and economic warriors? Is it true that Japanese wives control the household? Is it true that Japanese men suffer from over-dependence on their mothers? What do young Japanese women and young men worry about? What does the government think about the future of Japanese women and men? Assuming that expressions of gender and sexuality are deeply influenced by cultural and social factors, and that they also show profound differences regionally and historically, this course examines a variety of texts—historical, biographical, autobiographical, fictional, non-fictional, visual, cinematic, analytical, theoretical—in order to better understand the complexity of any attempts to answer the above questions.
Not Offered Every Year

GSWS 3600 The Planets in my Pen: Experiments in Writing, Visual Art & Performance
The Planets in my Pen is a multi-genre creative arts workshop constellated around experimentation. We will be looking at innovative writing, visual art and film as models for the making of poetry, fiction, memoir, drawing, painting, sculpture, installation, plays and performance. The genres, techniques and movements of science fiction, surrealism, performance art and the political essay will be key with an emphasis on feminist, queer, left and anticolonial models of art and world making. The works of William S. Burroughs, John Rechy, Nelly Santiago, Jean Genet, Ntozake Shange, Octavia Butler, Adrienne Kennedy, Lucrecia Martel, Aimé Césaire, Jamaica Kincaid, Regina Jose Galindo, Raul Ruiz, Josefina Baez, Zadie Smith and Cherríe Moraga will be among those read, viewed and studied. As their final project students will submit a final manuscript, performance and/or art object as well as participate in a public reading/viewing/screening.

1 Course Unit

GSWS 3630 Here I/We Stand: Writing/Performing Self and Community
This writing for performance workshop will focus on the creation of plays, solo performance, collectively devised work, screenings and videos. Students can work in both the autobiographical mode common to one person shows, traditional theater and screenplay form as well as avant-garde and experimental techniques. We will write and use theater exercises to develop character and narratives that either directly or obliquely speak to the conditions of subjects who struggle to make art and sense out of self and community, history and society, memory and fantasy. We will read the work of playwrights and solo performers as well as view film and video with an emphasis on the work of leftist, feminist, queer/trans, BIPOC and social justice artists such as Jean Genet, Bertolt Brecht, Ntozake Shange, Adrienne Kennedy, Cherríe Moraga, Luis Alfaro, Holly Hughes, Kate Bornstein, Ana Mendieta, Valerie Solanas, Wallace Shawn, Tomata du Plenty, Teatro Campesino and ACT UP.
Also Offered As: ENGL 3630
1 Course Unit

GSWS 3651 Passion Projects: Radical Experiments in Writing Plays, Screenplays, and Pilots
This creative writing workshop will focus on writing for screen, stage and internet and is open to undergraduate and graduate students at every level of writing experience. The course will be writing intensive and also include the reading and analysis of feminist, trans, queer, working class and racially liberatory plays, films, television and performance as models of inspiration. Meditation, drawing, theater games, improv exercises, screenings and outings to see work on and off campus will round out this holistic and experimental approach to making work that illuminates and entertains audiences from across the US and global audience spectrum.

1 Course Unit

GSWS 3665 Fables from the Flesh: Black feminist movement and the embodied archive
Drawing inspiration from Harge's multiform fable project FLY | DROWN and Audre Lorde's conception of biomythography, students will trace their interiority to realize and imagine how personal histories, ancestral inheritance, and metaphysics live/move through the body. We will translate and transform stories of the flesh into a series of compositional modalities—which may include text, movement, performance, sound, and installation—to create lexicons that honor subjectivity as form. Informed by surrender, refusal, imagination, and self-sovereignty, we will situate our embodied archives as vessels for fable writing, create and correct myths through movement, and expand our relationship to memory, time, space, and illegibility. Throughout the course, we will turn to Black feminist literary and performance works employing fable, myth, and ancestral legacies including but not limited to: Toni Morrison's Beloved, Aretha Franklin's gospel music, Jaamil Olawale Kosoko's Chameleon, and a close reading of Harge's FLY | DROWN. The room will be grounded in practices of Black fellowship, moving between study group, kickback, ceremony, cypher, and incubator. We will oscillate between these formats depending on the needs of the course and the cohort.

GSWS 3702 Feminism in the Americas
Students in this seminar will choose their own research topic in the history of feminism. With guidance and support each person will produce a twenty-page paper based on intensive work with primary sources. Readings will range across Latin America, the Caribbean, and the United States. We'll take a long view, beginning in the sixteenth century, and use an expansive frame. Our purpose will not be to decide who was or wasn't 'a feminist' but instead to try to understand actors within their contexts. Readings include scholarship on Sor Juana Inés de la Cruz, Sojourner Truth, the struggle for voting rights across national lines, opposition to dictatorship, and organizing against racism and homophobia. *For History Majors and Minors: Geographic requirement fulfilled by this seminar is dependent on research paper topic.
Fall or Spring
Also Offered As: HIST 3702, LALS 3702

GSWS 3831 Queer Art Seminar
This course explores art and art history from a Queer Studies perspective, in a global and cross-cultural context. Topics vary from semester to semester and stretch widely in terms of geography and chronology.
Also Offered As: ARTH 3831
1 Course Unit
GSWS 3890 Psychoanalysis and Autobiography
Both psychoanalysis and autobiography are ways of re-telling a life. Psychoanalysis is often called "the talking cure" because, as patients tell the analyst more and more about their lives (their thoughts, dreams, memories, hopes, fears, relationships, jobs, and fantasies), they start to recognize themselves in new ways, and this can help them overcome conflicts, impasses, bad feelings, and even psychiatric illnesses that have kept them from flourishing. Autobiographers do something similar as they remember, re-examine, and re-tell their lives - though one very important difference is that they do so, not privately in a psychoanalyst's office, but publicly in books that anyone may read. This seminar is a comparative exploration of these different ways of a re-telling a life. This seminar is usually team-taught by a humanities scholar and a practicing psychoanalyst.

Fall
Also Offered As: COML 3097, ENGL 0541
1 Course Unit

GSWS 3930 Cinema and Civil Rights
This undergraduate seminar will examine key moments in the history of civil rights through a cinematic lens. Over the course of the semester, we will explore how filmmakers have depicted the lives, aspirations, and struggles of those who have struggled for equal rights; how different struggles have intersected with each other; what aesthetic strategies have been adopted to represent freedom and the denial of it; and how effective cinematic efforts to contribute to increased freedom have been as well as what criteria we use to evaluate success or failure in the first place. Each week, we will watch a film and read a series of texts that will be drawn from a variety of arenas, including histories of civil rights; civil rights pamphlets and speeches; filmmaker interviews; film and media theory; memoirs; and theories of race, gender and sexuality. Course requirements: mutual respect; completion of all readings and screenings; participation in class discussion; weekly online responses; a final project that can be a research paper, film, art project, or community-based initiative.

GSWS 3931 Participatory Community Media, 1970-Present
What would it mean to understand the history of American cinema through the lens of participatory community media, collectively-made films made by and for specific communities to address personal, social and political needs using a range of affordable technologies and platforms, including 16mm film, Portapak, video, cable access television, satellite, digital video, mobile phones, social media, and drones? What methodologies do participatory community media makers employ, and how might those methods challenge and transform the methods used for cinema and media scholarship? How would such an approach to filmmaking challenge our understanding of terms like "authorship," "amateur," "exhibition," "distribution," "venue," "completion," "criticism," "documentary," "performance," "narrative," "community," and "success"? How might we understand these U.S.-based works within a more expansive set of transnational conversations about the transformational capacities of collective media practices? This course will address these other questions through a deep engagement with the films that make up the national traveling exhibition curated by Louis Massiah and Patricia R. Zimmerman, We Tell: Fifty Years of Participatory Community Media, which foregrounds six major themes: Body Publics (public health and sexualities); Collaborative Knowledges (intergenerational dialogue); Environments of Race and Place (immigration, migration, and racial identities unique to specific environments); States of Violence (war and the American criminal justice system); Turf (gentrification, homelessness, housing, and urban space); and Wages of Work (job opportunities, occupations, wages, unemployment, and underemployment). As part of that engagement, we will study the history of a series of Community Media Centers from around the U.S., including Philadelphia's own Scribe Video Center, founded in 1982 by Louis Massiah, this course's co-instructor. This is an undergraduate seminar, but it also available to graduate students in the form of group-guided independent studies. The course requirements include: weekly screenings, readings, and seminar discussions with class members and visiting practitioners, and completing both short assignments and a longer research paper.

**GSWS 4387 Black Feminist Approaches to History and Memory**
Topics vary. Black Feminist Approaches to History & Memory - The term black feminism emerged in public discourse amid the social, political, and cultural turbulence of the 1960s. The roots of black feminism, however, are much older, easily reaching back to the work of black women abolitionists and social critics of the nineteenth century. The concept continued to grow and evolve in the work of twentieth-century black women writers, journalists, activists, and educators as they sought to document black women's lives. Collectively, their work established black feminism as a political practice dedicated to the equality of all people. More recently, black feminism has been deployed as a tool for theoretical and scholarly analysis that is characterized by an understanding that race, class, gender, and sexuality are inextricably interconnected. Using materials such as slave narratives, social criticism, and archival sources, this course will explore the theoretical and practical applications of black feminist thought in nineteenth and twentieth-century North American culture and politics. In particular, we will consider the symbols and practices (storytelling, myth-making, art, archival research) that black women use to document lives. We will ask: how do these methods of documentation inform our understanding of the past and the production of historical knowledge? How can we understand black feminism as both theory and practice? And what are the implications of black feminist approaches for current research and scholarship? We will give particular attention to concepts such as gender, race, memory, the archive, and embodied knowledge to complicate our understanding of historical documentation, epistemology, and authenticity. The course material will include scholarship by Harriet Jacobs, Audre Lorde, Saidiya Hartman, Hazel Carby, Hershini Young, Evelyn Brooks Higginbotham, Toni Morrison, and others. (Image: From In Praise of Shadows, Kara Walker (2009). See the Africana Studies Department's website at https://africana.sas.upenn.edu for a description of the current offerings.

**GSWS 4880 Topics: Culture, Sexuality and Global Health**
What does it mean to claim that "Homosexuality is un-African"? This course explores the linked histories of race, nation, gender and sexuality in Africa that such an ideological claim invokes, yet effaces. The polemics that produce statements like this play out through the disciplinary tensions that exist between African and sexuality/queer studies. These tensions have as much to do with the role played by the relation between sexuality and race within cultures of European colonization, as they have with the role of gender and sexuality within postcolonial power relations in Africa. Such antagonisms are sustained through the marginalization of gender and sexuality perspectives within postcolonial scholarship on Africa, as well as the bracketing of African perspectives in queer and feminist studies. This course will deconstruct these impasses by exploring scholarship at the margins of each area of study. Students will be encouraged to ask questions about how issues of race, ethnicity, nation, gender and sexuality are produced as suppressed presences in a range of texts, films, and other materials. The course will include readings from postcolonial, gender, sexuality and African studies, anthropology, history, literary studies and Marxism, giving students a grounding in historical and contemporary perspectives at the intersection of African, queer and feminist studies.

**GSWS 4890 Fashioning Gender**
In 1901 the average American family spent 14% of their annual income on clothing. By 1929, the average middle-class woman owned a total of nine outfits. Fast forward to the early twenty-first-century, where the relative price of clothing has dropped, clothing has become virtually disposable, and individuals post videos of their shopping hauls online. This course will examine how we got here, why fashion matters, and the far-reaching implications of our love affair with clothes. Readings and topics will include foundational theory about fashion; how clothes shape class, gender, and identity; the significance of revolutionary designers such as Vivienne Westwood and Rei Kawakubo; and the evolution of the clothing industry and its place in the global economy.

**GSWS 5020 Brujas and Blackness: Transnational Feminist Perspectives on AfroLatinidad**
Blackness and brujería are taboo topics within Latinx communities; both typically connote negative imagery and are actively avoided. Recently, the bruja identity has been reclaimed by many AfroLatinx women who see it as an outward expression of their AfroLatinidad and source of personal empowerment. Lara (2005) describes this as a bruja positionality – “the re-membering, revising, and constructing of knowledge as well as participation in other forms of social change...built on healing the internalized desconocimientos that demonize la Bruja and the transgressive spirituality and sexuality that she represents” (p 13). Latinx spiritual practices such as espiritismo, Santeria, Palo Monte, among others, will become avenues through which will explore key themes in Black/Latina/Chicana feminisms, including the politics of representation, stigmatization, multiple forms of state and interpersonal violence, intersecting forms of oppression, economic justice, reproductive justice, queerness/sexuality/lesbianism, and strategies of empowerment and resistance. Through a variety of course materials – academic articles, personal reflections, performance, and art – we will critically examine the construction of Afro-indigenous feminist identities within the contexts of Latin America and the diaspora.

GSWS 5050 Women and Urban Struggles in Latin America
In Latin America, 80% of the population lives in a city. As many of these cities enter the worldwide competition for attracting networks and capitals—and to join the select club of the so-called global cities—many city residents become progressively dispossessed and excluded to the peripheries, where urban services are rarely adequate. Power relations of class, race, and gender play an essential role in how dispossession is orchestrated in the city and experienced by its residents. This course focuses on how women, specifically, find ways to “endure” in the cities of Latin America, exploring different cases of urban struggles led by women. Across the region, many have been pointing out the extraordinary leadership of women in a wide variety of political struggles—often occupying public places, to denouncing the disappearance of loved ones, and to community organizing that helps build necessary infrastructure in their neighborhoods. Women are also at the forefront of environmental and ecological transformations, leading initiatives to green their city through urban agriculture, reforestation, recycling, and compost projects. Addressed through a holistic approach to caring, these initiatives are embedded in broader struggles for housing, security, and wellness, specifically in the urban peripheries. The contingency of these projects is, at their core, multifaceted: they are typically part of women’s implication in popular education, activism, and human rights defense. During this course, we will explore and analyze how the specific urban contexts of Latin America affect women and their political subjectivities and how, through their struggles, they play an essential role in re-shaping their cities.

GSWS 5090 Topics in Yiddish Literature: Modernist Jewish Poetry
One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define “Jewish writing,” in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation’s process and products. Another version of this seminar presents Jewish modernism as an international phenomenon of the early 20th century. The course will attempt to define “Jewish modernism” through the prism of poetry, which inevitably given the historical events in Europe and America during this time, grapples with aesthetic, religious, and national ideologies and methods. The syllabus will focus mainly on poetry written in Yiddish and English, and will also include German, Russian, and Hebrew verse. All poetry, critical, and theoretical materials will be taught in English translation, although students who know the languages will work on the original texts and will bring to the table a comparative perspective. Because we will be discussing translated poems, a secondary focus of the course will, in fact, be on literary translation’s process and products.

GSWS 5100 Inner Outer Space Travel Writing: A Creative Writing Workshop
Inner Outer Space Travel Writing is a creative writing workshop focused on writing work within the science fiction/speculative fiction/alternative futurities, science/land/travel writing, and creative-critical nonfiction traditions. Students will work within a variety of genres, with an emphasis on the essay, the short story, screen/tele-play, play, blog and performance. Students will read recommended texts from within their particular interests, and the course will culminate in both a public performance and dissemination/publication via another media platform (zine, website, podcast, etc). All levels of experience, from none/first-time writer to published writers, are encouraged to register for the course.

GSWS 5120 Passion Projects: Radical Experiments in Writing Plays, Screenplays, and Pilots
This creative writing workshop will focus on writing for screen, stage and internet and is open to undergraduate and graduate students at every level of writing experience. The course will be writing intensive and also include the reading and analysis of feminist, trans, queer, working class and racially liberatory plays, films, television and performance as models of inspiration. Meditation, drawing, theater games, improv exercises, screenings and outings to see work on and off campus will round out this holistic and experimental approach to making work that illuminates and entertains audiences from across the US and global audience spectrum.

GSWS 5140 Writing Towards Transformation
Writing Towards Transformation is a critical and creative writing workshop focused on developing works across genres that express and elaborate upon current and historical conditions of crisis and injustice. Using guided meditation, critical feedback and healthy, ethical discussion, the students of the class will develop manuscripts of poems, short stories, essays, plays and/or screenplays that in some way articulate their analysis of the present and the past towards a transformative future. We will read essays, manifestos, theater and fiction as well as view films that will hopefully inspire each student to develop texts and scripts of hope. Writers used as models of inspiration will include Gary Indiana, Valerie Solanas, June Jordan, Bertolt Brecht, Cherrie Moraga, Leslie Feinberg and Toni Cade Bambara, among many others. This is a graduate level course open to undergraduates by permission of the instructor.

GSWS 5150 Queer Francophone Cinema
Taught in English. This course will survey queer cinema in French from around the world, examining cult classics beside established masterpieces and avant-garde aesthetics alongside more mainstream productions in order to probe how film participates in both the representation and the formation of LBGT epistemologies and identities. Tracing the lineage of queer French cinema from Jean Genet's and Jean Cocteau's A Song of Love (Un Chant d'amour, 1950) to Christophe Honore's Love Songs (Les Chansons d'amour, 2007), the course will cover a variety of films from France (by Francois Ozon, for example), Belgium (Chantal Akerman), Morocco (Abdellah Taia), Quebec (Xavier Dolan and Lea Pool) and elsewhere. Theoretical and critical perspectives will be provided by Judith Butler, Eve Kosofsky Sedgwick, Jose Esteban Munoz, Jack Halberstam and others. No previous knowledge of cinema studies, queer studies or Francophone cultures is assumed. The course will meet for two and a half hours weekly by Zoom, complemented by asynchronous discussion of assigned film excerpts, which students will annotate online.

GSWS 5180 Nursing and the Gendering of Health Care in the United States and Internationally, 1860-2000
This course examines changing ideas about the nature of health and illness; changing forms of health care delivery; changing experiences of women as providers and patients; changing role expectations and realities for nurses; changing midwifery practice; and changing segmentation of the health care labor market by gender, class and race. It takes a gender perspective on all topics considered in the course. A comparative approach is used as national and international literature is considered. This focus is presented as one way of understanding the complex interrelationships among gender, class, and race in health care systems of the United States and countries abroad.

1 Course Unit

GSWS 5200 Art, Sex and the Sixties
With a distinct emphasis on performance, film, installation art, video and painting, this course explores the explosion of body-based, nude and erotic work from the 1950 to the 1970s, with particular focus on the 1960s. And it seeks to explore this dynamic not only within the familiar confines of North America and Europe but within Latin America and Asia, too, in what was a nearly simultaneous international emergence of the erotic as a political force in the art world. Reading a range of key voices from Frankfurt School philosopher Herbert Marcuse, to performance artists Carolee Schneemann and Yoko Ono, Neo-Freudian theorist Norman O. Brown and Brazilian theorist and poet Oswald de Andrade, we will examine how and why sexuality became a privileged form of politics at this historical juncture in a range of different contexts across the globe. We will pay particular attention to how and why an art about sex became a camouflaged form of political dissidence in the confines of repressive political dictatorships, as were then rising in Brazil, Argentina and ultimately Chile. Students interested in feminist, gender or queer theory, Latin American Studies, social revolution, performance studies, post war art and Frankfurt School thought should find the course particularly appealing, but it assumes no background in any of these fields.

GSWS 5260 The Trouble with Freud: Psychoanalysis, Literature, Culture
For professionals in the field of mental care, Freud's work is often regarded as outmoded, if not problematic psychologists view his work as non-scientific, dependent on theses that cannot be confirmed by experiments. In the realm of literary and cultural theory, however, Freud's work seems to have relevance still, and is cited often. How do we understand the gap between a medical/scientific reading of Freud's work, and a humanist one? Where do we locate Freud's relevance today? The graduate course will concentrate on Freud's descriptions of psychoanalytic theory and practice, as well as his writings on literature and culture.

GSWS 5270 Market Women, Madames, Mistresses and Mother Superior
Market Women, Madames, Mistresses & Mother Superior studies gender, labor, sexuality, and race in the Caribbean. In our historical examination of primary source documents alongside literature, and popular media, we will question some of the iconic representations of Caribbean and Latin American women in order to understand the meaning, purpose and usages of these women's bodies as objects of praise, possession, obsession and/or ridicule by communities, governments and religions within and outside of the region. Beginning in the late-18th century and ending with contemporary migration narratives, this course considers the relationship between slave society and colonial pasts on gender performance in the modern Caribbean, Latin America, and their diasporas.

GSWS 5280 Witchcraft and Gender in the Early Modern World
From the 15th century through the 18th century, social tensions erupted in Europe and the Atlantic colonies in the witch craze, a period when intense cultural concern over witchcraft was expressed through religious treatises and sermons, popular literature such as pamphlets and broadsides, legal accusations, trials, and, in some cases, executions. Although the number of people executed during the witch-hunts is a matter of scholarly debate, their importance in understanding early modern beliefs and responses to social tensions is clear. In this class, we will explore historians' understandings of the causes underlying this cultural phenomenon. With special attention to gender, social position, and religious belief, we will join academic debates about the causes of these persecutions. We will also read some primary sources from the medieval through the early modern periods, including trial transcripts, sermons, and pamphlets. Were women the main target of witchcraft accusations and executions, and if so, was misogyny their most important cause? What role did sexual norms and beliefs have in the way that accusations were framed? Were there different patterns of accusations and executions across time and region, and if so, what social and cultural factors might explain them? In what ways were witchcraft accusations an effort to control marginal people in local communities, particularly in regard to gender, socio-economic position, and age? How might religious developments and conflicts have influenced elite and popular ideas about witchcraft? What challenges do historians face in analyzing primary sources about witchcraft and witchcraft trials? Through in class discussions and threaded discussion forums on primary sources, students will learn about the challenges involved in interpreting sources including treatises, trial transcripts, pamphlets, and images.

GSWS 5290 History of Sexuality
In this online course, we will consider the impact of social, economic, and political conditions on social constructions of sexuality, from the classical world of Greece and Rome, to the early modern West, to the streets of Victorian London and 1920s New York. Topics of interest include: the prostitutes of New Orleans’ Storyville district; Jack the Ripper and sensational media accounts of crimes of passion; the taverns and bawdy houses of colonial Philadelphia; cases of sexual misconduct in premodern Europe, Latin America, and colonial America; the history of sexual harassment in the American workplace; the history of hermaphrodites and transgendered people; JFK and representations of 20th-century masculinity. We will pay special attention to the ways that race, class, religion, and gender come together to shape power dynamics through the development, change, and continuity in sexual roles, norms, and relationships.
Summer Term
1 Course Unit

GSWS 5300 Latin American Sexual Movements
This course explores significant sexual movements in Latin America that destabilized the idea of nation formation and its frames of citizenship. From the 1960s and on, we will analyze and study homosexual, lesbian, and feminist irruptions of contestation from Argentina, Chile, Mexico, and U.S. and how their interruption in the social, public, and political sphere changed sexual and reproductive rights.
Summer Term

GSWS 5310 Gendered Constructions of Other Cultures in Western Travel Literature
Descriptions of peoples from foreign lands and faraway places have captured the imaginations of Europeans for centuries. Pilgrims and merchants, explorers and conquistadores, Victorians taking their Grand Tour and 21st-century travelers have preserved their observations, both in written form, in ethnographies and diaries, novels and travel narratives, and in visual form, in maps, illuminated manuscripts, engravings, and photographs. Through these media, these travelers have not simply captured their memories, but have also helped to shape Western representations of the people they encountered, often justifying Western political, economic, cultural, and social dominance as a result, although some travelers have critiqued the West instead. And in all these depictions, gender and sexuality have played central roles in the creation of these identities and relationships. In this online course, we will explore this topic by studying a variety of primary and secondary sources focusing on medieval Ireland and Wales; English, Spanish, and Portuguese texts representing the New World and indigenous Americans; orientalism through the lens of imperial representations of the Middle East, India, and Africa; and 20th- and 21st-century representations of a globalized world, focusing on political, economic and cultural tensions between the West and other regions of the world. Primary texts will include travel diaries and narratives, ethnographies and novels, as well as visual images. We will also examine how scholars from fields including anthropology, art history, cultural studies, history, and literary studies have analyzed these works, with attention to theories on colonialism and post-colonialism, gendered and queer readings, orientalism and othering, and globalization. Finally, we will also look at how some of the people who were described by the Western writers described Westerners themselves. Assignments will include weekly blogs in response to readings, primary source threaded discussions, live discussions every week in our online classroom, leading class discussion for two weeks, writing two response papers, and completing a final essay in several stages.

1 Course Unit
GSWS 5460 Women's Writing in French, 1160–1823

In this course, we will examine a representative sample of premodern women's writing in French, beginning in the Middle Ages and concluding in the Revolutionary Era. The authors studied come from differing walks of life, social classes, and religious and political identifications, and they express themselves in a wide variety of genres, including short stories, fairy tales, lyric poetry, letters, plays, and novels. Despite their many differences, these authors are united by a common tendency to question a centuries-old tradition of misogynistic discourse, patriarchal social order, and gender normativity. Authors to be studied include: - Marie de France (ca. 1160), a brilliant storyteller and poet attached to the court of Henry II of England whose fabulous tales, arguably an early form of speculative fiction, imagine alternatives to the rigidity of arranged marriages and the heterosexual couple. - Christine de Pizan (1364–ca. 1430), a court writer for Charles VI of France and several other powerful patrons who is often considered France's first professional female writer. Her Livre de la Cité des Dames (Book of the City of Ladies) systematically refutes the misogynistic pronouncements of learned male authors and holds up devotion and religious life as alternatives to accepting the assigned role of wife and mother. - Marguerite de Navarre (1492–1549), the sister of Francis I of France and a prolific author of devotional poetry, plays, and the Heptaméron, a collection of tales modeled on Boccaccio's Decameron and known for its often shocking subject matter. Throughout her oeuvre, she calls into question the social perception of women rooted in misogynistic discourse, as well as the tendency to blame sexual violence on women, while at the same time revealing the potential danger of masculinity for men and women alike and envisioning Pauline Christianity as a means of radical equality. - Pernette du Guillet (1520–1545), Louise Labé (c. 1524–1566), and Anne de Marquets (1533–1588), three poets who respond to and write against the male-centered tradition of Petrarchan love poetry. Guillet and Labé stand out for their frank and often sensual depictions of female desire and sexuality in spite of taboos against their public expression, while Marquets, a Dominican nun at the convent of Poissy, combines Petrarchan, devotional, and mystic tropes to envision religious life as an alternative to the heteronomativity of lay French society and the Protestant Reformation. - Madame de Lafayette (1634–1693) and Madame de Sévigné (1626–1696), whose writings are of monumental importance in the history of literature in French as well as invaluable testimonies to the role played by women in the intellectual developments of the early modern period, including salons, Jansenism, and free-thinking (libertinism). - Gabrielle-Suzanne de Villeneuve (1685–1755), author of the first known version of La belle et la bête (Beauty and the Beast), who, along with other female authors of fairy tales, used the conventions of the genre to challenge social conventions and criticize the treatment of women. - Claire de Duras (1777–1828), whose novel Ourika, much like Villeneuve's La belle et la bête, shows how feminist concerns might intersect with colonialism and race; a bestseller in its day, it is one of the first works in French to feature a complex and articulate black narrator and what many scholars consider to be a modern outlook on race and identity. To provide historical and theoretical context, these readings will be supplemented with relevant primary and secondary sources, as well as with modern and contemporary adaptations, such as illustrations and films. The course is open to graduate students and to advanced undergraduates with permission of the instructor. Discussions will be in English. Readings will be made available both in the original French and in English translation, and final papers may be written in English or in French.

1 Course Unit

GSWS 5560 More Human Than Human

In early 2017, animal rights lawyer Steve Wise argued that two of his clients should be afforded the rights of "personhood." The clients in question were chimpanzees. This case suggests that "speciesism" might soon be met with the same degree of suspicion as sexism and racism. This course will explore how such a shift could come about and what it might signal. We will begin by examining the western foundations of binaries such as human-animal, male-female, and self-other. From here we will explore recent attempts to dismantle these constructs by ecofeminists and post-humanists. We will also look at how such categories have manifested in social movements and cultural artifacts. Finally, we will investigate how our beliefs about who "we" are and what "we" are not can affect everything from the foods we eat to where and how we vacation.

Not Offered Every Year
1 Course Unit

GSWS 5680 Gender, Power & Feminist Theory

This seminar will examine the theme of power as it engages questions of sex and gender. Subsidiary themes that will be developed over the course of the semester include: the modernism/ postmodernism debate as it particularly relates to feminism; the intersectionality of race, gender, sexuality and class and how feminists can and do talk about "women"; the relevance of feminist theory to policy issues, and which theoretical approaches are the most appropriate or have the most powerful potential. The readings will start with "foundational" texts in feminist theory--texts that anyone who wants to work in or teach feminist theory needs to have in their repertoire, they set out the background and history of contemporary feminist theory, and they operate from a variety of disciplinary frameworks. We will then move onto some newer scholarship and some more specific political issues and topics, depending on what students in the course are interested in studying. This course is open to undergraduates who have had some prior course work in feminist theory, gender and sexuality studies, and/or political theory, in consultation with the professor.

GSWS 5720 Language and Gender
This course traces the development of research on language and gender, introducing key theoretical issues and methodological concerns in this area. Participants will consider how gender ideologies shape and are shaped by language use, with particular attention to how research findings can be applied to educational and other professional settings. Not Offered Every Year
Also Offered As: EDUC 5240
1 Course Unit

GSWS 5780 Sexuality of Postmodernism
This course is fundamentally concerned with why so many of the defining artists of the postwar generation were queer; indeed such that one could plausibly claim that postmodernism in American art was a queer innovation. Centrally, most of these artists raise the problem of authoriality and its discontents. Deploying a combination of social-historical and theoretical texts, we will approach the problem of the disclaiming of authoriality in post-war American art, focusing on the works of John Cage, Robert Rauschenberg, Jasper Johns, Cy Twombly, Robert Indiana, Louise Nevelson, Ellsworth Kelly, Agnes Martin, Leon Polk Smith and at least Andy Warhol. Central to this course will be the continuing salience of the “death of the author” discourse, pioneered in literature by Barthes and Foucault, and in art by every one of the artists we will be examining. What, in short, is the relationship between the rise of an anti-biographical, anti-auteurial theoretical framework, and the lived histories of so many queer authors? In asking this question, we are of course self-consciously violating the very premise of one key strand of postmodernist critique—and in so doing attempting to historicize a theoretical frame that is strikingly resistant to historical analysis. (Undergraduates interested in the course should contact Professor Katz.) Not Offered Every Year
Also Offered As: ARTH 5800

GSWS 5790 Provocative Performance
What is feminist theatre? How do artists use live performance to provoke not only thought and feeling, but also social, personal, and political change? This course will examine a wide array of plays and performances by and about women; these pieces are, in turn, serious, hilarious, outrageous, poignant—and always provocative. Our focus will be on English-language works from the late 20th century to the present (#metoo) moment. We will read these performance texts and/or view them on stage/screen; we will also read essays that provide contextual background on feminist theatre theory and history. Throughout the semester, we will engage diverse perspectives on women and race, ethnicity, class, sexuality, and gender identity; the issues we encounter will also include marriage and motherhood, career and community, feminism and friendship, and patriarchy and power. The class will take full advantage of any related events occurring on campus or in the city, and will feature visits with guest speakers. Students will have the opportunity to pursue research on their own areas of interest (some recent examples are “women in comedy,” trans performance, drag kings, feminist directing, etc.). GSWS 5810 Advanced Psychology of Women
The course is intended for those who already have a foundation in the study of the psychology of women and want to expand their understanding of the provision of psychological services to include a contextual, feminist, and relational perspective. Theoretical and applied practices regarding women's mental health, issues of diversity, sexuality and relationships for women will be addressed. Prerequisite: Introduction to Psychology and an undergraduate course in the Psychology of Women or approval by professor. Also Offered As: EDUC 5581
1 Course Unit

GSWS 5850 Fashioning Gender
In 1901 the average American family spent 14% of their annual income on clothing. By 1929, the average middle-class woman owned a total of nine outfits. Fast forward to the early twenty-first century, where the relative price of clothing has dropped, clothing has become virtually disposable, and individuals post videos of their shopping hauls online. This course will examine how we got here, why fashion matters, and the far-reaching implications of our love affair with clothes. Readings and topics will include foundational theory about fashion; how clothes shape class, gender, and identity; the significance of revolutionary designers such as Vivienne Westwood and Rei Kawakubo; and the evolution of the clothing industry and its place in the global economy. Fall
1 Course Unit
GSWS 5880 The Politics of Women's Health Care
This course will utilize a multidisciplinary approach to address the field of women's health care. The constructs of women's health care will be examined from a clinical, as well as sociological, anthropological and political point of view. Topics will reflect the historical movement of women's health care from an obstetrical/gynecological view to one that encompasses the entire life span and life needs of women. The emphasis of the course will be to undertake a critical exploration of the diversity of women's health care needs and the past and current approaches to this care. Issues will be addressed from both a national and global perspective, with a particular focus on the relationship between women's equality/inequality status and state of health. This course satisfies the Society & Social Structures Sector for Nursing Class of 2012 and Beyond.

GSWS 5932 The Place of Film and Media Theory
Taking its title from a recent special issue in the journal Framework, this seminar will engage the where of film and media theory. At a moment when this discourse, often presumed to have roots in Anglo and Western European traditions, is purportedly undergoing a global turn, we will consider how some of film and media theory’s key terms and preoccupations including realism, documentary, genre, identity, sound, spectatorship, nation, auteur, and screens are being inflected by expanded geographic, linguistic, aesthetic and cultural frames. We will grapple with some of the logistical challenges, motivations, resistances, and questions that scholars encounter as they attempt to shift film and media theory’s borders; compare contemporary efforts to broaden the discourse’s geographic horizon with earlier efforts to do the same; and consider what happens to the viewer’s sense of space and place in different media environments. Course requirements: full participation in readings, screenings, discussion, and class presentations; 20-25 page research paper + annotated bibliography.

Also Offered As: ARTH 5932, CIMS 5932, ENGL 5932
1 Course Unit

GSWS 5933 Cinema and Media Studies Methods
This proseminar will introduce a range of methodological approaches (and some debates about them) informing the somewhat sprawling interdisciplinary field of Cinema and Media Studies. It aims to equip students with a diverse—though not comprehensive—toolbox with which to begin conducting research in this field; an historical framework for understanding current methods in context; and a space for reflecting on both how to develop rigorous methodologies for emerging questions and how methods interact with disciplines, ideologies, and theories. Students in this class will also engage scholars participating in the Cinema and Media Studies colloquium series in practical discussions about their methodological choices. The course’s assignments will provide students with opportunities to explore a particular methodology in some depth through a variety of lenses that might include pedagogy, the conference presentation, grant applications, the written essay, or an essay in an alternative format, such as the graphic or video essay. Throughout, we will be trying to develop practical skills for the academic profession. Although our readings engage a variety of cinema and media objects, this course will be textually based. No prior experience needed. The course is open to upper-level undergraduates with relevant coursework in the field by permission of instructor only. Course Requirements: Complete assigned readings and actively participate in class discussion: 20%; Reading responses: 10%; Annotated bibliography or course syllabus on a particular methodology: 20%; SCMS methodology-focused conference paper proposal according to SCMS format: 10%; Research paper, grant proposal, or essay in an alternative format using the methodology explored in the syllabus or bibliography: 40%.

GSWS 6550 Black Political Thought: Difference And Community
This course is designed to familiarize graduate students with some of the key texts and debates in Africana Studies concerning the relationship between racial slavery, modernity and politics. Beginning with the Haitian Revolution, much of black political thought (thinking and doing politics) has advocated group solidarity and cohesion in the face of often overwhelming conditions of servitude, enslavement and coercion within the political economy of slavery and the moral economy of white supremacy. Ideas and practices of freedom however, articulated by political actors and intellectuals alike, have been as varied as the routes to freedom itself. Thus, ideas and practices of liberty, citizenship and political community within many African and Afro-descendant communities have revealed multiple, often competing forms of political imagination. The multiple and varied forms of political imagination, represented in the writings of thinkers like Eric Williams, Richard Wright, Carole Boyce Davies and others, complicates any understanding of black political thought as having a single origin, genealogy or objective. Students will engage these and other authors in an effort to track black political thought’s consonance and dissonance with Western feminisms, Marxism, nationalism and related phenomena and ideologies of the 20th and now 21st century.

1 Course Unit

GSWS 6650 Fables from the Flesh: Black feminist movement and the embodied archive
Drawing inspiration from Harge’s multiformal fable project FLY | DROWN and Audre Lorde’s conception of biomythography, students will trace their interiority to realize and imagine how personal histories, ancestral inheritance, and metaphysics live/move through the body. We will translate and transform stories of the flesh into a series of compositional modalities—which may include text, movement, performance, sound, and installation—to create lexicons that honor subjectivity as form. Informed by surrender, refusal, imagination, and self-sovereignty; we will situate our embodied archives as vessels for fable writing, create and correct myths through movement, and expand our relationship to memory, time, space, and illegibility. Throughout the course, we will turn to Black feminist literary and performance works employing fable, myth, and ancestral legacies including but not limited to: Toni Morrison’s Beloved, Aretha Franklin’s gospel music, Jaamil Olawale Kosoko’s Chameleon, and a close reading of Harge’s FLY | DROWN. The room will be grounded in practices of Black fellowship, moving between study group, kickback, ceremony, cypher, and incubator. We will oscillate between these formats depending on the needs of the course and the cohort.
Not Offered Every Year
Also Offered As: AFRC 6665, ANTH 6665
Mutually Exclusive: ANTH 3665
1 Course Unit

GSWS 6780 Gender and Sexuality in Education
This seminar gives an overview of the intersections and interplay among gender, sexuality, and education through theory, practice, current discussions, and analysis of varied contexts in English speaking countries (e.g. the United States, Canada, Great Britain, and Australia). After examining the theoretical foundations of genders and sexualities, we will look at their histories and effects in K-12 schools and colleges and universities as well as explore special topics.
Fall
Also Offered As: EDUC 6178
1 Course Unit

GSWS 6870 Postwar Art
At a time of seismic shifts in the American politiy, postwar art has too often seemed above the fray. Even as New York came to replace Paris as the epicenter of art world in the post war period, the rapid succession of styles and movements from Abstract Expressionism to Neo-Dada, Pop Art, Minimalism, Conceptual Art and Happenings can seem to have their own internal logic, severed from the historical backdrop of the time. Some of the artists we’ll consider include Pollock, Krasner, Rauschenberg, Johns, Warhol, Kusama, Martin, Lichtenstein, Bearden, Oldenburg, LeWitt, Chicago and Judd. In this course, we’ll reexamine American art and art criticism in the postwar period alive to everything from the Cold War’s virulent anti-communism to the rise of progressive liberation movements around race, ethnicity, sexuality, and gender. In the process, we will repeatedly underscore how art both served, and bit, the hand that fed it.
Also Offered As: ARTH 6870
1 Course Unit

GSWS 6910 Transatlantic Black Feminisms in Francophone Literatures
This course explores the evolution of representations of the Black femme body in French and francophone imaginaries, tracing a chronological arc that begins with early colonial imagery and ends with the rise of a 2018 movement spearheaded by a collective of Black comediennes, denouncing exclusionary practices in the French entertainment industry. We will first focus on the male gaze — European, Caribbean and African — and the way it constructed the Black femme body, to better understand how Black female authors undermine, resist, parody, or continue to bear the weight of these early images when they take control of their own representation. While our primary readings will be authored by French-writing women, including Mayotte Capcia (Martinique), Marie Vieux-Chauvet (Haiti), Maryse Condé (Guadeloupe), Mariama Bâ (Senegal) and Marie Ndiaye (France), our theoretical foundation will include anglophone thinkers, such as bell hooks, Audre Lorde, Saidiya Hartman, and others. Readings and discussions will be in English.
Also Offered As: AFRC 6910, COML 6910, FREN 6910
1 Course Unit

GSWS 7762 Women in South Asia
This course on women in South Asian history has several objectives. To comprehend the genres of narratives in which South Asian women between the sixteenth and twentieth centuries have spoken and have been spoken about. To gain an understanding of evolving institutions and practices shaping womens lives, such as the family, law and religious traditions. To understand the impact of historical processes — the formation and and breakdown of empire, colonialism, nationalism and decolonization — upon South Asian women between the sixteenth and twentieth centuries. We will read primary sources in addition to familiarizing ourselves with the historiography of women in South Asia.
Not Offered Every Year
Also Offered As: SAST 7762
1 Course Unit
GSWS 7901 Recent Issues in Critical Theory Related to Gender & Sexuality
This course will provide an overview of critical theory related to the study of gender and/or sexuality. Different instructors will emphasize different topics within these fields. See the English Department’s website at www/english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
Also Offered As: COML 7901, ENGL 7901
1 Course Unit

GSWS 8300 Conducting Research in Global Women’s Health
An introduction to theoretical and methodological issues as they relate to conducting research in global women’s health. Advanced analysis of historical, social, cultural, economic, political, technological and geographical contexts as they influence the health of girls and women across the lifespan and their relation to health care systems as both clients and providers. This includes contextual issues that constrain the provision and receipt of adequate healthcare. Prerequisites: Completion of course in Global Health (this may include a reputable online course eg: Coursera), or equivalent background (eg. global health field experience). Permission of Instructor. For graduate and professional students from any field with an interest in global women’s health; Master students by permission of instructor. A critical examination of theoretical and methodological issues pertaining to research on women and girls conducted around the world across disciplines. A focused and intensive exploration of place as it pertains to women and girls formal and informal structures of healthcare delivery as those needing and/or seeking healthcare, care, and as those providing healthcare to others. Students will examine the multiple dimensions and qualities of these endeavors (e.g. activity, power, control, visibility, value, and remuneration) and the intersection of gender and health - locally, globally and across borders. Students will focus their examination on the implications of seeking and providing healthcare for women’s and girls’ health and well-being. By examining issues in local and global contexts and across geographical boundaries, students will have the opportunity to challenge gendered, class, political, and cultural assumptions related to women’s health.
Fall
Also Offered As: NURS 8300
1 Course Unit

GSWS 8841 Current Japanology
This is a course designed for advanced undergraduate students and graduate students, primarily those majoring in Japanese and East Asian Studies and related disciplines. The main objective of the course is to survey recent and current scholarship on Japan. Each week we will focus on one monograph or a set of chapters or essays, reading them closely not merely to acquire up-to-date knowledge, but to gain new frameworks for approaching the study of Japanese culture, history, and society. Japanese-reading ability is not assumed and discussions will be in English, but optional readings in Japanese will be available.
Not Offered Every Year
Also Offered As: EALC 8841
1 Course Unit

GSWS 9005 Finding Voice: Perspectives on Race, Class and Gender
This writing workshop explores the influence of identity, primarily race, class, gender, and sexuality, on the ways we convey our personal truths to the world.
Not Offered Every Year
Also Offered As: AFRC 9005, ENGL 9005, URBS 9005
1 Course Unit

GSWS 9006 Learning from James Baldwin
This class will examine the intellectual legacy that James Baldwin left to present-day writers such as Toni Morrison, Charles Johnson, Ta-Nehisi Coates, Thulani Davis, Caryl Phillips, and others. We will spend time reading and discussing Baldwin’s novels, short stories, plays and essays, and students will research subjects of their own choosing about Baldwin’s life and art.
Also Offered As: AFRC 9006, ENGL 9006, URBS 9006
1 Course Unit

GSWS 9013 Memoir Writing
This memoir workshop will shine light on the human experience as viewed through your personal lens. We’ll see how memoir can illuminate larger cultural themes - from the inhumanity of war, to racism, misogyny, and economic inequality - as viewed through lived experiences.
Also Offered As: ENGL 9013, URBS 9013
1 Course Unit

GSWS 9016 Being Human: A Personal Approach to Race, Class & Gender
In this workshop, we will address the ways race, class, and gender impact our lives, our work, and our culture. As a class, we will create connection and community by practicing deep listening, daily writing, deep reading, and the sharing of ideas and observations.
Not Offered Every Year
Also Offered As: AFRC 9016, ENGL 9016, URBS 9016
1 Course Unit

GSWS 9017 Considering Race, Class and Punishment in the American Prison System
This graduate writing seminar will examine the origins, myths, and realities of the complex industry that currently imprisons more than 2,300,000 men, women and teens in America’s city, county, state and federal prisons - the largest prison population and highest per-capita rate of imprisonment in the world.
Not Offered Every Year
Also Offered As: AFRC 9017, ENGL 9017, URBS 9017
1 Course Unit

Genetic Counseling (GENC)

GENC 6010 Advanced Genetics and Genomics
This course will provide an extensive survey of molecular genetics including molecular and cellular biology and the regulation of gene expression. Applications to human clinical genetics and genetic counseling through discussion of relevant case studies will be incorporated. The class will be primarily lecture-based with some small group work. In addition to exams, students will prepare and present a teaching tool to describe a complex topic to laypeople. The content of this course will provide the foundation for understanding topics covered in additional courses in the genetic counseling master’s program including Foundations in Clinical Genetics and Genomic Technologies, Cancer Genetics, Reproductive and Developmental Genetics, and Medical Genetics.
Fall
1 Course Unit
GENC 6020 Mechanisms of Disease
Primary concepts in this course introduce the fundamental principles of pathophysiology, including normal and abnormal embryological development. Pathophysiology and development are covered by major organ systems. Lectures and class exercises will review normal as well as abnormal physiology in all systems. The focus of the course will be on understanding the pathophysiology of human genetic diseases. The coursework serves as the background for understanding specific diseases as they present in clinical genetics and research that has led to improved therapy and treatment for patients. The class will be primarily lecture-based using case-based learning. Students will give formal presentations on the pathophysiology of specific disorders.

Fall
1 Course Unit

GENC 6030 Introduction to Genetic Counseling
Genetic counseling students will be oriented to the profession through a review of the history of genetic counseling. Topics covered include medical terminology, pedigree construction, the structure of genetic counseling sessions, discussion of the scope of practice and disability rights, instruction in obtaining family pedigrees, review of genetic testing practices, and the National Society of Genetic Counselors’ Code of Ethics. Students will gain an appreciation for the lived experience of individuals with genetic diseases by reading memoirs, reviewing online support groups, watching videos, and performing role plays. The course will provide experiential learning about advocacy groups for patients and their families through first-hand interviews. Students will engage in role play scenarios throughout the course.

Fall
1 Course Unit

GENC 6040 Reproductive and Developmental Genetics
A variety of topics in reproductive genetics will be covered in this course, including a review of human development emphasizing the genetic basis of these complex events and how teratogenic factors lead to abnormal development. The common indications for prenatal genetic counseling, such as advanced maternal age, first-trimester screening, NIPS, ultrasound anomalies, diagnostic procedures, prenatal complications, and prenatal therapies will be reviewed. Through the completion of assignments and discussion, students will demonstrate their abilities to think critically through cases, assess risk, and provide patient-centered care. The course will discuss psychosocial issues surrounding fertility counseling as well as perinatal bereavement and palliative care.

Spring
1 Course Unit

GENC 6110 Cancer Genetics
In this course, students will gain an understanding of cancer genetics. Topics covered include an overview of cancer biology and clinical oncology; diagnostics and predictive testing in cancer, including familial mutations in BRCA 1 and 2, and panel testing; cancer risk assessment; psychosocial aspects of cancer genetic testing and counseling. Students will examine specific inherited disorders predisposing individuals to malignancies and counseling for familial cancers. Students will learn how to conduct a genetic counseling session for inherited cancer syndromes such as HBOC and Lynch syndrome and to identify when genetic testing panels are indicated. In addition, the course will cover somatic cancer NGS technology and its relevance in cancer genetic counseling.

Spring
1 Course Unit

GENC 6120 Genetic Counseling Theory and Practice I
Students will learn how to structure genetic counseling sessions including the competencies of establishing rapport, contracting, and eliciting patient goals. The teaching of active listening and interviewing skills guides students in responding empathetically to patient concerns. Students use role play to practice skills and demonstrate their ability to organize a genetic counseling session. Students will learn chart documentation and practice letter writing. Each student will be responsible for presenting a Genetic Counseling Practice Guideline and leading a class discussion. Through role play and exploration of current practice students learn to adapt genetic counseling skills for alternate service delivery models. Students will gain an appreciation of appropriate professional interactions and expand their understanding of the impact of genetic disease on families. At the end of the semester, all students complete a genetic counseling session with a standardized patient at the Experiential Learning and Assessment Center at the Perelman School of Medicine. The highly skilled staff ensures safe, measurable, and authentic learning with qualified standardized patients.

Spring
1 Course Unit

GENC 6130 Foundations of Clinical Genetics and Genomic Technologies
In this course, students will understand the importance of conveying to families the pathophysiology, inheritance pattern, recurrence risk, testing options and management of genetic disorders. Students will learn the principles of pedigree review, particularly how to apply Mendelian genetics, population genetics, and Bayesian analysis to provide accurate risk assessment. They will also learn how genetic and molecular principles contribute to the etiology, clinical features, and expression of genetic conditions. They will appreciate how the natural history and variable expressivity of many genetic diagnoses influence differential diagnoses, interpretation of dysmorphology, choices of genetic testing, and test report interpretation. Genetic testing methodologies will be examined in depth, particularly the concepts and tools used to analyze and interpret data from next-generation sequencing (NGS). This class will provide students with hands-on opportunities to utilize databases to systematically review and classify variants. Clinical case variant interpretation and clinical relevance will be discussed in terms of its importance in genetic counseling. Case-based learning will help students understand the complexities of genetic diseases and the importance of obtaining an accurate medical history.

Fall
1 Course Unit

GENC 6140 Introduction to Genetic Counseling Research
This course will familiarize students with research methodologies in clinical genetics and genetic counseling. Students will gain an appreciation for the importance of well-designed research both in advancing our understanding of all aspects of genetic disease and in addressing the professional practice of genetic counseling. This course will introduce students to scientific writing and interpretation of the literature. Topics include how to formulate testable hypotheses, design appropriate studies, and carry out a literature review. Students will develop and refine their own IRB proposals as preparation for submitting an application to the IRB committee. Students are required to obtain CITI training and to work with their thesis committees as they develop their proposals.

Spring
1 Course Unit
GENC 6200 Medical Genetics I
The first semester of this year-long course presents a broad overview of concepts in Medical Genetics including natural history, management and counseling strategies for major pediatric and adult genetics diagnoses and syndromes, focusing on Genomic Medicine and Pediatric Genetics. Topics covered include autism, ophthalmogenetics, hearing loss, psychiatric genetics, genodermatoses, immune genetics, pediatric cancer genetics, bone marrow failure syndromes, differences of sex development, craniofacial disorders, skeletal dysplasias and imprinting disorders. Students will be exposed to future directions of clinical genetics and genetic counseling and its impact on the management and treatment of common conditions. Students will actively engage in Clinical Case Presentations and a Journal Club session. Course directors will attend each class, and guest lecturers with relevant clinical expertise will be invited to share their clinical knowledge.

Fall
0.5 Course Units

GENC 6210 Genetic Counseling Theory and Practice II
In this class, students are taught the basic tenets of counseling theory and how they can be applied to genetic counseling sessions. Theories covered include person-centered counseling with its emphasis on genuineness, empathy, and positive regard. Narrative Medicine will be covered in detail, and students will be required to digitally record a narrative medicine interview with an individual or parent of an individual with a genetic disease. The recordings are analyzed and reviewed. Standardized patient assessments will be performed to monitor students’ acquisition of more advanced counseling skills. Students will learn the integration of process in the genetic counseling session and how to address sensitive patient issues such as sharing challenging news and working with angry patients. They will learn to use active listening and value-free communication to manage a genetic counseling session in a culturally responsive manner.

Fall
1 Course Unit

GENC 6220 Biochemical Genetics
This course presents a broad overview of concepts of inborn errors of metabolism as well as detailed reviews of specific conditions so that students will learn to distinguish the basic descriptors of a wide variety of metabolic conditions, including cardinal features, biochemical signatures, genetic etiologies, inheritance patterns, and available treatments. Students will also understand the basis for, and implications of, newborn screening for both metabolic and other disorders. Students will learn the methods available for diagnosis, genetic and tissue-based testing, and the various forms of treatment for the disorder, from nutrition therapy and transplants to clinical trials. Approaches to appropriately counsel families with a wide range of metabolic conditions and to identify at-risk family members are included in this course. Course directors will attend each class, and guest lecturers with relevant clinical expertise will be invited to share their clinical knowledge.

Fall
0.5 Course Units

GENC 6230 Ethical Issues in Genetic Counseling
In this introductory course on bioethics, we will unpack ethical issues that emerge in the context of clinical genetics and genetic research. Though hospital ethics boards advise on the most challenging ethical cases, they often play the simple but crucial role of slowing the conversation down, asking questions of team members, and facilitating calm, reasoned communication regarding the ethical quandaries that family, clinicians, staff pose. Accordingly, this course gives students the opportunity to analyze ethics cases, alongside lectures, student presentations, and class debates. As a class, we aim to establish and maintain a space where students can develop ethical reasoning skills and debate controversial topics within genetics. Class time will be devoted to short lectures and selected video excerpts, student presentations and debates, and extensive discussion guided by a compendium of ethics cases and associated reading assignments that represent the diverse perspectives of different authors.

Fall
1 Course Unit

GENC 6300 Medical Genetics II
The second semester of this year-long course presents a broad overview of concepts in medical genetics including natural history, management and counseling strategies for major pediatric and adult genetics diagnoses and syndromes. Topics covered this semester include single gene disorders, bleeding and clotting disorders, hemoglobinopathies, adult liver disease, connective tissue disorders, cardiovascular genetics, psychiatric genetics, neurogenetic conditions such as epilepsy, movement disorders, ataxias, Huntington disease, and ALS, as well as classic genetic conditions identified by the organ system involved, such as cystic fibrosis. Students will learn the methods available for genetic testing, diagnosis, and treatment of genetic conditions. Students will be exposed to future directions of clinical genetics and genetic counseling and its impact on the management and treatment of common conditions. Therapeutic approaches and different modalities to treating genetic diagnoses will be reviewed, including approved gene therapy treatments as well as investigational therapies and clinical trials. Students will actively engage in Clinical Case Presentations and a Clinical Research Presentation. Course directors will attend each class, and guest lecturers with relevant clinical expertise will be invited to share their clinical knowledge.

Spring
Prerequisite: GENC 6200
1 Course Unit

GENC 6310 Genetic Counseling Theory and Practice III
This course provides students with advanced counseling skills such as advanced empathy and confrontation. Students will explore counseling theories such as solution-focused brief therapy, cognitive behavioral therapy, and family systems models. Counselor issues such as self-disclosure and countertransference will be discussed in detail. Additional skills and techniques from the counseling literature will be practiced in role plays to illustrate the usefulness of various counseling techniques in clinical genetics. This course includes an experiential component for the practice of techniques utilizing standardized patients. Students will analyze their standardized patient recordings and identify missed opportunities and areas in which they need to focus their counseling skills. Each student will analyze one of their clinical cases utilizing at least two theories discussed in class.

Spring
1 Course Unit
GENC 6400 Professional Development I
The goal of this seminar is to increase awareness of the many facets of genetic counseling as a career. The genetic counseling profession is rapidly evolving as new diagnostic technologies and treatments are developed. Skills learned by genetic counselors are applicable to many different job settings. Knowledge of these alternative ways in which counselors may work increases a student's ability to successfully pursue a career. Members of the genetics community from Philadelphia and the surrounding area provide lectures describing the current state of the profession. Selected topics include genetic counseling for a diverse population, the intersection between palliative care and genetic counseling, and how to manage a clinical genetic counseling practice with issues surrounding billing reimbursement and credentialing. This seminar also helps prepare students for the demands of the genetic counseling profession by focusing on emotional well-being through a process group facilitated by a professional counselor. Students prepare a career development plan reflecting on the essential components of an "ideal job" and develop a curriculum vitae and cover letters.

Fall
0 Course Units

GENC 6450 Professional Development II
In this continuation of GENC 6400, the goal is to increase awareness of the many facets of genetic counseling as a career. The students will learn how to obtain a license and register to take the American Board of Genetic Counseling Certification Examination. Members of the genetics community from Philadelphia and the surrounding area provide lectures describing the current state of the profession. Students will explore professional issues by reviewing the National Society of Genetic Counseling position statements and legislative initiatives. This seminar also helps prepare students for the demands of the genetic counseling profession by focusing on emotional well-being through a process group facilitated by a professional counselor. Students will present a journal club reflecting a paper that discusses current trends in genetic counseling. During the semester, students will write Op-Ed pieces exploring contemporary issues that may impact patient care or the genetic counseling profession, identify community resources for adults with neurodevelopmental disabilities, and prepare abstracts of their thesis research for submission to a conference.

Spring
Prerequisite: GENC 6400
0 Course Units

GENC 6500 Genetic Counseling Rounds I
Once a week, students participate in discussion of clinical cases and recent journal literature. Through their participation, students gain familiarity with the process of reviewing clinical material and providing peer supervision. Presenting clinical and scientific information for group discussion in conferences and patient rounds is an important skill for genetic counselors. This seminar provides these experiences in a supportive environment and thus permits skill building in this area. This activity introduces students to a broad range of diagnoses and methods of managing a case. Discussions of case organization and tailoring a presentation to a specific patient is another aspect of this seminar.

Fall
0 Course Units

GENC 6550 Genetic Counseling Rounds II
In this continuation of GENC 6500, students participate in weekly discussions of clinical cases and recent journal literature. Through their participation, students gain familiarity with the process of reviewing clinical material and providing peer supervision. Presenting clinical and scientific information for group discussion in conferences and patient rounds is an important skill for genetic counselors. This seminar provides these experiences in a supportive environment and thus permits skill building in this area. This activity introduces the students to a broad range of diagnoses and methods of managing a case. Discussions of case organization and tailoring a presentation to a specific patient is another aspect of this seminar.

Spring
Prerequisite: GENC 6500
0 Course Units

GENC 6700 Internship
In addition to course-based degree requirements, students participate in internships related to the field of genetic counseling. These internships begin in the students' first term. Internships give students the opportunity to learn in varying practice-based environments including clinical and laboratory settings, as well as placements in a research and/or advocacy capacity with a specific organization or research protocol. Students document their experiences online daily and provide written summaries of their experiences for the program leadership to review. Students attend their internships once a week. Clinical supervisors evaluate the students in each of the placements.

0 Course Units

GENC 6800 Clinical Internship
The clinical internships during the second year consist of four clinical placements in genetics clinics. Students will have a minimum of 20 days in each specialty. This experiential course will expose genetic counseling students to the genetic counselors' role in different clinical settings and to the broad range of diagnoses and methods of effectively managing patient care. Clinical supervision is provided in a supportive environment that permits skill building as students take on more roles throughout the course of the year. Students will have exposure to cases representing the wide range of diagnoses and indications seen in a clinical genetics practice and will collect at least 50 participatory encounters to satisfy the ACGC requirement. All cases will be supervised by certified genetic counselors to be acceptable for the core case log book. Students will log each case for program review, including self-reflection about their performance. All students will be evaluated by their clinical supervisors and will prepare case analyses for the program leadership to review. The course is required for all second-year students.

Fall, Spring, and Summer Terms
Prerequisite: GENC 6700
0 Course Units
GENC 7101 Research Design and Methodologies
This course focuses on study design and proposal development of research projects relevant to clinical genetics and genetic counseling, encompassing translational, clinical, and behavioral projects. Covered topics include identifying a research topic, asking a research question, study design, background, aims, and methods, proposal writing and analysis plans. IRB submission and feasibility issues will also be addressed. This course will include online asynchronous lectures, online group discussions, and weekly exercises. In addition there will be weekly hour-long online group meetings to discuss research progress. Students will implement course lessons by developing and executing a research project during the one-year program.
Fall
1 Course Unit

GENC 7102 Research Bioethics
This course will combine an overview of NHGRI’s program in the ethical, legal, and social implications of genomic research and genomics will be highlighted. National experts offer lectures on race and ancestry in relation to biomedical research and practice, disability perspectives on genetics, the social and ethical implications of genomic prognostication, best practices for and challenges with respect to informed consent, and key legislation related to genomics, research, and medicine. Students are expected to complete reading assignments, case analyses, and participate in online discussion. Synchronous sessions will be held occasionally throughout the course.
Fall
1 Course Unit

GENC 7103 Manuscript & Grant Writing
This comprehensive course will focus on the fundamentals of writing and submitting grant proposals and preparing a manuscript for publication. Grant writing training will include the mechanics of proposal writing and aspects of “grantmanship” as students identify appropriate sources of grant funding, use narrative tools to create informative, persuasive and engaging proposals, creation of Aims that outline the goals of the grant, and support of Aims with well thought out research design. Grant submission process will be discussed. Manuscript writing training will include literature review to identify gaps in knowledge and how the research project will add to the field, the various sections of a manuscript, scientific writing, how to identify the appropriate journal for submission, guidance for authorship, and details about article submission, the peer review process, revisions, and response to reviewers and editors. Students will be prepared to submit the results of their thesis project at the completion of the ART-GC program. Synchronous sessions will be held occasionally throughout the course.
Spring
1 Course Unit

GENC 9900 Thesis
This is an independent study course with a strong emphasis on writing. Students conduct their research, gather data, analyze it, and develop their final thesis in the form of a journal submission. Each student will meet regularly with his/her primary thesis mentor and committee to complete his/her project. Students will be required to submit an abstract to a professional meeting and are encouraged to prepare a manuscript for publication. Students will also present their research to members of the genetic counseling program, advisors, thesis committee members, and the public at the end of the semester.
Spring
1 Course Unit

Genomics & Comp. Biology (GCB)

GCB 4930 Epigenetics of Human Health and Disease
Epigenetic alterations encompass heritable, non-genetic changes to chromatin (the polymer of DNA plus histone proteins) that influence cellular and organismal processes. This course will examine epigenetic mechanisms in directing development from the earliest stages of growth, and in maintaining normal cellular homeostasis during life. We will also explore how diverse epigenetic processes are at the heart of numerous human disease states. We will review topics ranging from an historical perspective of the discovery of epigenetic mechanisms to the use of modern technology and drug development to target epigenetic mechanisms to increase healthy lifespan and combat human disease. The course will involve a combination of didactic lectures, primary scientific literature and research lectures, and student-led presentations.
Spring, even numbered years only
Also Offered As: BIOL 4244, CAMB 4930
Prerequisite: BIOL 2210
1 Course Unit

GCB 5330 Statistics for Genomics and Biomedical Informatics
BMN 5330 is an introductory course in probability theory and statistical inference for graduate students in Genomics and Computational Biology. The goal of the course is to provide foundation of basic concepts and tools as well as hands-on practice in their application to problems in genomics. At the completion of the course, students should have an intuitive understanding of basic probability and statistical inference and be prepared to select and execute appropriate statistical approaches in their future research.
Also Offered As: BMN 5330, IMUN 5770
1 Course Unit

GCB 5340 Experimental Genome Science
This course will survey methods and questions in experimental genomics, including next generation sequencing methods, genomic sequencing in humans and model organisms, functional genomics, proteomics, and applications of genomics methods. Students will be expected to review and discuss current literature and to propose new experiments based on material learned in the course. Prerequisite: Undergraduates and Masters students need BIOL 431.
Also Offered As: PHRM 5340
Prerequisite: BIOL 4231
1 Course Unit
GCB 5350 Introduction to Bioinformatics
This course provides an overview of bioinformatics and computational biology as applied to biomedical research. A primary objective of the course is to enable students to integrate modern bioinformatics tools into their research activities. Course material is aimed to address biological questions using computational approaches and the analysis of data. A basic primer in programming and operating in a UNIX environment will be presented, and students will also be introduced to Python R, and tools for reproducible research. This course emphasizes direct, hands-on experience with applications to current biological research problems. Areas include DNA sequence alignment, genetic variation and analysis, motif discovery, study design for high-throughput sequencing RNA, and gene expression, single gene and whole-genome analysis, machine learning, and topics in systems biology. The relevant principles underlying methods used for analysis in these areas will be introduced and discussed at a level appropriate for biologists without a background in computer science. The course is not intended for computer science students who want to learn about biologically motivated algorithmic problems; BIOL 4536/BIOL 5536 and BE 5370/CIS 5370/MPHY 6090 are more appropriate. Prerequisites: An advanced undergraduate course such as BIOL 4210 or a graduate course in biology such as BIOL 5210, BIOL 5240, or equivalent, is a prerequisite.

Fall
Also Offered As: CIS 5350, MTR 5350
Prerequisite: BIOL 4210 OR BIOL 5210 OR BIOL 5240
1 Course Unit

GCB 5360 Fundamentals of Computational Biology
Introductory computational biology course designed for both biology students and computer science, engineering students. The course will cover fundamentals of algorithms, statistics, and mathematics as applied to biological problems. In particular, emphasis will be given to biological problem modeling and understanding the algorithms and mathematical procedures at the "pencil and paper" level. That is, practical implementation of the algorithms is not taught but principles of the algorithms are covered using small sized examples. Topics to be covered are: genome annotation and string algorithms, pattern search and statistical learning, molecular evolution and phylogenetics, functional genomics and systems level analysis.

Fall
Also Offered As: BIOL 5536, CIS 5360
Prerequisite: ((BIOL 1101 AND BIOL 1102) OR BIOL 1121) AND STAT 111 AND STAT 112
1 Course Unit

GCB 5370 Advanced Computational Biology
Advanced Computational Biology will review important concepts for computer science and statistics as they apply to computational biology; discuss current topics and related papers in genomics and computational biology; teach to evaluate, criticize, and summarize research papers in genomics and computational biology; and experiment, evaluate, and try to improve tools/algorithms from topics covered in the course. Requirement: Background in statistics, biology, genetics and genomics, and computer science. Non-GCB students need permission from the instructors.

Spring
1 Course Unit

GCB 5670 Mathematical Computation Methods for Modeling Biological Systems
This course will cover topics in systems biology at the molecular/cellular scale. The emphasis will be on quantitative aspects of molecular biology, with possible subjects including probabilistic aspects of DNA replication, transcription, translation, as well as gene regulatory networks and signaling. The class will involve analyzing and simulating models of biological behavior using MATLAB. Prerequisite: Graduate standing or permission of the instructor.

Fall or Spring
Also Offered As: AMCS 5670, BE 5670
1 Course Unit

GCB 5770 Advanced Epigenetics Technology
Second year students in GCB, CAMB (G&E), or IGG programs using genomics methods to measure transcriptomics and epigenomics changes in their experimental systems. The goal is to familiarize students with the latest cutting-edge genomics tools and cover solutions to major experimental and computational challenges in the investigation of genome-wide epigenetic data sets. Students will develop competence in (i) variations of experimental techniques improving resolution and throughput, (ii) issues related to the computational analyses closely related to the various genome-wide assays used to probe epigenetic processes and signals, (iii) computational approaches useful to overcome pitfalls associated to the analysis of a given epigenetic data modality, (iv) methods, techniques and studies on the integration of multi-layer epigenetic data sets.

GCB 5850 Wistar Institute Cancer Biology Course: Signaling Pathways in Cancer
This course is intended to provide foundational information about the molecular basis of cancer. When necessary the significance of this information for clinical aspects of cancer is also discussed. The main theme centers around cell cycle checkpoints with specific emphasis on the biochemistry and genetics of DNA damage signaling pathways, DNA damage checkpoints, mitotic checkpoints and their relevance to human cancer. The course is taught by the organizers and guest lecturers from universities and research institutions in the Northeast. Following every lecture, students present a research paper related to the topic of that lecture. The course is intended for first and second year graduate students but all graduate students are welcome to attend. Prerequisite: Undergraduates and Master’s degree candidates require permission from the course directors.

0.3 Course Units
GCB 7520 Genomics
Recent advances in molecular biology, computer science, and engineering have opened up new possibilities for studying the biology of organisms. Biologists now have access to the complete genomic sequence and set of cellular instructions encoded in the DNA of specific organisms, including homo sapiens, dozens of bacterial species, the yeast Saccharomyces cerevisiae, the nematode C. elegans, and the fruit fly Drosophila melanogaster. The goals of the course include the following: 1. introduce the basic principles involved in sequencing genomes, 2. familiarize the students with new instrumentation, informative tools, and laboratory automation technologies related to genomics, 3. teach the students how to access the information and biological materials that are being developed in genomics and 4. examine how these new tools and resources are being applied to basic and translational research. This will be accomplished through in depth discussion of classic and recent papers. Prerequisite: Permission of Instructor.

GRMN 0010 Bad Taste
"Beauty is not a quality inherent to things: it only exists in the mind of the beholder." (David Hume) " Most of us can recognize bad taste as soon as we see it: Harlequin romances, Elvis on black velvet, lawn ornaments. But bad taste also has a history, and kitsch has been identified as a peculiarly modern invention related to capitalism and consumerism. Beginning with a discussion of taste in the eighteenth century, we will investigate under what conditions good taste can go bad, for example when it is the object of mass reproduction, and, on the other hand, why bad taste in recent times has increasingly been viewed in positive terms. Categories such as the cute, the sentimental, the popular, the miniature, kitsch, and camp will be explored. We will also ask what forms of ideological work have been done by this brand of aesthetics, for example in the connection between politics and kitsch, femininity and the low-brow, or camp and queer identity. Writers and film-makers to be discussed include: Hume, Kant, Goethe, Flaubert, Bourdieu, Sacher-Masoch, Thomas Mann, Nabokov, Benjamin, Greenberg, Sontag, John Waters.

GRMN 0011 In Praise of the Small in Literature and the Arts
We can memorize aphorisms and jokes, carry miniature portraits with us, and feel playful in handling small objects. This seminar will ask us to pay attention to smaller texts, art works, and objects that may easily be overlooked. In addition to reading brief texts and looking at images and objects, we will also read texts on the history and theory of short genres and the small.

GRMN 0012 Jews and China: Views from Two Perspectives
Jews in China?? Who knew?? The history of the Jews in China, both modern and medieval, is an unexpected and fascinating case of cultural exchange. Even earlier than the 10th century. Jewish trader from India or Persia on the Silk Road, settled in Kaifeng, the capital of the Northern Song Dynasty, and established a Jewish community that lasted through the nineteenth century. In the mid-nineteenth century, Jewish merchants, mainly from Iraq, often via India, arrived in China and played a major role in the building of modern Shanghai. After 1898, Jews from Russia settled in the northern Chinese city of Harbin, first as traders and later as refugees from the Bolshevik Revolution and Russian Civil War. In the first decades of the twentieth century, a few Jews from Poland and Russia visited China as tourists, drawn by a combination of curiosity about the cultural exoticism of a truly foreign culture and an affinity that Polish Jewish socialists and communists felt as these political movements began to emerge in China. During World War II, Shanghai served as a port of refuge for Jews from Central Europe. In this freshman seminar, we will explore how these Jewish traders, travelers, and refugees responded to and represented China in their writings. We will also read works by their Chinese contemporaries and others to see the responses to and perceptions of these Jews. We will ask questions about cultural translation: How do exchanges between languages, religions, and cultures affect the identities of individuals and communities? What commonalities and differences between these people emerge?

GRMN 0013 Euro Zone Crisis - The EU in a Currency War for Survival?

"Let me put it simply...there may be a contradiction between the interests of the financial world and the interests of the political world...We cannot keep constantly explaining to our voters and our citizens why the taxpayer should bear the cost of certain risks and not those people who have earned a lot of money from taking those risks." Angela Merkel, Chancellor of Germany, at the G20 Summit, November 2010. In January 1999, a single monetary system united Germany, a core nation, with 10 other European states. Amidst the optimism of the euro's first days, most observers forecast that Europe would progress toward an ever closer union. Indeed, in the ensuing decade, the European Union became the world's largest trading area, the euro area expanded to include 17 member states, and the Lisbon Treaty enhanced the efficiency and democratic legitimacy of the Union. In 2009, Greece's debt crisis exposed deep rifts within the European Union and developed into a euro zone crisis - arguably the most difficult test Europe has faced in the past 60 years. After two years of a more benign EURO debt situation, the risk of recession, EU sanctions against Russia, and a possible collision of a newly-elected Greek government with its creditors, the euro crisis returned with a vengeance in 2015. In addition, the pressure mounts for European leaders to find a solution to the refugee crisis which reached a peak in the fall of 2015. In 2016 the Brexit delivered the latest blow to the European Union, and the future of the European project without the UK looks bleak. The Economic and Monetary Union (EMU) is still fragile, and economic and political developments in 2017 could determine the future of the euro. Does the EU have what it takes to emerge from these crises? Will the European nations find a collective constructive solution that will lead to a fiscal union that implies further integration?

GRMN 0015 Hipster Philosophy from Marx to Zizek

From Wes Anderson to Williamsburg, hipster culture is everywhere. And yet the very notion of the hipster remains notoriously difficult to define--whether we perceive this cultural phenomenon as the waste product of the postmodern, as a new form of consumerism, as a peculiar attitude toward irony and authenticity, as scenester posturing or as just plain cool. This course addresses such tensions through an examination of the intellectual history of the nineteenth and twentieth centuries. Each week pairs philosophical and theoretical readings with an artifact of hipster culture: reading Instagram beside Walter Benjamin, ironic facial hair with Friedrich Nietzsche, Facebook through the lens of Georg Lukacs and indie music alongside Theodor Adorno. No previous knowledge of skinny jeans required.

GRMN 0016 Babylon Berlin: German Crime Books

Why are crime books and crime shows so popular? 2017 marked a moment in time when a serialized domestic TV show took off in Germany like wild fire. The first three episodes of "Babylon Berlin" were seen by an average 7.8 million viewers on ARD last year, achieving a 24.5% share and reaching a peak of 8.5 million. On Sky, it boasted the best ratings ever for a non-English series and was only beaten overall by the seventh season of "Game of Thrones." Babylon Berlin is based on Volker Kutscher's crime books. Thus, this course will trace the success of German crime books as a best-selling genre by analyzing the appeal of the whodunit format and by questioning the transnational appeal of this genre. "Babylon Berlin" exemplifies the success of German crime books because the treatment of historical events combined with a critical eye toward the Zeitgeist of cultural products sheds light on the representation of culture and its co-construction of a transnational identity.

1 Course Unit

GRMN 0017 Politics of Commemoration

In this course, we will examine how commemorative traditions in Germany and the United States have been invented and contested since the nineteenth century. We will discuss why certain events in the past rather than others have been the object of commemoration; what these creations stood for originally; how their meanings have changed over the time; and the lessons, if any, these commemorative practices continue to teach us today. We also will examine the ways in which Europeans and Americans have protested, torn down old monuments, erected new ones, and turned to a wide variety of artistic forms to call into question stories about empire, fascism, communism, westward expansion and settler colonialism, enslavement, as well as military victory and loss. We will discuss topics, such as racism, ethnic conflict, Antisemitism, settler colonialism, guilt and victimhood, cultural appropriation, as well as gender and sexuality. To answer these questions, we will focus on literature, essays, art, films, podcasts, and public art and monuments found in Germany, on Penn's campus, and around Philadelphia.

GRMN 0018 Climate Change and Community in Indonesia
Climate change isn't fair. Countries and small island states that have contributed little to cause climate change are already confronting the worst impacts. This trend will continue. While wealthy countries in the Global North scramble to respond to sea level rise, drought, extreme weather, and other impacts with technological and infrastructural solutions, countries in the Global South know they won't be able to protect their vulnerable populations in that way. For them, part of the answer lies in social resilience: the ability of a community or neighborhood in a city or region to withstand and recover from climate shocks and stresses. What are the ingredients that promote social resilience? In this first-year seminar, we will take Indonesia, the fourth most populous country in the world, as an example. Classified as a newly industrialized developing country, Indonesia has the capacity to mount some large projects such as the decision to move the government from Jakarta to a newly created capital city on the island of Borneo. At the same time, in Jakarta and all along the coasts of the thousands of islands that make up this archipelagic nation, vulnerable communities must foster resilience within themselves. Participants in this seminar will become acquainted with Indonesia's colonial and recent history, learn about its deep cultural resources, and engage with its current efforts to mitigate emissions and adapt to climate change. Highlights include modules on the plan to protect Jakarta, designing the new capital city, and the use of the arts to increase community resilience in urban and rural kampongs in other parts of the country.

GRMN 0100 Elementary German I
Designed for the beginning student with no previous knowledge of German. German 0100, as the first course in the first-year series, focuses on the development of language competence in listening, speaking, reading, and writing. By the end of the semester, students will be able to engage in simple conversations about familiar things, know greetings and everyday expressions, they will be able to count and tell time, and negate sentences in day-to-day contexts. Furthermore, students will be able to speak about events that happened in the immediate past and express plans for the future. In addition, students will have developed reading strategies that allow them to glean information from simple newspaper and magazine articles and short literary texts. Because cultural knowledge is one of the foci of German 0100, students will learn much about practical life in Germany and will explore German-speaking cultures on the Internet.
Fall or Spring
1 Course Unit

GRMN 0150 Accelerated Elementary German
This course is intensive and is intended for dedicated, highly self-motivated students who will take responsibility for their learning and creation of meaning with their peers. An intensive two credit course in which two semesters of elementary German (GRMN 101 & 102) are completed in one. Introduction to the basic elements of spoken and written German, with emphasis placed on the acquisition of communication skills. Readings and discussions focus on cultural differences. Expression and comprehension are then expanded through the study of literature and social themes.
Fall
2 Course Units

GRMN 0200 Elementary German II
This course is a continuation of GRMN 0100 and is designed to strengthen and expand students' listening, speaking, reading, and writing competence and to deepen an understanding of German-speaking cultures. By the end of the course, students will be able to handle a variety of day-to-day needs in a German-speaking setting and engage in simple conversations about personally significant topics. Students can expect to be able to order food and beverages, purchase things, and to be familiar with the German university system, the arts, and current social topics. Students will begin to be able to talk about the past and the future, make comparisons, describe people and things in increasing detail, make travel plans that include other European countries, and make reservations in hotels and youth hostels. By the end of the course students will be able to talk about their studies and about their dreams for the future. In addition, students will develop reading strategies that should allow them to understand the general meaning of articles, and short literary texts. Furthermore, students will feel more able to understand information when hearing German speakers talking about familiar topics. Cultural knowledge remains among one of the foci of German 0200, and students will continue to be exposed to authentic materials.
Fall or Spring
Prerequisite: GRMN 0100

GRMN 0350 Accelerated Intermediate German
This course is intensive and is intended for dedicated, highly self-motivated students who will take responsibility for their learning and creation of meaning with their peers. This accelerated course is designed to improve students writing and speaking competencies, to increase vocabulary, to deepen grammar usage, and to help develop effective reading and listening strategies in German across literary genres and media as students interpret and analyze cultural, political, and historical moments in German-speaking countries and compare them with their own cultural practices. This course is organized around content-based modules. Students conclude the basic-language program at PENN by reading an authentic literary text, offering the opportunity to practice and deepen reading knowledge and to sensitize cultural and historical awareness of German-speaking countries.
Spring
Prerequisite: GRMN 0200 OR GRMN 0150
2 Course Units
GRMN 0400 Intermediate German II
A continuation of GRMN 0300. Expands students writing and speaking competence in German, increases vocabulary and helps students practice effective reading and listening strategies. Our in-class discussions are based on weekly readings of literary and non-literary texts to facilitate exchange of information, ideas, reactions, and opinions. In addition, the readings provide cultural and historical background information. The review of grammar will not be the primary focus of the course. Students will, however, expand and deepen their knowledge of grammar through specific grammar exercises. Students will conclude the basic-language program at PENN by reading an authentic literary text; offering the opportunity to practice and deepen reading knowledge and to sensitize cultural and historical awareness of German-speaking countries.
Fall or Spring

GRMN 1010 Freud: The Invention of Psychoanalysis
No other person of the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This course will study his work, its cultural background, and its impact on us today. In the first part of the course, we will learn about Freud's life and the Viennese culture of his time. We will then move to a discussion of seminal texts, such as excerpts from his Interpretation of Dreams, case studies, as well as essays on psychoanalytic practice, human development, definitions of gender and sex, neuroses, and culture in general. In the final part of the course, we will discuss the impact of Freud's work. Guest lecturers from the medical field, history of science, psychology, and the humanities will offer insights into the reception of Freud's work, and its consequences for various fields of study and therapy.

1 Course Unit

GRMN 1015 Freud's Objects
How do we look at objects? And which stories can objects tell? These are questions that have been asked quite regularly by Art Historians or Museum Curators, but they take a central place within the context of psychoanalytic studies as well. The seminar "Freud's Objects" will offer an introduction to Sigmund Freud's life and times, as well as to psychoanalytic studies. We will focus on objects owned by Freud that he imbued with special significance, and on Freud's writings that focus on specific objects. Finally, we will deal with a re-interpretation of the "object" in psychoanalytic theory, via a discussion of texts by British psychoanalysts such as Melanie Klein and Donald Winnicott.

GRMN 1020 Marx, Marxism, and the Culture of Revolution
Capitalist society is the object of Karl Marx's analysis and critique—a society that is the product of history and may one day vanish. This course will trace Marx's critique by moving between the fields of philosophy, economics, and politics. We will locate key interventions of Marx's thought that transform modern conceptions of history, the relation between economics and politics, and the limits of struggle and emancipation in capitalist society. We will consider the historical conditions of Marx's writing and the development of his thought to discover many sides of Marx and many divergent Marxisms (humanist, post-structuralist, feminist, and others) that follow, often at odds with each other. Further, we will ask about what kind of horizons Marx's and Marxist interventions open up for critique and analysis of capitalist society with respect to gender, race, class, and nation. "Theory becomes a material force when it has seized the masses," argues the young Marx; indeed, his theories have fueled emancipatory movements and propped up tyrannical regimes, substantiated scientific theories and transformed philosophical debates. In examining Marx's legacy, we will focus on the elaborations and historical limitations of his ideas by examining the challenges of fascism, the communist experiment in the Soviet Union and its collapse, as well as the climate and other crises currently taking place. In conclusion, we will turn to the question of whether and to what extent Marx's ideas remain relevant today, and whether it is possible to be a Marxist in the contemporary world dominated by global capital.

GRMN 1030 Nietzsche's Modernity and the Death of God
"God is dead." This famous, all too famous death sentence, issued by the 19th-century German philosopher Friedrich Nietzsche, also signaled the genesis of a radical challenge to traditional notions of morality, cultural life, and the structure of society as a whole. In this course we will examine both the "modernity" of Nietzsche's thought and the ways in which his ideas have helped to define the very concept of Modernity (and, arguably, Postmodernity) itself. In exploring the origin and evolution of Nietzsche's key concepts, we will trace the ways in which his work has been variously revered or refuted, championed or co-opted, for more than a century. We will survey his broad influence on everything from philosophy and literature to music and art, theater and psychology, history and cultural theory, politics and popular culture. Further, we will ask how his ideas continue to challenge us today, though perhaps in unexpected ways. As we will see, Nietzsche wanted to teach us "how to philosophize with a hammer."

GRMN 1040 Berlin: History, Politics, Culture
What do you know about Berlin's history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and Koeln to establish a new capital for this country. It will tell the story of Berlin's rising political prominence in the eighteenth century, and its position as a center of the German and Jewish Enlightenment. It will follow Berlin's transformation into an industrial city in the nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will conclude its historical survey with a consideration of Berlin's position as a capital in reunified Germany. The historical survey will be supplemented by a study of Berlin's urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker's housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin, and focus on Berlin's Jewish history. The course will be interdisciplinary with the fields of German Studies, history, history of art, urban studies, and German-Jewish studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin.

GRMN 1070 Fascist Cinemas
Cinema played a crucial role in the cultural life of Nazi Germany and other fascist states. As cinema enthusiasts, Goebbels and Hitler were among the first to realize the important ideological potential of film as a mass medium and saw it to what Germany remained a cinema powerhouse producing more than 1000 films during the Nazi era. In Italy, Mussolini, too, declared cinema "the strongest weapon." This course explores the world of "fascist" cinemas ranging from infamous propaganda pieces such as The Triumph of the Will to popular entertainments such as musicals and melodramas. It examines the strange and mutually defining kinship between fascism more broadly and film. We will consider what elements mobilize and connect the film industries of the Axis Powers: style, genre, the aestheticization of politics, the creation of racialized others. More than seventy years later, fascist cinemas challenge us to grapple with issues of more subtle ideological insinuation than we might think. Weekly screenings with subtitles.

GRMN 1090 Jewish Films and Literature
From the 1922 silent film "Hungry Hearts" through the first "talkie," "The Jazz Singer," produced in 1927, and beyond "Schindler's List," Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare's "King Lear" to Sholom Aleichem's "Tvey the Dairyman," primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we "read" literature and film, b) the various ways that the media of fiction, drama, and film "translate" Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience.

GRMN 1100 Women in Jewish Literature
"Jewish woman, who knows your life? In darkness you have come, in darkness do you go." J. L. Gordon (1890). This course will bring into the light the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres -- devotional literature, memoir, fiction, and poetry -- we will study women's roles and selves, the relations of women and men, and the interaction between Jewish texts and women's lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction and poetry from the past century. The course is divided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are portrayed in the Hebrew Bible, in rabinic commentary, in pre-modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah's daughter. Next we turn to the seventeenth century Glikl of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction written by women in Yiddish, Hebrew, and English.

GRMN 1110 Jewish American Literature
What makes Jewish American literature Jewish? What makes it American? This course will address these questions about ethnic literature through fiction, poetry, drama, and other writings by Jews in America, from their arrival in 1654 to the present. We will discuss how Jewish identity and ethnicity shape literature and will consider how form and language develop as Jewish writers "immigrate" from Yiddish, Hebrew, and other languages to American English. Our readings, from Jewish American Literature: A Norton Anthology, will include a variety of stellar authors, both famous and less-known, including Isaac Mayer Wise, Emma Lazarus, Isaac Bashevis Singer, Celia Dropkin, Abraham Cahan, Anzia Yezierska, Saul Bellow, Philip Roth, Cynthia Ozick, and Allegra Goodman. Students will come away from this course having explored the ways that Jewish culture intertwines with American culture in literature.

GRMN 1120 Translating Cultures: Literature on and in Translation
"Languages are not strangers to one another," writes the great critic and translator Walter Benjamin. Yet two people who speak different languages have a difficult time talking to one another, unless they both know a third, common language or can find someone who knows both their languages to translate what they want to say. Without translation, most of us would not be able to read the Bible or Homer, the foundations of Western culture. Americans wouldn't know much about the cultures of Europe, China, Africa, South America, and the Middle East. And people who live in or come from these places would not know much about American culture. Without translation, Americans would not know much about the diversity of cultures within America. The very fabric of our world depend upon translation between people, between cultures, between texts. With a diverse group of readings--autobiography, fiction, poetry, anthropology, and literary theory--this course will address some fundamental questions about translating language and culture. What does it mean to translate? How do we read a text in translation? What does it mean to live between two languages? Who is a translator? What are different kinds of literary and cultural translation? what are their principles and theories? Their assumptions and practices? Their effects on and implications for the individual and the society?

GRMN 1130 Water Worlds: Cultural Responses to Sea Level Rise & Catastrophic Flooding
As a result of climate change, the world that will take shape in the course of this century will be decidedly more inundated with water than we're accustomed to. The polar ice caps are melting, glaciers are retreating, ocean levels are rising, polar bear habitat is disappearing, countries are jockeying for control over a new Arctic passage, while low-lying cities and small island nations are confronting the possibility of their own demise. Catastrophic flooding events are increasing in frequency, as are extreme droughts. Hurricane-related storm surges, tsunamis, and raging rivers have devastated regions on a local and global scale. In this seminar we will turn to the narratives and images that the human imagination has produced in response to the experience of overwhelming watery invasion, from Noah to New Orleans. Objects of analysis will include mythology, ancient and early modern diluvialism, literature, art, film, and commemorative practice. The basic question we'll be asking is: What can we learn from the humanities that will be helpful for confronting the problems and challenges caused by climate change and sea level rise?

1 Course Unit
GRMN 1132 Forest Worlds: Mapping the Arboreal Imaginary in Literature and Film
The destruction of the world's forests through wild fires, deforestation, and global heating threatens planetary bio-diversity and may even, as a 2020 shows, trigger civilizational collapse. Can the humanities help us think differently about the forest? At the same time that forests of the world are in crisis, the "rights of nature" movement is making progress in forcing courts to acknowledge the legal "personhood" of forests and other ecosystems. The stories that humans have told and continue to tell about forests are a source for the imaginative and cultural content of that claim. At a time when humans seem unable to curb the destructive practices that place themselves, biodiversity, and forests at risk, the humanities give us access to a record of the complex inter-relationship between forests and humanity. Forest Worlds serves as an introduction to the environmental humanities. The environmental humanities offer a perspective on the climate emergency and the human dimension of climate change that are typically not part of the study of climate science or climate policy. Students receive instruction in the methods of the humanities - cultural analysis and interpretation of literature and film - in relation to texts that illuminate patterns of human behavior, thought, and affect with regard to living in and with nature.

GRMN 1140 Liquid Histories and Floating Archives
Climate change transforms the natural and built environments, and it is re-shaping how we understand, make sense, and care for our past. Climate changes history. This course explores the Anthropocene, the age when humans are remaking earth's systems, from an on-water perspective. In on-line dialogue and video conferences with research teams in port cities on four continents, this undergraduate course focuses on Philadelphia as one case study of how rising waters are transfiguring urban history, as well as its present and future. Students projects take them into the archives at the Independence Seaport Museum and at Bartram's Garden. Field trips by boat on the Schuykill and Delaware Rivers and on land to the Port of Philadelphia and to the John Heinz National Wildlife Refuge invite transhistorical dialogues about how colonial and then industrial-era energy and port infrastructure transformed the region's vast tidal marshlands wetlands. Excursions also help document how extreme rain events, storms, and rising waters are re-making the built environment, redrawing lines that had demarcated land from water. In dialogue with one another and invited guest artists, writers, and landscape architects, students final projects consider how our waters might themselves be read and investigated as archives. What do rising seas subsume and hold? Whose stories do they tell? What floats to the surface?

GRMN 1146 Queer German Cinema
Taught in English. This course offers an introduction into the history of German-language cinema with an emphasis on depictions of lesbian, gay, bisexual, trans and queer themes. The course provides a chronological survey of Queer German Cinema from its beginnings in the Weimar Republic to its most recent and current representatives, accompanied throughout by a discussion of the cultural-political history of gay rights in the German-speaking world. Over the course of the semester, students will learn not only cinematic history but how to write about and close-read film. No knowledge of German or previous knowledge required.

GRMN 1150 Comparative Cultures of Sustainability
Sustainability is more than science, engineering, policy, and design. Surveying the world, we see that the politics and practice of sustainability play out in different ways depending on cultural factors. Some cultures are more prone to pursue ecological goals than others. Why? Do the environmental history and experience of a nation affect policy? Do nature and the environment play a crucial role in the cultural memory of a nation? Can cultural components be effectively leveraged in order to win approval for a politics of sustainability? And what can we, as residents of a country where climate change and global warming are flashpoints in an enduring culture war, learn from other cultures? This course is designed to equip undergraduate students with the historical and cultural tools necessary to understand the cultural aspects of sustainability in two countries noted for their ecological leadership and cultural innovation, Germany and the Netherlands. This hybrid course combines online instruction with a short-term study abroad experience in Berlin and Rotterdam. During the pre-tip online portion of the course, students will become acquainted with the cultural histories of Germany and Dutch attitudes toward sustainability and the environment through a combination of recorded lectures by the instructor, reading assignments, viewing assignments (documentary and feature films), threaded discussions, and short written assignments. The goal of the pre-trip instruction are to help students develop tools for analyzing and interpreting cultural difference, construct working models of German and Dutch concepts of sustainability, and formulate hypotheses about the relation between culture and policy in Germany and the Netherlands. The class will spend a total of ten days in Europe: five days in Berlin and five days in the area of Rotterdam. The days will be jam-packed with visits to important sites of sustainable practice; discussion with policy makers, activists, and scientists; and immersion in the cultures of the Netherlands and Germany. Upon our return from Europe, the class will debrief and students will present online projects. There are no prerequisites or language requirements.

GRMN 1151 Comparative Cultures of Resilience and Sustainability in the Netherlands and the United States
Coastal and riverside cities worldwide are under increasing pressure from sea level rise and other effects of climate change. Resilience and sustainability are paradigmatic concepts for the ways in which cities address the effects associated with global warming: sea level rise, extreme weather, changing climate, and their impacts on water, food, energy, and housing. This course focuses on the cultural side of resilience and sustainability in four signature cities: Rotterdam (with areas 6 meters below sea level), Nijmegen (which has devised a new way to live with a major river), New York City (which was devastated by Hurricane Sandy), and New Orleans (one of the most vulnerable American cities). Of course, other cities (Amsterdam, Arnhem, Boston, The Hague, Houston, Miami, etc.) will also come into play. In deeply uncertain times, cities such as these confront an array of interconnected choices that involve not only infrastructural solutions, but priorities, values, and cultural predispositions. Ideally, the strategies that cities devise are generated through inclusive processes based on the understanding that resilience and sustainability should be grounded in the cultural life of their communities. When this is the case, resilience and sustainability can become unique and motivating narratives about how cities and their residents co-develop the kinds of hard, soft, and social infrastructure the climate emergency requires. With this in mind, we will analyze the cities’ climate action plans and resilience strategies; explore their cultural histories relative to flooding events; and consult with Dutch and American experts in climate adaptation, governance, community development, and design. The highlight of the course will be travel to the Netherlands during spring break for site visits and discussions with experts.

GRMN 1153 Is Europe Facing a Spiritual Crisis?
Is Europe Facing a Spiritual Crisis? On Contemporary Debates about Secularization, Religion and Rationality. Point of departure for this course is the difference between Europe and the US as to the role of religion in the unfolding of their respective “cultural identities” (cf. Charles Taylor, A Secular Age, 522-530). As a rule, both the US and Western Europe are now defined as secularized cultures, even if their histories and specific identities are strongly rooted in the Christian heritage. Given this contemporary situation, four research questions will be dealt with in this course. 1) What is meant by secularization? In answer to that question, two secularization theories are distinguished: the classic versus the alternative secularization thesis; 2) What is the historical impact of the nominalist turning-point at the end of the Middle Ages in this process towards secularization? 3) How did the relation between rationality and religion develop during modern times in Europe? 4) What is the contemporary outcome of this evolution in so-called postmodern / post-secular Europe and US? We currently find ourselves in this so-called postmodern or post-secular period, marked by a sensitivity to the boundaries of (modern) rationality and to the fragility of our (modern) views on man, world and God. In this respect, we will focus on different parts of Europe (Western and Eastern Europe alike) and will refer to analogies and differences between Western Europe and US. This historical-thematic exposition is illustrated by means of important fragments from Western literature (and marginally from documents in other arts) and philosophy. We use these fragments in order to make more concrete the internal philosophical evolutions in relation to corresponding changes in diverse social domains (religion, politics, economy, society, literature, art...).

GRMN 1160 Sustainability & Utopianism
This seminar explores how the humanities can contribute to discussions of sustainability. We begin by investigating the contested term itself, paying close attention to critics and activists who deplore the very idea that we should try to sustain our, in their eyes, dystopian present, one marked by environmental catastrophe as well as by an assault on the educational ideals long embodied in the humanities. We then turn to classic humanist texts on utopia, beginning with More’s fictive island of 1517. The “origins of environmentalism” lie in such depictions of island edens (Richard Grove), and our course proceeds to analyze classic utopian tests from American, English, and German literatures. Readings extend to utopian visions from Europe and America of the nineteenth and twentieth centuries, as well as literary and visual texts that deal with contemporary nuclear and flood catastrophes. Authors include: Bill McKibben, Jill Kerr Conway, Christopher Newfield, Thomas More, Francis Bacon, Karl Marx, Henry David Thoreau, Robert Owens, William Morris, Charlotte Perkins Gilman, Ayn Rand, Christa Wolf, and others.

GRMN 1170 Global Sustainabilities
This research-oriented seminar focuses on the ways in which "sustainability" and "sustainable development" are linguistically and culturally translated into the world's languages. We may take the terms for granted, but they have only really been on the global stage since they were widely introduced in the 1987 United Nations report, Our Common Future. Seminar participants will first become acquainted with the cultural and conceptual history of the terms and the UN framework within which sustainability efforts directly or indirectly operate. Having established the significance of cultural and linguistic difference in conceiving and implementing sustainability, participants will collaboratively develop a research methodology in order to begin collecting and analyzing data. We will draw heavily on Penn's diverse language communities and international units. Seminar members will work together and individually to build an increasingly comprehensive website that provides information about the world's languages of sustainability.

GRMN 1301 Northern Renaissance Art
This course critically examines concepts traditionally associated with the Renaissance by focusing on the exchange of artistic ideas throughout the Holy Roman Empire and across different media, such as the altarpieces of Jan van Eyck, the expressive drawings of Albrecht Durer and Hans Baldung Grien, the peasant studies of Pieter Bruegel and the prints of satirists who wished to remain anonymous. The material is organized thematically around four topics: religious art as piety and politics; antiquity as a source of tradition and imagination; the formulation of a public discourse that exposed social threats; and the distinctiveness of artistic claims of individual achievement. A motif throughout the course is the question of how the survival of fragments may be presented in museum contexts as parts standing in for an absent whole. We will also consider how historians approach designs for works of art now lost or never completed. Encouraging encounters with art and artifacts around the city, assignments focus on objects in Philadelphia collections.

1 Course Unit

GRMN 1302 Writing About Art Seminar
What does it mean to write about art? What are the historical origins of this undertaking? How does language mediate the intellectual, somatic, and cultural rapport between the viewing self and the physical object? As an initial response to these questions we will examine the writings of the Tuscan artist and critic Giorgio Vasari (1511-1574), the biographer of such renowned artists as Leonardo, Raphael, Donatello, and Michelangelo. We will also read the letters of famous artists from the early modern period, and examine the theoretical forays of artists such as Albrecht DÃ?rer, who attempted to sketch the relationship between the memory and the imagination. Finally, we will look to examples of works of art for how we might read visual images as expressive of theories about what are is and what it can do.

GRMN 1305 The Vikings
The Vikings were the terror of Europe from the late eight to the eleventh century. Norwegians, Danes and Swedes left their homeland to trade, raid and pillage; leaving survivors praying “Oh Lord, deliver us from the fury of the Norsemen!” While commonly associated with violent barbarism, the Norse were also farmers, craftsmen, and merchants. As their dragon ships sailed the waterways of Europe and beyond, they also transformed from raiders to explorers, discoverers and settlers of found and conquered lands. This course will introduce students to various facets of the culture and society of the Viking world ranging from honor culture, gender roles, political culture, mythology, and burial practices. We will also explore the range of Viking activity abroad from Kiev and Constantinople to Greenland and Vineland, the Viking settlement in North America. We will use material and archeological sources as well as literary and historical ones in order to think about how we know history and what questions we can ask from different sorts of sources. Notably, we will be reading Icelandic sagas that relate oral histories of heroes, outlaws, raiders and sailors that will lead us to question the lines between fact and fiction, and myth and history.
Fall or Spring
Also Offered As: HIST 1210
1 Course Unit

GRMN 1306 Origins of Nazism: From Democracy to Race War and Genocide
Where did the Nazis come from? Was the Weimar Republic bound to fail? Did the Treaty of Versailles or the Great Depression catapult the Nazis into power? What was the role of racism, of Anti-Semitism? How did the regime consolidate itself? What was the role of ordinary people? How do we explain the Holocaust and what kind of a war was the Second World War? Grappling with these and more questions, the first half of the course focuses on Germany’s first democracy, the Weimar Republic and its vibrant political culture. In the second half, we study on the Nazi regime, how it consolidated its power and remade society based on the concepts of race and struggle. Discussions of race and race-making are crucial throughout the course. In the name of the “racial purity,” the Nazi state moved ruthlessly against Germany’s Jewish population and cleansed German society of all “undesirable” elements. These ideas and practices didn’t originate with the Nazis and they didn’t operate in a geopolitical vacuum. Thinking about Nazi racism and genocide in both its particular specifics and in a larger global historical context is the main goal of this course.

GRMN 3212 Seeing Green: Environmentalism in Germany and Austria  
Many regard Germany as a leader in the transition to renewable energy. The Green Party has been a significant player in federal and local politics since 1981. The current Austrian chancellor is a member of the Green Party. Soon, Germany will shutter its last nuclear reactor. Work on the coal phase-out has already begun. Germans overwhelmingly support aggressive climate action by their government. How can we explain this? In this course, we will become familiar with current climate, environmental, and energy policy and practice in Germany and Austria, but we will also delve into the cultural history of German environmentalism. We'll learn about the origin of the German concept of sustainability in early 18th-century forestry; the role of the forest in Romanticism; the origin of the concepts of ecology and environment in the work of Ernst Haeckel and Jacob von Uexkull; the role of the mountains in Austrian environmental thinking; Nazi-era environmentalism; "Waldersterben," the anti-nuke movement and the rise of the Green Party; the "Energiewende"; and the impact of the uprising to protect the Hambacher Forest on the coal phase-out. We'll make use of readings from policy, history, and literature, and screen feature and documentary films. This course is taught in German.  
Not Offered Every Year  
1 Course Unit

GRMN 3215 German Youth Cultures  
This course examines how youth has been understood in German history and how it is experienced today. Literary and non-literary texts, historical documents, and films will help us generate discussion about youth movements; subcultures; sexual expression and repression; and the social and psychological developments that have been part of becoming an adult since the late eighteenth century. Students will improve their spoken and written German during class discussion as well as through individual and collaborative assignments. Taught in German.  
Not Offered Every Year  
1 Course Unit

GRMN 3220 Writing in Dark Times: German Literature  
The rise of Hitler and the Nazis in 1933 radically disrupted the literary marketplace in Germany. Public book burnings were the most visible sign of a complete reorganization of the literary world. What was it like to be a writer in the Third Reich? How did censorship work? What kind of choices were writers forced to make? What political roles did writers adopt? Under what conditions could they publish? Who read their books and how did they read them? These are some of the questions we will ask as we become acquainted with German writers in ideological adherence or alliance, in exile throughout Europe and the Americas, in "inner emigration," even in concentration camps, and in hiding. By focusing on their writing, we will shed light on the value of literature in dark times.  
Not Offered Every Year  
1 Course Unit
GRMN 3221 German Ideas and Nazi Ideology
Right-wing movements are often considered to be a reservoir of those who are left behind and economic losers. This seems to apply as much today as it did to the fascist movements of the first half of the 20th century. Admittedly, the economic situation has had a considerable influence on the development and success of these movements and most intellectuals have obviously reacted with open rejection to the aggressive and racist policies, which has led to mass emigration, especially to the United States. It must be noted, however, that the movement itself was supported by a prominent conservative worldview from which it emerged and through which it is best understood. The notion of the "Downfall of the West" (Oswald Spengler) or the prevailing view among the intellectual elite that "Germany's soul is the place where Europe's spiritual oppositions are carried out" (Thomas Mann) and the resulting disdain for political business, are all expressions of the idea of a special historical responsibility of the Germans. Even though this intellectual elite was opposed to the National Socialist movement, it must be said that the most renowned thinkers not only arranged themselves with the regime, but even supported it at times. Three particularly important examples are Martin Heidegger, Carl Schmitt and Gottfried Benn. Today they are counted among the intellectual giants of the 20th century and their works are studied worldwide, including the University of Pennsylvania. In this seminar, the spirit of National Socialism will be explored. To this end, we will look at the intellectual background in Europe at the beginning of the 20th century, but especially at the period between the two wars, before we will then intensively deal with the National Socialist involvement of the three thinkers Heidegger, Schmitt, and Benn.
Not Offered Every Year
Prerequisite: GRMN 3110 OR GRMN 3120
1 Course Unit

GRMN 3240 Crime and Detection - Dark Deeds
The detective story and the crime drama are time-honored genres of literature and popular culture. We are drawn to morbid scenes of violence and crime, and satisfied by the apprehension of criminals and their punishment. At the same time, the process of detection, of deciphering clues, is much like the process of reading and interpretation. In this course we will read a variety of detective and crime stories, some by famous authors (e.g., Droste-Huelshoff, Fontane, Handke), others by contemporary authors that address interesting aspects of German culture (e.g., Turkish-Germans, gay and lesbian subcultures, DDR and Wende). We will also look at episodes from popular West, East, and post-reunification German TV crime shows (e.g., Tatort).
Not Offered Every Year
1 Course Unit

GRMN 3250 Theater and Language: Staging the 20th Century
Germany's relationship to theater has been intimate since its beginnings, and the events shown on its stages have close ties to the country's social, political, and economic conditions. In this course, students will improve their language skills and cultural knowledge by reading Germany's social and political history through the lens of some of its most fascinating theatrical moments: death scenes. Whether gruesome, suspenseful, uneventful, or unexpected, death fascinates an audience like almost nothing else, and the greatest German-language playwrights of the twentieth century—including Brecht, Wedekind, and Dürenmatt—knew this well. Their works feature everything from friendly executions to grisly serial killings, which students will both read and watch against a background of German cultural history. Taught in German.
Not Offered Every Year
Prerequisite: GRMN 3110 OR GRMN 3120
1 Course Unit

GRMN 3260 Topics in German Literature
Topics vary annually. The course description for Spring 2015 is as follows: Typically "the Other" stands for a person or a group of people from another cultural background. But there have always been other encounters that forced people to distinguish themselves from an "other". Foremost, in order to define what is "human", the "unhuman" needed to be described. Initially, this meant distinguishing the human from the rest of nature. With the industrial revolution, the technological became a concern—machines as monsters. On a figurative level, we have the supernatural, ghosts, aliens, and cyborgs. In this course we will explore the ways in which real and imagined encounters with these "other Others" are depicted in German language literature and culture.
Not Offered Every Year
Prerequisite: GRMN 3110 OR GRMN 3120
1 Course Unit

GRMN 3265 Kafka's Creatures
Franz Kafka's writings are replete with bestial beings, talking animals, hybrid creatures and other non-human or quasi-human entities. Examining the monstrous or grotesque bodies his work offers up for display, this course, taught in German, will interrogate how Kafka's short stories and novellas construct and call into question the very category of the anthropological. Examining the tradition out of which this creaturely writing grows (reading Kafka's animal fables beside Aesop's, for instance) and its legacy in literature, art and cinema (comparing, for example, Kafka's Metamorphosis with David Cronenberg's The Fly), we will also attend to how these incongruous critters and bodies-in-becoming reflect on Kafka's minoritarian experience as a German-speaking Jew in Habsburg-Era Prague and are in turn reflected in uncanny and ever-evolving aesthetic forms.
Not Offered Every Year
1 Course Unit

GRMN 3270 German Literature after 1945
Focus on the continuity of the literary tradition, innovation, and prominent themes related to coming-of-age in today's society, and specific stylistic experiments. Topics include: the changing literary perspective on German history and World War II; the representation of such prominent issues as individual reponsibility, German reunification, and human relations in modern society.
Not Offered Every Year
1 Course Unit

GRMN 3273 Critical Theory of Christa Wolf: What remains?
Understood as one of the most prominent writers of the GDR, Christa Wolf's literary contributions shape cultural production of former East Germany and beyond. Nevertheless, her critical engagement with the writing process and the role that memory plays for identity formation and a collective historical process remain less known. This course will shed light on Wolf's iconographic text Die Dimension des Autors, in which she develops the notion of fossilization—medallions of memory—to unpack the anthropological. Examining the tradition out of which this creaturely writing grows (reading Kafka's animal fables beside Aesop's, for instance) and its legacy in literature, art and cinema (comparing, for example, Kafka's Metamorphosis with David Cronenberg's The Fly), we will also attend to how these incongruous critters and bodies-in-becoming reflect on Kafka's minoritarian experience as a German-speaking Jew in Habsburg-Era Prague and are in turn reflected in uncanny and ever-evolving aesthetic forms.
Not Offered Every Year
1 Course Unit
**GRMN 3280 Decadence**
The period of the late nineteenth and turn to the twentieth century has often been described as a time of decadence—a decline in the "standards" of morals and virtue. While Freud explored the nature of sexual desire, writers like Schnitzler or Wedekind made this exploration central for their stories or plays. The course will focus on the literature and culture of fin-de-siecle Vienna and Berlin, and consider a variety of texts as well as their later reception and translation into film. Lectures and discussion in German.
Not Offered Every Year
Prerequisite: GRMN 3110 OR GRMN 3120
1 Course Unit

**GRMN 3290 Topics in German Culture**
Topics vary; see departmental website for details.
Not Offered Every Year
Prerequisite: GRMN 3110 OR GRMN 3120
1 Course Unit

**GRMN 4100 Trans(l)its**
Drawing on Goethe's musings on "world literature", the course focuses on authors who have arrived at their German words via global, worldly itineraries. The course considers movements between languages, including those of the students themselves and encourages students to develop their own voice as authors via a series of critical and creative writing exercise. At the same time, students develop strategies to reflect on their own language learning. This course provides an important space for German-learners at Penn to draw on one another's experiences in the program and to build a sense of community. The course is required for all German majors in the Fall semester of their senior year.
Fall
Prerequisite: GRMN 3110 OR GRMN 3120
1 Course Unit

**GRMN 5070 Elementary Middle High German**
Designed to familiarize the student with the principal elements of Middle High German grammar and to develop skills in reading and translating a major work of the twelfth century. Limited text interpretation.
Not Offered Every Year
1 Course Unit

**GRMN 5090 Topics in Yiddish Literature: Modernist Jewish Poetry**
One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define "Jewish writing," in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation's process and products. Another version of this seminar presents Jewish modernism as an international phenomenon of the early 20th century. The course will attempt to define "Jewish modernism" through the prism of poetry, which inevitably, given the historical events in Europe and America during this time, grapples with aesthetic, religious, and national ideologies and methods. The syllabus will focus mainly on poetry written in Yiddish and English, and will also include German, Russian, and Hebrew verse. All poetry, critical, and theoretical materials will be taught in English translation, although students who know the languages will work on the original texts and will bring to the table a comparative perspective. Because we will be discussing translated poems, a secondary focus of the course will, in fact, be on literary translation's process and products.

1 Course Unit

**GRMN 5110 Stylistics**
Textual analysis based on communication theory. Texts selected from literature and other disciplines. Emphasis placed on the development of the student's own compositional and stylistic skills.
Not Offered Every Year
Prerequisite: GRMN 3110 OR GRMN 3120
1 Course Unit

**GRMN 5160 Teaching Methods**
This course examines major foreign language methodologies, introduces resources available to foreign language teachers, and addresses current issues and concerns of foreign language teaching and learning, such as second language acquisition theory and application of technology.
Fall or Spring
1 Course Unit

Although the starting point for the Anthropocene is still under discussion, there is broad agreement that the industrial revolution and the turn to fossil fuels mark an intensification of humanity’s impact on the Earth. It may not be a coincidence that Kant’s proclamation of the Copernican revolution in philosophy, according to which human reason replaces the natural light of traditional metaphysics, falls roughly in the same period. Human finite cognition became the measure for God and his creation. The dawn of the era of human freedom and the ramped up exploitation of resources coincide. It is against this background that the Naturphilosophie of F. W. J. Schelling can become particularly interesting. The genesis of German idealism is closely related with the opposition between freedom and necessity that lies at the heart of Kant’s critical project. Kant associated the former with man and the latter with nature. In trying to bridge the gap between them, Schelling reinstates nature as an autonomous actor in its own right. Schelling’s thinking about nature chimed with the literary and empirical-scientific work of his contemporary Johann Wolfgang von Goethe. In the productive interplay of poetry, science, religion, and philosophical thought, Goethe and Schelling offer a critical alternative to philosophy in the aftermath of the Copernican revolution that may be viable or useful today as humanity tries to come to terms with anthropogenically induced climate change. This co-taught interdisciplinary seminar will focus on works by Schelling (Ideas for a Philosophy of Nature, First Outline of a System of the Philosophy of Nature, On the World Soul) and Goethe (scientific writings, Faust I & II), in addition to engaging recent scholarship of Schelling and Goethe in relation to environmental humanities.

GRMN 5260 The Trouble with Freud: Psychoanalysis, Literature, Culture

For professionals in the field of mental care, Freud’s work is often regarded as outmoded, if not problematic psychologists view his work as non-scientific, dependent on theses that cannot be confirmed by experiments. In the realm of literary and cultural theory, however, Freud’s work seems to have relevance still, and is cited often. How do we understand the gap between a medical/scientific reading of Freud’s work, and a humanist one? Where do we locate Freud’s relevance today? The graduate course will concentrate on Freud’s descriptions of psychoanalytic theory and practice, as well as his writings on literature and culture.

GRMN 5350 The Elemental Turn

The unfolding effects of climate change—rising sea level, melting ice sheets, subsiding land masses, drought stricken regions, wild fires, air laden with greenhouse gases, and inundated cities—heighen our awareness of the elements: air, earth, fire and water. Within the context of the new materialism, philosophers, eco-critics, and writers are re-turning to the elements and encountering, at the same time, predecessor texts that assume new relevance. This seminar will place current thinking and writing about the elements into dialogue with older traditions ranging from the classical (Empedocles, Plato, Lucretius) to writers and thinkers of the eighteenth, nineteenth and twentieth centuries (e.g., Goethe, Novalis, Tieck, Stifter, Bachelard, Heidegger, Boehme).

GRMN 5370 Translating Literature: Theory and Practice

The greats all have something to say about translation. The Hebrew poet H. N. Bialik is attributed with saying that “he who reads the Bible in translation is like a man who kisses his bride through a veil.” That, however, is a mistranslation: What Bialik really wrote was, “Whoever knows Judaism through translation is like a person who kisses his mother through a handkerchief.” (http://benyehuda.org/bialik/dvarim02.html), a saying that he probably translated and adapted from Russian or German. (https://networks.h-net.org/node/28655/discussions/116448/query-bialik-kissing-bride) Robert Frost wrote, “I could define poetry this way: it is that which is lost out of both prose and verse in translation.” Walter Benjamin defines it: “Translation is a form. To comprehend it as a form, one must go back to the original, for the laws governing the translation lie within the original, contained in the issue of its translatability.”

Lawrence Venuti rails against translation that domesticates, rather than foreignizes, thus betraying the foreign text through a contrived familiarity that makes the translator invisible. Emily Wilson wants her translation “to bring out the way I think the original text handles it. [The original text] allows you to see the perspective of the people who are being killed.” https://bookriot.com/2017/12/04/emily-wilson-translation-the-odyssey/ Is translation erotic? A form of filial love? Incestuous? A mode of communion, or idol worship? Is translation a magician's vanishing trick? Is translation traitorous, transcendent? Maybe translation is impossible. But let's try it anyways! In this graduate seminar, we will read key texts on the history and theory of translating literature, and we sample translations from across the centuries of the “classics,” such as the Bible and Homer. We will consider competing translations into English of significant modern literary works from a variety of languages, possibly including, but not limited to German, Yiddish, French, Hebrew, and Russian. These readings will serve to frame each student’s own semester-long translation of a literary work from a language of her or his choice. The seminar offers graduate students with their skills in various language an opportunity to take on a significant translation project within a circle of peers.

GRMN 5400 Franz Kafka and J. M. Coetzee
This seminar will listen attentively to the echoes of Franz Kafka in the novels of J.M. Coetzee. Building on Gilles Deleuze and Felix Guattari's concept of a minor literature, elaborated on the example of Kafka's oeuvre, we will situate Kafka against the backdrop of the German-speaking Jewish community of Habsburg-era Prague and read Coetzee within the context of apartheid and his native South Africa. Beyond an investigation of empire and its aftermath, this course will consider the arguably posthuman ethics of these authors, examining them through the lens of animal studies and the environmental humanities in order to reveal how they anticipate and participate in current thinking on the Anthropocene. Reading Kafka's fables beside Coetzee's allegorical narratives, the seminar will follow the twisted course taken by literary justice from the Josef K. of Kafka's Trial to Coetzee's Life and Times of Michael K. Alongside these two towering figures, the influence of and affinities with other German-language authors (Heinrich von Kleist, Hugo von Hofmannsthal, Robert Walser) and Anglophone contemporaries (Samuel Beckett, Nadine Gordimer, Cormac McCarthy) will also be considered. Other works to be read will include Kafka's Castle, In the Penal Colony, Metamorphosis and late animal stories as well as Coetzee's In the Heart of the Country, Waiting for the Barbarians and Elizabeth Costello. Advanced undergraduates may enroll with the permission of the instructor. Readings and discussions in English. Not Offered Every Year

GRMN 5430 Environmental Humanities: Theory, Method, Practice
Environmental Humanities: Theory, Methods, Practice is a seminar-style course designed to introduce students to the trans- and interdisciplinary field of environmental humanities. Weekly readings and discussions will be complemented by guest speakers from a range of disciplines including ecology, atmospheric science, computing, history of science, medicine, anthropology, literature, and the visual arts. Participants will develop their own research questions and a final project, with special consideration given to building the multi-disciplinary collaborative teams research in the environmental humanities often requires. 1 Course Unit

GRMN 5440 Public Environmental Humanities
This broadly interdisciplinary course is designed for Graduate and Undergraduate Fellows in the Penn Program in Environmental Humanities (PPEH) who hail from departments across Arts and Sciences as well as other schools at the university. The course is also open to others with permission of the instructors. Work in environmental humanities by necessity spans academic disciplines. By design, it can also address and engage publics beyond traditional academic settings. This seminar, with limited enrollment, explores best practices in public environmental humanities. Students receive close mentoring to develop and execute cross-disciplinary, public engagement projects on the environment. In spring 2018, participants have the opportunity to participate in PPEH's public engagement projects on urban waters and environmental data. These ongoing projects document the variety of uses that Philadelphians make of federal climateand environmental data, in and beyond city government; they also shine light on climate and environmental challenges our city faces and the kinds of data we need to address them. Working with five community partners across Philadelphia, including the City's Office of Sustainability, students in this course will develop data use stories and surface the specific environmental questions neighborhoods have and the kinds of data they find useful. The course hosts guest speakers and research partners from related public engagement projects across the planet; community, neighborhood, open data, and open science advocates; and project partners in government in the City of Philadelphia and Commonwealth of Pennsylvania. Course assignments include: * 2 short-form essays (course blog posts); * a 12-hour research stay (conducted over multiple visits) with a community course partner to canvas data uses and desires; * authorship of 3 multi-media data stories; * co-organization and participation in a city-wide data storytelling event on May 2, 2018. GRMN 5450 Reading Benjamin Reading Kafka
Readings and discussions in English. Walter Benjamin's study of the works of Franz Kafka is as enlightening as it can be bewildering. Moving from philology to Marxism, metaphysics to messianism, Daoism to Talmud, this densely argued piece elliptically touches on almost all of Kafka's published works in just four short sections. This seminar proposes a line-by-line reading Benjamin's 1934 "Franz Kafka on the Tenth Anniversary of His Death" with an eye to its literary, philosophical and religious contexts as well as to the rich history of its intellectual reception. Reading Kafka's works as the essay evokes them, we will situate this piece with regard to Benjamin's other writings, the essay's interlocutors (Brod, Scholem, Lukacs, Brecht) and its most illustrious interpreters (Adorno, Arendt, Celan, Hamacher). Not Offered Every Year
Also Offered As: COML 5650, JWST 5650
1 Course Unit
GRMN 5470 Writing in Dark Times: German Literature
The rise of Hitler and the Nazis in 1933 radically disrupted the literary marketplace in Germany. Public book burnings were the most visible sign of a complete reorganization of the literary world. What was it like to be a writer in the Third Reich? How did censorship work? What kind of choices were writers forced to make? What political roles did writers adopt? Under what conditions could they publish? Who read their books and how did they read them? These are some of the questions we will ask as we become acquainted with German writers in ideological adherence or alliance, in exile throughout Europe and the Americas, in “inner emigration,” even in concentration camps, and in hiding. By focusing on their writing, we will shed light on the value of literature in dark times.

GRMN 5560 What is Enlightenment?
The question “What is the Enlightenment?” was posed for an essay competition in a journal, the Berlin Monatsschrift in 1784. At that point, French and English philosophers had already considered new ways of thinking, inventing the modern individual and the modern citizen (in contrast to a state’s subject). German responses to this question were written by an established philosopher (Immanuel Kant), a Jewish resident of Berlin (Moses Mendelssohn), as well as concerned readers of recent philosophical treatises. In our course, we will consider this question by exploring this early discussion and the formation of Enlightenment thought in Europe and specifically Germany, including the German-Jewish Enlightenment (Haskalah), but also trace the historical transformation of this discussion, including Theodor W. Adorno’s and Max Horkheimer’s Dialectics of Enlightenment (1944/1947) and more recent criticism.

1 Course Unit

GRMN 5570 Reading the Twentieth Century
Taught in German, this graduate anchor course gives an introduction to German-language literary traditions through an overview of important authors, texts and movements of the long twentieth century. Short texts by Franz Kafka and Elfriede Jelinek provide conceptual bookends permitting an understanding of the evolution of literary modernism into the postmodern—from psychoanalysis to the postnational, Expressionism to postdramatic theater and from language crisis to the (im)possibility of poetry after Auschwitz. Longer works of narrative and theater are complemented by accompanying poetry, theoretical or philosophical approaches. Readings include works by Hofmannsthal, Rilke, Schnitzler, Musil, Brecht, Celan, Özdamar and Tawada, among others.

1 Course Unit

GRMN 5580 The Long Nineteenth Century: Literature, Philosophy, Culture
The present course will discuss German literature and thought from the period of the French Revolution to the turn of the twentieth century, and put it into a European context. In regard to German literature, this is the period that leads from the Storm and Stress and Romanticism to the political period of the Vormärz, Realism, and finally Expressionism; in philosophy, it moves from German Idealism to the philosophy of Schopenhauer, Nietzsche, and neo-Kantian thought. It is also the period that saw the rise of the novel, and new forms of dramatic works. Painting moved out of the studio into plein air; the invention of photography made an imprint on all arts, and the rise of the newspaper led to new literary genres such as the feuilleton. Economically, Germany experienced the industrial revolution; politically, it was striving for a unification that was finally achieved in 1871. The nineteenth century saw the establishment of the bourgeoisie, the emergence of the German working class, and the idea of the nation state; it also saw Jewish emancipation, and the call for women’s rights. Readings will focus on a variety of literary, political, and philosophical texts; and consider a selection of art works.

1 Course Unit

GRMN 5590 Myth Through Time and In Time
The textual and physical remains of Greek and Roman culture and belief as ‘myth’ entrenched the post-antique European world and its neighbors. Makers, patrons and viewers manipulated those survivals to challenge and speak to a contemporary world. This course focuses on how and why artists and their patrons engaged the mythic and examines the various areas of political and religious life that sought animation through evocation of narratives from the past. Readings and case studies will engage with very late antique, medieval, and early modern art, turning to the modern and contemporary as well. Moving to the modern lets us examine, among other things, how artists address the exclusionary histories of the past, to enable critiques of myths of supremacy by one gender, race, or culture over others.

GRMN 5610 The Long Eighteenth Century
The aim of this anchor course is to acquaint students with the literary, philosophical, and cultural complexity of the “long eighteenth century,” roughly 1648-1806. Often associated with the enlightenment and the revolutions it inspired, the eighteenth century is a prolonged period in which institutions of power and knowledge come under pressure and are reconfigured. Old institutions are submitted to the critique of reason, while new institutions of governance, sociability, gender, race and class create new spaces for cultural production. Students will analyze representative works in context and in combination with current scholarship.

1 Course Unit

GRMN 5690 New German Fiction
This seminar addresses topics in contemporary German literature, including migration, exile, memory, identity, family, and language. We will evaluate the aesthetic merits of these works as well as discuss their social, political, and cultural contexts. Assignments will include book reviews; interpretations; and presentations on authors and the contemporary publishing industry. Readings and class discussion in German.
Not Offered Every Year
Prerequisite: GRMN 3110 OR GRMN 3120
1 Course Unit

GRMN 5710 Literature and Multilingualism
Since several years, the societal and cultural reality of multilingualism has become an important research field in linguistics and literary studies, as in cultural studies more generally. This graduate course will investigate how multilingual poetics challenge and resist paradigms and ideologies of innate monolingualism, linguistic mastery, absolute translatability and monocultural nationalism. To begin with, the course will introduce central aspects of scholarship on literature and multilingualism, covering concepts such as heteroglossia, code switching, translanguaging and macaronic language, and debates such as those on world literature, global English, foreignization, (un)translatability and non-translation, including their political and ethical importance. After a brief historical overview, glancing at western literary multilingualism in the Middle Ages, Romanticism and the avantgarde, the course will mainly focus on literature of the late 20th and 21st centuries taken from Germanic and Romance linguistic contexts. Using an exemplary selection, the course will cover prose, poetry and drama, and include excerpts of texts by authors such as Andrea Camilleri, Gino Chiellino, Fikry El Azzouzzi, Ernst Jandl, Jackie Kay, Çağlar Köseoğlu, Monique Mojica, Melinda Nadj Abonji, Emine Sevgi Özdamar, Olivier Rolin, Yoko Tawada, Nicole van Harskamp, and others. Reading these texts, we will try to determine how multilingualism manifests itself (linguistically, discursively, rhetorically, thematically, contextually etc.) and how the texts engage with linguistic, cultural and social pluralities. The course will conclude with a focus on the translator as a central character in fictional prose and movies. Classes will take place in an interactive format that stimulates discussion and exchange. Students will get the respective excerpts – both in the original version and in English translation – one week at a time so that they can prepare themselves each week for the discussion. Theoretical and contextual information will be provided via Power Point presentations.

1 Course Unit

GRMN 5720 Materialism
How do we recognize materialism? This seminar poses this question by acknowledging “materialism” as a contested category with disparate and contradictory historical meanings: as a synonym for dogmatism, as the arch-enemy of reason and morality, as the scientific philosophy of the revolutionary workers' movement, as an alternative to (ideal)ist metaphysics, as a poetic practice, or as a central concern for material nature and environment, among others. Less concerned with enumerating philosophical systems, we will search out “family resemblances” and materialist tendencies among a wide range of texts. To this end, we will not only read the major historical texts of the so-called materialists (from Lucretius to Spinoza, from La Mettrie to Lenin), but also engage with materialism's supposed critics and antagonists (from Plato to Kant and Hegel). A special emphasis will be placed on the attempts to recuperate materialism as a positive category in recent critical theory and continental philosophy, for example, in the reinventions of Marxist and Spinozist traditions. We will also survey the attempts that found new traditions, such as aleatory materialism or various new materialisms. By reading exemplary literary texts that engage with the problem of materialism the seminar will also ask: can one speak of materialist poetics?

GRMN 5740 Politics and Societies in the Early Modern World
In this seminar, we will discuss how early modern globalization affected societies and the ways their members and rulers made politics. Following a historiographical introduction, it is divided in three sections. In the first, we will concentrate on empires and kings in order to detect common features of dynastic power across the globe and to explore how such characteristics influenced each other. Second, we will shift our attention to citizens and the ways they made politics in their city-states. For a long time, research on citizenship has been confined to the post-revolutionary nation states. However, recent research suggests that urban citizenship has far deeper roots in medieval and early modern cities. Up to now most research has focused on urban centers in Western Europe and more precisely on the so-called urban belt stretching from Central and North-Italy over Switzerland and Southern Germany to the Rhineland and the Low Countries. Comparisons with urban centers in Asia and the colonial Americas will be needed to test that view. In the third section, we will study the people who provided information to societies and decision makers. Often, they held multiple identities or they acted as religious or ethnic outsiders. Therefore, we call them, with a term borrowed from anthropology ‘brokers’. Taken together, the analysis of these aspects will deepen our understanding of politics and societies in the globalizing early modern world. Thus, the seminar will contribute to a more comprehensive, less Europe-centered view on that period.

1 Course Unit

GRMN 5750 Kafka's Creatures
Franz Kafka's writings are replete with bestial beings, talking animals, hybrid creatures and other non-human or quasi-human entities. Examining the monstrous or grotesque bodies his work offers up for display, this course, taught in German, will interrogate how Kafka's short stories and novellas construct and call into question the very category of the anthropological. Examining the tradition out of which this creaturely writing grows (reading Kafka's animal fables beside Aesop's, for instance) and its legacy in literature, art and cinema (comparing, for example, Kafka's Metamorphosis with David Cronenberg's The Fly), we will also attend to how these incongruous critters and bodies-in-becoming reflect on Kafka's minoritarian experience as a German-speaking Jew in Habsburg-Era Prague and are in turn reflected in uncanny and ever-evolving aesthetic forms.
Not Offered Every Year
1 Course Unit

GRMN 5750 The Panorama Experience
Painted panoramas were one of the nineteenth century's signature popular entertainments. Since its invention in 1787, audiences from cities and towns around the world have admired these circular landscape representations of nature, cities, and battles, which provide an opportunity to escape everyday life by witnessing scenes from the past and far-away places from an unfamiliar perspective. In this seminar, we will consider the phenomenon of the panorama, above all, as a political art form. We will examine the ways in which European and American artists since the nineteenth century have turned to panoramic forms to tell and call into question stories about empire and colonialism, enslavement and freedom struggles, the mastery of natural environments, as well as military victory and loss. As we debate the politics of panoramic forms, we will gain familiarity with a set of related topics from visual and material culture, including vedute, transparencies, magic lantern projections, panoramic wallpaper, dioramas, cartographic representation, history painting, illustrated print culture and pictorial journalism, travel literature and guidebooks, accordion folds and gatefolds, stereoscopes, panoramic photography, panoramic shots in cinema, and immersive environments. In addition to enriching your knowledge of nineteenth-century media history and how to conduct media archaeological research in libraries, archives, and museums, this seminar will offer an overview of approaches to visual culture from social history, gender, race, colonialism, museum studies, print history, sound studies, transnational history, and digital art history, which will be of use for work in a number of interdisciplinary fields. Students with a background in disciplines, such as architecture, literature, history, cinema studies, gender and sexuality studies, Africana Studies, and material texts, are welcome.

1 Course Unit

GRMN 5770 Inside the Archive
What is an archive, and what is its history? What makes an archival collection special, and how can we work with it? In this course, we will discuss work essays that focus on the idea and concept of the archive by Jacques Derrida, Michel de Certeau, Benjamin Buchloh, Cornelia Vismann, and others. We will consider the difference between public and private archives, archives dedicated to specific disciplines, persons, or events, and consider the relationship to museums and memorials. Further questions will involve questions of property and ownership as well as the access to material, and finally the archive's upkeep, expansion, or reduction. While the first part of the course will focus on readings about archives, we will invite curators, and visit archives (either in person or per zoom) in the second part of the course. At Penn, we will consider four archives: (1) the Louis Kahn archive of architecture at Furness, (2) the Lorraine Beitel Collection of material relating to the Dreyfus affair, (3) the Schoenberg collection of medieval manuscripts and its digitalization, and (4) the University archives. Outside Penn, we will study the following archives and their history: (1) Leo Baeck Institute for the study of German Jewry in New York, (2) the Sigmund Freud archive at the Library of Congress, Washington, D.C., (3) the German Literary Archive and the Literaturmuseum der Moderne in Marbach, Germany, and (4) the archives of the National Library of Israel in Jerusalem.

1 Course Unit
GRMN 5780 Northern Renaissance Art
This course critically examines concepts traditionally associated with the Renaissance by focusing on the exchange of artistic ideas throughout the Holy Roman Empire and across different media, such as the altarpieces of Jan van Eyck, the expressive drawings of Albrecht Durer and Hans Baldung Grien, the peasant studies of Pieter Bruegel and the prints of satirists who wished to remain anonymous. The material is organized thematically around four topics: religious art as piety and politics; antiquity as a source of tradition and imagination; the formulation of a public discourse that exposed social threats; and the distinctiveness of artistic claims of individual achievement. A motif throughout the course is the question of how the survival of fragments may be presented in museum contexts as parts standing in for an absent whole. We will also consider how historians approach designs for works of art now lost or never completed. Encouraging encounters with art and artifacts around the city, assignments focus on objects in Philadelphia collections.

GRMN 5781 Privacy and Society in Seventeenth-Century Dutch Art Seminar
How do paintings offer occasions for personal reflection, and how do they construct social bonds? The aim of this seminar is to develop a set of critical skills for analyzing the different ways in which seventeenth-century Dutch paintings drew upon shared social values, national identity and economic pride, how they appealed to individual buyer tastes, and how they have engaged and continue to engage poetic minds. We will address these matters by paying particular attention to the representation of space, considering domestic interiors, urban settings, church architecture, imperial arenas, and landscapes both real and imagined. Our discussions of how paintings reflect and shape privacy and society will be informed by visits to the Philadelphia Museum of Art, by readings from methodologically diverse essays, and by writing frequently, which will provide us with occasions to test our ideas in response to what we see and read. Open to graduate and undergraduate students.

GRMN 5790 Spinoza After Marx
This seminar will focus on the thought of Baruch Spinoza and Karl Marx, tracing the effects of their encounter, not only in philosophy and critical theory, but in fields ranging from literary studies to environmental humanities. The second half of the twentieth century saw a revival of interest in Spinoza across the humanities and social sciences as a means of rethinking the very terms of philosophical and political debates of modernity. Mobilized for political purposes and contemporary demands, especially among Marxist theoreticians, Spinoza's philosophy became virtually unrecognizable from its earlier forms of reception. This seminar departs from the following observation: on the one hand, this revival of Spinoza proved especially fruitful among Marxist theoreticians; on the other hand, the modes of interpretation of Spinoza and the adaptations of Spinoza and Marxism are highly heterogeneous and often conflictual. The seminar will ask: what is it about Spinoza's thought that lends itself to a revival of Marxism? To what extent is Marx's thought necessary for a reevaluation of Spinoza? Why Spinoza today? To address these questions, we will trace the multiple traditions that think Marx and Spinoza together: the deployment of Spinoza against Hegel to rejuvenate Marxism in France (Louis Althusser, Etienne Balibar, Gilles Deleuze, Chantal Jaquet); the development of theories of the multitude in the tradition of Autonomism in Italy (Antonio Negri, Paolo Virno); the vicissitudes of Spinozism among the Soviet Marxists (Lyubov Axelrod, Abram Deborin, Evald Ilyenkov). Likewise, we will investigate the most recent turn to the Marx-Spinoza tradition in psychoanalysis (A. Kiariana Kordela), rethinking finance capitalism (Frederic Lordon), feminist theory (Moira Gatens), literary studies (Pierre Macherey, Anthony Uhlmann), and environmental humanities (Hasana Sharp, Beth Lord).

GRMN 5800 Topics In Aesthetics
Topic title for Spring 2018: Walter Benjamin. Walter Benjamin (1892-1940) is a philosopher whose writings on art, literature, and politics have had tremendous influence on many disciplines in the Humanities and Social Studies. He has been variously described as one of the leading German-Jewish thinkers, and a secular Marxist theorist. With the publication of a four-volume collection of this works in English, many more of his writings have been made accessible to a wider public. Our seminar will undertake a survey of his work that begins with his studies on language and allegory, and continues with his autobiographical work, his writings on art and literature, and on the imaginary urban spaces of the nineteenth-century.

GRMN 5810 Topics in Jewish History
Reading and discussion course on selected topics in Jewish history. The instructors are visiting scholars at the Center for Advanced Judaic Studies. Topic and seminar title for Spring 2015: Topics in Jewish Studies: The Origins of Jewish Studies. Course description for Spring 2015: This is a reading course that grants seminar participants access to Katz Center fellows, some of the best scholars in Judaic studies from around the world. The aim of the course is to expose students to these scholars and their work, to get to know them as people, learn from them at high level, and understand their approach to the field. Over the course of the spring semester there will be four 3-session modules. Students will meet with 4 different fellows for 3 sessions each. The weekly 90-minute classes will be held at the Katz Center on Wednesdays from 10:30 am - 12 pm, and participants will be encouraged to stay for lunch and the fellows’ seminar which runs from 12:30 - 2:30 pm.

GRMN 5830 Hegel
A graduate seminar on Hegel's philosophy, focusing primarily on his Phenomenology of Spirit, with attention to passages in other works such as Hegel's Logic and Philosophy of Right. Topics may include: (1) Hegel's conception of philosophy, (2) the development of his system, (3) the problem of an introduction to his system (Phenomenology of Spirit), (4) Hegel's criticism of traditional metaphysics, (5) his notion of a ‘concept’ (Begriff), his theory of the Idea. The seminar will focus primarily on some of Hegel's early Jena writings, his Phenomenology of Spirit, on passages from different versions of Hegel's Logic and (maybe) on aspects of his Philosophy of Right. Topics that are dealt with include: (1) Hegel's conception of philosophy, (2) the development of his system, (3) the problem of an introduction to his system (Phenomenology of Spirit), (4) Hegel's criticism of traditional metaphysics, (5) his notion of a 'concept' (Begriff), his theory of the Idea. Other topics might become of interest as well.

GRMN 5990 Teaching and Learning
The course focuses on diverse areas of Foreign Language and Second Language Acquisition research and theories and how they apply to foreign language teaching. Students will familiarize themselves with the major foreign language methodologies and approaches, as well as the ACTFL standards and proficiency guidelines for foreign language learning. Similarly, students will analyze the resources and tools for planning instruction in a second language based on the Universal Design for Learning. Furthermore, students will research and discuss the most effective ways to promote diversity, inclusivity, and equity; enhance learning experiences and outcomes through technology; foster engagement and active learning; and build a sense of community in the foreign language classroom.

GRMN 6050 Modern Literary Theory and Criticism
This course will provide an overview of major European thinkers in critical theory of the 20th and 21st centuries. We will pay particular attention to critical currents that originated in Eastern European avant-garde and early socialist contexts and their legacies and successors. Topics covered will include: Russian Formalism and its successors in Structuralism and Deconstruction (Shklovsky, Levi-Strauss, Jakobson, Derrida); Bakhtin and his circle, dialogism and its later western reception; debates over aesthetics and politics of the 1930s (Lukacs, Brecht, Adorno, Benjamin, Radek, Clement Greenberg); the October group; Marxism, new Left criticism, and later lefts (Althusser, Williams, Eagleton, Jameson, Zizek).

GRMN 6210 Reading Marx's Capital: Divergent Traditions in Europe, the Soviet Union, and the Global South
Karl Marx's masterpiece Capital received little attention at the time of its publication, but gained new life in the twentieth and twenty-first centuries. The afterlives of Capital, however, took disparate forms across different regions and traditions globally: while working on the same text, these traditions gave rise to conflicting and contradictory interpretations, antagonistic dialogues, and cross-disciplinary encounters. This seminar will examine a series of exemplary interpretations of Capital with attention to detail in order to clarify the stakes of different readings and pose the question of relevance of Marx’s masterpiece for the contemporary moment. We will investigate how political conjunctures, regional specificities, and ideological concerns shape disparate modes and cultures of reading. We will also examine how Capital is transfigured through the lens of disciplines such as literary studies and comparative literature, philosophy, political science, postcolonial studies, and economics. We will also pose the question of philosophical genealogies of Capital, tracing how divergent philosophical backgrounds inflect the reconfigurations of Marx’s thought, e.g., in examining “Hegelian,” “Spinozist,” and “Epicurian” readings. The topics may include, but are not limited to, the following regions and traditions: France (Louis Althusser group), Italy (Mario Tronti and autonomia tradition), and Germany (Neue Marx Lektüre); Soviet Union (Isaak Rubin, Evald Ilyenkov); Bolivia (Alvaro Garcia Linera), and Argentina (Ernesto Laclau). Finally, we will engage with the most recent readings of Capital in the twenty-first century in the works of thinkers such as Sylvia Federici, Michael Heinrich, and A. Kiarina Kordela, among others.

GRMN 6280 Topics 18th Century, vary annually.
Topic for Fall 2014 is: Wolfgang’s Lehrjahre (1765-1774) The decade before the publication of Goethe’s Die Leiden des jungen Werthers is full of literary ferment. The goal of this course is to gain a sense of the multiplicity of projects and perspectives in this crucial decade in order to break down any teleology that might see Werther as its crowning triumph. In other words, this is a course in the “politics” of literature and literary aesthetics. Works to be read, discussed, and reported on include: Kant, Beobachtungen ueber das Gefuehl des Schoenen und Erhabenen; Lessing, Minna von Barnhelm; Mendelssohn, Phaedon oder ueber die Unsterblichkeit der Seele; von Gerstenberg, Ugolino; Wieland, Geschichte des Agathon; Lessing, Emilia Galotti; Goethe, Goetz von Berlichingen mit der eisernen Hand; Herder, Von deutscher Art und Kunst; Nicolai, Sebaldus Nothanner; Wieland, Alcestis; Zimmerman, Von der Einsamkeit; Blankenburg, Versuch ueber den Roman, and, of course, Werther.

GRMN 6381 Troubadours at the Center
‘Troubadour’ is a term whose meaning has evolved from the eleventh century to our day. In the Middle Ages, a troubadour was a singer-songwriter (male or female) who composed in a language called Occitan, the language spoken in northern Italy, across southern France, and into today's Catalonia. Medieval works in this language include epic poetry, didactic texts, lengthy romances, and love poetry. Renowned and imitated throughout medieval Europe - by authors from today's Italy, Austria, Germany, France, Spain, and Portugal – the Occitan literary heritage cannot be ignored. Though sometimes presented as a dead language, Occitan is very much alive, and one purpose of this course is to introduce students to it and to its broad importance in European literary history. This course will present the literary and cultural history of the Occitan region, wit large, from the Middle Ages to the modern day. By the end of the course, students will be able to read Occitan with the aid of a dictionary; they will understand the culture of the French Midi as distinct from that of France; they will know something of the distinctive cultural elements of Occitania. They will also have a profound knowledge of at least one Occitan author, medieval, modern, or contemporary. The course will be taught in English. In addition to learning the material covered in the course, students will gain expertise in producing professional presentations and research papers.

GRMN 6570 Becoming Modern: The German-Jewish Experience
Yuri Slezkine described the twentieth century as a "Jewish Age"—to be modern would essentially mean to be a Jew. In German historical and cultural studies, this linkage has long been made—only in reference to the last years of the German monarchy and the time of the Weimar Republic. Indeed, what has become known as "modern" German culture—reflected in literature, music, and the visual arts and in a multitude of public media—has been more often than not assigned to Jewish authorship or Jewish subjects. But what do authorship and subject mean in this case? Do we locate the German-Jewish experience as the driving force of this new "modernity" or is our understanding of this experience the result of this new "modern" world?

GRMN 6770 The Life of Forms: Ontogenesis, Morphology, Literature
In recent years, the notions of form, formalism, and morphology have reentered contemporary debates across the humanities. This seminar considers the current resurgence of interest in form by tracing form's evolving concepts throughout modernity. It departs from the observation that experimention with and debates on form in art and literature are inextricably linked to various notions of life and the living. These debates—this is the provisional thesis of the seminar—are the battlefield where literary and art criticism undermine the major presuppositions of the western metaphysical tradition (e.g., determinations of inside-outside, form-content, living-inorganic). On the one hand, the seminar will explore a selective genealogy of various attempts to dynamize the concept of form through theories of 1) ontogenesis, 2) morphology, 3) aesthetics (e.g., Baumgarten, Schlegel brothers, Adorno). On the other hand, in order to investigate the political, ideological, and methodological implications of differing concepts of form, the seminar will bring together texts from different disciplines, including literary studies (literary morphology, Russian Formalism), art history (Focillon, Kubler), philosophy (Wittgenstein, Macherey), On the other hand, in order to investigate the political, ideological, and methodological implications of differing concepts of form, the seminar will bring together texts from different disciplines ranging from literary studies (e.g., Jolles, Russian Formalism, Jauss), art history (e.g., Panofsky, Focillon, Kubler), philosophy (e.g., Wittgenstein, Blumenberg, Macherey), history of science (e.g., Vygotsky, Varela), and sociology (e.g., Tarde, DeLanda). Finally, the seminar will engage in close reading of exemplary literary and art works, and situate the findings on the conjunction of form and life in current debates on New Formalisms (e.g., Levine, Levinson, Kornbluh) and New Materialisms (e.g., Bennett, Grosz).

GRMN 6780 Realism: Literature and Theory
What is "realism"? What does it mean to depict the world as a "realist" writer or artist? This seminar will consider these questions and concentrate on German literature and art of the second half of the nineteenth century. It will focus on writers such as Stifter, Storm, Raabe, and Fontane; but also on Stifter's drawings and paintings, visual artists such as Menzel, and the vogue of historical painting. Finally, the seminar will consider the role of early photography in the development of the notion of "realism." Secondary literature will include studies by Michael Fried, Linda Nochlin, and others.

1 Course Unit

GRMN 6840 Topics in Philosophy.
This seminar explores political thought in Germany from the Imperial state of the early 20th century through its fragmentation and division and into the reunification of east and west Germany in 1992. Much of this period was "after idealism" philosophically and politically, the preface to pessimism and "the passing of political philosophy" as articulated in the Enlightenment (Shklar), but fascinating period of thought and argument. Among our texts are Habermas (philosophy), Weber (sociology), Schmitt (law), Juenger (literature) & their contemporaries. Students are not expected to read texts in the original, although having German will greatly expand your range and the depth of your reading.

GRMN 6850 Nature and Labor in Early Modern Art Seminar
In the sixteenth century, the notion of nature as fecund spawned not only images of lushness but also analogies to the artist's mind as a fertile place. The idea of "natural law" was also appealed to as a presumably primal condition, one that established how the earth's resources were to be distributed among its people. Yet the taste for artistic objects in gold, silver, wax, and wood--materials that could be worked into shapes attesting to the owner's dominium over land--led to harvesting processes which met the awareness that nature's resources could run low or even run out. Untappable nature was a functional metaphor, but scarcity was a reality. As a collective effort to write the other side of the story of Renaissance abundance, this seminar will proceed by addressing the question of how the history of art might be told as a description of natural and human resources. We will address this question by focusing on primary texts, theoretical interventions, and a selection of objects, images, and early books from collections near at hand. Open to graduate students only.

GRMN 7770 Francophone, Italian and Germanic Proseminar
This proseminar will introduce first-year FIGS graduate students to doctoral studies in the humanities. It is organized into four parts. Part I, "Scholarly Habits and Resources," introduces students to a variety of resources at Penn, discusses the scholarly habits that graduate students should develop, and covers strategies for promoting mental and physical well-being as a graduate student. Part II, "Intervening in the Field," introduces students to the processes of conference participation and article publication. Part III, "The Dissertation," covers the ins-and-outs of writing the dissertation. Part IV, "Awards, Networking, and Jobs," addresses the importance of awards and networking as well as the academic and non-academic job markets. While DEI issues are constantly addresses throughout the course, also in the form of assignments, there are also bridge sessions to other courses, especially on pedagogy and recent research trends. In addition to weekly discussions and activities, this course will include a number of guest speakers who will share their expertise and give guidance on the how-tos of the field. Students will be given pre- as well as post-class activities to reflect on each week's topic and begin to prepare a dossier for later use in their graduate studies. Much of the information in this proseminar becomes particularly relevant during the final years of coursework and your dissertation writing years, but it is important to be introduced to these topics and to begin to think about them now. This course is designed for PhD students in Francophone, Italian, and Germanic Studies. Many of the topics apply to all three fields; however, students will also have the opportunity to work on areas that are specific to their language for certain topics. They will also be able to add to the course materials for future graduate students in FIGS.

Global MPA (GMPA)

GMPA 6010 Critical Issues in Governance: Strategic Leadership
What types of leadership and problem-solving have contributed to notable successes in addressing and ameliorating challenges to human well-being ranging from public health in Africa to economic development in Latin America, eldercare services in Asia to carbon emissions in Europe, homelessness in the US to HIV/AIDS in Australia? In these cases, and countless others, the answer relates in part to cross-sector collaboration in the form of two or more organizations working together intentionally across sectors to strategically manage, innovatively leverage their respective human and financial resources, and achieve mutually beneficial, pro-social, and pro-civic outcomes. Drawing on the best inter-disciplinary studies, this course is dedicated to helping students identify, delineate, and promote the conditions under which "boundary-spanning" and "bridge-building" organizational leaders arise, persist, and operate within and across each sector. In addition to classic and contemporary work by social and behavioral scientists who have made notable contributions to the field of public administration or public management, we focus particular attention on the work of scholars and practitioners from across the globe and in many different disciplines (social work, public health, urban design, and others) who are contributing to our basic and applied knowledge about "the built environment"—the concepts and skills needed to build healthy communities and meet such challenges as sudden pandemics, structural inequities, and slow but steady climate change.
1 Course Unit
GMPA 6020 Critical Issues in Business: Strategic Management
Together with government and the nonprofit sector, the business, corporate, or for-profit sector has a profound bearing on human well-being. For socially responsible business leaders, the challenge is to formulate successful organizational strategies that sustain and grow the organization’s profits and market shares, and satisfy its employees, shareholders, and customers, while also benefiting, or at least not adversely affecting, wider communities, whether local, regional, national, or transnational. Especially when facing less scrupulous business competitors, aggressive government regulators, or adversarial nonprofit advocates, civic-minded business leaders grapple with this challenge every day. How can such leaders nonetheless formulate strategies to gain and sustain a competitive advantage at home or abroad? In this course, we explore the complexity and ambiguity of strategic management by examining real-world cases in which firms either failed or succeeded. Specific topics to be covered include performance measures, industry analysis, resources and capability analysis, business-level strategy, corporate-level strategy, and strategies for expanding into foreign markets. *Students must take this course prior to GMPA 6070.

1 Course Unit

GMPA 6030 Critical Issues in Nonprofit Management: Strategic Collaboration
Over the last quarter-century, the nonprofit, independent, or social sector—also often dubbed the “third sector” in juxtaposition to government and business—has become an ever-greater presence in nations all across the globe. In tandem, nonprofit management, and the role of local, regional, national, and transnational social entrepreneurs, has become internationally recognized as a critically vital field of study and practice. Coinciding with the rise of the “third sector,” it has become increasingly clear that leaders in all three sectors must work across three different types of boundaries: interpersonal boundaries, which involve relations with persons who differ from oneself demographically and in other ways; institutional boundaries, which involve working across government, nonprofit, and business organizations; and international boundaries, which involve both individual and institutional engagements that are carried on across national borders. This course focuses mainly on nonprofit management and the latest and best empirical research pertaining to the second stratum of boundary-spanning leadership: the theory, policy, and practice of cross-sector collaboration, what purposes collaboration may serve, and the steps involved in initiating, sustaining, and evolving collaborative enterprises and governance.

1 Course Unit

GMPA 6040 Economic Reasoning for Public Decision-Making
This course introduces students to key economic concepts such as scarcity, efficiency, monopolies, and other markets to investigate the notions of economic efficiency in a competitive marketplace. In addition, it examines how such efficiency is affected by distortions relevant to public policy, especially regulations, externalities, and incomplete information. From the macroeconomics side, we cover a variety of timely and timeless topics including the short-run and long-run effects of government debt. Students practice applying these principles to the range of decisions that public sector executives have to make in order to understand the trade-offs inherent in any public policy or program. Students must take this course prior to their final semester in the program.

1 Course Unit

GMPA 6050 Quantitative Reasoning for Program Evaluation
Many governments, businesses, and NPO/NGO leaders around the globe are drowning in numerical and statistical data. The challenge they face is not only how to organize, parse, and analyze the data, but also how to utilize it effectively and in real time. This course is uniquely designed to enhance your ability to use data effectively for real-time problem-identification, definition, decision-making, problem-solving, and, most particularly, program evaluation. In this course, students are introduced to key concepts, principles, protocols, and analytical tools and techniques relevant to the theory and practice of three separate but related problem-solving leadership skills: (1) forecasting general social, economic, and civic trends; (2) measuring government performance and results; and (3) evaluating particular social, economic, and civic programs. Students advance and apply these skills in relation to several cases. Students must take this course prior to their final semester in the program.

1 Course Unit

GMPA 6060 Critical Issues in Leadership Theory and Practice: Ethical Analysis
In a world filled with multiple and competing human well-being needs, not all of which can be addressed or acted upon fully or at once, which human well-being goals or purposes ought to matter most, which problems ought to be considered most deserving of attention and action, and which goals, purposes, or problems should be treated as top priorities with respect to their claims on attention, resources, and action? In this course, students explore how, whether, and to what extent “effective leadership” is, ought to be, or can be made synonymous with “moral” or “ethical leadership,” and by which understanding(s) of “morality” and “ethics.” Through classic and contemporary readings and case studies, students explore several different philosophical and religious traditions that might usefully inform the moral reasoning of present or future leaders who seek to promote human well-being by solving local, regional, national, or global problems.

1 Course Unit

GMPA 6070 Critical Issues in Leadership Theory and Practice: Innovation Management
In today’s environment, it is increasingly apparent that success is driven by an organization’s ability to create and capture value through innovations, either technological or non-technological. Thus, the processes used by organizations to develop and foster innovations, the choices they make regarding how to commercialize their innovations, the changes they make to their business models to adapt to the dynamic environment, and the strategies they use to position and build a dominate competitive position all are important issues facing the organizations. Building directly on the learnings achieved in G-MPA 6020, this course identifies and analyzes various types of innovation by socially responsible business leaders, and generates insights about how leaders can strategically manage innovation and implement their innovation strategies to maximize their likelihood of success.

1 Course Unit
GMPA 6080 Global Leadership and Problem-Solving - Public Health in Africa

Globally, more than half of all children under age five who die of pneumonia, diarrhea, measles, HIV, tuberculosis, and malaria reside in Africa. More generally, by many public health indices, including rates of life-threatening infectious diseases, access to healthcare delivery, life expectancy, and rates of foodborne illnesses, Africa faces huge and still largely unmet public health challenges. Millions of people in Africa die each year from diseases that can be prevented by access to certain medicines and mitigated by participation in particular programs. Focusing mainly on malaria in Africa, and with a special case-based focus on Tanzania, students describe, analyze, and evaluate multiple and competing anti-malaria approaches and programmatic initiatives. 1 Course Unit

GMPA 6090 Global Leadership and Problem-Solving: Economic Development in Latin America

From the mid-1950s to the early 1980s, by most conventional economic measures including growth in GDP per capita, Latin America was at least slightly ahead of East Asia. Over the last several decades, however, the economic fortunes of Latin America dimmed while those of East Asia brightened. This course surveys multiple and competing theories about economic development with a special case-based focus on Latin America: What explains Latin America's global economic position? What factors might account for its most acute national or regional economic downturns and concentrated pockets of poverty? What explains the sometimes wide differences in economic development patterns among and between Latin American nations, and within single Latin American nations over time? And what, if any, reforms and initiatives have proven efficacious in boosting economic development and improving overall human well-being in one or more Latin American nations? Capstone Option: Students who opt to utilize this course for their one required capstone research paper will be co-advised and co-evaluated by experts associated with multiple international organizations that have been engaged in economic development initiatives in Latin America. Students who opt to write the capstone paper for this course may utilize materials for the purpose that are in English as well as in either Portuguese, or Spanish, or both. 1 Course Unit

GLBS 1000 Introduction to Global Studies

A focus on three major historical circulations of ideas, people, capital, and goods introduces basic concepts about cultural change, economic interest, the creation of new societies, and human preoccupations with ethical and moral issues. Through study of these global circulations, students develop analytical skills that support further work in global studies. We look at the early historical creation of a "Sinosphere" in East Asia, as demand for ideas from China, from Japan, Korea, and Vietnam, led to the expansion of Chinese language and script and the invention of phonetic scripts. This innovation in scripts and interest in Chinese learning, and then Buddhism coming through China, contributed to the development of an East Asian thought world that is still defined by distinctive cultural traditions. The Indian Ocean trade, from the 7th to the 16th century, connected different cultural worlds by trade routes that themselves contributed to the spread of Islam. These trade networks built complex alliances and new societies with use of military power. The third circulation, the Atlantic trade from the 16th to the 19th century, connected Europe to West Africa, building an expanded trade in enslaved Africans and disrupted and transformed that region. Scholars analyzing the end of the slave trade have made competing arguments about changing economic conditions, the emergence of new economic interests, and efforts based on ethical commitments. These global circuits present essential ideas for considering global connections today. 1 Course Unit

GLBS 2000 Globalization: Social, Economic, and Political Aspects

This course offers an analysis of globalizing and anti-globalizing tendencies in the world. It combines the insights of sociology, economics, and political science to provide an understanding of topics such as population and migration trends, the evolution of global consumer and financial markets, the spread of digital technologies, inequality, populism, climate change and food security, and the shifting geopolitical balance of power. Students will learn how different theories explain the current interplay among social, economic, and political forces. 1 Course Unit

GLBS 2750 Latin America and the Caribbean: Themes, Trajectories and Disruptions

This course explores the world region now known as "Latin America" over centuries, helping students see aspects of the present for which "Latin" is definitely the wrong word. We will examine the diverse political and economic relationships that preceded Europeans' arrival, analyze the complexities of conquest-era texts, learn about Africans' resistance to enslavement, and trace multiple revolutions in the modern period. The course includes attention to current events. For example, we will discuss both the way coca leaf was used by indigenous people going back millennia and debates in the present about what many call the "War on Drugs." Throughout, we will pay primary attention to the experiences of people rooted in the region, including writers, musicians, religious leaders, revolutionaries, military officers, artists, and people who lived marked by manual labor. Some readings will be available in Spanish, but everything required will also be accessible in English translation. No previous knowledge of the region is required and there are no prerequisites. 1 Course Unit

Global Studies (GLBS)

The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

2023-24 Catalog | Generated 08/02/23
GLBS 2800 Contemporary Issues in Global Health
This course focuses on how social, political, and economic forces—increasingly global in nature— influence how biomedical diseases are experienced, understood, and treated. The course covers topics such as structural violence, narratives of illness, and global pharmaceuticals. The larger approach in the course is that of medical anthropology, where disease, health, and treatment are understood in their social contexts. As we explore how people in different global contexts confront and are affected by disease, poverty, and unequal access to treatment and information, students will gain an understanding of the interconnectedness of the issues that the larger "global health project" seeks to uncover and address. Specifically, students will: 1.) learn some of today's most pressing global health issues; 2.) learn how to explain the connections between social, economic, and political systems and health outcomes for individuals and groups; and 3.) develop their own toolkit for engaging with global health issues. All readings will be available in the course site.

1 Course Unit

GLBS 3200 Latin America and the Caribbean: Themes, Trajectories and Disruptions
This course explores the world region now known as "Latin America" over centuries, helping students see aspects of the present for which "Latin" is definitely the wrong word. We will examine the diverse political and economic relationships that preceded Europeans' arrival, analyze the complexities of conquest-era texts, learn about Africans' resistance to enslavement, and trace multiple revolutions in the modern period. The course includes attention to current events. For example, we will discuss both the way coca leaf was used by indigenous people going back millennia and debates in the present about what many call the "War on Drugs." Throughout, we will pay primary attention to the experiences of people rooted in the region, including writers, musicians, religious leaders, revolutionaries, military officers, artists, and people who led lives marked by manual labor. Some readings will be available in Spanish, but everything required will also be accessible in English translation.

1 Course Unit

GLBS 3800 Putin's Russia
Winston Churchill famously said that Russia is "a riddle, wrapped in a mystery, inside an enigma." Strikingly, today many informed Russians would agree: no one can provide definitive answers concerning what has driven Russian public life and politics over the past three decades, from the unexpected collapse of the Soviet Union in 1991, to the rise of powerful oligarchs amid social violence in the 1990s, to the seeming stabilization of social and economic life under president Vladimir Putin in the 2000s, to the whirlpool of mass, oppositional protests in 2011-2012 that culminated in Putin's reelection, the stabilization of a conservative, "patriotic regime," renewed belligerence between Russia and western states, and finally notoriety in the US as a shadow force in our own political life. In this course we will examine how Russians themselves represent Russia and what this reveals about this complex society and its development, as well as how Russia has been viewed from abroad. We will consider print journalism, novels, films, televised media, and the internet—paying close attention both to particular representations and to social institutions for their production, dissemination and consumption. Our work will triangulate between analysis of media representations and public discourse and close readings of works of literature and film, in order to analyze cultural life in the light of political and social actuality, and to learn how works of art and culture comment upon and inform social life and politics. Topics of special concern will include representations of Russian history, collective identity and patriotism, intellectuals and elites, gender and sexuality, consumption and wealth, and of course, the career and public image of Vladimir Putin himself. No prior knowledge of Russian history, culture or society is required.

1 Course Unit

GLBS 3900 Applied Economics in Global Contexts
An introduction to basic economics with emphasis on global contexts, this course combines economic studies with readings on contexts, examples, and applications. Scarcity, markets, market failures, monopolies, inflation, subsidies, famine, and growth are among the basic economic issues students will study. Examples from different countries will be used to further theoretical and practical understanding. Different economic policy approaches will also be presented. This approach relies on less math background although students will engage with economic models and economic thinking, and be able to participate in discussions about economic and business policies. Learning goals include a good grasp of basic economic terms and models of analysis, engagement with economics in the workplace, connecting to economics as a field, and understanding the global contexts of economic policy making. No prerequisites are required however a previous course in Global and Regional Studies is strongly recommended. All readings will be available through the course site. All classes are asynchronous; any synchronous sessions are optional.

1 Course Unit
Government Administration (GAFL)

GAFL 5000 Half-Term Electives

--- GAFL 5000 - 025: Empowering Communities through Real Estate Development — This course introduces students to residential and commercial real estate development and its inherent risks and benefits. By understanding the development process, students will be better able to enact public policy that promotes the advantages brought by development while slowing the gentrification process. Using the successful JumpStart Germantown model, students will learn the 7 JumpSteps of real estate development beginning with creating a development strategy and ending with leasing or selling the property. JumpStart is a successful alternative to the boom and bust cycle of real estate development. It encourages slow growth, scattered development, and a mix of price points - all of which act to slow gentrification and encourage healthy development that supports sustainable communities.

--- GAFL 5000 - 026: Economic Development, Equity and Inclusion — Virtually every US city experienced a great decline in the second half of the twentieth century. As the manufacturing base of the industrial city deteriorated, as factories moved to the suburbs in search of cheaper land, a vicious cycle ensued. Following the jobs and taking advantage of racial preferences in the suburbs, working and middle class residents fled; as the tax base shrunk, cities were forced to raise taxes to support city services, leading to more job and residential flight. The “inner city” became synonymous with blight and decline, with ominous racial undertones, as urban and suburban political priorities and sentiments began to diverge sharply. Yet by the turn of the 21st century, this process had bottomed out and in many so-called “post-industrial” cities, some of these trends were beginning to reverse. In the 1990s and early 2000s in particular, civic and political leaders had to make tough decisions about prioritizing scarce public resources. Should they focus on revitalizing the downtown core to create jobs, create amenities to induce people with higher incomes to choose their city, grow a tourism economy? Or on rebuilding the most distressed and disinvested inner city neighborhoods? Or on shoring up the so-called “middle neighborhoods” that were able to maintain some stability during the great decline? Layered on top of these issues were (and are) critical questions about who does and should benefit from economic development. Should we prefer “trickle down” policies that focus on high-end development and presume that they will eventually lead to benefit for the less advantaged in the form of service sector or indirect jobs? Or should cities be more proactive and ensure that public and publicly-enabled investments leverage increases in human capital development, in public goods like parks and schools? This course will focus on case studies from several cities to explore the policy options available to leaders, to assess their decisions, and to consider whether it is possible to promote economic development that is robust and sustainable at the same time as it is equitable and inclusive. This is a half-credit course (0.5 CU) that meets in the first half of the semester. The first class session will meet on January 23, and the last class session will meet on March 13.

Fall or Spring

1 Course Unit

Fall, Spring, and Summer Terms

GAFL 5020 Public Communications

Successful leaders must be able to convey their integrity and their ideas, their vision and their values clearly and convincingly in public settings. By analyzing great political speeches and afford students the opportunity to prepare and deliver different types of speeches, this course teaches the fundamentals of persuasive public speaking while encouraging students to develop their own voice. This is a performance course. Students will gain skill and confidence in their speech writing and public speaking skills through practice, peer feedback, and extensive professional coaching. Class lectures and discussions will focus on persuasive strategies and techniques for handling community meetings, Q and A sessions, and interactions with the media.

Fall, Spring, and Summer Terms

1 Course Unit

GAFL 5060 The Problem of Jobs: The Philadelphia Story

Once the “workshop of the world” with a diverse manufacturing economy, the City of Philadelphia has lost a huge proportion of its historical economic base in the past 60 years. Today, Philadelphia struggles to find its competitive advantage. Yet, it has tremendous assets that can be leveraged. This course will explore the rise and fall of Philadelphia’s manufacturing economy, efforts to forestall its decline in the 1960s and 70s, the racial and gender dynamics of its employment ecosystem, and contemporary strategies to create a sustainable local economy.

We will focus on the emerging national recognition of place-based economic development strategies, including the revival of downtown residential living, tourism, and hospitality, and the role of institutions, such as universities and hospitals, in the revitalization of urban America. The course will combine readings in economic and social history and urban economics with case study analyses of local policies aimed at stimulating growth.

Not Offered Every Year

1 Course Unit

GAFL 5110 Reinventing Nonprofits

Three nonprofit leaders walk into a bar. What’s the conversation? cross fields, focus, size, and target audiences, nonprofits often face similar challenges: public policy changes, evolving stakeholder expectations, new modalities to service requiring investment, rising competition, fickle funders and demographic shifts, all in a world where culture eats strategy for breakfast. Against this backdrop, nonprofits need to re-assess their mission, approach, position, organizational structure and revenue model.

Why are some organizations able to pivot and reinvent themselves while others languish? Through readings to frame the issues, speakers offering firsthand accounts of successes and disappointments, projects with practitioners wrestling with real-ime issues, and group discussions to tie it all together, this course is intended to provide students with an intellectual construct, ideas, and experience to be better prepared to enter and advance in the field, and be part of the conversation.

Fall, Spring, and Summer Terms

1 Course Unit
GAFL 5120 Advocacy and Communicating Change
The skills used by leaders to advocate for change involve a seemingly random collection of behaviors: the ability to simplify a complex idea, the application of precise well-focused language to define a problem and its solution, the ability to tell a compelling and relevant story in human terms, and the skill to spin logic and emotion into an ethically coherent narrative that leads to new thinking and collective action. The effective application of these skills can mark the difference between a successful policy change, a successful political campaign and even, as demonstrated in history, the difference between war and peace. This course will explore the tools and strategies employed by leaders, policymakers, and thought leaders to impact the decision making process, build support for ideas and to navigate interactions with media and other sources of influence on public opinion that shape our world. Students will be challenged to identify their own topic of change and then to use the communication theories and paradigms discussed in class and presented by guest speakers to expand their leadership communication proficiency. They will learn from peer and instructor feedback to enhance their advocacy skills and to better understand the processes that underlie organizational and policy change.
Not Offered Every Year
1 Course Unit

GAFL 5140 Public Finance and Public Policy
This course deals with how governments tax and spend. Students become familiar with the theoretical, empirical, and practical tools and methods used to create and analyze government budgets, as well as the flow of public resources. The course examines public revenues and expenditures within the context of fiscal federalism, in addition to budgeting and resource management and the social, economic, and political forces that shape the fiscal environment within which governments (particularly state and local governments) operate. Significant attention is paid to tax policy analysis and the fiscal crises confronting many large cities and states. Additional special topics covered include health care & social security, public education finance, public finance and the environment, bond markets & municipal finance, and public pensions.
Fall
1 Course Unit

GAFL 5150 Public Finance Leadership in the New Fiscal Reality
Several factors are intersecting upon U.S. local governments including: muted economic growth, demographics, technological change, ineffective monetary & fiscal policy, and political shenanigans. These are having a profound impact on local government financial health. Many local governments are struggling to structurally balance their budgets, even now several years into one of the longest U.S. post-WWII economic recoveries. Expenditure demand, especially because of rising employee pension and OPEB benefits, is rising faster than expected. Revenues are not rising as quickly as they have historically. This New Fiscal Reality is redefining the concept of municipal distress. Further, the options local governments have to respond to distress may be changing. It might be necessary for local governments to move away from typical solutions like distressed municipality programs and other state level aid. If the current financial trajectory continues, some local governments will not be able to deliver the same service level they have in the past. New solutions are required. This class will 1) define the New Fiscal Reality; 2) review essential public finance concepts and relationships; 3) study past and recent examples of financial distress and prescribed solutions; 4) survey the current local government financial landscape; and 5) identify solutions public finance leaders can institute for the future. Several local government finance, political and policy experts will speak during the semester. A heavy amount of student engagement is expected to be completed in the form of research, group work, writing, and the critiquing of other students’ work.
Spring
1 Course Unit

GAFL 5170 Quantitative Tools for Consulting
The purpose of the course is to study the theory and application of certain, key quantitative methods utilized in financial and fiscal decision-making in state and local governments: defining and measuring efficiency and equity; statistical analysis, multivariate analysis, linear and multiple regression; inter-temporal decision-making; and cost-benefit analysis. Primary emphasis will be on understanding the context and quantitative basics of these methods to prepare students for effective careers in state and local governments. Each student should have a basic understanding of market economics, the roles of government in our market economy, accounting/budgeting basics, and the Philadelphia metro area economy and government.
1 Course Unit
GAFL 5200 Marketing & Fundraising for Non-Profit Organizations
Fundraising and marketing are complementary tools for building revenue streams and fulfilling the program objectives of nearly every nonprofit organization. This course develops students’ ability to market a nonprofit to mission recipients and prospective donors and to solicit funds from individuals and organizations. Through lectures, readings, discussions, and assignments, students are actively engaged in learning how to help an organization achieve its mission and objectives. This includes but is not limited to the assessing an organization’s marketing and fundraising capabilities; identifying, segmenting, and creating relationships with target markets and donors; building infrastructure to properly seek and steward gifts; using technology to fulfill marketing and fundraising objectives; and focusing on fundraising and marketing methods such as social media, direct response, events, major gifts, planned giving, and others. This course emphasizes applications. Each student will complete a fundraising and/or marketing plan for a specific organization of their choosing, the structure of which will be derived from the term’s assignments. This course will meet in-person from 2:00-5:30pm on the following Fridays and Saturdays: September 9-10, October 14-15, November 18-19, December 2-3. This course will meet virtually Wednesdays 9:00-10:00pm.

Fall  
1 Course Unit

GAFL 5210 Advanced Public Management
A wait list will be kept for this course. To be added to the wait list, please email Josh Power at joshuarp@upenn.edu. This is a “hybrid” course, with synchronous online meetings and once-monthly on-campus meetings. Synchronous online meetings will be held on Mondays 6:30-7:30pm. On-campus meetings for Spring 2018 will be held on the following Friday afternoons (2-5:30pm) and Saturday mornings (9:30am-1pm): January 12-13, February 9-10, March 16-17, April 20-21. This course is designed to provide students with a scientific foundation of management and leadership theory to inform their actions as current and aspiring public leaders. We will draw from diverse disciplines within applied social science, including management science, positive psychology, organizational psychology, system thinking, and change management. Students will learn these theoretical frameworks and management strategies by applying these theoretical frameworks to their specific professional interests.

Spring  
1 Course Unit

GAFL 5260 Municipal Bonds
The course provides a comprehensive overview of the $3.7 trillion municipal bond market, with a focus on public finance investment banking; capital project financing for state and local governments including water, sewer, mass transit and road projects, and non-profit financing for educational and healthcare institutions; the legal and regulatory framework governing the municipal bonds market; rating agency analysis; quantitative modeling; and investor perspectives.

Fall  
1 Course Unit

GAFL 5270 Community Development and Qualitative Methods
Urban planning and community development involve attempting to understand (and then propose methods for solving) complex problems arising from our shared experience of living together in communities. These wicked problems (Rittel & Weber, 1973) often arise from multiple co-occurring influences; economic, socio-cultural, political, geographic/geological, psychological, etc. The fluid and multi-dimensional nature of these problems, therefore, calls for a fluid and multi-dimensional approach to understanding them. Nonetheless, for the better part of the last half a century the majority of efforts to approach such dilemmas has relied largely on quantitative research methods. While quantitative approaches to understanding community dynamics certainly have a demonstrated value, an over-reliance on such methods can come at the expense of the more nuanced understanding available through qualitative research approaches. Quantitative methods are useful in exploring questions such as where, when, who and how many. For answers to these sorts of questions we must turn to qualitative research methods.

This course will introduce students to qualitative research approaches currently used in urban planning/community development, along with methods NOT currently in use, but that hold the potential to yield insights into community dynamics. In addition, this course will teach students how to apply these research techniques in the service of producing a professional-quality outcome, as opposed to producing a purely academic end result. To this end, attention will be given to the process by which these research methods are applied, or would be applied, in the professional consulting world and the language and concepts that would be used in that process and setting. Each student will leave the course with a firm understanding of terms and concepts such as: project scope; sub-deliverable(s); final deliverable(s); benchmarks; Notice to Proceed (NTP); project kick-off; out of scope services, front-end and best practices research; and other related professional concepts/terms.

1 Course Unit

GAFL 5280 Critical Issues in Public Finance
The Course, Critical Issues in Public Finance will consider contemporary issues affecting the fiscal state of local governments. Covered will be issues that have distressed municipalities; the policies/initiatives that seek to rectify such including privatization/public private partnerships; reformation of municipal pensions; sustainable education funding alternatives; and tax policies aimed at promoting economic growth. Students will be assigned to a team, which will identify and provide a solution for an issue or issues plaguing a fictional government. Each team will prepare a written report and make a presentation all of which will constitute the final project. Assignments will serve as the building blocks for the final written work product and presentation developed by each team. The class is divided into four modules. The first module will take a historical look at events behind fiscal distress in municipalities and then explore current day drivers that are causing the same today. Modules two, three and four will examine some of the tools that have been used successfully or otherwise to remediate the drivers of fiscal distress. In each module case studies will be used to further analyze the particular fiscal challenge of a municipality. Written assignments will be based on case studies.

Spring  
1 Course Unit
GAFL 5290 Nonprofit Financial Management
The course is designed to provide the student with an understanding of the primary financial management issues and decisions that confront senior management in nonprofits and government. Students will examine financial analysis techniques from both a practical and strategic perspective as they examine operating and capital decisions. The objective of the course is to allow the student to understand how managers integrate the various discrete financial decisions within a broader framework that allows them to analyze, develop and execute a coherent overall financial strategy.
Spring
1 Course Unit

GAFL 5300 Evidence Based Policies of Economic and Political Development
This class provides a "hands-on" introduction to the promises and limitations of using Randomized Control Trials (RCTs) to inform policy makers, practitioners, and academics of the conditions under which policies likely would have a positive effect on economic and political outcomes, in the context of international development. This course has three parts: the first is devoted to understanding the "nuts and bolts" of running field experiments / RCTs in developing countries. In part, we will be reading Glennester and Takavarasha's Running Randomized Evaluations: A Practical Guide. In addition, we will discuss core behavioral concepts from both behavioral economics and social psychology (prospect theory). The second part of the course will be devoted to demonstrating how schools have used RCTs to inform core policy debates (e.g. What are some effective ways to reduce corruption? How can we improve the performance of frontline service providers? How can politicians be more responsive to their constituents?) In the third part, students will be presenting their own research proposals, explicitly designed to address either a core policy question in the developing world or-for those interested-in the USA. Here students will have an opportunity to partner with the Social and Behavioral Sciences Team (https://sbst.gov), which is under the National Science and Technology Council.
Spring
1 Course Unit

GAFL 5310 Data Science for Public Policy
In the 21st century, Big Data surround us. Data are being collected about all aspects of our daily lives. To improve transparency and accountability an increasing number of public organizations are sharing their data with the public. But data are not information. You need good information to make sound decisions. To be an effective public leader, you will need to learn how to harness information from available data. This course will introduce you to key elements of data science, including data transformation, analysis, visualization, and presentation. An emphasis is placed on manipulating data to create informative and compelling analyses that provide valuable evidence in public policy debates. We will teach you how to present information using interactive apps that feature software packages. As in all courses at Fels, we will concentrate on more practical skills than theoretical concepts behind the techniques. This course is designed to expand upon core concepts in data management and analysis that you learned in GAFL 6400: Program Evaluation and Data Analysis. This is a graduate level course and while GAFL 6400 is not a pre-requisite, students are expected to have a foundation of data management and analysis before beginning this course.
Spring
1 Course Unit

GAFL 5340 Infrastructure Investment and Economic Growth: Why, How, and When
Infrastructure is widely acknowledged to be critical for economic success, and infrastructure investments are promoted as leading to economic growth, either at the local or national level. Yet, investments in telecommunications, transportation, energy, or other infrastructure do not always yield the hoped public benefit. This course will help answer the question: Under what circumstances does infrastructure investment contribute to economic growth, and how do we know? Because government resources are limited, advocates often must be creative to find sufficient funding to get desirable projects completed. This course will also help answer the question: How do we pay for the infrastructure projects we want to build? The course will illustrate approaches to answering these questions using case studies of past and proposed investments.
Spring
1 Course Unit

GAFL 5350 International Policy and Security Seminar
This course provides a practical survey on the underpinnings of the idea of the "international order" and how it affects trade, politics, and security for the United States and the world. Students will be able to consider and analyze what states mean when they appeal to the international community, to a putative liberal order, and why other states may contest it. The course will also provide a basic survey of key policy and security challenges in the contemporary international environment related to international policy and security. Does an international community really exist? Why does it matter? What's the difference between the Yalta Agreement and the Helsinki principles, and how does this interact with the United Nations charter? Students will examine primary source texts, key analyses, and will have the opportunity reflect upon and develop policy advisories around international policy. Aligned with the Fels' mission in service of praxis, the course will also allow students the opportunity interact with guest speakers involved in foreign and national security policy and present their policy recommendations on a key international public policy issue.
Not Offered Every Year
1 Course Unit

GAFL 5380 Human Rights, Access To Justice, and Public Policy
Law is central to effective and legitimate governance at all levels (local, national, regional, global). Law not only serves as a basis and frames governance and policy-making processes; it also offers tools and opportunities for public policy, as well as accountability mechanisms. Familiarity and understanding of legal frameworks, mechanisms and dynamics is thus essential for public and private actors involved in policy making. This course combines theoretical insights as well as practical components. During the first portion of each class students will examine a wide spectrum of international legal frameworks and instruments which set standards for good governance on a variety of themes: eg. Children, women, refugees. This comparative perspective lays the context for US policies. During the second major portion of each class, students will explore how statutes, regulations and case law serve as tools for social change. Students will gain familiarity with relevant US legal frameworks at the Federal, State and Municipal level and at all three branches of government: legislative, executive and judicial. The third portion of each class will explore the role of the non government sector in public policy. Students will learn about core competencies needed to non profits effective such as: Boards, management leadership, and program Fall, Spring, and Summer Terms
1 Course Unit
GAFL 5460 Social Enterprise Models and Social Impact Locally and Globally
If you believe in finding innovative ways to make a difference and solve social issues locally and globally, you will benefit from the Social Enterprise and Impact Locally and Globally Course (Social Enterprise). Social Enterprise is designed for those who have a practitioner's interest in the development, leadership, and management of the evolving nonprofit sector and their intersection with the socially conscious private sector and government. The course takes the student through the process of developing a mock social enterprise including idea exploration, testing and plan execution and provides the student with essential strategies and tools to conduct in-depth analysis of a social enterprise leading to their application to a regional social enterprise. This course fulfills an elective for the MPA and the Certificate in Nonprofit Administration.
Spring
1 Course Unit

GAFL 5480 Grant Writing
This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Also, please note there is an additional $150 online course fee. Spring 2019 on-campus meetings will be held on the following Fridays and Saturdays from 9:30 AM - 1:00 PM: January 18 & 19;February 15 & 16, March 15 & 16, and April 26 & 27. Class will meet online on Monday evenings from 7:45 PM - 8:45 PM. This course will provide students with the role of the foundation in philanthropy, what it does, how it does it, and what you need to know to be both an effective foundation manager and foundation grant seeker. From the foundation side, the course will include strategic planning, assessment of project results, and the responsibilities of the foundation grant program officer. From the grant seeker side, it will include identifying the appropriate foundations, making the connection to the foundation, grant writing, and relationship management.
1 Course Unit

GAFL 5490 Leading Nonprofits
Leading Nonprofit Organizations is designed for those interested in leading and managing a nonprofit organization. It takes a practitioners perspective on strategic realities of modern practice. Each section will seek to rapidly orient a new manager to the complexities, strategic issues, & politics. The course is taught through a combination of theory and practice using selected readings, lectures, guest presentations, group activities (Mock senior staff discussions) and field assignments (pairing with area nonprofit leader and attendance at one of the organizations board meetings.) This course has seats reserved for Fels students and NPLD students, and gives priority to grad students.
1 Course Unit

GAFL 5500 Organizational Diagnosis
This course will help participants learn the skills involved in conducting a systemic, organizational diagnosis. Applying organizational diagnosis skills can help organizations make more effective, evidence-based decisions; increase an organization’s ability to learn and to apply these learnings; increase organizational effectiveness; and, often, save organizations from flawed and detrimental actions. The course places an emphasis on systems thinking, psychodynamic organizational theory, and appreciative inquiry as ways into understanding organizational issues and problems. Frequently, when organizations find themselves in trouble, e.g. problems in the system about such things as lack of leadership, poor communication, diminished productivity, low morale, etc., there is a tendency to frame the problem(s) simplistically and/or locate blame on a few difficult individuals or groups. However, upon closer examination, problematic issues are often found to be symptomatic and/or symbolic of multiple issues within the organization. This course will help participants to understand how problems, which appear, at one level of the system, (e.g. at the personal or interpersonal level) often represent problems at other levels of the system (e.g. at the group and/or institutional level), or signify a range of inter-related issues. Emphasis will be placed on the diagnostic skills needed to examine government agencies, non-profits, and bureaucracies. It will provide participants with the theoretical constructs and application skills necessary for identifying and framing problem areas, collecting data, and organizing feedback to client systems. Real-time examples will inform our discussions as we consider the relationship between diagnosis, organizational reflection, and appropriate action. Summer 2017 On-Campus Meetings: 9:00am-1:00pm Fridays June 23, July 21 and Saturdays May 20, June 24, and July 22.
1 Course Unit

GAFL 5510 Government Relations
In a system of representative government, organizations and individuals with interests at stake often seek the support of a government relations professional. This course addresses government relations from the varying perspectives of the current or aspiring professional, the client, and the government official.
Not Offered Every Year
1 Course Unit
GAFL 5550 Using the Political Process to Effect Organizational Change
At one time or another, each of us has said something like, "I know what to do to make some really effective—and possibly even profitable—changes in this organization, but the politics make it almost impossible to get anything done." The sense is that, although there are changes that should be made to improve organizational performance, politics (internal, external, governmental) simply obstruct our ability to make a difference. Frustrations notwithstanding, depending on how it is employed, politics can be either an impediment or, more importantly, a source of opportunities for improving organizations. Politics is the art and science of coordinating individuals, departments, management, markets—the entire organizational environment—to effect a balance between the organization’s objectives and the methods used to achieve them. As with the other factors that are employed to affect organizational performance—the methods used to improve manufacturing, marketing, sales, finance, and so on—politics is a means that organizations can use to initiate and maintain critical personal and institutional relationships. One of the seminar readings—Latimer’s “Why Do They Call It Business If It’s Mostly Politics?” is used to provide illustrations of the ambiguous nature of much of what is regarded as organizational politics. What is critical to understand and appreciate from the outset, however, is that politics is not an external factor that is imposed on organizations. Politics is not only a means for achieving personal or institutional power; it is also a method for developing and maintaining personal and institutional relationships within and among individuals and organizations of all types. This seminar will discuss organizational politics and the ways that it is used to identify, characterize, and affect change—both within and among organizations. After reviewing several perspectives on organizations and the roles that political processes play in decision-making, a series of cases is presented that illustrate the contexts and conditions for effective political communication and coordination. Prerequisite: Course Permits for non-DYNM students: https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit
Fall or Spring
Also Offered As: DYNM 6550
1 Course Unit

GAFL 5590 Social Enterprise
With an increasing competitive market, the landscape for private, not-for-profits and government organizations nationally and globally is becoming more complex and diverse. Leaders across government, private, and not-for-profits are being challenged to lead differently given the diversity and complexity of organizations that cross and blend the traditional organizations that cross and blend the traditional organizational legal structures. The course includes providing students with the essential competencies and tools to create, lead, and influence system and policy change utilizing Social Enterprise, Social Finance, and Collective Impact strategies and tools. The knowledge accumulated through this course will be translated to a working level knowledge of a Critical Thinking that is important for any leader or manager in government, private, or the non-profit sectors. Critical thinking involves making judgments based on reasoning: leaders consider options; analyze these using specific criteria; and draw conclusions and make judgments. Critical thinking competency encompasses a set of abilities that leaders use to examine their own thinking, and that of others, about information that they receive through observation, experience, and various forms of communication. This course has seats reserved for Fels’ students and gives priority to grad students. Non-Fels students should contact Vincent George at vigeorge@sas.upenn to request a permit. Seats are not guaranteed to post-bacc or undergraduate students.
1 Course Unit

GAFL 5610 Media Relations
This course is designed to help you better understand the role and practice of media relations and messaging in corporate, non-profit, and government organizations in this new media era. You will learn how to research media and reporters, develop messages, build strategic media plans, generate media coverage, serve as spokespeople, handle crisis situations, and use new media strategies. You will hear from public relations professionals on such topics as working with reporters, developing PR campaigns, and creating effective web outreach programs. Class discussions, reading assignments, research and writing projects, group projects, and case studies offer an engaging and interactive learning environment to expand and apply your knowledge of media relations and messaging. Summer 2017 On-Campus Meetings are 9:30am-1:00pm on Fridays—May 19, June 23, and July 21 and Saturdays—May 20, June 24, and July 22
Summer Term
1 Course Unit

GAFL 5690 The Politics of Housing and Community Development
This course offers an exploration of how legislative action, government policymaking, and citizen advocacy influence plans for the investment of public capital in distressed urban neighborhoods. Course topics this semester will include an evaluation of the results of City of Philadelphia development policies under the administration of former Mayor Michael A. Nutter, as well as consideration of plans being undertaken by the administration of Mayor James F. Kenney, who took office in January. The course will also include an assessment of a large-scale property acquisition and development strategy being implemented by the Philadelphia Housing Authority in North Philadelphia and a review of recent and current reinvestment proposals for Camden’s waterfront and downtown-area neighborhoods.

1 Course Unit

GAFL 5710 Children and Law Seminar
This seminar will draw on Prof. Hamilton’s distinguished career as one of the nation’s leading advocates for the civil rights of children. Materials for class discussion will be derived from her textbook, Children and the Law, and other publications. Topics include the rights of a child in relation to the family, school, society, and the justice system. Law students and graduate students welcome. Undergraduate students must obtain permission
1 Course Unit
GAFL 5810 Law, Religion, and Politics
This course addresses the contemporary interplay between government, religion, and politics with focus on issues during the COVID-19 pandemic and the 2020 presidential election. Due to the rise in statutory religious liberty statutes at the federal and state levels over the last 20 years—which have placed constraints on government beyond the First Amendment—adjustments between the government's interest and religious liberty have become complicated. Public administrators need to anticipate challenges to government action, including the limits imposed by the First Amendment and these relatively new statutory constraints. This course will teach future public policy administrators how to assess the myriad of instances where policy determinations must take into account the likely impact of politically powerful and connected religious leaders and organizations on the public interest. This knowledge has never been more important than it is now with the COVID-19 pandemic and the 2020 presidential election occurring at the same time, both of which entail fascinating questions related to religious liberty and public safety.
1 Course Unit

GAFL 5830 Religion, Public Policy, and Law
We will address the ways in which religious Liberty claims interact with public policies involving health care, reproductive rights, anti-discrimination laws, vaccination, and child protection among other issues. We will also examine how the changes to the landscape of religious devotion in the US is affecting public policy debates and policies.

1 Course Unit

GAFL 5900 Use and Misuse of Data for Policy Challenges
"Data-Driven Policy Making" has become a popular phrase, but what does it actually mean and how can aspiring policy-makers meet its lofty goals? This class will help students understand how data of all sorts (administrative, observational, experimental, "big") can be used to shed light on various policy issues. To do this, the class teaches students a set of computational tools (centered on the R statistical programming language), and shows them how to gather, analyze, and present data in useful ways. It does so by working through a number of important policy issues, including policing, campaign finance, public health, political polling, and many others. No prior statistical or technical knowledge is assumed, though basic statistical literacy is helpful. This class was previously called "Using Big Data for Policy Challenges."
1 Course Unit

GAFL 5999 Independent Study
Independent study course.
1 Course Unit

GAFL 6110 Statistics for Public Policy
This course is GAFL 6110, the required course in statistical analysis for students in the Fels school. This is the required course in statistical analysis for public policy/public administration. Increasingly, this is a quantitative field. Even if you think you'll someday just be (say) a city manager, and not likely to use quantitative analysis yourself, you will likely find yourself working with quantitative data. For example, "policy evaluation" has become a buzzword in recent years in public management and examples involving Fels graduates—or their equivalents—abound. Did giving low-income children after-school tutoring improve their academic performance? Does expanding a free-lunch program reduce the number of student outbursts in classrooms? Did Philadelphia’s "big belly" trash cans actually reduce the amount of litter on our streets? Answering any of these questions requires statistical analysis. This course aims to lay the groundwork for you to answer these (and many more!) questions. The point here is not to convince you to adopt a quantitative design for your own work, or that quantitative designs are the "best" designs for answering all questions. Rather, the goal is to give you a set of tools that will enable you to read, critique and eventually produce your own quantitative research. The course will introduce you to the logic of social scientific inquiry, and the basic statistical tools used to analyze politics and public policy.
Fall
1 Course Unit

GAFL 6120 Quantitative Methods for Policy Analysis
This course will help students learn how to make evidence-based decisions in a public sector context. The course will introduce important data analysis skills and help students evaluate the quality of studies undertaken to measure the impact of public policies and programs. This course has seats reserved for Fels’ students and gives priority to grad students. Post-bacc students, contact Vincent George (vigeorge@upenn.edu) for a permit.
Fall
1 Course Unit

GAFL 6210 Public Economics
This course provides students with the knowledge required to understand government operations in relation to the market economy. In theory of supply and demand, students explore the pricing mechanism, price elasticity, and the effects of price controls on markets. Efficiency is examined in connection with competition and again in connection with equity, and market failure is considered as a reason for government intervention. Cost-benefit analysis is examined in the context of selecting among public investment alternatives. The course also assists students in addressing issues connected with local public goods and economic development.
Fall
1 Course Unit

GAFL 6222 Economic Principles of Public Policy
This course will introduce students to key economic concepts such as scarcity, efficiency, monopolies and cost-benefit. Students will practice applying these principles to the range of decisions that public sector executives have to make in order to understand the trade-offs inherent in any public policy or program.
Spring
1 Course Unit
GAFL 6230 Leading People
Leading Diverse Organizations focuses on Strategic Human Resource Management (SHRM), the combination of human resource management (HRM) and the strategic direction of the organization, whether public or non-profit. This course will examine the theory and principles of SHRM as they relate to job analysis, recruitment and selection, compensation, benefits, training and career development, performance management, and labor-management relations. Learning to deal with the daily SHRM challenges makes leaders and managers more effective and more valuable to the organization. This course has seats reserved for Fels’ students and gives priority to grad students. Post-bacc students, contact Vincent George at vigeorge@sas.upenn.edu for a permit. Undergraduate students, contact Vincent George 2 weeks before the start of the pertinent term to request a seat. Seats are not guaranteed to post-bacc or undergraduate students.
Summer Term
1 Course Unit

GAFL 6300 Public Law and Public Process (Executive)
This class introduces students to the processes by which ideas of public policy make their way into public law. The course will examine a variety of case studies involving the interaction between public policy initiatives and how they evolve into public law. It will also involve critical examination of the processes that lead to the creation of law intended to serve the public interest. The class requires students to read accounts of public law battles and to analyze them through different metrics, including assigned reading, independent research, class discussion, papers, and a final presentation. This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. This course has seats reserved for Fels students and gives priority to grad students.
Summer Term
1 Course Unit

GAFL 6310 Public Law and Process
This course introduces students to the theories and practice of the policy-making process. There are four primary learning objectives. First, understanding how the structure of political institutions matter for the policies that they produce. Second, recognizing the constraints that policy makers face when making decisions on behalf of the public. Third, identifying the strategies that can be used to overcome these constraints. Fourth, knowing the toolbox that is available to participants in the policy-making process to help get their preferred strategies implemented. While our focus will primarily be on American political institutions, many of the ideas and topics discussed in the class apply broadly to other democratic systems of government. The class will be a mix of lecture and cases. Cases are on a diverse set of policy topics, with a goal of illustrating broad themes about the policy-making process rather than the specifics of certain policy areas.
1 Course Unit

GAFL 6400 Program Evaluations and Data Analysis
One of the trademarks of the 21st century public management is the usage of data and analysis in the decision-making process. A successful public leader will use empirical evidence to guide her decisions. She knows what types of data and analysis she should ask her analysts to collect and conduct, how to consume the results they generate, and how to transform the analytical results into effective communication with stakeholders. This class will help you become that 21st century public leader. At the end of this course, you will understand key principals of performance measures and program evaluation. In addition, you will be able to process, manage, and analyze quantitative data using R, a modern programming language optimized for statistical analysis. I picked R for many reasons: it is free, has many open-source visualization techniques and statistical models, and many statistical and quantitative method courses on campus use it as the language of choice. More importantly, knowing how to use R can be a unique and attractive skill for your employer.
Spring
Prerequisite: GAFL 6110
1 Course Unit

GAFL 6410 Program Evaluations & Data Analysis
This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Also, please note there is an additional $150 online course fee. This course introduces program evaluation in the context of research methods. Students learn about design and the application of data collection skills to all phases of program/service delivery from needs assessment to analysis of findings to implementation of changes based on results. Students learn to appreciate how these skills can be used as practical tools for identifying problems to developing and implementing programs. This applied course provides students with practical experiences to apply guidelines of evaluation and research methods in actual program evaluation projects in Philadelphia.
Spring
Prerequisite: GAFL 6120
1 Course Unit

GAFL 6510 Public Finance & Public Policy
This course provides an introduction to the fundamentals of accounting and budgeting for government and nonprofit organizations. The course is designed for students with little or no background in financial reporting, budgeting, and financial management. “Accounting and budgeting must be recognized as separate systems that must interact in a complementary manner if managers are to exercise control of the financial resources of their organizations” (Garner, 1991). Guided by the premise above, the course naturally divides into two parts: In the first, students are introduced to basic financial reporting concepts. The course will provide a foundation in the state and local government financial reporting model. Students will analyze Comprehensive Annual Fund Reports (the main filings required for state and local governments) and focus on the aspects and objectives that make reporting for governments unique. Students will develop a framework for evaluating performance and operating results of governments. In the second part of the course, students will focus on budgeting, which is central to the successful operation of government organizations. Government budgets are expressions of public policy and carry the authority of the law. The course examines budget formulation and development, forecasting, budget adoption, and budget evaluation. Students will be trained to determine whether organizations are effectively using their resources while meeting their legal requirements and social responsibilities.
Spring
1 Course Unit
GAFL 6520 Financial Management of Public and Nonprofit Organizations
This course provides an introduction to financial management principles for public and nonprofit organizations. The primary objective of this course is to demystify financial information and improve students' ability to effectively engage in financial discussions, regardless of their role in the organization. This course will be focused on the vocabulary and tools necessary to interpret, analyze, and properly communicate financial information in order to develop and execute an appropriate financial strategy.
Summer Term
1 Course Unit

GAFL 7100 Negotiations
To influence public policy you need analytical skills to discover optimal solutions to problems, and good negotiation skills to tailor implementable solutions that address the needs and priorities of multiple stakeholders. What resources you want to invest, whom you engage in discussions, and what you expect to receive in return are open to explicit and implicit negotiations. This course will provide a working understanding of key negotiations concepts, including: Strategic elements of negotiations - interests, goals, positions, rights, power, value creation, high stakes, disputes; Preparation for and the details of negotiation processes; Ethical encounters and conundrums; Leveraging your strengths/ understanding your negotiating personality. You will learn cooperative and competitive strategies, have a solid grasp of the decision-making science of negotiation, and better understand cognitive processes and emotional dynamics that affect the ways people negotiate. This is a “hybrid” course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Also, please note there is an additional $150 online course fee.
Fall
1 Course Unit

GAFL 7190 Advanced Budgeting
The course will build on the fundamentals taught in the introductory budgeting unit to help build students' competence in budgetary analysis. Using detailed data from a major city as a course-long case study, and incorporating excel skill-building exercises, students will develop hands-on understanding of budgets by working through such factors as economic drivers of fiscal performance, revenue analysis and forecasting, including tax policy considerations; expenditure analysis and projection, with an emphasis on workforce costs; and capital budgeting and financing. Students will also be introduced to key fiscal policies, budget monitoring and performance measurement, and the development of effective budget communications for various audiences.

1 Course Unit

GAFL 7330 Public Management (MPA Executive Section)
This core MPA course is intended to help each student learn more than s/he already knows about public management, both as a profession and field of academic study, and to enjoy the company of supportive peers, instructors, and special guests as s/he contemplates a post-MPA career in governance. This course satisfies a core requirement in the Master of Public Administration program. Seats are reserved for Fels' students and this course gives priority to grad students.
Fall
1 Course Unit

GAFL 7350 The Performance Imperative
This course will examine the role of performance management within public organizations (government and nonprofit), including why measuring and managing performance is critically valuable to high-functioning organizations' success. With the increasing pressures on nonprofit and government organizations to continue to produce more with less, performance management systems are becoming a staple within organizations looking to drive better outcomes for their constituents. The goal of a highly functioning performance management system within a public organization is to establish a system of continuous monitoring designed to routinely measure specific quantitative and qualitative indicators in real-time - Key Performance Indicators (KPIs) - in order to improve the organization's ability to achieve specific outcomes through continuous improvement and timely, data-based decision-making. This course will use a diversity of course materials, including real-life examples and case studies to:
(a) demonstrate how organizations have successfully implemented performance management systems, (b) indicate the importance of using real-time, valid and reliable data, and linking performance results with effective budget resource allocation (e.g., program and outcome-based budgeting) and constituent satisfaction, and (c) explore practices on how to best protect valuable aspects of performance management systems despite changes in leadership.
Fall or Spring
1 Course Unit

GAFL 7980 MPA Capstone I
This required non-credit class is the first part of the MPA Capstone, which is a requirement for the Master of Public Administration at the University of Pennsylvania's Fels Institute of Government. During MPA Capstone I, students will work through the early stages of their capstone projects, including project planning and project research and design. Examples of early stage work include conducting background research, creating a working bibliography, designing the project, and planning and executing data collection. Students will work with their Capstone instructor, advisor and Community Partner Organization. Full-time MPA students take MPA Capstone I during the Spring semester. Executive MPA students take MPA Capstone I during their second Fall semester.
0 Course Units

GAFL 7990 MPA Capstone II
Successful completion of a Capstone project is one of the academic requirements for the Master of Public Administration (MPA) at the University of Pennsylvanias Fels Institute of Government. This core course is designed to give students direct guidance as they apply and consolidate knowledge and skills gained across the curriculum through the completion of a rigorous Capstone project. Capstone students are responsible for designing and completing a public policy or public administration-related project and presenting a deliverable (described below) to the Fels community and other stakeholders.
Fall or Spring
1 Course Unit
**GAFL 8990 Public Administration Internship**
Internship with a relevant nonprofit or government agency, chosen in consultation with a career services advisor. Students put their knowledge to use, develop vital skills, and build a professional network through an internship with a government or nonprofit organization. Our career advising team helps students identify internship opportunities to align with their professional goals.
Fall, Spring, and Summer Terms

**Graduate Arts & Sciences (GAS)**

**GAS 6000 English Language Skills**
For prospective International Teaching Assistants (ITA) seeking English fluency certification, this course emphasizes the development of oral academic discourse skills and practices prominent features of spoken English that promote successful communication in academic settings, including intelligibility, active listening skills, grammar.
Fall
1 Course Unit

**GAS 6010 Proseminar in Graduate Studies**
Graduate Arts and Sciences doctoral students may register for GAS 6010 as an introduction to the methods of graduate study and research. To be conducted by individual graduate group faculty.
Fall or Spring
1 Course Unit

**Greek (GREK)**

**GREK 0100 Elementary Classical Greek I**
Intensive introduction to Classical Greek morphology and syntax. This course includes exercises in grammar, Greek composition, and translation from Greek to English. Emphasis is placed upon developing the ability to read Greek with facility.
Fall
1 Course Unit

**GREK 0110 Intensive Elementary Classical Greek**
An introduction to the ancient Greek language for beginners, with explanation of basic grammatical concepts and intensive exercises in reading and writing. Ideal for undergraduates or graduate students from Penn or elsewhere with some background in learning other languages, or who need to learn Greek rapidly. The course covers the first year of college-level Greek, equivalent to GREK 0100 + GREK 0200 at more than twice the normal pace. For further information on Penn's Greek curriculum, visit the Classical Studies department website.
Summer Term
2 Course Units

**GREK 0130 Elementary New Testament Greek**
This course provides a one-semester introduction to koine, the version of ancient Greek that was shared by many communities around the Mediterranean and was used in the composition of the Greek New Testament and much early Christian literature. Coursework will focus on grammar, vocabulary, and basic readings. The course prepares students for more extensive readings in biblical Greek literature, in the sequel course GREK 0230 Readings in New Testament Greek. Students aiming to learn classical Greek should take instead GREK 0100 Elementary Classical Greek I.
1 Course Unit

**GREK 0180 Elementary Modern Greek I**
This course is designed for students with no prior knowledge of the modern Greek Language. Instructions are theme based and is supported by a Textbook as well as other written or audiovisual material. It provides the framework for development of all communicative skills (reading, writing, comprehension and speaking) at a basic level. The course also introduces students to aspects of Modern Greek culture that are close to students' own horizon, while it exposes them to academic presentations of Greek history, arts, and current affairs. Quizzes, finals and short individual work with presentation are the testing tools. The completion of this unit does NOT satisfy the language requirement.
Not Offered Every Year
1 Course Unit

**GREK 0200 Elementary Classical Greek II**
Continuation of Elementary Modern Greek I, with increased emphasis on reading and writing.
Not Offered Every Year
Prerequisite: GREK 0180
1 Course Unit

**GREK 0280 Elementary Modern Greek II**
Continuation of Elementary Modern Greek I, with increased emphasis on reading and writing.
Not Offered Every Year
Prerequisite: GREK 0200 OR GREK 0110
1 Course Unit

**GREK 0300 Intermediate Classical Greek: Prose**
This course is for those who have completed GREK 0200, Greek 0110, or equivalent. You are now ready to begin reading real Greek! We will read a selection of passages from Greek prose authors, focusing on language and style.
Fall
Prerequisite: GREK 0200 OR GREK 0110
1 Course Unit

**GREK 0310 Intensive Intermediate Greek**
An introduction to the basic history and conventions of Greek prose and poetry, with continuous readings from classical authors accompanied by grammar review and exercises. Ideal for undergraduates or graduate students from Penn or elsewhere who have completed the equivalent of one year Greek (e.g., GREK 0110). The course covers the second year of college-level Greek, equivalent to GREK 0300 + GREK 0400 at more than twice the normal pace.
Summer Term
2 Course Units

**GREK 0380 Intermediate Modern Greek I**
This course is designed for students with an elementary knowledge of Demotic Modern Greek, and aims mainly at developing oral expression, reading and writing skills.
Not Offered Every Year
Prerequisite: GREK 0180 AND 0280
1 Course Unit
GREK 0388 Greek/Heritage Speakers I
This course is intended to help Heritage Speakers or student with prior knowledge of conversational modern Greek (or even Ancient Greek) to refresh or enrich their knowledge of modern Greek and who would not be a good fit for the elementary or intermediate classes. A theme based textbook and instructions along with a comprehensive overview of grammar as a whole is presented while original text, songs, video and other media are used in order to augment vocabulary and increase fluency in modern Greek. Students are expected to properly use the language, do theme-based research on the themes examined and provide written work on various subjects and make conversation in class.
Presentations on researched topics account for final exam.
Fall or Spring
1 Course Unit

GREK 0400 Intermediate Classical Greek: Poetry
We will read a selection of passages from Greek poetic authors, ranging from Homer to tragedy.
Spring
Prerequisite: GREK 0300
1 Course Unit

GREK 0480 Intermediate Modern Greek II
Further attention to developing oral expression, reading, and writing skills for students with knowledge of Demotic Modern Greek.
Not Offered Every Year
Prerequisite: GREK 0180 AND GREK 0280 AND GREK 0380
1 Course Unit

GREK 0488 Greek/Heritage Speakers II
It is the continuation of GREK 0388 with completing Grammar (passive voice as well as unusual nouns and adjectives etc.) and adding more challenging reading and writing material. The completion of this course satisfies the language requirement. ALL students completing the HSI GREK 0388 are eligible to enroll. ALL OTHERS will have to take a placement test.
Spring
1 Course Unit

GREK 3001 Hymnic Poetry
In this course, we will read the four major Homeric hymns and five Callimachean hymns, with briefer examinations of the minor Homeric hymns and Orphic hymns. Some of the questions that will arise from our readings include the contexts for which they were composed, the literary and religious relationship of humans and gods, mythopoetics, and the differences in dialect and language between the works. (This course is for those who have completed Greek 0400, Greek 0310, or equivalent.)
Not Offered Every Year
Prerequisite: GREK 0400
1 Course Unit

GREK 3003 Greek Dialogue
TBA
Not Offered Every Year
1 Course Unit

GREK 3202 The Myth of Prometheus
In Greek mythology, human beings are indebted for their survival and their way of life to Prometheus, the powerful Titan and clever trickster who defies Zeus to give them the gift of fire and the various arts and technologies of civilization. We will trace the development of the Prometheus myth through a series of works in different genres by Hesiod, Aeschylus, and Plato.
1 Course Unit

GREK 3203 Alcibiades and the Athenian Imagination
Political superstar, demagogue, desperate lover, brilliant general, and traitor, Alcibiades captured the imaginations of his fellow Athenians as well as thinkers and artists for centuries to come. This course offers students an opportunity to study democracy, sexuality, ethics, and youth through the perspectives on Alcibiades presented in comedy, historiography, philosophy, and oratory. In addition to preparing weekly translations, students will write individual papers presenting original close readings or research and will additionally collaborate on a digital project.
Not Offered Every Year
1 Course Unit

GREK 3204 Alcibiades and the Athenian Imagination
Political superstar, demagogue, desperate lover, brilliant general, and traitor, Alcibiades captured the imaginations of his fellow Athenians as well as thinkers and artists for centuries to come. This course offers students an opportunity to study democracy, sexuality, ethics, and youth through the perspectives on Alcibiades presented in comedy, historiography, philosophy, and oratory. In addition to preparing weekly translations, students will write individual papers presenting original close readings or research and will additionally collaborate on a digital project.
1 Course Unit

GREK 3205 Helen of Troy
Helen of Troy was one of the most debated figures in classical literature, at once overwhelmingly attractive and responsible for the immense suffering and loss of the Trojan War. We will focus on Euripides’ complex, playful presentation of the Helen myth in his tragedy Helen (in which she never goes to Troy at all), but will also look at portrayals of Helen by Homer, Sappho, Herodotus, and Gorgias. Reading knowledge of Greek or permission of instructor is required to enroll in this course.
Not Offered Every Year
1 Course Unit

GREK 3206 Ancient Ideas on Myth
Ancient readers were puzzled by their myths. The myths conveyed authoritative stories, many thought, but they did this in sometimes baffling ways. Heroes are not all that heroic, gods do things it seems they shouldn’t, and strange creatures and behaviors abound. This course will survey views on the myths among Greek philosophers, historians, and mythographers, and try to piece together what they think myth is and how it works. Texts will be read in Greek. Introductory and Intermediate Greek, or the equivalent, are pre-requisites.
Not Offered Every Year
1 Course Unit

GREK 3402 Thucydides
In this class we will read excerpts from the Greek historian, Thucydides, whose account of the Peloponnesian War is one of the most influential and compelling examples of history writing from any culture. Thucydides is generally thought of as one of the more difficult Greek prose authors. We will read some basic narrative passages in order to become familiar with Thucydidean style, before moving to the more difficult speeches and editorial passages in which Thucydides expounds upon the goals and difficulties of writing history.
Fall or Spring
1 Course Unit
GREK 3601 Demosthenes
This semester we shall read Demosthenes, On the Crown. This speech, one of the masterpieces of Greek oratory, was delivered in 330 BC towards the end of Demosthenes’ career. It has long been used as a valuable source of information on social, religious and political history, but it is also a pleasure to read for its clarity and vigour. We will read approximately five pages per week, and each Thursday there will be a short student report on a topic relating to the speech and Athenian oratory. These reports will be written up and submitted one week later as the only papers required in the class. Intermediate-level (200-level) Greek for undergraduate students is a pre-requisite for this class.
Not Offered Every Year
1 Course Unit

GREK 3801 Advanced Greek Language and Composition
Study of Greek grammar, vocabulary, and stylistic features, combining exercises in analysis, composition, and sight translation. Intended for graduate students and advanced undergraduates.
Not Offered Every Year
Mutually Exclusive: GREK 5801
1 Course Unit

GREK 5003 Greek Dialogue
In this course we will examine the various manifestations of dialogue in ancient Greek literature. We will read some whole dialogues (such as those by Plato and Lucian; some dialogues in drama and dialogue episodes in historiography). We will also study, and experiment with, the linguistic and discursive phenomena associated with dialogue. (Prior completion of intermediate 200-level Greek sequence or high-school exercises in analysis, composition, and sight-translation.
1 Course Unit

GREK 5203 Alcibiades and the Athenian Imagination
Political superstar, demagogue, desperate lover, brilliant general, and traitor, Alcibiades captured the imaginations of his fellow Athenians as well as thinkers and artists for centuries to come. This course offers students an opportunity to study democracy, sexuality, ethics, and youth through the perspectives on Alcibiades presented in comedy, historiography, philosophy, and oratory. GREK 6600 The Greek Text: Language and Style
What do we need to read texts in ancient Greek? In this course we read just one prose text and one poetic text, or a very limited number of texts and passages, with a focus on language and formal analysis (such as diction, grammar, stylistics, metrics, rhetoric, textual criticism). A range of exercises will be used to develop these skills, including composition, lexical studies, recitation, memorization, exegesis, written close-readings, and sight-translation.
Not Offered Every Year
1 Course Unit

GREK 6601 Greek Literary History
Through selected readings from both poetry and prose, we will survey the range and evolution of ancient Greek literary practice and will identify some of Greek literature might be constructed.
Not Offered Every Year
1 Course Unit

GREK 6610 Reading Greek
Intensive reading in ancient Greek literature, focusing on the skills and practices required to read closely a 150-page “short list” of key texts and becoming familiar with authors, chronology, meters, dialects, and genres. Exercises include analysis, sight translation, and practice versions of the Qualifications Examinations in Greek.
1 Course Unit
**GREK 7201 Troy and Homer**

An interdisciplinary seminar focusing on the city of Troy both as an archaeological site and as the setting of the legendary Trojan War. We will consider Homer’s Iliad (with selected sections read in Greek) together with the topography and archaeology of the site of Troy in order to address a series of interrelated questions: What are the points of continuity and discontinuity between the stories told by the literary tradition and the material record? How do both types of evidence contribute to our understanding of political relations and cultural interactions between Greece and Anatolia in the Bronze Age? How do Hittite sources bear on our reconstruction of the events behind the Troy legend? How have the site and the poem contributed to each other’s interpretation in the context of scholarly discovery and debate? We will give some attention to modern receptions of the Troy legend that deliberately combine material and textual elements, such as Cy Twombly’s “Fifty Days at Iliam” and Alice Oswald’s “Memorial: An Excavation of Homer’s Iliad.” The seminar will include a visit to the site of Troy during the Spring Break.

Also Offered As: AAMW 7259

1 Course Unit

**GREK 7202 Plato and Aristotle on Human Nature**

The place of humans in the order of things was a perennial question for ancient philosophers. The puzzle typically begins with questions of humans’ place within a hierarchy, setting them between inanimate things and non-human living things on the one side, and the divine on other. These categories, along with others like metabolism, growth and decay, death, sentence, cognition, and knowledge, will form the background against which we look closely at Plato’s and Aristotle’s views. We will read sections of Phaedo, Republic, and Timeaues, along with On the Soul, On the Motion of Animals, and On Divination During Sleep. The course will invite both broad synthetic thinking, and focused textual analysis. Students will be responsible for a class presentation, a stint as lead questioner, a presentation of work toward a research paper, and a final research paper.

Not Offered Every Year

1 Course Unit

**GREK 7203 Ancient and Medieval Theories and Therapies of the Soul**

This seminar focuses on premodern conceptions of the ‘soul’, the force felt to animate and energize a human body for as long as it was considered alive, and to activate virtually all aspects of its behavior through time. Premodern concepts of the soul attempted to account for a person’s emotions and desires, perceptions, thoughts, memory, intellect, moral behavior, and sometimes physical condition. The course will trace the various ancient theories of the soul from the Presocratics, Plato, Aristotle, Stoic thought in Greek and Latin, medical writers (Hippocrates, Hellenistic doctors, Galen), and Neoplatonists, to the medieval receptions and transformations of ancient thought, including Augustine and Boethius, Avicenna’s interpretation of Aristotle and its medieval influence, and Aquinas and other later medieval ethicists. These premodern conceptions of the soul have a surprisingly long afterlife, reaching into the literary cultures and psychological movements of early modernity and beyond. Knowledge of Greek or Latin not required, but see the following: The seminar will meet for one two-hour session per week, and a separate one-hour ‘breakout’ session during which students who have registered for GREK 7203 will meet to study a selection texts in Greek, and students who have registered for COML/ENGL will meet to discuss medieval or early modern texts relevant to their fields of study.

Not Offered Every Year

Also Offered As: COML 6100, ENGL 7060

1 Course Unit

**GREK 7402 Aristophanes and Old Comedy**

This advanced graduate seminar in ancient Greek literature will focus in detail on several plays of Aristophanes and selections from his contemporaries in Old Comedy, Cratinus and Eupolis. Special attention will be paid both to questions of genre and comic dynamics, and to the historical and political contexts in which these plays were first performed.

Not Offered Every Year

1 Course Unit

**GREK 7403 Aristophanes and Lucian**

This seminar will explore the comic drama of Aristophanes and its influence on the comic prose of Lucian in the Imperial period. Aristophanes was an important literary model for Lucian, but Lucian read Aristophanes in his own way and for his own literary agenda. We will consider each author both in their own historical contexts, and comparatively, as parodists, satirists and cultural critics within a long and varied literary tradition.

Fall or Spring

1 Course Unit

**GREK 7404 Herodotus**

An overview of Herodotus’ Histories with attention both to its place in Greek literary history and to its uses and limitations as an historical source. We will consider the Histories in relation to questions of ethnic identity, cultural contact, and the construction of East and West. In their individual projects, students will explore the relevance of this protean, polyvocal text to their particular interests and scholarly perspectives.

Not Offered Every Year

1 Course Unit

**GREK 7707 The Iliad and its Receptions**

We will read selections from the Greek poem together, alongside some modern scholarship on it. We will also read Plato’s Ion and the Battle of the Mice and Frogs, as evidence for Homer’s ancient philosophical, rhetorical and poetic receptions. We will discuss the history of the poem’s translation into English, focusing on earlier translations (Chapman, Hobbes, Pope) and discussing the instructor’s goals and challenges in producing a new re-translation. We will also talk about two recent novelizations of the poem, Pat Barker’s Silence of the Girls and Madeline Miller’s Song of Achilles. The course is primarily intended for graduate students in Classical Studies and Ancient History, but it is also open to students in other programs, including those whose Greek might be less advanced. Prerequisite: Students should have a working knowledge of Greek.

Not Offered Every Year

Also Offered As: COML 7707

**GREK 9999 Independent Study**

This course is taken by graduate students doing independent work with a faculty advisor.

Fall or Spring

1-2 Course Units
**Gujarati (GUJR)**

**GUJR 0100 Beginning Gujarati Part I**
During the first year of Gujarati, major emphasis is placed on acquiring phonetics, grammatical patterns, and basic vocabulary. These goals are accomplished through guided drills and conversations accompanied by formal instruction on Gujarati grammar. From the outset, students are also taught the Gujarati writing system, which is used for all materials. By the end of the first year of instruction, student should be able to carry on coherent conversations on selected topics, read simple texts and compose short pieces in Gujarati.

**GUJR 0200 Beginning Gujarati Part II**
During the first year of Gujarati, major emphasis is placed on acquiring phonetics, grammatical patterns, and basic vocabulary. These goals are accomplished through guided drills and conversations accompanied by formal instruction on Gujarati grammar. From the outset, students are also taught the Gujarati writing system, which is used for all materials. By the end of the first year of instruction, student should be able to carry on coherent conversations on selected topics, read simple texts and compose short pieces in Gujarati.

Spring
Prerequisite: GUJR 0100 OR GUJR 5100
1 Course Unit

**GUJR 0300 Intermediate Gujarati Part I**
This course is designed as a continuation of beginning Gujarati. The course objectives are to expand the mastery of sentence patterns and augment vocabulary and its usage through intensive grammar and comprehension exercises. A special emphasis will be placed on greater cultural awareness. Upon completion of this course students should be able to interact socially with added confidence and greater expressiveness. Students should also experience a great improvement in their comprehension of spoken and written language. During the second year of Gujarati, students are introduced to progressively more difficult reading selections, along with additional instructions in the formal grammar of the language. To maintain and develop oral and aural command of the language, readings are discussed in Gujarati. To develop their writing abilities, students are also expected to compose short essays on their readings.

Two Term Class, Student must enter first term; credit given after both terms are complete

HSOC 0100 Emergence of Modern Science
During the last 500 years, science has emerged as a central and transformative force that continues to reshape everyday life in countless ways. This introductory course will survey the emergence of the scientific world view from the Renaissance through the end of the 20th century. By focusing on the life, work, and cultural contexts of those who created modern science, we will explore their core ideas and techniques, where they came from, what problems they solved, what made them controversial and exciting and how they relate to contemporary religious beliefs, politics, art, literature, and music. The course is organized chronologically and thematically. In short, this is a "Western Civ" course with a difference, open to students at all levels.

HSOC 0228 Studying Sex
The concept of "sex" has meant multiple things to science and medicine over the last few hundred years: a way of sorting bodies, a behavior to observe, a driving force behind reproduction and evolution, and a yardstick by which to measure normality. It has been both a binary of male and female, and a spectrum; both separate from gender, and inseparably entwined with it. It has been defined at different moments by anatomy, hormones, chromosomes, and even metabolism. In this course, we will explore how scientists have studied—and perhaps produced—the many-faceted thing called sex, and how historians have come to understand that past. This first-year seminar introduces students to primary source research; historical writing; and methods from both Science and Technology Studies (STS), and queer, trans, and feminist studies. Course materials will focus mainly on the United States in the 19th and 20th centuries.

HSOC 0283 Medicine, Magic and Miracles
This course explores the nature of disease and the history of medical practice and healing in the medieval period, using methods from intellectual, cultural, and social history, as well as the life sciences, and incorporating material from Indonesia to England. The themes of this course include: 1) the diversity of healing practices and beliefs in this period; 2) specific rationalities of different methods of healing; 3) views of the human body and disease; 4) the wide array of practitioners that people turned to for medical care, including physicians, midwives, family members, herbalists, snake handlers, saints, and surgeons; 5) institutions of medicine, such as the hospital. Students will have their minds blown as they learn to question everything they thought they knew about how science and medicine work.

1 Course Unit

HSOC 0313 Cane and Able: Disability in America
Disability is a near universal experience, and yet it remains on the margins of most discussions concerning identity, politics, and popular culture. Using the latest works in historical scholarship, this seminar focuses on how disability has been experienced and defined in the past. We will explore various disabilities including those acquired at birth and those sustained by war, those visible to others and those that are invisible. For our purposes, disability will be treated as a cultural and historical phenomenon that has shaped American constructions of race, class, and gender, attitudes toward reproduction and immigration, ideals of technological progress, and notions of the natural and the normal.

HSOC 0331 Autism Epidemic
The CDC estimates that 1 in 150 children have autism. Three decades ago, this number was 1 in 5,000. The communities in which these children are identified in ever increasing numbers are ill prepared to meet their needs. Scientists have struggled to understand the causes of this disorder, its treatment, and why it appears to be rapidly increasing. Families, policy makers, schools and the healthcare system have argued bitterly in the press and in the courts about the best way to care for these children and the best ways to pay for this care. In this class, we will use autism as a case study to understand how psychiatric and developmental disorders of childhood come to be defined over time, their biological and environmental causes identified, and treatments developed. We will also discuss the identification and care of these children in the broader context of the American education and healthcare systems.

HSOC 0362 First Year Seminar - Bacteria, Bodies, and Empires: A Global History of Medicine and Healing
Bacteria, Bodies, and Empires: A Global History of Medicine and Healing is a seminar on the history of medicine from the early modern period to the present. It addresses major issues and questions about bodies, diseases, epidemics, and medical institutions in the context of major historical developments in world history, with a focus on the Global South. The course examines how medicine, knowledge, and practices about diseases and bodies influenced political and social conditions, as well as how sociopolitical changes shaped and transformed people's perceptions of health, life, and the environment. Scholars have frequently examined the history of medicine as a Western practice and with a focus on Western medical traditions. And, medical and healing practices in the history of the Global South are frequently examined through the lens of religion, culture, and race, or, more recently, in relation to modernization and colonization. By situating the history of medical knowledge and practices in world history with an emphasis on Global South, this course introduces readings and research methods to challenge these fixed paradigms and shed light on questions and research agendas that will unearth the encounters, connections, and mobility of bacteria, bodies, and medical methods among various communities across time from Black Death to contemporary pandemics.
Also Offered As: HIST 0032
1 Course Unit

HSOC 0387 Epidemics in History
The twenty-first century has seen a proliferation of new pandemic threats, including SARS, MERS, Ebola, Zika, and most recently the novel coronavirus called COVID-19. Our responses to these diseases are conditioned by historical experience. From the Black Death to cholera to AIDS, epidemics have wrought profound demographic, social, political, and cultural change all over the world. Through a detailed analysis of selected historical outbreaks, this seminar examines the ways in which different societies in different eras have responded in times of crisis. The class also analyzes present-day pandemic preparedness policy and responses to health threats ranging from influenza to bioterrorism.

HSOC 0400 Medicine in History
This course surveys the history of medical knowledge and practice from antiquity to the present. No prior background in the history of science or medicine is required. The course has two principal goals: (1) to give students a practical introduction to the fundamental questions and methods of the history of medicine, and (2) to foster a nuanced, critical understanding of medicine's complex role in contemporary society. The course takes a broadly chronological approach, blending the perspectives of the patient, the physician, and society as a whole—recognizing that medicine has always aspired to "treat" healthy people as well as the sick and infirm. Rather than history "from the top down" or "from the bottom up," this course sets its sights on history from the inside out. This means, first, that medical knowledge and practice is understood through the personal experiences of patients and caregivers. It also means that lectures and discussions will take the long-discredited knowledge and treatments of the past seriously, on their own terms, rather than judging them by today's standards. Required readings consist largely of primary sources, from elite medical texts to patient diaries. Short research assignments will encourage students to adopt the perspectives of a range of actors in various historical eras.

Also Offered As: HIST 0876, STSC 0400
1 Course Unit
HSOC 0480 Health and Societies
"Two fundamental questions structure this course: (1) What kinds of factors shape population health in various parts of the world in the twenty-first century? and (2) What kinds of intellectual tools are necessary in order to study global health? Grasping the deeper "socialness" of health and health care in a variety of cultures and time periods requires a sustained interdisciplinary approach. "Health and Societies: Global Perspectives" blends the methods of history, sociology, anthropology and related disciplines in order to expose the layers of causation and meaning beneath what we often see as straightforward, common-sense responses to biological phenomena. Assignments throughout the semester provide a hands-on introduction to research strategies in these core disciplines. The course culminates with pragmatic, student-led assessments of global health policies designed to identify creative and cost-effective solutions to the most persistent health problems in the world today." Fall or Spring
1 Course Unit

HSOC 0490 Comparative Medicine
This course explores the medical consequences of the interaction between Europe and the "non-West." It focuses on three parts of the world Europeans colonized: Africa, South Asia, and Latin America. Today's healing practices in these regions grew out of the interaction between the medical traditions of the colonized and those of the European colonizers. We therefore explore the nature of the interactions. What was the history of therapeutic practices that originated in Africa or South Asia? How did European medical practices change in the colonies? What were the effects of colonial racial and gender hierarchies on medical practice? How did practitioners of "non-Western" medicine carve out places for themselves? How did they redefine ancient traditions? How did patients find their way among multiple therapeutic traditions? How does biomedicine take a different shape when it is practiced under conditions of poverty, or of inequalities in power? How do today's medical problems grow out of this history? This is a fascinating history of race and gender, of pathogens and conquerors, of science and the body. It tells about the historical and regional roots of today's problems in international medicine. HSOC 0600 Technology & Society
Technology plays an increasing role in our understandings of ourselves, our communities, and our societies, in how we think about politics and war, science and religion, work and play. Humans have made and used technologies, though, for thousands if not millions of years. In this course, we will use this history as a resource to understand how technologies affect social relations, and conversely how the culture of a society shapes the technologies it produces. Do different technologies produce or result from different economic systems like feudalism, capitalism and communism? Can specific technologies promote democratic or authoritarian politics? Do they suggest or enforce different patterns of race, class or gender relations? Among the technologies we'll consider will be large objects like cathedrals, bridges, and airplanes; small ones like guns, clocks and birth control pills; and networks like the electrical grid, the highway system and the internet. Spring

HSOC 0823 Sport Science in the World
This seminar is designed for first-year students who are interested in some big questions related to the topic of "sport science." Sport science may seem to be just a niche field where teams of physiologists, psychologists, geneticists, engineers and others work to make already very athletic people go "faster, higher, stronger." On the other hand, the work of sport scientists intersects everyday with far-reaching questions about how categories of sex, age, race, disability, and nationality are defined, measured, challenged, or maintained. Sport scientists weigh in on debates over what kinds of physical activity or bodies are "clean," what kinds of performance are "natural" or even human, and what kinds of sporting spaces or equipment are fair. In this class we'll read and discuss historical and contemporary accounts of sport science in the world. My hope is that students will enter the class interested in sports and leave interested in sports and in gendered science, objectivity and standardization, the politics of big data and more. Fall

HSOC 1222 Medical Sociology
This course will give the student an introduction to the sociological study of medicine. Medical sociology is a broad field, covering topics as diverse as the institution and profession of medicine, the practice of medical care, and the social factors that contribute to sickness and well-being. Although we will not explore everything, we will attempt to cover as much of the field as possible through four thematic units: (1) the organization and development of the profession of medicine, (2) the delivery of health-care, especially doctor-patient interaction, (3) the social and cultural factors that affect how illness is defined, and (4) the social causes of illness. The class will emphasize empirical research especially but not only quantitative research. Also Offered As: SOCI 1110
1 Course Unit
HSOC 1312 Mental Illness
This course is designed to give a general overview of how sociologists study mental illness. We will be concerned with describing the contributions of sociological research and exploring how these contributions differ from those of psychology, psychiatry, and social work. This overview will be done in three parts: we will discuss (i) what "mental illness" is, (ii) precisely how many Americans are mentally ill, (iii) how social factors (e.g. race, gender, class) and social arrangements (e.g. social networks) lead to mental illness, and (iv) how we as a society respond to and treat the mentally ill. Throughout the course, we will be concerned with uncovering the assumptions behind different definitions of mental health and exploring their political, social, and legal implications.

HSOC 1362 Bacteria, Bodies, and Empires: Medicine and Healing in the Eastern Mediterranean (15th-21st c.)
Bacteria, Bodies, and Empires is a survey course about the history of medicine in the Eastern Mediterranean from early modern period to the present. It addresses the major issues and questions concerning bodies, diseases, and medical institutions within the context of major historical developments in the world and region's history. The course looks at how medicine, knowledge, and practices about diseases and bodies shaped American social relations based on race, class, gender, and age. This course is a combination lecture and "SAIL" class. SAIL stands for "Structured, Active, In-Class Learning." During many class periods, students will work in small groups on a specific exercise, followed by a large group discussion and/or brief lecture. Students who choose to take this course, therefore, must be fully committed to adequately preparing for class and to working collaboratively in class.

HSOC 1401 The Peoples Health
While the scary threats of the moment in recent years, Ebola, MERS, swine flu, bioterrorism dominate media coverage of public health, most human suffering and death are driven by more mundane causes. This course critically addresses twenty-first-century public health science and policy by examining the long history (beginning with the plague epidemics of Renaissance Italy) that brought us to where we are today. Topics include responses to epidemics; socioeconomic, racial, and other disparities in health; occupational health; the rise of public health as a field of scientific inquiry; sanitary reform; the Bacteriological Revolution; the shift from disease causes to risk factors; and the social determinants of health.
Fall or Spring
1 Course Unit

HSOC 1411 American Health Policy
"American Health Policy" places the success or failure of specific pieces of U.S. health care legislation into social and political context. The course covers the time period from the U.S. Civil War to the 2010 Affordable Care Act (ACA), addressing two central questions: 1) Why was the United States one of the only industrialized nations to, until recently, have a private, non-nationalized, non-federalized health care system? 2) Why has U.S. health insurance historically been a benefit given through places of employment? Some topics addressed include: private health insurance, industrial health and workmen's compensation, the welfare state (in Europe, Canada, and the U.S.), maternal and infant care programs, Medicare and Medicaid. One of the main take-home messages of the course is that 20th-century U.S. health care policies both reflected and shaped American social relations based on race, class, gender, and age. This course is a combination lecture and "SAIL" class. SAIL stands for "Structured, Active, In-Class Learning." During many class periods, students will work in small groups on a specific exercise, followed by a large group discussion and/or brief lecture. Students who choose to take this course, therefore, must be fully committed to adequately preparing for class and to working collaboratively in class.

HSOC 2002 Sociological Research Methods
One of the defining characteristics of all the social sciences, including sociology, is a commitment to empirical research as the basis for knowledge. This course is designed to provide you with a basic understanding of research in the social sciences and to enable you to think like a social scientist. Through this course students will learn both the logic of sociological inquiry and the nuts and bolts of doing empirical research. We will focus on such issues as the relationship between theory and research, the logic of research design, issues of conceptualization and measurement, basic methods of data collection, and what social scientists do with data once they have collected them. By the end of the course, students will have completed sociological research projects utilizing different empirical methods, be able to evaluate the strengths and weaknesses of various research strategies, and read (with understanding) published accounts of social science research.

HSOC 2211 Sex, Sexuality and Sexual Science in South Asia: Perspectives from the Past and Present
This course will introduce students to the problems of sex, sexuality and sexual science in South Asia over the centuries. Its central problem will be how sex, society and knowledge about sex have been transformed in South Asia under the conditions of colonial and postcolonial modernity. It will consider how a multitude of indigenous practices and knowledges, from the famous Kamasutra and its allied knowledges to the transgender communities, from the Lazzat-un-Nisa to concubinage and the sexual norms of elite households, were framed and reframed during the nineteenth and twentieth centuries through the agency of a variety of institutions, groups and individuals. The course will also show how South Asia played a crucial role in the global evolution of sexual knowledge. Topics will include the varieties and functions of traditional sexual knowledges, colonial sexology, changing sexual identities and practices, the relation of psychiatry and medicine to sex, queer and transgender sexualities, and the complex and shifting role of the state and civil society to all of these topics.

HSOC 2213 Herbs and Humors: Medieval and Early Modern Pharmacology
What do gold, mummies, and rhubarb have in common? All were important ingredients in premodern pharmacy! This course surveys the history of pharmacology in the Medieval and Early Modern periods, beginning with the earliest European universities, through the professionalization of the medical field in the High and Late Middle Ages, and into the chymical medicine of the Renaissance. By engaging with a selection of both primary and secondary sources, students will learn about the development of the field of pharmacology and its relation to the broader field of medicine during its formation. Students will also learn how other emerging fields, such as alchemy and chemistry, and new technological advances made the development and advancement of pharmaceuticals possible. By the end of the course, students should expect to be able to address the following questions: How do theory and practice converge in premodern medicine and pharmacology? What is the relationship between the pharmacist and the physician, and how does this relationship shape medical practice? How does the invention of new technology shape the development of pharmacology during this period?
No prior knowledge of medical history is needed for this course.
Also Offered As: STSC 2213
1 Course Unit
HSOC 2254 American Medicine and Technology in War and Peace
War and its effects on the human body are brutal; the carnage of the battlefield and the conditions of camp life have presented special challenges to medicine throughout history. Additionally, the incorporation of new technologies into the military sphere, whether or not they started as civilian technologies, fundamentally changed the ways in which war was conceptualized, fought, and won. But the significance of medicine and technology in a military context extends well beyond the injuries and illnesses of war. Looking more closely at the ways in which physicians, military officers, soldiers, and civilians have interacted with each other both in war and in peace reveals much about the political, cultural, and disciplinary formation of medicine in the modern era and the roles technology in such formations. Understanding historical uses of medicine and technologies sheds light upon notions of localized and globalized warfare, as well as the political machinations in which nations engaged to create ideologies of dominance, threat, and safety. This seminar surveys the history of medicine and technology, principally in an American context, from the seventeenth through the late twentieth centuries. We will look at the ways in which the practices, theories, and tools of military medicine have played, and continue to play, a prominent role in conceptualizations of warfare, health, disease, politics, disability, morality, society, the body, culture, and ethics. We will take an in-depth look at the ways in which military and medical institutions have shaped, and been shaped by, other social and political categories like gender, race, class, and ethics over the last four hundred years and across various (though mostly Western) societies, and the ramifications for both soldiers and civilians alike. Students will be graded on two short essay assignments, an exam, in-class participation, and a final paper (no longer than ten pages in length) based on material covered in the course.

HSOC 2293 From Madness to Mental Health: The History of Psychiatry
Studies show that about a quarter of college students take psychotropic medications, such as anti-depressants and stimulants. This figure has been attacked from both sides – by those who describe American adolescents and young adults today as over-medicated, and by those who point to accessibility gaps to suggest that too many are actually undertreated. Interrogating this question requires a deep dive into the history of one of our most contested disciplines. We'll briefly consider the ancient roots of mental illness to show that concerns about sanity and aberrant behavior have always been with us, but most of the syllabus will focus on the shifting landscape in the United States, as biological theories ceded to psychoanalysis and back again. Specific topics will include somatic therapies (like lobotomy and electroconvulsive therapy), pharmaceutical interventions, and institutionalization/deinstitutionalization. We'll close by examining the current state of the field as represented by the fifth edition of the American Psychiatric Association's Diagnostic and Statistical Manual.

HSOC 2304 Insect Epidemiology Pests, Pollinators and Disease Vectors
Malaria, Dengue, Chagas disease, the Plague - some of the most deadly and widespread infectious diseases are carried by insects. The insects are also pernicious pests; bed bugs have returned from obscurity to wreak havoc on communities, invasive species decimate agricultural production, and wood borers are threatening forests across the United States. At the same time declines among the insects on which we depend - the honeybees and other pollinators - threaten our food security and ultimately the political stability of the US and other nations. We will study the areas where the insects and humans cross paths, and explore how our interactions with insects can be cause, consequence or symptom of much broader issues. This is not an entomology course but will cover some fascinating epidemiological theory originally developed for the control of disease vectors. It will cover past epidemics and infestations that have changed the course of the history of cities and reversed advancing armies. HSOC 241. Stem Cells, Science and Society. Gearhart/Zaret.

HSOC 2312 Healthy Schools
This Fox Leadership and academically based community service seminar will use course readings and students' own observations and interviews in their service learning projects in West Philadelphia schools to analyze the causes and impact of school health and educational inequalities and efforts to address them. Course readings will include works by Jonathan Kozol, studies of health inequalities and their causes, and studies of No Child Left Behind, the CDC's School Health Index, recess, school meal, and nutrition education programs. Course speakers will help us examine the history, theories, politics and leadership behind different strategies for addressing school-based inequalities and their outcomes. Service options will focus especially on the West Philadelphia Recess Initiative. Other service options will include work with Community School Student Partnerships and the Urban Nutrition Initiative.

HSOC 2332 Just Futures Seminar II: Health and Healing in Abiayala (the Americas)

Health and Healing in Abiayala (the Americas) will introduce students to ecosocial notions of health, colonialism’s contributions to ill-health, and decolonial action as healing action. Part one of the course introduces general concepts of body, health, and illness in biomedical models. It then pivots to the relational and ecosocial practices of body, health, and wellbeing among many First Peoples of the Abiayala, highlighting “radical relationality.” For many First Peoples, community includes humans, plants, animals, ancestors, and earth beings (such as the land, mountains, rivers, and lakes) that are materially, socially, and spiritually interdependent. These beings work together to maintain a “shared body” through practices of reciprocal care. Part two of the course examines how the shared body has been and is threatened by the colonization of Indigenous lands and bodies through (e.g.) land dispossession, pollution, extractive industry, lack of access to quality education and medical care, forced sterilization, forced removal of children, exploitative economic relations, and political violence. The third part of the course will follow how First Peoples of Abiayala are healing from the physical, social, and spiritual wounds of colonialism through decolonial action. First Peoples are creating their own healing centers and ecological protection agencies, engaging in Land Back movements, in legal and direct-action processes to protect the shared body from extractive industry, and reproductive justice movements. Healing is future oriented, powering the “radical resurgence” of First Peoples. Some questions addressed in this class include, where does the body begin and end? What constitutes personhood? How does continued colonization affect Indigenous peoples’ health—and that of all peoples? How do Indigenous peoples use ancestral knowledges, relation ethics, and local ecologies to help heal historic and contemporary wounds to power their futures? Is there a political dimension to healing? How do autonomy and self-determination figure into healing and wellbeing?

HSOC 2382 Global Health: Anthropological Perspectives

In some parts of the world spending on pharmaceuticals is astronomical. In others, people struggle for survival amid new and reemerging epidemics and have little or no access to basic or life-saving therapies. Treatments for infectious diseases that disproportionately affect the world’s poor remain under-researched and global health disparities are increasing. This interdisciplinary seminar integrates perspectives from the social sciences and the biomedical sciences to explore 1) the development and global flows of medical technologies; 2) how the health of individuals and groups is affected by medical technologies, public policy, and the forces of globalization as each of these impacts local worlds. The seminar is structured to allow us to examine specific case material from around the world (Haiti, South Africa, Brazil, Russia, China, India, for example), and to address the ways in which social, political-economic, and technological factors – which are increasingly global in nature – influence basic biological mechanisms and disease outcomes and distribution. As we analyze each case and gain familiarity with ethnographic methods, we will ask how more effective interventions can be formulated. The course draws from historical and ethnographic accounts, medical journals, ethnical analyses, and films, and familiarizes students with critical debates on globalization and with local responses to globalizing processes.

HSOC 2401 Social Determinants of Health

Over the last century, we have witnessed dramatic historical change in population health, e.g. rising numbers of obese Americans and dramatic declines in death from stomach cancer. There has also been highly visible social patterning of health and disease, such as socio-economic disparities in AIDS, substance abuse, and asthma in the U.S. to day or the association of breast cancer with afluenza around the world. This course will explore the way researchers and others in past and present have tried to make sense of these patterns and do something about them. The course is historical and sociological. We will examine evidence and theories about how poverty, afluenza and other social factors influence health AND we will examine how social and historical forces shape the ways in which health and disease are understood.

1 Course Unit

HSOC 2418 Engineering Cultures

Modern engineering, technology, science, and medicine converge with each other in countless places, landscapes, institutions, and households. The profession of the engineer has been distinct from that of the scientist, and the “doctor,” since its inception in the 1880s, however. In our class we trace overlaps and boundaries among engineers and other key experts of modern society, government, and public health, covering spaces in the Americas, Asia, and Europe. We explore rivalries, the roles of management and the state, class status and prestige, and we listen to engineers themselves and their understandings of their roles, functions, and purpose in modern societies. We cover fields such as civil engineering, mining, chemical-industrial engineering (including pharmaceuticals and oil refinery), mechanical engineering and machine design/maintenance, computer science, and the engineering of information technologies. No pre-requisites, no prior knowledge required.

Also Offered As: STSC 2418
1 Course Unit

HSOC 2421 Manufacturing Minds: From Babbage to ChatGPT

When asked to tell its own history, ChatGPT answers literally, describing (vaguely of course) its own training data set. When pressed to describe the longer history of “technology like you,” it mentions early computer science, programs that played chess or solved math problems, before naming deep learning algorithms and big data as the key breakthroughs. This lineage is not untrue, but it ignores the wider context in which individuals and organizations have come to pursue this strange dream of crafting an intelligent object. As an uncannily lucid conversation partner who freely performs all manner of textual tasks, ChatGPT participates in a longstanding tension in the history of information technology between the goals of manufacturing minds and making mindless clerical workers. In this course we historicize that tension in three domains—calculation, knowledge work, and games—all of which directly inform our efforts to imagine what ChatGPT and its ilk might be. Throughout, we will attend to the ways machinery shaped specific tasks’ construction in relation to gender, race, and class identities. We will see how technologies often imagined as disembodied are always material, interacting with human bodies and physical environments.

HSOC 2433 Sustainability and Public Health
We know that wild animal populations are only as healthy as their habitats, but what about humans? What is the connection between the health of human populations and the environments we inhabit? This course explores how the goals of the sustainability movement intersect with public health policy. It asks the question, "To what extent is sustainability the most important public health issue of our time?" We will examine issues related to climate change, peak oil, environmental toxins, ecosystem destruction, water availability, and food production through the lens of public health policy and human health. On a more positive note, we will learn about how applications of whole systems thinking are transforming our culture, creating a more sustainable and healthier society, and how these cultural trends will transform health policy in the future.
Summer Term
1 Course Unit

HSOC 2457 History of Bioethics
This course is an introduction to the historical development of medical ethics and to the birth of bioethics in the twentieth-century United States. We will examine how and why medical ethical issues arose in American society at this time. Themes will include human experimentation, organ donation, the rise of medical technology and euthanasia. Finally, this course will examine the contention that the current discipline of bioethics is a purely American phenomenon that has been exported to Great Britain, Canada and Continental Europe.
Fall or Spring
1 Course Unit

HSOC 2483 Health, Politics, and Social Movements
What is the relationship between health and social movements for race, gender, or political justice? How do political, economic, and social struggles intersect with, impede, or give rise to new demands for health, changing medical practice, or intensified or ameliorated experiences of disease? Recently, such questions have animated news headlines and popular media as responses to COVID have occurred simultaneously with popular protest, social mobilizations, and heated debates regarding race, police violence, and social policy. Moreover, convergences of popular protest, health crises, and health action can be observed in historical accounts and in widely disparate geographical examples. This course asks what such instances have to offer our understandings of health politics today. It explores this through two questions: how have questions of health and medicine been taken up or influenced by political and social movements in diverse historical and geographical spaces? And, how have scholars thought about the relationship between social and political mobilizations and health access and practice? Drawing from examples from around the globe, the course will ask students to master conceptual tools and core questions used to analyze the relationship between health, political mobilizations, and social movements. Course materials will include scholarly readings, news media accounts, films, and popular and fictional writing.
Fall or Spring
1 Course Unit

HSOC 2511 Foundations of Public Health
Many factors have shaped, and continue to shape, population health and public health policy. This course covers the foundational knowledge of the science of public health and factors related to human health and wellness. Students will explore contemporary issues in the profession including the ongoing social and cultural reckoning with race and racism.
Spring
1 Course Unit

HSOC 2514 Environments and Public Health
This course explores the relationship between local environmental conditions and health. Using historical case studies, we will consider a variety of questions: What factors (employment, pollution, local flora and fauna, racism, etc.) influence citizens' environment and health? How have insects, landscapes, and diseases shaped cultures or events in history? Was eighteenth-and-nineteenth-century Philadelphia actually a good place to live? What was going on with all those basements and cobblestone streets in Old City? Would you rather work in a coal mine or a uranium mine? You will examine these issues through a mixture of readings, lectures, class discussion, short essays and a research project.
Fall
1 Course Unit

HSOC 2518 Devices, Pills, People: American Medicine in the 20th and 21st Centuries
In this course, we approach some of the most pressing questions in the modern American medical marketplace, attempting to understand why it looks the way it does, how it developed, and what it offers (and takes) from patients. By the end of the course, we will also try to look forward and consider where current trends in American medicine might lead. The course is organized around six topics: 1) demography (changing patterns of health, disease, and death); 2) the growing and changing role of institutions, like hospitals and universities, in medical education and patient care; 3) the development and increasing role of technology in medicine; 4) changes in medical and pharmaceutical research and regulation; 5) patient experiences of health, illness, and patient-practitioner relations; 6) the construction of disease, or the broader social context and cultural representation of health and illness, both in culture and particular groups of patients. You will examine these issues through a mixture of readings, lectures, class discussion, short essays and a research project.
Spring
1 Course Unit

HSOC 2523 Technology and Medicine in Modern America
Medicine as it exists in contemporary America is profoundly technological; we regard it as perfectly normal to be examined with instruments, to expose our bodies to many different machines; and to have knowledge produced by those machines mechanically/electronically processed, interpreted and stored. We are billed technologically, prompted to attend appointments technologically, and often buy technologies to protect, diagnose, or improve our health: consider, for example, HEPA-filtering vacuum cleaners; air-purifiers; fat-reducing grills; bathroom scales; blood pressure cuffs; pregnancy testing kits; blood-sugar monitoring tests; and thermometers. Yet even at the beginning to the twenty-first century, medical technologies were scarce and infrequently used by physicians and medical consumers alike. Over the course of this semester, we will examine how technology came to medicine's center-stage, and what impact this change has had on medical practice, medical institutions and medical consumers - on all of us!
Summer Term
1 Course Unit
HSOC 2537 Gender and Health
Women’s health is a constant refrain of modern life, prompting impassioned debates that speak to the fundamental nature of our society. Women’s bodies are the tableaux across which politicians, physicians, healthcare professional, activists, and women themselves dispute issues as wide-ranging as individual versus collective rights, the legitimacy of scientific and medical knowledge, the role of the government in healthcare, inequalities of care, and the value of experiential knowledge, among many others. Understanding the history of these questions is crucial for informed engagement with contemporary issues.

1 Course Unit

HSOC 2583 Law and Medicine: Global Themes
The course will explore the complex relationship between Law and Medicine in the modern world. It will cover a range of themes such as the regulation of quackery, forensic science, medical malpractice, medical patents and biopiracy etc. The course will be historical in its orientation and roughly cover the period from the late seventeenth century to the present. It will also focus particularly on the Majority World, looking especially at case studies from Asia and Africa.
Fall or Spring
1 Course Unit

HSOC 2707 Data and Death
Digital tools and data-driven technologies increasingly permeate twenty-first century life. But how have they affected death? Do we conceive of death differently in a digitally mediated world? How do we mourn in the age of Facebook? How is “big data” put to work in the medical world that seeks to diagnose and treat fatal illness? What new forms of death and violence have been imagined or developed with digital technologies in hand? And what of those who believe that they could live forever, defying death, by uploading "themselves" into some new digital form? This course offers a historical exploration of these questions, looking at different intersections between data and death. We will work with a range of different sources ranging from science fiction to medical journals to the often-controversial death counts that follow natural and political disasters. Our goal will be to map the many contours of death in a digital world, but also to recognize the longer histories of counting, mourning, diagnosing, dreaming, and dying that have shaped them.

1 Course Unit

HSOC 3028 Normal People
For most of us, what's normal feels downright natural. The normal is our baseline, invisible and unconsidered until something abnormal draws our attention to it. But a little prodding shows the contradictions within bland, boring normality: it's defined by our internal feelings as much as by quantified standards, it describes individuals as well as populations, and it is intensely difficult to describe on its own merits without comparison. So what does it mean to be normal, anyway? This seminar examines "the normal" as a medical and scientific concept from the Renaissance until today. Has the concept of normal always existed? What makes a person or body normal? How has such a thing been assessed? Can the normal exist without deviance – and is this relationship inherently one about power? We will examine how scientific ideas of "the normal" – and its conflation with "the natural" – shaped medical knowledge and ideologies about racial difference, sex and gender, socioeconomic class, anatomical difference and disability, and human behavior. How have the "normals" of the past shaped our current scientific understandings of ourselves and the people around us? Our goal will be to make visible the ways that "normal" gets normalized in order to deepen our critical engagement with modern medicine, wellness culture, and racial and gender politics.

HSOC 3097 Indigeneity in Health, Science, and Technology
In recent decades, Indigenous Studies has emerged as a trans-national and interdisciplinary academic discipline that seeks to understand the historical experience, social reality, and political aspirations of Indigenous peoples. This course examines how theories and methods from Indigenous Studies offer new perspectives on core issues in the social study of science and technology and of health and society. Through films, podcasts, literature, and academic articles we will examine the historical role that science, technology, and medicine have played in the colonization of Indigenous people in the Americas, Australia, and New Zealand. We will also examine how Indigenous groups have resisted scientific and technological projects and participated in their development in ways that foster self-governance and territorial sovereignty.

1 Course Unit
HSOC 3147 Scientific Instruments and the Making of Knowledge
This course surveys the history of scientific proof and authority through the instruments used to collect and interpret data. In stories of discovery, scientists’ tools often take a back seat to their ideas, but instruments play a crucial role as physical intermediaries. All scientific instruments have been built and used by human beings according to their own ideas of what data are important to collect and how the data should be interpreted. How have the design and function of instruments affected scientists’ perspectives, and vice versa? What intellectual, political, and symbolic roles have instruments played beyond simply collecting data, and how do they continue to do so? We begin by examining the instruments of the “Scientific Revolution” and the ways their owners put them to use constructing not just data sets, but a new scientific authority in describing previously invisible realms of nature. Next, we look at the reciprocal relationship between scientific theory and physical tools, assessing how each has shaped the other, both individually and for entire fields of study in the nineteenth and twentieth centuries. We conclude by expanding the view to include the ways instruments interact with and affect the general public, from doctor-patient interaction to national politics and policy.

HSOC 3210 Health in Philly, Past and Present
How have different neighborhood organizations, activist groups, and private and public institutions in Philadelphia tried to understand and address shared health problems? How have Philadelphia organizations, groups, and institutions promoted wellbeing? In this course, students will read about neighborhood- and community-based interventions into health in Philadelphia since the turn of the 20th century. We will start the term reading some of the foundational research of W.E.B. DuBois, who investigated health in South Philly and was the first American sociologist to identify structural racism as a cause of illness. We will then investigate the histories of various health-focused organizations in Philadelphia, which may include: Lutheran Settlement House (1900s-present), the International Institute of Philadelphia/Nationalities Service Center (1920s-present), public FQHCs (1960s-present), Yellow Seeds & the Philadelphia Chinatown Development Cooperation (1960s/1970s-present), the Black Women’s Health Alliance (1980s-present), Philadelphia Community Health Alternatives/the Mazzoni Center (1980s-present), JUNTOS/Puentes de Salud (2000s-present), Philly Thrive (2010s-present), and the Black Doctors COVID Consortium (2020s). When studying the origins of Philadelphia-based health organizations and interventions, students will ask and answer: How was “health” defined at the time and by whom? What were some important health concerns – and for whom – that this group addressed, and how? What are some of the activities of this organization today? Students will practice historical and ethnographic research methods. Assignments will require students to 1) locate, analyze, and share primary sources that shed light on the history of these different organizations and 2) participate in a collaborative research project designed to answer a question relevant to health in Philadelphia today. Training in ethnographic interviewing methods will be provided.
Fall, even numbered years only
1 Course Unit
HSOC 3216 Toxicity in Context
We live amidst a constant stream of messages, practices, and regulations about things, behaviors, or relationships deemed "toxic." Within environmental health in particular, all sorts of actors grapple with complex decisions about what it means to live with materials and anticipate the ways they can interact with human health and the environment - at present through the distant future. What exactly do we mean when we categorize some substances as toxic, and by extension others as safe? Are there other ways of managing uncertainty or conceptualizing harm? How are these concepts built into broader social structures, economics, and regulations? What other work are they used to do? In this course, we will explore major social science approaches to toxicity and apply these theories to our own analysis of examples from the contemporary United States, and in particular, to a robust oral history collection with residents, developers, and government scientists grappling with these questions just outside of Philadelphia. This course grows out of scholarship in the history and anthropology of environmental risk, and health, as well as direct ethnographic, historical, and oral history research at a site outside of Philadelphia grappling with the meaning of materials that remain on site after past industrial manufacturing. In this course, students will gain an introduction to oral history and analysis of in-depth interviews, and introduction to key approaches in theorizing toxicity. By connecting life experiences of residents, government scientists and others, at an actual site, with the literatures we read in class, students will think critically about the ways the literatures we engage do and do not fully encompass the experiences and concerns that are intertwined with toxicity for actual people grappling with making sense of uncertain harms amidst urban planning.

HSOC 3313 Reproductive Medicine: Societal Impact of New Technologies
Reproduction is essential for the survival of species. Adverse events during embryogenesis or pregnancy can not only have an immediate impact on the well-being of the developing embryo but also later in life as adolescents or adults. Startlingly, we are learning that environmental influences on the molecular mechanisms in germ cells over the reproductive lifespan of adults that regulate gene expression in eggs, sperm and embryos can have serious consequences on progeny and their progeny's progeny - over generations. We have long sought to control our fertility, for example, from the timing of a pregnancy in our lives; of overcoming infertility; and of ensuring the health and well-being of our progeny from the very beginning of development. Assisted Reproductive Technologies (ART) are now having a significant impact on fertility and embryo viability and well-being. However, they are not without controversy and society must be involved in important policy issues. For example, embryo selection is being used eliminate or reduce genetic-based diseases, but now genome editing, a powerful tool for effectively and safely modifying our genome in perpetuity presents a viable alternative. Should we do it and for which conditions? Since the lifestyles of parents and even grandparents can affect the future health of offspring, how do we ensure that individuals are aware of lifestyle effects and make the right choices for future generations? We are in an era of many groundbreaking discoveries in reproductive medicine that will lead to more technologies that will continue to raise ethical concerns that affect some of society's most basic social covenants and that will require major societal adjustments. How will society deal with innovations that enable many facing infertility to have genetic offspring; that improve the quality of life or permit life itself for a developing embryo; that ensure successful outcomes of pregnancy by identifying and addressing risk factors in the environment that adversely affect the developing fetus, potentially even the future offspring of a person exposed as a fetus to an adverse environment; and that will enable women to have children at what used to be grandparental ages? Society will also be faced with the possibility of germline interventions and altering our own evolution. How can we manage these technologies to make sure that patients can benefit while also allowing us to be comfortable in our humanity? This course will present the latest in reproductive technologies (and those on the horizon) so as to appreciate their importance for individuals and then focus on how we as a society should manage their use.

HSOC 3327 Birth Culture and Medical Technology
How we are born and give birth can vary more than most people realize. For most of history, women only acknowledged their pregnancy when they felt the baby move and they gave birth at home, often surrounded by other women. Now, the majority of Americans learn about pregnancy from an at-home kit you buy at the drugstore and their babies are born in hospitals, often the result of a complex set of processes involving surgical interventions, pharmaceuticals, and plenty of expert advice. How did this shift happen? How has it shaped one of the most foundational and intimate experiences of being human? This course will explore the history of conception, pregnancy, childbirth, and the post-partum period since the 19th century. We will examine the role of medicine, science, and technology, alongside changing ideas about gender, family, and motherhood to better understand this transformation in human reproduction. We will also critically examine the late-20th century emergence of the "natural motherhood" movement that arose as a response to the medicalization of these processes. Our class will examine this history from a critical trans-inclusive feminist perspective. We will also consider the impact of increasingly sophisticated medical technology on reproductive experiences and decisions, including birth control, abortion, conception, pregnancy, in vitro fertilization, surrogate mothers, and more.

HSOC 3328 Women in Medicine
Today in the US almost half of all medical students are women and female physicians comprise roughly one-third of the workforce. However, some statistics are still troubling, including the number of African American women who pursue advanced medical degrees. This course will trace the evolution of women practicing medicine over several centuries, exploring how various cultural, societal, and intellectual norms differed over time while challenging the assumption of linear progress towards equality. While the focus will be on American medicine, including field trips to archives and historical landmarks within Philadelphia, the coursework also includes international case studies and cultural comparisons to help position local issues within a wider and more complicated narrative. Considering both the historical and contemporary contexts for interconnected issues such as bias, motherhood, and burnout, we will analyze challenges and strategize potential solutions for the next generation of women seeking careers in medicine.

HSOC 3377 Race and Medicine in the Global South
Racialized medical provisions under Apartheid in South Africa, theories of racial immunity to malaria in the Philippines and contemporary investigations of caste-based disease risks in India are some of the topics to be covered in this course. From the more straightforward issues of racial discrimination in medicine, to more complex issues of racial immunity or racial susceptibility to disease, medicine and race have been entangled together in multiple ways. More importantly these issues are far from being matters of the past. Genomic medicine and risk society have combined to make race and medicine one of the most potent contemporary issues. Outside the Western World, in the Global South, these issues are further refracted through local cultural, historical and political concerns. This course will take a long-term view of these contemporary issues.

HSOC 3383 Bioethics and National Security
At least since Augustine proposed a theory of “just war,” armed conflict has been recognized as raising ethical issues. These issues have intensified along with the power and sophistication of weapons of war, and especially with increasing engineering capabilities and basic knowledge of the physical world. The life sciences have had their place in these developments as well, perhaps most vividly with the revelations of horrific experiments conducted by the Naziand Imperial Japanese militaries, but with much greater intensity due to developments in fields like genetics, neuroscience and information science, and the widely recognized convergence of physics, chemistry, biology and engineering. The fields of bioethics and national security studies both developed in the decades following World War II. During the cold war little thought was given to the fact that many national security issues entail bioethical questions, but this intersection has been increasingly evident over the past two decades. In spite of the overlapping domains of bioethics and national security, there has been a remarkable little systematic, institutional response to the challenges presented by these kinds of questions: - What rules should govern the conduct of human experiments when national security is threatened? - Is it permissible to study ways that viruses may be genetically modified in order to defeat available vaccines, even for defensive purposes? - What role may physicians or other health care professionals play in interrogation of suspected terrorists? - Must warfighters accept any and all drugs or devices that are believed to render them more fit for combat, including those that may alter cognition or personality? - What responsibilities do the scientific community have to anticipate possible “dual purpose” uses or other unintended consequences of its work? Deploying the resources of ethics, philosophy, history, sociology and theory, this course will address these and other problems.

HSOC 3447 The Future of Disability and the Afterlives of Epidemics
Medical framings of disease focus on “cure” narratives, but what does “getting better” really mean when examined from a patient perspective and how might epidemics challenge or reshape our relationships to concepts of health, illness, and disability? In this course, we will learn to examine stories of epidemics past and present through the lens of disability. In doing so, we will ask how epidemics in the past have shaped our ideas and experiences of disability, muddied our binary thinking about illness and wellness, and challenged the beliefs, epistemologies, and institutions that drive our approaches to caring for the body, the mind, and the spirit. Through an exploration of primary and secondary source readings, we will interrogate how these eras of crisis, and their aftermaths, have historically influenced the ways we think about and experience disability and its relationship to identity, family, culture, religion, society, and citizenship in the days, weeks, months, years, and decades that follow in their wake. Ultimately, we will draw upon the insights of the past to develop better questions about present epidemics, including COVID-19, Monkeypox, as well as the re-emergence of “old” epidemic diseases like measles and polio in order to think in novel and critical ways about how our ideas about wellness, disability, and society both shape and are shaped by our encounters with contagious epidemic diseases.

1 Course Unit

HSOC 3488 Current Issues in Global Health
This course examines current world events through the lens of public health. The course will focus on six key questions: 1) What does health infrastructure look like in different parts of the world, and how is it working or failing different groups of people? 2) What public health opportunities and challenges are created by the rise of megacities? 3) What unique public health challenges are created by modern-day proxy wars and refugee flows, and what is the role of health professionals in responding to human disasters? 4) How are fertility patterns and changes in life expectancy impacting different societies? 5) How is climate change altering the global health landscape? 6) What might the next global pandemic look like? We will discuss these questions in class using a mixture of scholarly and popular texts, and you will conduct and present your own secondary research into one of these topics.

1 Course Unit

HSOC 3524 Medical Mestizaje: Health and Development in Contemporary Latin America
Latin American nations as we know them today emerged in the nineteenth century after violent independence struggles against the Spanish Empire. Since independence, mestizaje has been an influential ideology that seeks to portray the identity of Latin American nations as comprised of a unique cultural and racial fusion between Amerindian, European, and African peoples. Through historical, anthropological, and STS approaches this course examines how concerns with racial fusion and purity have shaped the design and implementation of public health programmes in Latin America after independence and into the 20th century. Topics include: tropical medicine and race; public health and urbanization; toxicity and exposure in industrialized settings; biomedicine and social control; indigenous health; genomics and health; food and nutrition.
Fall or Spring
Also Offered As: LALS 3524
1 Course Unit

HSOC 3528 Public Health & Violence
This course will address two health concerns of long-standing controversy: the role of guns in population health and violence in relationships. We will adopt a healthy skepticism about the assumptions and ideologies that currently dominate formal and informal discourse about these topics. A life span perspective - guns from design through use, and abuse from childhood through late life - will be grounded in a public health injury prevention framework. As a function of this approach, we will examine key aspects of the social context in which guns and abuse exist and within which related policies are formulated. Students are encouraged to examine their perceptions about these issues so that they can become more effective members of a society that appears to maintain a deep ambivalence about guns and about violence in relationships.
Not Offered Every Year
1 Course Unit
HSOC 3803 Bodies and Borders: Health, Place, and Displacement
How are health and wellbeing shaped by place? This course examines the relationship between place, environment, and health, with particular attention to mobility and migration and to the impact of changing climates. Scholars have used the term Anthropocene to characterize this era of fossil-fuel driven climatic changes. This course will ask how new understandings of the relationship between human well-being, particularly health and disease, and place and environment are shaping one another. Drawing from anthropology, history, and related fields, we will ask how humans have shaped health and place over time, about the relationship between health and cities in particular, and about mobility, movement, and displacement and their relationship to health. Students will be asked to conduct independent research and to produce a final project or paper on a case study of their choosing. Please note that the reading load in this course will be intensive.
Fall
1 Course Unit

HSOC 3824 Animals in Science Medicine Technology
This course explores human-animal relationships: the wide range of these relationships, why they originated and how they have changed over time. How have humans classified, valued, utilized, consumed, behaved toward and understood animals? Where is the boundary between humans and other animals, and how do we know, since humans are also animals? How is that boundary been maintained and redefined? Are humans part of the animal “natural” world or apart from it? How are humans similar to and different from other kinds of animals? How do we know about animals and what is it we know? To what extent are questions about animals really questions about humans? How has the meaning of animal changed over time? The course focuses in particular to the roles and relationships of animals within science and medicine, and as biotechnologies.
Fall or Spring
Also Offered As: STSC 3824
1 Course Unit

HSOC 3889 Trans Method
What are the subjects of trans studies? What does “trans” as a category afford us in looking at texts, people, systems, and objects? To what extent is trans an identity? What might it mean to think of it as a methodology? How might the tools of trans studies intervene in conversations and practices beyond the field itself? What are the stakes of such an expansive approach? This course introduces students to “trans” as a still-forming analytic that has emerged out of academic spaces, activist movements, and trans cultural production. We will engage with texts and questions that build on trans studies’ connections to (and divergences from) queer and feminist studies, history, critical race studies, disability studies, and science studies, among other fields, and we will also consider how trans knowledge can act beyond the theoretical.

HSOC 4028 Stories, Science, and Medicine
Since COVID-19 shut down the world in 2020, we have been surrounded by stories about health, medicine, and disease that cut across every aspect of our lives. This seminar explores the relationship between scientific knowledge and narrative: how do we tell stories about science and medicine? How is medical knowledge made culturally meaningful? How can thinking about storytelling as a craft make us better at communicating complex ideas about public health, medical knowledge, and their myriad social dimensions? People enjoy stories about science and medicine whether consumed as a podcast, magazine article, novel, Netflix special, or public talk — however, the popularity and the real-world urgency of this content endows the storyteller with great responsibility. This seminar takes the “story” in history seriously and uses methods from the history of medicine to help students produce compelling, contextually nuanced stories about medicine and culture, health and society. We will learn from sources including science fiction, pandemic journalism, historical scholarship, and popular science media when comparing and contrasting how medical subjects are translated into a story for particular audiences and mediums.
Not Offered Every Year
1 Course Unit

HSOC 4094 Science and Disability
How have ideas about ability and disability shaped the questions we ask about the world and the methods we use to answer them? How do assumptions about who can and ought to be a scientist, engineer, or physician intersect with constructions of disability and difference? How might studying the lived experiences of people with disabilities in the context of STEM(Medicine) help us begin to answer these questions? This course explores the exciting intersection between disability studies and the history and sociology of science and medicine through weekly readings, discussions, and original research. Using materials ranging from archival and online sources to oral history interviews and museum collections, students in this course will learn how scientific ideas and institutions have helped shape 20th- and 21st-century categories and experiences of disability as an embodied and socio-political identity. At the same time, students will learn how to use disability as a critical theoretical lens for investigating the cultures, tools, and institutions behind the creation and application of modern scientific and medical knowledge. Collaborative and analytical writing work throughout the course will build towards the completion of a final original research project.

Also Offered As: STSC 4094
1 Course Unit
HSOC 4114 Sports Science Medicine Technology
Why did Lance Armstrong get caught? Why do Kenyans win marathons? Does Gatorade really work? In this course, we won’t answer these questions ourselves but will rely upon the methods of history, sociology, and anthropology to explore the world of the sport scientists who do. Sport scientists produce knowledge about how human bodies work and the intricacies of human performance. They bring elite (world-class) athletes to their laboratories or their labs to the athletes. Through readings, discussions, and original research, we will find out how these scientists determine the boundary between "natural" and "performance-enhanced," work to conquer the problem of fatigue, and establish the limits and potential of human beings. Course themes include: technology in science and sport, the lab vs. the field, genetics and race, the politics of the body, and doping. Course goals include: 1) reading scientific and medical texts critically, and assessing their social, cultural, and political origins and ramifications; 2) pursuing an in-depth The course fulfills the Capstone requirement for the HSOC/STSC majors. Semester-long research projects will focus on "un-black-boxing" the metrics sport scientists and physicians use to categorize athletes' bodies as "normal" or "abnormal." For example, you may investigate the test(s) used to define whether an athlete is male or female, establish whether an athlete's blood is "too" oxygenated, or assess whether an athlete is "too" fast (false start). Requirements therefore include: weekly readings and participation in online and in-class discussions; sequenced research assignments; peer review; and a final 20+page original research paper and presentation.

Also Offered As: STSC 4114
1 Course Unit

HSOC 4187 Sound in Science, Medicine and Technology
How do listening and knowing relate? This capstone will analyze sound as an object, an instrument, a product and a process of research in science, technology, and medicine. From anthropological field recordings to experiments in acoustics, readings will address the ways in which researchers have isolated and investigated sonic phenomena during the modern period. We will consider sound as a tool for knowing about other phenomena as well: bodily functions, seismic events, animal communication, and the like. Technologies of sound production, reproduction, storage, manipulation, and analysis will be front and center in this course. What can you do with magnetic tape that phonography does not allow? How might the hospital soundscape inform clinical decision-making? Why is Amazon's Alexa female? How has scientific communication changed over time? In addition to wrestling with questions like these, the course will provide undergraduate majors with the opportunity to research and execute an original paper of significant length in the humanistic social sciences. Students must be in their last three semesters for it to fulfill the capstone requirement, but any student may enroll.

1 Course Unit

HSOC 4242 The History & Future of Genetic Medicine
Nearly twenty years after the Human Genome Project was completed, genetic research continues to garner attention and resources. From news coverage to governmental initiatives and commercial investment, genetics is a force in medicine, industry, and society more generally. Using scholarship from diverse disciplines, this capstone seminar focuses on how genetic medicine came into existence. We will explore the field’s early history in eugenics and its transformation via technological advancements like prenatal testing and targeted therapies. Through case studies of select genetic conditions, we will examine scientific innovations alongside the lived experience of those advancements, broaching critical questions about disability, race, and inequality. This will provide students with the opportunity to debate historical changes and continuities, taking on some of the most vexing questions in bioethics.
Spring
Also Offered As: STSC 4242
1 Course Unit

HSOC 4288 Invisible Labor in the Human Sciences
This course looks at those disciplines that take people as their subjects of research—including biology and biomedicine as well as anthropology, linguistics, and sociology—to explore the contributions of a wide range of research participants. We will focus on the sciences of human behavior, information, and medicine to analyze the labors of behind-the-scenes actors including tissue donors, survey respondents, student subjects, patients, translators, activists, ethics review boards, data curators, and archivists. Our job will be to analyze the experiences of these technoscientific laborers with a view to systems of knowledge and power in the production and maintenance of Knowledge about humans and their bodies.
Fall or Spring
Also Offered As: STSC 4288
1 Course Unit

HSOC 4303 Disease & Society
What is disease? In this seminar students will ask and answer this question by analyzing historical documents, scientific reports, and historical scholarship (primarily 19th and 20th century U.S. and European). We will look at disease from multiple perspectives—as a biological process, clinical entity, population phenomenon, historical actor and personal experience. We will pay special attention to how diseases have been recognized, diagnosed, named and classified in different eras, cultures and professional settings.

1 Course Unit

HSOC 4324 Medical Activism and the Politics of Health
During the second half of the twentieth century, overlapping waves of social reform movements agitating for civil rights, women's rights, peace, environmentalism, and gay rights reshaped the U.S. political and cultural landscape. Physicians, other health care professionals, and organized patient groups played important roles in all of these movements. This seminar investigates the history of this medical activism, making special use of the Walter Lear Collection in Penn Libraries' Kislak Center. Readings, discussions, and student research projects analyze the relationships between this history and the political dimensions of individual and population health in the late twentieth century.

1 Course Unit
HSOC 4327 Seeking Health: Tourism, Medicine in America 1800-2000
Summer camps, spring break, and trips to the beach, mountains, and national parks: vacations are an integral part of American culture. Often we talk and think about traveling for its ability to rejuvenate our tired bodies and spirits. Although tourism only developed over the past 100 years, the tradition of traveling for health has a much deeper history. This course will examine how different people in different times have understood the connections between travel and health, and how technologies have and continue to mediate those experiences. Over the course of the semester students will complete an original research paper through critical reading and step-wise assignments that will culminate in a final project. By the end of the semester, students will have honed their skills in primary and secondary source research, the construction of an academic argument and paper, and will continue to develop skills in critical analysis through weekly reading assignments.
Not Offered Every Year
1 Course Unit

HSOC 4333 Bodies, Gender, Science, and Medicine
Americans’ ideas about gender and sex have changed dramatically since the 19th century—But what roles have science and medicine played in these changes? How have shifting biological, psychological, cultural and political ideas about femininity and masculinity shaped our experiences of health, illness, sex and reproduction? How have these ideas about gender and sexuality influenced the creation of, participation in, institutions, technologies and experiences of our modern healthcare system? Drawing from the history of science, medicine and technology as well as gender studies, bioethics and disability studies, students in this class will examine a wide array of topics that address these questions, exploring how deeply rooted historical, political and social forces have shaped the relationship between gender and medicine.
Fall
1 Course Unit

HSOC 4364 Biopiracy: Medicinal Plants and Global Power
Biopiracy has emerged as the name of conflict between multinational pharmaceutical companies attempting to get genetic patents on medicinal plants and indigenous communities in the Global South who have long known and used these plants for medicinal purposes. Today the story of Biopiracy is an unfolding story of plants, patents and power. The extraction and commercial exploitation of plants and knowledge about them from the Global South however is not new. It has been happening at increasing pace for at least the last two centuries. Both the anti-malarial drug quinine and the cancer drug vincristine for instance have their plant-origins in the Global South where local communities used them medicinally long before their discovery by biomedicine. This course will put the current debates around Biopiracy in context and explore how the entanglements of plants and power have changed or not changed.

Also Offered As: STSC 4364
1 Course Unit

HSOC 4375 Medicine and Development
This course is devoted to readings and research about medicine and development in resource-poor countries. The focus is on medical institutions and practices as seen within the broader context of development. We try to understand changing interpretations of how development takes place—of its relationship to technical knowledge, power and inequality. The course give students the opportunity to do intensive original research.
Fall or Spring
1 Course Unit

HSOC 4392 Centering the Impaired Mind: Topics in Intellectual and Developmental Disability
Much disability scholarship has focused on physical and sensory disabilities, which better fit the "social model" that locates disability in a mismatch between individuals and their environments. But what about intellectual and developmental disabilities and the cognitive impairments that often, but not always, accompany them? This class will look at some of the more prevalent intellectual and developmental disabilities, including Down syndrome, cerebral palsy, and autism, which has been called “the paradigmatic developmental disability...of the postmodern period.” We will consider how the meaning of these diagnoses—and sometimes the diagnoses themselves—have changed over time, as well as the roles diverse stakeholders, including affected individuals, their families, and physicians, have played and continue to play in these conversations. More broadly, intellectual and developmental disabilities provide a unique lens through which we will interrogate questions of representation, identity, personhood, citizenship, and care. Because this course fulfills the Capstone requirement for HSOC/STSC majors, developing the skills necessary to write an original research paper will be a primary focus—including articulating an argument and supporting it with compelling evidence drawn from both primary and secondary sources in history, sociology, and anthropology.
Fall
1 Course Unit

HSOC 4400 Research Seminar Health and Society
This course is designed to provide HSOC students with the tools necessary to undertake original research, guiding them through the research and writing process. Students will produce either a polished proposal for a senior thesis project, or, if there is room in the course, a completed research paper by the end of term. Students work individually, in small groups and under the close supervision of a faculty member to establish feasible research topics, develop effective research and writing strategies, analyze primary and secondary sources, and provide critiques of classmates’ drafts. Students must apply for this course by December 1.
Spring
1 Course Unit

HSOC 4437 Remembering Epidemics
This seminar challenges students to encounter and interpret the city around them in unconventional ways. During a deadly pandemic that has profoundly disrupted all aspects of society, just as the question of public commemoration has vigorously and sometimes violently re-entered our country’s public discourse, one question has remained surprisingly neglected: How do we remember epidemics? This course confronts this question through an analysis of traumatic epidemics in Philadelphia’s history, and of the broader landscape of public memory. We devote special attention to the yellow fever epidemic of 1793, but we also consider the 1918-1919 influenza, AIDS, and COVID-19, among others. Students conduct archival, documentary, site-based, and other kinds of research in the process of analyzing the origins, course, and consequences of epidemics, as well as the nature of public commemoration.
Fall or Spring
Mutually Exclusive: HSSC 5437
1 Course Unit
HSOC 4517 The Lazaretto, the City, and the World: Public Health, Immigration, and Urban Growth, 18th-21st C.
Philadelphia's Lazaretto quarantine station was built in 1799 to protect the city after a series of catastrophic yellow fever epidemics. In its time, the Lazaretto was a gateway through which goods and people from many regions of the world passed before entering Philadelphia (sometimes after temporary detention). This course uses the Lazaretto as a gateway to the history of American public health, immigration, and urban growth. Our exploration of those histories is not limited to events that happened at the Lazaretto, nor to the period of its quarantine operations (1801-1895), nor even to Philadelphia, but rather uses the very local and very human stories of this unusual site as a point of entry into larger American and global stories. Coursework includes site visits to the Lazaretto and to a variety of local partner institutions, including the Historical Society of Pennsylvania, the Mutter Museum, Puentes de Salud, and Sayre Health Center. Students undertake extensive research projects covering some combination of the course's themes, including discussions of how historical interpretation can facilitate and enhance public engagement and activism.
Not Offered Every Year
1 Course Unit

HSOC 4528 Race and Medicine in America
Race has been, and remains, a central issue to the delivery and experience of healthcare in America. This course will examine a variety of issues and cases studies to examine how the patient-doctor has been negotiated, defined, and contested upon the basis of race. This course is designed to further develop students' research, analytical and writing skills in a collaborative atmosphere. Students will complete an original research paper through critical reading and step-wise assignments that will culminate in a final project. By the end of the course, students will have honed skills in primary and secondary source research, and the construction of an academic, analytical argument and paper. Students will build an argument based on their analysis of primary sources, and appropriately situate their argument within the literature of the core HSOC disciplines (anthropology, sociology, and history). In addition, student will continue to develop skills in critical analysis through weekly reading assignments.
Fall
1 Course Unit

HSOC 4588 Environments and Health
Do classrooms' fluorescent lights give you headaches? Have you ever felt invigorated by a mountain's breeze? Have you ever sought to get a "healthy" tan at the beach? Throughout history people have attributed their health -- good and bad-- to their physical surroundings. In this class we will explore how medical professionals, scientists and the general population have historically understood the ways in which the environment impacts different people, in different places, in different ways. We will interrogate medical theories that underpinned popular practices, like health tourism, public health campaigns, and colonial medical programs. We will also consider how people constructed and understood the physical environment, including farms and factories, cemeteries and cities, to be healthy or not. This course is designed to foster a collaborative atmosphere in which students will complete an original research paper through critical reading and step-wise assignments that will culminate in a final project.
Not Offered Every Year
1 Course Unit

HSOC 4595 Defining Disability
Live long enough, and you are almost certain to experience some kind of disability if you haven't already. What, then, does it mean to be "disabled"? This capstone takes as its premise the idea that disability has meant different things to different stakeholders (e.g. activists, physicians, politicians, families, employers, artists, clergy, engineers) across cultures and over time. We will historicize and analyze these various definitions in order to better understand the complex socio-cultural construct of disability while simultaneously cultivating the research skills necessary for advanced work in the humanistic social sciences. Assignments will be scaffolded to help students write an original research paper of significant length by the end of the semester.

Health Care Innovation (HCIN)

HCIN 6000 The American Health Care System
The American health care system is a product of its history and of policy decisions made in doctors’ offices, boardrooms, and congressional committee chambers over many decades—and presents opportunities for innovation. This course examines the structure and economics of the various components of health care financing and delivery in the United States, including private health insurance, Medicare, telehealth, and behavioral health; surveys the present structure of the American health care system and the history of efforts to reform health care at the federal level; and evaluates efforts to reform payment, expand access, and improve the quality of health care services. Lectures and interviews by active experts address successful policy change in health care, being a policy advocate, and proposing innovations to address needs within the health care system.
Fall
1 Course Unit

HCIN 6010 Health Care Operations
The word "operations" derives from the Latin "opus," and opus means work. So by definition, operations is about work. This course offers an introduction to operations management: after completing the course, students will be able to use a systematic approach to analyze and improve their work in health care settings. The course includes an examination of inefficiencies resulting from the three system inhibitors: waste, variability, and inflexibility. And it provides strategies for engaging in the ongoing process of reducing these negative impacts without sacrificing quality of care. Major units also cover health care delivery processes, lean ops, agility, and managing the service organization. Students will practice identifying key performance indicators in health care systems, forecasting demand, predicting utilization and variability, determining staffing levels, and recommending process improvements and innovations to improve client satisfaction.
Fall
1 Course Unit
HCIN 6012 Connected Health Care
Technology has allowed firms to fundamentally change how they connect with their customers. Rather than having occasional, episodic interactions — where customers realize they have an unmet need, then look for ways to fill it — firms are striving to be continuously connected to their customers, providing services and products as the needs arise, even before customers become aware of them. There is probably no other industry for which this development will be as transformative as in health care delivery. Wearable devices, smart pill bottles, digestible sensors, and many other technologies are associated with the promise of improving the quality of care while also making efficient use of resources. This course explores the impact of connected strategies in general, and the opportunities associated with them in health care delivery.
Mutually Exclusive: HCIN 6100
1 Course Unit

HCIN 6013A Addressing Challenges
In this 6-week lab, you will use the skills you have learned throughout the Master of Health Care Innovation so far—as well as your own professional expertise—to investigate, specify, and address an exigent challenge in health care. Together as a class, we will consider why some innovations may fail, examine health care leaders’ perspectives on why some succeed, and learn techniques for ideation and for building an effective business case for an innovative solution. Simultaneously, in small groups, you will work together to design, refine, and pitch your own health care innovation in one of several high priority challenge areas. You will come away from this lab with tools for finding and filling market niches in health care, experience navigating the design process as a team, and an array of deliverables—both team-created and individual—that detail the what, how, and why of a real-world innovation to improve health care. This is a multi-term course. To earn course credit, students must successfully complete both HCIN6013A in the Summer and HCIN6013B in the Fall. Students who complete both parts will receive a single grade and earn 1 CU total.
Two Term Class, Student must enter first term; credit given after both terms are complete
0.5 Course Units

HCIN 6013B Addressing Challenges
This lab is a continuation of HCIN6013A, Addressing Challenges. Students will build on work they have already done to produce a suite of deliverables calibrated to inform decision makers and persuade them to adopt their approach. At the end of this lab, students will come away with a suite of work-related materials, including a 1-pager and a second deliverable tailored to their professional setting. Students must successfully complete HCIN6013A in the Summer term before taking this course. Students will receive a single grade and earn 1 CU total for HCIN6013A and 6013B.
Two Term Class, Student must enter first term; credit given after both terms are complete
Prerequisite: HCIN 6013A
0.5 Course Units

HCIN 6020A Behavioral Economics and Decision Making
Behavioral economics is a relatively new field at the intersection of economics and psychology that builds on the observation that people tend to make predictably irrational decisions, and that those patterns can be used to shape personally and socially beneficial behaviors. This course offers an introduction to behavioral economics and its applications in health and health care. We will examine the underpinnings of the field, then consider: • The structure of choice environments and how people are influenced by how choices are framed. • Strategies for supercharging incentive programs. • The use of social incentives and social comparisons to achieve better physician performance. The course will conclude with an exploration of how behavioral economics can be used to shape health policy, and the important question of when a “nudge” becomes a shove. This is a multi-term course. To earn course credit, students must successfully complete both HCIN6020A in the Fall and HCIN6020B in the Spring. Students who complete both parts will receive a single grade and earn 1 CU total.
Two Term Class, Student must enter first term; credit given after both terms are complete
0.5 Course Units

HCIN 6020B Behavioral Economics and Decision Making
This course is a continuation of HCIN6020A, Behavioral Economics and Decision Making. In the final weeks of the course, students will focus on structuring incentive programs, utilizing social forces to shape behavior, and the role of behavioral economics in public policy. Students must successfully complete HCIN6020A in the Fall term before taking this course. Students will receive a single letter grade and earn 1 CU total for HCIN6020A and 6020B.
Two Term Class, Student must enter first term; credit given after both terms are complete
Prerequisite: HCIN 6020A
0.5 Course Units

HCIN 6022 Digital Health
This course is designed for professionals and graduate students to gain an understanding of the digital health landscape so they might effectively leverage technology for innovation, with consideration of patient-centered care, equity, and ethical issues. Students will explore a range of health care settings, health care data types, the role of patients as sources of data and recipients of information, the role of humans in-the-loop of AI, and the security, privacy, and confidentiality concerns of digital health approaches. There will be discussions of emerging systems still in their infancy, and enabling technologies outside of the hospital: what they can do, what they are unable to do, and which of them have the potential to revolutionize the way we deliver care from birth to old age.
1 Course Unit

HCIN 6023 Pitching Innovation
Students will leverage skills learned throughout the Master of Health Care Innovation to construct a plan for an innovation project that addresses an exigent issue in their professional settings. In the first half of the course, students will match their innovation ideas to stakeholder and organizational needs, build a case for the value and financial viability of ideas, and consider the scope and scale of their work. In the second half of the course, students will create a portfolio of materials designed to build support for their project among colleagues and decision makers in their organizations. At the end of this lab, students will come away with a clear plan for an innovation project, as well as a set of persuasive tools including an elevator pitch, 1-pager, and pitch.
Spring
Mutually Exclusive: HCIN 6190
1 Course Unit
HCIN 6032 Value and Quality in Health Care
Innovations in health care have the potential to achieve efficiency, reduce health care costs, and ensure high-quality patient outcomes. But to achieve these goals, we must determine and adopt standards for health care quality and safety. Through lectures, interviews with national leaders, case studies, and hands-on practice, this course introduces students to quality and measurement tools that make visible the most pressing areas of opportunity for health care innovation. Students will explore how perceptions of value are specific to stakeholder needs. And they will learn how quality improvement initiatives can be leveraged to drive value for stakeholders across the health care system.
1 Course Unit

HCIN 6042 Health Economics
Health economics applies economic principles to the health care sector. By recognizing the importance of scarcity and incentives, it focuses on the critical economic issues in producing, delivering, and financing health care. It analyzes determinants of demand for medical care, the unique role of physicians in resource allocation, the role of health insurance, and competition in medical care markets.
Spring
Mutually Exclusive: HCIN 6040
1 Course Unit

HCIN 6052 Leadership & Legal Issues in Health Care
This course surveys the leadership skills and legal knowledge necessary to navigate the complexities of the health care industry at the highest levels. The first unit focuses on concepts, experience, and skills analysis necessary to develop and synthesize a personal and organizational leadership strategy. The second unit surveys the legal regimes that govern medical care in the United States, including the types of health law formation (cases, statutes, administrative regulations) and the multiple federal, state, and local institutions involved in the creation and application of the law. Throughout, students will reflect on learning, test their knowledge with quizzes, and apply what they have learned to cases.
Spring
Mutually Exclusive: HCIN 6120
1 Course Unit

HCIN 6062 Using Data for Transformation
Whether we are using AI to diagnose lung cancer or machine learning to predict hospitalization risk, algorithms are transforming medicine and health care. Most algorithms are based on routinely collected health care data — claims, electronic health records, and registry data. But too often algorithms are deployed without a full understanding of what we are trying to predict and where the data are coming from. Through a combination of lectures, case studies, and interviews with leaders from across the health care ecosystem, we will discuss how to turn routine health care data into an algorithm, how to evaluate the validity of AI products, and how to understand liability and policy implications around algorithms in health care. This course will help students gain a fuller understanding of how to use routine health care data to transform care delivery and work with technical experts to design or select approaches that are right for their needs.
1 Course Unit

HCIN 6067 Translating Ideas into Outcomes
In this course, students will apply state-of-the-art innovation methodologies to improve health care for patients, clinicians, and organizations. Rooted in design thinking and human-centered design, this course guides students through the development of innovation projects from idea generation, through problem definition, testing, and preparing for delivery. The course asks students to identify unexamined assumptions about their professional environment to gain proficiency in defining strategies for solving health care problems. These strategies include: · Engaging in contextual inquiry to reveal what others have missed. · Reframing problems to enable the development of high-impact solutions. · Practicing intentional divergence to challenge initial, unproductive concepts. · Testing hypotheses to generate data quickly and at low cost. · Designing experiences that catalyze the spread of desirable behaviors. The goal of this course is to provide students with tools to develop innovative solutions to pressing health care problems, and to produce the types of early data that enable organizations to support, promote, and ultimately adopt those solutions at scale.
1 Course Unit

HCIN 6160 Advancing Health Equity
Against a backdrop of policy experimentation and growing evidence of effective practices, this course explores the work of diversity, equity, inclusion, and justice in health care organizations, clinical spaces, and affected communities. Throughout the course, we survey the context of health disparities and health equity—a definition of terms, the state of the evidence, and relevant historical background. We examine opportunities and limitations of ADEI programs. We explore evidence-based frameworks and techniques that promote sustainable implementation of new initiatives. And we reflect on the personal and relational aspects of doing the work: learning to see inequity, interrogating our roles in existing power structures, and changing our perceptions of what types of change are feasible for ourselves and our institutions. Throughout this course, students will be asked to catalogue and analyze opportunities to advance equity in health and health care, and they will come away with a plan for an initiative that can be implemented in their professional context.
Summer Term
1 Course Unit

HCIN 6170 Leading Change in Health Care
There has been no shortage of recommendations from executives, consultants, and self-declared experts on how to improve health care. But the success rate for implementation has been low, and health care systems still struggle with problems of quality, cost, and access—not to mention high employee turnover and provider burnout. However, across the country, there have been pockets of success in improving care delivery. A number of best practices show promise, including open access scheduling, care coordination and standardization, performance measurement and feedback, the expansion of palliative care, community health worker programs, and the integration of behavioral care. Through lectures, case studies presented by multiple expert faculty, and interviews with leaders in the field, you will examine these transformative practices, and the leadership techniques that have led to their success. You will identify organizations that are primed for transformation, potential directions for leading transformation, and ways to direct change within your organization.
1 Course Unit
Health Care Management (HCMG)

**HCMG 0001 Introduction to Health Economics**
HCMG 0001: In Introduction to Health Economics, you will explore the application of economic principles to the health care sector. The course emphasizes the importance of scarcity and incentives in guiding the decision and interactions of key players, including care providers, payers, patients and producers. Course content highlights the critical economic issues in producing, delivering, and financing health care. Through video lectures, synchronous class meetings and discussions with your peers, you will learn to analyze determinants of demand for medical care, the unique role of physicians in resource allocation, the role of health insurance, and competition in medical care markets. The course focuses on the US health care context, but the economic principles applied are relevant to a range of systems.

0.5 Course Units

**HCMG 1010 Health Care Systems**
This introductory course takes a policy and politics angle to health care’s three persistent issues - access, cost and quality. The roles of patients, physicians, hospitals, insurers, and pharmaceutical companies will be established. The interaction between the government and these different groups will also be covered. Current national health care policy initiatives and the interests of class members will steer the specific topics covered in the course. The course aims to provide skills for critical and analytical thought about the U.S. health care system and the people in it.

Fall or Spring

1 Course Unit

**HCMG 2020 The Economics and Financing of Health Care Delivery**
The course provides an application of economic models to demand, supply, and their interaction in the medical economy. Influences on demand, especially health status, insurance coverage, and income will be analyzed. Physician decisions on the pricing and form of their own services, and on the advice they offer about other services, will be considered. Competition in medical care markets, especially for hospital services, will be studied. Special emphasis will be placed on government as demander of medical care services. Changes in Medicare and regulation of managed care are among the public policy issues to be addressed. Prerequisite: If course requirement not met, permission of instructor required.

Fall or Spring

Also Offered As: ECON 0390, ECON 0630
Prerequisite: ECON 0100 OR ECON 0110

1 Course Unit

**HCMG 2040 Comparative Health Care Systems**
This course examines the structure of health care systems in different countries, focusing on financing, reimbursement, delivery systems and adoption of new technologies. We study the relative roles of private sector and public sector insurance and providers, and the effect of system design on cost, quality, efficiency and equity of medical services. Some issues we address are normative: Which systems and which public/private sector mixes are better at achieving efficiency and equity? Other issues are positive: How do these different systems deal with tough choices, such as decisions about new technologies? Our main focus is on the systems in four large, prototypical OECD countries—Germany, Canada, Japan, and the United Kingdom—and then look at other countries with interesting systems—including Italy, Chile, Singapore, Brazil, China and India. We draw lessons for the U.S. from foreign experience and vice versa.

Spring

Mutually Exclusive: HCMG 8590

1 Course Unit

**HCMG 2130 Health Care Strategy and Management: the Business of Health Care**
This course presents an overview of the business of health and how a variety of health care organizations have gained, sustained, and lost competitive advantage amidst intense competition, widespread regulation, high interdependence, and massive technological, economic, social and political changes. Specifically, we evaluate the challenges facing health care organizations using competitive analysis, identify their past responses, and explore the current strategies they are using to manage these challenges (and emerging ones) more effectively. Students will develop generalized skills in competitive analysis and the ability to apply those skills in the specialized analysis of opportunities in producer (e.g. biopharmaceutical, medical product, information technology), purchaser (e.g. insurance), and provider (e.g. hospitals, nursing homes, physician) organizations and industry sectors. The course is organized around a number of readings, cases, presentations, and a required project.

Fall

Prerequisite: HCMG 1010

1 Course Unit
HCMG 2150 Management and Economics of Pharmaceutical and Biotech Industries
This course explores the key phases of the pharmaceutical and biotechnology product lifecycle. The product journey begins in the lab where scientists explore a vast array of compounds against diseases (therapeutic targets). Compounds that perform best enter the capital-intensive clinical trial phase aimed at assessing the product’s safety and efficacy. In parallel, regulatory agencies guide and govern these trials and ultimately decide which products are approved for use in patients. Once approved, launched, and priced, products face many dynamic market forces including competitors trying to steal share, government and private payers placing downward pressure on price, regulatory agencies controlling what manufacturers can and cannot say about their products, generic manufacturers challenging existing patents, and finally patients and physicians who behave both rationally and irrationally when deciding which product to use. While the course perspective is global in nature, the emphasis is on the U.S., the largest and most profitable market. In addition, we will delve into the world of biotech start-ups from company creation and financing, to how they make decisions which compounds to advance. We will also explore how large pharma views the biotech industry to bolster their existing pipelines and drive shareholder value. Through case studies, readings, guest speakers, and in-class exercises, students will learn concepts and analytical frameworks and acquire the tools and skills necessary to become the future leaders of the pharmaceutical and biotech industry.

Spring
Prerequisite: HCMG 1010 OR ECON 0100 OR ECON 0110
1 Course Unit

HCMG 2160 Health Insurance and Health Care Strategy
This course combines the insights of health economics with a strategic perspective on the business of health. The first section will consider the costs and benefits of medical interventions, while the second considers insurance theory and places special emphasis on the challenges facing firms in the face of the rising costs of health benefits as well as opportunities for private insurers operating in publically financed markets. The third section will analyze strategies of vertical and horizontal integration and their effect on the balance of power in local healthcare markets. Finally, the course will cover the effects of reform on firm incentives. The course will be taught using a mix of lectures and cases.

Spring
1 Course Unit

HCMG 2500 Health Care Reform and the Future of the American Health Care System
This course provides students with a rigorous understanding of the current American health care system and how it is likely to evolve over the next decade. The course will focus on six topics: 1) the development of the current health care system; 2) challenges of health care costs, quality, and access; 3) lessons of previous attempts to reform the system including the Affordable Care Act (ACA); 4) analysis of current policies regarding provider payment, technology, and electronic health records and how various sectors (e.g. public health and hospitals) are evolving in the current system; 5) drug pricing and potential strategies for reform, and 6) future megatrends in American health care system. Throughout the course, lessons will integrate basic health economics, history, health policy, and politics to elucidate key principles for understanding the health care system. The course will also examine at least one other country's health system for comparison. The course will end with a consideration of the long term outlook for the structure of the US health system and potential reform. Numerous expert guest speakers will give their perspectives throughout the semester.

Fall
1 Course Unit

HCMG 3020 Economics and Financing of Health Care Delivery
This course provides an application of economic principles to the health care sector. By recognizing the importance of scarcity and incentives, this course will focus on the critical economic issues in producing, delivering, and financing health care. In particular, the course will analyze determinants of demand for medical care, such as health status, insurance coverage, and income; the unique role of physicians in guiding and shaping the allocation of resources in medical care markets; and competition in medical care markets, especially among hospitals. Special emphasis will be placed on the evaluation of policy instruments such as government regulation, antitrust laws, 'sin taxes' on cigarettes and alcohol, and public health programs. Students who take HCMG 302 may also take HCMG 202 (ECON 039) for further credit.; knowledge of calculus and basic microeconomics is recommended.

Fall
Prerequisites: Knowledge of calculus and basic microeconomics is recommended.
1 Course Unit

HCMG 3220 The Health Care Ecosystem: Evolution, Structure and Current Issues
This course provides an application of economic principles to the health care ecosystem, focusing primarily on the US health care sector. By recognizing the importance of scarcity and incentives, this course will focus on the critical economic issues in producing, financing, and delivering efficient and equitable health care. In particular, the course will discuss the tension between cost, access and quality of care; analyze the determinants of demand for medical care; discuss the role of health insurance and the complexities it brings; study the unique role of physicians in guiding and shaping the allocation of resources in medical care markets; and analyze competition in medical care markets, especially among hospitals. Special emphasis will be placed on the evaluation of policy instruments such as government regulation, antitrust laws, and public health programs. Knowledge of calculus and basic microeconomics is highly recommended. Students who take HCMG 3220 may also take HCMG 3520 for further credit.
1 Course Unit
HCMG 3330 Leading the Health Care Workforce
The nature of the healthcare industry presents a unique set of managerial challenges. The health care workforce operates in a complex, fast-paced, uncertain, and interdependent environment. Power dynamics, hierarchy, and specialization make coordination particularly difficult in this setting. The course will provide students with frameworks and tools from management science tailored to the health care setting. At the end of the course, students will: (1) be able to apply evidence-based management principles to health care contexts and (2) have practical skills for leading, managing, and thriving in health care.

Fall
1 Course Unit

HCMG 3520 Health Services Delivery: A Managerial Economic Approach
The purpose of this course is to apply economics to an analysis of the health care industry, with special emphasis on the unique characteristics of the US healthcare markets, from pre-hospital to post-acute care. This course focuses on salient economic features of health care delivery, including: the role of nonprofit providers, the effects of regulation and antitrust activity on hospitals, the degree of input substitutability within hospitals, the nature of competition in home health care, public versus private provision of emergency medical services, the effect of specialty hospitals and ambulatory surgery centers, the economics of direct-to-consumer advertising and its effect on drug safety, defining and improving medical performance in hospitals, specialization and investment in physical and human capital, and shifting of services between inpatient and outpatient settings and its effect on health care costs and quality.

Spring
Mutually Exclusive: HCMG 8520
1 Course Unit

HCMG 3570 Healthcare Data and Analytics
Health care data creates unparalleled opportunities to save lives, improve health, strengthen the health care workforce, reduce costs, and increase efficiency. But it also presents a unique set of challenges ranging from privacy to data consistency. In this course, we begin by surveying the health care data landscape and then turn to how to use this rich data to better manage care and organizations. We will refine the art of asking good questions and gain first-hand experience applying analytics to answer them. We will also examine innovative businesses focused on health care data and analytics. At the end of this course, students will: (1) Understand the topography of the health care data landscape, (2) Have the skills necessary to be thoughtful consumers of evidence on health care, (3) Be able to use data and analytics to improve care and health care management, and (4) Anticipate business opportunities in health care data and analytics.

Fall
Mutually Exclusive: HCMG 8570
0.5-1 Course Unit

HCMG 3910 Health Care Entrepreneurship
Delivering basic health care advances worldwide and continuing to increase lifespan and quality (in an affordable manner) represent some of the major societal challenges of our time. Addressing these challenges will require innovation in both medical technology and the ways in which health services are delivered. Through readings, cases, guest lectures, and your own entrepreneurial work outside of class, we will examine the environment facing prospective health care entrepreneurs: (1) sources of health care innovation; (2) the many "customers" in health care: patients, doctors, hospitals, insurers, and regulators; (3) the powerful established firms with developed clinical and sales expertise; (4) the investing community. Along the way we will develop a framework for thinking about what is different (and what is not) about the challenges of health care entrepreneurship.

Fall
1 Course Unit

HCMG 6530 Health Care Management Field Application Project
This course focuses on leadership and management issues in health care organizations while providing students with a practice setting to examine and develop their own management skills. Each team acts as a consultant to a healthcare organization which has submitted a project proposal to the course. The teams define the issue and negotiate a contract with the client organization. By the end of the semester, teams present assessments and recommendations for action to their clients and share their experience and key lessons learned in a final presentation to their classmates.

Spring
Prerequisite: HCMG 8410
1 Course Unit

HCMG 8410 Introduction to Health Management and Economics
This course provides an introduction to the field of health care economics and management. Using an economic approach, the course will provide an overview of the evolution, structure and current issues in the health care ecosystem. It examines the unique features of health care services, products and markets, with a specific focus on the changing relationships between patients, physicians, hospitals, insurers, employers, communities, and government. In particular, the course focuses on three broad segments of the health care industry: payors, providers, and producers. NOTE: This is a required course for Wharton Graduate Health Care Management majors; it counts as an elective course for all other Wharton Graduate students. It is also open to Law School and Nursing School students with a joint Wharton Program.

Fall
0.5-1 Course Unit
HCMG 8450 US Payer and Provider Strategy
This course, co-taught with Brad Fluegel (former Chief Strategy Officer at Aetna, Anthem, and Walgreens and presently on the boards of several health care firms, including Fitbit and Premera Blue Cross), provides an overview of the challenges facing payers and providers in US healthcare as well as the strategies they use (or should use) to succeed. We cover all major aspects of the healthcare sector as seen from the perspective of payers and providers, starting from their core products and services (consumer preferences and health plan design, provider quality), the market environment they operate in (regulation and the role of public insurers, payment reforms, rising costs, and consolidation), and their strategic and operational responses (new organization models, mergers and acquisitions, and new ventures). The pedagogy is accordingly a mix of faculty lectures and talks by senior industry leaders to balance theory and practice.
Spring
0.5-1 Course Unit

HCMG 8490 Financial Management of Health Institutions
This course focuses on health care organizations' financing and financial decisions in the changing health care landscape. The course involves case analyses and lectures, including presentations by practitioners with extensive real-world experience. Students seeking careers in health care with minimal finance background will obtain a solid introduction to key areas of health care finance and financial decision making. Students with more background will extend and enhance their analytical skills in a variety of important areas.

HCMG 8660 The Digital Transformation of Health Care
Healthcare is in the early stages of extraordinary change in the business model of care delivery and financing. This transformation will lead to a system based on the proactive management of health, integration of care across the continuum, blurred boundaries between care providers and purchasers and the placement of the consumer at the center. As has been the case in other industries, this new business model will be based on a foundation of diverse, potent, and well implemented information technology. This course will help prepare students to lead a digital health future. Specifically, the course will cover three major areas. (1)The context of health care information technology: the size, composition and evolution of the digital health market; federal government agencies, and related regulations, that shape the market; leadership roles and factors that enable healthcare organizations to effectively implement and leverage information technology. (2)Emerging technologies that will fuel the transformation of healthcare: artificial intelligence and advanced analytics; interoperability; telehealth; consumer-directed digital health; use of behavioral economics to influence patient and provider decisions. (3)Digital health use by specific sectors of the healthcare industry: healthcare providers; health plans; retail-based primary care; life sciences; wellness and chronic disease management. The course will include lectures from industry leaders who will share their ideas and experiences.

0.5 Course Units

HCMG 8680 Private Sector Role in Global Health
Issues surrounding global health have captivated the attention of the public sector and foundations for many decades. Many of their initiatives are realizing progress on the health-related Millennium Development Goals. The private sector has been less engaged in global health, but has a significant role to play in providing resources and in building infrastructure, human resource capacity and sustainability. This course explores entrepreneurial and other private sector solutions for health services and access to medicines and technologies in the developing world and other underserved areas. The course also encompasses study of creative programs to engage the private sector in development of vaccines and medicines for tropical and neglected diseases. Furthermore, the course addresses novel care systems and therapeutic strategies for the rapidly growing burden of chronic, non-communicable diseases in the developing world. In short, the course builds on the content of conventional global health courses from a managerial and entrepreneurial perspective. Learning is driven through readings, class discussion and a series of guest speakers representing a wide range of global health issues. Evaluation is largely based on a student group project.

HCMG 8900 Advanced Study Project: Management of Health Care Service Businesses
HCMG 8900-001: This course examines issues related to the Services Sector of the health care industry. For those interested in management, investing, or banking in the health care industry, the services sector will likely be the largest and most dynamic sector within all of health care. We will study key management issues related to a number of different health care services businesses with a focus on common challenges related to reimbursement, regulatory, margin, growth, and competitive issues. We will look at a number of different businesses and subsectors that may have been unfamiliar to students prior to taking the course. We will make extensive use of outside speakers, many of whom are true industry leaders within different sectors of the health care services industry. Speakers will address the current management issues they face in running their businesses as well as discuss the career decisions and leadership styles that enables them to reach the top of their profession. Students will be asked to develop a plan to both buy out and manage a specific health care services business of their choosing and will present their final plans to a panel of leading Health Care Private Equity investors who will evaluate their analysis. Prerequisites: HCMG 8410. Health Care Management MBA majors only

HCMG 9000 Proseminar in Health Economics: Models and Methods
This course is intended to provide entering doctoral students with information on the variety of health economics models, methods, topics, and publication outlets valued and used by faculty in the HCMG doctoral program and outside of it. The course has two main parts: the first, to acquaint students with theoretical modeling tools used frequently by health economists. This part of the course involves a number of lectures coupled with students’ presentations from the health economics, management and operations research community at Penn on a research method or strategy they have found helpful and they think is important for all doctoral students to know.

Fall or Spring
1 Course Unit

HCMG 9010 Proseminar in Health Economics: Health Econometrics
This course will cover empirical methods used in economics research with an emphasis on applications in health care and public economics. The methods covered include linear regression, matching, panel data models, instrumental variables, regression discontinuity, bunching, qualitative and limited dependent variable models, count data, quantile regressions, and duration models. the discussion will be a mix of theory and application, with emphasis on the latter. The readings consist of a blend of classic and recent methodological and empirical papers in economics. Course requirements include several problem sets, paper presentations, an econometric analysis project and a final exam. The course is open to doctoral students from departments other than Health Care Management with permission from the instructor.

Spring
1 Course Unit
HCMG 9020 Special Topics in Health Economics: The Industrial Organization of Health Care
This advanced PhD seminar will explore topics in the industrial organization of health care and structural econometric approaches in health economics. The focus in this course is the development of advanced econometric tools. The (tentative) topics covered include health insurance and hospital demand estimation, the analysis of hospital competition, insurer competition, quality competition, technology adoption, models of entry and exit and dynamic oligopoly games. The readings will focus on recent advances in economics. Students are required to present recent research from the field and write an empirical research paper that broadly based on the topics covered in the course. With the permission of the instructor, the seminar is open to doctoral students from departments other than Health Care Management.
Fall
1 Course Unit

HCMG 9030 Economics of Health Care and Policy
This course applies basic economic concepts to analyze the health care market and evaluate health policies. The course begins with a discussion of productivity in health care and of the theoretical and empirical effects of asymmetric information and market failure. The second part of the course explores several topic areas in the health care economics literature: health insurance and the labor market; health policy interventions; and health as human capital. The third part of the course examines competition and the behavior of health care providers, with emphasis on the impact of policy on competition, behavior, and finally, bringing us full circle, health care productivity.
Spring
1 Course Unit

HCMG 9040 Doctoral Seminar in Organizational Behavior and Theory in Health Care
This course introduces students to organizational behavior and theory (OBT) by examining key issues in OBT, different perspectives on key issues, and how OBT informs health services research and practice. This course examines "micro" theories (i.e., social psychological theories of organizational behavior) and "macro" theories (i.e., theories focused on the structural and environmental aspects of organizations). We will examine the strengths and weaknesses of various theories, how they can be used as a foundation for research, methods used to study them, and the implications for health policy and management. Examples of published health services research grounded in OBT will be discussed so that students become familiar with the theories-in-use and various publication outlets for health care management (HCM) research.
Fall
1 Course Unit

Health Policy Research (HPR)

HPR 5010 Economics of Health Care Delivery
This course examines how medical care is produced and financed in private and public sectors, economic models of consumer and producer behavior, applications of economic theory to health care. Prerequisite: Course only open to Masters of Science in Heath Policy Research students unless by special request.
Spring
1 Course Unit

HPR 5030 Qualitative Methods in Health Research
The purpose of this course is to expose students to a variety of qualitative approaches/methodologies that may be used in health services/policy research. In didactics we will discuss the pros and cons of a range of qualitative Methods, how the method is actually implemented (with multiple experts presenting approaches), and pair the presentation with a broader discussion in which students compare and contrast health oriented articles in which the method was used. Students will have the opportunity to apply the theoretical approaches to their own research interests with direct input from the faculty and their peers. Prerequisite: Permission needed from Instructor.
Summer Term
1 Course Unit

HPR 5500 Clinical Economics and Decision Making
This course focuses on the application of decision analysis and economic analysis to clinical and policy research. It provides an introduction to the general tools for decision analysis, including decision trees and Markov models, assessment of costs and patient preferences, and assessment of cost-effectiveness. Special emphasis is placed on second-order Monte Carlo analysis and its use in the construction of measures of sampling uncertainty for cost-effectiveness analysis. Seminars will include didactic material, practical exercises that include problem solving, critically analyzing published articles and learning to use computer software that facilitates decision and economic analyses.
Spring
Also Offered As: EPID 5500
1 Course Unit

HPR 5800 Outcomes Research
This course is divided into two main parts. The first part addresses issues related to the measurement of quality in health care. Included is a review of the classical structure-process-outcome quality paradigm. The paradigm's strengths and limitations are addressed. This part especially focuses on outcome measures of quality, and examines the validity of alternative measures. The second part deals with observational, or quasi-experimental, research studies. It addresses the advantages and limitations of alternative designs, and covers the role of clinical risk adjustment in observational studies of medical interventions. It focuses on the problem of selection bias, and reviews recent methods for dealing with this bias, such as instrumental variables. Prerequisite: Introductory course in statistics including regression methods. Permission of instructor if prerequisite is not met.
Fall
Also Offered As: EPID 5800
1 Course Unit

University of Pennsylvania Undergraduate Catalog 2023-24 Catalog | Generated 08/02/23
HPR 5880 Advanced Leadership Skills in Community Health
Grounded in a social justice perspective, this course aims to provide the student with a foundational overview of the field of community health and leadership skills in public health advocacy. The course encourages critical thinking about health outcomes framed by the broad context of the political and social environment. This course analyzes the range of roles and functions carried out by leaders in healthcare advocacy for marginalized communities; integrates knowledge of health policy and the key influence of government and financing on health outcomes; explores community-based participatory research and interventions as tools for change; and discusses ways to develop respectful partnerships with community organizations. An assets-based approach that draws upon the strengths of communities and their leaders provides a foundation for community-engagement skill building. The course emphasizes the development of skills and techniques to lead effective, collaborative, health-focused interventions for disenfranchised groups, including residents of urban neighborhoods. Prerequisite: Undergraduates with permission of the instructor
Spring
Also Offered As: NURS 5870, PUBH 5880
1 Course Unit

HPR 5940 Critical Multimodal Qualitative Research Across the Professions
Created in collaboration with Schools of Design and Law, this course is designed to introduce professional school students to critical, multimodal and experimental ethnographic qualitative research methods. The coverage of the course includes both theoretical and applied components. The course is divided into five modules. The first module explores the theory of critical ethnographic qualitative research and the ethical issues that arise when undertaking collaborative research around the "everyday culture" of communities and institutions with which practitioners in the students' chosen areas of study typically interact. The second module allows students to analyze qualitative research in professional fields of study and in dialogue with Penn faculty whose qualitative research addresses significant issues of importance to practitioners in law, business, medicine and planning. This module will also begin a discussion of the tasks of formulating critical qualitative research projects and analyzing data. The third module is devoted to qualitative data collection methods (participant observation, oral histories and in-depth interviews) and the modes and tools used in collecting qualitative data and reporting results (traditional or text-based, multimodal, and experimental). The final module considers in greater depth the role of aesthetics, advocacy and activism in utilizing multimodal approaches for sharing research findings with audiences consisting of academics, collaborators, fellow professionals, and the general population.
Fall or Spring
1 Course Unit

HPR 6000 Health Services Research and Innovation Science
This course will provide students with an introduction to health services and health policy research. First, faculty representing various departments and and schools at the University of Pennsylvania will introduce students to a number of “hot topics,” including health disparities, medical decision making, neighborhoods and health, quality of care, access to care, behavioral incentives, and cost effectiveness research. Second, the course will offer an introduction to various career paths in the research and policy domains. Third, the course will provide a brief overview of practical issues such as grant opportunities, data options, publishing, and dissemination. Prerequisite: This course is only open to Masters of Science in Health Policy Research students.
Summer Term
1 Course Unit

HPR 6030 Health Services and Policy Research Methods I: Primary Data Design and Collection
This course will introduce students to commonly used primary data collection methods and provide multiple examples of how they have been used in health services research. Through the course students will define a primary data collection research project and develop the methods necessary to conduct the project. To get the full benefit of this course, students should use this course to develop the methods they plan to employ in their primary data collection project. Prerequisite: Permission needed from instructor.
Fall
1 Course Unit

HPR 6040 Introduction to Statistics for Health Policy
This is the first semester of a two-semester sequence. It is an introductory statistics course covering descriptive statistics, probability, random variables, estimation, hypothesis testing, and confidence intervals for normally distributed and binary data. The second semester stresses regression models. Permission needed from instructor to enroll.
Summer Term
1 Course Unit

HPR 6050 Fundamentals of Health Policy
While academic researchers often think of health policy in terms of research evidence and outcomes, politics and political processes also play important roles. The purpose of this course is to provide those pursuing careers in health services research and health policy with an understanding of the political context from which U.S. health policy emerges. This understanding is important for researchers who hope to ask and answer questions relevant to health policy and position their findings for policy translation. This understanding is important as well to policy leaders seeking to use evidence to create change. The class provides an overview of the U.S. health care system and then moves on to more comprehensive understanding of politics and government, including the economics of the public sector, the nature of persuasion, and techniques and formats for communication. The course emphasizes reading, discussion and applied policy analysis skills in both written and oral forms. Concepts will be reinforced with case studies, written assignments and a final policy simulation exercise where students will be placed in the position of political advisors and policy researchers.
Prerequisite: Permission needed from Instructor.
Fall
1 Course Unit
HPR 6070 Health Services and Policy Research Methods II: Causal Inference Using Secondary Data
Empirical research for health care policy frequently involves the analysis of observational data—information that is not primarily collected for research purposes. With the rapid increase in U.S. health information technology capacity, future opportunities for research using these “secondary data” appear promising. The objective of this course is to teach the skills necessary to conduct quality health policy research using secondary data. These skills include formulating research aims and applying appropriate study designs for achieving these aims. The course will also include a survey of the content and structure of several commonly used administrative and public databases available to researchers and workshops to develop the skills to access and manipulate these valuable resources. Prerequisite: Permission needed from Instructor.
Spring
1 Course Unit

HPR 6080 Applied Regression Analysis for Health Policy Research
This course deals with the work-horse of quantitative research in health policy research—the single outcome, multiple predictor regression model. Students will learn how to 1) select an appropriate regression model for a given set of research questions/hypotheses, 2) assess how adequately a given model fits a particular set of observed data, and 3) how to correctly interpret the results from the model fitting procedure. After a brief review of fundamental statistical concepts, we will cover analysis of variance, ordinary least squares, and regression models for categorical outcomes, time to event data, longitudinal and clustered data. We will also introduce the concepts of mediation, interaction, confounding and causal inference. Prerequisite: Permission needed from Instructor.
Fall
1 Course Unit

HPR 6110 Implementation Science Institute
The Penn Implementation Science Institute is a virtual 4-day intensive course that introduces learners to the fundamentals of implementation science, including theories, models, frameworks, strategies, and outcomes. Course content is delivered synchronously through didactic presentations and small group work, with course faculty available for consultation during office hours before and after each day.
Summer Term
0.5-1 Course Unit

HPR 6200 Implementation Science in Health and Health Care
This course presents a survey of the field of implementation science in health. The structure of the course will include two parts. In the first part, we will introduce the field of implementation science, with an emphasis on theory, design and measurement. In the second part, we will focus on applied implementation science which will include examples of research programs in implementation science as well as applying insights of implementation science to practical implementation. An emphasis on qualitative and mixed methods approaches is included. Prerequisite: permission needed from Instructor.
Fall
1 Course Unit

HPR 6210 Advanced Topics in Implementation Science in Health
This seminar course offers an opportunity for students to advance their understanding of the thorniest methodological challenges in implementation science. Broadly, topics include study design, study execution, and tensions in the field. The intention will be for attendees to directly apply their learnings to their ongoing or proposed implementation research. This half credit course is intended for those who have already been exposed to the foundational content of implementation science. This can be achieved via HPR 611, the Penn Implementation Science Institute, or other training opportunities such as the NIH TIDIRH/TIDIRC or mentored K awards. Instructor permission is required for enrollment. Additional prerequisites: the Penn Implementation Science Institute, or other training opportunities such as the NIH TIDIRH/TIDIRC or mentored K awards.
Summer Term
Prerequisite: HPR 6110 AND HPR 6200
0.5 Course Units

HPR 6250 Pragmatic Clinical Trials in Healthcare
This seminar course offers an opportunity for students to understand what a pragmatic randomized controlled trial (RCT) is, how it differs from explanatory RCTs, why it is relevant, and key methodological and analytic issues that arise in the conduct of pragmatic trials. The student will also learn about ethical issues in pragmatic trials, nesting relevant studies within a trial, and trial reporting requirements. The intention will be for attendees to be able to directly apply their learnings to their ongoing or future clinical research.
0.5 Course Units

HPR 6370 Advocacy & Public Health: Turning Knowledge into Action
This course is designed to provide the foundational context and practical skills necessary to effectively identify public health problems, craft evidence-based solutions and advocate for those solutions in furtherance of public health objectives. The class will be interactive in nature and will require participation in public health advocacy exercises in order to hone advocacy skills. There will also be a focus on persuasive communication, both oral and written. We will explore the entire advocacy process from the identification of a problem and evaluation of possible public health policy solutions to utilizing the full range of advocacy tools to promote policy change. We will be using real-time examples of public health challenges affecting the health, safety and well-being of children and families here in Philadelphia and in communities across the country. Students will apply advocacy skills during an Injury & Violence Prevention Hill Day in Washington, D.C. with national partners. Not Offered Every Year
Also Offered As: NURS 5650, PUBH 6370
Prerequisite: PUBH 5050 OR PUBH 5070
1 Course Unit
HPR 6600 Applied Predictive Modeling for Health Services Research
The course offers an introduction to the principles and applications of predictive modeling. It is geared toward health services researchers with an emphasis on clinical and policy scenarios and the use of electronic health record and administrative claims data. The primary goals of this course are to help each student understand (1) the fundamental concepts of predictive modeling and what distinguishes it from traditional causal inference approaches in statistics, (2) the different evaluation metrics for model performance and their appropriate use and (3) the role of domain knowledge in developing a statistical plan for model development with the end-user in mind. Students will be building their own predictive models by the end of the course and may elect to use R, STATA or Python for coding exercises. No prior programming experience is required. A background in basic statistical principles would be helpful. Prerequisite: Permission needed from Instructor.
Summer Term
1 Course Unit

HPR 6700 Health Care Strategic Leadership and Business Acumen
The weeklong intensive course aims at developing essential business acumen and leadership skills required to thrive in a constantly changing health care ecosystem. Taught by invited faculty who have experience working with health care leaders, this course will focus on actionable knowledge in financial acumen, strategic decision making, innovation and building high-performance teams. Through interactive mixed-mode delivery methods, faculty will share tools and frameworks, always with a focus on how to apply them, both personally and within an organizational context. Prerequisite: Permission needed from Instructor.
Summer Term
1 Course Unit

HPR 7140 Grant Writing/Review
This course will assist students in the design of an NIH grant (F-32, K, R21 or R01) for submission by enhancing their appreciation of the specifics of the grant writing process and in understanding the grant review process. This course is designed to provide background, training, and practice with the writing and submitting of NIH style grants. As a minimum all students who enroll will be expected to write and submit a reasonable draft of a full NIH style grant proposal by the end of the term. During the process, the portions of each proposal will be reviewed as a group by the other students in the course. In response to each review, students are expected to revise their grant sections. Prerequisite: If course requirement not met, permission of instructor required.
Summer Term
Also Offered As: EPID 7140
Prerequisite: EPID 5100 AND EPID 5260 AND EPID 5600 AND EPID 5700
0.5 Course Units

HPR 7990 Independent Study
This course is designed to provide the student with an opportunity to gain or enhance knowledge and to explore an area of interest related to health policy research under the guidance of a faculty member. Prerequisite: Permission of Program Director and Faculty Member.
Fall, Spring, and Summer Terms
0.5-1 Course Unit

HPR 9900 Health Policy Research Thesis I
Each student completes a mentored research project that includes a thesis proposal and a thesis committee and results in a publishable scholarly product. Prerequisite: Course only open to Masters of Science in Health Policy Research students.
Fall or Spring
1 Course Unit

HPR 9901 Health Policy Research Thesis II
Each student completes a mentored research project that includes a thesis proposal and a thesis committee and results in a publishable scholarly product. Prerequisite: Course only open to Masters of Science in Health Policy Research students.
Fall or Spring
1 Course Unit

Healthcare Quality and Safety (HQS)

HQS 6010 Healthcare Quality: Landscape, Standards, and Measurement
This week-long hybrid course (in person + virtual online) provides a national perspective on the history and evolution of the US healthcare quality movement and the six components for high quality healthcare: safe, timely, effective, equitable, efficient, and patient-centered. Using a mix of local and national leaders in the field, the complexities of quality and the scientific basis for understanding the measurement of quality will be explored, including exposure to quality measures from a variety of organizations and measure comparison sites and the merging of quality outcomes with evolving reimbursement paradigms and models. The association between quality and safety and healthcare economics, regulation, accreditation, information technology, and population health will also be covered.
Summer Term
1 Course Unit

HQS 6020 Learning Health System Seminar Series
This seminar series will provide students with knowledge and skills in the learning healthcare system. Through lecture and interactive discussions with leaders across the University of Pennsylvania, students will expand their network of resources and collaborators for the learning health care system where they work.
Spring
0.5 Course Units

HQS 6030 Evaluating Quality Improvement and Patient Safety Programs
This course provides an overview of quantitative and qualitative methods for evaluating quality improvement and patient safety (QI/PS) efforts in healthcare. Through the use of assigned readings, discussion, and assignments, students will develop skills to critique evaluations of existing QI/PS projects and design a robust evaluation of a healthcare improvement initiative. Topics include the principles of good measurement, development of performance measures, intermediate and advanced concepts in statistical process control, and the research methods used in the evaluation of QI/PS interventions.
Fall
1 Course Unit
HQS 6060 Applied Clinical Informatics in Quality Improvement
This four-day intensive graduate institute applies core clinical informatics concepts in the context of quality improvement and patient safety initiatives. Content covered addresses foundational theories, frameworks, and policies of clinical informatics relevant to quality improvement and patient safety as well as practical application of informatics tools relevant to quality improvement efforts and local governance structure. Learners will be exposed to a variety of informatics leaders from across both the University of Pennsylvania Health System and Children's Hospital of Philadelphia. A hybrid structure of two full, in-person days with two half, virtual days with optional offers hours is intended to allow flexibility for learners while maximizing beneficial interactions between learner, instructors, and building the UPHS/CHOP informatics community Spring
Also Offered As: BMIN 6060
0.5 Course Units

HQS 6070 Safety and Quality Leadership in Healthcare Systems
This six week hybrid course will help develop core skills for emerging leaders of safety and quality in healthcare systems. The course will include a combination of self-assessments, encounters with exemplary leaders, group exercises, individual activities and readings that will provide the participants with a range of experiences designed to further student's own leadership journey. Summer Term
1 Course Unit

HQS 6080 Using Quality Improvement to Achieve Health Equity
This course provides learners with the tools to address health and health care inequities using quality improvement methods. Learners will be able to explore the upstream causes of health and healthcare inequities including historical and current day practices routed in racism, sexism, classism, and queer-and-transphobia, among other practices of oppression. This course explores different methods for the purposes of using them in conjunction with quality improvement (QI) frameworks to ensure health equity as a positive outcome of QI efforts. Common QI frameworks and outcome measures will be reviewed with a focus on how to use them in health equity QI work. In addition, the course includes topics of leadership and change management in order to support successful collaborations resulting in health equity. Learners will apply these themes in a final project, engaging an example of an inequitable processes or care to design a QI project with the goal of improving health equity. Spring
1 Course Unit

HQS 6120 Principles and Practice of Healthcare Quality Improvement
Healthcare delivery is complex and constantly changing. A primary mission of leading healthcare organizations is to advance the quality of patient care by striving to deliver care that is safe, effective, efficient, timely, cost effective, and patient-centered. The goal of this inter professional course is to provide students with a broad overview of the principles and tools of quality improvement and patient safety in healthcare while also guiding them through the steps of developing a quality improvement project. It will provide a foundation for students or practicing clinicians who are interested in quality improvement and patient safety research, administration, or clinical applications. As part of this course, students will design and plan for a real quality improvement project in their area of interest within healthcare using the methods and tools taught in the course. Fall
Also Offered As: NURS 6120
1 Course Unit

HQS 6400 Coaching in Quality Improvement Work
The purpose of this course is to provide participants with the skills and tools to successfully guide learners in experiential quality improvement (QI) work in healthcare while developing a network of educators with similar roles. Students will be placed into groups based upon their level of experience and confidence in teaching and advising learners in this field. Both groups will discuss topics such as QI project selection, using QI frameworks to structure teaching sessions, key organizational and team factors, providing feedback, common teacher and learner pitfalls in QI, and many others. This will be a blended course with three in-person workshops and monthly asynchronous online educational components with assignments. Fall
0.5 Course Units

HQS 6500 Systems Thinking in Patient Safety
This blended online/in-classroom graduate level course integrates principles of systems thinking with foundational concepts in patient safety. Utilizing complexity theories, students assess healthcare practices and identify factors that contribute to medical errors and impact patient safety. Using a clinical microsystem framework, learners assess a potential patient safety issue and create preventive systems. Lessons learned from the science of safety are utilized in developing strategies to enhance safe system redesign. Core competencies for all healthcare professionals are emphasized, content is applicable for all healthcare providers including, but not limited to, nurses, pharmacists, physicians, social workers and healthcare administrators, and may be taken as an elective by non-majors. Spring
Also Offered As: NURS 6500
1 Course Unit

HQS 6900 Quality Improvement Capstone I
The purpose of the quality improvement capstone is to provide a culminating experience in the program that requires the integration and application of knowledge attained in pre- and co-requisite coursework. The Capstone will build upon prior coursework that provided a broad overview of the principles and tools of quality improvement and patient safety in healthcare with a focus on implementation and sustainment of change. Students will apply this knowledge through completion of a mentored quality improvement project in a healthcare organization. In collaboration with faculty and health organization advisors, students will identify a quality improvement opportunity and use improvement methodology to describe the extent of the problem, analyze the current system, design tests of change (countermeasures), implement at least two plan-do-study-act cycles, and measure results. Students will also reflect on lessons learned and process of change. This is a hybrid course with virtual and in person components. Spring
Also Offered As: NURS 6950
1 Course Unit
HQS 9910 Quality Improvement Capstone II
The purpose of the quality improvement capstone II course is to provide a culminating experience in the master's program that requires the integration and application of knowledge attained in prior coursework. Students will build on the skills obtained throughout the master's program and specifically in Quality Improvement in Healthcare Capstone I (HQS990/NURS695) while continuing to lead and experience cycles of improvement work while measuring their results. Students will be required to write a final report and deliver an oral presentation for this course.
Fall, Spring, and Summer Terms
Also Offered As: NURS 6960
1 Course Unit

Hebrew (HEBR)

HEBR 0100 Elementary Modern Hebrew I
An introduction to the skills of reading, writing, and conversing in modern Hebrew. This course assumes no previous knowledge of Hebrew. A grade of B- or higher is needed to continue in the language.
Fall or Spring
Also Offered As: JWST 0100
1 Course Unit

HEBR 0200 Elementary Modern Hebrew II
A continuation of first semester Elementary Modern Hebrew, which assumes basic skills of reading and speaking and the use of the present tense. Open to all students who have completed one semester of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
Fall or Spring
Also Offered As: JWST 0200
Prerequisite: HEBR 0100
1 Course Unit

HEBR 0250 Elementary Biblical Hebrew II
A continued introduction to the grammar of Biblical Hebrew, focusing on the verbal system, with an emphasis on developing language skills in handling Biblical texts. A suitable entry point for students who have had some Modern Hebrew.
Spring
Also Offered As: JWST 0250
Prerequisite: HEBR 0150
1 Course Unit

HEBR 0300 Intermediate Modern Hebrew III
Development of the skills of reading, writing, and conversing in modern Hebrew on an intermediate level. Open to all students who have completed two semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
Fall or Spring
Also Offered As: JWST 0300
Prerequisite: HEBR 0200
1 Course Unit

HEBR 0350 Intermediate Biblical Hebrew I
This course will focus on using the grammar and vocabulary learned at the introductory level to enable students to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the punctuation marks used in the Bible. This is a suitable entry point for students who already have strong Hebrew skills.
Fall
Also Offered As: JWST 0350
Prerequisite: HEBR 0250
1 Course Unit

HEBR 0400 Intermediate Modern Hebrew IV
This course constitutes the final semester of Intermediate Modern Hebrew. Hence, one of the main goals of the course is to prepare the students for the proficiency exam in Hebrew. Emphasis will be placed on grammar skills and ability to read literary texts. Open to all students who have completed three semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
Fall or Spring
Also Offered As: JWST 0400
Prerequisite: HEBR 0300
1 Course Unit

HEBR 0450 Intermediate Biblical Hebrew II
This course is a continuation of the fall semester's Intermediate Biblical Hebrew I. No one will be admitted into the course who has not taken the fall semester. It will continue to focus on using the grammar and vocabulary learned at the introductory level to enable students to read biblical texts independently and take advanced Bible exegesis courses. We will concentrate this semester on various selections of Biblical poetry, including Exodus 15 and Job 28. We will also continue to translate English prose into Biblical Hebrew.
Spring
Also Offered As: JWST 0450
Prerequisite: HEBR 0350
1 Course Unit

HEBR 1000 Advanced Modern Hebrew: Conversation & Writing
In this course students are introduced to the vibrant world of contemporary Israeli culture by reading some of the best plays, poems, short stories and journalism published in Israel today. They also watch and analyze some of Israel's most popular films, TV programs, and videos. Themes include Jewish-Arab relations, the founding of the State, family ties and intergenerational conflict, war and society, and the recent dynamic changes in Israeli society. Students must have taken four semesters of Hebrew at Penn or permission of instructor. Since the content of this course may change from year to year, students may take it more than once (but only once for credit).
Fall or Spring
Also Offered As: JWST 1000
Prerequisite: HEBR 0400
1 Course Unit
HEBR 4000 Rabbinic Writers on Rabbinic Culture
This course traces reflections on rabbinic culture produced within Jewish legal literature of the classic rabbinic period - Midrash, Mishna, and Talmud - and in later juridical genres - Talmudic commentary, codes and responses. Attention will be paid to the mechanics of different genres, the role of the underlying proof text, the inclusion or exclusion of variant opinions, the presence of non-legal information, the balance between precedent and innovation. Reading knowledge of Hebrew is required.
Not Offered Every Year
Also Offered As: JWST 4000, RELS 4300
1 Course Unit

HEBR 5100 Elementary Modern Hebrew I
An introduction to the skills of reading, writing, and conversing in modern Hebrew. This course assumes no previous knowledge of Hebrew. A grade of B- or higher is needed to proceed to the next level.
Fall or Spring
1 Course Unit

HEBR 5200 Elementary Modern Hebrew II
A continuation of Elementary Modern Hebrew I, which assumes basic skills of reading and speaking and the use of the present tense. Open to all students who have completed one semester of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
Prerequisite: HEBR 5100
1 Course Unit

HEBR 5250 Elementary Biblical Hebrew II
A continued introduction to the grammar of Biblical Hebrew, focusing on the verbal system, with an emphasis on developing language skills in handling Biblical texts. A suitable entry point for students who have had some Modern Hebrew. Prerequisite: If course requirement not met, permission of instructor required.
Spring
Prerequisite: HEBR 5150
1 Course Unit

HEBR 5300 Intermediate Modern Hebrew III
Development of the skills of reading, writing, and conversing in modern Hebrew on an intermediate level. Open to all students who have completed two semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
Fall or Spring
Prerequisite: HEBR 5200
1 Course Unit

HEBR 5350 Intermediate Biblical Hebrew I
This course will focus on using the grammar and vocabulary learned at the introductory level to enable students to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the punctuation marks used in the Bible. This is a suitable entry point for students who already have strong Hebrew skills.
Fall
Prerequisite: HEBR 0250
1 Course Unit

HEBR 5400 Intermediate Modern Hebrew IV
This course constitutes the final semester of Intermediate Modern Hebrew. Hence, one of the main goals of the course is to prepare the students for the proficiency exam in Hebrew. Emphasis will be placed on grammar skills and ability to read literary texts. Open to all students who have completed three semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
Fall or Spring
Prerequisite: HEBR 5300
1 Course Unit

HEBR 5450 Intermediate Biblical Hebrew II
This course is a continuation of the fall semester’s Intermediate Biblical Hebrew I. No one will be admitted into the course who has not taken the fall semester. It will continue to focus on using the grammar and vocabulary learned at the introductory level to enable students to read biblical texts independently and take advanced Bible exegesis courses. We will concentrate this semester on various selections of Biblical poetry, including Exodus 15 and Job 28. We will also continue to translate English prose into Biblical Hebrew.
Spring
Prerequisite: HEBR 0350
1 Course Unit

HEBR 6000 Advanced Modern Hebrew: Conversation & Writing
After four semesters of language study, it’s time to enter the vibrant world of contemporary Israeli culture. In this course students read some of the best plays, poems, short stories, and journalism published in Israel today. They also watch and analyze some of Israel’s most popular films, TV programs, and videos. Themes include Jewish-Arab relations, the founding of the State, family ties and intergenerational conflict, war and society, and the recent dynamic changes in Israeli society. HEBR 054 or permission of instructor. Since the content of this course may change from year to year, students may take it more than once (but only once for credit).
Fall or Spring
Prerequisite: HEBR 0400
1 Course Unit

HEBR 6100 Seminar in Rabbinic Literature
Most of the foundational writings of rabbinic Judaism corpora of Midrash, Mishna, and the two Talmuds were in existence by the end of the sixth century CE. Yet, for several centuries thereafter, there is little evidence attesting to the lived nature of rabbinic culture and society. Course will focus on writings by Jews and about Jews, produced between the 7th and 10th centuries, complemented by secondary sources. Texts will include selections from archaeological inscriptions; Midrash; liturgical poetry; Targum; Masora; geonic responsa, writings by Muslims and by Church Fathers. While students must be able to read Hebrew, much class time will be devoted to the improvement of reading and comprehension skills. Undergraduates should seek permission of the instructor.
Spring
Also Offered As: JWST 5300, NELC 5300
1 Course Unit
HEBR 6200 Studies in Medieval Jewish Culture
Through close reading of primary sources in the original Hebrew, participants in this seminar will explore historical circumstances that engaged and shaped medieval Jews in both Christian and Muslim lands, along with the enduring cultural projects that Jews themselves produced. Topics will include Geonica, Karaism, the encounter of Reason and Revelation; the Christian “Other”: the Muslim “Other”; legal codification; the Tosafist project; Rhineland Pietism; Minhag (custom); family life; the aesthetic dimension; Kabbalah; conversos; messianism. Students should be able to comfortably read unpointed Hebrew.
Fall
Also Offered As: JWST 6200, RELS 6200
1 Course Unit

HEBR 9999 Independent Study
An independent study in Hebrew language for PhD students
1 Course Unit

Hindi (HIND)

HIND 0100 Beginning Hindi-Urdu Part I
In this course, students learn the fundamentals of Hindi-Urdu through hands-on practice using the language. Classes are interactive and there is a strong emphasis on the acquisition of speaking skills with attention to reading and writing to support this goal. Topics include: introductions; talking about yourself, your friends and your family; describing physical spaces such as the home and the city; daily life and daily routines; and likes, needs, wants, and interests. Students will also engage with level-appropriate authentic materials from the Hindi-Urdu speaking world. Beginning Hindi-Urdu I assumes no previous knowledge of Hindi-Urdu. Students with listening abilities but no speaking abilities are also welcome to enroll. The course teaches a single core spoken language style that is common to both Hindi and Urdu. All written materials are provided in both scripts, and students learn one script of their choosing.
Fall
Also Offered As: URDU 0100
Mutually Exclusive: HIND 5100
1 Course Unit

HIND 0200 Beginning Hindi-Urdu Part II
Beginning Hindi-Urdu II is the second part of the first-year Hindi-Urdu sequence. In this course, students continue to learn the fundamentals of Hindi-Urdu through hands-on practice using the language. Classes are interactive and there is a strong emphasis on the acquisition of speaking skills; students also continue to improve literacy skills in the script of their choice (Hindi or Urdu – all materials are provided in both scripts). New topics include but are not limited to: future plans, recounting past events, traveling in South Asia, and navigating shopping and travel-related situations. Students will also engage with level-appropriate authentic materials from the Hindi-Urdu speaking world. After completing this course, students will be able to interact successfully with native speakers in a variety of everyday communication contexts. Beginning Hindi-Urdu II assumes one prior semester of classroom study or the equivalent proficiency. Students with some speaking ability but no reading-writing abilities may place into the course but should contact the instructor a few weeks before the beginning of the semester to ensure that this is the appropriate level.
Spring
Also Offered As: URDU 0200
Mutually Exclusive: HIND 5200, URDU 5200
Prerequisite: HIND 0100 OR HIND 5100 OR URDU 0100 OR URDU 5100
1 Course Unit

HIND 0300 Intermediate Hindi Part I
Intermediate Hindi I is the first part of the second-year Hindi sequence. In this course, we review and refine first-year language skills while also significantly expanding those skills. The course provides students with the tools needed to engage confidently and substantively with other Hindi speakers and with authentic materials in Hindi. Course materials include Bollywood film clips, folk tales and mythology, and short flash fiction pieces about current societal issues. The materials are carefully selected for students of this level, they engage a mix of reading and listening skills, and they present core vocabulary which students will find useful in real-world communication contexts. In-class activities emphasize speaking through structured, form-focused practice; pair and group discussions; and a variety of additional engaging topics. The course assumes the prior successful completion of Beginning Hindi-Urdu I or the equivalent proficiency. Students who can speak Hindi but are unable to read or write may place into this course but should contact the instructor a few weeks before the beginning of the semester to ensure that this is the appropriate level.
Fall
Prerequisite: HIND 0100 OR HIND 5100 OR HIND 0200 OR HIND 5200
1 Course Unit

HIND 0400 Intermediate Hindi Part II
Intermediate Hindi II is the second part of the second-year Hindi sequence. The course refines and expands students’ incoming language skills. It provides students with the tools needed to engage confidently and substantively with other Hindi speakers and with authentic materials in Hindi. Course materials include Bollywood film clips, folk tales and mythology, news media, and additional materials addressing topics of relevance in current north Indian society. The materials are carefully selected for students of this level, they engage a mix of reading and listening skills, and they present core vocabulary which students will find useful in real-world communication contexts. In-class activities emphasize speaking through structured, form-focused practice; pair and group discussions based on assigned materials; and a variety of additional engaging topics. The course assumes the prior successful completion of Intermediate Hindi I. Students who have not previously taken Hindi should contact the instructor for placement into the appropriate level. This course fulfills the College’s language requirement.
Spring
Prerequisite: HIND 0300 OR HIND 5300
1 Course Unit
HIND 1500 Advanced Hindi
This is an advanced course designed to expand students' language abilities while also deepening their understanding of the Hindi-speaking world. The course is organized around the following three areas of focus: 1) Surveying Hindi – We survey a range of Hindi sources – literary, journalistic, contemporary, historical, print, video – that provide diverse viewpoints on the social and cultural life of South Asia and Hindi-speaking communities. 2) Situating Hindi – The course places course materials in historical context and explores Hindi's place in the language politics of South Asia. 3) Using Hindi – We devote time to understanding the linguistic structure of Hindi and its vocabulary to enable students to speak and write Hindi with greater confidence and precision. Classes are interactive. Prerequisite: Intermediate Hindi II or the equivalent proficiency. Please contact the instructor for placement. This course fulfills the College's cross-cultural analysis requirement. Topics vary by semester and the course may be repeated for credit. Students who complete two semesters may earn a Hindi Language Certificate, which will be noted on their transcript.
Fall
Prerequisite: HIND 0300 OR HIND 5300 OR HIND 0400 OR HIND 5400
1 Course Unit

HIND 5100 Beginning Hindi-Urdu Part I
This introductory course core proficiency in Hindi-Urdu up to the intermediate level. It is designed for students with little or no prior exposure to Hindi or Urdu. The course covers all four language skills (speaking, listening, reading, and writing) and all three models of communication (interpersonal, presentational, interpretive). Students will develop literacy skills in the primary script of their choice (Hindi or Urdu script). All written materials will be provided in both scripts. All meetings are interactive and students acquire the language by using it in realistic contexts. Culture is embedded in the activities and is also introduced through various authentic materials.
Fall
Also Offered As: URDU 5100
Mutually Exclusive: HIND 0100

1 Course Unit

HIND 5500 Advanced Hindi
Advanced Hindi aims at systematically developing higher level linguistic functions and cultural nuances. Students learn to describe, narrate and support opinions in informal and formal styles. The objective of the course is to promote a meaningful interaction with written literature and with native speakers in a socially acceptable manner in a variety of simple and complicated situations. A variety of authentic materials are used, such as short stories, plays, newspapers, magazines, videos, television and radio broadcasts, and interviews. Every semester the course materials and foci vary depending on the needs and interests of students in the class.
Fall
1 Course Unit

Historic Preservation (HSPV)

HSPV 5210 American Architecture
This course is a survey of architecture in the United States. The organization, while broadly chronological, emphasizes themes around which important scholarship has gathered. The central purpose is to acquaint you with major cultural, economic, technological, and environmental forces that have shaped buildings and settlements in North America for the last 400 years. To that end, we will study a mix of "high-style" and "vernacular" architectures while encouraging you to think critically about these categories. Throughout the semester, you will be asked to grapple with both the content of assigned readings (the subject) and the manner in which authors present their arguments (the method). Louis Sullivan, for instance, gives us the tall office building "artistically considered" while Carol Willis presents it as a financial and legal artifact. What do you make of the difference? Finally, you will learn how to describe buildings. While mastery of architectural vocabulary is a necessary part of that endeavor, it is only a starting point. Rich or "thick" description is more than accurate prose. It is integral to understanding the built environment - indeed, to seeing it at all.
Fall
1 Course Unit
HSPV 5310 American Domestic Interiors
This course will examine the American domestic interior from the
seventeenth through the twentieth centuries with emphasis on the
cultural, economic, and technological forces that determined the
decoration and furnishing of the American home. Topics covered include
the evolution of floor plans; changes in finish details and hardware; the
decorative arts; floor, wall, and window treatments; and developments
in lighting, heating, plumbing, food preparation and service, as well as
communication and home entertainment technologies. In addition to
identifying period forms and materials, the course will offer special emphasis on historic finishes. The final project will involve re-creation of
a historic interior based on in-depth documentary household inventory
analysis, archival research, and study. Students will create a believable
house interior and practice making design and furnishing choices based on evidence. Several class periods will be devoted to off-site field trips.
Spring
1 Course Unit

HSPV 5340 Public History - Theory and Practice
This seminar is required for students wishing to concentrate on the
Public History of the Built Environment while pursuing an MS in Historic Preservation. It builds on skills developed in HSPV 5210 (American Architecture), HSPV 6000 (Documentation), and HSPV 6060 (Site Management); only HSPV 6000 is a prerequisite. Unlike many public history courses, this one focuses on interpretation of the built environment. While proficiency in archival research is required, an understanding of form and chronology in American architecture is helpful. Fundamentally, this course is about community, memory, and their relationship to built form. As such, it examines oral history methodology and includes readings in sociology and ethnography. It acknowledges that while buildings and landscapes are in one sense simply larger forms of material culture than furniture or other movable objects, they also "work" differently by dint of being inhabited, occupied, and publicly encountered, forming de facto frameworks for private and public life. More than other courses, this one grapples with interpretation and dissemination - everything from signage and monuments to websites and exhibits. It is not, however, a tutorial in the use of those media so much as a chance to reflect critically on their strengths and weaknesses in different contexts.
Spring
Prerequisite: HSPV 6000
1 Course Unit

HSPV 5380 Cultural Landscapes and Landscape Preservation
The course surveys and critically engages the field of cultural landscape studies. Over the semester, we will explore cultural landscape as a concept, theory and model of preservation and design practice; we will read cultural landscape historiography and creative non-fiction; we will examine a range of types (national parks, community gardens, designed landscapes, informal public spaces), and we will map the alternative preservation, planning and design methods that ground cultural landscape studies practically. Readings, class discussions, and projects will draw on cultural geography, environmental history, vernacular architecture, ecology, art, and writing.
Not Offered Every Year
Also Offered As: LARP 7380
1 Course Unit

HSPV 5510 Building Pathology
This course addresses the subject of deterioration of buildings, their
materials, assemblies and systems, with the emphasis on the technical aspects of the mechanisms of deterioration and their enabling factors, material durability and longevity of assemblies. Details of construction and assemblies are analyzed relative to functional and performance characteristics. Lectures cover: concepts in durability; climate; psychometric, soils & hydrologic; conditions; physics of moisture in buildings; enclosure, wall and roof systems; structural systems; and building services systems with attention to performance, deterioration, and approaches to evaluation of remedial interventions.
Spring
Prerequisite: HSPV 5550
1 Course Unit

HSPV 5520 Building Diagnostics and Monitoring
Building diagnostics pertain to the determination of the nature of a building's condition or performance and the identification of the corresponding causative pathologies by a careful observation and investigation of its history, context and use, resulting in a formal opinion by the professional. Monitoring, a building diagnostic tool, is the consistent observation and recordation of a selected condition or attribute, by qualitative and/or quantitative measures over a period of time in order to generate useful information or data for analysis and presentation. Building diagnostics and monitoring allow the building professional to identify the causes and enabling factors of past or potential pathologies in a building and building systems, thus informing the development appropriate interventions or corrective measures. In the case of heritage buildings, the process informs the selection of interventions that satisfy the stewardship goals for the cultural resource. In the case of recently constructed buildings, the process informs the identification of envelope and systems interventions for improved performance and energy efficiency.
Fall
1 Course Unit

HSPV 5550 Architectural Conservation
Architectural Conservation is an introduction to the technical study of traditional building materials. This knowledge is essential preparation for any professional engaged in the conservation and adaptive reuse of structures built before the mid 20th century. The course focuses on these materials' properties, performance, and especially weathering, and the basic laboratory-based methods that can be employed for their study, characterization, and specification for restoration. Lectures and coordinated laboratory sessions introduce the history of use, composition, and deterioration mechanisms of a wide array of traditional building materials including earth, stone, brick, terra cotta, concrete, mortars and plasters, metals, wood, and paints. The course provides a basic knowledge of the major building materials in use before the Second World War in industrialized as well as pre-industrial traditional contexts. Undergraduate level students may enroll. Basic undergraduate level understanding of chemistry recommended.
Spring
1 Course Unit
HSPV 5720 Preservation Through Public Policy
This course explores the intersection between historic preservation, design and public policy, as it exists and as it is evolving. That exploration is based on the recognition that a challenging and challenging network of law and policy at the federal, state and local level has direct and profound impact on the ability to manage cultural resources, and that the pieces of that network, while interconnected, are not necessarily mutually supportive. The fundamental assumption of the course is that the preservation professional must understand the capabilities, deficiencies, and ongoing evolution of this network in order to be effective. The course will look at a range of relevant and exemplary laws and policies existing at all levels of government, examining them through case studies and in-depth analyses of pertinent programs and agencies at the local, state and federal level.

Fall or Spring
1 Course Unit

HSPV 5840 World Heritage in Global Conflict
Heritage is always political. Such a statement might refer to the everyday politics of local stakeholder interests on one end of the spectrum, or the volatile politics of destruction and erasure of heritage during conflict, on the other. If heritage is always political then one might expect that the workings of World Heritage might be especially fraught given the international dimension. In particular, the intergovernmental system of UNESCO World Heritage must navigate the inherent tension between state sovereignty and nationalist interests and the wider concerns of a universal regime. The World Heritage List has almost 1200 properties has many such contentious examples, including sites in Iraq, Mali, Syria, Crimea, Palestine, Armenia and Cambodia. As an organization UNESCO was born of war with an explicit mission to end global conflict and help the world rebuild materially and morally yet has found its own history increasingly entwined with that of international politics and violence.

Fall or Spring
Also Offered As: ANTH 5840
1 Course Unit

HSPV 5850 Ruins and Reconstruction
This class examines our enduring fascination with ruins coupled with our commitments to reconstruction from theoretical, ethical, socio-political and practical perspectives. This includes analyzing international conventions and principles, to the work of heritage agencies and NGOs, to the implications for specific local communities and development trajectories. We will explore global case studies featuring archaeological and monumental sites with an attention to context and communities, as well as the construction of expertise and implications of international intervention. Issues of conservation from the material to the digital will also be examined. Throughout the course we will be asking what a future in ruins holds for a variety of fields and disciplines, as well as those who have most to win or lose in the preservation of the past.

Also Offered As: ANTH 5805, CLST 7317, NELC 5950
1 Course Unit

HSPV 5880 What’s at Stake? Heritage Conservation in Asia
This course is a broad introduction to Heritage Conservation in Asia. Origin of many of the world’s oldest civilizations and five major religions, Asia today is also the most rapidly urbanizing region with the fastest-growing economy. What happens in Asia impacts the globe. Born of an historical construct and variously defined, Asia is home to vast cultural, religious, political, and geographic diversity. Through an assortment of case studies, we will examine the diversity of Asian heritage – culturally, geographically, typologically, and historically. We will ask how heritage has been conceptualised, by whom and to what effect, and consider the conditions that have structured those heritage constructs. To that end, we will delve into perceptions and values of authenticity, sovereignty, belief systems, ideas of the communal self, materials and construction technologies, regimes of expertise, and histories of heritage administration; all of which have informed local conservation practices. Where technical conservation capacity has been limited and governance weak, conservation has been dominated by transnational actors. Which raises ethical questions: what are the implications of these relationships and how have they shaped the built environment and the communities that live within them? Asian heritage professionals contend with deep histories of culture-defining empires, supra-national religious geographies, legacies of colonialism, modern independence movements, regional alliance-building, and the concomitant contemporary pressures of rapid urbanisation and climate change. What can we learn from what is happening in Asia and what is at stake? This course elaborates on conservation best practices discourses and methodological approaches and contributes to a global perspective on heritage.

Fall
1 Course Unit

HSPV 5940 Critical Multimodal Qualitative Research Across the Professions
Created in collaboration with Schools of Design and Law, this course is designed to introduce professional school students to critical, multimodal and experimental ethnographic qualitative research methods. The coverage of the course includes both theoretical and applied components. The course is divided into five modules. The first module explores the theory of critical ethnographic qualitative research and the ethical issues that arise when undertaking collaborative research around the “everyday culture” of communities and institutions with which practitioners in the students’ chosen areas of study typically interact. The second module allows students to analyze qualitative research in professional fields of study and engage in dialogue with Penn faculty whose qualitative research addresses significant issues of importance to practitioners in law, business, medicine and planning. This module will also begin a discussion of the tasks of formulating critical qualitative research projects and analyzing data. The third module is devoted to qualitative data collection methods (participant observation, oral histories and in-depth interviews) and the modes and tools used in collecting qualitative data and reporting results (traditional or text-based, multimodal, and experimental). The final module considers in greater depth the role of aesthetics, advocacy and activism in utilizing multimodal approaches for sharing research findings with audiences consisting of academics, collaborators, fellow professionals, and the general population.

Fall or Spring
1 Course Unit
**HSPV 6000 Documentation, Research, Recording I**
The goal of this course is to help students learn to research and contextualize the history of buildings and sites. In order to gain first-hand exposure to the actual materials of building histories, we will visit our neighborhood research sites and several key archival repositories. Students will work directly with historical evidence, including maps, deeds, the census, city directories, insurance surveys, photographs, and many other kinds of archival materials. After discussing each type of document in terms of its nature and the motives for its creation, students will complete a series of projects that develop their facility for putting these materials to effective use. Philadelphia is more our laboratory than a primary focus in terms of content, as the city is rich in institutions that hold over three centuries of such materials; students will find here both an exposure to primary documents of most of the types they might find elsewhere, as well as a sense of the culture of such institutions and of the kinds of research strategies that can be most effective. The final project is the completion of an historic register nomination.

Fall
2 Course Units

**HSPV 6010 Documentation, Research, Recording II**
Documentation, Research, Recording II. This course provides an introduction to the survey and recording of historic buildings and sites. Techniques of recording include traditional as well as digitally-based methods including field survey, measured drawings, photography and rectified photography. Emphasis is placed on the use of appropriate recording tools in the context of a thorough understanding of the historical significance, form and function of sites. Required for first-year MSHP students; others by permission.

Spring
1 Course Unit

**HSPV 6060 Historic Site Management**
This course focuses on management, planning, decision making, and interpretation for heritage sites, from individual buildings and historic sites to whole landscapes and historic objects. Class projects ask students to analyze historic site operations and interpret objects. Course material will draw on model approaches to management, as well as a series of domestic and international case studies, with the goal of understanding the practicalities and particularities of site management. Topics to be examined in greater detail might include histories of historic sites, collections and conservation policies, interpretation, tourism, social justice, community engagement, strategic planning, in addition to fundraising and financial management. The course emphasizes making historic sites meaningful, relevant and sustainable in the present.

Fall, odd numbered years only
1 Course Unit

**HSPV 6200 Celebrations in the Contingent City**
This seminar will explore the impact of Philadelphia’s 1876 Centennial Exhibition on the subsequent histories of the neighborhoods adjacent to the West Fairmount Park exhibition site.

Spring
1 Course Unit

**HSPV 6210 Heritage and Social Justice**
This course will explore connections between heritage, historic preservation (and related design, planning and artistic practices) and the pursuit of social justice. How do historic preservation and other design and humanities professionals contribute to more equitable and just societies? How can our work be organized to result in greater equity, access and social justice? The course will focus on conceptual and theoretical work (how we think about built heritage and social change; how we conceptualize social justice) and practical examples of advancing social outcomes through preservation and design (how social justice concerns reorganize projects, practices, and organizations). We’ll draw on work by: designers; historians; public intellectuals; geographers, anthropologists and other social scientists; heritage organizations; artists; entrepreneurs; and more. Subjects will include traditional preservation, reparative practices, creative placemaking, public art, memorialization, and organizational-managerial social innovation. Cases will be drawn from the US and abroad. The course will progress through a series of weekly topics, often including guest practitioners and scholars. Students will have significant agency in helping flesh out the topics and cases; final projects (individual and group) will be envisioned as a statement (in the form of an exhibition or publication) of how social justice concerns have reshaped practice and how they could reshape our fields in the future.

Spring
1 Course Unit

**HSPV 6220 Revolutionary Approaches to Philadelphia’s Black Heritage**
Surveying Black heritage sites in Philadelphia as the city celebrates its 250th birthday.

Spring
1 Course Unit

**HSPV 6240 Digital Media for Historic Preservation I**
A required praxis course designed to introduce students to the techniques and application of digital media for visual and textual communication. Techniques will be discussed for preservation use including survey, documentation, relational databases, and digital imaging and modeling. This course requires a weekly laboratory period (1.5 hours).

Fall
.5 Course Units

**HSPV 6250 Preservation Economics**
The primary objective is to prepare the student, as a practicing preservationist, to understand the language of the development community, to make the case through feasibility analysis why a preservation project should be undertaken, and to be able to quantify the need for public/non-profit intervention in the development process. A second objective is to acquaint the student with the measurements of the economic impact of historic preservation and to critically evaluate "economic hardship" claims made to regulatory bodies by private owners.

Spring
1 Course Unit

**HSPV 6270 Digital Media for Historic Preservation II**
A required praxis course designed for students to further explore the techniques and applications of digital media for visual and textual communication. Techniques will be discussed for preservation use including survey, documentation, relational databases, and digital imaging and modeling. Must enroll in both lecture and lab sections HSPV 6270-001 and HSPV 6270-101.

Spring
.5 Course Units
HSPV 6380 Topics in Historic Preservation
This seminar concentrates on a selected topic in the social and cultural history of the built environment. Past themes have included photography and the American city and the relationship between cities and sound. For our current offering, please visit: https://www.design.upenn.edu/historic-preservation/courses
Spring
Also Offered As: CPLN 6870
1 Course Unit

HSPV 6400 Contemporary Design in Historic Settings
Contemporary design can contribute value and meaning to historic settings of any age or scale, from individual landmarks to landscapes and neighborhoods. In turn, engaging in a rigorous dialogue with history and context enriches contemporary design. This seminar immerses designers, planners and preservationists in the challenges of designing amid existing structures and sites of varying size and significance. Readings of source materials, lectures and discussions explore how design and preservation theory, physical and intangible conditions, and time have all shaped the particular realm of design response to historic context, as well as the political, cultural, and aesthetic environments that influence its regulation. Through sketch analytical exercises set in Philadelphia and outstanding case studies from around the world, students will learn to communicate their understanding of historic places, critique propositions for design intervention, and conceptualize a range of potential design responses. No prerequisites.
Fall
1 Course Unit

HSPV 6500 Material Histories and Ethnographic Methods
What does it mean for students in the spatial disciplines (outside of anthropology, sociology, and history) to engage human subjects as primary sources of evidence? How can students in design, planning, and preservation both learn from the social sciences and transform classic ethnographic and historical methods to address the unique contexts of buildings, landscapes, and cities? This class focuses on how to conduct built environment research that views human subjects as repositories of knowledge and critical sources of primary evidence. We will explore research on the history of the built environment (dependent on maps, plats, documentation of sites) and human centered research as we design—collectively—best practices and spatially oriented interview and observation techniques. We will address multiple scales (sidewalks, commercial store fronts, post offices, neighborhoods) as we problematize human experience, perception, and knowledge of the built world.
Fall
Also Offered As: CPLN 6830
1 Course Unit

HSPV 6600 Theories of Historic Preservation
Theories of historic preservation serve as models for practice, integrating the humanistic, artistic, design, scientific and political understandings of the field. This course examines the historical evolution of historic preservation, reviews theoretical frameworks and issues, and explores current modes of practice. Emphasis is placed on literacy in the standard preservation works and critical assessment of common preservation concepts. In addition to readings and lectures, case studies from contemporary practice will form the basis for short assignments. Professional ethics are reviewed and debated. The instructor’s permission is required for any student not registered in the Graduate Program in Historic Preservation. Note that the course is organized in two parts; the first half, on the basics of preservation theory, is taught in the fall semester (HSPV660) while the second half (HSPV661) takes place in the spring semester and engages advanced topics. Note: This course continues in the second half of the spring semester for another 0.5 CU. Prerequisite: Instructor’s permission required for any student not registered in the Graduate Program in Historic Preservation.
Fall
0.5 Course Units

HSPV 6610 Theories of Historic Preservation II
Theories of historic preservation serve as models for practice, integrating the humanistic, artistic, design, scientific and political understandings of the field. HSPV 6610 builds on HSPV 6600, which examines the historical evolution of historic preservation, reviews theoretical frameworks and issues, and explores current modes of practice. HSPV 6610 engages advanced topics such as cultural landscape theory, economics of preservation, sustainability and environmental conservation, social justice, and urban design. In addition to readings and lectures, case studies from contemporary practice will be used to examine theories in practice. Students from outside the Graduate Program in Historic Preservation are welcome; instructor’s permission is required for any non-HSPV student. (Note that the course is the second of two parts; the first half, on the basics of preservation theory is taught in the fall semester.)
Spring
0.5 Course Units

HSPV 6710 Historic Preservation Law
Introduction to the legal framework of urban planning and historic preservation, with special emphasis on key constitutional issues, zoning, historic districts, growth management, and state and local laws for conserving historic buildings.

HSPV 6741 Curricular Practical Training: Academic Year
Course Description This course provides international Master of Historic Preservation students the opportunity for practical training in architecture in the United States (CPT). The course develops critical thinking about the organization, operation, and ethics of professional practice in city planning. This course will allow international HSPV students to work in an internship in the United States during the academic year without shortening their limited OPT time. The course is offered for .20 course units. The employment must relate to the major and the experience must be part of the program of study. Course enrollment is by permit only.
0.2 Course Units
**HSPV 7010 Historic Preservation Studio**
The Preservation Studio is a practical course making architectural, urban and landscape conservation operations, bringing to bear the wide range of skills and ideas at play in the field of historic preservation. As part of the core MSHP curriculum the Studio experience builds on professional skills learned in the first-year core. The work requires intense collaboration as well as individual projects. The Preservation Studio centers on common conflicts between historic preservation, social forces, economic interests, and politics. Recognizing that heritage sites are complex entities where communities, cultural and socio-economic realities, land use, building types, and legal and institutional settings are all closely interrelated, the main goals of the studio are (1) understanding and communicating the cultural significance of the built environment, (2) analyzing its relation to other economic, social, political and aesthetic values, and (3) exploring the creative possibilities for design, conservation and interpretation prompted by cultural significance. Studio teams undertake documentation, planning and design exercises for heritage sites and their communities, working variously on research, stakeholder consultation, comparables analysis, writing policies and designing solutions. Students work in teams as well as on individual projects. Study sites will be announced in the fall before the semester starts.

**Fall**
2 Course Units

**HSPV 7030 Preservation and Development of Urban Heritage in the Americas**
This advanced topic seminar will focus on the challenges confronted by the conservation and urban planning professions in turning the urban heritage into a social and economic development resource for cities in developing countries. The preservation of the urban heritage is moving to a new paradigm of intervention responding to: a growing interest in communities for preserving their intangible and tangible urban heritage; rising development pressures on historic neighborhoods; the generalization of adaptive rehabilitation as a conservation strategy; and recent international agreements calling for expanding the role of the urban heritage in the social and economic development of the communities. This is a problem that is in the cutting edge of the research and practice of heritage conservation and urban planning and has conservation, planning and design implications making it ideally suited to a multi-discipline seminar approach. The course will combine seminar and field study methodologies in ways that they support each other. The knowledge acquired through the seminar work will be put to use in a field study exercise whose objective is to allow the students to work on topics of their interest and pursue research or urban development and heritage conservation interventions related to the semester’s specific studio site. For the current site offering, please visit: https://www.design.upenn.edu/historic-preservation/courses.

**Spring**
odd numbered years only

1 Course Unit

**HSPV 7050 Advanced Preservation Studio**
The Advanced Preservation Studio is designed to allow students to integrate knowledge from their core and concentration courses, to gain insight into the meanings of professionalism and professional practice, and to reflect on the norms of a discipline and a profession. Studio topics are selected based on faculty research and contemporary issues and therefore offer a range of subjects and methodologies. By focusing on the unique set of issues and problems associated with specific case studies and a project site, advanced students have the opportunity to learn and apply the knowledge and skills required for their documentation, assessment and evaluation, and intervention and interpretation as an integrated activity. For our current offering, please visit: https://www.design.upenn.edu/historic-preservation/courses.

**Spring**
1-2 Course Units

**HSPV 7070 Historic Preservation Post-Professional Studio**
Master of Design Capstone Studio. This intensive on-site studio will explore advanced topics in preservation theory, planning and design as applied to the challenges of a landmark historic site. Readings will focus on background research completed for the site as well as theoretical and local approaches to preservation and site management, supplemented by lectures, workshops, field trips and on-site investigations. Students will prepare a written report as well as design studies. Permission of department required to enroll. Course usually offered in summer term.

**Summer Term**
2 Course Units

**HSPV 7100 Thesis I**
The Graduate Program in Historic Preservation's Thesis course is a two semester 2 CU capstone. The goal of the Thesis is demonstrated mastery of the research process by exploring a question of academic/professional relevance to the preservation field and presenting the results of the study in accordance with the highest standards of scholarly publishing. The Thesis spans the academic year, beginning with HSPV 710/Thesis I in the fall semester and continues in the spring with HSPV 711/Thesis II. Students are required to successfully complete 9-10 CUs (the first year of the curriculum) to qualify for Thesis. Dual degree students are expected to enroll in HSPV 710 before undertaking thesis studio in their respective dual program in their final year.

**Fall**
1 Course Unit
HSPV 7110 Thesis II
The Historic Preservation’s Thesis course is a two-semester 2 CU capstone required of all MSHP candidates. The goal of the individual Thesis is to demonstrate mastery of the research process by exploring a question of academic/professional relevance to the preservation field and presenting the results of the study in accordance with the highest standards of scholarly publishing. The Thesis spans the academic year, beginning with HSPV 7100/Thesis I in the fall semester and pending successful completion, continues in the spring with HSPV 7110/Thesis II. Students are required to successfully complete 9-10 CUs (the first year of the curriculum before beginning the Thesis process. Dual degree students are required to enroll in HSPV 7100 only before undertaking thesis studio in their respective dual program in their final year. Thesis II follows Thesis I with a focus on writing and developing the research methods explored in Thesis I. During Thesis II, students work with their individual academic advisors and come together periodically to present their progress and participate in advanced workshops on publishing and publication, peer-review, and specific methods related to each concentration. Successful completion of HSPV 7100 Thesis I in the fall is required to enroll.

1 Course Unit

HSPV 7210 Historic Preservation Capstone Studio
The Graduate Program in Historic Preservation’s Capstone Studio course is a one-semester 2 CU course taken instead of HSPV 710/711 Thesis to fulfill the MSHP capstone requirement. This is a research studio that builds on the core curriculum completed in the first year. The work requires intense collaboration as well as individual projects. A studio topic will be chosen and announced each year.
Spring
1-2 Course Units

HSPV 7380 Conservation Seminar: Wood
Prior to the twentieth century, most structures found in the built environment relied upon wood as a primary material for both structural members and decorative features. An understanding of the physical properties as well as the historic application of this organic material provides the basis for formulating solutions for a wide spectrum of conversation issues. As the scope of preserving wooden structures and wooden architectural elements is continually broadened, new methods and technology available to the conservator together allow for an evolving program - one that is dependent upon both consistent review of treatments and more in-depth study of craft traditions. This course seeks to illustrate and address material problems typically encountered by stewards of wooden cultural heritage - among them structural assessment, bio-degradation, stabilization and replication techniques. Through a series of lectures and hands-on workshops given by representative professionals from the fields of wood science, conservation, entomology, engineering, and archaeology, theoretical and practical approaches to retaining wooden materials will be examined with the goal to inform the decision-making process of future practicing professionals.
Spring
Prerequisite: HSPV 5550
1 Course Unit

HSPV 7390 Conservation Seminar: Masonry
This seminar will offer an in-depth study of the conservation of masonry buildings and monuments. Technical and aesthetic issues will be discussed as they pertain to the understanding required for conservation practice. Part 1 will address a broad range of materials and masonry construction technologies, and deterioration phenomena; Part 2 will concentrate on conservation methodology as well as past and current approaches for the treatment of masonry structures. The subject will be examined through published literature and case studies. Students will gain practical experience through lab and field exercises and demonstrations. The subject matter is relevant to interested students of conservation and preservation, architecture, landscape architecture, architectural history, and archaeology.
Fall
Prerequisite: HSPV 5550
1 Course Unit

HSPV 7400 Conservation Seminar: Finishes
This seminar will advance students’ knowledge of and skills at researching, analyzing and interpreting historic architectural finishes. Lectures, demonstrations, hands-on exercises, case studies, and site visits will consider the history, technology, analysis, deterioration, and treatment of historic finishes. Guest lecturers will enlarge the subject with discussion and demonstrations of archival research of finishes, advanced methods of scientific analysis and presentation of a long-term project to analyze and conserve historic finishes at the US Treasury Building (Robert Mills). The course will also address historic plaster with a guest lecture and demonstration of plaster materials, application, and casting for ornamental plaster. We will make and apply paints and other finishes in class. A visit to the decorative arts studio and Philadelphia sites displaying decorative painting will complement lectures and assignments. Bartram’s Garden, the eighteenth-century home of botanist John Bartram in West Philadelphia, will serve as a case study and subject for the final assignment.
Spring
Prerequisite: HSPV 5550
1 Course Unit

HSPV 7410 Topics in Architectural Conservation
This course explores a topic in Architectural Conservation/Preservation Technology. Details for our current offering can be found at: https://www.design.upenn.edu/historic-preservation/courses
Spring, even numbered years only
1 Course Unit

HSPV 7470 Conservation of Archaeological Sites and Landscapes
This seminar will address the history, theories, principles, and practices of the preservation and interpretation of archaeological sites and landscapes. The course will draw from a wide range of published material and experiences representing both national and international contexts. Topics will include site and landscape documentation and recording; site formation and degradation; intervention strategies including interpretation and display, legislation, policy, and contemporary issues of descendant community ownership and global heritage. Depending on the site, students will study specific issues leading toward the critique or development of a conservation and management program in accordance with guidelines established by ICOMOS/ ICAHM and other official agencies.
Fall or Spring
Also Offered As: ANTH 5080
1 Course Unit
HSPV 7500 Architectural Conservation Praxis: Traditional Buildings / Traditional Practice
Architectural Conservation Praxis is an intensive 3-week summer course designed for students pursuing studies in architectural conservation and builds on Penn Preservation’s core curriculum and the first-year conservation courses. The syllabus is organized around project fieldwork supplemented by lectures, demonstrations, exercises, and site visits that will allow students to experience firsthand the design and construction of vernacular buildings and the application of traditional craft- based methods to preserve them.
Summer Term
Prerequisite: HSPV 5400 AND HSPV 5410 AND HSPV 5550
1 Course Unit

HSPV 7600 Preservation Planning Praxis
Hong Kong will be the venue for this year’s HSPV 760-901 Heritage Praxis. Collaborators in Hong Kong have already been signed on including iDiscover, an innovative firm that has been doing citizen-based, bottom-up mapping of heritage precincts throughout Southeast Asia. Other university, NGO, and government collaborators are currently being recruited. The course will run from May 27 through June 6, 2019 and students should plan to arrive on May 25 or May 26 and depart on June 7. The first week will be lectures and tours. During the second week all participants will work in teams to conduct original research in under-recognized historic neighborhoods in Hong Kong. Through individual interviews, focus groups, and other social research tools, participants will first identify the “values” assigned by local residents, business and property owners, and others to the neighborhood. This qualitative information will then be matched with GIS-based quantitative data. Using this qualitative + quantitative approach, participants will attempt to estimate the economic values of non-economic value components. Each of the teams will be made up of PennDesign graduate students, PennDesign alumni, and young professionals from Hong Kong. Course is open to all PennDesign graduate students.
Summer Term
1 Course Unit

HSPV 7900 Historic Preservation Summer Institute
The Summer Institute is a required orientation course designed to prepare incoming, first-year graduate students for the intense coursework of their first semester. Generally, the institute orientates students to the issues and methods of the core MSHP curriculum, begins familiarizing students to the resources of Philadelphia, and begins skill-building exercises, especially in the area of digital media. This non-credit course employs lectures, exercises, and field trips to introduce some of the important skills, questions, and issues that will be at the center of first year’s work in the Program. The Summer Institute also constitutes an extended introduction to the Program’s faculty and the students in first-year and second-year cohorts. Course enrollment is by permit only.
Summer Term
1 Course Unit

HSPV 8200 Readings in Urban Planning & History
Reading and discussion course on selected topics in urban and planning history, with an emphasis on the United States, 1820-2000. We will sample both canonical and more recent scholarship. Interested doctoral students from across the university are particularly welcome. Masters students interested in an intensive reading course are also welcome. All students will read at least one book per week, and the final written assignment can be tailored to individual student interests and needs.
Spring, odd numbered years only
Also Offered As: CPLN 8200
1 Course Unit

HSPV 9901 Masters Thesis II
Historic Preservation Masters Thesis
Fall, Spring, and Summer Terms
0 Course Units

HSPV 9990 Independent Study
An opportunity for a student to work on a special project under the guidance of a faculty member.
Fall or Spring
0.5-2 Course Units

History & Sociology of Science (HSSC)

HSSC 5008 Current Issues in Science & Technology Studies
A graduate-level reading seminar in STS, this course will survey major themes and readings as well as recent work in STS.
Fall
1 Course Unit

HSSC 5020 Public History
Public history, long marginalized and stigmatized in the scholarly world, is undergoing rehabilitation. The continuing, prodigious public demand for history in various media and manifestations, together with many historians’ desire for greater relevance and the persistently disappointing academic job market for new Ph.D.s., has reawakened interest in public history within the academy. This seminar examines the many varieties of public history while giving students hands-on experience, focusing on museums and historic sites.
Not Offered Every Year
1 Course Unit

HSSC 5050 Seminar in the History and Sociology of Science
Seminar for first-year graduate students, undergraduate majors, and advanced undergraduates. Reading will introduce the student to current work concerning the effect of social context on science, technology, and medicine.
Fall
1 Course Unit

HSSC 5100 READING SEM STS
This course will review major developments in biomolecular sciences and Many historians of science, technology and medicine have embraced the study of popular culture in recent years. They have drawn on a rich literature in mainstream history, on the history of reading, of the book, of museums, of oral culture, journalism, theater, and of the mass media including radio and television. Some have even proposed that popular culture provides insights into elite knowledge systems that are not accessible in other kinds of sources, thus privileging what is publicly known over the traditional private textual, visual and material records of the archive or museum. In this graduate research seminar we will be exploring the relevance of the study of popular culture to the history of science, technology and medicine. Participants will write an original research paper in which they draw on popular culture as a resource for the interpretation of practices, theories and material resources in natural knowledge systems. Readings will generally focus on surveys that explicitly discuss methods, though we will also read some primary sources possibly including science fiction texts, memoirs of patients, engineers, physicians and scientists, gee-whiz popular science books, and didactic books intended for children.
Fall or Spring
1 Course Unit
**HSSC 5108 Knowledge in Motion**
This course provides a broad, interdisciplinary introduction to the movement of knowledge across space and time. In particular, we will be focusing on the economic models of knowledge movement, on comparative and trans-cultural views on science, on translation, and finally, on the global turn in the history of science. Since the movement of knowledge is inseparable from the production of knowledge, we will also start our discussion by looking back at some of the literature that constitutes the intellectual foundations of the history and sociology of science.
Not Offered Every Year
1 Course Unit

**HSSC 5181 BOTANIC EMPIRE: Plants and Colonialism 1700 to 1950**
Tea, rubber, cinchona, sugar and myriad other plants that have and continue to shape our contemporary world have been moved, altered and exploited by modern empires. With the rise of new forms of Biopiracy, older connections between plants and imperialism are being rethought not just academically but in multiple new practical, commercial and political arenas. Looking back from this contemporary vantage point, this course will explore the sites, sciences and instruments through which plants and empire came to be so intimately entangled. Topics shall range from the histories of botanic gardens to botanic illustrations and agricultural experimental stations to botanic horror fiction.
Not Offered Every Year
1 Course Unit

**HSSC 5199 Other Reasons**
This course seeks to destabilize a monolithic vision of science as a singular, homogenous body of knowledge by revisiting its plural, heterogeneous histories. This course is particularly interested in exploring the historical entanglements between the sciences and the enchanted world of intangible entities such as spirits, ghosts and gods. The course will look at the theoretical critiques of "Enlightenment Rationality" and "Science" in post colonial theory; at a detailed and loosely chronological examination of the multifaceted entanglements of science and technology with the paranormal in the 19th and 20th centuries; and at the performative aspects of scientific rationality in colonial and postcolonial contexts in a bid to understand the background that led to postcolonial theorization.
Not Offered Every Year
1 Course Unit

**HSSC 5203 Periodization and Science**
Who invented the Scientific Revolution? Does the term "modern science" tell us about the subject under discussion, how we should evaluate that subject, or something else? How are historical periodization and the historiography of science related? This course will explore the concept of historical epochs, or periods, and the role of science and technology in defining historical epochs (and vice-versa). Readings will be taken from philosophy of history, history and philosophy of science, STS, classical studies, and history of art.
Not Offered Every Year
1 Course Unit

**HSSC 5207 Readings in Race & Science**
What accounts for the persistence and resilience of racial conceptions in science? In this course we will look for answers to this and other questions by examining the historiography of race, colonialism, and science. The standard historiography has focused on the rise and fall of racial typologies in the north Atlantic and their contributions to troublesome political projects such as the Atlantic slave trade, Jim Crow policies, the eugenics movement, and the Holocaust. More recent histories have taken inspiration from postcolonial studies, standpoint theories, and indigenous studies to insist on a more global reckoning of race and science. If we focus on the southern hemisphere, for instance, we can see scientific racial conceptions enrolled for a different though not necessarily less innocent set of projects: the dispossession of indigenous lands and effacement of indigenous peoples, the glorification of race-mixing as a tool of nation building, and the cultivation of whiteness as a means to modernity. By examining classic and recent approaches to race and science we will grapple with the following questions: Is 'race' a product of 18th century French and English science? Or can we find earlier iterations in the idioms of conquest of Spanish America during the early modern period? Do the standard narratives concerning the history of racial conceptions in science change when looked at from the frame of the global south? Does race get 'buried alive' after WWII? And do recent developments in human genomics bring "race" back from the dead, albeit in an anti-racist form?
Fall
1 Course Unit

**HSSC 5251 Darwin and Evolution: New Perspectives**
In this graduate reading seminar, we consider evolution as a cluster of sometimes mismatched theories about nature and time, a political resource in emerging debates about human difference and social order, and a theological conundrum that persists into the twenty-first century. We consider primary source materials by Lamarck, Chambers, Darwin, Wallace, Mayr, and other naturalists; and explore the contexts of their production and their meanings through the work of scholars including Browne, Secord, Keller, Richards (both Robert and Eveleen), Smocovitis, Graham and many others. Our goal is to develop new perspectives on "the Darwin Industry" and think critically about how to move the field forward drawing on the most exciting new scholarly work in this area.
Fall or Spring
1 Course Unit

**HSSC 5288 Gender and Science**
With a special focus on methods, this course explores the rich literature on gender and technical knowledge.
Not Offered Every Year
1 Course Unit

**HSSC 5300 Current Issues in the History of Medicine**
This seminar surveys a variety of popular and scholarly approaches to the study of medicine and its history, ranging from traditional physician-centered narratives to more recent cultural and epistemological methodologies. The potential values of journalistic, sociological, anthropological, geographical and other approaches to the historical study of health, disease, and health care will be explored.
Not Offered Every Year
1 Course Unit
HSSC 5400 Reading Seminar in History of Science
Survey of major themes and figures in the history of western science, technology, and medicine since the Renaissance, through reading and discussion of selected primary and secondary sources. Topics include: Kepler, Galileo, Bacon, Newtonainism, Pasteur, the Industrial Revolution, the rise of German science, etc. Concurrent attendance at STSC 1 lectures is recommended.
Fall
1 Course Unit

HSSC 5431 Visualizing Science
This seminar focuses on the intersection of visualization and natural knowledge in the pre-modern world. It is open to graduate students and undergraduate students with permission of the instructor.
Also Offered As: ARTH 5431
1 Course Unit

HSSC 5437 Remembering Epidemics
This seminar challenges students to encounter and interpret the city around them in unconventional ways. During a deadly pandemic that has profoundly disrupted all aspects of society, just as the question of public commemoration has vigorously and sometimes violently re-entered our country’s public discourse, one question has remained surprisingly neglected: How do we remember epidemics? This course confronts this question through an analysis of traumatic epidemics in Philadelphia’s history, and of the broader landscape of public memory. We devote special attention to the yellow fever epidemic of 1793, but we also consider the 1918-1919 influenza, AIDS, and COVID-19, among others. Students conduct archival, documentary, site-based, and other kinds of research in the process of analyzing the origins, course, and consequences of epidemics, as well as the nature of public commemoration
Not Offered Every Year
Mutually Exclusive: HSOC 4437
1 Course Unit

HSSC 5588 Disability: History and Theory
Disability is the “next academic frontier,” argues historian Douglas Baynton, “an analytic category with the transformative potential of race, class, sexuality, and gender.” The purpose of this course will be explore recent literature on the history and theory of disability, focusing primarily on the history of physical disability. Throughout the semester, we will approach this literature with an eye to how disability studies relates to the fields of the history of science, medicine, and technology. Topics will include: the sociology of deviance, the medical vs. social model of disability, chronic illness and disease, genetics and disability, the role of disability in health care policy, as well as the politics of design and assistive technologies.
Not Offered Every Year
1 Course Unit

HSSC 5640 History of Technology
In this course we read influential classic and recent works in the history and the philosophy of technology, tackling the ways in which the fields are analytically structured as well as their relation to each other. We also discuss approaches and methodological questions in general history and general philosophy. We start with Karl Marx, arguably the most influential historian and philosopher of technology of the modern era, and discuss him in relation to what has been one of the most visible debates in the historiography of technology - the question of technological determinism. We then travel in a roughly chronological order through key periods and methodological issues in the fields. During our journey we encounter the Middle Ages and historical theoreticians of the Annales School, the early modern period and questions about gender and microhistory, and the so-called Industrial Revolution and the questions it raises about what’s modern about modern technology. Mid-way through the class, we discuss two classics in the philosophy of technology, Martin Heidegger and Jürgen Habermas, who grapple precisely with the question about the modern element in industrial technology. As we enter the nineteenth and twentieth centuries, we expand our methodological horizon to include examples from the cultural history of technology and applications of the social constructivism debate to the history of technology. We end the class with works on the recently emerging fields of biotechnology and nanotechnology and with a set of monographs written in the nascent sub-discipline in the history and philosophy of technology, engineering studies.
Not Offered Every Year
1 Course Unit

This seminar will challenge students to encounter and interpret the city around around them in unconventional ways. At a time when public commemoration has vigorously and sometimes violently re-entered our country’s public discourse, we wish to re-examine how monuments, memory, politics, and our senses shape our understandings of Philadelphia’s past, present, and possible futures. Our focus is on two intertwined themes: How we remember and What we remember. Treating monuments, memory, politics, and our senses shape our understandings of Philadelphia’s past, present, and possible futures. Our focus is on two intertwined themes: How we remember and What we remember. HSSC 5687 Minds and Machines
There is a plaque at Dartmouth College that reads: "In this building during the summer of 1956 John McCarthy (Dartmouth College), Marvin L. Minsky (MIT), Nathaniel Rochester (IBM), and Claude Shannon (Bell Laboratories) conducted the Dartmouth Summer Research Project on Artificial Intelligence as a research discipline to proceed on the basis of the conjecture that every aspect of learning or any other feature of intelligence can in principle be so precisely described that a machine can be made to simulate it." The plaque was hung in 2006, in conjunction with a conference commemorating the 50th anniversary of the Summer Research Project, and it enshrines the standard myth that Artificial Intelligence was born in 1955 when these veterans of early military computing applied to the Rockefeller Foundation for a summer grant to fund the workshop that in turn shaped the field. However, like so many myths, this one obfuscates the long-entangled histories that have come together in contemporary Artificial Intelligence research – including histories of labor, histories of automation, histories of intelligence, histories of mathematics, and histories of technology. This course surveys the historical scholarship that has investigated the intersections of minds and machines.

1 Course Unit

HSSC 5707 Gender and Technical Knowledge
In this graduate reading seminar, we explore how technical knowledge systems have historically intersected with identity and social order. The materials emphasize gender, but our discussions and readings will also engage at times with disability, race, class and other social categories that have shaped envisioning in technical endeavors and been the focus of technical study. Our goal is to understand how embodiment and expertise intersect. We will explore why certain kinds of people have been understood to be unreliable knowers, pathologically embodied, untrustworthy, or dangerously linked to emotion, incompetence or confusion, while other kinds of people have been socially marked as embodying reliability, trustworthiness, or epistemological neutrality. These embodiments bear on the historical development of technical knowledge as a social system for the establishment of consensus about the nature of reliable truth. They are also relevant at many different levels to embodied social experiences of scientific information, personal health, reproduction and everyday technology. This course will give students the tools and insights needed to draw on feminist/gender/queer theory when it is useful to their research. That is the purpose of all of our readings. We begin with an exploration of some key ideas in feminist scholarship of the last few decades. Then we turn to three broad, interconnected queries, relating to the social organization of science, technology and medicine (who has been excluded, who favored? What kinds of work have been understood to belong to different kinds of people?); to the intellectual content of expertise (how have experts made technical sense of social and bodily difference? How have technologies expressed and performed gender?); and to the philosophical debate about the nature of technical knowledge, particularly science, as a fundamentally gendered (masculine) endeavor which privileges hierarchical explanations in ways that mimic the social order.

1 Course Unit

HSSC 5888 Humanities Beyond the Human
The humanities are once again influx as scholars experiment with a variety of new techniques and conceptual frameworks. In recent years many of these experiments have involved turning away from longstanding questions of representation, language, epistemology, and human exceptionalism and toward questions of enactment, materiality, ontology, and the nonhuman. In this seminar we will examine a variety of manifestations of this turn as they have emerged in history, anthropology, literary studies, and philosophy under names such as new materialism, multi-naturalism, big/deep history, multispecies ethnography, and object-oriented ontology. We will try to situate these recent turns in longer intellectual genealogies, drawing especially on works in science studies and the history of science that seek to provide contingent, situated accounts of what exists and what we can know about it. Objects of inquiry will include dogs, mushrooms, cyborgs, seeds, mosquitoes, bacteria, stones, jugs, pictures, hormone disruptors, and the cosmos.
Not Offered Every Year
1 Course Unit

HSSC 6097 Feminist STS As Theory, Method, Practice: Relations And Their Limits
Drawing from historical, anthropological, and ethnographic texts, this course draws from core readings in feminist theory and feminist STS as well as from decolonial and postcolonial perspectives. We will examine feminist ethnographic, historical, and science studies approaches to science, knowledge production, and governance. Course readings will be organized around themes or cases and key questions will include the politics and limits of relation as an organizing analytical, methodological, and political concept.

1 Course Unit
HSSC 6100 Research Seminar in History of Human Sciences
This concentrated research seminar provides graduate students with time, support, and space to hone their writing skills. Thematically, the seminar closely examines historiographic trends within the history of human sciences - namely the stylistic, methodological, and investigative strategies adopted by prize-winning articles in the field. By carefully dissecting the architecture of these articles, our aim is to identify models that we can use in our own scholarly endeavors and to draft an article with these in mind. Accordingly, a significant portion of the course is devoted to examining archival and primary source resources in the region, to discussing research strategies, and to workingshopping our work-in-progress. Students can use the course to significantly revise an already written paper or to draft a new paper. The course's overarching purpose is to create the scaffolding necessary for students to produce a substantial research paper in the history of human sciences (broadly conceived) that is potentially publishable as a journal article.
Fall or Spring
1 Course Unit

HSSC 6199 Other Reasons
Postcolonial Theories, building largely on Frankfurt School theorists, have critiqued the totalizing aspirations of what it calls 'Enlightenment Rationality'. Such critiques have also fed a range of critiques of Science. At the heart of such critiques is a rather restricted and plastic idea of Science as a singular, homogenous body of knowledge that has steadily promoted the disenchantment of the world. In this course we seek to destabilize this monolithic vision of science by revisiting its plural, heterogeneous histories. The course is particularly interested in exploring the historical entanglements between the sciences and the enchanted world of intangible entities such as spirits, ghosts and gods. The course will be divided into three broad sections. The first will deal with the theoretical critiques of 'Enlightenment Rationality' and 'Science' in postcolonial theory. The second will undertake a detailed and loosely chronological examination of the multifaceted entanglements of science and technology with the paranormal in the 19th and 20th centuries. Finally, the last section will explore the performative aspects of scientific rationality in colonial and postcolonial contexts in a bid to understand the background that led to the postcolonial theorization.
1 Course Unit

HSSC 6188 Cold War Science
In this research seminar we will work through some of the literature on the history of science, technology and medicine in the Cold War and explore together relevant archival collections in the Philadelphia region, and digital collections online (particularly oral histories but other sources as well). All history begins with the availability of sources though we want to think creatively about what counts as a source (for example buildings, landscapes, artifacts, museum displays, film, other visual sources). All history begins with the availability of sources though we want to think creatively about what counts as a source (for example buildings, landscapes, artifacts, museum displays, film, other visual sources).

1 Course Unit

HSSC 6288 Capitalism: Theorizing economy in sci & med
What are the relationships between capitalism and the practice and experience and medicine? How have historians and anthropologists theorized capitalism and political economy in accounts of health and medicine? What do such theories account for and what is foreclosed? This research seminar examines theories of capitalism as they are taken up in historical and ethnographic accounts of science, health, healing, and medicine. Exploring how contemporary and classic accounts have sought to analyze and unpack the relationship between economy and health, we will examine how political economic approaches to health and medicine have informed historical and ethnographic accounts of health and illness -- asking, for instance, how theories of neoliberalism have been used to explain health inequalities (and vice versa) -- and will analyze how scholars have linked practices of financialization, speculation, and investment to changing dynamics of health, medicine, healing, and the generation of medical knowledge. Course time will also be devoted to independent research through which students will develop and write up a research paper on an area of interest related to the course theme.
Not Offered Every Year
1 Course Unit
HSSC 6299 Genetics and Genomics
This course is called "Genetics and Genomics," but we are defining those terms broadly to potentially encompass historical studies of biomedicine, evolution, race theory, biological anthropology, reproduction, agriculture, animal breeding, psychiatry, social sciences, and so on. We are thinking about knowledges of embodiment and what they teach us about social and technical order—about systems, institutions, technologies, hierarchies, theories, practices, networks, and so on. The goal of the semester will be for each student to produce a first draft of a publishable research paper. Many of our readings are calibrated to complement the available archival collections at the American Philosophical Library, the University of Pennsylvania archives, the Academy of Natural History collections, the Chemical Heritage Foundation, Wagner Free Institute of Science, College of Physicians of Philadelphia, Hagley Museum and Library, and collections held in striking distance of Philadelphia, in New York, Princeton, Baltimore, and Washington DC. While APS will be a special of focus of attention, given the remarkable collections there, students should make a special effort to become familiar with the many other resources that are available in the region, some of which have not been the focus of significant historical attention.
Fall or Spring
1 Course Unit

HSSC 6500 Research Seminar in the History of Medicine
This course is focused on comparing and contrasting ethnographic and historical approaches to health and medicine. We will engage ethnographic and historical approaches to health and medicine to explore the methodological, empirical, and theoretical stakes of thinking medicine, disease, and the body across and within disciplines. Taking a methodological and comparative approach, the course will explore ethnographic and historical approaches to such themes as the body, disease, pharmaceuticals, and biomedical knowledge-production in global and historical context. We aim to develop skills and knowledge for critically reading anthropological, historical, and sociological literatures on medicine, the body, and disease. As such, students will develop a research project, which may be in either the history or anthropology of medicine and/or science, or a project, which combines such approaches, utilizing the comparative and methodological frameworks of the course to develop an original analysis on a topic of their choosing.

1 Course Unit

HSSC 6517 The Lazaretto, the City, and the World: Public Health, Immigration, and Urban Growth, 18th-21st C.
Philadelphia’s Lazaretto quarantine station was built in 1799 to protect the city after a series of catastrophic yellow fever epidemics. In its time, the Lazaretto was a gateway through which goods and people from many regions of the world passed before entering Philadelphia (sometimes after temporary detention). This course uses the Lazaretto as a gateway to the history of American public health, immigration, and urban growth. Our exploration of those histories is not limited to events that happened at the Lazaretto, nor to the period of its quarantine operations (1801-1895), nor even to Philadelphia, but rather uses the very local and very human stories of this unusual site as a point of entry into larger American and global stories. Coursework includes site visits to the Lazaretto and to a variety of local partner institutions, including the Historical Society of Pennsylvania, the Mutter Museum, Puentes de Salud, and Sayre Health Center. Students undertake extensive research projects covering some combination of the course’s themes, including discussions of how historical interpretation can facilitate and enhance public engagement and activism.

HSSC 6700 Research Seminar in History of Technology
This graduate seminar provides a structured environment in which each student executes an independent research project. Early class meetings focus on the craft of researching and writing scholarly articles. Later meetings are devoted to discussion of students progress on their research projects. Each student defines their own research topic in the history of technology, subject to the Professor’s approval.

History (HIST)

HIST 0001 Making of the Modern World
This course examines the political, economic, social, cultural and intellectual foundations of the world in which we live. We will cover the full scope of the human experience—empire, war, religion, revolution, industrialization, climate, globalization—over a vast geographic range, exploring key parallels and contrasts: in power and access to resources; modes of production and value systems; religious and ethnic traditions; identities and cultural practice, and in political systems and social formations. We will examine both human and non-human actors and personal and systemic changes and explore trajectories that are never predetermined. This course serves as a gateway to the discipline of History and to the Department of History at Penn. It fulfills both the Sector II (History and Tradition) and Cross-Cultural Analysis requirement and, depending on the faculty member in charge, may examine the world through ONE specific theme or highlight developments over two hundred or over two thousand years.

HIST 0010 First-Year Books that Changed Modern America
Why have some books had a profound impact on their times? How have they articulated an issue, focused debate, captured public attention, and spurred action? In this seminar, we will read a group of books that changed the modern United States. The Jungle, Silent Spring, The Common Sense Book of Baby and Child Care, The Feminine Mystique, The Grapes of Wrath, Conscience of a Conservative: These are among the books that mobilized Americans to demand food safety and a safer environment, adopt new childrearing practices, redefine traditional gender roles, develop greater awareness of poverty, and rethink their politics. We will do close readings of these and other texts, and examine the history of each book as a book: its place within the author’s life and work, its publishing history, critical reception, and readers’ responses. Finally, we will consider the broader historical contexts in which the work was written, to assess its impact on American culture, society, and politics.

HIST 0012 First-Year Seminar: Why College? Historical and Contemporary Perspectives
This course will explore controversies and dilemmas surrounding American colleges, from their birth into the present. What is the purpose of "college"? How have these goals and objectives changed, across time and space? What should college do, and for whom? And how can colleges be reformed to meet their diverse purposes and constituencies? Topics of discussion will include affirmative action, "political correctness," fraternities and sororities, sexual assault and safety, online education, and the recent trend towards "college for all." For first-year students only.

1 Course Unit

HIST 0013 First-Year Seminar: American Pasts in American Places
All around you are traces of America's past. Some of them, like Independence Hall, are easy to see. Others are more obscure. The long-disappeared Philadelphia house where Cyrus Bustill, a free Black baker of the Revolutionary era, opened his school for Black children is visible only because of a recently erected historic marker. This course introduces you to the skills and techniques necessary to read America's past in the landscape around you. Even a place like Independence Hall has had many meanings and uses since it was built in 1732 as each generation has projected their understanding of its significance onto its bricks and mortar. We will explore a variety of places – extant and long gone, local and farther afield – to uncover what they can tell us about the American past and its connections to the American present. Meetings will include field trips to places discussed in the course.
1 Course Unit

HIST 0020 First-Year Seminar: Reading the Classics
In this seminar we will study the early roots of Western culture—the Biblical, Greek and Roman traditions—as well as how sixteenth- and seventeenth-century Europeans reproduced, rethought and reshaped these early traditions. Instead of reading and discussing the required texts according to the date when they were written (first the early traditions and then the Renaissance views), we will focus our attention on a few themes that were central concerns to those living in Classic and Renaissance times and that continue to influence modern ways of thinking and acting in Western societies: conceptions of God and place of religion in society; nature of power and authority, and individuals' rights and duties; good and evil; views on women, their nature and roles in society; ethnography and the perception of other cultures and societies. In addition to reading and discussing several biblical books—Genesis, Exodus, The Book of Revelation—we will work with other seminal classical works—Sophocles' Antigone, Aristotle's Politics and Ethics, Herodotus' The Histories, Plato's Apology—and works by Michel de Montaigne, Maria de Zayas y Sotomayor, Marie de Gournay, Christopher Marlowe, William Shakespeare, Blaise Pascal, and several others. We will also work with books published in the last decades, analyzing the impact of these works in various periods of history, but also books that analyze the impact of these books and ideas today—Dreyfus and Kelly's All Things Shinning: Reading the Western Classics to Find Meaning in a Secular Age, Anthony Grafton's Bring Out Your Dead: The Past as Revelation, James Miller's Examined Lives, from Socrates to Nietzsche, and Sarah Bakewell's How to Live: Or A Life of Montaigne in One Question and Twenty Attempts at an Answer.

HIST 0021 First-Year Seminar: Inquisitors, Heretics and Witches
When and why did medieval European Christians develop anxieties about the beliefs of others, and what did they do to grapple with this anxiety? This course will explore the development of ideas of right and wrong belief in medieval Europe, and the various concerns and practical reactions that developed in response. We will begin by examining how notions of orthodoxy and its concomitant devolved from late Antiquity to the medieval period. We will then turn to the criminalization of the latter and development of the "inquisitors of heretical depravity," individuals assigned by the pope to inquire into heresy, and the various methods they used to identify and punish those they considered to hold wrong belief. Combining the zeal of faith with the power of law, inquisition was Europe's most infamous institution and co-opted judicial procedure in the fight against heresy. Ultimately the course aims to provide a deeper understanding of the development of orthodoxy, dissent, intolerance and persecution.

HIST 0022 First-Year Seminar: A Tale of Two Cities: London and Paris 1750-present
"Paris is the capital of the nineteenth century," wrote Walter Benjamin. "When a man is tired of London, he is tired of life," quipped Samuel Johnson. These two great cities have captivated authors and artists, politicians and philosophers, tourists and traders for centuries. They share many things in common, and they both helped set a paradigm for the "modern city" that has shaped urban centers around the world. And yet, many have also remarked on the differences between them. Examining novels, maps, stories, paintings, plays, political writings, and statistical inquiries, we'll study the characters, companies, and crimes that have made each city tick. What does it mean to be a Londoner or a Parisian? How have both cities changed over the last 250 years? Can the study of these two metropolises tell us something about modern urban life in general?

1 Course Unit

HIST 0023 First-Year: Russia in the Age of Anna Karenina
Leo Tolstoy's Anna Karenina is an epic tale of passion, intrigue, tragedy and redemption. It is also a penetrating portrayal of Russian life and society in the period following the Great Reforms of the 1860s. This period, the third quarter of the nineteenth century, was both the time of the flowering of the Russian novel as well as the age of Russia's imperial glory. In this course we will use Anna Karenina as the starting point for a multifaceted exploration of nineteenth century Russian history and culture. Among the topics we will discuss are family life, social relations, modernization and industrialization, gender and sexuality, revolutionary movements, imperialism, and political power. We will enhance our reading of the novel with a wide range of supplementary materials including memoirs, travel accounts, historical analysis, and art. This course will be organized in a seminar format. No prior knowledge of Russian history or literature is required. All readings are in English.

1 Course Unit

HIST 0031 Gender, Sexuality, and Social Change in the Middle East
This first year seminar introduces basic concepts, debates, and narratives pertaining to the histories of gender and sexuality in the Middle East by covering the period from the late eighteenth century until the present day. In an engagement with global historical contexts, the course aims to engage students with the history of women, gender, and sexuality as they informed and shaped political and social change in the Middle East and vice versa. This course will concentrate on selected themes such as modernity, nationalism, and colonization to encourage students to challenge preconceived assumptions about Middle Eastern women, discuss some of the many roles they have played in social change, and think comparatively and transnationally about gender, history, and social life. In doing so, the class provides a historical context pertaining to the region's history by presenting a chronologically and thematically organized analysis to scrutinize the decline of the Ottomans, the rise of nationalisms, the implications of Islamist reformism, colonial rules before and after World War I and their impact on shaping women's lives, gender dynamics and sexual politics, the age of decolonization and rise of state feminisms under colonial and authoritarian regimes, an historical inquiry of same-sex desire and the political activism organized around LGBTQI+ movements, and finally contemporary political movements such as the Iranian Revolution and Arab Uprisings in shaping present discourses and practices informing individual and collective social and political status along with gendered and sexual politics in contemporary Middle Eastern societies.

1 Course Unit

HIST 0032 First Year Seminar - Bacteria, Bodies, and Empires: A Global History of Medicine and Healing
Bacteria, Bodies, and Empires: A Global History of Medicine and Healing is a seminar on the history of medicine from the early modern period to the present. It addresses major issues and questions about bodies, diseases, epidemics, and medical institutions in the context of major historical developments in world history, with a focus on the Global South. The course examines how medicine, knowledge, and practices about diseases and bodies influenced political and social conditions, as well as how sociopolitical changes shaped and transformed people's perceptions of health, life, and the environment. Scholars have frequently examined the history of medicine as a Western practice and with a focus on Western medical traditions. And, medical and healing practices in the history of the Global South are frequently examined through the lens of religion, culture, and race, or, more recently, in relation to modernization and colonization. By situating the history of medical knowledge and practices in world history with an emphasis on Global South, this course introduces readings and research methods to challenge these fixed paradigms and shed light on questions and research agendas that will unearth the encounters, connections, and mobility of bacteria, bodies, and medical methods among various communities across time from Black Death to contemporary pandemics.

HIST 0060 First-Year Seminar: Epidemic Disease in Modern History
In this seminar, we look at how human societies have grappled with epidemic disease across the modern world. From cholera, to bubonic plague, to yellow fever, SARS, ebola, and flu, we'll explore how outbreaks disrupt and devastate communities but also how they can be linked to state growth, medical reform, and cultural change. By looking at specific societies around the world at moments of acute distress, we'll be able to ask questions about the role of government, about fault lines of class and race, and about how human beings have grappled with fear and systemic collapse at different moments in time and space. Yet we will also examine global trends and consider what the study of past epidemics can tell us about the world we live in today. Sources we will consider include medical treatises, diaries, novels, films, and cartoons. Hypochondriacs and germophobes are welcome. We'll study epidemics from a very safe distance and (hopefully) without first-hand experience!

1 Course Unit
HIST 0061 First-Year Seminar: Of Horses, Bows and Fermented Milk: The Silk Roads in 10 Objects
The empires of the Turkic and Turkish peoples have stretched across much of Eurasia since before the Common Era until the twentieth century. We first hear of them in Chinese chroniclers’ tales of a powerful people in the wilderness. Greek historians, Byzantine writers, and Arab polymaths write about the empires of the steppes. Centuries later, the heirs of the heroes of these empires move south and west, establishing empires and tribal confederations beyond the steppe, in Central Asia, Anatolia, and the Middle East. The Turkic empires seem to appear in the periphery of many civilizations, challenging, and, one could say, enriching their borders. But looking at a map, is really more than a half of Eurasia a periphery? If we flip the map, could we say these historians were writing from the margins of the Turkish empires? This course introduces the student to the history of empire by following the various histories of Turkic and Turkish people through 15 objects. It discusses the questions of periphery, borders, and the divide between agrarian, pastoral, and nomadic societies. The student will learn to derive historical questions and hypothesis through the intensive study of material culture, literature, and historical writing tracing the long and diverse history of the bow, the saddle, dumplings, and fermented milk (among others) across Eurasia.

HIST 0100 Deciphering America
This course examines American history from the first contacts of the indigenous peoples of North America with European settlers to our own times by focusing on several telling moments in this history. The course treats thirteen of these moments and each unit begins with a specific primary document, historical figure, image, or cultural artifact to commence the delving into the American past. Some of these icons are familiar, but the ensuing deciphering will render them as more complicated; some are unfamiliar, but they will emerge as absolutely telling. The course meets for two in-person lectures each week and a required recitation. Course requirements include: student’s choice of ten “before” journal entries (1-2 sentences) and ten end of the week “after” journal entries (300-word maximum per entry); a take home mid-term exam; a part take home and part in-class final exam; and recitation attendance and participation. All course readings can be accessed online on the course’s CANVAS website; no books have been ordered or placed on reserve. Instructions for the journal entry exercise are posted on the course’s CANVAS website as “Protocol for Journal Entries.” Students should post all journal entries on CANVAS Assignments.

1 Course Unit

HIST 0108 American Origins
The United States was not inevitable. With that assumption as its starting point, this course surveys North American history from about 1500 to about 1850, with the continent’s many peoples and cultures in view. The unpredictable emergence of the U.S. as a nation is a focus, but always in the context of wider developments: global struggles among European empires; conflicts between indigenous peoples and settler-colonists; exploitation of enslaved African labor; evolution of distinctive colonial societies; and, finally, independence movements inspired by a transatlantic revolutionary age.

1 Course Unit

HIST 0200 The Emergence of Modern Europe
This course examines the period in European history from the Black Death until the French Revolution (roughly 1348 to 1789). During this period of Renaissance, Reformation, and Enlightenment, early modern Europe experienced a series of crises in authority that ushered in the modern world. The course will explore how new discoveries (both geographical and intellectual) challenged existing worldviews; movements of religious reform challenged the authority of the Church and the unity of Europe; and new political doctrines, accompanied by a series of striking rebellions, challenged the foundations of traditional rule. Our aim will be to excavate the changing social, political, intellectual, and cultural experiences of men and women during this time of renaissance, reformation, enlightenment, and revolution. We will follow the encounter between Europeans and the peoples of the Americas, Africa, and Asia, as well as the “discovery” of new ways to read old books, the “discovery” of new technologies in communications and combat, and the “discovery” of new sciences, arts, and philosophies as they impacted the way Europeans related to the wider world and their place within it.
Fall or Spring
1 Course Unit

HIST 0205 Europe: From Fall of Rome to Age of Exploration
This course offers a broad introduction to the history of Europe from around the fourth to sixteenth century CE. We begin with Roman civilization facing a series of crises that led to its eventual fall in the West and the great migrations that resulted in ‘barbarian’ kingdoms. We then explore European history as it developed afterwards through key questions that capture its essence: what was ‘barbarian’ about these kingdoms and what exactly were the ‘dark ages’? How did political power transform throughout the period to produce nascent nation states in the end? What did it mean to be a medieval knight? In what ways were women powerless or powerful? What was city life like as these began to be rebuilt? What roles did faith and knowledge play in this world? What were the first universities like? How did European culture in this period handle difference, and how is this similar or different to modern approaches? How do we even know this history from centuries to over a millennium ago? Students will discover a Europe that is fascinating in its contradictions: both dark and bright, both closed and open, both strikingly different and yet often surprisingly familiar.
Fall or Spring
1 Course Unit

HIST 0210 Early Modern Europe, 1450-1750
This course examines those European developments which contributed to the world we understand as modern. Special emphasis will be placed on the transformation of Europe through the advent of new technologies, the creation of a global economy, the consolidation of territorial states, the rise of effective, central governments, the dissolution of religious unity, and the dialect between modern and traditional world views.
Not Offered Every Year
1 Course Unit
HIST 0220 England and the British Isles to 1707
The subject of this course is the history of the British Isles from the Roman Conquest in 43AD to the creation of the United Kingdom in 1707. Between these two dates the various societies and cultures in the British Isles were brought into the orbit of the Roman Empire, converted to Latin Christianity, and developed distinctive cultures and strong ties with the Continent. From the twelfth century on, the kingdom of England began to exert its power over Wales, Ireland, and Scotland, although English power waxed and waned in these areas between the twelfth and the seventeenth centuries. The Anglo-Norman continental empire of the Plantagenet dynasty also played a large part in shaping the English monarchy, as did the playing out of the Hundred Years War, the internal divisions in fifteenth-century English society, and the rise of the Tudor-Stuart dynasty.

1 Course Unit

HIST 0240 The Rise and Fall of the Russian Empire, 1552-1917
How and why did Russia become the center of the world’s largest empire, a single state encompassing eleven time zones and over a hundred ethnic groups? To answer this question, we will explore the rise of a distinct political culture beginning in medieval Muscovy, its transformation under the impact of a prolonged encounter with European civilization, and the various attempts to re-form Russia from above and below prior to the Revolution of 1917. Main themes include the facade vs. the reality of central authority, the intersection of foreign and domestic issues, the development of a radical intelligentsia, and the tension between empire and nation.

HIST 0250 Making and Breaking European Hegemony
This course will trace the dramatic rise and fall of Europe’s global hegemony during the period roughly from 1450 to 1950. Among the major themes we will examine are: states and power, borders and resistance, race and genocide, economies and oppression, ideas and revolution, the building and change of hierarchies of gender and power. Truly, a dramatic story. The objectives of the course are: 1) To serve as an introduction to the study of history for majors and non-majors alike, and to teach the critical analysis of historical sources; 2) to teach substantive knowledge of European history; 3) to provide a foundation for further study of the European past. No previous background in European or World history is required.
Fall or Spring
1 Course Unit

HIST 0255 Modern Europe, 1789-1919
It’s old, it’s new. It’s unfamiliar, it’s recognizable. This course investigates the collapse of the "old regime" and the birth of something like the Europe we recognize. The long nineteenth century witnessed the development of political, economic, and cultural phenomena we often see as characteristic of modern society. Topics considered include political revolution, industrialization, liberalism, imperialism, and new ideologies of gender, race, and class. Our focus will be consistently transnational. Where did Europe begin and end? How did borders and boundaries operate at the edge of nations, but also within societies? We will investigate these questions as we follow European history from the violence and optimism of the French Revolution to the chaos of the First World War.
Fall or Spring
1 Course Unit

HIST 0270 Modern Britain, 1700-present: Empire, Industry and Democracy
In this course, we will investigate the extraordinary story of Britain’s rise to global predominance and the question of its “decline” in the twentieth century. Our readings and discussions will engage with dominant ideas, social processes, and popular beliefs; we will look at the structure of government and the texture of everyday lives. We will encounter Britons in all corners of the world even as we explore the complexities of metropolitan British history. Big ideas were born there: industrial capitalism, political liberalism, and scientific racism. Britain’s political system, with its early form of (limited) democracy, gave shape to party politics around the world. We begin in the early eighteenth century—focusing on the agricultural and social changes that accompanied the onset of the Industrial Revolution. We’ll examine the rise of the Hanoverian fiscal-military state, and its consolidation and transformation in the course of the Napoleonic Wars. We end in the present day, looking at a Britain which may have lost an Empire, but which retains a strong welfare state, a global cultural presence, and a permanent seat on the UN Security Council. Should we understand its rise and subsequent retraction as a store of an ascent and a decline? We will interrogate that narrative throughout the semester. The course moves roughly chronologically, but by way of discrete units that provide different perspectives on British politics, economics, and culture.
Spring
1 Course Unit

Out of an obscure, backward empire, the Soviet Union emerged to become the great political laboratory of the twentieth century. This course will trace the roots of the world’s first socialist society and its attempts to recast human relations and human nature itself. Topics include the origins of the Revolution of 1917, the role of ideology in state policy and everyday life, the Soviet Union as the center of world communism, the challenge of ethnic diversity, and the reasons for the USSR’s sudden implosion at the end of the century. Focusing on politics, society, culture, and their interaction, we will examine the rulers (from Lenin to Gorbachev) as well as the ruled (peasants, workers, intellectuals; Russians and non-Russians). The course will feature discussions of selected texts, including primary sources in translation.

Also Offered As: AFRC 0300
1 Course Unit
HIST 0310 Warriors, Concubines & Converts: the Ottoman Empire in the Middle East & Europe
For almost six hundred years, the Ottomans ruled most of the Balkans and the Middle East. From their bases in Anatolia, Ottoman armies advanced into the Balkans, Syria, Egypt, and Iraq, constantly challenging the borders of neighboring European and Islamicate empires. By the end of the seventeenth century, Constantinople, Jerusalem, Cairo, Baghdad, Sarajevo, Budapest, and nearly Vienna came under Ottoman rule. As the empire expanded into Europe and the Middle East, the balance of imperial power shifted from warriors to converts, concubines, and intellectuals. This course examines the expansion of the Ottoman sultanate from a local principality into a sprawling empire with a sophisticated bureaucracy; it also investigates the social, cultural, and intellectual developments that accompanied the long arc of the empire's rise and fall. By the end of the course, students will be able to identify and discuss major currents of change in the Ottoman Empire and the Middle East. The student will have a better understanding of the roles of power, ideology, diplomacy, and gender in the construction of empire and a refined appreciation for diverse techniques of historical analysis.

HIST 0400 Colonial Latin America
The year 1492 was pivotal in the history of the world. It precipitated huge population movements within the Americas and across the Atlantic - a majority of them involuntary as in the case of indigenous and African people who were kidnapped and enslaved. It led to cataclysmic cultural upheavals, including the formation of new cultures in spaces inhabited by people of African, European and indigenous descent. This course explores the processes of destruction and creation in the region known today as Latin America in the period 1400 - 1800. Class readings are primary sources and provide opportunities to learn methods of source analysis in contexts marked by radically asymmetrical power relationships.
Fall

1 Course Unit

HIST 0450 Modern Latin America 1808-Present
This course examines central themes of Latin American history, from independence to the present. It engages a hemispheric and global approach to understand the economic and social transformations of the region. We will explore the anti-imperial struggles, revolutions, social movements, and global economic crises that have given rise to new national projects for development, or have frustrated the realization of such goals. Taking a historical perspective, we will ask: What triggers imperial breakdown? How did slaves navigate the boundary between freedom and bondage? Was the Mexican Revolution revolutionary? How did the Great Depression lead to the rise of state-led development? In what ways have citizens mobilized for equality, a decent standard of living, and cultural inclusion? And what future paths will the region take given uneasy export markets and current political uncertainty?

1 Course Unit

HIST 0550 History of Modern China
From an empire to a republic, from communism to socialist-style capitalism, few countries have ever witnessed so much change in a hundred year period as China during the twentieth century. How are we to make sense out of this seeming chaos? This course will offer an overview of the upheavals that China has experienced from the late Qing to the Post-Mao era, interspersed with personal perspectives revealed in primary source readings such as memoirs, novels, and oral accounts. We will start with an analysis of the painful transition from the last empire, the Qing Dynasty (1644-1911), to a modern nation state, followed by exploration of a century-long tale of incessant reform and revolution. The survey will focus on three main themes: 1) the repositioning of China in the new East Asian and world orders; 2) the emergence of a modern Chinese state and nationalistic identity shaped and reshaped by a series of cultural crises; and finally, 3) the development and transformation of Chinese modernity. Major historical developments include: the Opium War and drug trade in the age of imperialism, reform and revolution, the Nationalist regime, Mao's China, the Cultural Revolution, and the ongoing efforts of post-Mao China to move beyond Communism. We will conclude with a critical review of the concept of "Greater China" that takes into account Taiwan, Hong Kong, and the Chinese diaspora in order to attain a more comprehensive understanding of modern China, however defined, at the end of the last century.

HIST 0570 Colonial South Asia, 1700 - 1950
The East India Company established its first trading outpost in India in 1612 and by 1765, was granted the right to collect revenue in eastern India on behalf of the Mughal Emperor. By 1858, Queen Victoria was Empress of India and by 1947, two independent nation states had emerged upon decolonization, India and Pakistan. The course will familiarize students with the outlines of the history of colonial South Asia, while exploring the following themes: How do we know what we know as historians, about the colonial era? What new institutions emerged in India under the British and, more importantly, what older institutions did they replace or modify? What kinds of modernity did South Asians begin to embrace, and what was the role of colonial rule in shaping and constraining these changes? How did different groups of South Asians perceive and respond to colonial rule, and how did this shape the emergence of new political movements in the early twentieth century?

HIST 0710 African American Life and Culture in Slavery
This course will examine the lives of enslaved Africans in the United States, both in the North and the South. We will engage historiographical debates, and tackle questions that have long concerned historians. For example, if slaves were wrenched from families and traded, could they sustain family relationships? If slaves worked from sun-up until sun-down, how could they create music? We will engage with primary and secondary sources to expand our understandings of values, cultural practices, and daily life among enslaved people. Topics will include: literacy, family, labor, food, music and dance, hair and clothing, religion, material culture, resistance, and memories of slavery. Several disciplines including History, Archaeology, Literature, and Music, will help us in our explorations. Written, oral, and artistic texts for the course will provide us with rich sources for exploring the nuances of slave life, and students will have opportunities to delve deeply into topics that are of particular interest to them.

HIST 0720 Ancient Greece
The Greeks enjoy a special place in the construction of western culture and identity, and yet many of us have only the vaguest notion of what their culture was like. A few Greek myths at bedtime when we are kids, maybe a Greek tragedy like Sophokles’ Oidipous when we are at school: these are often the only contact we have with the world of the ancient Mediterranean. The story of the Greeks, however, deserves a wider audience, because so much of what we esteem in our own culture derives from them: democracy, epic poetry, lyric poetry, tragedy, history writing, philosophy, aesthetic taste, all of these and many other features of cultural life enter the West from Greece. The oracle of Apollo at Delphi had inscribed over the temple, “Know Thyself.” For us, that also means knowing the Greeks. We will cover the period from the Late Bronze Age, c. 1500 BC, down to the time of Alexander the Great, concentrating on the two hundred year interval from 600-400 BC.

HIST 0721 Ancient Rome
At its furthest extent during the second century CE, the Roman Empire was truly a “world empire”, stretching from northern Britain to North Africa and Egypt, encompassing the whole of Asia Minor, and bordering the Danube in its route from the Black Forest region of Germany to the Black Sea. But in its earliest history it comprised a few small hamlets on a collection of hills adjacent to the Tiber river in central Italy. Over a period of nearly 1500 years, the Roman state transformed from a mythical Kingdom to a Republic dominated by a heterogeneous, competitive aristocracy to an Empire ruled, at least notionally, by one man. It developed complex legal and administrative structures, supported a sophisticated and highly successful military machine, and sustained elaborate systems of economic production and exchange. It was, above all, a society characterized both by a willingness to include newly conquered peoples in the project of empire, and by fundamental, deep-seated practices of social exclusion and domination. This course focuses in particular upon the history of the Roman state between the fifth century BCE and the third century CE, exploring its religious and cultural practices, political, social and economic structures. It also scrutinizes the fundamental tensions and enduring conflicts that characterized this society throughout this 800-year period.

HIST 0724 Portraits of Old Rus: Myth, Icon, Chronicle
Three modern-day nation-states – Russia, Ukraine, and Belarus – share and dispute the cultural heritage of Old Rus, and their political relationships revolve around interpretations of the past. Has the medieval Rus state been established by the Vikings or by the local Slavs? Is early Rus a mother state of Russia or of Ukraine, and, therefore, should it be spelled 'Kyivan Rus,' or 'Kievan Rus' in English? Has the culture of Russian political despotism been inherited from the Mongols, or is it an autochthonous ideology? The constructed past has a continuing importance in modern Russia, Ukraine, and Belarus, and it is keenly referenced, often manipulatively, in contemporary social and political discourse. For example, President Putin invaded Ukraine under a pretense that its territory has "always" been an integral part of Russia and its history. The course covers eight centuries of cultural, political, and social history of the lands that are now within the borders of Russia, Ukraine, and Belarus, from early historical records through the 18th century, a period that laid the foundation for the Russian Empire and the formation of modern nations. Students gain knowledge about formative events and prominent figures, as well as social and cultural developments during this period. The course takes multidisciplinary approach by combining the study of textual sources, objects of art and architecture, music, ritual, and film in their social and historical contexts. Students learn to analyze and interpret primary sources (historical documents and literary texts), identify their intellectual issues, and understand the historical, cultural, and social contexts in which these sources emerged. While working with these primary sources students learn to pose questions about their value and reliability as historical evidence. By exposing students to the critical examination of "the uses of the past," the course aims to teach them to appreciate the authoritative nature of historical interpretation and its practical application in contemporary social and political rhetoric. The study of pre-modern cultural and political history through the prism of nationalism theories explains many aspects of modern Belarusian, Russian, and Ukrainian societies, as well as political aspirations of their leaders. At the end of the course, students should develop understanding of the continuity and change in the history of Russia, Ukraine and Belarus, their belief systems, and nationalistic ideologies, and will be able to speak and write about these issues with competence and confidence. HIST 0725 National Antiquities: Genealogies, Hagiographies, Holy Objects
Human societies have always wanted to know about their origins, the reasons for their customs, the foundations of their social institutions and religious beliefs, and the justification of their power structures. They have conceived of creation myths and of origins stories for their communities in order to position themselves within the past and present of the natural and human worlds. The newly Christianized kingdoms of Medieval Europe faced the challenge of securing a place in the new vision of universal Providential history, and they inscribed their own histories into the narratives they knew from the authoritative sources of the time - biblical genealogies and heroic stories inherited from the poets of classical antiquity. The deeds and virtues of saintly kings and church hierarchs provided a continuity of historical narrative on the sacred map of time and space. In the 19th century, while interest in medieval antiquity as a source of inspiration for political and cultural renewal brought about a critical study of evidence, it also effected reinterpretation and repurposing of this evidence vis-a-vis a new political concept - that of a nation. This seminar will focus on central, eastern and southeast European nations and explore three categories of "national antiquities" that have been prominent in the workings of their modern nationalisms: (1) stories of ethnogenesis (so-called, origo gentis) that narrate and explain the beginnings and genealogy of peoples and states, as they are recorded in medieval and early modern chronicles, (2) narratives about holy people, who are seen as national patron-saints, and (3) material objects of sacred significance (manuscripts, religious ceremony objects, crowns, icons) that act as symbols of political, cultural and national identities. Our approach will be two-fold: On the one hand, we will read medieval sources and ask the question of what they tell us about the mindset of the authors and societies that created them. We will think about how the knowledge of the past helped medieval societies legitimize the present and provide a model for the future. On the other hand, we will observe how medieval narratives and artifacts have been interpreted in modern times and how they became repurposed - first, during the "Romantic" stage of national awakening, then in the post-imperial era of independent nation-states, and, finally, in the post-Soviet context of reimagined Europe. We will observe how the study of nationalistic mentality enhances our understanding of how the past is represented and repurposed in scholarship and politics. Also Offered As: REES 1174

HIST 0730 Introduction to the Ancient Near East
The great pyramids and mysterious mummies of Egypt, the fabled Tower of Babel, and the laws of the Babylonian king Hammurabi are some of the things that might come to mind when you think of the ancient Near East. Yet these are only a very few of the many fascinating – and at time perplexing – aspects of the civilizations that flourished there c. 3300-300 BCE. This is where writing first developed, where people thought that the gods wrote down what would happen in the future on the lungs and livers of sacrificed sheep, and where people knew how to determine the length of hypotenuse a thousand years before the Greek Pythagoras was born. During this course, we will learn more about these other matters and discover their place in the cultures and civilizations of that area. This is an interdisciplinary survey of the history, society and culture of the ancient Near East, in particular Egypt and Mesopotamia, utilizing extensive readings from ancient texts in translation (including the Epic of Gilgamesh, "one of the great masterpieces of world literature"), but also making use of archaeological and art historical materials. The goal of the course is to gain an appreciation of the various societies of the time, to understand some of their great achievements, to become acquainted with some of the fascinating individuals of the time (such as Hatshepsut, "the women pharaoh," and Akhenaten, "the heretic king"), and to appreciate the rich heritage that they have left us.

HIST 0750 From Shamans to Shoguns: The Texts that Made Pre-Modern Japanese History
This course tackles about a millennium of pre-modern Japanese political, social, and cultural history (roughly, 700-1700). Instead of attempting to cover the period chronologically, as an introductory survey might, this class is structured as a series of case studies. Each of these will take a primary source as its point of departure and explore one or more facets of Japanese history and writing. In the course of each case study, lectures and discussions will branch out from the main source to examine its historical context as well as the (political, cultural, textual) traditions that informed that source's composition. In general, students will read the entire texts of the main sources (or significant portions of them), along with scholarly articles and shorter excerpts from other sources, composed at the same time or in the same vein/genre. During lectures and discussions alike, students will be asked to engage the readings, so as to grasp the specifics of Japanese history and practice the analytical skills required of historical discourse.

HIST 0775 City & Citizenship: Samurai Politics and Commoner Culture in Early Modern Japan
In the early modern period (1600-1867), Japan underwent a staggering urban transformation. Edo, the shogunal capital, grew in barely a century from a new settlement to a sprawling metropolis of over a million. Indeed, most of Japan's current urban centers descend directly from the castle towns built by regional warlords in the late sixteenth and early seventeenth centuries in an effort keep the peace after over a hundred years of civil war. As a result, Japanese cities in the early modern period became a central component of what historians have called a "re-feudalization" of society, and retained strong vestiges of their military origins. At the same time the samurai-centered space of the new samurai, while introducing some of the defining texts that have shaped our imagination of this age (from laws to epic poems, from codes of conduct to autobiographies).

HIST 0751 Japan: The Age of the Samurai
Who (or what) where the samurai? What does it mean to say that Japan had an "Age of the Samurai"? In popular imagination, pre-modern Japan has long been associated with its hereditary warrior class. Countless movies have explored the character and martial prowess of these men. Yet warriors constituted but a tiny portion of the societies they inhabited and ruled, and historians researching medieval Japan have turned their attentions to a great range of subjects and to other classes (elite and commoner alike). This class is designed to acquaint students with the complex and diverse centuries that have been called the "Age of the Samurai"-roughly, the years between ca. 1110 and 1850. In the course of the semester, we will explore the central themes in the historiography of warrior society, while introducing some of the defining texts that have shaped our imagination of this age (from laws to epic poems, from codes of conduct to autobiographies).

HIST 0753 City & Citizenship: Samurai Politics and Commoner Culture in Early Modern Japan
In the early modern period (1600-1867), Japan underwent a staggering urban transformation. Edo, the shogunal capital, grew in barely a century from a new settlement to a sprawling metropolis of over a million. Indeed, most of Japan's current urban centers descend directly from the castle towns built by regional warlords in the late sixteenth and early seventeenth centuries in an effort keep the peace after over a hundred years of civil war. As a result, Japanese cities in the early modern period became a central component of what historians have called a "re-feudalization" of society, and retained strong vestiges of their military origins. At the same time the samurai-centered space of the new cities created opportunities for the development of alternative cultural practices and values by urban commoners. The juxtaposition of the regimented, honor-driven society designed and longed for by samurai and the fluid, money-driven society that grew out of the burgeoning cities' commoner quarters is one of the animating forces of the early modern period. Through study of scholarship and contemporary sources (laws and sumptuary regulations, codes of conduct, but also diaries, novels, plays), this course will explore the many facets of early modern urban society, its medieval antecedents, and its legacies in contemporary Japan.

HIST 0754 Law and Violence in Pre-Modern Japan
This course will be an exploration of premodern Japanese history through the lens of violence. The centuries under consideration (roughly, the eighth through nineteenth) were characterized by greatly varying levels of violence, both of the state-sanctioned variety (war, punishments for law-breakers and political losers) and of the non-sanctioned variety (piracy, banditry, warrior and peasant rebellions). Examining a wide variety of translated sources, from diaries to chronicles, from legal codes to fiction, we shall examine the changing social, political, economic, and cultural contexts of violence, in order to interrogate not only why certain periods were remarkably peaceful while others were not, but also why violence took different forms in relation to different circumstances. We shall consider how contemporaries made sense of the violence that surrounded them (or didn't) and how they divided the acceptable use of force from the wanton and society-threatening abuse of it. The course will feature presentations and several (very short) papers.

HIST 0755 History, Culture, and Religion in Early India
This course surveys the culture, religion and history of India from 2500 BCE to 1200 CE. The course examines the major cultural, religious and social factors that shaped the course of early Indian history. The following themes will be covered: the rise and fall of Harappan civilization, the “Aryan Invasion” and Vedic India, the rise of cities, states and the religions of Buddhism and Jainism, the historical context of the growth of classical Hinduism, including the Mahabharata, Ramayana and the development of the theistic temple cults of Saivism and Vaisnavism, processes of medieval agrarian expansion and cultic incorporation as well as the spread of early Indian cultural ideas in Southeast Asia. In addition to assigned secondary readings students will read select primary sources on the history of religion and culture of early India, including Vedic and Buddhist texts, Puranas and medieval temple inscriptions. Major objectives of the course will be to draw attention to India’s early cultural and religious past and to assess contemporary concerns and ideologies in influencing our understanding and representation of that past.

HIST 0757 Mongolian Civilization: Nomadic and Sedentary
This course will explore how two intertwined ways of life - pastoral nomadism and settling down for religious, educational, and economic reasons - have shaped the cultural, artistic, and intellectual traditions of Mongolia. In this course students will learn about Mongolian pastoral nomadism, and how the Mongolian economy, literature, and steppe empires were built on grass and livestock. We will also explore how Mongolians have also just as consistently used the foundations of empire to build sedentary monuments and buildings, whether funerary complexes, Buddhist monasteries, socialist boarding schools, and modern capitals. Over time, these cities have changed shape, location, and ideology, all while remaining linked to the mobile pastoralists in the countryside. We will also explore how these traditions of mobile pastoralism and urbanism were transformed in the 20th century, by urbanization, communist ideology, and the new reality of free-market democracy, ideological pluralism, and a new mining dependent economy. We will meet modern painters and musicians who interweave Mongolian nomadic traditions with contemporary world trends, and consider the future of rural traditions in a modern world.

HIST 0812 Perspectives on Urban Poverty
This course provides an interdisciplinary introduction to 20th century urban poverty, and 20th century urban poverty knowledge. In addition to providing an historical overview of American poverty, the course is primarily concerned with the ways in which historical, cultural, political, racial, social, spatial/geographical, and economic forces have either shaped or been left out of contemporary debates on urban poverty. Of great importance, the course will evaluate competing analytic trends in the social sciences and their respective implications in terms of the question of what can be known about urban poverty in the contexts of social policy and practice, academic research, and the broader social imaginary. We will critically analyze a wide body of literature that theorizes and explains urban poverty. Course readings span the disciplines of sociology, anthropology, urban studies, history, and social welfare. Primacy will be granted to critical analysis and deconstruction of course texts, particularly with regard to the ways in which poverty knowledge creates, sustains, and constricts meaningful channels of action in urban poverty policy and practice interventions.

HIST 0814 American Slavery and the Law
In this course, we will work both chronologically and thematically to examine laws, constitutional provisions, and local and federal court decisions that established, regulated, and perpetuated slavery in the American colonies and states. We will concern ourselves both with change over time in the construction and application of the law, and the persistence of the desire to control and sublimate enslaved people. Our work will include engagement with secondary sources as well as immersion in the actual legal documents. Students will spend some time working with Mississippi murder cases from the 19th century. They will decipher and transcribe handwritten trial transcripts, and will historicize and analyze the cases with attention to procedural due process as well as what the testimony can tell us about the social history of the counties in which the murders occurred. The course will end with an examination of Black Codes that southern states enacted when slavery ended.

HIST 0817 Black Feminist Approaches to History and Memory
Topics vary: Black Feminist Approaches to History & Memory - The term black feminism emerged in public discourse amid the social, political, and cultural turbulence of the 1960s. The roots of black feminism, however, are much older, easily reaching back to the work of black women abolitionists and social critics of the nineteenth century. The concept continued to grow and evolve in the work of twentieth century black women writers, journalists, activists, and educators as they sought to document black women's lives. Collectively, their work established black feminism as a political practice dedicated to the equality of all people. More recently, black feminism has been deployed as a tool for theoretical and scholarly analysis that is characterized by an understanding that race, class, gender, and sexuality are inextricably interconnected. Using materials such as slave narratives, social criticism, and archival sources, this course will explore the theoretical and practical applications of black feminist thought in nineteenth and twentieth century North American culture and politics. In particular, we will consider the symbols and practices (storytelling, myth-making, art, archival research) that black women use to document lives. We will ask: how do these methods of documentation inform our understanding of the past and the production of historical knowledge? How can we understand black feminism as both theory and practice? And what are the implications of black feminist approaches for current research and scholarship? We will give particular attention to concepts such as gender, race, memory, the archive, and embodied knowledge to complicate our understanding of historical documentation, epistemology, and authenticity. The course material will include scholarship by Harriet Jacobs, Audre Lorde, Saidiya Hartman, Hazel Carby, Hershini Young, Evelyn Brooks Higginbotham, Toni Morrison, and others. (Image: From In Praise of Shadows, Kara Walker (2009). See the Africana Studies Department's website at https://africana.sas.upenn.edu for a description of the current offerings.

HIST 0821 Berlin: History, Politics, Culture
What do you know about Berlin’s history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and Koelln to establish a new capital for this country. It will tell the story of Berlin’s rising political prominence in the eighteenth century, and its position as a center of the German and Jewish Enlightenment. It will follow Berlin’s transformation into an industrial city in the nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will conclude its historical survey with a consideration of Berlin’s position as a capital in reunified Germany. The historical survey will be supplemented by a study of Berlin’s urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker’s housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin, and focus on Berlin’s Jewish history. The course will be interdisciplinary with the fields of German Studies, history, history of art, urban studies, and German-Jewish studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin.

HIST 0822 Universal Language: From the Tower of Babel to Artificial Intelligence
This is a course in European intellectual history. It explores the historical trajectory, from antiquity to the present day, of the idea that there once was, and again could be, a universal and perfect language among the human race. If recovered, it can explain the origins and meaning of human experience, and can enable universal understanding and world peace. The tantalizing question of the possibility of a universal language have been vital and thought-provoking throughout the history of humanity. The idea that the language spoken by Adam and Eve was a language which perfectly expressed the nature of all earthly objects and concepts has occupied the minds of intellectuals for almost two millennia. In defiance of the Christian biblical myth of the confusion of languages and nations at the Tower of Babel, they have over and over tried to overcome divine punishment and discover the path back to harmonious existence. By recovering or recreating a universal language, theologians hoped to be able to experience the divine; philosophers believed that it would enable apprehension of the laws of nature, while mystic cabalists saw in it direct access to hidden knowledge. In reconstructing a proto-language, 19th-century Indo-Europeanist philologists saw the means to study the early stages of human development. Even in the 20th century, romantic idealists, such as the inventor of Esperanto Ludwik Zamenhof, strived to construct languages to enable understanding among estranged nations. For writers and poets of all times, from Cyrano de Bergerac to Velimir Khlebnikov, the idea of a universal and perfect language has been an inexhaustible source of inspiration. Today, this idea echoes in theories of universal and generative grammars, in approaching English as a global tongue, and in various attempts to create artificial languages, even a language for cosmic communication. Each week we address a particular period and set of theories to learn about universal language projects, but above all, the course examines fundamental questions of what language is and how it functions in human society.

HIST 0823 Portraits of Russian Society: Art, Fiction, Drama
This course covers 19C Russian cultural and social history. Each week-long unit is organized around a single medium-length text (novella, play, memoir) which opens up a single scene of social history birth, death, duel, courtship, tsar, and so on. Each of these main texts is accompanied by a set of supplementary materials paintings, historical readings, cultural-analytical readings, excerpts from other literary works, etc. The object of the course is to understand the social codes and rituals that informed nineteenth-century Russian life, and to apply this knowledge in interpreting literary texts, other cultural objects, and even historical and social documents (letters, memoranda, etc.). We will attempt to understand social history and literary interpretation as separate disciplines yet also as disciplines that can inform one another. In short: we will read the social history through the text, and read the text against the social history.

HIST 0830 Introduction to the Middle East
This is the second half of the Near East sequence. This course surveys Islamic civilization from circa 600 (the rise of Islam) to the start of the modern era and concentrates on political, social, and cultural trends. Although the emphasis will be on Middle Eastern societies, we will occasionally consider developments in other parts of the world, such as sub-Saharan Africa, Central Asia, and Spain, where Islamic civilization was or has been influential. Our goal is to understand the shared features that have distinguished Islamic civilization as well as the varieties of experience that have endowed it with so much diversity.

HIST 0835 North Africa: History, Culture, Society
This interdisciplinary seminar aims to introduce students to the countries of North Africa, with a focus on the Maghreb and Libya (1830-present). It does so while examining the region's close economic and cultural connections to sub-Saharan Africa, Europe, and the Middle East. Readings will include histories, political analyses, anthropological studies, and novels, and will cover a wide range of topics such as colonial and postcolonial experiences, developments in Islamic thought and practice, and labor migration. This class is intended for juniors, seniors, and graduate students.

HIST 0836 Muslims, Christians, and Jews in the Middle East: Historical Perspectives
A reading- and discussion-intensive seminar that addresses several recurring questions with regard to the Middle East and North Africa. How have Islam, Judaism, and Christianity influenced each other in these regions historically? How have Jews, Christians, and Muslims fared as religious minorities? To what extent have communal relations been characterized by harmony and cooperation, or by strife and discord, and how have these relations changed in different contexts over time? To what extent and under what circumstances have members of these communities converted, intermarried, formed business alliances, and adopted or developed similar customs? How has the emergence of the modern nation-state system affected communal relations as well as the legal or social status of religious minorities in particular countries? How important has religion been as one variable in social identity (along with sect, ethnicity, class, gender, etc.), and to what extent has religious identity figured into regional conflicts and wars? The focus of the class will be on the modern period (c. 1800-present) although we will read about some relevant trends in the early and middle Islamic periods as well. Students will also pursue individually tailored research to produce final papers. Prior background in Islamic studies and Middle Eastern history is required. Middle Eastern history is required. This class is intended for juniors, seniors, and graduate students.

HIST 0837 Religion and Society in Africa
In recent decades, many African countries have perennially ranked very high among the most religious. This course serves as an introduction to major forms of religiosity in sub-Saharan Africa. Emphasis will be devoted to the indigenous religious traditions, Christianity and Islam, as they are practiced on the continent. We will examine how these religious traditions intersect with various aspects of life on the continent. The aim of this class is to help students to better understand various aspects of African cultures by dismantling stereotypes and assumptions that have long characterized the study of religions in Africa. The readings and lectures will be drawn from historical and a few anthropological, and literary sources.
Also Offered As: AFRC 2870, RELS 2870

HIST 0838 Medicine, Health and Healing in Africa
This seminar course will examine how sub-Saharan Africans have interpreted and dealt with issues of health, healing, and medicine under colonial and postcolonial regimes. It will also look at how various social, economic, religious, and political factors have impacted health and healing on the continent and shaped African responses. Class discussions will center around both general themes affecting health and healing in Africa as well as case studies drawn from historical and anthropological works.

HIST 0840 Love, Anger, Madness: History and Silences in Modern Haiti
On the stage of modern world history, Haiti plays the unique role as both the exceptionally victorious and tragic character. This course interrogates archival documents, oral histories, historical texts, and prose created within the nation and her diaspora in order to establish a nuanced image of the projection of Haiti’s modern history. Using two classic Haitian texts, Marie Vieux-Chauvet’s Love, Anger, Madness (1968) and Michel-Rolph Trouillot’s Silencing the Past: Power and the Production of History (1995), this course examines how, why, and to what end Haiti’s history and popular narratives about the country have served to construct and dismantle global movements, popular culture, and meanings of race, gender, and citizenship in the Americas. In our historical examination, we will question some of the iconic representations of Haiti through literature that deepen the affective historical profile of Haiti with interrogations of culture, sexuality, political, and media performance. Students will become familiar with the post-colonial history of Haiti and the region, meanings of race, and the production of history. The course is a research and historical methods seminar. Students will conduct archival research and write narratives from primary source material. This course qualifies as a “methods” course for Africana Studies undergraduate majors and minors.

HIST 0853 Adivasis/Indigenous Peoples & British Colonialism in India
Modern Western colonialism impacted the world in many ways. However, each country and community has had a different encounter and experience with colonialism. For the Adivasis (indigenous peoples) of India, it was catastrophic and marked a new phase in their history. The pre-colonial symbolizes a period of freedom in the hills and forest, whereas the colonial era symbolizes state coercion, eviction from land and the end of free movement in the forest. The proposed course discusses Adivasis’ encounters with the British colonial state. The course examines Indian history from the perspectives of Adivasis and contrasts these with dominant paradigms of Indian history. In this way, the course allows students to understand India from a different perspective. Under British colonialism, the diverse ethnic self-governing communities were imagined as primitive, uncivilized, barbaric, violent, backward and childlike people. The course discusses how such constructions impacted Adivasi social life and development. It traces how the expansion of the colonial state in forests and hills put an end to self-rule and induced massive migration from the plains of India and asked how Adivasi areas were integrated into the colonial economy. How did the colonial state use revenue and forest policies and regulations to bring these areas under its control? How did commercialization of agriculture and forest conservation work to further marginalize Adivasis? The course also examines how Adivasi knowledge of cultivation and forest conservation were viewed by the colonial state and asks why the colonial state encouraged caste-Hindu peasant migration into Adivasi areas. Finally, it traces the ways that colonial intervention has resulted in a series of contestations, acts of resistance, and insurgencies by Adivasi groups? Tracing forms of Adivasi resistance, the course puts these into conversation with intellectual history, emphasizing the role of rumours, myths, and orality, which provided the basis for the new insurgent consciousness that spread throughout Adivasi communities. Adivasi resistance movements have been documented and analyzed by colonial rulers and anthropologists. Colonial discourses were successful in criminalizing Adivasi politics. Ironically, many colonial-era discourses concerning Adivasis have been perpetuated within the post-colonial academy. The anti-colonial struggles of Adivasis were constructed as sporadic, spontaneous, unorganized and apolitical. The inauguration of the Subaltern Studies Project has reversed such arguments and attempted to provide ideological integrity to Adivasi politics. Students will be introduced to important literature on Adivasi anti-colonial insurgent consciousness and will be encouraged to think critically about the concepts and theories of subaltern politics. Assigned readings include texts by James Scott, Ranajit Guha, David Arnold, David Hardiman, Ajay Skaria, Dhanagare, Ramachandra Guha, Biswamoy Pati, Alpa Shah, Crispin Bates, Jangkhomang Guite and Bangya Bhukya. One aim of the course is to sensitize the students to how the political and cultural mobilizations by subalterns have contributed to the shaping of democracy.

HIST 0860 Introduction to Korean Civilization
What is Korean civilization—is it a singular notion, or are there many that became what we know as South and North Korea today? How have Koreans interpreted and represented their own cultures, traditions, and history through the years? This introductory course offers a broad chronological survey of Korean history, arts, and culture from its early days to the present moment. Our readings will include a selection of literature—from foundation myths, poetry, to modern fiction—as well as royal edicts and political manifestoes and op-eds. Alongside the readings, we will also engage with multimedia resources including various artwork, film, and music. Through these cultural texts, we will explore the political, economic, and social order of different historical eras and identify major currents and events on the Korean peninsula such as shifting political climates, class struggles, gender dynamics, and complex relations with its East Asian neighbors and the West. We will also be treated to guest lectures from the interdisciplinary Korean studies scholars affiliated with the James Joo-Jin Kim Center for Korean Studies at Penn. By the end of the semester, students will become familiar with the many continuities and breaks that constitute Korean culture from ancient to modern times and gain good insight into where it might be headed in the future. No prior knowledge of Korea or the Korean language is required.

HIST 0867 Divinities, Diviners and Divinations: Religions of the African Diaspora
This undergraduate course is designed to provide students with a broad introduction to major themes within African Diasporic Religions. This is an interdisciplinary course. We will be drawing upon various theoretical methods, i.e. historical, ethnographical, and autobiographical. Additionally, we will be examining visual media to understand the presence and value of African Diasporic Religions in the 20th/21st century. Special attention will be given to Vodou, Santeria, and Candomble in the Americas. Thematically, we will work through concepts of the diaspora; memory, myth and authenticity; ritual and material practices; borders, migration, gender and sexuality, religious commodities and exchange. As we traverse through these various religious traditions, it is through the readings, lectures, invited speakers, films and class discussions that we will develop a complex understanding of integrative religious worldviews that impacts every aspect of life: family structure, gender relations, education, healing, economics, politics, arts, and so on. It is with the hopes that we can apprehend how these traditions are indeed an American Religion.

HIST 0871 The Material Past in a Digital World
The material remains of the human past -objects and spaces- provide tangible evidence of past people’s lives. Today’s information technologies improve our ability to document, study, and present these materials. But what does it mean to deal with material evidence in a virtual context? In this class, students will learn basic digital methods for studying the past while working with objects, including those in the collections of the Penn Museum. This class will teach relational database design and 3D object modeling. As we learn about acquiring and managing data, we will gain valuable experience in the evaluation and use of digital tools. The digital humanities are a platform both for learning the basic digital literacy students need to succeed in today’s world and for discussing the human consequences of these new technologies and data. We will discuss information technology’s impact on the study and presentation of the past, including topics such as public participation in archaeological projects, educational technologies in museum galleries, and the issues raised by digitizing and disseminating historic texts and objects. Finally, we will touch on technology’s role in the preservation of the past in today’s turbulent world. No prior technical experience is required, but we hope students will share an enthusiasm for the past.

1 Course Unit

HIST 0872 Liquid Histories and Floating Archives
Climate change transforms the natural and built environments, and it is re-shaping how we understand, make sense, and care for our past. Climate changes history. This course explores the Anthropocene, the age when humans are remaking earth’s systems, from an on-water perspective. In on-line dialogue and video conferences with research teams in port cities on four continents, this undergraduate course focuses on Philadelphia as one case study of how rising waters are transfiguring urban history, as well as its present and future. Students projects take them into the archives at the Independence Seaport Museum and at Bartram’s Garden. Field trips by boat on the Schuylkill and Delaware Rivers and on land to the Port of Philadelphia and to the John Heinz National Wildlife Refuge invite transhistorical dialogues about how colonial and then industrial-era energy and port infrastructure transformed the region’s vast tidal marshlands wetlands. Excursions also help document how extreme rain events, storms, and rising waters are re-making the built environment, redrawing lines that had demarcated land from water. In dialogue with one another and invited guest artists, writers, and landscape architects, students final projects consider how our waters might themselves be read and investigated as archives. What do rising seas subsume and hold? Whose stories do they tell? What floats to the surface?

HIST 0873 Existence in Black
Racial, colonial, and other political formations have encumbered Black existence since at least the fifteenth-century. Black experiences of and reflections on these matters have been the subject of existential writings and artistic expressions ranging from the blues to reggae, fiction and non-fiction. Reading some of these texts alongside canonical texts in European existential philosophy, this class will examine how issues of freedom self, alienation, finitude, absurdity, race, and gender shape and are shaped by the global Black experience. Since Black aliveness is literally critical to Black existential philosophy, we shall also engage questions of Black flourishing amidst the potential for pessimism and nihilism.

HIST 0875 Classicism in the Black Atlantic, 1776-1968
During the eighteenth century, Britain, France, and the other imperial powers embraced the classical aesthetic to broadcast their genealogical connections with ancient Greece and Rome. As they expanded across the Atlantic, they brought with them an aesthetic of white marble, symmetry, restraint, and cultivated ‘taste’ that served to aestheticize the dependence of the imperial system on enslaved labor. This course explores how freed slaves and their descendants negotiated with the ideology of classicism during the long battle for civil rights in the Atlantic world. Beginning with the work of Phillis Wheatley, Olaudah Equiano, Ignatius Sancho, and Ottobah Cugoano, we will investigate how participants in the world of the work of Phillis Wheatley, Olaudah Equiano, Ignatius Sancho, and during the long battle for civil rights in the Atlantic world. Beginning with the work of Phillis Wheatley, Olaudah Equiano, Ignatius Sancho, and Ottobah Cugoano, we will investigate how participants in the world of

HIST 0876 Medicine in History
This course surveys the history of medical knowledge and practice from antiquity to the present. No prior background in the history of science or medicine is required. The course has two principal goals: (1) to give students a practical introduction to the fundamental questions and methods of the history of medicine, and (2) to foster a nuanced, critical understanding of medicine's complex role in contemporary society. The course takes a broadly chronological approach, blending the perspectives of the patient, the physician, and society as a whole—recognizing that medicine has always aspired to "treat" healthy people as well as the sick and infirm. Rather than history "from the top down" or "from the bottom up," this course sets its sights on history from the inside out. This means, first, that medical knowledge and practice is understood through the personal experiences of patients and caregivers. It also means that lectures and discussions will take the long-discredited knowledge and treatments of the past seriously, on their own terms, rather than judging them by today's standards. Required readings consist largely of primary sources, from elite medical texts to patient diaries. Short research assignments will encourage students to adopt the perspectives of a range of actors in various historical eras.

1 Course Unit

HIST 0878 Science, Labor and Capital
This course looks at the intertwined history of science, labor and capital since the fifteenth century. Starting with the surge of patents for labor-saving devices in fifteenth century Italy and coming all the way down to the contemporary neoliberal university, the culture of science and the cultures of labor and capital have always remained in intense conversation. The first half of the course will focus on the early relations between science, labor and capital. We will discuss patterns of employment for scientists, the relationship between manual work and intellectual work, the scientific aspects of commercial capitalism as well as the debates on the transition to capitalism. The second half of the course will focus on the period from the nineteenth century to the present. We will talk about colonialism and science, the social ascendance of the scientist in relation to the technician, as well as the political economy of contemporary science and of the contemporary university. This is a seminar course and will require regular participation. Some knowledge of the existing literature on capitalism, especially the writings of Ellen Wood and E.P Thompson, are recommended but not required.

Also Offered As: STSC 3088
1 Course Unit
HIST 0879 Global Queer History
Sexuality has a history that is both geographically and culturally specific. For this reason, this course aims to destabilize familiar sexual categories and identities by exploring how it was (and is) to be queer in different parts of the world. We will historicize sexual orientation as a category anchored in Western medical and legal discourses; we will link the history of sexuality with that of capitalism, colonialism, and racism; and we will evaluate the idea of “Gay Imperialism” and how it is resisted around the world. The course is not comprehensive either chronologically or geographically. Instead, it considers some key topics in the history of queer sexualities; it provides a general historiographical background; and it introduces a toolbox for doing critical queer history with a global perspective. Finally, we will address how contemporary LBGTQ+ issues around the world can be put into historical perspective, and why queer history is essential for achieving the goals of social justice.

HIST 1100 North American Colonial History
A survey of the development of American colonial society, 1607-1750, with emphasis on the regional differences between life in early New England, the Mid-Atlantic, and the South, as well as the relationships between British colonists, Native Americans, and African Americans.
Fall
1 Course Unit

HIST 1110 Hamilton's America: US History 1776-1804
In this course, students will learn about the political, constitutional, and social history of the United States from 1776 (the year the colonies declared their independence from Great Britain) to 1800 (the year Thomas Jefferson won the presidency in a heated partisan election for the presidency). Alexander Hamilton, an influential American statesman during this time, will be our guide to the many events and transformations that occurred during these years. The course is not, however, a biographical course about Hamilton. Topics covered include: the politics of independence, the Revolutionary War, the development of state and national republics, the creation of the U.S. Constitution, the role of ordinary people in the politics of the time period, the problem of slavery in the new nation, Native American power and loss, diplomatic affairs, and the rise of partisan politics.
Spring
1 Course Unit

HIST 1119 History of American Law to 1877
This course is designed to explore major themes and events in early American legal history. Because of the richness of the subject matter and the wealth of sources available, we will be selective in our focus. The course will emphasize several core areas of legal development that run throughout colonial and early national history: 1) the state: including topics such as war and other military or police action, insurrection, revolution, regulation, courts, economic policy, and public health; 2) labor: including race and racially-based slavery, varied forms of servitude and labor coercion, household labor, industrialization, unionization, and market development; 3) property: including property in persons, land, and business, and the role of lawyers in promoting the creation of wealth; 4) private spaces: including family, individual rights, sexuality, gender, and private relations of authority; 5) constitutionalism: various methods of setting norms (rules, principles, values) that create, structure, and define the limits of government power and authority in colonial/imperial, state, and national contexts; 6) democracy and belonging: including questions of citizenship, voting rights, and participation in public life. By placing primary sources within historical context, the course will expose students to the ways that legal change has affected the course of American history and contemporary life. The course will be conducted primarily in lecture format, but I invite student questions and participation. In the end, the central aim of this course is to acquaint students with a keen sense of the ways that law has operated to liberate, constrain, and organize Americans. Ideally, students will come away with sharper critical thinking and reading skills, as well. *This course is a core requirement for the Legal Studies and History Minor (LSHM).*

HIST 1151 Race, Space and Place in American History
This course provides with a historical introduction to America’s racial and ethnic groupings by examining the social, spatial and historical forces that have defined these groups. Weekly lectures and readings trace American racial formations, identities and experiences from the age of Columbus to the present day. Following the work of historians and geographers who emphasize the importance of space and place in constructions of racial and ethnic identity, most of the class readings chart the evolution of such identities within specific regions or communities. Early readings illuminate the origins of categories such as “white,” black, “Native American” and “Asian” by exploring the colonial encounters in which these identities first took shape; while later readings trace how these identities have been maintained and/or changed over time. Less a product of racial attitudes than of economic and political interests, early American conceptions of race first took shape amidst contests over land and labor that pitted European immigrants against the indigenous peoples of North America, and ultimately led to the development of racial slavery. Colonial legal distinctions between Christians and Heathens were supplanted by legislation that defined people by race and ethnicity. Over time these distinctions were reinforced by a variety of other forces. Distinctive from place to place, America’s racial and ethnic groupings have been shaped and reshaped by regional economies such as the slave South, political initiatives such as Indian Removal and Chinese Exclusion Acts, a changing national immigration policy, and sexual and social intermixture and assimilation. Course readings will examine the links between race, region, labor, law, immigration, politics, sexuality and the construction and character of racialized spaces and places in America.
Also Offered As: AFRC 1151

HIST 1162 The American West
This lecture course surveys that vast and varied region now known as the American West, and the earlier “wests” that preceded it. The U.S. West contains a distinctive mixture of mountains and deserts; wide-open spaces and sprawling cities; Natives and newcomers. This region functions as an emblematic space in U.S. pop culture and national mythology (think “cowboys and Indians,” Yellowstone and Grand Canyon, Hollywood and Vegas). It also figures prominently in environmental history, political history, and the histories of religion, race, war, and diplomacy. Today, the West is where the United States faces China across the Pacific; and where the republic meets its neighbor Mexico along a 2,000-mile border, some of it barricaded. From Great Plains Indigenous equestrian innovators in the eighteenth century to Bay Area tech entrepreneurs in the contemporary moment, this course gives the West and all its peoples their due.
Spring
1 Course Unit
**HIST 1163 Modern American Culture**

Through the twentieth century, American culture took on new forms and meanings, spurred by technological innovation, commerce, and institutions, and shaped by an ever-changing population. In the process, American culture became self-consciously "modern"-embraced, contested, repudiated, and continually redefined. This course explores the history of American culture from the 1890s to the 1990s, with a focus on the following questions: Why did culture become such an important part of American economic, social, and political life in the twentieth century? How has culture been created, understood, and mobilized by different groups in American society at different times? What have been the politics of culture over the twentieth century? Topics include the rise of "culture industries" and mass entertainment, including amusement parks, film, radio, and television; the growth of consumer culture; the impact of gender in such arenas as sports and fashion; the role of working-class peoples, African Americans, and immigrants in American culture; the cultural response to the Depression and World War II; and popular activism. The course emphasizes the study of primary documents—journalism, fiction, letters and diaries, music, photographs, and film—as a means of understanding the past.

1 Course Unit

**HIST 1164 American Monuments: Designs for the Future**

Recent protests about monuments have exposed this truth: arguments over the past are arguments about the future. This place-based course examines U.S. public memory in relation to the built environment. Students will learn about the making of the nation's memorial landscape in the long nineteenth century, its remaking in the twentieth century, and its possible futures in the (un)making. Lectures and readings will cover a variety of commemorative structures and practices, from the permanent to the ephemeral and the virtual. Working in teams, students will create proposals for innovative monuments of their own design. While contextualized in national and international history, student projects will be grounded in present-day Philadelphia, with the goal of joining the academic and the civic.

1 Course Unit

**HIST 1165 History of American Education**

This course will examine the growth and development of American schools, from the birth of the republic into the present. By 1850, the United States sent a greater fraction of its children to school than any other nation on earth. Why? What did young people learn there? And, most of all, how did these institutions both reflect and shape our evolving conceptions of "America" itself? In an irreducibly diverse society, the answers were never simple. Americans have always defined their nation in a myriad of contrasting and often contradictory ways. So they have also clashed vehemently over their schools, which remain our central public vehicle for deliberating and disseminating the values that we wish to transmit to our young. Our course will pay close attention to these education-related debates, especially in the realms of race, class, and religion. When immigrants came here from other shores, would they have to relinquish their old cultures and languages? When African-Americans won their freedom from bondage, what status would they assume? And as different religious denominations fanned out across the country, how would they balance the uncompromising demands of faith with the pluralistic imperatives of democracy? All of these questions came into relief at school, where the answers changed dramatically over time. Early American teachers blithely assumed that newcomers would abandon their old-world habits and tongues; today, "multicultural education" seeks to preserve or even to celebrate these distinctive patterns. Post-emancipation white philanthropists designed vocational curricula for freed African-Americans, imagining blacks as loyal serfs; but blacks themselves demanded a more academic education, which would set them on the road to equality. Protestants and Catholics both used the public schools to teach their faith systems until the early 1960s, when the courts barred them from doing so; but religious controversies continue to hound the schools, especially on matters like evolution and sex education. How should our public schools address such dilemmas? How can the schools provide a "common" education, as Horace Mann called it, melding us into an integrated whole while still respecting our inevitable differences?

**HIST 1169 History of American Law Since 1877**

This course introduces students to major themes in U.S. legal history from 1877 to the present. Topics include (but are not limited to) citizenship and immigration, federalism, public regulation of economic activity, lawyers and the legal profession, criminalization, social welfare provision, and rights-claiming. Prominent through-lines include the relationship between law and politics; the struggles of marginalized groups for recognition and inclusion; and shifting, competing understandings of liberty, equality, and justice. Judicial decisions figure prominently in this course, but so, too, do other sources of law, including statutes, administrative decisions, and provisions of the U.S. Constitution. Students will leave this course with a better grasp of how the U.S. legal system operates and how it has channeled power, resources, and opportunity over time. *This course fulfills a core requirement for the Legal Studies and History Minor.*

1 Course Unit
HIST 1170 The American Civil War and Reconstruction
This course will cover the nature of American slavery, the causes of the Civil War, how the aims of the war changed over time, and the emergence and destruction of bi-racial democracy during Reconstruction. This is not a military history course, but we will discuss the course of the war and explore why Americans in the mid-nineteenth century came to believe that they could only settle their political disagreements through violence. We will examine how the revolutionary social and political changes that the war made possible were undermined and how the promise and shortcomings of Reconstruction continue to shape the nation today. Students will be graded on class participation in lecture and three written assignments. No prior knowledge required.
1 Course Unit

HIST 1171 The American South 1860-Present
This course will trace the history of the American South from the end of the Civil War to the present. It will investigate Reconstruction, the New South, Populism, racial disfranchisement and the rise of Jim Crow, the politics of the One-Party South, the South in the Progressive era and its role in the New Deal and World War II, the Civil Rights Movement of the 1950s and 1960s, and the rise of the Republican South. While following the narrative of politics and economic development, we will pay particular attention to race relations and will be more than casually interested in gender roles. In addition, we will take frequent peeks at the evolving Southern identity as reflected in popular culture and literature as well as in other corners of the public sphere.
Two Term Class, Student may enter either term; credit given for either
1 Course Unit

HIST 1172 Bodies, Race and Rights: Sex and Citizenship in Modern American History
What did it mean to be a man or woman in the post-Civil War United States? Was being a man the same as being a citizen? If African-American men were to be fully embraced as both men and citizens in the aftermath of slavery, where did that leave women, white and black? Why did a nation built on immigration become so hostile to certain groups of immigrants during this period? In this course, we consider how the meanings and experiences of womanhood, manhood, citizenship, and equality before the law changed from the period immediately after the Civil War until the present day. We look at political battles over the meaning of citizenship, the use of terror to subdue African Americans politically and economically, and the fears of white Americans that they would lose their political and economic dominance to immigrant groups they deemed irreconcilably different from themselves. We also consider the repercussions of these conflicts for medical, legal, and economic efforts to regulate the bodies of women, children, poor people, immigrants, working class laborers, military men, and African Americans. Throughout the course, we will follow the state’s changing use of racial, sexual, and economic categories to assess the bodily and intellectual capacities of different groups of citizens. We will also note some of the popular cultural expressions of manhood, womanhood, and citizenship. The lectures and reading assignments are organized around a series of historical problems, dynamic leaders, and controversies that illuminate these issues.

HIST 1173 History of Sexuality in the U.S.
This course introduces students to a relatively new field of inquiry, the history of sexuality in the U.S. It explores the past to consider why sexuality has been so central to American identities, culture, and politics. Primary documents and other readings focus on the history of sexual ideology and regulation; popular culture and changing sexual practices; the emergence of distinct sexual identities and communities; the politics of sexuality; and the relationship between sexual and other forms of social difference, such as gender, race, ethnicity, age, and class. Topics include many with continuing relevance to contemporary public debate: among them, sexual representation and censorship, sexual violence, adolescent sexuality, the politics of reproduction, gay and lesbian sexualities and sexually transmitted diseases.

1 Course Unit

HIST 1179 Precious Lord, Take My Hand: America in the Sixties
The Sixties are mythologized in American memory. From social movements to hippies, the Sixties are often portrayed as a decade of unfettered idealism, chaos, and revolution. The Sixties were indeed a dramatic era of conflict and change, but the experiences of Americans who lived during the Sixties were also remarkably diverse and complex in ways that transcend stereotypes of the decade. More than merely a series of conflicts between activists and racists or hawks and doves, the Sixties represented a turning point in American life. The society that emerged in the wake of this profound decade was completely different than anything that had ever existed before. Through a variety of themes—especially gender, race, foreign policy, and consumer culture—this class will move beyond generic Sixties narratives to offer a multi-faceted examination of American life during the Sixties and explore how the decade has shaped the contemporary United States.
1 Course Unit
HIST 1180 U.S. Politics and Society since the 1960s: From Civil Rights to the Trump Right
This course explores significant political and social developments that shaped the late twentieth and early twenty-first centuries in the United States, an era of declining faith in political institutions, ideological and partisan polarization, and accelerating inequality. The course will consider a variety of perspectives, developments, and movements across the political spectrum as well as others that defy easy ideological or partisan categorization. Topics will include the evolution of the post-1960s civil rights movement and the rise of mass incarceration; the rise and transformation of the religious right and the emergence of the populist right from the 1970s through the Tea Party and MAGA movements; the evolution of liberalism and the Democratic Party and its relationship to the left; the AIDS crisis and the LGBTQ movement; 9/11 and the war on terror; the financialization of the global economy and the causes and effects of the mortgage crisis of 2008; and bipartisan paths toward the emergence of "neoliberalism" and the concept of the "free market" as ways of reordering not just social and political commitments but perhaps even society itself.

1 Course Unit

HIST 1191 The U.S. and the World since 1898
This class examines the emergence of the U.S. as a world power since 1898, and considers both the international and domestic consequences of U.S. foreign relations. In one respect, the twentieth century was a strange time to become a global empire: it was the period when colonial systems centered in Europe, Russia, Japan, and Turkey collapsed, and new nations emerged throughout Africa and Asia. This class explores the changing strategies of military, economic, and political intervention that the U.S. pursued as colonization lost legitimacy. Within that framework, the class invites students to think about several questions: How did the idea and practice of empire change over the twentieth century? How did the United States relate to new visions of independence emerging in Africa, Asia, and Latin America? How did global interactions both inform and reflect racial ideology in the United States? Finally, how did international affairs transform U.S. politics and social movements?

1 Course Unit

HIST 1201 Foundations of Law
This course explores the history and conceptual underpinnings of modern law in the West. What exactly is law? What is its relationship with politics and religion? Where do our notions of constitutionalism come from? How have we come to think in terms of rights? Using a historical and comparative approach, we will examine legal thought and culture in the European West from the Greek concept of nomos to the main categories of law developed in Roman antiquity, concepts of constitutionalism and rights crafted in medieval Europe, the development of the two main legal traditions of Europe (Common Law and Civil Law), and the emergence of intellectual property, human rights discourse and modern international law. The course will blend intellectual, political and social history. We will study concepts and intellectual categories such as crime, proof, punishment and the public/private distinction alongside illustrative cases that either exemplified the law or pushed it forward, foundational documents such as Magna Carta, and political developments such as the Peace of Westphalia, credited with the birth of modern state sovereignty and modern international law. Together, these subjects form core foundations of how we think and do law today.
1 Course Unit

HIST 1203 Economic History of Europe I
This course concentrates on the economy of Europe in the Early Modern Period, 1450-1750. It was a time of great transition. Europe developed from an agriculturally-based to an industrially-based economy, with attendant changes in society and culture. From subsistence-level productivity, the European economy expanded to create great surfeits of goods, with attendant changes in consumption and expectation. Europe grew from a regional economic system to become part--some would say the heart--of a global economy, with attendant changes in worldview and identity. Economic intensification, expansion, globalizaton, and industrialization are our topics, therefore. Beginning with economic organizations and practices, we will consider how these changed over time and influenced society and culture. The course takes as its point of departure the experience of individual, working men and women: peasants and artisans, merchants and landlords, entrepreneurs and financiers. Yet, it argues outward: from the particular to the general, from the individual to the social, from the local to the global. It will suggest ways in which the economy influenced developments or changes that were not in themselves economic, shaped, and deflected economic life and practice.
Fall or Spring
1 Course Unit
HIST 1205 Reading the Classics
In this course we will study the early roots of Western culture—the Biblical, Greek and Roman traditions—as well as how sixteenth- and seventeenth-century European authors reproduced, rethought and reshaped these early traditions. Instead of reading and discussing several of the biblical books—Genesis, Exodus, the Book on Revelation—we will study other seminal classical works—Sophocles' Antigone, Aristotle's Politics and Ethics, Herodotus’ The Histories; Plato’s Apology— and works by Michel de Montaigne, Maria de Zayas y Sotomayor, Marie de Gournay, Christopher Marlowe, William Shakespeare, and several others. We will also work with books published in the last decades, analyzing the classics and their reception in various periods of history, but also books that analyze what the classics tell us today—Dreyfus and Kelly's All Things Shining, Reading the Western Classics to find meaning in a secular Age; Anthony Grafton's Bring Out Your Dead: the Past as Revelation; James Miller, Examined Lives, from Socrates to Nietzsche; and Sarah Bakewell, How to Live: Or a Life of Montaigne in One Question and Twenty Attempts at an Answer.
1 Course Unit

HIST 1210 The Vikings
The Vikings were the terror of Europe from the late eight to the eleventh century. Norwegians, Danes and Swedes left their homeland to trade, raid and pillage; leaving survivors praying "Oh Lord, deliver us from the fury of the Norsemen!" While commonly associated with violent barbarism, the Norse were also farmers, craftsmen, and merchants. As their dragon ships sailed the waterways of Europe and beyond, they also transformed from raiders to explorers, discoverers and settlers of found and conquered lands. This course will introduce students to various facets of the culture and society of the Viking world ranging from honor culture, gender roles, political culture, mythology, and burial practices. We will also explore the range of Viking activity abroad from Kiev and Constantinople to Greenland and Vineland, the Viking settlement in North America. We will use material and archeological sources as well as literary and historical ones in order to think about how we know history and what questions we can ask from different sorts of sources. Notably, we will be reading Icelandic sagas that relate oral histories of heroes, outlaws, raiders and sailors that will lead us to question the lines between fact and fiction, and myth and history.

1 Course Unit

HIST 1215 LOVE, LUST AND VIOLENCE IN THE MIDDLE AGES
Medieval Europe was undoubtedly gruff and violent but it also gave birth to courtly culture - raw worries transformed into knights who performed heroic deeds, troubadours wrote epics in their honor and love songs about their ladies, women of the elite carved out a place in public discourse as patrons of the arts, and princely courts were increasingly defined by pageantry from jousting tournaments to royal coronations. This course will trace the development of this courtly culture from the eleventh to the sixteenth century, from its roots in Southern France to its spread to Northern France and then to various kingdoms in Europe. Central themes will include the transformation of the warrior into the knight, the relationship between violence and courtliness, courtly love, cultural production and the patronage, and the development of court pageantry and ceremonial. This is a class cultural history and, as such, will rely on the interpretation of objects of art and material culture, literature as well as historical accounts.

HIST 1220 The Tudors
This course examines the history of England from the accession of Henry (VII) Tudor in 1485 to the death of Elizabeth I in 1603, with emphases on the political and personal history of this colorful dynasty, the religious revolution known as the Protestant Reformation, the arts and literature known as the English Renaissance, imperial and trade ventures overseas, and aspects of popular culture including the witch craze. Unlike most English histories of the period, we will also look closely at the other realms of the British Isles, Scotland, Wales, and Ireland. Readings consist of a textbook with a British scope, and an array of primary sources, some in book form and others (marked with an asterisk on the syllabus) attached to Blackboard or distributed in class. Books are available at the Penn Book Center, except for biographies associated with film critiques. Most of the films noted in the syllabus will be available on PVN; otherwise, they can be viewed at the library or through Netflix. Assignments in square brackets are optional.
Spring
1 Course Unit

HIST 1221 Britain's Century of Revolution
England, Ireland, Wales and Scotland experienced revolutions in the first half of the seventeenth century that abolished monarchy and hereditary aristocracy, and carried out the first judicial execution of a monarch in European history. England was re-constructed as a republic, then with Scotland became the United Commonwealth of Great Britain, then declined into a military dictatorship, and finally invited the king back. In 1688, however, the Glorious Revolution deposed that king and declared Britain a strictly constitutional monarchy. This course will explore what motivated ordinarily obedient British subjects to take up arms against their rulers. The works of Milton and Marvell, Cromwell, Hobbes and Locke, and many lesser-known writers of diaries, autobiographies, sermons, statutes, and letters will illuminate the issues. The focus will be on how law, politics and religion interacted in the onset of war and defining of settlement, but with an eye to the larger social and cultural setting in which revolutions happened: this is also an era of both witchcraze and scientific revolution, puritanism and the slave trade, the near-destruction of London by fire and plague and its re-birth as the capital of a commercial empire.
Fall or Spring
1 Course Unit
HIST 1230 The French Revolution and the Origins of Modern Politics
This course will examine the social, cultural, intellectual, economic, and especially political history of France and its Empire from the end of the Old Regime through the Napoleonic period. The origins, development, and outcome of the French Revolution, followed by the Haitian Revolution and the Napoleonic Wars, will be our main focus. Particular attention will be paid to the global legacy of these late 18th and early 19th century revolutions in terms of such key modern political concepts as human rights, nationalism, social welfare, feminism, democracy, terrorism, abolitionism, capitalism, and revolution itself. Throughout the course, we will also emphasize the different and often conflicting ways in which historians have interpreted the meaning and consequences of this critical moment of upheaval. Readings will be a mixture of primary and secondary sources, and classes will combine lecture and discussion. Requirements will be one mid-term examination (15%), one short paper (15%), one final paper (30%), and one final examination (30%), as well as class participation (10%).
Not Offered Every Year
1 Course Unit

HIST 1250 Belief and Unbelief in Modern Thought
"God is dead," declared Friedrich Nietzsche, "and we have killed him." Nietzsche's words came as a climax of a longer history of criticism of, and dissent toward, the religious foundations of European society and politics. The critique of religion had vast implications for the meaning of human life, the nature of the person, and the conception of political and social existence. The course will explore the intensifying debate over religion in the intellectual history of Europe, reaching from the Renaissance, through the Scientific Revolution and the Enlightenment, to the twentieth century. Rousseau, Voltaire, Marx, Nietzsche, and Freud. These thinkers allow us to trace the varieties of irreligious experience that have emerged in modern European thought and their implications for both historical and philosophical understanding. Rather than drawing a straight line from belief to non-belief, however, we will also consider whether religion lingers even in secular thought and culture.

HIST 1260 Tolstoy's War and Peace and the Age of Napoleon
In this course we will read what many consider to be the greatest book in world literature. This work, Tolstoy's War and Peace, is devoted to one of the most momentous periods in world history, the Napoleonic Era (1789-1815). We will study both the book and the era of the Napoleonic Wars: the military campaigns of Napoleon and his opponents, the grand strategies of the age, political intrigues and diplomatic betrayals, the ideologies and human dramas, the relationship between art and history. How does literature help us to understand this era? How does history help us to understand this great book? Because we will read War and Peace over the course of the entire semester, readings will be manageable and very enjoyable.

1 Course Unit

HIST 1265 Victorian Britain: Spaces, Places, and Pests
In this course, we will examine the nooks and crannies of Victorian society. It was a period of squalor, but also innovation, devastating diseases, and crucial advances in public health and medical science. Its cities featured depressing slums and lurid crimes, but also new kinds of spectacles, entertainments, and commodities. It was, in many ways, as one of its greatest authors wrote, "the best of times, and the worst of times." Units under study will include "The Docks," "The Germs," "The Empire," "The Church," and "the Museum." We'll investigate killer diseases like cholera and typhus, dazzling buildings like the Crystal Palace, imperial wars and crises, and new scientific movements like Darwinism and mesmerism. Along the way, we will encounter proper and eminent Victorians as well as scandalous and marginalized ones. The aim will be to understand Victorian mentalities and ideas by looking at a diverse array of institutions and inventions. Readings will include novels, stories, pamphlets, essays, and cartoons as well as secondary literature. Classes will be a mixture of lecture and discussion, and no previous experience in British history is necessary.
Not Offered Every Year
1 Course Unit

HIST 1270 World War I
This survey course examines the outbreak, conduct, and aftermath of the First World War. The First World War put an end to the world of the 19th century and laid the foundations of the 20th century, the age of destruction and devastation. This course will examine the war in three components: the long-term and immediate causes of the First World War, the war's catastrophic conduct, on the battlefield and on the home front; and the war's devastating aftermath. While we will discuss military operations and certain battles, this course is not a military history of the war; it covers the social, economic, political and diplomatic aspects that contributed to the war's outbreak and made possible its execution over four devastating years. No preliminary knowledge or coursework is required.
Two Term Class, Student may enter either term; credit given for either
1 Course Unit

HIST 1280 Origins of Nazism: From Democracy to Race War and Genocide
Where did the Nazis come from? Was the Weimar Republic bound to fail? Did the Treaty of Versailles or the Great Depression catapult the Nazis into power? What was the role of racism, of Anti-Semitism? How did the regime consolidate itself? What was the role of ordinary people? How do we explain the Holocaust and what kind of a war was the Second World War? Grappling with these and more questions, the first half of the course focuses on Germany's first democracy, the Weimar Republic and its vibrant political culture. In the second half, we study on the Nazi regime, how it consolidated its power and remade society based on the concepts of race and struggle. Discussions of race and race-making are crucial throughout the course. In the name of the "racial purity," the Nazi state moved ruthlessly against Germany's Jewish population and cleansed German society of all "undesirable" elements. These ideas and practices didn't originate with the Nazis and they didn't operate in a geopolitical vacuum. Thinking about Nazi racism and genocide in both its particular specifics and in a larger global historical context is the main goal of this course.

HIST 1300 Gunpowder, Art and Diplomacy: Islamic Empires in the Early Modern World
In the sixteenth century, the political landscape of the Middle East, Central Asia, and India changed with the expansion and consolidation of new Islamic empires. Gunpowder had transformed the modes of warfare. Diplomacy followed new rules and forms of legitimation. The widespread use of Persian, Arabic and Turkish languages across the region allowed for an interconnected world of scholars, merchants, and diplomats. And each imperial court, those of the Ottomans, the Safavids, and the Mughals, found innovative and original forms of expression in art and literature. The expansion of these Islamic empires, each of them military giants and behemoths of bureaucracy, marked a new phase in world history. The course is divided into four sections. The first section introduces the student to major debates about the so-called gunpowder empires of the Islamic world as well as to comparative approaches to study them. The second section focuses on the transformations of modes of warfare and military organization. The third section considers the cultural history and artistic production of the imperial courts of the Ottomans, the Mughals, and the Safavids. The fourth and final section investigates the social histories of these empires, their subjects, and the configuration of a world both connected and divided by commerce, expansion, and diplomacy.

1 Course Unit

HIST 1359 Filming the Middle East
This course will take us through the history of the modern Middle East as told by the region’s many film-makers. We will explore how cinema developed and grew throughout countries like Egypt, Iran, Syria, Turkey, Lebanon, Israel and Palestine. Unusually for a typical course on the Middle East, we will also pay close attention to North Africa’s film industry, with a deep exploration of the cinema of Algeria, Tunisia and Morocco. Sudanese films will be an important part of our study as well. What does it mean to have a national cinema? Many of these countries’ film industries grew under European occupation and colonialism. With independence, were more markets available to Middle Eastern films? Where did directors and screenwriters train? Who were the intended audiences for these films? We will watch canonical films from the region, many of which focus on or reflect the political turmoil and aftermath of wars. But we will also examine the lightness of comedies, which were usually much more popular with Middle Eastern audiences, and which reveal every bit as much about the region’s histories. And we will watch and discuss a phenomenon not found in Western cinema - the Ramadan soap operas and historical reenactments that are unique to the Middle East.
Also Offered As: CIMS 1359, NELC 1970

1 Course Unit
HIST 1361 Sex Matters: Politics of Sex in the Modern Middle East
The course concentrates on the history of sexuality as it informed and shaped political and social change in the Middle East, and vice versa, in an engagement with global historical contexts. What does sexuality have to do with power, political rule, and mass movements in the modern Middle East? What can the study of sexuality and body politics teach us about colonialism and state formation over centuries of imperial rules and colonial regimes, as well as in the contemporary context of neoliberal capitalism? What is the relationship between studying LGBTIQ/A+ movements alongside with feminism and the use of sex and sexuality as an analytical category? This course will investigate selected themes such as modernity, nationalism, and colonization and connect them to harem lives, politics of veiling/unveiling, reproductive rights, race, polygamy, masculinity, and early modern concepts of same-sex desire in connection with modern queer thought and activism to ask questions about the preconceived notions about "Middle Eastern sexualities." The course focuses on discussing on some of the many roles that sex and gender politics have played in social and political change in the Middle East, while thinking about gender, history, and society comparatively and transnationally.

1 Course Unit

HIST 1365 Bacteria, Bodies, and Empires: Medicine and Healing in the Eastern Mediterranean (15th-21st c.)
Bacteria, Bodies, and Empires is a survey course about the history of medicine in the Eastern Mediterranean from early modern period to the present. It addresses the major issues and questions concerning bodies, diseases, and medical institutions within the context of major historical developments in the world and region's history. The course looks at how medicine, knowledge, and practices about diseases and bodies changed political and social conditions, as well as how socio-political changes defined and transformed people's perceptions of health, life, and the environment. Scholars have frequently examined the history of medicine in Eastern Mediterranean societies, either in relation to Islamic culture in the early modern period or, more recently, in relation to Westernization and modernization. By situating the history of medical knowledge and practices in the Eastern Mediterranean within global history, this course seeks to challenge these fixed paradigms and shed light on questions and research agendas that will unearth the encounters, connections, and mobility of bacteria, bodies, and medical methods among various communities.
Also Offered As: HSOC 1362

HIST 1370 African Environmental History
This new course will explore multiple dimensions of Africa's environmental history, drawing upon literature in the natural sciences, social sciences, and the humanities. It is one component of a pilot project supported by Penn Global and directed by the instructor on "Local Histories of Climate Change in the Horn of Africa", though we will cover topics and case studies from the entire continent. The course takes an historical perspective on environmental change in Africa, with an eye to engaging current debates on climate change and its impact on contemporary urban and rural communities. Students will read and discuss key works on the African environment, conduct their own literature reviews on selected topics, and prepare case studies of communities which have been impacted by severe climate events in the past half-century. The format combines lectures and seminar-style discussions, and we will draw upon the expertise of guest lecturers in a variety of disciplines which have contributed to the study of environmental change.

1 Course Unit

HIST 1382 Modern Iran
"Iran" acquired its current appellation through a process of national and international negotiation. To understand its modern history requires a retrospective analysis of international processes, which have guided Iran's political and cultural transformations in the contemporary period. Iran's engagement with its neighbors and with other transnational communities, from the nineteenth to the 21st century, has remained a source of conflict and cultural flux, especially along its volatile boundaries. Its past has become embedded in the broad histories of the Middle East and thus cannot be studied in isolation. This course will traverse the history of Iran from the monarchic era to the Islamic Republic. It will offer readings of primary accounts, historical newspapers, archival documents, and unpublished manuscript sources to show the breadth of the Persianate world and the significance of Iran's involvement in the contemporary Middle East, from social issues to arms build-up.
1 Course Unit
HIST 1388 From Oil Fields to Soccer Fields: The Middle East in the 20th Century
How did the Middle East become modern? Life changed in spectacular ways for the people of the Middle East in the span of a century. Oil – once considered a scarce natural commodity – was discovered in many countries and exported in substantial quantities that altered the economic landscape of the world. Movie theaters, sewage systems, and public housing projects changed the urban backdrop of Middle Eastern cities and towns. Soccer, swimming, and volleyball became some of the new-fangled sports embraced by Middle Eastern communities. This course will traverse these fascinating and fraught cultural transformations of the Middle East in the twentieth century. Although inclusive of the military battles and conflicts that have affected the region, this class will move beyond the cliches of war to show the range of issues and ideas with which intellectuals and communities grappled. The cultural politics and economic value of oil as well as the formation of a vibrant cultural life will be among the topics covered. By considering illustrative moments that shed light on the political history of the period, this course will develop a nuanced framework to approach the history of the U.S. involvement in the region, the Iran-Iraq war, the Arab/Israeli conflict, and the current crises in the Persian Gulf. Students are required to participate in every lecture and/or recitation, as on Thursdays, part of the class time will be devoted to discussing select documents provided by the instructor. Please keep in mind that lectures do not duplicate readings, but rather supplement them. We will also watch video clips during some lectures. In addition, students are expected to complete each week’s readings before class. Course requirements include satisfactory performance on a Powerpoint presentation related to the weekly readings, 2 short factual quizzes, and 7-page paper. The paper can be on a topic of contemporary interest that is placed in the proper historical context.

HIST 1400 Silver and Gold in the Americas from pre-history to the present
Precious metals have shaped pre-Colombian economies and socio-cultural processes in the Americas for thousands of years. After 1492, gold and silver sent from the "New World" to the "Old World" played a key role in changing economies all over the world. Locally, mining centers were places marked by forced labor, conspicuous consumption, and the destruction of ecosystems. Internationally, gold and silver prices have long had outsized effects on monetary and trade policies. This course uses case studies to delve into the fascinating history of precious metals and mining in North and South America. We will analyze documents describing the gold objects ransacked by Spanish conquistadors, examine 17th Century proto-industrial silver mining at Potosi, trace the impact and human cost of the huge gold strikes in Minas Gerais, in colonial Brazil, read new work on the California and Yukon moments of "rush" and their long-term impact on US monetary policy, and follow new reports about the conflicts at the heart of transnational gold mining in the present. Students will gain experience working with primary sources and will produce an in-depth research paper.

HIST 1405 Indigenous Latin America 1400-1800
In 1492 Europeans began to colonize the Americas. Many colonizers sought to dispossess Indigenous people of their labor, land, and, sometimes, their lives, and often tried to impose their religion and cultural practices. Nonetheless, throughout Latin America Indigenous communities not only survived but adapted in creative, vigorous ways to the new social and ecological circumstances. In this course we will look at the diverse ways that Indigenous individuals and collectives avoided or adapted to colonial rule in Latin America between 1492 and 1800. We will particularly focus on Arawakan, Carib, Tupinamba, Nahua, and Andean histories. Readings will include both primary and secondary sources.

1 Course Unit

HIST 1455 Independence and Revolution in Latin America: Crises and Crossroads
Was it inevitable that the countries in Latin America would become independent, republican nations? What was the impact of revolutions throughout the region from Mexico to Buenos Aires? This course studies the main social, political, economic, and cultural tensions that shook Spanish and Portuguese America during the first decades of the nineteenth century. Through close readings of primary and secondary sources, we will reflect on the meanings and implications of independence and the rise of new republican nations throughout the region. The course is expansive across time and space as we explore topics including the Tupac Amaru Rebellion in Perú, the Comunero Revolt in New Granada, and how the French and Haitian Revolutions, as well as U.S. independence, were perceived throughout Spanish and Portuguese America. We will also delve deeply into the diversity of independence movements. Why did a monarch hold onto power for years after independence was proclaimed in Brazil? How were societies divided during the struggle and who fought on which side? The course culminates with a study of the impact and legacy of independence and revolutions on the region in the mid-19th century and thereafter.

HIST 1475 History of Brazil: Slavery, Inequality, Development
In the past decade, Brazil has emerged a leading global power. As the world’s fifth-largest country, by size and population, and the ninth-largest by GDP, Brazil exerts tremendous influence on international politics and the global economy, seen in its position as an emerging BRIC nation and a regional heavyweight in South America. Brazil is often in the news for its strides in social welfare, leading investments in the Global South, as host of the World Cup and Olympics, and, most recently, for its political instability. It is also a nation of deep contradictions, in which myth of racial democracy – the longstanding creed that Brazilian society has escaped racial discrimination – functions alongside pervasive social inequality, state violence, political corruption, and an unforgiving penal system. This course examines six centuries of Brazilian history. It highlights the interplay between global events – colonialism, slavery and emancipation, capitalism, and democratization – and the local geographies, popular cultures, and social movements that have shaped this multi-ethnic and expansive nation. In particular, the readings will highlight Brazil’s place in Latin America and the Lusophone World, as well as the ways in which Brazil stands as a counterpoint to the United States, especially in terms of the legacy of slavery and race relation. In this lecture, we will also follow the current political and economic crises unfolding in Brazil, at a moment when it has become all the more important to evaluate just how South America’s largest nation has shaped and been shaped by global events.

HIST 1550 East Asian Diplomacy
Home to four of the five most populous states and four of the five largest economies, the Asia/Pacific is arguably the most dynamic region in the twenty-first century. At the same time, Cold War remnants (a divided Korea and China) and major geopolitical shifts (the rise of China and India, decline of the US and Japan) contribute significantly to the volatility of our world. This course will examine the political, economic, and geopolitical dynamism of the region through a survey of relations among the great powers in Asia from the sixteenth century to the present. Special emphasis will be given to regional and global developments from the perspective of the three principal East Asian states—China, Japan and Korea. We will explore the many informal, as well as formal, means of intercourse that have made East Asia what it is today. Graduate students should consult graduate syllabus for graduate reading list, special recitation time and graduate requirements.

1 Course Unit

HIST 1591 The Vietnam War
A thorough historical, military, and social history of the Vietnam war, which lasted in one form or another from the end of WWII in 1945 to 1975, in which occurred the longest and most humiliating defeat in our history. Since that time the Vietnamese have published hundreds of documents, some in English, which provide an entirely new perspective on what we believed during the war. These, supplemented by other primary and secondary materials, as much as possible written by Vietnamese or by Americans having first-hand knowledge, will form the backbone of the course. The various American and Vietnamese strategies will be scrutinized carefully, and a good deal said about the home front in America. The actual fighting, that determined the outcome, will not be slighted. We expect at least some guest speakers having long diplomatic or military experience in Vietnam. The present will be our conclusion. Lectures TTH 12:1-3; midterm in class, short paper, an irregular final. If you want to understand the world you now live in, this coursea good place to start.

HIST 1593 20th Century China: Democracy, Constitutions, and States
Since 1900 four types of states have ruled China: dynastic, elective parliamentary, authoritarian nationalist, and communist. We will trace each from its intellectual origins to conclusion. By doing so we will present a solid and wide-ranging narrative of China's past century, introducing newly discovered material, some controversial. Above all we will dig into the issues raised by the century's mixture of regimes. Right now China is a dictatorship but once it was an imperfect democracy. Does this prove that Chinese are somehow incapable of creating democracy? That sadly it is just not in their DNA? Or only that the task is very difficult in a country nearly forty times the size of England and developing rapidly? That without dictatorship the Chinese almost inevitably collapse into chaos? Or only that blood and iron have been used regularly with harsh effectiveness? You will be given a solid grounding in events, and also in how they are interpreted, right up to the present. Readings will be mostly by Chinese authors (translated), everything from primary sources to narrative to fiction. We will also use wartime documentary films. Two lectures per week, regular mid-term and final exams, and a paper on a topic of your own choice. No prerequisites.

HIST 1594 China and the World: Modern Times
History 1594 is a comprehensive introduction to the last hundred years of China's relations with the world, with emphasis on American-Chinese relations, but within the necessary context of China's relations with other countries from Asia to Europe to Africa and elsewhere (as well as Washington's changing relations with Beijing). China's role in the world can be understood only when the full background and international context is made clear. This course has no prerequisites: first year and other students lacking background will find it manageable and interesting. Students who have successfully completed this course will be well positioned to understand some of the most important of current events, and if they like, pursue the topics as careers (there will be no shortage, I assure you). Although much will be said about diplomacy, and Chinese diplomatic strategy in particular, the mile-posts of the course will be a series of wars: World War I and its effects on China; the heroic Chinese war of resistance against Japan (1937-1945) in which, effectively without allies, the Chinese avoided defeat; the bitter Civil War that followed almost immediately (1946-1949) and brought Mao Zedong and his Communists to power while the predecessor Nationalist government fled to the island of Taiwan; then the Korean War (1950-1953) and the close Chinese-Soviet alliance that followed; The Taiwan Straits Crises (1954-1955, 1958, 1996); the Chinese-Indian war (1962) the origin of a situation now heating up; the Sino-Soviet border conflicts (1969); the Vietnam War (1955-1975) which changed the United States profoundly while reorienting China internationally; the (at the time) little noticed Chinese invasion of Vietnam (1979) - and finally the increasingly tense situation today, between China and India, and China and her maritime neighbors from Japan to Indonesia, many U.S. allies.

HIST 1620 The Rise and Fall of the Spanish Empire 1450-1700
This course will provide students with a solid knowledge of the history of early modern Spain (1450-1700). Through readings of primary and secondary texts that offer a complex vision of the cultural, religious, intellectual, and economic contexts and processes, students will be able to appreciate the intricacies of Spain's historical evolution. The course focuses on the rise and decline of the Spanish monarchy: the conditions that enabled Spain to become the most powerful monarchy in early modern times, and the conditions that led to its decline. This course also touches upon other important aspects critical to understanding early modern Spain: relationships among Christians, Muslims, and Jews in the Iberian Peninsula; the conquest and colonization of the New World; and early modern debates about Spain's rights to occupy America and the so-called "destruction of the Indies."

HIST 1625 Era of Revolutions in the Atlantic World
This class examines the global ramifications of the era of Atlantic revolutions from the 1770s through the 1820s. With a particular focus on French Saint Domingue and Latin America, it provides an overview of key events and individuals from the period. Along the way, it assesses the impact of the American and French revolutions on the breakdown of colonial regimes across the Americas. Students will learn how to think critically about citizenship, constitutional power, and independence movements throughout the Atlantic world. Slavery and the transatlantic slave trade were seriously challenged in places such as Haiti, and the class investigates the appropriation and circulation of revolutionary ideas by enslaved people and other subaltern groups.

1 Course Unit

HIST 1630 Witchcraft and Possession
This course explores world witchcraft and possession from the persecutions of the early seventeenth century through the rise of Wicca in the twentieth century. The mere mention of these terms, or of such close cousins as demonology, sorcery, exorcism, magic, and the witches Sabbath, raises clear ethno-graphic and historical challenges. How can the analysis of witchcraft-- including beliefs, patterns of accusation, the general social position of victims, the intensity and timing of witch hunts, and its relation to religious practice, law, language, gender, social marginalization, and property--lead us to a more humane understanding of belief and action? Films such as The Exorcist, The Blair Witch Project, The Crucible, and Three Sovereigns for Sarah will focus discussion.

HIST 1650 Human-Animal Relationships in Historical Perspective
We live in a paradoxical moment in the history of people's relationships with animals. Certain species suffer today more than ever due to environmental degradation and modern food production practices. Yet other mammalian species are subject to a degree of sentimental attention (perhaps) unprecedented in history. This paradox is related to an unresolved tension in Western cultures: do the commonalities that bind humans to other animals unite them more or less than the differences that divide them? The course is organized around three main segments: animal domestication; modes of interaction (hunting, husbandry, pets, science) in early modern Europe; and contemporary science. We will conclude with a consideration of current philosophical and ethical perspectives of our treatment of non-human animals. By considering a variety of disciplinary approaches but with an emphasis on historians' methodologies, we will investigate these questions through careful reading of primary sources as well as secondary sources.

HIST 1700 The African Diaspora: Global Dimensions
This class examines the cultural and social ramifications of the African diaspora on a global level. It is divided into two major sections. The first section provides the historical background to the African diaspora by focusing on the forced migration of Africans to Spanish and Portuguese colonies in the Americas. We will then delve into the black experience in French and British colonial spaces. In this section, we will also endeavor to move beyond the Atlantic-centric paradigm in studies of the African diaspora by examining free and unfree migrations of African people across the Indian Ocean to places as far away as India and the Philippines. The second half of the class devotes significant attention to the historical legacy of slavery and colonialism in places like Brazil, Cuba and the United States. In this section, we will discuss such issues as race relations, the struggle for civil rights for African-descent people as well as the emergence and the implementation of affirmative action policies in places like Brazil and the US.

HIST 1706 Global Environmental History from Paleolithic to the Present
This course explores the changing relationships between human beings and the natural world from early history to the present. We will consider the various ways humans across the globe have interacted with and modified the natural world by using fire, domesticating plants and animals, extracting minerals and energy, designing petrochemicals, splitting atoms and leaving behind wastes of all sorts. Together we consider the impacts, ranging from population expansion to species extinctions and climate change. We examine how human interactions with the natural world relate to broader cultural processes such as religion, colonialism and capitalism, and why it is important to understand the past, even the deep past, in order to rise to the challenges of the present.

HIST 1731 Financial Meltdown, Past and Present
Economic history is increasingly recognized as a crucial source of policy advice and is invoked with growing frequency in public debates. In particular, the subprime crisis in 2008 and after has generated a demand for "historical perspective" that would improve the understanding of the causes of financial turmoil and facilitate the prevention of comparable catastrophes. This course begins with a review of the principal features of the subprime crisis of 2008 and asks, so to speak, "how did we get there?" It answers by providing historical insights that shed light on crucial aspects of financial disasters. This is a history course, engaging with topics pertaining to economics, law and politics (national and international). Students with diverse backgrounds are expected to benefit from this course through acquiring a concrete knowledge of the historical evolution of fundamental institutions of financial capitalism. Ultimately, students enrolling in this course are expected to achieve proficiency in historically informed discussion of the mechanisms that were played out in the subprime crisis and beyond.

Also Offered As: ECON 0620
1 Course Unit
HIST 1733 Free Speech and Censorship
This course will explore the idea of free speech - its justification, its relationship to various forms of censorship, and its proper limits - as a historical, philosophical, legal, and ultimately, political question. In the first half of the course, we will explore the long history across the West of the regulation of various kinds of ideas and their expression, from malicious gossip to heresies, and read classic arguments for and against censorship, copyright protections, and standards of taste and decency and of truth. In the second part of the seminar, after looking at how the idea of freedom of speech came to seem an existential prerequisite for democracy as well as individual liberty, we will take up the historical and philosophical questions posed by such recent dilemmas as whether or not hate speech deserves the protection of the First Amendment, the distinction between art and pornography from the perspective of freedom of expression, speech during wartime, and the transformative effects of the internet on the circulation and regulation of ideas. We will end the semester by thinking about the globalization of the idea of free speech as a human right and its implications, both positive and negative. Readings will range from Robert Darnton’s The Forbidden Best-Sellers of Pre-Revolutionary France, to D. H. Lawrence’s Lady Chatterley’s Lover, to documents concerning the cartoons of Charlie Hebdo and law review articles about Citizens United v. FEC. We will also make considerable use of local resources, from museums to the library.

HIST 1740 Capitalism, Socialism, and Crisis in the 20th Century Americas
From the crisis of the Great Depression through the 1970s, the United States and Latin America produced remarkable efforts to remake society and political economy. This course analyzes the Cuban and Guatemalan revolutions, as well as social movements that transformed the United States: the black freedom movement, the labor movement, and changing forms of Latinx politics. In all three countries, Americans looked for ways to reform capitalism or build socialism; address entrenched patterns of racism; define and realize democracy; and achieve national independence. They conceived of these challenges in dramatically different ways. Together, we'll compare national histories and analyze the relationships between national upheavals.

1 Course Unit

HIST 1770 1947-49: British Empire and the Partitions of South Asia and Palestine
The partitions of South Asia and Palestine marked the end of the British Empire in those regions. British colonial rule in India ended in 1947 with the emergence of not one, but two nation states, India and Pakistan. Decolonization was marked by mass migration and ethnic cleansing along their borders. An estimated million people died in the violence in less than a year, and 12.5 million people migrated from their homes. The British Empire also gave up its claims to Palestine in 1947, exhausted by the two nationalisms of Zionists and Palestinians. This partition set up the declaration of the state of Israel, and the War for Palestine. By 1949, almost a million Palestinians found themselves displaced over many borders, some also within the borders of Israel. This comparative course is organized around three themes - the prehistories of these cataclysmic events, the role of Empire in catalyzing them, and the afterlives of these events that continue to haunt us into the present, seventy-five years later. It explores the political history - and the collapse of politics - that led to violence on a scale that was without precedent in the history of the Indian subcontinent. It examines the political, social and cultural events that led to decades of war and exile, and shaped the lives of generations of Palestinians, Israelis and the wider Middle East. Primary sources will help to explore the perspectives of ordinary people whose lives were turned upside down in both places.

HIST 1788 Civilizations at odds? The United States and the Middle East
Foe or friend, Satan or saint - America has often been depicted in the Middle East either as a benevolent superpower or an ill-meaning enemy. In America, too, stereotypes of the Middle East abound as the home of terrorists, falafels, and fanatics. This undergraduate lecture course will explore the relationship between the United States and the Middle East by moving beyond such facile stereotypes. Our goal is to understand why a century of interaction has done little to foster greater understanding between these two societies. By reading novels, memoirs, and historical accounts, we will examine the origins of this cultural and diplomatic encounter in the twentieth century. The readings will shed light on America's political and economic involvement in the Middle East after the Second World War. We will consider the impact of oil diplomacy on U.S.-Middle East relations, as well as the role of ideology and religion, in our effort to comprehend the current challenges that face these societies.

HIST 1790 China & USSR Compared
A comprehensive and multi-faceted survey of China and Russia, mostly in the twentieth century, through examining preludes and postludes, but focusing above all on their time as Communist states and sometimes quarreling Cold War allies. Of course we will cover the history, the geography, the economics, the leaders (Stalin, Mao), and the great events - not least the Second World War in each - always comparing, contrasting, and drawing linkages. We will also examine, however, daily life and work for ordinary people, developments in society, and not least their common attempts at revolution, at somehow creating new and unprecedented polities, having populations of radically transformed new people. This informative, fascinating quest will take us from folklore to literature and the arts to dissent and religion and ecology, among other topics. As far as possible we will let their people speak for themselves, by assigning mostly translations of original sources including novels and memoirs, even poetry. A comprehensive assessment of the strategically critical Asian heartland - which at over 14 million square miles is larger than Canada, the United States, and Western Europe combined. Lectures, readings, midterm, short paper, and in-class final.

HIST 2152 Work and Workers in America
The subjects to be examined in this seminar on work and workers in the United States, include: industrialization and working-class protests movements in the nineteenth century; transformations of work under corporate capitalism; women, African Americans, immigrants and work; the rise of mass production unionism in the 1930s; deindustrialization and the eclipse of trade unionism; workers in contemporary America and blue color blues; and the future of work and new avenues for labor organizing. A number of films will be shown during the course of the semester and two field trips are planned. Requirements for the seminar include: the leading of discussions; three paper assignments; and engaged participation.

HIST 2153 History Behind the Headlines: Contemporary U.S. Politics and Policy
History Behind the Headlines offers students the opportunity to explore the historical roots and development of current, pressing questions of U.S. politics and public policy. Drawing upon historical methodologies and scholarship as well recent work in political science and sociology, this reading seminar offers deep context for understanding some of the most important contemporary issues in American public life. Topics will likely include political polarization, the incarceration crisis, immigration, lobbying (that is, the role of money in democracy), and, perhaps, impeachment. In addition to a number of short response and op-ed style writing assignments, students will write and present a final project on a contemporary political or policy issue of their choosing. These final projects might take a variety of forms, including traditional historical research essays, policy white papers, long form investigative journalism, or projects using digital media.

1 Course Unit
HIST 2154 The State of the Union is not Good: The US in Crisis in the 1970s
Vietnam. Watergate. Deindustrialization. Inflation. Disco. These events and forces only begin to scratch the surface of the social, cultural, political, and economic transmutations that remade American life in the 1970s and which, by 1975, forced President Gerald Ford to concede “that the state of the union is not good.” Beyond these familiar topics, this reading seminar will explore a range of developments that are crucial for understanding why the 1970s was perhaps the pivotal decade in making modern American politics, economics, and culture. Topics will include the fate of the Civil Rights movement and the war on crime; the rise and impact of second wave feminism; the rise of the modern conservative coalition (e.g., its religious, economic, and white working-class components); the emergence of the finance economy; the reorientation of organized labor and the remaking of the Democratic Party; the explosion of “therapeutic” cultures of self-help, individualism, and entrepreneurialism; and the rise of the Sunbelt as the nation’s dominant cultural, political, and economic region.

HIST 2155 Gender History and American Film
More than any other medium, the motion pictures fostered new ideals and images of modern womanhood and manhood in the United States. Throughout the twentieth century, gender representations on the screen bore a complex relationship to the social, economic, and political transformations marking the lives and consciousness of American men and women. This course explores the history of American gender through film. It treats the motion pictures as a primary source that, juxtaposed with other kinds of historical evidence, opens a window onto gendered work, leisure, sexuality, family life, and politics. We will view a wide range of Hollywood motion pictures since 1900, as well as films by blacklist artists, feminists, and independent producers.

HIST 2156 Life Stories in Early America, 1730-1830
This seminar explores the social and cultural history of early America by focusing on the lives of specific individuals, ranging from Jesuit priests in early Quebec to Philadelphia politicians to Saramaka slaves to Maine midwives. As we critically examine biography and autobiography as two of history’s most powerful narrative frames, we will concentrate on the spaces and places in the social landscape that shaped individual understandings of work, sense of self, gender, beliefs, and political power, and why.

HIST 2157 Petrosylvania: Reckoning with Fossil Fuel
Fossil fuel powered the making—now the unmaking—of the modern world. As the first fossil fuel state, Pennsylvania led the United States toward an energy-intensive economy, a technological pathway with planetary consequences. The purpose of this seminar is to perform a historical accounting—and an ethical reckoning—of coal, oil, and natural gas. Specifically, students will investigate the histories and legacies of fossil fuel in connection to three entities: the Commonwealth of Pennsylvania, the City of Philadelphia, and the University of Pennsylvania. Under instructor guidance, students will do original research, some of it online, much the rest of it in archives, on and off campus, in and around Philadelphia. Philly-based research may also involve fieldwork. While based in historical sources and methods, this course intersects with business, finance, policy, environmental science, environmental engineering, urban and regional planning, public health, and social justice. Student projects may take multiple forms, individual and collaborative, from traditional papers to data visualizations prepared with assistance from the Price Lab for Digital Humanities. Through their research, students will contribute to a multi-year project that will ultimately be made available to the public.

HIST 2158 News, Media and American Democracy
At separate moments, Thomas Jefferson famously declared both that newspapers were crucial to sustain a nation and that a person who never looked at a newspaper was better informed than a regular reader of the press. The ideal of an informed citizenry occupies a central spot in our understanding of the democratic project in the United States, and, consequently, the news and media play a vital role. But news may inform or distort, empower or control. As Americans on both the Left and Right wonder today what is happening to our democratic prospects, how does access to public information and the media support or undermine democracy? In this class we will consider the history of news — reliable and fake news — and media systems in the United States and their implications for democracy. We will dig into an array of moments that highlight the contested nature of the news, media and democratic citizenship, from the colonial era to the 21st century. We will explore the importance of the different media that conveyed news in the past — and think about what that means for us in the present moment as news travels through new channels. How we know about our world — including through the media — shapes how we inhabit it. Throughout, we will explore what it means to think historically: to understand how to draw our own conclusions from historical sources, to understand perspectives other than our own, and to bring the past to bear to better understand the present.
1 Course Unit

HIST 2159 The History of Family Separation
This course examines the socio-legal history of family separation in the United States. From the period of slavery to the present-day, the United States has a long history of separating and remaking families. Black, Indigenous, poor, disabled, and immigrant communities have navigated the precarious nature of family separation and the legal regime of local, state, and federal law that substantiated it. In this course, we will trace how families have navigated domains of family separation and the reasoning that compelled such separation in the first place. Through an intersectional focus that embraces race, class, disability, and gender, we will underline who has endured family separation and how such separation has remade the very definition of family in the United States.

HIST 2200 Florence in History
Florence is justly famous for its art and learning, especially during the era of the Renaissance. It was also one of the most literate states in Europe during this era; thanks to the city's abundant records, it is one of the best-studied cities in Europe from the late Middle Ages through the early modern era. Our course readings present a mix of major primary sources, synthetic summaries, and important modern scholarship. Most of our class time will focus on the information and issues they raise.

Also Offered As: ITAL 2200
1 Course Unit

HIST 2201 The City of Rome: From Constantine to the Borgias
The great city of Rome outlived its empire and its emperors. What happened to the Eternal City after "the fall of the Roman Empire in the West?" In this course, we will follow the story of this great city, its people, its buildings old and new, and its legacy across Italy, Europe, and beyond. Rome rebuilt and reshaped itself through the Middle Ages: home for popes, destination for pilgrims, power broker for Italy. It became a great Renaissance and early modern city, a center of art and architecture, of religion, and of politics. We will be reading a mix of primary sources and modern scholarship. All required texts are in English, though students who take this course for Italian Studies credit may choose to read some works in Italian.

HIST 2202 Taking Things: A History of Property and Law
This course looks at the history of the idea of property from antiquity to contemporary society though various specific themes and problems. We will begin with early development of the idea of property in Roman law. How was the idea of property explained, and what were the basic legal concepts associated with taking, using and owning? How did people lay claim to things wild or unowned? We will then move through medieval, early modern and modern periods to examine specific questions. How were people made into things? How do we create rights in intangibles? What are the limits of rights of property? Property is in many ways a central concept in relations between people in their everyday life. It is also a cornerstone of political ideology. This class will explore the history behind how we make and distinguish between 'mine' and 'yours'.

HIST 2203 Introduction to Print Culture
This course examines the writing, printing, dissemination, interpretation, and censorship of specific works in Early modern England, France, Italy, Spain and America. The course is an introduction to the history of authorship, publishing, and reading at the age of print culture from Gutenberg to Franklin. All the texts analyzed in the course (the Bible, Montaigne's Essays, Shakespeare's plays, Don Quixote, Pamela among them) are available in English but the course pays particular attention to the massive range of translations in early modern period. Its main focus are the relation between the "printing revolution" and scribal culture, censorship and transgression, the birth of the author and collaborative writing, and reading practices from humanist techniques to reading of the novels. The course is based on the exceptional collections of rare books and manuscripts at Penn and in Philadelphia and it is taught in the Van Pelt Library.

1 Course Unit

HIST 2205 Religious Conflict and Coexistence in Early Modern Europe
Europe's early modern period (roughly 1450-1750) has been described as an "age of religious wars," with the Reformation and contact with the New World prompting the formation of new fault lines, new collectives, and the reshaping of old animosities in new expressions. It was a period of bloody riots between Catholics and Protestants, expulsions of Jews and Muslims, prosecution of heretics, martyrdoms of saints, andquisitions of witches. But it was also an age of living together, of pragmatism, and of coexistence. This seminar explores the complexities and curiosities of religious intellectual, political, social, and daily life as people across religious lines clashed, cooperated, communicated, and carried-on. We will explore the experiences both of influential thinkers but also ordinary people, and ask how and why people were willing, in the name of religion, to persecute, prosecute, fight, kill, and die, and how others traded and traveled together, defended each other, and even married across religious lines.
Also Offered As: JWST 2225
1 Course Unit

HIST 2206 Neighbors and Strangers: Jews and Christians in Premodern Europe
The history of Christians and Jews—and of Judaism and Christianity—is an entangled one. From antiquity the two groups gained understandings of themselves in relation to the other, and that story defined much of the lives of each throughout the Middle Ages and into the modern period. At times this relationship was a hostile one, but it was also a force for creativity and a basic fact of life. This course approaches the history of relations between Christians and Jews in Medieval and Early Modern Europe (ca. 1000-1800), exploring both the bases of hatred and the possibilities of coexistence. We will look at episodes of crusader violence, mass expulsion, and religious polemic alongside exchanges in taverns, shared child-rearing, and sexual encounters. We will examine sources from both Christians and Jews, recovering voices from across this seeming divide, encountering both the ideals imagined by elites and intellectuals, and the messy—and more interesting!—realities of living side-by-side for centuries. Class meetings will involve dedicated discussion of a combination of primary and secondary sources, and assessment will be based on writing assignments.

1 Course Unit
HIST 2250 History, Memory, and Nostalgia in Modern Europe
Karl Marx compared history to a nightmare weighing on the brains of the living, but it can also be a refuge, a source of inspiration, and a constant companion. In this course, we will consider our own relationship to the past as we navigate the boundaries and intersections of history, memory, and nostalgia. Reading will consist of plays, novels, music, film, television, and painting. From the traumas of the Holocaust and of Stalinism to the conflicted memory of empire, from preservation to imagination, we will consider a wide array of methods through which Europeans have engaged their past over the last two hundred and fifty years. How does the academic study of the past relate to individual and collective memories of it? If "living in the past" seems often seems counterproductive, and yearning for it often seems reactionary, in what ways can nostalgia be a force of progress? We will consider these questions as we study topics such as the birth of heritage movements in the nineteenth century, the formation of national museums, representations of war and violence, legacies of imperialism, and the history of memory after the cataclysms of the twentieth century.

1 Course Unit

HIST 2251 Machiavelli and Modern Political Thought
Niccolo Machiavelli, the Renaissance author best known for The Prince, is frequently regarded as a consummate cynic. Yet he has been not only a provocation but an inspiration throughout the subsequent history of political thought. This was true for the entire twentieth century, which witnessed an ever-growing interest in the Florentine thinker among historians and philosophers alike. One of the most surprising dimensions of this modern engagement with Machiavelli is surely his recurring presence as figure and motif within left-wing philosophical discourse. In light of the failure of the twentieth-century’s revolutionary experiments, as well as its own entanglements with those experiments, how could radical theory understand its past and imagine its future? What vision could supplant the dimming of utopia? Such questions have frequently led recent theorists into melancholic resignation, but they have also provoked innovative and rigorous attempts to rethink the project of radical politics as radical democracy. How is it that Machiavelli, a thinker indelibly associated with the cynical and amoral manipulation of politics, could become an inspiration for theorists of a robust democratic life? This course will examine this curious history of influence and transformation. Starting with an examination of key texts by Machiavelli himself, we will then trace his reception in European intellectual history, focusing upon the twentieth century. Among authors we will consider will be Jean-Jacques Rousseau, Hannah Arendt, Leo Strauss, John Pocock, Quentin Skinner, Antonio Gramsci, Louis Althusser, John McCormick, and Antonio Negri.

HIST 2253 Human Rights and History
The idea of universal, inalienable rights—once dismissed by the philosopher Jeremy Bentham as "nonsense upon stilts"—has become the dominant moral language of our time, the self-evident truth par excellence of our age. Human rights have become a source of inspiration to oppressed individuals and groups across the world, the rallying cry for a global civil society, and not least, a controversial source of legitimation for American foreign policy. This seminar asks: how did all this come to be? We will investigate human rights not only as theories embodied in texts, but as practices embedded in specific historical contexts. Are human rights the product of a peculiarly European heritage, of the Enlightenment and protestantism? How did Americans reconcile inalienable rights with the reality of slavery? Did human rights serve as a "civilizing" mask for colonialism? Can universal rights be reconciled with genuine cultural diversity? Through case studies and close readings, the seminar will work toward a genealogy of human rights.

1 Course Unit

HIST 2255 Modern Spain From Civil War to Democracy, 1930-1977
This course will examine the social, cultural, intellectual, economic, and political history of Spain from the 1890s loss of the colonial empire through the end of the Francoist regime (1970s). The history of 20th-century Spain offers the opportunity to study events, processes and ideologies that were and are central to the history of the West in the modern period: imperialism, the rise of communism and fascism, civil war, dictatorship, post-war reconstruction, and wars over cultural memory to control how societies remember their pasts. This course is divided into four parts. Introduction: the loss of the last colonies (1898) and the effect in Spain, and on Spain's participation in the scramble for Africa. First Part: the Spanish Republic and Civil War (1931-1939), focuses on the rise of a democratic system and its demise after three years of violent civil war. Second Part: Post-war Reconstruction (1939-1975), focuses on the reconstruction of Spain led by an authoritarian and anti-democratic dictator, General Franco, the winner of the Civil War. Third Part: Memory Wars, focuses on the period after 1975 with the restoration of a democratic system. In this section, we will study the different and often conflicting ways Spaniards remembered the origins and causes of the Civil War, the victims of the Civil War, and the characteristics of Franco's regime. Course readings will be a mixture of primary and secondary sources, and classes will combine short lectures by the instructor and discussion. Requirements: weekly short papers (reactions to weekly readings), oral presentations, and a final paper of 15 pages. Students can opt to write a research paper (20 pages) using original primary sources, to fulfill the department research requirement.

1 Course Unit
HIST 2256 The Russian Revolutions, 1905-1924: Brave New World? Many believe that the 1917 Russian Revolution was the most significant event in the twentieth century, both as a rupture from the past and as a precursor of much that was to come in the twentieth century. The February Revolution of 1917 made the Russian Republic—at one stroke, in the midst of the world war—the world’s most democratic state. The October Revolution of 1917, following it, was the world’s first socialist revolution, and it established the world’s first socialist state—the Soviet Union. Throughout the twentieth century and beyond, people have looked to it with either fear or with hope. It generated great dreams of equality and liberation—and great misery. This course will examine the causes, course and consequences of this crucial period, for the peoples of the Soviet Union and for the world. In some ways, the term “Russian Revolution” is in fact not entirely correct. First, there was not one Russian Revolution—were a series of overlapping revolutions in this period—labor, rural, national, liberalizationist. And second, it was a revolution that was not limited to European Russia, but encompassed the entire space of Russian empire (the Caucasus, the Baltics, Poland, Central Asia), and had worldwide and global significance. How do programs for liberation produce both new possibilities and great misery?

HIST 2258 Existentialism, Structuralism, Poststructuralism: French Thought Since 1945

In no other period, with the possible exception of the European Enlightenment, did French thought enjoy greater international influence than in the decades after the Second World War. From Existentialism, through Structuralism, Poststructuralism, and Postmodernism, French thinkers played a crucial role in shaping the intellectual history of the second half of the twentieth century. This seminar surveys the intellectual movements and some of the key figures of this period. While our discussion will touch on many themes, the core of our inquiry will be the status of the human subject. If late nineteenth and early twentieth-century thinkers were preoccupied by the question of the “death of God,” French philosophical discourse in the late twentieth century was famously obsessed by the death of “Man.” Jean-Paul Sartre opened the post-war era by declaring that the death of God heralded an unprecedented age of Man; soon that proclamation came under attack as rival thinkers of the post-war period subjected the idea of the human “subject” – the “self” or “ego” – to unprecedented criticism. With the waning of Sartrean Existentialism, the unfolding dynamics of that critique came to drive the most creative and influential figures in French intellectual life.

1 Course Unit

HIST 2290 The Great War in Memoir and Memory (Penn Global Seminar) World War One was the primordial catastrophe of twentieth-century history. For all who passed through it, the Great War was transformative, presenting a profound rupture in personal experience. It was a war that unleashed an unprecedented outpouring of memoirs and poetic and fictional accounts written by participants. In its wake, it also produced new forms of public commemoration and memorialization - tombs to the unknown soldier, great monuments, soldiers' cemeteries, solemn days of remembrance, and the like. One hundred years after World War One, this course will explore the war through the intersection of these processes of personal and public memory. (Please note: This is not a seminar in military or diplomatic history, but rather an exploration of personal experiences of the War, representations of experience, and the cultural and political dimensions of memory.) The course will end with a one week visit to the Western Front region of northern France. Travel to sites in northern France will allow us to consider the scale and topography of some of the major battles, visit cemeteries and ossuaries and reflect on their various forms of secular and sacred organization, various national war monuments, and WWI museums, including the pathbreaking museum in Peronne and the national WWI museum in Meaux.
1 Course Unit

HIST 2350 Migration and Refugees in African History

This seminar will examine the experiences of recent African emigrants and refugees within and from the continent Africa from a historical and comparative perspective. We will look at the relations of overseas Africans with both their home and host societies, drawing on some of the extensive comparative literature on immigration, ethnic diasporas, and transnationalism. Other topics include reasons for leaving Africa, patterns of economic and educational adaptation abroad, changes in gender and generational roles, issues of cultural, religious, and political identity, and the impact of international immigration policies. Students will have the opportunity to conduct focused research on specific African communities in Philadelphia or elsewhere in North America, Europe, or the Middle East. We will employ a variety of sources and methodologies from different disciplines—including newspapers, government and NGOs, literature and film, and diaspora internet sites—to explore the lives, aspirations, and perceptions of Africans abroad. History Majors may complete the research requirement if their paper is based on primary sources. Students not seeking credit for the research requirement may write papers drawing on secondary sources exclusively. Class will consist of a combination of lectures (including several by invited guests), discussions, video screenings, and presentations by students of their research in progress.

HIST 2351 Silencing: Voices of Dissent in the Middle East
The Middle East boasts a rich and vibrant literary tradition. At the same time, modern Middle Eastern literature has incorporated innovative techniques to produce unique literary forms that give meaning to the contemporary circumstances of the region. This course will survey this literary history as a window through which to observe and understand Middle Eastern society. We will begin by reading excerpts from classical texts, since these works resonate strongly in contemporary Middle Eastern culture. Next, we will read Middle Eastern novels from various countries and different eras. The last part of the course will focus on memoirs that shed light on wars and conflicts through personal reflections. We will use literary works (epic poetry, novels, memoirs) as historical texts and analyze the social milieux in which these works emerged.

Also Offered As: NELC 2566
1 Course Unit

HIST 2353 Sex and Power in the Middle East: Unveiling Women's Lives
How did Islamic women really live? What were their attitudes toward veiling and politics? To what extent did family dynamics and sexuality inform social interactions? This course strives to answer these questions by offering a comparative perspective on the lives of women primarily in the Middle East and North Africa. It combines historical accounts with select fictional works to study women's social and cultural milieux under colonialism, as well as the evolution of women's roles in politics and society with the emergence of independent nation-states in the Middle East and North Africa. By crossing national boundaries, this course highlights the diversity of women's experiences. Active participation is critical to the success of this seminar. Every student is required to prepare a Powerpoint presentation on one week's readings. The presentation must be completed before the start of each class meeting and subsequently distributed to the members of the class. The PPT presentation should offer critical reflections on the topics discussed in the text. Rather than providing summaries, or personal commentary, students should attempt to raise questions and explain the arguments presented in the readings. In addition to the PPT presentation, students must complete a term paper (approx. 20-25 pages) by the end of the semester on a subject approved by the instructor. Students may select a primary text and discuss its relevance by drawing on the readings from the seminar. The text MUST be different from the text chosen for the PPT presentation. Required books are available for purchase at the Penn Book Center at 34th and Sansom Streets.

HIST 2354 The Body in Middle Eastern History
The body has long been the focus of social and scientific inquiry, as well as the foundation of religious, philosophical, and artistic thought. This seminar examines premodern and modern notions of the body in the Middle East as they intersect with colonialism, nationalism, religion, labor, law, military, gender, race, medicine, and art. Students use the notion of the body as a "useful" historical category to investigate the broader social, cultural, and political transformations occurring in the Ottoman Empire and Qajar Iran, followed by post-empire and colonial modern Middle Eastern contexts. The course addresses diverse views and theories as manifested in the constructions and practices over the body by using literary texts, primary sources, medical recipes, religious orders, and even public monuments to unearth the role of the body in the making of Middle Eastern history.

HIST 2400 Indigenous History of Mexico from the Aztecs to Present
This course will explore the history of indigenous peoples of Mexico from roughly 1400 to the present. Mesoamerica — the cultural region that encompassed what is today Mexico and much of Central America — in the fifteenth century saw the ascendance of the Aztec Empire in central Mexico (and beyond) and the continued independence of numerous Mayan communities. We will begin by looking at a diverse range of sources produced by the linguistically diverse people in these areas, particularly focusing on the “codices,” as the painted deer hide books that recorded history and ritual knowledge are known. Reading sources (in translation) by both European and indigenous languages (primarily Spanish, Nahuatl, and Maya), we will look at the divergent ways that Native communities and individuals responded to Spanish wars of conquest and how they responded to colonialism. The final part of the will look at the impact of Mexican independence and Revolution in the nineteenth century through the present, as well as the ongoing indigenous Mesoamerican diaspora to locales throughout the United States. In addition to written primary and secondary sources, we will consider a diverse array of visual sources — taking advantage of the spectacular holdings of the Penn museum — and contemporary cinema.

HIST 2401 Indians, Pirates, Rebels and Runaways: Unofficial Histories of the Colonial Caribbean
This seminar considers the early history of the colonial Caribbean, not from the perspective of European colonizing powers but rather from "below." Beginning with European-indigenous contact in the fifteenth century, and ending with the massive slave revolt that became the Haitian Revolution (1791-1804), we will focus on the different ways in which indigenous, African, European and creole men and women experienced European colonization in the Caribbean, as agents, victims and resisters of imperial projects. Each week or so, we will examine the experiences of a different social group and their treatment by historians, as well as anthropologists, archaeologists, sociologists, and novelists. Along the way, we will pay special attention to the question of primary sources: how can we recover the perspectives of people who rarely left their own accounts? How can we use documents and material objects—many of which were produced by colonial officials and elites—to access the experiences of the indigenous, the enslaved, and the poor? We will have some help approaching these questions from the knowledgeable staff at the Penn Museum, the Kislak Center for Special Collections, Rare Books and Manuscripts, and the Van Pelt Library.

HIST 2402 The Haitian Revolution
In August 1791, enslaved Africans on the northern plain of Saint Domingue (colonial Haiti) rose up in a coordinated attack against their French colonial masters, launching the initial revolt in what would come to be known as the Haitian Revolution. In the years that followed, their actions forced the abolition of racial discrimination and slavery throughout the French Empire. When Napoleon Bonaparte threatened to return slavery to Saint Domingue, they waged a war for independence, declaring Haiti the world's first "Black Republic" in 1804. This seminar will examine some of the major themes and debates surrounding Haiti's colonial and revolutionary history. We will begin by considering the colonial paradox: France's leading role in the intellectual movement called the "Enlightenment" coincided with its ascent as a slaveholding colonial power. The seminar will also explore parallels and points of connection between the revolutionary movements in France and Saint Domingue: how did increasingly radical ideas in France shape events in the Caribbean? Likewise, how did west African traditions and political ideologies influence insurgents and their leaders? And how, in turn, did revolution in the Caribbean impact the revolution in France? Finally, we will ask how the Haitian Revolution influenced ideas about liberty, sovereignty and freedom throughout the Atlantic World. We will read a combination of primary and secondary materials each week. A final research paper will be required of all students.

1 Course Unit

HIST 2403 Animal, Vegetable, Mineral: Culture, Tech, & the Columbian Exchange, 1450-1750
In this course we will explore how Native American technologies shaped the early modern Atlantic World in order to understand the role of culture in what is often called the "Columbian Exchange." Technologies, for the purpose of this course, include animal practices (such as hunting and taming techniques), foraged and domesticated plants (such as maize, potatoes, and annatto), foods (such as cassava and chocolate), drugs (such as tobacco, quinine and coca), textiles (such as hammocks and featherworks), and precious metals and gemstones (such as pearls, emeralds and gold). We will explore technologies' relationships to other aspects of art and culture, and focus particularly on how and why certain technologies - and not others - moved beyond colonial Latin America in the sixteenth and seventeenth centuries. We will read intensively in both primary and secondary sources.

Also Offered As: LALS 2403
1 Course Unit

HIST 2450 Coca and Cocaine
This seminar compares practices that center on coca leaf production in indigenous communities, where coca cultivation has been sustained over millennia, on the one hand, with practices linked to the post 1961 "drug war" in the Americas, on the other. Participants will read scholarly work in history and anthropology, support one another through a research process, and explore what historians and other scholars might contribute to discussions about drug policy. Case studies we'll explore include Peruvian Quechua-speakers' ritual use of leaf, the history of Coca-Cola, patterns of violence in Medellín and Northern Mexico, and the evolution of money laundering in 1980-2010. Students will also have the opportunity to define a topic of interest to them and prepare an in-depth literature review.

HIST 2500 History of Private Life in China
Underneath the grandeur of empires, war, revolutions, history eventually is about people's life. This seminar explores how the boundaries of private life in China intersect with the public arena and how such an intersection has significantly re-shaped Chinese private life between the 16th century and the present. The first half of the seminar will explore how the private realm in late imperial China was defined and construed by Confucian discourses, architectural design, moral regulation, cultural consumption, and social network. Moving into the twentieth century, the remaining part of the seminar will examine how the advent of novel concepts such as modernity and revolution restructured the private realm, particularly in regard to the subtopics outlined above. Organizing questions include: How did female chastity become the center of a public cult which then changed the life paths of countless families? How did the practice of female foot-binding intersect with marriage choices, household economy, and social status? How did print culture create a new space for gentility women to negotiate the boundaries between their inner quarters and the outside world? What was the ideal and reality of married life in late imperial China? How did people's life change when the collective pursuit for Chinese modernity placed romantic love, freedom to marry and divorce at the center of public debates? How was "Shanghai modern" related to the emerging middle class lifestyle as evidenced in advertisement posters? How has the ideal of gender equality been re-interpreted and realized under the Communist regime? How have the current market reforms reformulated the contours of private life in China?

1 Course Unit

HIST 2501 Cities in Chinese History
This seminar will study the development of Chinese cities over the past two millennia with respect to their spatial structure, social constitution, economic system, political functions, and cultural representation (including cityscape paintings, maps, and films). As China transitioned from a collection of city-states to a united empire to nation state, Chinese urbanism underwent transformations as drastic as those of the country itself. Cities, which serve as a critical mechanism for the operation of a vast agrarian empire/nation like China, offer a unique vantage point for us to observe and analyze the continuities and discontinuities between dynastic empires as well as the radical transition from empire to modern nation state. Topics include: the city-state system in ancient China; the creation and evolution of imperial capitals; the medieval urban revolution and the subsequent collapse of classic city plans; the development of urban public sphere/public space in late imperial China; the rise of commercial power in urban politics; the negotiation of urban class and gender relations via cultural consumption; the role of cities in the building of a modern Chinese nation state; the anti-city experiment under the communist regime; urban citizenship in the reform era; as well as the expanding urbanization and shifting urbanism of Greater China as reflected in cinematic representations of Shanghai, Hongkong, and Taipei.

HIST 2551 History of Hong Kong
Hong Kong is almost explosively alive today, as Professor Waldron discovered on a recent trip to prepare for this course. From 1842-1997 the British Colony was a sleepy city having a mostly transient population until 1945; then she swelled with refugees after 1950 to become a rapidly growing economy now richer than Britain. In 1997 she was turned over to China under the "one country two systems" motto. Since then, however, relations with China have proven increasingly fraught. The legislative election of autumn 2016 saw the pro-China candidates crushed in a massive vote that returned a number of young people (Hong Kong politics are generational) to the Legislature who explicitly favor the independence of the city from China—the worst of heresies from Beijing's point of view. Nearly all favor democracy and real law—also anathema to Beijing. As the course is being taught, a new Chief Executive election will be going on. Hong Kong is not simply a fascinating city. She is also a window of sorts into China and her politics. We will read everything from colonial accounts to campaign leaflets, examining the situation in three dimensions, integrated with China and the region. Seminar meets T 1:30-4:30; readings, discussion, and a short paper on a topic of your choice.

HIST 2600 Witches, Whores and Rogues
What should we make of the disorderly people of the past? Were they acting out their dissent against powerful customs and institutions in their lives? Or were they the victims of those customs and institutions? In this course, we consider the lives of these disorderly people: the witches, prostitutes, criminals, escaped servants and slaves, criminals, cross dressers, and rowdies of early modern Europe and the Americas. The course will focus on several case studies featuring people considered to be troublemakers, or at the very least, non-conformist, by their contemporaries. We will use films, primary sources, book-length studies, and works of theory to develop our analyses of the problem of dissent, disorder, and resistance in the early modern past.

HIST 2602 The Mediterranean World in the Age of Don Quixote
Using as our guides the works of Miguel de Cervantes, Michel de Montaigne, William Shakespeare, Baldassare Castiglione, Antonio de Sosa, Elias al-Musili, and many others, this seminar will analyze the social mutations, religious confrontations, political conflicts, cultural productions and circulation of books, ideas and goods that characterized the Mediterranean world during the sixteenth and seventeenth centuries. Based on close readings of primary and secondary sources, this seminar will focus on the study of the main transformations—political, economic, religious, cultural, and literary—in the early modern Mediterranean world. Students will also be introduced to and learn to analyze original materials from the Library's Kislak Center, where the class will meet, including early modern editions of books we will discuss, maps, ephemera, and manuscript documents. *History Majors will have the opportunity to write a 15-page paper to fulfill the Major research requirement*  
Also Offered As: ENGL 2605  
Mutually Exclusive: HIST 3602  
1 Course Unit
HIST 2605 The Jewish Book from Scroll to Screen
Through much of their history, Jews have been known as a “people of the book” and have, often, prided themselves on such an association. The very definition of a book, what books contained, and who might use them are not so easy to define, and their study opens up new ways to think about the Jewish past. Books are perhaps the most important ways people share ideas and change minds. But they are also commercial goods, collectors’ items, community memories, and cherished heirlooms. This course offers a cultural history of communication and knowledge in Jewish experience through an exploration of the history of the book. It will use primary sources, scholarly articles, and hands-on encounters with books in different shapes and sizes to explore the way people of the past engaged with books both texts and material objects. It will also offer examples of new methods in the study of the book drawn from the digital humanities. Tracing changing conceptions and uses of the book from the ancient world until the present, we will consider the way that books have shaped religion, caused upheaval, and changed over time, even to face their possible obsolescence in our own age.
Also Offered As: JWST 2605
1 Course Unit

HIST 2700 Utopia
Western thinkers from the ancient Greeks to the present have speculated about what the ideal human society would look like. We can study the resultant utopias as works of literature, philosophy, religion, psychology or political science; we must understand them in their historical contexts. This seminar will take a multidisciplinary approach to utopian thought from Plato’s Republic to the ecological utopias of the 1980s. Works to be examined include More’s Utopia; seventeenth century scientific utopias like Bacon’s New Atlantis; the political theory of Rousseau (Social Contract); essays of the French utopian socialists and Hawthorne’s version of the Brook Farm experiment; Morris’ News from Nowhere; its American counterpart, Bellamy’s Looking Backward; Gilman’s feminist blueprint, Herland; BF Skinner’s psychological utopia, Walden Two; and the utopian science fiction of LeGuin. Huxley’s dystopia, Brave New World, will be set against his later utopia, Island.
Fall or Spring
1 Course Unit

HIST 2702 How to Rule an Empire: Intro to European and American Imperialism
Over the last five centuries, European and American powers developed changing strategies of empire designed to order societies at home and overseas. The practice of empire spurred worldwide debates that continue today: how did imperialism operate, what purposes did it serve, could it come to an end, and what might replace it? Over the course of two hundred years, these questions inspired some of the world’s great historical writing, and this seminar introduces students to a sample of it. Together we’ll explore varied forms of political, economic, military, and cultural power involved in imperial expansion; the experience and consequences of empire for both colonized and colonizer; and the emergence of anti-imperialist movements. We will read an average of 150 pages per week. No background is required. The books we’ll read reward slow, careful reading. What you learn in this class, and the quality of our experience together, depends on your reading closely, coming to class with informed questions, and being prepared to help your classmates answer theirs. Active, informed class participation will account for forty percent of your grade.

1 Course Unit

HIST 2703 Decades of Extremes: Protectionism, Fascism, Imperialism, 1917-1945
The rise of Fascism in Italy, the Russian Revolution, anti-colonial struggles in India, the New Deal in the United States, the Spanish Civil War, and the emergence of populist Juan Perón in Argentina. These events – as distinct as they are – all responded to the crisis of the global economy following World War I. These were decades of ideological extremes: liberal democracy pitted against fascism, socialism versus capitalism, imperialist expansion in some parts of the world and struggles for self-determination in others. What did the world look like in 1917, and why did it give rise to such revolutionary politics? This course studies the ideological conflicts and economic crises of the interwar decades (1917-1945) through firsthand accounts produced by intellectuals, economists, dictators, and ordinary citizens. We will read from the 1917 Soviet Constitution, George Orwell’s personal account of the Spanish Civil War, and Mussolini’s writings to understand the revolutionary visions at stake. We will debate alongside John M. Keynes and Friedrich Hayek to engage one of the driving questions to arise in these years: what is the role of the state in economic life? We explore the policy experimentation that arose in response to this crippling economic situation, from the New Deal in the United States to the rise of populism in Latin America. Finally, we consider how these interwar struggles explain the outbreak of World War II, an extreme experience of totalitarianism, destruction, and genocide. The key concepts we explore – fascism, imperialism, protectionism, capitalism, socialism, authoritarianism, liberalism – are of enduring relevance. What lessons – if any – can we learn from these interwar decades of extremes?
Fall or Spring
1 Course Unit

HIST 2701 Travel, Trade and War in the Modern Mediterranean
The Mediterranean Sea links together many societies, cultures, cuisines, and economies. Long after the Roman Empire and the Italian Renaissance, the Middle Sea continued to function as a cohesive geographic and cultural space. Contacts and conflicts in the Mediterranean shed light on the major themes of modern history: relations between East and West, encounters among Christians, Muslims, and Jews, brutal wars of imperial expansion, economic migration, catastrophic epidemic disease, and the birth of a globalized economy. We’ll read travel narratives by French scholars who helped Napoleon invade Egypt, and we’ll investigate how the Egyptians responded. We’ll study how Mediterranean nationalism began the First World War. We’ll look at the first massive Mediterranean migrant crises and compare them with the news we’re hearing today. Studying trade, travel, and war in the modern Mediterranean will provide students with a unique lens on European, Middle Eastern, North African, and Global history. **Students can get credit for the Europe or Africa/Middle East requirement depending upon their research paper topic.**

1 Course Unit
HIST 2705 Wars and Postwars
This course focuses on the study and analysis of the political and social challenges posed in, and faced by, post-war societies in the modern period, 1800-1950. Casting a large net from the early nineteenth century to the twentieth century it looks at the process of rebuilding after wars, both international and civil wars. The course will be organized thematically – Conducting War; Reconstructions; Vengeance and Justice; Public Memory. Cases will include the Napoleonic Wars, the American Civil War, the Spanish Civil War, and WWII, with references to other conflicts in various world regions.
Fall or Spring
1 Course Unit

HIST 2706 Wastes of War: A Century of Destruction
This seminar examines the human and environmental consequences of violent conflict from the South African War at the beginning of the 20th century to the War on Terror. War violently transforms the social and physical environment. War reshuffles ideologies, reimagines futures and reshapes alliances, destroys bodies, spaces, societies, habitats, ecosystems and cultures. And of course, there's no war that doesn't produce a whole host of wastes, and as a result, inspires a multitude of strategies to combat and eradicate them. In this course, we approach war as an engine of destruction and transformation rather than as politics gone awry. The wastes of war will serve as our focal point as we study the new worlds (technological, social and environmental) that war not merely leaves in its wake but systematically generates. Critically examining two key categories – “waste” and “war” in tandem, we discover how together they fundamentally restructure our social, cultural and natural worlds in unexpected ways.

1 Course Unit

HIST 2707 Extreme Heat: White Nationalism in the Age of Climate Change
The Amazon is burning. The glaciers are melting. Heat waves, hurricanes, earthquakes, floods, wildfires, and droughts devastate ever larger swaths of the earth, producing crop failures, air pollution, soil erosion, famine and terrifying individual hardship. At the same time the so-called Western World is literally walling itself off from the millions who are fleeing from disaster and war with what little they can carry. White nationalists chant "blood and soil" and "Jews will not replace us," social media spreads memes and talking points about "white genocide" and "white replacement" and online ideologues fantasize about building white ethnostates. Are these developments connected? Is there a causal relationship? Or are these conditions purely coincidental? Increasingly, arguments about limits to growth, sustainabilty, development and climate change have come to stand in competitive tension with arguments for social and racial equality. Why is that case? What are the claims and underlying anxieties that polarize western societies? How do white nationalist movements relate to populist and fascist movements in the first half of the 20th century? What is new and different about them now? What is the relationship between environmentalism, rightwing populism and the climate crisis? And how have societies responded to the climate crisis, wealth inequality, finite resources and the threat posed by self-radicalizing white nationalist groups?
Also Offered As: ENVS 2440
1 Course Unit

HIST 2708 War and the Arts
War, it is often forgotten, is powerfully reflected in the arts. This highly flexible student-driven seminar will examine the phenomenon. Each student will choose a topic and materials for us all to examine and then discuss after an interval of 1-2 weeks. With benefit of discussion they will write a paper 10pp maximum, summing up topic and reactions, as we seek broader understanding. The material is very rich. Goya (1746-1829) Picasso (1881-1973) both dealt with war in ways that scholars have examined, as did John Singer Sargent (1856-1925) whose immense canvas "gassed" (1919) not yet received monographic treatment. Of musicians, Shostakovich (1906-1975) is very promising; sculptor and artist Käthe Kollwitz (1867-1945) is of an inexpressible profundity that takes us to issues of mourning. Novels of Zola (1840-1902) and Proust (1871-1922) are great literature that deals in places with military issues. Students are of course strongly encouraged to choose their own topics. We will begin with several weeks on Vietnam, our understanding of which has been completely transformed by the pivotal work of Lien-Hang Thuy Nguyen, Penn Grad and Professor at Columbia, who may join us. For the first two classes we should read a short play, "The Columnist" by David Auburn, about Joseph Alsop (1910-1989) a highly influential writer of the Vietnam era, and relative of the professor. That should get things started. Then dig into "The Centurions" (1960) by Jean Laterguy (1920-2011) an absorbing novel.
1 Course Unit

HIST 2709 Pan-Africanism in Global Perspective
This class covers the history of Pan-Africanism from its early inception in the nineteenth century to the present. Pan-Africanism has sparked political struggles and provided a powerful catalyst to artistic endeavors across the globe. The class focuses on the early critiques of the transatlantic slave trade, tracing the development of a unifying sociopolitical movement and the struggle for identity among Africans and African descendants in the diaspora. C. L. R. James posits that people of African descent, no matter where they might live, are linked through ancestral ties to Africa and as victims of structural and historical racism in the West. The class will not only engage with the classics of Pan-Africanism but also explore the movement's influence through the arts (music, movies, and literature) and politics. To stress Pan-Africanism's global ramifications, the class pays significant attention to the movement's impact on Africa and Latin America.
Also Offered As: AFRC 2709, LALS 2709
1 Course Unit
HIST 2710 Inflationary Times: Money, Currency, and Debt in History
What is inflation? What are its causes and consequences? Inflation has become a pressing concern recently, as prices of fuel, food, and consumer goods have ticked upwards at alarming rates. From the ongoing COVID-19 pandemic, war in Ukraine, and climate disasters, current inflationary pressures are inseparable from the major events disrupting the global economy. This is as much the case today as it was following the discovery of silver mines in Potosí (Bolivia), the French Revolution, the breakdown of Bretton Woods, or the 1980s debt crises in Latin America. This course explores the economic and social consequences of inflation across history. It also considers the economic models used to explain the rise and fall of prices—and how economists and policy-makers experiment with new formulas when old ones appear obsolete. By exploring inflationary moments in historical perspective, this seminar explores topics like the political and social meanings of money, how to build trust in a new currency, and what governments can do (or tried to do) to correct financial crisis. Students will be asked to explore past moments of financial and economic crises on their own terms, but also to look for how the past can offer lessons for the present.
Also Offered As: LALS 2710
1 Course Unit

HIST 2711 The Good Fight: Global Decolonization from Chile to China
The conclusion of the Second World War precipitated independence movements that put an end to colonialism in many countries of the Global South, especially Asia and Africa. How did people with different political backgrounds, ideologies, as well as divergent and historical experiences of imperialism, take part in shaping their communities after WWII? The rise of the Cold War and expressions of Third Worldism complicated the identities and alliances of many newly formed countries that were previously colonized or in relationships of political dependency with the West. This course will survey case studies that speak to issues of social inequality, in particular poverty, gender, and race. At the same time, the class will consider the role and impact of new international organizations and non-state actors in the struggle for decolonization. Special attention will be paid to civil rights movements and political resistance to new forms of state control.
1 Course Unit

HIST 2715 The Wartime Incarceration of Japanese Americans
This research seminar will consist of a review of representative studies on the Japanese American internment, and a discussion of how social scientists and historians have attempted to explain its complex backgrounds and causes. Through the careful reading of academic works, primary source materials, and visualized narratives (film productions), students will learn the basic historiography of internment studies, research methodologies, and the politics of interpretation pertaining to this particular historical subject. Students will also examine how Japanese Americans and others have attempted to reclaim a history of the wartime internment from the realm of “detached” academia in the interest of their lives in the “real” world, and for a goal of “social justice” in general. The class will critically probe the political use of history and memories of selected pasts in both Asian American community and contemporary American society through the controversial issue of the Japanese American internment.

1 Course Unit

HIST 3153 American Feminist and LGBT Movements, 1960s-1980s
This seminar explores the history of the feminist and LGBT movements from the mid-1960s to mid-1980s in Philadelphia. Although there will be some attention to national organizations, we will focus on social and political activism as it was made in local groups and spaces. We will explore the social and cultural web that fostered activism, for example, in gay and lesbian coffee houses, campus women’s centers, bookstores, and radio shows. We will also pay attention to groups and actions that may not have been self-consciously defined as "feminist" or "gay liberationist," but had important effects on social change related to gender and sexuality; these include African American, Latino/a, and working-class organizations. This is a hands-on research seminar, with students exploring local archives and special collections to document and analyze these complex movements. Each student will conduct an oral history, analyze a set of published and printed sources, and write a paper based on archival research.
Not Offered Every Year
Also Offered As: GSWS 3153
1 Course Unit
HIST 3154 Performing History
This seminar concentrates on the ways that various peoples in the world make their history by means other than relying on written texts alone. Over the course of the semester, we therefore may be examining such different public events and civic rituals as parades, political and religious processions, local historical pageants, carnivals, historic preservation, museums, military reenactments, and history theme parks. The emphasis in each of these forms, places, and semiotic processes will be on their identity and function as key performances that transform consciousness, shift individuals alternately into both actors and spectators, reframe the everyday as the metaphysical, and intensify the status of cultural values in the histories they present to view. Course requirements: a seminar paper, the topic of which you will discuss with me no later than week five of the course; and a working annotated bibliography and statement of your paper’s main thesis. I will say more about these assignments as they approach.

Also Offered As: ANTH 2154, ARTH 3790
1 Course Unit

HIST 3155 Fake News and American Democracy
At separate moments, Thomas Jefferson famously declared both that newspapers were crucial to sustain a nation and that a person who never looked at a newspaper was better informed than a regular reader of the press. The ideal of an informed citizenry occupies a central spot in our understanding of the democratic project in the United States, and, consequently, the news and the news media play a vital role. But the news may also be a means to manipulate and distort, not simply inform. As Americans on both the Left and Right wonder today, what happens to our democratic prospects when public information and the media are unreliable? In this class we will consider the history of fake news in the United States and its implications for democracy and citizenship. We will dig into an array of episodes – from the Jefferson-Hamilton debates in the press to battles over what could be printed about slavery; from McCarthyism to the ways in which different racial and ethnic groups often engaged with different accounts of the news. We will examine in depth the moment of a global rise in fascism and America’s best-known news hoax, the “War of the Worlds” radio program. Throughout, we will explore the importance of the different media that conveyed news in the past – and think about what that means for us in the present moment as news travels through new channels.

1 Course Unit

HIST 3156 Liberalism in the 20th Century
At a moment when American liberalism is embattled and in a profound state of flux, this research seminar explores the development of the political ideology of the Democratic Party since its first modern articulation in Franklin Roosevelt’s New Deal. In addition to examining key moments of reform, expansion, and reimagining through the Cold War, Lyndon Johnson’s Great Society, and under Bill Clinton’s New Democrats, students will explore the ways in which liberals and liberalism have both succeeded and often failed to meaningfully incorporate the interests of a diverse array of Americans including women, organized labor, African Americans, immigrants, rural constituencies, immigrants, and LGBTQ citizens. Over the course of the semester, students will develop a significant piece of original, primary source-based, historical research on a theme of their choosing within the modern history of liberalism, broadly construed.

Also Offered As: AFRC 3173
1 Course Unit

HIST 3174 Free State Slavery and Bound Labor Research Seminar
This seminar invites students to do original research into the stories of Black refugees – including escaped, kidnapped, sojourning, and other temporary or permanent residents of Pennsylvania. Their stories unfolded through contentious freedom suits, daring escapes on the Underground Railroad, newspaper wars, gun fights and thuggery, treason cases, and more. We have assembled an archive of statutes, legal cases, testimony, judicial and administrative decisions, newspaper stories, images, memoirs, maps, and more to help students get started with their research. In addition, students will have opportunities to pursue additional research at the Historical Society of Pennsylvania, a co-sponsor of this course. Many of these materials have never been the subject of sustained study or placed in their historical context. Students will choose their topics in consultation with the professors and will produce research reports in written or digital or cinematic formats. Students are expected to contribute to the course website, a platform that will be available to the public as well as to the Penn community, and we aim to provide new information and venues for research. The course therefore will involve considerations of how best to convey what we learn, as well as explorations of historical methods and collaborating archives.
Also Offered As: AFRC 3174
1 Course Unit
HIST 3200 War and Conquest in Medieval Europe
This course will focus on wars of conquest in the medieval period. The code of chivalry demanded that knights not only display great prowess in battle, but also adhere to Christian virtue. How did these square in practice? What constitutes acceptable violence and military intervention? We will seek to understand the medieval mentality of warfare in order to think about the place of war in society, how war was justified, why war was fought, and how it was fought. War, however, cannot be separated from its goals. We will thus go beyond the battlefield to look at how conquest of territories was cemented with the establishment and enforcement of a new order. Themes will include the rise of knighthood, ideas of just war, crusade, laws of war, territorial control and colonization. The course will also include two fabulous field trips to visit Penn’s manuscript collection and the arms and armor collection at the Philadelphia Museum of Art.
Fall or Spring
1 Course Unit

HIST 3201 Capitalism and Charity: The Long, Complicated Connection
Capitalism and charity seldom appear in the same sentence, much less the same title. They seem diametrically opposed. While capitalism is commonly understood as “an economic system based on the private ownership of the means of production and their operation for profit”, according to Merriam-Webster, charity refers to “generosity and helpfulness especially toward the needy or suffering, also aid given to those in need”. The former implies self-interest, while the other breathes common interest. Yet, the two are closely, dynamically connected.
As capitalism has emerged and evolved historically, so has charity changed to meet new circumstances and find new legitimations. From simple charity in the form of indiscriminate alms-giving have emerged “poor relief”, “work relief”, “social welfare” and, more recently “effective altruism” to name but a few permutations. Charity as a personal, face-to-face interaction between rich and poor has become cloaked in varieties of impersonal programs and institutions. This research seminar will explore the tensions (and synergies) between capitalism and charity over time. Through readings and discussions of primary sources, students will come to understand something of this historical dynamic. By completing independent research projects, they will contribute to that understanding as well.

1 Course Unit

HIST 3202 Medieval Justice
What exactly is justice? What is its relationship to law? To what extent is it culturally contingent? How do ideas about justice change over time? This course will examine different theories and representation of justice in European Middle Ages (ca. 500-1500). We will begin by looking at aspects of dispute resolution in the early middle ages, when there was little centralized government. This was the heyday of feud, ordeal, and the law of talion, when law was largely unwritten and disputes were resolved informally by the community. We will then look at how law professionalized and how ideas of justice changed as formal legal institutions and centralized governments developed. Readings will be drawn from a variety of sources, including the so-called barbarian codes, stories of feud, accounts of crime, charters of rights, lawbooks, and trial records.
1 Course Unit

HIST 3250 Great War in Memoir and Memory
World War One was the primordial catastrophe of twentieth-century history. For all who passed through it, the Great War was transformative, presenting a profound rupture in personal experience. It was a war that unleashed an unprecedented outpouring of memoirs and poetic and fictional accounts written by participants. In its wake, it also produced new forms of public commemoration and memorialization – tombs to the unknown soldier, great monuments, soldiers’ cemeteries, solemn days of remembrance, and the like. On the centenary of World War One’s outbreak, this course will explore the war through the intersection of these processes of personal and public memory. The first ten weeks will be devoted to shared readings on these themes. In the remaining weeks, students will pursue independent research projects investigating the literature of the Great War or aspects of public or private commemoration. Please note: This is not a seminar in military or diplomatic history, but rather an exploration of personal experiences of the war, representations of experience, and the cultural and political dimensions of memory.

HIST 3251 Modern Spain: Civil War and Postwar, 1930-1970
This RESEARCH SEMINAR is divided into three parts. Part I centers on the Spanish CIVIL WAR, 1930-1939. The beginnings of the conflict, the main causes and motivations, the debates in the international arena, the main events and ideologies, some of the main characters, personal experiences (men and women) during the war, violence and repression. Part II focuses on the consequences of the Civil War (1939-1970), both from internal and international perspectives - the constitution of the Francoist regime and its internal politics; the repression of political dissidence; the situation of the Francoist regime during WWII and during the Cold War, how political and cultural dissidence started under Franco’s regime, the social history of Spain, and the construction of the historical memory of the Civil War. Part III, Research and Writing: this course is designed to model the research and writing process professional historians use, beginning with a paper proposal and bibliography of primary documents and secondary sources. It then proceeds through the various stages of the research process to produce drafts of the essay and finally the finished essay. All written work is for peer review.

1 Course Unit
HIST 3252 Marx, Nietzsche, Freud: Masters of Suspicion
In his influential book Freud & Philosophy, the French philosopher Paul Ricoeur identified three master thinkers whose influence on the twentieth century was inestimable. What these figures shared was what Ricoeur called a “hermeneutics of suspicion”; that is, in their different ways, each developed a style of interpretation aimed at unmasking, demystifying, and exposing the real from the apparent. “Three masters, seemingly mutually exclusive, dominate the school of suspicion: Marx, Nietzsche, and Freud.”
Taking its inspiration from Ricoeur, this seminar will explore some of the key writings of Marx, Nietzsche, and Freud. We will encounter the hermeneutics of suspicion above all in these authors’ attempts to unmask religion and reveal its true origin and function. And we shall also pursue the hermeneutics of suspicion in the specific concerns that form the core of each thinker’s work: Marx’s critique of capitalism, Nietzsche’s genealogy of Judaeo-Christian morality, skepticism about ‘truth’, and proto-deconstruction of the human self, and Freud’s theory of the unconscious. The final weeks of the course will be devoted to independent research and writing of an original essay in intellectual history.

HIST 3350 Religion and Colonial Rule in Africa
This course is designed to introduce students to the religious experiences of Africans and to the politics of culture. We will examine how traditional African religious ideas and practices interacted with Christianity and Islam. We will look specifically at religious expressions among the Yoruba, Southern African independent churches and millenarist movements, and the variety of Muslim organizations that developed during the colonial era. The purpose of this course is threefold. First, to develop in students an awareness of the wide range of meanings of conversion and people’s motives in creating and adhering to religious institutions; Second, to examine the political, cultural, and psychological dimensions in the expansion of religious social movements; And third, to investigate the role of religion as counterculture and instrument of resistance to European hegemony. Topics include: Mau Mau and Maji Maji movements in Kenya and Tanzania, Chimurenga in Mozambique, Watchtower churches in Southern Africa, anti-colonial Jihads in Sudan and Somalia and mystical Muslim orders in Senegal.

HIST 3351 Africa and the Mid-East
This seminar will explore the historical relationship between these two regions from the early modern age to the present. We will examine the history of trade, particularly the slave trade, and its cultural and political legacy. We will compare the experiences of European imperialism–how the scramble for Africa dovetailed with the last decades of the Ottoman Empire–with an eye to how this shaped nationalist movements in both regions. The course will also explore the decades of independence with a special eye towards pan-Africanism and pan-Arabism. We will also study the ramifications of the Arab-Israeli conflict on the relationship between African and Middle-Eastern countries, from OPEC to Darfur. The course will pay close attention to migrations through the regions, whether forced or economic or religious. Whenever possible we will explore, through film and literature, how people in Africa and the Middle East see their connections, and their differences.

HIST 3405 The Conquest of Mexico
The Conquest of Mexico is one of the most famous episodes of global history. Often told as a story of European technological and military superiority, scholarship of the last thirty years has started to change our understanding of what really happened. In the first half of this course we will examine the history of both Spain and Mesoamerica from approximately 1300 to the fateful meeting of the two civilizations in 1519 that led to war in 1520-21. We will ask questions about sources, actors, and intentions such as, should we even call the events “The Conquest of Mexico”? The second half of the course will focus on the first century of Spanish colonial control of what was now called New Spain to roughly 1650. We will ask questions like, how much control did the Spanish have over their Mesoamerican colonies? What role did the Catholic Church play? How did Indigenous people and Africans adapt to living under colonialism? In what ways did the lives of women change? How was the environment impacted? How did epidemic disease alter daily life and communities? And, finally, what role did China and the Philippines play in the maintenance of a Spanish colony in the Americas?
Throughout the course we will read translated primary sources produced by both Spaniards and Indigenous people, as well as selections from recently published scholarship. By the end of the course, each student will have written an original historical analysis based on a theme or event discussed with and approved by the instructor.

HIST 3500 Women and the Making of Modern South Asia
This course on women in South Asian history has four objectives - 1. To acquaint ourselves with the historiography on South Asian women. 2. To gain an understanding of evolving institutions and practices shaping women’s lives, such as the family, law and religious traditions. 3. To understand the impact of historical processes - the formation and breakdown of empire, colonialism, nationalism and decolonization - upon South Asian women between the sixteenth and twentieth centuries. 4. To become familiar with some of the significant texts written about and by women in this period. We will read a wide variety of primary sources including a Mughal princess’ account, devotional verse authored by women, conduct books, tracts, autobiographies and novels.

HIST 3550 Chinese Foreign Policy
An examination of China’s policies since 1950 not so much in general terms, but rather by looking at policies toward specific countries, such as Korea 1950-53, Taiwan 1958, India 1962, Japan 1963, USSR 1969, US recognition 1971-79 and failure of Kissinger policies. Vietnam both wars: i.e. we cover the ongoing conflict that began in 1979 as well as the war that ended in 1975, toward Cambodia, and not least the South China Sea and the whole world today. We will also examine China’s immense military build up (for what purpose?) the concept that China is rising, the US declining, and Beijing is foreordained lord of the East. The goal is to start from empirical information then build some sense of whether policy has continuity, common features etc. or not, and to what extent it is domestically driven or not. Lots of political background but little theory or grand generalization. A serious research paper will be required.

HIST 3551 Pacific World
Following ongoing attempts by historians to move beyond the confines of national and imperial histories, this research seminar highlights the interaction of peoples and cultures across what may be described as the most dynamic world region of the twenty-first century. While discussions of Mediterranean, Atlantic and Indian Ocean Worlds are now commonplace, scholars have, to date, paid less attention to the idea of a Pacific World. How useful is it to identify a “Pacific World” before and after the Age of Discovery—that is, to locate distinctive patterns of human, material and cultural exchange across the Pacific before and after the flood of European power from the fifteenth century? What has been the effect of the rise of the nation-state, modern empires, modern war and globalization? How critical are national and/or imperial legacies to enduring patterns of human interaction and exchange in the twenty-first century Pacific? As global economics, politics and culture increasingly tilt toward the Pacific, we will attempt to uncover the source of the region's extraordinary energy.

HIST 3552 Constitutionalism and Democracy in China: 1900-present
Research on constitutional thought in China from the late Qing to the present, as well as the political and practical aspects of attempts at implementation. A presentation and a research paper of moderate length are expected. Chinese language is not necessary, though if you have it, that will be useful.
Also Offered As: EALC 3532
1 Course Unit

HIST 3600 Human Rights in the Age of Revolutions
This seminar is designed as both an introduction to the question of the origins of the idea of human rights and as an opportunity to develop a sustained research project related to the Age of Revolutions in Europe, the Americas (North or South), or Caribbean, mid-18th century to 1848. Topics to be discussed include: the relationship and tension in Enlightenment thought between equality and liberty, the idea of “the rights of man” and its exclusions, the emergence of abolitionism in the context of slave societies, the roots of feminism, the problem of the poor and the question of social and economic rights, rights and national self-determination, and left- and right-wing critiques of rights language. Primary source readings will range from the Declaration of the Rights of Man and Citizen, to 18th-century slave codes, to the writings of Mary Wollstonecraft and Jeremy Bentham. Secondary source readings will introduce students to interpretative problems in thinking about human rights in the context of the American, French, Haitian, and Latin American revolutions. Throughout the seminar, emphasis will also be placed on the development of a historical research project, including framing a question, building a bibliography, analyzing various kinds of sources, constructing an effective outline, and writing an argument-driven and well substantiated seminar paper. **Note for History Majors and Minors: if your research paper addresses a Latin American/Caribbean or US topic, then you may use this course to fulfill that particular geographic requirement.
Fall or Spring
1 Course Unit

HIST 3601 The Horse in World History
Around 8000 years ago, communities in the western part of the Eurasian steppe began to breed and ride horses. This process of domestication made horses central participants in human history. The domestication of the horse transformed military tactics, human mobility and communication, agriculture, and entertainment. Humans have transformed the horse as well, producing about 200 breeds with unique characteristics matched to human goals. This course traces the history of equine-human relations across the globe, using the horse as a focal point to think about animal-human relations in societies ranging from prehistoric Europe to the Spanish conquests of Latin America. Our inquiry will address not only the place of horses in these particular phases of world history, but also by extension the debates about human-animal relations in our society today. The Major or Minor geographic requirement fulfilled by this course will be determined by an individual student's research paper topic.
Fall or Spring
1 Course Unit

HIST 3602 The Mediterranean and the World, 1450-1700
Using as our guides the works of Miguel de Cervantes, Michael de Montaigne, William Shakespeare, Baldassare Castiglione, Antonio de Sosa, Elias al-Musili, Ogier Ghiselin de Busbecq, Aḥmad ibn Qāsim Ibn al-ʿajaʿf, María de Zayas y Sotomayor, and many others, this seminar will analyze the social mutations, religious confrontations, political conflicts, cultural productions and circulation of books and ideas that characterized the Mediterranean world during the sixteenth and seventeenth centuries. Based on a close reading of the authors mentioned above, this seminar will focus on the study of the central transformations – political, religious, cultural, and literary – in the early modern Mediterranean world. Students will also be introduced to original materials belonging to the Rare Books and Manuscripts Collections of the Library: early modern editions of some of the books read in the class, printed ephemera, or manuscript documents belonging to the Lea Collection. Students are expected to be active participants in this class; class attendance, participation, and oral presentations will be required. Students will write a final paper, around 15 pages. Students majoring in History can opt to write a research paper (20 pages) using original primary sources, to fulfill the department research requirement.

HIST 3603 Writing, Publishing, and Reading in Early Modern Europe and the Americas
In this course we will consider the writing, publication, and reading of texts created on both sides of the Atlantic in early modern times, from the era of Gutenberg to that of Franklin, and in many languages. The seminar will be held in the Kislak Center for Special Collections, Rare Books and Manuscripts in Van Pelt Library and make substantial use of its exceptional, multilingual collections, including early manuscripts, illustrated books, plays marked for performance, and censored books. Any written or printed object can be said to have a double nature: both textual and material. We will introduce this approach and related methodologies: the history of the book; the history of reading; connected history; bibliography; and textual criticism. We will focus on particular case studies and also think broadly about the global history of written culture, and about relations between scribal and print culture, between writing and reading, between national traditions, and between what is and what is not “literature.” We encourage students with diverse linguistic backgrounds to enroll. As part of the seminar, students will engage in a research project which can be based in the primary source collections of the Kislak Center. History Majors or Minors may use this course to fulfill the US, Europe, or Latin America geographic requirement if that region is the focus of their research paper.
Also Offered As: COML 3603, ENGL 2603
1 Course Unit

HIST 3700 Abolitionism: A Global History
This class develops a transnational and global approach to the rise of abolitionism in the nineteenth century. In a comparative framework, the class traces the rise of abolitionism in Europe, the Americas, Africa, and Asia, examining the suppression of the transatlantic slave trade, the rise of colonialism in Africa, and the growth of forced labor in the wake of transatlantic slave trade. We will deal with key debates in the literature of African, Atlantic and Global histories, including the causes and motivations of abolitionism, the relationship between the suppression of the slave trade and the growth of forced labor in Africa, the historical ties between abolitionism and the early stages of colonialism in Africa, the flow of indentured laborers from Asia to the Americas in the wake of the slave trade. This class is primarily geared towards the production of a research paper. *Depending on the research paper topic, History Majors and Minors can use this course to fulfill the US, Europe, Latin America or Africa requirement.*

1 Course Unit

HIST 3701 Capitalism and Humanitarianism
Reviewing David Brion Davis’ Problem of Slavery in Western Culture for the New York Review of Books in 1967, the great ancient historian Moses Finley concluded that Davis’s book was “one of the most important to have been published on the subject of slavery in modern times.” Yet he found the book inconclusive on the “decisive question” of why slavery was finally abolished in the West. “Nothing is more difficult perhaps than to explain how and why, or why not, a new moral perception becomes effective in action,” Finley wrote. Almost 50 years after this statement was made, the complicated processes that are being played out at the heart of capitalism, mobilizing both ethical issues and the pursuit of profit are still imperfectly understood, yet more fascinating than ever. This course’s working hypothesis is that, from a better understanding of the entanglements of capitalism and humanitarianism a better understanding of the nature of the “material civilization” can be achieved. For this purpose, the course does provide a multi-pronged approach including sessions discussing analytical arguments about the reasons for the entanglements of capitalism and humanitarianism, sessions devoted to historical turning points and sessions devoted to case studies and the exploration of specific mechanisms whereby capitalism and humanitarianism connect with one another. I wish in particular to try and make students aware of the problem of “quality” and its social construction, which is found at the heart of both capitalism and humanitarianism. By awakening them to this question, I also hope to provide an engaging way to understand the importance of economics in cultural history. Last, while the course will make verbal references to work on more recent periods, the focus is on a time frame that ends with World War I. This seems warranted given that the purpose is to unpack the entanglements of finance and humanitarianism “as they got intertwined.”
Nota Bene, some a few non-mandatory readings in French.
Fall or Spring
1 Course Unit

HIST 3702 Feminism in the Americas
Students in this seminar will choose their own research topic in the history of feminism. With guidance and support each person will produce a twenty-page paper based on intensive work with primary sources. Readings will range across Latin America, the Caribbean, and the United States. We’ll take a long view, beginning in the sixteenth century, and use an expansive frame. Our purpose will not be to decide who was or wasn’t ‘a feminist’ but instead to try to understand actors within their contexts. Readings include scholarship on Sor Juana Inés de la Cruz, Sojourner Truth, the struggle for voting rights across national lines, opposition to dictatorship, and organizing against racism and homophobia. *For History Majors and Minors: Geographic requirement fulfilled by this seminar is dependent on research paper topic.

HIST 3703 Taking Off: How Some Economies Get Rich
What makes an economy grow? This question has been asked – and answered – many times over in modern history. From Adam Smith's classic Wealth of Nations (1776) to today's political leaders, many have debated the ingredients necessary for a nation to prosper, or policies to promote growth. Some point to the need for fiscal responsibility, others an educated labor force, or to tariffs, natural resources, and the right laws. This seminar explores the deep history of this problem of economic growth. Students will read works by economists, social scientists, and historians that present different theories for why some nations develop faster than others. With case studies from across the globe, we will tackle topics like why Europe industrialized first, or the paradox of why the abundance of natural resources does not necessarily contribute to long-lasting economic development. This course also asks students to think critically about the metrics used to measure "success" and "failure" across nations, as well as how such comparisons between societies have been mobilized to legitimate imperial expansion, human exploitation, environmental destruction, or political repression. By discussing how governments, corporate interests, and individual actors have implemented strategies to increase national wealth, students will also be asked to grapple with some of the consequences of economic growth for the environment, human welfare, and social inequality. *Students may fulfill one geographic requirement for the History major or minor with this course. The specific requirement fulfilled will be determined by the topic of the research paper.

HIST 3707 The Vietnam War
The Vietnam war was a great watershed in twentieth century history that rearranged geo-politics while changing the United States through dissent and social unrest. Frankly, things have never quite recovered. It was a catastrophic and humiliating defeat, but that is all the more reason to study it, for failure often has more to teach us than success. This course provides a framework of free discussion and basic readings—ranging from battlefield memoirs to Graham Greene's great novel The Quiet American—in which to pursue research on whatever aspect of the war they choose, from strategy to cinema and the arts. We will start with a look at the Empire of Vietnam that lasted a millennium, producing a uniquely refined and pure culture. Then we turn to the century of French colonialism and its end in 1954, which was followed by an invasion of South Vietnam from the north, through Laos. American policy was both arrogant and uninformed, converting a protracted loss (1955-1975) into what could easily have been a relatively bloodless success. That process we trace in its many strands. Finally we spend some time on contemporary Vietnam, on how the war is now understood, remembered, and memorialized, as well as how the country seeks to advance. And not least, without removing our focus from Vietnam, we assess how the United States has been changed. For every Tuesday meeting we will have some reading, to provide a common timeline and set of issues. As the semester progresses, students will make informal presentations about their work. This is a "Research Seminar" which means a 15-20 page paper on a topic you choose yourself. This can be the most enjoyable and interesting part of the course.

HIST 3708 History of Truth
Truth has become a controversial topic lately. This course will take a historical look at truth and its opposites, including lies and false beliefs, in the history of the West from the Renaissance to the present. We will consider changing conceptions of evidence and knowledge in law, religion, science, the arts, and politics and the media. We will also consider the historian's responsibility to truth, in the past and today. Part of the course will focus on the discussion of readings in common, including both primary sources and secondary sources that introduce students to interpretive problems in this field. Part will be devoted to the construction of an extensive research paper in which students grapple with a problem of their choice related to the history of truth claims or lies. Class time will also be devoted to discreet steps involved in this process, including framing a question, building a bibliography, analyzing various kinds of evidence or sources, constructing an effective outline, and writing an argument-driven and well-substantiated seminar paper.

HIST 3710 Introduction to Business, Economic and Financial History
Business, Economic and Financial History plays a crucial role today in informing the views of business leaders, policy makers, reformers and public intellectuals. This seminar provides students with the opportunity to acquire a command of the key elements of this important intellectual field. The seminar format enables us to do this engagingly through reading and discussion. Students acquire a knowledge of the fundamental texts and controversies. Each meeting focuses on one foundational debate and provides a means to be up to date with the insights gleaned from rigorous economic history. We will examine twelve important debates and students will be asked to write a paper. The debates will include such questions as: What is growth and how can it be measured? What caused the "great divergence" in long run development among countries? How can we "understand" the rise and fall of slavery and its long shadow today? What is globalization and when did it begin? Did the Gold Standard and interwar fiscal and monetary policy orthodoxy cause the great depression? How can we explain the evolution of inequality in the very long run?
Also Offered As: ECON 0625
1 Course Unit

HIST 3711 Uses and Abuses of History
This course is designed for junior and senior history majors in any regional or thematic concentrations. Using case studies from around the world, it will explore the roles of history and historians in shaping national and 'ethnic' outlooks and identities; in offering 'lessons' to guide policy makers in a variety of diplomatic, political, and social contexts; and in contributing to the numerous controversies surrounding the most appropriate ways to remember and represent painful events in a society's past. Because nations, regimes, and interest groups invariably want to believe that 'history is on their side', they typically produce partisan narratives which use historical evidence selectively and subjectively. How effective have historians been—or can they be—in countering egregious 'myths' about the past, in uncovering 'silences' in the historical record, and in acknowledging that the same 'objective' events can leave different memories and carry different meanings for the various parties involved. Does fuller knowledge of the past constrain or empower our capacities to deal with challenges in the present and future? In examining these and other 'meta-questions' through a series of specific case studies, you will almost certainly learn something about contested histories in parts of the world you may not be familiar with, but which should help you situate your own regional interests in a wider comparative framework. During the last five weeks of the course, students will have an opportunity to research a topic of their choice and to present their findings to the class.
1 Course Unit

HIST 3712 From Tablets to Tablets: A Long History of Technology and Communication
The invention of new communications technologies is often accompanied by a swell of hope. Enthusiasts expect people to become more connected, new ideas to become more accessible, and information to be shared more rapidly and in more fixed forms than ever before. While there are always nay-sayers, who warn against the effects of such inventions, the narrative linking new communications technologies and progress is so strong that these detractors are most commonly painted as luddites, and the narrative itself is used to justify and promote yet newer media as well as new configurations of state and media relations. In this class, we will examine some of the most significant transformations in the history of communications technology—from orality to writing, from tablet to scroll to codex, manuscript to print, hand-press to steam-press, print to radio, radio to tv, and tv to streaming and other forms of new media. We will ask some basic questions: How were these technologies made? How and by whom were these technologies used? How did contemporaries perceive them and the transformations they did or did not work? We will also ask some bigger questions: why do certain communications technologies emerge and get adopted when and where they do? Conversely, why are some communications technologies resisted at some times and in some places? What impacts do communications technologies have on the societies in which the appear? Do they alter the course of events? Do they change the way in which we think? If so, then how? Is the history of communication substitutive or additive? How is the digital age in which we live similar to or different from those that came before? History Majors may use this course to fulfill the pre-1800 requirement depending on the topic of their research paper.

HIST 3910 Immigration and the Making of US Law
This course examines the legal history of the United States to illuminate one of the most urgent issues of our time: immigration. From the late nineteenth century, immigration to the United States changed the legal landscape of the country by challenging the bounds of national citizenship, “separate but equal,” Congressional powers, home ownership, and an array of other topics. In this course, we will trace how immigrants challenged existing orders of their time through major state and federal supreme court cases, and the subsequent aftermaths of their trials. In addition to considering the key legal issues at stake in these cases, this course compels us to consider the dynamics of race, disability, gender, and labor that define the construction of US law in the context of immigration.
Also Offered As: ASAM 3110
1 Course Unit

HIST 3920 European Diplomatic History 1789-1914
This course will examine the international politics of Europe in the 18th and 19th centuries, up to the outbreak of World War I. During these centuries, the European great powers experienced significant internal transformations and also a revolution in their relations, both of which reinforced and accelerated each other. In the process, Europe asserted a dominant position in world politics, but also sowed the seed for the terrible catastrophes of the 20th Century. The course will address this transformation of European diplomacy with special attention to the rivalries between the great powers, the impact of nationalism and emerging mass politics, the interplay between military and economic power, and the relationship between the European powers and the rest of the world.

HIST 3921 European International Relations 1914-present
This course looks at Europe’s interactions with other world regions throughout the twentieth century. Over the course of roughly a hundred years, Europeans have shaped the fates of peoples living beyond the western world, for instance through the impact of two world wars, European colonialism, and the global Cold War. At the same time, European societies ‘at home’ were not left unaffected by these interactions. Even today, Europeans are facing the legacies of some of these histories in immigration and the politics of religion and secularism for example. The past century also saw a dramatic shift in Europe’s position in the world - from dominance to a loss of influence in the shadow of the United States and more recently, China. The course spends significant time covering the histories of world regions other than Europe. It furthermore considers some interactions and exchanges between world regions from a social and cultural point of view. Because the class spans roughly a century, the content has to remain introductory and general, although a very basic familiarity with 20th-century international history is helpful.
Two Term Class, Student may enter either term; credit given for either
1 Course Unit

HIST 3922 European Thought and Culture in the Age of Revolution
Starting with the dual challenges of Enlightenment and Revolution at the close of the eighteenth century, this course examines the emergence of modern European thought and culture in the century from Kant to Nietzsche. Themes to be considered include Romanticism, Utopian Socialism, early Feminism, Marxism, Liberalism, and Aestheticism. Readings include Kant, Hegel, Burke, Marx, Mill, Wollstonecraft, Darwin, Schopenhauer, and Nietzsche.

HIST 3923 Twentieth Century European Intellectual History
European intellectual and cultural history from 1870 to 1950. Themes to be considered include aesthetic modernism and the avant-garde, the rebellion against rationalism and positivism, Social Darwinism, Second International Socialism, the impact of World War One on European intellectuals, psychoanalysis, existentialism, and the ideological origins of fascism. Figures to be studied include Nietzsche, Freud, Woolf, Sartre, Camus, and Heidegger.

1 Course Unit

HIST 3930 The History of Foreign Aid and Intervention in Africa
This course examines the history, politics, and significance of foreign aid to Africa since the late 19th century. While we do not typically think about the European colonial period in Africa in terms of ‘foreign aid,’ that era introduced ideas and institutions which formed the foundations for modern aid policies and practices. So we start there and move forward into more contemporary times. In addition to examining the objectives behind foreign assistance and the intentions of donors and recipients, we will look at some of the consequences (intended or unintended) of various forms of foreign aid to Africa over the past century. While not designed to be a comprehensive history of development theory, of African economics, or of international aid organizations, the course will touch on all of these topics. Previous course work on Africa is strongly advised.

HIST 3960 Histories of the Information Economy
This course provides a perspective on the role of information as a historical actor. Moving beyond common narratives of the progress of the information economy driven by technological factors, the course underscores the significance of what may be called the political economies of information. We will approach major works, dealing with the historical importance of information (Foucault, Cohn, Habermas) and simultaneously engages with the history of institutions to store and circulate information. We will emphasize the importance of value (social, political, economic) which is at the heart of information gathering and producing. In particular, we will discuss the rise and fall of institutions to store and circulate information. We will study the importance of information in historical processes such as imperialism and colonization, state building, propaganda, the Enlightenment, as well as the informational aspects of the rise of global NGOs and international organization, police and spying. Information may be accumulated or lost; it can be safeguarded or debased; it can confer power or undermine it. In the age of fake news, these are issues worthy of a closer interest.

1 Course Unit
HIST 3965 The History of the International Monetary System and the Rise of the US Dollar
The course will cover the modern evolution of the international monetary system going all the way back to the era when sterling became the leading international currencies. It is arranged thematically and chronologically both. The lessons and readings will introduce students to the principal evolutions of the international monetary system and at the same time, it will give them an understanding of regimes, their mechanics and the geopolitical economies behind systemic shifts. Students need not have an economic background but must be prepared to read about exchange rates (and world politics). Special focus on: The early modern international monetary system. How Amsterdam and London captured the Spanish treasure. Beyond the West (Ottoman Empire, India, China). The Napoleonic wars and the rise of sterling. Hong-Kong: Silver, Opium, and the Recycling of Surpluses. The emergence of the Gold Standard. Bimetallism: The US election of 1796. Sterling and Key Currencies before WWI. The First World War and the origins of dollar supremacy. When the dollar displaced sterling (1920s). The collapse of the international gold standard (1930s). The Bretton Woods System. The rise and rise of the US dollar. Currency competition (Dollar, Euro, Yuan Renminbi). The meaning of cryptocurrencies.

HIST 5240 The Rise and Fall of the Russian Empire, 1552-1917
How and why did Russia become the center of the world’s largest empire, a single state encompassing eleven time zones and over a hundred ethnic groups? To answer this question, we will explore the rise of a distinct political culture beginning in medieval Muscovy, its transformation under the impact of a prolonged encounter with European civilization, and the various attempts to re-form Russia from above and below prior to the Revolution of 1917. Main themes include the facade vs. the reality of central authority, the intersection of foreign and domestic issues, the development of a radical intelligentsia, and the tension between empire and nation.

Mutually Exclusive: HIST 0240
1 Course Unit

HIST 5550 East Asian Diplomacy
Home to four of the five most populous states and four of the five largest economies, the Asia/Pacific is arguably the most dynamic region in the twenty-first century. At the same time, Cold War remnants (a divided Korea and China) and major geopolitical shifts (the rise of China and India, decline of the US and Japan) contribute significantly to the volatility of our world. This course will examine the political, economic, and geopolitical dynamism of the region through a survey of relations among the great powers in Asia from the sixteenth century to the present. Special emphasis will be given to regional and global developments from the perspective of the three principal East Asian states—China, Japan and Korea. We will explore the many informal, as well as formal, means of intercourse that have made East Asia what it is today. Graduate students should consult graduate syllabus for graduate reading list, special recitation time and graduate requirements.

Hungarian (HUNG)

HUNG 0100 Hungarian I
This course is the first in a series of first-year courses, intended for students with no previous background in Hungarian. The course develops competence in speaking, reading, writing, and understanding contemporary Hungarian. It will also introduce you to Hungarian culture through exciting authentic materials, including songs, videos, and short stories. Class work emphasizes development of communicative competence in real-life situations, spontaneous interactions, pair and group work and is conducted almost entirely in Hungarian. By the end of the course, you will be able to engage in simple conversations in Hungarian on topics concerning your daily life, likes and dislikes, school, work and family, Hungarian holidays and holiday traditions. You will also be able to write short personalized messages in Hungarian.
Two Term Class, Student may enter either term; credit given for either
1 Course Unit
HUNG 0200 Hungarian II
This course is the second in a series of first-year courses, continuation of Hungarian I. The course continues to develop competence in speaking, reading, writing, and understanding contemporary Hungarian. We will continue the exploration of Hungarian culture through exciting authentic materials, including songs, videos, short stories, and internet sites. Class work emphasizes development of communicative competence in real-life situations, spontaneous interactions, pair and group work and is conducted almost entirely in Hungarian. By the end of the course, you will be able to engage in simple conversations in Hungarian on many topics in informal and some formal contexts concerning your daily life, including planning a trip to Hungary, staying in a hotel, ordering meals, and buying goods. You will also be able to write longer personalized messages in Hungarian.
Two Term Class, Student may enter either term; credit given for either
1 Course Unit

HUNG 0299 Independent Study in Hungarian
This is an independent study course for students who select to do individual language and culture projects in Hungarian under the guidance of the Hungarian language instructor; students need to be done with the four semesters of Hungarian prior to requesting such course.
Fall or Spring
1 Course Unit

HUNG 0300 Hungarian III
This course is the first in a series of second-year courses, continuation of Hungarian II. The course will strengthen students' competence in speaking, reading, writing, and understanding contemporary Hungarian and will expand students' active and passive vocabulary on a variety of topics. We will continue the exploration of Hungarian culture through exciting authentic materials, including songs, videos, and short stories. Class work emphasizes development of communicative competence in real-life situations, spontaneous interactions, pair and group work and is conducted almost entirely in Hungarian. By the end of the course, you will be able to engage in increasingly complex conversations in Hungarian on many topics in informal and formal contexts concerning your daily life, your interests and life on campus, travel and cultural experiences, Hungarian seasonal traditions and cultural events. You will also be able to write longer messages in a variety of informal and formal contexts.
Two Term Class, Student may enter either term; credit given for either
1 Course Unit

HUNG 0400 Hungarian IV
This course is the second in a series of second-year courses, continuation of Hungarian III. The course will continue strengthening and expanding students' competence in speaking, reading, writing, and understanding contemporary Hungarian and increasing active and passive vocabulary on a variety of topics. We will continue the exploration of Hungarian culture through exciting authentic materials, including online news resources, songs, and videos. Class work emphasizes development of communicative competence in real-life situations, spontaneous interactions, pair and group work and is conducted almost entirely in Hungarian. By the end of the course, you will be able to engage in increasingly complex conversations in Hungarian on many topics in informal and formal contexts concerning your daily life, significant personal and cultural events, attitudes and perspectives. You will be able to write longer messages in a variety of informal and formal contexts.
Satisfies Penn Language Requirement.
Two Term Class, Student may enter either term; credit given for either

Immunology (IMUN)

IMUN 5060 Immune Mechanisms
This is an introductory graduate course which surveys most areas of immunology. It is assumed that students have a background in biochemistry and molecular biology, and at least some familiarity with immunological concepts. Topics covered include the major histocompatibility complex, structure of antibodies and T cell receptors, antigen-antibody interactions, the generation of diversity of immunoglobulins and B cells, antigen presentation, and immunological tolerance.
Fall
1 Course Unit
IMUN 5070 Immunopathology
The relationship between basic immunology and clinical immunologic diseases is emphasized. Course lecturers represent University faculty who are established investigators in immunologic research and established clinical immunologists. Course topics include plasma protein systems; B cell, T cell, macrophage immunology; immunohematology; tumor immunology; benign and malignant, immunoproliferative disorders; neuro-immunology; pulmonary immunology; renal immunology; immune complex disease and immunoregulatory abnormalities. Prerequisite: Permission from instructor.
Fall
Prerequisite: IMUN 5060
1 Course Unit

IMUN 5200 Tutorials in Immunology
This tutorial course is designed to provide students with an in-depth knowledge of a specific branch of Immunology. The tutorial can be used to enable students to become more deeply acquainted with the literature related to their thesis projects or to expand on a topic that the student found interesting in one of their basic courses. The course is currently the only immunology elective and is, therefore, required for all Immunology Graduate Group students. It is also open as an elective to BGS students who meet the prerequisite. The tutorial course will be examined by the program director and the tutorial leader and the grade will be based on a written paper on the subject studied (5 to 10 typewritten pages) and by an oral presentation of the paper (15 to 20 minutes). Prerequisite: A senior undergraduate, graduate or professional school course in Immunology.
Fall
1 Course Unit

IMUN 5770 Statistics for Genomics and Biomedical Informatics
BMIN 5330 is an introductory course in probability theory and statistical inference for graduate students in Genomics and Computational Biology. The goal of the course is to provide foundation of basic concepts and tools as well as hands-on practice in their application to problems in genomics. At the completion of the course, students should have an intuitive understanding of basic probability and statistical inference and be prepared to select and execute appropriate statistical approaches in their future research.
Also Offered As: BMN 5330, GCB 5330
1 Course Unit

IMUN 6010 Molecular Immunology
The purpose of this course is to provide examples in which the cell biology topics covered in BIOM 600 are studied in the context of immune cells or used to explain immune system function. This course will help students become proficient at reading and critically assessing the published literature and encourage students to actively participate in scientific discussion with their peers.
Not Offered Every Year
0.5 Course Units

IMUN 6070 Grant Writing
This course will introduce the student to basic principles of grant writing. In this regard a primary objective of the course is to teach you how to describe your ideas and experimental objectives in a clear and concise manner within the standard NIH grant format. To accomplish this, you will be required to write an NIH, "R01" type grant proposal based on your current laboratory project. Prerequisite: Permission from instructor.
Spring
Prerequisite: IMUN 5060 AND IMUN 5070
1 Course Unit

IMUN 6090 Vaccines and Immune Therapeutics
Vaccination is perhaps the most successful medical technological intervention. The goal of this course is to expand on students’ general understanding of the immune system and to focus this understanding towards the application of modern vaccines and immune therapies in the 21st century. The course will provide the student with a sense of how these principles are applied to a vaccine and immune therapeutic development. The course covers basic vaccine science and describes how this science is translated through clinical, regulatory, ethical, and political issues to result in a final vaccine product. The courses’ goal is to leave the student with an understanding of the implications of modern vaccines /immunotherapies and their impact on world health.
Initial lectures review immune mechanisms believed to be responsible for vaccine-induced protection from disease. Subsequent lectures build on this background to explore the science of vaccines for diverse pathogens, including agents of bioterrorism, as well as vaccines and immunotherapies for cancer. An appreciation for the application of laboratory science to the clinical development and clinical trials of vaccines are provided. An important focus on the regulatory, safety, and ethical implications of vaccines in different world situations based on true world examples are presented. The financial implications of specific vaccines with these implications for global health is a focus of the course. The course is presented in a lecture-style consisting of multiple distinguished guest lecturers who are experts in their particular area of vaccine development. There are required readings to provide the student context and background for the diverse lectures. Students are graded on course participation and a final project/exam which the students will present. The project is to design a vaccine strategy for a current disease or pathogen of importance that does not as yet have an effective vaccine or immune therapy and present this to the class. Strategies used should build on the material presented in the class lectures. The course is intended for graduate students or medical students in various MS, Ph.D., or MD/Ph.D. programs on the campus, as well as local scientists and professionals in the community. As a prerequisite, students should have taken biology, biochemistry, or immunology courses at the advanced college level. This course is offered in the fall semester. Prerequisite: Biology, Biochemistry at the advanced college level, college-level immunology is recommended. Not limited to CAMB students, however first options are to CAMB students, the permission of the

Implementation Science (IMP)

IMP 6000 Foundations in Implementation Science
The purpose of this course is to introduce participants to the foundations of implementation science (i.e., terminology, conceptual models and frameworks, study design). Participants will develop an in-depth understanding of the historical and theoretical underpinnings of implementation science, preparing them to describe the positionality of their research within the broader field. Relevant theories and frameworks will be addressed in the context of multiple disciplines, such as healthcare, social work, education, and criminal justice. Significant group work will prepare participants to evaluate the appropriate usage of frameworks, theories, and models in the design and execution of IS research. This course is available to anyone outside of the Implementation program with permission from the program coordinator. This course may also be of interest to students with a major in Health Policy Research, Medicine, Nursing, Social Work, or Education. **There are two alternate completion pathways for IMP 6000: participants may take the summer 4-day virtual Implementation Science Institute (HPR 6110) for 0.5 CU and complete an additional 0.5 CU elective, OR participants may enroll in HPR 6200: Implementation Science in Health and Healthcare.**

Fall
1 Course Unit

IMP 6100 Ethics and Equity in Implementation Science
Implementation science introduces a host of issues related to the ethics and equity in care delivery and the conduct of research. We will use case examples from ongoing trials to demonstrate and work through these concepts, including (1) pragmatic tradeoffs (e.g., acceptability and effectiveness) in study design and execution; (2) sustainability and health system integration as up-front considerations; (3) unintended consequences with implications for health equity; and (4) consent in implementation research, considering organizational power and hierarchical relationships. We will highlight future directions for empirical work at the intersection of bioethics and implementation science. We will encourage students to work through these issues in their own research.
Prerequisite: IMP 6000, HPR 6110 (Penn Implementation Science Institute) or HPR 6200

Fall
Prerequisite: HPR 6110 OR IMP 6000 OR HPR 6200
1 Course Unit

IMP 6200 Mixed Methods in Implementation Science
The focus of this course is applying and integrating mixed methods in implementation research/science, with a particular emphasis on incorporating qualitative and mixed methods to design and evaluate implementation trials equitably and sustainably. This course will provide an overview of different ways in which mixed methods can be used across implementation and dissemination research using readings, lectures, case studies, and group discussions. Trainees will gain basic skills in collecting and analyzing qualitative and mixed methods data, ways in which mixed methods can be integrated into different study designs (e.g., pragmatic trials) and innovative approaches such as rapid ethnography and configurational comparative methods. The course will also cover philosophical and theoretical foundations and tensions in the field. At the end of the course, trainees will be able to: 1. Design and plan a mixed methods implementation research project. 2. Identify different forms of mixed methods analysis and how to integrate into study designs. 3. Critically evaluate the use of methodological paradigms and theoretical models to ensure alignment with implementation targets and strategies. 4. Identify different ways mixed methods can incorporated across the implementation process from contextual inquiry to implementation trials to policy change.
Prerequisite: IMP 6000, HPR 6110 (Penn Implementation Science Institute), or HPR 6200 Prior coursework or training in qualitative research is strongly suggested. Training or experience in public health, epidemiology, quality improvement or health care organization leadership is preferred.

Spring
Prerequisite: IMP 6000 OR HPR 6110 OR HPR 6200
1 Course Unit

IMP 6300 Project Development in Implementation Sciences
This course offers an opportunity for trainees to apply competencies acquired through the certificate program to address questions related to implementation research and practice. Students will meet weekly as a group to receive guidance and hands-on experience in developing individual proposals in their topical area of interest. At the conclusion of the course, students will have workshopped a proposal suitable for submission, so preference for enrollment will be given to trainees who plan to submit grants within the next year. Prerequisite: IMP 6000, HPR 6110, or HPR 6200

Fall, Spring, and Summer Terms
Prerequisite: HPR 6110 OR IMP 6000 OR HPR 6200
0.5 Course Units

IMP 6400 Practicum in Implementation Science
This course offers an opportunity for trainees to apply competencies in implementation research and practice. Through mentorship from course directors, trainees will receive guidance as they execute individual projects. Prerequisite: IMP 6000, HPR 6110, or HPR 6200

Fall, Spring, and Summer Terms
Prerequisite: HPR 6110 OR IMP 6000 OR HPR 6200
0.5 Course Units
**Indonesian (INDO)**

**INDO 0100 Elementary Indonesian I**
Elementary Indonesian I course is designed for both beginners and those who may have some previous experience with the language. This course will focus on developing and using the four foundational language skills (speaking, listening, reading, and writing) in a communicative format. Students will develop not only their ability to use and understand contemporary Indonesian, but also their knowledge of Indonesian history and culture. By the end of the semester, students will be able to engage in simple conversations about familiar things such as family, friends and daily activities. They will know every day expressions, will be able to tell time, to negate sentences and to build questions. Students will develop reading strategies and learn about the practical life and the cultural practices in Indonesia and compare them with their own.

Fall
1 Course Unit

**INDO 0200 Elementary Indonesian II**
Elementary Indonesian II course is the second course in the first-year series. It is designed to strengthen and expand students Indonesian language competencies in listening, speaking, reading, writing and to deepen their understanding of Indonesian culture. By the end of the semester, students will be able to engage in more detail conversations about familiar things and topics pertinent to them. Students will know everyday expressions and will be able to describe their cities, to tell story about their friends, family, about celebration and family tradition. Furthermore, students will be able to talk about events that happened in the past and in the future, will be able to make comparisons, to express their preference, describe people, things, or an important experience in increasing detail. Furthermore, students will be able to make plan for a party or a trip, write and retell a story or fairy tale.

Fall
1 Course Unit

**INDO 0300 Intermediate Indonesian I**
This course is designed to improve students writing and speaking competencies, to increase their vocabulary, to deepen grammar usage, and to help them develop effective reading and listening strategies in Indonesian. The authentic Indonesian reading texts and videos provide cultural and historical background information. In class, students will practice grammar, interpret reading texts, analyze and discuss Indonesian cultural practices and compare them with their own.

Fall or Spring
1 Course Unit

**INDO 0400 Intermediate Indonesian II**
This course is designed to expand students writing and speaking competencies, to increase their vocabulary and to deepen grammar usage. Students will practice effective reading and listening strategies in Indonesian. The authentic Indonesian reading texts and videos give students opportunities to deepen their knowledge about cultural practices and historical moments in Indonesia. In class, students will have ample opportunities to practice speaking on a daily basis through partner and group work, discussion forums and oral presentations. The variety of communicative activities exposes students to rich input of spoken Indonesian and leads them from structured practice to free expression.

Fall
1 Course Unit

**INDO 0500 Advanced Indonesian Conversation I**
This course will focus on the development of communicative skills and the ability to use Indonesian in extended discourse and abstract discussions at the advanced level. Student will give oral presentations, lead discussions on selected topics from authentic texts, short stories, and Indonesian video clips. Students will also write weekly journals and compositions. The course will provide students with tools to improve understanding of intercultural competence and communication with a focus on Indonesian culture.

Fall or Spring
1 Course Unit

**INDO 0600 Advanced Indonesian Conversation II**
This is continuation of Advanced Indonesian Conversation I, and builds on the student’s communicative skills and the ability to use Indonesian in extended discourse and abstract discussions at the advanced level. Student will give oral presentations, lead discussions on selected topics from authentic texts, short stories, and Indonesian video clips. Students will also write weekly journals and compositions. The course will provide students with tools to improve understanding of intercultural competence and communication with a focus on Indonesian culture.

Fall
1 Course Unit

**Integrated Studies (INTG)**

**INTG 2610 Emerging Technologies and the Future of the World**
Technological change is always occurring, but the rate of change seems to be accelerating. Advances in robotics, artificial intelligence, cyber, biotechnology, and other arenas generate promise as well as peril for humanity. Will these emerging technologies unleash the innovative capacity of the world, generating new opportunities that help people live meaningful lives? Alternatively, are automation and other technologies chipping away at the labor market in a way that could create severe generational dislocation at best, and national and international turmoil at worst? These questions are important, and have consequences for how we live our lives, how nations interact, and the future of the world writ large. Emerging technologies could shape public policy at the local, national, and international level, and raise questions of fairness, ethics, and transparency. This course takes a unique approach, combining insights from engineering, political science, and law in an interdisciplinary way that will expose students both to the key technologies that could shape the future and ways to think about their potentials, politics, and society.

Fall or Spring
Also Offered As: EAS 2610, PSCI 2401
1 Course Unit

**INTG 3440 Curiosity: Ancient and Modern Thinking about Thinking**
This course will examine two approaches to the still unanswered question of what happens when we humans come up with new knowledge. How should we describe the impulse, or set of impulses, that leads us to seek it? What is happening when we achieve it? And how do we describe the new state in which we find ourselves after we have it? We will study the work of contemporary physicists and cognitive scientists on these questions along side the approaches developed by the two most powerful thinkers from antiquity on the topic, Plato and Aristotle.

Not Offered Every Year
Also Offered As: CLST 3803, EAS 2440
1 Course Unit
Integrated Product Design (IPD)

**IPD 5000 Product Engineering Basics**
The course targets non-engineering majors interested in understanding engineering approaches to product fabrication. The course covers a broad variety of engineering topics including mechanical, electrical, computer and material science. Many of these topics would normally be full courses in themselves. This course intends to teach familiarity with a focus on hands-on practice as applied to products. Students will briefly use equipment such as MTS materials testing machines, mills, lathes, oscilloscopes, laser cutters, photodiodes, motors, servos, microcomputers as well as engineering software such as Solidworks, C compilers, Labview, Matlab, and Cambridge Engineering Selector. The class concludes with independent projects.
1 Course Unit

**IPD 5010 Integrated Computer-Aided Design, Manufacturing and Analysis**
The majority of today’s engineered products move through an advanced computer-aided workflow which greatly speeds design and process time. This course will explore the fundamental components of this workflow through a combination of lectures, hands-on exercises, and a semester design project. General course topics include: fundamental design principles, project definition and needfinding, advanced computer-aided design, rapid prototyping techniques, computer-controlled machining, and an in-depth exploration of the modern analysis and simulation tools that have revolutionized the way in which products are designed. Enrollment is limited. Not Offered Every Year
1 Course Unit

**IPD 5030 Design Fundamentals**
The creation of a successful product requires the integration of design, engineering, and marketing. The purpose of this intensive studio course is to introduce basic concepts in the design of three-dimensional products. For purposes of the course, design is understood as a creative act of synthesis expressed through various modes of 2-dimensional and 3-dimensional representation. The course develops basic design skills ranging from hand sketching to the use of digital modeling software and rapid prototyping. Fulfills the requirement for a design background course in the interdisciplinary graduate program in Integrated Product Design (IPD).
Summer Term
1 Course Unit

**IPD 5040 Rehab Engineering and Design**
Students will learn about problems faced by disabled persons and medical rehabilitation specialists, and how engineering design can be used to solve and ameliorate those problems. The course combines lectures, multiple design projects and exercises, and field trips to clinical rehabilitation facilities. Students will have substantial interaction with clinical faculty, as well as with patients. Prerequisite: Graduate students or permission of the instructor.
Fall
Also Offered As: BE 5140
1 Course Unit

**IPD 5090 Needfinding**
Needfinding is an approach that puts people and their needs at the center of product development and business strategy creation. Over 90% of new products introduced into the marketplace fail. A good portion of these failures are due to lack of understanding of end consumers and their needs. To develop truly successful new products, it’s not enough just to ask people what they need or want. Designers and engineers need tools and techniques to get beyond what people can explicitly state and determine their implicit needs. Needfinding is an approach for developing deep insights that provide strategic direction for corporations and open up new possibilities for product development. In this class students will gain a toolset from which to develop their own approaches to conducting researching for design: learning how to think about other people, about culture, and about new perspectives. They will also learn tactical skills: how to define research questions, how to conduct observations and interviews, how to interpret results, how to synthesize them into fodder for design, and how to communicate their findings in a way that is compelling and actionable for designers, marketers, and business strategists. This class is designed for graduate students and upper level undergrads with a specific interest in product design or design thinking.
Fall or Spring
1 Course Unit

**IPD 5110 How to Make Things: Production Prototyping Studio**
The course centers around a sequence of three projects that each culminate in the design and fabrication of functional objects. A 2D Design, 3D Design, and final “Micro-Manufacturing” project will introduce students to a wide variety of design, engineering, and fabrication skills made possible by the new Studios @ Tangen Hall. The micro-manufacturing final project will task interdisciplinary student teams to create a "micro-business" where they will design and utilize 3D printed molding and casting techniques to create a small-scale run of functional products. These products will then be showcased in an end of semester exposition, where the teams will merchandise and market their products to the Penn community. This exposition will also be a wonderful inaugural use of the student and alumni retail space on the 1st floor of Tangen Hall and serve as a great university-wide event to show case the work of SEAS students. Requires proficiency in solid modeling software (e.g., SolidWorks, Maya, Rhino), practice with design process, and hands-on fabrication experience.
Also Offered As: OIDD 5110
1 Course Unit

**IPD 5140 Design for Manufacturability**
This course is aimed at providing current and future product design/development engineers, manufacturing engineers, and product development managers with an applied understanding of Design for Manufacturability (DFM) concepts and methods. The course content includes materials from multiple disciplines including: engineering design, manufacturing, marketing, finance, project management, and quality systems. Prerequisite: Senior or graduate standing in the School of Design, Engineering, or Business with completed product in development and/or design engineering core coursework or related experience.
Spring
Also Offered As: MEAM 5140
1 Course Unit
IPD 5150 Product Design
This course provides tools and methods for creating new products. The course is intended for students with a strong career interest in new product development, entrepreneurship, and/or technology development. The course follows an overall product design methodology, including the identification of customer needs, generation of product concepts, prototyping, and design-for-manufacturing. Weekly student assignments are focused on the design of a new product and culminate in the creation of a prototype, which is launched at an end-of-semester public Design Fair. The course project is a physical good - but most of the tools and methods apply to services and software products. The course is open to any Penn sophomore, junior, senior or graduate student. The course follows a studio format, in which students meet for three hours each week with Professor Marcovitz for lectures and hands-on making, and students will complete 90 minutes of asynchronous, self-paced content from Professor Ulrich on their own time each week. Professor Ulrich gives one in-person lecture during the semester and attends the Design Fair, but is not present at the weekly studio sessions.
Also Offered As: OIDD 5150
1 Course Unit

IPD 5160 Advanced Mechatronic Reactive Spaces.
This course combines performance art and advanced mechatronics concepts that include the design and implementation of large-scale actuation, advanced sensing, actuation and control. This course pairs design school and engineering students to form interdisciplinary teams that together design and build electro-mechanical reactive spaces and scenic/architectural elements in the context of the performing arts. The two disciplinary groups will be treated separately and receive credit for different courses (ARCH746 will be taught concurrently and in some cases co-located) as they will be learning different things. Engineering students gain design sensibilities and advanced mechatronics in the form of networked embedded processing and protocols for large scale actuation and sensing. Design students learn elementary mechatronics and design reactive architectures and work with engineering students to build them. The class will culminate in a some artistic performance (typically with professional artists) such as a Shakespeare play, robotic ballet, a mechatronic opera.
Not Offered Every Year
Also Offered As: MEAM 5160
Prerequisite: MEAM 5100
1 Course Unit

IPD 5190 Smart Devices
An embedded system is the product of a marriage between hardware and software. Embedded systems have grown to be ubiquitous in the modern world - from simple temperature controlled kettles to intricate smart watches with a plethora of functions squeezed into one small package to complex rovers for space exploration. This course introduces the theory and practice of developing embedded systems through exploration of modern microcontroller architectures and culminates in a final project where students have the opportunity to synthesize and apply their knowledge in a project of their own design. Previous programming experience (Preferably C); Some exposure to circuit/ electronics; Undergraduates who have taken ESE 3500 are not permitted to take this course.
Fall
Also Offered As: ESE 5190
Prerequisite: CIS 1200 AND ESE 3500
1 Course Unit

IPD 5210 Designing Smart Objects for Play and Learning
Today's children enjoy a wide array of play experiences, with stories, learning, characters and games that exist as physical stand-alone objects or toys enhanced with electronics or software. In this course, students will explore the design of play and learning in order to develop original proposals for new product experiences that are at once tangible, immersive and dynamic. They will conduct research into education and psychology while also gaining hands-on exposure to new product manifestations in a variety of forms, both physical and digital. Students will be challenged to work in teams to explore concepts, share research and build prototypes of their experiences in the form of static objects that may have accompanying electronic devices or software. Final design proposals will consider future distribution models for product experiences such as 3D printing, virtual reality and software-hardware integration. Instruction will be part seminar and part workshop, providing research guidance and encouraging connections will subject matter experts throughout the Penn campus.
Fall
Also Offered As: ARCH 7210
1 Course Unit

IPD 5250 Ergonomics/Human Factors Based Product Design
Human Factors and Ergonomics knowledge is a critical component of a product designer or design engineer’s toolbox. This course teaches the direct application of existing human factors/ergonomic data to the creation of new product designs. Applying human factors knowledge to problem solving for product design happens throughout the design process. It is a useful input as initial ideas begin to ut and as a way to verify completed concepts through directly documented user testing and design iteration. The course would be a mini-lecture/studio style course in which the students will work in class on assigned projects, finding, analyzing, extrapolating and applying data to design solutions and creating mockups, modeland prototypes for user testing of their designs.
Fall
1 Course Unit

IPD 5270 Industrial Design I
This course provides an introduction to the ideas and techniques of Industrial Design, which operates between Engineering and Marketing as the design component of Integrated Product Development. The course is intended for students from engineering, design, or business with an interest in multi-disciplinary, needs-based product design methods. It will follow a workshop model, combining weekly lectures on design manufacturing, with a progressive set of design exercises.
Spring
Also Offered As: ARCH 7270
1 Course Unit
**IPD 5280 Design of Contemporary Products: Design for Equity, Inclusion and Accessibility**
The power of design to shape the world we live in is increasingly obvious, as is the responsibility of designers to challenge our assumptions about who designs, who is included or marginalized by our designs, and how we can make sure that all design is inclusive design. This course will address issues around designing for equity, inclusion and accessibility and co-design. We will ask, What is inclusive design? Who does it serve? What should it look like? To answer these questions, we will engage with the current discourse around designing for equity, inclusion and accessibility, with a particular focus on accessibility. We will engage with disability justice frameworks and critical disability studies to challenge our assumptions about disability and engagement. And we will connect with members of the disability community and co-design along with them. This course is intended for anyone who considers themselves a designer of physical or digital products, places, or services who wants to prioritize inclusion in their practice.

*Spring*

*Also Offered As: ARCH 7280*

1 Course Unit

**IPD 5290 Designing Connected Objects and Experiences**
The objective of this course is to introduce students to a more conceptual, creative, and meaningful approach to creating interactive functional objects utilizing analog, digital, and electronic skillsets acquired through the core engineering curriculum. This course will cover basics of design as an art form, wearables design, electronic sensors, and creating connected devices. Students will be challenged to create 3 pieces of work both individually and in teams culminating in a gallery show of the students’ work. Visit the course website at www.ipd529.com to view previous student work.

*Fall or Spring*

*Also Offered As: EAS 5450*

1 Course Unit

**IPD 5440 Image, Object, Architecture**
As we have entered a postdigital era, the dominance of a purely technological approach as a vehicle for design innovation has waned. Questions of substance and disciplinary autonomy have found their way back into the contemporary cultural discourse, enriching the way we examine and deploy advanced technologies towards novel expressions in architecture. This seminar will investigate, through the production of estranged objects, opportunities for design that are being generated at the intersection of machinic and human minds, and speculate on possible futures in which concepts of nature and technology have been inseparably intertwined.

*Spring*

*Also Offered As: ARCH 7440*

1 Course Unit

**IPD 5450 Engineering Entrepreneurship I**
Engineers and scientists create and lead great companies, hiring managers when and where needed to help execute their vision. Designed expressly for students having a keen interest in technological innovation, this course investigates the roles of inventors and founders in successful technology ventures. Through case studies and guest speakers, we introduce the knowledge and skills needed to recognize and seize a high-tech entrepreneurial opportunity - be it a product or service - and then successfully launch a startup or spin-off company. The course studies key areas of intellectual property, its protection and strategic value; opportunity analysis and concept testing; shaping technology driven inventions into customer-driven products; constructing defensible competitive strategies; acquiring resources in the form of capital, people and strategic partners; and the founder’s leadership role in an emerging high-tech company. Throughout the course emphasis is placed on decisions faced by founders, and on the sequential risks and determinants of success in the early growth phase of a technology venture. The course is designed for, but not restricted to, students of engineering and applied science and assumes no prior business education. Prerequisite: Third or Fourth year or Graduate standing.

*Fall or Spring*

*Also Offered As: EAS 5450*

1 Course Unit

**IPD 5510 Design Processes**
This studio is structured for IPD students as an intensive, interdisciplinary exploration of Design as purposeful for Integrated Product Design. The goal of the studio is to give students a firsthand experience of various processes involved in creating successful integrated product designs. This first semester of the four-semester studio sequence focuses on giving students experience developing designs based on a range of starting points: form, function, materiality and manufacturing process. Students will practice design through rigorous, consistent processes for thinking through the evolution of their ideas. In this course, they will go through an entire design process from conceptualization to design to producing prototypes. They will be taught to focus on the specifics of their designs, causing them to be conscious of what drives their choices as designers and providing them with a wider range of tools to design from in successive projects. Course work will involve readings, assignments, class participation, in-class exercises, a mid-term presentation and a final submission.

*Fall or Spring*

1 Course Unit

**IPD 5520 Problem Framing**
In the second semester of the four-semester studio sequence, we ask students to take a step back from what and how they are designing and ask the question of why they are designing it. We will teach them a rigorous process for understanding stakeholder needs and for translating those needs into implications for product design. They will begin to develop greater awareness of the personal, social, competitive and technological contexts that their products fit into, and to learn how to design for those contexts. They will develop the ability to dive into a topic and frame a design problem, and to understand the implications of how they frame the problem on what they design. Ideally, they will use this process to identify a problem or opportunity to work on for their final project. Course work will involve readings, assignments, class participation, in-class exercises, and a final submission.

*Spring*

1 Course Unit
IPD 5680 Integrative Design Studio: Biological Design
This course is a research-based design studio that introduces new materials, fabrication, and prototyping techniques to develop a series of design proposals in response to the theme: Biological Design. The studio introduces life sciences and biotechnologies to designers, artists, and non-specialists to develop creative and critical propositions that address the social, cultural, and environmental needs of the 21st century. The course will be a pilot study of the first biodesign challenge organized by CUT/PASTE/GROW. The final projects will be submitted to a competition and the winning entry will be featured at Biofabricate in Summer 2017. Fall or Spring
1 Course Unit

IPD 5720 Design Thinking
Creating new product concepts was once a specialized pursuit exclusively performed by design professionals in isolation from the rest of an organization. Today's products are developed in a holistic process involving a collaboration among many disciplines. Design thinking - incorporating processes, approaches, and working methods from traditional designers' toolkits - has become a way of generating innovative ideas to challenging problems and refining those ideas. Rapid prototyping techniques, affordable and accessible prototyping platforms, and an iterative mindset have enabled people to more reliably translate those ideas into implementable solutions. In this course, students will be exposed to these techniques and learn how to engage in a human-centered design process. Fall
Also Offered As: ARCH 7250
1 Course Unit

IPD 5900 Special Topics in Integrated Product Design
This course will be offered when demand permits. The topics will change due to the interests and specialties of the instructor(s). Some topics could include: Advanced Manufacturing, Design of Interactive Objects, Medical Devices and Sustainable Products. Not Offered Every Year
0.5-1 Course Unit

IPD 5990 Master's Independent Study
Fall or Spring
1 Course Unit

Capitalized course title and removed period from the end of the long course title.
Fall or Spring
1 Course Unit

IPD 7990 IPD Final Project
The last two semesters of the IPD studio sequence consist of the IPD Final Project. Students are given the opportunity to work on design problems that follow their passion or to work on a real world problem provided by our partners in academia, industry, or the non-profit world. The Final Project enables students to put the skills that they have developed in engineering, design arts and business into practice, following the process from initial opportunity identification into the development of a working product with a complementary business plan. Interdisciplinary group work is encouraged on final projects. Working in teams offers students the opportunity to collaborate across skill sets and learn from teammates from different disciplines. Final Projects provide students with ample opportunity to learn leadership and collaboration skills that are invaluable in today's workplace. Fall or Spring
1 Course Unit

Intercultural Communication (ICOM)
The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

ICOM 1000 Intercultural Communication
Language is a complex and multifaceted phenomenon, simultaneously communicative, creative, and cultural. An intercultural perspective is vital to learning a new language and engaging meaningfully with speakers of other languages and cultures. Focusing on the key ideas of intercultural practices, reflections, and strategies, this course offers students a foundation for understanding language, culture, and communication as well as the intricate relationship between them. 1 Course Unit

International Relations (INTR)

INTR 1001 Transnational Issues in Global Politics
This course is designed to provide students with an introduction to transnational issues and world politics and to acquaint them with some of the leading issues, theories, concepts and processes, and history that shape and define world events. It is suitable for students embarking on a long-term study of international affairs as well as for students with other majors and intellectual interest who simply want to know more about how the world works and how the material covered in this class affects their lives. It is expected that students taking the course will gain an ability to analyze, understand objectively evaluate and appreciate the complex dynamics that affect “global politics” writ large, including issues relating to trade, diplomacy, people-to-people and business transactions, and shifts in demography, borders, international institutions and global governance. In addition to issues of diplomacy, statecraft, and security we will assess some of the major international issues of our time (i.e. climate change, proliferation of weapons of mass destruction, genocide and human trafficking) and debate the prospects for bringing peace and prosperity to a world that is rife with conflict and poverty. Fall or Spring
1 Course Unit

INTR 2500 Political Risk Analysis
This course teaches students to apply social science theories and concepts together with futures methodologies (e.g. Delphi method; country risk assessments used by ratings agencies) to the challenges of addressing international political risks to the continuity, effectiveness and operations of business, government and other organizations in their international transactions. Fall or Spring
1 Course Unit
INTR 2600 Counterintelligence: History, Theory, and Practice
This course will address the conceptual and practical issues of the practice of counterintelligence as it relates to the national defense, economic competitiveness, and foreign policy decision-making and the role of the intelligence community in thwarting intelligence gathering and espionage against the United States and the United Kingdom. Because the closer is to the contemporary world and the inherent secrecy the surrounds intelligence and counterintelligence activities, much of this class focuses on historical cases where long term public research and declassification of government documents have allowed us to look into the system and process of intelligence gathering, analysis, and recommendations for action. We will explore recurrent and prominent themes of intelligence failures, the trade-offs and calculations of a strong CI infrastructure as it relates to ethics, democracy and national power and prestige that shape our understanding of the subject and how it directly and indirectly impacts our lives and our society. Students will gain an appreciation of how the practice has been utilized by government, specifically its structure, analytical processes, organizational culture, practice-related ethics, perception(s) by the public, guiding charter, and governmental oversight. This class covers the diverse array of counterintelligence applications - within the government as well as in the private sector and our individual lives. TO APPLY FOR THIS COURSE, EMAIL INSTRUCTION FOR APPLICATION FORM FPLANTAN@SAS.UPENN.EDU
Spring
1 Course Unit

INTR 2900 Topics in International Relations
Topics in International Relations focuses on specialized issues, practical or applied approaches, policy and other topics of contemporary relevance in modern study of international relations. These are experimental or occasionally offered classes. Past topics of included US Foreign Policy and the Arab Spring, the Iraq Wars, Secret Intelligence & American Democracy, Counterintelligence, Homeland Security, the US & South Asia Cold War and New Alignments, and Think Tanks and Global Governance.
Fall or Spring
1 Course Unit

INTR 2999 Independent Study
Independent study for IR majors.
Fall or Spring
1 Course Unit

INTR 3500 Research Methods/Practice in IR
International Relations is concerned with both theory and practice so we employ a range of analytical tools to examine actors and events in world politics. The purpose of this course is to introduce students to the various research methods utilized by students and scholars in the field of IR including: case studies, historical - comparative and archival research, survey research, interviewing techniques, simulations, quantitative and statistical analysis.
Fall or Spring
Prerequisite: PSCI 0400
1 Course Unit

INTR 4197 Senior Seminar for Thesis Research I
Seminar in International Relations. A two semester sequence including review of advanced International Relations theory and research methods for the preparation of the senior thesis.
Fall
Prerequisite: INTR 3500 AND PSCI 0400
1 Course Unit

INTR 4198 Independent Study for Thesis Research
Independent study for international relations majors completing senior thesis research.
Fall or Spring
1 Course Unit

INTR 4297 Senior Seminar For Thesis Research II
Seminar in international relations. Second semester of a two semester sequence including review of advanced international relations theory and research methods for the preparation of the senior thesis.
Spring
Prerequisite: INTR 4197
1 Course Unit

INTR 4597 Senior Project I
This seminar will prepare students to plan, implement, and present their senior research project. Students will draw on the experience and insight they have gained in the course of their fieldwork or internship to develop defensible policy recommendations for their target audience. As such, the seminar will introduce students to the policy formation process as they develop the practical skills needed to formulate and produce actionable policy recommendations. Students will produce a formal report and will present their findings to relevant stakeholders at the conclusion of the Seminar. This class will ensure that students develop the skills necessary to undertake a substantive research project.
Fall
Prerequisite: INTR 3500 AND PSCI 0400
1 Course Unit

INTR 4697 Senior Project II
This course is a continuation of INTR-395, culminating with the production of a policy research paper and presentation.
Spring
Prerequisite: INTR 4597
1 Course Unit
International Studies (INSP)

INSP 1001 Huntsman Program First-Year Seminar in International Studies and Business
This is a course for first-year students in their first semester. Will be required for, and limited to, incoming students in the Huntsman Program in International Studies and Business, which is a coordinated dual-degree program jointly administered by the College of Arts and Sciences and the Wharton School. The course is being offered for the first time in Fall 2020 and will be co-taught by the Huntsman Faculty Directors, Professor Rudra Sil (Department of Political Science, School of Arts & Sciences) and Professor Harbir Singh (Management Department, Wharton School). The course offers a shared understanding of some fundamental concepts, theoretical frameworks, and long-term historical trends that relate to both the study of business on a global scale and the social scientific analysis of contemporary issues. The first section (module) of the course, to be led by Professor Sil, will provide a broad overview of the evolution of global political economy across diverse historical eras, from the Industrial Revolution to the challenges of economic governance in the post-World War II era to the emergence of (and questioning of) the "Washington Consensus" in the post-Cold War era. Throughout, students will learn about varied developmental pressures and shifting international environments within which the relationships between markets and governments have been organized. The second section (module), to be led by Professor Singh, will delve into the complex challenges and opportunities faced by firms and businesses operating on a global scale. With the aid of case studies, this section will address approaches to decisions and processes that affect the rise and fall of comparative advantage, while paying attention to evolving organizational structures, business strategies, the emergence of inter-firm networks and large business organizations, including multi-national corporations. In the third part of the course, students are expected to use what they learn and engage each other through the presentation of team projects on a major contemporary issue of global significance. These projects will incorporate discussion of some of the research being done by Penn faculty in the School of Arts & Sciences as well as the Wharton School, thereby helping to familiarize students with some of the disciplines and scholarly traditions covered in the two schools. The weekly three-hour sessions will typically include lectures, discussions of assigned readings, small-group work and question-and-answer periods. Following an introductory session in the first week, the course will consist of three modules. Prerequisites: Admission to Huntsman Program in International Studies and Business
Fall
1 Course Unit

INSP 4998 Senior Thesis, International Studies
The senior thesis course is a capstone for seniors in the Huntsman Program in International Studies and Business. Students in the Huntsman Program should consult with the Huntsman Program advisors for more information.

ITALIAN (ITAL)

ITAL 0010 Italian Survival Kit: The Language and Culture of getting around in Italy
This course provides content that is taught efficiently in order to be used practically. If you are going to Italy and questioning how you will survive your total immersion experience, this course will provide you with the linguistic and cultural skills you will need to effectively function in Italy and fully enjoy its wonders. In this course, you will learn and practice the language you need to talk about: yourself; others; travel; public transportation; housing; food; shopping; technology; health; money, etc. Students participate in conversations that replicate day-to-day life in Italy thereby developing the skills needed for face-to-face and online situations. This course does not count toward fulfillment of the language requirement. Students wishing to continue in Italian 0200 should register for Italian 0100 rather than Italian 0010. This course is open to students who have never taken Italian and who don’t intend to satisfy the language requirement by taking courses in Italian.

ITAL 0050 Sicilian Language and Culture
Occupied over the centuries by the Greeks, Romans, Arabs, Normans, French, and Spaniards, Sicily is a region of many histories and many traditions. Birthplace and crossroad of cultures and artistic movements, the Sicilian land has shaped the imagination of its inhabitants and has never ceased to fascinate its visitors. Its language and culture have also been exported abroad, through the many Sicilians who left the island and settled all over the world. This course is an introduction to Sicilian Language and Culture. We will study spoken Sicilian and cultural artifacts ranging from film to literature, to music and food, in order to learn to recognize and understand the unique sounds and features of "siciliano" and to converse in Sicilian with native speakers and with one another. Class sessions include lectures and interactive discussions. Between classes, the learning experience is extended through assignments, lectures and discussions.
Fall
0.5 Course Units

ITAL 0087 Desire and Deception in Medieval Erotic Literature
In this course, we will investigate the ideology, content, and material forms of love literature from Dante Alighieri to Francesco Petrarca. Through close readings of such texts as Dante's Vita nova (ca. 1295), Giovanni Boccaccio's Decameron (ca. 1353), and Petrarca's Rerum vulgarium fragmenta (often referred to as the poetry book par excellence: il canzoniere, ca. 1374), we will unveil the literary and fictitious nature of medieval erotic literature. We will explore the origins of love poetry in medieval France and its subsequent interpretation and rewriting in Italian courts and comuni. We will inquire into the cultural constructions of the medieval notion of lyrical self and how it still has an impact on our own notion of consciousness. We will study the forms, themes, and characters that populate 'love stories' in the Middle Ages. We will analyze the dynamics of composition, circulation, and reception in manuscript culture. Our close analysis of the texts as they have been preserved in manuscript form will help us gauge the differences between medieval and contemporary ways of writing, reading, and loving.

ITAL 0100 Elementary Italian I
A first-semester elementary language course for students who have never studied Italian or who have had very little exposure to the language. Students who have previously studied Italian are required to take the placement test. Class work emphasizes the development of spontaneous discourse skills and interactional competence. Out-of-class homework required.
Fall or Spring
1 Course Unit

ITAL 0120 Accelerated Elementary Italian
An intensive two-credit course covering the first and second semester of the elementary year for students who have never studied Italian before but have already fulfilled the language requirement in another modern language, preferably a romance language. Students who have fulfilled the language requirement in a language other than a romance language will be considered on an individual basis. All students must have departmental permission to register. Class work emphasizes the development of spontaneous discourse skills and interactional competence. Out-of-class homework required.
Fall or Spring
2 Course Units

ITAL 0200 Elementary Italian II
This course is the continuation of the elementary-level sequence designed to develop functional competence in the four skills. Class work emphasizes the further development of spontaneous discourse skills and interactional competence. Out-of-class homework required.
Fall or Spring
Prerequisite: ITAL 0100
1 Course Unit

ITAL 0300 Intermediate Italian I
Italian 0300 is the first half of a two-semester intermediate sequence designed to help you attain a level of proficiency that will allow you to function comfortably in an Italian-speaking environment. The course will build on your existing skills in Italian, increase your confidence and your ability to read, write, speak and understand the language, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. You are expected to have already learned the most basic grammatical structures in elementary Italian and to review these. The course materials will allow you to explore culturally relevant topics and to develop cross-cultural skills through the exploration of similarities and differences between your native culture and the Italian world.
Fall or Spring
Prerequisite: ITAL 0200
1 Course Unit

ITAL 0340 Accelerated Intermediate Italian
This course is the intensive and accelerated course that combines in one semester the intermediate sequence (0300 and 0400). It will build on your existing skills in Italian, increase your confidence and your ability to read, write, speak and understand the language, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. The course will allow you to explore culturally relevant topics and to develop cross-cultural skills through the exploration of similarities and differences between your native culture and the Italian world.
Fall or Spring
Prerequisite: ITAL 0120
2 Course Units

ITAL 0400 Intermediate Italian II
This course is the second half of a two-semester intermediate sequence designed to help you attain a level of proficiency that will allow you to function comfortably in an Italian-speaking environment. The course will build on your existing skills in Italian, increase your confidence and your ability to read, write, speak and understand the language, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. The course will allow you to explore culturally relevant topics and to develop cross-cultural skills through the exploration of analogies and differences between your native culture and the Italian world. The course will move beyond stereotypical presentations of Italy and its people to concentrate on specific social issues together with cultural topics.
Fall or Spring
Prerequisite: ITAL 0300
1 Course Unit

ITAL 0800 Italian Conversation
The course materials and nature of assignments and projects complement the Italian Studies curriculum by supporting the cultural content, linguistic functions, and types of assignments students may have already been exposed to in other Italian courses. This course will serve not only as a gateway to inspire students to take Italian Studies courses in the future, but will also accompany classes they may be taking simultaneously. The learning objectives of the works studied in this course will mirror and support the goals of the Italian Studies Curriculum while paying particular attention to oral expression, communication, and fostering a community of students of Italian both inside and outside the classroom. Two Term Class, Student may enter either term; credit given for either 0.5 Course Units
ITAL 1000 Advanced Italian I
This course will focus on contemporary Italian culture following its development since the 1960s. Pertinent films, literary texts, articles, as well as material in other media will complement the analysis of films and allow in-depth discussion. The cultural material explored in the course will be also used as a basis for a review of linguistic structures and vocabulary. Audiovisual materials develop students’ comprehension and production in Italian and enable them to function in an academic setting. Class work will center primarily on conversation to improve students’ fluency, vocabulary, and accuracy in speaking. Homework will consist of research and writing assignments in written Italian. Additionally, students will be required to prepare presentations. Students will write a final essay.
Fall or Spring
1 Course Unit

ITAL 1200 Advanced Italian II
In this course, students will strengthen their communication skills, while continuing to explore significant aspects of contemporary Italian culture and history. Students will take further steps towards being able to understand in depth and to contextualize authentic Italian documents. Films, songs, and a variety of readings, will be used as windows on particular historical periods, cultural movements, political issues, and social customs. They will serve as a tool to investigate the many facets of Italian identity and, at the same time, as a way to prepare those students who will continue their study of Italian literature and culture in higher-level courses. Students are expected to participate in conversations and all other class activities in order to improve their oral and written ability to narrate, express opinion, hypothesize, and discuss a variety of topics, using rich, appropriate vocabulary and grammar, and organizing well-structured discourses, be they oral presentations, weekly compositions or the final essay. To reach these goals, speaking, listening, reading and writing activities – role plays, discussions, oral presentations, journals, grammar reviews – will be based on audio-visual material and written texts and/or proposed by the students themselves, based on their independent explorations and research.

1 Course Unit

ITAL 1211 Business Italian
The course is conducted entirely in Italian and should be taken after completion of Italian 1000 or equivalent. It is designed to enable students to acquire language proficiency in the current Italian business and labor world. Business terminology will be used in specific business situations such as banking, trade, communications, etc. The course will examine Italian business practices, cultural differences such as the attitude towards money, work, leisure and consumerism through websites, newspaper and magazine articles and video clips. Students will learn to read business publications, write and compose business texts, and participate in business-related conversations. Additionally, guest lecturers from the local business world with ties to Italy will provide students with information about internship and job opportunities and the knowledge necessary to navigate international and Italian commercial routes. All reading and lectures in Italian.

Prerequisite: ITAL 1000
1 Course Unit
ITAL 1320 Composers: Opera Composers 1600-1900
This course will center on the biography, works, and cultural context of a specific composer or group of composers. As well as introducing students to the musical works of the composer(s), the course will examine issues such as reception history, the canon, mechanisms of cult formation, authorship and attribution, identity, historical and social contexts, and nationalism and patriotism. Fulfills Arts and Letters Requirement. The course centers on a group of composers who created or developed opera as a successful genre by setting texts in Italian: Monteverdi, Handel, Mozart, Verdi, and Puccini. We will explore how these musicians were involved in opera as a business model, how their careers took shape, how their music interacted on stage with words, bodies, and sets (enhancing narratives based on literature, mythology and history), how their works were products of larger social contexts, and finally, how and why these operas are presented today by American theatres (also adapted as Broadway musicals) or in film versions. The course is intended for non-majors, but music majors are welcome. Knowledge of Italian is not necessary.
Not Offered Every Year
Also Offered As: MUSC 1320
1 Course Unit

ITAL 1322 Composers: Mozart/DaPonte
This course will center on the biography, works, and cultural context of a specific composer or group of composers. As well as introducing students to the musical works of the composer(s), the course will examine issues such as reception history, the canon, mechanisms of cult formation, authorship and attribution, identity, historical and social contexts, and nationalism and patriotism. Fulfills Arts and Letters Requirement. Mozart's meeting with Lorenzo Da Ponte in Vienna in 1783 sparked one of the most successful collaborations in opera history between a poet and a composer, generating three works that are frequently staged in today's theatres worldwide, The Marriage of Figaro (1786), Don Giovanni (1787), and Cosi fan tutte (1790). We will study the literary sources of these operas, the poetic and operatic conventions of the time, and the issues (such as love, power, and gender) that these works raise, by also comparing different versions on video. The course is intended for non-majors, but music majors are welcome.
Not Offered Every Year
Also Offered As: MUSC 1322
1 Course Unit

ITAL 1430 History of Opera
An investigation, through a series of representative works, of the central problem of opera: how does the combination of music, text, and visual spectacle create an art form in which the whole is more powerful than its parts. Today this issue can be examined not only in live performances but also through media such as film, DVD, streaming video— media to which this four-centuries-old multimedia form has adapted, evolving in still compelling ways. The works chosen for the course provide a chronological survey but also represent the variety of sources on which opera has drawn for it subject matter: myth and legend, the epic, the novel, and the play.
Not Offered Every Year
Also Offered As: MUSC 1430
1 Course Unit

ITAL 1440 Film Music in Post 1950 Italy
An exploration of cinematic sound through the lens of specific composer/director collaborations in post-1950 Italy, examining scores, soundtracks, and the interaction of diegetic and non-diegetic music with larger soundscapes. Composers Nino Rota and Ennio Morricone serve as case studies, in partnership with directors Fellini, Visconti, Leone, Pontecorvo, Pasolini, and Coppola. Highlights include several excerpts from the Fellini/Rota collaboration, including The White Sheik, I vitelloni, The Road, Nights of Cabiria, La dolce vita, 8 1/2, Juliet of the Spirits, Satyricon, The Clowns, Roma, Amarcord, Casanova, and Orchestra Rehearsal. Rota's music for Visconti will be examined in Senso, the Leopard, and Rocco and his Brothers, along with his Transatlantic collaboration for The Godfather. Morricone's work with various directors will be discussed in The Good, the Bad, and the Ugly, The Battle of Algiers, and Teorema, as well as for American films such as Malick's Days of Heaven and Tarantino's The Hateful Eight. Weekly screenings required. Open to all: music majors, minors, and non-majors; will count toward requirements for music minor. Knowledge of music and Italian helpful but not required. All readings and lectures in English.
Also Offered As: CIMS 1440, MUSC 1440
1 Course Unit

ITAL 1871 Florence Myth and History
The course explores the historical, social, and cultural history of Florence across the centuries. Florence, which has been one of the largest and most powerful city-states since the Middle Ages, has undergone different changes that have significantly shaped both the character and the urban texture of the city. Cradle of the Renaissance, culinary and fashion hub, a political laboratory, Florence has lived many lives that will be discussed in the course, also offering comparisons with other Italian and Mediterranean realities. Readings by authors, philosophers, architects, and artists will be complemented by field trips, excursions, and tours of Florence's most iconic sites and monuments. Trips to other Tuscan cities (Siena, S. Gimignano, Arezzo, Cortona) will be part of the course.
1 Course Unit

ITAL 1890 Masterpieces-Italian Literature
This course surveys the history of Italian literature through its major masterpieces. Beginning with Dante's Divine Comedy, Petrarca's love poems, and Boccaccio's Decameron, we will follow the development of Italian literary tradition through the Renaissance (Machiavelli's political theory and Ariosto's epic poem), and then through Romanticism (Leopardi's lyric poetry and Manzoni's historical novel), up to the 20th century (from D'annunzio's sensual poetry to Calvino's post-modern short stories). The course will provide students with the tools needed for analyzing the texts in terms of both form and content, and for framing them in their historical, cultural, and socio-political context. Classes and readings will be in Italian. ITAL 1890 is mandatory for Majors in Italian Literature and Minors in Italian Literature. If necessary, ITAL 1000 can be taken at the same time as ITAL 1890. Prerequisite: Open to students who have completed ITAL 1000 or equivalent.
Fall or Spring
Also Offered As: COML 1890
Prerequisite: ITAL 1000

ITAL 1900 Italian History on Screen: How Movies Tell the Story of Italy
How has our image of Italy arrived to us? Where does the story begin and who has recounted, rewritten, and rearranged it over the centuries? In this course, we will study Italy's rich and complex past and present. We will carefully read literary and historical texts and thoughtfully watch films in order to attain an understanding of Italy that is as varied and multifaceted as the country itself. Group work, discussions and readings will allow us to examine the problems and trends in the political, cultural and social history from ancient Rome to today. We will focus on: the Roman Empire, Middle Ages, Renaissance, Unification, Turn of the Century, Fascist era, World War II, post-war and contemporary Italy. Lectures and readings are in English.
Fall or Spring
Also Offered As: CIMS 1900
1 Course Unit

ITAL 1910 Sicily on Page and Screen
What images come to mind when we hear the words Sicily and Sicilians? Often our thoughts range from scenic vacation spots, delicious seafood and cannoli, and sweet grandmothers dressed in black, to mafia violence, vendettas, and the deep-rooted code of silence, omerta. But, how did these ideas get to us? Is there truth in them? Is there more to this island and its people? Through careful analysis of literary and cinematic representations of this Italian region, and those that do and have inhabited it, we will trace and analyze how Sicilians have represented themselves, how mainland Italians have interpreted Sicilian culture, how outsiders have understood these symbols, how our own perceptions shaped what we thought we knew about this place and, finally, how our own observations will have evolved throughout our studies. We will watch films such as Tornatore's Cinema paradiso and Coppola's The Godfather II, and read texts such as Lampedusa's The Leopard and Maraini's Bagheria. This course aims to increase students' understanding and knowledge of the Sicilian socio-cultural system. It will help students develop their ability to understand and interpret Sicilian culture through close analysis of its history, values, attitudes, and experiences, thereby allowing them to better recognize and examine the values and practices that define their own, as well as others', cultural frameworks.
Summer Term
Also Offered As: CIMS 1910
1 Course Unit

ITAL 1920 Italian History on the Table
"Mangia, mangia!" is an expression commonly associated with the American stereotype of Italians, whose cuisine is popular throughout the world. But is the perceived Italian love of food the same in the United States and in Italy? Is it an issue of quantity or quality? Of socioeconomics, politics, education, health ...? Global, local or maybe, glocal? In this course, we will explore the role of food in Italian culture and in the shaping of the Italic identity, in Italy and abroad since antiquity. We will trace its evolution through literary documents, works of art, music and film, as well as family recipes and cooking tools; from ancient Rome to Dante and Boccaccio, to Stanley Tucci's Big Night; from court banquets to food trucks that, while always a feature at Italian fairs and open air markets, are now being "Americanized" under the influence of American cooking shows on Italian television. This course will be taught in English. It is an OBL (Object Based Learning) Course and will include class visits, in person and/or virtual, to the Penn Museum and to the Rare Book and Manuscript Library. It counts also as a credit for the minor in Global Medieval Studies.

Also Offered As: ENGL 1295
1 Course Unit

ITAL 1930 Fascist Cinemas
Cinema played a crucial role in the cultural life of Nazi Germany and other fascist states. As cinema enthusiasts, Goebbels and Hitler were among the first to realize the important ideological potential of film as a mass medium and saw to it that Germany remained a cinema powerhouse producing more than 1000 films during the Nazi era. In Italy, Mussolini, too, declared cinema "the strongest weapon." This course explores the world of "fascist" cinemas ranging from infamous propaganda pieces such as The Triumph of the Will to popular entertainments such as musicals and melodramas. It examines the strange and mutually defining kinship between fascism more broadly and film. We will consider what elements mobilize and connect the film industries of the Axis Powers: style, genre, the aestheticization of politics, the creation of racialized others. More than seventy years later, fascist cinemas challenge us to grapple with issues of more subtle ideological insinuation than we might think. Weekly screenings with subtitles.

ITAL 2200 Florence in History
Florence is justly famous for its art and learning, especially during the era of the Renaissance. It was also one of the most literate states in Europe during this era; thanks to the city's 3 abundant records, it is one of the best-studied cities in Europe from the later Middle Ages through the early modern era. Our course readings present a mix of major primary sources, synthetic summaries, and important modern scholarship. Most of our class time will focus on the information and issues they raise.

ITAL 2201 The City of Rome: From Constantine to the Borgias
The great city of Rome outlived its empire and its emperors. What happened to the Eternal City after "the fall of the Roman Empire in the West?" In this course, we will follow the story of this great city, its people, its buildings old and new, and its legacy across Italy, Europe, and beyond. Rome rebuilt and reshaped itself through the Middle Ages: home for popes, destination for pilgrims, power broker for Italy. It became a great Renaissance and early modern city, a center of art and architecture, of religion, and of politics. We will be reading a mix of primary sources and modern scholarship. All required texts are in English, though students who take this course for Italian Studies credit may choose to read some works in Italian.
Fall or Spring
Also Offered As: HIST 2201

ITAL 2204 Food and Diet in Early Europe: Farm to Table in the Renaissance

What did medieval and Renaissance Europeans choose to eat? What did they have to eat? Before the age of mass transportation, was all food locally sourced? In an era when most medicines were plant-based, what did it mean to eat a balanced diet? “Feed a cold, starve a fever.” Why?

In this course we will examine food, foodways, and diet in European culture, thought, and society with a focus on the later Middle Ages and Renaissance, and with a mix of primary sources and modern scholarship on food, cuisine, religion, and diet.

ITAL 2210 Intensive Italian, Culture, and Conversation - Penn in Florence

This course, taught in Italian, has been designed to enhance the students’ reading, speaking, and listening abilities in Italian and to enrich their knowledge of Italian culture. Aspects of contemporary culture, civilization, and current events will be explored through the discussion of articles, short stories, selections from novels, movies, and documentaries. Students will have the opportunity to practice the language in context and use a variety of formats, including debates, role plays, scene analysis, and quote or text interpretation. The course requires students to explore the city and its cultural landscape, starting with group forays and proceeding through meetings and interviews.

ITAL 2510 Black Italy: Transnational Identities and Narratives in Afro-Italian Literature

This course focuses on how the migration movements to Italy, mainly from the Maghreb and the Horn of Africa in the ‘80s and ‘90s contributed to change Italy’s status and image. From a country of emigration to other parts of the world, Italy became - as many historians, geographers, and scholars have observed - an immigration site, playing a pivotal role in the African diaspora. In the shadow of Italy’s colonialist heritage (a past that Italy still has not fully confronted), these phenomena of mass migration challenge, complicate, and develop the notion of Italian-ness and undermine the fixity of an Italian identity in favor of multicultural and transnational identities. This course focuses on several Black Italian artists, writers, filmmakers, and activists of Somali, Eritrean, Ethiopian, and Egyptian origins (e.g. migrants or children of immigrants who were born or raised in Italy and children of mixed-race unions) who contribute to broaden the definition of Italian-ness and to challenge its racial, social, and cultural boundaries. Students will analyze short stories, novels, documentaries, songs, blogs, journal articles by Igiaba Scego, Cristina Ali Farah, Gabriella Ghermandi, Medhin Paolos, Fred Kudjo Kuwornu, Amir Issaa, Amara Lakhous, Pap Khouma, and Kaha Mohamed Aden, among others. They describe their multicultural identities, their senses of belonging, their feelings for the place that is depriving them of foundational rights (such as citizenship or a legal status), their nostalgia for their homeland or the countries where their parents were born, their fights to find or create a social and literal space where being recognized not as foreigners or worse as "clandestini." Their works offer an original, complex, and multilayered depiction of contemporary Italy and its social and cultural changes, where the African community is becoming larger and better represented. Some questions this course will ask include: what are the historical and geographical components of blackness in Italy? How, if at all, have these phenomena of migration changed Italian identity? How do black Italians live within the context of anti-blackness? How do these Italian writers and artists relate to African American histories and experiences of diaspora? How can African Italian literature contribute to a deeper understanding of the Black diaspora in Europe and elsewhere? The course will pursue answers to these questions by exploring issues of race, color, gender, class, nationality, identity, citizenship, social justice in post-colonial Italy while drawing on related disciplines such as Geography, Mediterranean Studies, Diaspora Studies, Post-Colonialism, and Media and Cultural Studies. Course taught in English. Course Material in English.

ITAL 2520 Contemporary Italy: Pop Culture, Politics, and Peninsular Identity  
Is the land of good food, beautiful landscapes, and la bella vita really how it looks in the movies? Where do our ideas about Italy come from and how do they compare to the realities of its cultural production and its contemporary day-to-day life? This cultural survey course on contemporary Italy will investigate the similarities and divergences of these perceptions by researching current social, political, and media trends and putting them face to face with our preconceived notions. The course will cover major cultural trends from fashion and food trends, to eco-Italy, criminality and the Anthropocene, to immigration, to Black and LGBTQ Italia, to contemporary transfeminism, to Berlusconismo and Populism, to Netflix Italia and Social media culture. Through written assignments both in and outside the classroom, oral presentations, and multimedia projects we will critically reflect on these contemporary issues and gain a stronger understanding of the socio-cultural specificity of the Italian cultural landscape and its relationship to contemporary global socio-political trends and identities.

ITAL 2525 Florence Throughout the Centuries  
The course explores the historical, social, and cultural history of Florence across the centuries. Florence, which has been one of the largest and most powerful city-states since the Middle Ages, has undergone different changes that have significantly shaped both the character and the urban texture of the city. Cradle of the Renaissance, culinary and fashion hub, a political laboratory, Florence has lived many lives that will be discussed in the course, also offering comparisons with other Italian and Mediterranean realities. Readings by authors, philosophers, architects, and artists will be complemented by field trips, excursions, and tours of Florence’s most iconic sites and monuments. Trips to other Tuscan cities (Siena, S. Gimignano, Arezzo, Cortona) will be part of the course.
Summer Term  
1 Course Unit

ITAL 2540 Titian and Venetian Painting  
This lecture course examines the art and architecture of the Venetian Republic, with emphasis on the work of the renowned painter, Titian.

ITAL 2550 Michelangelo and the Art of the Italian Renaissance  
An introduction to the work of the Renaissance artist Michelangelo (1475-1564)-his sculptures, paintings, architecture, poetry, and artistic theory-in relation to his patrons, predecessors, and contemporaries, above all Leonardo and Raphael. Topics include artistic creativity and license, religious devotion, the revival of antiquity, observation of nature, art as problem-solving, the public reception and function of artworks, debates about style, artistic rivalry, and traveling artists. Rather than taking the form of a survey, this course selects works as paradigmatic case studies, and will analyze contemporary attitudes toward art of this period through study of primary sources.

ITAL 2950 Palermo: Urban Migration, the Built Environment, and Global Justice  
This City Seminar sponsored by Penn’s Humanities+Urbanism+Design initiative explores Palermo, Italy, its migrant communities, built environment, and related questions of justice. In the first half of the semester, we will survey Palermo’s long history as one of the most “conquered” cities in the world, tracing different empires and peoples’ impacts on the city, its social life and built environment, to its recent history as a “sanctuary city” and center of diverse communities from Africa, Asia, and Europe. The class will travel to Palermo during the week of fall break, documenting the built environments of historic and contemporary immigrant neighborhoods, and meeting with leaders of city government, immigrant rights movements, and migrant community associations. Assisted by “cultural mediators” from various communities, students will produce case studies of different migrant communities, their civil society organizations, and the recent impacts they have had on the city and its built environment. Leaders of Palermo’s elected migrants’ city council, the Consulta delle Culture, will be our partners in this class and its engagement with migrant communities. During the second half of the semester, we will continue to explore contemporary topics related to migration, the built environment, and social justice in the city while students work to develop their case studies, which we will publish at the end of the semester on a web site that we build together.  
Also Offered As: URBS 2950  
1 Course Unit
ITAL 3030 Queer Cinema
Queer Cinema, in Theory. This course explores the role of cinema in shaping the history of gender and sexuality, at the same time introducing students to some of the most relevant texts in the field of queer, gender and trans studies. While the last decades have been characterized by increasing acceptance of gays, lesbians and trans people into mainstream society, this process has no doubt reproduced new inequalities and asymmetries — in terms of race, class, and gender presentation. Does “queer” still pose a threat to the mainstream or is it now part of the “normal”? Should one welcome the progressive acceptance or queer lives within the mainstream or should one reject it in the name of an indissoluble difference? How do whiteness and homonormativity participate in the structural marginalization of black and trans people? Some of the topics addressed by this course are the “closet” in classical Hollywood cinema and its critique in 1990s queer films such as Happy Together (Wong Kar-wai, 1997); the intersection of sexuality and race in black feminist films such as Born in Flames (Lizzie Borden, 1983) and Watermelon Woman (Cheryl Dunye, 1996); the treatment of reproductive labor in experimental feminist films such as Jeanne Dielmann (Chantal Akerman, 1975); the representation of the AIDS crisis in new queer films such as The Living End (Gregg Araki, 1992); sex reassignment politics in 2000s Iranian films such as Sex My Life (Bahman Motomedian).

1 Course Unit

ITAL 3050 Rome in Cinema: Representations of The Eternal City
In this course we will look at the different ways in which Rome's cityscape has been represented in 20th and 21st century Italian and American cinemas, intersecting with historical events such as the rise of Italian fascism, WWII, the 1960s economic boom, as well as the political impact of the current migratory crisis in the Mediterranean Sea. Why is Rome often referred to as "The Eternal City"? In what ways has the myth of Rome's eternity been politically exploited throughout Italy's modern history? Students will acquire technical vocabulary to improve their visual interpretation skills, as well as knowledge of some of the most impactful historical and cultural events of last century. Requirements will include readings in cultural and film history, an analytical essay, a research paper, weekly blog posts, and active participation in class discussion. Films may include Roman Holiday (William Wyler, 1953), La Dolce Vita (Federico Fellini, 1960), Accattone (Pier Paolo Pasolini, 1961), The Talented Mr Ripley (Anthony Minghella, 1999), The Great Beauty (Paolo Sorrentino, 2013).

ITAL 3330 Dante's Divine Comedy
In this course we will read the Inferno, the Purgatorio and the Paradiso, focusing on a series of interconnected problems raised by the poem: authority, fiction, history, politics and language. Particular attention will be given to how the Commedia presents itself as Dante's autobiography, and to how the autobiographical narrative serves as a unifying thread for this supremely rich literary text. Supplementary readings will include Virgil's Aeneid and selections from Ovid's Metamorphoses. All readings and written work will be in English. Italian or Italian Studies credit will require reading Italian texts in their original language and writing about their themes in Italian. This course may be taken for graduate credit, but additional work and meetings with the instructor will be required.

ITAL 3610 Writing About Art Seminar
What does it mean to write about art? What are the historical origins of this undertaking? How does language mediate the intellectual, somatic, and cultural rapport between the viewing self and the physical object? As an initial response to these questions we will examine the writings of the Tuscan artist and critic Giorgio Vasari (1511-1574), the biographer of such renowned artists as Leonardo, Raphael, Donatello, and Michelangelo. We will also read the letters of famous artists from the early modern period, and examine the theoretical forays of artists such as Albrecht DÃ?rer, who attempted to sketch the relationship between the memory and the imagination. Finally, we will look to examples of works of art for how we might read visual images as expressive of theories about what are is and what it can do.

ITAL 3820 Renaissance Europe
This course will examine the cultural and intellectual movement known as the Renaissance, from its origins in fourteenth-century Italy to its diffusion into the rest of Europe in the sixteenth century. We will trace the great changes in the world of learning and letters, the visual arts, and music, along with those taking place in politics, economics, and social organization. We will be reading primary sources as well as modern works.
Fall or Spring
Also Offered As: HIST 3820
1 Course Unit

ITAL 3830 French & Italian Modern Horror
This course will consider the horror genre within the specific context of two national cinemas: France and Italy. For France, the focus will be almost exclusively on the contemporary period which has been witnessing an unprecedented revival in horror. For Italy, there will be a marked emphasis on the 1960s-1970s, i.e. the Golden Age of Gothic horror and the giallo craze initiated by the likes of Mario Bava and Dario Argento. Various subgenres will be examined: supernatural horror, ghost story, slasher, zombie film, body horror, cannibalism, etc. Issues of ethics, gender, sexuality, violence, spectatorship will be examined through a variety of critical lenses (psychoanalysis, socio-historical and cultural context, aesthetics, politics, gender, etc.).

ITAL 5110 Introduction to Paleography & Book History
Writing and reading are common actions we do every day. Nonetheless they have changed over the centuries, and a fourteenth century manuscript appears to us very different from a Penguin book. The impact of cultural movements such as Humanism, and of historical events, such as the Reformation, reshaped the making of books, and therefore the way of reading them. The course will provide students with an introduction to the history of the book, including elements of paleography, and through direct contact with the subjects of the course: manuscripts and books. Furthermore, a section of the course will focus on digital resources, in order to make students familiar with ongoing projects related to the history of book collections (including the “Philosophical Libraries” and the “Provenance” projects, based at the Scuola Normale Superiore in Pisa and at Penn). The course will be conducted in English; a basic knowledge of Latin is desirable but not required.

Also Offered As: CLST 7709, COML 5111
1 Course Unit

ITAL 5254 Myth Through Time and in Time Seminar
The textual and physical remains of Greek and Roman culture and belief as ‘myth’ entranced the post-antique European world and its neighbors. Makers, patrons and viewers manipulated those survivals to challenge and speak to a contemporary world. This course focuses on how and why artists and their patrons engaged the mythic and examines the various areas of political and religious life that sought animation through an evocation of narratives from the past. Readings and case studies will examine very late antique through medieval and early modern art. This seminar is open to graduate and undergraduate students.

ITAL 5310 Dante’s Commedia I
Please check the department’s website for the course description at: http://www.sas.upenn.edu/italians/graduate/courses Dante Visualizing: Dante Visualizing and Dante Visualized. Dante’s Commedia has inspired art, but at the same time art is present within the Comedy itself, through images, metaphors, descriptions and even more concrete examples. This course aims at discussing these aspects, taking into consideration also the philosophical, political and religious background of these motifs. While analyzing images in and from the Commedia, we will look at illustrations and artistic interpretations, spanning from medieval illuminations and Renaissance printed books (mainly from Van Pelt Library) to contemporary examples, and focusing on artists such as Giotto, Botticelli, Michelangelo, Blake, Dore, and Dali. The course will be taught in English.

ITAL 5410 Transalpine Tensions: Franco-Italian Rivalries in the Renaissance
In the Middle Ages and Early Modern period, France and the Italian States were bound together by linguistic, economic, political, and religious ties, and intellectual developments never flowed unilaterally from one country to the other. On the contrary, they were transnational phenomena, and French and Italian thinkers and writers conceived of themselves and their work both in relation to and in opposition to one another. This course will consider the most fundamental aspects of Franco-Italian cultural exchange in the medieval and early modern period, with an emphasis on humanism, philosophical and religious debates, political struggles, and the rise of vernacular languages in literary and learned discourse. Authors to be studied include Dante, Petrarch, Boccaccio, Ficino, Pico della Mirandola Castiglione, Bembo, Rabelais, Marguerite de Navarre, Du Bellay, Machiavelli, and Montaigne. In addition to learning the material covered in the course, students will gain expertise in producing professional presentations and research papers, and will also have the opportunity to consult original material from the Kislak Center. This course is open to undergraduates with permission of the instructors. It counts toward the certificate in Global and Medieval Renaissance Studies.

1 Course Unit

ITAL 5550 Digital Humanities
This course examines the literary and social resonances of mural arts in medieval and Early Modern Italy. We will investigate emerging artistic conventions alongside textual moments that employ ekphrastic descriptions of mural art as a point of departure for larger commentaries on the role of gender, social hierarchies, the labor of the author and the artist, and civic justice. How did mural arts in medieval and early modern Italy shape viewers’ understanding of justice, society, and city life and their role within it? How did Italian authors appropriate artistic conventions, through text, in order to intervene in public discourse on sociopolitical concerns? Through a comparison of images and texts, we will explore the ways in which Italian writers and artists visualized justice, critiqued dominant social hierarchies, and renegotiated gendered spaces in their literary and artistic works. Alongside viewing works of art, course readings will explore literary representations of mural arts, both fictional and real, described ekphrastically in the works of Dante, Boccaccio, Ariosto, and Machiavelli, among others. Select readings from the work of Marguerite de Navarre, Sor Juana Inés de la Cruz, and Classical antecedents will shed light on cross cultural dialogue on the representation of civic life, gender, and justice in the Early Modern period. Primary source readings will be accompanied by selections from contemporary and critical theory on art history, gender, race, and politics. Finally, we will examine contemporary street art and graffiti in Florence to consider the legacy of these early modern tensions in Florentine culture today.

1 Course Unit

ITAL 5710 Literature and Multilingualism
Since several years, the societal and cultural reality of multilingualism has become an important research field in linguistics and literary studies, as in cultural studies more generally. This graduate course will investigate how multilingual poetics challenge and resist paradigms and ideologies of innate monolingualism, linguistic mastery, absolute translatability and monocultural nationalism. To begin with, the course will introduce central aspects of scholarship on literature and multilingualism, covering concepts such as heteroglossia, code switching, translingualism and macaronic language, and debates such as those on world literature, global English, foreignization, (un)translatability and non-translation, including their political and ethical importance. After a brief historical overview, glancing at western literary multilingualism in the Middle Ages, Romanticism and the avantgarde, the course will mainly focus on literature of the late 20th and 21st centuries taken from Germanic and Romance linguistic contexts. Using an exemplary selection, the course will cover prose, poetry and drama, and include excerpts of texts by authors such as Andrea Camilleri, Gino Chiellino, Fikry El Azzouzi, Ernst Jandl, Jackie Kay, Çağlar Köseoğlu, Monique Mojica, Melinda Nadji Abonji, Emine Sevgi Özdamar, Olivier Rolin, Yoko Tawada, Nicole van Harskamp, and others. Reading these texts, we will try to determine how multilingualism manifests itself (linguistically, discursively, rhetorically, thematically, contextually etc.) and how the texts engage with linguistic, cultural and social pluralities. The course will conclude with a focus on the translator as a central character in fictional prose and movies. Classes will take place in an interactive format that stimulates discussion and exchange. Students will get their respective excerpts – both in the original version and in English translation – one week at a time so that they can prepare themselves each week for the discussion. Theoretical and contextual information will be provided via Power Point presentations.

ITAL 5850 Italian Thought
What is Italian philosophy? Does Italian philosophy have a peculiar character? Can we speak of "Italian philosophy" if Italy became a unified country only recently, and its history is complex and fragmented? Yet "Italian Thought" and its genealogy are central to today's theoretical debates on concepts such as biopolitics, reproductive labor and "empire" among others. This course will offer a diachronic review of the most important Italian thinkers, highlighting the political vocation of Italian philosophy, and its engagement with history and science, while discussing the modern supporters and opponents of the "Italian Thought" category. Readings might include Dante, Machiavelli, Bruno, Vico, Beccaria, Gramsci, Cavarero and Agamben among others.

ITAL 5910 Italian Teaching & Learning
This is a year-long course required of all first-year Teaching Assistants in Italian. It is designed to provide new instructors with the necessary practical support to carry out their teaching responsibilities effectively and to build their own portfolio. It will also introduce students to various approaches to foreign language teaching as well as to current issues in second language acquisition.
Two Term Class; Student must enter first term; credit given after both terms are complete
1 Course Unit

ITAL 5940 Theories of Nationalism
You cannot build a wall to stop the free flow of literary and creative ideas. But in constructing narratives of national identity, states have long adopted particular texts as "founding." Very often these texts have been epics or romances designated "medieval," that is, associated with the period in which specific vernaculars or "mother tongues" first emerged. France and Germany, for example, have long fought over who "owns" the Strasbourg oaths, or the Chanson de Roland; new editions of this epic poem, written in French but telling of Frankish (Germanic) warriors, have been produced (on both sides) every time these two countries go to war. In this course we will thus study both a range of "medieval" texts and the ways in which they have been claimed, edited, and disseminated to serve particular nationalist agendas. Particular attention will be paid to the early nineteenth century, and to the 1930s. Delicate issues arise as nations determine what their national epic needs to be. Russia, for example, needs the text known as The Song of Igor to be genuine, since it is the only Russian epic to predate the Mongol invasion. The text was discovered in 1797 and then promptly lost in Moscow's great fire of 1812; suggestions that it might have been a fake have to be handled with care in Putin's Russia. Similarly, discussing putative Mughal (Islamic) elements in so-called "Hindu epics" can also be a delicate matter. Some "uses of the medieval" have been exercised for reactionary and revisionist causes in the USA, but such use is much more extravagant east of Prague. And what, exactly, is the national epic of the USA? What, for that matter, of England? Beowulf has long been celebrated as an English Ur-text, but is set in Denmark, is full of Danes (and has been claimed for Ulster by Seamus Heaney). Malory's Morte Darthur was chosen to provide scenes for the queen's new robing room (following the fire that largely destroyed the Palace of Westminster in 1834), but Queen Victoria found the designs unacceptable: too much popery and adultery. Foundations of literary history still in force today are rooted in nineteenth-century historiography: thus we have The Cambridge History of Italian Literature and The Cambridge History of German Literature, each covering a millennium, even though political entities by the name of Italy and Germany did not exist until the later nineteenth century. What alternative ways of narrating literary history might be found? Itinerary models, which do not observe national boundaries, might be explored, and also the cultural history of watercourses, such as the Rhine, Danube, or Nile. The exact choice of texts to be studied will depend in part on the interests of those who choose to enroll. Faculty with particular regional expertise will be invited to visit specific classes.

ITAL 5990 Teaching and Learning
The course focuses on diverse areas of Foreign Language and Second Language Acquisition research and theories and how they apply to foreign language teaching. Students will familiarize themselves with the major foreign language methodologies and approaches, as well as the ACTFL standards and proficiency guidelines for foreign language learning. Similarly, students will analyze the resources and tools for planning instruction in a second language based on Backward Design and the Universal Design for Learning. Furthermore, students will research and discuss the most effective ways to promote diversity, inclusivity, and equity; enhance learning experiences and outcomes through technology; foster engagement and active learning; and build a sense of community in the foreign language classroom.

ITAL 6050 Modern Literary Theory and Criticism
This course will provide an overview of major European thinkers in critical theory of the 20th and 21st centuries. We will pay particular attention to critical currents that originated in Eastern European avant-garde and early socialist contexts and their legacies and successors. Topics covered will include: Russian Formalism and its successors in Structuralism and Deconstruction (Shklovsky, Levi-Strauss, Jakobson, Derrida); Bakhtin and his circle, dialogism and its later western reception; debates over aesthetics and politics of the 1930s (Lukacs, Brecht, Adorno, Benjamin, Radek, Clement Greenberg), the October group; Marxism, new Left criticism, and later lefts (Althusser, Williams, Eagleton, Jameson, Zizek). 1 Course Unit

ITAL 6381 Troubadours at the Center
'Troubadour' is a term whose meaning has evolved from the eleventh century to our day. In the Middle Ages, a Troubadour was a singer-songwriter (male or female) who composed in a language called Occitan, the language spoken in northern Italy, across southern France, and into today's Catalonia. Medieval works in this language include epic poetry, didactic texts, lengthy romances, and love poetry. Renowned and imitated throughout medieval Europe – by authors from today's Italy, Austria, Germany, France, Spain, and Portugal – the Occitan literary heritage cannot be ignored. Though sometimes presented as a dead language, Occitan is very much alive, and one purpose of this course is to introduce students to it and to its broad importance in European literary history. This course will present the literary and cultural history of the Occitan region, writ large, from the Middle Ages to the modern day. By the end of the course, students will be able to read Occitan with the aid of a dictionary; they will understand the culture of the French Midi as distinct from that of France; they will know something of the distinctive cultural elements of Occitania. They will also have a profound knowledge of at least one Occitan author, medieval, modern, or contemporary. The course will be taught in English. In addition to learning the material covered in the course, students will gain expertise in producing professional presentations and research papers.

1 Course Unit

ITAL 6500 Michelangelo and the Art of the Italian Renaissance
An introduction to the work of the Renaissance artist Michelangelo (1475-1564) - his sculptures, paintings, architecture, poetry, and artistic theory - in relation to his patrons, predecessors, and contemporaries, above all Leonardo and Raphael. Topics include artistic creativity and license, religious devotion, the revival of antiquity, observation of nature, art as problem-solving, the public reception and function of artworks, debates about style, artistic rivalry, and traveling artists. Rather than taking the form of a survey, this course selects works as paradigmatic case studies, and will analyze contemporary attitudes toward art of this period through study of primary sources.

ITAL 7320 Studies in Baroque Music
Seminar on selected topics in the music of the Baroque period. The seminar explores musical genres (madrigal, opera, cantata, etc.) using poetic texts in Italian (primarily), French, and German, which circulated mainly in Europe in both private and public settings during the 17th and early 18th centuries. Issues of reception and performance/staging during the 20th and 21st centuries are also investigated. Each instance of the seminar has a focus, e.g.: Monteverdi's madrigals, opera in seventeenth-century Venice and Paris, Guarini and Marino in music, histories of the madrigal, Petrarchism and music, the "Baroque" in theory and practice, Handel's operas, staging Baroque opera today, historically informed performance practice, etc. Please see department website https://music.sas.upenn.edu/course-list/ for current term course descriptions.

ITAL 7770 Francophone, Italian and Germanic Proseminar
This proseminar will introduce first-year FIGS graduate students to doctoral studies in the humanities. It is organized into four parts. Part I, "Scholarly Habits and Resources," introduces students to a variety of resources at Penn, discusses the scholarly habits that graduate students should develop, and covers strategies for promoting mental and physical well-being as a graduate student. Part II, "Intervening in the Field," introduces students to the processes of conference participation and article publication. Part III, "The Dissertation," covers the ins-and-outs of writing the dissertation. Part IV, "Awards, Networking, and Jobs," addresses the importance of awards and networking as well as the academic and non-academic job markets. While DEI issues are constantly addressed throughout the course, also in the form of assignments, there are also bridge sessions to other courses, especially on pedagogy and recent research trends. In addition to weekly discussions and activities, this course will include a number of guest speakers who will share their expertise and give guidance on the how-tos of the field. Students will be given pre- as well as post-class activities to reflect on each week's topic and begin to prepare a dossier for later use in their graduate studies. Much of the information in this proseminar becomes particularly relevant during the final years of coursework and your dissertation writing years, but it is important to be introduced to these topics and to begin to think about them now. This course is designed for PhD students in Francophone, Italian, and Germanic Studies. Many of the topics apply to all three fields; however, students will also have the opportunity to work on areas that are specific to their language for certain topics. They will also be able to add to the course materials for future graduate students in FIGS.

JPAN 0103 Spoken Japanese I
Intended for students who have no Japanese background. The major emphasis is on oral communication skills, although some reading and writing instructions are given. Japanese pop-culture will also be incorporated.
Fall
1 Course Unit

JPAN 0105 Spoken Japanese II
Although some reading/writing instruction is given, the major emphasis is on oral communication skill.
Spring
Prerequisite: JPAN 0103
1 Course Unit

JPAN 0200 Beginning Japanese II
A continuation of Beginning Japanese I, this course continues the introduction of the Japanese language. All four skills, speaking/listening/writing/reading, are equally emphasized. Hiragana/Katakana (Two sets of Japanese syllabic letters) and some Chinese characters (Kanji) are introduced. Textbooks: Genki I (Lesson 8- Lesson 12) and Genki II (Lesson 13- Lesson 14) Kanji: reproduction-approx. 170/recognition-approx.250
Spring
Prerequisite: JPAN 0100
1 Course Unit

JPAN 0210 Intensive Beginning Japanese I & II
A continuation of Intensive Beginning Japanese, this class is equivalent to JPAN0300 Intermediate Japanese I and JPAN0400 intermediate Japanese II in one semester, 2 CU, and completes the College language requirement. Textbooks: Genki II and Tobira: Gateway to Advanced Japanese (Unit 1-Unit 3) Kanji: Approximately 140 new Kanji will be introduced. Overall Kanji knowledge will be about approx. 400.
Spring
Prerequisite: JPAN 0100 or JPAN 0210
1 Course Unit

JPAN 0300 Intermediate Japanese I
This course is a continuation of Beginning Japanese II and focuses on the development of the elementary grammatical structures of the Japanese language through aural-oral practices. The course also aims to develop the four basic skills: listening, speaking, reading, and writing. The course also introduces aspects of Japanese culture and customs, knowledge that is necessary for behaving in a socio-culturally appropriate manner. Students will learn and practice skills to communicate in situations they might face in real life. Example topics and functions are travel, part-time job, work, asking for favors, asking permission, stating your intention/opinion, reporting what you heard, and various speech styles including Keigo (respectful speech). Textbooks: Genki II (Lesson 15- Lesson 21) will be covered, and around 100 new Kanji will be introduced. Overall kanji knowledge will be 286.
Fall
Prerequisite: JPAN 0200 or JPAN 0210
1 Course Unit

JPAN 0400 Intermediate Japanese II
Prerequisites: Completion of Intermediate Japanese I or the equivalent. This course completes the College language requirement. Textbooks: Genki II (Lesson 22- Lesson 23) and Tobira: Gateway to Advanced Japanese (Unit 1-Unit 3) Kanji: Approximately 140 new Kanji will be introduced. Overall Kanji knowledge will be about approx. 400.
Spring
Prerequisite: JPAN 0300

Readings in classical texts drawn from the Heian, Kamakura, Muromachi, and Edo periods. Introduction to the different styles of classical Japanese, and to classical Japanese as a whole.
Fall
Also Offered As: EALC 3641
1 Course Unit

JPAN 1080 Advanced Japanese for Proficiency I
This course is for students with an advanced background in Japanese, who are interested in taking at least the Level 2 Japanese Proficiency Test. Solid grammar, an extensive vocabulary, and the knowledge of at least 800-900 Chinese characters is required. This course is not continuous with any existing intermediate or advanced-level Japanese course; therefore, your grade from any of those courses does not qualify you to take this class. Eligibility will be determined through an interview and placement test taken in the first meeting. All students who take this course are required to take the Japanese Proficiency Test in December. Since the JLPT is administered in December every year, if you wish to fully prepare for the test, the instructor strongly recommends that you take Advanced Proficiency II in the same calendar year. For example, if you plan to take the test in December, take Advanced Proficiency II the prior spring and take Advanced Proficiency I in the fall. Different from other courses, this full-year course begins in the spring and ends in the fall, because the test is given in December. However, participation in 482 is optional.
Fall
Mutually Exclusive: JPAN 6080
Prerequisite: JPAN 0800 OR JPAN 0860
1 Course Unit

JPAN 1085 Advanced Japanese for Proficiency II
This course is for students with an advanced-low or advanced-mid background in Japanese, aiming to strengthen the four language skills (speaking, reading, writing, and listening) and to deepen their understanding of Japanese culture. The class will use authentic Japanese through media, such as newspapers, television, and articles, regarding Japanese culture and society as well as current news. Students will narrate, describe, and express their opinions with details, examples, and strong reasoning, using sophisticated terms and phrases related such topics.
Spring
Mutually Exclusive: JPAN 6085
1 Course Unit

JPAN 1140 Readings in Advanced Japanese
Readings in advanced literary and journalistic texts written in modern Japanese.
Fall
Mutually Exclusive: JPAN 6140
Prerequisite: JPAN 1045
1 Course Unit

JPAN 1145 Readings Advanced Japanese II
Readings in advanced literary and journalistic texts written in modern Japanese.
Spring
Mutually Exclusive: JPAN 6145
Prerequisite: JPAN 1140
1 Course Unit
In this course, students learn basic techniques and skills in translation through hands-on practices. Depending on the interests of enrolled students, both literary and non-literary texts are drawn from a wide range of fields, including popular culture (e.g. manga, animation, film, game, music, and short story), religion, law, and medicine. As students read papers pertinent to principles and problems of translation from Japanese to English, they acquire practical experience in translation tasks and approaches, learn cultural and communicative differences between Japanese and English, and familiarize themselves with ethics and resources.

Jewish Studies Program (JWST)

JWST 0012 Jews and China: Views from Two Perspectives
Jews in China??? Who knew??? The history of the Jews in China, both modern and medieval, is an unexpected and fascinating case of cultural exchange. Even earlier than the 10th century, Jewish trader from India or Persia on the Silk Road, settled in Kaifeng, the capital of the Northern Song Dynasty, and established a Jewish community that lasted through the nineteenth century. In the mid-nineteenth century, Jewish merchants, mainly from Iraq, often via India, arrived in China and played a major role in the building of modern Shanghai. After 1898, Jews from Russia settled in the northern Chinese city of Harbin, first as traders and later as refugees from the Bolshevik Revolution and Russian Civil War. In the first decades of the twentieth century, a few Jews from Poland and Russia visited China as tourists, drawn by a combination of curiosity about the cultural exoticism of a truly foreign culture and an affinity that Polish Jewish socialists and communists felt as these political movements began to emerge in China. During World War II, Shanghai served as a port of refuge for Jews from Central Europe. In this freshman seminar, we will explore how these Jewish traders, travelers, and refugees responded to and represented China in their writings. We will also read works by their Chinese contemporaries and others to see the responses to and perceptions of these Jews. We will ask questions about cultural translation: How do exchanges between languages, religions, and cultures affect the identities of individuals and communities? What commonalities and differences between these people emerge? Not Offered Every Year

1 Course Unit

JWST 0111 Archaeology & The Bible
Archaeology and the Bible is a chronological survey of the long span of human occupation in the Land of the Bible, known by the names of the modern nation-states and political entities that occupy the area, as well as various short hands such as Levant and Syria-Palestine, from ca. 10,000 BCE, when humans first began to farm and herd animals through the time of the Divided Monarchy of Israel and Judah. While archaeology has moved beyond a primary concern with illuminating the Bible, NELC 155 will investigate the broader import of archaeological discoveries for our understanding of ancient Israel and its neighbors.

JWST 0160 Beginning Yiddish I
The goal of this course is to help beginning students develop skills in Yiddish conversation, reading and writing. Yiddish is the medium of a millennium of Jewish life. We will frequently have reason to refer to the history and culture of Ashkenazi Jewry in studying the language.
Fall
Also Offered As: YDSH 0100
1 Course Unit

JWST 0170 Elementary Biblical Hebrew I
This course is an introduction to Biblical Hebrew. It assumes no prior knowledge, but students who can begin to acquire a reading knowledge of the Hebrew alphabet before class starts will find it extremely helpful. The course is the 1st of a 4-semester sequence whose purpose is to prepare students to take courses in Bible that demand a familiarity with the original language of the text.
Fall
Also Offered As: NELC 0301
Mutually Exclusive: NELC 5211
1 Course Unit
JWST 0270 Elementary Biblical Hebrew II
A continued introduction to the grammar of Biblical Hebrew, focusing on the verbal system, with an emphasis on developing language skills in handling Biblical texts. A suitable entry point for students who have had some Modern Hebrew.
Spring
Also Offered As: NELC 0302
1 Course Unit

JWST 0300 Intermediate Modern Hebrew III
Development of the skills of reading, writing, and conversing in modern Hebrew on an intermediate level. Open to all students who have completed two semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
Fall or Spring
Also Offered As: HEBR 0300
1 Course Unit

JWST 0303 Introduction to the Bible: The Old Testament
An introduction to the major themes and ideas of the Hebrew Bible (the Old Testament), with attention to the contributions of archaeology and modern Biblical scholarship, including Biblical criticism and the response to it in Judaism and Christianity. All readings are in English.
Fall
Also Offered As: NELC 0300, RELS 0301
1 Course Unit

JWST 0305 Great Books of Judaism
Since the early medieval period, Jews have been known as "the People of the Book". Yet the books they produced and consumed changed drastically over time and place, spanning a variety of known genres and inventing new ones. These works, in turn, shaped the texts, ideas, and lives of Jews and others for millennia, spawned vast commentary traditions, and inspired new works. This course engages prominent Jewish texts, such as the Hebrew Bible, Rabbinic Literature, the works of major medieval philosophers, pre-modern intellectuals, and modern authors, situating them in their literary, cultural, and social contexts, and examining their later reception.
Fall
Also Offered As: NELC 0305, RELS 0305
1 Course Unit

JWST 0315 Jewish Literature in the Middle Ages in Translation
Course explores the cultural history of Jews in the lands of Islam from the time of Mohammed through the late 17th century (end of Ottoman expansion into Europe) -- in Iraq, the Middle East, al-Andalus and the Ottoman Empire. Primary source documents (in English translation) illuminate minority-majority relations, internal Jewish tensions (e.g., Qaraism), and developments in scriptural exegesis, rabbinic law, philosophy, poetry, polemics, mysticism and liturgy.

JWST 0320 Modern Hebrew Literature and Film in Translation
This course is designed to introduce students to the rich art of Modern Hebrew and Israeli literature and film. Poetry, short stories, and novel excerpts are taught in translation. The course studies Israeli cinema alongside literature, examining the various facets of this culture that is made of national aspirations and individual passions. The class is meant for all: no previous knowledge of history or the language is required. The topic changes each time the course is offered. Topics include: giants of Israeli literature; the image of the city; childhood; the marginalized voices of Israel; the Holocaust from an Israeli perspective; and fantasy, dreams & madness.

JWST 0330 Themes Jewish Tradition: Iberian Conversos: Jew-Christian?
Course topics will vary; they have included The Binding of Isaac, Responses to Catastrophes in Jewish History, Holy Men & Women (Ben-Amos); Rewriting the Bible (Dohrmann); Performing Judaism (Fishman); Jewish Political Thought (Fishman); Jewish Esotericism (Lorberbaum) Democratic culture assumes the democracy of knowledge - the accessibility of knowledge and its transparency. Should this always be the case? What of harmful knowledge? When are secrets necessary? In traditional Jewish thought, approaching the divine has often assumed an aura of danger. Theological knowledge was thought of as restricted. This seminar will explore the "open" and "closed" in theological knowledge, as presented in central texts of the rabbinic tradition: the Mishnah, Maimonides and the Kabbalah. Primary sources will be available in both Hebrew and English.

JWST 0625 Israel in the Middle East
This introductory level course will offer an in-depth look at Israeli history and society, and how it relates to the Middle East through varying lenses. We will consider such topics as the rise of Jewish, Palestinian, and Arab nationalisms in the context of changing imperial control over Palestine/Israel (from Ottoman to British), and the emergence of the Middle East in its current borders; Conflict and conflict-resolution in Israel, Palestine, and the Middle East; Israel's Palestinian minority, Jewish immigrants to Israel from the Middle East, food and music culture in Israel, and their connection to the Middle East; or the place of the Middle East in Israeli literature and film. We will use cutting edge research from several disciplines, as well as literature, film, audio, and photographic evidence. Students will leave the class with a firm grasp of Israeli history and society, and will be widely familiar with the different narratives, viewpoints, and complexities concerning Israel and its position in the Middle East. Prior knowledge of Israeli or Middle Eastern history is not required.
Also Offered As: NELC 0625
1 Course Unit
**JWST 1000 Advanced Modern Hebrew: Conversation & Writing**
In this course students are introduced to the vibrant world of contemporary Israeli culture by reading some of the best plays, poems, short stories and journalism published in Israel today. They also watch and analyze some of Israel's most popular films, TV programs, and videos. Themes include Jewish-Arab relations, the founding of the State, family ties and intergenerational conflict, war and society, and the recent dynamic changes in Israel society. Students must have taken four semesters of Hebrew at Penn or permission of instructor. Since the content of this course may change from year to year, students may take it more than once (but only once for credit).

Fall or Spring
Also Offered As: HEBR 1000
1 Course Unit

**JWST 1090 Jewish Films and Literature**
From the 1922 silent film "Hungry Hearts" through the first "talkie," "The Jazz Singer," produced in 1927, and beyond "Schindler's List," Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare's "King Lear" to Sholom Aleichem's "Tevye the Dairyman," primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we "read" literature and film, b) the various ways that the media of fiction, drama, and film "translate" Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience.

**JWST 1100 Women in Jewish Literature**
"Jewish woman, who knows your life? In darkness you have come, in darkness do you go." J. L. Gordon (1890). This course will bring into the light the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres – devotional literature, memoir, fiction, and poetry – we will study women’s roles and selves, the relations of women and men, and the interaction between Jewish texts and women’s lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction and poetry from the past century. The course is divided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are portrayed in the Hebrew Bible, in rabbinic commentary, in modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah's daughter. Next we turn to the seventeenth century Glikl of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction written by women in Yiddish, Hebrew, and English.

**JWST 1110 Jewish American Literature**
What makes Jewish American literature Jewish? What makes it American? This course will address these questions about ethnic literature through fiction, poetry, drama, and other writings by Jews in America, from their arrival in 1654 to the present. We will discuss how Jewish identity and ethnicity shape literature and will consider how form and language develop as Jewish writers "immigrate" from Yiddish, Hebrew, and other languages to American English. Our readings, from Jewish American Literature: A Norton Anthology, will include a variety of stellar authors, both famous and less-known, including Isaac Mayer Wise, Emma Lazarus, Isaac Bashevis Singer, Celia Dropkin, Abraham Cahan, Anzia Yezierska, Saul Bellow, Philip Roth, Cynthia Ozick, and Allegra Goodman. Students will come away from this course having explored the ways that Jewish culture intertwines with American culture in literature.

**JWST 1120 Translating Cultures: Literature on and in Translation**
"Languages are not strangers to one another," writes the great critic and translator Walter Benjamin. Yet two people who speak different languages have a difficult time talking to one another, unless they both know a third, common language or can find someone who knows both their languages to translate what they want to say. Without translation, most of us would not be able to read the Bible or Homer, the foundations of Western culture. Americans wouldn’t know much about the cultures of Europe, China, Africa, South America, and the Middle East. And people who live in or come from these places would not know much about American culture. Without translation, Americans would not know much about the diversity of cultures within America. The very fabric of our world depend upon translation between people, between cultures, between texts. With a diverse group of readings—autobiography, fiction, poetry, anthropology, and literary theory—this course will address some fundamental questions about translating language and culture. What does it mean to translate? How do we read a text in translation? What does it mean to live between two languages? Who is a translator? What are the different kinds of literary and cultural translation? What are their principles and theories? Their assumptions and practices? Their effects on and implications for the individual and the society?

**JWST 1130 How to Read the Bible**
The aim of this course is to explore what the Bible means, and why it means such different things to different people. Why do people find different kinds of meaning in the Bible. Who is right in the struggle over its meaning, and how does one go about deciphering that meaning in the first place? Focusing on the book of Genesis, this seminar seeks to help students answer these questions by introducing some of the many ways in which the Bible has been read over the ages. exploring its meaning as understood by ancient Jews and Christians, modern secular scholars, contemporary fiction writers, feminist activists, philosophers and other kinds of interpreter.

JWST 1270 Gender and Religion in Israel
Contemporary Israel is a site not just of religious conflict but of clashing gender norms, bringing together a variety of groups - the secular and the religious, the Orthodox and the non-Orthodox - that are distinguished from each other in part by their understanding of gender and their treatment of women and LGBTQ people. As a way into understanding the interaction of religion and gender more broadly, this course survey various intersections of religion, gender and politics in Israel today, investigating how religion shapes gender relations, and is shaped in turn by gender.
Also Offered As: RELS 1270
1 Course Unit

JWST 1272 Israel: Law, Religion and State
This course aims to explore the role of religion in the political and legal culture of the state of Israel by examining Israel's efforts and vision to be both a Jewish state and a democratic state at the same time. How does the state of Israel manage the challenges and conflicts inherent in such an identity, and what is there to be learned about the relationship between the state and religion by comparing the situation in Israel with the separation of Church and State in the United States? What is the status of gender equity in Israel when it is in apparent conflict with religious considerations? Religious freedom and the rights of people belonging to other religious groups? Students will have the opportunity to learn more about these and other questions as the course examines the political, legal and cultural foundations of Israel's self-identity as a Jewish and democratic state.

JWST 1320 The History of God
This course introduces the history of God as understood by modern scholars of religion. Why do people believe in gods in the first place? How is the God of the Old Testament different from earlier Near Eastern deities, or different from God as represented in the New Testament and the Quran? When and why did people come to question the existence of God, and how has the idea of God changed in the last century in light of experiences like the Holocaust, social movements like feminism, and the rise of new technologies like the Internet? This course will address these questions as it surveys the approaches scholars have developed to comprehend the history of a being who would seem beyond human comprehension.

JWST 1362 The Making of Modern Israel and Palestine
This course analyzes the making of a modern Jewish state in the land of Israel/Palestine and the role of Zionism, Palestinian nationalism, and global politics in that process. Beginning in 19th-century Europe and the Middle East, we will study the ideas, movements, and people that shaped what has come to be known as the Arab-Israeli conflict. Students will explore the impact of international factors on the struggles that resulted from the Zionist project in Israel/Palestine and Arab reactions to it across three periods: imperialism and world wars (1860s-1940s), cold war (late 1940s-1990), and multi-polarity (1990s-present).
Also Offered As: HIST 1362, PSCI 1141
1 Course Unit

JWST 1400 The Making of Scripture: From Revelation to Canon
The Bible as we know it is the product of a lengthy process of development, elaboration, contest, and debate. Rather than a foregone conclusion, the process by which the texts and traditions within the bible, and the status ascribed to them, was turbulent and uncertain. This course examines that process, examining the Bible, traditions and communities from the Second Temple Period - such as the Dead Sea Scrolls and Community - that rewrote, reconsidered, revised, or rejected now well-recognized figures and stories, and constructed distinct ideas of what was considered scripture and how it should be approached. Even as the bible began to resemble the corpus as we now know it, interpretive strategies rendered it entirely different, such as Hellenistic Allegorizers, working from the platonic tradition, rabbinic readers who had an entirely different set of hermeneutics, early Christians, who offered different strategies for reading the “Old” and “New” Testaments alongside one another (and employing categories like “Old” and “New,” themselves constituting a new attitude and relationship to and between these texts), and lastly early Muslim readers, who embraced many of the stories in the Bible, altered others, and debated the status of these corpses under Islam.
Also Offered As: NELC 1400, RELS 1400
1 Course Unit

JWST 1600 Jews and Judaism in Antiquity
A broad introduction to the history of Jewish civilization from its Biblical beginnings to the Middle Ages, with the main focus on the formative period of classical rabbinic Judaism and on the symbiotic relationship between Judaism, Christianity, and Islam.
Spring
Also Offered As: HIST 1600, NELC 0350, RELS 1600

JWST 1605 Muslims, Christians, and Jews in the Middle East: Historical Perspectives
A reading- and discussion-intensive seminar that addresses several recurring questions with regard to the Middle East and North Africa. How have Islam, Judaism, and Christianity influenced each other in these regions historically? How have Jews, Christians, and Muslims fared as religious minorities? To what extent have communal relations been characterized by harmony and cooperation, or by strife and discord, and how have these relations changed in different contexts over time? To what extent and under what circumstances have members of these communities converted, intermarried, formed business alliances, and adapted or developed similar customs? How has the emergence of the modern nation-state system affected communal relations as well as the legal or social status of religious minorities in particular countries? How important has religion been as one variable in social identity (along with sect, ethnicity, class, gender, etc.), and to what extent has religious identity figured into regional conflicts and wars? The focus of the class will be on the modern period (c. 1800-present) although we will read about some relevant trends in the early and middle Islamic periods as well. Students will also pursue individually tailored research to produce final papers. Prior background in Islamic studies and Middle Eastern history is required. Middle Eastern history is required. This class is intended for juniors, seniors, and graduate students.

JWST 2070 Jews, Race and Religion
Contemporary Jewish identity exists at an uneasy cross-section of race, religion and ethnicity. This course aims to expose students to the diversity of Jewish experience through the lenses of race and religion, examining the various ways these categories intersect and complicate each other. How can the study of race and religion help us to understand the present and future of Jewish life? How do Jews figure in the study of race and race relations in North America and Israel? Of what relevance is the category of whiteness for understanding Jewish identity, and what does their association in the U.S. mask about Jews and Jewish life today? And what are the roles of Jews in the continuing struggle for racial justice now underway in the world? This course aims to address these questions in light of a range of intellectual perspectives and disciplinary approaches. It will be built around a series of weekly guest lectures by leading scholars of Jews, race and/or religion, and will include among the questions and topics that it explores opportunities to explore connections among scholarship, personal experience and activism.

JWST 2206 Neighbors and Strangers: Jews and Christians in Premodern Europe
The history of Christians and Jews—and of Judaism and Christianity—is an entangled one. From antiquity the two groups gained understandings of themselves in relation to the other, and that story defined much of the lives of each throughout the Middle Ages and into the modern period. At times this relationship was a hostile one, but it was also a force for creativity and a basic fact of life. This course approaches the history of relations between Christians and Jews in Medieval and Early Modern Europe (ca. 1000-1800), exploring both the bases of hatred and the possibilities of coexistence. We will look at episodes of crusader violence, mass expulsion, and religious polemic alongside exchanges in taverns, shared child-rearing, and sexual encounters. We will examine sources from both Christians and Jews, recovering voices from across this seeming divide, encountering both the ideals imagined by elites and intellectuals, and the messy—and more interesting!—realities of living side-by-side for centuries. Class meetings will involve dedicated discussion of a combination of primary and secondary sources, and assessment will be based on writing assignments.
Also Offered As: HIST 2206
1 Course Unit
JWST 2225 Religious Conflict and Coexistence in Early Modern Europe
Europe's early modern period (roughly 1450-1750) has been described as an "age of religious wars," with the Reformation and contact with the New World prompting the formation of new fault lines, new collectives, and the reshaping of old animosities in new expressions. It was a period of bloody riots between Catholics and Protestants, expulsions of Jews and Muslims, prosecution of heretics, martyrdoms of saints, and inquisitions of witches. But it was also an age of living together, of pragmatism, and of coexistence. This seminar explores the complexities and curiosities of religious intellectual, political, social, and daily life as people across religious lines clashed, cooperated, communicated, and carried-on. We will explore the experiences both of influential thinkers but also ordinary people, and ask how and why people were willing, in the name of religion, to persecute, prosecute, fight, kill, and die, and how others traded and traveled together, defended each other, and even married across religious lines.
Also Offered As: HIST 2205
1 Course Unit

JWST 2440 From Miracles to Mindfulness
In 1902, the most famous philosopher in America, William James, revolutionized the study of religion by analyzing religion as an experience rather than as a set of doctrines or scriptures. In this course, we will pick up the inquiry that James and scholars such as Sigmund Freud began by exploring new approaches to the science and philosophy of religious experience. We will invite a series of experts from a wide range of fields—neuroscience, psychoanalysis, phenomenology, psychology, anthropology, to name only a few—to present their cutting-edge research on the nature of religious experience. How can religious experience be studied? What does the research reveal about religious experience? And what can we learn from such experiences about the workings of the human mind and human society? The course has two components: 1) a discussion-centered mini-seminar from 3:30-5:00 will open consideration of the subject with help from relevant readings 2) a guest lecture series every Tuesday from 5:00-6:30, featuring leading scholars who approach religious experience from different disciplinary angles or in light of different questions.

1 Course Unit

JWST 2605 The Jewish Book from Scroll to Screen
Through much of their history, Jews have been known as a "people of the book" and have, often, prided themselves on such an association. The very definition of a book, what books contained, and who might use them are not so easy to define, and their study opens up new ways to think about the Jewish past. Books are perhaps the most important way people share ideas and change minds. But they are also commercial goods, collectors' items, community memories, and cherished heirlooms. This course offers a cultural history of communication and knowledge in Jewish experience through an exploration of the history of the book. It will use primary sources, scholarly articles, and hands-on encounters with books in different shapes and sizes to explore the way people of the past engaged with books both texts and material objects. It will also offer examples of new methods in the study of the book drawn from the digital humanities. Tracing changing conceptions and uses of the book from the ancient world until the present, we will consider the way that books have shaped religion, caused upheaval, and changed over time, even to face their possible obsolescence in our own age.

JWST 3203 Power and Peril: The Paradox of Monarchy among Ancient Greeks, Romans, and Jews
We imagine ancient Greece and Rome as the cradles of democracy and republicanism, early Judea as a pious theocracy, but monarchy was the most common and prevalent form of government in antiquity (and the premodern world in general). In this class, we will take a special look at kinship among the Jews, Greeks, and Romans to assess and discuss similarities, differences, and mutual influences. In all these cultures, the king was a polarizing figure in reality and in conception. On the one hand, some revered the monarch as ideal leader; and monarchy provided the language with which to describe and even imagine the very gods. On the other, monarchs were widely reviled in both theory and practice, from the Greek tyrants to biblical Saul. The Emperor Augustus loudly denied his own affinity to the office of king, even as he ruled alone and was revered as a god. In other words, kings stood both for the ideal and the worst form of government. This class confronts the paradox of monarchical rule and will, through the lens of the king, explore ideas of god, government, human frailty, and utopianism.

JWST 3206 Jewish Diaspora in the Roman Empire
Under the Roman Empire, Jewish communities developed and flourished especially in the cities of the Eastern Mediterranean, in Egypt, Syria, Asia Minor, Greece, Northern Africa, and Italy proper. In many of these cities, the Jews formed a considerable part of the population; they influenced the cultural, social, and political communal life and developed an identity that was distinctively different from that in Judea. In this seminar, we will trace Jewish life in the Diaspora under Roman rule. How did Jews and non-Jews interact? What was the legal status of Jewish communities under the Roman Empire? What caused conflicts and how were they solved? What can the history of Jewish Diaspora communities tell us about minorities in the Roman Empire in general? We will use literary texts, inscriptions, papyri, and archaeological material to answer these questions and many more.

1 Course Unit
JWST 3300 Jewish Magic
The Hebrew Bible legislates against magic and witchcraft. But Jewish literature is replete with demons, witches, spells and incantations. This course will examine the phenomenon of Jewish magic in the longue durée. We will explore a wide array of sources describing ancient Jewish magical practices, and attempt to reconstruct the various aspects of ancient Jewish magic. We will start with demonology and exorcism in biblical and Second Temple literature. Then we will examine rabbinic attitudes towards magic and sorcery and rabbinic magical recipes. We then turn to material artifacts: late antique Jewish amulets and magic bowls. Finally we will survey the large corpus of magical texts from the Cairo Geniza and Hebrew manuscripts of magic from the middle ages. During the course we will consider broader questions such as the relationships between magic and religion, the identity of the Jewish magicians and their clients, relationship between Jewish and contemporary non-Jewish magic, and the role of women in magical practice.

JWST 3704 Re-reading the Holocaust
This course explores how the Holocaust has been constructed as an historical event. Beginning in the mid-1940s, with the first attempts to narrate what had transpired during the Nazi era, this seminar traces the ways that the Holocaust became codified as a distinct episode in history. Taking a chronological approach, the course follows the evolution of historical and popular ideas about the Holocaust and considers the different perspectives presented by a variety of sources. We will examine documentary films, memoirs, survivor testimonies, as well as other scholarly and popular representations of the Holocaust. Students will be introduced to unfamiliar sources and also asked to reconceptualize some well-known Holocaust documents and institutions.

JWST 3705 Jews and the City
Jews have always been an extraordinarily urban people. This seminar explores various aspects of the Jewish encounter with the city, examining the ways that Jewish culture has been shaped by and has helped to shape urban culture. We will examine European and American cities as well as some in Palestine/Israel, covering an expansive view of urban culture. We will consider Jewish involvement in political and cultural life, the various neighborhoods in which Jews have lived, relations with other ethnic groups, as well as many other topics. We will read some classic works in the field along with contemporary scholarship. No prior background in Jewish history is required. *This course may be applied toward the US, European, or Middle East requirements for the History Major or Minor, depending upon the research paper topic. Students must consult with the instructor to determine which geographic requirement will be fulfilled.*

JWST 4130 Creating a Constitution in Israel
Why does the State of Israel not have a constitution? If it ever establishes a constitution, what will it consist of? How would it impact contemporary Israeli politics if it voted to accept one? The aim of this course, offered in conjunction with Penn’s law school, is to explore the attempt to write a constitution for Israel in light of readings and the instructor’s personal experience as a member of Israeli parliament (the Knesset) and chair of its Constitution, Law and Justice Committee at the time that it drafted a full Israeli constitution. We will explore legal and political issues and controversies involved in the effort to create a constitution, including issues bearing on the relationship of religion and the state in Israel, and will seek to understand the process in light of larger social, historical and philosophical contexts.

JWST 4300 Seminar in Modern Hebrew Literature
This course introduces students to selections from the best literary works written in Hebrew over the last hundred years in a relaxed seminar environment. The goal of the course is to develop skills in critical reading of literature in general, and to examine how Hebrew authors grapple with crucial questions of human existence and national identity. Topics include: Hebrew classics and their modern “descendants,” autobiography in poetry and fiction, the conflict between literary generations, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students’ literary understanding.

JWST 4305 Spirit and Law
While accepting “the yoke of the commandments”, Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from overtly polemical challenges to the law, such as those leveled by Paul, medieval Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law’s meaning and purpose, by examining a range of primary sources within their intellectual and historical contexts. Texts (in English translation) include selections from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic homilies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.

Reading and discussion course on selected topics in Jewish history.
Fall or Spring
1 Course Unit

JWST 5090 Topics in Yiddish Literature: Modernist Jewish Poetry
One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define “Jewish writing,” in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation’s process and products. Another version of this seminar presents Jewish modernism as an international phenomenon of the early 20th century. The course will attempt to define “Jewish modernism” through the prism of poetry, which inevitably, given the historical events in Europe and America during this time, grapples with aesthetic, religious, and national ideologies and methods. The syllabus will focus mainly on poetry written in Yiddish and English, and will also include German, Russian, and Hebrew verse. All poetry, critical, and theoretical materials will be taught in English translation, although students who know the languages will work on the original texts and will bring to the table a comparative perspective. Because we will be discussing translated poems, a secondary focus of the course will, in fact, be on literary translation’s process and products.

JWST 5300 Seminar in Rabbinic Literature
Most of the foundational writings of rabbinic Judaism corpora of Midrash, Mishna, and the two Talmuds were in existence by the end of the sixth century CE. Yet, for several centuries thereafter, there is little evidence attesting to the lived nature of rabbinic culture and society. Course will focus on writings by Jews and about Jews, produced between the 7th and 10th centuries, complemented by secondary sources. Texts will include selections from archaeological inscriptions; Midrash; liturgical poetry; Targum; Masora; geonic responsa, writings by Muslims and by Church Fathers. While students must be able to read Hebrew, much class time will be devoted to the improvement of reading and comprehension skills. Undergraduates should seek permission of the instructor.

JWST 5370 Translating Literature: Theory and Practice
The greats all have something to say about translation. The Hebrew poet H. N. Bialik is attributed with saying that “he who reads the Bible in translation is like a man who kisses his bride through a veil.” That, however, is a misinterpretation: What Bialik really wrote was, “Whoever knows Judaism through translation is like a person who kisses his mother through a handkerchief.” (http://benyehuda.org/bialik/dvarim02.html), a saying that he probably translated and adapted from Russian or German. (https://networks.h-net.org/node/28655/discussions/116448/query-bialik-kissing-bride) Robert Frost wrote, “I could define poetry this way: it is that which is lost out of both prose and verse in translation.” Walter Benjamin defines it: “Translation is a form. To comprehend it as a form, one must go back to the original, for the laws governing the translation lie within the original, contained in the issue of its translatability.” Lawrence Venuti rails against translation that domesticates, rather than foreignizes, thus betraying the foreign text through a contrived familiarity that makes the translator invisible. Emily Wilson wants her translation “to bring out the way I think the original text handles it. [The original text] allows you to see the perspective of the people who are being killed.” (https://bookriot.com/2017/12/04/emily-wilson-translation-the-odyssey/ Is translation erotic? A form of filial love? Incestuous? A mode of communion, or idol worship? Is translation a magician’s vanishing trick? Is translation traitorous, transcendent? Maybe translation is impossible. But let’s try it anyways! In this graduate seminar, we will read key texts on the history and theory of translating literature, and we sample translations from across the centuries of the “classics,” such as the Bible and Homer. We will consider competing translations into English of significant modern literary works from a variety of languages, possibly including, but not limited to German, Yiddish, French, Hebrew, and Russian. These readings will serve to frame each student’s own semester-long translation of a literary work from a language of her or his choice. The seminar offers graduate students with their skills in various language an opportunity to take on a significant translation project within a circle of peers.

JWST 5650 Reading Benjamin Reading Kafka
Readings and discussions in English. Walter Benjamin’s study of the works of Franz Kafka is as enlightening as it can be bewildering. Moving from philology to Marxism, metaphysics to messianism, Daoism to Talmud, this densely argued piece elliptically touches on almost all of Kafka’s published works in just four short sections. This seminar proposes a line-by-line reading Benjamin’s 1934 “Franz Kafka on the Tenth Anniversary of His Death” with an eye to its literary, philosophical and religious contexts as well as to the rich history of its intellectual reception. Reading Kafka’s works as the essay evokes them, we will situate this piece with regard to Benjamin’s other writings, the essay’s interlocutors (Brod, Scholem, Lukacs, Brecht) and its most illustrious interpreters (Adorno, Arendt, Celan, Hamacher).

JWST 5800 Topics In Aesthetics
Topic title for Spring 2018: Walter Benjamin. Walter Benjamin (1892-1940) is a philosopher whose writings on art, literature, and politics have had tremendous influence on many disciplines in the Humanities and Social Studies. He has been variously described as one of the leading German-Jewish thinkers, and a secular Marxist theorist. With the publication of a four-volume collection of this works in English, many more of his writings have been made accessible to a wider public. Our seminar will undertake a survey of his work that begins with his studies on language and allegory, and continues with his autobiographical work, his writings on art and literature, and on the imaginary urban spaces of the nineteenth-century.

JWST 6570 Becoming Modern: The German-Jewish Experience
Yuri Slezkine described the twentieth century as a "Jewish Age"—to be modern would essentially mean to be a Jew. In German historical and cultural studies, this linkage has long been made—only in reference to the last years of the German monarchy and the time of the Weimar Republic. Indeed, what has become known as "modern" German culture—reflected in literature, music, and the visual arts and in a multitude of public media—has been more often than not assigned to Jewish authorship or Jewish subjects. But what do authorship and subject mean in this case? Do we locate the German-Jewish experience as the driving force of this new "modernity" or is our understanding of this experience the result of this new "modern" world? Not Offered Every Year

Korean (KORN)

KORN 0100 Beginning Korean I
This course is designed for students who have little or no knowledge of Korean. This course aims to develop foundational reading, writing, listening, and speaking skills through meaningful communicative activities and tasks. Upon successful completion of this course, students should be able to comprehend and carry on simple daily conversations and create simple sentences in the past, present, and future tenses. Students will learn how to introduce themselves, describe their surroundings, talk about daily lives, friends and relatives, and talk about past and future events.
Fall
1 Course Unit

KORN 0103 Spoken Korean I
This class is for those that have little to no knowledge of Korean. The main focus is the development of Korean communication skills by exploring a variety of everyday topics beyond school settings. Students will improve their Korean communication skills by engaging in a variety of interactive activities, role plays, and presentations. Class topics include, but are not limited to, introducing oneself, describing one's surroundings, discussing daily activities and past events, talking about common objects and people, etc. We will also introduce cultural topics in order to deepen students' understanding of Korea's culture and language. NOTE: This course does not count toward the language requirement or the EALC major or minor. Offered through the Penn Language Center.
Fall
1 Course Unit

KORN 0105 Spoken Korean II
A continuation of Spoken Korean I, this course aims to further develop oral communication skills by exploring a variety of topics, such as shopping, hobbies, family and future plans. Class activities include interactive tasks, role plays and presentations. Cultural topics will also be incorporated in order to further deepen students' understanding of Korea's culture and language. Upon completion of the course, students will be able to comprehend and carry on basic conversations; exchange information on a variety of topics in the past, present and future tenses; and achieve a proficiency level of Novice High based on the ACTFL (American Council on the Teaching of Foreign Languages) proficiency scale. NOTE: This course does not count toward the language requirement or the EALC major or minor. Offered through the Penn Language Center.
Spring
Prerequisite: KORN 0103
1 Course Unit

KORN 0200 Beginning Korean II
A continuation of Beginning Korean I, this course aims to further develop the four language skills of students to the novice-high level by building on materials covered in that class. Students will learn how to use three speech styles (polite formal, informal, and intimate) appropriately in a given context. Upon successful completion of this course, students should be able to handle simple and elementary needs of daily lives and talk (and write) about a variety of topics such as family, college life, birthday celebration, shopping, Korean food, etc.
Spring
Prerequisite: KORN 0100
1 Course Unit
KORN 0210 Intensive Beginning Korean I & II
This is an intensive Korean course that covers the material from Elementary Korean I and Elementary Korean II in an intensive format, designed for novice learners who have little or no knowledge of Korean. This course aims to develop a solid foundation for reading, writing, listening, and speaking skills through meaningful communicative activities and tasks in cultural context. Upon completion of the course, students should be able to handle simple and elementary needs of daily lives and be able to talk and write about a variety of topics such as mood and personalities, clothing, weather, illness, Korean food, etc. Students will also learn how to use three speech styles (polite formal, informal, and intimate) appropriately in a given context. Students are also expected to obtain the Novice High level of proficiency based on the ACTFL (American Council on the Teaching of Foreign Languages) proficiency scale. During the summer, this course will be given in an online format that provides a communicative learning environment through Adobe Connect and Canvas. Students will be required to view PowerPoint slide shows and do homework questions in Canvas before each class, and class time will be mostly spent on communicative activities. After class, students will practice four language skills with the online exercises on Canvas, class blogs, and Voice Thread. This online course requires access to a reliable computer with high-speed internet and good quality headsets with a microphone. This course is offered through the Penn Language Center.

Summer Term

KORN 0220 Korean for Heritage Speakers I
This course is designed for heritage speakers who have a strong background in everyday Korean. This course focuses on enhancing linguistic accuracy (spelling, grammar, vocabulary, pronunciation) and fluency (idiomatic and figurative expressions, narrative structure, discursive practice) in both spoken and written Korean, as well as gaining a deeper understanding of Korean culture. Upon completion of the course, students will be able to express themselves more accurately and participate in Korea-related communities more meaningfully. This course and its subsequent course KORN0420 complete the College language requirement.

Fall
1 Course Unit

KORN 0300 Intermediate Korean I
This is a continuation of Elementary Korean II. This course is designed to develop students' Korean language proficiency to the intermediate-low level of the ACTFL Proficiency Guidelines. Authentic materials, as well as various student-centered activities that are highly contextualized in everyday interactions will be used. Upon completion of the course, students will be able to present and exchange information on a variety of topics such as weather, fashion, travel, mailing, housing, public transportation, and shopping.

Fall
Prerequisite: KORN 0200
1 Course Unit

KORN 0400 Intermediate Korean II
This is a continuation of Intermediate Korean I. This course is designed to develop students' Korean language proficiency to the intermediate-mid level of the ACTFL Proficiency Guidelines. This course expands student's competence by dealing with more functions in various contexts that students can frequently encounter in everyday interactions. In order to prepare students for social contexts, students are encouraged to engage in conversations by personalizing the topics, functions, or contexts. Students will perform in an interpersonal way by providing and obtaining information, expressing feelings and emotions, and exchanging opinions on a variety of topics such as birthday parties, recreation and hobbies, Korean holidays, marriage, cultural differences, education and jobs. This course completes the College language requirement.

Spring
Prerequisite: KORN 0300
1 Course Unit

KORN 0420 Korean for Heritage Speakers II
This course is a continuation of Korean for Heritage Speakers I, and aims to further develop students’ linguistic and cultural competence by building on materials covered in that class. In addition to gaining a deeper understanding of Korean culture, the course focuses on enhancing linguistic accuracy and fluency in both spoken and written Korean. Particular emphasis will be placed on building a meaningful Korean-speaking community, as well as consolidation of grammar structures, and expansion and enhancement of vocabulary. Topics include preparing for a trip to Korea, finding housing, college culture in Korea, entertainment and participating in various social events. Upon completion of this course, students will be able to express themselves more accurately and participate in Korea-related communities more meaningfully. This course completes the College language requirement.

Spring
Prerequisite: KORN 0220
1 Course Unit

KORN 0500 High Intermediate Korean I
This course aims to develop functional proficiency in Korean at the intermediate-high level. Students will develop competence in fluency, grammatical accuracy and socio-linguistic/cultural appropriateness through a variety of activities and assignments. In addition, students will learn to communicate using more sophisticated grammatical structures and advanced vocabulary on various topics. The development of each of the four language skills (speaking, listening, reading and writing) is equally emphasized.

Fall
Prerequisite: KORN 0400 OR KORN 0420
1 Course Unit
KORN 0560 Business Communication in Korean
Offered through the Penn Language Center. This course is designed to help students improve their Korean language proficiency by learning essential communication skills necessary to engage in business in Korea. Students will also develop their knowledge of and competence in Korean business culture and practice. The course objectives include: (1) to learn essential business terms, advanced grammar structures and communication strategies in business transactions; (2) to learn Korean business customs and culture, work norms, and business etiquette that students need to successfully communicate in a Korean business context. Topics include job application, business correspondence and reports, discussion and presentation in business meetings, communication styles and strategies in business contexts, current business culture, etc.
Fall
Prerequisite: KORN 0400
1 Course Unit

KORN 0600 High Intermediate Korean II
This is a continuation of Advanced Korean I. Students continue to develop functional proficiency in Korean at the advanced-low level. The topics include literature, culture, Korean customs, and social issues in contemporary Korea.
Spring
Prerequisite: KORN 0500
1 Course Unit

KORN 0700 Advanced Korean
This course aims to develop an in-depth understanding of Korean culture and society through the analysis of spoken and written Korean discourse. Students will engage with key sociolinguistic concepts of politeness, hierarchy, solidarity, power, age, and gender, and enhance their advanced vocabulary and grammar. Students will also develop their abilities in conversation management, self-presentation, socialization, and sense of socio-cultural appropriateness, and gain a better understanding of how native speakers' cultural practices are reflected in language use and how interpersonal relationships are built and maintained through language.
Fall
Prerequisite: KORN 0600
1 Course Unit

KORN 0800 Advanced Korean II
KORN 0800 is a sequel to KORN 0700 (Advanced Korean I) that focuses on further developing language skills and intercultural competence at the advanced level, so that students can communicate in a clearly participatory manner regarding various topics of personal and general interests. Students will engage in various task-based activities to expand lexical repertoire, refine grammar, and develop appropriate and effective interactional skills in Korean. Students’ active engagement in learning through presentations and projects will constitute a crucial part of the course. Upon completion of the course, students will be able to participate in Korean-speaking communities in meaningful ways and competently and confidently interact with Korean people, utilize their linguistic knowledge in a wider range of social settings, and develop a deeper understanding and appreciation of Korea’s language and culture. According to the ACTFL (American Council on the Teaching of Foreign Languages) oral proficiency guidelines, students will attain Advanced Low/Mid-Level and sufficient linguistic and cultural competence to advance to a content-and-language course beyond the 0700 level.
Spring
Prerequisite: KORN 0700
1 Course Unit

KORN 0860 Business Korean I
Offered through the Penn Language Center. Business Korean I is designed for students who want to sharpen their Korean language skills to the advanced-high level by focusing their study on Korean business and economy. Students will learn business/economy-related terminologies and concepts. They will also take an in-depth look at the issues related to business practices and environment in Korea. Students will improve and refine their language skills through actively participating in discussions, research, and presentations.
Not Offered Every Year
Prerequisite: KORN 0600
1 Course Unit

KORN 0865 Business Korean II
Offered through the Penn Language Center. A continuation of the material offered in Business Korean I. Students further develop their Korean language proficiency at the advance-high level by studying case studies, participating in discussions, and doing research and giving presentations on the topic of current Korean business and economy.
Not Offered Every Year
Prerequisite: KORN 0600
1 Course Unit

KORN 0870 Current Korean Media I
Offered through the Penn Language Center. This course aims to develop a deeper understanding of the contemporary Korean society through critical analysis of language use and viewpoints expressed in various types of media including the internet, TV, films and newspapers. This course will provide students with a rich opportunity to relate what they have learned in previous Korean language courses to the larger context of Korean culture and society. The course is conducted entirely in Korean and utilizes both written and audiovisual materials to develop students’ reading/listening comprehension and critical thinking. The course also involves in-depth class discussion and writing short compositions to enhance conversation and writing skills.
Fall or Spring
Prerequisite: KORN 0600
1 Course Unit

KORN 0875 Current Korean Media II
Offered through the Penn Language Center. This course aims to develop a deeper understanding of the contemporary Korean society through critical analysis of language use and viewpoints expressed in various types of media including the internet, TV, films, magazines and newspapers. This course will focus on cultural products and practices such as popular culture, media culture, and entertainment. By catering to the needs and interests of individual learners of Korean, the course will provide them with a rich opportunity to relate what they have learned in previous Korean language courses to the larger context of Korean culture and society. In addition, students will have an in-depth discussion on topics related to Korean society as well as Penn news. This course is conducted entirely in Korean.
Fall
Prerequisite: KORN 0870
1 Course Unit
### KORN 1040 Advanced Readings in Modern Korean I
This course is designed for advanced level students. Based on literary pieces in the form of short stories, essays, and novels, students are to gain an in-depth, multi-faceted and critical understanding of Korean people, society, and culture. These objectives are achieved primarily through 1) close reading and discussion of original literary texts by 20th-century Korean writers; and 2) regular writing exercises. Some Korean films that are related to the topics of the reading text will be used.

- **Prerequisite:** KORN 0700
- **Mutually Exclusive:** KORN 6045
- **Fall, even numbered years only**
- **Not Offered Every Year**
- **Mutually Exclusive:** KORN 6040
- **1 Course Unit**

**KORN 1045 Advanced Readings in Modern Korean II**
This course allows development of creative and analytical thinking through introduction of more organized thematic topics such as family, human relationships, and the reflection of self-images, and individual’s mental status while the society changes in time.

- **Spring**
- **Mutually Exclusive:** KORN 6045
- **Prerequisite:** KORN 0700
- **1 Course Unit**

### KORN 1060 Advanced Business Korean I
Offered through the Penn Language Center. This course aims to further develop students’ advanced language proficiency and simultaneously deepen their knowledge and understanding of specific areas related to Korean business and economy such as an expansion of business into Asian markets and globalization strategies. Through research, discussion and presentation on various case studies and other business-related materials, students will enhance their critical thinking skills and gain an in-depth perspective on issues related to contemporary Korean business operations and practices.

- **Fall**
- **Prerequisite:** KORN 0700
- **1 Course Unit**

### KORN 1065 Advanced Business Korean II
Offered through the Penn Language Center. A continuation of the material offered in Advanced Business Korean I. Students continue to closely follow the current topics of business and financial markets of Korea by actively participating in discussions, research, and presentations.

- **Spring**
- **Mutually Exclusive:** KORN 6065
- **Prerequisite:** KORN 0700
- **1 Course Unit**

### KORN 1070 Advanced Topics in Korean Language and Culture I
This class aims to expand and deepen students’ understanding and knowledge related to various aspects of the Korean language and culture. Students will consolidate and further sophisticate their expertise in the Korean language and culture to achieve professional language proficiency while engaging in discussions, debates, mini-research, and presentations on a wide range of topics covering the Korean language, contemporary life, and culture. Special emphasis will be given to how the Korean language is structured, how cultural practices are reflected in the way language is used, and how interpersonal relationships are built and negotiated through the use of language. As such, the course is organized into the following two parts: (1) Analysis of the Korean language in various genres and media sources and (2) Examination of critical issues related to the Korean language and culture and development of one’s own stance on the given issues. Upon completion of the course, students will be able to reach the Advanced High Level (according to the ACTFL’s proficiency guidelines).

- **Fall**
- **Mutually Exclusive:** KORN 6070
- **Prerequisite:** KORN 0800
- **1 Course Unit**

### KORN 1075 Advanced Topics in Korean Language and Culture II
This course focuses on further developing comprehensive language abilities and deepening socio-cultural knowledge related to Korea by exploring contentious topics surrounding Korean society. Through a review of Korean materials from various genres and media, students will not only gain knowledge of Korean society and culture, but also advance their language proficiency to the professional level. Special emphasis will be given to the investigation of the dynamic nature of Korean culture and society, as well as the development of students’ debate skills on important issues related to them. Upon completion of the course, students will be able to reach the Advanced High Level (according to the ACTFL’s proficiency guidelines).

- **Spring**
- **Mutually Exclusive:** KORN 6075
- **Prerequisite:** KORN 0800
- **1 Course Unit**

### KORN 1140 Advanced Academic Korean I
This course aims to assist students who wish to improve their knowledge of the advanced Korean language skills required to conduct academic research. Students will critically read, analyze, and discuss academic and other relevant texts, written in either Korean or mixed scripts. Readings include, but are not limited to, academic journal articles and book chapters are important in the field of each student’s research, as well as major primary sources, such as periodicals, government documents, and other authentic texts from the late nineteenth century to the present. Students will develop familiarity with these texts and a deeper understanding of academic writing styles in Korean. In addition, students will expand their proficiency in Sino-Korean vocabulary and Hanja (Chinese characters), both essential to developing their academic language skills in Korean. This course will be conducted in Korean.

- **Fall, even numbered years only**
- **Prerequisite:** KORN 1045
- **1 Course Unit**

KORN 1145 Advanced Academic Korean II
This course aims to further develop and enhance the language and critical thinking skills required for conducting academic research in Korean studies or relevant disciplines. Through a historical lens, students will have the opportunity to explore a variety of topics, such as culture, gender, international relations, politics, the economy, and religion from early times to the nineteenth century. Students will continue to read critically, evaluate, analyze, and discuss these academic texts (both primary and secondary sources), written in Korean or mixed scripts, and will broaden and expand their repertoires of the Sino-Korean vocabulary and Hanja (Chinese characters) common in academic disciplines. Course materials will include academic journal articles, book chapters, and primary sources pertaining to the fields of each student's research, as well as Korean historical movies and documentaries. This course will be conducted in Korean.

Landscape Architecture & Regional Planning (LARP)

LARP 5010 Studio I
The focus of this foundation studio is to explore ways of recording and representing landscape - with an emphasis on material, space, rhythm and measure - through a range of drawings and constructions. The studio attempts to create a sensibility toward landscape where the act of surveying a site is as much an imaginative endeavor as is the crafting of an artifact or the construction of a path in a landscape. Emphasis is placed on visual and manual skills in two-dimensional and three-dimensional constructions (drawing, fabrications, model-making, etc.), while developing ways to "see" landscape.
Spring
Fall
2 Course Units
LARP 5020 Studio II
This foundation design studio explores the relationship among sites, drawings, models and the making of landscape architectural projects. Sites are fairly large in size and present a complex set of issues, including fragmentation, lack of access, and contamination. Through the design of a park, students test and refine the relationship among project concept, modes of visualization, and project formation (organizational and material). The objective for the studio is to develop an informed and imaginative response to the site in order to create new relationships among the site, its immediate edges and the larger neighborhood or region.
Spring
Prerequisite: LARP 5010
2 Course Units

LARP 5110 Workshop I: Ecology and Built Landscapes
This workshop explores a sequence of sites extending from the Atlantic Ocean to the Appalachian Mountains that illustrates the changing geology and topography of the regional physiographic provinces including the Atlantic Coastal Plain, Piedmont, and Valley and Ridge. In moving westward along the transect, field trips to natural areas and constructed sites will highlight the diversity of regional plant communities ranging from primary dune to salt marsh, serpentine Virginia pine-oak forest to seepage wetland, and more. Analysis of the inter-connections between the underlying geology, topography, hydrology, soils, vegetation, wildlife, and human interventions will reveal patterns reflecting process and demonstrate key ecological and cultural systems and processes through the production of field notebooks as well as large-scale measured drawings. Ultimately students will develop a vocabulary (recognition, identification and nomenclature) of the materials of landscape, its substance, its ecology, and its changing nature owing to place and time. NOTE: COURSE MEETS IN ASSIGNED CLASSROOM FROM 9-1PM. CLASS MEETING FROM 2-5PM IS DEDICATED TO FIELD WORK.
Fall
1 Course Unit

LARP 5120 Workshop II: Landform and Planting Design
Workshop II combines two of the most elemental tools in the practice of landscape architecture: landform and planting design. Grading - the shaping and sculpting of the landform - is both art and science, and thus Workshop II aims to provide an appreciation of landform as an evocative component in the design vocabulary as well as a critical tool in solving difficult design problems. The basic techniques and strategies of grading design (slopes, terraces, water management, grade change devices) will be introduced, practiced and reinforced, so that grading design becomes an integral part of the students’ design approach. Lecture, field trips, modeling, in-class exercises, and group projects will be used. The Planting component provides students with a working overview of the principles and processes of planting design. Plants will be considered both as individual elements and as part of larger dynamic systems. The natural distribution of plants, concepts of plant community and successional patterns, and the relationship of planting to topography will be used as the initial framework for planting design. Planting design typologies will be examined as an outgrowth of these "natural" patterns. The role of plants as a key element in the structural design of the landscape will be explored through a combination of modeling, plan and section drawing, temporal studies, writing, field trips and case studies. Emphasis will be placed on process and evolution: the temporality of planting (daily, seasonal and annual changes), establishment and maintenance of plantings, and the process of planting design. During the first week of May, a five-day field ecology course focuses on techniques of urban revitalization, sustainable land use, reclamation, and restoration. The field trips offer insight into the diversity of approaches to using plants to promote positive environmental change.
Spring

LARP 5330 Media I: Drawing and Visualization
Drawing is the ability to experience deeply things we see and envision. It allows us, not only to represent things or images seen, but, to discover and construct space and depth on the two dimensions of drawing surface. Expanding the tools of drawing, this course presents inquiries into applied media providing a basis for envisioning the speculative and developing an economy of expression. Work will be closely related to work in Studio I. Students will be introduced to the formal syntax of drawing (line, contour, structure, texture, chiaroscuro), graphic grammar (orthographic, oblique, perspective projection drawings and free-hand sketching) alongside exercises in material expression (collage, assemblage).
Fall
1 Course Unit

LARP 5350 Theory I: Histories and Theories of Landscape and Environment
This course introduces students to relevant topics, themes, and sites that help us understand the conception, production, evolution, and reception of designed and found landscapes throughout the nineteenth and twentieth centuries. It aims at building an understanding of landscapes as both physical spaces and as cultural media and constructions that sit at the nexus between art and science and that contribute knowledge about humankind’s relationship with non-human nature. Landscapes are the result of social, political, artistic and intellectual endeavors. The toponomy, soil and climate of a site also condition its design, use and habitation. As much as designed and found landscapes are a product of their time, they have also contributed to shaping history, both through their physical materiality and through the mental worlds they enable. Embedding found and designed landscapes into their social, political and cultural contexts, the course also pays close attention to the role of expert knowledge and the professions that have contributed to creating them. The course explores the various tensions and relationships embodied, created and represented by designed landscapes; the tensions between nature and culture, practice and use, design and reception, the visual reception of landscapes and their inhabitation, and site-specificity and purposefully “international” design expressions. Using a variety of sources including texts, illustrations, and film the course offers insights into the development and transfer of ideas between different cultures, countries and geographical regions, and time periods.
Fall
1 Course Unit

LARP 5400 Theory II: The Culture of Nature
Landscape architecture, architecture and visual art are all mediations between nature and culture. This course is designed to help students form their own view regarding our relationship with the "natural" world around us in an age of ecological crisis. To achieve this, the course provides a stimulating historical and contemporary survey of ideas of nature. We explore ways “nature” has been understood mythically, theologically, ideologically, philosophically, scientifically, and artistically through the ages, with an emphasis on contemporary culture. We survey the way in which the polarity of culture and nature has been historically constructed and more recently, deconstructed. The pedagogical philosophy of this course is that an appreciation of the broad pattern of history and the ideas that have shaped it are foundational to living a critical and ethical life and central to the process of making contemporary art, architecture, and landscape architecture.
Spring
2 Course Units

LARP 5420 Media II: Fundamentals of 3D Modeling
Continuing the sequence of the Landscape Architecture media classes, this course will provide students with the techniques to explore and examine precision surface profiles and land forming strategies, in both physical and digital models. These models provide a basis to speculate on what processes and programs might be engendered or instigated. Rhino will be the primary modeling platform. Associated plug-ins of Grasshopper, Rhino Terrain, Sonic, and Bongo will help extend the toolset. GIS will facilitate the collection and analysis of extent data. The Adobe Creative Cloud will also be used for documenting and expressing modeling processes through static and time-based visualizations.
Spring
Prerequisite: LARP 5330
1 Course Unit

LARP 5430 Media III: Landscape and Digital Dynamics
This course is the third in the media sequence and is required of all MLA students at the 600 level. This course engages the generative potential of the dynamic and temporal attributes of the landscape medium. Time-based visualizations are used to investigate landscape organizations shaped through the dynamic interplay of varying processes and their spatial consequences. Emphasis will parallel the LARP 601 on urban ecology and landscape systems.
Fall
1 Course Unit

LARP 6010 Studio III
This studio brings together both two-year and three-year MLA students for a landscape studio problem that works at a regional scale, as well as multiple design scales. LARP 601 - the Green Stimuli studio - emphasizes rigorous site analysis, the strategic organization of living material, and the potential of design to produce a wide range of effects. Studio problems are “live” - local leaders and experts are actively trying to solve them, there is an audience for student work outside the University, and projects have the potential to stimulate debate and new directions. The Green Stimuli studio takes on design problems where soil, terrain, geology, mineral resources, climate, water, plants, wildlife, and living systems interactions are major drivers. Studio projects explore one or more of these dimensions in depth to reach high levels of design exploration, strategic thinking, technical resolution and physical expression. The studio’s topics intersect with a broader universe of practical concerns, including land use, local and regional economies, real estate development and public policy, as well as philosophical and artistic questions about nature and ecology. The intent is that designed Green Stimuli make new connections between the material of landscape and the economic, infrastructural, scientific, social, cultural and creative attributes of a region.
Fall
2 Course Units
LARP 6020 Studio IV
This studio is the fourth and final studio in the core sequence and is designed to introduce students to essential competencies related to contemporary problems in urban design. The studio operates in what have been referred to as "global cities" - contexts in which there are significant pressures on the physical form of a metropolis from substantial population and economic growth (both ongoing and projected). These pressures induce considerable demands for the development of new contexts. The studio is focused on managing and negotiating these pressures through landscape-driven strategies capable of guiding and organizing this urbanization. Students develop individual design strategies through a process of mapping, modeling, scenario building and fieldwork that lead to both conceptual and physical proposals for the development of new urban districts and metropolitan agendas.
Spring
2 Course Units

LARP 6110 Workshop III: Site Engineering and Water Management
Building upon the skills and concepts developed in Workshops I and II, this intermediate workshop focuses on technical aspects of site design, with an emphasis on landscape performance. Functional considerations related to landscapes and their associated systems - including circulation, drainage and stormwater management, site stabilization and remediation - will be explored as vital and integral components of landscape design, from concept to execution. Lectures, case studies, field trips, and focused design exercises will enable students to develop facility in the tools, processes and metrics by which landscape systems are designed, evaluated, built and maintained. In concert with the concurrent design studio, students will consider the means by which functional parameters can give rise to the conceptual, formal, and material characteristics of designed landscapes.
Spring
1 Course Unit

LARP 6120 Workshop IV: Advanced Landscape Construction
Advanced Landscape Construction: The Art and Craft of Design Documentation and Detailing introduces students to the process of landscape documentation as means of strengthening design intent through careful material selection and articulation of form. The course builds upon Workshop III by expanding the concept of site systems to the full range of drawings, details, specifications, and contracts used by landscape designers in the creation of the man-made environment. The course features lectures, case studies and field walks, exploring documentation from initial concept through construction administration. Topics will include materials and their use in exterior environments, documentation phases and their role in a projects evolution and the art of detailing to ensure beautiful, durable landscapes that define cohesive design.
Fall
Prerequisite: LARP 6110
1 Course Unit

LARP 6650 Case Studies and Urban Design Explorations
Participants in this course will become familiarized with a diversity of iconic urban references from all continents, while acquiring skills that will facilitate planning and design processes, appreciating the value of interdisciplinary, multi-scaler initiatives, and the transformative contributions of city planning and urban design/placemaking. It is a dynamic class in which each session is centered on a particular topic (see list below), combining class discussions on case studies presented by the instructor, guest lecturers, and teams of students. Interdisciplinary groups also are asked to deliver short planning/design exercises - without the pressure of the studios, allowing to rapidly identify existing site conditions, design opportunities, delivering their proposals with compelling narratives, strategic moves, graphics, models, and verbal communication. Course topics include: From territory to site-specific; On the public realm; The rehabilitation of historic districts; Mobility/infrastructure and public space; The self-constructed city; Community and urban design; Contending forces of nature; Ecological urbanism; New town planning; Urban art. The class also organizes walking tours in Philadelphia. A final exhibit of the work delivered by the students will be held in Meyerson's Lower Gallery.

LARP 6741 Curricular Practical Training: Academic Year
This course provides international Master of Landscape Architecture students the opportunity for practical training in architecture in the United States (CPT). The course develops critical thinking about the organization, operation, and ethics of professional practice in city planning. This course will allow international MLA students to work in an internship in the United States during the academic year without shortening their limited OPT time. The course is offered for .20 course units. The employment must relate to the major and the experience must be part of the program of study. Course enrollment is by permit only.
0.2 Course Units

LARP 6850 Environmental Readings
In this seminar, we will explore this green thread and analyze its influence on how we shape our environments through design and planning. The course has three parts. Throughout, the influence of literature on design and planning theory will be explored. The first part will focus on three most important theorists in environmental planning and landscape architecture: Frederick Law Olmsted Sr., Charles Eliot and Ian McHarg. The second part of the course will critically explore current theories in environmental planning and landscape architecture. The topics include: frameworks for cultural landscape studies, the future of the vernacular, ecological design and planning, sustainable and regenerative design, the languages of landscapes, and evolving views of landscape aesthetics and ethics. In the third part of the course, students will build on the readings to develop their own theory for ecological planning or, alternatively, landscape architecture. While literacy and critical inquiry are addressed throughout the course, critical thinking is especially important for this final section.

LARP 7010 Studio V
These advanced elective studios provide opportunities for focused exploration of particular themes in contemporary landscape architecture. Important emerging and accomplished designers, often from divergent points-of-view, interests and backgrounds, are invited to run these studios. Collaborative options (between Landscape and the Departments of Architecture or City Planning) are sometimes offered across the School. In addition to our own faculty who offer some of these studios (Fabiani Giannetto, Gouverneur, Marcinkoski, Mathur, M’Closkey, Neises, Olin, Pevzner, Sanders, Tomlin), visitors have included Paolo Burgi (Switzerland), Peter Latz (Munich), Bernard Lassus (Paris), Margie Ruddick (Philadelphia), Chris Reed (Boston), Peter Beard (London), Nicholas Quennell (New York), Ken Smith (New York), Raymond Gastil (New York), Alessandro Tagliolini (Italy), Ignacio Bunster (Philadelphia), Perry Kulper (Los Angeles), James Wines (New York), Lee Weintraub (New York), Charles Waldheim (Chicago), Stanislaus Fung (Australia), Dennis Wedlick (New York), Sandro Marpillero (New York), Peter Connolly (Australia), and former associate professor Anita Berrizbeitia. More recent visitors have been Claire Fellman (New York), Catherine Mosbach (Paris), Nanako Umemoto/Neil Cook (New York), Valerio Morabito (Italy), Carol and Colin Franklin (Philadelphia), Keith Kaseman (Philadelphia), Silvia Benedito (New York), Claudia Taborda (Lisbon), Mark Thomann (New York), Jerry Van Eyck (New York), and Martin Rein-Cano (Berlin).

LARP 7040 Urban Design Research Studio
This course is a requirement for students enrolled in the Certificate of Urban Design. The Urban Design Research Studio (UDRC) is a capstone educational experience open to students of architecture, planning, landscape architecture and historic preservation in PennDesign. The studio’s focus is how design intelligence can be applied to complex urban problems which are at once systemic and spatial. Reaching across scales and across disciplines the studio immerses students in the social, economic, political, ecological and aesthetic complexity of the contemporary city in a way that interweaves the speculative quality of the design process with the analytical and evidence-based empiricism of urban research. Interdisciplinary collaboration is the studio’s modus operandi and its purpose is to develop techniques and strategies by which contemporary cities can become not only metabolically more efficient but also more edifying of the human spirit in the 21st century. Acceptance into the studio is based on interview and portfolio with priority placements given to students enrolled in the Urban Design Certificate Program.

Spring
2 Course Units

LARP 7100 Implementation of Urban Design
This course is a requirement for students enrolled in the Certificate of Urban Design. With a focus on contemporary major cities this subject charts the various ways in which urban design is typically conceived, procured, administered and ultimately delivered. From the very conception of a project to its completion, the various methods and avenues through which contemporary cities are planned, designed, and constructed are examined from multiple perspectives so that students become familiar with the myriad issues and main actors involved in urban development. Though exemplary case studies the subject offers a comprehensive understanding of the complexities and contingencies of contemporary city making, placing a particular emphasis on the role of the urban designer as a practical, ethical and visionary agent of change. This course may open to other interested PennDesign students if there is space and with permission of the instructor.

Spring
1 Course Unit

LARP 7200 Topics in Representation
In these advanced representation courses the work extends to new ways of documenting and seeing landscape. These courses are open to all interested School of Design students who have previous drawing experience or have taken foundation studios. Recent topics have been: Landscape Representation (fall annually), instructors: Valerio Morabito; Terrains of Wetness (spring 2017-2020), instructors: Anuradha Mathur, Matthew Neff; Landscape Drawing, instructor: Laurie Olin (spring 2014); Traces and Inscriptions (spring 2013), instructors: Anuradha Mathur, Matthew Neff.

1 Course Unit
LARP 7300 Topics in Professional Practice
These seminar courses explore ideas and methods in current landscape architectural practice. They include instruction in professional procedures, project development, leadership, and professional identity. They include visits to construction sites, professional offices and archives. Recent topics have been: Transformational Leadership (fall annually), instructor: Lucinda Sanders; Unruly Practices (spring 2021), instructors: Rebecca Popowsky and Sarai Williams; The Practice of Landscape Architecture (spring 2021, fall 2021).
Fall or Spring
1 Course Unit

LARP 7340 Designing a Green New Deal: From Concept to Program
This advanced social science and design seminar is about mobilizing expert knowledge to develop transformative policy ideas to make the Green New Deal come alive. We'll look at cutting edge social science and design scholarship on the problems we're trying to solve, and the successes and failures of past efforts at transformative policy. And we’ll focus in particular on the built environment. How might a Green New Deal make the physical changes to our infrastructures, homes, energy landscapes, transportation systems, public recreation amenities, care facilities, and more, in ways that slash carbon emissions, increase resiliency, and abolish inequalities of race, class, gender, and nation? That’s not a rhetorical question: in this class, we’ll assemble knowledge, get into teams, and come up with concrete proposals.
1 Course Unit

LARP 7380 Cultural Landscapes and Landscape Preservation
The course surveys and critically engages the field of cultural landscape studies. Over the semester, we will explore cultural landscape as a concept, theory and model of preservation and design practice; we will read cultural landscape historiography and creative non-fiction; we will examine a range of types (national parks, community gardens, designed landscapes, informal public spaces), and we will map the alternative preservation, planning and design methods that ground cultural landscape studies practically. Readings, class discussions, and projects will draw on cultural geography, environmental history, vernacular architecture, ecology, art, and writing.
Not Offered Every Year
Also Offered As: HSPV 5380
1 Course Unit

LARP 7400 Topics in Digital Media
These courses offer advanced instruction in the uses and applications of various digital media, including Geographical Information Systems, 3D modeling, video, animation, and web-design. These courses are open to all interested School of Design students who already have a working knowledge of basic digital graphic techniques and with permission of the instructor. Recent topics have been: Sensing and Sensibility (fall 2019-2021), instructors: Keith VanDerSys, Sean Burkholder; Simulated Natures (instructors Keith VanDerSys, Joshua Freeese); Digital Fabrication (instructor: Keith VanDerSys); Non-Static Representation: Video, Animation, and Interactive Media (instructor: Todd Montgomery).
Fall or Spring
Prerequisite: LARP 5430
1 Course Unit

LARP 7500 Topics in Construction, Horticulture and Planting Design
These courses explore relevant topics in construction, horticulture and planting design as they relate to contemporary landscape architecture. The aim is to supplement fundamental skills and ideas explored in the core curriculum workshops with more advanced, cutting-edge research, technology and case studies. The teaching faculty are leading practitioners and researchers in the field. These courses are open to all interested Weitzman students. Recent topics have been: Build It/Detailing in Landscape Design (spring annually since 2015), instructors: Lindsay Falck, Abdallah Tabet, Andrew Schlatter; Plant Futures (spring 2019), instructors: Kira Appelhans, Misako Murata; Urban Horticulture and Planting Design (2009-2014), instructor: David Ostrich
Fall or Spring
1 Course Unit

LARP 7550 Arboretum Management I: Understanding Plants
In this course, students will learn about plants from an organismal perspective, an applied/practical perspective, an aesthetic perspective, an environmental perspective, and an evolutionary perspective. Utilizing the plant collection of the Morris Arboretum as a living laboratory and the expertise of arboretum staff, this course will bring students, novices and experts alike, to a better understanding of plants. Session topics integrate both theoretical and hands-on practical work. Course assessment will be based on weekly practical assignments and two exams. Please note that this course takes place at the Morris Arboretum in the Chestnut Hill section of Philadelphia and students are responsible for transporting themselves to and from the arboretum on their own for class each week. For further information about the course, students may contact Cynthia Skema (cskema@upenn.edu).
Fall
1 Course Unit

LARP 7560 Arboretum Management II: Evaluating Public Gardens
This interdisciplinary course looks at public gardens as a whole, studying these public institutions and their performance in the four major services they undertake: research, horticultural display, conservation and education/outreach. Students, of any level or discipline, begin the course by learning what arboreta and botanic gardens are, how they function, and what role they fill in our society through a series of lecture sessions at the Morris Arboretum. For the remainder of the semester, the students take that knowledge into the field to apply what they have learned and evaluate some of the many public gardens in "America's Garden Capital," the Philadelphia region, with expert instructors from the Morris Arboretum as guides. Course assessment will be based on one exam, and a series of essays pertaining to their garden evaluations. Garden evaluations and the written work can be tailored to a particular subject of interest to a student, if pertinent within the public garden realm. Please note that this course takes place at the Morris Arboretum in the Chestnut Hill section of Philadelphia and students are responsible for transporting themselves to and from the arboretum on their own or to other Philadelphia area public gardens as required for class each week. For further information about the course, students may contact Cynthia Skema (cskema@upenn.edu).
Spring
1 Course Unit
LARP 7600 Topics in Ecological Design
These elective courses explore relevant topics in ecological design and new technologies as they relate to contemporary landscape architecture. The courses explore topics such as ecology, sustainability, habitat restoration, hydrology, green roof and green architecture technology, soil technology, and other techniques pertinent to the construction of ecologically dynamic, functioning landscapes. The teaching faculty are leading practitioners and researchers in the field. These courses are open to all interested Weitzman students. Recent topics have been: Large-Scale Land Reclamation Projects (annually since 2005), instructor: William Young; Green Roof Systems (spring 2010-2014), instructor: Susan Weiler
Fall or Spring
1 Course Unit

LARP 7610 Urban Ecology
This course introduces students to the core concepts, processes, and vocabulary of contemporary urban ecology. It aims to provide a conceptual framework and grounding in an understanding of ecological processes, in order to empower students to develop and critique the function and performance of landscape interventions. Urban ecology describes the interaction of the built and natural environment, looking at both ecology in the city, as well as ecology of the city. Lectures, case studies, critical reading and design exercises will enable students to increase their ability to analyze and interpret ecological systems and processes. By analyzing the application of ecological concepts in the design management of urban landscapes, urban ecology will be explored as a dynamic, human-influenced system. Registration is limited to MLA students in the LARP 601 studio.
Fall
1 Course Unit

LARP 7700 Topics in Landscape Architecture History and Theory
These advanced seminars explore central issues in the history and theory of landscape architecture from the Renaissance to the present day. The focus is upon the cultural context of built works, their relation to conceptual writings (contemporary with the designs as well as modern) and the dialogue between modern professional practice and historical example and method. These courses are open to all interested students. Recent topics include: The Culture of Cultivation (spring 2017), instructor: Raffaella Fabiani Giannetto; Weimar Landscapes (spring 2017), instructors: John Dixon Hunt, Liliane Weissberg; Seminar in American Architecture (spring 2016), instructor: Aaron Wunsch; Therapeutic Landscape (spring 2014), instructor: Aaron Wunsch

A special link is made between the analysis of built work and text to design practice and the making of projects. Topics include the intersections of art, nature and creativity; practices of analysis and criticism; ideas of urbanism and infrastructure; collaborative ventures and cross-disciplinarity; vision and visuality; and representational structures, both verbal and visual. These courses are open to all interested Weitzman students.
1 Course Unit

LARP 7802 Topics in Theory and Design
These advanced seminars explore advanced ideas in contemporary landscape architectural design and theory. A special link is made between the analysis of built work and text to design practice and the making of projects. Topics include the intersections of art, nature and creativity; practices of analysis and criticism; ideas of urbanism and infrastructure; collaborative ventures and cross-disciplinarity; vision and visuality; and representational structures, both verbal and visual. These courses are open to all interested Weitzman students.
1 Course Unit

LARP 7803 Topics in Theory and Design
These advanced seminars explore advanced ideas in contemporary landscape architectural design and theory. A special link is made between the analysis of built work and text to design practice and the making of projects. Topics include the intersections of art, nature and creativity; practices of analysis and criticism; ideas of urbanism and infrastructure; collaborative ventures and cross-disciplinarity; vision and visuality; and representational structures, both verbal and visual. These courses are open to all interested Weitzman students.
1 Course Unit
LARP 7890 LARP Summer Institute: Lineages of Contemporary Landscape for 3-Year Students
This one-week course will introduce students to some of the most important strands of contemporary landscape architecture, introduce important landscape vocabulary and terminology in the landscape lexicon, analyze seminal landscape case studies, and hold group discussion on these topics. It will provide an overview of the vocabulary of landscape representation and visualization, introduce students to techniques of landscape representation, and then dive more deeply into the visualization of information, grounded in landscape theory. Students will collaborate on a historical analysis of the various threads of landscape architecture, tracing its relationship to allied fields such as architecture, urbanism, ecology, cultural geography, art, and the landscape garden tradition—and use this analysis as a basis of group discussion about what landscape architecture can accomplish in the world. Along the way, we will talk about how we use visualization as a way to synthesize ideas and as a projective device for testing new concepts and combinations. This course will offer an opportunity to practice research methods, and prepare students for digital collaboration. Course enrollment is by permit only. Please contact landarch@design.upenn.edu.
Summer Term
0 Course Units

LARP 7900 LARP Summer Institute: Natural Systems (3-year Students)
This one-week session for entering three-year MLA students will provide an introduction to the varied physiographic provinces and associated plant communities of the greater Philadelphia region. Through a review of available mapping and on-site study we will characterize and consider the connections between climate, geology, topography, hydrology, soils, vegetation, wildlife, and disturbance, both natural and anthropogenic.
With a focus on plants students will begin to develop a familiarity with the local flora (native and non-native) including plant species identification, preferred growing conditions and potential for use. Field trips will include visits to the Inner Coastal Plain and Piedmont. Course enrollment is by permit only. Please contact landarch@design.upenn.edu.
Summer Term
0 Course Units

LARP 7910 LARP Summer Institute: Landscape Operations (3-year Students)
This one-week course will introduce some of the concepts and techniques for the manipulation of the ground plane, one of the most fundamental skills in landscape architecture. The course will discuss some of the technologies, considerations, and constraints of operating on landform, introduce representation techniques that convey how we describe and communicate landform and topography, and walk students through some simple design exercises to make a set of interventions on a topographic site. Students will develop an appreciation for the spatial implications of landform, for landscape narrative, for the movement of water and people across the landscape, and for the operation of reshaping the ground, through the construction of a set of drawings that walk viewers through students' set of interventions on their site. Work product from this week will serve as the starting point for the following week's course, Introduction to Digital Media for 3-year Students. Please contact landarch@design.upenn.edu.
Summer Term
0 Course Units

LARP 7920 LARP Summer Institute: Introduction to Digital Media (3-year Students)
This four-day introductory course is intended to enable students to orient themselves to digital media facilities, programs, and workflows. The course is focused around daily projects building up to a final pinup. Each daily project illustrates a different set of work paths between digital programs, as well as teaches students how to use different software applications key to the practice of landscape architecture today. The focus of this course is to enable students to understand what each digital software application offers to the landscape process, and how to build change and iteration into digital workflows. Please contact landarch@design.upenn.edu.
Summer Term
0 Course Units

LARP 7930 LARP Summer Institute: Landform and Grading Workshop (2-Year Students)
The reading and shaping of landform is an elemental tool in the practice of landscape architecture. The act of grading design - the shaping and sculpting of landform - is both art and science. This four-day session for entering two-year MLA students aims to provide an appreciation of landform as both an evocative component in the design vocabulary and as a critical tool in resolving difficult design problems. Basic techniques and strategies of grading design are introduced and reinforced, so that grading design becomes an integral part of the student's design approach. This session is intended to provide a concise overview of the principles and process of landform and grading design, and is designed to prepare the entering two-year students for Workshop III. Course enrollment is by permit only. Please contact landarch@design.upenn.edu.
Summer Term
0 Course Units

LARP 7940 LARP Summer Institute: Natural Systems (2-year students)
This five-day session for entering two-year MLA students will provide an introduction to the varied physiographic provinces and associated plant communities of the greater Philadelphia region. Through a review of available mapping and on-site study we will characterize and consider the connections between climate, geology, topography, hydrology, soils, vegetation, wildlife, and disturbance, both natural and anthropogenic.
With a focus on plants students will begin to develop a familiarity with the local flora (native and non-native) including plant species identification, preferred growing conditions and potential for use. Field trips will include visits to the Coastal Plain and Piedmont of New Jersey and Pennsylvania. Course enrollment is by permit only. Please contact landarch@design.upenn.edu.
Summer Term
0 Course Units

LARP 7950 LARP Summer Institute: Computing Introduction (2-year Students)
This nine-day session introduces the entering two-year MLA students to digital media as the primary mode of design visual communication. The course provides a short, yet intensive, hands-on inquiry into the production and expression of digital media that is essential for all designers. Through a series of working labs, students learn various software applications and associated techniques to execute precise two-dimensional representations of three-dimensional concepts. Students also learn the Weitzman systems, network basics and computer lab procedures. Course enrollment is by permit only. Please contact landarch@design.upenn.edu.

2 Course Units

LATN 0400 Intermediate Latin: Poetry
Prerequisite(s): LATN 0300 or equivalent (such as placement score of
600). Continuous reading of several Latin authors in poetry (e.g., Ovid,
Virgil, Horace) as well as some more complex prose, in combination with
ongoing review of Latin grammar. By the end of the course students
will have thorough familiarity with the grammar, vocabulary, and style
and style of the selected authors, will be able to tackle previously unseen
passages by them, and will be able to discuss language and
interpretation. Note: Completion of Latin 0400 with C- or higher fulfills
Penn's Foreign Language Requirement.
Spring
Prerequisite: LATN 0300
1 Course Unit

LATN 3202 Latin Love Letters
In this course we look at an intersection between emotion and rhetoric,
reading ancient theorists and practitioners in the art of love-letter
writing. Readings will include Cicero, Ovid, Propertius, Horace, Seneca,
and Petronius. "Love" will include the full breadth of affections from
intellectual friendship to erotic desire, and "letters" will include the whole
spectrum of written communication, both formal and informal. A special
goal of this course will be to gently develop our speaking and writing
skills in Latin. Final projects will be flexible, ranging from a traditional
term-paper to creative experiments in speaking and writing Latin.
Not Offered Every Year
1 Course Unit
LATN 3203 Triangulating Augustanism: Livy, Horace, and Ovid
What is a Roman? How does the rise of Augustus Caesar change the meaning of Romanness? In this course, we will read selections from the historian Livy and the poets Horace and Ovid as they try (and sometimes fail) to navigate and accommodate the new regime. Livy’s prose history of Rome, Ab Urbe Condita, looks to the past for moral guidance and attempts to draw lessons for the imperial future. Horace’s Odes veer from ironic to patriotic (and back again) as he works out the new reality and his place in it. Ovid’s Fasti, written during the poet’s exile from Rome, report the origins of Rome’s sacred festival calendar. Through close readings of these three texts, this course will consider Augustanism from several angles and distances, and attempt to construct a richer picture of a complicated and vibrant period.
Fall or Spring
1 Course Unit
Not Offered Every Year

LATN 3204 Plague and Pestilence in Latin Literature
Plagues and pestilences were a common feature of life in the ancient world. As such, they fueled the literary imagination. Historians, doctors, poets, and others have left many accounts of diseases, both endemic and epidemic. This literature can be considered a kind of literary genre with its own conventions, literal and metaphorical frames of reference, and intertextual relations. We will focus on a few representative examples in Latin literature to read in the original, and will read others Greek and Roman accounts in translation to gain familiarity with the broader context. Students will gain experience in reading upper-level Latin while broadening their knowledge of Latin literature and literary history.
Not Offered Every Year
1 Course Unit

LATN 3205 Medieval Latin
This course will be an introduction to the literature of the Latin Middle Ages. Our readings will range from the early Christian era (beginning with the Latin Vulgate translation of Scripture) and early medieval poetic philosophy (Boethius) to medieval receptions of classical myth, funny and poignant Latin poetry of the later Middle Ages, literary love letters, autobiography (Abelard), and other selections from the rich fields of medieval Latin literature. The purpose of this course is to offer a broad picture of the Latin literature of the Middle Ages and to engage with some key themes that medieval Latinity offers up to us: how to engage with antiquity, how to imitate and innovate, how to be persuasive, how to value poetic effect for its own sake, how to negotiate the sacred and secular domains of Latinity. We’ll be particularly interested in how medieval teachers taught Latin to non-Latin speakers, whose native languages were French, English, German, etc., a parallel to our modern situation. 200-level Latin or equivalent is a prerequisite for enrollment.
Not Offered Every Year
1 Course Unit

LATN 3206 The Underworld in Latin Poetry
The mythical land of the dead was a source of endless fascination and inspiration for Latin poets of all periods. The importance of the underworld as a place of revelation, a storehouse of poetic treasure, and a demonic source of narrative and dramatic energy is especially great in epic and tragic poetry. In this course we will survey conceptions of the underworld as presented from the 2nd century BCE to the 4th century CE in the works of Ennius, Lucretius, Vergil, Ovid, Seneca, Lucan, Statius, and Claudian and the influence of these poets on medieval, renaissance, and modern literature. An intermediate (200-level) Latin or equivalent course is prerequisite.
Not Offered Every Year
1 Course Unit

LATN 3207 Writing Women at Rome
In this course, students will read texts in Latin from a variety of classical Roman genres - letters, love poems, epic, history, graffiti - that represent women’s communications. While working on their own translations, students will become familiar with the contemporary lively discussion surrounding the interpretation and translation of the poet Ovid through contemporary opinion pieces. At the same time, we will also get to know some of the historical evidence for women’s educational, philosophical, literary, and sexual activities. We will read the mysterious poems attributed to Sulpicia, one of the few bodies of pre-Christian writings in Latin attributed to a woman - and understand the debates surrounding her work. Principal readings will be drawn from Ovid (Metamorphoses, Heroides), Sulpicia (Elegies), and Roman satire.

1 Course Unit

LATN 3208 Pagan and Christian Martyrs
Under the Roman Empire, martyrdom — dying for one's beliefs — took many different forms among different groups. Some martyrs were members of the imperial power structure, while others were individually unimportant subjects. Nevertheless, all of their deaths had political, philosophical, religious, and personal meanings. Many of them came to be celebrated in some of the world’s most compelling literature. In this course we will read and discuss a number of shorter and a few longer examples of martyr literature in Latin and in English translation from the 1st century BCE to the 6th century CE and compare them to one or more modern examples of martyr literature. Evaluation will be based primarily on daily, in-class contributions to translation and discussion. There will also be a mid-term examination and a choice between a final examination or a ten-to-fifteen page paper.
Not Offered Every Year
1 Course Unit

LATN 3401 Seneca, On the Brevity of Life and other essays
Seneca was the most important writer of Latin in the early imperial period. In addition to poetry, satire, and natural philosophy, he wrote ethical philosophy in the form of letters, dialogues, and essays. His works "On the Brevity of Life" and "On Leisure" speak both the ethical issues of his own time and those of many others, including our own. In this course we will read both these essays with the goals of becoming familiar with Seneca’s thought and style of expression, both as an individual and as a writer representative of his age. Students will have the opportunity to respond to Seneca in the form of critical essays, essayistic or epitaphial responses, or other forms of their choosing.
1 Course Unit

LATN 3403 The Poetry of Phaedrus
A survey of the poetry of Phaedrus, who wrote during the reign of Tiberius or shortly thereafter. His poems consist mainly of animal fables in the manner of Aesop. Through regular translation and discussion, students will gain facility with Phaedrus’ poetic style, which is disarmingly simple, and with the esthetic and political interpretation of his work, which is always entertaining, and sometimes challenging. In addition, by reading other examples of Aesopic fables in translation, we will gain some familiarity with Phaedrus’ sources and his influence, which is considerable, as well as with the relation of Aesopic fable to other kinds of animal fable.

1 Course Unit

LATN 5040 Medieval Latin
This course will be an introduction to the literature of the Latin Middle Ages. Our readings will range from the early Christian era (beginning with the Latin Vulgate translation of Scripture) and early medieval poetic philosophy (Boethius) to medieval receptions of classical myth, funny and poignant Latin poetry of the later Middle Ages, literary love letters, autobiography (Abelard), and other selections from the rich field of medieval Latin literature. The purpose of this course is to offer a big picture of the Latin literature of the Middle Ages and to engage with some key themes that medieval Latinity offers up to us: how to engage with antiquity, how to imitate and innovate, how to be persuasive, how to value poetic effect for its own sake, how to negotiate the sacred and secular domains of Latinity. We'll be particularly interested in how medieval teachers taught Latin to non-Latin speakers (students whose native languages were French, English, German, etc.), a parallel to our modern situation. 200-level Latin or equivalent is a prerequisite for enrollment.

LATN 6600 The Latin Text: Language and Style
What do we need to read texts in Latin? In these courses we read just one prose text and one poetic text, or a very limited number of texts and passages, with a focus on language and formal analysis (such as diction, grammar, stylistics, metrics, rhetoric, textual criticism). A range of exercises will be used to develop this, including composition, lexical studies, recitation, memorization, exegesis, written close-readings, and sight-translation.
Not Offered Every Year
1 Course Unit

LATN 6601 Latin Literary History
In this course we survey an extensive range of readings in a variety of authors in both prose and poetry, and consider the problems and opportunities involved in literary history.
Not Offered Every Year
1 Course Unit

LATN 6610 Reading Latin
Intensive reading in ancient Latin literature, focusing on the skills and practices required to read closely a 150-page “short list” of key texts and to become familiar with authors, chronology, meters, dialects, and genres. Exercises include analysis, sight translation, and practice versions of the Qualifications Examination in Latin.
1 Course Unit

LATN 7002 The Mostly Latin Epigram
In this seminar we will explore the themes and aesthetics of the Latin epigram, a genre (or is it?) best known for its brevity and wit but one whose precise nature is tantalizingly elusive. After orienting ourselves in the epigrams of Hellenistic Greek epigrammatists and late Republican authors like the so-called Neoterics (Catullus, Cinna, Calvus, Caesar), we will turn our attention to the poetry of Martial, whose accounts of Rome, its inhabitants, and their foibles exerted a profound influence on subsequent epigrammatists. Among the themes we will engage are: epigram as a genre; persona in tessellated textual collections; the interaction of refined and obscene language; and the artistic and intellectual implications of replication, anthology, and remix.
1 Course Unit

LATN 7004 The Worlds of the Latin Novel
This seminar will explore the worlds of Petronius' Satyrica, Apuleius' Metamorphoses, and other works of Latin prose fiction, devoting equal time to literary, historical, and material dimensions. Participants will devise research topics to serve as the focus of presentations and a seminar paper. Latin is not required, but the regular reading assignments will include Latin options, both from ancient novels and from modern novellae (a recent innovation in Latin learning).
Not Offered Every Year
Also Offered As: CLST 7602
1 Course Unit

LATN 7201 Julio-Claudian Literature
The years between the principates of Augustus and Nero are commonly regarded as a "fallow" period in Latin literary history. In fact, this is objectively untrue in terms of both the amount of literature produced during this time and in terms of its influence. If one considers the relationship between contemporary Latin and Greek literature or the evidence for increased institutional support of literature during this period, the sense of its importance increases. In this course we will study the formative aspects of literature culture during the regimes of Tiberius, Gaius, and Claudius and their decisive influence on the Latin and Greek literature of the subsequent Imperial Period.
1 Course Unit
LATN 7203 Roman Humor and Invective
This seminar will explore Roman humor in epigram, iambic, oratory, and satire as a method of constructing and policing norms of sexuality, the body, and social identity. We will read from a wide range of authors including Catullus, Martial, Cicero, Quintilian, Petronius, and Juvenal, as well as texts that discuss or depict laughter and ridicule. Beyond focused analysis of the works at hand, we will evaluate modern theories of humor and laughter according to the ancient evidence and develop models for understanding Roman humor. In addition to weekly readings, students will be responsible for class presentations, contributing to works-in-progress workshops, and a final research paper.
Not Offered Every Year
Also Offered As: CLST 7200
1 Course Unit

LATN 7204 The Black Aeneid
This research seminar will bring the insights of critical race theory to bear on Vergil's Aeneid. Its general objective will be to assess how these insights reinforce and/or complicate existing ideas about the poem and its reception. We will frame our work in terms of three major questions: (1) To what extent are ancient conceptions of blackness thematized in the poem? (2) What insights can be gained by studying the poem with reference to modern conceptions of Blackness? (3) How has race figured in assessments of and responses to the Aeneid by scholars, writers, and artists? To answer these questions we will organize our work under three research rubrics, each of them based on a secondary character whom the poem figures explicitly or implicitly as black. These are: The Black Hero (Memnon); The Black Suitor (Iarbas); The Black Poet (Iopas). Students will work in groups to address these and other topics with a view to understanding the potential significance of such features in the poem as a whole and in its reception. The goal of the course will be to produce publishable research as well as materials to facilitate teaching the Aeneid with appropriate attention to issues of race in the poem, in classical studies, and in ancient and modern society. Each student will write a paper reporting on their own research, or a part of it, during the seminar and will contribute to one of several collaborative papers that will be assessed for eventual submission to an appropriate peer-reviewed journal. Graduate-level Latin is a pre-requisite for this course.

LATN 7202 ANCH 7210
Not Offered Every Year

LATN 7403 Phaedrus and Aesopic Fable
The Roman poet Phaedrus is author of the earliest surviving collection of Aesopic fables in Greek or Latin. His work, which dates from the reign of Tiberius or shortly afterwards, is foundational for later collections of animal fables in all European languages. In addition, and in contrast to most Greek and Latin literature, many of his fables are known in earlier and later versions in languages such as Sanskrit, Arabic, Syriac, Persian, and others. Phaedrus' poetry therefore bears witness to the aesthetics and the sociopolitical realities of the early Roman Empire, and also belongs to a literary and cultural tradition that extends far beyond the limits of Greek and Roman indebtedness and influence. Students will become familiar with both aspects. Class meetings will be divided between group reading and discussion of Phaedrus' poetry with reference to its closest Greek and Latin analogues, and individual student reports on related or similar material from other literary traditions.
Not Offered Every Year
1 Course Unit

LATN 7601 Tacitus' Annals
In this seminar we will read Tacitus' Annals, a work replete with stirring history presented in a style that eschews complacency. Through careful study of this work and selected passages of its predecessor, the Histories, we will develop a richly detailed understanding of Tacitus' historiographical method, principles, and practice. Consideration of surviving epigraphic parallels will allow us to see a particularly important element of his historiographical practice, namely, his awareness of but deviation from the official record of events. Each class session will involve close reading of the text and student-led discussion of important features of Tacitus work. As a group project we will produce a variorum edition of the Annals for on-line publication. Final projects will take the form of papers suitable for presentation at the SCS Annual Meeting.

LALS 0092 Corona Capitalism: Crisis and Inequality Across the Americas
The coronavirus pandemic has exacerbated existing social inequalities. It has also accelerated the pace of history so sharply that the course of events has become nearly impossible to predict. This CWiC critical speaking seminar takes as its starting point our shared participation in the experience of uncertainty. At the same time, in looking to Latin America and the US, it articulates the fact that COVID-19 is anything but a “great equalizer”: its impact varies widely and decisively across race, class, and gender. As the world confronts multiple layers of wreckage, not only biological but also ecological and economic, how can we frame and communicate both uncertainty and truth in a thoughtful way? We will examine social problems that have been laid bare by the pandemic and have since become sites of ethical and political reevaluation, namely health disparities, ecological racism, the distribution of labor, and criminal justice. This seminar’s aim is to collaboratively assess one fundamental question: How can we understand COVID-19 not as an exceptional moment in history, but as a crisis of racial capitalism? By studying media, activism, policy, and scholarship produced during the pandemic alongside foundational critical theory, students will gain the analytical tools to contextualize its disproportionate global impact on poor communities and people of color, and to envision a just post-pandemic recovery. We will engage Marxist, feminist, and anti-racist theoretical approaches, and while familiarity with these methods is not necessary, an openness to them is. Self-examination is crucial to the success of the course, which requires students reflect on their own political, intellectual, and emotional investments in racialized inequality. This is a speaking intensive seminar intended to improve students’ oral communication and listening skills through class discussions, prepared presentations, and mixed-media communication projects. Conducted in English.

1 Course Unit

LALS 0093 Latinx Environmental Justice
This course explores the involvement of the Latinx environmental justice movement since the 1960s. It addresses theories and concepts of environmental racism and environmental justice, underscoring how Latinx have challenged, expanded, and contributed to the environmental justice discourse. In this course, students will explore national case studies of environmental and racial injustice as they bear on Latinx communities both in rural areas and in urban barrios throughout the United States. The course will analyze these case studies through the lens of Latinx artistic and literary texts (essays, paintings, short stories, documentaries, and short films) as they provide a unique historic and multicultural perspective of the Latinx experience with environmental injustice and of how Latinxs imagine alternative transitions and responses to environmental marginalization. In addition, the works of Latinx artists and writers will serve as case studies to deconstruct racial stereotypes of Latinxs as unconcerned about environmental issues, shedding light on how they share a broad engagement with environmental ideas. The case studies analyzed in this course emphasize race and class differences between farmworkers and urban barrio residents and how they affect their respective struggles. The unit on farmworkers will focus on workplace health issues such as toxic chemicals and collective bargaining contracts. The unit on urban barrios will focus on gentrification, affordable housing, and toxic substances in the home. We will also review current and past programs that have been organized to address the aforementioned problems. This is an Academically Based Community Service Course (ABCS course) through which students will learn from and provide support to a Latinx-serving organization in the City of Philadelphia on preventing exposure to hazardous substances, thus bridging the information gap on environmental justice issues in the Latinx community in Philadelphia. Information dissemination and education efforts will be conducted by collaborating with Esperanza Academy Charter School in Philadelphia to implement lessons on preventing exposure to hazardous substances. Studying environmental justice and pairing it with community service will heighten students’ awareness of the complexities of culture, race, gender, and class while providing them with an invaluable experience of cross-cultural understanding.

LALS 0115 American Race: A Philadelphia Story (SNF Paideia Program Course)
This course proposes an examination of race with a two-pronged approach: one that broadly links the study of race in the United States with a multi-disciplinary approach and also simultaneously situates specific conversations within the immediate location of Philadelphia, home to the University. The broad historical examination advances key concepts of race and racialization, explores key theoretical methodologies, and highlights major scholarly works. For example, students will engage with the study of race through Africana Studies, Asian American Studies, Urban Studies and through Latin American & Latinx Studies. Readings and methodologies will introduce students to critical issues in education, in literature, in sociology, and with methods in oral history, archival work, and ethnography. Most importantly, this extensive approach highlights the impact of race across multiple communities including Black Americans, immigrant populations, and communities that are marginalized to emphasize connections, relationships, and shared solidarity. Students are intellectually pushed to see the linkages and the impacts of racism across and among all Americans historically and presently. As each theme is introduced a direct example from Philadelphia will be discussed. The combination of the national discourse on race, with an intimate perspective from the City of Philadelphia, engages students both intellectually and civically. The course will be led by Fariha Khan and Fernando Chang-Muy but guest instructors with varied disciplinary backgrounds and guest speakers from local community organizations. Each instructor not only brings specific disciplinary expertise, but also varied community engagement experience.

LALS 0270 The Immigrant City
This course focuses on immigrant communities in United States cities and suburbs. We survey migration and community experiences among a broad range of ethnic groups in different city and suburban neighborhoods. Class readings, discussions, and visits to Philadelphia neighborhoods explore themes including labor markets, commerce, housing, civil society, racial and ethnic relations, integration, refugee resettlement, and local, state, and national immigration policies. The class introduces students to a variety of social science approaches to studying social groups and neighborhoods, including readings in sociology, geography, anthropology, social history, and political science. Ultimately, the class aims to help students develop: 1) a broad knowledge of immigration and its impacts on U.S. cities and regions; 2) a comparative understanding of diverse migrant and receiving communities; and 3) familiarity with policies and institutions that seek to influence immigration and immigrant communities.

LALS 0400 Colonial Latin America
The year 1492 was pivotal in the history of the world. It precipitated huge population movements within the Americas and across the Atlantic - a majority of them involuntary as in the case of indigenous and African people who were kidnapped and enslaved. It led to cataclysmic cultural upheavals, including the formation of new cultures in spaces inhabited by people of African, European and indigenous descent. This course explores the processes of destruction and creation in the region known today as Latin America in the period 1400 - 1800. Class readings are primary sources and provide opportunities to learn methods of source analysis in contexts marked by radically asymmetrical power relationships.
Fall

1 Course Unit

LALS 0450 Modern Latin America 1808-Present
This course examines central themes of Latin American history, from independence to the present. It engages a hemispheric and global approach to understand the economic and social transformations of the region. We will explore the anti-imperial struggles, revolutions, social movements, and global economic crises that have given rise to new national projects for development, or have frustrated the realization of such goals. Taking a historical perspective, we will ask: What triggers imperial breakdown? How did slaves navigate the boundary between freedom and bondage? Was the Mexican Revolution revolutionary? How did the Great Depression lead to the rise of state-led development? In what ways have citizens mobilized for equality, a decent standard of living, and cultural inclusion? And what future paths will the region take given uneasy export markets and current political uncertainty?

LALS 0600 The Foundations of the Early Modern Atlantic World 1450-1800
The purpose of this course is to provide students with a solid knowledge of Atlantic history during the early modern period (XV-XVIII centuries). Through readings of primary and secondary texts we will discuss the cultural, religious, intellectual, and economic developments of Europe, Africa, and the Americas, as well as the connections, struggles, and mutual influences between the peoples of these three continents. Throughout the semester we will study several important topics: medieval precedents of early modern expansion; theories of empire; ideologies and systems of conquest and colonization; the relevance of race and slavery to the understanding of the early modern Atlantic world; how different peoples perceived others and themselves; how European imperialism and colonization affected the internal development of Africa and America; the role played by religion in the Atlantic world; persistence and continuity of Native cultures and beliefs during an age of expansion; the creation of new identities; the role played by African nations in the creation of the Atlantic world; and the creation of an Atlantic economy. Not Offered Every Year Also Offered As: HIST 0600 1 Course Unit

LALS 0720 Introduction to Latin American and Latino Studies
Designed to introduce students to the interdisciplinary field of Latin American and Latino Studies, this is a seminar oriented toward first and second year students. Readings will range widely, from scholarly work on the colonial world that followed from and pushed back against the "conquest"; to literary and artistic explorations of Latin American identities; to social scientists' explorations of how Latinos are changing the United States in the current generation. Spring Also Offered As: HIST 1702 1 Course Unit

LALS 1060 Race and Ethnic Relations
The course will focus on race and ethnicity in the United States. We begin with a brief history of racial categorization and immigration to the U.S. The course continues by examining a number of topics including racial and ethnic identity, interracial and interethnic friendships and marriage, racial attitudes, mass media images, residential segregation, educational stratification, and labor market outcomes. The course will include discussions of African Americans, Whites, Hispanics, Asian Americans and multiracial. Fall or Spring Also Offered As: AFRC 1060, ASAM 1510, SOCI 1060, URBS 1060 1 Course Unit

LALS 1090 Urban Sociology
This course is a comprehensive introduction to the sociological study of urban areas. This includes more general topics as the rise of cities and theories urbanism, as well as more specific areas of inquiry, including American urbanism, segregation, urban poverty, suburbanization and sprawl, neighborhoods and crime, and immigrant ghettos. The course will also devote significant attention to globalization and the process of urbanization in less developed counties. Not Offered Every Year Also Offered As: AFRC 1090, SOCI 1090, URBS 1090 1 Course Unit

LALS 1103 Dilemmas of Immigration
Beneath the daily headlines about refugees blocked entry, and undocumented migrants deported there is a set of hard questions which deserve closer attention: Should countries have borders? If countries have borders, how should they decide who is kept out and who is allowed in? How many immigrants is ’enough’? Are immigrants equally desirable? What kinds of obligations do immigrants have to their receiving society? What kinds of obligations do host societies have to immigrants? Should there be ‘pathways’ to citizenship? Can citizenship be earned? Should citizenship be automatic? This course explores these and other dilemmas raised by immigration. Spring, odd numbered years only Also Offered As: PSCI 1103 1 Course Unit

LALS 1120 Latin American Politics
This course examines the dynamics of political and economic change in twentieth century Latin America, with the goal of achieving an understanding of contemporary politics in the region. We will analyze topics such as the incorporation of the region to the international economy and the consolidation of oligarchic states (1880s to 1930s), corporatism, populism, and elict pacts (1930s and 1940s), social revolution, democratic breakdown, and military rule (1960s and 1970s), transitions to democracy and human rights advocacy (1980s), maktet-oriented reforms (1990s), and the turn to the left of current governments (2000s). The course will draw primarily from the experiences of Argentina, Brazil, Colombia, Chile and Mexico. No prior knowledge of the region is required. Fall or Spring Also Offered As: PSCI 1120 1 Course Unit

LALS 1121 U.S. Intervention in Latin America
Why has the United States government participated in regime change in Latin America? How have these interventions affected Latin American political and economic outcomes? How have they helped or hurt U.S. interests in the region? This lecture course provides an introduction to the history and politics of U.S. participation in regime change in Latin America since 1949. For each event, the course will help students understand (1) the goals of the U.S. government; (2) the historical and political context of the intervention; and (3) the outcomes and consequences, both in Latin America and for the United States. One set of short writing assignments will train students to identify the main argument of a reading and assess the quality of the evidence presented in support of that argument; a second set of short writing assignments will train students to make and defend their own argument (see draft syllabus for details). Spring, odd numbered years only Also Offered As: PSCI 1121 1 Course Unit
LALS 1160 Caribbean Culture and Politics
This course offers anthropological perspectives on the Caribbean as a geo-political and socio-cultural region, and on contemporary Caribbean diaspora cultures. We will examine how the region’s long and diverse colonial history has structured relationships between race, ethnicity, class, gender and power, as well as how people have challenged these structures. As a region in which there have been massive transplantations of peoples and their cultures from Africa, Asia, and Europe, and upon which the United States has exerted considerable influence, we will question the processes by which the meeting and mixing of peoples and cultures has occurred. Course readings include material on the political economy of slavery and the plantation system, family and community life, religious beliefs and practices, gender roles and ideologies, popular culture, and the differing ways national, ethnic, and racial identities are expressed on the islands and throughout the Caribbean diaspora.
Not Offered Every Year
Also Offered As: AFRC 1160, ANTH 1160
1 Course Unit

LALS 1191 The U.S. and the World since 1898
This class examines the emergence of the U.S. as a world power since 1898, and considers both the international and domestic consequences of U.S. foreign relations. In one respect, the twentieth century was a strange time to become a global empire: it was the period when colonial systems centered in Europe, Russia, Japan, and Turkey collapsed, and new nations emerged throughout Africa and Asia. This class explores the changing strategies of military, economic, and political intervention that the U.S. pursued as colonization lost legitimacy. Within that framework, the class invites students to think about several questions: How did the idea and practice of empire change over the twentieth century? How did the United States relate to religious visions of independence emerging in Africa, Asia, and Latin America? How did global interactions both inform and reflect racial ideology in the United States? Finally, how did international affairs transform U.S. politics and social movements?
Spring
Also Offered As: HIST 1191
1 Course Unit

LALS 1202 Literature of the Americas to 1900
This course examines U.S. literature and culture in the context of the global history of the Americas. Historical moments informing the course will range from the origins of the Caribbean slave-and-sugar trade at the beginning of the nineteenth century, to the Monroe Doctrine of 1823 and the U.S.-Mexico and Spanish-American wars. Readings will include works by authors such as Frances Calderon de la Barca, Frederick Douglass, Helen Hunt Jackson, Henry Wadsworth Longfellow, Jose Marti, Herman Melville, John Rollin Ridge, Maria Amparo Ruiz de Burton, and Felix Varela. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

LALS 1260 Latinx Literature and Culture
This course offers a broad introduction to the study of Latinx culture. We will examine literature, theater, visual art, and popular cultural forms, including murals, poster art, graffiti, guerrilla urban interventions, novels, poetry, short stories, and film. In each instance, we will study this work within its historical context and with close attention to the ways it illuminates class formation, racialization, and ideologies of gender and sexuality as they shape Latinx experience in the U.S. Topics addressed in the course will include immigration and border policy, revolutionary nationalism and its critique, anti-imperialist thought, Latinx feminisms, queer latinidades, ideology, identity formation, and social movements. While we will address key texts, historical events, and intellectual currents from the late 19th century and early 20th century, the course will focus primarily on literature and art from the 1960s to the present. All texts will be in English.
Not Offered Every Year
Also Offered As: ARTH 2679, COML 1260, ENGL 1260, GSWS 1260

LALS 1290 Race and Ethnic Politics
This course examines the role of race and ethnicity in the political discourse through a comparative survey of recent literature on the historical and contemporary political experiences of the four major minority groups (Blacks or African Americans, American Indians, Latinos or Hispanic Americans, and Asian Americans). A few of the key topics will include assimilation and acculturation seen in the Asian American community, understanding the political direction of Black America in a pre and post Civil Rights era, and assessing the emergence of Hispanics as the largest minority group and the political impact of this demographic change. Throughout the semester, the course will introduce students to significant minority legislation, political behavior, social movements, litigation/court rulings, media, and various forms of public opinion that have shaped the history of racial and ethnic minority relations in this country. Readings are drawn from books and articles written by contemporary political scientists.

LALS 1310 Africa and the Transatlantic Slave Trade
This course focuses on the history of selected African societies from the sixteenth through the mid-nineteenth centuries. The primary goal is to study the political, economic, social, and cultural history of a number of peoples who participated in the Atlantic slave trade or were touched by it during the era of their involvement. The course is designed to serve as an introduction to the history and culture of African peoples who entered the diaspora during the era of the slave trade. Its audience is students interested in the history of Africa, the African diaspora, and the Atlantic world, as well as those who want to learn about the history of the slave trade. Case studies will include the Yoruba, Akan, and Fon, as well as Senegambian and West-central African peoples.
Fall or Spring

LALS 1340 Portuguese for the Professions II
Portuguese for the Professions II is a second-semester course designed to provide advanced-level students with exposure to, and practice in, a wide variety of technical vocabulary, and to develop their communicative skills on topics related to Brazil’s economic, social and historical context. Classroom activities will be based on the readings and discussions of articles, papers, the viewing of documentaries and other visual media, covering an array of topics within the proposed themes. The course will be conducted in Portuguese.

LALS 1400 Silver and Gold in the Americas from pre-history to the present
Precious metals have shaped pre-Colombian economies and socio-cultural processes in the Americas for thousands of years. After 1492, gold and silver sent from the "New World" to the "Old World" played a key role in changing economies all over the world. Locally, mining centers were places marked by forced labor, conspicuous consumption, and the destruction of ecosystems. Internationally, gold and silver prices have long had outsized effects on monetary and trade policies. This course uses case studies to delve into the fascinating history of precious metals and mining in North and South America. We will analyze documents describing the gold objects ransacked by Spanish conquistadors, examine 17th Century proto-industrial silver mining at Potosi, trace the impact and human cost of the huge gold strikes in Minas Gerais, in colonial Brazil, read new work on the California and Yukon moments of "rush" and their long-term impact on US monetary policy, and follow new reports about the conflicts at the heart of transnational gold mining in the present. Students will gain experience working with primary sources and will produce an in-depth research paper.

LALS 1405 Indigenous Latin America 1400-1800
In 1492 Europeans began to colonize the Americas. Many colonizers sought to dispossess Indigenous people of their labor, land, and, sometimes, their lives, and often tried to impose their religion and cultural practices. Nonetheless, throughout Latin America Indigenous communities not only survived but adapted in creative, vigorous ways to the new social and ecological circumstances. In this course we will look at the diverse ways that Indigenous individuals and collectives avoided or adapted to colonial rule in Latin America between 1492 and 1800. We will particularly focus on Arawakan, Carib, Tupinamba, Nahuatl, and Andean histories. Readings will include both primary and secondary sources.
Also Offered As: HIST 1405
1 Course Unit

LALS 1455 Independence and Revolution in Latin America: Crises and Crossroads
Was it inevitable that the countries in Latin America would become independent, republican nations? What was the impact of revolutions throughout the region from Mexico to Buenos Aires? This course studies the main social, political, economic, and cultural tensions that shook Spanish and Portuguese America during the first decades of the nineteenth century. Through close readings of primary and secondary sources, we will reflect on the meanings and implications of independence and the rise of new republican nations throughout the region. The course is expansive across time and space as we explore topics including the Tupac Amaru Rebellion in Perú, the Comunero Revolt in New Granada, and how the French and Haitian Revolutions, as well as U.S. independence, were perceived throughout Spanish and Portuguese America. We will also delve deeply into the diversity of independence movements. Why did a monarch hold onto power for years after independence was proclaimed in Brazil? How were societies divided during the struggle and who fought on which side? The course culminates with a study of the impact and legacy of independence and revolutions on the region in the mid-19th century and thereafter.

LALS 1475 History of Brazil: Slavery, Inequality, Development
In the past decade, Brazil has emerged as a leading global power. As the world’s fifth-largest country, by size and population, and the ninth-largest by GDP, Brazil exerts tremendous influence on international politics and the global economy, seen in its position as an emerging BRIC nation and a regional heavyweight in South America. Brazil is often in the news for its strides in social welfare, leading investments in the Global South, as host of the World Cup and Olympics, and, most recently, for its political instability. It is also a nation of deep contradictions, in which myth of racial democracy – the longstanding creed that Brazilian society has escaped racial discrimination – functions alongside pervasive social inequality, state violence, political corruption, and an unforgiving penal system. This course examines six centuries of Brazilian history. It highlights the interplay between global events – colonialism, slavery and emancipation, capitalism, and democratization – and the local geographies, popular cultures, and social movements that have shaped this multi-ethnic and expansive nation. In particular, the readings will highlight Brazil’s place in Latin America and the Lusophone World, as well as the ways in which Brazil stands as a counterpoint to the United States, especially in terms of the legacy of slavery and race relation. In this lecture, we will also follow the current political and economic crises unfolding in Brazil, at a moment when it has become all the more important to evaluate just how South America’s largest nation has shaped and been shaped by global events.

LALS 1620 The Rise and Fall of the Spanish Empire 1450-1700
This course will provide students with a solid knowledge of the history of early modern Spain (1450-1700). Through readings of primary and secondary texts that offer a complex vision of the cultural, religious, intellectual, and economic contexts and processes, students will be able to appreciate the intricacies of Spain’s historical evolution. The course focuses on the rise and decline of the Spanish monarchy: the conditions that enabled Spain to become the most powerful monarchy in early modern times, and the conditions that led to its decline. This course also touches upon other important aspects critical to understanding early modern Spain: relationships among Christians, Muslims, and Jews in the Iberian Peninsula; the conquest and colonization of the New World; and early modern debates about Spain’s rights to occupy America and the so-called “destruction of the Indies.”

LALS 1625 Era of Revolutions in the Atlantic World
This class examines the global ramifications of the era of Atlantic revolutions from the 1770s through the 1820s. With a particular focus on French Saint Domingue and Latin America, it provides an overview of key events and individuals from the period. Along the way, it assesses the impact of the American and French revolutions on the breakdown of colonial regimes across the Americas. Students will learn how to think critically about citizenship, constitutional power, and independence movements throughout the Atlantic world. Slavery and the transatlantic slave trade were seriously challenged in places such as Haiti, and the class investigates the appropriation and circulation of revolutionary ideas by enslaved people and other subaltern groups.
Also Offered As: AFRC 1625, HIST 1625
1 Course Unit

LALS 1700 The African Diaspora: Global Dimensions
This class examines the cultural and social ramifications of the African diaspora on a global level. It is divided into two major sections. The first section provides the historical background to the African diaspora by focusing on the forced migration of Africans to Spanish and Portuguese colonies in the Americas. We will then delve into the black experience in French and British colonial spaces. In this section, we will also endeavor to move beyond the Atlantic-centric paradigm in studies of the African diaspora by examining free and unfree migrations of African people across the Indian Ocean to places as far away as India and the Philippines. The second half of the class devotes significant attention to the historical legacy of slavery and colonialism in places like Brazil, Cuba, and the United States. In this section, we will discuss such issues as race relations, the struggle for civil rights for African-descent people as well as the emergence and the implementation of affirmative action policies in places like Brazil and the US.

1 Course Unit

LALS 1740 Capitalism, Socialism, and Crisis in the 20th Century Americas
From the crisis of the Great Depression through the 1970s, the United States and Latin America produced remarkable efforts to remake society and political economy. This course analyzes the Cuban and Guatemalan revolutions, as well as social movements that transformed the United States: the black freedom movement, the labor movement, and changing forms of Latinx politics. In all three countries, Americans looked for ways to reform capitalism or build socialism; address entrenched patterns of racism; define and realize democracy; and achieve national independence. They conceived of these challenges in dramatically different ways. Together, we’ll compare national histories and analyze the relationships between national upheavals.
Fall
Also Offered As: HIST 1740
1 Course Unit

LALS 1800 Perspectives in Brazilian Culture
This course is designed to provide advanced-level students with additional exposure to Portuguese language and culture, as they broaden their knowledge of the Lusophone world and its identity. Classes will focus on discussions and students presentations based on articles, literary texts, and movies or documentaries from, and about, the different regions of the world where Portuguese is spoken. We will start with Portugal and Brazil, and end with Angola and Mozambique, and their cultural expressions. A series of important themes related to the Lusophone world, its history, the dialogues among its different countries, and contemporary challenges will be incorporated in this course as a way to familiarize students with key themes. At the end of this course, students should 1) have developed their oral and written expressions in Portuguese, at the advanced-level, and 2) be able to recognize and discuss important themes, historical figures, and cultural characteristics of the Lusophone world.

LALS 2020 International Organizations in Latin America
International Organizations play a powerful role in mitigating conflict at the global level. What role do they play in solving problems related to global politics, economic development, corruption, inequality and civil society in Latin America? How much power, influence and control do they possess in the region? This course examines the role and impact international organizations have had on Latin America since the mid-20th century. After a review of theoretical and methodological perspectives on the significance of IOs in international relations, students will examine the workings, issues and often controversies surrounding IOs in Latin America, including the IMF, World Bank, UN, OAS and ICC as well as other national and international institutions such as the Inter-American Court of Human Rights and area trade blocs and agreements of Mercosur, NAFTA and others. Students will also explore the regional impact of transnational civil society organizations, such as human rights organizations and the International Olympic Committee. Students will be invited to participate in the Washington Model OAS from April 10-17.
Spring
Also Offered As: PSCI 2421
1 Course Unit

LALS 2120 Democracy in Latin America
Since the inception of the twenty first century, Latin America has undergone major economic, social, and political transformations. Many of the neoliberal policies of the last quarter of the twentieth century were reversed or revisited, economic inequality decreased significantly across the region, and a number of governments turned to the left of the political spectrum, often instituting major public policy and constitutional reforms. How have those changes affected citizenship and democracy in the region? In particular, have citizens' channels for representation and participation changed in the recent past? What has happened to local participatory institutions since the return to the right in some countries of the region? The course will explore these and related questions. Students will develop their own research projects throughout the semester. While not a requirement, the ability to read Spanish or Portuguese will significantly enhance students' learning experience.
Fall or Spring
Also Offered As: PSCI 2120

LALS 2121 People of the Land: Indigeneity and Politics in Argentina and Chile
This undergraduate seminar compares the evolution of relations between settler colonial nation-states and indigenous peoples and movements throughout the Americas, with a particular focus on the Mapuche people of the Patagonia region, in the south of nowadays Argentina and Chile. The main goal of the course is to comparatively study the organization of indigenous communities and analyze their political demands regarding plurinationality, self-determination, territory, prior consultation, living well, and intercultural education and health care, as well as the different ways in which settler colonial nation-states accommodate or respond to such demands. The course is organized in three parts. The first part of the course studies indigenous rights in international law and in global affairs, particularly in the United Nations, the Organization of American States, and the International Labor Organization. The second part of the course studies indigenous organization, movements, parties, and political representation, in Latin America since the 1990s, when indigenous demands acquired national and international notoriety throughout Latin America. The third part of the course zooms in on a comparative analysis of the relationship between the Mapuche and the formation and evolution of the settler colonial nation-states in Argentina and Chile. Once international travel resumes, the course will have an eight-day travel component. Students will travel to the south of Argentina to visit indigenous Mapuche communities to experience and learn first-hand about their culture, intercultural education and health, recuperation of identity and language practices, different models of economic sustainability, and of territorial claims and arrangements, including co-management between indigenous communities and the National Parks system.

LALS 2145 Reading Maya Culture: Decipherment and a New Window into the Ancient Americas

The past three decades have seen a revolution in the study of the Ancient Americas, one with far-reaching implications for how we understand indigenous society and culture on this continent. This course will take us on a journey of academic discovery—encompassing language, art, and materiality—that explains how the decipherment of a major writing system has revealed a previously hidden world. The Maya are one of the most distinctive and best-known of Mesoamerican peoples, who live today, as they did in ancient times, in the Yucatan Peninsula and a region that spans modern southern Mexico, the whole of Guatemala and Belize, and the westernmost fringes of Honduras and El Salvador. From as early as 1000 BCE they were erecting major architecture and flourished for twenty-five more centuries before the invasion of Europeans brought their independence to an end in the sixteenth century CE. Within their elaborate urban spaces, the Maya erected large stone monuments inscribed with imagery and hieroglyphic texts—most of them commissioned in the Classic Period that reaches from 150-900 CE—although the script is also found on many smaller and more intimate objects. For the first century of research these texts proved all but unintelligible, as faulty assumptions and lack of adequate sources left a deep pessimism that they could ever be understood. But beginning in the 1980s major progress in "cracking the code" took place and today we can read almost all inscriptions to some extent, a decent number in their entirety. This course will teach practical skills that allow students with no previous background to read Maya inscriptions and gain access to the history, politics, religious beliefs, and practical material culture they describe. The fabulous design of the hieroglyphs, that at first seem to the history, politics, religious beliefs, and practical material culture they describe. The fabulous design of the hieroglyphs, that at first seem so impenetrable, will be broken-down to reveal not only language but an iconographic system that reveals much about the ancient Maya aesthetics and visual culture.

1 Course Unit

LALS 2150 The Ancient Maya: Integrating Material, Text, and Image

Ancient Maya studies is one of the most dynamic and innovative fields in world archaeology today. Emerging as a true historical archaeology only in the past three decades, the decipherment of Maya script now provides a powerful complement and counterpoint to both traditional excavation data and new remote sensing technologies. Equally, the reading of images, and their interaction with texts and artifacts, forms a vital part of our interest in the broader humanistic concerns of worldview and the transcendent—where our primary interest lies in gaining access to past mentalities. This course will provide a comprehensive introduction into current knowledge of the Ancient Maya, with a recurring methodological focus on how different types of evidence are integrated to assemble a persuasive "portrait of the past." This scope of this process is unique in the ancient Americas, since only the Maya offer us the opportunity to read their own descriptions of the world two millennia or more in the past. Geographically, we will be looking at the greater Yucatan Peninsula, which today covers parts of southeastern Mexico, the whole of Guatemala and Belize, and the western extremities of Honduras and El Salvador. Since archaic times (before 1200 BCE) this has been occupied by speakers of the Mayan language group, and millions of people identified as Maya by that means continue to do so today (despite popular notions to the contrary, they have never "disappeared"). No prior knowledge of archaeology or art history is necessary. The course structure is one 3-hour session per week, consisting of a lecture followed by group discussion in seminar-style. Additionally, in Week 6 there will be a virtual tour of the new Mexico and Central American Gallery at Penn Museum. This will introduce the class to the issues of disseminating scholarship and building narratives that are accessible to the wider public.

LALS 2198 Race, Science, and Globalization

Why do racist ideologies persist when a majority of scientists and scholars reject the premises they rely upon? Since the end of WWII, major scientific organizations like UNESCO and the American Anthropological Association have published statements rejecting race as an accurate representation of human biological variation. Yet despite widespread scientific opposition to the validity of race as an object of study, troublesome issues concerning race and racism abound in Western societies. If not an accurate description of human biology then what is race? And is racism an inevitable feature of human societies?

LALS 2220 Latino/as and the Law

Based in concepts and principles of Constitutional law, this course explores the interpretation and impact of seminal court cases in U.S. history as applied to Latino/as in the United States and abroad. With a particular focus on the 20th century, students will examine how court decisions have affected civil rights, immigration policies, welfare, political incorporation and identity and other important issues affecting Latino/as. Students will also explore additional themes including the status and treatment of Latinos in the criminal justice system, representation of Latino/as in the judiciary, and how Supreme Court decisions have also affected U.S. foreign policy with Latin America. Students will be introduced to a number of guest speakers who are academic experts and practitioners in the field.

1 Course Unit
LALS 2238 Modalities of Black Freedom and Escape: Ships
The course circulates around ships and boats. The course combines methods from environmental humanities, visual arts and history to consider multi-modal practices of black freedom and escape. From free black sailors in the eighteenth century Caribbean Sea, to twentieth and twenty-first century West African fishing boats, notions of Haitian “boat people,” Parliament Funkadelic’s mothership, and sinking boats with Somali and Ethiopian migrants off Yemen’s coast, ships have been and remain technologies of containment and freedom for communities of African descent. In the face of environmental vulnerabilities and the reality of water ways as systems of sustenance and imminent death, this course asks: how do black people use the ship and the process and practice of shipping as vessels for freedom, escape, and as a site to experiment with futures? Using the city of Philadelphia and the Schuylkill and Delaware rivers as our primary site of interrogation, the course attends to the threats that black people experience following natural disaster (New Orleans, Haiti, Puerto Rico) and everyday engagement with the local and global state structures regarding water (Flint, MI). In this context, we also look to shipping as a site to theorize and account for black innovation, meanings of (non-)sovereignty, and alternative futures.

LALS 2237 The Politics of Matter and the Matter of Politics
What is nature? What is culture? What kinds of practices and actors constitute what we call science? Who and what constitute the sphere we refer to as politics? A number of theoretical developments in cultural anthropology, political theory, critical geography, and feminist science studies have problematized the modernist ontological divide between Nature and Culture and a whole series of binary oppositions (such as objects/subjects, matter/form, bio/geo) that follow from it. Taking inspiration from this literature and placing it in conversation with Native and Indigenous scholarship and a series of contemporary socio-environmental struggles occurring in Latin America and beyond, this course will discuss the conceptual-methodological tools that a concern with politics of matter has generated. The epistemic and political implications of these tools go beyond their analytical usefulness as innovative devices to explore novel phenomena. They complicate well-established fields of inquiry, such as political ecology and economy, environmental studies, ethics, social justice, and modern politics; and, indeed, the singular ontology that these fields may inadvertently and explicitly sustain. We will explore how it is that things, stuff, matter, ‘nature’ came to fall outside modern politics as such, and the kinds of ethico-political repercussions that problematizing this division may produce.
Fall or Spring

LALS 2320 Educating for Democracy in Latin America and the U.S.
What does it mean to educate for a democracy, and for what type of democracy should we educate for? This course will examine these central questions and others pertaining to citizenship, democracy, and education as it relates to Latin America and Latino/as in the U.S. The course will first examine theories of education for democracy comparing and contrasting the works of persons including U.S. progressive-era writer John Dewey, Brazilian scholar Paolo Freire, and Penn President and political scientist Amy Gutmann. The course will delve into a civic and political education curriculum and pedagogies that have been carried out in institutions, inequality, and culture in the region. The latterpart of the course will examine civic education practices of Latino/as here in the U.S. from primary schools to higher education. This course offers a service-learning component where students will be encouraged to volunteer with educational organizations in the Philadelphia community.
1 Course Unit

LALS 2390 Clarice Lispector
This seminar focuses on the work of Clarice Lispector, the Ukrainian-born Brazilian novelist and short story writer (1920-1977). See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: COML 2390, ENGL 2390, GSWS 2390, PRTG 0090
1 Course Unit
LALS 2400 Indigenous History of Mexico from the Aztecs to Present
This course will explore the history of indigenous peoples of Mexico from roughly 1400 to the present. Mesoamerica — the cultural region that encompassed what is today Mexico and much of Central America — in the fifteenth century saw the ascendancy of the Aztec Empire in central Mexico (and beyond) and the continued independence of numerous Mayan communities. We will begin by looking at a diverse range of sources produced by the linguistically diverse people in these areas, particularly focusing on the “codices,” as the painted deer hide books that recorded history and ritual knowledge are known. Reading sources (in translation) by both European and indigenous languages (primarily Spanish, Nahuatl, and Maya), we will look at the divergent ways that Native communities and individuals responded to Spanish wars of conquest and how they responded to colonialism. The final part of the will look at the impact of Mexican independence and Revolution in the nineteenth century through the present, as well as the ongoing indigenous Mesoamerican diaspora to locales throughout the United States. In addition to written primary and secondary sources, we will consider a diverse array of visual sources — taking advantage of the spectacular holdings of the Penn museum — and contemporary cinema.

1 Course Unit

LALS 2401 Indians, Pirates, Rebels and Runaways: Unofficial Histories of the Colonial Caribbean
This seminar considers the early history of the colonial Caribbean, not from the perspective of European colonizing powers but rather from “below.” Beginning with European-indigenous contact in the fifteenth century, and ending with the massive slave revolt that became the Haitian Revolution (1791-1804), we will focus on the different ways in which indigenous, African, European and creole men and women experienced European colonization in the Caribbean, as agents, victims and resisters of imperial projects. Each week or so, we will examine the experiences of a different social group and their treatment by historians, as well as anthropologists, archaeologists, sociologists, and novelists. Along the way, we will pay special attention to the question of primary sources: how can we recover the perspectives of people who rarely left their own accounts? How can we use documents and material objects — many of which were produced by colonial officials and elites — to access the experiences of the indigenous, the enslaved, and the poor? We will have some help approaching these questions from the knowledgeable staff at the Penn Museum, the Kislak Center for Special Collections, Rare Books and Manuscripts, and the Van Pelt Library.

Also Offered As: AFRC 2401, GSWS 2401, HIST 2401
1 Course Unit

LALS 2402 The Haitian Revolution
In August 1791, enslaved Africans on the northern plain of Saint Domingue (colonial Haiti) rose up in a coordinated attack against their French colonial masters, launching the initial revolt in what would come to be known as the Haitian Revolution. In the years that followed, their actions forced the abolition of racial discrimination and slavery throughout the French Empire. When Napoleon Bonaparte threatened to return slavery to Saint Domingue, they waged a war for independence, declaring Haiti the world’s first “Black Republic” in 1804. This seminar will examine some of the major themes and debates surrounding Haiti’s colonial and revolutionary history. We will begin by considering the colonial paradox: France’s leading role in the intellectual movement called the “Enlightenment” coincided with its ascent as a slaveholding colonial power. The seminar will also explore parallels and points of connection between the revolutionary movements in France and Saint Domingue: how did increasingly radical ideas in France shape events in the Caribbean? Likewise, how did west African traditions and political ideologies influence insurgents and their leaders? And how, in turn, did revolution in the Caribbean impact the revolution in France? Finally, we will ask how the Haitian Revolution influenced ideas about liberty, sovereignty and freedom throughout the Atlantic World. We will read a combination of primary and secondary materials each week. A final research paper will be required of all students.

LALS 2403 Animal, Vegetable, Mineral: Culture, Tech, & the Columbian Exchange, 1450-1750
In this course we will explore how Native American technologies shaped the early modern Atlantic World in order to understand the role of culture in what is often called the “Columbian Exchange.” Technologies, for the purpose of this course, include animal practices (such as hunting and taming techniques), foraged and domesticated plants (such as maize, potatoes, and annatto), foods (such as cassava and chocolate), drugs (such as tobacco, quinine and coca), textiles (such as hammocks and featherworks), and precious metals and gemstones (such as pearls, emeralds and gold). We will explore technologies’ relationships to other aspects of art and culture, and focus particularly on how and why certain technologies - and not others - moved beyond colonial Latin America in the sixteenth and seventeenth centuries. We will read intensively in both primary and secondary sources.
Fall or Spring
Also Offered As: HIST 2403
1 Course Unit

LALS 2450 Coca and Cocaine
This seminar compares practices that center on coca leaf production in indigenous communities, where coca cultivation has been sustained over millennia, on the one hand, with practices linked to the post 1961 “drug war” in the Americas, on the other. Participants will read scholarly work in history and anthropology, support one another through a research process, and explore what historians and other scholars might contribute to discussions about drug policy. Case studies we’ll explore include Peruvian Quechua-speakers’ ritual use of leaf, the history of Coca-Cola, patterns of violence in Medellín and Northern Mexico, and the evolution of money laundering in 1980-2010. Students will also have the opportunity to define a topic of interest to them and prepare an in-depth literature review.

LALS 2590 Nutritional Anthropology
The course is an introduction to nutritional anthropology, an area of anthropology concerned with human nutrition and food systems in social, cultural and historical contexts. On the one hand, nutritional anthropologists study the significance of the food quest in terms of survival and health. On the other hand, they also know that people eat food for a variety of reasons that may have little, if anything, to do with nutrition, health, or survival. While the availability of food is dependent upon the physical environment, food production systems, and economic resources, food choice and the strategies humans employ to gain access to and distribute food are deeply embedded in specific cultural patterns, social relationships, and political and economic systems. Thus, nutritional anthropology represents the interface between anthropology and the nutritional sciences, and as such, can provide powerful insights into the interactions of social and biological factors in the context of the nutritional health of individuals and populations. Because food and nutrition are quintessential biocultural issues, the course takes a biocultural approach drawing on perspectives from biological, socio-cultural and political-economic anthropology. Course content will include: a discussion of approaches to nutritional anthropology; basics of human nutrition; food systems, food behaviors and ideas; methods of dietary and nutritional assessment; and a series of case studies addressing causes and consequences to nutritional problems across the world.

Also Offered As: ANTH 2590, URBS 2590
1 Course Unit

LALS 2601 The Asian Caribbean
Although Asians have lived in the Americas for centuries, the Asian American community and experience tends to be defined by the post-1965 wave of immigration to the United States. In an effort to correct this narrative this course will explore the histories, experiences, and contributions of some of the forgotten Asians of the Americas. In particular, we will focus on the earlier labor migrations of Chinese and South Asian individuals to the Caribbean and the United States. The experiences of these individuals, who built railroads, cut sugarcane, and replaced African slave labor, complicate our understandings of race today. By examining the legal and social debates surrounding their labor in the 19th century and exploring how their experiences are forgotten and their descendants are rendered invisible today, we will complicate what is Asian America and consider how this history shapes immigration policies today.

1 Course Unit

LALS 2610 Latinos in the United States
This course presents a broad overview of the Latino population in the United States that focuses on the economic and sociological aspects of Latino immigration and assimilation. Topics to be covered include: construction of Latino identity, the history of U.S. Latino immigration, Latino family patterns and household structure, Latino educational attainment. Latino incorporation into the U.S. labor force, earnings and economic well-being among Latino-origin groups, assimilation and the second generation. The course will stress the importance of understanding Latinos within the overall system of race and ethnic relations in the U.S., as well as in comparison with previous immigration flows, particularly from Europe. We will pay particular attention to the economic impact of Latino immigration on both the U.S. receiving and Latin American sending communities, and the efficacy and future possibilities of U.S. immigration policy. Within all of these diverse topics, we will stress the heterogeneity of the Latino population according to national origin groups (i.e. Mexican, Puerto Rican, Cuban, and other Latinos), as well as generational differences between immigrants and the native born.

LALS 2650 Sociology of the Climate Emergency
We're in the midst of a climate emergency, with climate change the most pressing problem. We need to transform our social and economic system to avoid the worst. There's still time to do this, while establishing the conditions for us, and our descendants, to live brilliant, stimulating lives. To move forward, we need to supplement natural science with social science. In the course, will ask, how did we get into this ecological crisis? How does climate figure in contemporary politics? How do the climate and water crises intersect with inequalities around the world? How does an ongoing revolution in the energy sector reflect these tendencies, and what is its promise? What are the big competing paradigms for positive, transformative change today? This fresh-person seminar will tackle these vast questions by introducing students to a range of novel social perspectives on the contemporary global environmental crisis - a crisis that is usually otherwise represented in coldly scientific terms or according to cliches about environmentalists.

LALS 2660 International Migration
A comprehensive review of theories and research on international migration. The course introduces the basic precepts of neoclassical economics, the new economics of labor migration, segmented labor market theory, world systems theory, social capital theory and the theory of cumulative causation. Readings examine patterns and processes of global migration during the classic age from 1800-1914 as well as during the postwar period from 1945 to the present. The course also covers a history and evaluation of immigration policies around the world, and devotes signification attention to theoretical and empirical perspectives on immigrant adaptation. Within this larger topic, we will also discuss internal migration and urbanization; the relationship between gender and migration; the spatial distribution of immigrants within the United States, immigrant communities, and ethnic enclaves; and the undocumented population in the United States.

LALS 2670 Latin American American Art
The numerous traditions of Latin American art have been formed from the historical confluence of Indigenous, European, African, and Asian cultural traditions, each one impacting the others. This lecture course serves as an introduction to these hybrid New World art forms and movements by both providing a large chronological sweep (1492-present) and focusing on several specific countries, including Brazil, Mexico, Cuba, Peru, and Argentina.

LALS 2680 Contemporary Immigration in the U.S.
While this course will engage immigration issues more broadly, we will centrally focus on questions of immigrant incorporation and the effects of U.S. immigration policy. We will start with the broad question of what should be done about the estimated 10.5 million undocumented immigrants living in the United States. Then, we will take a deeper look at the ways in which macro-level forces such as our laws and institutions shape the micro-level, everyday lives of undocumented immigrants and those living in mixed-status families. We will pay close attention to the circumstances of young people, including their experiences of exclusion and belonging across social and educational contexts. More specifically, we will examine how these factors might affect young people’s development, schooling experiences, academic trajectories and aspirations, assimilation and ethnic identity, family dynamics, civic engagement, and employment.

LALS 2670 Pan-Africanism in Global Perspective
This course covers the history of Pan-Africanism from its early inception in the nineteenth century to the present. Pan-Africanism has sparked political struggles and provided a powerful catalyst to artistic endeavors across the globe. The class focuses on the early critiques of the transatlantic slave trade, tracing the development of a unifying sociopolitical movement and the struggle for identity among Africans and African descendants in the diaspora. C. L. R. James posits that people of African descent, no matter where they might live, are linked through ancestral ties to Africa and as victims of structural and historical racism in the West. The class will not only engage with the classics of Pan-Africanism but also explore the movement’s influence through the arts (music, movies, and literature) and politics. To stress Pan-Africanism’s global ramifications, the class pays significant attention to the movement’s impact on Africa and Latin America.

LALS 2710 Inflationary Times: Money, Currency, and Debt in History
What is inflation? What are its causes and consequences? Inflation has become a pressing concern recently, as prices of fuel, food, and consumer goods have ticked upwards at alarming rates. From the ongoing COVID-19 pandemic, war in Ukraine, and climate disasters, current inflationary pressures are inseparable from the major events disrupting the global economy. This is as much the case today as it was following the discovery of silver mines in Potosí (Bolivia), the French Revolution, the breakdown of Bretton Woods, or the 1980s debt crises in Latin America. This course explores the economic and social consequences of inflation across history. It also considers the economic models used to explain the rise and fall of prices—and how economists and policy-makers experiment with new formulas when old ones appear obsolete. By exploring inflationary moments in historical perspective, this seminar explores topics like the political and social meanings of money, how to build trust in a new currency, and what governments can do (or tried to do) to correct financial crisis. Students will be asked to explore past moments of financial and economic crises on their own terms, but also to look for how the past can offer lessons for the present.

1 Course Unit

LALS 2740 Facing America
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.

LALS 2710 Designing a Green New Deal: From Concept to Program
This advanced social science and design seminar is about mobilizing expert knowledge to develop transformative policy ideas to make the Green New Deal come alive. We’ll look at cutting edge social science and design scholarship on the problems we’re trying to solve, and the successes and failures of past efforts at transformative policy. And we’ll focus in particular on the built environment. How might a Green New Deal make the physical changes to our infrastructures, homes, energy landscapes, transportation systems, public recreation amenities, care facilities, and more, in ways that slash carbon emissions, increase resiliency, and abolish inequalities of race, class, gender, and nation? That’s not a rhetorical question: in this class, we’ll assemble knowledge, get into teams, and come up with concrete proposals.

1 Course Unit
LALS 2820 Theatre and Politics
This course will examine the relationship between theatre and politics in the twentieth and twenty-first centuries. How do theatre artists navigate their artistic and political aims? How do we distinguish between art and propaganda? Throughout the semester we will ask how the unique components of theatre—its poetic structure, engagement with spectators, aesthetics of representation, relationship to reality, and rehearsal process—contribute to its political capacity. Students will read a variety of plays drawn from late twentieth century and contemporary global theatre practice alongside political and aesthetic theory to interrogate the relationship between artistic production, power, and resistance. We will conclude with a consideration of the ways politics is itself a performance, considering how power is supported by theatrical means and how performance functions in resistance movements.

LALS 2977 Just Futures Seminar I
This seminar analyzes the historical construction of race and ethnicity in the Americas by focusing on the processes of dispossession—of land, bodies, and heritage—that started with the European colonization of the continent. The first part of the class builds a theoretical framework that will allow students to understand the origin of ethnic and racial classifications as acts of symbolic power, and their connections to specific historical conjunctures. The second and main part of the class focuses on the historical processes that resulted in the colonization of the Americas and the global transformations that came from the encounter of people in the “New World” (the development of capitalism, the emergence of settler colonialism, the Atlantic slave trade, and modern liberalism) in order to trace the genealogy of the ethnic and racial classificatory systems that continue to be used today. We will pay particular attention to the transformation of land tenure and labor regimes and how different political economies produced different logics of racialization. The focus of the seminar is in the Americas as a unit, including both North and South America, and the Caribbean, from the 15th century to the present. The readings come from a wide range of disciplines, including sociology, anthropology, history, political science, settler colonial studies, and law. The last part of the class is organized as a workshop where students will develop their ideas for a final project and discuss student-selected readings.

LALS 2978 Just Futures Seminar II: Health and Healing in Abiayala (the Americas)
Health and Healing in Abiayala (the Americas) will introduce students to ecosocial notions of health, colonialism’s contributions to ill-health, and decolonial action as healing action. Part one of the course introduces general concepts of body, health, and illness in biomedical models. It then pivots to the relational and ecosocial practices of body, health, and wellbeing among many First Peoples of the Abiayala, highlighting “radical relationality.” For many First Peoples, community includes humans, plants, animals, ancestors, and earth beings (such as the land, mountains, rivers, and lakes) that are materially, socially, and spiritually interdependent. These beings work together to maintain a “shared body” through practices of reciprocal care. Part two of the course examines how the shared body has been and is threatened by the colonization of Indigenous lands and bodies through (e.g.) land dispossession, pollution, extractive industry, lack of access to quality education and medical care, forced sterilization, forced removal of children, exploitative economic relations, and political violence. The third part of the course will follow how First Peoples of Abiayala are healing from the physical, social, and spiritual wounds of colonialism through decolonial action. First Peoples are creating their own healing centers and ecological protection agencies, engaging in Land Back movements, in legal and direct-action processes to protect the shared body from extractive industry, and reproductive justice movements. Healing is future oriented, powering the “radical resurgence” of First Peoples. Some questions addressed in this class include, where does the body begin and end? What constitutes personhood? How does continued colonization affected indigenous peoples’ health—and that of all peoples? How do indigenous peoples use ancestral knowledges, relation ethics, and local ecologies to help heal historic and contemporary wounds to power their futures? Is there a political dimension to healing? How do autonomy and self-determination figure into healing and wellbeing?

1 Course Unit

LALS 3020 Diplomacy in the Americas - The Penn Model OAS Program
“Diplomacy in the Americas” an academically based community service course in which students work with Philadelphia and Norristown public school students to explore solutions to critical problems facing the Americas. Entrenched political, economic, and social inequality, combined with environmental degradation, weak institutions, pervasive health epidemics, weapon proliferation, and other issues pose formidable hurdles for strengthening democratic ideals and institutions. The Organization of the American States (OAS), the world’s oldest regional organization, is uniquely poised to confront these challenges. “Diplomacy in the Americas” guides students through the process of writing policy resolutions as though the students were Organization of the American States (OAS) diplomats, basing their research and proposals on democracy, development, security, and human rights - the four pillars of the OAS. Students will also read literature about what it means to educate for a democracy and global citizenry, and they will have the opportunity to turn theory into practice by creating and executing curriculum to teach and mentor the high school students through interactive and experiential pedagogies.

LALS 3022 Bodies of Water: Conflicts and Collaborations around Wetlands and Watersheds
In less than half a decade, the idea that "nature" possesses inalienable rights akin to human rights has gone from a strictly theoretical concept to the basis of policy changes in several countries and U.S. municipalities. This seminar will introduce students to current legal, political, ethical, and practical debates about the implementation and impacts of granting "rights to nature" in these different contexts with a particular focus on the rights associated with bodies of water. We will begin by examining how the Community Environmental Legal Defense Fund (CELDF) supported citizens of Tamaqua, Pennsylvania to write the world's first local "rights of nature" ordinance. We will then go on to compare the politics of "rights of nature" cases in Ecuador, New Zealand, India, and Colombia paying special attention to the cases of rivers. We will focus on the ways biocentric constitutional moves may transform concepts and understandings of environmental justice and socio-environmental conflicts. In particular, how the recognition of "nature" as a victim of war may transform understandings of violence, and hence, approaches to constructing peace and engaging and reparative and restorative practices within the larger framework of planetary and community efforts to mitigate climate change, deforestation, and the degradation of watersheds and wetlands. Lastly, we will explore the possibilities and tensions between community decision-making, the "rights of nature," and national level policies regarding the intensification of extractive activities and questions of territorial ordinance as they relate to multiple bodies of water.

LALS 3110 Transdisciplinary Environmental Humanities
Emergent transdisciplinary fields, such as the environmental and medical humanities, reflect a growing awareness that responses to contemporary environmental dilemmas require the collaborative work of not only diverse scientists, medical practitioners, and engineers, but also more expansive publics, including artists, urban and rural communities, social scientists, and legal fields. This course is inspired by the need to attend to environmental challenges, and their health, justice, and knowledge production implications, as inherently social concerns. The class is co-taught by faculty from the School of Arts and Sciences and the School of Medicine, and will address the challenges and possibilities of working across disciplinary boundaries, building collaborative affinities, and negotiating frictions between diverse methodologies and epistemological approaches. Dr. Kristina Lyons from the Department of Anthropology brings years of experience collaborating with scientists, small farmers, indigenous communities, lawyers, and judges in Colombia and Chile on watershed restoration projects, soil degradation, toxicity, and the implementation of socio-ecological justice. Dr. Marilyn Howarth is a medical doctor from the Center of Excellence in Environmental Toxicology of the School of Medicine and has experience engaging the public, legislators and regulators around environmental health issues affecting the quality of air, water, soil and consumer products. Through their different lenses, they will foster interdisciplinary environmental collaboration and scholarship by engaging students in discussions and research that bring together the arts and sciences regarding issues of urban air pollution, soil remediation, deforestation, and water contamination, among other environmental health problems. This class offers a unique opportunity for students from engineering, natural and social sciences, humanities, and the arts to learn to converse and collaborate around pressing socio-environmental and public health issues.

LALS 3158 ¡Huelga! The Farmworker Movement in the United States
This intensive research seminar invites students to explore the history of farmworkers in the United States during the twentieth century. Research will primarily but not necessarily exclusively focus on the west coast, a region in which many archival sources have been digitized. Students may explore a wide variety of topics, including but not limited to: farmworker unions; the relationship between farmworker mobilizations and other movements in the US and abroad; the experiences of workers from the Philippines and Latin America and the role of US imperial and immigration policies in the lives of farmworkers; farmworkers’ confrontations with and participation in systems of racism; the Great Depression in rural communities; the history of gender and family in farmworker communities; the history of environment and health; struggles over citizenship and social rights; counter-mobilizations of growers and the right; religion in farmworker communities; legislative and legal strategies to obtain rights denied agricultural workers in federal law; artistic, musical, and cultural production; or the relationship between consumers and the workers who produced their food.

LALS 3251 Modern Spain: Civil War and Postwar, 1930-1970
This RESEARCH SEMINAR is divided into three parts. Part I centers on the Spanish CIVIL WAR, 1930-1939. The beginnings of the conflict, the main causes and motivations, the debates in the international arena, the main events and ideologies, some of the main characters, personal experiences (men and women) during the war, violence and repression. Part II focuses on the consequences of the Civil War (1939-1970), both from internal and international perspectives - the constitution of the Francoist regime and its internal politics; the repression of political dissidence; the situation of the Francoist regime during WWII and during the Cold War, how political and cultural dissidence started under Franco’s regime, the social history of Spain, and the construction of the historical memory of the Civil War. Part III, Research and Writing: this course is designed to model the research and writing process professional historians use, beginning with a paper proposal and bibliography of primary documents and secondary sources. It then proceeds through the various stages of the research process to produce drafts of the essay and finally the finished essay. All written work is for peer review.

LALS 3260 Dispossession and Territorial Recovery Among Indigenous Peoples in South America
This seminar will focus on contemporary dynamics of dispossession, territorial claims and territorial recovery involving indigenous peoples in South America. Drawing on cases from different countries (particularly from Brazil, Argentina, Chile, Bolivia and Colombia), we will examine, in historical perspective, processes of territorial dispossession, socio-environmental conflicts, collective action, and struggles for territorial recovery and recognition set against the policies of settler colonial nation-states and economic activities that tend to evict people from their lands. More specifically, we will focus on actions carried out by indigenous peoples and movements to fight territorial dispossession, recover and protect their lands. Particular attention will be paid to the period marked by the growing visibility of the indigenous movements in South America, from 1970s to the present. The perspectives and strategies of indigenous peoples and movements regarding their territorial rights and projects of living well will be considered within the broader framework of identity, ethnicity and land issues. In that sense, the course will draw connections to the actions carried out by landless peasants and other groups. By devoting our attention to different contexts through the region, we will be able both to understand specific situations and identify underlying dynamics.

LALS 3260 The Peopling of the Americas
The peopling of the Americas is a question that has intrigued scholars and laymen for over 500 years. The origin of Native Americans was also a seminal issue during the emergence of American Anthropology as a discipline at the turn of the 20th century, with research on this topic animating current studies of ethnohistory, indigenous archeology, post-colonialism and repatriation. The proposed course will review the scholarship dedicated to describing this long history from an interdisciplinary perspective. It will explore their roots in the expansion of modern humans into Eurasia, evaluate the new archeological and genetic research that has fundamentally altered our understanding of the migration history and diversity of indigenous peoples in the American continents, and examine issues of identity, ethnicity and cultural heritage in contemporary Native populations that extend from this knowledge. The course will further draw on the instructor’s fieldwork experience working with indigenous communities in Alaska, Canada, the Lower 48, Mexico and the Caribbean, as well as native Siberians in Russia, where the cultural and biological roots of ancestral Native American populations lie.

LALS 3377 Race and Medicine in the Global South
Racialized medical provisions under Apartheid in South Africa, theories of racial immunity to malaria in the Philippines and contemporary investigations of caste-based disease risks in India are some of the topics to be covered in this course. From the more straightforward issues of racial discrimination in medicine, to more complex issues of racial immunity or racial susceptibility to disease, medicine and race have been entangled together in multiple ways. More importantly these issues are far from being matters of the past. Genomic medicine and risk society have combined to make race and medicine one of the most potent contemporary issues. Outside the Western World, in the Global South, these issues are further refracted through local cultural, historical and political concerns. This course will take a long-term view of these contemporary issues.

LALS 3405 The Conquest of Mexico
The Conquest of Mexico is one of the most famous episodes of global history. Often told as a story of European technological and military superiority, scholarship of the last thirty years has started to change our understanding of what really happened. In the first half of this course we will examine the history of both Spain and Mesoamerica from approximately 1300 to the fateful meeting of the two civilizations in 1519 that led to war in 1520-21. We will ask questions about sources, actors, and intentions such as, should we even call the events “The Conquest of Mexico”? The second half of the course will focus on the first century of Spanish colonial control of what was now called New Spain to roughly 1650. We will ask questions like, how much control did the Spanish have over their Mesoamerican colonies? What role did the Catholic Church play? How did Indigenous people and Africans adapt to living under colonialism? In what ways did the lives of women change? How was the environment impacted? How did epidemic disease alter daily life and communities? And, finally, what role did China and the Philippines play in the maintenance of a Spanish colony in the Americas? Throughout the course we will read translated primary sources produced by both Spaniards and Indigenous people, as well as selections from recently published scholarship. By the end of the course, each student will have written an original historical analysis based on a theme or event discussed with and approved by the instructor.

LALS 3510 Love, Anger, Madness: History and Silences in Modern Haiti
On the stage of modern world history, Haiti plays the unique role as both the exceptionally victorious and tragic character. This course interrogates archival documents, oral histories, historical texts, and prose created within the nation and her diaspora in order to establish a nuanced image of the projection of Haiti’s modern history. Using two classic Haitian texts, Marie Vieux-Chauvet’s Love, Anger, Madness (1968) and Michel-Rolph Trouillot’s Silencing the Past: Power and the Production of History (1995), this course examines how, why, and to what end Haiti’s history and popular narratives about the country have served to construct and dismantle global movements, popular culture, and meanings of race, gender, and citizenship in the Americas. In our historical examination, we will question some of the iconic representations of Haiti through literature that deepen the affective historical profile of Haiti with interrogations of culture, masculinity, and media performance. Students will become familiar with the post-colonial history of Haiti and the region, meanings of race, and the production of history. The course is a research and historical methods seminar. Students will conduct archival research and write narratives from primary source material. This course qualifies as a “methods” course for Africana Studies undergraduate majors and minors.

LALS 3524 Medical Mestizaje: Health and Development in Contemporary Latin America
Latin American nations as we know them today emerged in the nineteenth century after violent independence struggles against the Spanish Empire. Since independence, mestizaje has been an influential ideology that seeks to portray the identity of Latin American nations as comprised of a unique cultural and racial fusion between Amerindian, European, and African peoples. Through historical, anthropological, and STS approaches this course examines how concerns with racial fusion and purity have shaped the design and implementation of public health programmes in Latin America after independence and into the 20th century. Topics include: tropical medicine and race; public health and urbanization; toxicity and exposure in industrialized settings; biomedicine and social control; indigenous health; genomics and health; food and nutrition.

LALS 3550 Accordion of the New World
This course focuses on the musical genres and styles (both traditional and popular) that have grown up around the accordion in the New World. We will begin our explorations in Nova Scotia and move toward the Midwest, travelling through the polka belt. From there, our investigation turns toward Louisiana and Texas toward zydeco, Cajun, and Tex-Mex music. We will then work our way through Central and South America, considering norteno, cumbia, vallenato, tango, chamame, and forro. Our journey will conclude in the Caribbean, where we will spend some time thinking about merengue and rake-n-scraper music. Throughout the semester, the musical case studies will be matched by readings and film that afford ample opportunity to think about the ways that music is bound up in ethnicity, identity, and class. We will also have occasion to think about the accordion as a multiply meaningful instrument that continues to be incorporated into debates over cultural politics and mobilized as part of strategies of representation through the New World.

LALS 3560 Fighting the Dispossession of Black Bodies -The Brazilian Black Activism from Slavery to the Present
The objective of this seminar is to provide to the students an overview of the history of black activism in Brazil. We will examine several forms of racial conflict, focusing on the Afro-Brazilian ways of organization. We will explore the main periods and organizations of black activism, such as the abolitionism, the Brazilian Black Front, the Experimental Black Theater, the Black Unified Movement and the Quilombolas’ movement. Through this exploration, the classes will investigate the relationship between black organizations, black thinkers and the circulation of black ideas across Americas, Africa, and Europe. We will also examine how the Brazilian black movement has elaborated values of democracy and equality, handling notions of class, race and nationality.

LALS 3570 Caribbean Music and Diaspora
This course considers Caribbean musics within a broad and historical framework. Caribbean musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Caribbean contexts-- concepts such as post-colonialism, migration, ethnicity, hybridity, syncretism, and globalization. Each of these concepts, moreover, will be explored with a view toward understanding its connections to the central analytical paradigm of the course--diaspora. Throughout the course, we will listen to many different styles and repertoires of music ranging from calypso to junkanoo, from rumba to merengue, and from dance hall to zouk. We will then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own North-American contexts of music consumption and production. (Formerly Music 258).

LALS 3602 Cyborgs, Robots, Gadgets: Technologies in Contemporary Hispanic Cinema
Contemporary Latin American and Spanish Cinema offer a great reflection on the role that new technologies have in the film industry, and in our lives, in the digital era. Often, we find that technologies are used in an original way to overcome financial shortages in times of crisis, or when resources are limited. In this context, sometimes it is actually thanks to the new technologies that the work of new directors can be produced or distributed. Some recent Latin American and Spanish sci-fi movies find genuine ways to bring about social and political commentary through the use of technological narratives. Reflections on technology are often found in many other film genres too. Our aim in this course will be to explore the use of technology in film and in the present, as well as to study narratives that place technology at the center. We will focus our study on films where technology is a key factor and will reflect on the impact of technologies in our experience as spectators as well. Fall or Spring

LALS 3682 Staging Gender in Latin America
This course is based on an understanding of theater as a social space and a cultural practice that allows a collectivity—in its most concrete sense, the audience—to think in public about itself and about the fundamental forces facing and shaping it. In this course, we will mainly read contemporary Latin American and Latinx theatrical texts produced by women and queer authors. Our focus will be to discuss how, in the last approximately four decades, the stage as space and performance as practice have been used in Latin America as vehicles to represent and discuss issues related to gender and sexuality, to reconfigure the parameters of these debates, to examine and question existing social structures and attitudes, to propose and rehearse alternative solutions to the problems faced by marginalized subjects, and overall to explore the transformative capabilities of theater. We will also examine how conceptions and representations of gender and sexuality intersect with other identitarian coordinates, such as race, class, and nationality. Not Offered Every Year
Also Offered As: SPAN 3682
1 Course Unit

LALS 3684 Theatrical Modernity and Postmodernity in Latin America
This course will focus on the theatrical tradition of Latin America during the twentieth and twenty-first centuries. In addition to reading some of the most influential playwrights of the region, we will discuss the aesthetic theories and sociohistorical contexts that have shaped contemporary Latin American and Latino theater and performance practices. We will also explore how the stage has served as a space in which to represent, debate, negotiate, and complicate issues related to national, gender, political, and ethnic communities and identities. Not Offered Every Year

LALS 3700 Abolitionism: A Global History
This class develops a transnational and global approach to the rise of abolitionism in the nineteenth century. In a comparative framework, the class traces the rise of abolitionism in Europe, the Americas, Africa, and Asia, examining the suppression of the transatlantic slave trade, the rise of colonialism in Africa, and the growth of forced labor in the wake of transatlantic slave trade. We will deal with key debates in the literature of African, Atlantic and Global histories, including the causes and motivations of abolitionism, the relationship between the suppression of the slave trade and the growth of forced labor in Africa, the historical ties between abolitionism and the early stages of colonialism in Africa, the flow of indentured laborers from Asia to the Americas in the wake of the slave trade. This class is primarily geared towards the production of a research paper. *Depending on the research paper topic, History Majors and Minors can use this course to fulfill the US, Europe, Latin America or Africa requirement.*

LALS 3701 Studies in Colonial Latin American Literature and Culture
The colonial period in Latin America spans more than 400 years. In this course, we study the culture of the Spanish-speaking Americas from the moment Christopher Columbus arrived in the Caribbean to the Latin American wars of independence during the 19th century. We analyze the role that religion and race played in the emergence of colonial societies and the development of national revolutionary discourses. We reflect on the tensions between indigenous populations and Spanish settlers and study the literary culture that developed in the New World. Course content may vary. Please see the department website for current course offerings: https://www.sas.upenn.edu/hispanic-portuguese-studies/undergraduate/hispanic-studies
Not Offered Every Year
Also Offered As: SPAN 3700
Prerequisite: SPAN 1800 OR SPAN 1900
1 Course Unit

LALS 3702 Feminism in the Americas
Students in this seminar will choose their own research topic in the history of feminism. With guidance and support each person will produce a twenty-page paper based on intensive work with primary sources. Readings will range across Latin America, the Caribbean, and the United States. We'll take a long view, beginning in the sixteenth century, and use an expansive frame. Our purpose will not be to decide who was or wasn't 'a feminist' but instead to try to understand actors within their contexts. Readings include scholarship on Sor Juana Ines de la Cruz, Sojourner Truth, the struggle for voting rights across national lines, opposition to dictatorship, and organizing against racism and homophobia. *For History Majors and Minors: Geographic requirement fulfilled by this seminar is dependent on research paper topic.

LALS 3704 There Will Be Blood: The Spanish Conquistador in Latin America
Who was the Spanish conquistador? A brave soldier, a devoted religious man or a voracious murderer? An enemy or a benefactor? This course will study the Spanish "conquest" of the so-called New World through the analysis of a variety of cultural artifacts, from early modern chronicles, poems, and paintings, to contemporary literature and film. We will also reflect on the many forms in which Spanish colonialism is still visible in the present in Latin America and the United States.

Also Offered As: SPAN 3702
1 Course Unit

LALS 3706 Oral History
From wax cylinders to reel-to-reel to digital video, recording technologies expanded the historical profession dramatically during the twentieth century. We will read some classics, such as Barbara Myerhoff's Number Our Days and Alessandro Portelli's Death of Luigi Trastulli, as well as scholarly pieces aimed at working historians. This course centers on methodology—students will learn about 'best practices' in the field and will work toward creating an interview record that can be housed in an archive and accessed by other researchers. All students will use digital video and will practice creating accessible links to both video and audio material, although your interviewees may choose an audio format.

LALS 3713 Singer-songwriters in the Cold War
This research seminar considers the overlapping political worlds of performers like Violeta Parra (b. Chile 1917), Pete Seeger (b. USA 1919), Miriam Makeba (b. South Africa 1932), Vladimir Vysotsky (b. USSR 1938), Gilberto Gil (b. Brazil 1942), Bob Marley (b. Jamaica 1945), Silvio Rodríguez (b. Cuba 1946), Waldemar Bastos (b. Angola 1954), and others. We will have shared readings about youth-identified musicians who brought Leftist politics on stage with them, as well as about the activism of anti-communists and anti-Stalinists in different geographic spaces. Each participant will produce a 15-20 page page based on primary sources. Throughout the semester, in-class work will be designed to support the research process. Students will work through multiple drafts and share their writing with one another. Faculty members from Music, Comparative Literature, and other departments will be invited as guest speakers, as will folklorists, performers, and members of other Philadelphia-area communities.

LALS 3732 New Women's Writing in Latin America
Something unprecedented has been happening lately in the Latin American literary market and scene. Women writers in great numbers have been publishing without encountering major constraints or pressures, and their fictional work has been receiving more awards and critical accolades than ever before. Hence, the assertion made by a critic in El País that “the other Latin American Boom is female” (“El otro ‘boom’ latinoamericano es femenino”) merits to be considered and unpacked. For example, compared to their literary precursors, have the 21st-century female authors presented the customary topics of family, motherhood, sexuality, illness, etc. in a radical new way? Which are the social, political, economic, and aesthetic conditions that have given rise to this proliferation of female authors and the wide acceptance of their fictional worlds? How do these conditions differ from the Latin American literary Boom of the 20th century? These are among the questions we will explore.
Not Offered Every Year

1 Course Unit
LALS 3734 The Boom in Latin American Literature
Why has Latin American narrative of the 1960s and 70s enjoyed such popular and critical success? What distinguishes this literature from that which was written earlier or later or outside Latin America? Who were the major writers of the boom generation, and what unites or separates them? In this course we will consider these questions as we read important works of fiction by authors such as Cortázar, Donoso, Fuentes, García Márquez, and Vargas Llosa as well as criticism that sheds light on the phenomenon of the boom.

Also Offered As: SPAN 3734
1 Course Unit

LALS 3736 Gabriel García Marquez and Contemporary Latin American Literature
The publication of Cien años de soledad in 1967 was one of the highest moments in 20th century Latin American literature. Behind this masterpiece was the arduous and tireless work of a writer that had been searching for a personal style during almost a decade. This search also has a continental dimension. In García Marquez’s work, readers find the main topics, aesthetic quests, and political conflicts that hold the Latin American imagination, from the “crónicas de conquista” to the artistic vanguard adventures of the middle of the century. His narrative brings together early discussions about magical realism and the literary boom, anthropological inquiries rooted in transculturation and critical regionalism, as well as questions on class, race, and gender. In this course we will read different moments of his work, from his early short stories to some of his major novels. In addition, we will compare his writing to some of their contemporaries’, in order to have a comprehensive idea about the formation of the Latin American contemporary canon.

1 Course Unit

LALS 3740 Latin American Non-Fiction
Non-fiction is a narrative mode that presents an account of a subject as fact, but it is a label that began to be used to describe narratives dealing with real events and real people fairly recently. This course studies the boundaries and tensions between facts and fiction in Latin America from a historical perspective. We start by analyzing early modern writing by the Spanish conquistadors: cannibals, human sacrifices, sirens, sea monsters, and El Dorado are just a few subjects that 16th-century “non-fiction” presents as facts. We move then to discuss 19th-century journalism about cosmopolitanism and urban modernization. Technological innovations blur the boundaries between fact and fiction, something that film, narrative journalism, and literary chronicles would exploit thought-out the 20th century. Finally, we study non-fictional narratives in contemporary podcasts and social media.

LALS 3742 Detectives, Criminals, and Writers in Latin American Fiction
Born as a sub-genre, crime fiction (a denomination which encompasses a wide number of texts: classical detective stories, hard-boiled, true-crimes and the non investigative crime novel) has become one of the most attractive literary forms for writers, and one of the favorites for readers. Because it is built around topics like the crime and the law, the search of the truth and the unstable identity of the subject in mass societies, it has become an ideal vehicle for the expression of the anxieties and fears that dominate the contemporary culture. Its versatility has been used by many Latin-American authors to express the social and political conflicts of the continent, as well as to explore its literary possibilities through formal searches, characterized by parody, meta-literary and auto referential games. The aims of this course are, on the one hand, to offer a panoramic vision of the crime fiction in Latin America through the reading of some representative authors; and, on the other, to explore how they can be can be read from different theoretical approaches.

Prerequisite: SPAN 1800 OR SPAN 1900
1 Course Unit
LALS 3802 Rural Modernity in Latin America
This course focuses on literary representations of rural Latin America in the 19th and 20th centuries. While it remains common to understand rural societies as traditional or backward in contrast with the city (considered the true center of modernity), this course approaches rural social orders as sites of modernity and modernization in their own right. We will be primarily concerned with examining how works of Latin American literature and film created rural visions of modernity, particularly in relation to land reform, political revolution, and capitalist agriculture. While our principal focus will be literature, we will also consider how other forms such as painting, film, and political documents envisioned rural transitions.

LALS 3820 Rel & Pol in Latin Amer
This course offers an introductory examination of the political and social role that the Catholic Church has played in Latin America from the time of the Spanish and Portuguese conquests in the 16th century to the end of the 20th century. Throughout this five-century period, the Catholic Church has not acted as a monolithic institution. Some members of the church have been associated with governments and those in power in order to exert control and domination over the population. Others have been among the few individuals or institutions that have spoken up against the injustices and oppression both of colonial governments in the 16th to 18th centuries, and of authoritarian regimes of independent republics in the 19th and 20th centuries. In this latter period, our analysis will include the churches role in defending human, civil, political, and indigenous rights and in promoting the transition from the period of military or civilian dictatorships that ruled a good part of the region starting in the 1960s to civilian democratic regimes in the 1980s and 1990s. We will analyze six countries, three of which were under national security regimes: Brazil, Chile, and Argentina, and three others that experienced internal wars between guerrillas and military-backed civilian juntas: Guatemala, El Salvador, and Nicaragua.
Fall or Spring
1 Course Unit

LALS 3840 Cuban Visual Culture
This course will focus on the urban history and cultural politics of contemporary Cuba with an emphasis on contemporary art and contemporary developments in the city of Havana. Students will learn about the Spanish influence on early colonial art, the development of formal academic art training and the changes to art instruction and the form and content of art created since the Revolution.

LALS 3912 Labor in Contemporary Latin American Literature and Film
This course studies different forms of cultural production (film, novel, short story, critical essay) as entry-points into new settings and conditions for work in Latin America, in four sectors that have become especially salient in the region: services, finance, agro-industry and the informal economy (particularly drug trafficking). We will pay particular attention to how cultural production allows us to envision the coordinates of the larger, indeed global, economy into which workers are inserted. We will examine how cultural production allows us to map shifting class structures; we will also track how gender and race shape national and international divisions of labor.

LALS 3914 Madness and Women in Contemporary Hispanic Culture
The first goal of this course is to examine different “cases” of mental disturbances suffered by women in Hispanic cultures as they have been depicted in novels, short stories and films in the last 50 years. We will study “cases” of female madness precipitated by maternity, domesticity, sexuality, creativity, historical events, and biculturalism. Secondly, we will focus on the “causes” psychoanalysts, authors and literary critics have proposed for those mental illnesses. Additional readings on a wide range of disciplines --feminism, literary theory, psychology and psychoanalysis-- will enhance our understanding of the works selected for the course and will help us identify their political and ideological underpinnings.

Also Offered As: SPAN 3916
1 Course Unit
LALS 3930 Latinx Environmental Justice
This course explores the involvement of the Latinx environmental justice movement since the 1960s. It addresses theories and concepts of environmental racism and environmental justice, underscoring how Latinx have challenged, expanded, and contributed to the environmental justice discourse. In this course, students will explore national case studies of environmental and racial injustice as they bear on Latinx communities both in rural areas and in urban barrios throughout the United States. The course will analyze these case studies through the lens of Latinx artistic and literary texts (essays, paintings, short stories, documentaries, and short films) as they provide a unique historic and multicultural perspective of the Latinx experience with environmental injustice and of how Latinxs imagine alternative transitions and responses to environmental marginalization. In addition, the works of Latinx artists and writers will serve as case studies to deconstruct racial stereotypes of Latinxs as unconcerned about environmental issues, shedding light on how they share a broad engagement with environmental ideas. The case studies analyzed in this course emphasize race and class differences between farmworkers and urban barrio residents and how they affect their respective struggles. The unit on farmworkers will focus on workplace health issues such as toxic chemicals and collective bargaining contracts. The unit on urban barrios will focus on gentrification, affordable housing, and toxic substances in the home. We will also review current and past programs that have been organized to address the aforementioned problems. This is an Academically Based Community Service Course (ABCS course) through which students will learn from and provide support to a Latinx-serving organization in the City of Philadelphia on preventing exposure to hazardous substances, thus bridging the information gap on environmental justice issues in the Latinx community in Philadelphia. Information dissemination and education efforts will be conducted by collaborating with Esperanza Academy Charter School in Philadelphia to implement lessons on preventing exposure to hazardous substances. Studying environmental justice and pairing it with community service will heighten students’ awareness of the complexities of culture, race, gender, and class while providing them with an invaluable experience of cross-cultural understanding.

Fall or Spring

LALS 4020 U.S.- Latin American Relations
Why has and does foreign policy between the U.S. and Latin America matter? Why is there a historical legacy of tension, violence, and limits to the friendship between the US and its neighbors to the south? How do historical perspectives help us understand contemporary inter-American relations? How do theories of neocolonialism, neorealism, and neoliberal institutionalism inform discussion, debate and understanding between the North and the South? To what extent and in what way do global trends influence inter-American affairs? The course explores answers to all of these questions through the analysis of historical and current events of the US-Latin America relationship and develops students’ critical thinking through their insertion into debates that reflect alternative perspectives.
1 Course Unit

LALS 4240 Latinx Communities and the Role of CBO’s in Social Change
The purpose of this course to create a Latino Studies/Service Learning ABCS course that cultivates dialogue and knowledge about the social, political, cultural and historical complexities of the Latinx experience in the United States (Philadelphia in particular) and the roles Latinx CBO’s play in meeting the needs of Latinx communities and in impacting social change.

1 Course Unit

LALS 4387 Black Feminist Approaches to History & Memory
Topics vary. Black Feminist Approaches to History & Memory - The term black feminism emerged in public discourse amid the social, political, and cultural turbulence of the 1960s. The roots of black feminism, however, are much older, easily reaching back to the work of black women abolitionists and social critics of the nineteenth century. The concept continued to grow and evolve in the work of twentieth century black women writers, journalists, activists, and educators as they sought to document black women’s lives. Collectively, their work established black feminism as a political practice dedicated to the equality of all people. More recently, black feminism has been deployed as a tool for theoretical and scholarly analysis that is characterized by an understanding that race, class, gender, and sexuality are inextricably interconnected. Using materials such as slave narratives, social criticism, and archival sources, this course will explore the theoretical and practical applications of black feminist thought in nineteenth and twentieth century North American culture and politics. In particular, we will consider the symbols and practices (storytelling, myth-making, art, archival research) that black women use to document lives. We will ask: how do these methods of documentation inform our understanding of the past and the production of historical knowledge? How can we understand black feminism as both theory and practice? And what are the implications of black feminist approaches for current research and scholarship? We will give particular attention to concepts such as gender, race, memory, the archive, and embodied knowledge to complicate our understanding of historical documentation, epistemology, and authenticity. The course material will include scholarship by Harriet Jacobs, Audre Lorde, Saidiya Hartman, Hazel Carby, Hershini Young, Evelyn Brooks Higginbotham, Toni Morrison, and others. (Image: From In Praise of Shadows, Kara Walker (2009). See the Africana Studies Department’s website at https://aficana.sas.upenn.edu for a description of the current offerings.

LALS 4517 One Series—Love and Rockets: The Great American Comic Book
This One Series course explores Love and Rockets, an anthology comic book series created by the collective known as Los Bros Hernandez and published continuously since 1978. We will approach the series through the lenses of Comics Studies and Latinx Studies. Is it true, as one scholar says, that, “Love and Rockets is the closest thing we have to ‘The Great American Comic Book?’” How does the series continue or challenge the legacy of the underground comix movement of the 1960s and 1970s? We will consider how Love and Rockets incorporates elements of the anarchist LA punk scene, challenges notions of Latinidad, and expands the visual vernacular of gender & sexuality in American comics. Alongside two representative volumes from Love and Rockets, we will read criticism, watch documentaries, incorporate our own comics research, and write comics of our own. Assignments will include brief research exercises and short writing in various forms. For the final projects, students will have the choice of a critical essay or creative project. Students will come away from the class with increased visual literacy as well as a basic theoretical framework for ethnic studies writ large.
Also Offered As: ENGL 4517

LALS 4910 The Inclusive City: Participatory Design at Taller Puertorriqueno
The Inclusive City: Participatory Design at Taller Puertorriqueno seminar will provide students in and beyond the Architecture department with the opportunity to learn from and with Taller Puertorriqueno about community, spacemaking, and memorialization in the built environment. Students will learn about a neighborhood and engage in collaborative participatory design, engaging primary sources in the Taller archives, and working on a collaborative design project. Starting from a general (region-urban) to particular (neighborhood) methodology research on site across several categories, and engaging primary sources in the Taller archives, the students will generate relational territorial cartographies and mappings, allowing them to develop a master architectural plan that includes urban strategies, as well as dynamic processes of community development. As a truly interdisciplinary course, students will utilize design concepts, historical methods, and ethnoriclal lenses of analysis to collaborate with Taller Puertorriqueno to develop targeted architectural solutions that align with the organization’s programmatic goals.

1 Course Unit

LALS 5010 Norte, Desierto, Frontera: Countertopographies of the NAFTA Era
Analyzing Mexican, Central American, and Chicana/o cultural production, this course examines the uneven reconfiguration of the U.S.-Mexico borderland in the era of the North American Free Trade Agreement. Drawing from critical geography, migration and border studies, and the environmental humanities, we consider how different cultural artifacts have imagined, projected, and challenged the political and socioeconomic boundaries of the Americas. Likewise, we consider how trans-border bodies, spaces and species can help us interrogate the history of the nation-state as well as the social, emotional, and economic toll experienced on both sides of the border from the early 1990s onward. Interdisciplinary in methods and scope, this course strives to develop an understanding of how cultural production responds to and, at the same time, participates in the process of the production of social space. Particularly, we consider how the production of desert and border as sites of socio-ecological devastation prefigures a new paradigm in the relationship between the environment, migration, and the global circulation of capital. Special attention is given to demographic trends and new patterns of forced migration that arose in the aftermath of the so-called Mexican “War on Drugs” (2006). Assignments include presentations, discussion facilitation, and a seminar paper. Alongside readings and class discussions, students will work as a group on a digital timeline/story map using a platform of their choosing (StoryMapJS, ArcGIS StoryMaps, etc.) The goal is to create an annotated cartography of North America’s recent history. The class is structured around four units, each refers to a particular concept that specifies the relation between spatial literary studies and the regional integration of North America: 1. North. Focusing on the entanglements between industrial agriculture and the rise of the maquila industry, we ask how labor and labor relations across the U.S.-Mexico border evolved during the last decade of the 20th century. We consider how urbanization and patterns of residential differentiation affected populations on both sides of the border, while allowing for the consolidation of Northern Mexican and Chicana/o identities. 2. Desert. Moving beyond the city as a spatial referent, we consider how the representation of the desert biome in contemporary Mexican and Central American narratives refracts the increased use of violence as a stabilizing agent for capital accumulation. We consider the novel’s ecological imagination and the valences of form to think through the ecological crisis associated with the urban climatic. 3. Border. Studying how neoextractivism intersects with new patterns of international forced migration, we analyze changes in public space, gender, and ethnic identities derived from the contemporary proliferation of borders (political, economic, geographical). We consider the role cultural production plays in the changing border and migration regimes across the Americas. 4. Countertopographies. Finally, we study how memorialization, nostalgia, and loss in contemporary Mexican, Central American, and Chicanos/a cultural production become spatial vectors that extend the sense of belonging in geographical form. We consider how literary form delineates a countertopography to NAFTA’s ideal of globalization.

LALS 5020 Brujas and Blackness: Transnational Feminist Perspectives of AfroLatinidad

Blackness and brujería are taboo topics within Latinx communities; both typically connote negative imagery and are actively avoided. Recently, the bruja identity has been reclaimed by many AfroLatinx women who see it as an outward expression of their AfroLatinidad and source of personal empowerment. Lara (2005) describes this as a bruja positionality – "the re-membering, revising, and constructing of knowledge as well as participation in other forms of social change...built on healing the internalized desconocimientos that demonize la Bruja and the transgressive spirituality and sexuality that she represents" (p 13). Latinx spiritual practices such as espiritismo, Santeria, Palo Monte, among others, will become avenues through which will explore key themes in Black/Latina/Chicana feminisms, including the politics of representation, stigmatization, multiple forms of state and interpersonal violence, intersecting forms of oppression, economic justice, reproductive justice, queerness/sexuality/lesbianism, and strategies of empowerment and resistance. Through a variety of course materials – academic articles, personal reflections, performance, and art – we will critically examine the construction of Afro-indigenous feminist identities within the contexts of Latin America and the diaspora.

LALS 5030 Race in Latin America

In this course, we will examine historical, scholarly and community narratives about race and racialized communities in Latin America. Course texts and discussions will center Black and Indigenous histories and contemporary identities across the region. Our journey this semester will span from the pre-Columbian era to the present day, and will cover multiple Latin American geographies: the Caribbean, Central America, and South America. While we will focus most closely on the Spanish-speaking populations, we will also incorporate texts and discussion about populations speaking other languages in the region (Portuguese, French, Quechua, Kreyol, and English, for example). Finally, the diasporas of Latin America, particularly in the United States, will also figure in the discussions as sites of Latin American convergence, community and interaction in which race functions in various ways. As such, we will engage with a wide range of texts including books, articles (scholarly and popular), video, primary sources, and interviews.

LALS 5050 Women and Urban Struggles in Latin America

In Latin America, 80% of the population lives in a city. As many of these cities enter the worldwide competition for attracting networks and capitals—and to join the select club of the so-called global cities—many city residents become progressively dispossessed and excluded to the peripheries, where urban services are rarely adequate. Power relations of class, race, and gender play an essential role in how dispossession is orchestrated in the city and experienced by its residents. This course focuses on how women, specifically, find ways to “endure” in the cities of Latin America, exploring different cases of urban struggles led by women. Across the region, many have been pointing out the extraordinary leadership of women in a wide variety of political struggles - from occupying public places, to denouncing the disappearance of loved ones, and to community organizing that helps build necessary infrastructure in their neighborhoods. Women are also at the forefront of environmental and ecological transformations, leading initiatives to green their city through urban agriculture, reforestation, recycling, and compost projects. Addressed through a holistic approach to caring, these initiatives are embedded in broader struggles for housing, security, and wellness, specifically in the urban peripheries. The contingency of these projects is, at their core, multifaceted: they are typically part of women’s implication in popular education, activism, and human rights defense. During this course, we will explore and analyze how the specific urban contexts of Latin America affect women and their political subjectivities and how, through their struggles, they play an essential role in re-shaping their cities.

LALS 5100 Inner Outer Space Travel Writing: A Creative Writing Workshop

Inner Outer Space Travel Writing is a creative writing workshop focused on writing work within the science fiction/speculative fiction/alternative futurities, science/land/travel writing, and creative-critical nonfiction traditions. Students will work within a variety of genres, with an emphasis on the essay, the short story, screen/tele-play, play, blog and performance. Students will read recommended texts from within their particular interests, and the course will culminate in both a public performance and dissemination/publication via another media platform (zine, website, podcast, etc). All levels of experience, from none/first-time writer to published writers, are encouraged to register for the course.

LALS 5110 Ethics, Archaeology, and Cultural Heritage
This seminar will explore some of the most important issues that are now a central part of archaeological, anthropological and historical research throughout the world. The identification and control of cultural heritage is a central part of the framework for research within other communities. Issues for this course will also include cultural identity, human rights, repatriation, colonialism, working with communities and many other topics. Field research today must be based upon a new series of ethical standards that will be discussed and examined within this class. Major topics include: cultural heritage - definitions and constructs, cosmopolitanism and collecting, archaeology and looting, cultural heritage preservation, museums - universal and national, museum acquisition policies, cultural identity, international conventions (including underwater issues), national laws of ownership, community based development, cultural tourism, development models, and human rights.

LALS 5140 Writing Towards Transformation
Writing Towards Transformation is a critical and creative writing workshop focused on developing works across genres that express and elaborate upon current and historical conditions of crisis and injustice. Using guided meditation, critical feedback and healthy, ethical discussion, the students of the class will develop manuscripts of poems, short stories, essays, plays and/or screenplays that in some way articulate their analysis of the present and the past towards a transformative future. We will read essays, manifestos, theater and fiction as well as view films that will hopefully inspire each student to develop texts and scripts of hope. Writers used as models of inspiration will include Gary Indiana, Valerie Solanas, June Jordan, Bertolt Brecht, Cherrie Moraga, Leslie Feinberg and Toni Cade Bambara, among many others. This is a graduate level course open to undergraduates by permission of the instructor.

LALS 5220 Transitional Justice in Latin America
Latin America, a region where many countries transitioned to democracy since the mid-20th century or emerged from years of civil war, often serves as a model for transitional justice, the process of dealing with past human rights abuses. This online class explores the nature, history, and context of transitional justice across the region through class dialogue on film, case studies, first-hand accounts, and scholarly research. Engaging in comparative analyses of countries including Argentina, Chile, Brazil, Guatemala, El Salvador, Peru and Colombia, students will consider such topics as the extent to which countries have moved from impunity to accountability for previous human rights violations, the effectiveness of transitional justice mechanisms, such as trials versus truth commissions, and the theoretical, empirical, and historical arguments for transitional justice. Finally, students will learn about transitional justice models and processes worldwide, including the case of South Africa and the workings of the International Criminal Court, and analyze them according to the Latin American examples.
1 Course Unit

LALS 5240 Latinxs and the Law
Based in concepts and principles of Constitutional law and critical race theory, this course explores the interpretation and impact of seminal court cases in U.S. history as applied to Latinxs in the United States and abroad. With a particular focus on the 20th century, students will examine how court decisions have affected civil rights, immigration policies, welfare, political incorporation, education, and other important issues affecting Latinxs. Students will also explore additional themes including the status and treatment of Latinxs in the criminal justice system, representation of Latinxs in the judiciary and how Supreme Court decisions have affected U.S. foreign policy with Latin America.
Summer Term
1 Course Unit

LALS 5270 Market Women, Madames, Mistresses and Mother Superior
Market Women, Madames, Mistresses & Mother Superior studies gender, labor, sexuality, and race in the Caribbean. In our historical examination of primary source documents alongside literature, and popular media, we will question some of the iconic representations of Caribbean and Latin American women in order to understand the meaning, purpose and usages of these women's bodies as objects of praise, possession, obsession and/or ridicule by communities, governments and religions within and outside of the region. Beginning in the late-18th century and ending with contemporary migration narratives, this course considers the relationship between slave society and colonial pasts on gender performance in the modern Caribbean, Latin America, and their diasporas.

LALS 5300 Latin American Sexual Movements
This course explores significant sexual movements in Latin America that destabilized the idea of nation formation and its frames of citizenship. From the 1960s and on, we will analyze and study homosexual, lesbian, and feminist irruptions of contestation from Argentina, Chile, Mexico, and U.S. and how their interruption in the social, public, and political sphere changed sexual and reproductive rights.
Summer Term
Also Offered As: GSWS 5300
1 Course Unit
LALS 5420 Parallel Plagues: Infectious Diseases and their Control in Peru and The United States
Infectious agents continue to emerge, killing and harming humans and animals with unrelenting regularity. The emergence and control of these agents are, in some ways, remarkably different in different geographies. In other ways the patterns and consequences of infectious agents are very similar. The course will be structured around a series of pairings of infectious disease problems that affect Peru and the United States. Some pairings will be in terms of the agents themselves; others will be more thematic. In each case we will trace two lines of inquiry, one in each country, but always with an eye to the harmonics—where these lines resonate—even if they do not interact. The primary goal of the course is to investigate the historical, political and economic forces driving infectious disease in Peru and the US. A co-primary goal is to bring students and faculty from Penn and our partner institutions in Peru, Universidad Peruana Cayetano Heredia, to work their way through topics in infectious disease control, which are inherently challenging. The course will be taught in English but a workable knowledge of Spanish will be helpful.

LALS 5430 Migration, Displacement, and Education
This course examines the effects of migration (forced and voluntary) on education in a variety of contexts across the world (including the United States). The course reviews sociological and anthropological theories of immigrant incorporation and inclusion. Such frameworks are then applied to migration through case studies of im/migrants, refugees, and displaced persons in order to consider educational practices, programs and policies that address the effects of migration and displacement on education in diverse contexts.
Fall
Also Offered As: EDUC 5430
1 Course Unit

LALS 5570 Archaeology of Landscapes
Traditionally, archaeological research has focused on the "site" or "sites." Regional investigation tends to stress settlement pattern and settlement system determined through archaeological site survey. This seminar will stress the space between the sites or "points" on the landscape. Most previous attempts at "landscape archaeology" tended to focus on the relationship of sites and the natural environment. This course will highlight the cultural, "anthropogenic," or "built environment"—in this case human modification and transformation of the natural landscape in the form of pathways, roads, causeways, monuments, walls, agricultural fields and their boundaries, gardens, astronomical and calendrical alignments, and water distribution networks. Features will be examined in terms of the "social logic" or formal patterning of cultural space. These can provide insights into indigenous structures such as measurement systems, land tenure, social organization, engineering, cosmology, calendars, astronomy, cognition, and ritual practices. Landscapes are also the medium for understanding everyday life, experience, movement, memory, identity, time, and historical ecology. Ethnographic, ethnohistorical, and archaeological case studies will be investigated from both the Old and New Worlds.

LALS 5640 Poverty, Race and Health
This course is designed to introduce students to current literature on race/ethnic difference in health and mortality in the United States, covering such topics as explanations for why some race/ethnic groups fare better than others, how inner city poverty and residential segregation may contribute to racial/ethnic differences in health outcomes, and health of immigrants versus native-born populations. Current policy debated and recent policy developments related to health are also briefly discussed. The course is organized as a seminar with a combination of lectures and class discussions.
Also Offered As: SOCI 5640
1 Course Unit

LALS 5680 Contemporary Immigration in the U.S.
While this course will engage immigration issues more broadly, we will centrally focus on questions of immigrant incorporation and the effects of U.S immigration policy. We will start with the broad question of what should be done about the estimated 10.5 million undocumented immigrants living in the United States. Then, we will take a deeper look at the ways in which macro-level forces such as our laws and institutions shape the micro-level, everyday lives of undocumented immigrants and those living in mixed-status families. We will pay close attention to the circumstances of young people, including their experiences of exclusion and belonging across social and educational contexts. More specifically, we will examine how these factors might affect young people's development, schooling experiences, academic trajectories and aspirations, assimilation and ethnic identity, family dynamics, civic engagement, and employment.

LALS 5792 Biography and Art History
Beginning with the ancient Greeks, people have created specific biographical structures as a way to understand and explain the artistic process. Artists have often been labeled as natural prodigies possessing creative powers on par with the divine. This seminar will examine the role that biography plays in the assessment of visual art and the creative process over time and across European and American culture. During the semester we will read art historical texts, watch biographical films, and debate the historical and post-structuralist critical theory that has helped to shape the current cultural construction of the artist. Throughout the seminar we will discuss the underlying debates around these various approaches to biography. This course is open to graduate students and undergraduate students with permission of the instructor.

1 Course Unit
LALS 5830 Art, Sex and the Sixties
With a distinct emphasis on performance, film, installation art, video and painting, this course explores the explosion of body-based, nude and erotic work from the 1950 to the 1970s, with particular focus on the 1960s. And it seeks to explore this dynamic not only within the familiar confines of North America and Europe but within Latin America and Asia, too, in what was a nearly simultaneous international emergence of the erotic as a political force in the art world. Reading a range of key voices from Frankfurt School philosopher Herbert Marcuse, to performance artists Carolee Schneemann and Yoko Ono, Neo-Freudian theorist Norman O. Brown and Brazilian theorist and poet Oswald de Andrade, we will examine how and why sexuality became a privileged form of politics at this historical juncture in a range of different contexts across the globe. We will pay particular attention to how and why an art about sex became a camouflaged form of political dissidence in the confines of repressive political dictatorships, as were then rising in Brazil, Argentina and ultimately Chile. Students interested in feminist, gender or queer theory, Latin American Studies, social revolution, performance studies, post war art and Frankfurt School thought should find the course particularly appealing, but it assumes no background in any of these fields.

LALS 6106 Democracy in Comparative Perspective
This graduate seminar focuses on issues of political regime change and democratization, as studied in the comparative politics literature. The course is structured in three parts. In the first part, we scrutinize conceptualizations and measurements of democracy that are used in comparative politics. In the second part, we study political economy and comparative historical theories about the causes of democratization.
We assess the relative strength of theories that focus on economic development, inequality (whether of income, land, or labor), social class actors, insurgency, institutions, and/or strategic choices and interactions. In the final part of the course, political regimes in action, we study different aspects of democratization as they relate to current and salient issues of comparative politics.
Not Offered Every Year
Also Offered As: PSCI 6106
1 Course Unit

LALS 6550 Black Political Thought: Difference And Community
This course is designed to familiarize graduate students with some of the key texts and debates in Africana Studies concerning the relationship between racial slavery, modernity and politics. Beginning with the Haitian Revolution, much of black political thought (thinking and doing politics) has advocated group solidarity and cohesion in the face of often overwhelming conditions of servitude, enslavement and coercion within the political economy of slavery and the moral economy of white supremacy. Ideas and practices of freedom however, articulated by political actors and intellectuals alike, have been as varied as the routes to freedom itself. Thus, ideas and practices of liberty, citizenship and political community within many African and Afro-descendant communities have revealed multiple, often competing forms of political imagination. The multiple and varied forms of political imagination, represented in the writings of thinkers like Eric Williams, Richard Wright, Carole Boyce Davies and others, complicates any understanding of black political thought as having a single origin, genealogy or objective. Students will engage these and other authors in an effort to track black political thought's consonance and dissonance with Western feminisms, Marxism, nationalism and related phenomena and ideologies of the 20th and now 21st century.

1 Course Unit

LALS 6560 Politics and Social Movements in Contemporary Afro-Latin America
Over the past two decades there has been an explosion of research into Afro-Latin American populations in South America and the Caribbean. During this period a generation of scholars who were largely unsatisfied with the research methods and normative agendas of many scholars, activists and politicians of prior eras began to pose distinct research questions and methodological approaches to various subject matter. Afro-Latin identification and identity (as both separate from and entangled with national identity) is a major theme in the new literature. Race, racism and inequality, Afro-Latin involvement in social movements, political parties and other forms of political articulation have also been prominent themes. In previous eras, scholars largely emphasized various iterations of purportedly racial and ostensibly cultural mixture such as Mestizaje and Democracia Racial to explain why race and racism did not play a prominent role in social and political mobilization. Contemporary sociologists and anthropologists, however, have found ways to identify attitudes, behaviors, demographic and socio-economic indicators that belie imagery and ideologies of social and political equality achieved through miscegenation (cultural and physical) in Latin America.

LALS 6971 Afro-Latin America
In-depth analysis of the black experience in Latin America and the Spanish, French and English-speaking Caribbean, since slavery to the present. The course opens with a general examination of the existence of Afro-descendants in the Americas, through the study of fundamental historical, political and sociocultural processes. This panoramic view provides the basic tools for the scrutiny of a broad selection of literary, musical, visual, performance, and cinematic works, which leads to the comprehension of the different ethical-aesthetic strategies used to express the Afro-diasporic experience. Essential concepts such as negritude, creolite, and mestizaje, as well as the most relevant theories on identity and identification in Latin America and the Caribbean, will be thoroughly examined, in articulation with the interpretation of artistic works. Power, nationalism, citizenship, violence, religious beliefs, family and community structures, migration, motherhood and fatherhood, national and gender identities, eroticism, and sexuality are some of the main issues discussed in this seminar.

LALS 9215 Genealogies of Race and Language in Educational Research
This course explores the historical and contemporary co-construction of race and language in educational research. As opposed to treating race and language as self-evident and universal concepts, the course adopts a genealogical perspective that examines their historical development within the context of European colonialism and critically analyzes the legacy of these colonial ideologies in contemporary educational research, policy and practice. Students engage with a range of foundational theoretical and methodological texts to develop a robust understanding of the historical and contemporary relationship between race and language. Students also read, analyze and critique educational research that has sought to apply these theoretical and methodological insights. The course will culminate in students undertaking genealogical research projects on questions of race and language connected to their own educational research interests.

**LEAD 1040 Professional Communication and Personal Development**

This writing-intensive course is designed to enhance each student's ability to communicate effectively in the workplace and other professional settings. Students will critically analyze texts and related to effective leadership and leaders and, at the same time, develop their own, individualized leadership traits and skills profile. A culminating biographical analysis paper requires students to compare and contrast their own distinctive leadership traits and skills to those of an admired leader. The course concludes with each student crafting a 5-year leadership and communication career plan.

1 Course Unit

**LEAD 2020 Leadership Lessons from Social Sciences**

Drawing on several social science fields and subfields, from economics to psychology and more, this course is an introduction to leadership as studied and applied in various scholarly disciplines in the social sciences. Academic texts will introduce students to several social science fields, while case studies will offer them the opportunity to consider the practical and organizational applications of the theories being studied. Students' papers will synthesize the material of the course in thoughtful ways, and apply it to to problems of leadership. You have the option to enroll in the individual course without committing to the entire Certificate in Leadership and Communication, enjoying the flexibility and expertise offered by Penn LPS Online to suit your schedule and interests.

1 Course Unit

**LEAD 2030 Leadership Lessons from Humanities**

Using philosophy, literature, religious studies and biographies of famous public leaders, students conduct a searching examination of competing ideas and concepts regarding leadership, moral reasoning and ethical action. Students reflect on the complexities of problem-solving through an ethical lens and further define their individual interpretations and approaches to ethical decision-making. As an integral part of this simultaneously academic and practical exploration of leadership ethics, students co-author a mini-biography assessing the ethics of a famous (or infamous) public leader. Prerequisite: This course counts toward the Certificate in Leadership and Communication and degree concentration.

Prerequisite: LEAD 1010 OR LEAD 3040

1 Course Unit

**LEAD 3040 Professional Communication and Personal Development**

This writing-intensive course is designed to enhance each student's ability to communicate effectively in the workplace and other professional settings. Students will critically analyze texts and related to effective leadership and leaders and, at the same time, develop their own, individualized leadership traits and skills profile. A culminating biographical analysis paper requires students to compare and contrast their own distinctive leadership traits and skills to those of an admired leader. The course concludes with each student crafting a 5-year leadership and communication career plan.

1 Course Unit

**LEAD 3080 Leadership and Public Administration**

In LEAD 3100, Leadership and Public Administration, students are introduced to both classic and contemporary studies of how public laws and policies are translated into effective action, how and why government reform efforts succeed or fail, and complete an original case study on the ongoing revolution in public management theory and practice favoring public-private partnerships and collaborative governance.

1 Course Unit

**LEAD 3200 Leadership and Business Organization**

In LEAD 3200, Leadership and Business Organization, students interactively and critically study five of the most influential books ever published regarding why for-profit enterprises succeed or fail, do an original 'management consulting' report on an actual business firm; and write a final paper on what, if any, particular individual styles or institutional structures predictably and reliably enable one to 'succeed in business.'

1 Course Unit
LEAD 3300 Leadership and Nonprofit Management
In LEAD 3300, Leadership and Nonprofit Management, students are immersed in research that profiles America's vast and varied, large and growing independent sector, exploring what works (and what doesn't) when it comes to leadership and innovation in the non-governmental, not-for-profit organizations (charities, churches, private colleges, hospitals, and others) that, even if only counting the about 1.4 million registered with the IRS, now have more $2 trillion a year in annual revenues, more than $5 trillion in total assets, and more than 14 million full-time employees.
1 Course Unit

LEAD 4000 Global Leadership and Problem-Solving
According to research sponsored by the Organization for Economic Cooperation and Development (OECD), over the last 200 years, human beings in virtually every corner of the globe have become ever more likely to live longer, healthier, wealthier, and more personally satisfying lives. But global progress in improving human well-being has been neither linear nor universal. For instance, measured at living on just $5.50 a day per person, nearly 3.5 billion people still live in extreme poverty. Moreover, humankind now faces several unprecedented existential threats to human life itself such as global warming and the persistence or spread of drug-resistant infectious diseases including ones once thought to be nearly eradicated. In this course, students are introduced to multiple and competing concepts and empirical theories on each of two interrelated questions regarding global leadership and problem-solving: (1) What, if any, particular approaches (for example, "collaborative governance" or "boundary-spanning leadership") might predictably and reliably increase the odds that the next century-long chapter in the annals of global human well-being—the chapter to be written between now and the decade that will begin in 2120—will be a tale of greater wealth, health, and happiness for all or most people worldwide? (2) Under what, if any, conditions can diverse institutions—families and social networks; neighborhood and community groups; nonprofit or social sector organizations; for-profit firms; and local, national, and transnational government institutions—act, either independently or in tandem with each other, to maintain or improve human well-being? Each student quasi-independent researches and writes a capstone research paper describing, analyzing, and assessing an existing policy or program pertaining to one of the following three challenges: elder care with a focus on China; education with a focus on Africa; or economic development with a focus on Latin America. The prerequisites for this course are LEAD 1010, LEAD 1040/3040, LEAD 2020, LEAD 2030, LEAD 3100, LEAD 3200, and LEAD 3300, plus one of the following: DATA 1010, MTHS 1000, MTHS 2000, or MTHS 2200. Prerequisite: LEAD 1010 AND LEAD 1040 AND LEAD 3040 AND LEAD 2020 AND LEAD 2030 AND LEAD 3100 AND LEAD 3300 AND (DATA 1010 OR MTHS 1000 OR MTHS 2000 OR MTHS 2200)
1 Course Unit

Legal Studies & Business Ethics (LGST)

LGST 1000 Ethics and Social Responsibility
This course explores business responsibility from rival theoretical and managerial perspectives. Its focus includes theories of ethics and their application to case studies in business. Topics include moral issues in advertising and sales; hiring and promotion; financial management; corporate pollution; product safety; and decision-making across borders and cultures.
Fall or Spring
Mutually Exclusive: LGST 1008
1 Course Unit

LGST 1008 Ethics and Social Responsibility
This course explores business responsibility from rival theoretical and managerial perspectives. Its focus includes theories of ethics and their application to case studies in business. Topics include moral issues in advertising and sales; hiring and promotion; financial management; corporate pollution; product safety; and decision-making across borders and cultures.
Mutually Exclusive: LGST 1000
1 Course Unit

LGST 1010 Law and Social Values
This course presents law as an evolving social institution, with special emphasis on the legal regulation of business in the context of social values. It considers basic concepts of law and legal process, in the U.S. and other legal systems, and introduces the fundamentals of rigorous legal analysis. An in-depth examination of contract law is included.
Fall or Spring
Mutually Exclusive: LGST 1018
1 Course Unit

LGST 1018 Law and Social Values
This course presents law as an evolving social institution, with special emphasis on the legal regulation of business in the context of social values. It considers basic concepts of law and legal process, in the U.S. and other legal systems, and introduces the fundamentals of rigorous legal analysis. An in-depth examination of contract law is included.
Mutually Exclusive: LGST 1010
1 Course Unit

LGST 2020 Law of Corporate Management and Finance
This course provides an introduction to the law of corporate management and finance. The course covers the roles of directors and managers under state corporate law and the federal securities laws. It also considers the rights and responsibilities of other major stakeholders including shareholders, creditors, and employees. Particular attention is given to the law of mergers and acquisitions. Focus in on public corporations, but application of the law to venture firms is also discussed. Alternative organizational forms, such as LLCs, partnerships, and DAOs, are considered. Format: Socratic conversation and some lecture.
Fall or Spring
Mutually Exclusive: LGST 8020
1 Course Unit
LGST 2040 Real Estate Law
This course examines the fundamentals of real estate finance and development from a legal and managerial perspective. The course serves as a foundation course for real estate majors and provides an introduction to real estate for other students. It attempts to develop skills in using legal concepts in a real estate transactional setting. The course will be of interest to students contemplating careers in accounting, real estate development, real estate finance, city planning, or banking. The main topics covered may include the following: land acquisition, finance; choice of entity; tax aspects; management (leasing, environmental); disposition of real property (sale of mortgaged property, foreclosures, wraparound mortgages, sale-leasebacks); and recent legal developments. Lectures and class discussion required.
Fall or Spring
Also Offered As: REAL 2040
1 Course Unit

LGST 2050 Innovation, Marketing Strategy, and Antitrust
This course considers business strategy and law, particularly the role of antitrust and intellectual property law in managing innovation. We will examine several highly innovative firms in technology rich areas, considering how they adapt their strategies to the competitive and legal environment, and asking whether antitrust law promotes or hinders innovation. The strategies of both current firms such as Uber, Google, Apple, and Microsoft and historical examples such as American Can Company, Standard Oil, Brown & Williamson Tobacco Co., and Kodak will provide context and source materials for the course. We will pay special attention to the role of intellectual property rights in fostering or hindering innovation. The legal focus is primarily on U.S. law, but the course will occasionally address foreign regimes as well. The course is useful to students interested in marketing or competitive business strategy, and, more broadly, to anyone desiring to understand the legal and public policy issues relating to competition and innovation.
Fall or Spring
Also Offered As: MKTG 2600
1 Course Unit

LGST 2070 The Sports Industry: Business and Legal Aspects
This course examines various business disciplines as they apply to the sports industry. The course provides the student with an overview of the business of the intercollegiate, Olympic and professional sports enterprises. In addition, the course investigates the business related issues encountered by managers of sports organizations and covers how business principles can be applied to effectively address these issues.
Fall or Spring
1 Course Unit

LGST 2080 The Law at Work: Employment Law for Managers
This course is based on the principle that knowledge and understanding of employment law facilitate (1) promotion of a workforce with a high degree of commitment to reaching business goals, (2) the development of practical business solutions to problems arising in the workplace, (3) effective human resources policy and procedures that comply with applicable laws, and (4) justice for workers. The course provides students with an introduction to the law of the workforce and examines the balance between business goals and employment law compliance. The course examines the various employment laws with which businesses must comply and the legal rights and responsibilities of employees and employers. The emphasis is on laws concerning equal employment opportunity with respect to discrimination and harassment because of sex, race, national origin, religion, sexual orientation, age, disability and other characteristics protected by workforce laws; constitutional -- and especially free speech -- rights at work; work-related privacy including investigations, electronic communication and social media; classifying workers in the gig economy; diversity and affirmative action; and the legal and regulatory environment regarding immigration, wage and hour, leaves of absence, hiring, termination and afterwards; and labor/management relations and collective bargaining.
Fall or Spring
Mutually Exclusive: LGST 8080
1 Course Unit

LGST 2120 Economic Analysis of Law
This course provides an introduction to the economic analysis of law and legal institutions. Our goal is develop intuitions about the ways law simultaneously shapes and responds to private behavioral incentives. In the first half of the course, we will survey the application of key economic concepts to basic features of the Anglo-American common law of property, contract, and tort. In the second half of the course, we will use the tools developed in our survey to focus in depth on the law of intellectual property.
Fall or Spring
Also Offered As: BEPP 2120
1 Course Unit

LGST 2130 Legal Aspect of Entrepreneurship
This practically oriented course examines the critical legal issues confronting start-ups with a focus on innovation and disruption. Cutting edge topics include blockchain, fintech, AI, digital and mobile based issues. Students will learn to use the law to manage risk, deploy resources and maximize value. The course covers the entire lifecycle of a business, including confidentiality, non-competition and invention assignment clauses, intellectual property (IP) including patent, trade secrets, copyrights and trademarks, tax advantages of limited liability companies (LLC) vs. corporations or partnerships, securities law strategy for raising angel financing, convertible debt and venture capital (covering SAFEs and KISSes), independent contractor vs. employee concerns, discrimination laws, merger and acquisition exit plans, as well as restructuring and bankruptcy. Students will emerge from the course with the skills and tools to draft term sheets and contracts, negotiate deals tailored to their business models, as well as mitigate liability via risk-protective policies, insurance and management of litigation. The course fulfills elective requirements for 5 Concentrations, Majors, or Minors: * Wharton Legal Studies and Business Ethics; * Wharton Entrepreneurship and Innovation/Management; * Wharton Social Impact and Responsibility; * SAS Legal Studies Minor; * SAS STSC Major (Science, Technology and Society)--with permission.
Fall or Spring
1 Course Unit
LGST 2140 International Business Transactions
This course aims to familiarize students with and prepare students for the conduct of international transactions. Students will work their way through a series of hypothetical trade transactions, placed against a background of concepts and general theories. Students will take a hypothetical firm through a series of possible transnational investments, again after discussion of concepts and general theories. Throughout, the course will discuss issues of importance to emerging economies. Students should be able to make thoughtful choices rather than simply reciting bullet points about international business transactions.
Not Offered Every Year
Mutually Exclusive: LGST 8140
1 Course Unit

LGST 2150 Environmental Management: Law & Policy
This course provides an introduction to environmental management by focusing on foundational concepts of environmental law and policy and how they affect business decisions. The primary aim of the course is to give students a deeper practical sense of the important relationship between business and the natural environment, the existing legal and policy framework of environmental protection, and how business managers can think about managing their relationship with both the environment and the law.
Fall or Spring
Mutually Exclusive: LGST 8150
1 Course Unit

LGST 2160 Emerging Economies
This course explores important issues in conducting business internationally in and with emerging economies. Much of the course attempts to define emerging economies and to understand the changes occurring in these countries. The course also examines the position of emerging economies in the global context, and how broad social issues affect the development of emerging economies and the ability to establish relationships or conduct business in emerging economies.
Fall or Spring
1 Course Unit

LGST 2180 Diversity and the Law
The goal of this course is to study the role the law has played, and continues to play, in addressing the problems of racial discrimination in the United States. Contemporary issues such as racial profiling, affirmative action, and diversity will all be covered in their social and legal context. The basis for discussion will be assigned texts, articles, editorials and cases. In addition, interactive videos will also be used to aid class discussion. Course requirements will include a term paper and class case presentations.
Fall or Spring
Also Offered As: AFRC 2180
1 Course Unit

LGST 2190 Law and Policy in International Business
This course introduces students to the legal frameworks for regulating international business - national, regional, and international. Topics include mechanisms for dispute resolution, different standards on assigning nationality, jurisdictional and choice of law problems, controversies regarding the treatment of incoming foreign direct investment and expropriation of foreign-owned businesses, patterns in extraterritoriality, problems of clashing legal standards affecting areas like labor and the environment, and projects for creating more uniform rules governing the conduct of international business. Throughout students will be encouraged to evaluate the policy dimensions of laws and to develop their own critical perspectives regarding these.
Fall or Spring
1 Course Unit

LGST 2200 International Business Ethics
This course is a multidisciplinary, interactive study of business ethics within a global economy. A central aim of the course is to enable students to develop a framework to address ethical challenges as they arise within and across different countries. Alternative theories about acting ethically in global environments are presented, and critical current issues are introduced and analyzed. Examples include bribery, global sourcing, environmental sustainability, social reports, intellectual property, e-commerce, and dealing with conflicting standards and values across cultures. As part of this study, the course considers non-Western ethical traditions and practices as they relate to business.
Fall or Spring
1 Course Unit

LGST 2210 Constitutional Law and Free Enterprise
The course explores the fundamentals of U.S. constitutional doctrine and adjudication, with an emphasis on commercial and business issues and implications of constitutional law. The course starts by considering the Constitution and the structure and relationship of the governmental entities it establishes and upon which it depends. Special attention is given to the role of the federal courts, especially the Supreme Court, in interpreting and applying constitutional principles. From this foundation, the course moves on to examine in detail the major economic and business implications of constitutional law in different eras of the nation’s history. A core theme is how historical events and changing notions of public policy have affected and been affected by the evolution of constitutional doctrine.
Fall or Spring
1 Course Unit

LGST 2220 Internet Law, Privacy, and Cybersecurity
This course examines the complex and often novel legal issues surrounding the development and current state of the Internet, information privacy, and cybersecurity. Topics include federal- and state-level regulation and enforcement of Internet and privacy legal concepts, data breaches, online privacy protections, how to legally manage a borderless Internet, and the liability of intermediaries such as network operators, social media services, and search engines.
Fall or Spring
Also Offered As: OIDD 2220
1 Course Unit
LGST 2230 Securities Regulation
The course examines the federal securities laws and the operation of the Securities Exchange Commission. The legal responsibilities of corporate managers, accountants, underwriters, and broker-dealers, occasioned by the securities regulatory scheme, will be investigated. Students will be encouraged to evaluate, from a managerial perspective, the various aspects of securities regulation studied. The course will discuss the recent financial crisis and ask the question whether enhanced securities regulation will prevent such a crisis in the future. The material covered in the course will provide familiarity with the basic legal structure of securities law and will assist in understanding the current policy issues in securities law. The course should help students to develop the ability to read and learn further in the field and to improve their effectiveness of communication with attorneys. It will also suggest ways of detecting instances in which an attorney should be consulted. The course is particularly useful for those students pursuing careers in corporate finance, investment banking, mergers and acquisitions, sales and trading, venture capital, private equity, entrepreneurship, accounting, corporate management, and real estate.
Fall or Spring
Mutually Exclusive: LGST 8070
1 Course Unit

LGST 2240 Human Rights and Globalization
The 2000 UN Global Compact has confirmed the role of TNCs as central actors in the UN system of international human rights law, but whether their role should be voluntary or legally mandated remains in dispute. This course introduces students to how globalization has led to projects for expanding international human rights law to capture the operations of TNCs and why this development is opposed in many quarters. Competing perspectives on the pros and cons of imposing human rights responsibilities on TNCs and on the respective roles that businesses and governments should play will be examined. The Positions of various governments, businesses, international institutions, academics, and NGOs will be considered, and a number of illustrative case studies will be analyzed.
Fall or Spring
Mutually Exclusive: LGST 5240
1 Course Unit

LGST 2260 Markets, Morality & the Future of Capitalism
This course invites students to carefully evaluate one of the fundamental building blocks of capitalism, namely the institution of markets. What is the point of markets? In what ways do markets free us and in what ways do they constrain us? Are there some goods for which it is wrong to have a market? Are markets somehow undemocratic? Is equality compatible with the existence of markets? In reflecting on these questions we will necessarily also be reflecting on the basic structure of our own societies. This course will develop your ability to make and evaluate arguments, both in writing and in conversation, and thereby help you think clearly and critically about politics and society. It will also expose you to an array of arguments from across the political spectrum that will present powerful challenges to your existing beliefs and thereby force you to consider what you really believe and why. Grades will be based on two papers and class participation.
Fall or Spring
1 Course Unit

LGST 2270 Literature of Success
This course explores the history, literature, and philosophy of two age-old questions: what does it mean to be successful and how does one achieve this elusive goal? It surveys some of the classics of the "success" genre - from Benjamin Franklin's Autobiography in the 18th century to Dale Carnegie's How to Win Friends and Influence People and Marcus Buckingham's Now, Discover Your Strengths in the 20th and 21st centuries. Case studies of remarkable achievements in business and society and Arthur Miller's play Death of a Salesman provide additional contexts within which to reflect on the questions at the center of the course. Students will keep a personal journal and use web-based tools to examine their own character strengths, talents, and achievement orientations. Grading is based on class attendance and participation, reading response papers, personal journals on assigned topics involving self reflection, a mid-term paper on an assigned research subject related to success, and a final, longer paper exploring, based on course readings and original research, each students personal philosophy of success. No final exam.
Fall or Spring
1 Course Unit

LGST 2280 Sports Law
This course focuses on the areas of association, contract, constitutional, labor, antitrust, and agency law as they apply to the sports industry. This course exposes the student to many of the legal issues facing stakeholders in sport organizations. Special attention is given to the regulation of professional sports leagues promoting competitive balance, as well as antitrust law and labor-management relations dealing with the organization structure of sports leagues. The course also takes an inside look at previous and newly formed collective bargaining agreements and the use of Salary Cap or lack thereof in professional sports leagues. The development of effective communication skills will be emphasized through class presentations, written assignments, and quizzes; leadership and interpersonal communications will be cultivated through small group projects and meetings, and critical thinking and problem solving skills will be fostered through the careful study of case law impacting the sports industry in a variety of facets.
Fall or Spring
1 Course Unit

LGST 2300 Social Impact and Responsibility: Foundations
What role can business play in helping to meet global societal needs, whether it involves the environment, improving health, expanding education or eradicating poverty? Is there any responsibility on the part of business to help meet those needs? What are models of successful business engagement in this area? How should success be measured? Are there limits to what businesses can and should do, and what institutional changes will enable businesses and entrepreneurs to better succeed? This survey course provides students the opportunity to engage in the critical analysis of these and other questions that lie at the foundation of social impact and responsibility as an area of study. The course involves case studies, conceptual issues, and talks by practitioners. The course is designed to help students develop a framework to address the question: How should business enterprises and business thinking be engaged to improve society in areas not always associated with business? The course is required for the secondary concentration in Social Impact and Responsibility
1 Course Unit
LGST 2410 Theories of Business Enterprise
What is a business firm? How did various forms of business, including the corporation, arise historically? How do contemporary economic and financial theories explain how business firms evolve, grow, and die? What are the legal underpinnings of the forms of business enterprise, ranging from sole proprietorships to partnerships to family-owned enterprises to multinational corporate groups? How do business firms relate to politics and government, as well as religion? What about the environment? This interdisciplinary course offers an introduction to pursuing answers to these questions. Students will gain perspective on the nature of business enterprises from different points of view that will be useful in further research, as well as having practical application. Ubiquitous economic concepts such as agency costs, principal-agent relationships, transaction costs, and influence costs will be studied. Different legal structures of firms will also be introduced, including new hybrid organizations such as benefit corporations, which seek to meld non-profit and profit objectives. In the course, we will read high-profile U.S. Supreme Court cases such as Citizens United and Hobby Lobby and debate appropriate boundaries (or not) between business and politics, as well as business and religion. Business ethics and the nature of any social responsibilities owed by business and business people will be topics too.
Fall or Spring

1 Course Unit

LGST 2420 Big Data, Big Responsibilities: The Law and Ethics of Business Analytics
Significant technologies always have unintended consequences, and their effects are never neutral. A World of ubiquitous data, subject to ever more sophisticated collection, aggregation, and analysis, creates massive opportunities for both financial gain and social good. It also creates dangers in areas such as privacy, security, discrimination, exploitation, and inequality, as well as simple hubris about the effectiveness of management by algorithm. Firms that anticipate the risks of these new practices will be best positioned to avoid missteps. This course introduces students to the legal, policy, and ethical dimensions of big data, predictive analytics, and related techniques. It then examines responses—both private and governmental—that may be employed to address these concerns.
0.5 Course Units

LGST 2430 Other People’s Money: The Law, Politics, and History of Financial Institutions
We learn in introductory economics courses that money is fungible: that is, one dollar is as good as the next. Indeed, using money as a “medium of exchange” is one of its defining characteristics. But what happens when we take a big pile of money and put it in different buckets. On one bucket we might write “hedge fund”; on another, “central bank”; on still another, “payday lender.” Then money starts to change in ways defined by law, history, ethics, and politics. This course will take you on a tour of these different buckets—different kinds of financial institutions, broadly defined—throughout the modern financial system. We will look at hedge funds, insurance companies, investment banks, sovereign wealth funds, central banks, consumer banks, payday lenders, state-sponsored enterprises (like the Export-Import Bank in the United States and much of the financial system in China), and the cutting edge of fintech, including crowd-funded lending, digital currencies, and more. In each case, students will be exposed to a series of specialized questions: Where did this institution come from? What problem is it trying to solve that other alternatives could not resolve? What is the basic business (or, where relevant, regulatory) model for each institution? How is each institution regulated, and by whom? What are the ethical considerations in each context? What are the political considerations that each market participant faces?

1 Course Unit

LGST 2440 Blockchain & Cryptocurrencies: Business, Legal, and Regulatory Considerations
Blockchain technology is a form of decentralized database that allows for the secure exchange of value without reliance on trusted intermediaries. Blockchain is the foundation for cryptocurrencies such as Bitcoin, as well as for distributed ledger platforms used by enterprise consortia in various industries. Many believe that blockchain solutions have revolutionary potential. They promise to replace legal enforcement with technical mechanisms of cryptographic consensus as the means of generating trust. The technology has generated significant excitement, investment, and entrepreneurial activity in recent years. However, the business value of blockchain-based solutions is uncertain, cryptocurrency valuations are speculative, and there are serious legal, regulatory, and governance challenges to be addressed. This course is designed to give students the tools for critical assessment of ongoing developments in this evolving area.

LGST 2470 Value of Values: Contemporary Ethical Issues in Business
This course explores the concepts of value and values in economic life. All strategic and many tactical decisions begin with a value proposition of some kind. Investors, customers, employees, suppliers, and community members are potential sources of value in the creation, exchange, distribution and sale of a good or service. This course examines different conceptions of "value/values" in business life and the role they play in interpreting issues such as artificial intelligence, corporate governance, business and professional education, international business, value theory, and personal values. The class will utilize a combination of theoretical readings, class exercises, student presentations and case discussions.
Fall or Spring
1 Course Unit

LGST 2600 Climate & Environmental Leadership in Action: Building a Sustainable Future
This course aims to engage undergraduate students at Wharton with fundamental questions at the intersection of climate change, environmental management, ethics, and leadership. Important questions we will address include: (1) What can we learn about leadership from being in “the environment” or “the field” that we cannot as easily learn in other settings? (2) What does it mean to be a leader in the area of climate change and environmental management at a for-profit business firm? A non-profit organization? A social enterprise/benefit corporation? Within this overarching theme of environmental and climate leadership, the course examines a concrete set of timely topics through readings, discussions, guest speakers, and written assignments, including: environmental management and a circular economy; product stewardship; extended producer responsibility; environmental personhood; greenwashing; and the different types of firms and organizations in this space, including for-profit corporations, benefit corporations/social enterprises; and non-profits. The course begins with six classroom sessions on these issues with assignments and readings run and graded by Professor Light. The culminating event of the course is a weeklong Leadership Venture — a camping expedition during spring break that will include a combination of cycling, paddling, hiking and discussions about leadership and the environment.
Spring
0.5 Course Units

LGST 2910 Negotiations
This course examines the art and science of negotiation, with additional emphasis on conflict resolution. Students will engage in a number of simulated negotiations ranging from simple one-issue transactions to multi-party joint ventures. Through these exercises and associated readings, students explore the basic theoretical models of bargaining and have an opportunity to test and improve their negotiation skills.

LGST 6110 Responsibility in Global Management

This course uses the global business context to introduce students to important legal, ethical and cultural challenges they will face as business leaders. Cases and materials will address how business leaders, constrained by law and motivated to act responsibly in a global context, should analyze relevant variables to make wise decisions. Topics will include an introduction to the basic theoretical frameworks used in the analysis of ethical issues, such as right-based, consequentialist-based, and virtue-based reasoning, and conflicting interpretations of corporate responsibility. The course will include materials that introduce students to basic legal (common law vs. civil law) and normative (human rights) regimes at work in the global economy as well as sensitize them to the role of local cultural traditions in global business activity. Topics may also include such issues as comparative forms of corporate governance, bribery and corruption in global markets, human rights issues, diverse legal compliance systems, corporate responses to global poverty, global environmental responsibilities, and challenges arising when companies face conflicting ethical demands between home and local, host country mores. The pedagogy emphasizes globalized cases, exercises, and theoretical materials from the fields of legal studies, business ethics and social responsibility.

0.5 Course Units

LGST 6120 Responsibility in Business

This course introduces students to important ethical and legal challenges they will face as leaders in business. The course materials will be useful to students preparing for managerial positions that are likely to place them in advisory and/or agency roles owing duties to employers, clients, suppliers, and customers. Although coverage will vary depending on instructor, the focus of the course will be on developing skills in ethical and legal analyses that can assist managers as they make both individual-level and firm-level decisions about the responsible courses of action when duties, loyalties, rules, norms, and interests are in conflict. For example, the rules of insider trading may form the basis for lessons in some sections. Group assignments, role-plays, and case studies may, at the instructor's discretion, be used to help illustrate the basic theoretical frameworks. Course materials will highlight industry codes and professional norms, as well as the importance of personal and/or religious values.

LGST 6130 Business, Social Responsibility, and the Environment

This half-credit (.5 cu) course presents students with the opportunity to explore an alternative perspective to what some might consider the traditional or standard model of business. A starting point of the course is to ask whether business firms owe a “social responsibility” that includes, but goes beyond, maximizing profits. The course begins with overreaching questions including to whom a business firm owes legal and ethical duties, how to balance or trade-off obligations owed to different stakeholders when they may conflict, and how to consider the distributional and other socially important implications of business decisions. Different sections of this course will examine questions about the responsibility of business toward a number of pressing environmental and social issues, including for example, climate change, fresh water availability, green marketing claims, democratic values, racial and gender diversity, human rights, poverty reduction, and global health issues such as access to medicine. These topics will be treated primarily through the lenses of law and ethics. Please consult individual instructors’ syllabi in the Wharton syllabus repository for further details on what will be covered in each individual section, and please note that topics change over time and in response to student and faculty interests. Finally, students should expect to prepare and present in groups to colleagues in classes on selected issues of business responsibility. This course fulfills the MBA Flex Core requirement in Legal Studies and Business Ethics.

LGST 6410 Theories of Business Enterprise

What is a business firm? How did various forms of business, including the corporation, arise historically? How do contemporary economic and financial theories explain how business firms evolve, grow, and die? What are the legal underpinnings of the forms of business enterprise, ranging from sole proprietorships to partnerships to family-owned enterprises to multinational corporate groups? How do business firms relate to politics and government, as well as religion? What about the environment? This interdisciplinary course offers an introduction to pursuing answers to these questions. Students will gain perspective on the nature of business enterprises from different points of view that will be useful in further research, as well as having practical application. Ubiquitous economic concepts such as agency costs, principal-agent relationships, transaction costs, and influence costs will be studied. Different legal structures of firms will also be introduced, including new hybrid organizations such as benefit corporations, which seek to meld non-profit and profit objectives. In the course, we will read high-profile U.S. Supreme Court cases such as Citizens United and Hobby Lobby and debate appropriate boundaries (or not) between business and politics, as well as business and religion. Business ethics and the nature of any social responsibilities owed by business and business people will be topics too.

1 Course Unit
LGST 6420 Big Data, Big Responsibilities: The Law and Ethics of Business Analytics

Significant technologies always have unintended consequences, and their effects are never neutral. A world of ubiquitous data, subject to ever more sophisticated collection, aggregation, and analysis, creates massive opportunities for both financial gain and social good. It also creates dangers in areas such as privacy, security, discrimination, exploitation, and inequality, as well as simple hubris about the effectiveness of management by algorithm. Firms that anticipate the risks of these new practices will be best positioned to avoid missteps. This course introduces students to the legal, policy, and ethical dimensions of big data, predictive analytics, and related techniques. It then examines responses—both private and governmental—that may be employed to address these concerns.

LGST 6430 Other People’s Money: The Law, Politics, and History of Financial Institutions

We learn in introductory economics courses that money is fungible: that is, one dollar is as good as the next. Indeed, using money as a “medium of exchange” is one of its defining characteristics. But what happens when we take a big pile of money and put it in different buckets. On one bucket we might write “hedge fund”; on another, “central bank”; on still another, “payday lender.” Then money starts to change in ways defined by law, history, ethics, and politics. This course will take you on a tour of these different buckets—different kinds of financial institutions, broadly defined—throughout the modern financial system. We will look at hedge funds, insurance companies, investment banks, sovereign wealth funds, central banks, consumer banks, payday lenders, state-sponsored enterprises (like the Export-Import Bank in the United States and much of the financial system in China), and the cutting edge of fintech, including crowd-funded lending, digital currencies, and more. In each case, students will be exposed to a series of specialized questions: Where did this institution come from? What problem is it trying to solve that other alternatives could not resolve? What is the basic business (or, where relevant, regulatory) model for each institution? How is each institution regulated, and by whom? What are the ethical considerations in each context? What are the political considerations that each market participant faces?

LGST 6440 Blockchain and Cryptocurrencies: Business, Legal and Regulatory Considerations

Blockchain technology is a form of decentralized database that allows for the secure exchange of value without reliance on trusted intermediaries. Blockchain is the foundation for cryptocurrencies such as Bitcoin, as well as for distributed ledger platforms used by enterprise consortia in various industries. Many believe that blockchain solutions have revolutionary potential. They promise to replace legal enforcement with technical mechanisms of cryptographic consensus as the means of generating trust. The technology has generated significant excitement, investment, and entrepreneurial activity in recent years. However, the business value of blockchain-based solutions is uncertain, cryptocurrency valuations are speculative, and there are serious legal, regulatory, and governance challenges to be addressed. This course is designed to give students the tools for critical assessment of ongoing developments in this evolving area.

0.5-1 Course Unit

LGST 6450 Business, Law, and Democracy

What is the relationship between business and democracy? Do institutions of free enterprise depend on democratic government—and vice versa? Do more democratic decision-making structure enhance efficient outcomes? What principles inform shareholder democracy? What is the relationship of business, democracy, and the rule of law? This course explores various dimensions of the relationship between business and democracy. Particular attention is given to legal structures that govern the relationship, but ethical considerations are examined as well.

LGST 6470 The Business and Governance of Water

Virtually every business imaginable—from oil refining to semiconductor manufacturing to cloud computing—requires copious supplies of fresh water. However, there is a fixed amount of water on earth. As climate change makes many parts of the world hotter and drier, it is increasingly important for today’s business leaders to be able to understand water challenges and to implement solutions that will enable businesses to thrive in the future.

In addition to understanding and navigating water quality and quantity challenges, business leaders thinking about water operate in a highly regulated environment at the local, national, and global levels. It is therefore important to understand who the key external stakeholders—both public and private—are and how to engage with them productively. Students are not expected to have any previous experience with the water industry. This course will begin by focusing on global water risks and global, national, and local water governance. It will introduce students to how governments at many levels make and implement water policy and how business leaders need to navigate managing water risks and opportunities within that environment. It will also cover private governance and water—considering how to engage with NGOs like the World Resources Institute and the CDP (formerly Carbon Disclosure Project) that operate on behalf of multiple stakeholders, including investors in this space. The course will examine the duties of corporate officers and directors in developing and implementing a firm's water sustainability program, how major water projects are financed, and the business ethics issues surrounding “doing the right thing” in a module on water and ESG (environmental, social and governance factors). It will conclude with an “H2O Shark Tank” exercise where student groups pitch their best ideas for sustainable water solutions to a panel of potential funders, including investment banks, corporate executives, and foundation leaders.

LGST 6920 Advanced Topics Negotiation
This is a course that builds on the basic Negotiation course. In this course, we explore a wide range of negotiation topics from crisis and hostage negotiations, to the role of emotions including anxiety, envy and anger in negotiations, to backlash effects for women in negotiations, and the role of alcohol in negotiations. We will survey many aspects of current negotiation research, discuss historic negotiation cases, and students will participate in role-play exercises. Many of the role play exercises will involve multi-party negotiations and afford opportunities to hone skills in team-based negotiations.

LGST 7290 Intellectual Property Strategy for the Innovation-Driven Enterprise
Announcing the first iPhone at Macworld 2007, Apple CEO Steve Jobs famously boasted: "And boy, have we patented it!" How, and to what extent, do patents and intellectual property really provide competitive advantage for innovative technology companies? What makes an IP asset strategically powerful? How do patents impact, and even drive, corporate decisions including M&A, venture funding and exits, and entry into new markets? In this course, students will learn to critically analyze and answer these questions, gaining insights they can leverage in their future roles as innovation industry executives, entrepreneurs, strategists and investors. The course includes three major units. In Unit 1, Patents and Innovation Value, we examine closely the relationship between competitive advantage, value proposition, and intellectual property (particularly patents). We will apply our understanding of that relationship to critique and sharpen patent strategy to protect examples of cutting-edge technologies. In Unit 2, Patent Leverage and the Corporate Playbook, we study theory and examples of how intellectual property leverage strategically informs corporate transactions and decisions, for established companies as well as for start-ups. In unit 3, Limits and Alternatives to Patents, we confront the recent legal trend toward reigniting the power and scope of patents. We also consider the growing importance of data as a proprietary technology asset, and discuss options for adapting intellectual property strategy appropriately. Throughout, students will learn and practice applying the concepts we learn to decision-making in examples based on innovative real-world technologies and businesses.

LGST 8040 Real Estate Law
This course examines the fundamentals of real estate finance and development from a legal and managerial perspective. The course serves as a foundation course for real estate majors and provides an introduction to real estate for other students. It attempts to develop skills in using legal concepts in a real estate transactional setting. The course will be of interest to students contemplating careers in accounting, real estate development, real estate finance, city planning, or banking. The main topics covered may include the following: land acquisition, finance; choice of entity; tax aspects; management (leasing, environmental); disposition of real property (sale of mortgaged property, foreclosures, wraparound mortgages, sale-leasebacks); and recent legal developments. Lectures and class discussion required.
Fall or Spring

1 Course Unit

LGST 8050 Innovation, Marketing Strategy, and Antitrust
This course considers business strategy and law, particularly the role of antitrust and intellectual property law in managing innovation. We will examine several highly innovative firms in technology rich areas, considering how they adapt their strategies to the competitive and legal environment, and asking whether antitrust law promotes or hinders innovation. The strategies of both current firms such as Uber, Google, Apple, and Microsoft and historical examples such as American Can Company, Standard Oil, Brown & Williamson Tobacco Co., and Kodak will provide context and source materials for the course. We will pay special attention to the role of intellectual property rights in fostering or hindering innovation. The legal focus is primarily on U.S. law, but the course will occasionally address foreign regimes as well. The course is useful to students interested in marketing or competitive business strategy, and, more broadly, to anyone desiring to understand the legal and public policy issues relating to competition and innovation.

LGST 8060 Negotiations
This course examines the art and science of negotiation, with additional emphasis on conflict resolution. Students will engage in a number of simulated negotiations ranging from simple one-issue transactions to multi-party joint ventures. Through these exercises and associated readings, students explore the basic theoretical models of bargaining and have an opportunity to test and improve their negotiation skills. Crosslisted with MGMT 6910/OIDD 6910/LGST 8060. Format: Lecture, class discussion, simulation/role play, and video demonstrations. Materials: Textbook and course pack.
Fall or Spring
Also Offered As: MGMT 6910, OIDD 6910
1 Course Unit

LGST 8070 Securities Regulation
The course examines the federal securities law and the operation of the Securities Exchange Commission. The legal responsibilities of corporate managers, accountants, underwriters, and broker-dealers, occasioned by the securities regulatory scheme, will be investigated. Students will be encouraged to evaluate, from a managerial perspective, the various aspects of securities regulation studied. The course will discuss the recent financial crisis and ask the question whether enhanced securities regulation will prevent such a crisis in the future. The material covered in the course will provide familiarity with the basic legal structure of securities regulation and will assist in understanding the current policy issues in securities law. The course should help students to develop the ability to read and learn further in the field and to improve their effectiveness of communication with attorneys. It will also suggest ways of detecting instances in which an attorney should be consulted. The course is particularly useful for those students pursuing careers in corporate finance, investment banking, mergers and acquisitions, sales and trading, venture capital, private equity, entrepreneurship, accounting, corporate management and real estate. Requirements: Midterm and final exam. Materials: Text, pamphlet of statutes and rules, and study guide.
Fall or Spring
Mutually Exclusive: LGST 2230
1 Course Unit

LGST 8080 Employment Law
This course is based on the principle that knowledge and understanding of employment law facilitate (1) promotion of a workforce with a high degree of commitment to reaching business goals, (2) the development of practical business solutions to problems arising in the workplace, (3) effective human resources policy and procedures that comply with applicable laws, and (4) justice for workers. The course provides students with an introduction to the law of the workplace and examines the balance between business goals and employment law compliance. The course examines the various employment laws with which businesses must comply and the legal rights and responsibilities of employees and employers. The emphasis is on laws concerning equal employment opportunity with respect to discrimination and harassment because of sex, race, national origin, religion, sexual orientation, age, disability and other characteristics protected by workplace laws; constitutional – and especially free speech – rights at work; work-related privacy including investigations, electronic communication and social media; classifying workers in the gig economy; diversity and affirmative action; and the legal and regulatory environment regarding immigration, wage and hour, leaves of absence, hiring, termination and afterwards; and labor/management relations and collective bargaining.

LGST 8090 Sports Business Management
This course examines various business disciplines as they apply to the sports industry. The course provides the student with an overview of the business of the intercollegiate, Olympic and professional sports enterprises. In addition, the course investigates the business related issues encountered by managers of sports organizations and covers how business principles can be applied to effectively address these issues. This course is crosslisted with MGMT8150.
Fall or Spring
Also Offered As: MGMT 8150
0.5,1 Course Unit
LGST 8130 Legal and Transactional Aspects of Entrepreneurship
Legal and Transactional Aspects of Entrepreneurship is a practical and intensive course that examines the critical legal and transactional issues confronting start-up and emerging growth companies. Although the context of the course is early stage companies, many of the concepts studied are equally applicable to more mature, established companies. The course provides perspective on how to use the law strategically to manage risk, deploy resources and maximize shareholder value. Topics include the enforceability of confidentiality, non-competition and other restrictive covenants in employment agreements; choice of business form including the legal, financial and tax advantages and disadvantages of general partnerships, limited partnerships, corporations and limited liability companies; tax and securities law; legal aspects of raising capital including structuring venture capital and private equity financing; entrepreneurial acquisition structures, employment law, and intellectual property law including trade secrets, copyrights, patents, and trademarks. Format: Lecture and discussion with coverage of legal cases and materials. Requirements: Class participation, midterm and final exam. Materials: Course pack.
Fall or Spring
0.5-1 Course Unit

LGST 8150 Environmental Management: Law and Policy
This course provides an introduction to environmental management with a focus on law and policy as a basic framework. The primary aim of the course is to give students a deeper practical sense of the important relationship between business and the natural environment and to think critically about how best to manage this relationship.
Fall or Spring

LGST 8200 International Business Ethics
This course is a multidisciplinary, interactive study of business ethics within a global economy. A central aim of the course is to enable students to develop a framework to address ethical challenges as they arise within and across different countries. Alternative theories about acting ethically in global environments are presented, and critical current issues are introduced and analyzed. Examples include bribery, global sourcing, environmental sustainability, social reports, intellectual property, e-commerce, and dealing with conflicting standards and values across cultures. As part of this study, the course considers non-Western ethical traditions and practices as they relate to business.
Fall or Spring
Mutually Exclusive: LGST 2200
1 Course Unit

LGST 8300 Social Impact and Responsibility: Foundations
What role can business play in helping to meet global societal needs, whether it involves the environment, improving health, expanding education or eradicating poverty? Is there any responsibility on the part of business to help meet those needs? What are models of successful business engagement in this area? How should success be measured? Are there limits to what businesses can and should do, and what institutional changes will enable businesses and entrepreneurs to better succeed? This course provides students the opportunity to engage in the critical analysis of these and other questions that lie at the foundation of social impact and responsibility as an area of study. The course involves class studies, conceptual issues, and talks by practitioners. The course is designed to help students develop a framework to address the question: "How should business enterprises and business thinking be engaged to improve society in areas not always associated with business?"
0.5 Course Units

LGST 9200 Ethics in Business and Economics
The seminar explores the growing academic literature in business ethics. It also provides participants an opportunity to investigate an ethical issue of their choosing in some depth, using their field of specialty as context. The seminar assumes no previous exposure to business ethics. Different business ethics theories and frameworks for investigating issues will be discussed, including corporate social responsibility, corporate moral agency, theories of values, and corporate governance. In turn, these theories will be applied to a range of issues, both domestic and international. Such issues include: corruption in host countries, the management of values in modern corporations, the ethical status of the corporation, ethics in sophisticated financial transactions (such as leveraged derivative transactions), and gender discrimination in the context of cultural differences. Literature not only from business ethics, but from professional and applied ethics, law, and organizational behavior will be discussed. Often, guest speakers will address the seminar. At the discretion of the class, special topics of interest to the class will be examined. Students will be expected to write and present a major paper dealing with a current issue within their major field. The course is open to students across fields, and provides integration of ideas across multiple business disciplines.

LING 0004 Bilingualism in History
This course introduces the foundations of linguistics - the scientific study of language - through exploration of multilingualism in the USA and in different societies around the world. Contacts between groups of people speaking different languages are documented from earliest records, and around the world it remains the norm to find more than one language in regular use in a single community. In this course we will see that multilingualism is a catalyst for linguistic change: sometimes languages are lost; sometimes new languages are created; sometimes the structure of a language is radically altered. We will consider: Which parts of linguistic structure are most susceptible to change under conditions of bilingualism? Does language contact - whether as a result of trade, education, migration, conquest, or intermarriage - influence language structure in predictable ways? How do individual speakers handle multiple languages? How do we know? Reconstruction of the Proto-Indo-European language, one of the triumphs of comparative and historical linguistics in the 19th and 20th centuries, allows us a glimpse into the society of this prehistoric people. In this seminar students will, through comparison of modern and ancient languages, learn the basis of this reconstruction – the comparative method of historical linguistics – as well as explore the culture and society of the Proto-Indo-Europeans and their immediate descendants. In addition, we will examine the pseudo-scientific basis of the myth of Aryan supremacy, and study the contributions of archaeological findings in determining the “homeland” of the Indo-Europeans. No prior knowledge of any particular language is necessary. This seminar should be of interest to students considering a major in linguistics, anthropology and archaeology, ancient history or comparative religion. (Also fulfills Cross-Cultural Analysis.)
Not Offered Every Year
1 Course Unit

LING 0051 Proto-Indo-European Language and Society
Most of the languages now spoken in Europe, along with some languages of Iran, India and central Asia, are thought to be descended from a single language known as Proto-Indo-European, spoken at least six thousand years ago, probably in a region extending from north of the Black Sea in modern Ukraine east through southern Russia. Speakers of Proto-Indo-European eventually populated Europe in the Bronze Age, and their societies formed the basis of the classical civilizations of Greece and Rome, as well as of the Celtic, Germanic and Slavic speaking peoples. What were the Proto-Indo-Europeans like? What did they believe about the world and their gods? How do we know? Reconstruction of the Proto-Indo-European language, one of the triumphs of comparative and historical linguistics, allows us a glimpse into the society of this prehistoric people. In this seminar students will, through comparison of modern and ancient languages, learn the basis of this reconstruction – the comparative method of historical linguistics – as well as explore the culture and society of the Proto-Indo-Europeans and their immediate descendants. In addition, we will examine the pseudo-scientific basis of the myth of Aryan supremacy, and study the contributions of archaeological findings in determining the “homeland” of the Indo-Europeans. No prior knowledge of any particular language is necessary. This seminar should be of interest to students considering a major in linguistics, anthropology and archaeology, ancient history or comparative religion. (Also fulfills Cross-Cultural Analysis.)

LING 0150 Writing Systems
The historical origin of writing in Sumer, Egypt, China, and Mesoamerica; the transmission of writing across languages and cultures, including the route from Phoenician to Greek to Etruscan to Latin to English; the development of individual writing systems over time; the traditional classification of written symbols (ideographic, logographic, syllabic, alphabetic); methods of decipherment; differences between spoken and written language; how linguistic structure influences writing, and is reflected by it; social and political aspects of writing; literacy and the acquisition of writing.
Fall
1 Course Unit

LING 0500 Introduction to Formal Linguistics
In this course, we study formal mathematical tools for the analysis of language that help us understand and classify the complex structures and rules that constitute language and grammar. These tools include set theory, formal language and automata theory, as well as aspects of logic, and will be applied to the syntax and semantics of natural language. In addition to learning something about formal tools for analyzing language, this will also enhance your general skills in analytical reasoning.
Spring
1 Course Unit

LING 0600 Introduction to Sociolinguistics
Human language viewed from a social and historical perspective. Students will acquire the tools of linguistic analysis through interactive computer programs, covering phonetics, phonology and morphology, in English and other languages. These techniques will then be used to trace social differences in the use of language, and changing patterns of social stratification. The course will focus on linguistic changes in progress in American society, in both mainstream and minority communities, and the social problems associated with them. Students will engage in field projects to search for the social correlates of linguistic behavior, and use quantitative methods to analyze the results.

1 Course Unit

LING 0650 Talkin' Black: Language, Power & Identity
Soda, pop, or coke? Buggy or shopping cart? Y'all, Y'alls, y'all'd've, y'all'd've'y'I'd've'? Do you talk black, speak Appalachian - maybe both? Is your vernacular spectacular? Does anyone talk 'normal'? What does your accent say about you? We use language every day, but don't always take the time to stop and talk about the language we use. Language can both be a powerful tool for communication, and also a means to mock and disempower the 'other' (such as using the Southern accent to portray stereotypes). It can be used to draw people in (I'm lookin at you, broth, sister) and dividing (you ain't from around here, aren ya?) And, even if we share the exact same language - or think we do - miscommunications still seem to abound. This course will bring a sociolinguistic perspective to language: how we use it, how we speak and write multiple versions of the same language, and how it reflects our identities, particularly with regards to race, class, gender, and regional backgrounds. We will explore deep questions of language as a medium of communication with consequences and impact in political, social, and personal realms. In addition to producing a research paper, we will also explore codeswitching and codemeshing techniques. This course, open to majors and non-majors, will explore language in social interactions, both as a means for humans to inflict power, but also as a site for deploying resistance. Language, at the intersections of power and identity, is not neutral. This sociolinguistic course will apply linguistic principles to literary forms, to explore how Black novelists such as Toni Morrison, James Baldwin, Ken Saro-Wiwa, M. NourbeSe Philip, bell hooks, and others, incorporate their voices across the Black diaspora to explore the ways that Black voices are expressed - or silenced - when accounting for agency and power relations.
Spring
1 Course Unit

LING 0700 Data Science for Studying Language and the Mind
Data Science for studying Language and the Mind is an entry-level course designed to teach basic principles of data science to students with little or no background in statistics or computer science. Students will learn to identify patterns in data using visualizations and descriptive statistics; make predictions from data using machine learning and optimization; and quantify the certainty of their predictions using statistical models. This course aims to help students build a foundation of critical thinking and computational skills that will allow them to work with data in all fields related to the study of the mind (e.g. linguistics, psychology, philosophy, cognitive science).
Fall
Also Offered As: PSYC 2314
1 Course Unit

LING 0750 Language and Thought
This course describes current theorizing on how the human mind achieves high-level cognitive processes such as using language, thinking, and reasoning. The course discusses issues such as whether the language ability is unique to humans, whether there is a critical period to the acquisition of a language, the nature of conceptual knowledge, how people perform deductive reasoning and induction, and how linguistic and conceptual knowledge interact.
Fall or Spring
Also Offered As: PSYC 1310
Prerequisite: PSYC 0001 OR COGS 1001
1 Course Unit
LING 1005 Introduction to Cognitive Science
How do minds work? This course surveys a wide range of answers to this question from disciplines ranging from philosophy to neuroscience. The course devotes special attention to the use of simple computational and mathematical models. Topics include perception, learning, memory, decision making, emotion and consciousness. The course shows how the different views from the parent disciplines interact and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of computation in such theories and provides an introduction to some of the main directions of current research in the field. It is a requirement for the BA in Cognitive Science, the BAS in Computer and Cognitive Science, and the minor in Cognitive Science, and it is recommended for students taking the dual degree in Computer and Cognitive Science.
Fall
Also Offered As: CIS 1400, COGS 1001, PHIL 1840, PSYC 1333
1 Course Unit

LING 1100 The History of Words
It is sometimes said that every word has its own history. But there are also general factors affecting how words change over time. In this course, we explore both aspects of the history of words. On the one hand, we explore the ways in which the saying is true, by investigating taboo words, euphemisms, shibboleths, doublets, folk etymology, idioms, paradigm gaps, reanalysis, and other word-specific processes. On the other hand, we discuss the general factors, such as regular sound change (for instance, the Great Vowel Shift), word frequency, and others, as time and interest permit.
Spring, even numbered years only
1 Course Unit

LING 1250 The Phonetics of Music
Singing is an instance of human voice production, and as such can be studied in the way that speech is studied by speech scientists. The scientific study of singing is a small but growing field that uses methods from speech physiology and acoustics to characterize differences among singing voices and performances. This course will introduce students to methods for quantifying aspects of voice production, so that voice samples can be compared across singers, styles, etc. We will also discuss the scientific basis for some of the vocal techniques. Every aspect of voice presented in class will be explored through hands-on lab work with computer programs. We will mostly look at recorded samples of professional singers, but we will sometimes look at students’ own vocal productions. However, this is not a course about improving one’s singing, and no skill or talent is required to participate.
Not Offered Every Year
1 Course Unit

LING 1500 The Keys to Language Structure (and How to Use Them)
The purpose of this course is to introduce students to the basic concepts of sentence structure in a "pretheoretical" framework, demonstrating that any natural human language must have certain structures and must choose the rest from a restricted universal set. The textbook, which was written for this course, discusses each set of structures with examples from six languages: English, Spanish, Latin, Biblical Hebrew, Mandarin, and Navajo. The instructor will add languages from among those with which the students are familiar, within the limits of his competence. This course will help students not only to learn foreign languages, but also to improve their own writing skills, by making the structures that they must use more explicit and intelligible.
Fall, even numbered years only
1 Course Unit

LING 1700 Experimental Approaches to the Study of Language
Controlled experiments are a key element of empirical research, and they play an increasingly important role in the study of language and communication. This course will be divided into two halves. In the first half, students will be introduced to the fundamentals of how to conduct an experiment, along with a basic introduction to statistical methods. The emphasis will be on understanding the basic logic of experimental design, but special lectures will focus on the application of particular methods to the study of language. In the second half, classes will become more like lab meetings as students develop their own experimental projects from the ground up. At the end of the semester they will write up these projects as papers.
Not Offered Every Year
1 Course Unit

LING 1720 Language, Cognition and Culture
This is a course on how language relates to other cognitive systems. We will discuss the question of whether and how the language one speaks affects the way one thinks, the relation between words and concepts, the link between language acquisition and conceptual development in children, and the potential role of language in shaping uniquely human concepts. The course incorporates cross-linguistic, cross-cultural and developmental perspectives and combines readings from linguistics, psychology, philosophy, neuroscience and other fields within cognitive science.
Fall
1 Course Unit

LING 1750 Psychology of Language
This course describes the nature of human language, how it is used to speak and comprehend, and how it is learned. The course raises and discusses issues such as whether language ability is innate and unique to humans, whether there is a critical period for the acquisition of a language, and how linguistic and conceptual knowledge interact.
Fall or Spring
Also Offered As: PSYC 2310
Prerequisite: PSYC 1310 OR LING 0001
1 Course Unit

LING 2041 Language in Native America
This course is an introduction to linguistic perspectives on the languages native to the Americas (their nature and distribution, typological similarities and differences), with an emphasis on North America. The diverse languages of this region will be examined from the point of view of particular linguistic phenomena, such as phonology, morphology, and syntax; and in addition we will study their historical development and their place in culture, society, and thought.
Not Offered Every Year
1 Course Unit

LING 2042 Construct a Language
In this course, students construct their own language, one that is compatible with what is known about possible human languages. To this end, the course investigates language typology through lectures and examination of grammars of unfamiliar languages. Topics include language universals, points of choice in a fixed decision space, and dependencies among choices.
Not Offered Every Year
1 Course Unit
LING 2047 Structure of American Sign Language
This course covers the linguistic structure of American Sign Language (ASL), including its phonology (articulatory features, phonological constraints, nonmanuals), morphology (morphological constraints, compounds, incorporation, borrowing), and syntax (syntactic categories, basic phrase structure, common sentence types). Also discussed are the topics of classifiers and deixis. In keeping with the comparative perspective of linguistic theory, parallels and differences between ASL and other (primarily spoken) languages are pointed out where appropriate. Historical and sociolinguistic issues are addressed where they are relevant to elucidating linguistic structure. Though the course focuses on ASL, it necessarily touches on issues concerning sign languages more generally, notably the possible effects of modality (sign vs. speech) on linguistic structure and the implications of the signed modality for general linguistics. Although the course does not presuppose knowledge of ASL, it does require acquaintance with basic concepts of linguistics.
Not Offered Every Year
Also Offered As: ASLD 2047
Prerequisite: LING 0001
1 Course Unit

LING 2100 Introduction to Language Change
This course covers the principles of language change and the methods of historical linguistics on an elementary level. The systematic regularity of change, the reasons for that regularity, and the exploitation of regularity in linguistic reconstruction are especially emphasized. Examples are drawn from a wide variety of languages, both familiar and unfamiliar. The prerequisite for the course is any course in phonetics or phonology, or Ling 001, or permission of the instructor. Note that this course does NOT satisfy any sector requirement.
Not Offered Every Year
Prerequisite: LING 0001
1 Course Unit

LING 2170 Origins and Evolution of Language
While communication is abundant throughout the living world, the human system we call language seems to stand out. Indeed, if humans themselves can be said to stand out among other species on Earth, it may well be language that played the crucial role in getting us here. So where does language come from? This question has been dubbed the hardest problem in science, but the last three decades have seen a notable renaissance in scientific attempts to answer it. This seminar will examine both the results of this multidisciplinary endeavor and the tools that have been employed in it. It will involve discussions of the nature of language and its place among other communication systems and will touch on fundamental questions of what it means to be human.
Not Offered Every Year
1 Course Unit

LING 2190 Language games and cultural evolution
This is a course about how language and communication can be thought of as games. When people use language to communicate, they are following rules to perform actions that have an effect on the world, including other people. These actions might achieve goals, and they might prompt further actions, and so on. Perhaps more interestingly, these communicative actions can, over time, lead to changes in the environment and even the rules of the game itself. In other words, the playing field changes dynamically as a result of the actions performed on it. This way of looking at language is not new, and this is also a course about how thinking about language this way can inspire (and has inspired) formal models and laboratory experiments that help us to understand how humans use language and how it evolves. In doing so we will also situate this approach to studying language in a broader context of studying the cultural evolution of complex behavioral systems more generally.
Fall
1 Course Unit

LING 2210 Phonetics I: Experimental
This course focuses on experimental investigations of speech sounds. General contents include: the fundamentals of speech production and perception; speech analysis tools and techniques; and topics in phonetic studies. The course consists of integrated lectures and laboratory sessions in which students learn computer techniques for analyzing digital recordings.
1 Course Unit

LING 2220 Phonetics II: Data Science
This is a methodology course, which focuses on how to conduct phonetics research using very large speech corpora. Topics include scripting and statistical techniques, automatic phonetic analysis, integration of speech technology in phonetics studies, variation and invariability in large speech corpora, and revisiting classic phonetic and phonological problems from the perspective of corpus phonetics.
Spring
Prerequisite: LING 5210 AND LING 2200
1 Course Unit

LING 2250 Computer Analysis and Modeling of Biological Signals and Systems
A hands-on signal and image processing course for non-EE students needing these skills. We will go through all the fundamentals of signal and image processing using computer exercises developed in MATLAB. Examples will be drawn from speech analysis and synthesis, computer vision, and biological modeling.
Spring
Mutually Exclusive: LING 5250
1 Course Unit

LING 2300 Sound Structure of Language
An introduction to phonetics and phonology. Topics include articulatory phonetics (the anatomy of the vocal tract; how speech sounds are produced); transcription (conventions for representing the sounds of the world’s languages); classification (how speech sounds are classified and represented cognitively through distinctive features); phonology (the grammar of speech sounds in various languages: their patterning and interaction) and syllable structure and its role in phonology.
Spring
Prerequisite: LING 0001 OR COGS 1001
1 Course Unit
LING 2500 Introduction to Syntax
This course is an introduction to current syntactic theory, covering the principles that govern phrase structure (the composition of phrases and sentences), movement (dependencies between syntactic constituents), and binding (the interpretation of different types of noun phrases). Although much of the evidence discussed in the class will come from English, evidence from other languages will also play an important role, in keeping with the comparative and universalist perspective of modern syntactic theory.
Fall
Mutually Exclusive: LING 5500
1 Course Unit

LING 2700 Language Acquisition
An introduction to language acquisition in children and the development of related cognitive and perceptual systems. Topics include the nature of speech perception and the specialization to the native language; the structure and acquisition of words; children's phonology; the development of grammar; bilingualism and second language acquisition; language learning impairments; the biological basis of language acquisition; the role in language learning in language change. Intended for any undergraduate interested in the psychology and development of language.
Not Offered Every Year
1 Course Unit

LING 2980 Transfer or Credit Away Free Elective
Course number for use in XCAT
1 Course Unit

LING 3020 Linguistic Field Methods
Instruction and practice in primary linguistic research, producing a grammatical sketch and a lexicon through work with a native-speaker consultant and some reference materials. Consultant work is shared with LING 5020.
Not Offered Every Year
Prerequisite: LING 2300 AND LING 2500
1 Course Unit

LING 3040 Structure of a Language
This class focuses on an in-depth study of the grammar of a given language, typically one that is understudied or that has particularly interesting grammatical properties. Different aspects of grammar will be considered, drawing on features of the sound system, morphology, syntax and semantics as appropriate.
Not Offered Every Year
1 Course Unit

LING 3090 Language and Computation
The computational study of natural language and its implications for linguistic theories. Topics include finite state tools, computational morphology and phonology, grammar and parsing, computational models of language learning in children and machines.
Not Offered Every Year
1 Course Unit

LING 3100 History of the English Language
This course traces the linguistic history of English from its earliest reconstructable ancestor, Proto-Indo-European, to the present. We focus especially on significant large-scale changes, such as the restructuring of the verb system in Proto-Germanic, the intricate interaction of sound changes in the immediate prehistory of Old English, syntactic change in Middle English, and the diversification of English dialects since 1750.
Not Offered Every Year
1 Course Unit

LING 3110 Old English I
The main purpose of this course is to teach students to read Old English ("Anglo-Saxon"), chiefly but not exclusively for research in linguistics. Grammar will be heavily emphasized; there will also be lectures on the immediate prehistory of the language, since the morphology of Old English was made unusually complex by interacting sound changes. In the first eight weeks we will work through Moore and Knott's "Elements of Grammar" and learn the grammar; the remainder of the term will be devoted to reading texts.
Not Offered Every Year
1 Course Unit

LING 3410 Morphology I
This course will explore some issues concerning the internal structure of words. After a brief introduction to some basic terms and concepts, we will discuss the interaction of morphology with phonology. We will look both at how morphology conditions phonological rules and how phonology conditions morphology. Then we will turn to the interaction of syntax and morphology. We will look at some problems raised by inflectional morphology, clitics and compounds. The main requirement for the class will be a series of homework exercises in morphological analysis and a short paper at the end of the semester.
Not Offered Every Year
1 Course Unit

LING 3420 Morphology II
This course takes a detailed look at a number of central topics in morphological theory. The material examined in the course consists of primary readings and reviews, covering a number of central topics in the field. These topics include (but are not restricted to) allomorphy, blocking, the interface of phonology and morphology, syncretism, affixation, the syntax-morphology interface, and compounding. The primary requirements for the class involve short assignments that are based on the readings, in the form of both problem sets and critical appraisals of core theoretical positions. In addition to this, students will write a short paper at the end of the semester.
Not Offered Every Year
Prerequisite: LING 3410
1 Course Unit

LING 3430 Introduction to Syntax
This course takes a detailed look at a number of central topics in morphological theory. The material examined in the course consists of primary readings and reviews, covering a number of central topics in the field. These topics include (but are not restricted to) allomorphy, blocking, the interface of phonology and morphology, syncretism, affixation, the syntax-morphology interface, and compounding. The primary requirements for the class involve short assignments that are based on the readings, in the form of both problem sets and critical appraisals of core theoretical positions. In addition to this, students will write a short paper at the end of the semester.
Not Offered Every Year

Prerequisite: LING 3410
1 Course Unit

LING 3640 Experimental Sociolinguistics
How do people form social impressions of others based on subtle patterns in their linguistic behavior? How do people shape their use of language to adapt to different social contexts and reflect their own identities? And what kinds of cognitive processes allow people to learn and use these sociolinguistic skills? Sociolinguists are increasingly turning to experimental methods to answer these exciting but complex questions. In this class, students will gain an up-to-date familiarity with major results in the experimental sociolinguistics literature, an awareness of the wide range of methods for sociolinguistic experimentation, and hands-on experience with the tools needed to create sociolinguistic experiments.
Fall, even numbered years only
Mutually Exclusive: LING 5640
Prerequisite: LING 0600 OR LING 0060
1 Course Unit

LING 3640 Experimental Sociolinguistics

Mutually Exclusive: LING 5640
Prerequisite: LING 0600 OR LING 0060
1 Course Unit
LING 3650 Sociophonetics
This course will build on students’ existing knowledge of sociolinguistic variation and phonetics to allow them to explore differences in the perception and production of different language and language varieties. In this course, students will learn the primary skills of sociophonetic analysis, including learning to design their own perception and production studies. Students will also gain experience with methods in sociophonetics and common tools for analysis such as ELAN, Praat, FAVE and R. The course is open to graduate and undergraduate students, but all students will have the opportunity to conduct an independent sociophonetic research project.
Mutually Exclusive: LING 5650
Prerequisite: LING 0600 OR LING 2200
1 Course Unit

LING 3670 Language Contact
To this day, we have found no evidence of a language developing in total isolation from other languages. Most languages are in constant contact with other languages with the consequence that they can shape and influence each other. However, every language evolves in a distinct linguistic ecology and this means that the circumstances of language contact and the sociocultural relationships involved in each contact situation vary considerably, leading to a range of different outcomes. This course offers a thorough introduction to the field of contact linguistics including a detailed overview of contact situations and their linguistic and social consequences. The topics under study are: bilingualism (including code switching), multilingualism, morphi-syntactic and phonological transfer, structural diffusion, convergence, pidginization & creolization, language shift and language death. We will particularly focus on the cognitive processes involved in contact situations and will explore them, using descriptive, theoretical and experimental approaches.
Mutually Exclusive: LING 5670
1 Course Unit

LING 3740 Neurolinguistics
This course is an upper level undergraduate/graduate seminar in neurolinguistics. We will explore language in the brain through readings and discussions.
1 Course Unit

LING 3750 Psycholinguistics Seminar
This course examines how people use language. We will focus on Herb H. Clark’s book “Using Language” (1996). In this book, Clark proposes that language use is a form of joint action, and extensively develop what this claim entails and how it accounts for people’s linguistic behavior. The course will consist of a detailed examination of Clark’s thesis.
Also Offered As: PSYC 3310
Prerequisite: PSYC 1310 OR PSYC 2310 OR LING 0001
1 Course Unit

LING 3810 Semantics I
This course provides an introduction to formal semantics for natural language. The main aim is to develop a semantic system that provides a compositional interpretation of natural language sentences. We discuss various of the aspects central to meaning composition, including function application, modification, quantification, and binding, as well as issues in the syntax-semantics interface. The basic formal tools relevant for semantic analysis, including set theory, propositional logic, and predicate logic are also introduced.
Fall
Mutually Exclusive: LING 5810
Prerequisite: LING 2500
1 Course Unit

LING 3850 Experiments in the Study of Meaning
This course provides an introduction to the experimental study of meaning in natural language. We begin by introducing some basic notions of formal semantics and pragmatics and review relevant technical background. Next we discuss recent developments in studying meaning-related phenomena experimentally, which, in addition to theoretical questions, involve issues in the acquisition and processing of semantic information. In the course of this, we will also introduce the basics of experimental design and relevant psycholinguistic methodology. In addition to readings and homework assignments, students will embark on a small research project (individually or jointly), which will be presented in class at the end of the semester and written up as a term paper.
Not Offered Every Year
Prerequisite: LING 0500 OR LING 1700 OR LING 2500 OR LING 3810 OR LING 5810 OR LING 5510
1 Course Unit

LING 3860 Experiments in the Study of Meaning II
This course continues the introduction to Experiments in the study of meaning in natural language from LING 455. A large focus will be practical aspects of designing and implementing experiments, while covering a range of current topics from the experimental semantics and pragmatics literature (and exploring new avenues) along the way, e.g., pronouns and definite reference, presuppositions, quantifiers and domain restriction, generics. We’ll start with some basic aspects of experimental design, including counter-balancing, controlling for confounds, utilizing fillers, as well as a range of key experimental task paradigms, such as simple truth- value judgments and picture sentence matching, acceptability ratings, reading time studies, and visual world eye tracking. For implementation, we will introduce the PCIbex platform at https://farm.pcibex.net and its relevant functionalities. Students will select a topic area, either individually or in small groups, and start from a survey article or recent journal paper to familiarize themselves with current issues. Next, they will formulate their own question, decide on a suitable task paradigm, and begin fleshing out a full experiment implementation, with the goal of collecting data at the end of the semester (if at all possible). The project will then be written up in a term paper. This provides students with the opportunity to engage in a scientific investigation of their own early on in their career in a domain that is easily accessible and yet central to the general enterprise of the cognitive sciences.
Spring
1 Course Unit

LING 3999 Independent Study in Linguistics
An independent study for majors in linguistics.
Fall or Spring
1 Course Unit

LING 4000 Tutorial in Linguistics
This tutorial allows students to deal in a concentrated manner with selected major topics in linguistics by means of extensive readings and research. Two topics are studied during the semester, exposing students to a range of sophisticated linguistic questions.

1 Course Unit

LING 5150 Dynamics of Language
This course introduces the tools, techniques, as well as current research on the approach to language as a dynamical system, which seeks to fruitfully integrate linguistic theory, psycholinguistics, corpus linguistics, and historical linguistics through the means of mathematical modeling. Topics include: string processing, dynamical systems and stability, stochastic processes, mathematical models of population dynamics, and dynamical models of language learning, processing, and change.
Fall or Spring
Prerequisite: LING 5100
1 Course Unit

LING 5170 Evolutionary Linguistics
Evolutionary linguistics Scholars have been interested in the origins and evolution of language for hundreds of years, and work was published on the topic throughout the twentieth century. The end of the century, however, saw a considerable upsurge in serious scientific interest, leading to increasing interdisciplinary communication on the topic and the development of new empirical tools. This course offers an introduction to the literature in this field, bringing together research from a diverse range of disciplines, and laying out what questions remain and how they might possibly be answered.
Fall or Spring
1 Course Unit

LING 5210 Phonetics I: Experimental
Speech: its linguistic transcription, its quantitative physical description, and its relationship to the categories and dimensions of language structure and use. The physical basis of speech: acoustics, vocal tract anatomy and physiology, hearing and speech perception, articulation and motor control. Phonetic variation and change. Prosody: stress, intonation, phrasing speech rate. Phonetic instrumentation, the design and interpretation of phonetic experiments, and the use of phonetic evidence in linguistic research, with emphasis on computer techniques. Introduction to speech signal processing. Speech technology: introduction to speech recognition, text-to-speech synthesis, speech coding. This course will emphasize the phonetics of natural speech, and its connections to issues in other areas of linguistics and cognitive science.
Fall
Prerequisite: LING 0001
1 Course Unit

LING 5220 Phonetics II: Data Science
This is a methodology course, which focuses on how to conduct phonetics research using very large speech corpora. Topics include scripting and statistical techniques, automatic phonetic analysis, integration of speech technology in phonetics studies, variation and invariability in large speech corpora, and revisiting classic phonetic and phonological problems from the perspective of corpus phonetics.
Spring
Prerequisite: LING 5210
1 Course Unit

LING 5250 Computer Analysis and Modeling of Biological Signals and Systems
A hands-on signal and image processing course for non-EE graduate students needing these skills. We will go through all the fundamentals of signal and image processing using computer exercises developed in MATLAB. Examples will be drawn from speech analysis and synthesis, computer vision, and biological modeling.
Fall
Mutually Exclusive: LING 2250
1 Course Unit

LING 5300 Sound Structure of Language
An introduction to phonetics and phonology. Topics include articulatory phonetics (the anatomy of the vocal tract; how speech sounds are produced); transcription (conventions for representing the sounds of the world's languages); classification (how speech sounds are classified and represented cognitively through distinctive features); phonology (the grammar of speech sounds in various languages: their patterning and interaction) and syllable structure and its role in phonology.
Spring
1 Course Unit
LING 5310 Phonology I
First half of a year-long introduction to the formal study of phonology. Basic concepts in articulatory phonetics; the distribution of sounds (phonemes and allophones); underlying and surface forms, and how to relate them using both ordered-rule and surface-constraint approaches. The survey of theoretical topics in this term includes distinctive features (context, organization, underspecification); the autosegmental representation of tone; and the theory of phonological domains and their interaction with morphological and syntactic constituency. Emphasizes hands-on analysis of a wide range of data.
Fall
Prerequisite: LING 5300
1 Course Unit

LING 5320 Phonology II
Second half of a year-long introduction; continues LING 530. Topics to be surveyed include syllable structure and moraic theory; the prosodic hierarchy; the properties and representation of geminates; templatic and prosodic morphology; reduplication and emergence of the unmarked; and metrical phonology (properties of stress, foot typology, and issues of constituency). Emphasizes hands-on analysis of a wide range of data.
Spring
Prerequisite: LING 5310
1 Course Unit

LING 5410 Morphology I
This course will explore some issues concerning the internal structure of words. After a brief introduction to some basic terms and concepts, we will discuss the interaction of morphology with phonology. We will look both at how morphology conditions phonological rules and how phonology conditions morphology. Then we will turn to the interaction of syntax and morphology. We will look at some problems raised by inflectional morphology, clitics and compounds. The main requirement for the class will be a series of homework exercises in morphological analysis and a short paper at the end of the semester.
Not Offered Every Year
1 Course Unit

LING 5420 Morphology II
This course takes a detailed look at a number of central topics in morphological theory. The material examined in the course consists of primary readings and reviews, covering a number of central topics in the field. These topics include (but are not restricted to) allomorphy, blocking, the interface of phonology and morphology, syncretism, affixation, the syntax-morphology interface, and compounding. The primary requirements for the class involve short assignments that are based on the readings, in the form of both problem sets and critical appraisals of core theoretical positions. In addition to this, students will write a short paper at the end of the semester.
Not Offered Every Year
1 Course Unit

LING 5450 Mental Lexicon
An investigation of the psychological representations and processing of words. Topics include: the extraction of words from speech; lexical access and production; the induction of morphological and phonological regularities in word learning; decomposition of morphologically complex words; frequency effects in morphological processing; storage vs. computation in the lexicon; the past tense debate; morphological change. This course makes extensive use of linguistic corpora. Students will also be familiarized with experimental design issues in the psycholinguistic study of the lexicon.
Not Offered Every Year
1 Course Unit

LING 5500 Introduction to Syntax
This course is an introduction to current syntactic theory, covering the principles that govern phrase structure (the composition of phrases and sentences), movement (dependencies between syntactic constituents), and binding (the interpretation of different types of noun phrases). Although much of the evidence discussed in the class will come from English, evidence from other languages will also play an important role, in keeping with the comparative and universalist perspective of modern syntactic theory.
Fall
1 Course Unit

LING 5510 Syntax I
A general introduction at the graduate level to the analysis of sentence structure. The approach taken is that of contemporary generative-transformational grammar.
Fall
1 Course Unit

LING 5520 Syntax II
The second half of a year-long introduction to the formal study of natural language syntax. Topics to be covered include grammatical architecture; derivational versus representational statement of syntactic principles; movement and locality; the interface of syntax and semantics; argument structure; and other topics. The emphasis is on reading primary literature and discussing theoretical approaches, along with detailed case-studies of specific syntactic phenomena in different languages.
Spring
Prerequisite: LING 5510
1 Course Unit

LING 5560 Historical Syntax
Introduction to the study of the syntax of languages attested only in historical corpora. The course will cover methods and results in the grammatical description of such languages and in the diachronic study of syntactic change.
Not Offered Every Year
Prerequisite: LING 5520
1 Course Unit

LING 5600 Language Variation & Change
Speech communities as a focus for the understanding of language evolution and change: language variation in time and space. The relationship between language structure and language use; between language change and social change. Populations as differentiated by age, sex, social class, race, and ethnicity, and the relationship of these factors to linguistic differentiation.
Spring
1 Course Unit

LING 5620 Quantitative Study of Linguistic Variation
This course provides students with the opportunity to hone their statistical, computational, and organizational skillsets while conducting original linguistic research on data gathered in continuing fieldwork in the speech community. Topics include forced alignment and vowel extraction, auditory and automated variable coding, the application of linear and logistic regression, and techniques for effective data visualization.
Fall, odd numbered years only
Prerequisite: LING 5660 OR STAT 5000 OR STAT 5010
1 Course Unit
LING 5640 Experimental Sociolinguistics
How do people form social impressions of others based on subtle patterns in their linguistic behavior? How do people shape their use of language to adapt to different social contexts and reflect their own identities? And what kinds of cognitive processes allow people to learn and use these sociolinguistic skills? Sociolinguists are increasingly turning to experimental methods to answer these exciting but complex questions. In this class, students will gain an up-to-date familiarity with major results in the experimental sociolinguistics literature, an awareness of the wide range of methods for sociolinguistic experimentation, and hands-on experience with the tools needed to create sociolinguistic experiments.
Fall, even numbered years only
Mutually Exclusive: LING 3640
1 Course Unit

LING 5650 Sociophonetics
This course will build on students’ existing knowledge of sociolinguistic variation and phonetics to allow them to explore differences in the perception and production of different language and language varieties. In this course, students will learn the primary skills of sociophonetic analysis, including learning to design their own perception and production studies. Students will also gain experience with methods in sociophonetics and common tools for analysis such as ELAN, Praat, FAVE and R. The course is open to graduate and undergraduate students, but all students will have the opportunity to conduct an independent sociophonetic research project.
Mutually Exclusive: LING 3650
Prerequisite: LING 0600 AND LING 2200
1 Course Unit

LING 5660 The Study of the Speech Community: Field Methods
For students who plan to carry out research in the speech community. Techniques and theory derived from sociolinguistic studies will be used to define neighborhoods, enter the community, analyze social networks, and obtain tape-recorded data from face-to-face interviews. Students will work in groups and study a single city block.
Fall or Spring
1 Course Unit

LING 5670 Language Contact
To this day, we have found no evidence of a language developing in total isolation from other languages. Most languages are in constant contact with other languages with the consequence that they can shape and influence each other. However, every language evolves in a distinct linguistic ecology and this means that the circumstances of language contact and the sociocultural relationships involved in each contact situation vary considerably, leading to a range of different outcomes. This course offers a thorough introduction to the field of contact linguistics including a detailed overview of contact situations and their linguistic and social consequences. The topics under study are: bilingualism (including code switching), multilingualism, morphosyntactic and phonological transfer, structural diffusion, convergence, pidginization & creolization, language shift and language death. We will particularly focus on the cognitive processes involved in contact situations and will explore them, using descriptive, theoretical and experimental approaches.
Mutually Exclusive: LING 3670
1 Course Unit

LING 5700 Developmental Psycholinguistics
The generative literature on language acquisition has produced many accurate and insightful descriptions of child language, but relatively few explicit accounts of learning that incorporate the role of individual experience into the knowledge of specific languages. Likewise, the experimental approach to language development has identified processes that could provide the bridge between the data and the grammar, but questions remain whether laboratory findings can sufficiently generalize to the full range of linguistic complexity. This course is an overview of research in language acquisition with particular focus on the important connection between what children know and how they come to know it.
Spring
1 Course Unit

LING 5740 Neurolinguistics
This course is an upper level undergraduate/graduate seminar in neurolinguistics. We will explore language in the brain through readings and discussions.
Fall
1 Course Unit

LING 5750 The Acquisition of Meaning
This course is an overview of research in language acquisition with particular focus on the acquisition of first language by children. We will discuss the acquisition of the meanings of words and sentences, and the pragmatic and social interpretation of sentences in context. We will also consider how language relates to other cognitive systems and to human social reasoning. Particular emphasis will be placed on discovering the mechanisms children possess that enable them to learn and use language.
Not Offered Every Year
1 Course Unit

LING 5810 Semantics I
This course provides an introduction to formal semantics for natural language. The main aim is to develop a semantic system that provides a compositional interpretation of natural language sentences. We discuss various of the aspects central to meaning composition, including function application, modification, quantification, and binding, as well as issues in the syntax-semantics interface. The basic formal tools relevant for semantic analysis, including set theory, propositional logic, and predicate logic are also introduced.
Fall
Prerequisite: LING 5510
1 Course Unit

LING 5820 Semantics II
The first part of the course expands the system from LING 580 to include intensional contexts. In particular, we discuss analyses of modal, attitude verbs, and conditionals, as well as the scope of noun phrases in modal environments. The second part of the course discusses a selection of topics from current work in semantics, such as the semantics of questions, tense and aspect, donkey anaphora, indefinites, genericity, degree constructions, events and situations, domain restriction, plurality and focus.
Spring
Prerequisite: LING 5520
1 Course Unit
LING 5850 Experiments in the Study of Meaning
This course provides an introduction to the experimental study of meaning in natural language. We begin by introducing some basic notions of formal semantics and pragmatics and review relevant technical background. Next we discuss recent developments in studying meaning-related phenomena experimentally, which, in addition to theoretical questions, involve issues in the acquisition and processing of semantic information. In the course of this, we will also introduce the basics of experimental design and relevant psycholinguistic methodology. In addition to readings and homework assignments, students will embark on a small research project (individually or jointly), which will be presented in class at the end of the semester and written up as a term paper.
Not Offered Every Year
1 Course Unit

LING 5860 Experiments in the Study of Meaning II
This course continues the introduction to Experiments in the study of meaning in natural language from LING 455. A large focus will be practical aspects of designing and implementing experiments, while covering a range of current topics from the experimental semantics and pragmatics literature (and exploring new avenues) along the way, e.g., pronouns and definite reference, presuppositions, quantifiers and domain restriction, generics. We'll start with some basic aspects of experimental design, including counter-balancing, controlling for confounds, utilizing fillers, as well as a range of key experimental task paradigms, such as simple truth-value judgments and picture sentence matching, acceptability ratings, reading time studies, and visual world eye tracking. For implementation, we will introduce the PCIbex platform at https://farm.pcbex.net and its relevant functionalities. Students will select a topic area, either individually or in small groups, and start from a survey article or recent journal paper to familiarize themselves with current issues. Next, they will formulate their own question, decide on a suitable task paradigm, and begin fleshing out a full experiment implementation, with the goal of collecting data at the end of the semester (if at all possible). The project will then be written up in a term paper. This provides students with the opportunity to engage in a scientific investigation of their own early on in their career in a domain that is easily accessible and yet central to the general enterprise of the cognitive sciences.
Spring
1 Course Unit

LING 6000A Second Year Seminar
The goal of this course is divided into two main components: First, it provides a setting in which second year PhD students in Linguistics will develop the skills that are essential to communicating and advancing their research; and second, it provides professional support in a number of areas, including (but not limited to) abstract writing, preparing papers for publication, dealing with reviews, and related topics. At the beginning of each semester, the students will determine which of their research projects will be central to the seminar; this is the one that they will regularly present on during course meetings. One possibility is that students will be simultaneously enrolled in an independent study for their project, but that is by no means necessary. The course will be flexible enough so that students can have certain days devoted to the specific professional activities that they are engaged in. For example, we might spend part of a session providing feedback on an abstract that one of the participants is preparing to submit. The small size of the course will ensure that specific occasions like this can be addressed in course meetings throughout the course of the year.
Two Term Class, Student must enter first term; credit given after both terms are complete
0.5 Course Units

LING 6000B Second Year Seminar
The goal of this course is divided into two main components: First, it provides a setting in which second year PhD students in Linguistics will develop the skills that are essential to communicating and advancing their research; and second, it provides professional support in a number of areas, including (but not limited to) abstract writing, preparing papers for publication, dealing with reviews, and related topics. 0.5 Course Units

LING 6100 Seminar in Historical and Comparative Linguistics
Selected topics either in Indo-European comparative linguistics or in historical and comparative method.
Fall or Spring
1 Course Unit

LING 6110 Comparative Indo-European Grammar I
A survey of phonology and grammar of major ancient Indo-European languages and the reconstruction of Proto-Indo-European. A knowledge of at least one ancient Indo-European language is required.
Two Term Class, Student must enter first term; credit given after both terms are complete
1 Course Unit

LING 6120 Comparative Indo-European Grammar II
A survey of phonology and grammar of major ancient Indo-European languages and the reconstruction of Proto-Indo-European. A knowledge of at least one ancient Indo-European language is required.
Fall or Spring
1 Course Unit
LING 6170 Topics in the Cultural Evolution of Language
Readings in the cultural evolution of language. This encompasses research on the contribution of processes of cultural change to the emergence of language in the human species, the emergence of new languages, and language change viewed as a cultural-evolutionary process. There will be an emphasis on research employing empirical methods, particularly experimentation. Otherwise focus varies from term to term.
Not Offered Every Year
1 Course Unit
LING 6200 Topics in Phonetics
Topics in Phonetics
Not Offered Every Year
1 Course Unit
LING 6300 Topics in Phonology
Topics are chosen from such areas as featural representations; syllable theory; metrical structure; tonal phonology; prosodic morphology; interaction of phonology with syntax and morphology.
Not Offered Every Year
Prerequisite: LING 5310 OR LING 5320
1 Course Unit
LING 6400 Seminar in Morphology
Readings in modern morphological theory and evaluation of hypotheses in the light of synchronic and diachronic evidence from various languages.
Not Offered Every Year
Prerequisite: LING 5310
1 Course Unit
LING 6500 Topics in Natural-Language Syntax
Detailed study of topics in syntax and semantics, e.g., pronominalization, negation, complementation. Topics vary from term to term.
Fall or Spring
Prerequisite: LING 5520
1 Course Unit
LING 6580 Topics in the Syntax-Semantics Interface
Topics in the Syntax-Semantics Interface
Fall
1 Course Unit
LING 6600 Research Seminar in Sociolinguistics
Students approaching the dissertation level will explore with faculty frontier areas of research on linguistic change and variation. Topics addressed in recent years include: experimental investigation of the reliability of syntactic judgments; the development of TMA systems in creoles; transmission of linguistic change across generations. The course may be audited by those who have finished their course work or taken for credit in more than one year.
Not Offered Every Year

Topics in Semantics & Pragmatics
Not Offered Every Year
1 Course Unit
LING 6960 Pragmatics Workshop
Pragmatics Workshop
Not Offered Every Year
1 Course Unit
LING 6999A Independent Research Project
PhD students undertake an independent research project over the course of a year. Designed to be optionally paired with LING 6000A/B, Second Year Seminar.
Two Term Class, Student must enter first term; credit given after both terms are complete
0.5 Course Units
LING 6999B Independent Research Project
PhD students undertake an independent research project over the course of a year. Designed to be optionally paired with LING 6000A/B, Second Year Seminar.
Two Term Class, Student must enter first term; credit given after both terms are complete
0.5 Course Units
LING 9999 Independent Study and Research
Independent Study and Research
Fall or Spring
1 Course Unit
Logic, Information and Computation (LGIC)
LGIC 1710 Introduction to Logic
This course provides an introduction to some of the fundamental ideas of logic. Topics will include truth functional logic, quantificational logic, and logical decision problems.
Fall or Spring
Also Offered As: PHIL 1710
Mutually Exclusive: PHIL 5710
1 Course Unit
LGIC 2100 Discrete Mathematics I
Topics will be drawn from some subjects in combinatorial analysis with applications to many other branches of math and science: graphs and networks, generating functions, permutations, posets, asymptotics.
Not Offered Every Year
Also Offered As: MATH 3400
1 Course Unit
LGIC 2200 Discrete Mathematics II
Topics will be drawn from some subjects useful in the analysis of information and computation: logic, set theory, theory of computation, number theory, probability, and basic cryptography.
Also Offered As: MATH 3410
1 Course Unit

LGIC 3100 Logic and Computability 1
This graduate course focuses on topics drawn from the central areas of mathematical logic: model theory, proof theory, set theory, and computability theory.
Not Offered Every Year
Also Offered As: PHIL 4721
1 Course Unit

LGIC 3200 Logic and Computability 2
The course is a continuation of PHIL 4721. Cross-list with MATH5710 and LGIC3200.
Not Offered Every Year
Also Offered As: PHIL 4722
Prerequisite: PHIL 4721 OR PHIL 6721 OR MATH 5700
1 Course Unit

LGIC 4960 Topics in Mathematical Logic
The course focuses on topics drawn from the central areas of mathematical logic: model theory, proof theory, set theory, and computability theory.
Not Offered Every Year
Also Offered As: PHIL 4720
1 Course Unit

LGIC 4999 Independent Study
Student arranges with a faculty member to pursue an independent research project on a suitable topic.
1 Course Unit

Malagasy (MALG)

MALG 0100 Elementary Malagasy
The main objective of this course is to allow students to study an African language of their choice, depending on the availability of the instructor. The course will provide students with lingustics tools which will facilitate their research work in the target country. Cultural aspects of the speakers of the language will be introduced and reinforced.
Fall or Spring
1 Course Unit

MALG 0200 Elementary Malagasy II
Continuation of AFST 490.
Fall or Spring
1 Course Unit

MALG 0201 Malagasy (Elementary II) Language in a Cultural Context
This class will create a communicative language environment where students will explore the language and culture of Madagascar. The course offers a unique opportunity for students to deepen their understanding of an island that has remained largely isolated from the rest of the world while fulfilling a language requirement. Emphasis will be placed on exposing students to Malagasy culture through speaking, reading, writing and listening, and students will be expected to use the target language in class as much as possible. At the end of the semester, students will travel to become fully immersed in the Malagasy language and to deepen their understanding of the history, environment, and unique culture of Madagascar. Students who are interested in taking this seminar must complete Malagasy Elementary I or Malagasy Intermediate I in the preceding fall. Malagasy Elementary I is available to all students.
Not Offered Every Year
Prerequisite: MALG 0100
1 Course Unit

MALG 0300 Intermediate Malagasy I
Intermediate level courses in a variety of African languages: Igbo, Shona, Wolof, Malagasy, Chichewa, Setswana, Manding, Afrikaans, Setswana. Focus on oral proficiency and productive language skills. All course are language specific and follow ACTFL proficiency guidelines.
Fall
1 Course Unit

MALG 0400 Intermediate Malagasy II
Continuation of AFST 492.
Spring
1 Course Unit

MALG 0401 Intermediate Malagasy II: Language in a Cultural Context
As part of this Intermediate II levels of Malagasy, the content will create a communicative language environment where students will explore the language and culture of Madagascar. The course offers a unique opportunity for students to deepen their understanding of an island that has remained largely isolated from the rest of the world while fulfilling a language requirement. Emphasis will be placed on exposing students to Malagasy culture through speaking, reading, writing and listening, and students will be expected to use the target language in class as much as possible. At the end of the semester, students will travel to become fully immersed in the Malagasy language and to deepen their understanding of the history, environment, and unique culture of Madagascar. Students who are interested in taking this seminar must complete Malagasy Intermediate I in the preceding fall. .
Not Offered Every Year
Prerequisite: MALG 0300
1 Course Unit
MALG 0496 Malagasy (Elementary II/Intermediate II): Language in a Cultural Context
Combining the Elementary II and Intermediate II levels of Malagasy, this class will create a communicative language environment where students will explore the language and culture of Madagascar. The course offers a unique opportunity for students to deepen their understanding of an island that has remained largely isolated from the rest of the world while fulfilling a language requirement. Emphasis will be placed on exposing students to Malagasy culture through speaking, reading, writing and listening, and students will be expected to use the target language in class as much as possible. At the end of the semester, students will travel to become fully immersed in the Malagasy language and to deepen their understanding of the history, environment, and unique culture of Madagascar. Students who are interested in taking this seminar must complete Malagasy Elementary I or Malagasy Intermediate I in the preceding fall. Malagasy Elementary I is available to all students.
Not Offered Every Year
Also Offered As: AFRC 0496
1 Course Unit

MALG 1100 Advanced Malagasy I
Language specific sections for students interested in doing country-specific research in a target language. Courses cover project-based skills for AFST research.
Fall
1 Course Unit

MALG 1200 Advanced Malagasy II
Continuation of AFST 494.
Spring
1 Course Unit

Malayalam (MLYM)

MLYM 0100 Beginning Malayalam Part I
This course is designed to develop skills in reading, writing, and speaking. It will focus on the alphabet, basic vocabulary, nouns (cases, gender and number), verbs and their basic tenses, numerals, rules of joining words, adjectives, adverbs, and sentence structure. Guided conversation will be a part of every class. Students will receive considerable training in speaking and writing their own sentences and paragraphs.
Fall
1 Course Unit

MLYM 0200 Beginning Malayalam Part II
This course is designed to develop skills in reading, writing, and speaking. It will focus on the alphabet, basic vocabulary, nouns (cases, gender and number), verbs and their basic tenses, numerals, rules of joining words, adjectives, adverbs, and sentence structure. Guided conversation will be a part of every class. Students will receive considerable training in speaking and writing their own sentences and paragraphs.
Spring
Prerequisite: MLYM 0100 OR MLYM 5100
1 Course Unit

MLYM 0300 Intermediate Malayalam Part I
This course is designed to further the language skills learned in Beginning Malayalam. Direct and indirect speech, passive voice, postpositions, and rules of joining words, will be included. Reading and discussion of texts from current Malayalam literature (essays, narration, short stories, and poems) will be a major portion of the course.
Two Term Class, Student must enter first term; credit given after both terms are complete
1 Course Unit

Management (MGMT)

MGMT 0001 Principles of Management
Organizations emerge because individuals can't (or don't want to) accomplish their goals alone. Management is the art and science of helping individuals achieve their goals together. Managers in an organization determine where their organization is going and how it gets there. More formally, managers formulate strategies and implement those strategies. This 0.5 credit unit course provides a framework for understanding the opportunities and challenges involved in formulating and implementing strategies. We examine multiple aspects of how managers address their environments, strategy, structure, culture, tasks, people, and outputs, and how managerial decisions made in these various domains interrelate. The course will help you begin to understand and analyze how managers can formulate and implement strategies effectively. Please note that this 0.5 CU course does not fulfill the Wharton MGMT 1010 requirement.

0.5 Course Units

MGMT 0004 Work, Power, and Inequality
From the immigrant shirtwaist sewers' strike of 1909 to the 2021 union declaration by engineers Google, MGMT004 examines imbalances of power in the workplace and responses to perceived abuses of employer power. We investigate, via an exploration of government regulations and an examination of movements like #MeToo, how government and firm-level human capital policies shape workforce inequalities of race and gender. Throughout the course, we compare the United States with other countries to assess how national institutions influence both productivity and profitability (for firms) and fairness and stability (for workers).

Fall, Spring, and Summer Terms
0.5 Course Units

MGMT 1010 Introduction To Management
We all spend much of our lives in organizations. Most of us are born in organizations, educated in organizations, and work in organizations. Organizations emerge because individuals can't (or don't want to) accomplish their goals alone. Management is the art and science of helping individuals achieve their goals together. Managers in an organization determine where their organization is going and how it gets there. More formally, managers formulate strategies and implement those strategies. This course provides a framework for understanding the opportunities and challenges involved in formulating and implementing strategies by taking a "system" view of organizations, which means that we examine multiple aspects of how managers address their environments, strategy, structure, culture, tasks, people, and outputs, and how managerial decisions made in these various domains interrelate. The course will help you to understand and analyze how managers can formulate and implement strategies effectively. It will be particularly valuable if you are interested in management consulting, investment analysis, or entrepreneurship - but it will help you to better understand and be a more effective contributor to any organizations you join, whether they are large, established firms or startups. This course must be taken for a grade.

Fall or Spring
1 Course Unit

MGMT 1110 Multinational Management
Most successful firms go global in some way; why do they go global, and how do they navigate across international borders? This is the question at the core of multinational management. In this course, you will learn about topics such as how firms choose where and how to invest abroad, how shifts in the political economy landscape affect firm strategy, and how firms respond to restrictions on the movement of both physical and human capital across borders. The class utilizes economics and global strategy frameworks to provide students with an understanding of how to formulate multinational firm strategy. Fulfills the Global Economy, Business, and Society requirement. This course has a mandatory attendance policy.

Prerequisite: WH 1010 OR MGMT 1010
1 Course Unit

MGMT 1170 Global Growth of Emerging Firms
Emerging firms are a critical element of economic growth, and a key source of gains in innovation and social welfare. This course is designed to depart from the U.S.-centric conversation on startups - with its outsized focus on Silicon Valley - and train a critical eye on some of the unique innovations emerging from new regional hotspots across the globe, with a particular focus on developing and emerging economies. We will discuss the challenges faced by founders in different global contexts, the components of a robust institutional ecosystem, and the ways in which creative solutions may flourish in response to local problems. Along the way, students will gain a virtual view into global startup communities, and personalized insights from firm founders operating around the world - from Bogota to Nairobi to Jakarta. The course will be structured in three primary parts. The first and longest section will discuss the Key Challenges for emerging firm growth across the globe, such as access to talent and resources, political risk, and legal institutions. The second section will highlight particularly active areas of Context-Driven Innovation that are thriving in various regions, such as financial technology, mobile health products, and clean energy. The final section will train Regional Spotlights on different geographic areas in turn, so that we may focus on the challenges and opportunities specific to various parts of the world.

1 Course Unit

MGMT 1980 Special Topics in Management
Courses offered of various topics and points of focus, ranging across multiple concentrations of Management, (i.e., Entrepreneurial, Strategy, Organizational Effectiveness, etc.).

Fall or Spring
Mutually Exclusive: MGMT 7990
0.5-1 Course Unit

MGMT 2050 Multinational Corporate Strategies
This course focuses on the creation of competitive advantage in the multinational firm. It examines the nature of global competition by exploring the characteristics of global versus non-global industries and firms. We also explore different types of international strategy and structure and examine the specific challenges of managing in multiple countries and markets. Finally, we consider the strategic allocation of resources along the value chain and the role of strategic alliances as a crucial element of an effective global strategy.

Spring
Prerequisite: MGMT 1010 AND MGMT 1110 AND WH 1010
1 Course Unit
MGMT 2080 Globalization and International Political Economy
Managing Globalization and Anti-Globalization provides students with a solid foundation in the economic history of globalization and anti-globalization, the institutions that manage the global economy, and the current challenges these institutions are facing. Students in this class will develop their own worldview about the powerful forces shaping today's international political economy and build a solid foundation for understanding the future of organizational strategy. The first half of the course focuses on the historical trajectory of globalization and learning about the institutions that seek to manage it. The second half of the course explores how institutions manage present-day global governance challenges ranging from global migration, the rise of populist anti-globalization movements, the collapse of communism, and global inequality, to disruptive technologies such as bitcoin. Format: Lectures and discussion structured to encourage maximum student participation. Requirements: midterm and final exam, a final course paper of 10-20 pages and short reaction papers dealing with the readings for the week. Supplemental activities include map quizzes, small group projects, and current events analysis. Spring 1 Course Unit

MGMT 2090 The Political Environment of the Multinational Firm
The share of executives, board members, and investment managers who consider climate risk, racial justice and other ESG issues as well as stakeholder's opinions of the firm to be material to their business decisions has risen dramatically. If this business case for engagement with stakeholders on ESG issues can be demonstrated to mainstream investors, pools of capital can be mobilized to harness grand societal challenges. However, executives, board members, and investment managers are actually growing less confident in the ESG data available to guide capital allocations and strategic decisions. ESG scores have been demonstrated to be unreliable, incomplete and biased and often lean on outdated and/or incomplete information obtained through voluntary unaudited disclosure. This course provides students the latest tools to assess and map stakeholder opinions as well as integrate them into financial valuation. It also offers behavioral skills critical for stakeholder engagement including trust building, strategic communications and shaping organizational culture. In short, it prepares students to engage in Corporate Diplomacy (i.e., to influence external stakeholders' opinions of the acceptability of a company's operations at a moment in time and to convince internal stakeholders to adapt their behaviors, systems and outputs when necessary to support an organizational mission). 1 Course Unit

MGMT 2110 Competitive Strategy
This is an advanced course in competitive strategy. The course will apply the tools of industrial organization economics and game theory to examine the strategic decisions that managers make. We will examine those decisions concerning pricing, capacity investment, advertising, new product introductions, and research and development. Emphasis will be placed on the strategic interaction among rival sellers. In particular we will look at the various methods of entry deterrence and strategic commitment. The course will attempt to integrate traditional economic models with case study materials. In addition to prerequisites, some knowledge of microeconomics is suggested. The course will be discussion oriented and based largely on case materials and mini-lectures. Fall Prerequisite: WH 1010 AND MGMT 1010 1 Course Unit

MGMT 2120 Social Entrepreneurship
This is a course on creating a business to attack a social problem and thereby accomplish both social impact and financial sustainability. For this course, social entrepreneurship is defined as entrepreneurship used to profitably confront social problems. This definition therefore views social entrepreneurship as a distinct alternative to public sector initiatives. The basic thesis is that many social problems, if looked at through an entrepreneurial lens, create opportunity for someone to launch a venture that generates profits by alleviating that social problem. This sets in motion a virtuous cycle - the entrepreneur is incented to generate more profits and in so doing, the more the profits made, the more the problem is alleviated. Even if it is not possible to eventually create a profit-making enterprise, the process of striving to do so can lead to a resource-lean not-for-profit entity. Creating a profitable social entrepreneurship venture is by no means a simple challenge. Cross-listed with MGMT 812. Fall Mutually Exclusive: MGMT 8120 0.5 Course Units

MGMT 2130 Entrepreneurship through Acquisition
The objective of this course is to study the process of entrepreneurship through the acquisition of existing operating businesses. We will study this process through a series of lectures, assigned readings, case studies, and a final project which will follow the acquisition process. Freshmen require instructor's permission. Prerequisite: FNCE 1000 AND ACCT 1010 0.5 Course Units

MGMT 2140 Market Dynamics and Technical Change
The course is designed to meet the needs of future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using information technology to improve business processes and offerings. We will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems. There is definitely an overlap in content with other courses in intermediate microeconomics, or managerial economics. Nevertheless, the treatment is sufficiently distinctive to make it complementary to those other treatments for a student who is particularly interested in economic change, or is otherwise interested in acquiring a broader view of economics. 1 Course Unit
MGMT 2230 Business Strategy
This course encourages students to analyze the problems of managing the total enterprise in the domestic and international setting. The focus is on the competitive strategy of the firm, examining issues central to its long- and short-term competitive position. Students act in the roles of key decision-makers or their advisors and solve problems related to the development or maintenance of the competitive advantage of the firm in a given market. The first module of the course develops an understanding of key strategic frameworks using theoretical readings and case-based discussions. Students will learn concepts and tools for analyzing the competitive environment, strategic position and firm-specific capabilities in order to understand the sources of a firm’s competitive advantage. In addition, students will address corporate strategy issues such as the economic logic and administrative challenges associated with diversification choices about horizontal and vertical integration. The second module will be conducted as a multi-session, computer-based simulation in which students will have the opportunity to apply the concepts and tools from module 1 to make strategic decisions. The goal of the course is for students to develop an analytical tool kit for understanding strategic issues and to enrich their appreciation for the thought processes essential to incisive strategic analysis. This course offers students the opportunity to develop a general management perspective by combining their knowledge of specific functional areas with an appreciation for the requirements posed by the need to integrate all functions into a coherent whole. Students will develop skills in structuring and solving complex business problems. In addition to prerequisites, enrollment is limited to seniors and juniors that have completed introductory courses in finance, marketing, and accounting. Prerequisite: WH 1010 AND MGMT 1010
1 Course Unit

MGMT 2240 Leading Diversity in Organizations
People in the workplace are constantly interacting with peers, managers, and customers with very different backgrounds and experiences. When harnessed effectively, these differences can be the catalyst for creative breakthroughs and the pathway to team and organizational learning and effectiveness; but when misunderstood, these differences can challenge employees’ values, performance, workplace relationships, and team effectiveness. This course is designed to help students navigate diverse organizational settings more effectively and improve their ability to work within and lead diverse teams and organizations. It also offers students the opportunity to develop their critical thinking on topics such as identity, relationships across difference, discrimination and bias, equality, and equity in organizations and society and how they relate to organizational issues of power, privilege, opportunity, inclusion, creativity and innovation and organizational effectiveness. Class sessions will be experiential and discussion-based. Readings, self-reflection, guest speakers from organizations, case studies and a final project will also be emphasized. By the end of this course, you should be able to: 1) Evaluate the aspects of your identity and personal experiences that shape how you interact and engage with others and how they interact and engage with you in organizations 2) Explain how issues of power, privilege, discrimination, bias, equality, and equity influence opportunity and effectiveness in organizations 3) Propose ways to make relationships across difference in organizations more effective 4) Describe current perspectives on the relationships among diversity, inclusion, creativity, and innovation in organizations 5) Analyze a company’s current approach to leading diversity and use content from this course to propose ways to enhance learning and effectiveness in that company. Fall or Spring 0.5 Course Units

MGMT 2250 Value Creation and Value Capture in American Business History
This course examines how the kind of firms in which most Wharton students will spend the next stage of their careers came to be as they are today. At a superficial level, the course’s objectives are descriptive and narrative. But history, considered thoughtfully and critically, is never just description and a narrative and the course’s deeper purpose is to give students some idea of how to think about the future evolution of firms and industries. In this the course is as much an applied strategy course as it is a historical survey. The course considers the development of the business enterprise as an economic institution. It also covers the evolution of competition and strategy, marketing institutions, some aspects of the history of operations management, and corporate finance. Issues arising in these different management disciplines are considered in part for the purpose of showing off their interrelationships. Questions of how value can be created and captured at the enterprise level form the core of the perspective. The course’s focus is on American developments, since many of the innovations took place here, but there is scope for comparison with Japan and the leading European economies if there is student interest. Chronologically the course runs from Franklin’s days through the early twenty-first century. The individual classes proceed through discussion of actual business decisions and performance in a series of challenging and otherwise interesting moments in the evolution of the American business environment. The materials are unusual for the Wharton School—they are not just often case-like but wherever possible draw on documents contemporary to the decisions such as correspondence, internal memoranda, minutes of meetings, old newspaper and magazine stories, and eyewitness accounts. The objective in this is to give students as minimally mediated access as is feasible to what the embedded actors knew and thought. The materials require thoughtful preparation. Weekly short writing assignments during the first twelve weeks of the term develop students’ skill in turning such preparation into crisp analytical prose. (This will be valuable to most students in the early phases of their post-Wharton careers.) The course as a process is much more focused on the students than many and the most productive experience of it demands that the students both engage with the materials when they prepare and then take an active role in the class discussion. The largest single element in the grading is a substantial term paper on a topic agreeable to both the student and the instructor. (To everyone’s surprise, the lack of easy access Mutually Exclusive: MGMT 7140
1 Course Unit
**MGMT 2290 Intellectual Property Strategy for the Innovation-Driven Enterprise**

Announcing the first iPhone at Macworld 2007, Apple CEO Steve Jobs famously boasted: "And boy, have we patented it!" How, and to what extent, do patents and intellectual property really provide competitive advantage for innovative technology companies? What makes an IP asset strategically powerful? How do patents impact, and even drive, major corporate decisions including M&A, venture funding and exits, and entry into new markets? In this course, students will learn to critically analyze and answer these questions, gaining insights they can leverage in their future roles as innovation industry executives, entrepreneurs, strategist and investors. The course includes three major units. In Unit 1, Patents and Innovation Value, we examine closely the relationship between competitive advantage, value proposition, and intellectual property (particularly patents). We will apply our understanding of that relationship to critique and sharpen patent strategy to protect examples of cutting-edge technologies. In Unit 2, Patent Leverage and the Corporate Playbook, we study theory and examples of how intellectual property leverage strategically informs corporate transactions and decisions, for established companies as well as for start-ups. In unit 3, Limits and Alternatives to Patents, we confront the recent legal trend toward reigning in the power and scope of patents. We also consider the growing importance of data as a proprietary technology asset, and discuss options for adapting intellectual property strategy appropriately. Throughout, students will learn and practice applying the concepts we learn to decision-making in examples based on innovative real-world technologies and businesses.

0.5 Course Units

**MGMT 2300 Entrepreneurship**

How do you take a good idea and turn it into a successful venture? Whether you plan to become a founder, investor, mentor, partner, or early employee of a startup company, this course will take you through the entire journey of new venture creation and development. MGMT 230 is a project-based survey course designed to provide an overview of the entrepreneurial process and give you practical hands-on experience with new venture development. You and a team will have the chance to ideate, test, and develop a pitch for an early-stage startup by incorporating material from class lectures, simulations, labs, and class discussions. By the end of the course, you will have a better understanding of what it takes to create a successful startup, as well as proven techniques for identifying and testing new market opportunities, acquiring resources, bringing new products and services to market, scaling, and exiting new ventures.

0.5 Course Units

**MGMT 2310 Entrepreneurship Launchpad**

This advanced course on entrepreneurship focuses on taking your venture from a good idea to a fundable business. Participants need to come to the class with a validated idea that they are committed to pursuing commercially. The course is entirely oriented toward applying concepts and frameworks to advance your venture and provides practical guidance for testing the product or service, forming the entity, establishing partnerships, and engaging with investors. Students must have successfully completed MGMT 801 before enrolling (or obtain the permission of the instructor). Format: Highly interactive Requirements: Class participation, interim assignments.

Mutually Exclusive: MGMT 8310

Prerequisite: MGMT 8010

0.5-1 Course Unit

**MGMT 2320 Business Model Innovation Strategy**

Business Model Innovation Strategy is a half semester MBA elective course which centers on the conceptualization, design, analysis and implementation of novel business models by incumbent and by new venture leaders as well as on the organizational challenges associated with a business model innovation strategy. Students will be introduced to a framework for developing and implementing a new business model. The framework will be brought to life through a combination of lectures, in-class exercises, numerous illustrations and case discussions. Fall

Mutually Exclusive: MGMT 8320

0.5 Course Units

**MGMT 2330 Strategies and Practices of Family-Controlled Companies**

This course is designed for those persons who desire to understand the distinct strategies and practices of family-controlled companies and family wealth creation. It will focus on stakeholder decision making; financial and resource driven options for long-run competitiveness; organizational structures, management team issues; strategic planning from a resource-based perspective; transition planning for the corporate entity; family dynamics and communication issues; and leadership empowerment. The course is intended for those who plan to consult or provide professional services to family-controlled companies and for those planning a career in a family firm. The class is structured around topical lectures with frequent utilization of case studies requiring active class participation, as well as on-site and off-site project work time. Submission of several written case studies, and a term project are required. Open to Wharton undergraduate & MBA students, as well as Penn graduate students. Format: The class is structured around topical lectures with frequent utilization of case studies. There will be in-class discussion, as well as on-site and off-site project work time.

Mutually Exclusive: MGMT 8330

**MGMT 2380 Organizational Behavior**

Management 238 is an organizational behavior course, examining individual, interpersonal, and group effectiveness at work. Topics range from decision-making, motivation, and personality to networks, influence, helping, leadership, teamwork, and organizational culture. The learning method is heavily experiential, with a focus on applying key principles to the human side of management in role-play exercises, simulations, a mini-TED talk, and group projects in local organizations. Other Information: This course is open to juniors and seniors across Penn. This course also has a first-day mandatory attendance policy. Fall

1 Course Unit
MGMT 2410 Knowledge for Social Impact: Analyzing Current Issues & Approaches
Inequality. Poverty. Racism. Climate change. COVID. Violence. Crime. And so much more. The list of societal challenges in the United States and around the globe is daunting. Like many other students, you may hope to make a positive difference in the world. But, where and how? This course is designed to help you begin to answer this question.
We will meet with for-profit and nonprofit leaders working to make a difference, drawing lessons from their successes, failures, evolution, and resilience. We will read and discuss rigorous social science research that ensures that we move from hunches to facts, from simplistic and ineffective solutions to systems knowledge. We will investigate impact measurement strategies, asking “What is feasible and beneficial to monitor and measure, and why?” And, we will take a deep dive into two of the complex societal challenges facing the US States today: (1) barriers to college access, completion, and post-college employment; and (2) barriers to employment following incarceration.

1 Course Unit

MGMT 2420 Corporate Governance, Executive Compensation and the Board
This course examines the relationships between corporate managers, the boards of directors charged with overseeing them, and investors. We'll review the responsibilities of the board, including financial statement approval, CEO performance assessment, executive compensation, and succession planning. While boards are legally bound to represent the interests of equity investors, in the course of carrying out this role they are often called on to respond to the needs of numerous other stakeholders, including customers, employees, government and society at large. With global brands at risk and mistakes instantly transmitted via Internet and social media, the reputational stakes are very high.

The course is a combination of lecture, guest lecture, discussion, case analysis, and in-class research workshops. We will review some of the theory underlying modern governance practice, drawing from theories and evidence provided by research across diverse fields, including finance, sociology, and organization and management theory. We'll study specific situations where boards and management teams faced governance challenges, and assess the strategies used to deal with them. Finally, we'll examine the ways in which governance arrangements and external stakeholder involvement in governance affects corporate social behavior and global citizenship.
Prerequisite: WH 1010 AND MGMT 1010
1 Course Unit

MGMT 2430 Work and Technology: Choices and Outcomes
That technology affects work is a commonplace - but we accept technology's impact too readily as inevitable and unchangeable. This 0.5 CU course challenges the mindset of technological determinism and explores what choice points are available to managers implementing new technologies as well as the engineers who design them. • Module 1: "Technology and Its Impact on Jobs and Skills" considers which technologies deserve the characterization of "revolutionary" due to their capacity to change entire organizations - and even societies - vs. those that only substitute narrowly for past technologies. We'll examine past anxieties related to automation and evaluate the extent to which the "worst-case" scenarios about employment loss have or have not come to pass - and evaluate claims of "this time it's different". • Module 2: "Intelligent Technologies: How Will They Affect Work and Organizations?" explores how Artificial Intelligence (AI) is changing core "managing people" activities (e.g., hiring and performance appraisal) – plus shifting the locus of management away from human bosses and into algorithms. We'll examine controversies around "gig work", i.e., the positives of worker schedule flexibility vs. the negatives of algorithmic control. We'll also consider the metaverse and its potential for unleashing human creativity and fostering richer and more nuanced virtual communication - as well as providing organizations with new ways to monitor and control.
• Module 3: "Technology and Policy" examines three policy issues. First, how can we inject more ethical criteria into the development of artificial intelligence and algorithms affecting work? Second, what are the pros and cons of "universal basic income", whose premise is that technological change will soon lead to an unprecedented amount of job elimination? Third, how does "technology make us dumber"? How can we avoid the obsolescence of critical human skills? Take this course to be ready to manage the strategic and analytic issues involving the design and implementation of technology at work - and for a preview of your own future work life. Requirements include: class participation; in-class quizzes; interviewing someone you know to ask how technology has affected their work life; and the "In Hindsight" group assignment looking back on past scares about a particular technology's impact on work - and what actually happened.

0.5 Course Units

MGMT 2480 How to be the Boss
Despite the press accounts about the "gig" economy, the Bureau of Labor Statistics calculates that about 92 percent of the people working in the US are employees who are supervised by someone. That figure has remained roughly the same for decades. The term "supervisor" is sometimes used for the first-level of supervision in an organization, but in fact that role - and indeed the title? goes all the way up to the very top of any employer organization. Even CEO’s are the supervisor of their direct reports. When people talk about their "boss," they almost always are referring to the person who supervises them. Stepping into a supervisor position is challenging, exceptionally so the first time. That time comes relatively soon for Wharton grads. Undergrads pursuing consulting jobs typically find themselves supervising new hires by their third year, those working for corporations find themselves in those roles even sooner. Roughly three-quarters of our MBA students report that they had been required to supervise subordinates after college and before arriving here. In this class, we examine the role of the supervisor and the unique tasks associated with performing that role. We pay special attention to the unique challenges of taking on that role for the first time.

MGMT 2490 Mergers and Acquisitions
This interactive, applied, and case-based course explores the various modes of corporate development available to managers to drive firm growth and change, including alliances, outsourcing, corporate venturing, and particularly mergers and acquisitions. The objectives are three-fold: (1) to arm the student with a set of tools to facilitate the selection of the appropriate growth strategy in a given situation; (2) to provide insights as to how to manage partnerships like alliances, outsourcing, and corporate venturing; and, (3) to develop a comprehensive framework for executing M&As, from initiation to implementation. The emphasis is on strategic and operational aspects of these transactions, rather than financial considerations. Please note that you must fulfill the prerequisites in order to enroll in this class.
Fall
Prerequisite: WH 1010 AND MGMT 1010
1 Course Unit

MGMT 2510 Consulting to Growth Companies
This course offers students a unique opportunity to develop consulting skills and entrepreneurial expertise by working as consultants to thriving entrepreneurial ventures in the Philadelphia area. This capstone course combines both fieldwork and class work and allows students to apply knowledge and skills acquired through other course work to real world issues that must be addressed by operating companies. An understanding of characteristics producing rapid entrepreneurial growth and skills related to effective communications and management of a business relationship are emphasized. Team term consulting assignment, lectures, case analysis, and small group discussions.
Fall
1 Course Unit

MGMT 2640 Venture Capital and Entrepreneurial Management
This course focuses on venture capital management issues in the context of a high-growth potential start-up company. The course is motivated by rapid increases in both the supply of and demand for private equity over the past two decades. The topic is addressed from two distinct perspectives: issues that relate to the demand for private equity and venture capital (the entrepreneur's perspective) on the one hand, and issues that relate to the supply of capital (the investor's perspective) on the other. As well, we will address management issues that relate to how the VC and the entrepreneur work together once an investment has been made, compensation issues, and governance issues in the privately held venture capital backed company. Format: Case/discussion format, supplemented by lectures and guest speakers.
Fall
1 Course Unit

MGMT 2650 Culture of Technology: Culture & Institutions of the Tech Sector--Bridging Research and Practice
Academics, students and practitioners alike are fascinated by the culture of tech sector - its people, practices, and organization. In this course we explore this sector using a combination of research papers, press coverage, and practitioner involvement. Each class session will be devoted to discussion of a single research article, during which we will be joined via state-of-the-art videoconferencing by a Wharton alum from the tech sector whose expertise is relevant to the paper topic. Therefore, the learning objectives half-credit course are to: 1) understand the managerial, organizational, and regional institutions that characterize the tech sector, with particular emphasis on the case of Silicon Valley 2)Bridge research and practice by critical analysis of academic research papers in conjunction with practitioner input 3) Forge connections with tech sector practitioners, particularly with our west coast alumni base.
0.5 Course Units

MGMT 2670 Entrepreneurship and Technological Innovation
Building a new firm around technology innovation can mean different choices and challenges for entrepreneurs. The goals and outcomes of technology entrepreneurship vary as much as the innovations that inspire them. MGMT 267 will take you through the questions that entrepreneurs should address as they go from a technology innovation idea to founding and funding a tech startup. The course will appeal to individuals who have a desire to become technology entrepreneurs at some stage of their career, as well as others interested in the startup ecosystem such as investors, early employees, other professional service providers, etc. Through a combination of individual and team work, you will examine what is different when technology is at the core of an entrepreneurial opportunity and how to move a technology-based venture forward.
0.5 Course Units

MGMT 2720 Power and Politics in Organizations
"If you want to test a (person's) character, give (him/her) power." These famous words articulate one of the many tensions of exercising power. Regardless of whether you have an appetite for power or disdain it, power and politics are likely to play an important role in your career. The purpose of this course is to introduce you to concepts that are useful for understanding, analyzing, and developing your political skill. But beyond discovering ways to extend your own power in organizations, we will also uncover lessons about ways in which power and politics can blind you, and how to navigate situations in which you are up against powerful people. Using a range of scholarly articles, cases, exercises, assessments and simulations, we will extract a variety of lessons relevant to your role in organizations. Topics include diagnosing power in organizations, building coalitions, change management, understanding networks, coping with intolerable bosses and incivility, and downsizing. Students will be expected to engage in field research for their coursework and final paper, and the course requires that students submit assignments for almost every class session. Organizations are inherently political arenas that require social astuteness, and an understanding of the "rules of the game." This course is designed for students aiming to develop their leadership, general management and career skills through a better understanding of power and politics, and relates to other courses on these topics in the Management department.
0.5 Course Units

MGMT 2750 Comparative Capitalism
While we often debate capitalism as a system, the nature of capitalist economies differ from country to country and rarely match up to the ideal. Why do these differences arise? Is there a pure form of capitalism? What is the nature of capitalism in advanced and emerging economies? Why are capitalist economies often embedded in other social systems? Why do some economies grow faster than others? How do international institutions and interdependencies affect national capitalist institutions? How are the strategies of multinational corporations (MNCs) influenced by their country of origin? And how is the nature of capitalism changing today? This course provides insight into these questions as it explores the nature of capitalism around the world, with specific reference to Brazil, Russia, Ukraine, China, Hungary, Nigeria, South Africa, Singapore, Israel, Argentina, and the advanced OECD countries. Students will leave this class with understanding key differences in how capitalist economies are organized and competition over the future of the world economy.
Mutually Exclusive: MGMT 8750
1 Course Unit
MGMT 2760 Cultivating Judgment Skills: Forecasting in Business Politics
This course will explore the diverse ways in which scholars and practitioners have defined "good judgment." And it will introduce students to practical tools for assessing and improving judgment, with special emphasis on probabilistic reasoning. Students will have the opportunity both to fine-tune their personal judgment skills as well as to master and then weave together insights from several bodies of scientific knowledge, including frequentist and Bayesian statistics, psychological work on judgment and choice, group dynamics, organizational behavior and political science (key concepts discussed in Tetlock's (2015) book "Superforecasting"). We will focus on bottom-line accuracy in sizing up real world problems. Class work will be primarily exercises, including working as an individual and in teams. You will have opportunities to forecast on a wide range of political, business, and macro-economic questions, which we will use as feedback tools to help you calibrate your judgment. Assessments include a weekly concept test and a final group presentation aimed to help you improve your judgment. The goal is to launch you on the lifelong process of learning how much trust you should place in your judgments of trustworthiness.
1 Course Unit

MGMT 2870 Global Management of Digital Businesses
Digital businesses enable users to communicate, interact, share, and engage in transactions. They enable individuals to shop, work, play, and learn, and they offer companies new ways of organizing their value chains, reaching customers, collecting and analyzing information, and creating value. This half-semester, 0.5-credit class deals with the international expansion of businesses through the use of digital technologies. The focus is on the tension between the eminent scalability facilitated by digital technologies and the ruggedness of the international landscape, shaped as it is by demographics, consumer preferences, culture, regulatory structures, and network effects operating at the local, national, regional, and global levels. The class covers both companies launched as digital businesses and traditional companies undergoing a digital transformation. Topics include industry dynamics, the impact of network effects, the sequence of foreign market entry, regulatory risk, strategic interaction, and global versus local strategies for both new digital businesses and established firms undergoing digital transformation. While there are no specific requirements, knowledge of the fundamental concepts of competitive strategy and global strategy is essential to follow this class. Students will learn through interactive class discussions, team-based exercises, and self-made short videos to pitch novel new ideas about digital businesses.
0.5-1 Course Unit

MGMT 2880 Managing and Competing in China
The business environment in China is characterized by both uncertainty and complexity. On the one hand, it is changing fast; on the other hand, it is influenced by deep-rooted political, economic, and cultural forces that exhibit tremendous inertia. This course will help students—potential managers, entrepreneurs, and investors—gain the knowledge and analytical skills necessary to compete effectively in China. We will discuss various types of firms in the Chinese economy—from large state-owned enterprises (SOEs) to newly minted Internet giants, from prominent multinational companies (MNCs) to virtually anonymous local suppliers—and the unique institutions in which these firms operate. Such discussions will also help managers whose firms compete or collaborate with Chinese firms on the global stage. We will use a combination of lectures, cases, debates, and role play in class. You will also have the opportunity to apply your learning to real business scenarios.
Mutually Exclusive: MGMT 7880
1 Course Unit

MGMT 2910 Negotiations
This course examines the art and science of negotiation, with additional emphasis on conflict resolution. Students will engage in a number of simulated negotiations ranging from simple one-issue transactions to multi-party joint ventures. Through these exercises and associated readings, students explore the basic theoretical models of bargaining and have an opportunity to test and improve their negotiation skills.
Fall or Spring
Also Offered As: LGST 2910, OIDD 2910
1 Course Unit

MGMT 2920 Advanced Negotiation
This course is designed to teach negotiation principles and to enable students to develop their negotiation skills. This course assumes familiarity with the basic negotiation concepts covered in the prerequisite for this course: Negotiations. In this course, we extend the study and practice of negotiations and we develop a deeper understanding for how specific aspects of the negotiation process (e.g., emotions, deadlines, trust violations) impact outcomes. Through course lectures, readings, and case exercises, students will develop a rich framework for thinking about the negotiation process and acquire tools for guiding the negotiation process.

Also Offered As: LGST 2920, OIDD 2920
Prerequisite: LGST 2910 OR OIDD 2910 OR MGMT 2910
1 Course Unit

MGMT 2930 People Analytics
This course examines the use of data to understand and improve how people are managed in organizations. People really are organizations’ most important asset, providing the critical link in converting strategy and capital into value. Yet throughout most of our history, most organizations have relied on long-standing traditions, hearsay, political expediency, prejudice and gut instinct to make decisions about how those people should be managed. Recent years have seen a growing movement to bring more science to how we manage people. In some cases, that means ensuring that whatever practices and approaches we adopt are backed up by solid evidence as to their effectiveness. Often, organizations will seek to go further, analyzing their own data to identify problems and learn what is working and what is not in their own context. This course applies the insights of the people analytics movement to help students become better managers and more critical analysts within their organizations. The course aims to develop students in three specific ways. First, it will provide students with an up-to-the-minute grounding in current evidence about managing people, providing a knowledge base that can ensure that their future management is guided by best practices. Second, we will develop the skills and understanding necessary to be thoughtful, critical consumers of evidence on people management, allowing them to make the most of the analysis available to them as they make people decisions. Third, we will provide guidance and practice in conducting people analytics, preparing students to gather data of their own, and making them more skilled analysts. We will pursue these goals through a mixture of lecture, case discussion, and hands on exploration of a variety of data sets.
Spring
Also Offered As: OIDD 2930
1 Course Unit
MGMT 2940 Understanding Careers & Managerial Labor Markets
The class will examine a variety of aspects of careers. The first few sessions explore the basic building blocks of the career, outlining our knowledge on the different orientations that individuals take to their careers, how approaches to the career change as people get older, and how different kinds of job moves within and across firms advance careers. We will complement academic research by also hearing from an experienced executive who can talk about the issues that she dealt with as her career unfolded, and how she approached major decisions. The second part of the course explores in more detail the social resources that affect careers. Much research has examined how the structure of social networks affect success in the workplace and access to job. We will review this evidence with an eye to understanding how effective relationships can be developed. We will also examine some of the most critical relationships for shaping careers - those involving mentors and sponsors. The third section of the course then examines part of the most important and difficult issues affecting modern careers. We explore one of the most difficult transitions that forms part of many careers, moving into management from an individual contributor role. We will also explore important social psychological conditions and strategies that allow individuals to persist and succeed in their career pursuit, especially in the face of obstacles, such as career setbacks and employer rejections. We then turn to issues of gender and careers. There is much evidence on the particular challenges that have faced women managers and executives in moving up the corporate ladder. We examine that evidence and discuss possible responses by managers and by organizations. We also discuss how individuals and organizations can manage the challenges of balancing work and personal life throughout the career.

Fall or Spring
0.5 Course Units

MGMT 3010 Teamwork and Interpersonal Influence
Organizations emerge because individuals cannot (or do not want to) accomplish their goals alone. Likewise, employees pursue projects in teams and other small units because there is strength in numbers. For example, over 80% of Fortune 1,000 companies use teams to accomplish their goals. As such, collaboration - in relationships and in teams - is the building block of organizational effectiveness. In addition, most of your work each day will occur in a social context, and it will require you to influence others, and be influenced by, others. In this course we will use the latest evidence from the science of organizations to understand key tactics that can help you work more effectively with others and better influence and lead them as you strive to attain shared goals. We will cover topics such as team coordination, team decision making, interpersonal influence, leader effectiveness, and ethics. This course is the third module of the four-module set that comprises the Wharton Leadership Journey. MGMT 301 assumes exposure to MGMT 101 content. As of Fall 2022 MGMT 101 will become a formal prerequisite for the class.

MGMT 3530 Wharton Field Challenge FLCP
Do you want to make a real difference in the lives of a student? Do you want to set kids on a path to becoming financially literate? Do you want to learn leadership skills in the classroom? Here at the Financial Literacy Community Project (FLCP) we are able to create an experience that achieves all three. We partner with various public schools around the West Philadelphia area and teach concepts integral to financial literacy. We teach a wide range of grades from middle school to high school, and work with students to help them learn how to be financially responsible. In addition to teaching in neighboring high schools, we also have group class meetings run by Professor Keith Weigelt on Mondays from 7:00 PM-8:30 PM. We learn about the disparity of wealth and how to best address it while also learning teaching techniques, classroom strategies, and overall basic financial literacy. A basic understanding of personal financial literacy is required.

1 Course Unit

Mutually Exclusive: MGMT 8880
Prerequisite: MGMT 2300 OR MGMT 2670

MGMT 3880 Venture Acceleration Lab
This Lab emphasizes experiential learning in evaluating and contributing to "live" startup ventures. The goal of the Lab is to accelerate the development of ventures by providing a structured curricular setting in which mentors with industry expertise as operators and investors provide guidance to full-time venture founders. Undergraduate and MBA students learn through witnessing these interactions and through helping ventures structure their value creation and capture strategies. The latter is facilitated via instructor-led classes on focused venture development concepts. This unique Lab therefore brings together communities which rarely mix: startup founders, enrolled students as potential venture "joiners" and consultants, venture mentors, and technical/academic specialists.

Mutually Exclusive: MGMT 8880

MGMT 3980 Managing and Motivating Talent
People are the most valuable asset of any business, but they are also the most unpredictable, and the most difficult, asset to manage. And although managing people well is critical to the health of any organization, most managers don't get the training they need to make good management decisions. Now, award-winning authors and renowned management Professors Mike Useem and Peter Cappelli of the Wharton School have designed this course to introduce you to the key elements of managing people. Based on their popular course at Wharton, this course will teach you how to motivate individual performance and design reward systems, how to design jobs and organize work for high performance, how to make good and timely management decisions, and how to design and change the your organization's architecture. By the end of this course, you'll have developed the skills you need to start motivating, organizing, and rewarding people in your organization so that you can thrive as a business and as a social organization. This course can also only be applied towards unrestricted electives at the undergraduate level.

Mutually Exclusive: MGMT 7980

0.25 Course Units
MGMT 4010 Growing Social Impact
This course seeks to address a gap at the core of contemporary entrepreneurship: despite a growing desire to pursue prosocial goals and affect positive change in the world, most founders have little understanding of how to measure, manage, and scale their impact. This creates the risk that financial goals will play an outsized role in decision-making, particularly as the venture scales, leading founders to drift away from social impact aims - or to pursue goals that fail to deliver on their intended impacts. MGMT 401 fulfills the Wharton capstone requirement with a hands-on approach to addressing these issues. Students will work hand-in-hand with the founding teams of pre-selected startups from the Wharton venture community to develop a strategy for measuring social impact, and ensuring fidelity to social goals as the venture goes to market and begins to scale. Projects will be group-based, and will ask students to integrate learnings on social enterprise, impact measurement, and impact investing, with prior coursework on entrepreneurship, social impact, business ethics, leadership, team dynamics, and venture finance. Students will leave the class with a deeper appreciation of the potential for business to be a force for good in the world, and the difficulties that this can pose during the founding and growth stages of a new business. The class will be of value to students who are interested in creating socially impactful businesses, as well as to those who want to work in the ecosystem that supports such ventures (e.g., consulting, or impact investing).
Prerequisite: MGMT 1010 AND WH 1010 AND WH 2010 AND MGMT 3010

MGMT 4020 Service Learning Client Project
MGMT 4020 builds on the foundation established by the pre-requisites in the Leadership Journey. As seniors, you will draw on the self-awareness you acquired in WH1010, the speaking skills you practiced in WH2010, and the teamwork and interpersonal skills you honed in MGMT3010. Moreover, MGMT 4020 serves as a capstone course by giving you the opportunity to work with a robust nonprofit and in order to frame the problems and address the challenges your host organization faces; in the process, you will use your creative and critical thinking skills, apply what you have learned, and reflect on your growth and development through iterative feedback and constructive coaching. As a highly experiential course, MGMT 4020 is relatively unstructured, giving you ample opportunity to demonstrate leadership by providing direction and teamwork by pulling together to deliver results for your host. MGMT 4020 will enable you to draw on your Wharton undergraduate education and apply what you have learned in a way that promises to provide real impact for your host organization and a meaningful and memorable experience for you. It is only open to Wharton seniors. In short, MGMT 4020 gives Wharton seniors the opportunity to: 1. Engage in a service learning and experiential course - Demonstrate leadership and work as a team on a real, host engagement - Think creatively, critically, and practically for the benefit of your host - Refine your interpersonal communication and presentation skills - Heighten your self-awareness through feedback and reflection.

MGMT 4090 Huntsman Capstone Study
The objective of the capstone study is to provide participants with the opportunity to integrate the knowledge gained in various courses Huntsman students take in Wharton and the College in a focused application to a specific project. The project would have sufficient breadth and depth to require participants to draw upon multiple analytical perspectives, theoretical lenses, and stocks of empirical data to collaboratively develop distinctive insights in relation to a given problem. The end product is a paper summarizing the research/application journey of the students, as well as a group presentation highlighting key findings as well as their theoretical and practical implications. Prerequisite: This course is only open to students in the Huntsman Program.
0.5 Course Units

MGMT 4180 The India Startup Ecosystem
The objective of OIDD/MGMT 418 and the Wharton India Fellows program is to introduce Penn juniors to the entrepreneurship and innovation ecosystem in India through a course covering topics in entrepreneurship, innovation, venture capital and technology in India and then matching students to a specific short-term project with a Bangalore-based early-stage startup or rapidly scaling company. Students will complete preliminary work on the project assignment during the course, and then travel as a group to Bangalore with the instructor for a week immersion in the company to which they have been assigned for their entrepreneurship project. Penn Wharton Entrepreneurs will cover airfare and lodging expenses for students selected as Wharton India Fellows for the duration of the 2 week immersion in India. For more information: https://entrepreneurship.wharton.upenn.edu/wharton-india-fellows/
Also Offered As: OIDD 4180
0.5 Course Units

MGMT 6100 Foundations of Teamwork and Leadership
MGMT 610 is the first core course in the MBA Program and it cannot be waived. The first week of the fall term (in August) is dedicated to this formative and foundational experience. This course focuses on developing students' knowledge and skill set for teamwork and leadership. It is meant to be an intense immersion experience that draws strongly on the pedagogy of the Wharton Teamwork and Leadership Simulation, a team-based, highly interactive simulation that was custom-designed specifically to allow students to experience the core concepts they learn in this class. The three goals of this course are for students to learn: 1. Leadership behaviors: how to enact the skills that contribute to a team's effective performance. 2. Team dynamics: how to be an effective team member, as well as how to best design work teams; 3. Organizational awareness: understanding organizational culture. Format: A custom-designed Wharton-only simulation is paired with course sessions to deliver a unique learning experience. Classes will include experiential learning combined with debriefings, lectures, readings, class discussion and personal and group performance feedback. This course reflects the realities that informal leadership occurs in teams on an ongoing basis, that being a good team player is a part of leadership, and that many of one's early experiences with leadership will occur while working on teams. Because of the team-based nature of this course, and time intensive nature of this experience, attendance is mandatory for ALL five sessions of this class.
0.5 Course Units
MGMT 6110 Managing Established Enterprises
This course is about managing large enterprises that face the strategic challenge of being the incumbent in the market and the organizational challenge of needing to balance the forces of inertia and change. The firms of interest in this course have moved past the purely entrepreneurial phase and need to systematically formalize strategies and organizational processes to reach maturity and stability, but they still lack the resources of a mature firm. The class is organized around three distinct but related topics that managers of established firms must consider: strategy, human and social capital, and global strategy.
1 Course Unit

MGMT 6120 Management of Emerging Enterprises
This course is about managing during the early stages of an enterprise, when the firm faces the strategic challenge of being a new entrant in the market and the organizational challenge of needing to scale rapidly. The enterprises of interest in this course have moved past the purely entrepreneurial phase and need to systematically formalize strategies and organizational processes to reach maturity and stability, but they still lack the resources of a mature firm. The class is organized around three distinct but related topics that managers of emerging firms must consider: strategy, human and social capital, and global strategy.

MGMT 6240 Leading Diversity in Organizations
People in the workplace are constantly interacting with peers, managers, and customers with very different backgrounds and experiences. When harnessed effectively, these differences can be the catalyst for creative breakthroughs and the pathway to team and organizational learning and effectiveness; but when misunderstood, these differences can challenge employees' values, performance, workplace relationships, and team effectiveness. This course is designed to help students navigate diverse organizational settings more effectively and improve their ability to work within and lead diverse teams and organizations. It also offers students the opportunity to develop their critical thinking on topics such as identity, relationships across difference, discrimination and bias, equality, and equity in organizations and society and how they relate to organizational issues of power, privilege, opportunity, inclusion, creativity and innovation and organizational effectiveness. Class sessions will be experiential and discussion-based. Readings, self-reflection, guest speakers from organizations, case studies and a final project will also be emphasized. By the end of this course, you should be able to: 1) Evaluate the aspects of your identity and personal experiences that shape how you interact and engage with others and how they interact and engage with you in organizations 2) Explain how issues of power, privilege, discrimination, bias, equality, and equity influence opportunity and effectiveness in organizations 3) Propose ways to make relationships across difference in organizations more effective 4) Describe current perspectives on the relationships among diversity, inclusion, creativity, and innovation in organizations 5) Analyze a company's current approach to leading diversity and use content from this course to propose ways to enhance learning and effectiveness in that company.

MGMT 6250 Corporate Governance, Executive Compensation and the Board
This course examines the relationships between corporate managers, the boards of directors charged with overseeing them, and investors. We'll review the responsibilities of the board, including financial statement approval, CEO performance assessment, executive compensation, and succession planning. While boards are legally bound to represent the interests of equity investors, in the course of carrying out this role they are often called on to respond to the needs of numerous other stakeholders, including customers, employees, government and society at large. With global brands at risk and mistakes instantly transmitted via Internet and social media, the reputational stakes are very high. The course is a combination of lecture, guest lecture, discussion, case analysis and in-class research workshops. We will review some of the theory underlying modern governance practice, drawing from theories and evidence provided by research across diverse fields, including finance, sociology, and organization and management theory. We'll study specific situations where boards and management teams faced governance challenges, and assess the strategies used to deal with them. Finally, we'll examine the ways in which governance arrangements and external stakeholder involvement in governance affects corporate social behavior and global citizenship.
0.5 Course Units

MGMT 6560 Global Immersion Program
The Global Immersion Program is a pass/fail, 0.5 credit course that is designed to provide students with an in-depth exposure to international business practices and first-hand insights into a foreign culture. In past years, programs were offered in India, the Middle East, China, South America, Southeast Asia, and Africa. The program offers students the opportunity to learn about a foreign business environment by way of academic lectures and a multi-week study tour, allowing students to visit with corporate and government officials, network with alumni, and take cultural excursions.

MGMT 6710 Executive Leadership
Leaders mobilize resources toward valued goals. In this course, the focus is on growing the student's capacity as a leader in all parts of life. The purpose is to learn practical and customized lessons about how to improve performance and results at work, at home, in the community, and in the private self (mind, body, spirit) by finding mutual value among these four domains. The core idea is that leadership is about making a difference in all aspects of one's life. This course offers students the opportunity to practice the skills needed to do so, now and in the future. Students learn and apply key leadership principles and actively explore what it means for them to be real (to act with authenticity by clarifying what's important), to be whole (to act with integrity by respecting the whole person), and to be innovative (to act with creativity by experimenting with how things get done). This course is only available to WEMBA students.

**MGMT 6920 Advanced Topics Negotiation**
This is a course the builds on the basic Negotiation course. In this course, we explore a wide range of negotiation topics from crisis and hostage negotiations, to the role of emotions including anxiety, envy and anger in negotiations, to backlash effects for women in negotiations, and the role of alcohol in negotiations. We will survey many aspects of current negotiation research, discuss historic negotiation cases, and students will participate in role-play exercises. Many of the role play exercises will involve multi-party negotiations and afford opportunities to hone skills in team-based negotiations.
Fall or Spring
Also Offered As: LGST 6920, OIDD 6920
0.5-1 Course Unit

**MGMT 7010 Strategy and Competitive Advantage**
This course is concerned with strategy issues at the business unit level. Its focus is on the question of how firms can create and sustain a competitive advantage. A central part of the course deals with concepts that have been developed around the notions of complementarities and fit. Other topics covered in the course include the creation of competitive advantage through commitment, competitor analysis, different organizational responses to environmental changes, modularity, and increasing returns. An important feature of the course is a term-length project in which groups of students work on firm analyses that require the application of the course concepts.
Prerequisite: MGMT 6110 OR MGMT 6120
0.5 Course Units

**MGMT 7110 Competitive Strategy and Industrial Structure**
This is a course in analyzing competitive interactions. The course emphasizes a vision of strategy in which each competitor simultaneously chooses its strategy, taking into account the strategies of its opponents. Crucial to this vision is the anticipation of the moves of your opponent and, in particular, the expectation that your opponent is (almost) as smart as you are. Equal attention will be given to the development of techniques for analyzing competitive interactions and to the application of those techniques. Game theory and the economics of industrial organization provide the basis for the theoretical constructs developed in the course. Topics that will be explored include: market failures and profitability, competitive bidding, signaling, entry deterrence, agenda setting, regulations, and price wars.
Fall
1 Course Unit

**MGMT 7120 Managing Strategic Partnerships**
This course explores the management of strategic partnerships between firms, which have surged in recent years in response to globalization, technological evolution, deregulation, shortened product life cycles, and intensified competition. Today's alliances drive corporate growth and change, and vary greatly in terms of partner type, commitment, equity investment, degree of control, between scale, and scope. They range from bilateral arrangements to ecosystems to outsourcing, often blurring traditional organizational boundaries and leading to the creation of globally distributed enterprises. In view of these contemporary developments, the objectives of the course are two-fold: (1) to arm you with a set of tools to facilitate the selection of an appropriate alliance strategy in a given situation; and, (2) to provide you with frameworks to help the initiate and implement different kinds of partnerships. The emphasis lies on strategic and organizational aspects in the formation and management of these transactions, rather than financial considerations. Alternative growth strategies to strategic alliances (e.g., acquisitions), the impact of these partnerships on competition within an industry, and regulatory constraints will also be discussed. In terms of its pedagogical approach, this is designed to be an interactive, applied, case-based course with accompanying conceptual readings to help structure your thinking. Given the nature of the course, we will also apply the lessons from the cases to understand the challenges and implications of relevant recent and on-going deals. In addition, guest speakers with experience in investment banking, consulting, and industry will be invited to share their perspectives. A group project is intended to give you the opportunity to apply your learning from the course to a context that is most interesting and relevant to you.

Prerequisite: MGMT 6110 OR MGMT 6120
0.5 Course Units
MGMT 7140 Value Creation and Value Capture in American Business History
This course examines how the kind of firms in which most Wharton students will spend the next stage of their careers came to be as they are today. At a superficial level, the course’s objectives are descriptive and narrative. But history, considered thoughtfully and critically, is never just description and a narrative and the course’s deeper purpose is to give students some idea of how to think about the future evolution of firms and industries. In this the course is as much an applied strategy course as it is a historical survey. The course considers the development of the business enterprise as an economic institution. It also covers the evolution of competition and strategy, marketing institutions, some aspects of the history of operations management, and corporate finance. Issues arising in these different management disciplines are considered in part for the purpose of showing off their interrelationships. Questions of how value can be created and captured at the enterprise level form the core of the perspective. The course’s focus is on American developments, since many of the innovations took place here, but there is scope for comparison with Japan and the leading European economies if there is student interest. Chronologically the course runs from Franklin’s days through the early twenty-first century. The individual classes proceed through discussion of actual business decisions and performance in a series of challenging and otherwise interesting moments in the evolution of the American business environment. The materials are unusual for the Wharton School—they are not just often case-like but wherever possible draw on documents contemporary to the decisions such as correspondence, internal memoranda, minutes of meetings, old newspaper and magazine stories, and eyewitness accounts. The objective in this is to give students as minimally mediated access as is feasible to what the embedded actors knew and thought. The materials require thoughtful preparation. Weekly short writing assignments during the first twelve weeks of the term develop students’ skill in turning such preparation into crisp analytical prose. (This will be valuable to most ex-students in the early phases of their post-Wharton careers.) The course as a process is much more focused on the students than many and the most productive experience of it demands that the students both engage with the materials when they prepare and then take an active role in the class discussion. The largest single element in the grading is a substantial term paper on a topic agreeable to both the student and the instructor. (To everyone’s surprise, the lack of easy access Mutually Exclusive: MGMT 2250
1 Course Unit

MGMT 7150 Political Environment of the Multinational Firm
All successful firms go global. This course provides a broad introduction to international business. You will learn about who loses and who gains from trade, what are the effects of tariffs and non-tariff barriers, the World Trade Organization (WTO), regional trading blocs, and NAFTA. The course then turns to the international financial architecture, focusing on exchange rate risk. We then move to multinational firm strategies, including a discussion of the reasons for why firms choose to do business globally through trade or FDI, international tax strategy, joint ventures, technology transfer, different ways to be a multinational firm, and ethical dilemmas. The class is a mix of lectures and cases that allow students to synthesize the extensive materials on multinational management, international institutions, economic policies, and politics with a goal towards formulating multinational firm strategy.
0.5 Course Units

MGMT 7170 Deals: The Economic Structure of Transactions
This course focuses on the role of professionals, including lawyers of all types (corporate, tax, securities, etc.), direct private equity investors, corporate business development officers, and investment bankers, in creating value through transaction engineering. The overall goal of the course is to explore how private parties could order their commercial interactions, to develop a theory of how they ought to do this, and to gain a thorough understanding of how business deals are actually done. The course is offered in springtime terms only. The long first half of the course is devoted to analyzing impediments to transacting, including asymmetric information, exogenous risk and uncertainty, difficulties intrinsic to contracting over time, enforceability, and various forms of strategic behavior, all with a view to understanding the logic of the variety of techniques used to ameliorate them and more broadly to create distributable value through transaction structuring. These Part I classes are accompanied by exercises of various sorts. In the second part of the course, student teams apply the conceptual tools and techniques developed in the first half to analyzing the fine detail of a series of recently completed and interestingly complex transactions. Each team is given access to the original documents implementing their deal. A week of class time is devoted to each transaction. In the first (Monday) session, the student teams present their deal to the class, laying out strategic motivations, analyzing key structuring moves, and exploring the advantages and disadvantages of proceeding in the way the participants did. In the second, on the Wednesday, one or (usually) more of the professionals who worked on it will present the deal from the participant perspective, address the always interesting process questions, and take questions from the class. The requirements for the class are regular attendance, active participation in class discussions, a series of homework assignments and a short individual paper in Part I, the group presentation project and a group memorandum from each deal team on what there was to be learned from the Wednesday presentation their week in Part II, and a six-hour take-home exam.
1 Course Unit

MGMT 7200 Corporate Diplomacy
The share of executives, board members, and investment managers who consider climate risk, racial justice and other ESG issues as well as stakeholder’s opinions of the firm to be material to their business decisions has risen dramatically. If this business case for engagement with stakeholders on ESG issues can be demonstrated to mainstream investors, pools of capital can be mobilized to harness grand societal challenges. However, executives, board members, and investment managers are actually growing less confident in the ESG data available to guide capital allocations and strategic decisions. ESG scores have been demonstrated to be unreliable, incomplete and biased and often lean on outdated and/or incomplete information obtained through voluntary unaudited disclosure. This course provides students the latest tools to assess and map stakeholder opinions as well as integrate them into financial valuation. It also offers behavioral skills critical for stakeholder engagement including trust building, strategic communications and shaping organizational culture. In short, it prepares students to engage in Corporate Diplomacy (i.e., to influence external stakeholders’ opinions of the acceptability of a company’s operations at a moment in time and to convince internal stakeholders to adapt their behaviors, systems and outputs’ when necessary to support an organizational mission).
0.5,1 Course Unit
MGMT 7210 Corporate Development: Mergers and Acquisitions
This interactive, applied, and case-based course explores the various modes of corporate development available to managers to drive firm growth and change, including alliances, outsourcing, corporate venturing, and particularly mergers and acquisitions. The objectives are three-fold: (1) to arm the student with a set of tools to facilitate the selection of the appropriate growth strategy in a given situation; (2) to provide insights as to how to manage partnerships like alliances, outsourcing, and corporate venturing; and, (3) to develop a comprehensive framework for executing M&As, from initiation to implementation. The emphasis is on strategic and operational aspects of these transactions, rather than financial considerations. Please note that you must fulfill the prerequisites in order to enroll in this class.
Fall or Spring
Prerequisite: MGMT 6110 OR MGMT 6120
0.5-1 Course Unit

MGMT 7230 Strategy and Environmental Sustainability
Environmental sustainability issues are one of the defining problems of our time. While governments and NGOs will have to play important roles, without active involvement of businesses it will be impossible to make sufficient progress on these issues. Globalization and Digitization have been two major disruptive developments that organizations have faced (and are still facing). ESG (Environmental, Social, and Governance) issues are the latest large-scale development that will shape companies' futures. This course will focus on the "E" of ESG. As with any large change, environmental sustainability poses significant business challenges but also tremendous opportunities. We will study these issues both from the perspective of incumbent firms that have to adapt their business practices and from firms (incumbents and new start-ups) that will take advantage of the new opportunities that are being created.
0.5-1 Course Unit

MGMT 7290 Intellectual Property Strategy for the Innovation-Driven Enterprise
Announcing the first iPhone at Macworld 2007, Apple CEO Steve Jobs famously boasted: "And boy, have we patented it!" How, and to what extent, do patents and intellectual property really provide competitive advantage for innovative technology companies? What makes an IP asset strategically powerful? How do patents impact, and even drive, major corporate decisions including M&A, venture funding and exits, and entry into new markets? In this course, students will learn to critically analyze and answer these questions, gaining insights they can leverage in their future roles as innovation industry executives, entrepreneurs, strategist and investors. The course includes three major units. In Unit 1, Patents and Innovation Value, we examine closely the relationship between competitive advantage, value proposition, and intellectual property (particularly patents). We will apply our understanding of that relationship to critique and sharpen patent strategy to protect examples of cutting-edge technologies. In Unit 2, Patent Leverage and the Corporate Playbook, we study theory and examples of how intellectual property leverage strategically informs corporate transactions and decisions, for established companies as well as for start-ups. In unit 3, Limits and Alternatives to Patents, we confront the recent legal trend toward reigning in the power and scope of patents. We also consider the growing importance of data as a proprietary technology asset, and discuss options for adapting intellectual property strategy appropriately. Throughout, students will learn and practice applying the concepts we learn to decision-making in examples based on innovative real-world technologies and businesses.
Also Offered As: LGST 7290
0.5 Course Units

MGMT 7310 Technology Strategy
The course is designed to meet the needs of future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using information technology to improve business processes and offerings. We will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems. The course uses a combination of cases, simulation and readings. The cases are drawn primarily from technology-based industries. Note, however, that the case discussions are mainly based on strategic (not technical) issues. Hence, a technical background is not required for fruitful participation.
0.5-1 Course Unit

MGMT 7430 Work and Technology: Choices and Outcomes
This course is situated at the intersection of technological and social/human issues involving work. The first module "Technology and Its Impact on Jobs and Skills" considers the types of technologies whose impact concerns us and probes which deserve the characterization of "revolutionary". We'll examine past anxieties related to automation and evaluate the extent to which the "worst-case" scenarios about, for example, employment loss have or have not come to pass. In the process, we'll sharpen our lens for which technological changes have effects on entire organizations rather than simply individual jobs. The second module "Intelligent Technologies: How Will They Affect Work and Organizations?" explores how these technologies are changing the structure, performance, and experience of work amid changes in how organizations are managing people. We consider how these technologies provide managers new ways to enact control and to induce commitment - and how workers (both employees and contractors) react. In the third module "Technology and Policy" we will examine the ethics of algorithms and artificial intelligence, proposals for a "universal basic income" (UBI) premised on the idea that technological change will lead to an unprecedented amount of job displacement, and the premise that "technology makes us dumber" by taking tasks away that have helped humans maintain a certain level of competence. Take this course to be ready to manage the strategic and analytic issues involving the design and implementation of technology at work - and if you want a glimpse into the future of your own work life. Students will be evaluated on class participation, in-class quizzes, written work and a group assignment.
0.5 Course Units
MGMT 7480 How to Be the Boss
Despite the press accounts about the "gig" economy, the Bureau of Labor Statistics calculates that about 92 percent of the people working in the US are employees who are supervised by someone. That figure has remained roughly the same for decades. The term "supervisor" is sometimes used for the first-level of supervision in an organization, but in fact that role - and indeed the title - goes all the way up to the very top of any employer organization. Even CEO's are the supervisor of their direct reports. When people talk about their "boss," they are almost always referring to the person who supervises them. Supervisors are the central actors in accomplishing work tasks, especially in projects where they also have autonomy over what is done and how it is done. They have an extraordinary amount of power and influence over their direct reports and considerable responsibility toward them. There is considerable truth to the aphorism that people quit bosses, not organizations, as employee dissatisfaction with supervisors rates as one of the leading causes of turnover. There is little doubt that a bad boss can make the life of a subordinate miserable, while a good boss can do the opposite, i.e. improving job design to make work more motivating, providing support during difficult periods of learning new tasks and facing performance pressures, helping chart a career path, and mentoring in organizational realities. Being a supervisor is not the same as leading a team of peers. Supervisors have formal authority over subordinates that we never have with peers. Supervisors also have decisions they cannot delegate, and are personally accountable for them. Stepping into a supervisor position is challenging, especially so when it comes with a promotion in the same organization having to manage direct reports who were peers. In this class, we examine the role of the supervisor and the unique tasks associated with performing that role.
Spring
0.5 Course Units

MGMT 7510 Strategic Management of Human Assets
Successful firms often excel in the capability of employing and deploying human assets (resources) to achieve the effective implementation of business strategy. To understand this capability, this course will address two central themes: 1) How to think systematically and strategically about various aspects of managing the organization's human assets; and 2) What really needs to be done to implement these policies and achieve competitive advantage. In order to think "systematically" about this topic for any particular organization, we will consider the bundles of work practices and human resources processes that make up the overall system for managing people and evaluate whether these are internally consistent and aligned ("internal fit"). To think "strategically," we will then assess the relationship between practices/processes of managing people and the firm's strategy and strategic context, e.g. industry structure, competitive landscape, political, social, and economic environment -- for evidence of external fit. By paying attention to implementation, we will recognize that although many organizations recognize the importance of managing the workforce effectively (and even "know" what approaches have been effective elsewhere), firms and managers very often fail to implement these approaches. The course is organized in four sections: 1) Setting out basic frameworks for viewing the strategic management of human assets as a source of competitive advantage for firms; 2) Comparing and contrasting four different approaches to organizing human assets: "Control", "Commitment" model, "Talent" model, and "Collaborative", 3) Addressing the "make" vs. "buy" decision for human assets, i.e. when to upgrade the internal skills of existing employees (including promotion from within) in order to boost capabilities and compete in new areas vs. when to hire people who already have the necessary skills, via external hires and/or hiring individuals on contract; and 4) Analyzing the relationships among culture, HR systems, and organization change when faced with strategic shifts; leadership crises; rapid growth, and global expansion. The strategic management of human assets is only one source of competitive advantage. Yet many managers recognize (and many successful organizations embody) the reality that the competitive edge gained from the newest technology, the latest marketing strategy, or the most creative product design may be relatively short-lived as competitors rush to imitate and follow. Prerequisite: MGMT 6110 OR MGMT 6120
0.5 Course Units

MGMT 7650 Venture Capital and Entrepreneurial Management: Practices and Institutions of Silicon Valley
This elective half-semester course will highlight venture capital and entrepreneurship in general and will explore selected aspects of this industry, including: industry trends and dynamics in Silicon Valley and the South of Market area (SOMA) of San Francisco; the recent emergence of alternative sources of startup financing, including incubators/accelerators and crowdfunding platforms, angel groups and stage-agnostic institutional investors; business and operational aspects of early stage companies in transition to mezzanine-level stages of growth; and company "exits," including both initial public offerings and merger/sale transactions. MGMT765 and MGMT804 cover separate issues within the same general industry and are not redundant. This course addresses issues faced by later stage VC backed firms, while MGMT804 centers on early stage, pre-revenue startups. It is recommended students take MGMT 801 before enrolling in this course. The format of this course relies heavily on site visits and recognized leaders within the Bay Area to bring forth on-the-ground perspectives of a changing and important industry. While MGMT804 is not a prerequisite, the two courses are complementary.
0.5 Course Units
MGMT 7720 Power and Politics in Organizations

"If you want to test a (person's) character, give (him/her) power." These famous words articulate one of the many tensions of exercising power. Regardless of whether you have an appetite for power or disdain it, power and politics are likely to play an important role in your career. The purpose of this course is to introduce you to concepts that are useful for understanding, analyzing, and developing your political skill. But beyond discovering ways to extend your own power in organizations, we will also uncover lessons about ways in which power and politics can blind you, and how to navigate situations in which you are up against powerful people. Using a range of scholarly articles, cases, exercises, assessments and simulations, we will extract a variety of lessons relevant to your role in organizations. Topics include diagnosing power in organizations, building coalitions, change management, understanding networks, coping with intolerable bosses and incivility, and downsizing. Students will be expected to engage in field research for their coursework and final paper, and the course requires that students submit assignments for almost every class session. Thematically, this course highlights how your relationships with organizational stakeholders and an understanding of the organizational context are crucial to successfully navigating the political terrain of organizations. Organizations are inherently political arenas that require social astuteness, and an understanding of the "rules of the game." This course is designed for students aiming to develop their leadership, general management and career skills through a better understanding of power and politics, and relates to other courses on these topics in the Management department.

0.5 Course Units

MGMT 7730 Managing Organizational Change

This course focuses on the nature and process of organization change, and how to be successful as a leader, implementer, and recipient of change. It emphasizes the forces for change, the change implementation process, the skills of successful change leaders, and the behavioral theories and management practices of how individuals and organizations change. All of this will help you to better diagnose, orchestrate, and implement the change agendas of organizations. After the initial session that introduces many of the topics and discussions of the course, Module 1 presents the foundations of successful transformations. The goal here is for you to get an understanding for how these major types of transformations unfold, how the motivation for change affects the type of transformation, how well the changes were instituted, sources of resistance, and how leaders are involved in the whole endeavor. Module II focuses on applications to learn the ingredients for successful change management and implement concepts from Module I. We will start with a merger integration implementation. Next, you will make a series of decisions to manage recipients of change by focusing on downsizing and privatization. Finally, you will test your implementation acumen in a real world-based simulation. Module III has two parts. The first is designed to expand your insights and apply them to the experiences of early career professionals who initiate, drive, and experience change as members of larger organizations or as startup founders. The course ends on how to build organizations that have the capacity to successfully change. To teach this course I use cases, simulations, and readings that integrate findings from academic research with practitioner experiences and insights. Importantly, the value of the class is maximized when you integrate your own experiences, and I am excited in anticipation of the discussions and debates we will have.

Prerequisite: MGMT 6110 OR MGMT 6120

0.5-1 Course Unit

MGMT 7780 Strategic Implementation

Much more is known about strategy formulation than its implementation, yet valid, sensible strategies often fail because of problems on the implementation side. This course provides you with tools to turn good strategy into successful reality. It covers the choices, structure, and conditions that enable the successful attainment of strategic objectives. Students learn from rigorous academic research on successful implementation, as well as a series of seasoned business leaders who will visit to share their own experience from the front lines.

Prerequisite: MGMT 6110 OR MGMT 6120

0.5-1 Course Unit

MGMT 7840 Managerial Economics and Game Theory

The purpose of this course is to develop students’ abilities to apply game theory to decision making. Development of the tools of game theory and the application of those tools is emphasized. Game theory has become an important tool for managers and consultants in analyzing and implementing tactical as well as strategic actions. This course will primarily focus on examples useful for developing competitive strategy in the private sector (pricing and product strategy, capacity choices, contracting and negotiating, signaling and bluffing, takeover strategy, etc.). Game theory can also be used to address problems relevant to a firm’s organizational strategy (e.g., internal incentives and information flow within a firm) and to a firm’s non-market environment (e.g., strategic trade policies, litigation and regulation strategy). Recommended background in intermediate microeconomics or equivalent. It is expected that the student has been introduced to some basic game theory. There will be a quick review of the basics and some recommended supplemental readings for those who have little or no background in game theory.

Prerequisite: MGE 6110

0.5 Course Units

MGMT 7860 Reforming Mass Incarceration and the Role of Business

This half-semester course introduces current and future leaders to mass incarceration in the U.S., and its effect on employment and entrepreneurship prospects for formerly incarcerated people. We will explore both the challenges of our correctional system as well as potential solutions. For example, over 600,000 people return home from U.S. prisons each year. For most, the return is short-lived as two-thirds are re-incarcerated within three years of release. We will consider many of the reasons why this occurs, including research indicating that the lack of employment opportunities is a major contributor. We will also hear from those directly impacted by the justice system. By the end of the course, you will be among the more educated leaders not just on mass incarceration, but on how to think about ways that the business community can contribute to the success of those impacted by the criminal justice system. This course will also serve as a prerequisite for a follow-up experiential course where we will teach business skills and financial acumen justice-impacted people, as well as help with their employment and entrepreneurship opportunities.

0.5-1 Course Unit
MGMT 7870 Global Management of Digital Businesses
Digital businesses enable users to communicate, interact, share, and engage in transactions. They enable individuals to shop, work, play, and learn, and they offer companies new ways of organizing their value chains, reaching customers, collecting and analyzing information, and creating value. This half-semester, 0.5-cu class deals with the international expansion of businesses through the use of digital technologies. The focus is on the tension between the eminent scalability facilitated by digital technologies and the ruggedness of the international landscape, shaped as it is by demographics, consumer preferences, culture, regulatory structures, and network effects operating at the local, national, regional, and global levels. The class covers both companies launched as digital businesses and traditional companies undergoing a digital transformation. Topics include industry dynamics, the impact of network effects, the sequence of foreign market entry, regulatory risk, strategic interaction, and global versus local strategies for both new digital businesses and established firms undergoing digital transformation. While there are no specific requirements, knowledge of the fundamental concepts of competitive strategy and global strategy is essential to follow this class. Students will learn through interactive class discussions, team-based exercises, and self-made short videos to pitch novel new ideas about digital businesses.

0.5-1 Course Unit

MGMT 7880 Managing and Competing in China
The business environment in China is characterized by both uncertainty and complexity. On the one hand, it is changing fast; on the other hand, it is influenced by deep-rooted political, economic, and cultural forces that exhibit tremendous inertia. This course will help students--as potential managers, entrepreneurs, and investors--gain the knowledge and analytical skills necessary to compete effectively in China. We will discuss various types of firms in the Chinese economy--from large state-owned enterprises (SOEs) to newly minted Internet giants, from prominent multinational companies (MNCs) to virtually anonymous local suppliers--and the unique institutions in which these firms operate. Such discussions will also help managers whose firms compete or collaborate with Chinese firms on the global stage. We will use a combination of lectures, cases, debates, and role play in class. You will also have the opportunity to apply your learning to real business scenarios.

Mutually Exclusive: MGMT 2880

1 Course Unit

MGMT 7930 People Analytics
This course examines the use of data to improve how people are managed within organizations. Recent years have seen a growing movement to bring more science to how we manage people. In some cases, that means ensuring that whatever practices and approaches we adopt are backed up by solid evidence as to their effectiveness. Often, organizations will seek to go further, analyzing their own data to identify problems and learn what is working and what is not in their own context. This course applies the insights of the people analytics movement to help students become better managers and more critical analysts within their organizations. The course aims to develop students in three specific ways. First, it provides students with an up-to-the-minute grounding in current evidence about managing people, providing a knowledge base that can ensure that their future management is guided by best practices. Second, it develops the skills and understanding necessary to be thoughtful, critical consumers of evidence on people management, allowing them to make the most of the analysis available to them as they make people decisions. Third, it provides guidance and practice in conducting people analytics, preparing students to gather data of their own, and making them more skilled analysts. The course addresses these topics through a mixture of lecture, case discussion, and hands on exploration of a variety of data sets.

Also Offered As: OIDD 7930

0.5 Course Units

MGMT 7940 Understanding Careers and Executive Labor Markets
This course examines the structure of executive careers in order to help understand how those careers can be managed most effectively. By drawing on extensive economic, sociological and psychological research on careers, we will examine such questions as when executives should move on to the next job or even change fields altogether, and what are effective means of finding jobs, achieving promotions, managing networks, and achieving work-life balance. The first few sessions of the course explore the basic building blocks of the career, outlining our knowledge on the different orientations that individuals take to their careers, how approaches to the career change as people get older, and how different kinds of job moves within and across firms advance careers. The second part of the course explores in more detail the social resources that affect careers, notably social networks and relationships with mentors. The third section of the course then examines a number of the most important and difficult issues affecting modern careers, including making successful transitions, the effects of gender on careers, work life balance, and international careers.

0.5 Course Units
**MGMT 7980 Managing and Motivating Talent**

People are the most valuable asset of any business, but they are also the most unpredictable, and the most difficult, asset to manage. And although managing people well is critical to the health of any organization, most managers don’t get the training they need to make good management decisions. Now, award-winning authors and renowned management Professors Mike Useem and Peter Cappelli of the Wharton School have designed this course to introduce you to the key elements of managing people. Based on their popular course at Wharton, this course will teach you how to motivate individual performance and design reward systems, how to design jobs and organize work for high performance, how to make good and timely management decisions, and how to design and change the organization’s architecture. By the end of this course, you’ll have developed the skills you need to start motivating, organizing, and rewarding people in your organization so that you can thrive as a business and as a social organization. This course can also only be applied towards unrestricted electives at the undergraduate level. Mutually Exclusive: MGMT 3980

0.25 Course Units

**MGMT 7990 Special Topics in MGMT**

Courses offered of various topics and points of focus, ranging across multiple concentrations of Management, (i.e., Entrepreneurial, Strategy, Organizational Business, etc.).

Mutually Exclusive: MGMT 1980

0.25-1 Course Unit

**MGMT 8010 Entrepreneurship**

MGMT 801 is the foundation course in the Entrepreneurial Management program. The purpose of this course is to explore the many dimensions of new venture creation and growth. While most of the examples in class will be drawn from new venture formation, the principles also apply to entrepreneurship in corporate settings and to non-profit entrepreneurship. We will be concerned with content and process questions as well as with formulation and implementation issues that relate to conceptualizing, developing, and managing successful new ventures. The emphasis in this course is on applying and synthesizing concepts and techniques from functional areas of strategic management, finance, accounting, managerial economics, marketing, operations management, and organizational behavior in the context of new venture development. The class serves as both a stand alone class and as a preparatory course to those interested in writing and venture implementation (the subject of the semester-long course, MGMT 806). Format: Lectures and case discussions

0.5 Course Units

**MGMT 8020 Change, Innovation & Entrepreneurship**

Designed for students with a serious interest in entrepreneurship, this course will provide you with an advanced theoretical foundation and a set of practical tools for the management of startups and entrepreneurial teams in fast-changing and innovative environments. Building on the skills of MGMT 801, every class session is built around an experience where you have to put learning into practice, including the award-winning Looking Glass entrepreneurial simulation, role-playing exercises, and a variety of other games and simulations. The goal is to constantly challenge you to deal with entrepreneurial or innovative experiences, as you learn to navigate complex and changing environments on the fly, applying what you learned to a variety of scenarios. MGMT 802 is built to be challenging and will require a desire to deal with ambiguous and shifting circumstances. It is recommended students take MGMT 801 before enrolling in this course. Format: Lectures, discussion, interim reports, class participation, readings report, and presentations, and an innovation assessment in PowerPoint format.

0.5 Course Units

**MGMT 8040 Venture Capital and Entrepreneurial Management**

This elective half-semester course focuses on venture capital management issues in the context of the typical high-growth potential early stage start-up company. The course is fundamentally pragmatic in its outlook. It will cover seven principal areas relevant to the privately held high-growth start-up which include: commentary on the venture capital industry generally, as well as a discussion of the typical venture fund structure and related venture capital objectives and investment strategies; common organizational issues encountered in the formation of a venture backed start-up, including issues relating to initial capitalization, intellectual property and early stage equity arrangements; valuation methodologies that form the basis of the negotiation between the entrepreneur and the venture capitalist in anticipation of a venture investment; the challenges of fundraising, financing strategies and the importance of the business plan and the typical dynamics that play out between VC and entrepreneur. It is recommended students take MGMT 801 before enrolling in this course. Typical investment terms found in the term sheet and the dynamics of negotiation between the entrepreneur and the venture capitalist; compensation practices in a venture capital backed company; and corporate governance in the context of a privately-held, venture capital-backed start-up company and the typical dynamics that play out between VC and entrepreneur in an insider-led, "down round" financing.

0.5 Course Units
MGMT 8060 Venture Implementation
This advanced course on entrepreneurship focuses on developing a validated opportunity or concept into a venture that is ready for seed financing and/or launching the product or service. Participants in this course must previously have developed a validated opportunity, either in a previous course or through independent efforts. Students may participate as a team of up to three people. Ideally, participants are committed to pursuing their opportunity commercially, or at least to seriously explore that possibility. The course provides a practical guidance for developing the product or service, forming the entity, raising capital to build the team, establishing partnerships, and sourcing professional services. After completing the course, you will be "pitch ready" - whether submitting to campus venture competitions or to outside investors. Most coursework is focused on applying concepts and frameworks to project tasks in developing the venture. Students must have successfully completed MGMT 8010 before enrolling in this course (or obtain the permission of the instructor). Format: Highly interactive Requirements: Class participation, interim assignments.
Prerequisite: MGMT 8010
0.5-1 Course Unit

MGMT 8090 Private Equity in Emerging Markets
This course investigates the private equity industry in emerging markets. The goal of the course is to give students a realistic understanding of the roles, responsibilities and analytical skills required of market practitioners, as well as the tensions that arise between various stakeholders, including government officials, investors, entrepreneurs and the press. The underlying premise is that the basic rules for private equity in those countries are similar to the rules in more industrialized countries, but market participants face a broader range of issues in areas such as valuations, governance, legal structures, contract enforcement and regulatory transparency. To provide students with a practical grasp of the issues, classes will be a mix of lectures, expert guest speakers and business cases. Cases will highlight the challenges and tasks at each stage of the investment cycle, such as structuring and launching a new fund, originating new deals, conducting due diligence, creating value, monitoring the performance of portfolio companies and exiting. Each class will focus on a specific topic, ranging from the basics of how and why private equity funds operate to complex issues such as fund governance and adding value to family firms.
Prerequisite: FNCE 6110
0.5 Course Units

MGMT 8110 Entrepreneurship Through Acquisition
MGMT 811 focuses on the theoretical, strategic, analytics, and practical issues of acquiring a business. Topics include: locating a business, due diligence, reviewing and analyzing data, valuing, raising capital/financing the deal, search funds, structuring the acquisition, letters of intent, contracts/asset purchase agreements, integrating the target, acquisition growth strategies, and transitioning/exiting the acquisition. Format: The class consists of lectures, in-class discussions of cases, assigned readings, homework problems, case studies, and a group or individual project. It is recommended students take MGMT 801 before enrolling in this course.
0.5 Course Units

MGMT 8120 Social Entrepreneurship
This is a course on creating a business to attack a social problem and thereby accomplish both social impact and financial sustainability. For this course, social entrepreneurship is defined as entrepreneurship used to profitably confront social problems. This definition therefore views social entrepreneurship as a distinct alternative to public sector initiatives. The basic thesis is that many social problems, if looked at through an entrepreneurial lens, create opportunity for someone to launch a venture that generates profits by alleviating that social problem. This sets in motion a virtuous cycle - the entrepreneur is incented to generate more profits and in so doing, the more the profits made, the more the problem is alleviated. Even if it is not possible to eventually create a profit-making enterprise, the process of striving to do so can lead to a resource-lean not-for-profit entity. Creating a profitable social entrepreneurship venture is by no means a simple challenge. Cross-listed with MGMT 212.
Fall
Mutually Exclusive: MGMT 2120
0.5 Course Units

MGMT 8140 Search Fund Entrepreneurship
The objective of this course is to study the path to entrepreneurship through the acquisition of an existing operating business using the Search Fund private equity model. We will study the process through a series of lectures, guest presentations, assigned readings, case studies, and a final project.
0.5-1 Course Unit

MGMT 8150 Sports Business Management
This course examines various business disciplines as they apply to the sports industry. The course provides the student with an overview of the business of the intercollegiate, Olympic and professional sports enterprises. In addition, the course investigates the business related issues encountered by managers of sports organizations and covers how business principles can be applied to effectively address these issues. This course is crosslisted with MGMT8150.
Fall or Spring
Also Offered As: LGST 8090
0.5,1 Course Unit

MGMT 8160 Building Human Assets in Entrepreneurial Ventures
The success of entrepreneurial endeavors depends, even more so than in larger more bureaucratic organizations, on the ability to locate and manage talent effectively. Specifically, on the need to find the right people and keep them engaged in working on the organization's goals. We focus in this course on leading, building, and maintaining human assets in start-up and small, growing operations. The course is designed with several key components, these are: conceptual and practical readings relevant to the topic; case studies illustrating key concepts and issues; lecture on practical application and examples; and lastly every class will also feature a presentation by and conversation with an outside expert whose work is relevant to guiding or advising start-ups and fast-growing small firms. We will focus on the following objectives: identifying the talent needed to initiate and sustain an entrepreneurial endeavor; structuring human resource policies and corporate culture to prepare for and facilitate firm growth; assessing the human assets of valuing entrepreneurial companies; and responding to conflict and organizational threats within nascent firms. This course will apply recent research from strategic human resource management, personnel economics and organizational behavior to the practical issues of building and managing human assets in new ventures.
0.5 Course Units
MGMT 8170 Global Growth of Emerging Firms
Emerging firms are a critical element of economic growth, and a key source of gains in innovation and social welfare. This course is designed to depart from the U.S.-centric conversation on startups - with its outsized focus on Silicon Valley - and train a critical eye on some of the unique innovations emerging from new regional hotspots across the globe, with a particular focus on developing and emerging economies. We will discuss the challenges faced by founders in different global contexts, the components of a robust institutional ecosystem, and the ways in which creative solutions may flourish in response to local problems. Along the way, students will gain a virtual view into global startup communities, and personalized insights from firm founders operating around the world - from Bogota to Nairobi to Jakarta. The course will be structured in three primary parts. The first and longest section will discuss the Key Challenges for emerging firm growth across the globe, such as access to talent and resources, political risk, and legal institutions. The second section will highlight particularly active areas of Context-Driven Innovation that are thriving in various regions, such as financial technology, mobile health products, and clean energy. The final section will train Regional Spotlights on different geographic areas in turn, so that we may focus on the challenges and opportunities specific to various parts of the world. This course is relevant to both U.S. and non-U.S. students, and it is expected that students will bring their own backgrounds and experiences to contribute to lively class discussions. The course will culminate with a group project done in teams of four, in which groups will give short presentations to the class.
Fall or Spring
1 Course Unit

MGMT 8310 Entrepreneurship Launchpad
This advanced course on entrepreneurship focuses on taking your venture from a good idea to a fundable business. Participants need to come to the class with a validated idea that they are committed to pursuing commercially. The course is entirely oriented toward applying concepts and frameworks to advance your venture and provides practical guidance for testing the product or service, forming the entity, establishing partnerships, and engaging with investors. Students must have successfully completed MGMT 801 before enrolling (or obtain the permission of the instructor). Format: Highly interactive Requirements: Class participation, interim assignments.
Mutually Exclusive: MGMT 2310

MGMT 8330 Strategies and Practices of Family-controlled Companies
This course is designed for those persons who desire to understand the distinct strategies and practices of family-controlled companies and family wealth creation. It will focus on stakeholder decision making; financial and resource driven options for long-run competitiveness, organizational structures, management team issues; strategic planning from a resource-based perspective; transition planning for the corporate entity, family dynamics, communication issues; and leadership empowerment. The course is intended for those who plan to consult or provide professional services to family-controlled companies and for those planning a career in a family firm. The class is structured around topical lectures with frequent utilization of case studies requiring active class participation, as well as on-site and off-site project work time. Submission of several written case studies, and a term project are required. Open to Wharton MBA and Penn graduate students.
Mutually Exclusive: MGMT 2330
1 Course Unit

MGMT 8710 Advanced Global Strategy
This class is designed to develop world class, globally-minded managers. Many of the most important business issues of today are global in nature. Both "macro" phenomena (e.g. nationalism, protectionism, demographic change) and "micro" trends (e.g. competition within and from emerging markets, distributed talent and innovation, digitization and automation) are inherently international issues. They require firms and managers to think, innovate, and organize globally. This class offers a comprehensive set of tools to evaluate opportunities and challenges in global markets, to leverage cross-country differences to enhance innovation and performance, to manage the complexities of a business spread across multiple countries, and to win against foreign rivals. The course will focus on both the formulation and execution of global strategy, with a heavy emphasis on current events and hands on activities. Sample topics include: quantifying opportunities and risks of foreign investments; formulating and executing strategies that balance local responsiveness, global efficiency, and innovation; exploiting differences across countries to enhance innovation while protecting intellectual property; managing organizational structure, culture, and people in multinational organizations; structuring and managing cross-national and cross-cultural teams; developing a global mindset among managers and employees. This course builds on the global management portion of MGMT 611 or MGMT 612, but taking those classes is not a prerequisite for MGMT 871.
Fall
0.5-1 Course Unit
MGMT 8750 Comparative Capitalism
While we often debate capitalism as a system, the nature of capitalist economies differ from country to country and rarely match up to the ideal. Why do these differences arise? Is there a pure form of capitalism? What is the nature of capitalism in advanced and emerging economies? Why are capitalist economies often embedded in other social systems? Why do some economies grow faster than others? How do international institutions and interdependencies affect national capitalist institutions? How are the strategies of multinational corporations (MNCs) influenced by their country of origin? And how is the nature of capitalism changing today? This course provides insight into these questions as it explores the nature of capitalism around the world, with specific reference to Brazil, Russia, Ukraine, China, Hungary, Nigeria, South Africa, Singapore, Israel, Argentina, and the advanced OECD countries. Students will leave this class with understanding key differences in how capitalist economies are organized and competition over the future of the world economy.
Mutually Exclusive: MGMT 2750
1 Course Unit

MGMT 8880 Venture Acceleration Lab
This Lab emphasizes experiential learning in evaluating and contributing to "live" startup ventures. The goal of the Lab is to accelerate the development of ventures by providing a structured curricular setting in which mentors with industry expertise as operators and investors provide guidance to full-time venture founders. Undergraduate and MBA students learn through witnessing these interactions and through helping ventures structure their value creation and capture strategies. The latter is facilitated via instructor-led classes on focused venture development concepts. This unique Lab therefore brings together communities which rarely mix: startup founders, enrolled students as potential venture "joiners" and consultants, venture mentors, and technical/academic specialists.

MGMT 8920 Advanced Study Project - Collaborative Innovation Program
Business success is increasingly driven by a firm's ability to create and capture value through innovation. Thus, the processes used by firms to develop innovations, the choices they make regarding how to commercialize their innovations, the changes they make to their business models to adapt to the dynamic environment, and the strategies they use to position and build a dominate competitive position are important issues facing firms. In MGMT. 892, you will learn to address these issues through an action learning approach. MGMT. 892 is a 1.0-credit course conducted in the spirit of an independent study. By working on consulting projects for leading global companies, you will develop and then apply your knowledge about innovation management and help these firms better understand the challenges and opportunities posed by emerging technologies and markets.

MGMT 8960 Decision Making in the Leadership Chair
Contact the Management Department for additional information at: Courseinfo@wharton.upenn.edu. Decision making in the leadership chair is a complex task and one that is difficult to teach in a business school setting. To bridge this gap, Mr. William P. Lauder and invited executives will bring their experiences into the classroom, primarily addressing key decision they made, how they weighed their options, and what they learned from the outcomes. The framework for the class centers around two crucial aspects of decision making in the leadership chair: the need to manage many groups of stakeholders, and the need to play many roles when doing this. This course is by application only to second-year Wharton MBAs and a maximum of 48 students will be selected. A communication will be sent regarding the application details.

MGMT 8980 Global Modular Course B
removing WH 898 as erroneous crosslist.
0.5 Course Units

MGMT 9000 Economic Foundations of Management
This course examines some of the central questions in management with economic approaches as a starting point, but with an eye to links to behavioral perspectives on these same questions. Economics concerns itself with goal directed behavior of individuals interacting in a competitive context. We adopt that general orientation but recognize that goal directed action need not take the form of maximizing behavior, particularly for organizations comprised of individuals with possibly divergent interests and distinct sub-goals. Further, we treat competitive processes as playing out over meaningful periods of calendar time and, in general, not equilibrating instantaneously. A central property of firms, as with any organization, is the interdependent nature of activity within them. Thus, understanding firms as "systems" is quite important, a perspective which has important implications for understanding processes of organizational adaptation. Among the sorts of questions we explore are the following: What underlies a firm's capabilities? How does individual knowledge aggregate to form collective capabilities? What do these perspectives on firms say about the scope of a firm's activities, both horizontally (diversification) and vertically (buy-supply relationships)? As a "foundations" course, readings will cover key conceptual foundations, but also provide an arc to current work — an "arc" that will be developed more fully in our in-class discussions.
Fall
0.5 Course Units
**MGMT 9180 Personnel Economics A**

This is a half-semester PhD course in the Management Department that is also open to any current PhD students at Wharton. The canonical model in economics views an agent as a fully rational, atomistic individual making optimal choices under scarcity. This approach has been very powerful theoretically and empirically to explain and to predict behavior in the workplace. This model has also been enriched to accommodate other phenomena arguably affecting behavior in the workplace like the social context (e.g. peer effects, altruism, or social comparison), non-standard time preferences, loss aversion, and cognitive costs. Incorporating these ideas into the standard model can be accomplished in various ways but the real stress test for these theories is whether they predict behavior more generally (i.e. we don’t just use theory to explain one choice but choices more generally) and to generate empirical predictions that can be tested using experiments. In this mini-course we start-off with a tour de force of the fundamental principal-agent model and the various behavioral extensions. The core of the course is, however, not theoretical but a practical course on how to design field experiments to test these ideas.

0.5 Course Units

**MGMT 9190 Personnel Economics B**

This is a half-semester PhD course in the Management Department that is also open to any current PhD students at Wharton. It is a continuation and builds on MGMT 918 - please see the course description for MGMT 918. As in MGMT 918 we expand on the canonical model in economics and introduce views from behavioral economics and introduce views from behavioral economics to derive novel theories with empirically testable implications on workplace behavior and individual performance in labor markets and health. In this mini-course the focus is on continuing our review of the literature but the primary aim is to work towards a project description and paper that can be developed into a PhD chapter or journal article.

0.5 Course Units

**MGMT 9200 Seminar in Human Resources Research**

The class is organized around understanding labor and work. For management students trained in social science disciplines, there is a considerable gap between what we can learn about the workplace from economics, which relies on markets and incentives for its explanations, and psychology, which relies on dispositional attributes and social interactions. Managing people is arguably the biggest topic in the social sciences each with its own subgroups: labor economists in economics, I/O and personnel psychologists in psychology and organizational behavior researchers use the workplace as their central research context, work and occupations and career students in sociology. For the most part, these fields talk past each other and are largely unaware of what the others are doing. We try to bridge that gap a bit in this class, although by no means do we attempt to span the range of topics represented across these quite different fields. In most contexts, the employer has considerable discretion as to the arrangements that are chosen for influencing the behavior of workers and, in turn, their outcomes and subsequent attitudes. The management practices they choose are our main focus. They drive many of the most important outcomes in society - who gets access to the most important and powerful jobs, how much income will people have and how it is distributed, whether and to what extent we have control over our lives at work, and so forth. Most of the attention still goes to employment, but it is not the only arrangement for doing work, though. We consider others, especially various forms of contracting and the gig work organized around electronic platforms. To the extent that there is a common conceptual orientation across the class, it is analysis at the organization-level, typically used for independent variables although often for outcomes and dependent variables as well, and power as a mechanism. Many of the most important and exciting topics in public discourse are in our focus, from remote work to gig work to the influence of artificial intelligence. The range of new issues to explore is enormous. A caveat: the phrase “human resources” is a contemporary business term that began as a description of the set of management practices coming out of the “great corporations” and the lifetime employment model for managing non-union employees. Many of these are within the domain of I/O and personnel psychology, such as employee selection tests, succession planning exercises, and so forth. The use of these practices has declined dramatically and are now only one approach to addressing the practical problems that lie ahead.

0.5 Course Units

**MGMT 9250 Seminar in Corporate Strategy**

This course explores current research on corporate strategy. Over the past two decades, research in the area of corporate strategy has evolved considerably. The fundamental focus of the field has been on sources of competitive advantage at the of the firm, and the process of building and maintaining competitive advantage. In this class, we explore current research articles that best represent the development of rent-generating resources at the level of the firm. Topics addressed include the concept of strategy, research on the evolution of firm capabilities, competitive interaction, top management teams and strategy formation, and changes in firm scope through acquisitions, divestitures and alliances.

Spring

0.5 Course Units
MGMT 9260 Seminar in Strategy and Organization Design
This half-semester course examines one of the foundational questions in strategy: the role of organizational structure in both supporting and shaping strategy. As Winston Churchill famously said: "We shape our buildings, and afterwards our buildings shape us." This course examines this proposition from two traditions, the "institutional economics" and "information processing" schools of organizational design. We will examine foundational works from both schools, such as Coase, Williamson, Simon, March, and others, and then proceed to recent work in the area. Some of the questions that we will explore in the class are: why do firms exist? What determines their boundaries? What determines formal and informal structures within firms? How does the strategic context shape the answers to these questions? How might the nature of the firm and its boundaries relate to innovation, human capital, and knowledge creation? The aim of this class is to provide students with a grounding in the fundamental questions and contributions in this area, and to spark ideas for research in their own graduate work. 0.5 Course Units

MGMT 9270 Technology & Innovation Strategy
This quarter-length doctoral seminar deals with major streams of management research in technology strategy and innovation. We will focus on both classical topics such as incumbents’ management of technological change and industry evolution, and new emergent topics such as ecosystems and platforms. The emphasis will be on understanding the link between technologies and firms in terms of both strategy choices and performance outcomes. 0.5 Course Units

MGMT 9320 Proseminar in Management in Qualitative Methods
This course is designed to provide students with an understanding of the methodological approaches we commonly think of as qualitative, with special emphasis on ethnography, semi-structured interviews, case studies, content analysis, and mixed-methods research. The course will cover the basic techniques for collecting, interpreting, and analyzing qualitative (i.e. non-numerical) data. In the spring quarter, the course will operate on two interrelated dimensions, one focused on the theoretical approaches to various types of qualitative research, the other focused on the practical techniques of data collection, such as identifying key informants, selecting respondents, collecting field notes and conducting interviews. In the fall semester, the course will operate on two interrelated dimensions, one focused on the theoretical approaches on building arguments and theory from qualitative data, the other focused on the practical techniques of data collection, such as analyzing data, writing, and presenting findings. Note: This class is part of a two-part sequence which focuses on qualitative data collection and analysis. The first of this course, offered in the Spring, focuses on data collection and the second half of the course, offered the following Fall, will focus on qualitative data analysis. Each course is seven weeks long. Students may take either class independently or consecutively. Two Term Class, Student may enter either term; credit given for either Also Offered As: SOCI 9320 0.5 Course Units

MGMT 9330 Psychological Foundations of Research in Management
This seminar-based course, with active discussion and analysis, is required of all first-year doctoral students in Management and open to other Penn students with instructor permission. The purpose of this course is to examine and understand basics in the theory and empirical research in the field of micro organizational behavior and to build an understanding of people’s behavior in organizations and across organizations. The course covers a blend of classic and contemporary literature so that we can appreciate the prevailing theories and findings in various areas of organizational behavior. This course covers micro-organizational behavior, focused on topics such as influence/status, virtual teams, job design, organizational culture and socialization, identity in organizations and overall look on where the field of micro-organizational behavior is going. Fall or Spring 0.5 Course Units

MGMT 9340 Foundations of Organizational Theory
This seminar-based course, with active discussion and analysis, is required of all first-year doctoral students in Management and open to other Penn students with instructor permission. The purpose of this course is to examine and understand basics in the theory and empirical research in the field of macro organizational behavior and to build an understanding of people's behavior in organizations and across organizations. The course covers a blend of classic and contemporary literature so that we can appreciate the prevailing theories and findings in various areas of organizational behavior. This course covers macro-organizational behavior, covering the topics of organizational ecology, institutional theory, organizational status and reputation, impression management, social networks and social movements. Fall 0.5 Course Units

MGMT 9350 Network Theory and Applications
This course explores network models and their applications to organizational phenomena. By examining the structure of relations among actors, network approaches seek to explain variations in beliefs, behaviors, and outcomes. The beauty of network analysis is its underlying mathematical nature - network ideas and measures, in some cases, apply equally well at micro and macro levels of analysis. Therefore, we read and discuss articles both at the micro level (where the network actors are individuals within organizations) and at the macro level (where the network actors are organizations within larger communities) that utilize antecedents or consequences of network constructs such as small worlds, cohesion, structural equivalence, centrality, and autonomy. We begin by examining the classic problem of contagion of information and behaviors across networks, and follow by considering the various underlying models of network structure that might underlie contagion and other processes The next two sessions address a variety of mechanisms by which an actor’s position in a network affects its behavior or performance. Then, the following two sessions address antecedents of network ties via the topics of network evolution and network activation. We close with a “grab bag” session of articles chosen to match class interests. 0.5 Course Units
MGMT 9370 Entrepreneurship Research Seminar
The seminar seeks to expose students to theoretical and empirical perspectives on entrepreneurship research. We will focus on the main questions that define the field and attempt to critically examine how, using a range of methodologies, researchers have approached these questions. As we review the literature, we will seek to identify promising research areas, which may be of interest to you in the context of your dissertation research. In addition to addressing the content of the received literature, we will examine the process of crafting research papers and getting them published in top-tier journals. Towards that end we will characterize the key elements of high-impact papers and review the development process of such studies. Students are expected to come fully prepared to discuss and critique the readings that are assigned to each class meeting (see details below). Each student will serve as the discussion leader for one or more of the class sessions. Discussion leaders are expected to critically review several articles, identify new insights in the research that is being reviewed and evaluate its contribution to the literature, position the articles within the literature on the subject matter, raise discussion questions, and act as the discussion moderator for the class session. Each discussion leader is asked to prepare a one or two-page summary of the assigned papers which includes a statement of the main research question(s), the methodology, data set if any, summary of findings, a commentary with your thoughts on the reading, and proposed discussion questions. Prior to each class, the discussion leader will meet the instructor to help plan the class meeting. Towards the end of each class meeting, each student will be asked to articulate a research question that emerged from the session and describe the research design used to investigate the issue.
0.5 Course Units

MGMT 9380 Seminar in Social Entrepreneurship
This half-semester course examines how social enterprise organizations emerge, attract resources, and affect society. The course will bridge micro and macro theoretical perspectives to provide insight into the unique challenges faced by social enterprises, while also showing how the study of such organizations can help to advance mainstream entrepreneurship research. Individual sessions will focus on defining social entrepreneurship, the tensions and tradeoffs that emerge in organizations that pursue social and financial goals, impact investing and other sources of finance, and the role of incubators/accelerators in supporting the development of these organizations. This is a seminar-based course with active discussion and analysis.
0.5 Course Units

MGMT 9390 Seminar in Entrepreneurial Innovation
This quarter-length course explores key topics at the intersection of entrepreneurship and innovation. While the course primarily draws from established theory and empirics from management and economics, it will also include discussions of emerging phenomena in this rapidly evolving field. We will begin by reviewing the basic properties of ideas that uniquely shape the sources and dynamics of entrepreneurship and innovation. Subsequently, we will explore innovation-related challenges and opportunities for startups. Special focus will be placed on research application in which students design and present their own research proposal broadly in the area of entrepreneurship and innovation. Students are highly encouraged to take this course in sequence with MGMT 937.
0.5 Course Units

MGMT 9510 Special Topics in OB: Theories and Methods
The purpose of this half-semester course is to examine and understand theory and empirical research in the field of micro-organizational behavior to build an understanding of people’s behavior in organizations. The course covers a blend of classic and contemporary literature to appreciate the prevailing theories and findings in various areas of micro-organizational behavior. We will cover topics such as identity, diversity/inclusion, work design/proactivity, extra-role behaviors, behavioral ethics/organizational justice, and an overall look at where the field of micro-organizational behavior is heading. This is a seminar-based course with active discussion and analysis.
0.5 Course Units

MGMT 9520 Seminar in Macro-Organizational Behavior
Organizations are ubiquitous, and so is organization. This half-semester course explores organization theory (OT) from the 1960s through the end of the 20th century. We will examine the proliferation of organizational theories during this time period (such as contingency theory, resource dependence theory, ecological theory, and institutional theory) and understand how each theory attempts to relate structure and action over varying levels of analysis. We will determine one or two additional schools to add once we discuss your exposure in other management classes to other potential topics such as behavioral decision theory, sense-making and cognition, organizational economics, corporate governance, social networks, and the like.
0.5 Course Units

MGMT 9530 Seminar in Research Design
This is an introductory doctoral seminar on research methods in management. The course is designed to help you define your research interests, to strengthen your grasp of research design choices and standards, and to move you further along on the path to becoming a skilled, accomplished, engaged, and independent research scholar. We will read about, discuss, and in some cases practice: framing of research questions, writing for publication, defining and meeting research standards, and conducting experimental, archival, survey-based, and qualitative research suitable for publication in top-tier management journals.
0.5 Course Units

MGMT 9550 Foundations of Multinational Management
The goal of the course is to provide you with a foundation in some of the major research areas that underpin the study of Multinational Management. International Business (and the study of MNCs) is an interdisciplinary field. As such, our survey of the seminal articles in the field will span a number of different theoretical and empirical approaches (i.e., economic, managerial, organizational and institutional). Much of our seminar discussions will focus on identifying and developing interesting research questions raised by this interdisciplinary literature, which offers many opportunities for systematic empirical study.
0.5 Course Units
MGMT 9570 Applied Research Methods and Data Analysis in Organizational Behavior
This is a half semester course where we review and apply fundamental lessons related to empirical research (both methods and analyses) in organizational behavior. The course will focus primarily on quantitative research. We will begin by covering the link between theory and empirics as well as core concepts in methods and statistics, including causality, validity, reliability, and statistical power. We will then shift to research methods, including design, sampling, pre-registration, and data collection. A key focus will be on maximizing different forms of validity, with an emphasis on multi-method research designs. Finally, we will consider a variety of the most important analytical approaches in organizational behavior, including regression, structural equation modeling, and multi-level analyses. This is an applied methods course, which means that we will be applying the lessons directly by using statistical software to compile and analyze datasets. The course will introduce you to the broad array of methods and analyses that OB scholars are expected to master in order to consistently publish in the field's top journals.
0.5 Course Units

MGMT 9600 Non-Market Strategy
This course builds on the foundational material presented in MGMT 955 with a deeper focus on current research examining institutional influences on multinational management. These include regulative supports (e.g., laws, regulations, contracts and their enforcement through litigation, arbitration of incentive compatible self-regulation) but also normative (e.g., socially shared expectations of appropriate behavior, and social exchange processes) and cognitive (e.g., creating shared identity to bridge differences in values, beliefs and framing) elements of the institutional environment. We will examine not only strategic responses in the market environment but also influence strategies of multinational and domestic firms that seek to alter the institutional environment in which they operate. We will draw not only upon the international business literature but also related literatures including political economy, sociology, law, finance, communications, institutional theory, strategic corporate social responsibility, social movements, network theory and the management of extractive industries.
0.5 Course Units

MGMT 9610 Special Topics in OB: Making a Contribution
This is a complement course to MGMT 951, and it has the same purpose to examine and understand basics in the theory and empirical research in the field of micro-organizational behavior and to increase our understanding of people's behavior in organizations. To do so, we will cover a blend of classic and contemporary literature so that we can appreciate the prevailing theories and findings in various areas of micro-organizational behavior. In addition, for each topic we will then try to go beyond the existing literature. We will work to increase our understanding by re-framing the research variables, altering the perspective, bringing in new theory, and comparing levels of analysis. The purpose of this course is not meant to be exhaustive, rather it covers approximately half of the organizational behavior literature. For a more complete understanding of the basics of organizational behavior it is mandatory for organizational behavior students to have taken MGMT 951 which covers the remaining topics in basic organizational behavior. However, it is not mandatory to have taken MGMT 951 before MGMT 961 as they cover different sets of topics.
Not Offered Every Year
0.5 Course Units

MGMT 9620 Multinational Firms Global Economy A
This is a graduate course focusing on the empirical aspects of multinational firms and international trade. The goal of the course is to familiarize graduate students with empirical work on multinational firms in the global economy, by reviewing the recent as well as older literature on this topic. Econometrics and statistical techniques for doing empirical work in international trade will also be discussed. We will focus on a variety of issues that are related to the multinational firm, beginning with trends in multinational activity, then moving to both horizontal and vertical theories of the multinational firm. Topics over the course of the semester will include patterns in the expansion of multinational firms, horizontal and vertical multinational firms; the linkages between openness to trade and investment and growth; trade orientation and firm performance; technology transfer and spillovers; innovation and productivity; immigration; labor markets and multinational firms; and global value chains. This course has a mandatory attendance policy.
0.5 Course Units

MGMT 9630 Multinational Firms Global Economy B
This is continuation of Multinational Firms in Global Economies (A). It is a graduate course focusing on the empirical aspects of multinational firms and international trade. The goal of the course is to familiarize graduate students with empirical work on multinational firms in the global economy, by reviewing the recent as well as older literature on this topic. Econometrics and statistical techniques for doing empirical work in international trade will also be discussed. We will focus on a variety of issues that are related to the multinational firm, beginning with trends in multinational activity, then moving to both horizontal and vertical theories of the multinational firm. Topics over the course of the semester will include patterns in the expansion of multinational firms, horizontal and vertical multinational firms; the linkages between openness to trade and investment and growth; trade orientation and firm performance; technology transfer and spillovers; innovation and productivity; immigration; labor markets and multinational firms; and global value chains. This course has a mandatory attendance policy.
0.5 Course Units

MGMT 9700 Research Methods in Management
Students taking the course will be introduced to the seminal readings on a given method, have a hands-on discussion regarding their application often using a paper and dataset of the faculty member leading the discussion. The goal of the course is to make participants more informed users and reviewers of a wide variety of methodological approaches to Management research including Ordinary Least Squares, Discrete Choice, Count Models, Panel Data, Dealing with Endogeneity, Survival/failure/event history and event studies, experiments, factor analysis and structural equation modeling, hierarchical linear modeling, networks, comparative qualitative methods, coding of non-quantitative data, unstructured text and big data simulations.
0.5 Course Units
Managerial Economics (MGEC)

MGEC 6110 Microeconomics for Managers: Foundations
This course establishes the micro-economic foundations for understanding business decision-making. The course will cover consumer theory and market demand under full information, market equilibrium and government intervention, production theory and cost optimization, producing in perfectly competitive and monopoly markets, vertical relations, and game theory, including simultaneous, sequential, and infinitely repeated games. Students are expected to have mastered these materials before enrolling in the second quarter course: Microeconomics for Managers: Advanced Applications.
Fall or Spring
0.5 Course Units

MGEC 6120 Microeconomics for Managers: Advanced Applications
This course will cover the economic foundations of business strategy and decision-making in market environments with other strategic actors and less than full information, as well as advanced pricing strategies. Topics include oligopoly models of market competition, creation, and protection, sophisticated pricing strategies for consumers with different valuations or consumers who buy multiple units (e.g. price discrimination, bundling, two-part tariffs), strategies for managing risk and making decisions under uncertainty, asymmetric information and its consequences for markets, and finally moral hazard and principle-agent theory with application to incentive contracts.
Fall or Spring
0.5 Course Units

Marathi (MRTI)

MRTI 0100 Beginning Marathi I
The first year course in Marathi begins with learning the Devnagari script which is common for other important languages like Hindi and Nepali. With proper emphasis on grammar, vocabulary, and phonetics, the syllabus will see the student becoming able to speak conversational Marathi, read Marathi data from the Internet, and compose simple short essays on selected topics.
Fall
1 Course Unit

MRTI 0200 Beginning Marathi II
Simple sentences in the present tense, narration (spoken as well written) of day to day activities, expressing likes & dislikes, culturally appropriate greetings and addressing, ability to describe events happening in present and present incomplete tense, consolidation of reading and writing skill acquired in the previous semester as well as proper pronunciations of common usage words and phrases. Speaking practices based upon the My Marathi Text book created by University of Mumbai.
Spring
Prerequisite: MRTI 0100 OR MRTI 5100
1 Course Unit

MRTI 0300 Intermediate Marathi I
Intermediate Marathi builds up upon the Beginning Level of Marathi. Gaining ability to speak about past and future is the most important skill in the intermediate course. Students learn the grammar, vocabulary, sentence structures to narrate and write in simple language about their experiences, short anecdotes, their observations and opinions and future plans.
Fall
Prerequisite: MRTI 0200 OR MRTI 5200
1 Course Unit

MRTI 0400 Intermediate Marathi Part II
In the syllabus for the fourth semester Marathi course gaining language inputs regarding Marathi culture and day to day daily life in Maharashtra becomes one important topic. Day to day communication skills necessary to survive in Maharashtra on the street like interaction with a grocery store clerk or a vegetable sales woman in the market, a rikshaw driver, a policeman, a commoner, asking and providing directions on the street and various day to day real life situations are improvised and practiced. Vocabulary, sentence structures and associated grammar is acquired during practice and real life situations based exercises.
Spring
Prerequisite: MRTI 0300 MRTI 5300
1 Course Unit

MRTI 1500 Advanced Marathi
Theater and Films, Literature and poetry, Folk Songs, Dance and Music; this one semester course will explore the rich Marathi culture as well as will work on increasing the spoken, listening, reading and written proficiency of the students. News stories from the Marathi print media as well as glimpses from Marathi Television, News as well as Serials and popular comedy shows become the authentic materials in this course. Students learn the linguistic as well as cultural aspect of the variety of material through discussions, presentations in which students acquire and use the language to describe, narrate, express their opinions, evaluate, critique and appreciate these aspects of Marathi urban and rural culture.

Marketing (MKTG)

MKTG 0001 Viral Marketing
Why do some products catch on and become popular while others fail? Why do apps and services take off while others languish? And why do certain ads, messages, or ideas stick in memory while others disappear the minute you hear them? Diffusion, social media, word of mouth, and viral marketing have become important topics for companies, brands, and organizations. Marketers want their product to be popular, organizations want their social change initiative to catch on, and entrepreneurs want their ideas to stick. This course investigates these and other topics as it explains how things catch on and become popular.

Fall, Spring, and Summer Terms
0.5 Course Units

MKTG 0002 Consumer Behavior
The purpose of this course is to provide students with working knowledge of the major theories and research findings in the area of consumer behavior. The goal of this course is for students to gain a deeper understanding of the psychologies behind behaviors, judgments, and decision-making, and to gain insight into how to apply them to influence behavior in the marketplace. By the end of this course, students should not only be familiar with a large body of consumer behavior literature, but should also be able to identify theories as they play out in the real world, and be able to apply behavioral principles to a variety of marketing problems.

0.5 Course Units

MKTG 1010 Introduction to Marketing
The objective of this course is to introduce students to the concepts, analyses, and activities that comprise marketing management, and to provide practice in assessing and solving marketing problems. The course is also a foundation for advanced electives in Marketing as well as other business/social disciplines. Topics include marketing strategy, customer behavior, segmentation, customer lifetime value, branding, market research, product lifecycle strategies, pricing, go-to-market strategies, promotion, and marketing ethics.

Fall or Spring
Mutually Exclusive: MKTG 1018
1 Course Unit

MKTG 1018 Introduction to Marketing
The objective of this course is to introduce students to the concepts, analyses, and activities that comprise marketing management, and to provide practice in assessing and solving marketing problems. The course is also a foundation for advanced electives in Marketing as well as other business/social disciplines. Topics include marketing strategy, customer behavior, segmentation, customer lifetime value, branding, market research, product lifecycle strategies, pricing, go-to-market strategies, promotion, and marketing ethics. (This is the honors section of MKTG 1010 open only to Joseph Wharton Scholars).

Mutually Exclusive: MKTG 1010
1 Course Unit

MKTG 2110 Consumer Behavior
This course is concerned with how and why people behave as consumers. Its goals are to: (1) provide conceptual understanding of consumer behavior, (2) provide experience in the application of buyer behavior concepts to marketing management decisions and social policy decision-making; and (3) to develop analytical capability in using behavioral research.

Fall or Spring
Mutually Exclusive: MKTG 7110
Prerequisite: MKTG 1010 or MKTG 1018
1 Course Unit

MKTG 2120 Data and Analysis for Marketing Decisions
This course introduces students to the fundamentals of data-driven marketing, including topics from marketing research and analytics. It examines the many different sources of data available to marketers, including data from customer transactions, surveys, pricing, advertising, and A/B testing, and how to use those data to guide decision-making. Through real-world applications from various industries, including hands-on analyses using modern data analysis tools, students will learn how to formulate marketing problems as testable hypotheses, systematically gather data, and apply statistical tools to yield actionable marketing insights.

Fall or Spring
Mutually Exclusive: MKTG 7120
Prerequisite: (MKTG 1010 OR MKTG 1018) AND (STAT 1010 OR STAT 1110 OR STAT 4300)
1 Course Unit

MKTG 2210 New Product Management
Examination of the marketing aspects of products or services exclusive of their promotion, pricing or distribution. Focuses on decisions regarding product introduction, positioning, improvements, and deletion, and the tools available for making these decisions.

Fall or Spring
Mutually Exclusive: MKTG 2620, MKTG 7210
Prerequisite: MKTG 1010 OR MKTG 1018
0.5 Course Units
MKTG 2240 Advertising Management
Immersion in the advertising development process and examination of the practice of advertising. Focuses on decisions regarding advertising objectives, copy selection, budget setting and media selection.
Fall or Spring
Mutually Exclusive: MKTG 2650, MKTG 7240
Prerequisite: MKTG 1010 OR MKTG 1018
0.5 Course Units

MKTG 2250 Principles of Retailing
This course is a cross-functional overview of retailing — from types of retailers to current trends and strategies. The objective is to familiarize students with the retail business model in its various forms — from pure store-based retailers, to digital natives, and everything in-between. Topics will include structures & organizational models, channels & formats, real estate & locations, marketing & customer relationship management, the full merchandising cycle (planning & buying to display & pricing), and operations & technology. This knowledge will be fundamental to careers working for retailers themselves (e-commerce or omnichannel), but also in consulting to retailers, in banking or investing in the retail sector, or even starting a brand or retail concept. Those seeking more depth in product design & development, buying, planning, pricing, and visual merchandising should consider taking Retail Merchandising (MKTG 3060). Those seeking more depth in sourcing, distribution, fulfillment, and store/site operations should consider taking Retail Supply Chain Management (OIDD 3970)
Fall
Mutually Exclusive: MKTG 7250
Prerequisite: MKTG 1010 OR MKTG 1018
0.5 Course Units

MKTG 2270 Digital Marketing and Electronic Commerce
The effect of the Internet and related technologies on business and social institutions is more profound than that of any prior invention, including the printing press and the internal combustion engine. Furthermore, marketing is critical to the success of firms that will shape the consumption-led economies that are fueled by these technologies. MKTG 2270 provides a research-based and framework-driven approach to succeeding in this environment, through a rigorous approach to understanding digital marketing and electronic commerce. The course is organized into two sections and utilizes relevant theory, empirical analysis, and practical examples, to develop the key learning points. Guest speakers will participate as well, as appropriate.
Spring
Mutually Exclusive: MKTG 2700, MKTG 7270, MKTG 7700
Prerequisites: Using a spreadsheet, and basic statistics (linear regression)
0.5 Course Units

MKTG 2340 Idea Generation & the Systematic Approach for Creativity
The ability to solve problems creatively and generate change is a recognized standard of success and plays an important role in gaining a competitive advantage in many areas of business management. This course is designed to teach students several creative problem solving methodologies that complement other managerial tools acquired in undergraduate and graduate studies. The course offers students the opportunity to learn how to solve problems, identify opportunities, and generate those elusive ideas that potentially generate enormous benefits to organizations. The objectives of this course are to enhance the students’ (a) creativity, (b) ability to innovate and (c) ability to identify, recruit, develop, manage, retain, and collaborate with creative people. The course includes: 1. A review of the literature on creativity, creative people, innovation, and design as well as the leadership and management of creative people and innovation. 2. Hands on learning of approaches for generating creative ideas. Students will have the opportunity of implementing the techniques studied in class. 3. Applications of creativity to selected management domains - Approaches to the generation of creative options are not limited to the development of products and services or businesses, but can be applied to all areas of management, business, and life. The purpose of these sessions is to explore the applications of creative approaches to marketing, advertising, organizational design, negotiations, and other management challenges. 4. Integration - Both via individual assignments and a group project in which interdisciplinary teams of students generate a creative product/service/customer.

MKTG 2370 Introduction to Brain Science for Business
This course provides an overview of contemporary brain science and its applications to business. Students are first rapidly introduced to the basic anatomy and physiology of the brain and become familiar with important techniques for measuring and manipulating brain function. The course then surveys major findings in neuroscience with applications to business, including vision, attention and advertising; valuation and marketing; decision making; learning, innovation and creativity; social influence, team-building, and leadership; and discussion of the ethical, legal, and societal implications of applying neuroscience to business. Applications to business, education, sports, law, and policy are discussed throughout.
Fall
Mutually Exclusive: MKTG 7370
0.5 Course Units
MKTG 2380 Consumer Neuroscience
How can studying the brain improve our understanding of consumer behavior? While neuroscience made tremendous strides throughout the past few decades, rarely were meaningful applications developed outside of medicine. Recently, however, breakthroughs in measurement and computation have accelerated brain science, and created an array of opportunities in business and technology. Currently, applications to marketing research and product development are experiencing explosive growth that has been met with both excitement and skepticism. This mini course provides an overview of the neuroscience behind and the potential for these developments. Topics will range from well-known and widely used applications, from eye-tracking measures in the lab and the field, to emerging methods and measures such as mobile technologies, face-reading, and neural predictors of market response. This course is self-contained and has no prerequisites. However, students with some background in business, economics, psychology, and/or neuroscience are likely to find some of the material covered in this course complementary to their existing knowledge. Much of the foundational work in consumer neuroscience and neuroeconomics involves laboratory experiments. Accordingly, we will read and discuss several experimental papers and the craft of designing an experiment will occasionally be discussed. However, we will not dedicate significant time to the methodology of experimental design and analysis. As will become clear as the course progresses, “consumer neuroscience” can be used to study almost any aspect of consumer behavior.

MKTG 2390 Visual Marketing
As consumers, we are constantly exposed to advertisements and experience visual messages from product packages in stores, retail displays, and products already owned. In essence, visual marketing collateral is omnipresent and is an essential part of corporate visual identity, strategy, branding, and communication. Some of this falls to creative graphic design, but advertising, design, and marketing can also be significantly enhanced by knowledge of how visual information and its presentation context can be optimized to deliver desirable and advantageous messages and experiences. This course will emphasize how to measure, interpret, and optimize visual marketing. This course will use lectures, discussions, exercises and a group project, to help students understand the underlying processes that influence our visual perception and visual cognition. Students will learn about the theoretical processes and models that influence, attention and visual fluency. Students will also be exposed to eye-tracking instruments that help measure eye movement. Finally, we will explore how visual stimuli can influence consumer memory, persuasion, and choice. We will examine practical applications in marketing, advertising, packaging, retail, and design contexts.

1 Course Unit

MKTG 2410 Entrepreneurial Marketing
This course focuses on the real life marketing challenges involved in launching an entrepreneurial venture. The primary goal of the course will be to provide a roadmap for students seeking to actively engage as entrepreneurs, investors or managers in the startup culture. Many of the entrepreneurial marketing principles studied in this course will be equally applicable to mid-size and larger companies seeking new approaches to drive top-line growth. The course will address how start-ups, early growth stage and more mature companies have used entrepreneurial marketing as an essential competitive weapon to grow their businesses by gaining customers, driving revenue, acquiring funding and recruiting A-level employees, advisors and directors. Students will form teams and select an idea/concept for an entrepreneurial venture, and by the conclusion of the course will have developed a fully fleshed out and testable marketing plan. Preferably, the selected venture will be one that one or more members of the team would consider implementing, should their plan prove feasible.

MKTG 2470 Marketing Strategy for Technology Platforms
This course focuses on the unique aspects of creating effective marketing and management strategies for technology-intensive on-line and off-line businesses. It addresses the effective competitive marketing strategies for winning in markets which are powered by technology: specifically, how firms create value for customers and how they can integrate technology in delivering a better consumer experience. While competitive marketing strategy is important for all managers, this course will be particularly useful to students who are planning to accept a position in leading technology companies, and marketing firms in which technology is likely to play an important role. In addition, the course will provide value to those who expect to work in consulting or investing in technology industries, and must analyze firm strategies. Course open to sophomores, juniors and seniors.

0.5 Course Units
MKTG 2520 Marketing Analytics
Companies are currently spending millions of dollars on data-gathering initiatives, but few are successfully capitalizing on all this data to generate revenue and increase profit. Converting data into increased business performance requires the ability to extract insights from data through analytics. This course covers the three pillars of analytics – descriptive, predictive, and prescriptive – within the marketing context. Descriptive Analytics examines different types of data and how they can be visualized, ultimately helping you communicate your findings and strengthen your team’s or organization’s decision making. Predictive Analytics explores the use of data for forecasting. You will learn to utilize various tools, including regression analysis, to estimate relationships among variables and predict future behavior. Prescriptive Analytics takes you through the final step — formulating concrete recommendations. These recommendations can be directed toward a variety of marketing actions, including pricing and social-platform outreach. Students will be exposed to several methods such as linear regression, logistic regression, multinomial regression, machine learning methods (e.g., neural networks and random forests). We will learn how to employ these methods for such managerial decisions as demand forecasting, pricing, and valuing customers. Overall, you will develop a data analytics mindset, learn new tools, and understand how to convert numbers into actionable insights.

0.5 Course Units

MKTG 2500 Innovation, Marketing Strategy, and Antitrust
This course considers business strategy and law, particularly the role of antitrust and intellectual property law in managing innovation. We will examine several highly innovative firms in technology rich areas, considering how they adapt their strategies to the competitive and legal environment, and asking whether antitrust law promotes or hinders innovation. The strategies of both current firms such as Uber, Google, Apple, and Microsoft and historical examples such as American Can Company, Standard Oil, Brown & Williamson Tobacco Co., and Kodak will provide context and source materials for the course. We will pay special attention to the role of intellectual property rights in fostering or hindering innovation. The legal focus is primarily on U.S. law, but the course will occasionally address foreign regimes as well. The course is useful to students interested in marketing or competitive business strategy, and, more broadly, to anyone desiring to understand the legal and public policy issues relating to competition and innovation.

MKTG 2660 Marketing for Social Impact
Private and public sector firms increasingly use marketing strategies to engage their customers and stakeholders around social impact. To do so, managers need to understand how best to engage and influence customers to behave in ways that have positive social effects. This course focuses on the strategies for changing the behavior of a target segment of consumers on key issues in the public interest (e.g., health behaviors, energy efficiency, poverty reduction, fundraising for social causes). How managers partner with organizations (e.g., non-profits, government) to achieve social impact will also be explored.

Fall
Prerequisite: MKTG 1010
1 Course Unit

MKTG 2700 Digital Marketing, Social Media and E-Commerce
MKTG 2700 explores the digital marketing environment from both a consumer and business perspective. The course provides an overview of various online business models and delves into digital advertising and social media marketing techniques and technologies. A mixture of case studies, guest speakers and assignments, including one that uses real advertising data, translates theory into practice. It is recommended that students enrolling in the course be comfortable using Excel and are knowledgeable in applying regression analysis techniques. Students who would prefer a less technical course may wish to take MKTG 2270, Digital Marketing and Electronic Commerce, a half cu course offered by the department.

Prerequisite: MKTG 1010 OR MKTG 1018
1 Course Unit
**MKTG 2710 Models for Marketing Strategy**
The course develops students’ skills in using analytics to make better marketing decisions. Compared to other courses in marketing analytics, the focus is less on ‘what is happening?’ or ‘what will happen?’ and more on ‘what should we do?’ i.e., the course moves beyond descriptive and predictive analytics into prescriptive analytics. It covers a variety of topics, models and tools: (1) Marketing mix modeling & optimization, (2) Choice modeling, choice-based conjoint analysis & market simulators, (3) Modeling churn & maximizing customer lifetime value, and (4) Quantifying causal effects in marketing. The course requires familiarity with Excel and linear regression from the very first day, but is otherwise self-contained. Lectures are organized around a mini-case or illustrate the model/technique at hand through one or more real-life applications.

**MKTG 2780 Strategic Brand Management**
Which brands make you happy? Apple? Amazon? Starbucks? Everlane? Soulcycle? Sweetgreen? What draws you into these brands? How do companies create compelling brand experiences? How could you cultivate a well-loved brand? This course explores such questions with the goal of identifying the ingredients for building an inspired brand. The course is created for students interested in building a brand and/or immersing themselves in the enhancement of an existing brand, and it is comprised of lectures, cases, guest speakers, discussions, in and out of class exercises, and a final project. Broadly, the course will be divided into four parts: 1) Understanding Brand, 2) Crafting Brand, 3) Measuring Brand, and 4) Managing Brand. The course will provide students with an appreciation of the role of branding and (taking a consumer-centric approach) will augment students’ ability to think creatively and critically about the strategies and tactics involved in building, leveraging, defending, and sustaining inspired brands.

**MKTG 3060 Retail Merchandising (Center Special Topic)**
As a follow-on to Principles of Retailing (MKTG 2250), this course delves more deeply into both the fundamentals and recent trends in the end-to-end retail merchandising process. The objective is to familiarize students with both the theory and practice of planning, buying, designing, pricing, and displaying merchandise to consumers. This knowledge will be fundamental to careers working for retailers themselves (e-commerce or omnichannel), but also in consulting to retailers, in banking or investing in the retail sector, or even starting a brand or retail concept. Those seeking more depth in sourcing, distribution, fulfillment, and store/site operations should consider taking Retail Supply Chain Management (OIDD 3970).

MKTG 3090 Special Topics: Experiments for Business Decision Making

EXPERIMENTS FOR BUSINESS DECISION MAKING: In the past decade, massive shifts in how companies interact with their customers have suddenly made field experiments an economically feasible way to learn about a variety of business questions such as what types of promotions are most effective, what products should be stocked at a store, how e-mail promotions should be designed, how sales staff should be compensated, etc. Many marketers engaged in online retailing, direct-marketing, online advertising, media management, etc. are rapidly embracing a "test and learn" philosophy and a number of platforms such as Google Website Optimizer, have been developed to facilitate rigorous field experiments in the online environment. Just as with the quality revolution in manufacturing during the 1980s and 1990s, the rapid rise of the "test and learn" philosophy in marketing has created a huge demand for those who can design, field, and analyze marketing experiments. Through this course, you will learn and practice a wide range of critical skills, from the statistical methods used to design and analyze experiments to the management and strategy required to execute an experiment and act on the results. Although the cases and examples will focus on marketing problems, the material covered can be applied in a number of other domains particularly operations management and product design.

MKTG 3530 Special Topics: The Business of Wellness: Marketing and Consumption

Wellness relates to the active pursuit of activities, choices, and lifestyles that lead to a state of holistic health. The global wellness industry represents a rapidly expanding, multi-trillion-dollar market. The purpose of this course is to provide a better understanding of the marketing of wellness brands, services, and products and the consumer behavior of wellness. Throughout the course, we will explore: 1) The evolution of the wellness industry and its various sub-industries (e.g., fitness, beauty, mindfulness, mental health, food/drink, tourism, etc.); 2) How organizations “sell wellness” through marketing strategies and tactics; and 3) “Consuming wellness,” or the consumer psychology and behaviors that contribute to or detract from one’s personal wellness. We will also consider significant ethical and moral issues in the wellness industry, and how consumers can be more discerning of wellness offerings. These topics will be explored through the specific lenses of marketing, consumer culture, and consumer psychology. By the end of the semester, students should have a better understanding of the wellness industry, including its various stakeholders, evolution, the business opportunities and challenges, and consumer behaviors.

Spring
Prerequisite: MKTG 1010
1 Course Unit
MKTG 3550 Special Topics - AI in Our Lives: The Behavioral Science of Autonomous Technology

"AI in Our Lives: The Behavioral Science of Autonomous Technology" (or "AI in Our Lives" for short) takes a behavioral perspective on the topic of autonomous technology, such as Artificial Intelligence. It reviews new behavioral insights to help companies thrive in the dawning age of smart machines. We focus on both the behavior of consumers and how managers should make decisions about consumers. Related to the former, the emerging behavioral science of autonomous technology helps us understand barriers to consumer adoption and how to design captivating AI experiences. Related to the latter, we discuss how to improve decision-making with data and algorithms. This is a non-technical course. No coding or data science skills are required. The course uses interdisciplinary materials and a blend of pedagogical approaches, including interactive lectures, workshops, guest lectures, and case discussions. In addition to its many substantive insights, the course offers moments of reflection to help you understand how technology is changing our lives, and how each of us can help effect positive change in the world. The course bridges two perspectives. On one side, we acknowledge the tremendous value that autonomous technology can provide to firms and individual consumers. In many ways, automation defines progress. On the other side, we examine emerging risks for consumers in an AI-driven economy. The main theoretical lens will be offered by psychology, but we will also examine ideas from economics, management, history, statistics, computer science, art, sociology, and philosophy. The application contexts will be focused on marketing. While also relevant to other disciplines (e.g., operations, IT, innovation, or general management), this course is therefore especially suitable for students interested in a career in marketing (e.g., product management, brand management, service design, and customer experience management). The ultimate goal of the course is to help ensure that the amazing technologies currently being developed bring about positive change. The course will strive to achieve that by tackling the following UN Sustainable Development Goals: SDG9 (Innovation), SDG8 (Economic growth), SDG3 (Health and wellbeing), SDG10 (Reduced inequality), and SDG12 (Responsible consumption and production). The course complements the research activities of the new Wharton Human-Centered Technology Initiative.

MKTG 4760 Applied Probability Models in Marketing

This course will expose students to the theoretical and empirical "building blocks" that will allow them to construct, estimate, and interpret powerful models of consumer behavior. Over the years, researchers and practitioners have used these models for a wide variety of applications, such as new product sales, forecasting, analyses of media usage, and targeted marketing programs. Other disciplines have seen equally broad utilization of these techniques. The course will be entirely lecture-based with a strong emphasis on real-time problem solving. Most sessions will feature sophisticated numerical investigations using Microsoft Excel. Much of the material is highly technical.

Spring
Also Offered As: STAT 4760
1 Course Unit

MKTG 6110 Marketing Management

This course addresses how to design and implement the best combination of marketing efforts to carry out a firm’s strategy in its target markets. Specifically, this course seeks to develop the student’s (1) understanding of how the firm can benefit by creating and delivering value to its customers, and stakeholders, and (2) skills in applying the analytical concepts and tools of marketing to such decisions as segmentation and targeting, branding, pricing, distribution, and promotion. The course uses lectures and case discussions, case write-ups, student presentations, and a comprehensive final examination to achieve these objectives.

Fall
0.5 Course Units

MKTG 6120 Dynamic Marketing Strategy

Building upon Marketing 611, the goal of this course is to develop skills in formulating and implementing marketing strategies for brands and businesses. The course will focus on issues such as the selection of which businesses and segments to compete in, how to allocate resources across businesses, segments, and elements of the marketing mix, as well as other significant strategic issues facing today’s managers in a dynamic competitive environment. A central theme of the course is that the answer to these strategic problems varies over time depending on the stage of the product life cycle at which marketing decisions are being made. As such, the PLC serves as the central organizing vehicle of the course. We will explore such issues as how to design optimal strategies for the launch of new products and services that arise during the introductory phase, how to maximize the acceleration of revenue during the growth phase, how to sustain and extend profitability during the mature phase, and how to manage a business during the inevitable decline phase.

Fall or Spring
Prerequisite: MKTG 6110
0.5 Course Units
MKTG 6130 Strategic Marketing Simulation
Building upon Marketing 611, Marketing 613 is an intensive immersion course designed to develop skills in formulating and implementing marketing strategies for brands and businesses. The central activity will be participation in a realistic integrative product management simulation named SABRE. In SABRE, students will form management teams that oversee all critical aspects of modern product management: the design and marketing of new products, advertising budgeting and design, sales force sizing and allocation, and production planning. As in the real world, teams will compete for profitability, and the success that each team has in achieving this goal will be a major driver of the class assessment. The SABRE simulation is used to convey the two foci of learning in the course: the changing nature of strategic problems and their optimal solutions as industries progress through the product life cycle, and exposure to the latest analytic tools for solving these problems. Specifically, SABRE management teams will receive training in both how to make optimal use of marketing research information to reduce uncertainty in product design and positioning, as well as decision support models to guide resource allocation.

Fall or Spring
Prerequisite: MKTG 6110
0.5 Course Units

MKTG 7110 Consumer Behavior
Marketing begins and ends with the customer, from determining customers' needs and wants to providing customer satisfaction and maintaining customer relationships. This course examines the basic concepts and principles in customer behavior with the goal of understanding how these can be used in marketing decision making. The class will consist of a mix of lectures, discussions, cases, assignments, project work and exams. Topics covered include customer psychological processes (e.g., motivation, perception, attitudes, decision-making) and their impact on marketing (e.g., segmentation, branding, and customer satisfaction). The goal is to provide you with a set of approaches and concepts to consider when faced with a decision involving understanding customer responses to marketing actions.

MKTG 7340 Idea Generation and the Systematic Approach for Creativity
The ability to solve problems creatively and generate change is a recognized standard of success and plays an important role in gaining a competitive advantage in many areas of business management. This course is designed to teach students several creative problem solving methodologies that complement other managerial tools acquired in undergraduate and graduate studies. The course offers students the opportunity to learn how to solve problems, identify opportunities, and generate those elusive ideas that potentially generate enormous benefits to organizations. The objectives of this course are to enhance the students’ (a) creativity, (b) ability to innovate and (c) ability to identify, recruit, develop, manage, retain, and collaborate with creative people. The course includes: 1. A review of the literature on creativity, creative people, innovation, and design as well as the leadership and management of creative people and innovation. 2. Hands on learning of approaches for generating creative ideas. Students will have the opportunity of implementing the techniques studied in class. 3. Applications of creativity to selected management domains - Approaches to the generation of creative options are not limited to the development of products and services or businesses, but can be applied to all areas of management, business, and life. The purpose of these sessions is to explore the applications of creative approaches to marketing, advertising, organizational design, negotiations, and other management challenges. 4. Integration - Both via individual assignments and a group project in which interdisciplinary teams of students generate a creative product/service/customer.
