This course provides an overview of what we know about the criminal justice system in the United States and other developed nations. The central purpose of the course is to increase your knowledge about how the U.S. criminal justice system works but we will also spend a great deal of time thinking about the quality of the available evidence and how we know what we know. Topics covered will vary from year to year; recent topics have included police use of force, capital punishment, pre-trial detention, the use of predictive algorithms in the criminal justice system and the relationship between immigration and crime in the United States.
Spring
Prerequisite: CRIM 6000
1 Course Unit

CRIM 6002 Criminal Justice Data Analytics
This course covers the tools and techniques to acquire, organize, link and visualize complex data in order to answer questions about crime and the criminal justice system. The course is taught as a basic course in statistics and presumes minimal mathematical or statistical background. We'll begin with a brief introduction to the research process. We'll then cover the computation, interpretation and understanding of basic descriptive statistics, distributions, hypothesis testing, measures of association and finally regression analysis. Depending on how much time we have, I will cover several more advanced topics in regression analysis at the end of the semester.
Fall
1 Course Unit

CRIM 6003 Research Methods/Crime Analysis
This course provides an overview of the application of social science research methods and data analysis to criminology. Students will learn research design principles and statistical techniques for the analysis of social science data, including how to interpret results as part of the rigorous practice of evidence-based criminology. M.S. students will conduct a semester-long, data-intensive crime analysis project using quantitative methods to address a specific research question. Student projects culminate with a poster presentation, an oral defense, and the submission of a written research paper.
Spring
1 Course Unit

CRIM 6004A Criminology in Practice
In this capstone course, students will meet weekly with guests who work on or close to the front line of the criminal justice system. Past guests have included police chiefs, forensic scientists, lobbyists for gun rights and lobbyist for gun control, formerly incarcerated individuals, crime analysts, directors of sentencing commissions, prosecutors and defenders, politicians, and researchers at research organizations working closely with criminal justice agencies. Guests share their career paths, the roles of their organizations in the justice system, and key justice system challenges. Students interact with all guest speakers.
Fall
0.5 Course Units
CRIM 6004B Criminology in Practice
In this capstone course, students will meet weekly with guests who work on or close to the front line of the criminal justice system. Past guests have included police chiefs, forensic scientists, lobbyists for gun rights and lobbyist for gun control, formerly incarcerated individuals, crime analysts, directors of sentencing commissions, prosecutors and defenders, politicians, and researchers at research organizations working closely with criminal justice agencies. Guests share their career paths, the roles of their organizations in the justice system, and key justice system challenges. Students interact with all guest speakers.

Spring
0.5 Course Units

CRIM 6005 Evidence-Based Crime Prevention
This course considers the use of evidence to identify effective crime prevention policies. The course will teach students to think critically about what constitutes convincing evidence, use benefit-cost analysis in comparing policy alternatives, and write effective policy memos that can translate research into practice. We will develop these skills by studying the effects of different policy approaches to crime prevention including incarceration, policing, gun control, drug regulation, and place-based interventions, as well as education, social programs, and labor market policies. Emphasis will be on the methodological challenges to identifying "what works" and the empirical methods to overcome those challenges.

Fall
1 Course Unit

CRIM 6710 Violence: A Clinical Neuroscience Approach
Developed for both Psychology and Criminology graduates in particular, this interdisciplinary course outlines a clinical neuroscience approach to understanding violence in which the tools of neuroscience- neuroanatomy, neurophysiology, neurocognition, neuroendocrinology, neuropharmacology, molecular and behavioral genetics- are used to help inform the etiology and treatment of violence. Clinical components include psychopathy, proactive and reactive aggression, homicide, domestic violence, conduct disorder, oppositional defiant disorder, antisocial personality disorder, crime, and delinquency as well as their comorbid conditions (schizophrenia, drug abuse, hyperactivity). The interaction between social, psychological, and neurobiological processes in predisposing to violence will be highlighted, together with neurodevelopmental perspectives on violence focusing on prospective longitudinal and brain imaging research. Key implications for the criminal justice system, neuroethics, forensics psychology, and intervention will also be outlined.

Fall
1 Course Unit

CRIM 7000 Advanced Pro-Seminar in Criminology
This second year doctoral course is a weekly discussion group designed to help students integrate their coursework from different disciplines around the unifying perspectives of criminology. It focuses on preparation for the doctoral comprehensive examination, detailed critiques of published research reports, and colloquia by leading guest lecturers presenting new research results. Students preparing for dissertation research on the causes and prevention of crime will report on their developing research ideas.

Fall
1 Course Unit

CRIM 7100 Advanced Pro-Seminar in Criminal Justice
This second year doctoral course is a weekly discussion group designed to help students integrate their coursework from different disciplines around the behavior and operation of criminal law systems. It focuses on preparation for the doctoral comprehensive examination, detailed critiques of published and unpublished research reports, and colloquia by leading guest lecturers presenting new research results. Students preparing for dissertation research on the behavior of criminal law will report on their developing research ideas.

Spring
1 Course Unit

CRIM 9999 Independent Study and Research
Primarily for graduate students who work with individual faculty upon permission. Intended to go beyond existing graduate courses in the study of specific problems or theories or to provide work opportunities in areas not covered by existing courses.

Fall or Spring
1-2 Course Units

Czech (CZCH)

CZCH 0010 Czech Through Film
This course has two separate but related components: a series of Czech films, shown with subtitles and open to the entire University of Pennsylvania community, and a Czech language class which relies on the films for content. Each film screening will be preceded by introductory remarks and followed by a discussion, with optional reading material made available in advance. In this way, the film series can but need not also be offered as a for-credit course, cross-listed through REES and Cinema and Media Studies. The films will be sequenced chronologically through Czech history, as opposed to film history, so that the series will double as a survey of Czech history. For example, we will begin with films set in the medieval period, such as Marketa Lazarova (dir. Frantisek Vlacil, 1967) and Cisaruv pekar-Pekaruv cisar (Emperor’s Baker-Baker’s Emperor, dir. Martin Fric, 1955). Eventually we will progress to recent films that deal with the current moment. Classic and contemporary films will be intermingled to simultaneously present a variety of important historical eras and cinematic techniques. Concurrently, students enrolled in the language course will learn basic Czech using custom-made materials drawn from the films. As their vocabulary and grasp of grammatical concepts increases, we will be able to work with longer and more complex sections of the film-texts. The films will provide the material for listening and reading exercises, and the students’ oral and written work will be anchored by their responses to the films. We will advance from picking out simple statements to analyzing dialogue and identifying irony in film and composition, developing skills of intercultural communication and competence. By the end of the course, students will be able to read about Czech cinema using authentic materials, and discuss the films’ aesthetic, historical and political importance.

1 Course Unit
CZCH 0100 Czech I
This course is the first in the series of first-year courses, intended for students with no previous background in Czech. The course develops competence in speaking, reading, writing, and understanding contemporary Czech. It will also introduce you to Czech culture through exciting authentic materials, including songs, videos, short stories, and cultural artifacts. Class work emphasizes development of communicative competence in real-life situations, spontaneous interactions, pair and group work and is conducted almost entirely in Czech. By the end of the course, you will be able to engage in simple conversations in Czech on topics concerning your daily life. You will also be able to write short personalized messages in Czech.

Two Term Class, Student may enter either term; credit given for either 1 Course Unit

CZCH 0120 Czech through Short Stories
A conversational Czech language course integrated with an introduction to Czech short fiction. The selection of texts can be tailored to suit students’ interests. All texts will be available in English translation; students with advance knowledge may choose to read in the original. Through examples of short fiction, students will be introduced to important Czech authors such as Alois Jirásek, Jan Neruda, Bozena Nemcova, Karel Capek, Jaroslav Hasek, Eva Kanturkova, Daniela Fischerova, and Daniela Hodrova.

Spring
1 Course Unit

CZCH 0200 Czech II
This course is the second in the series of first-year courses, continuation of Czech I. The course continues to develop competence in speaking, reading, writing, and understanding contemporary Czech. We will continue the exploration of Czech culture through exciting authentic materials, including songs, videos, short stories, and cultural artifacts. Class work emphasizes development of communicative competence in real-life situations, spontaneous interactions, pair and group work and is conducted almost entirely in Czech. By the end of the course, you will be able to engage in simple conversations on many topics in informal and some formal contexts concerning your daily life. You will also be able to write longer personalized messages in Czech.

Two Term Class, Student may enter either term; credit given for either 1 Course Unit

CZCH 0300 Czech III
This course is the first in a series of second-year courses, continuation of Czech II. The course will strengthen students’ competence in speaking, reading, writing, and understanding contemporary Czech and will expand students’ active and passive vocabulary on a variety of topics. We will continue the exploration of Czech culture through exciting authentic materials, including songs, videos, short stories, and cultural artifacts. Class work emphasizes development of communicative competence in real-life situations, spontaneous interactions, pair and group work and is conducted almost entirely in Czech. By the end of the course, you will be able to engage in increasingly complex conversations in Czech on many topics in informal and formal contexts concerning your daily life, significant personal and cultural events and situations, important cultural figures. You will be able to write longer messages in a variety of informal and formal contexts.

Two Term Class, Student may enter either term; credit given for either 1 Course Unit

CZCH 0400 Czech IV
This course is the second in a series of second-year courses, continuation of Czech III. The course will continue strengthening and expanding students’ competence in speaking, reading, writing, and understanding contemporary Czech and increasing active and passive vocabulary on a variety of topics. We will continue the exploration of Czech culture through exciting authentic materials, including songs, videos, short stories, and cultural artifacts. Class work emphasizes development of communicative competence in real-life situations, spontaneous interactions, pair and group work and is conducted almost entirely in Czech. By the end of the course, you will be able to engage in increasingly complex conversations in Czech on many topics in informal and formal contexts concerning your daily life, significant personal and cultural events, attitudes and perspectives. You will be able to write longer messages in a variety of informal and formal contexts. Satisfies Penn Language Requirement.

Two Term Class, Student may enter either term; credit given for either 1 Course Unit

Data Analytics (DATA)
The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

DATA 1010 Introduction to Data Analytics
In our digital world, data-driven decision-making is becoming more common and more expected. Effective leadership and communication, therefore, often hinges on the ability to acquire, manage, analyze, and display large, quantitative data sets. Even many entry-level jobs assume or require basic knowledge of data analytics. This course introduces students to important concepts in data analytics across a wide range of applications using the programming language R. Students complete the course with a clear understanding of how to utilize quantitative data in real-time problem identification, decision-making, and problem-solving. No prerequisites in statistics or math are required. This course will have required synchronous sessions and the instructor will offer a choice of times.

Also Offered As: LEAD 3050
1 Course Unit

DATA 2100 Intermediate Data Analytics
In Data Analytics 2100: Intermediate Data Analytics students learn the fundamentals of two skills required by many data science jobs: survey and experimental research. The course trains students in all aspects of the survey research process, including designing good survey questionnaires, drawing samples, weighting data, and analyzing survey responses. Students come away from the class with an understanding in how to design, analyze a randomized experiment and build upon the R skills gained in previous courses. Certificate students and individual course takers must complete a prerequisite data analytics course before enrolling in this course. Although courses in the Certificate in Data Analytics must be taken sequentially to build your expertise in data analytics, you have the option to take courses in order without committing to the entire certificate. Students who complete all four courses earn the Certificate in Data Analytics. Please submit a permission request in Path@Penn to register for this class.

Prerequisite: DATA 1010
1 Course Unit
DATA 3100 Introduction to Statistical Methods
Introduction to Statistical Methods exposes students to the process by which quantitative social science and data science research is conducted. The class revolves around three separate, but related tracks. Track one teaches some basic tools necessary to conduct quantitative social science research. Topics covered include descriptive statistics, sampling, probability, and statistical theory. Track two teaches students how to implement these basic tools using R. The third track teaches students the fundamentals of research design. Topics will include independent and dependent variables, generating testable hypotheses, and issues in causality. Please submit a permission request in Path@Penn to register for this class. Prerequisite: DATA 1010 AND DATA 2100
1 Course Unit

DATA 4010 Advanced Data Analytics
Data Analytics 4010: Advanced Topics in Data Analytics emphasizes the skills necessary to do predictive modeling of data. This is one of the most commonly sought-after skills in data science jobs, since it can help companies structure future investments, non-profits organize funding drives, or political candidates decide where to focus their get-out-the-vote efforts. The class begins with a comprehensive discussion on basic regression analysis and then moves on to more advanced topics in R like web scraping, mapping, textual analysis, and working with string variables. The course also features content about more advanced data visualization skills, including creating interactive data visualizations in RShiny. Please submit a permission request in Path@Penn to register for this class. Prerequisite: DATA 1010 AND DATA 2100 AND DATA 3100
1 Course Unit

Data Science (DATS)

DATS 5750 Cloud Technologies Practicum
Cloud computing is the heart of modern digital applications. This course provides practical, hands-on knowledge and understanding of distributed computing principles to design and develop applications that utilize public clouds such as Google Cloud, Amazon Web Services, Azure, etc. The course will cover cloud infrastructure services for computing, storage, networking, data analytics, machine learning, and modern application development. Students will learn to architect and implement complex applications utilizing different cloud infrastructure components to engineer robust, scalable solutions across practical industry use cases. Prerequisites: CIS 5450 and CIS 5500
0.5 Course Units

DATS 5970 Master's Thesis Research
For students working on advanced research leading to the completion of a master's thesis. Fall or Spring
1-2 Course Units

DATS 5990 Master's Independent Study
For Data Science Master's students. Involves coursework and class presentations. A DATS 5990 project will invariably include formallygradable work comparable to that in a CIS 5000 level course. Students should discuss with the faculty supervisor the scope of the Independent Study, expectations, work involved, etc. Fall or Spring
1-4 Course Units

Demography (DEMG)

DEMG 5240 Advanced Topics in Family Sociology
This course will focus on the intersection of family life and inequality. The course will cover theories and empirical research examining the ways in which the political economy of family life is implicated in sustaining and organizing inequalities by class, gender, sexuality, and race. Fall or Spring
Also Offered As: SOCI 5240
Mutually Exclusive: SOCI 2290
1 Course Unit

DEMG 5330 Sociology of Race and Ethnicity
Race and ethnicity are, above all, both converge as system of ideas by which men and women imagine the human body and their relationships within society. In this course we will question the concept of race and ethnicity and their place in modern society (1500-2020). While the course reviews the pre-1500 literature our focus will be on the last 500 years. This course reviews the research that has contributed to the ideas about ethnicity and race in human society. The review covers the discourse on race in political propaganda, religious doctrine, philosophy, history, biology and other human sciences. Also Offered As: AFRC 5330, SOCI 5330
1 Course Unit

DEMG 5350 Quantitative Methods I
This course is an introduction to the practice of statistics in social and behavioral sciences. It is open to beginning graduate students and—with the permission of the instructor—advanced undergraduates. Topics covered include the description of social science data, in graphical and non-graphical form; correlation and other forms of association, including cross-tabulation; bivariate regression; an introduction to probability theory; the logic of sampling; the logic of statistical inference and significance tests. There is a lecture twice weekly and a mandatory "lab." Fall
Also Offered As: SOCI 5350
1 Course Unit

DEMG 5351 Quantitative Methods II
As the second part of a two-semester sequence, this graduate course focuses on regression analysis as used in social science research. In particular, we discuss features and assumptions of linear regression and logistic regression models. We learn how to apply regression models to real social science data using Stata and how to interpret the results. Spring
Also Offered As: CRIM 5351, SOCI 5351
Prerequisite: SOCI 5350
1 Course Unit
DEMGG 5970 Demography of Education
The major topic of the course is the impacts of education, especially college education, on various kinds of family behavior such as dating, cohabitation, living arrangements, marriage, fertility, parenting, divorce, and remarriage. In many countries, some family behaviors, if not all, are increasingly differentiated between college-educated and non-college-educated parents. For instance, increase in divorce is more evident among the less educated than their more educated counterparts, while marriage decline is more substantial among the less educated. Although parents’ time and money investments in children’s education have generally increased over time for both college-educated and non-college-educated parents, the increase is much more substantial among college-educated parents than their non-college-educated counterparts, leading to divergence. In such societies, college education has increasingly differentiated population with respect to family behavior, which has important implications for inequality of children’s well-being. Of course, such diverging family behavior is not observed every society. In some countries, educational differentiation in family behavior is minimal.

In this course, students first will be able to have a global perspective on education and family behavior by reviewing empirical evidence of the relationship between education and various kinds of family behavior across a variety of countries. After learning how different measurements and methods are used to identify the relationship between education and family behavior, Students will be able to evaluate how empirical evidence is robust. Second, students will learn about different theories that explain why education has specific relationships with family behavior. Finally, students will have an opportunity to conduct their own research (in the format of either an empirical or a review paper) by choosing a specific context where they will first document the relationship between education and family behavior and apply theories to explain the relationship with explicit consideration of specific contextual factors. The proposed course will be open to undergraduate and graduate students with different assignments to each of undergraduate and graduate students.

Fall or Spring
Also Offered As: SOCI 5970
1 Course Unit

DEMGG 6040 Methodology of Social Research
This course will give students familiarity with the common research methods social scientists use to conduct research. Ethnographic, interview, survey, experimental and historical/comparative research methods will be covered. Four themes will be explored: 1) the basics of solid research design, 2) the various advantages and disadvantages of each method, 3) when the use of a method is appropriate or inappropriate for the research question, and 4) how to evaluate researchers’ claims on the basis of the evidence they present. These themes will be explored by reading examples of and conducting exercises designed to give students hands-on experience in each of the methods. Students will conduct the exercises on a topic of their choice, which together will culminate in their final paper.

Fall or Spring
Also Offered As: SOCI 6040
1 Course Unit

DEMGG 6070 Introduction to Demography
A nontechnical introduction to fertility, mortality and migration and the interrelations of population with other social and economic factors.

Fall
Also Offered As: SOCI 6070
1 Course Unit

DEMGG 6090 Basic Demographic Methods
The course is designed to introduce students to basic concepts of demographic measurement and modeling used to study changes in population size and composition. The course covers basic measures of mortality, fertility and migration; life table construction; multiple decrement life tables; stable populations; population projections; and age patterns of vital events. Students will learn to apply demographic methods through a series of weekly problem sets.

Fall or Spring
Also Offered As: SOCI 6090
1 Course Unit

DEMGG 6120 Categorical Data Analysis
This course deals with techniques for analyzing multivariate data which the dependent variable is a set of categories (a dichotomy or polytomy). Topics will include linear probability models, logit (logistic) regression models, probit models, logit analysis of contingency tables, cumulative logit and probit (for ordinal data), multinomial logit, conditional logit (discrete choice), unobserved heterogeneity, log-linear models, square tables, response-based sampling, and repeated measures. Methods will be illustrated using the Stata System. There will be several assignments using Stata to analyze data provided by the instructor.

Not Offered Every Year
Also Offered As: SOCI 6120
1 Course Unit

DEMGG 6210 Health, Mortality and Aging
The course focuses on the description and explanation of health and mortality in human populations and their variability across several dimensions such as age, time, place, social class, race, etc. The course includes general theories of health, mortality and morbidity, investigations of mortality and related processes in developing and developed countries, and discussions of future mortality trends and their implications for individual lives and the society at large.

Not Offered Every Year
Also Offered As: SOCI 6210
1 Course Unit

DEMGG 6220 Fertility
The biological, social and demographic factors explaining the levels, trends and differentials in human fertility. Data, measures, and methods used in the context of the more and the less developed countries, with an emphasis on the historical and current course of the fertility transition.

Not Offered Every Year
Also Offered As: SOCI 6220
1 Course Unit

DEMGG 6320 Demography of Race
This course will examine demographic and statistical methods used to capture the impact of racial stratification in society. This course covers the skills and insights used by demographers and social statisticians in the study of racial data. A key challenge facing researchers is the interpretation of the vast amount of racial data generated by society. As these data do not directly answer important social questions, data analysis and statistics must be used to interpret them. The course will examine the logic used to communicate statistical results from racial data in various societies. We will question the scientific claims of social science methodology by extending the critical perspective to biases that may underlie research methods. We will discuss good and bad practices within the context of the historical developments of the methods.

Also Offered As: SOCI 6320
1 Course Unit
DEM 6430 Social Stratification
This is an advanced level graduate seminar where we will review contemporary research on social stratification and mobility. We will examine empirical and theoretical studies not only in the US but also in other countries to address how the pattern of social stratification varies across societies and over time. The main topics to be discussed are social mobility, occupational attainment, educational inequality, gender and race, and family processes and stratification. We will also examine studies that address how national contexts mediate social stratification. Advanced undergraduate students will be admitted with permission.
Not Offered Every Year
Also Offered As: SOCI 6430
1 Course Unit

DEM 6620 Panel Data Analysis
This course focuses on the ability to use, analyze, and understand panel data. Panel data contain repeated measurements of the dependent variable for the same individuals, and possibly repeated measurements of the predictor variables as well. Panel data offer important opportunities for controlling unobserved variables and for answering questions about causal ordering.
Also Offered As: SOCI 6620
1 Course Unit

DEM 7070 Second Year Research Seminar I
This course is intended to hone the skills and judgment in order to conduct independent research in sociology and demography. We will discuss the selection of intellectually strategic research questions and practical research designs. Students will get experience with proposal writing, the process of editing successive drafts of manuscripts, and the oral presentation of work in progress as well as finished research projects. The course is designed to be the context in which master’s papers and second year research papers are written. This is a required course for second year graduate students in Demography. Others interested in enrolling in only one of the courses may do so with the permission of the Chair of the Graduate Group in Demography.
Fall
Also Offered As: SOCI 7070
1 Course Unit

DEM 7071 Second Year Research Seminar II
This is the second part of a two-course sequence designed to introduce and familiarize second year students with current norms for academic research, presentation and publishing in the field of Demography. Students are expected to finalize the analyses and to complete their second year research paper. This is a required course for second year demography students. Others interested in enrolling in the course may do so with the permission of the Chair of the Graduate Group in Demography.
Spring
Also Offered As: SOCI 7071
1 Course Unit

DEM 7310 Advanced Demographic Methods
This course considers a variety of procedures for measuring and modeling demographic processes. We will consider both deterministic (drawn from classic demographic methods, stable population theory, and the like) and stochastic (drawn from statistics) perspectives and methods, including their integration. Pre-requisites: DEMG 609 and SOCI 536 (or its equivalent).
Not Offered Every Year
Also Offered As: SOCI 7310
Prerequisite: SOCI 6090 AND SOCI 5351
1 Course Unit

DEM 7960 Demographic, Economic, and Social Interrelations
The course investigates economic and social determinants of fertility, mortality, and migration, and it discusses the effects of population variables on economic and social conditions, including economic and social development. Topics discussed in the course include: How do economic changes affect marriage, divorce, and child bearing decisions? How do households make decisions about transfers and requests? How can economic and sociological approaches be combined in explanatory models of demography change? How does immigration to the US affect the ethnic composition of the population, the earnings of native workers, taxes on natives, and the macro-economy? What causes the aging of populations, and how will population aging affect the economies of industrial nations, and in particular, pension programs like Social Security? What accounts for the rise in women’s participation in the wage labor force over the past century? How are family composition and poverty interrelated? Does rapid population growth slow economic development with low income countries? In addition to these topics, the course also covers selected methods not included in DEMG/ SOCI 5350/5360 and 6090.
Not Offered Every Year
Also Offered As: SOCI 7960
1 Course Unit

DEM 9999 Independent Study
Primarily for advanced students who work with individual instructors upon permission. Intended to go beyond existing graduate courses in the study of specific problems or theories or to provide work opportunities in areas not covered by existing courses.
Fall or Spring
1 Course Unit

Dental - Dental Medicine (DENT)

DENT 5001 Foundation Sciences I
Foundation Sciences I is aimed at providing students with a thorough understanding of the basic principles of molecular biology and general biochemistry; the biochemical concepts underlying healthy metabolism, nutrition and selected disease states and comprehension at an advanced level of selected topics in cell biology
2.5-6.5 Credit Hours

DENT 5011 Foundation Sciences II
The course is structured to provide basic information about the evolutionary relationship, structure, physiology and molecular biology of the prokaryotic cells and viruses, and the basic mechanisms of immunology in relation to oral health. Emphasis will also be placed on how oral microorganisms participate in plaque/biofilm formation, caries and periodontal disease. Primary objectives related to the clinical setting include an understanding of the basis of the selective inhibition of antibiotics and the development of resistance, understanding the basis of serological tests and immunization and interpretation of radiographic evidence for caries and periodontal disease
0-6.5 Credit Hours
DENT 5022 Foundation Sciences III
Foundation Sciences III is the first course in the curriculum that focuses on the underlying cellular and molecular basis of disease and is a critical component of a larger subject commonly known as Pathology. In its simplest terms, Pathology is the study of the structural, biochemical and functional abnormalities that develop within cells, tissues and organs resulting in disease. The disease process forms the core of pathology and includes: etiology, pathogenesis, lesions, and clinical manifestations. Traditionally, Pathology is divided into general and systemic pathology. FSIII is the first of two courses (the other being FSIV) that collectively comprise the topic of general pathology. Specifically, FSIII will focus on: (1) the reactions of cells and tissues to abnormal stimuli leading to either adaption or cell injury and (2) pathogenic mechanisms responsible for disease development.
2.25-6.25 Credit Hours

DENT 5032 Foundation Sciences IV
This series of lectures will present relevant and important diseases and their treatments. We will explore the mechanisms used by bacteria to infect cells and present two major classes of bacteria, the Streptococcus and Staphylococcus. We will introduce odontogenic infections important to the oral cavity. Gastrointestinal infections, sexually transmitted diseases, tuberculosis and bacterial endocarditis will also be presented. There will be an introduction to antibiotics. This will be followed by a set of lectures on viruses with oral manifestations. These will include herpes, hepatitis, influenza, rhino, coxsackie, measles, mumps, rubella viruses, and treatments using antiviral drugs. Highlighted will be HIV and opportunistic infections of AIDS. Next, fungal infections and treatments will be presented. Finally, infection control in dentistry will be featured.
0.0-6.5 Credit Hours

DENT 5051 Biological Systems I
Biological Systems I is a multi-disciplinary, module-based course. Module I will provide the student with a basic understanding of the molecular, tissue, and functional mechanisms that give rise to the human form. Clinical aberrations, including craniofacial dysmorphisms will be presented to illustrate what happens when normal developmental mechanisms are disrupted. Module 2 will provide the student with a thorough understanding of the development, biology, morphology, and function of mucosal epithelium, connective tissue, skin and salivary glands. Module 3 combines perspectives from neurocytology, neurophysiology and pharmacology to help students develop a pre-clinical understanding of neuronal conduction and coordination as applied to the function and pharmacology of the somatic and autonomic nervous systems. Clinical correlations will be used where appropriate.
2.25-6.25 Credit Hours

DENT 5062 Biological Systems II
Biological Systems III combines the study of the general principles of anatomy and physiology of the human vascular, muscular and neuroanatomic systems with an emphasis on the orofacial complex. The goals of the course are to provide students with a sound knowledge of normal biology and organization of those organ systems and to examine and discuss examples of pathophysiologic conditions. Students should subsequently be able to recognize the anatomical structures, identify tissue types, and explain the principal physiologic functions of the vasculature, muscle and cranial nerves. The third module also includes clinical assessment of cranial nerve function.
2.25-6.25 Credit Hours

DENT 5072 Biological Systems IV
Cadaveric Anatomy of the Head and Neck is designed to facilitate integration of the gross anatomy learned systemically in the Biological Science track through the meticulous regional dissection of a human cadaver. In addition to enabling visualization of both anatomical structures and their clinically significant relationships in a three-dimensional context, the course provides initiation into the tactile manipulation of the human body.
0.5-3 Credit Hours

DENT 5102 Behav Sci I-Health Promo
Lectures, seminars, clinical sessions and community field experiences are provided so that students gain the necessary knowledge and skills in oral health promotion and disease prevention activities related to caries, periodontal diseases, and oral cancer. Focus is placed on assessment, planning, implementation and evaluation of strategies designed to target the individual patient, the community and a population perspective. Course topics include discussion of the philosophy, modalities, rationale and evaluation of health promotion and disease preventive activities related to caries, periodontal diseases, and oral cancer. Focus is placed on assessment, planning, implementation and evaluation of strategies designed to target the individual patient, the community and a population perspective. Course includes an introduction to evidence based care and research principles in application to critique of current dental literature.
0.5-4 Credit Hours

DENT 5120 Local and Global Public Health I
This course provides students with an introduction and foundational knowledge in basic concepts in public health, and specifically dental public health. An overview of public health programs at the global, federal, state, local level is provided. Public health topics, such as access to care, advocacy, cultural competence, health literacy, dental care delivery system, leadership, ethics, dental payment mechanisms and public health financing are included to provide students with a broader perspective on the social, political and economic forces affecting oral health and dental practice at the local, state, national and global levels. Students attend lectures, seminars and complete twelve hours of community activities in order to gain knowledge and skills in community oral health.
Summer Term
0.75-2.25 Credit Hours

DENT 5180 Biological Systems V
The course will provide the student with a sound knowledge of hematology and the basic biology and organization of the cardiovascular, pulmonary and renal systems; and establish the general integrative knowledge of the pathologies most commonly associated with these systems. The student will be made aware of the relevance of these pathologies, and the therapeutic agents applied, to dental practice. On the basis of the information and concepts learned during the course, the student will subsequently be able to: 1) Understand laboratory medicine, hematologic disorders, and transplant medicine; 2) To recognize the anatomical structures, identify tissue types, and explain the principal physiological functions of the three internal systems; 3) To recognize and explain the interrelationships within and between the anatomical structures of the heart, blood vessels, lung, and kidney; 4) To familiarize with the common pathologies likely to be encountered during dental practice and their implications to oral health; 5) To understand how specific systemic diseases affect diagnosis, management and general well-being of the dental patient.
3 Credit Hours
DENT 5301 Intro To the Patient
This course will provide foundational knowledge about the doctor patient relationship, present medical history skills and cover the basics of a dental orofacial physical exam. The first part of the course includes lectures outlining the doctor patient relationship, components and applications of the medical history. The second part includes lectures outlining the components and application of the physical exam, including vital signs, cranial nerve exam, head and neck examination, and examination of the heart and lungs. The third and final part of the course includes two practical workshops in small groups where students are required to practice taking medical histories and performing various components of the physical examination. The second rotation occurs in the Oral Diagnosis clinic where students take a medical history and perform a physical examination on a PDM admissions patient. 2.25-4.75 Credit Hours

DENT 5321 Biological Systems II
Presented in lectures and seminars, Module 1, will present information on the history of Radiology, in particular Dental Radiology and its implications for diagnosis and patient care. Module 2 will present a detailed survey of osteology of the skull, cervical spine and laryngeal skeleton in a series of interactive lectures and small-group conferences. Appreciation of the three-dimensional anatomy of the cranium, temporomandibular joint and the orofacial skeletal complex will be reinforced with integrative presentations of radiographic anatomy to introduce some clinical correlations. Module 3 will present a basic knowledge of bone based on development, anatomical, histological, radiological, molecular and functional perspectives. Teach the fundamental principles of cell-cell interactions, extracellular matrix deposition and mineralization related to bone homeostasis, remodeling and healing. Concepts will be emphasized with radiological presentation of bone diseases using different imaging modalities. 0-4.5 Credit Hours

DENT 5340 Intro. To Hematology and Lab Medicine
The objective of the Freshmen Dental Occulsion course is to provide foundational knowledge regarding human occlusion and the temporomandibular joint. Dental occlusion relative to Operative dentistry procedures will be discussed. This knowledge will be called upon throughout all four years of the dental curriculum. This course includes lectures and laboratory sessions where waxing of teeth using only concepts related to dental occlusion, selective grinding to achieve an ideal occlusal relationship, alginate impressions and diagnostic model making, facebow transfer, and diagnostic model mounting procedures will be completed to reinforce didactic materials presented. 1.25-2 Credit Hours

DENT 5380 Operative Dent. Lab
The objective of the Freshmen Operative Dentistry Laboratory course is to develop an understanding of the normal, healthy stomatognathic system and to introduce fundamental didactic and psychomotor skills, relative to operative dentistry procedures. The course includes a review of individual tooth anatomy and the study of occlusion to define what is normal and healthy. The study of cariology and the treatment of the pathologic progress continues afterward. Restoration of form and function with basic intracoronar amalgam and composite procedures then follows. More complex intracoronar procedures such as gold inlay and porcelain onlay preparations and restorations are then taught. Throughout the entire course, the study of occlusion as it applies to restorative dentistry procedures is continued. 2 Credit Hours

DENT 5400 Intro To Pharmacology
Neuropharmacology is both a basic science and a clinical science. It builds on the foundation of anatomy, biochemistry, physiology, and pathology and bridges the gap into clinical dentistry. This course in basic neuropharmacology will give the students a better understanding of drugs, interpreting complicated drug/medical histories, and understanding drug reactions. This module will focus on pharmacology of the central nervous system with lectures on analgesic agents, antianxiety drugs, general anesthetics, arthritis and gout drugs, prescription writing and a host of other agents used to treat diseases of the CNS including Parkinson’s, seizures, and a variety of psychiatric disorders. Clinically relevant drug-drug interactions will also be covered in this course. 0.25-3 Credit Hours

DENT 5520 Ethics I
The objective of the PEDM courses (1st, 2nd and 3rd year courses) is to impart a general knowledge of fundamental concepts in principles of professionalism and ethical decision making with emphasis on care-based discussions. The courses utilize lectures, seminars, online discussions, and reflection papers to address issues related to doctor-patient relationships, academic integrity as well as professional communication. These Pass/Fail courses provide a forum for discussing, debating and understanding parameters of professional and ethical behavior, and their impact on the patients, colleagues, the public, and the profession. PEDM I focuses on academic integrity, micro-aggressions and how professional and ethical behavior during pre-clinical years translates into ethical clinical practice. 0.5 Credit Hours

DENT 5540 Intro To Clinical Dent I
This course provides first-year dental students with a variety of different clinical experiences. The student spends day-long rotations in various predoctoral and specialty PDM clinics. In addition, students gain a unique perspective in practice management by assisting PDM staff with dispensing clinical supplies and in Instrument Management Services. 0.25 Credit Hours

DENT 5702 Periodontics I
This course is presented in two parts. The first part presents basic biology concepts applied to the healthy and diseased periodontium. Macroscopic and microscopic changes of the periodontium will be featured and how these are altered by disease. In addition the biological basis for etiology, pathogenesis and epidemiology of periodontal disease is presented. The second part consists of presenting the basic clinical procedures for diagnosis and non-surgical treatment of periodontal diseases through lectures, preclinical labs and clinical rotations. Part 2: consists of lectures, pre-clinical labs and clinical rotations. Those will be dedicated to presenting diagnostic and non-surgical aspects of periodontal therapy. 0.5-3.5 Credit Hours

DENT 5800 Orthodontics I
This course will expose the students to the diagnostic and treatment planning process in orthodontics. The student will also be taught the basic principles and events in child growth and development (craniofacial, somatic and dentitional) as well as the development and diagnosis of malocclusions. 2.25 Credit Hours
DENT 5801 Advanced Simulation
The objective of the Freshman Advanced Simulation Laboratory course is to introduce and develop specific psychomotor and cognitive skills through the use of virtual reality based training that will enhance and augment future skills acquired in the preclinical General Restorative Dentistry, Operative Dentistry course. Technical skills are developed through learning preparations with a high speed handpiece, and dental hand instruments in a virtual reality, advanced simulation environment. Suitable operative skills, knowledge, and ergonomics will be emphasized for the successful transition into the preclinical operative course. Dental terminology and principles of tooth preparation will be applied to the theory of all the basic preparations. Suitable operative skills, knowledge, and ergonomics will be emphasized for the successful transition into the preclinical operative course.
0.25-2 Credit Hours

DENT 5821 Dental Devel.& Anatomy
The Freshman Dental Development and Anatomy provides foundational knowledge regarding Tooth development, Primary dentition, Permanent dentition, Tooth numbering systems, Tooth classification (Incisors, Canines, Premolars, Molars), Set Traits (traits between Primary and Permanent dentition), Class traits (traits for each kind of tooth), Arch traits (traits of maxillary vs. mandibular), and Type traits (differences between teeth within the Class). Dental morphology relative to Operative dentistry procedures will be discussed. This knowledge will be called upon throughout all four years of the dental curriculum.
0.75-4 Credit Hours

DENT 5841 Dental Auxiliary Utilization II
This course is designed to teach the first-year student a four-handed dental assisting technique which is used to assist third and fourth year students in clinical practice. In addition, skills such as patient communication, team building, and record keeping are taught. Students gain clinical experience and assist in the same procedures that they are encountering in GRD, thus forming a clinical bridge to pre-clinical learning. Lectures, a written exercise, a lab, clinical rotations and completion of a clinical exam make up the didactic portions of the course.
0.25-3 Credit Hours

DENT 5842 Clinical Prac II - Dau
This course is designed to teach the first-year student a four-handed dental assisting technique which is used to assist third and fourth year students in clinical practice. In addition, skills such as patient communication, team building, and record keeping are taught. Students gain clinical experience and assist in the same procedures that they are encountering in GRD, thus forming a clinical bridge to pre-clinical learning. Lectures, a written exercise, a lab, clinical rotations and completion of a clinical exam make up the didactic portions of the course.
0.75-4 Credit Hours

DENT 5862 Operative Dent. Lecture
The objective of the Freshmen Operative Dentistry lecture course is to give foundation knowledge of operative instrumentation, operative dentistry, terminology, principles of cavity preparations, and the basics of single tooth restorations.
0.75-4 Credit Hours

DENT 5870 Introduction to Caries Risk Assessment
This course provides students with GRD experience in order to gain additional knowledge, skills and values to develop competency in caries risk assessment. Classes are scheduled for the summer for the incoming second year and include the following topics: risk assessment for caries, health promotion care, and Axium. Students will be completing caries risk assessment in the simulation lab and record the completion of procedures in Axium using appropriate codes to document completion of required activities.
0.5 Credit Hours

DENT 5882 Dental Materials
The course is divided into two segments. The first segment teaches the principles of materials science. The second segment is designed to present topics in applied dental materials as students use these materials in General Restorative Dentistry (GRD). After successful completion, the student should understand how the basic principles aid in material selection, risk/benefit assessment, restoration design, patient information and evaluation of new materials and manufacturer's claims.
0.25-3 Credit Hours

DENT 5890 Restorative Microscopy I
The use of enhanced magnification with loupes is a widely accepted standard practice to perform restorative dentistry. The dental operating microscope can provide superior visual performance. For the endodontic specialty, the dental microscope has demonstrated significantly higher success rates compared to loupes. The success of endodontic therapy utilizing the dental microscope suggests that the dental clinician may achieve better outcomes with microscope implementation in restorative dentistry. This introductory course will provide each participant the ability to learn essential restorative microscope utilization techniques in combination with dental loupes for optimal precision dentistry.
Summer Term
0.5 Credit Hours

DENT 5912 Honors I
In line with PDM's vision to transform global oral health and well-being through exceptional clinical care, innovation, education, and research, the PDM Honors Course provides qualified students an enrichment experience designed to cultivate enhanced understanding of and a leadership outlook in Oral Health related disciplines. These disciplines include Basic and Translational Research, Clinical Dentistry, Clinical Research, Community Oral Health, Endodontics, Nutritional Sciences, Oral and Maxillofacial Surgery, Orthodontics, Pediatric Dentistry, Periodontics, Personalized Care, Radiology and Oral Medicine and Vulnerable Populations.
Spring
1.5-3.5 Credit Hours

DENT 5992 Selectives I
0.25-1.5 Credit Hour
DENT 6001 Biological Systems V
A comprehensive overview of the cardiovascular, respiratory, and renal organ systems will be discussed by faculty from the School of Dental Medicine. Lectures will also be given by faculty from the School of Medicine. Module 1, will provide the student with an introduction to histology, gross anatomy, and physiology of the cardiovascular system. Next, lectures will introduce the student to the common diseases that may involve the cardiovascular system that includes, atherosclerosis, conduction disorders, and valvular diseases. Lectures on pharmacology will be presented to apply understanding of normal physiology and mechanisms underlying disease processes. Module 2, will provide the student with an introduction to histology, gross anatomy, and physiology of the respiratory system. Next, lectures will introduce the student to the host defense of the pulmonary systems, and the infectious diseases that may occur when defense are defective. Additionally, lectures will introduce the small vessel vasculitides that can present with head and neck manifestations. Module 3, will provide the student with an introduction to histology, gross anatomy, and physiology of the renal system. Next, lectures will introduce the student to the fundamental physiologic processes that occur in the renal system, which includes glomerular function, regulation of potassium balance, and the buffering system. Lectures on pharmacology will be presented to apply understanding of normal renal physiology and drug mechanisms.
1.5-3.5 Credit Hours

DENT 6042 Oral & Maxil Complex II
This is a course that will apply what students have already learned in Foundation Sciences and Biologic Systems courses to the study, interpretation and diagnosis of oral disease. It is an essential link between the basic and clinical sciences concerned with the mechanisms of disease (e.g., inflammation, genetic disease, neoplasia, immunopathology) and the disease processes that students will encounter during their careers in dentistry. The emphasis will be on oral soft and hard tissue pathology, including oral manifestations of systemic diseases that may impact on the health of the patients.
1.5-3.5 Credit Hours

DENT 6062 Biological Systems VII
Cadaveric Anatomy is designed to facilitate integration of the gross anatomy learned systematically in the Biological Systems curriculum stream through the meticulous regional dissection of a human cadaver. In addition to enabling visualization of both anatomical structures and their clinically significant relationships in a three-dimensional context, the course provides initiation into the tactile manipulation of the human body.
0.25-2 Credit Hours

DENT 6101 Local, Public Health, Ethics
Lectures, seminars and community experiences provide students with foundation knowledge in general principles of public health and community health, with specific application to the following dental public health concepts: access to care, cost, quality of care and international health. Students complete community experiences that provide foundation experiences in developing and implementing community oral health promotion activities.
0.25-3 Credit Hours

DENT 6102 Local & Public Health II
Lectures, seminars and community experiences provide students with foundation knowledge in general principles of public health and community health, with specific application to the following dental public health concepts: access to care, cost, quality of care and international health. Students complete community experiences that provide foundation experiences in developing and implementing community oral health promotion activities.
Spring
0.25-1.5 Credit Hour

DENT 6110 Biological Systems IV
This course combines an introduction to the general principles of anatomy, histology, and physiology of the human cardiovascular, pulmonary and renal systems, with an extensive study of the pathology and therapeutics of these systems, with an explicit emphasis on their relationship to dental practice. This course is presented in three modules. We have assembled a diverse and experienced group of lecturers, including experts in oral medicine, oral surgery, anatomy, physiology, pharmacology and pulmonary and renal medicine.
1.25 Credit Hour

DENT 6160 Biological Systems VIII
This course combines an introduction to the general principles of anatomy, histology, and physiology of the human hematopoietic and lymphoid system and neurologic systems with an extensive study of the pathology and therapeutics of these systems, and with an explicit emphasis on their relationship to dental practice.
2 Credit Hours

DENT 6162 Behavioral Management
This course provides students with the knowledge and skills to communicate with and manage appropriately a diverse group of clinical patients. Eight hours of small group activity, including experiences with standardized patients, as well as twelve hours of large group activities provide the foundational knowledge and skills in patient management with diverse and challenging patients. Motivational interviewing is presented and discussed as a strategy for communication and management with patients.
0.5-3.5 Credit Hours

DENT 6202 Endodontics Lecture
The Department of Endodontics trains pre-doctoral students to become competent in basic endodontic procedures. This includes instruction in the foundational core of Endodontics, including pulp biology, primary non-surgical root canal treatment. Clinical Endodontics: The Department of Endodontics furthermore trains pre-doctoral students to understand advanced endodontic procedures. This includes instruction in trauma, resorption, retreatment, endodontic surgery, bleaching, etc. Our ultimate goal is to implement that treatment/education in a caring, respectful, and responsible manner.
2.5-5 Credit Hours

DENT 6222 Endodontics Lab
The pre-clinical endodontic laboratory course is designed to introduce endodontic concepts and techniques to a student under simulated conditions using extracted teeth.
0.25-2 Credit Hours
DENT 6240 Oral & Maxil Complex III
This course is designed to give the student exposure to all methods of anesthesia and pain control used in dentistry, as well as, various medical emergencies encountered in practice. In addition, the students will learn about the mechanisms and consequences of orofacial pain. All lectures will be presented by faculty members from the departments of Oral and Maxillofacial Surgery & Pharmacology and Oral Medicine.
1.5 Credit Hour

DENT 6280 Oral Diagnosis and Emergency Medical Clerkship
The purpose of this course is to give students a foundation for understanding physical diagnosis, medical work-ups, medical consultations and medical conditions which directly affect the medical management of the dental patient.
3 Credit Hours

DENT 6301 Biological Systems V
This course combines an introduction to the general principles of anatomy, histology, and physiology of the human cardiovascular, pulmonary and renal systems, with an extensive study of the pathology and therapeutics of these systems, with an explicit emphasis on their relationship to dental practice.
1.5-4 Credit Hours

DENT 6310 Fixed Prosthodontics Lab
The curriculum of Fixed Prosthodontics Laboratory deals with the building of knowledge, thought processes, skills and understanding the procedures required in the restoration of missing and/or badly broken-down teeth by the fabrication of non-removable prostheses. Student will gain hands-on experience in the clinical and technical aspects of fixed prosthodontics.
0.25-2.5 Credit Hours

DENT 6321 Biological Systems Vi
This course combines an introduction to the general principles of anatomy, histology, and physiology of the human gastrointestinal, hepatobiliary, and endocrine systems, with an extensive study of the pathology and therapeutics of these systems, with an explicit emphasis on their relationship to dental practice.
2.25-5 Credit Hours

DENT 6322 Medical Clerkship
The purpose of this course is to give student doctors a foundation for understanding physical diagnosis, medical work-ups, medical consultations and medical conditions which directly affect the medical management of the dental patient. Clinical Case of the Day examples are reviewed/discussed.
0.25-3 Credit Hours

DENT 6360 Fixed Prosthodontics II
The curriculum of the Fixed Prosthodontics Lecture Course deals with building knowledge, thought processes and understanding the procedures required in the restoration of missing and/or badly broken-down teeth by the fabrication of non-removable prostheses.
1.5 Credit Hour

DENT 6370 Fixed Prosthodontics Laboratory II
The curriculum of Fixed Prosthodontics Laboratory deals with the building of knowledge, thought processes, skills and understanding the procedures required in the restoration of missing and/or badly broken-down teeth by the fabrication of non-removable prostheses. Student will gain hands-on experience in the clinical and technical aspects of fixed prosthodontics.
Spring
1.75 Credit Hour

DENT 6401 Intro To Pharmacology
Neuropharmacology is both a basic science and a clinical science. It builds on the foundation of anatomy, biochemistry, physiology, and pathology and bridges the gap into clinical dentistry. This course in basic neuropharmacology will give the students a better understanding of drugs, interpreting complicated drug/medical histories, and understanding drug reactions. This module will focus on pharmacology of the central nervous system with lectures on analgesic agents, antianxiety drugs, general anesthetics, arthritis and gout drugs, prescription writing and a host of other agents used to treat diseases of the CNS including Parkinson’s, seizures, and a variety of psychiatric disorders. Clinically relevant drug-drug interactions will also be covered in this course.
0.25-3 Credit Hours

DENT 6421 Neuro,Neuropharm,Beh Mg
1.5-4.25 Credit Hours

DENT 6441 Oral & Maxil Complex II
This course will develop a general knowledge of fundamental concepts in orofacial function and occlusion. The course is presented in two modules, with an exam at the end of each module. The orofacial function module will focus on physiology anatomy and function of the facial structures, including saliva, mastication, speech, swallow, smell and taste. The goal is for the students to have a basic understanding of orofacial function. The occlusion module will discuss the role of occlusion in restorative dentistry with emphasis on the clinical application of fundamental biomechanical principles, techniques and instruments. By focusing on diagnosis, the student will be able to understand and develop the parameters to create successful restorative decisions and well-sequenced treatment plans. This module will provide a mandatory hands-on session for facebow transfer, unterocclusal record and articulator set-up.
0-3.75 Credit Hours

DENT 6460 Medical Emergencies
Oral and Pharmacology
1 Credit Hour

DENT 6502 Orthodontics I
The purpose of this course is to provide students with the knowledge of growth and development, concentrating on child somatic, craniofacial, and dental growth and development. The students build a solid foundation along the lines of diagnosing problems and understanding the etiology of malocclusion and space maintenance.
1-3.25 Credit Hours

DENT 6520 Ethics II
PEDM II focuses on preparing students to enter the clinical practice of dentistry; building relationships with patients, colleagues, and faculty; and developing and a moral framework for clinical decision making.
0.5 Credit Hours

DENT 6522 Adjunctive Ortho Lec/Lab
This course is designed to expose the student to basic orthodontic laboratory and clinical procedures and encourages the development of technical abilities in banding, bonding, wire bending, and removable appliance fabrication.
0.25-3 Credit Hours
DENT 6602 Pediatric Dentistry I
Pediatric Dentistry. This course will cover Fundamentals of Pediatric Dentistry that will allow you to have a working knowledge of how to manage infants, children, adolescents and patients with special needs that come into your office as a general dentist. The course also describes topics in pediatric relevant to a variety of dental specialties for those interested in pursuing post-graduate studies.
0.25-3 Credit Hours

DENT 6660 Recall Clinic
0.5 Credit Hours

DENT 6702 Periodontics II Lec/Lab
This course will be focused on non-surgical periodontal therapy. The macroscopic and microscopic effects of this modality of treatment will be discussed. Different forms of periodontal diseases and non-surgical therapeutic tools will also be presented as well as information on the prognosis of the periodontal therapy and the relevance of maintenance.
0:3.5 Credit Hours

DENT 6801 Fixed Prosthodontics
The curriculum of the Fixed Prosthodontics Lecture Course deals with the building of knowledge, thought processes and understanding the procedures required in the restoration of missing and/or badly broken-down teeth by the fabrication of non-removable protheses. Students will learn diagnosis, treatment planning, rehabilitation and maintenance of oral function, comfort, appearance and health of patients with clinical conditions associated with missing or deficient teeth using biocompatible substitutes. These restorations must provide an improved state of oral health, function and esthetics for patients.
2.5-5 Credit Hours

DENT 6802 Fixed Prosthodontics Lec Spring
This is the continuation of the fall lecture course. The curriculum of the Fixed Prosthodontics Lecture Course deals with the building of knowledge, thought processes and understanding the procedures required in the restoration of missing and/or badly broken-down teeth by the fabrication of non-removable protheses. Students will learn diagnosis, treatment planning, rehabilitation and maintenance of oral function, comfort, appearance and health of patients with clinical conditions associated with missing or deficient teeth using biocompatible substitutes. These restorations must provide an improved state of oral health, function and esthetics for patients.
0.5-3.25 Credit Hours

DENT 6811 Operative Dentistry II
This course will give a continuation of the D1 course dealing with the whole patient and the surgical and non-surgical treatment of the dental hard tissues. It builds on the foundation knowledge and experience from 1, exposing students to more complex cases. Both the classical and contemporary preparations of restorative dentistry are presented. Student will prepare for the patient care program by reviewing updates in cardiology, caries diagnosis; caries risk assessment, CAD/CAM and homecare procedures being reinforced in a simulated patient setting. All laboratory procedures will be “cased based” using a patient scenario. This training will take place in a simulation environment that develops good “clinical” habits and integrates “patient” data into the daily treatment. The course will also introduce the D2 student to the clinic Electronic Health Record (HER) using these same patient scenarios. The course finally transitions students to active patients care in the clinic. As a result of the emphasis on this “case-based approach” students will enhance their treatment planning skills by creating a complete EHR for reach of their assigned ‘patients.’ All records will be reviewed by faculty. Students will be encouraged to consult with their colleagues, and research needed information for input into all elements of treatment planning. This will also ensure a smoother transition to their clinic performance, clinic requirements, and to the electronic record system. Faculty feedback and mentoring will include the assembled patient records, and how they meet professional standards.
1.25-5 Credit Hours

DENT 6812 Partial Rem Dent Pros Lb
A combination of lectures, seminars and laboratory exercises provide the dental student with a fundamental understanding of the partially edentulous condition. Topics covered include classification, diagnosis, treatment planning and treatment of partially edentulous patients with RPDs. This course is designed to provide students with the terminology, concepts and principles necessary for case selection, design, construction of, and patient therapy with conventional RPDs. Upon completion of this course students will have the necessary didactic knowledge to successfully understand and treat removable partial denture cases in conjunction with the clinical faculty during their third and fourth years.
0.75-4 Credit Hours

DENT 6822 Complete Rem Dent Pros L
The goal of this course is to provide students with the foundation of knowledge needed to diagnose and treat edentulous patients. Students should be able to: 1. Recognize and define complete denture terminology deemed relevant in the classroom, course syllabus, and assigned readings. 2. Describe medical, emotional, and oral anatomic factors that aid in formulation of diagnostic considerations in the complete denture therapy. 3. Describe functional anatomy of the edentulous mouth. 4. Understand the clinical procedures performed during the construction of conventional complete dentures and during the maintenance phase of treatment. 5. List the fundamental clinical procedures performed during the construction of immediate complete dentures. 6. Understand the complete denture occlusion. Upon completion of this course, the students should have an in-depth understanding of: 1. The need for therapy in and restoration of the edentulous arch with complete protheses. 2. The significance of avoiding the edentulous condition in a patient wherever possible. 3. The dental materials that are used at the different stages of complete dentures therapy. 4. The concept and techniques of the clinical steps involved in the treatment of the edentulous patient.
0.25-3 Credit Hours
DENT 6831 Fixed Prosthodontics Laboratory
The curriculum of the Fixed Prosthodontics Laboratory deals with the building of knowledge, thought processes, skills and understanding the procedures required in the restoration of missing and/or badly broken down teeth by the fabrication of non-removable prostheses. Students will gain hands-on experience in the clinical and technical aspects of fixed prosthodontics.
1-4 Credit Hours

DENT 6832 Fixed Prosthodontics Laboratory Spring
This is a continuation of the fall lab course. The curriculum of the Fixed Prosthodontics Laboratory deals with the building of knowledge, thought processes, skills and understanding the procedures required in the restoration of missing and/or badly broken down teeth by the fabrication of non-removable prostheses. Students will gain hands-on experience in the clinical and technical aspects of fixed prosthodontics.
1 Credit Hour

DENT 6841 Clinical Practice I
Placeholer course description being finalized. Introduction to Clinical Practice for 2nd year DMD students.
0.25-3 Credit Hours

DENT 6842 Clinical Prac Ii-Dau
Dental Auxiliary Utilization for the sophomore class builds on the dental assisting skills the student has mastered in DAU 562. In 662, the student moves on from assisting to Expanded Functions Dental Auxiliary skills that have been taught in the General Restorative Dentistry course. Goals of the course include the goals of DRAUT 562, as well as the development of skills to restore prepared teeth, cement and fabricate temporary crowns, and obtaining, clinical patient records of third and fourth-year student patients. Emphasis is increased on the student’s independent completion of patient-centered tasks and preparation for becoming primary providers in the third year.
0.75-4 Credit Hours

DENT 6851 Fundamentals of Critical Thinking and Clinical Decision-Making
This course provides students with foundational knowledge and skills for evidence-informed clinical decision-making, critical thinking, and health literacy. The course presents a variety of clinical scenarios that guide the exploration of forms of evidence from primary and secondary research and their utilization to inform daily clinical and policy decision-making. The course provides the necessary skills for the students to become independent thinkers, efficiently navigate sources of evidence to inform practice, identify strengths and limitations of a variety of research study designs, master results interpretation, and apply study results and clinical practice guideline recommendations to patient care. In addition, the students will learn about the principles of health literacy and acquire the skills to contribute to their patients’ ability to make health decisions informed by evidence. Students attend weekly interactive lectures, seminars and need to pass a final exam.
1-2 Credit Hours

DENT 6852 Advanced Restorative Esthetics

Spring
1 Credit Hour

DENT 6862 Complete Rem Dent Pros B
The goal of this second-year course is to provide the dental students with the technical knowledge and skills needed to perform all the laboratory procedures used in the construction of complete dentures and apply the foundation knowledge learned in the lectures. Students should be knowledgeable and skilled in the following: 1. Describing and performing selected sequential clinical and laboratory procedures during the construction of complete dentures. 2. Applying the knowledge related to dental materials learned in the lectures. Upon completion of this course, the students should be able to: 1. Perform all the laboratory procedures used in construction of complete dentures. 2. Demonstrate the function and the usage of Hanau face bow and articulator in the construction of complete dentures. 3. Communicate with the laboratory technicians via properly written work authorizations.
0.75-4 Credit Hours

DENT 6872 Pass Preparatory Course
This is a preclinical laboratory course that consists of preclinical laboratory sessions and short presentations which include demonstrating and performing restorative and prosthetic procedures in a simulated environment (manikin and typodonts).
0-3 Credit Hours

DENT 6882 Intro To Clin Dent II
This course is offered by the Department of Preventive and Restorative Sciences at the University of Pennsylvania School of Dental Medicine. It is intended to integrate topics from General Restorative Dentistry courses and DAU courses at the PDM with clinical expectations and procedures of PDM clinics.
0.75-4 Credit Hours

DENT 6892 Professionalism, Ethics and Healthcare Communities
The Professionalism, Ethics and Healthcare Communities is comprised of ten Modules asynchronous online material designed to introduce incoming graduate and dental students to a range of concepts, theories and skills aimed at increasing their awareness issues of racism and oppression to promote inclusive and affirming classrooms and learning communities. The course material is delivered through a series of short videos and readings. Modules covers such topics as implicit bias, microaggressions conflict resolution and bystander intervention; free speech and inclusion, social media usage; racism and other forms of oppression; gender and gender identity; equity and access in healthcare; understanding and owning whiteness and racial literacy; and restorative justice. Students also attend 1 -in-person seminar titled “Restorative Practices, Conflict Skills and Responding to Harm” conducted by representatives from the Office of Restorative Practices and Student Conduct.
Spring
0.25-3 Credit Hours
DENT 6900 Oral Surgery I
This course is designed to give the student exposure to all aspects of the wide and varied scope of oral and maxillofacial surgery. The course also promotes the integration of the basic sciences and medicine into the daily practice of oral and maxillofacial surgery and dentistry. It builds upon and incorporates knowledge from many prerequisite courses, particularly the Pharmacology, Microbiology, and Anesthesia, Pain, and Anxiety courses. After successful completion of this course and its clinical counterpart (course #872), the student should be competent in the management of all aspects of oral and maxillofacial surgery as outlined above under the course goals. Lectures will be presented by faculty members of the department of Oral and Maxillofacial surgery. The lecture material and reading assignments are designed to be complementary. Examinations will encompass material from both sources. Additionally, at the request of the dean of academic affairs, the examinations will include questions that reinforce the knowledge obtained by completion of the prerequisite courses of PHARMACOLOGY, MICROBIOLOGY, and Anesthesia, Pain, and Anxiety. Students should review the material from those courses as both the midterm and final examinations will contain questions from knowledge obtained by their completion.
3 Credit Hours

DENT 6912 Honors II
In line with PDM’s vision to transform global oral health and well-being through exceptional clinical care, innovation, education, and research, the PDM Honors Course provides qualified students an enrichment experience designed to cultivate enhanced understanding of and a leadership outlook in Oral Health related disciplines. These disciplines include Basic and Translational Research, Clinical Dentistry, Clinical Research, Community Oral Health, Endodontics, Nutritional Sciences, Oral and Maxillofacial Surgery, Orthodontics, Pediatric Dentistry, Periodontics, Personalized Care, Radiology and Oral Medicine and Vulnerable Populations.

DENT 7102 Health Promotion II Spring
This course provides students with both seminars and clinical experiences in order to gain additional knowledge, skills and values to develop competency in health promotion activities. Seminars are scheduled throughout the third year and include the following topics: risk assessment for caries, periodontal diseases and oral cancer; customized oral health promotion plans to address risks and promote health; health promotion care with dentures and implants; modifying health promotion for patients with physical, developmental and emotional disabilities. Discussions also focus on communication to meet the different social and cultural needs of patients. Clinical experiences in the Primary Care Units and Community Clinics provide students with opportunities to develop skills and competencies related to health promotion. Oral health promotional activities are an integral part of the care students provide with their patients. Students complete a Caries and Periodontal Risk Assessment with each patient and provide customized oral health promotional services periodically throughout treatment. Students provide fluoride treatments, tobacco counseling and nutritional counseling as appropriate for their patients. In addition, edentulous patients receive special advice regarding mouth care, denture care and oral cancer self-examination procedures. Students must record the completion of health promotion procedures in Axium using appropriate codes to document completion of required clinical activities. In addition, students must record the completion of appropriate health promotion activities on the clinical charts.

DENT 7160 Professional Practitioner Development I
This course provides the foundation for students to understand knowledge, skills and attitudes that dental students must develop as professional dental care providers for success in dental practice. Three modules comprise this course: Ethics, Practice Management and Professionalism, and Behavior Management. Module 1 Ethics prepares students to enter the clinical practice of dentistry; build relationships with patients, colleagues and faculty; and develop a moral framework for clinical decision-making. The module follows the principle that by discussing ethical challenges and creating a plan for approaching them one can be a more ethical clinician when faced with dilemmas in real life. Module 2 Practice Management and Professionalism includes synchronous and asynchronous lectures and seminars on the following topics: developing career goals; concepts in leadership and mentorship; dental business basics; risk management and overview of dental insurance, CDT and coding. Seminars focus on application of lecture concepts to developing dental practice in leadership, insurance and risk management. Module 3: Behavior Management provides students with the knowledge and skills to communicate with and manage appropriately a diverse group of clinical patients at Penn Dental Medicine. Topics include discussion of patients’ perception of dentists and dental care, patient adherence and motivational interviewing, health disparities, management of diverse patients with psychiatric disorders, patients with fear, anxiety, phobias and pain, as well as review of the dentist’s role in identifying and managing patients experiencing abuse (child abuse and intimate partner violence) and addiction disorders. Experiences with four standardized patients are scheduled to provide the foundational knowledge and skills in patient management with diverse and challenging patients. Motivational interviewing is discussed as a strategy for communication and management of change with patients.

0.25-2 Credit Hours

DENT 7201 Endodontics Clinic
0.25-2 Credit Hours

DENT 7202 Endodontics II Clinical Spring
The Department of Endodontics trains pre-doctoral students to become competent in basic endodontic procedures on vital and non-vital teeth. This course includes clinical instruction in diagnosis, treatment planning, treatment/obturation, post-endodontic restoration and related entities (bleaching of non-vital teeth, treatment of traumatic injuries, etc.). This instruction begins at the pre-clinical in the second year endodontic lecture series (670) and is expanded and reinforced in pre-doctoral laboratory course (672). Students present to the Endodontic Clinic to render care either on their own patients or on patients referred for endodontic emergencies. Case assignment will be handled by clinical faculty and the endodontic business office based on the AAE case difficulty guidelines. In a student's Endodontic Emergency rotation, they are instructed in the proper diagnosis and assessment of emergency cases, appropriate treatment (both emergency and scheduled appointment visits), pertinent paperwork and follow up of emergency patients. The pre-doctoral student, at the discretion of the faculty member on duty, may elect to retain the emergency patient for further treatment or, if the case is deemed too difficult or the student elects not to treat that particular patient, the appropriate referral to another pre-doctoral or a post-doctoral student is made. Regularly scheduled patients are treated in the Endodontic Clinic. Appointments are made by the treating students through the Endodontic Business Office. Supervision ranges from chair-side direct supervision for those students identified as having limited endodontic experience, to that of indirect supervision for those having completed more cases involving anterior and posterior teeth. Attending instructors consist of full- and part-time faculty members and second-year postgraduate endodontic residents assigned to teach in the Endodontic Clinic on a rotational basis. The overall supervision of the clinic on a specific day is the responsibility of the appointed "day chief" (a faculty member). Management and administration of the clinic and all related decisions are the shared responsibility of the pre-doctoral and post-doctoral directors. During Endodontic Clinic rotations, pre-doctoral students do not treat emergency dental trauma cases. Post-doctoral students will treat these patients through the Emergency Clinic and endodontic emergency.

DENT 7302 Admissions and Emergency II Clinical
The Admissions & Emergency Care Clinic rotation (13 rotations for juniors) consists of separate clinical rotations in the Emergency Care Clinic and the Oral Diagnosis (Admissions) Clinic. The Emergency Care Clinic provides emergency care to appointed and walk-in non-registered patients. Emphasis is placed on efficient and thorough medical work-up and dental care to ensure that the patient receives the highest quality of emergency dental care in a timely manner. The dental students on rotation gain knowledge and experience in medical history acquisition, clinical pharmacology, general and specialty medicine, and physical examination, including a head and neck cancer examination and risk assessment, and emergency care of the dental patient. This also includes the appropriate selection and evaluation of radiography to assess the emergency. The Oral Diagnosis Clinic provides an initial evaluation for SDM patients who register for comprehensive dental care on an appointment basis. Students who rotate through the Oral Diagnosis Clinic assess the comprehensive medical and oral health status of the patients, gain knowledge of clinical pharmacology, general and specialty medical issues, associated laboratory and other studies. This also includes a head and neck cancer examination and risk assessment, and the taking of the indicated intra-oral and/or extra-oral dental radiographs. Additionally, the medical status of patients, when specifically designated by the faculty, is re-assessed annually, or other indicated frequency, in the Oral Diagnosis Clinic. Juniors must complete 10 H&P and 5 Emergencies. Oral Medicine faculty directly supervise all student activity with a faculty/student ratio of approximately 1:3.

DENT 7361 Personalized Care I
The Medically Complex, Infectious Diseases and Special Disability Patient Care Clinical Course consists of ~4 half day rotations. Attendance is required to pass this course. Your clinical rotation experience will include at least one or more of the following: Admission Care (Initial Patient visits) provides an initial evaluation for medically complex, infectious disease and special needs patients who register for comprehensive dental care. Student doctors will be involved in the process of obtaining and assessing the comprehensive medical and oral health status of the patients. Students gain knowledge of clinical pharmacology, general and specialty medical issues including physical examination findings, associated laboratory medicine and other medical studies. The rotation also includes experience in performing an oral and extraoral exam such that the student is able to recognize deviations from normal findings and is able to perform a head and neck cancer examination and issue a risk assessment. The student will also gain radiological experience including the appropriate selection and taking of radiographs. Additionally, the student will select the frequency of updating the complete medical history of the patient based upon complexity or at a minimum recommending that the patient be reassessed bi-annually. Informed Consent: Informed consent must be completed for special needs patients prior to completing care. Student doctors will be expected to become familiar with identifying patients who need to have informed consents signed by guardians/parents/others prior to procedures. Medical Consult Requests for patients Not Medically Cleared – The medical consult request is the mechanism used to communicate with peers and other healthcare professionals when appropriate. Students are expected to become familiar with the process of completing medical consult requests, which include: requesting appropriate medical information, reviewing obtained information and coming up with a dental and medical management plan that is specific to the patient. Patient care - Successful dental treatment of special needs and medically complex patients, requires a thorough understanding of behavior management, internal medicine and how medical conditions can potentially complicate dental care. The PCare clinic trains you with effective strategies to prevent medical emergencies in a dental clinic, as well as how to behaviorally manage patients with special needs so as to make them comfortable with treatment in a dental clinic. This is achieved by having adequate knowledge of: behavioral management methods, frequent medical conditions; making necessary treatment adjustments and closely monitoring patients during dental treatment. In the case of a medical emergency, students are trained under the supervision of faculty to manage such emergencies.

0.25-3 Credit Hours

DENT 7410 Introduction to Oral Surgery and Medical Emergencies
The course is designed to give the students an introduction to oral surgery and the exposure to prevention, recognition and management of medical emergencies. Occupational health hazards will also be discussed.
Summer Term
1-3 Credit Hours

DENT 7420 Oral Surgery and Pharmacology
This course is designed to give the student exposure to all aspects of the wide and varied scope of oral and maxillofacial surgery. The course also promotes the integration of the basic sciences and medicine into the daily practice of oral and maxillofacial surgery and dentistry. It builds upon and incorporates knowledge from many prerequisite courses, particularly the Pharmacology, Microbiology, and Anesthesia, Pain, and Anxiety courses. After successful completion of this course and its clinical counterparts (courses #772/773/872/873), the student should be competent in the management of all aspects of oral and maxillofacial surgery as outlined above under the course goals. Lectures will be presented by faculty members of the department of Oral and Maxillofacial surgery. The lecture material and reading assignments are designed to be complementary. The examination will encompass material from both sources. The examination will include questions that reinforce the knowledge obtained by completion of the prerequisite courses of Pharmacology, Microbiology, and OMC V (Anesthesia, Pain, and Anxiety). Students should review the material from those courses as the final examination will contain questions from knowledge obtained by their completion.

0.25-2.5 Credit Hours

DENT 7522 Pediatric Dentistry II Clinical
The Pediatric Dentistry Clinic offers students the opportunity to learn clinical dentistry for children and adolescents. Students will treat children from different cultural and socioeconomic backgrounds and will receive experience in many aspects of Pediatric Dentistry, including but not limited to diagnosis, prevention, restorative dentistry, pulpal therapy, routine oral surgery, management of the developing occlusion, and behavior guidance. Comprehensive care of the child is emphasized; however, patients are not typically assigned to students. Students are encouraged to speak to a clinic staff member one or two days prior to a rotation to obtain the name and telephone number of a patient whose appointment they may confirm themselves by telephone. Any patient who appears for a student-confirmed appointment will see that student. Students who wish to complete a patient's entire treatment plan may schedule to do so. Students may also have the opportunity to care for special needs children who are medically, physically, or emotionally compromised. Correlation between didactic and clinical courses is emphasized whenever possible and instruction in proper record completion and chart documentation is provided on a regular basis. 0.25-2.5 Credit Hours

DENT 7521 Periodontics Clinic
The Preventive and Interceptive Orthodontic rotation consists of seven sessions in the Orthodontic clinic. During each rotation, students are assigned a minimum of two hours in a clinical setting and an additional hour or more in seminar to review the day's cases and any additional treatment planning information (ie, cephalometrics, space analysis). Through these rotations, students are exposed to patients with malocclusions that arise in a normally developing craniofacial complex. Management of these problems aims at providing an unimpeded eruption and alignment of dentition. 0.25-3.25 Credit Hours

DENT 7810 Advanced Restorative Esthetics
This course is designed to introduce third year students to the current concepts and principles that comprise a modern perception of esthetics. Students will learn the diagnostic process, indications, contra-indications and limitations of modern materials along with techniques utilized in esthetic restorations. Students will perform and understand the techniques and procedures necessary for the completion of cases involving basic esthetic modalities utilized effectively in practice such as porcelain veneers, diastema closures, CAD/CAM technology, inlays and onlays. Summer Term
0.75-2.5 Credit Hours

DENT 7821 Restorative Dentistry L
0.75-4 Credit Hours
DENT 7822 Comprehensive Care Spring
Comprehensive care is defined as the overall patient care delivery system that includes all dental services, including emergency care, treatment planning, general dentistry, specialty care, and maintenance programs. The delivery of such care revolves around the Primary Care Unit (PCU) Program, in which the Departments of Restorative Dentistry and Periodontics participate. Pre-doctoral students practice within one of six clinical groups within the Penn School of Dental Medicine. Within each unit, the students perform examination and diagnostic procedures, comprehensive treatment planning, all restorative dental procedures, fixed and removable prosthodontic procedures, including implant supported restorations, non-surgical periodontal procedures, and maintenance therapy. Faculty from the Department of Periodontics are also assigned to the units. Patient care is supervised and managed by the faculty in the PCU Program. The PCU leader is the final determinant in all Tx Plans, Procedures and referrals within the PCU group. The PCU Program is committed to graduating an excellent practitioner who is educated and trained to deliver comprehensive, preventive, therapeutic, and oral health maintenance services. The program strives to eliminate the fragmentation of treatment, integrate dental disciplines, and create faculty accountability and responsibility to both patients and students. The program goal is to produce a practitioner who can integrate basic science knowledge with clinical proficiency in all phases of general dentistry, based on the concept of recognition and treatment of oral disease, based on the best scientific evidence.

DENT 7842 Restorative Dentistry Spring
4.5-7 Credit Hours

DENT 7861 Clinical Seminar
The seminar is an open forum discussion in which students make case presentations after which the diagnosis, treatment plan, and therapy are analyzed and evaluated. Initially, the PCU leader may present cases in order to establish the proper method of case presentation; thereafter, it is the student’s responsibility to present thoroughly documented cases which include photographic slides of pretreatment, a complete dental and medical evaluation, study models, radiographs, and other pertinent data.
0.25-2 Credit Hours

DENT 7862 Clinical Seminars II
The seminar is an open forum discussion in which students make case presentations after which the diagnosis, treatment plan, and therapy are analyzed and evaluated. Initially, the PCU leader may present cases in order to establish the proper method of case presentation; thereafter, it is the student’s responsibility to present thoroughly documented cases which include photographic slides of pretreatment, a complete dental and medical evaluation, study models, radiographs, and other pertinent data.
0.25-2 Credit Hours

DENT 7890 Restorative Microscopy III
The use of enhanced magnification with loupes is a widely accepted standard practice to perform restorative dentistry. The dental operating microscope can provide superior visual performance. For the endodontic specialty, the dental microscope has demonstrated significantly higher success rates compared to loupes. The success of endodontic therapy utilizing the dental microscope suggests that the dental clinician may achieve better outcomes with microscope implementation in restorative dentistry. This introductory course will provide each participant the ability to learn essential restorative microscope utilization techniques in combination with dental loupes for optimal precision dentistry.
Summer Term
0.25-1 Credit Hour

DENT 7912 Honors III
In line with PDM’s vision to transform global oral health and well-being through exceptional clinical care, innovation, education, and research, the PDM Honors Course provides qualified students an enrichment experience designed to cultivate enhanced understanding of and a leadership outlook in Oral Health related disciplines. These disciplines include Basic and Translational Research, Clinical Dentistry, Clinical Research, Community Oral Health, Endodontology, Nutritional Sciences, Oral and Maxillofacial Surgery, Orthodontics, Pediatric Dentistry, Periodontology, Personalized Care, Radiology and Oral Medicine and Vulnerable Populations.

Health Promotion Clinical experiences provide students with the opportunity to apply knowledge and develop competencies related to oral health promotion and disease prevention activities with individual patients in the clinics at Penn Dental Medicine.
0.25-2 Credit Hours

DENT 8102 Health Promotion Practicum II
Health Promotion Clinical experiences provide students with the opportunity to apply knowledge and develop competencies related to oral health promotion and disease prevention activities with individual patients in the clinics at Penn Dental Medicine.
0.25-2 Credit Hours
DENT 8121 Community Oral Health
Community Oral Health Experiences in alternate oral health care delivery settings provide students with the opportunity to develop and expand their skills in providing comprehensive oral health care in community based settings under the direct supervision of faculty members. Students are scheduled in the mobile dental vehicle, PennSmiles, and are also scheduled at Community Volunteers in medicine, a community based medical and dental treatment facility in West Chester, PA. Students attend small group seminars to discuss their experiences and theoretical underpinnings of community oral health activities.
2-6 Credit Hours

DENT 8161 Professional Practitioner Development III
This 4th year course will cover the practice management topics a dentist needs to consider upon graduating from dental school, including leadership, career and business decisions, human relations/personnel issues, working in teams, issues of burnout and mentoring, handling medical errors, and an overview of relationships a dentist needs to develop with many different other types of professionals in the dental industry. 1. Describe the effective practice management principles, including financial, leadership and staff development, legal and risk management, and communication, necessary for successful dental practice. 2. Appraise legal contracts and employment situations for risk/benefit. 3. Explore basic financial principles relevant to clinical practice. 4. Understand how malpractice works in the United States and discuss best practices in risk management. Understand the role of the State Board of Dentistry in monitoring the dental professional. 5. Reflect on career goals and dental career trajectory.
0.5-3 Credit Hours

DENT 8162 Professional Practitioner III
We want this course to challenge you to grow personally and in how you interact with other members of the Penn community. We've designed it to help you prepare for difficult conversations—about race and racism, white supremacy, gender, and health inequities—in the classroom, your field work, clinical work, internships, and beyond. We anticipate you'll have a range of feelings while moving through the course. Be mindful of your reactions. Lean in to what you find new or uncomfortable, where you find yourself becoming defensive, where you feel your own resistance. Reach out to the course co-director Dr. Beverley Crawford beverlyc@upenn.edu if you want help processing what you are learning. You'll have a chance to share your feedback about the course at the end. You are also welcome to reach out to us via email with your thoughts and questions.

Emphasis is placed on efficient and thorough dental care to ensure that the patient receives the highest quality of emergency dental care in a timely manner. The Admissions or Oral Diagnosis Clinic provides an initial evaluation for Penn Dental Medicine patients who register for comprehensive care on an appointment basis. Students that rotate through the Oral Diagnosis Clinic assess the medical and oral health status of the patients. Additionally, the medical status of all patients (except ASA I patients) are reassessed annually in the Oral Diagnosis Clinic.

0.25-3 Credit Hours

DENT 8340 Oral Medicine
0.25-3 Credit Hours

DENT 8341 Radiology Clinic
Students are assigned 12-15 rotations in the Radiology Clinic during their third and fourth years. During their rotations, they take full-mouth x-ray series on newly admitted patients who are sent to Radiology from the Admissions Clinic.
0.25-3 Credit Hours

DENT 8342 Radiology II Clinic
Students are assigned 12-15 rotations in the Radiology Clinic during their third and fourth years. During their rotations, they take full-mouth x-ray series on newly admitted patients who are sent to Radiology from the Admissions Clinic.
0.25-3 Credit Hours
DENT 8360 Personalized Care
The Medically Complex, Infectious Diseases and Special Disability Patient Care Clinical Course consists of ~20 half day rotations for the semester (~40 for the entire year). Each D4 student doctor is required to complete at least 2 med consult requests with interpretation of acquired medical information, 2 caries risk assessments and formulation of a personalized preventive regimen and 2 treatment modification plans (medical/behavioral/stabilization) during this semester. Initial patient visits provides an initial evaluation for medically complex, infectious disease and special needs patients who register for comprehensive dental care. Student doctors obtain and assess the comprehensive medical and oral health status of the patients. Students gain knowledge of clinical pharmacology, general and specialty medical issues including physical examination findings, associated laboratory medicine and other medical studies. The rotation also includes experience in performing an oral and extraoral exam such that the student is able to recognize deviations from normal findings, and is able to perform a head and neck cancer examination and issue a risk assessment. The student will also gain radiological experience including the appropriate selection and taking of radiographs. Additionally, the student will select the frequency of updating the complete medical history of the patient based upon complexity or at a minimum recommending that the patient be re-assessed annually. Medical consult requests for patients Not Medically Cleared – Each D4 student doctor is required to obtain at least 2 medical consultations. The medical consult request is the mechanism used to communicate with peers and other healthcare professionals when appropriate. These will be formative experiences and are separate from what is required in Admissions. Each of the 2 formative experiences must include requesting necessary medical information, reviewing the obtained information and formulating a management plan specific for the patient in the context of the necessary dental treatment. Patient care - Successful dental treatment of patients with disabilities and complex medical histories requires a thorough understanding of behavior management, internal medicine and how medical conditions can potentially complicate dental care. The PCare clinic trains you with effective strategies to prevent medical emergencies in a dental clinic, as well as how to behaviourally manage patients with special needs so as to make them comfortable with treatment in a dental clinic. This is achieved by having adequate knowledge of: behavioural management methods, frequent medical conditions; making necessary treatment adjustments and closely monitoring patients during dental treatment. In the case of a medical emergency, students are trained under the supervision of faculty to manage such emergencies.
0.25-4.25 Credit Hours

DENT 8361 Personalized Care
The Personalized Care Suite (PCare) patient care clinical course consists of ~20 half day rotations for the semester (~40 for the entire year). D4 student doctors are assigned a panel of patient and provide comprehensive dental care for patients with disabilities (IDD), medical complexities (MCC) and HIV (ICC). D4 students will be assigned sessions to provide an initial virtual encounter visit with new patients prior to the patient's in person appointment. Each D4 student is required to complete at least one formative evaluation in each of three areas (medical risk assessment including acquisition and interpretation of medical information; disease risk assessment with the formulation of a personalized preventive regimen with followup assessment and a treatment modification plan that includes assessment, formulation, implementation and evaluation of medical/behavioral/stabilization modifications necessary to provide dental care. These are evaluated using forms in axiUm-evaluation criteria can be found on CANVAS as well as in the student manual. Additionally, there will be a written mock OSCE given in December that will require the formulation of medical assessment, disease prevention and treatment modifications for simulated patients. Initial patient visits: Student doctors are required to obtain (if possible) information prior to patient's first in person appointment. Patients will be given a virtual appointment whenever possible to allow the student to collect pertinent information during an assigned teledentistry session. Information collected will include medical information as well as competition of the PCare intake form (as applicable). This will allow time to obtain necessary medical information prior to patient's initial in person appointment in order to facilitate delivery of actual dental care at the first clinic visit. At the initial in patient visit, students will complete a comprehensive oral exam (including a through extra and intra oral soft tissue exam) as well as dental and periodontal examination. Appropriate radiographs selection, acquisition and interpretation will be completed as well. All clinical and radiographic findings (including existing restoration, caries, defective restorations, fractures) will be entered into the odontogram along with the periodontal findings. The entered information will be used for the formulation of treatment plans. Medical consult requests for patients Not Medically Cleared – The medical consult request is the mechanism used to communicate with peers and other healthcare professionals when appropriate. These will be formative experiences and are separate from what is required in Admissions. The formative experience must include requesting necessary medical information, reviewing the obtained information and formulating a management plan specific for the patient in the context of the necessary dental treatment. DENT 8370 Oral Medicine Clinical Rotation
The Oral Medicine Clinical Course consists of 5 rotations as assigned from the Office of Academic Affairs in the Summer, Fall, or Spring semesters of the Senior year (D4). Oral Medicine C includes evaluation of SDM patients with oral mucosal disorder(s), salivary gland disease(s), temporomandibular disorders, or facial pain. Student doctors obtain and assess the comprehensive medical and oral health status of the patients. Students gain knowledge of general and specialty medical issues including physical examination findings, associated laboratory medicine and other medical studies. The Oral Medicine clinical care rotation also includes experience in performing an intraoral and extraoral examination such that the student is to be able to recognize deviations from normal findings and perform a head and neck cancer examination and issue a risk assessment. Examination of the cranial nerves, temporomandibular joint, and masticatory muscles will be stressed when indicated by the patient’s symptoms. The student will also gain experience in differential diagnosis, the appropriate selection and ordering of indicated laboratory tests, advanced imaging and initiating a medical consult request as a mechanism used to communicate with peers and other healthcare professionals when appropriate. Additionally, the student will select the frequency of clinical monitoring of the patient based upon the patient’s complexity and clinical status. Upon completion of the Oral Medicine Clinical Rotation course, the student doctor will be able to: • Obtain all necessary subjective information from the patient including the chief complaint, history of present illness, medical history, and social and family history. • Perform a physical examination including both intraoral and head and neck examination in order to construct a differential diagnosis. • Perform an Oral Cancer Exam and Risk Assessment. • Identify those patients whose oral disease may indicate an underlying systemic disease. • Formulate a differential diagnosis and discuss possible treatment plans for the patient. • Obtain a medical and dental consultations and communicate with peers and other healthcare professionals when appropriate. • Utilize diagnostic and/or investigative modalities to enhance differential diagnosis of oral and maxillofacial pathologic conditions. • Recognize on a patient the normal range of clinical findings, recognize deviations, and establish a differential diagnosis for orofacial abnormalities and pathology. Recognize significant deviations that require monitoring, treatment, or management.

The course introduces methods to perform systematic reviews and meta-analysis of clinical trials.
0.5-2 Credit Hours

GADS 5012 Systematic Review
An introduction to Evidence-Based Dentistry (EBD) Steps and description of the EBD process, benefits and challenges for the dental profession. Review EBD publications and how commentaries can be useful for understanding study methodology. Discuss the overall architecture of The Cochrane Library, introduction to formulation of the research question (PICO). Interactive discussion for selecting possible search terms in preparation for the database searches Introduction to the Preferred Reporting Items for Systematic Reviews and Meta-Analyses (PRISMA) tools.
2 Credit Hours

GADS 5021 Head and Neck Anatomy
The course will provide a review of principal anatomy comprising the stomatognathic system.
0.25-1.25 Credit Hour

GADS 5032 Osteoimmunology
The course will provide information about bone biology and metabolism and how it interfaces with the host immune response.
0.75-2 Credit Hours

GADS 5042 Pharmacology
The course will provide information about basic pharmacology and give the students a better understanding of drugs, interpreting complicated drug/medical histories, and understanding drug reactions.
0.75-2 Credit Hours

GADS 5052 Wound Healing
The course includes information given by experts in the basic and/or clinical sciences. The first seven lectures cover the basic biologic aspects of wound healing. These are followed by a series of five lectures discussing wound healing in a more clinical context covering the topics of fracture repair, osseointegration, orthodontics, endodontics and periodontics.
0.5-2 Credit Hours

GADS 5061 Maxillofacial Radiology
The course will provide in depth discussion about radiographic interpretation and differential diagnosis of various pathological conditions which show similarities on x-rays.
0.25-1.25 Credit Hour

GADS 5071 Ethics
The courses is to impart a general knowledge of fundamental concepts in principles of professionalism and ethical decision making with emphasis on care-based discussions.
0.25 Credit Hours

GADS 5081 Grand Rounds Conference
This conference based course will provide an understanding of the sequential management of multidisciplinary cases from a diagnostic and treatment basis. It will involve student presentations from each specialty followed by panel discussion.
0.25-1.5 Credit Hour

GADS 5082 Interdisciplinary Seminars Grand Rounds
This conference based course will provide an understanding of the sequential management of multidisciplinary cases from a diagnostic and treatment basis. It will involve student presentations from each specialty followed by panel discussion.
0.5 Credit Hours

GADS 5111 Adv Oral Surgery
Advanced oral surgery

3-6 Credit Hours

GADS 5272 Endodontic Rotation
Endodontic Rotation
3 Credit Hours

GADS 5302 Pathology
The course will provide information about the link between the basic and clinical sciences concerned with the mechanisms of disease (e.g., inflammation, neoplasia, and immunopathology). While the emphasis will be on oral pathology, systemic diseases and their impact on overall health will also be discussed.
0.25 Credit Hours

GADS 5311 Biological Systems
The course combines an introduction to the general principles of anatomy, histology, and physiology of the human cardiovascular, pulmonary and renal systems, with an extensive study of the pathology and therapeutics of these systems, with an explicit emphasis on their relationship to dental practice.
4 Credit Hours

GADS 5322 Oral Medicine
The purpose of this course is to provide foundational and applied knowledge of common oral medicine-related conditions as well as an understanding of medical conditions which directly affect the oral and maxillofacial structures.
0.5-2 Credit Hours
GADS 5331 Brightman Conference
This conference provides residents with didactic training in the fundamentals of oral medicine.
1 Credit Hour

GADS 5332 Brightman Conference II
The conference provides information about the fundamentals of oral medicine.
1-2.5 Credit Hours

GADS 5341 S. Gary Cohen Conference
The course will allow academic discussion of disease, disease processes, and therapeutic management of a wide range of topics related to oral medicine.
1.5 Credit Hour

GADS 5342 Cohen Conference II
The course will allow academic discussion of disease, disease processes, and therapeutic management of a wide range of topics related to oral medicine.
1.5-3 Credit Hours

GADS 5351 Oral and Maxillofacial Complex I
The Diagnostic Oral pathology and Radiology course is designed to give the dental student an understanding of the diagnosis of diseases pertaining to head and neck as well as interpreting histologic and radiographic investigations.
3 Credit Hours

GADS 5352 Oral and Maxillofacial Complex
The course will provide in depth discussion about the link between the basic and clinical sciences concerned with the mechanisms of disease (e.g., inflammation, genetic disease, neoplasia, and immunopathology). The emphasis will be on oral soft and hard tissue pathology, including oral manifestations of systemic diseases that may impact overall health of the patients.
2-3.5 Credit Hours

GADS 5362 Oral Medicine Rotation
Clinical rotations in specific specialty clinics will provide clinical experience in diagnosis, treatment planning, and patient care through observation.
6 Credit Hours

GADS 5492 Clinopathologic Conference
Oral Surgery conference
0.25 Credit Hours

GADS 5501 Orthodontics
The course provides information about the growth and development, concentrating on child somatic, craniofacial, and dental growth and development. The students will build a solid foundation along the lines of diagnosing problems and understanding the etiology of malocclusion and space maintenance.
1.5-3.5 Credit Hours

GADS 5502 Adjunctive Ortho Technique
This course is designed to expose the student to basic orthodontic laboratory and clinical procedures and encourages the development of technical abilities in banding, bonding, wire bending, and removable appliance fabrication.
0.5 Credit Hours

GADS 5511 Penn Orthodontics CE – Fall
pending
0.75 Credit Hours

GADS 5512 Orthodontics II
The course will provide the student with experience in early orthodontic treatment, exposing him/her to malocclusions arising in a normally developing craniofacial complex. Management of these problems aims at providing an unimpeded eruption and alignment of the permanent dentition. Other topics include biological and mechanical principles of tooth movement as well as corrective orthodontics.
0.5-1.5 Credit Hour

GADS 5521 Case Presentation I
The students attend the case presentation seminars.

4-7 Credit Hours
**GADS 5591 Orthodontics II**
The course will provide the student with experience in early Orthodontic treatment, exposing them to malocclusions arising in a normally developing craniofacial complex. Other topics include biological and mechanical principles of tooth movement as well as interceptive and comprehensive corrective Orthodontics.
1-2.5 Credit Hours

**GADS 5592 Penn Orthodontic Department Lecture Series II**
The course will provide the students various topics in Orthodontics described above.
Spring
1.25 Credit Hour

**GADS 5601 Pathology**
Pathology is a course that will apply what students have already learned to the study of disease. It is an essential link between the basic and clinical sciences concerned with the mechanisms of disease (e.g., inflammation, neoplasia, and immunopathology) and the disease processes that students will encounter during their careers in dentistry. While the emphasis will be on oral pathology, one must also be familiar with systemic diseases that may impact on the health of the patients.
0.25 Credit Hours

**GADS 5602 Maxillofacial Trauma**
pending
0.25 Credit Hours

**GADS 5611 Embryology, Genetics, Congenital Malformation**
The program includes the core basic science courses, designed to encompass the various disciplines basic to advanced studies in the science and practice of dentistry. They are designed to expose students to modern concepts in the areas covered with the objective of updating and expanding upon their predoctoral knowledge of oral biology. The courses are designed to meet the requirements of the different specialty organizations. All programs are presented on an academic term basis.
0.25 Credit Hours

**GADS 5612 Nitrous Oxide Nitrous Oxygen Analgesia**
This course is designed to provide didactic and clinical instruction in nitrous oxide/oxygen analgesia in accordance with American Dental Association Guidelines. Upon completion of this course, the participant will be eligible for an Anesthesia Restricted Permit II from the Pennsylvania State Board of Dentistry. Participants will have the opportunity to administer (to each other and patients) and undergo nitrous oxide sedation under close supervision. The course is geared to general dentists and dental specialists.
1 Credit Hour

**GADS 5621 Introduction to Pediatric Dentistry Fall**
A comprehensive course to provide an overview of main topics in Pediatric Dentistry including diagnosis, rationale for treatment and description of basic treatment techniques.
2 Credit Hours

**GADS 5622 Introduction to Pediatric Dentistry Spring**
A comprehensive course to provide an overview of main topics in Pediatric Dentistry including diagnosis, rationale for treatment and description of basic treatment techniques.
2 Credit Hours

**GADS 5631 Comprehensive Review of Pediatric Dentistry I**
The course is a more in depth/advanced presentations in several areas of Pediatric Dentistry through case presentations by medical and dental professionals.
Spring
4-6.5 Credit Hours

**GADS 5632 Comprehensive Review of Pediatric Dentistry II**
The course is a continuation of the Introduction to Pediatric Dentistry course and includes a more in depth/advanced presentations in several areas of Pediatric Dentistry through case presentations by medical and dental professionals.
4-7 Credit Hours

**GADS 5642 Pediatric Rotation**
Clinical rotations in specific specialty clinics will provide clinical experience in diagnosis, treatment planning, and patient care through observation.
4-7 Credit Hours

**GADS 5652 Embryology, Genetics, and Congenital Malformation**
This course will provide information about the persistent problems associated with cleft lip/palate and other types of craniofacial anomalies throughout lifetime of patients and include a thorough discussion of past and current concepts.
0.25-1.5 Credit Hour

**GADS 5662 Trauma**
The course provides students with an understanding of how to evaluate a patient presenting with dental trauma, the review of biological sequelae, and formulate a treatment plan and prognosis.
0.25-1.5 Credit Hour

**GADS 5701 Implant Dentistry**
Begin to develop a didactic basis for the development of a clinical competency in providing patient care to dentate, as well as partially and totally edentulous patients. Utilizing operative dentistry, fixed prostodontics, removable prosthetics and dental implants as restorative modalities will be emphasized.
1 Credit Hour

**GADS 5702 Classic and Current Literature Review Spring**
Students gain a fundamental knowledge of periodontal diseases and treatments through review of classic periodontal literature.
3 Credit Hours

**GADS 5711 Introduction to Periodontology**
The course will provide information about the current basic biological concepts applied to the healthy and diseased periodontium, the etiology, pathogenesis, and epidemiology of periodontal diseases. Different forms of periodontal diseases, non-surgical and surgical therapeutic modalities, multidisciplinary treatment approaches, and information on the prognosis of periodontal therapy will be discussed.
3 Credit Hours

**GADS 5712 Periodontics Case Presentation Spring**
Critical review and discussion of current concepts of surgical techniques and treatment in periodontology through case presentation.
1.25 Credit Hour

**GADS 5721 Classic and Current Literature Review**
This course aims to review and critically analyze classic and current periodontal literature, to acquire thorough knowledge of periodontal disease onset, progression, and treatment modalities, and to prepare those who are eligible for certification by the American Board of Periodontology.
3 Credit Hours
GADS 5722 Periodontal Prosthesis Case Presentation Spring
Critical review and discussion of current concepts of surgical techniques and treatment in Periodontal Prosthesis through case presentation.
2.25 Credit Hours

GADS 5731 Periodontics Case Presentation
Critical review and discussion of current concepts of surgical techniques and treatment in periodontology through case presentation.
1.25 Credit Hour

GADS 5732 Fundamentals of Periodontics Spring
A comprehensive course to provide an overview of periodontal anatomy, diagnosis and classification, rationale and basic techniques for periodontal therapy. Special emphasis is given to the correlation between histologic and clinical characteristics.
3 Credit Hours

GADS 5741 Periodontal Prosthesis Case Presentation Fall
Critical review and discussion of current concepts of surgical techniques and treatment in Periodontal Prosthesis through case presentation.
2.25 Credit Hours

GADS 5742 Periodontics Rotation
Two 3 week observational periods in the Periodontics Clinic
6.25 Credit Hours

GADS 5751 Fundamentals of Periodontics Fall
A comprehensive course to provide an overview of periodontal anatomy, diagnosis and classification, rationale and basic techniques for periodontal therapy. Special emphasis is given to the correlation between histologic and clinical characteristics.
3 Credit Hours

GADS 5801 Introduction to Advanced Fixed Prosthodontics
The art and science of Fixed Prosthodontics is discussed with emphasis on the fundamental biomechanical principles, materials and techniques required to rehabilitate oral function and form with single and multiple unit fixed prostheses at the level of a specialist. Conventional and digital workflow for clinical and laboratory fixed prosthodontic procedures, concepts of occlusion, articulators, esthetics as well as implant-supported fixed prosthesis are also included.
1 Credit Hour

GADS 5802 Literature Review Seminar II
The seminar includes the review, critical evaluation and discussion of prosthodontic classic and current literature with an intent to help participants develop and comprehend an evidence-based approach to oral health care and patient management with a focus on prosthodontic procedures.
2.75 Credit Hours

GADS 5811 Introduction to Advanced Removable Prosthodontics
The fundamentals of removable prosthodontics (complete denture and partial removable dental prosthesis) and the concepts of occlusion, articulators as well as implant retained and supported removable prosthesis laboratory steps are discussed.
0.5-1.5 Credit Hour

GADS 5812 Treatment Plan Seminar II
The course involves clinical case presentations and aims to develop skills in diagnosis, prognosis, and treatment planning and maintenance and treatment outcomes assessment of patients with complex prosthodontic needs.
2.75 Credit Hours

GADS 5821 Literature Review Seminar
The seminar includes the review, critical evaluation and discussion of prosthodontic classic and current literature with an intent to help participants develop and comprehend an evidence-based approach to oral health care and patient management with a focus on prosthodontic procedures.
0.5-2 Credit Hours

GADS 5822 Occlusion
The Diagnostic Oral pathology and Radiology course is designed to give the dental student an understanding of the diagnosis of diseases pertaining to head and neck as well as interpreting histologic and radiographic investigations.
0.5 Credit Hours

GADS 5831 Treatment Plan Seminar
The course involves clinical case presentations and aims to develop skills in diagnosis, prognosis, and treatment planning and maintenance and treatment outcomes assessment of patients with complex prosthodontic needs.
0.5-2 Credit Hours

GADS 5832 Prosthodontics Rotation
Clinical rotations in specific specialty clinics will provide clinical experience in diagnosis, treatment planning, and patient care through observation.
5-7 Credit Hours

GADS 5841 Current Literature Review Seminar
A monthly seminar series discussing current literature in the full scope of prosthodontics and relevant sciences.
0.5 Credit Hours

GADS 5842 Current Literature Review Seminar II
A monthly seminar series discussing current literature in the full scope of prosthodontics and relevant sciences.
0.25-1.5 Credit Hour

GADS 5852 Current Literature Review Seminar pending
0.5 Credit Hours

Dental - Graduate Core Curriculum (DADE)

DADE 9100 Clinical Microbiology
The purpose of Microbiology is to provide modern information in five broad categories: 1. Molecular biology of prokaryotic cells as it relates to oral health. 2. Basic principles of immunology as they relate to infection and immunity. 3. Infectious diseases caused by microbial agents. 4. Relationship of microbes to oral health and how microbes cause caries and periodontal disease. 5. Basic aspects of viral infections and how they related to oral health (herpes, hepatitis B and HIV)
Fall
0.5-2 Credit Hours

DADE 9101 Grand Rounds I
This conference based course will provide an understanding of the sequential management of multidisciplinary cases from a diagnostic and treatment basis. It will involve student presentations from each specialty followed by panel discussion.
0.25-1.25 Credit Hour
DADE 9102 Grand Rounds II
This conference based course will provide an understanding of the sequential management of multidisciplinary cases from a diagnostic and treatment basis. It will involve student presentations from each specialty followed by panel discussion.
0.25-1.25 Credit Hour

DADE 9103 Grand Rounds III
This conference based course will provide an understanding of the sequential management of multidisciplinary cases from a diagnostic and treatment basis. It will involve student presentations from each specialty followed by panel discussion.
0.25-1.25 Credit Hour

DADE 9104 Grand Rounds IV
This conference based course will provide an understanding of the sequential management of multidisciplinary cases from a diagnostic and treatment basis. It will involve student presentations from each specialty followed by panel discussion.
0.25-1.25 Credit Hour

DADE 9105 Grand Rounds V
This conference based course will provide an understanding of the sequential management of multidisciplinary cases from a diagnostic and treatment basis. It will involve student presentations from each specialty followed by panel discussion.
0.25-1.25 Credit Hour

DADE 9106 Grand Rounds VI
This conference based course will provide an understanding of the sequential management of multidisciplinary cases from a diagnostic and treatment basis. It will involve student presentations from each specialty followed by panel discussion.
0.25-1.25 Credit Hour

DADE 9107 Grand Rounds VII
This conference based course will provide an understanding of the sequential management of multidisciplinary cases from a diagnostic and treatment basis. It will involve student presentations from each specialty followed by panel discussion.
0.25-1.25 Credit Hour

DADE 9108 Grand Rounds VIII
This conference based course will provide an understanding of the sequential management of multidisciplinary cases from a diagnostic and treatment basis. It will involve student presentations from each specialty followed by panel discussion.
0.25-1.25 Credit Hour

DADE 9110 Ethics
The program includes the core basic science courses, designed to encompass the various disciplines basic to advanced studies in the science and practice of dentistry. They are designed to expose students to modern concepts in the areas covered with the objective of updating and expanding upon their predoctoral knowledge of oral biology. The courses are designed to meet the requirements of the different specialty organizations. All programs are presented on an academic term basis.
Fall
0.25 Credit Hours

DADE 9120 Genetics, Embryology
The treatment of patients with cleft lip/palate and other types of craniofacial anomalies in the United States has improved dramatically, many children still receive care that is substantially inferior to what can or should be provided. Inadequate care results from diagnostic errors, failure to recognize and treat the full spectrum of health problems associated with these anomalies, unnecessary and poorly timed treatment, and inappropriate or poorly performed procedures. This course will inform of these persistent problems. Embryology lecture is an overview of the field from its 19th Century with Hegel and "Ontogeny recapitulates Phylogeny" to the 21st century research on "Evo-Devo" and the HOX development genes and their relations to the contemporary understanding of embryological development including stem cells.
Fall
0.25 Credit Hours

DADE 9140 Maxillofacial Radiology
This course is intended to supplement the basic science course by radiographically showing dissimilar pathoses that appear similar on x-rays.
Fall
0.25 Credit Hours

DADE 9150 Nitrous Oxide Analgesia
This course is designed to provide didactic and clinical instruction in nitrous oxide/oxygen analgesia in accordance with American Dental Association Guidelines. Upon completion of this course, the participant will be eligible for an Anesthesia Restricted Permit II from the Pennsylvania State Board of Dentistry. Participants will have the opportunity to administer (to each other and patients) and undergo nitrous oxide sedation under close supervision. The course is geared to general dentists and dental specialists.
0.75-1.5 Credit Hour

DADE 9160 Practice Management
Practice Management Lectures and clinical experiences provide students with foundation knowledge regarding the policies and procedure governing practice.
0.25-0.75 Credit Hours

DADE 9170 Pathology
Pathology is a course that will apply what students have already learned to the study of disease. It is an essential link between the basic and clinical sciences concerned with the mechanisms of disease (e.g., inflammation, neoplasia, and immunopathology) and the disease processes that students will encounter during their careers in dentistry. While the emphasis will be on oral pathology, one must also be familiar with systemic diseases that may impact on the health of the patients.
0.25 Credit Hours

DADE 9180 Pulp/Dentin Biology
Biology of Pulp/Dentin Complex Microcirculation COURSE GOALS/ OBJECTIVES: 1. To give the student an understanding of the normal and abnormal biology of the dentin pulp complex. 2. To provide the student with fundamental information on clinically related subjects such as pain control and pulp capping procedures. 3. To provide the student with a general knowledge of the literature related to pulp biology. 4. To review the various physiological methods of investigating pulpal tissue.
0.25 Credit Hours
DADE 9190 Head and Neck Anatomy
The purpose of this lecture series is to review the principal anatomy comprising the stomatognathic system. The lectures build on the knowledge of head and neck anatomy acquired in dental school and integrate clinical relevance to this important subject. Slide presentations are employed to teach the anatomical structures of the major head and neck morphologic systems.
0.75 Credit Hours

DADE 9191 Grand Rounds IX
This conference based course will provide an understanding of the sequential management of multidisciplinary cases from a diagnostic and treatment basis. It will involve student presentations from each specialty followed by panel discussion.
0.25-1.25 Credit Hour

DADE 9192 Grand Rounds X
This conference based course will provide an understanding of the sequential management of multidisciplinary cases from a diagnostic and treatment basis. It will involve student presentations from each specialty followed by panel discussion.
0.25-1.25 Credit Hour

DADE 9193 Grand Rounds XI
This conference based course will provide an understanding of the sequential management of multidisciplinary cases from a diagnostic and treatment basis. It will involve student presentations from each specialty followed by panel discussion.
0.25-1.25 Credit Hour

DADE 9194 Grand Rounds XII
This conference based course will provide an understanding of the sequential management of multidisciplinary cases from a diagnostic and treatment basis. It will involve student presentations from each specialty followed by panel discussion.
0.25-1.25 Credit Hour

DADE 9200 Advance Library
0.25 Credit Hours

DADE 9210 Cultural Competency
Participants in this workshop will assess their beliefs and awareness around cross cultural communication and diversity and inclusiveness. Through lecture, group participation, skill practice, role-play, case studies, and coaching they learn to advance their skill levels and take communication to the next level. Participants will also be recorded at the opening and conclusion of the to assess skill development.
0.25 Credit Hours

DADE 9220 Pharmacology
Pharmacology is both a basic science and a clinical science. It builds on the foundation of anatomy, biochemistry, physiology, and pathology and bridges the gap into clinical dentistry. This course in basic pharmacology will give the students a better understanding of drugs, interpreting complicated drug/medical histories, and understanding drug reactions.
0.5 Credit Hours

DADE 9230 Osteoimmunology
This is a web based course with face to face review sessions prior to in class testing over course material. The material for the course will be presented to students via the online interface. This course covers topics from the text book “osteoimmunology” and from supplemental material provided on Canvas. The course directors will be available by phone, appointment or email for a one hour period each week to address questions. In addition, 90 minute review sessions will be held prior to each exam.
2 Credit Hours

DADE 9240 Oral Medicine
There are numerous conditions that affect the oral and maxillofacial region, including oral mucosal diseases, temporomandibular joint disorders, orofacial pain syndromes and salivary gland dysfunction. Patients presenting with these disorders can be challenging to diagnose and manage. Several techniques are available for evaluation of these conditions and will guide the clinician toward proper diagnosis. Management protocols vary based upon the specific affecting the oral and maxillofacial region. This course will highlight the etiology, clinical presentation, diagnostic techniques, and management protocols of several conditions including oral mucosal diseases, temporomandibular joint disorders, orofacial pain syndromes, and salivary gland disorders.
0.25 Credit Hours

DADE 9250 Nutrition & Oral Health
0.25 Credit Hours

DADE 9260 Wound Healing
The course includes information given by experts in the basic and/or clinical sciences. The first seven lectures cover the basic biologic aspects of wound healing. These are followed by a series of five lectures discussing wound healing in a more clinical context covering the topics of fracture repair, osseointegration, orthodontics, endodontics and periodontics.
2 Credit Hours

DADE 9280 Biostatistics
This course will provide a summary of the main statistical concepts needed to to make decisions based on data. Some of the material that will be covered includes: data displays, summary statistics, probability distributions and expectation, statistical inference procedures for univariate and bivariate data, linear regression models, and analysis of variance. You will learn how to test a hypothesis, which includes phrasing a hypothesis, making a rationale choice of experimental design, choosing the statistics best suited to test the hypothesis, and assessing the results with standard errors, confidence intervals, and p-values.

Dental - Graduate Oral and Population Health (GOPH)

GOPH 5000 Epidemiology and Oral Health
The online course "Epidemiology and Research Methods in Oral Health" offers a comprehensive learning experience, blending asynchronous interactive lectures with synchronous seminars. Designed as an introductory course, its primary goal is to provide students with a holistic understanding of essential epidemiological and population research methods. The course content encompasses various key aspects, including study design, study conduct, and specialized analysis per design.
1.5-3 Credit Hours
GOPH 5001 Biostatistics and Oral Health
The online course “Biostatistics and Oral Health” comprises asynchronous interactive lectures complemented by synchronous seminars. Designed as an introductory course, its primary goal is to provide students with the fundamental knowledge and skills to design, conduct, and interpret statistical analyses in population research. The course content focuses on statistical methods from a frequentist approach, including numerical and graphical representation of data, probability and distributions, hypothesis testing, regression methods, and survival analysis.
1.5-3 Credit Hours

This course will provide foundational knowledge in community, population, and public health in the context of oral healthcare. The course will focus on the determinants of health, understanding population health from the elements that define population health progressing to systems that affect health, and will help students develop a framework to understand evidence-informed policies.
1.5-3.5 Credit Hours

GOPH 5003 Bioethics in Oral and Population Health
The online course “Bioethics in Oral and Population Health” uses asynchronous interactive lectures and synchronous seminars to equip students with the knowledge and skills required to address ethical considerations and challenges inherent in conducting research within diverse populations. This course provides students with a deep understanding of the ethical frameworks, principles, and practices that guide population research, fostering their ability to critically analyze and navigate complex ethical dilemmas.
1.5-3.5 Credit Hours

GOPH 5004 Essential Research Skills in Oral and Population Health: Seminar Series
The online seminar series (asynchronous interactive lectures and synchronous seminars), “Essential Research Skills in Oral and Population Health: Seminar Series,” is designed for aspiring health professionals and researchers in the field of oral and population health. The program aims to instill a comprehensive understanding of essential research skills, equipping students with complementary tools beyond health research methods. The series comprises five seminars: Scientific Writing, Grant Writing, Searching the Scientific Literature, Critical Thinking, and Introduction to Statistical Packages. By the end of the series, participants will have a solid foundation in research skills necessary for successful career progression in oral and population health.
0.5-3 Credit Hours

GOPH 5100 Systematic Reviews and Meta-analysis
The online course (asynchronous interactive lectures and synchronous seminars) “Systematic Reviews and Meta-analysis” is designed to provide participants with the knowledge and skills necessary to conduct comprehensive and rigorous systematic reviews in various fields. This course provides a deep understanding of the principles, methodologies, and practical techniques involved in conducting systematic reviews and meta-analyses. Participants will learn to formulate focused research questions, develop comprehensive search strategies, and systematically retrieve and assess relevant primary studies. They will gain proficiency in data extraction and analysis, including statistical techniques for meta-analysis. The course also covers methods for assessing the certainty of the evidence using the GRADE approach, and optimal protocol development and registration, and manuscript preparation.
1.5-3 Credit Hours

GOPH 5101 Health Economics and Oral Health
The online course “Health Economic and Oral Health” explores the intersection of health economics and oral health, providing participants with a deep understanding of the economic principles and policies shaping oral healthcare systems. The course uses a combination of asynchronous interactive lectures and synchronous seminars. Through sessions covering foundational topics such as health economics introduction, health production, and demand/supply of healthcare, participants gain the knowledge to analyze the impact of economic factors on patient and provider behavior in oral health care. The course further delves into evaluating interventions, conducting economic evaluations, and assessing risk of bias in model-based economic evaluations specific to oral health. Participants will develop the skills to conduct systematic reviews of economic evaluations and explore strategies for workforce planning within the context of oral health.
1.5-3 Credit Hours

GOPH 5102 Methodology of Healthcare Guidelines
The online course “Methods for healthcare guidelines” aims to provide students with the fundamental knowledge and practical skills to produce healthcare guidelines. Using asynchronous interactive lectures and synchronous seminars and role-play activities, students will learn about the role of guidelines in healthcare, their development process, critical appraisal skills, and stakeholder engagement. In addition, they will learn how to define clinical questions, design evidence synthesis strategies to inform the formulation of recommendations and apply the GRADE approach to assess the certainty of the evidence and move from the evidence to the decisions. By the end of the course, students will become familiar with key strategies for the dissemination, implementation, and evaluation of healthcare guidelines.
1.5-3 Credit Hours

GOPH 5103 Vulnerable Populations and Oral Health
The online course “Vulnerable Populations and Oral Health” uses a combination of asynchronous interactive lectures and synchronous seminars and aims to explore the unique oral health challenges faced by vulnerable populations. Students will gain a holistic understanding of how factors such as disease, socio-economic status, race, ethnicity, caste, age, gender, sexual orientation, and specific life circumstances impact oral health. Through this course, students will gain insights into conducting population-level research and the identification of oral healthcare strategies tailored to diverse needs.
1.5-3 Credit Hours

GOPH 5104 Integrative Global Oral Health
The online course “Integrative Global Oral Health” provides a synoptic view of global oral health, diving into topics like disease burden, care delivery systems, and major global health initiatives, policies, and the mission of key nongovernmental organizations and health care agencies. Through asynchronous interactive lectures and synchronous seminars, the course will address what are the needs of special populations, examine significant global oral health policies and reports, and connect oral health to larger issues like sustainable development goals and planetary health. This course is an essential journey for anyone committed to promoting oral health globally.
1.5-3 Credit Hours
GOPH 5105 Planetary Health and Oral Health
This innovative course provides a comprehensive understanding of the interconnectedness between planetary health and oral health. Engaging with global policies, stakeholder roles, conflict resolution, implementation strategies, and progress measurement, it equips learners to foster holistic health perspectives. Emphasizing leadership in the health sector, the course promotes advocacy and policy-making geared towards sustainable health outcomes at multiple levels.
1-3 Credit Hours

GOPH 5106 The Aging Process and Oral Health
The online course “The Aging Process and Oral Health” explores the intricacies of aging, health care, oral health, and population-based research. Through asynchronous interactive lectures and synchronous seminars, students will delve into the epidemiology of oral diseases in older people, the systemic consequences of poor oral health, preventive measures, and relevant policies. The course also covers the unique challenges frail and dependent populations face and ways to address them. The course provides students with the knowledge and skills to contribute meaningfully to oral health research and policy-making for older adult populations.
1.5-3 Credit Hours

GOPH 5201 Thesis I
Students will work on their thesis work, which is required to graduate.
8-11 Credit Hours

GOPH 5202 Thesis II
Students will work on their thesis work, which is required to graduate.
8-11 Credit Hours

GOPH 5203 Thesis III
Students will work on their thesis work, which is required to graduate.
8-11 Credit Hours

GOPH 5204 Thesis IV
Students will complete and defend their thesis work.
8-11 Credit Hours

Dental - Graduate Oral Health Sciences (GOHS)

GOHS 5011 Cellular & Molecular Biology
The objectives of the Cellular and Molecular Biology course are to develop a general knowledge of fundamental concepts in cell and molecular biology and metabolism. The course utilizes both lectures and seminars and is presented in three modules with an exam at the end of each module: Module I: Cell Biology. To develop a thorough understanding of the basic principles of molecular and cell biology. Module 2: Molecular Biology. Comprehension at an advanced level of selected topics in molecular biology including gene therapy.
Fall
1-4 Credit Hours

GOHS 5021 Microbiology & Immunology
This lecture course is structured to provide basic information in four broad categories relating to oral health. 1. The evolutionary relationship, structure, physiology and molecular biology of prokaryotic cells as it relates to oral health. This knowledge provides the rational basis for many aspects of chemotherapy, understanding mechanisms of microbial pathogenesis, sterilization and disinfection and the host response to infection. Emphasis is placed on bacterial genetics physiology and regulatory mechanisms [MODULE 1]. 2. The relationship, structure and molecular biology of viruses and in particular those infections that relate to oral health. This knowledge provides the rational basis for many aspects of understanding mechanisms of viral pathogenesis, the host response to viral infection, the basis of viral vaccines and chemotherapy [MODULE 1]. 3. The human immune system and its response to challenge by microorganisms. Emphasis is placed on the interactions between antibodies and antigens, the roles of the innate and cellular immunity and the activities of B and T cells. This information provides the foundation for understanding how the host responds to invasion by microorganisms to prevent or lessen the severity of infectious disease [MODULE 2].
Fall
1-4 Credit Hours

GOHS 5031 Anatomy, Histology & Physiology
This course will provide the student with an introduction to histology, gross anatomy and physiology of the human body. All basic tissue types, including epithelium, connective tissue and its specialized forms, muscle and nerve will be discussed in detail. This will be followed by a review of the major organ systems, including heart, lung, kidney, hepatobiliary (liver and gall bladder), gastrointestinal tract and endocrine system. Students will be introduced to histology and microscopic identification of anatomic structures using a digital atlas. In conjunction, lectures will introduce the student to the early mechanisms of embryonic development with a focus on tissue patterning and functional mechanisms that give rise to the developing human form including the head and neck and teeth.
Fall
1-4 Credit Hours
GOHS 5042 Cellular & Molecular Basis of Diseases
Cellular and Molecular Basis of Disease focuses on the underlying cellular and molecular basis of disease and is a critical component of a larger subject commonly known as Pathology. In its simplest terms, Pathology is the study of the structural, biochemical and functional abnormalities that develop within cells, tissues and organs resulting in the signs and symptoms of (i.e., clinical manifestations) disease. Traditionally, Pathology is divided into general and systemic pathology. General pathology focuses on the main causes of disease; specifically, the reactions of cells and tissues to abnormal stimuli and to inherited defects. Systemic pathology examines these same reactions as they apply to specific organs. The disease process forms the core of pathology and includes: etiology, pathogenesis, lesions (which may be biochemical and/or structural) and clinical manifestations. Common to all disease is an “initiating” event known as etiology which may be genetic or acquired. Virtually all disease develop through a process (or pathogenesis) that involves one (or more) of six basic mechanisms: inflammation, vascular disturbances, immune-mediated, abnormal growth (neoplasia), genetic defects and infection. General pathology is typically presented in the context of these six pathogenic mechanisms. Cellular and Molecular Basis of Disease will focus on the mechanisms by which cells may be injured and the relationship between cellular injury and the disease process. We will also study three (of six) pathogenic mechanisms: vascular disturbances, inflammation, and infectious diseases. The concepts presented in this course will prepare the student for understanding specific diseases as they apply to the various organ systems.
3.5-5 Credit Hours

GOHS 5051 Hard Tissue Biology
Hard tissue biology course will provide the student with foundational and applied knowledge of bone from anatomical, radiological and biological perspectives. Presented in lectures and seminars, the course will have a strong emphasis on craniofacial bones. The course will present a basic knowledge of bone based on developmental, anatomical, histological, radiological, molecular and functional perspectives. It will present fundamental principles of cell-cell interactions, extracellular matrix deposition and mineralization related to bone homeostasis, remodeling and healing. Concepts will be emphasized with relevant clinical and radiological presentation of bone diseases using different imaging modalities.
Fall
1-4 Credit Hours

GOHS 5072 Advanced Library, Biostatistics, and Nutrition
The course will provide information about the fundamentals of literature search, and appraisal and introduction to basic statistical methods and discuss the significance of nutrition for oral health.
0.5-1.25 Credit Hour

GOHS 5081 Clinical Rotations I
This course will provide an opportunity for chairside observation of initial patient visits, medical consultation requests for medically-compromised patients, treatment planning and ongoing patient dental care. Upon completion of this course, students should have a good knowledge of chair-side dentist-patient interactions.
Fall
1-3 Credit Hours

GOHS 5082 Clinical Rotations II
Introduction to dental practice. Students will rotate one day per week in the pre-doctoral clinic observing skills such as patient communication, team building, and record keeping.
1.5-2.5 Credit Hours

GOHS 5091 Capstone Course I
Capstone course will provide the student with foundational and applied knowledge needed to conduct a capstone research project. Presented in lectures and seminars, the course will guide the student on how to design and complete an oral health related project. Concepts learned will be emphasized by written and oral presentation of the student's capstone project proposal.
Fall
0.5-2.5 Credit Hours

GOHS 5092 Capstone Course II
Guiding students to design and complete an oral health related project and present it in the form of a thesis.
1-2 Credit Hours

GOHS 5102 Professionalism, Ethics, and Healthcare Communities
This course will provide foundational knowledge on the doctor patient relationship, medical history skills and the basics of dental orofacial physical exam and developing the doctor patient relationship. All throughout, students will receive instruction in the principles of professionalism and ethical decision making with emphasis on case-based discussions.
0.5-1.5 Credit Hour

GOHS 5501 Introduction to Professionalism, Community and Patient Management
Introduction to Professionalism, Patient Management, and Community is a mixed-methods course designed to introduce best practices in patient interaction and management, concepts of medical evaluation of the dental patient, and considerations around ethical and inclusive treatment of all patients. This course will provide foundational knowledge in: cultural competency, fundamental concepts in principles of professionalism and ethical decision making, the doctor patient relationship, considerations of academic integrity and professional communication, components and application of the medical history, basics of a dental/orofacial exam and components of a general physical exam, including the general survey, vital signs, cranial nerve exam, head and neck examination, and examination of the heart and lungs. The course is designed as an introduction to professionalism and patient evaluation. This module will consist of lectures, three seminar sessions devoted to an investigation of ethical decision making, and two mandatory small group practical rotations where you will be exposed to application of the medical history and physical examination in practice. The ethics seminars will ask you to practice the skills reviewed during ethics lecture 1 and applied in ethics lecture 2. These discussion-based gatherings have a goal of providing students with knowledge and experiences in identifying and resolving ethical dilemmas. This includes stating the facts of a given case, explaining any temptations that may interfere with ethical behavior, creating and applying strategies for effectively dealing with ethical dilemmas, identifying resources available for resolving ethical concerns, and understanding aspects of professional communication among patients, colleagues, faculty, and staff, such as verbal, non-verbal, and written communication (including use of social media), and diversity and inclusion. The first practical workshop will also take place in a seminar setting and review components of medical history and physical exam, providing an opportunity for practice on classmates. The second rotation will occur in the Personalized Care Suite where you will assist senior students as they take a medical history and perform a physical examination on comprehensive care patients.
Fall
1-4 Credit Hours
GOHS 5511 Multidisciplinary Seminars I
The main objective of this course is to ensure that you develop the ability to understand biomedical, behavioral and clinical sciences and apply such information in a problem solving context for the comprehensive treatment planning and management of your patients. This course is broken up into three different modules. Each module will be directed by three to four faculty members. The modules will consist of an online component and a seminar component. The online component will include review of a multi-disciplinary case, video lectures, pertinent research articles and a knowledge assessment. The module directors will be the primary knowledge experts and content providers for the course. The discussion leaders will facilitate the seminar component.
Fall
0.25-2 Credit Hours

GOHS 5512 Multidisciplinary Seminars II
Continuation of the fall semester seminars which will develop knowledge in biomedical, behavioral and dental sciences and practice management for comprehensive treatment planning and patient management.
0.5-1 Credit Hour

GOHS 5522 Clinical Seminars
The seminar is an open forum discussion in which students make patient case presentations including the diagnosis, treatment plan, and therapy.
0.75-1.5 Credit Hour

GOHS 5532 Advanced Library, Biostatistics, and Nutrition
The course will provide information about the fundamentals of literature search, and appraisal and introduction to basic statistical methods and discuss the significance of nutrition for oral health.
0.5-1.25 Credit Hour

GOHS 5541 Dental Auxiliary Utilization IA
DAU (Dental Auxiliary Utilization) is an interdisciplinary clinical course designed for MOHS students who have earned dental degrees in countries outside of the United States and who are enhancing academic and clinical skills in order to become familiar with US dentistry in clinical practice through participation and observation as a trained dental assistant in a multi-specialty practice setting at the University of Pennsylvania Family Dental Practice and selected post-graduate specialty clinics. MOHS students will learn the role of a trained dental assistant, as well as the roles of every auxiliary member of the dental care team: assistant, hygienist, EFDA assistant, front desk, billing office, etc. through lecture and then through completion of assigned rotations in the Family Practice and selected clinics. Coursework will include learning fundamentals of obtaining standard radiology views as identified by the Dental Assistant National Boards (DANB) and preparation for the exam and licensure. In addition, topics such as ergonomics, infection control, team building, materials management, and record keeping among others will be explored in the lecture series. Through hands-on assisting practicing dentists and dental residents, MOHS DAU students will learn US norms of dental practice care including patient communication and management, dental team roles and responsibilities, operatory management, infection control, commonly utilized dental materials management, standard radiology technique, and records management among others. Each MOHS student is required to attend all lectures where these topics will be introduced and explored, and prior to the first clinical rotation each student will be required to pass a written assignment to assess and document their understanding of the topics explored in lectures. Students are also required to comply with all Penn Dental and University requirements for immunizations, documentation and completion of onboarding coursework.
Fall
1-4 Credit Hours

GOHS 5542 Dental Auxiliary Utilization IB
Continuation of the fall semester course designed to teach four-handed dental assisting technique as well as skills such as patient communication, team building, and record keeping.
2-3 Credit Hours

GOHS 5552 Pharmacology
The student will gain understanding of the effect of drugs on human body.
0.25-1 Credit Hour

GOHS 5561 Clinical Rotations I
This course will provide an opportunity for one day per week of clinical rotations through specialty clinics in Endodontics, Oral Surgery, Orthodontics, Periodontics, Periodontal Prosthesis, Prosthodontics, other PDM extramural community sites and the PDM Office of Fiscal Operations.
Fall
1-4 Credit Hours

GOHS 5562 Clinical Rotations II
Rotations through specialty clinics in Endodontics, Oral Surgery, Orthodontics, Periodontics, Periodontal Prosthesis, Prosthodontics, other PDM extramural community sites and the PDM Office of Fiscal Operations.
1.5-2.25 Credit Hours

GOHS 5571 Dental Auxiliary Utilization
DAU (Dental Auxiliary Utilization) is an interdisciplinary clinical course designed for MOHS students who have earned dental degrees in countries outside of the United States and who are enhancing academic and clinical skills in order to become familiar with US dentistry in clinical practice through participation as a trained dental assistant in a multispecialty practice setting at the University of Pennsylvania Family Dental Practice. MOHS students will learn the role of a trained dental assistant, as well as the roles of every auxiliary member of the dental care team: assistant, hygienist, EFDA assistant, front desk, billing office, etc. through lecture and then through completion of assigned rotations in the Family Practice. In addition, topics such as ergonomics, infection control, team building, materials management, and record keeping among others will be explored in the lecture series. Through hands-on assisting practicing dentists in the Penn Dental Family Practice, MOHS DAU students will learn US norms of dental practice care including patient communication and management, dental team roles and responsibilities, operatory management, infection control, commonly utilized dental materials management, and records management among others. Each MOHS student is required to attend all lectures where these topics will be introduced and explored, and prior to the first clinical rotation each student will be required to pass a written assignment to assess and document their understanding of the topics explored in lectures. Students are also required to comply with all Penn Dental and University requirements for immunizations, documentation and completion of onboarding coursework. The course consists of 6.15 hour lectures, successful completion of the written evaluation, compliance with all Penn Dental Medicine and University onboarding coursework, and completion of a weekly assigned rotation in the Penn Dental Family Practice of four hours each following a clinical orientation.
Fall
0.25 Credit Hours
GOHS 5572 Behavioral Sciences I
Students will gain the necessary knowledge and skills in oral health promotion and disease prevention activities with individuals, communities and populations. Course topics include discussion of the philosophy, modalities, rationale and evaluation of health promotion and disease prevention activities related to caries, periodontal diseases and oral cancer.
1.5-2.5 Credit Hours

GOHS 5591 Capstone Course I
Capstone course will provide the student with foundational and applied knowledge needed to conduct a capstone research project. Presented in lectures and seminars, the course will guide the student on how to design and complete an oral health related project. Concepts learned will be emphasized by written and oral presentation of the student's capstone project proposal.
Fall
1-3 Credit Hours

GOHS 5592 Capstone Course II
Guided research or service project that addresses at least three competencies including literature review & synthesis, patient-based surveys & analysis, quantitative/qualitative analysis and others.
0.75-1.75 Credit Hour

Dental - Graduate Oral Medicine (GOMD)

GOMD 9001 OMFS History & Physical Exam
This course, offered through the Department of Oral and Maxillofacial Surgery at the Hospital of the University of Pennsylvania, is designed to cover topics relevant for residents involved in the on-call service, including maxillofacial infections, trauma, and advanced head and neck anatomy.
0.75-1.75 Credit Hour

GOMD 9011 S. Gary Cohen Conference I
This course in Oral Medicine meets weekly and will allow academic discussion of disease and disease processes, as well as therapeutic management of a wide range of topics related to the field of Oral Medicine including but not limited to, oral-mucosal disease, orofacial pain, salivary gland diseases, infectious disease, oral pathology, oral radiology, and internal medicine. In addition, this course allows students to present and discuss recent scientific articles related to the field of oral medicine. Students will develop the ability to critically review papers.
Residents will meet with faculty members to discuss recent literature in their field of interest and/or expertise.
0.5-2 Credit Hours

GOMD 9012 S. Gary Cohen Conference II
This course in Oral Medicine meets weekly and will allow academic discussion of disease and disease processes, as well as therapeutic management of a wide range of topics related to the field of Oral Medicine including but not limited to, oral-mucosal disease, orofacial pain, salivary gland diseases, infectious disease, oral pathology, oral radiology, and internal medicine. In addition, this course allows students to present and discuss recent scientific articles related to the field of oral medicine. Students will develop the ability to critically review papers.
Residents will meet with faculty members to discuss recent literature in their field of interest and/or expertise.
0.5-2 Credit Hours

GOMD 9013 S. Gary Cohen Conference III
This course in Oral Medicine meets weekly and will allow academic discussion of disease and disease processes, as well as therapeutic management of a wide range of topics related to the field of Oral Medicine including but not limited to, oral-mucosal disease, orofacial pain, salivary gland diseases, infectious disease, oral pathology, oral radiology, and internal medicine. In addition, this course allows students to present and discuss recent scientific articles related to the field of oral medicine. Students will develop the ability to critically review papers.
Residents will meet with faculty members to discuss recent literature in their field of interest and/or expertise.
0.5-2 Credit Hours

GOMD 9014 S. Gary Cohen Conference IV
This course in Oral Medicine meets weekly and will allow academic discussion of disease and disease processes, as well as therapeutic management of a wide range of topics related to the field of Oral Medicine including but not limited to, oral-mucosal disease, orofacial pain, salivary gland diseases, infectious disease, oral pathology, oral radiology, and internal medicine. In addition, this course allows students to present and discuss recent scientific articles related to the field of oral medicine. Students will develop the ability to critically review papers.
Residents will meet with faculty members to discuss recent literature in their field of interest and/or expertise.
0.5-2 Credit Hours

GOMD 9021 V.J. Brightman Conference I
This course meets weekly and provides residents with didactic training in the fundamentals of oral medicine, including oral mucosal diseases, orofacial pain syndromes, oral pathology, oral and maxillofacial radiology, laboratory medicine, internal medicine, pharmacology, and research methodology. The lectures are given by faculty within the Department of Oral Medicine and the University of Pennsylvania School of Dental Medicine.
0.5-2 Credit Hours

GOMD 9022 V.J. Brightman Conference II
This course meets weekly and provides residents with didactic training in the fundamentals of oral medicine, including oral mucosal diseases, orofacial pain syndromes, oral pathology, oral and maxillofacial radiology, laboratory medicine, internal medicine, pharmacology, and research methodology. The lectures are given by faculty within the Department of Oral Medicine and the University of Pennsylvania School of Dental Medicine.
0.5-2 Credit Hours

GOMD 9023 V.J. Brightman Conference III
This course meets weekly and provides residents with didactic training in the fundamentals of oral medicine, including oral mucosal diseases, orofacial pain syndromes, oral pathology, oral and maxillofacial radiology, laboratory medicine, internal medicine, pharmacology, and research methodology. The lectures are given by faculty within the Department of Oral Medicine and the University of Pennsylvania School of Dental Medicine.
0.5-2 Credit Hours

GOMD 9024 V.J. Brightman Conference IV
This course meets weekly and provides residents with didactic training in the fundamentals of oral medicine, including oral mucosal diseases, orofacial pain syndromes, oral pathology, oral and maxillofacial radiology, laboratory medicine, internal medicine, pharmacology, and research methodology. The lectures are given by faculty within the Department of Oral Medicine and the University of Pennsylvania School of Dental Medicine.
0.5-2 Credit Hours
GOMD 9031 Oral & Maxillofacial Pathology I
This course introduces residents to the techniques and principles needed for the histopathologic evaluation of biopsy specimens. These include grossing, orienting and mounting specimens, various staining techniques, and the principles of microscopic diagnosis.
0.5-2 Credit Hours

GOMD 9033 Oral & Maxillofacial Pathology II
This course introduces residents to the techniques and principles needed for the histopathologic evaluation of biopsy specimens. These include grossing, orienting and mounting specimens, various staining techniques, and the principles of microscopic diagnosis.
0.5-2 Credit Hours

GOMD 9041 Oral Medicine Clinics I
Residents will spend time with departmental faculty diagnosing and treating patients with a variety of disorders related to oral medicine.
17-19 Credit Hours

GOMD 9042 Oral Medicine Clinics II
Residents will spend time with departmental faculty diagnosing and treating patients with a variety of disorders related to oral medicine.
17-19 Credit Hours

GOMD 9043 Oral Medicine Clinics III
Residents will spend time with departmental faculty diagnosing and treating patients with a variety of disorders related to oral medicine.
17-19 Credit Hours

GOMD 9044 Oral Medicine Clinics IV
Residents will spend time with departmental faculty diagnosing and treating patients with a variety of disorders related to oral medicine.
17-19 Credit Hours

GOMD 9051 Off-Service Clinical Rotations I
Residents will be assigned to various medical services or outpatient clinics to function as an integral part of the health care system and participate in clinical patient care.
2-4.5 Credit Hours

GOMD 9052 Off-Service Clinical Rotations II
Residents will be assigned to various medical services or outpatient clinics to function as an integral part of the health care system and participate in clinical patient care.
2-4.5 Credit Hours

GOMD 9053 Off-Service Clinical Rotations III
Residents will be assigned to various medical services or outpatient clinics to function as an integral part of the health care system and participate in clinical patient care.
12-15 Credit Hours

GOMD 9054 Off-Service Clinical Rotations IV
Residents will be assigned to various medical services or outpatient clinics to function as an integral part of the health care system and participate in clinical patient care.

Dental - Graduate Pediatrics (GPED)

GPED 9001 Introduction to Pediatric Dentistry I
The course provides an overview of the main domains in Pediatric Dentistry including diagnosis, rationale for treatment and description of basic treatment techniques. The course consists of the following components: • Lectures • Examinations on the AAPD Guidelines • Laboratory exercise • Observing in the outpatient clinic
Fall
2-4 Credit Hours

GPED 9011 Comprehensive Review of Pediatric Dentistry I
A comprehensive course to provide an in depth knowledge of all areas of Pediatric Dentistry
Fall
2-4 Credit Hours

GPED 9012 Comprehensive Review of Pediatric Dentistry II
A comprehensive course to provide an in depth knowledge of all areas of Pediatric Dentistry
Spring
2-4 Credit Hours

GPED 9013 Comprehensive Review of Pediatric Dentistry III
A comprehensive course to provide an in depth knowledge of all areas of Pediatric Dentistry
Fall
2-4 Credit Hours

GPED 9014 Comprehensive Review of Pediatric Dentistry IV
A comprehensive course to provide an in depth knowledge of all areas of Pediatric Dentistry.
Spring
2-4 Credit Hours

GPED 9021 First and Second Year Rotations I
Didactic and Clinical Rotations which provide the residents with the didactic knowledge and clinical experiences for the care of infants, children and adolescents including patients with special health care needs.
Fall

GPED 9041 Sedation Seminar
Moderate Sedation for Pediatric Dentistry is a graduate course that fulfills the requirements set forth by the CODA Accreditation Standards for Advanced Education Programs in Periodontics/ Pediatric Dentistry. This educational program provides training for the student/ resident in the methods of pain control and sedation to achieve: 1. In-depth knowledge in all areas of minimal, moderate, and deep sedation as prescribed by the ADA Guidelines for Teaching Pain Control and Sedation to Dentists and Dental Students. 2. Clinical training to the level of competency in minimal enteral and moderate parenteral sedation as prescribed by the ADA Guidelines for Teaching Pain Control and Sedation to Dentists and Dental Students.
Fall
0.5-3 Credit Hours

GPED 9042 Sedation Seminar Spring
Moderate Sedation for Pediatric Dentistry is a graduate course that fulfills the requirements set forth by the CODA Accreditation Standards for Advanced Education Programs in Periodontics/ Pediatric Dentistry. This educational program provides training for the student/ resident in the methods of pain control and sedation to achieve: 1. In-depth knowledge in all areas of minimal, moderate, and deep sedation as prescribed by the ADA Guidelines for Teaching Pain Control and Sedation to Dentists and Dental Students. 2. Clinical training to the level of competency in minimal enteral and moderate parenteral sedation as prescribed by the ADA Guidelines for Teaching Pain Control and Sedation to Dentists and Dental Students.
Spring
0.5-2.5 Credit Hours

GPED 9051 Multidisciplinary Seminar I
This course will be in the form of a monthly Penn conference for all the residents of graduate specialty programs in PDM. Each conference will include residents presentations of patients treatment with complex dental needs that require multi-disciplinary approach and then open discussion with all involved specialties as panel. This conference is designed to provide residents with an understanding of the sequential management of multidisciplinary cases from a diagnostic and treatment basis.
Fall
0.5-1.5 Credit Hour
GPED 9052 Multidisciplinary Seminar II
This course will be in the form of a monthly Penn conference for all the residents of graduate specialty programs in PDM. Each conference will include residents presentations of patients treatment with complex dental needs that require multi-disciplinary approach and then open discussion with all involved specialties as panel. This conference is designed to provide residents with an understanding of the sequential management of multidisciplinary cases from a diagnostic and treatment basis.

GPRS 9041 Literature Review Seminar I
This seminar includes the review, critical evaluation and discussion of prosthodontic classic and current literature. The intent of the comprehensive literature review is to help students/residents develop and comprehend an evidence-based approach to oral health care and patient management with a focus on prosthodontic procedures. The evidence-based approach integrates a contemporary and classical scientific foundation into patient care concepts. The review will be considered a critical literature evaluation where students/residents will develop an ability to evaluate the scientific quality of the evidence. Each topic (fixed prosthodontics 1 and 2), partial removable prosthodontics, complete removable prosthodontics, biomaterials and occlusion) will be assigned once every 3-year cycle. Prior to seminars, one student/resident will be responsible for collecting and updating the articles’ list with the Program Director or assigned faculty member. Then the student/resident will distribute the articles to all students/residents for review and summary (“bullet” abstracts or take-home message) of select literature.
1-4 Credit Hours

GPRS 9042 Literature Review Seminar II
This seminar includes the review, critical evaluation and discussion of prosthodontic classic and current literature. The intent of the comprehensive literature review is to help students/residents develop and comprehend an evidence-based approach to oral health care and patient management with a focus on prosthodontic procedures. The evidence-based approach integrates a contemporary and classical scientific foundation into patient care concepts. The review will be considered a critical literature evaluation where students/residents will develop an ability to evaluate the scientific quality of the evidence. Each topic (fixed prosthodontics 1 and 2), partial removable prosthodontics, complete removable prosthodontics, biomaterials and occlusion) will be assigned once every 3-year cycle. Prior to seminars, one student/resident will be responsible for collecting and updating the articles’ list with the Program Director or assigned faculty member. Then the student/resident will distribute the articles to all students/residents for review and summary (“bullet” abstracts or take-home message) of select literature.
1-4 Credit Hours

GPRS 9043 Literature Review Seminar III
This seminar includes the review, critical evaluation and discussion of prosthodontic classic and current literature. The intent of the comprehensive literature review is to help students/residents develop and comprehend an evidence-based approach to oral health care and patient management with a focus on prosthodontic procedures. The evidence-based approach integrates a contemporary and classical scientific foundation into patient care concepts. The review will be considered a critical literature evaluation where students/residents will develop an ability to evaluate the scientific quality of the evidence. Then the student/resident will distribute the articles to all students/residents for review and summary ("bullet" abstracts or take-home message) of select literature.
1-4 Credit Hours

GPRS 9051 Treatment Plan Seminar I
This course is a student/resident presentation series that aims to provide in-depth instruction in diagnosis, diagnostic procedures and instruments, treatment planning and treatment options for patients with complex prosthodontic needs as well as prognosis, maintenance and treatment outcomes assessment. At each seminar, one student/resident will present at least one of their patients - of their selection - in a detailed and comprehensive manner. The presentation may include a patient in any stage of the treatment, as long as all diagnostic data have been collected and are clearly presented. This seminar could serve as treatment planning discussion among the students/residents, for patients who have not started treatment, or show completed cases and discuss complications, alternatives and prognosis. Over the course of the three years of the program, a student/resident will become competent in diagnosis and treatment planning for patients with complex prosthodontic needs.
1-4 Credit Hours

GPRS 9052 Treatment Plan Seminar II
This course is a student/resident presentation series that aims to provide in-depth instruction in diagnosis, diagnostic procedures and instruments, treatment planning and treatment options for patients with complex prosthodontic needs as well as prognosis, maintenance and treatment outcomes assessment. At each seminar, one student/resident will present at least one of their patients - of their selection - in a detailed and comprehensive manner. The presentation may include a patient in any stage of the treatment, as long as all diagnostic data have been collected and are clearly presented. This seminar could serve as treatment planning discussion among the students/residents, for patients who have not started treatment, or show completed cases and discuss complications, alternatives and prognosis. Over the course of the three years of the program, a student/resident will become competent in diagnosis and treatment planning for patients with complex prosthodontic needs.
1-4 Credit Hours

GPRS 9053 Treatment Plan Seminar III
This course is a student/resident presentation series that aims to provide in-depth instruction in diagnosis, diagnostic procedures and instruments, treatment planning and treatment options for patients with complex prosthodontic needs as well as prognosis, maintenance and treatment outcomes assessment. At each seminar, one student/resident will present at least one of their patients - of their selection - in a detailed and comprehensive manner. This seminar could serve as treatment planning discussion among the students/residents, for patients who have not started treatment, or show completed cases and discuss complications, alternatives and prognosis. Over the course of the three years of the program, a student/resident will become competent in diagnosis and treatment planning for patients with complex prosthodontic needs.
1-4 Credit Hours

GPRS 9061 Advanced Clinical Prosthodontics I
The provision of clinical prosthodontic care during the Advanced Education Program in Prosthodontics occurs in the Clinic inside PDM and at the Philadelphia VA Medical Center. In those settings, prosthodontic students/residents will gain advanced-level experience in the management of complex edentulous, partially edentulous and dentate patients, including the surgical placement and restoration of dental implants. Detailed diagnostic information gathering and analysis of all dental problems will be emphasized. Diverse treatment approaches to complicated prosthodontic problems will be encountered. Clinical and photographic documentation of all procedures will be accomplished and careful evaluation is made of all treatment rendered. Extensive experience will be gained in diagnosis and treatment planning and multidisciplinary care coordination. Prosthodontic students/residents will plan, place, restore, and maintain a variety of different dental implant systems. This course for advanced prosthodontics students is designed to provide extensive clinical experience in the broad spectrum of prosthodontics in a progressively complex clinical prosthodontics curriculum. Each student/resident will have the opportunity to maintain a comprehensive prosthodontics practice involving fixed, removable, and implant treatment procedures.
14-18 Credit Hours

GPRS 9062 Advanced Clinical Prosthodontics II
The provision of clinical prosthodontic care during the Advanced Education Program in Prosthodontics occurs in the Clinic inside PDM and at the Philadelphia VA Medical Center. In those settings, prosthodontic students/residents will gain advanced-level experience in the management of complex edentulous, partially edentulous and dentate patients, including the surgical placement and restoration of dental implants. Design (DSGN)

DSGN 0010 Art, Design and Digital Culture
This course is an introduction to the fundamental perception, representation, aesthetics, and design that shape today's visual culture. It addresses the way artists and designers create images; design with analog and digital tools; communicate, exchange, and express meaning over a broad range of media; and find their voices within the fabric of contemporary art, design, and visual culture. Emphasis is placed on building an extended form of visual literacy by studying and making images using a variety of representation techniques; learning to organize and structure two-dimensional and three-dimensional space, and designing with time-based and procedural media. Students learn to develop an individual style of idea-generation, experimentation, iteration, and critique as part of their creative and critical responses to visual culture. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
Fall or Spring
Also Offered As: VLST 2640
Mutually Exclusive: DSGN 5001
1 Course Unit

DSGN 0020 Design 21: Design After the Digital
Last century, the digital revolution transformed every aspect of our lives. It shaped every design discipline and defined the ways we imagine and fabricate anything from images to everyday products to clothing, cars, buildings and and megacities. Today, design is going through other technical and conceptual revolutions. We design with biotechnologies, fall in love in Virtual Reality with AI bots, rent our cognitive labor through cryptocurrencies. Our creative capabilities, on the other hand, are bounded by a polluted, over-crowded, and resource-constrained planet that is suffering major income and educational inequality. Design After the Digital interrogates the role of design for this century. The seminar surveys the conceptual and technical developments in the past decade to develop an interdisciplinary understanding of design, science and technology. We will study how new design and fabrication methods shape what we eat, what we wear, how we form opinions and express ourselves. The goal will be to develop new literacies of design that will help us acclimate better to the realities of the century as creative and critical citizens who can shape its products and values.
Fall
Mutually Exclusive: DSGN 5002
1 Course Unit

DSGN 1010 Digital Illustration
Digital Illustration is a course designed to expose students to the diverse techniques and approaches used in creating digital illustration for print publication. Course assignments will include two-dimensional animation storybording, figure illustration, technical diagram illustration, photographic retouching and enhancing. Digital applications will include morphing with layers, surface cloning, three-dimensional modeling and spatial transformation of scenes and objects. Students completing this course will possess the capability to design and place creatively and skilfully execute finished artwork.
Fall or Spring
1 Course Unit

DSGN 1011 Introduction to Design
An investigation of an object-oriented design process utilizing digital drawings, rapid prototyping, and digital fabrication techniques. This course introduces design as a creative act marking out a synthesis based on observation of a problem, interpretation of possibilities, and translation of a concept into meaningful three-dimensional objects that engage with society and social justice. The course includes a weekly lecture and studio component.
Fall
Also Offered As: ARCH 1010
1 Course Unit

DSGN 1020 Art of the web: Interactive Concepts for Art & Design
Art of the Web: Interactive concepts for art and design is a first step in learning how to create, analyze and discuss interactive content, as a visual creator. It is an exploration of the culture of the internet, the ideas behind its quirks, the dreams and freedoms it encapsulates, and the creative power it gives us. Students will be assigned projects that will challenge their current understanding of the web, and the ways it shapes human connectivity and interaction. Upon completion of this course, students will possess a working knowledge how to organize and design websites and learn to critique web-content including navigation, UX design and information architecture. The course will require analytical conceptual skills and foster creative thinking.
Fall or Spring
1 Course Unit

DSGN 1030 3-D Computer Modeling
Students will develop a comprehensive knowledge of how virtual worlds are constructed using contemporary computer graphics technique with a fine arts perspective. The course will offer the opportunity to explore the construction, texturing, and rendering of forms, environments, and mechanism while conforming to modeling specifications required for animation, real-time simulations or gaming environments, and rapid prototyping.
Fall or Spring
1 Course Unit

DSGN 1040 Open Book
"Open Book" will focus on visual communication of information. It will address two methods of inquiry and the corresponding means of visual representation: the objective, well structured research of facts and images, and the creative process of their subjective evaluation and restatement. Students will propose a topic based on their area of interest and engage in a focused, semester-long exploration, which they will present in the form of a designed and printed book.
Fall
Prerequisite: DSGN 0010
1 Course Unit
DSGN 1050 Typography
The study and practice of typography spans the history of individual letterforms through the typesetting of full texts. It is a complete immersion into type as an integral part of visual communication. Typesetting conventions and variables including legibility, readability, texture, color and hierarchy will be stressed, as well as a form for organizing information and expressing visual ideas. Studio work will include collection and analyzing type, designing an orginial typeface, researching type history and experimentng with typographic forms. Fall or Spring
1 Course Unit

DSGN 1060 Visual Narrative
Visual Narrative is an introduction to the practice of storytelling with images. From news and information to art, law, and science, visual storytelling is a critical aspect of creating and navigating contemporary culture. This course is situated at the intersection of design, art, and visual culture, focusing on relevant forms and topics including the photo essay, information design and visual explanation, the photographic sequence in contemporary art, scenario design and concept visualization. Visual Narrative focuses on traditional as well as emerging modes of production and distribution for documentary, visual storytelling, and photojournalism, exploring new aesthetics and the social impact of visual narratives. Visual Narrative immerses students in the study of narrative craft and creation of visual stories covering topics relevant to designers and photographers. Beginning with the photo series and the photo documentary tradition, the course evolves through multimedia narrative and non-narrative forms. Students will explore principles of narrative construction in design and photography through lecture, studio projects, and with presentations by visiting artists, designers, and photographers. Students will work within and across disciplines of art, design, and visual journalism, exploring topics including context, cause and effect, time, space, flow, picture-to-picture relationships, sequence, visual hierarchy, and linearity. Study of non-narrative systems- categorical, theoretical, abstract, and asscocional forms - as well as interactive narratives will also be included. Fall
1 Course Unit

DSGN 1070 Graphic Design I: Creative Technologies
This aim this course is to introduce students creative ways to use color, typography, and layout across new materials and media, ranging from print to physical objects. Students will explore visual design through a set of assignments and projects that are geared towards exploring the role of design in visual arts, interaction design, media design and architecture. The course introduces a number of design concepts such as content organization, navigation, interaction and date-driven design and show ways to develop new design metaphors, presentation techniques, and imagery using old and new technologies. Course is structured as a combination of lectures and hands on workshops where students will have the chance to work both individually and collaboratively to realize their projects. Fall, Spring, and Summer Terms
Prerequisite: DSGN 0010
1 Course Unit

DSGN 2010 Digital Figure Modeling
This course introduces methods of modeling, texturing, and rendering human and animal figures. Students will study anatomical bone and muscle structures, and then employ this knowledge as they develop polygonal models for real-time 3D simulations or gaming environments, high-resolution rendering, and rapid prototyping. Spring
Prerequisite: DSGN 1020
1 Course Unit

DSGN 2030 Book and Publication Design
Book and Publication Design will focus on the theory and professional practice of designing multi-page publications. Students will analyze formal structures of different types of books-literature and poetry, fiction and non-fiction compilations, illustrated volumes such as art catalogues, monographs and textbooks, and serial editions-discussing both traditional and experimental approaches. The format of the course will be split between theoretical and historical evaluations of book formats by drawing on the Van Pelt Rare Book Collection - and studio time where students will design books with attention to the format's conceptual relationship to the material at hand with a focus on typography and page layout, as well as on understanding production methods of printing and binding. In addition to the conventions of page layout, students will examine paratextual elements (title page, practice of pagination and other internal structuring, content lists and indexes, colophons, notes, and marginalia, and end-leaves binding, etc.). Fall
Prerequisite: DSGN 0010
1 Course Unit

DSGN 2040 Environmental Animation
Animation can be disarming and effective when used for climate communication. The animation toolkit includes the implementation of metaphor within stories, alluring hand-drawn visualizations, illustrative views, dynamic transformations of visual forms, and cinematic sequences that reveal the cause and effect of human action. As the instructors of this studio have discovered in their own work, it is crucial that animators collaborate with climate scientists and that research be a component throughout the whole process, from script-writing and storyboarding to the animatic and the final product. This collaboration guarantees accuracy, relevance, and effective audience-targeting. What scientists value is the ability of animation to convey complex information in engaging and comprehensible ways. In this course, we will form small production teams that will partner with climate researchers at Penn and other centers and institutions to produce animated videos that meet their communication needs. Students in the course will use hand-drawn and collage animation to produce persuasive videos that communicate emerging risks and obstacles to climate action as well as solutions and new perspectives. Spring
Mutually Exclusive: DSGN 5012
1 Course Unit
DSGN 2050 Graphic Design Practicum
Practicum provides a real world experience for students interested in solving design problems for non-profit and community organizations. The studio works with two clients each semester, and previous projects have included print design, web design, interpretive signage and exhibit interactivities. All projects are real and will result in portfolio-ready finished product. Students will participate in full design experience including design, client interaction, presentations, production and project management. In addition, students will take field trips, meet professionals and go on studio visits.
Fall or Spring
Prerequisite: DSGN 2520 OR DSGN 1040
1 Course Unit

DSGN 2060 Advanced 3-D Modeling
Advanced 3-D Modeling will give students the opportunity to refine skills in modeling, texturing, lighting and rendering with an emphasis on the evolution of ideas through constant revision based class critique. Students will use a variety of industry standard software packages, including but not limited to Maya and Mudbox to compose complex environments. Projects are designed to give students the opportunity to work with orginial content within a simulated production environment.
Fall or Spring
Prerequisite: DSGN 1020 OR DSGN 6350 OR DSGN 2010 OR DSGN 5360
1 Course Unit

DSGN 2070 Graphic Design II
This course will explore advanced commercial, public and personal forms of visual communication. Emphasis will be placed on creative problem solving with consideration for audience. Discussion of design history, current ideology and future design applications will inform individual student projects. Work generated in this studio can be used to build a portfolio.
Fall
Prerequisite: DSGN 1070 AND DSGN 1040
1 Course Unit

DSGN 2090 Projection as a Tool for Expression and Communication in the Public Space
The course will introduce students to projection as a tool of artistic expression and cultural communication. The purpose of the course is to prepare designers and artists for the projection-based Installations, and performances. Students’ projects will take form of projections-animations of interior or exterior architectural and sculptural sites as well as inventions and presentations of wearable, portable, or mobile performative projects. The projects may require specific cultural research and a creative use of basic software, hardware, and physical modeling. Students will be encouraged to experiment with video projectors and micro-projectors in connection with available media devices, such as smart phones, speakers, monitors, sensors, or other input and output components, as well as the use of unconventional materials, and forms as projection “screens.”
Mutually Exclusive: DSGN 5090
1 Course Unit

DSGN 2260 Pixel to Print
This studio course introduces students to the world of print media and circulation through techniques in Risograph (a high-speed digital printing system developed in Japan in the 1980s), xerography, and letterpress, focusing particularly on the format of posters and artists’ ephemera. Beginning with the Adobe Creative Suite, students will create their own broadsides, flyers, announcement cards, and print-based installations throughout the course, exploring ways in which artists and designers make use of the printed form to disseminate information; initiate happenings; advertise events; or foment change. Students will learn about some of the most significant producers working within this realm—from Dada to punk bands in the ’70s to contemporary hybrid publishing collectives—and develop skills in page layout, typography, and design; digital to analog pre-press and post-print production methods; and mechanized and hand-pulled press operations. The course includes a field trip to NYC.
1 Course Unit

DSGN 2500 Cultures of Making
Cultures of Making is an integrative studio that explores new frontiers of design that enable, empower, and interrogate the human in the 21st century. We will take the human body, identity, or image as a site of investigation and design new types of products for it. Through our designs, we will raise questions about the motivations behind quantifying ourselves, desires for being permanently available and connected, complacency with not having privacy or intimacy, and eagerness to substitute craft, labor, and decision-making with intelligent systems from self-driving cars to painting bots and trading algorithms. This studio will pursue a research - and production-oriented format. We will incorporate techniques and technologies from fields as diverse as printed electronics, biochemical fabrication, machine learning and robotics to develop applications that respond to the emergent perceptions of the human for its individual, social, or environmental identity.
Mutually Exclusive: DSGN 5016
1 Course Unit

DSGN 2510 Biological Design
This course is a research-based design studio that introduces new materials, fabrication, and prototyping techniques to develop a series of design proposals in response to the theme: Biological Design. The studio introduces life sciences and biotechnologies to designers, artists, and non-specialists to develop creative and critical propositions that address the social, cultural, and environmental needs of the 21st century.
Fall or Spring
Prerequisite: DSGN 0010
1 Course Unit

DSGN 2530 Functions for Form and Material
This studio course will introduce methods of material selection and fabrication with the goal of developing evocative and effective designs. We will learn parametric modeling techniques that allow visualization to begin before all the requirements of design are known. We will implement techniques that allow us to structurally test and optimize forms to be stronger, lighter, to fail more predictably, or to function efficiently. The class will work identity to materials with properties that introduce new structural or conceptual possibilities for our designs. For each project, we will use a broad range of fabrication techniques for metals, natural and synthetic materials. The goal of this course is to develop a creative approach towards learning to work with unfamiliar tools and materials.
1 Course Unit
DSGN 2540 Information Design and Visualization
Information Design and Visualization is an introductory course that explores the structures of information (text, numbers, images, sounds, video, etc.) and presents strategies for designing effective visual communication appropriate for various users and audiences. The course seeks to articulate a vocabulary of information visualization and find new design forms for an increasingly complex culture.
Fall or Spring
Prerequisite: DSGN 0010
1 Course Unit

DSGN 2550 Interfacing Cultures: Designing for Mobile, Web and Public Media
This course introduces students to advanced interface design topics. We'll examine digital interfaces in relation to contemporary media technologies such as mobile applications, websites, and new technology. Structured as a studio class, students will work to understand the impact interface design decisions have on people and society at varying scales. At the end of this course, students will have a basic working knowledge of equity-centered, trauma-informed, and accessible design practices to carry out research and present strategic concepts utilizing social and/or speculative design. Through theory and practice, students will cultivate skills to carry forward as critical design thinkers, makers, and leaders.
Spring
1 Course Unit

DSGN 2560 Design Future(s)
Design Future(s) is production-oriented studio which explores the relationship between critical design and emerging technologies. Students learn how to work with sensing, machine learning, robotics, and biofabrication to explore what it means to design in response to the social, cultural, and environmental realities of our times. The course is organized through hands-on workshops, lectures, design and critique sessions to develop both technical skills and learn about new design methodologies. Every semester, the studio is developed around a specific theme (i.e., future of body and labor, future of identity, future interfaces) and work towards developing a discursive and multi-disciplinary understanding of "future" that is informed by methodologies outside the traditional Western design canon.
Mutually Exclusive: DSGN 5010
1 Course Unit

DSGN 2570 User Experience (UX) and User Interface (UI) Design
Great user experience and user interface design are essential for creating digital products that people love. In this course, we'll cover a range of topics from user research through designing visual interfaces, as well as principles of human-centered design and the design process. We'll study existing products to understand the problems they solve and the elements that make them succeed. Lectures and coursework will include practical exercises with user journeys, flowcharts, style sheets, and prototyping tools. No design experience necessary.
Prerequisite: DSGN 0010
1 Course Unit

DSGN 3020 Contemporary Theories of Design
This seminar explores a range of theories, concepts, and thought patterns that shape different disciplines of design. From critical science studies to object-orient ontology and speculative design, it discusses how theoretical frameworks drive innovation, critique, and user experience.
1 Course Unit

DSGN 3030 Creative Research
This seminar explores different aspects of research—knowledge production and dissemination—across a variety of creative practices from the arts to the humanities, engineering, and sciences. Students investigate what it means to observe, measure, analyze, test, study, experiment, diagram, prototype, speculate, generate and criticize; apply multiple modes of inquiry; be conceptual, analytical, propositional and critical at the same time, all in order to develop their work from different perspectives. As students work across different methodologies, they also explore ways of making their work public through various social protocols, publications, and exhibitions that address different audiences.
Spring
1 Course Unit

DSGN 3040 Language of Design
This course will explore the changing relationship during the modern era between design (structure, model, plan of a work of art) and language (metaphor for a system of communication; speech, writing, literature). Our readings and visual presentations will focus on topics in the decorative arts, painting, architecture, typography and visual communication. We will focus on primary sources in order to situate our inquiry in a larger historical context. The discussion will center on claims about the inherent meaning of form, discuss different roles for design - as an ideological statement, as an agent of social change, and as an idiosyncratic expression. Topics will also include the search for a universal language, attempts at bridging the perceived gap between spoken and written language, and the impact of visual form on the meaning of literary texts (particularly when the author has been involved in the publication process). Students can suggest additional topics related to their field of study.
Spring
1 Course Unit

DSGN 3050 Design Tools and Technologies
This studio focuses on providing digital skills to conceptualize, produce and disseminate design products. Through workshops, software training sessions and labs, students will engage with different design professionals and learn state-of-the-art tools used in interactive media, UI/UX, modeling and fabrication design. Students will also learn ways to work with open source software and have a chance to build their own design tools through creative programming exercises. The course does not require any technical background, but assumes basic familiarity with visual design tools (i.e.,Adobe Creative Suite).
1 Course Unit

DSGN 3060 Futures for All: Reimagining social equality through art and technology
How can art become a form of activism? How does design shape social equality? This course investigates how technological media shape culture and society, and how artists and designers can actively reshape these dynamics through art and design. We will engage in the practice of "speculative design", and tactical design using various digital tools to envision different futures, reflecting on social, political, and ethical implications of various technologies. Exploring the relationship between digital and physical realities, students will utilize their skills in art and design while applying them to critical social discourse and activism. Students will also develop skills in active reading, critical analysis, and scholarly writing.
1 Course Unit
DSGN 3070 Feminist Technoscience: Art, Technology, & Gender
How does scientific research produce and reinforce concepts of gender? How is sexism propagated through technological media? This course investigates how scientific and technological media shape culture and society, particularly through the lens of gender and sexuality. Engaging in interdisciplinary art making, students will use various technological media to reflect on the social, political, and ethical domains of technoscientific feminism. Exploring the relationship between digital and physical realities, students will engage art and design with critical social discourse and gender theory. Students will also develop skills in active reading, critical analysis, and scholarly writing. By the end of the course, students will have created a unique work of art that imagines more empowered, equitable futures.
1 Course Unit

DSGN 3080 Care as Revolution: Socially Engaged Art and Design
In the exploitative cycles of production and consumption fueled by late stage capitalism, are there alternative ways to reimagine systems of support and mutual care? Through the lens of socially engaged art and design, students will look at a range of primary sources from artists and designers who have created participatory works that challenge traditional structures of power and integrate practices of care into their local communities. With a focus on decommodified labor and care work, students will analyze why and how certain types of labor have been devalued historically. Students will read and analyze historical and current texts related to feminist economics, art as social action, and socially engaged design. Through a scholarly lens, we will evaluate the radical nature of acts of care as a critical framework through which we can imagine more equitable futures. At the end of the semester, students will present their own unique works that contribute to this discourse.
1 Course Unit

DSGN 3100 Interrogative Design: Cultural Prosthetics
The course is open to students interested in pursuing artistic, design and research projects that interrogate, and proactively respond to the existential, communicative and survival needs of the estranged, marginalized and excluded persons and social groups, while addressing the unacceptability of conditions that produce such needs. In the words of art theorist Rosalyn Deutsche, the ‘utopia’ of interrogative design is ‘based on the hope that its very function will render it obsolete’. The course will consist of readings, discussions, and presentations related to the fields and methods of interrogative, critical and speculative design, ‘cultural prosthetics’, ‘scandalizing functionalism’, forensic design, monument participatory animation, and, most importantly, on the ideation, experimentation, development, and presentation of students’ original projects. After a short introductory assignment, the students - individually or in teams- will work on a selected by them project to be advanced and discussed in class during the semester, presented at the midterm and at the final review, with the response and input from guest critics.
Mutually Exclusive: DSGN 5100
1 Course Unit

DSGN 3120 Anthropology of Futurity
How should we think about the future amid worlds on edge? What is an inevitable versus a contingent course of events? What role do humans and non-humans, machines, animals, and plants play as agents of futurity in the context of the Anthropocene? This seminar explores these pressing questions, linking multiple sources of knowledge production—biological, medical, ecological, engineering, economic, and anthropological—with manifestations of the future. It starts with the basic premise that futures are made, molded by competing material, economic, and creative desires and possibilities, and not foreordained. Innovating futures also entails unexpected ethical and technical entanglements that current forms of knowledge cannot always anticipate. Drawing from readings in anthropology, the social studies of science and technology, Indigenous studies, as well as from engineering, AI, and scientific journals and films, we explore tensions between knowledge and uncertainty on the one hand, and ethics and innovation on the other. With these tensions in mind, we consider the myriad of agents whose role will be vital to shaping planetary futures— as well as how alternative futures, especially among communities confronting systemic inequalities and colonial and race-based injustices, are imagined and realized. From the climate crises to the ongoing pandemics, militarization, and mass migrations that have torn apart social fabrics, we will learn to become ‘technologists of the future’—that is, individuals and collectives with the tools to realize more inclusive, flourishing, and just futurities.
Not Offered Every Year
Also Offered As: ANTH 2080
1 Course Unit

DSGN 3250 MATTERS: Connecting Arts + Design to Materials, and Materials to Labor + Land
How does matter transform into material, and back again? What hidden labor, sites, social and ecological costs and processes go into the production of a “blank” canvas and other “raw” materials? And why--for artists, designers, architects, preservationists, creative educators, builders, and anyone working with materials-- do these realities matter? This course connects arts and design learners to considerations, sites, and cycles around production and disposal of the defining materials of their creative fields (ex. paper, wood, glass, pigment, "the internet"), laying groundwork for creative practice rooted in social and ecological awareness, repair and care. A hybrid research seminar, field exploration, and studio investigation, the structure of this course alternates between reading/response/research, field trips and guest visitors (including a partnership affiliation with RAIR Philly), and time for responsive “making” and material experimentation/synthesis. In this course, students will collaboratively define key terms and concerns around material sustainability, discard studies, land and labor relations vis-a-vis creative work. Students will experience local sites of material extraction, production and disposal (through approx 5 field trips taking place during class time). Students will formulate individual or group questions around a specific material, leading to a final independent project, and class exhibition. This course will engage students in forming a material ethics to guide future creative work.
Also Offered As: FNAR 3250
1 Course Unit

DSGN 4010 Independent Study
Undergraduate Fine Arts independent study course for students pursuing advanced, specialized, indecently-driven course work. This course must be taught by a full-time faculty member.
Fall or Spring
1 Course Unit
DSGN 4020 Design Senior Seminar Project (Fall)
This rigorous pair of courses, one offered in the Fall and one offered in the Spring semester, are designed as the capstone of the Design major and are required for all graduating Design seniors. They can only be taken in the senior year.

Students will develop a comprehensive knowledge of how virtual worlds are constructed using contemporary computer graphics technique with a fine arts perspective. The course will offer the opportunity to explore the construction, texturing, and rendering of forms, environments, and mechanisms while conforming to modeling specifications required for animation, real-time simulations or gaming environments, and rapid prototyping.
Fall or Spring
1 Course Unit

DSGN 5006 Open Book
“Open Book” will focus on visual communication of information. It will address two methods of inquiry and the corresponding means of visual representation: the objective, wll structured research of facts and images, and the creative process of their subjective evaluation and restatement. Students will propose a topic based on their area of interest and engage in a focused, semester-long exploration, which they will present in the form of a designed and printed book.
Fall
Prerequisite: DSGN 0010
1 Course Unit

DSGN 5007 Typography
The study and practice and typography spans the history of individual letterforms through the typesetting of full texts. It is a complete immersion into type as an integral part of visual communication. Typesetting conventions and variables including legibility, readability, texture, color and hierarchy will be stressed, as well as a form for organizing information and expressing visual ideas. Studio work will include collecting and analyzing type, designing and orginial typeface, researching type history and experimenting with typographic forms.
Spring
1 Course Unit
DSGN 5008 Visual Narrative
Visual Narrative is an introduction to the practice of storytelling with images. From news and information to art, law, and science, visual storytelling is a critical aspect of creating and navigating contemporary culture. This course is situated at the intersection of design, art, and visual culture, focusing on relevant forms and topics including the photo essay, information design and visual explanation, the photographic sequence in contemporary art, scenario design and concept visualization. It proposes that studying and making sequential images and visual essays in a wide range of media- comics and graphic novels, propaganda, environments and installations, social media, animation, video, and digital media- are critical to understanding culture. The course immerses students in the study of narrative craft and creation of usual stories covering topics relevant to designers and photographers. Beginning with the photo series as an the photo documentary tradition, the course evolves through multimedia narrative and non-narrative forms. Students will explore principles of narrative construction in design and photography through lecture, studio projects, and with presentations by visiting artists, designers, and photographers.
1 Course Unit

DSGN 5009 Digital Figure Modeling
This course introduces methods of modeling, texturing, and rendering human and animal figures. Students will study anatomical bone and muscle structures, and then employ this knowledge as they develop polygonal models for real-time 3D simulations or gaming environments, high-resolution renderings, and rapid prototyping.
Spring
Prerequisite: DSGN 1020
1 Course Unit

DSGN 5011 Book and Publication Design
Book and Publication Design will focus on the theory and professional practice of designing multi-page publications. Students will analyze formal structures of different types of book-literature and poetry, fiction and non-fiction compilations, illustrated volumes such as art catalogues, monographs, and textbooks, and serial editions-discussing both traditional and experimental approaches. The format of the course will be split between theoretical and historical evaluations of book formats by drawing on the Van Pelt Rare Book collection- and studio time where students will design books with attention to the format's conceptual relationship to the material at hand with a focus on typography and page layout, as well as understanding production methods of printing and binding. In addition to the conventions of page layout students will examine paratextual elements (title pages, practices of pagination and other internal structuring, content lists and indexes, and colophons, notes and marginalia, end-leaves, binding etc.). Prerequisite: DSGN 0010 or permission from the instructor.
Fall
1 Course Unit

DSGN 5012 Environmental Animation
Animation can be disarming and effective when used for climate communication. The animation toolkit includes the implementation of metaphor within stories, alluring hand-drawn visualizations, illustrative views, dynamic transformations of visual forms, and cinematic sequences that reveal the cause and effect of human action. As the instructors of this studio have discovered in their own work, it is crucial that animators collaborate with climate scientists and that research be a component throughout the whole process, from script-writing and storyboarding to the animatic and the final product. This collaboration guarantees accuracy, relevance, and effective audience-targeting. What scientists value is the ability of animation to convey complex information in engaging and comprehensible ways. In this course, we will form small production teams that will partner with climate researchers at Penn and other centers and institutions to produce animated videos that meet their communication needs. Students in the course will use hand-drawn and collage animation to produce persuasive videos that communicate emerging risks and obstacles to climate action as well as solutions and new perspectives.
Spring
1 Course Unit

DSGN 5013 Graphic Design Practicum
Practicum provides a real world experience for students interested in solving design problems for non-profit and community organizations. The studio works with two clients each semester, and previous projects have included print design, web design, interpretive signage and exhibit interactives. All projects are real and will result in a portfolio-ready finished product. Students will participate in a full design experience including design, client interaction, presentations, production, and project management. In addition, students will take field trips, meet professionals and go on studio visits.
Fall or Spring
Prerequisite: DSGN 1020 OR DSGN 6350 OR DSGN 2010 OR DSGN 5360
1 Course Unit

DSGN 5014 Advanced 3D Modeling
Advanced 3D Modeling will give students the opportunity to refine skills in modeling, texturizing, lighting, and rendering with an emphasis on the evolution of ideas through constant revision based on class critique. Students will use a variety of industry standard software packages, including but not limited to Maya and Mudbox to compose complex environments. Projects are designed to give students the opportunity to work with original content with a simulated production environment.
Fall or Spring
Prerequisite: DSGN 2520 AND DSGN 1040
1 Course Unit

DSGN 5015 Graphic Design II
This course will explore advanced commercial, public and personal forms of visual communication. Emphasis will be placed on creative problem solving with consideration for audience. Discussion of design history, current ideology and future design applications will inform individual student projects. Work generated in this studio can be used build a portfolio. Prerequisite: Permission from instructor if prerequisites are not met.
Fall
1 Course Unit
DSGN 5016 Cultures of Making
Cultures of Making is an integrative studio that explores new frontiers of design that enable, empower, and interrogate the human in the 21st century. We will take the human body, identity, or image as a site of investigation and design new types of products for it. Through our designs, we will raise questions about the motivations behind quantifying ourselves, desires for being permanently available and connected, complacency with not having privacy or intimacy, and eagerness to substitute craft, labor, and decision-making with intelligent systems from self-driving cars to painting bots and trading algorithms. This studio will pursue a research- and production-oriented format. We will incorporate techniques and technologies from fields as diverse as printed electronics, biochemical fabrication, machine learning and robotics to develop applications that respond to the emergent perceptions of the human for its individual, social, or environmental identity.
Spring
1 Course Unit

DSGN 5017 Biological Design
This course is a research-based design studio that introduces new materials, fabrication, and prototyping techniques to develop a series of design proposals in response to the theme: Biological Design. The studio introduces life sciences and biotechnologies to designers, artists, and non-specialists to develop creative and critical propositions that address the social, cultural, and environmental needs of the 21st century.
Fall or Spring
1 Course Unit

DSGN 5018 Graphic Design I: Creative Technologies
The aim of this course is to introduce students creative ways to use color, typography, and layout across materials and media, ranging from print to physical objects. Students will explore visual design through a set of assignments and projects that are geared towards exploring the role of design in visual arts, interaction design, media design and architecture. The course introduces a number of design concepts such as content organization, navigation, interaction and data-driven design and show ways to develop new design metaphors, presentation techniques, and imagery using old and new technologies. Course is structured as a combination of lectures and hands on workshops where students will have the chance to work both individually and collaboratively to realize their projects.
Fall or Spring
1 Course Unit

DSGN 5019 Functions for Form and Material
This studio course will introduce methods of material selection and fabrication with the goal of developing evocative and effective designs. We will learn parametric modeling techniques that allow visualization to begin before all the requirements of a design are known. We will implement techniques that allow us to structurally test and optimize forms to be stronger, lighter, to fail more predictably, or to function efficiently. The class will work to identify materials with properties that introduce new structural or conceptual possibilities for our designs. For each project, we will use a broad range of fabrication techniques for metals, natural and synthetic materials. The goal of the course is to develop a creative approach towards learning to work with unfamiliar tools and materials.
Spring
1 Course Unit

DSGN 5021 Information Design and Visualization
Information design and visualization is an introductory course that explores the structure of information (text, numbers, images, sounds, video, etc.) and presents strategies for designing effective visual communication appropriate for various users and audiences. The course seeks to articulate a vocabulary of information visualization and find new design forms for an increasingly complex culture.
Fall or Spring
1 Course Unit

DSGN 5022 Interfacing Culture: Designing for Mobile, Web and Public Media
This course introduces students to advanced interface design topics. We'll examine digital interfaces in relation to contemporary media technologies such as mobile applications, websites, and new technology. Structured as a studio class, students will work to understand the impact interface design decisions have on people and society at varying scales. At the end of this course, students will have a basic working knowledge of equity-centered, trauma-informed, and accessible design practices to carry out research and present strategic concepts utilizing social and/or speculative design. Through theory and practice, students will cultivate skills to carry forward as critical design thinkers, makers, and leaders.
Spring
1 Course Unit

DSGN 5023 User Experience (UX) and User Interface (UI) Design
Great user experience and user interface design are essential for creating digital products that people love. In this course, we'll cover a range of topics from user research through designing visual interfaces, as well as principles of human-centered design and the design process. We'll study existing products to understand the problems they solve and the elements that make them succeed. Lectures and coursework will include practical exercises with user journeys, flowcharts, style sheets, and prototyping tools. No design experience necessary.
1 Course Unit

DSGN 5024 Contemporary Theories of Design
This seminar explores a range of theories, concepts, and thought patterns that shape different disciplines of design. From critical science studies to object-oriented ontology and speculative design, it discusses how theoretical frameworks drive innovation, critique, and user experience.
1 Course Unit

DSGN 5025 Creative Research
This seminar explores what it means to do research in creative and critical practices. Students learn about different research methods from design, engineering, humanities and sciences; utilize them for developing and evaluating their individual creative work as cultural producers. This is an interdisciplinary course that encourages students to observe, measure, analyze, test, study, experiment, diagram, prototype, speculate, generate and critique; apply multiple modes of inquiry; be conceptual, analytical, propositional and critical at the same time to develop their work from different perspectives.
Fall
1 Course Unit
**DSGN 5026 Language of Design**
The course will explore the changing relationship during the modern era between design (structure, model, plan of a work of art) and language (metaphor for a system of communication; speech, writing, literature). Our readings and visual presentations will focus on topics in decorative arts, painting, architecture, typography and visual communication. We will focus on primary sources in order to situate our inquiry in a larger historical context. The discussion will center on claims about the inherent meaning of form, discuss different roles for design - as an ideological statement, as an agent of social change, and as an idiosyncratic expression. Topics will also include the search for a universal visual language, attempts at bridging the perceived gap between spoken and written language, and the impact of visual form on the meaning of literary texts (particularly when the author has been involved in the publication process). Students can suggest additional topics to their field of study.

Spring
1 Course Unit

**DSGN 5027 Design Tools and Technologies**
This studio focuses on providing digital skills to conceptualize, produce and disseminate design products. Through workshops, software training sessions and labs, students will engage with different design professionals and learn state-of-the art tools used in interactive media, UI/UX, modeling and fabrication design. Students will also learn ways to work with open source software and have a chance to build their own design tools through creative programming exercises. The course does not require any technical background, but assumes basic familiarity with visual design tools (i.e., Adobe Creative Suite).

1 Course Unit

**DSGN 5028 Futures for All: Reimagining social equality through art and technology**
How can art become a form of activism? How does design shape social equality? This course investigates how technological media shape culture and society, and how artists and designers can actively reshape these dynamics through art and design. We will engage in the practice of “speculative design”, and “tactical design” using various digital tools to envision different futures, reflecting on social, political, and ethical implications of various technologies. Exploring the relationship between digital and physical realities, students will utilize their skills in art and design while applying them to critical social discourse and activism. Students will also develop skills in active reading, critical analysis, and scholarly writing.

1 Course Unit

**DSGN 5029 Feminist Technoscience: Art, Technology, & Gender**
How does scientific research produce and reinforce concepts of gender? How is sexism propagated through technological media? This course investigates how scientific and technological media shape culture and society, particularly through the lens of gender and sexuality. Engaging in interdisciplinary art making, students will use various technological media to reflect on the social, political, and ethical domains of technoscientific feminism. Exploring the relationship between digital and physical realities, students will engage art and design with critical social discourse and gender theory. Students will also develop skills in active reading, critical analysis, and scholarly writing. By the end of the course, students will have created a unique work of art that imagines more empowered, equitable futures.

1 Course Unit

**DSGN 5042 Pixel to Print**
This studio course introduces students to the world of print media and circulation through techniques in Risograph (a high-speed digital printing system developed in Japan in the 1980s), xerography, and letterpress, focusing particularly on the format of posters and artists' ephemera. Beginning with the Adobe Creative Suite, students will create their own broadsides, flyers, announcement cards, and print-based installations throughout the course, exploring ways in which artists and designers make use of the printed form to disseminate information; initiate happenings; advertise events; or foment change. Students will learn about some of the most significant producers working within this realm—from Dada to punk bands in the ’70s to contemporary hybrid publishing collectives—and develop skills in page layout, typography, and design; digital to analog pre-press and post-print production methods; and mechanized and hand-pulled press operations. The course includes a field trip to NYC.

1 Course Unit

**DSGN 5080 Care as Revolution: Socially Engaged Art and Design**
In the exploitative cycles of production and consumption fueled by late stage capitalism, are there alternative ways to reimagine systems of support and mutual care? Through the lens of socially engaged art and design, students will look at a range of primary sources from artists and designers who have created participatory works that challenge traditional structures of power and integrate practices of care into their local communities. With a focus on decommodified labor and care work, students will analyze why and how certain types of labor have been devalued historically. Students will read and analyze historical and current texts related to feminist economics, art as social action, and socially engaged design. Through a scholarly lens, we will evaluate the radical nature of acts of care as a critical framework through which we can imagine more equitable futures. At the end of the semester, students will present their own unique works that contribute to this discourse.

1 Course Unit

**DSGN 5090 Projection as a Tool for Expression and Communication in the Public Space**
The course will introduce students to projection as a tool of artistic expression and cultural communication. The purpose of the course is to prepare designers and artists for the projection-based Installations, and performances. Students’ projects will take form of projections-animations of interior or exterior architectural and sculptural sites as well as inventions and presentations of wearable, portable, or mobile performative projects. The projects may require specific cultural research and a creative use of basic software, hardware, and physical modeling. Students will be encouraged to experiment with video projectors and micro-projectors in connection with available media devices, such as smart phones, speakers, monitors, sensors, or other input and output components, as well as the use of unconventional materials, and forms as projection "screens."

Mutually Exclusive: DSGN 2090

1 Course Unit
**DSGN 5100 Interrogative Design: Cultural Prosthetics**
The course is open to students interested in pursuing artistic, design and research projects that interrogate, and proactively respond to the existential, communicative and survival needs of the estranged, marginalized and excluded persons and social groups, while addressing the unacceptable conditions of production that produce such needs. In the words of art theorist Rosalyn Deutsche, the 'utopia' of interrogative design is 'based on the hope that its very function will render it obsolete'. The course will consist of readings, discussions, and presentations related to the fields and methods of interrogative, critical and speculative design, ‘cultural prosthetics’, ‘scandalizing functionalism’, forensic design, monument participatory animation, and, most importantly, on the ideation, experimentation, development, and presentation of students’ original projects. After a short introductory assignment, the students - individually or in teams - will work on a selected project to be advanced and discussed in class during the semester, presented at the midterm and at the final review, with the response and input from guest critics.

Mutually Exclusive: DSGN 3100

1 Course Unit

**DSGN 5250 MATTERS: Connecting Arts + Design to Materials, and Materials to Labor + Land**

How does matter transform into material, and back again? What hidden labor, sites, social and ecological costs and processes go into the production of a “blank” canvas and other “raw” materials? And why-- for artists, designers, architects, preservationists, creative educators, builders, and anyone working with materials-- do these realities matter? This course connects arts and design learners to considerations, sites, and cycles around production and disposal of the defining materials of their creative fields (ex. paper, wood, glass, pigment, "the internet"), laying groundwork for creative practice rooted in social and ecological awareness, repair and care. A hybrid research seminar, field exploration, and studio investigation, the structure of this course alternates between reading/response/research, field trips and guest visitors (including a partnership affiliation with RAIR Philly), and time for responsive “making” and material experimentation/synthesis. In this course, students will collaboratively define key terms and concerns around material sustainability, discard studies, land and labor relations vis-a-vis creative work. Students will experience local sites of material extraction, production and disposal (through approx 5 field trips taking place during class time). Students will formulate individual or group questions around a specific material, leading to a final independent project, and class exhibition. This course will engage students in forming a material ethics to guide future creative work.

1 Course Unit

**Digital Culture (DIGC)**

The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

**DIGC 1200 Digital Literacy & Cultural Change**
The growing presence of technology in our personal and professional lives provides incontrovertible evidence of change. From individual reflections on the costs of innovation to meaningful connection through digital communication, each of us has an impulse to shape change. This impulse often pushes us to learn, adapt, and create. It also demands digital literacy. Together, we'll explore digital literacy as a concept and practice that offers tools for shaping cultural change, as we navigate the present and look toward the future. In DIGC 1200, students will learn to deconstruct, create, and remix projects using digital tools they'll encounter in a variety of settings outside of this course. Students will also grapple with concepts that shape our current technological and social landscape. Together, we'll question assumptions about digital citizenship and challenge claims about digital natives. I'll push students to think critically about audience, genre, rhetorical purpose, and design, along the way; and by semester's end, we'll have created various digital artifacts that speak to cultural change.

1 Course Unit

**DIGC 1600 A History of Digital Culture**
Technology is never just about the things we use or the things we do - what we see and do quickly become everyday occurrences. In our current world, this means the world of digital culture, but what led to this was a blending of technologies and material culture that we would not always consider as "technological." The cultural practices that go along with these technologies are invariably not visible to us without interrogation: the ways technological usage shapes and is shaped by the cultures that create them, as well as how technologies shape and are shaped by other cultures that adopt them. Oftentimes, technology tools practices are translated in ways that their creators never envisioned, and take on meanings that shift dramatically. Across time, even within a single culture, technology means very different things from one era to the next. Examples include the roles of basic tools like glass, to complex tools like audio tape. In DIGC 1600, students will explore and develop an understanding of contemporary digital culture based on the idea that media and information technologies operate in a cycle of constant dialogue with the communities and modes of cultural practice that surround them. Using case studies of technological innovation and transformation, we'll examine the political and social impacts of what has become our contemporary digital culture through the resulting material culture objects we use every day. Students will be encouraged to explore from their own experiences how they interact with, create, and understand technocultural objects in their active and living world from an interdisciplinary, social science-based perspective, drawing from disciplines across the humanities and social sciences. Some of the guiding questions for the course include: How do we understand something as a "new" technology? How can we analyze the ways that members of a culture use technology as a locus for evolving or conflicting cultural practices and social change? And, how does culture affect our understanding of a technology and how we use it?

Readings will consist of articles and book chapters provided in the course Canvas site. There will be no required synchronous sessions, though there will be optional synchronous sessions offered throughout the course. This course fulfills Qualitative Foundational Requirement (in Historical Perspectives) and to serve as a Gateway class. DIGC 1200 is recommended but not required.

1 Course Unit
DIGC 2000 Introduction to Working with Code
Code can seem intimidating, especially when it creates a barrier for customizing and completing important digital projects. In DIGC 2000, students develop a basic understanding of program code and structures that are common across all programming languages. This will enable students to build skills for communication among colleagues whose roles include working with code across skill levels and responsibilities. This course invites students to analyze some of the possibilities and uses of computer programs, while exploring strategies for engaging with digital development tools. It will introduce students to the Scientific Python Development Environment (Spyder), an open-source cross-platform Integrated Development Environment (IDE) used by computer programmers around the world. We tackle questions that encourage us to think critically about the programming decisions we make and about what effect these decisions may have on the work of our colleagues and customers who may have to maintain the code in the future. We also explore the opportunities and issues that advances in computer coding applications present in our increasingly digital culture. This course includes a required pre-course module in Canvas that opens a month before the course begins and is designed to walk students through downloading, installing, and using the Anaconda distribution of Python and the Spyder IDE. TEXTBOOK: https://www.amazon.com/Python-Programming-Introduction-Computer-Science/dp/1590282752/ref=sr_1_1?dchild=1&keywords=zelle&qid=1631898628&s=books&sr=1-1
Fall or Spring
1 Course Unit

DIGC 2200 Design Thinking for Digital Projects
Design thinking as a strategy and toolkit is usually defined as having five stages: Empathize, Define the problem, Ideate, Prototyping, and Testing. A crucial step in effective use of this toolkit is learning how to use empathizing with an audience or public, and learning what questions to ask in order to ideate. Students in DIGC 2200 will build on critical thinking and technological context from DIGC 1200 and DIGC 1600, applying these skills to understanding specific problems in digital spaces. We will examine case studies from this perspective, and unpack both the strengths and weaknesses of how each scenario was developed and executed, to build a lens students can apply to their own Design Thinking project, the culmination of the course. We will build on skills using an ethnographic approach to understanding communities and their diverse needs.
Fall or Spring
1 Course Unit

DIGC 2600 Diverse Projects for Digital Publics
Narratives matter. They encourage imagination and creativity through visions of what could be, even as they challenge us to think critically about the practical realities of everyday professional life. Narratives also connect us within a web of social and cultural relationships that shape the world around us. But some narratives are historically given more attention than others. This practice often leads to marginalization in digital public spaces. In response, DIGC 2600 centers a selection of diverse narratives that exemplify inclusive digital projects. This course invites students to explore how historically underrepresented narratives are created, curated, and shared in a range of digital formats using diverse forms of data. Surveying the broad concept of digital publics, I'll invite students to reflect on the ways race, gender, and sexuality intersect in a variety of digital environments. We'll examine interactive journalism, public scholarship, digital literature, and other types of media. Students will also have a chance to produce, workshop, and revise their own data-informed digital projects—from personal portfolios, to professional narratives—that communicate their perspectives as consumers, critics, and creators in digital publics. Prerequisite: Recommended - DIGC 1200 provides helpful foundational knowledge for materials and activities in this course.
Fall or Spring
1 Course Unit

DIGC 3000 Intermediate Coding for Digital Strategies
Building on the foundational concepts and approaches from experience gained through introductory coursework or prior coding experience, this course provides students with strategies for using Python to solve more complex problems. Students engage with applications of Python that help them expand their contextual knowledge and critical thinking skills, which are central to all DIGC certificate courses. By the end of the DIGC 3000 course, students can perform a functional analysis of a real-world problem and use Python to present results. Prior completion of DIGC 2000 or equivalent Python experience is required to enroll in this course.
Fall or Spring
Prerequisite: DIGC 2000
1 Course Unit
DIGC 3200 Designing Critical Futures
In her Nebula award-winning novel Parable of the Talents, Octavia Butler writes that "[w]e can, each of us, do the impossible as long as we can convince ourselves that it has been done before." But what if this "before" is located somewhere in critical futures? Why should these futures matter to people who are concerned with practicable strategies for building a more just world? DIGC 3200 invites students to imagine what "each of us" can do to reframe the possible by engaging with: (1) creative labor from sonic, literary, and visual artists; (2) critical labor from scholars, media experts, and non-profit professionals; and (3) social movement labor from activists, journalists, and civic participants. Along the way, students will design visions of critical futures that speak to the communities they hope to serve outside of the course. The course is organized around four essential units that each culminate in a creative project. The first unit focuses on place-making efforts that connect speculative design to community organizing and civic engagement. The second expands these connections through intersecting design discussions about queer community, disability justice, and feminist praxis. The third centers mutualistic collaboration and critical play as radical practices for advancing equity and affirming generative difference. These practices set up the final unit which invites students to make a digital object that engages with a critical future of their design. Each unit will frame speculative work and other materials as case studies for designing critical futures.

Fall or Spring
1 Course Unit

DIGC 3600 Applications of Digital Culture
The rapid pace of technological changes since the invention of the microchip in the 1970s has by some accounts outstripped society’s mechanisms for evaluating and managing the way we engage with one another and social systems in the larger world. When cell phones first became common in the early 2000s, taking a personal call in a restaurant was rude behavior—today it is rare that this same activity would be questioned or challenged. In short, the social, economic, and cultural parameters that define how we understand ourselves and our place in the world have been challenged and, in many cases, overthrown at all levels in our society. In this class, students take a deep dive into the implications and consequences of digital ethics and digital literacy as engaged citizens in four arenas: ethics and algorithms, ethics of privacy, ethics of identity, and ethics and professional practices. At the conclusion of the course, students work on developing a deeper understanding of ethical practices as they pertain to specialized arenas of digital culture with a framework and tools for engaging with technological change as a living component of their daily lives. Prerequisites: Students are expected to either have taken a minimum of either DIGC 1200 or DIGC 1600, or bring sufficient prior expertise to analyze the social implications of technological change.

Fall or Spring
Prerequisite: DIGC 1200 AND DIGC 1600
1 Course Unit

DIGC 4000 Advanced Work with Code
This course teaches you to understand code using Python at the 10,000 foot level. You’ll develop competencies to communicate with programmers and software engineers, to bridge the gap between the programmer and the client. It reinforces and builds upon the skills learned in previous coding courses in the DIGC cluster. Students will gain a deeper understanding of Python programming and develop the skills necessary to comprehend more complex Python programs. Throughout the course, students will develop a rudimentary understanding of specifications for code, which can be utilized to bridge the gap between knowledge domain experts and programmers. They will learn to discuss types and assignment, evaluate expressions, and practice logical reasoning through branches and loops. In addition, students will explore the development of small but structured programs, emphasizing ease of design, testing, and debugging through the formal description, and use, of functions. The course will also cover writing simple classes, which will help students to develop more complex programs and solve real-world problems. Upon completion of the course, students will have sufficient skills to understand, at a higher level, what a more professional Python program is doing. They will be able to read basic code and discuss it in detail. The course will provide students with a solid foundation for interfacing with programmers in a professional environment.

Fall or Spring
1 Course Unit

DIGC 4600 Practices in Digital Culture
Understanding literacy, having context for technocultures, telling stories, and exploring ethics are critical to being an informed individual in contemporary life; but becoming an active citizen in society requires the skills to engage on a deeper level with technologies. In this class, students will focus on living technocultures from 1970-present and engage in critical evaluation and analysis of technocultures in the modern and postmodern eras. Over the course of the term, students will focus on a particular technological category, located in its own cultural setting. They will develop, and implement their own project proposal for in-depth study of a specific technology or use-case that has application for their own interests or goals. Students will begin their exploration using grounded theory, though the nature of their projects will dictate what methodology they will employ. During the class, they will work in small groups with others using similar methods in the exploration of their research and course content. Students will be incorporating tools and skills developed in at least two of the DIGC track courses in their projects. Students are expected to either have taken at least two of the following: DIGC 1200, DIGC 1600, and/or DIGC 2000 or bring sufficient prior expertise to analyze and problematize a technological practice or arena in a real world setting with the guidance of the instructors of those courses. The full cluster is recommended.

Fall or Spring
1 Course Unit

Dutch (DTCH)

DTCH 0100 Elementary Dutch I
A first semester language course covering the core Dutch grammar and vocabulary with the goal of providing the corner stone for developing overall linguistic proficiency in Dutch.
Fall
1 Course Unit

DTCH 0200 Elementary Dutch II
Continuation of DTCH 0100.
Spring

**DTCH 0300 Intermediate Dutch I**
A third semester Dutch language course. The emphasis lies on vocabulary expansion through the use of audio-taped materials and readings. Grammar is expanded beyond the basics and focuses on compound sentences, features of text coherence and idiomatic language usage.
Fall
Prerequisite: DTCH 0200
1 Course Unit

**DTCH 0400 Intermediate Dutch II**
A fourth semester Dutch language course.
Spring
Prerequisite: DTCH 0300
1 Course Unit

**DTCH 1153 Is Europe Facing a Spiritual Crisis?**
Is Europe Facing a Spiritual Crisis? On Contemporary Debates about Secularization, Religion and Rationality. Point of departure for this course is the difference between Europe and the US as to the role of religion in the unfolding of their respective "cultural identities" (cf. Charles Taylor, A Secular Age, 522-530). As a rule, both the US and Western Europe are now defined as secularized cultures, even if their histories and specific identities are strongly rooted in the Christian heritage. Given this contemporary situation, four research questions will be dealt with in this course. 1) What is meant by secularization? In answer to that question, two secularization theories are distinguished: the classic versus the alternative secularization thesis; 2) What is the historical impact of the nominalist turning-point at the end of the Middle Ages in this process towards secularization? 3) How did the relation between rationality and religion develop during modern times in Europe? 4) What is the contemporary outcome of this evolution in so-called postmodern / post-secular Europe and US? We currently find ourselves in this so-called postmodern or post-secular period, marked by a sensitivity to the boundaries of (modern) rationality and to the fragility of our (modern) views on man, world and God. In this respect, we will focus on different parts of Europe (Western and Eastern Europe alike) and will refer to analogies and differences between Western Europe and US. This historical-thematic exposition is illustrated by means of important fragments from Western literature (and marginally from documents in other arts) and philosophy. We use these fragments in order to make more concrete the internal philosophical evolutions in relation to corresponding changes in diverse social domains (religion, politics, economy, society, literature, art...).

**DTCH 2610 Early Netherlandish Painting: Angels, Demons, Nudes**
Over the course of the fifteenth and sixteenth centuries, painting in the Netherlands experienced dramatic technological advancements: the application of oil on panel allowed for an unprecedented richness of color; experiments with optics led to improved illusions of space; artists rendered light and reflections as never before. Did these advancements in depicting the natural world conflict with or enhance the portrayal of spiritual visions? Did realism pave the way for secular art? In this course, we will look critically at the relationship of science and art, tradition and innovation, the imagined and the experienced. The delicate preciousness of Jan van Eyck, the strange spaces of Petrus Christus, the bizarre hellscapes of Hieronymus Bosch, and the peasant festivals of Peter Bruegel will guide us through these themes.

DTCH 5710 Literature and Multilingualism
Since several years, the societal and cultural reality of multilingualism has become an important research field in linguistics and literary studies, as in cultural studies more generally. This graduate course will investigate how multilingual poetics challenge and resist paradigms and ideologies of innate monolingualism, linguistic mastery, absolute translatability and monocultural nationalism. To begin with, the course will introduce central aspects of scholarship on literature and multilingualism, covering concepts such as heteroglossia, code switching, translanguaging and macaronic language, and debates such as those on world literature, global English, foreignization, (un)translatability and non-translation, including their political and ethical importance. After a brief historical overview, glancing at western literary multilingualism in the Middle Ages, Romanticism and the avantgarde, the course will mainly focus on literature of the late 20th and 21st centuries taken from Germanic and Romance linguistic contexts. Using an exemplary selection, the course will cover prose, poetry and drama, and include excerpts of texts by authors such as Andrea Camilleri, Gino Chiellino, Fikry El Azzouzi, Ernst Jandl, Jackie Kay, Çağlar Köseoğlu, Monique Mojica, Melinda Nadj Abonji, Emine Sevgi Özdamar, Olivier Rolin, Yoko Tawada, Nicole van Harskamp, and others. Reading these texts, we will try to determine how multilingualism manifests itself (linguistically, discursively, rhetorically, thematically, contextually etc.) and how the texts engage with linguistic, cultural and social pluralities. The course will conclude with a focus on the translator as a central character in fictional prose and movies. Classes will take place in an interactive format that stimulates discussion and exchange. Students will get the respective excerpts – both in the original version and in English translation – one week at a time so that they can prepare themselves each week for the discussion. Theoretical and contextual information will be provided via Power Point presentations.

DTCH 5740 Politics and Societies in the Early Modern World
In this seminar, we will discuss how early modern globalization affected societies and the ways their members and rulers made politics. Following a historiographical introduction, it is divided in three sections. In the first, we will concentrate on empires and kings in order to detect common features of dynastic power across the globe and to explore how such characteristics influenced each other. Second, we will shift our attention to citizens and the ways they made politics in their city-states. For a long time, research on citizenship has been confined to the post-revolutionary nation states. However, recent research suggests that urban citizenship has far deeper roots in medieval and early modern cities. Up to now most research has focused on urban centers in Western Europe and more precisely on the so-called urban belt stretching from Central and North-Italy, over Switzerland and Southern Germany to the Rhineland and the Low Countries. Comparisons with urban centers in Asia and the colonial Americas will be needed to test that view. In the third section, we will study the people who provided information to societies and decision makers. Often, they held multiple identities or they acted as religious or ethnic outsiders. Therefore, we call them, with a term borrowed from anthropology 'brokers'. Taken together, the analysis of these aspects will deepen our understanding of politics and societies in the globalizing early modern world. Thus, the seminar will contribute to a more comprehensive, less Europe-centered view on that period.

DTCH 5780 Privacy and Society in Seventeenth-Century Dutch Art Seminar
How do paintings offer occasions for personal reflection, and how do they construct social bonds? The aim of this seminar is to develop a set of critical skills for analyzing the different ways in which seventeenth-century Dutch paintings drew upon shared social values, national identity and economic pride, how they appealed to individual buyer tastes, and how they have engaged and continue to engage poetic minds. We will address these matters by paying particular attention to the representation of space, considering domestic interiors, urban settings, church architecture, imperial arenas, and landscapes both real and imagined. Our discussions of how paintings reflect and shape privacy and society will be informed by visits to the Philadelphia Museum of Art, by readings from methodologically diverse essays, and by writing frequently, which will provide us with occasions to test our ideas in response to what we see and read. Open to graduate and undergraduate students.

DTCH 6610 Nature and Labor in Early Modern Art Seminar
In the sixteenth century, the notion of nature as fecund spawned not only images of lushness but also analogies to the artist’s mind as a fertile place. The idea of “natural law” was also extended to what is a presumably primal condition, one that established how the earth’s resources were to be distributed among its people. Yet the taste for artistic objects in gold, silver, wax, and wood—materials that could be worked into shapes attesting to the owner's dominion over land—led to harvesting processes which met the awareness that nature’s resources could run low or even run out. Untappable nature was a functional metaphor, but scarcity was a reality. As a collective effort to write the other side of the story of Renaissance abundance, this seminar will proceed by addressing the question of how the history of art might be told as a description of materials and their potential for the expenditure of natural and human resources. We will address this question by focusing on primary texts, theoretical interventions, and a selection of objects, images, and early books from collections near at hand. Open to graduate students only.

Earth and Environmental Science (EESC)

**EESC 1000 Earth Systems Science**
An introduction to Earth as a complex system through examination of its atmosphere, hydrosphere, lithosphere and biosphere, the interactions among these spheres, and of the human impacts on the planet and its responses.
Fall
1 Course Unit

**EESC 1002 Geology Laboratory**
Fall or Spring
1 Course Unit

**EESC 1030 Oceanography**
The oceans cover over 2/3 of the Earth's surface. This course introduces basic oceanographic concepts such as plate tectonics, marine sediments, physical and chemical properties of seawater, ocean circulation, air-sea interactions, waves, tides, nutrient cycles in the ocean, biology of the oceans, and environmental issues related to the marine environment.
Spring
1 Course Unit

**EESC 1050 Earth and Life Through Time**
Origin of Earth, continents, and life. Continental movements, changing climates, and evolving life.
Fall or Spring
1 Course Unit

**EESC 1060 Natural Disturbances and Disasters**
Natural disasters play a fundamental role in shaping landscapes and structuring ecosystems. The purpose of this course is to introduce you to both the natural and social science of disasters. This course will explore the geologic processes that cause natural disasters, the ecological and social consequences of disasters, and the role of human behavior in disaster management and mitigation. Through exploring these concepts, this class will provide you with a broad background in the geosciences and the basic tools needed to understand: how earthquakes, volcanoes, landslides, and hurricanes occur; the myriad of ways that we can mitigate against their impacts; and the way in which we can "calculate the cost" of these disasters.
Fall
1 Course Unit

**EESC 1090 Introduction to Geotechnical Science**
Open to architectural and engineering majors as well as Ben Franklin Scholars. Field trips. Relations of rocks, rock structures, soils, ground water, and geologic agents to architectural, engineering, and land-use problems.
Fall
1.5 Course Unit

**EESC 1500 Paleontology**
Geologic history of invertebrates and their inferred life habits, paleoecology, and evolution. Introduction to paleobotany and vertebrate paleontology.

1 Course Unit

**EESC 3003 Penn in the Alps**
The aim of this 10-day summer program is to introduce inquisitive students to the nature, culture, history and languages of the European Alps in Switzerland and Italy. We will be exploring the geology of the Alps and how it influences the development of wildlife, flora, history, religion, culture and of entire regions, how humans have altered the environment, and how humans respond to climate change in Alpine ecosystems. We will learn how to observe nature in a spectacular landscape, visit cultural sites off the beaten track and explore some of the well-known localities, such as Zurich, Valtellina, Bellinzona, and the Engadine.
1 Course Unit
EESC 3100 Petrology and Petrography
Occurrences and origins of igneous and metamorphic rocks; phase equilibria in heterogeneous systems. Laboratory study of rocks and thin sections as a tool in interpretation of petrogenesis.
Spring
1 Course Unit

EESC 3300 Glaciers, Ice & Climate
All forms of frozen water at Earth’s surface define the cryosphere. These icy environments are an integral part of the global climate system, with important linkages and feedbacks resulting from their influences on surface energy and moisture fluxes, clouds, precipitation, hydrology, and circulation in the atmosphere and oceans. This course will survey the various components of the cryosphere and their interactions with climate, with a strong emphasis on the dynamics of glaciers and ice sheets. Broad topics to be covered are: (1) the rudimentary mechanics of glacier and ice sheet flow, (2) fast-flowing ice streams and factors limiting their motion, (3) ice-rafting and its origins, (4) the nature of climate data recorded in natural ice bodies, (5) the influence of climate on the stability of ice sheets and glaciers, and (6) glacier-like flow on other planetary bodies. This will be a lecture-based course with written assignments and problems sets.
1 Course Unit

EESC 3600 Earth’s Surface
Patterns on the Earth’s surface arise due to the transport of sediment by water and wind, with energy that is supplied by climate and tectonic deformation of the solid Earth. This course presents a treatment of the processes of erosion and deposition that shape landscapes. Emphasis will be placed on using simple physical principles as a tool for (a) understanding landscape patterns including drainage networks, river channels and deltas, desert dunes, and submarine channels, (b) reconstructing past environmental conditions using the sedimentary record, and (c) the management of rivers and landscapes under present and future climate scenarios. The course will conclude with a critical assessment of landscape evolution on other planets, including Mars.

1 Course Unit

EESC 4250 Our Water Planet
Water, the “universal solvent”, is a miraculous substance that makes Earth unique in the solar system and, possibly, the galaxy. This course will delve into the wondrous physical and chemical properties of water from the micro (water properties and composition) to macro (global water resources) scale and highlight its role in sculpting almost every facet of Earth’s environment. Water will be examined within a scientific framework, from wicked water problems to wondrous water bodies to the paradox of an abundant yet incredibly precious resource. We will study the vital role of water in life, its movement across around our planet, its part in the growth (and downfall) of civilizations, and the ways in which humans are having profound impacts on all aspects of the water cycle. We will also look at how water interacts with other Earth systems, use topical case studies to examine water issues in the Anthropocene and examine what lies in store for water quality and availability in the twenty-first century during an era of rapid environmental change. Assignments will include class presentations, an opinion piece, and a review article for a leading journal. This course will include a local field trip.

1 Course Unit

EESC 4320 Atmospheric Chemistry
An introduction to the chemistry of the earth’s atmosphere. Covers evolution of the earth’s atmosphere, its physical and chemical structure, its natural chemical composition and oxidative properties, and human impacts, including photochemistry, and aerosols; stratospheric ozone loss, tropospheric pollution; climate change, and acidic deposition.
Chemistry in the atmosphere of other planets in our solar system will be covered.
Fall
Mutually Exclusive: EESC 6320
1 Course Unit

EESC 4336 Ocean-Atmosphere Dynamics and Implications for Future Climate Change
This course covers the fundamentals of atmosphere and ocean dynamics, and aims to put these in the context of climate change in the 21st century. Large-scale atmospheric and oceanic circulation, the global energy balance, and the global energy balance, and the global hydrological cycle. We will introduce concepts of fluid dynamics and we will apply these to the vertical and horizontal motions in the atmosphere and ocean. Concepts covered include: hydrostatic law, buoyancy and convection, basic equations of fluid motions, Hadley and Ferrel cells in the atmosphere, thermohaline circulation, Sverdrup ocean flow, modes of climate variability (El-Nino, North Atlantic Oscillation, Southern Annular Mode). The course will incorporate student led discussions based on readings of the 2007 Intergovernmental Panel on Climate Change (IPCC) report and recent literature on climate change. Aimed at undergraduate or graduate students who have no prior knowledge of meteorology or oceanography or training in fluid mechanics. Previous background in calculus and/or introductory physics is helpful. This is a general course which spans many subdisciplines (fluid mechanics, atmospheric science, oceanography, hydrology).
Spring, odd numbered years only
Also Offered As: PHYS 3314
Mutually Exclusive: EESC 6336
Prerequisite: MATH 1410
1 Course Unit
EESC 4360 Environmental Fluid Dynamics
Environmental Fluid Dynamics (EFD) is an applied branch of fluid mechanics devoted to studying fluid systems in nature, including atmospheric boundary layers and aquatic environments, such as lakes, rivers, and coastal seas. In particular, EFD aims to characterize the mechanisms governing the transport of heat, dissolved, and suspended matter in fluid environments, which together play a critical role in the functioning of ecosystems. This course will introduce the underlying physics governing motion in natural fluids, with emphasis on water bodies. We will discuss the transport equations that model fluid flows affected by vertical and horizontal density gradients, the effect of Earth rotation in fluid trajectories, and the main natural drivers responsible for energizing fluid flows, such as wind and heat fluxes. The course will revisit analytical results characterizing specific type flows in nature, and we will discuss open topics that are under development.

Spring
Mutually Exclusive: EESC 6360
Prerequisite: MATH 1410
1 Course Unit

EESC 4400 Biogeochemistry
Humans have an enormous impact on the global movement of chemical materials. Biogeochemistry has grown to be the principal scientific discipline to examine the flow of elements through the global earth systems and to examine human impacts on the global environment. This course will introduce and investigate processes and factor controlling the biogeochemical cycles of elements with and between the hydrosphere, lithosphere, atmosphere and biosphere. Students will apply principles learned in lectures by building simple computer-based biogeochemical models.

Spring
Mutually Exclusive: EESC 6400
1 Course Unit

EESC 4440 Geomicrobiology
Microorganisms inhabit almost every conceivable environment on the planet’s surface, and extent the biosphere to depths of several kilometers into the crust. Significantly, the chemical reactivity and metabolic diversity displayed by microbial communities make them integral components of global elemental cycles, from mineral dissolution and precipitation reactions, to aqueous reduction-oxidation processes. In that regard, microorganisms have helped shape our planet over the past 4 billion years and made it habitable for higher forms of life. In this course we will evaluate the geological consequences of microbial activities, by taking an interdisciplinary and “global” view of microbe-environment interactions.

Mutually Exclusive: EESC 6440
1 Course Unit

EESC 4510 Introduction to Vertebrate Paleontology
Geologic history of invertebrates and their inferred life habits, paleoecology, and evolution. Introduction to paleobotany and vertebrate paleontology.

Not Offered Every Year
1 Course Unit

EESC 4540 Paleoecology Discovering Lost Ecosystems
Paleoecology, or ecology in the fossil record, is the study of how interactions between species have developed over time and how ecosystems and environmental change have shaped the evolution of life and biodiversity. It also involves rebuilding lost communities from fossil evidence to provide context for the origins of modern life and modern ecosystems. This seminar course will survey major topics in Paleoecology, including of ecosystems, the long-term connections between habitat, life mode and biodiversity as well as the distribution of life (e.g. paleobiogeography), escalation between predators and prey, competition between invasive and resident species, and how we can infer the ecology and behavior of long-dead organisms. Students will lead discussions on select concepts and choose one topic to investigate in depth.

Not Offered Every Year
1 Course Unit

EESC 4550 Macroevolution
Macroevolution, or evolution above the population level and on long timescales, as a field addresses fundamental questions about the origins of life, past and present. These include but are not limited to: How are highly dissimilar species related? Why are animals on distant continents so similar? How and when did major groups, like birds or mammals, originate? What drives evolutionary arms races? Why are there so many more species of beetle than crocodile? Why are there more species in the tropics than the Arctic? Did dinosaurs prevent the diversification of mammals? Why do some animals survive mass extinction? How can invasive species spread so rapidly? Students will learn important concepts underlying our understanding of modern biodiversity and the fossil record, as well as how to use different methods and lines of evidence, including evolutionary trees (phylogeny), fossil databases, past climate and global events, mathematical modeling, and even modern genomics, to answer fundamental questions about the evolution of life.

Spring, odd numbered years only
Also Offered As: BIOL 4450
1 Course Unit

EESC 4630 Hydrology
Introduction to the basic principles of the hydrologic cycle and water budgets, precipitation and infiltration, evaporation and transpiration, stream flow, hydrograph analysis (floods), subsurface and groundwater flow, well hydraulics, water quality, and frequency analysis.

Fall
Mutually Exclusive: EESC 6630
1 Course Unit

EESC 4660 Soil Science
Soil is considered the "skin of the Earth", with interfaces between the lithosphere, hydrosphere, atmosphere, and biosphere. It is a mixture of minerals, organic matter, gases, liquids and a myriad of organisms that can support plant life. As such, soil is a natural body that exists as part of the environment. This course will examine the nature, properties, formation and environmental functions of soil.

Mutually Exclusive: EESC 5660
1 Course Unit
EESC 4700 Remote Sensing
This course will introduce students to the principles of remote sensing, characteristics of remote sensors, and remote sensing applications. Image acquisition, data collection in the electromagnetic spectrum, and data set manipulations for earth and environmental science applications will be emphasized. We will cover fundamental knowledge of the physics of remote sensing; aerial photographic techniques; multispectral, hyperspectral, thermal, and other image analysis. Students will pursue an independent research project using remote sensing tools, and at the end of the semester should have a good understanding and the basic skills of remote sensing. Mutually Exclusive: EESC 6700 1 Course Unit

EESC 4800 Geophysics
This course will cover the application of geophysical investigation techniques to problems of the earth's planetary structure, local subsurface structure and mineral prospecting. The topics will include principles of geophysical measurements and interpretation with emphasis on gravity measurement, isostasy, geomagnetism, seismic refraction and reflection, electrical prospecting, electromagnetics and ground radar. Not Offered Every Year 1 Course Unit

EESC 4991 Topics in Earth Science
In depth examination of special topics in Earth Science. Topics will change with instructor and course offerings. 1 Course Unit

EESC 4997 Senior Thesis
The culmination of the Earth Science major. Students, while working with an advisor in their concentration, conduct research and write a thesis. Two Term Class, Student may enter either term; credit given after both terms are complete 1 Course Unit

EESC 5010 The Geology and Geography of Energy Resources
This course will survey the way geology controls the formation and location of energy resources. Questions we'll address include, "How are oil and gas fields formed?", "Why does the Middle East have so much oil?", "What are the best locations in the US for wind and solar energy generation, and why?". We will discuss hydrocarbon, nuclear, solar, wind, and tidal energy sources. Not Offered Every Year 1 Course Unit

EESC 5200 Aqueous Geochemistry
This course is designed to provide the graduate student with an understanding of the fundamentals of aqueous geochemistry. The chemistry of water, air and soil will be studied from an environmental perspective. The nature, composition, structure, and properties of pollutants coupled with the major chemical mechanisms controlling the occurrence and mobility of chemicals in the environment will also be studied. Upon completion of this course, students should expect to have attained a broad understanding of and familiarity with aqueous geochemistry concepts applicable to the environmental field. Environmental issues that will be covered include acid deposition, toxic metal contamination, deforestation, and anthropogenic perturbed aspects of the earth's hydrosphere. Not Offered Every Year 1 Course Unit

EESC 5320 Fundamentals of Air Pollution
This course will cover various topics related to Air Quality. Initial lectures will cover the history of air pollution, discussions of the Clean Air Act and composition of the atmosphere. We will then progress to discussion of atmospheric pollutants and sources of those pollutants. Additional topics will include: fate of atmospheric pollutants (transport and dispersion mechanisms will include: fate of atmospheric pollutants (transport and mechanisms), effects of air pollution (health and environmental effects), urban smog, acid rain, climate change, ozone depletion in the stratosphere, air quality criteria, and engineering controls. Spring 1 Course Unit

EESC 5400 Evolution/Revolution of Land Ecosystems
Origin and diversification of land ecosystems. Interaction between plants and animals. Effects of past climatic change and other external factors. The importance of past changes in land ecosystems to our understanding of current global change. Not Offered Every Year 1 Course Unit

EESC 5630 Hydrology
Introduction to the basic principles of the hydrologic cycle and water budgets, precipitation and infiltration, evaporation and transpiration, stream flow, hydrograph analysis (floods), subsurface and groundwater flow, well hydraulics, water quality, and frequency analysis. Fall 1 Course Unit

EESC 5660 Advanced Soil Science
Soil is considered the "skin of the Earth", with interfaces between the lithosphere, hydrosphere, atmosphere, and biosphere. It is a mixture of minerals, organic matter, gases, liquids and a myriad of organisms that can support plant life. As such, soil is a natural body that exists as part of the environment. This course will examine the nature, properties, formation and environmental functions of soil. Mutually Exclusive: EESC 4660 1 Course Unit
EESC 5700 Data Analysis in Earth Science
This course will introduce numerical techniques for analyzing data and formulating models in Earth Science. Students will first be introduced to Octave, a high level computer programming language (equivalent to Matlab, but free of cost) that allows data analysis and manipulation, sophisticated plotting and numerical modeling from the same interface. Data analysis will focus on time series, pattern recognition, image/topography analysis, and correlation statistics; modeling will include groundwater and surface water flow, random processes, diffusion, and erosion and deposition. This will be a seminar-style course where discussion will be encouraged, and additional topics may be covered depending on student interest. Through project-based learning exercises students will gain proficiency in Octave which will be useful for all aspects of Earth science.
Fall
1 Course Unit

EESC 5704 Geologic Field Methods
During six Saturday field trips, students will study field methods for the collection of geologic data. Use of the Brunton compass for basic surveying and collection of rock strata orientation will be stressed. Students will have an opportunity for field study of rocks and minerals, geomorphology, and geologic structures. This course is intended for MSAG students who do not have a degree in geology or need a field methods course for PG licensure.
1 Course Unit

EESC 5720 Role of the Environmental Professional in Managing Contaminated Site Liability
Evaluation of environmental contamination and liability is an important tool during acquisition of real estate property, and a standard work product in the environmental consulting field. This course will cover the purpose and history of the Superfund law, the various classifications of Superfund liable parties, and protections against Superfund liability, specifically with regard to bona fide prospective purchasers (BFPP). In the context of the BFPP liability defense the course will focus on the performance of “All Appropriate Inquiry” for the presence of environmental contamination (e.g. Phase I environmental site assessment). Our study of “All Appropriate Inquiry” will include evaluation of historical maps and other resources, aerial photography, chain-of-title documentation, and governmental database information pertaining to known contaminated sites in the area of select properties on or near campus. Site visits will be performed to gain experience and knowledge for the identification of recognized environmental conditions. Students will prepare environmental reports for select properties and will have an opportunity to hone technical writing skills.
Spring
1 Course Unit

EESC 5800 Geotectonics
Bulk structure of the Earth. Plate tectonics and plate boundaries. Plumes, rifting, and intraplate tectonics. Geotectonics and seismicity.

EESC 6206 Geochemical Modeling
This course is designed to introduce the major concepts regarding geochemistry and geochemical modeling. The course introduces two United States Geological Survey (USGS) computer models, PHREEQC, a geochemical speciation model, and PHAST, a transport module which is coupled with PHREEQC output. These are highly respected, world-renowned models that are free-ware via the USGS, complete with documentation. Once familiar with the models, the student can continue to work with them beyond the course experience. PHREEQC is designed to perform a wide variety of aqueous geochemical calculations and can be used to simulate chemical reactions and transport processes in natural or polluted waters. PHREEQC is capable of modeling both equilibrium and kinetic reactions. Some of the simulations pursued during the course include: Speciation of precipitation water; Iron speciation; Zinc sorption onto hydrous ferric oxide; Oxidation of organic carbon and the sequence of electron donors in natural waters; Benzene advective transport in groundwater; TCE transport and degradation.

Spring
1 Course Unit

EESC 6320 Advanced Atmospheric Chemistry
An introduction to the chemistry of the earth's atmosphere. Covers evolution of the earth's atmosphere, its physical and chemical structure, its natural chemical composition and oxidative properties, and human impacts, including photochemistry, and aerosols; stratospheric ozone loss, tropospheric pollution; climate change, and acidic deposition. Chemistry in the atmosphere of other planets in our solar system will be covered.

Fall
Mutually Exclusive: EESC 4320
1 Course Unit

EESC 6360 Advanced Environmental Fluid Dynamics
Advanced Environmental Fluid Dynamics (EFD) is an applied branch of fluid mechanics devoted to studying fluid systems in nature, including atmospheric boundary layers and aquatic environments, such as lakes, rivers, and coastal seas. In particular, EFD aims to characterize the mechanisms governing the transport of heat, dissolved, and suspended matter in fluid environments, which together play a critical role in the functioning of ecosystems. This course will introduce the underlying physics governing motion in natural fluids, with emphasis on water bodies. We will discuss the transport equations that model fluid flows affected by vertical and horizontal density gradients, the effect of Earth rotation in fluid trajectories, and the main natural drivers responsible for energizing fluid flows, such as wind and heat fluxes. The course will revisit analytical results characterizing specific type flows in nature, and we will discuss open topics that are under development.

Spring
Mutually Exclusive: EESC 4360
Prerequisite: MATH 1410
1 Course Unit

EESC 6400 Advanced Biogeochemistry
Humans have an enormous impact on the global movement of chemical materials. Biogeochemistry has grown to be the principal scientific discipline to examine the flow of elements through the global earth systems and to examine human impacts on the global environment. This course will introduce and investigate processes and factor controlling the biogeochemical cycles of elements with and between the hydrosphere, lithosphere, atmosphere and biosphere. Students will apply principles learned in lectures by building simple computer-based biogeochemical models.

Spring
Mutually Exclusive: EESC 4400
1 Course Unit

EESC 6404 Field Methods in Biogeochemistry
This field- and lab-based course will examine a set of methods for the study and quantification of biochemical processes in terrestrial and aquatic systems. We will focus on field-based measurements, as well as sample collection and laboratory analyses of fluxes of carbon and nutrient elements, including photosynthesis, respiration, dissolved and suspended nutrient fluxes in streams.

Summer Term
1 Course Unit

EESC 6440 Advanced Geomicrobiology
Microorganisms inhabit almost every conceivable environment on the planet's surface, and extent the biosphere to depths of several kilometers into the crust. Significantly, the chemical reactivity and metabolic diversity displayed by microbial communities make them integral components of global elemental cycles, from mineral dissolution and precipitation reactions, to aqueous reduction-oxidation processes. In that regard, microorganisms have helped shape our planet over the past 4 billion years and made it habitable for higher forms of life. In this course we will evaluate the geological consequences of microbial activities, by taking an interdisciplinary and "global" view of microbe-environment interactions.

Mutually Exclusive: EESC 4440
1 Course Unit

EESC 6510 Advanced Vertebrate Paleontology Seminar
Topics in vertebrate paleontology and paleoecology.

Fall or Spring
1 Course Unit

EESC 6540 Advanced Paleoecology Discovering Lost Ecosystems
Paleoecology, or ecology in the fossil record, is the study of how interactions between species have developed over time and how ecosystems and environmental change have shaped the evolution of life and biodiversity. It also involves rebuilding lost communities from fossil evidence to provide context for the origins of modern life and modern ecosystems. This seminar course will survey major topics in Paleoecology, including of ecosystems, the long-term connections between habitat, life mode and biodiversity as well as the distribution of life (e.g. paleobiogeography), escalation between predators and prey, competition between invasive and resident species, and how we can infer the ecology and behavior of long-dead organisms. Students will lead discussions on select concepts and choose one topic to investigate in depth.

Not Offered Every Year
1 Course Unit
EESC 6550 Advanced Macroevolution
Macroevolution, or evolution above the population level and on long timescales, as a field addresses fundamental questions about the origins of life, past and present. These include but are not limited to: How are highly dissimilar species related? Why are animals on distant continents so similar? How and when did major groups, like birds or mammals, originate? What drives evolutionary arms races? Why are there so many more species of beetle than crocodile? Why are there more species in the tropics than the arctic? Did dinosaurs prevent the diversification of mammals? Why do some animals survive mass extinction? How can invasive species spread so rapidly? Students will learn important concepts underlying our understanding of modern biodiversity and the fossil record, as well as how to use different methods and lines of evidence, including evolutionary trees (phylogeny), fossil databases, past climate and global events, mathematical modeling, and even modern genomics, to answer fundamental questions about the evolution of life.
Spring, odd numbered years only
1 Course Unit

EESC 6600 Advanced Earth's Surface
Patterns on the Earth's surface arise due to the transport of sediment by water and wind, with energy that is supplied by climate and tectonic deformation of the solid Earth. This course presents a treatment of the processes of erosion and deposition that shape landscapes. Emphasis will be placed on understanding landscape patterns as a tool for (a) understanding landscape patterns including drainage networks, river channels and deltas, desert dunes, and submarine channels, (b) reconstructing past environmental conditions using the sedimentary record, and (c) the management of rivers and landscapes under present and future climate scenarios. The course will conclude with a critical assessment of landscape evolution on other planets, including Mars.
Not Offered Every Year
Mutually Exclusive: EESC 3600
1 Course Unit

EESC 6606 Fate and Transport of Pollutants
This course covers basic groundwater flow and solute transport modeling in one-, two-, and three-dimensions. After first reviewing the principles of modeling, the student will gain hands-on experience by conducting simulations on the computer. The modeling programs used in the course are MODFLOW (USGS), MT3D, and the US Army Corps of Engineers GMS (Groundwater Modeling System).
Spring
1 Course Unit

EESC 6620 Environmental Groundwater Hydrology
This course is designed to introduce the major definitions and concepts regarding groundwater flow and contaminant transport. The theory and underlying concepts, including mathematical derivations of governing equations used to model groundwater flow and contaminant transport, will be discussed and applications to environmental problems addressed. Upon completion of this course, students should expect to have attained a broad understanding of and familiarity with groundwater flow and contaminant transport concepts, and to have acquired the skills necessary to pursue work in flow and transport modeling.
Spring
1 Course Unit

EESC 6664 Field Study of Soils
Processes of soil development in a variety of temperate environments. Effects of lithology and climate on soil properties.
Summer Term
1 Course Unit

EESC 6670 Advanced Remote Sensing
This course will introduce students to the principles of remote sensing, characteristics of remote sensors, and remote sensing applications. Image acquisition, data collection in the electromagnetic spectrum, and data set manipulations for earth and environmental science applications will be emphasized. We will cover fundamental knowledge of the physics of remote sensing; aerial photographic techniques; multispectral, hyperspectral, thermal, and other image analysis. Students will pursue an independent research project using remote sensing tools, and at the end of the semester should have a good understanding and the basic skills of remote sensing.
Mutually Exclusive: EESC 4700
1 Course Unit

EESC 6702 Instrumentation for the Geosciences
An introduction to the theory, operation and application of modern analytical instrumentation used in geo- and environmental sciences. Primarily focused on laboratory instrumentation such as mass spectroscopy, elemental analyses and x-ray techniques. Some field instruments will be introduced as well. Students will be expected to develop projects utilizing the various instruments.
Spring
1 Course Unit

EESC 6710 Environmental Statistical Analysis
Statistical analysis of data from geological, geotechnical, and geohydrologic sources.
Fall or Spring
1 Course Unit

EESC 6715 Water Resources for Geologists and Environmental Scientists
This class will provide an overview of water topics and issues and is intended to provide geologists and environmental scientists with a working understanding of current water resource issues and challenges ranging from stormwater and flooding to stream restoration, water re-use and ecological restoration. Starting with an understanding of hydrology, streams, and related ecosystems, the class will look at the various ways we use and depend on water, the ways in which water resources are degraded, and practices to restore and protect the resource. Topics to be covered include green infrastructure, water and wastewater sources and water reuse, stream health, stream channel restoration, riparian buffers, floodplains, best practices, and the concept of "one water". We will also cover current regulations, changing water policies, sustainability, and the implications of climate change.
Summer Term
1 Course Unit

EESC 6720 Landslides
Landslides are important geomorphic agents in mountainous terrain, mobilizing sediment and playing a key role in controlling relief and elevation. The work of landslides is often characterized by their magnitude-frequency, which also has direct implications for people, property, and infrastructure in mountainous terrain, and for the approaches taken to minimize the risk from landslides. This course will introduce students to a conceptual understanding of landslides at a range of spatial scales, including the mechanics of the processes governing landslides from trigger to deposition. Methods of slope monitoring and the varied approaches to landslide risk mitigation and management will be explored, with a range of geotechnical and environmental applications. This course includes lab-based sessions to demonstrate simple techniques to understand fundamental landslide processes, and applications of GIS technology to explore slope monitoring and failure prediction.
1 Course Unit
EESC 6730 Process Geomorphology
Geomorphology, the study of the Earth’s landforms and surface processes that have formed them, have evolved rapidly over the past decades. Traditionally, this sub-discipline of geology was largely descriptive, with the shape and relationships of various landforms attributed to the interplay of tectonic and climatic forces. In the 1950-60s, scientists began to quantify the processes operating at different spatial and temporal scales, and the field of Process Geomorphology replaced the descriptive framework. A quantitative approach is now integrating regional structural framework, climatology, and biologically mediated (including anthropogenic) processes to generate predictive models of landscape change. This course will include applications of high-resolution near-surface geophysical method, ground-penetrating radar (GPR), to help visualize the subsurface aspects of landform analysis. Along with understanding the morphodynamic feedbacks based on sediment transport, this geophysical application will help integrate the active earth surface processes with antecedent conditions (paleo-landscape). Lecture material will be complemented with manuscript analysis and the course will culminate with a rigorous research-based term project.
1 Course Unit

EESC 6770 Geocomputations
Review and applications of selected methods from differential equations, advanced engineering mathematics and geostatistics to problems encountered in geology, engineering geology, geophysics and hydrology.
Fall
1 Course Unit

EESC 6800 Advanced Geophysics
This course will cover the application of geophysical investigation techniques to problems of the earth's planitary structure, local subsurface structure and mineral prospecting. The topics will include principles of geophysical measurements and interpretation with emphasis on gravity measurement, isostasy, geomagnetism, seismic refraction and reflection, electrical prospecting, electromagnetics and ground radar. Not Offered Every Year
1 Course Unit

EESC 6810 Applied and Environmental Geophysics
The application of geophysical investigation techniques to problems of the local and shallow subsurface structure of the earth. The application of geophysical measurements and interpretation for environmental site characterizations, locating buried structures, groundwater investigations, and identifying geotechnical hazards with emphasis on gravity methods, seismic refraction and reflection, electrical resistivity, electromagnetic methods, ground penetrating radar, and borehole nuclear logging.
Fall
1 Course Unit

EESC 6820 Geomechanics: Solids
Mechanical properties of solid and fluid earth materials, stress and strain, earth pressures in soil and rock, tunnels, piles, and piers; flow through gates, weirs, spillways and culverts, hydraulics, seepage and Darcy’s law as applied to the hydrologic sciences.
Fall
1 Course Unit

EESC 6830 Geomechanics: Fluids
Static and Dynamic mechanical properties of fluid in earth materials, as applied to the Hydrologic Sciences; Principles of Fluid Mechanics and Hydraulics applied to open channel flow in earth materials; flow through gates, weirs, spillways, and culverts; Applications of Darcy’s Law to subsurface flow and seepage.
Spring
1 Course Unit

EESC 6840 Engineering Geology: Rock Mechanics
This course focuses on the rock mechanics aspects of Engineering Geology. The theme is characterization of the geologic environment for engineering and environmental investigations. Covered are the various exploration tools and methods, including: Collection and analysis of existing engineering data; Interpretation of remotely sensed imagery; Field and laboratory measurements of material properties; Measurement and characterization of rock discontinuities; Rock slope stability analysis; Stress, strain and failure of rocks and the importance of scale; Rock core logging; Rock mass rating; Rock support and reinforcement; Rock excavation, blasting and blast monitoring and control.
Fall
1 Course Unit

EESC 6850 Engineering Geology: Surficial Materials & Processes
As the human population continues to grow, the environment and earths resources become more important. This course will concentrate on the occurrence and distribution of earth's surficial materials and their engineering and environmental properties. The engineering classification, testing, and use of the earth materials will be emphasized. The geohazards of surficial processes will also be studied in the context of geologic history and the planning and use of the geologic environment.
Spring
1 Course Unit

EESC 6870 Interpretation of Near-surface Geologic Structure for Engineering and Environment
The course introduces the basic principles of structural geology and their applications to engineering and environmental site characterization. Includes the mechanisms for the deformation and failure of the earth's crust, folded and faulted structures, and the orthogonal and stereographic solutions to characterize near-surface geologic structure. It also includes the construction and interpretation of geologic maps, geologic cross sections and block diagrams. Emphasis is placed on the graphical representation of subsurface data, including the use of selected computer programs, and the integration of the data to solve problems encountered in engineering and environmental projects.
Spring
1 Course Unit

EESC 6904 Geology Field Work
Directed independent field work.
Fall or Spring
1 Course Unit

EESC 6909 Project Design
This course is designed to prepare Master of Science in Applied Geosciences students to undertake their Project Design exercise. In this course, we discuss how to identify an appropriate research project, how to design a research plan, and how to prepare a detailed proposal. By the end of the course, each student is expected to have completed a Project Design proposal.
Spring
1 Course Unit
EESC 7911 Research Topics in Earth Science
This seminar will familiarize new PhD students in Earth Science with the skills and knowledge needed to develop as professionals. Topics will include research ethics, the publication process, writing proposal for research funding, etc.
Two Term Class, Student may enter either term; credit given for either 1 Course Unit

EESC 7991 Topics in Earth Science
This course will use the weekly EES seminar series to survey historic breakthrough papers or topics in the earth sciences, as well as modern papers - written by the seminar speakers - that often put the classics in perspective. Graduate students (Ph.D. only) in the Department of Earth and Environmental Science will engage in the material through reading, presentation, and discussion. The course has several goals. (1.) To engender an understanding and appreciation of major breakthroughs in our field. (2.) To develop skills in presenting and discussing scientific results. And (3.) to refine students' understanding of what constitutes great science.
1 Course Unit

EESC 9999 Independent Study and Research
Directed study for individuals or small groups under supervision of a faculty member.
Fall or Spring
1-2 Course Units

East Asian Languages & Civilization (EALC)

EALC 0001 East Asia: Past and Present
This course surveys the history of East Asia from early times to the present. We will study the establishment of various sociopolitical orders and their characteristics alongside major cultural developments. Covered topics include: state formation and dissolution; the role of ideology and how it changes; religious beliefs and values; agriculture, commerce, and industry; changing family relations; responses to imperialism; and East Asia's growing stature in the modern world as well as future prospect. Although a main focus will be on understanding how the regions we now know as China, Japan, and Korea emerged with their respective identities, the course will also give attention to various groups that are rarely noticed in the contemporary world but nonetheless historically important, such as the Tibetans, Khitans, Jurchens, Mongols, and Manchus.
1 Course Unit

EALC 0020 Introduction to Chinese Civilization
This course introduces Chinese history from ancient to modern times. In addition to the political, social, economic, and intellectual developments, this course will look at Chinese history from the perspective of women, the peripheries, environment, and oceanic trade networks. It challenges the notion of "civilization" and the imagination of history as singular and monolithic. The lectures and readings will include some of the most up-to-date scholarship in Chinese and East Asian history. The recitations and short paper assignments are designed for students to practice historical analysis of primary sources.
Fall
1 Course Unit

EALC 0040 Introduction to Japanese Civilization
Survey of the civilization of Japan from prehistoric times to the present.
Spring
1 Course Unit

EALC 0060 Introduction to Korean Civilization
What is Korean civilization—is it a singular notion, or are there many that became what we know as South and North Korea today? How have Koreans interpreted and represented their own cultures, traditions, and history through the years? This introductory course offers a broad chronological survey of Korean history, arts, and culture from its early days to the present moment. Our readings will include a selection of literature—from foundation myths, poetry, to modern fiction—as well as royal edicts and political manifestoes and op-eds. Alongside the readings, we will also engage with multimedia resources including various artwork, film, and music. Through these cultural texts, we will explore the political, economic, and social order of different historical eras and identify major currents and events on the Korean peninsula such as shifting political climates, class struggles, gender dynamics, and complex relations with its East Asian neighbors and the West. We will also be treated to guest lectures from the interdisciplinary Korean studies scholars affiliated with the James Joo-Jin Kim Center for Korean Studies at Penn. By the end of the semester, students will become familiar with the many continuities and breaks that constitute Korean culture from ancient to modern times and gain good insight into where it might be headed in the future. No prior knowledge of Korea or the Korean language is required.
Spring
Also Offered As: HIST 0860
1 Course Unit

EALC 0080 Mongolian Civilization: Nomadic and Sedentary
This course will explore how two intertwined ways of life - pastoral nomadism and settling down for religious, educational, and economic reasons - have shaped the cultural, artistic, and intellectual traditions of Mongolia. In this course students will learn about Mongolian pastoral nomadism, and how the Mongolian economy, literature, and steppe empires were built on grass and livestock. We will also explore how Mongolians have also just as consistently used the foundations of empire to build sedentary monuments and buildings, whether funerary complexes, Buddhist monasteries, socialist boarding schools, and modern capitals. Over time, these cities have changed shape, location, and ideology, all the while remaining linked to the mobile pastoralists in the countryside. We will also explore how these traditions of mobile pastoralism and urbanism were transformed in the 20th century, by urbanization, communist ideology, and the new reality of free-market democracy, ideological pluralism, and a new mining dependent economy. We will meet modern painters and musicians who interweave Mongolian nomadic traditions with contemporary world trends, and consider the future of rural traditions in a modern world.
Spring, odd numbered years only
Also Offered As: HIST 0757
1 Course Unit

EALC 0100 Art and Civilization in East Asia
Introduction to the major artistic traditions of China and Japan and the practices of art history. We will also consider aspects of Korean and Indian artistic traditions as they relate to those of China and Japan. Our approaches will be methodological in addressing how we understand these objects through careful looking; chronological in considering how the arts developed in and through history; and thematic in studying how art and architecture were used for philosophical, religious and material ends. Special attention will be given to the relationship between artistic production and the afterlife; to the impact of Buddhism and its purposes; to painting traditions and their patronages; and to modernist transformations of traditions.
Not Offered Every Year
Also Offered As: ARTH 1030, VLST 2330
1 Course Unit
EALC 0120 Arts of China
A broad survey of Chinese architecture, sculpture, and painting from the Neolithic age through the nineteenth century. Topics include excavated material from China's Bronze Age, Chinese funerary arts, Buddhist caves and sculpture (including works in the University Museum), the Chinese city, the Chinese garden, and major masterpieces of Chinese painting.
Fall or Spring
Also Offered As: ARTH 2140
1 Course Unit

EALC 0140 Arts of Korea
The goal of this course is understanding the development of visual, performing, and literary arts in Korea and the historical, religious, and social contexts in which they flourished. It serves as an introduction to the arts of Korea, with emphasis on painting, sculpture, ceramics, and architecture and additional consideration of dance, drama, poetry, and culinary arts. Covers the whole history of Korea, from prehistoric times to the twenty-first century.
Not Offered Every Year
1 Course Unit

EALC 0160 Arts of Japan
This lecture course introduces the major artistic traditions of Japan, from the Neolithic period to the present, and teaches the fundamental methods of the discipline of art history. Special attention will be given to the places of Shinto, the impact of Buddhism, and their related architectures and sculptures; the principles of narrative illustration; the changing roles of aristocratic, monastic, shogunal and merchant patronage; the formation of the concept of the artist over time; and the transformation of tradition in the modern age.
Not Offered Every Year

1 Course Unit

EALC 0355 Monsters of Japan
Godzilla! Mothra! Rodan! Totoro! Pikachu! If you know who they are, join us to discover the deeper meanings of monstrosity in Japan. If you don't know who they are, learn the literal, metaphorical, and cinematic implications of these giant (and not so giant) beasts. Watch Tokyo go down in flames, and discuss what that means for New York and Philadelphia! Explore the history, literature, and films of Japanese monsters in this undergraduate seminar.
Not Offered Every Year
1 Course Unit

EALC 0500 East Asian Religions
This course will introduce students to the diverse beliefs, ideas, and practices of East Asia's major religious traditions: Buddhism, Confucianism, Daoism, Shinto, Popular Religion, as well as Asian forms of Islam and Christianity. As religious identity in East Asia is often fluid and non-sectarian in nature, there religious traditions will not be investigated in isolation. Instead, the course will adopt a chronological and geographical approach, examining the spread of religious ideas and practices across East Asia and the ensuing results of these encounters. The course will be divided into three units. Unit one will cover the religions of China. We will begin by discussing early Chinese religion and its role in shaping the imperial state before turning to the arrival of Buddhism and its impact in the development of organized Daoism, as well as local religion. In the second unit, we will turn eastward into Korea and Japan. After examining the impact of Confucianism and Buddhism on the religious histories of these two regions, we will proceed to learn about the formation of new schools of Buddhism, as well as the rituals and beliefs associated with Japanese Shinto and Korean Shamanism. The third and final unit will focus on the modern and contemporary periods through an analysis of key themes such as religion and modernity, the global reception and interpretation of East Asian religions, and the relationship between religion and popular culture. The class will be conducted mainly in the form of a lecture, but some sessions will be partially devoted to a discussion of primary sources in translation. The course assignments are designed to evaluate the development of both of these areas. No previous knowledge of East Asian languages is necessary, and all readings will be available in English on the Canvas site in PDF form.
Fall
Also Offered As: RELS 0500
1 Course Unit

EALC 0501 Introduction to Buddhism
This course seeks to introduce students to the diversity of doctrines held and practices performed by Buddhists in Asia. By focusing on how specific beliefs and practices are tied to particular locations and particular times, we will be able to explore in detail the religious institutions, artistic, architectural, and musical traditions, textual production and legal and doctrinal developments of Buddhism over time and within its socio-historical context. Religion is never divorced from its place and its time. Furthermore, by geographically and historically grounding the study of these religions we will be able to examine how their individual ethic, cosmological and soteriological systems effect local history, economics, politics, and material culture. We will concentrate first on the person of the Buddha, his many biographies and how he has been followed and worshipped in a variety of ways from Lhasa, Tibet to Phrae, Thailand. From there we touch on the foundational teachings of the Buddha with an eye to how they have evolved and transformed over time. Finally, we focus on the practice of Buddhist ritual, magic and ethics in monasteries and among aly communities in Asia and even in the West. This section will confront the way Buddhists have thought of issues such as "Just-War" Women's Rights and Abortion. While no one quarter course could provide a detailed presentation of the beliefs and practices of Buddhism, my hope is that we will be able to look closely at certain aspects of these religions by focusing on how they are practiced in places like Nara, Japan or Vietnam, Laos.
Fall or Spring
Also Offered As: RELS 1730, SAST 1730
1 Course Unit
EALC 0502 Gods, Ghosts, and Monsters
This course seeks to be a broad introduction. It introduces students to the diversity of doctrines held and practices performed, and art produced about "the fantastic" from earliest times to the present. The fantastic (the uncanny or supernatural) is a fundamental category in the scholarly study of religion, art, anthropology, and literature. This course will focus both theoretical approaches to studying supernatural beings from a Religious Studies perspective while drawing examples from Buddhist, Shinto, Christian, Hindu, Jain, Zoroastrian, Egyptian, Central Asian, Native American, and Afro-Caribbean sources from earliest examples to the present including mural, image, manuscript, film, codex, and even comic books. It will also introduce students to related humanistic categories of study: material and visual culture, theology, cosmology, shamanism, transcendentalism, soteriology, eschatology, phantasmatagoria, spiritualism, mysticism, theophany, and the historical power of rumor. It will serve as a gateway course into the study of Religion among numerous Asian, and East Asian Studies, as well as Visual Culture and Film Studies. It will include guest lectures from professors from several departments, as well as an extensive hands-on use of the collections of the Penn Museum of Archaeology and Anthropology and the manuscripts held in the Schoenberg Collection of Van Pelt Library. It aims to introduce students to major, approaches, and terms in the study of religion and the supernatural, but inspire them to take more advanced courses by Ilya Vinitsky, Liliane Weissberg, Proijt Mukharji, Talya Fishman, Annette Reed, David Barnes, David Spafford, Frank Chance, Michael Meister, Paul Goldin, Renata Holod, Paul Rozin, among several others.

EALC 0730 History of Modern China
From an empire to a republic, from communism to socialist-style capitalism, few countries have ever witnessed so much change in a hundred year period as China during the twentieth century. How are we to make sense out of this seeming chaos? This course will offer an overview of the upheavals that China has experienced from the late Qing to the Post-Mao era, interspersed with personal perspectives revealed in primary source readings such as memoirs, novels, and oral accounts. We will start with an analysis of the painful transition from the last empire, the Qing Dynasty (1644-1911), to a modern nation state, followed by exploration of a century-long tale of incessant reform and revolution. The survey will focus on three main themes: 1) the repositioning of China in the new East Asian and world orders; 2) the emergence of a modern Chinese state and nationalistic identity shaped and reshaped by a series of cultural crises; and finally, 3) the development and transformation of Chinese modernity. Major historical developments include: the Opium War and drug trade in the age of imperialism, reform and revolution, the Nationalist regime, Mao's China, the Cultural Revolution, and the ongoing efforts of post-Mao China to move beyond Communism. We will conclude with a critical review of the concept of "Greater China" that takes into account Taiwan, Hong Kong, and the Chinese diaspora in order to attain a more comprehensive understanding of modern China, however defined, at the end of the last century.
Spring
Also Offered As: HIST 0550
1 Course Unit

EALC 0750 Modern Japanese History
This course will survey the major political, economic, social and intellectual trends in the making of modern Japan. Special emphasis will be given to the turbulent relationship between state and society from 1800 to the present.
Fall or Spring
Also Offered As: HIST 0560
1 Course Unit

EALC 0954 Sushi & Ramen: Making Japanese Food Global
Who defines Japanese food? Is it the chef at a top establishment in Tokyo, a home cook in Osaka, a tea master in Kyoto, the ancient capital? Or is it the midwestern American who thinks sushi means raw fish? Is it the person who scarfs cup noodles, or the devotee of artisan ramen stock? Perhaps it is the Japanese government, which in 2006 sent undercover agents abroad to guard against inferior Japanese food outlets. In this class we will consider how Japanese food came to be defined in distinction to Western and Chinese foods beginning in the nineteenth century, and how Japanese food became a global cuisine. Among our questions: What makes a dish Japanese? How did Portuguese or Spanish frying habits (tempura) and Chinese lamian (ramen) become hallmarks? How traditional is the diet of rice and fish, and in what ways does it interact with the environment? How did Buddhist vegetarians justify sukiyaki? What relationship does food have to the longevity of Japanese today? How does gender affect Japanese food cultures? What are the origins of Iron Chef and bento? We will survey the Philadelphia Japanese food scene and learn to make our own sushi. Some controversies we will discuss include the consumption of whale meat in Japan. We will also investigate Japanese government controls of food to combat obesity and to make food safe. after the Fukushima nuclear catastrophe. Materials include essays, films, novellas, menus, and cookbooks.
Not Offered Every Year
1 Course Unit

EALC 1098 Sports in East Asia
This course will examine sports in East Asia from the nineteenth century to the present. Recently, East Asia plays an important role in transforming the global geopolitics of sport. The post-war East Asian Olympic Games-1964 Tokyo Olympics, 1972 Sapporo Winter Olympics, 1988 Seoul Olympics, 1998 Nagano Winter Olympics, and 2008 Beijing Olympics-and the 2002 FIFA World Cup Korea/Japan illustrate the fact that a new global sports order led by East Asia has emerged. East Asia nations will play hosts to other major sporting events, including the 2018 Pyeongchang Winter Olympics, 2020 Tokyo Olympics, and 2022 Beijing Winter Olympics. Chinese, Japanese, and Korean athletes have been highly active in MLB, NBA, English Premier League, and LPGA. The popularity of the various martial arts proves that East Asian sports seem to be everywhere these days. This class will focus on helping students understand how sports have affected and transformed East Asia exploring various issues: imperialism, colonialism, race, class, gender, foreign policy, nationalism, religion, economics, industrialization, tourism, and urbanization. Course contents include lecture, discussions, secondary readings, primary source readings, documentaries, and films.

1 Course Unit
EALC 1101 Introduction to East Asian History
This course will provide an overview of early modern and modern East Asian history. We will discuss developments from ca. 1400 to the present as integrally bound to the history of the modern world. We will also introduce the craft of history and some basic tools and methods of humanities/social science research. By the end of this course you will be able to develop a basic understanding of major topics in early modern and modern East Asian history, learn critical approaches to both primary and secondary sources; compose coherent and persuasive reviews of scholarly works.
Not Offered Every Year
1 Course Unit

EALC 1102 East Asian History to 1750
This course surveys Chinese history to 1750 and introduces students to the fundamental features of this period. Lectures will be illustrated by photographs from dozens of sites in East Asia, and by a field trip to the Japanese House and Garden in Fairmount Park. The main body of the course will be a historical survey of the evolution of East Asian garden art forms from the sixth century to the present. Discussion will touch on geographic and climatic parameters, spiritual and aesthetic principles, practical limitations and creative innovations of East Asian gardens. There will be an additional fee for the Japanese House visit, and possibly for other field trips.

1 Course Unit

EALC 1103 Early Modern Japanese Art and the City of Edo
Study of the major art forms and architecture of Tokugawa (or Edo) period (1603-1868). In this lecture course, we will consider how the arts of this era occur within an increasingly urban and modern culture, particularly with regard to the city of Edo. Issues of the articulation of authority in the built environment, the reinvention of classical styles, and patronage will be raised. May include some visits to PMA, Penn Museum, or other local collections.

1 Course Unit

EALC 1105 Buddhist Arts of East Asia: Sources, Iconography and Styles
Survey of art and architecture created for Buddhist religious purposes in China, Japan, and Korea from ancient times to the present. Lectures will be illustrated by photographs from dozens of sites in East Asia, and by a field trip to the Japanese House and Garden in Fairmount Park. The main body of the course will be a historical survey of the evolution of East Asian garden art forms from the sixth century to the present. Discussion will touch on geographic and climatic parameters, spiritual and aesthetic principles, practical limitations and creative innovations of East Asian gardens. There will be an additional fee for the Japanese House visit, and possibly for other field trips.

Also Offered As: RELS 1105
1 Course Unit

EALC 1106 Chinese Architecture
Survey of Chinese buildings and building technology from the formative period in the second millennium BCE through the twentieth century. The course will deal with well-known monuments such as the Buddhist monasteries of Wutai, imperial palaces in Chang' an and Beijing, the Ming tombs and the Temple of Heaven, and less frequently studied buildings. Also covered will be the theory and principles of Chinese construction. Not offered every year. Fall or Spring
Also Offered As: ARTH 2170
1 Course Unit

EALC 1107 Ancient Chinese Writing
In this course, we will study the material and ideological foundations of Chinese literacy and culture. We will read the earliest known Chinese inscriptions - oracle bones of the Shang dynasty - and learn how to read simple divination texts using modern methods. We will also study the evolution of Chinese writing, beginning with oracle bones and ending with the Chinese Classics. Not offered every year. Fall or Spring
Also Offered As: ARTH 2910, CIMS 2910

EALC 1108 Archaeology of Central Asia
A site by site investigation of Buddhist and non-Buddhist ruins in Central Asia. Included are Nisa, Khwarezm, Pyandzhikent, Khalchayan, Ay-Khanum, Bamiyan, Tumshuk, Kizil, Kucha, Khotan, Adzhina-Tepe, Khoch, Khara-Khoto, and Bezeklik. Fall or Spring
1 Course Unit
EALC 1242 Love and Loss in Japanese Literary Traditions: In Translation
How do people make sense of the multiple experiences that the simple words "love" and "loss" imply? How do they express their thoughts and feelings to one another? In this course, we will explore some means of interpreting and analyzing these experiences. Our materials will include a range of representative authors and cultural concerns that will help students develop a nuanced understanding of Japanese history and society. By the end of the semester, students will have been exposed to a diverse range of representative authors and cultural concerns that will help them develop a nuanced understanding of Japanese history and society.
Fall
Also Offered As: GSWS 1242
1 Course Unit

EALC 1251 Tokyo Stories in Contemporary Japanese Fiction
Tokyo is one of the largest and most vibrant cities in the world. It's also one of the most storied, laying claim to centuries of history and countless colorful districts and neighborhoods. In this class we will explore Tokyo by delving into a collection of stories set in and around the great metropolis. We will work our way forward in time, beginning from the city's roots as the samurai capital of Edo. Along the way, we will investigate contemporary themes such as demographic crisis, social stratification, gender trouble, and the ruins of neoliberal capitalism. By the end of the semester, students will have been exposed to a diverse range of representative authors and cultural concerns that will help them develop a nuanced understanding of Japanese history and society.
Fall, odd numbered years only
1 Course Unit

EALC 1321 18th-Century Seminar: China in the English Imagination
This course explores the material culture of china-mania that spread across England and Europe in the eighteenth century, from chinoiserie vogues in fashion, tea, porcelain, and luxury goods, to the idealization of Confucius by Enlightenment philosophers. The course texts include travel writing, poetry, essays, and plays, and is designed to provide historical background to contemporary problems of Orientalism, Sinophilia, and Sinophobia. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ASAM 2310, COML 2031, ENGL 2031
1 Course Unit

EALC 1322 Chinese Fiction and Drama in Translation
This course explores Romance of Three Kingdoms the most popular classical novel in East Asia and an important source for understanding Chinese culture, politics, history, and military strategy. We propose to read this work not only as a textbook of Chinese literature and culture, but also as a guidebook for career development and risk assessment. Why didn't Pang Tong have a career as successful as Zhuge Liang? Why didn't Ma Su volunteer in a project that he is not good at? If Cao Cao, Liu Bei, Sun Quan run for presidency in the U.S., who would you vote for and why? These are some of the questions that we will explore alongside our inquiry into the the historical development of various genres of Chinese fiction. In addition to Romance of Three Kingdoms, this course introduces Sun Tzu's The Art of War and other classical Chinese novels such as Dream of the Red Chamber and Strange Tales from a Chinese Studio, as well as classical literary criticism such as Cao Pi's On the Standard of Literature (Dian lun), Lu Ji's Essays on Literature (Wen lun), and Liu Xie's The Literary Mind and the Carving of Dragons.

1 Course Unit

EALC 1331 Chinese and Sinophone Cinemas
This course is a survey of Chinese and Sinophone cinemas from the silent era to the present. The Sinophone refers to Sinitic film cultures both inside and outside the People's Republic of China that have been in relatively marginalized positions against the Han-Chinese mainstream, such as Taiwanese, Hong Kong, Tibetan, and transpacific cinemas. One major goal of the course is to interrogate the national cinema framework and to show how the meaning of "Chineseness" has been problematized by filmmakers and critics throughout modern history. Students will learn about important film movements and trends such as leftist cinema from the 1930s, socialist cinema, Taiwanese and Hong Kong New Waves, the Fifth and Sixth Generation filmmakers, and contemporary transnational productions. Attention will be paid to both films known for awards and artistic achievements and popular genres including thrillers, horror, and wuxia (martial art).
Also Offered As: ARTH 3940, CIMS 3940
1 Course Unit

EALC 1335 Cultural Chinas: 20th Century Chinese Literature and Film
This course serves as a thematic introduction to modern Chinese literature and cinema in China, Hong Kong, Taiwan and other transnational Chinese communities in the twentieth century. By discussing a wide range of key literary and filmic texts, this class looks into major issues and discourses in China's century of modernization: enlightenment and revolution, politics and aesthetics, sentimental education and nationalism, historical trauma and violence, gender and sexuality, social hygiene and body politics, diaspora and displacement, youth sub-culture and urban imagination.

1 Course Unit
EALC 1340 Post War Japanese Cinema
Mizoguchi Kenji, Ozu Yasujirō, and Kurosawa Akira are recognized today as three of the most important and influential directors in Japanese cinema. In their films of the late 1940s and 1950s, these directors focused upon issues surrounding the human condition and the perception of truth, history, beauty, death, and other issues of the postwar period. This lecture course places their films in period context, and pays particular attention to the connections to other visual media, and to how “art” and “history” are being defined in the cinematic context. How other directors also took up these issues, and referred to the “big three” is also be discussed.
Not Offered Every Year
Also Offered As: ARTH 2900, CIMS 2900
1 Course Unit

EALC 1351 Contemporary Fiction & Film in Japan
This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan’s war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, manga, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujirō, Naruse Mikio, Kurosawa Akira, Imamura Shohei, Koreeda Hirokazu, and Beat Takeshi.

Also Offered As: CIMS 1351, COML 1351, GSWS 1351
1 Course Unit

EALC 1359 Japanese Popular Culture
Today, Japanese manga, anime, J-pop, and film have a global audience. But these exports can only be truly understood in light of longstanding domestic anxieties about sex, violence, gender, and “the kids these days.” More recent concerns about the country’s declining birthrate, weakening geopolitical position, and vulnerability to natural and anthropogenic disaster also deeply influence Japanese media products. This course explores some of these anxieties through critical examinations of manga, anime, video games, television, music, and fashion in Japan. Film screenings include work by directors Kon Satoshi, Otomo Katsuhiro, Takahata Isao, Miyazaki Hayao; Itami Juzo, and Takita Yojiro; manga excerpts include work by Tezuka Osamu, Usuiwa Naoki, and Yazawa Ai. Secondary readings include scholarship in anthropology, history, sociology, literature, film studies and religious studies.
Not Offered Every Year
1 Course Unit

EALC 1371 New Korean Cinema
In 2019, Bong Joon-ho’s Parasite won the Palme d’Or at the 72nd Cannes Film Festival. This event marked the apex of South Korean cinematic renaissance, having steadily become a tour de force in the international film festival scene since 1997 onwards. This course explores the major auteurs, styles, themes, and currents of the so-called “New Korean Cinema” that emerged in the mid-to-late 1990s to continue to this day. Drawing from texts on critical film and Korean studies, we will pay particular attention to how the selected works re-present, resist, and interweave the sociopolitical climate they concern and are born out of. Using cinema as a lens with which to see the society, we will touch upon major events of the twentieth century including national division, military dictatorship and democratization movements, IMF economic crisis, youth culture, hallyu (the Korean wave), and more. In so doing, we will closely examine how each cinematic medium addresses the societal power structure and the role of the “Other” it represents in terms of class, race, gender, and sexuality in the construction of contemporary Korean society. No prior experience of Korean studies courses necessary; all films will be screened with English subtitles.
Also Offered As: CIMS 1371
Mutually Exclusive: EALC 6371
1 Course Unit

EALC 1379 Art, Pop, and Belonging: Or, How to Talk about Korean Popular Culture
From K-pop and film to fashion, cosmetics, food, and art, South Korean culture seems to be everywhere. In this course, we will discuss how the cadences of Korean culture shifted in tandem with the sheer amount of historical and social change experienced by the Korean people throughout the twentieth century. Specifically, we will look at art and talk to artists, listen to K-pop, and contemplate how these cultural representations activate a sense of belonging and social coalition for marginalized communities in Korea. Addressing topics such as gender and sexuality, modernity and national trauma, xenophobia and racial tensions, queer feminist movements, and cultural transnationalism in the neoliberal era, we will pay particular attention to the structures of power and the role of the “other” in the construction of contemporary South Korea. In so doing, we will also rethink our own positionality in consuming Korean popular culture as North America-based scholars “looking at” Korea from a geographic, cultural, and social distance. All class materials will be in English; no previous knowledge of Korean language is required.
Fall, even numbered years only
1 Course Unit

EALC 1411 Queer Chinas: Sexuality and Politics in the Sinophone World
This class examines queer phenomena in and around China, including Taiwan, Hong Kong, Singapore, and the queer Sinophone world more generally. Beyond seeking to understand sexual subcultures and sites of queer intimacies on their own terms, the course examines their relationship to political economy and geopolitics. In addition to filmic and literary texts, the course includes readings that are theoretical, anthropological, sociological, and comparative. While the focus is largely on modern China, the class also attends to historical reference points both inside and outside the Sinophone world. From a macro perspective, this course examines China’s place in discourses of development, focusing on the role of desire in constituting the sexual and political subject of modernity. The overall goal of this class is to develop alternative frameworks for understanding the relationship between sexuality and politics. The course does not require specialized knowledge of China.
Also Offered As: GSWS 1411
1 Course Unit
EALC 1520 What is Taoism?
This course introduces a wide variety of ideas and practices that have at one time or another been labeled as Daoist (or "Taoist" in the Wade-Giles Romanization), in order to sort out the different senses of the term, and consider whether these ideas and practices have had any common features. We will begin with the two most famous Daoist works—the Zhuangzi and the Daodejing (or Laozi). We will also survey other bio-spiritual practices, such as the meditational techniques of Inner Alchemy and the self-cultivation regimens known today as Qigong and Tai-chi, as well as the theological and ritual foundations of organized Daoist lineages, many of which are still alive across East Asia. We will conclude with a critical review of the twentieth-century reinvention of "Daoism," the scientization of Inner Alchemy, and the new classification of "religious" versus "philosophical Daoism." While familiarizing ourselves with the key concepts, practices, and organizations developed in the history of Daoism, this course emphasizes the specific socio-political context of each of them. Throughout the course, we will think critically about the label of "Daoist" (as well as "Confucian" and "Buddhist") in Chinese history and in modern scholarship. We will also question modern demarcations between the fields of philosophy, religion, and science.

1 Course Unit

EALC 1623 Language, Script and Society in China
The Chinese writing system is the only major surviving script in the world that is partially picto-ideographic, Egyptian hieroglyphic and Sumero-Akkadian cuneiform having passed out of use about two millennia ago. Partly because it is so unique, a tremendous number of myths have grown up around the Chinese script. In an attempt to understand how they really function, this seminar will examine the nature of the sinographs and their relationship to spoken Sinitic languages, as well as their implications for society and culture. We will also discuss the artistic and technological aspects of the Chinese characters and the ongoing efforts to reform and simplify them. The use of sinographs in other East Asian countries than China will be taken into account. There are no prerequisites for this class.

1 Course Unit

EALC 1711 East Asian Diplomacy
Home to four of the five most populous states and four of the five largest economies, the Asia/Pacific is arguably the most dynamic region in the twenty-first century. At the same time, Cold War remnants (a divided Korea and China) and major geopolitical shifts (the rise of China and India, decline of the US and Japan) contribute significantly to the volatility of our world. This course will examine the political, economic, and geopolitical dynamism of the region through a survey of relations among the great powers in Asia from the sixteenth century to the present. Special emphasis will be given to regional and global developments from the perspective of the three principal East Asian states—China, Japan and Korea. We will explore the many informal, as well as formal, means of intercourse that have made East Asia what it is today. Graduate students should consult graduate syllabus for graduate reading list, special recitation time and graduate requirements.

Also Offered As: HIST 1550
Mutually Exclusive: HIST 5550
1 Course Unit

EALC 1712 China & USSR Compared
A comprehensive and multi-faceted survey of China and Russia, mostly in the twentieth century, through examining preludes and postludes, but focusing above all on their time as Communist states and sometimes quarreling Cold War allies. Of course we will cover the history, the geography, the economics, the leaders (Stalin, Mao), and the great events - not least the Second World War in each - always comparing, contrasting, and drawing linkages. We will also examine, however, daily life and work for ordinary people, developments in society, and not least their common attempts at revolution, at somehow creating new and unprecedented polities, having populations of radically transformed new people. This informative, fascinating quest will take us from folklore to literature and the arts to dissent and religion and ecology, among other topics. As far as possible we will let their people speak for themselves, by assigning mostly translations of original sources including novels and memoirs, even poetry. A comprehensive assessment of the strategically critical Asian heartland - which at over 14 million square miles is larger than Canada, the United States, and Western Europe combined. Lectures, readings, midterm, short paper, and in-class final.

Spring
Also Offered As: HIST 1790, REES 1580

EALC 1720 Late Imperial China
This lecture course – the first of a two-part sequence – examines the history of late imperial China through the early 19th century. We begin with the Song dynasty transformation: the rise of gentry society and imperial absolutism, the institution of Confucian orthodoxy, the shift of the population and the economic center of gravity to the south, the commercialization of the economy, and change in the relative status of women and men. We then trace China’s subsequent political and social history, including the following themes: inner vs. outer court politics; law, government, and society; intellectuals and political dissent; gender, family, and kinship practices; patterns of peasant life and rebellion; traditional foreign relations and first contacts with the West; internal sources of the decline of imperial order.

Also Offered As: HIST 0500
1 Course Unit
EALC 1731 20th Century China: Democracy, Constitutions, and States
Since 1900 four types of states have ruled China: dynastic, elective parliamentary, authoritarian nationalist, and communist. We will trace each from its intellectual origins to conclusion. By doing so we will present a solid and wide-ranging narrative of China’s past century, introducing newly discovered material, some controversial. Above all we will dig into the issues raised by the century’s mixture of regimes. Right now China is a dictatorship but once it was an imperfect democracy. Does this prove that Chinese are somehow incapable of creating democracy? That sadly it is just not in their DNA? Or only that the task is very difficult in a country nearly forty times the size of England and developing rapidly? That without dictatorship the Chinese almost inevitably collapse into chaos? Or only that blood and iron have been used regularly with harsh effectiveness? You will be given a solid grounding in events, and also in how they are interpreted, right up to the present. Readings will be mostly by Chinese authors (translated), everything from primary sources to narrative fiction. We will also use wartime documentary films. Two lectures per week, regular mid-term and final exams, and a paper on a topic of your own choice. No prerequisites.
Fall
Also Offered As: HIST 1593
1 Course Unit

EALC 1732 China and the World: Modern Times
History 1594 is a comprehensive introduction to the last hundred years of China’s relations with the world, with emphasis on American-Chinese relations, but within the necessary context of China’s relations with other countries from Asia to Europe to Africa and elsewhere (as well as Washington’s changing relations with China). China’s role in the world can be understood only when the full background and international context is made clear. This course has no prerequisites: first year and other students lacking background will find it manageable and interesting. Students who have successfully completed this course will be well positioned to understand some of the most important of current events, and if they like, pursue the topics as careers (there will be no shortage, I assure you). Although much will be said about diplomacy, and Chinese diplomatic strategy in particular, the mile-posts of the course will be a series of wars: World War I and its effects on China; the heroic Chinese war of resistance against Japan (1937-1945) in which, effectively without allies, the Chinese avoided defeat; the bitter Civil War that followed almost immediately (1946-1949) and brought Mao Zedong and his Communists to power while the predecessor Nationalist government fled to the island of Taiwan; then the Korean War (1950-1953) and the close Chinese-Soviet alliance that followed; The Taiwan Straits Crises (1954-1955, 1958, 1996); the Chinese-Indian war (1962) the origin of a situation now heating up; the Sino-Soviet border conflicts (1969); the Vietnam War (1955-1975) which changed the United States profoundly while reorientating China internationally; the (at the time) little noticed Chinese invasion of Vietnam (1979) - and finally the increasingly tense situation today, between Chine and India, and China and her maritime neighbors from Japan to Indonesia, many U.S. allies.
Also Offered As: HIST 1594
1 Course Unit

EALC 1733 Chinese Foreign Policy
An examination of China’s policies since 1950 not so much in general terms, but rather by looking at policies toward specific countries, such as Korea 1950-53, Taiwan 1958, India 1962, Japan 1963, USSR 1969, US recognition 1971-79 and failure of Kissinger policies. Vietnam both wars: i.e. we cover the ongoing conflict that began in 1979 as well as the war that ended in 1975, toward Cambodia, and not least the South China Sea and the whole world today. We will also examine China’s immense military build up (for what purpose?) the concept that China is rising, the US declining, and Beijing is foreordained lord of the East. The goal is to start from empirical information then build some sense of whether policy has continuity, common features etc. or not, and to what extent it is domestically driven or not. Lots of political background but little theory or grand generalization. A serious research paper will be required.
Fall or Spring
Also Offered As: HIST 3550
1 Course Unit

EALC 1742 From Shamans to Shoguns: The Texts that Made Pre-Modern Japanese History
This course tackles about a millennium of pre-modern Japanese political, social, and cultural history (roughly, 700-1700). Instead of attempting to cover the period chronologically, as an introductory survey might, this class is structured as a series of case studies. Each of these will take a primary source as its point of departure and explore one or more facets of Japanese history and writing. In the course of each case study, lectures and discussions will branch out from the main source to examine its historical context as well as the (political, cultural, textual) traditions that informed that source’s composition. In general, students will read the entire texts of the main sources (or significant portions of them), along with scholarly articles and shorter excerpts from other sources, composed at the same time or in the same vein/genre. During lectures and discussions alike, students will be asked to engage the readings, so as to grasp the specifics of Japanese history and practice the analytical skills required of historical discourse.

EALC 1746 Japan: The Age of the Samurai
Who (or what) where the samurai? What does it mean to say that Japan had an “Age of the Samurai”? In popular imagination, pre-modern Japan has long been associated with its hereditary warrior class. Countless movies have explored the character and martial prowess of these men. Yet warriors constituted but a tiny portion of the societies they inhabited and ruled, and historians researching medieval Japan have turned their attentions to a great range of subjects and to other classes (elite and commoner alike). This class is designed to acquaint students with the complex and diverse centuries that have been called the “Age of the Samurai”-roughly, the years between ca. 1110 and 1850. In the course of the semester, we will explore the central themes in the historiography of warrior society, while introducing some of the defining texts that have shaped our imagination of this age (from laws to epic poems, from codes of conduct to autobiographies).

EALC 1759 Current Issues in Contemporary Japan
In this course, we aim to understand what social issues in Japanese society exist and how they occur. Japan had experienced rapid industrial and economic developments until the 1980s. The Japanese systems of education, labor markets, and social security, which have continued until today, were established by this period approximately. Although people at that time were suffered from problems like harsh entrance examinations for secondary and higher educations, long working hours after they started a job, and gender inequality, they accepted these problems in exchange for their economic flourishing.

1 Course Unit

EALC 1781 Silk Road: From the Mediterranean to the Pacific
A journey along the overland and sea routes that connected China, India, Iran, and Rome from 200-1000 CE and served as conduits for cultural exchange. Precursor and successor routes will also be taken into consideration. The lives of merchants, envoys, pilgrims, and travelers interacting in cosmopolitan communities will be examined. Exploration of long-known and newly discovered archaeological ruins, along with primary sources in translation, will be studied.
Also Offered As: SAST 1781
1 Course Unit

EALC 1791 The Vietnam War
The Vietnam war was a great watershed in twentieth century history that rearranged geo-politics while changing the United States through dissent and social unrest. Frankly, things have never quite recovered. It was a catastrophic and humiliating defeat, but that is all the more reason to study it, for failure often has more to teach us than success. This course provides a framework of free discussion and basic readings —ranging from battlefield memoirs to Graham Greene's great novel The Quiet American—in which to pursue research on whatever aspect of the war they choose, from strategy to cinema and the arts. We will start with a look at the Empire of Vietnam that lasted a millennium, producing a uniquely refined and pure culture. Then we turn to the century of French colonialism and its end in 1954, which was followed by an invasion of South Vietnam from the north, through Laos. American policy was both arrogant and uninformed, converting a protracted loss (1955-1975) into what could easily have been a relatively bloodless success. That process we trace in its many strands. Finally we spend some time on contemporary Vietnam, on how the war is now understood, remembered, and memorialized, as well as how the country seeks to advance. And not least, without removing our focus from Vietnam, we assess how the United States has been changed. For every Tuesday meeting we will have some reading, to provide a common time line and set of issues. As the semester progresses, students will make informal presentations about their work. This is a “Research Seminar” which means a 15-20 page paper on a topic you choose yourself. This can be the most enjoyable and interesting part of the course.
Fall or Spring
Also Offered As: HIST 3707
1 Course Unit

EALC 1792 Pacific World
Following ongoing attempts by historians to move beyond the confines of national and imperial histories, this research seminar highlights the interaction of peoples and cultures across what may be described as the most dynamic world region of the twenty-first century. While discussions of Mediterranean, Atlantic and Indian Ocean Worlds are now commonplace, scholars have, to date, paid less attention to the idea of a Pacific World. How useful is it to identify a “Pacific World” before and after the Age of Discovery—that is, to locate distinctive patterns of human, material and cultural exchange across the Pacific before and after the flood of European power from the fifteenth century? What has been the effect of the rise of the nation-state, modern empires, modern war and globalization? How critical are national and/or imperial legacies to enduring patterns of human interaction and exchange in the twenty-first century Pacific? As global economics, politics and culture increasingly tilt toward the Pacific, we will attempt to uncover the source of the region’s extraordinary energy.

EALC 1955 Environment, Climate, and Culture in Japan
This course explores how Japanese literature, cinema, and popular culture have engaged with questions of environment, ecology, pollution, and climate change from the wake of the dropping of the atomic bomb on Hiroshima in 1945 to the ongoing Fukushima nuclear power plant disaster in the present. Environmental disasters and the slow violence of their aftermath have had an enormous impact on Japanese cultural production, and we examine how these cultural forms seek to negotiate and work through questions of representing the unrepresentable, victimhood and survival, trauma and national memory, uneven development and discrimination, the human and the nonhuman, and climate change's impact on imagining the future. Special attention is given to the possibilities and limitations of different forms—the novel, poetry, film, manga, anime—that Japanese writers and artists have to think about humans' relationship with the environment.

EALC 2201 Modern East Asian Texts
This course is an introduction to and exploration of modern East Asian literatures and cultures through close readings and discussion of selected literary works from the early 20th century to the start of the 21st century. Focusing on China, Japan, and Korea, we will explore the shared and interconnected experiences of modernity in East Asia as well as broaden our perspective by considering the location of East Asian cultural production within a global modernity. Major issues we will encounter include: nation-building and the modern novel; cultural translation; media and technology; representations of gender, race, and class; history and memory; colonialism; war; body and sexuality; globalization. No knowledge of the original language is required.
Not Offered Every Year
Also Offered As: COML 2201
Mutually Exclusive: EALC 6201
1 Course Unit

EALC 2211 Colonial Japanese Literature
This course will explore the development of Japanese and colonial identities in literature produced in and about Japan's colonies during the first half of the 20th century. Throughout the semester, we will read works written during and about the Japanese empire by Chinese, Japanese, Korean, Okinawan, and Taiwanese writers. Looking at the different representations of empire, we will examine concepts such as assimilation, mimicry, hybridity, travel, and transculturation in the context of Japanese colonialism. By bringing together different voices from inside and outside of Japan's empire, students will gain a deeper understanding of the complexities of colonial hegemony and identity. In particular, reading works by Japanese, Okinawan, Korean, Taiwanese and Chinese subjects will enable students to transcend binary notions of colonizer and colonized while also acknowledging the realities of colonial complicity.

1 Course Unit

EALC 2221 Chinese Poetry & Prose: In translation
A wide variety of poetic & prose genres from the earliest times to the 19th century is introduced through English translation. A few selections will also be studied in Chinese characters with romanized transcriptions. There are no prerequisites for this course.
Fall
1 Course Unit
EALC 2236 Seminar in Modern Chinese Literature
Modern Chinese writers are known for their efforts in creating a literary revolution that sought to reformulate the paradigm of Chinese writing. However, these Chinese writers also endeavored to learn from other cultures such as the European and Indian civilizations. For example, Tagore was invited to visit to China in 1923 and was considered a cultural model by many Chinese cultural elites. Hu Shi, a leading Chinese intellectual, wrote The Indianization of China: A Case Study in Cultural Borrowing and India Our Great Teacher, to emphasize the Indian elements in Chinese culture. Other Chinese writers also sought to compare the European with Chinese cultures in different occasions in order to find a path for the rise of modern China. This course explores the ways in which foreign cultures were introduced and how they influence the way the Chinese see themselves in their search for a cultural identity free from the constraints of classical tradition. We will read a variety of papers from the Peoples Republic of China, Hong Kong, Taiwan and Malaysia, in order to examine how modern Chinese literature thrives on cross-cultural elements. All readings will be in English. No prior knowledge is required. Those who are proficient in Chinese are invited to read some of the texts in Chinese.

1 Course Unit

EALC 2243 Loyal Warriors in Japanese Literature
From the earliest literature to the latest think piece on Japanese society, the roles of the "warrior" and of "loyalty" in Japanese culture have fascinated those both inside and outside of Japan. In this course we will trace the development of paragons of loyalty and warrior prowess from the earliest literary works, through the epic Tales of the Heike, and on to the "Treasury of Loyal Retainers," theater, and film. We will read in the philosophy of fidelity and samurai codes to track the growing dedication to ideals of loyalty, exploring evidence of behavior less than loyal as we seek the real influence of these notions. Related topics include the extremes of vengeance and fanaticism.
Not Offered Every Year
1 Course Unit

EALC 2255 Modern Japanese Literature
This course surveys Japanese literature (novels, short stories, poetry, drama, essays) from 1868 to World War II. The purpose is not only to read some of the most important and interesting literary texts of this period, but also to reflect on the ways we read and study literature, and how we draw connections between literature, self, and society. The reading material will be entirely in English.
Not Offered Every Year
1 Course Unit

EALC 2314 Cinema and Socialism
Films from socialist countries are often labeled and dismissed as "propaganda" in Western democratic societies. This course complicates this simplistic view, arguing for the value in understanding the ties between socialist governments, the cinematic arts, and everything in between. We will examine films from past and present socialist countries such as the Soviet Union, China, North Korea, and Cuba, as well as films made with socialist aspirations. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

1 Course Unit

EALC 2502 Science and Technology in Modern East Asia
Technology from East Asia is ubiquitous in everyday life in the 21st century. You may be reading these very words on a device designed or assembled in Japan, China, South Korea, or Taiwan. The region, now a global center of research and innovation, contains some of the modern world's most impressive technological and scientific achievements. It also exhibits some of the most distressing—from mass facial recognition surveillance in China to nuclear disaster in Japan. This course explores how this state of affairs has taken shape from the 19th century through the present. Topics include industrialization, military technology, science and the rise of nationalism, the proliferation of consumer electronics, and environmental engineering in a warming world.
Also Offered As: STSC 2146
1 Course Unit

EALC 2531 Religion in Modern China
This course focuses on the history and role of religion in the Chinese cultural sphere (Mainland China, Taiwan, and the Diaspora) from the mid-19th century to the present day, focusing on the relationship between religious institutions and the state during the imperial, republican, and communist regimes. We will learn about the impact of religious ideas, practices, and organizations on social, political and economic processes and inspect the role of religion in the consolidation of individual, communal, and national identity. Adopting a comparative and interdisciplinary approach, we will attempt to ascertain the impact of the various Chinese religious traditions: Confucianism, Daoism, Buddhism, and popular sects, as well as global religions such as Islam and Christianity, on the internal sociopolitical structure of the Chinese state and their role in shaping power relations on a transregional, national, and local level. Special emphasis will be given to the role and use of the grand narratives of secularism and modernity in the shaping of the Chinese nation-state, as well as the value of using these frameworks in the study of modern China. The class is discussion based, supplemented by lectures, student presentations, and documentary films. No knowledge of Chinese is presumed. All readings will be in English.

Also Offered As: RELS 2531
1 Course Unit
EALC 2550 The Politics of Shinto
Shinto-derived images and ideas frequently appear in Japanese anime and film, and journalists and academics frequently mobilize the term Shinto as a way of explaining Japan's past or envisioning its future. The environmentalist left champions a green Shinto while Shinto-derived ideas serve as red meat for politicians pandering to Japan's nationalist right. While the influential position Shinto occupies in Japanese sociopolitical life is therefore clear, the term Shinto itself is actually not. Depending on who one asks, Shinto is either the venerable indigenous religion of the Japanese archipelago, the irreducible core of Japanese culture, a tiny subset of Japanese Buddhism, an environmentalist ethic, or some combination of these. This course investigates the multifarious types of Shinto envisioned by these competing interest groups.

EALC 2701 Innovation, Regulations, Technology, and Society: Experience from East Asia
Innovation and creativity are universally recognized as aspects of modern life. From stem cell research to nanotechnology and machine learning, innovation is heralded as a thing of value to be actively fostered, as a key ingredient for the betterment of the human condition, and often as a desirable process for economic growth. While existing innovative activities are often based in the so-called advanced economies, particularly the United States and the European Union, increasingly we see new players on the global scene ying for influence and offering new forms of innovation and upgrading. These new players are often countries from East Asia. What positions do these East Asian countries occupy in the global knowledge economy? How are they navigating a constantly evolving and competitive frontier technology market where ownership of intellectual property rights remains in the hands of a handful of advanced economies? Technological innovation can take a toll, not least in the form of increased level of risks that a society must bear, as well as in environmental degradation, worker strife stemming from a shortage of jobs, gender disparity, and expanding wealth and knowledge gaps (including access to knowledge) between different socioeconomic classes. In this course, we will consider how regional patterns (and national variations) of economic growth and sociocultural changes under way in East Asia have been influenced by the global technological revolution, as well as the infrastructure of power and governance. Particularly, the course exposes students to scholarship on the governance of the global political economy, with a focus on the socio-legal regulation of emerging science and technology. The course will begin with discussing how states strike a balance between innovation and protection through implementing relevant regulatory frameworks. In addition, we will explore what implications emerging technologies have for societies, as well as how these evolving dynamics impact the lived experience of local communities.
Also Offered As: SOCI 2691

EALC 2711 Knights with Katana: Medieval Japan and Europe Compared
This course aims to provide an overview of some of the main themes and problems in the history and historiography of medieval Japan by drawing on comparisons with European counterparts and interpretive models. To this end, each week's readings on Japan are paired with one or more works on medieval Europe dealing with a similar theme. The primary purpose is not only to draw comparisons between the two civilizations and their development but also to use the great riches of scholarship on the European Middle Ages to shed light on possible new avenues of inquiry and perspectives on Japan.

EALC 2721 History of Private Life in China
Underneath the grandeur of empires, war, revolutions, history eventually is about people's life. This seminar explores how the boundaries of private life in China intersect with the public arena and how such an intersection has significantly re-shaped Chinese private life between the 16th century and the present. The first half of the seminar will explore how the private realm in late imperial China was defined and construed by Confucian discourses, architectural design, moral regulation, cultural consumption, and social network. Moving into the twentieth century, the remaining part of the seminar will examine how the advent of novel concepts such as modernity and revolution restructured the private realm, particularly in regard to the subtopics outlined above. Organizing questions include: How did female chastity become the center of a public cult which then changed the life paths of countless families? How did the practice of female foot-binding intersect with marriage choices, household economy, and social status? How did print culture create a new space for gentry women to negotiate the boundaries between their inner quarters and the outside world? What was the ideal and reality of married life in late imperial China? How did people's life change when the collective pursuit for Chinese modernity placed romantic love, freedom to marry and divorce at the center of public debates? How was "Shanghai modern" related to the emerging middle class life style as evidenced in advertisement posters? How has the ideal of gender equality been re-interpreted and realized under the Communist regime? How have the current market reforms reformulated the contours of private life in China?
Fall or Spring

1 Course Unit
EALC 2722 Cities in Chinese History
This seminar will study the development of Chinese cities over the past two millennia with respect to their spatial structure, social constitution, economic system, political functions, and cultural representation (including cityscape paintings, maps, and films). As China transitioned from a collection of city-states to a united empire to nation state, Chinese urbanism underwent transformations as drastic as those of the country itself. Cities, which serve as a critical mechanism for the operation of a vast agrarian empire/nation like China, offer a unique vantage point for us to observe and analyze the continuities and discontinuities between dynastic empires as well as the radical transition from empire to modern nation state. Topics include: the city-state system in ancient China; the creation and evolution of imperial capitals; the medieval urban revolution and the subsequent collapse of classic city plans; the development of urban public sphere/public space in late imperial China; the rise of commercial power in urban politics; the negotiation of urban class and gender relations via cultural consumption; the role of cities in the building of a modern Chinese nation state; the anti-city experiment under the communist regime; urban citizenship in the reform era; as well as the expanding urbanization and shifting urbanism of Greater China as reflected in cinematic representations of Shanghai, Hongkong, and Taipei. Fall or Spring
Also Offered As: HIST 2501, URBS 2501
1 Course Unit

EALC 2732 History of Hong Kong
Hong Kong is almost explosively alive today, as Professor Waldron discovered on a recent trip to prepare for this course. From 1842-1997 the British Colony was a sleepy city having a mostly transient population until 1945; then she swelled with refugees after 1950 to become a rapidly growing economy now richer than Britain. In 1997 she was turned over to China under the “one country two systems” motto. Since then, however, relations with China have proven increasingly fraught. The legislative election of autumn 2016 saw the pro-China candidates crushed in a massive vote that returned a number of young people (Hong Kong politics are generational) to the Legislature who explicitly favor the independence of the city from China—the worst of heresies from Beijing’s point of view. Nearly all favor democracy and real law—also anathema to Beijing. As the course is being taught, a new Chief Executive election will be going on. Hong Kong is not simply a fascinating city. She is also a window of sorts into China and her politics. We will read everything from colonial accounts to campaign leaflets, examining the situation in three dimensions, integrated with China and the region. Seminar meets T 1:30-4:30; readings, discussion, and a short paper on a topic of your choice. Fall or Spring
Also Offered As: HIST 2551
1 Course Unit

EALC 2761 Traditional Korea and the Human Experience
This course provides a survey of Chosŏn Korea (1392-1910), focusing on the insights this period and place offer us into fundamental problems that have engaged societies throughout history, including those of our present time. Through translated primary-source readings, images, and objects, we will explore topics such as public duties and private desires, exclusion and belonging, the pursuit of power and wealth, legal justice, gender and class relations, the politics of language and writing, and ecological vulnerability and resilience. Students will be invited to contribute comparative perspectives that draw on their knowledge of other societies and times; they will also assess contemporary dramatizations of this period with the historical understanding they will develop throughout the course. On completion, students will gain an overview of politics, society, and culture in traditional Korea that will serve as the foundation for their further study of modern Korean history and contemporary affairs. No prior knowledge of Korea or the Korean language is required. Mutually Exclusive: EALC 6761
1 Course Unit

EALC 2763 Readings in Korean History
This course introduces students to English-language scholarship on social history of Korea from the founding of the Chosŏn dynasty (1392–1910) to the mid-nineteenth century. Conducted as a reading seminar, the course will examine status and gender in early modern Korean society by considering, among others, descent, kinship, marriage, education, and economy. A reading list of noteworthy studies is intended to help the students map some critical questions and debates that have shaped the historiography. Everyone must participate actively in discussions, provide oral presentations as a discussion leader, and submit two review essays. No knowledge of Korean language or culture is presumed. This course satisfies Cross Cultural Analysis requirement. Fall or Spring
1 Course Unit

EALC 2801 East Asian Digital Humanities
Are you interested in cutting-edge digital methods for the humanities in East Asia, but don’t know where to start? This course covers a wide range of current and emerging digital projects and topics in East Asian studies. Students will engage with digital projects focused on East Asia (encompassing Japan, China, Korea, and Taiwan) as well as research being done on Digital methodologies for the humanities in those areas. Coursework consists of project and research analysis, active discussion, and learning about the implementation of various digital projects. Example topics include text analysis, APIs, network analysis, digital literary studies, and mapping. No technical expertise is required but students must have reading knowledge of Chinese, Japanese, or Korean at the high-intermediate or advanced level. Class presentations, discussions, and all course readings will be in English, but midterm and final projects involve reading articles and midterm and final projects involve reading articles and/or critiquing projects. Prerequisite: Reading knowledge (intermediate or above) of East Asian language required. Not Offered Every Year
1 Course Unit

EALC 2764 Early Modern Korea
This course examines the early modern period of Korean history, from the founding of the Chosŏn dynasty (1392–1910) to the mid-twentieth century. We will study the political, social, and cultural developments of this period with the historical understanding they will develop throughout the course. On completion, students will gain an overview of politics, society, and culture in traditional Korea that will serve as the foundation for their further study of modern Korean history and contemporary affairs. No prior knowledge of Korea or the Korean language is required. Mutually Exclusive: EALC 6761
1 Course Unit
EALC 3111 Tang China and Nara Japan
This is a seminar about Tang China and Nara Japan, and Early Heian Japan, Unified Silla Korea, Northeast Asia under Parhae, and Uyghur Inner Asia through their cities, palaces, monasteries, Buddhist art, and painting. We begin by studying material remains of the two best-documented civilizations of East Asian in the seventh-ninth centuries. Using painting, sculpture, ceramics, and architecture of Tang China and Nara Japan, we investigate the validity of the frequent assessment of an international Tang through material remains in China and Japan. We then move to Korea, Mongolia, and Central Asia. Students will have a wide range of topics to work on. They will be encouraged to find comparative topics. This seminar is an opportunity for students to use Chinese, Japanese, or Korean in research papers. There are no exams. Readings will be assigned to the whole group and to individual students for short presentations every week. Undergraduates will write one short and write and present one long paper.
1 Course Unit

EALC 3116 Chinese Art Under the Mongols
The Yuan Dynasty (1257-1368), the period of Mongolian rule, was the only time in Chinese history when China was part of a larger empire that spanned the Asian continent. Using architecture, sculpture, painting, and excavated evidence, this course examines the unique results of an international Asian world centered in China.
Not Offered Every Year
1 Course Unit

EALC 3121 Life and Death in Han China
Using maps, city-panning, architecture, wall painting, sculpture, and minor arts as evidence, the course will examine the attitudes toward life and death in Han (206 BCE-AD 220) China.
Fall or Spring
1 Course Unit

EALC 3211 Modern Chinese Poetry in a Global Context
The tumultuous political and economic history of modern China has been mirrored in and shaped by equally fundamental revolutions in language and poetic expression. In this course, we will take Chinese poetry as a crucible in which we can observe the interacting forces of literary history and social change. From diplomats who saw poetry as a medium for cultural translation between China and the world, to revolutionaries who enlisted poetry in the project of social transformation, we will examine the lives and works of some of China's most prominent poets and ask, what can we learn about modern China from reading their poetry? In asking this question, we will also reckon with the strengths and limitations of using poetry as an historical source. In addition to poems, the course will include fiction, essays, photographs, and films by both Chinese and non-Chinese artists that place our poets in a broader context. We will pay close attention to how these poets represent China's place in the world, as well as the role of language in social change. Topics of discussion include: national identity, revolution, translation, gender, the body, ethnicity, and technology. Familiarity with Chinese or related cultural context is beneficial, but not required. This course introduces students to Chinese poetry in English translation. Students will leave the course with an in-depth understanding of the main figures, themes, and techniques of Chinese poetry, and will be introduced to some of the major developments in the history of China. Through a focus on primary texts, students will develop the vocabulary and analytical skills to appreciate and analyze poetry in translation and will gain confidence as writers thinking about literary texts.

EALC 3244 War and Literature in Japan: Tales of the Heike
Our subject is Tale of the Heike, a multifaceted narrative of the twelfth-century battles that brought the Taira clan down and led to the establishment of Japan's first military government. We will read the Heike tales with an eye toward how they fictionalize history and idealize certain types, most notably loyal women and warriors; the development of the warrior tale genre; central aspects of the Japanese ethos; and later works of literature based on episodes and characters from the Tale of the Heike. All material is in English translation. (Students of Japanese language may learn to read a famous section in the original.) There are no prerequisites.
Not Offered Every Year
1 Course Unit
EALC 3246 The Tale of Genji
"Crowning masterpiece of Japanese literature," "the world’s first novel," "fountainhead of Japanese literary and aesthetic culture," "a great soap opera in the vein of Jacqueline Susann." Readers over the centuries have praised the Tale of Genji, the monumental prose tale finished just after the year 1000, in a variety of ways. In this course we will read the latest English translation of Murasaki Shikibu’s work. We will watch as Genji loses his mother at a tender age, is cast out of the royal family, and begins a quest to fill the void she left. Along the way, Genji’s loyalty to all the women he encounters forges his reputation as the ideal lover. We will consider gender issues in the female author’s portrayal of this rake, and question the changing audience, from bored court women to censorious monks, from adoring nationalists to comic book adaptors. Study of the tale requires consideration of poetry, imagery, costume, music, history, religion, theater, political and material culture, all of which will be components of the course. We will also trace the effect of the tale’s many motifs, from flora and fauna to murderously jealous spirits, on later literature and conceptions of human emotions. All material is in English translation. There are no prerequisites.

Also Offered As: GSWS 3246
1 Course Unit

EALC 3251 Japanese Science Fiction and Fantasy
This course will provide an overview of the major tropes, themes, and interpretations of contemporary Japanese science fiction and fantasy. As we establish a foundational knowledge of the history and structural formulations of genre fiction in Japan, we will cover topics such as folklore, high fantasy, apocalypse, dystopia, magical realism, posthumanism, video games, and transnational media franchises and cross-cultural marketing. By the end of the semester, students will possess a deeper understanding and appreciation of the role that science fiction and fantasy play in shaping contemporary media cultures in Japan and around the world.
1 Course Unit

EALC 3252 Japanese Ghost Stories
This course offers a survey of the numinous and supernatural through Japanese fiction, films, drama, comics, and video games from ancient times to the present day. Students will assemble a foundational knowledge of Japanese mythology and folk religion while studying popular narrative traditions representative of their historical eras. By peering into the liminal spaces connecting the living with the dead, students will also develop critical thinking and media literacy through careful investigation into the matters that people of different times and places have perceived as monstrous, alien, and unspeakable. Issues of gender, sexuality, and ethnic minority status will receive special attention as we navigate theories relating to the cultural role and relevance of ghosts. Strong writing skills are recommended, but no prior knowledge of Japan or the Japanese language is required.
Not Offered Every Year
1 Course Unit

EALC 3355 Japanese Theater
Japan has one of the richest and most varied theatrical traditions in the world. In this course, we will examine Japanese theater in historical and comparative contexts. The readings and discussions will cover all areas of the theatrical experience (script, acting, stage design, costumes, music, and audience). Audio-visual material will be used whenever appropriate and possible. The class will be conducted in English, with all English materials.

EALC 3424 Gender and Sexuality in Chinese History
This course examines gender and sexuality in Chinese history from ancient to contemporary times. It focuses on historiographical developments and methods of studying gender and sexuality in history as well as in Chinese history. The readings will include, but not be limited to, works by Robin Wang, Paul Goldin, Jen-der Lee, Patricia Ebrey, Beverly Bossler, Charlotte Furth, Susan Mann, Dorothy Ko, Francesca Bray, Yi-Li Wu, Matthew Sommer, Janet Theiss, Siyen Fei, Judith Zeitlin, Keith McMahon, Nicole Barnes, Gail Hershatter, Tani Barlow, and Lisa Rofel.
Spring
Also Offered As: HIST 0756
1 Course Unit

EALC 3425 Gender, Religion, and China
This course examines the interrelationship among “gender,” “religion,” and “China” as conceptual and historical categories. We ask, for example, how gender plays critical and constitutive roles in Chinese religious traditions, how religion can be used both to reinforce and to challenge gender norms, how religious women impact Chinese society and culture, and what the construction of “China” as a cultural identity and as a nation-state has to do with women, gender, and religion. We will also think about what assumptions we have when speaking of gender, religion, and China, and the infinite possibilities when we strive to think beyond. We will read three kinds of materials: (1) scholarship on gender and religion in historical and contemporary China as well as the Chinese-speaking world, (2) scholarship concerning theories and methodology of gender and religious studies not necessarily focused on China, and (3) historical record of religious women in English translation.
Fall or Spring

EALC 3523 Chinese Aesthetics
This seminar investigates classical Chinese conceptions of art and beauty as exemplified in philosophy, literature, music, painting, calligraphy, and architecture. All readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirements for graduate credit.
Not Offered Every Year
1 Course Unit

EALC 3524 Daoist Traditions
This course examines the history of various intellectual and religious traditions that came to be known as Daoist (or Taoist in the Wade-Giles Romanization). We will begin with a critical review of the twentieth-century reinvention of Daoism and the new classification of religious versus philosophical Daoism, before tracing chronologically the textual, institutional, and social history of Daoist traditions from the fourth century B.C.E. While familiarizing students with the key concepts, practices, and organizations developed in the history of Daoism, this class emphasizes the specific socio-political context of each of them. Throughout the course, we will think critically about the labeling of Daoist (as well as Confucian and Buddhist) in Chinese history and in modern scholarship. We will also question modern demarcations between philosophy, religion, and science, as well as that between the spiritual and the physical.
Not Offered Every Year

1 Course Unit

EALC 3528 Apocalypse and Utopia in China
Representations of a perfect society and imagined scenarios of a dystopian or apocalyptic future are a common feature of all human societies. Philosophical, religious, and literary attempts to imagine alternative futures and critique present conditions enjoyed wide popularity and considerable influence throughout Chinese history. The goal of this course will be to introduce students to the major themes and trends in utopian and apocalyptic thought in China, from the premodern age to our times. In the first part of the semester, we will learn about the utopian and apocalyptic narratives that emerged in early and medieval China. We will begin by discussing the two archetypal models of a utopian society in early China: the Confucian harmonious moral society and its Daoist counterpart of an idyllic secluded community located in faraway lands. We will then turn our attention to the emergence of organized religion and the utopian and apocalyptic scenarios promoted by Daoist and Buddhist writers and religious innovators. In the second part of the semester, we will focus on the modern and contemporary periods and the study the impact of the introduction of Western utopian and millenarian narratives on the Chinese imagination. In addition to surveying some real-world attempts to establish a utopian society, such as the 19th century Taiping Rebellion, Mao Zedong’s attempts to re-fashion China into a Community Utopia in the 20th century, and the 21st century eco-village green movement, students will be introduced to a wide variety of literary and cinematic texts that try to imagine a possible future - from the utopian sci-fi nationalism of The Wandering Earth to the dystopian fiction of leading writers such as Han Song, Chen Qiufan, and Han Jingfang. Using these works as case studies, we will strive to ascertain the role of utopianism as a tool of political, social, and environmental criticism and as a way to construct a better and more just society in the 21st century. No knowledge of Chinese is necessary - all readings will be in English. As a split-level seminar, the course will be discussion-based. Students will be asked to post weekly 500-word response papers in which they will analyze and critique the readings. The goal of this task is to help students familiarize themselves with the assigned sources before the in-class discussion thus facilitating a meaningful and productive discussion. For their final project, students will conduct their own research on a topic of their choice and present it during the last meeting. Undergraduate paper will be limited to 10- pages; graduate papers should be around 20-25 pages, including original-language research.
Not Offered Every Year
1 Course Unit
EALC 3531 Chinese Law and Society
This course is an introduction to the study of law and society in China in a comparative and global context. We will begin by considering the tradition of imperial Chinese law and its social and philosophical foundations. We will then turn to the confrontation between the Qing empire and Euro-American imperial powers in the nineteenth century and the attendant collision between European and Chinese notions of sovereignty. Next, we will consider early twentieth-century law reforms as the Qing empire was transformed into the constitutional form of a modern republic, followed by the introduction of socialist law and the establishment of the People's Republic of China. The course will conclude with post-Mao reforms and their implications for the future of Chinese law and society. Throughout the course, we will pay attention to the use of historical and comparative methods. What are the potentials and liabilities of using law as an analytical category in cross-cultural study? What happens when “Eastern” and “Western” legal cultures come in contact with each other? How is law related to capitalism and socialism? How does law structure political and socio-economic relations globally? How does law produce as well as constrain subjects and identities? What is the relationship between law, gender, and sexuality?

EALC 3532 Constitutionalism and Democracy in China: 1900-present
Research on constitutional thought in China from the late Qing to the present, as well as the political and practical aspects of attempts at implementation. A presentation and a research paper of moderate length are expected. Chinese language is not necessary, though if you have it, that will be useful.
Also Offered As: HIST 3552
1 Course Unit

EALC 3559 Gender and Sexuality in Japan
If you have ever wondered about the following questions, then this is the right course for you: Is Japan a hyper-feminine nation of smiling geisha and obedient wives? Is it a hyper-masculine nation of samurai and economic warriors? Is it true that Japanese wives control the household? Is it true that Japanese men suffer from over-dependence on their mothers? What do young Japanese women and young men worry about? What does the government think about the future of Japanese women and men? Assuming that expressions of gender and sexuality are deeply influenced by cultural and social factors, and that they also show profound differences regionally and historically, this course examines a variety of texts—historical, biographical, autobiographical, fictional, non-fictional, visual, cinematic, analytical, theoretical—in order to better understand the complexity of any attempts to answer the above questions.

1 Course Unit

EALC 3621 Introduction to Classical Chinese I
Introduction to the classical written language, beginning with Shadick, First Course in Literary Chinese. Students with a background in Japanese, Korean, Cantonese, Taiwanese, and other East Asian languages are welcome; it is not necessary to know Mandarin. The course begins from scratch, and swiftly but rigorously develops the ability to read a wide variety of classical and semi-classical styles. Original texts from the 6th century BC to the 20th century AD are studied. This course is taught in English and there are no prerequisites.
Fall
Also Offered As: CHIN 1050
1 Course Unit

EALC 3622 Introduction to Classical Chinese II
Continuation of Intro to Classical Chinese I, which is the only prerequisite for this course. Upon completion of Shadick, readings in a wide selection of texts with Chinese commentaries may be taken up. These readings are in part chosen to reflect student interest. This is the second half of a year-long course. Those who enroll must take both semesters.
Spring
Also Offered As: CHIN 1055
Mutually Exclusive: EALC 7622
Prerequisite: EALC 3621
1 Course Unit

EALC 3623 Advanced Classical Chinese I
Close reading and interpretation of texts in various styles of classical Chinese drawn from the Han, Wei, Tang, and Song periods. Focus on strengthening students’ reading ability in classical Chinese. Attention to questions of style, rhetoric, and syntax.
Fall
Also Offered As: CHIN 1150
Mutually Exclusive: EALC 8621
1 Course Unit

EALC 3624 Advanced Classical Chinese II
Close reading and interpretation of texts in various styles of classical Chinese drawn from the Han, Wei, Tang, and Song periods. Focus on strengthening students’ reading ability in classical Chinese. Attention to questions of style, rhetoric, and syntax. It is preferred, but not required, that students take Advanced Classical Chinese I first.
Spring
Also Offered As: CHIN 1155
Mutually Exclusive: EALC 8622
1 Course Unit

EALC 3641 Readings in Classical Japanese I
Readings in classical texts drawn from the Heian, Kamakura, Muromachi, and Edo periods. Introduction to the different styles of classical Japanese, and to classical Japanese as a whole.
Fall
Also Offered As: JPAN 1050
Prerequisite: JPAN 0600
1 Course Unit
EALC 3681 Introduction to Classical Mongolian
In this class students who already know some modern Mongolian in the Cyrillic script will learn how to transfer that knowledge to the reading of first post-classical, and then classical texts written in the vertical or Uyghur-Mongolian script. Topics covered will include the Mongolian alphabetic script, dealing with ambiguous readings, scholarly transcription, vowel harmony and syllable structure, post-classical and classical forms of major declensions, converbs, verbal nouns, and finite verbs, syntax, pronunciation and scribal readings. Readings will be adjusted to interests, but as a rule will include selections from short stories, diaries, chronicles, Buddhist translations, government documents, popular didactic poetry, ritual texts, and traditional narratives. Students will also be introduced to the most important reference works helpful in reading classical and post-classical Mongolian.

Fall
1 Course Unit

EALC 3682 Introduction to Classical Mongolian II
Continuation of EALC293/693, which is the only prerequisite for this course. Upon completion of the basic introduction to grammar, spelling rules, and diachronic levels (pre-classical, classical, post-classical), readings in a wide selection of texts with Mongolian commentaries may be taken up. These readings are in part chosen to reflect student interest. This is the second half of a year-long course. Those who enroll should take both semesters.

Spring
1 Course Unit

EALC 3720 Early Chinese History
This seminar covers the span of Chinese history from the Bronze Age to the end of the Han dynasty in A.D. 220. No knowledge of Chinese is presumed, but EALC 0020 (Introduction to Chinese Civilization) is a prerequisite. Graduate students who wish to enroll should meet with the instructor to discuss additional requirements for graduate credit.

Spring
1 Course Unit

EALC 3721 Law in Pre-Modern China
This course, intended for graduate students and advanced undergraduates, offers a survey of the sources and research problems of pre-modern Chinese law. For reasons to be examined in the course, traditional Sinological education has neglected law as a legitimate field of inquiry; consequently, the secondary literature is surprisingly meager. Our readings will take us from the Warring States Period to the Qing dynasty—an interval of over two millennia—and will cover several varieties of legal documents, including statutes, handbooks, court records, and theoretical treatises. All the readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirement for graduate credit.

Not Offered Every Year
1 Course Unit

EALC 3722 Law in Pre-Modern China
EALC 3742 City & Citizenship: Samurai Politics and Commoner Culture in Early Modern Japan
In the early modern period (1600-1867), Japan underwent a staggering urban transformation. Edo, the shogunal capital, grew in barely a century from a new settlement to a sprawling metropolis of over a million. Indeed, most of Japan’s current urban centers descend directly from the castle towns built by regional warlords in the late sixteenth and early seventeenth centuries in an effort keep the peace after over a hundred years of civil war. As a result, Japanese cities in the early modern period became a central component of what historians have called a “re-feudalization” of society, and retained strong vestiges of their military origins. At the same time the samurai-centered space of the new cities created opportunities for the development of alternative cultural practices and values by urban commoners. The juxtaposition of the regimented, honor-driven society designed and longed for by samurai and the fluid, money-driven society that grew out of the burgeoning cities’ commoner quarters is one of the animating forces of the early modern period. Through study of scholarship and contemporary sources (laws and sumptuary regulations, codes of conducts, but also diaries, novels, plays), this course will explore the many facets of early modern urban society, its medieval antecedents, and its legacies in contemporary Japan.

Fall or Spring
Also Offered As: HIST 0753
1 Course Unit

EALC 3744 Law and Violence in Pre-Modern Japan
This course will be an exploration of premodern Japanese history through the lens of violence. The centuries under consideration (roughly, the eighth through nineteenth) were characterized by greatly varying levels of violence, both of the state-sanctioned variety (war, punishments for law-breakers and political losers) and of the non-sanctioned variety (piracy, banditry, warrior and peasant rebellions). Examining a wide variety of translated sources, from diaries to chronicles, from legal codes to fiction, we shall examine the changing social, political, economic, and cultural contexts of violence, in order to interrogate not only why certain periods were remarkably peaceful while others were not, but also why violence took different forms in relation to different circumstances. We shall consider how contemporaries made sense of the violence that surrounded them (or didn’t) and how they divided the acceptable use of force from the wanton and society-threatening abuse of it. The course will feature presentations and several (very short) papers.

Also Offered As: HIST 0754
1 Course Unit
EALC 3783 Pastoralism & Mobility
"Pastoralism and Mobility" will examine the society and history of mobile pastoralists (nomads) in Inner Asia from earliest times to the present. Peoples covered will include Mongols, Tibetans, Turkic nomads (such as Kazakhs, Kyrgyz, and Turkmen), and their ancestors and predecessors. The class will focus on questions such as: Is there a distinctive form of Inner Asian pastoralist society? At the grass roots level? At the elite level? How have states (native and foreign) influenced Inner Asian pastoralist society in pre-modern and modern contexts? How have Inner Asian pastoralists influenced neighboring states? What role does kinship play in governing group formation, property, and status in Inner Asian pastoralist society? Does this role vary over time, space, or ethnic background? If so, how? What purposes does mobility serve in Inner Asian societies? How have various forms of livestock lease-holding changed and shaped wealth in Inner Asian pastoralist society? How did class differentiation emerge & function in pre-modern pastoralist societies? What happens when pastoralists become farmers? How have modern schemes of social improvement and productivity, especially collectivization and decollectivization, shaped pastoralist lives?

EALC 5000 East Asian History and Civilizations
This seminar is designed for incoming graduate students in the department of East Asian Languages and Civilizations, offering a thematic overview of the academic study of Chinese and Japanese history and cultures from the Neolithic period to the 21st century. Over the course of the semester, students will be introduced to different scholarly approaches to the study of East Asian history and culture through a close reading and analysis of the work of leading scholars in the fields of Sinology and Japanology. Together, we will learn about the diverse approaches to the study of China and Japan, from the various subfields of historical studies (such as social, intellectual, legal, and religious history) to other academic disciplines such as religious studies, anthropology, gender studies, and archaeology. We will examine the different methodological frameworks and tools used by past and present scholars and draw on them in order to problematize and enrich our understanding of East Asia. In addition, this seminar will provide incoming students with the relevant skills to produce their own original graduate-level research and present it in a clear and persuasive fashion both orally and in written form. While original-language research for the final project is encouraged, all weekly readings will be in English.

EALC 5040 Japanese History and Civilization
This seminar introduces students to the graduate-level study of Japan. In addition to getting a broad overview of Japanese culture, students in the course will develop familiarity with major debates in the history of the field of Japanese studies. The course also provides basic training in using primary and secondary sources in Japanese, Japanese bibliographic conventions, and other skills necessary for pursuing advanced research or a teaching career in the field. Open to all graduate students and to undergraduates with permission from the instructor. Familiarity with Japanese language is a plus but is not required.
Not Offered Every Year
1 Course Unit
EALC 5060 Korean History & Civilization

This graduate-level seminar focuses on the political, social, and cultural history of the Korean Peninsula and the vicinity from early times to the contemporary era. Readings will consist of primary and secondary sources, including influential modern studies of Korean history and civilization. All course materials are in English and no knowledge of Korean is presumed.

Spring
1 Course Unit

EALC 5080 Introduction to Inner Asian Civilizations

This class is intended for new graduate students and upper-division undergraduates with some prerequisites who wish to get a solid grounding in the study of Inner Asia. The class will introduce Inner Asia as a coherent civilizations network, focusing on: 1) the steppe-imperial tradition; 2) the Tibetan-rite Buddhist commonwealth that developed from the Tibetan and Mongol empires; and 3) the increasing integration of these two Inner Asian civilizational patterns with that of imperial China. There will also be some consideration of the Islamic Turco-Mongolian synthesis that developed in the post-Mongol period. Regionally, the class will introduce: 1) core Inner Asia (the Mongolian plateau, the Tarim Basin, the Tibetan plateau, the Manchuria) and 2) the main dynasties of China that formed in the Mongolia and Manchuria (Liao, Jin, Yuan and Qing). There will also be some consideration of historically Inner Asian populations in Hexi (Gansu-Qinghai), and the North China plains and the Shanxi-Shanxi-Rehe uplands. Chronologically, the class will touch on prehistory and the contemporary period, but will mostly cover the period from the emergence of historical records on the Mongolian plateau and the Tarim basin to roughly 1500. Prehistory and the contemporary period will be given less detailed coverage.

EALC 5100 How to Look at and Write Asian Art

This seminar focuses on ten very different monuments of Asian art in order to learn how to ask questions about and write about painting, sculpture, and buildings. Following a general introduction to the art of East Asia and South Asia, each class will focus on a major monument and similar examples of it: a Chinese bronze vessel, the Tomb of the First Emperor, Sokkuram, Elephanta, Traveling through Famous Sites of Wu, Tale of Genji, Gold Pavilion, the Forbidden City, Taj Mahal, the city Xi'an. We will discuss why each is important, its religious or philosophical context, and assess how it has been discussed in literature and modern writing. We will then discuss optimal or innovative ways to present it and write about it. Each week students will analyze writing about that week’s subject and turn in a short evaluation of writings about the subject of the previous week’s class. The final paper will be an article of the kind one would submit to a newspaper or magazine. The class will be taught synchronously. However, students will be encouraged to write about an object in a local museum for the final project.

1 Course Unit

EALC 5106 East Asian Gardens

Explore the beauty of gardens (and associated buildings) in Japan, China, and Korea from ancient times to the present. Lectures will be illustrated by photographs from dozens of sites in East Asia, and by a field trip to the Japanese House and Garden in Fairmount Park. The main body of the course will be a historical survey of the evolution of East Asian garden art forms from the sixth century to the present. Discussion will touch on geographic and climatic parameters, spiritual and aesthetic principles, practical limitations and creative innovations of East Asian gardens. There will be an additional fee for the Japanese House visit, and possibly for other field trips.

Not Offered Every Year
1 Course Unit

EALC 5109 East Asian Ceramics

History of ceramic forms, techniques, and aesthetic principles in China, Korea, and Japan from neolithic times to the present century, illustrated by slides and examples, augmented by readings, field trips, and student presentations. Aimed at students with general interest in Japan and/or ceramics history, particularly but not exclusively those majoring in East Asian Languages & Civs, East Asian Area Studies or History of Art; also art majors interested in ceramics.

Not Offered Every Year
1 Course Unit

EALC 5116 East Asian Cinema

This survey course introduces students to major trends, genres, directors, and issues in the cinemas of East Asian countries/regions, including Japan, Korea, China, Hong Kong, and Taiwan. Charting key developments over more than a hundred years from the early twentieth century to the present, this course examines films as aesthetic objects, asking questions about film form, narrative, and style. It also pays attention to the evolution of cinema as an institution (e.g. modes of production, circulation, and exhibition) in different cultural and political contexts. Weekly course materials will include both films (primary sources) and analytical readings (secondary sources). By the end of the course, students are expected to gain broad knowledge of East Asian cinema, develop skills of film analysis, and apply these skills to perform historically informed and culturally sensitive analysis of cinema. Prior knowledge of East Asian languages is NOT required.

EALC 5242 Love and Loss in Japanese Literary Traditions: In Translation
How do people make sense of the multiple experiences that the simple words "love" and "loss" imply? How do they express their thoughts and feelings to one another? In this course, we will explore some means Japanese culture has found to grapple with these events and sensations. We will also see how these culturally sanctioned frameworks have shaped the ways Japanese view love and loss. Our materials will sample the literary tradition of Japan from earliest times to the early modern and even modern periods. Close readings of a diverse group of texts, including poetry, narrative, theater, and the related arts of calligraphy, painting, and music will structure our inquiry. The class will take an expedition to nearby Woodlands Cemetery to experience poetry in nature. By the end of the course, you should be able to appreciate texts that differ slightly in their value systems, linguistic expressions, and aesthetic sensibilities from those that you may already know. Among the available project work that you may select, if you have basic Japanese, is learning to read a literary manga. All shared class material is in English translation.
Fall
1 Course Unit

EALC 5322 Chinese Fiction and Drama in Translation
This course explores Romance of Three Kingdoms the most popular classical novel in East Asia and an important source for understanding Chinese culture, politics, history, and military strategy. We propose to read this work not only as a textbook of Chinese literature and culture, but also as a guidebook for career development and risk assessment. Why didn't Pangtong have a career as successful as Zhuge Liang? Why did Ma Su volunteer in a project that he is not good at? If Cao Cao, Liu Bei, Sun Quan run for presidency in the U.S., who would you vote for and why? These are some of the questions that we will explore alongside our inquiry into the the historical development of various genres of Chinese fiction. In addition to Romance of Three Kingdoms, this course introduces Sun Tsu's The Art of War and other classical Chinese novels such as Dream of the Red Chamber and Strange Tales from a Chinese Studio, as well as classical literary criticism such as Cao Pi's On the Standard of Literature (Dian lun), Lu Ji's Essays on Literature (Wen lun), and Liu Xie's The Literary Mind and the Carving of Dragons.

EALC 5335 Cultural Chinas: 20th Century Chinese Literature and Film
This course serves as a thematic introduction to modern Chinese literature and cinema in China, Hong Kong, Taiwan and other transnational Chinese communities in the twentieth century. By discussing a wide range of key literary and filmic texts, this class looks into major issues and discourses in China's century of modernization: enlightenment and revolution, politics and aesthetics, sentimental education and nationalism, historical trauma and violence, gender and sexuality, social hygiene and body politics, diaspora and displacement, youth sub-culture and urban imagination.
Spring
1 Course Unit
EALC 5351 Contemporary Fiction & Film in Japan

This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan’s war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, manga, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujiro, Naruse Mikio, Kurosawa Akira, Imamura Shohei, Koreeda Hirokazu, and Beat Takeshi.

EALC 5501 Advanced Topics in Buddhism

This is an advanced course for upper level undergraduates and graduate students on various issues in the study of Buddhist texts, art, and history. Each semester the theme of the course changes. In recent years themes have included: Magic and Ritual, Art and Material Culture, Texts and Contexts. Manuscript Studies. Fall 2013 Topic: Buddhist repertoires (idiosyncratic and personal assemblages of beliefs, reflections, wonders, possessions, and practices) for a large part, material and sensual. Buddhists are often sustained by their collection, production, and trading of stuff amulets, images, posters, protective drawings, CDs, calendars, films, comic books, and even Buddhist-themed pillow cases, umbrellas, and coffee mugs. Aspirations are interconnected with objects. Beliefs are articulated through objects. Objects are not empty signifiers onto which meaning is placed. The followers and the objects, the collectors and their stuff, are overlooked in the study of religion, even in many studies in the growing field of material culture and religion. What is striking is that these objects of everyday religiosity are often overlooked by art historians as well. Art historians often remove (through photography or physical movement to museums or shops) images and ritual implements from their ritual context and are seen as objets d’art. While art historians influenced by Alfred Gell, Arjun Appadurai, and Daniel Miller have brought the study of ritual objects into the forefront of art historical studies, in terms of methodologies of studying Buddhist art, art historians have generally relegated themselves to the study of either the old and valuable or the static and the curated. This course aims to 1) bring a discussion of art into the study of living Buddhism. Art historians have primarily concentrated on the study of images, stupas, manuscripts, and murals produced by the elite, and primarily made before the twentieth century; 2) study art as it exists and operates in dynamic ritual activities and highly complex synchronic and diachronic relationships; 3) focus on the historical and material turn in the study of images, amulets, and murals in Buddhist monasteries and shrines.

EALC 5702 Economic Development, Education, and Inequality in East Asia
Where are East Asian economies and education headed? Can a new model of East Asian economy and education be established to achieve economic sustainability and equity in rapidly changing global contexts? In this seminar, we will survey 1) evolution of the East Asian economic model, focusing on changes in economic development strategies, labor market structures, and relationships with global economies; and 2) features of East Asian educational systems, focusing on educational opportunities and learning outcomes. In reviewing East Asian economy and education, a central question is not only how productive East Asian economy and education is but also how equal economic and educational opportunities are in the region. In the final part of the seminar, students will come up with some policy recommendations for East Asian economy and education to better achieve economic sustainability and equity. This graduate-level course is also open to advanced undergraduate students. Also Offered As: EDUC 5450, SOCI 5450 1 Course Unit

EALC 5711 East Asian Diplomacy
Home to four of the five most populous states and four of the five largest economies, the Asia/Pacific is arguably the most dynamic region in the twenty-first century. At the same time, Cold War remnants (a divided Korea and China) and major geopolitical shifts (the rise of China and India, decline of the US and Japan) contribute significantly to the volatility of our world. This course will examine the political, economic, and geopolitical dynamism of the region through a survey of relations among the great powers in Asia from the sixteenth century to the present. Special emphasis will be given to regional and global developments from the perspective of the three principal East Asian states—China, Japan and Korea. We will explore the many informal, as well as formal, means of intercourse that have made East Asia what it is today. Graduate students should consult graduate syllabus for graduate reading list, special recitation time and graduate requirements. Also Offered As: HIST 5550 Mutually Exclusive: HIST 1550 1 Course Unit

EALC 5742 From Shamans to Shoguns: The Texts that Made Pre-Modern Japanese History
This course tackles about a millennium of pre-modern Japanese political, social, and cultural history (roughly, 700-1700). Instead of attempting to cover the period chronologically, as an introductory survey might, this class is structured as a series of case studies. Each of these will take a primary source as its point of departure and explore one or more facets of Japanese history and writing. In the course of each case study, lectures and discussions will branch out from the main source to examine its historical context as well as the (political, cultural, textual) traditions that informed that source’s composition. In general, students will read the entire texts of the main sources (or significant portions of them), along with scholarly articles and shorter excerpts from other sources, composed at the same time or in the same vein/genre. During lectures and discussions alike, students will be asked to engage the readings, so as to grasp the specifics of Japanese history and practice the analytical skills required of historical discourse. Not Offered Every Year 1 Course Unit

EALC 5746 Japan: The Age of the Samurai
Who (or what) where the samurai? What does it mean to say that Japan had an “Age of the Samurai”? In popular imagination, pre-modern Japan has long been associated with its hereditary warrior class. Countless movies have explored the character and martial prowess of these men. Yet warriors constituted but a tiny portion of the societies they inhabited and ruled, and historians researching medieval Japan have turned their attentions to a great range of subjects and to other classes (elite and commoner alike). This class is designed to acquaint students with the complex and diverse centuries that have been called the “Age of the Samurai”-roughly, the years between ca. 1110 and 1850. In the course of the semester, we will explore the central themes in the historiography of warrior society, while introducing some of the defining texts that have shaped our imagination of this age (from laws to epic poems, from codes of conduct to autobiographies). Not Offered Every Year 1 Course Unit

EALC 5774 Two Koreas: The Politics of Division
In today’s world, the inter-Korean border or DMZ (demilitarized zone) is widely regarded as one of the most impermeable and conflictual frontiers. The purpose of this course is to explore the dynamics of its formation between, and impact within, the two Koreas. The course therefore proposes to analyze how the division of the Korean peninsula not only came into being but also how it has shaped the socio-political trajectories of both the North and the South since 1945. The course also aims at introducing students to conceptual frameworks and comparative debates relevant to understanding the Korean case(s) from a social science perspective. Not Offered Every Year 1 Course Unit

EALC 5780 Mongol Century
This course deals with the empire built by the Mongols in the 13th century - the largest land empire in the world. Most readings will be from translated primary sources of the 13th and 14th centuries, written by the Mongols themselves and also by Persians, Chinese, Eastern Christians, Europeans, and other peoples that fought, surrendered to, or traded with the Mongol conquerors. The course will explore the Mongols, the most spectacular example of the nomadic conquerors who played such a large role in all Eurasian history, and survey how their empire affected themselves and the peoples they conquered. By using primary sources, the course will also provide a survey of civilizations in Eurasia in the 13th and 14th centuries, and give a hands-on example of how historians build historical knowledge from varied sources. Graduate students will receive training in more advanced source critical methodologies for dealing with these sources and for beginning research in this topic. Spring 1 Course Unit

EALC 5781 Silk Road: From the Mediterranean to the Pacific
A journey along the overland and sea routes that connected China, India, Iran, and Rome from 200-1000 CE and served as conduits for cultural exchange. Precursor and successor routes will also be taken into consideration. The lives of merchants, envoys, pilgrims, and travelers interacting in cosmopolitan communities will be examined. Exploration of long-known and newly discovered archaeological ruins, along with primary sources in translation, will be studied. Also Offered As: SAST 5781 1 Course Unit
EALC 5801 East Asian Digital Humanities
Are you interested in cutting-edge digital methods for the humanities in East Asia, but don't know where to start? This course covers a wide range of current and emerging digital projects and topics in East Asian studies. Students will engage with digital projects focused on East Asia (encompassing Japan, China, Korea, and Taiwan) as well as research being done on digital methodologies for the humanities in those areas. Coursework consists of project and research analysis, active discussion, and learning about the implementation of various digital projects. Example topics include text analysis, APIs, network analysis, digital literary studies, and mapping. No technical expertise is required but students must have reading knowledge of Chinese, Japanese, or Korean at the high-intermediate or advanced level. Class presentations, discussions, and all course readings will be in English, but midterm and final projects involve reading articles and midterm and final projects involve reading articles and/or critiquing projects.

1 Course Unit

EALC 5955 Environment, Climate, and Culture in Japan
This course explores how Japanese literature, cinema, and popular culture have engaged with questions of environment, ecology, pollution, and climate change from the wake of the dropping of the atomic bomb on Hiroshima in 1945 to the ongoing Fukushima nuclear power plant disaster in the present. Environmental disasters and the slow violence of their aftermath have had an enormous impact on Japanese cultural production, and we examine how these cultural forms seek to negotiate and work through questions of the unrepresentable, victimhood and survival, trauma and national memory, uneven development and discrimination, the human and the nonhuman, and climate change's impact on imagining the future. Special attention is given to the possibilities and limitations of different forms—the novel, poetry, film, manga, anime—that Japanese writers and artists have to think about humans' relationship with the environment.

Not Offered Every Year
1 Course Unit

EALC 6104 East Asian Funerary Arts
Study of tombs and tomb decoration of emperors and officials in China, Korea, and Japan from the pre-Buddhist era through the 19th century.

Not Offered Every Year
1 Course Unit

EALC 6121 Chinese Wall Painting
This course examines murals in Chinese temples and tombs from their earliest appearance in the first millennium BCE through the 20th century. Some are in situ; others are in museums. Murals are studied alongside paintings on silk and paper. Chinese wall painting is also studied alongside murals in temples and tombs in Korea, Japan, and Mongolia.

Not Offered Every Year
Mutually Exclusive: EALC 2121
1 Course Unit

EALC 6201 Modern East Asian Texts
This course is an introduction to and exploration of modern East Asian literatures and cultures through close readings and discussion of selected literary works from the early 20th century to the start of the 21st century. Focusing on China, Japan, and Korea, we will explore the shared and interconnected experiences of modernity in East Asia as well as broaden our perspective by considering the location of East Asian cultural production within a global modernity. Major issues we will encounter include: nation-building and the modern novel; cultural translation; media and technology; representations of gender, race, and class; history and memory; colonialism; war; body and sexuality; globalization. No knowledge of the original language is required.

Not Offered Every Year
Also Offered As: COML 6201
Mutually Exclusive: EALC 2201
1 Course Unit

EALC 6211 Colonial Japanese Literature
This course will explore the development of Japanese and colonial identities in literature produced in and about Japan's colonies during the first half of the 20th century. Throughout the semester, we will read works written during and about the Japanese empire by Chinese, Japanese, Korean, Okinawan, and Taiwanese writers. Looking at the different representations of empire, we will examine concepts such as assimilation, mimicry, hybridity, travel, and transculturation in the context of Japanese colonialism. By bringing together different voices from inside and outside of Japan's empire, students will gain a deeper understanding of the complexities of colonial hegemony and identity. In particular, reading works by Japanese, Okinawan, Korean, Taiwanese and Chinese subjects will enable students to transcend binary notions of colonizer and colonized while also acknowledging the realities of colonial complicity.

Not Offered Every Year
1 Course Unit

EALC 6221 Chinese Poetry & Prose In Translation
A wide variety of poetic & prose genres from the earliest times to the 19th century is introduced through English translation. A few selections will also be studied in Chinese characters with romanized transcriptions. There are no prerequisites for this course.

Fall
1 Course Unit
EALC 6236 Seminar in Modern Chinese Literature
Modern Chinese writers are known for their efforts in creating a literary revolution that sought to reformulate the paradigm of Chinese writing. However, these Chinese writers also endeavored to learn from other cultures such as the European and Indian civilizations. For example, Tagore was invited to visit China in 1923 and was considered a cultural model by many Chinese cultural elites. Hu Shi, a leading Chinese intellectual, wrote The Indianization of China: A Case Study in Cultural Borrowing and India Our Great Teacher, to emphasize the Indian elements in Chinese culture. Other Chinese writers also sought to compare the European with Chinese cultures in different occasions in order to find a path for the rise of modern China. This course explores the ways in which foreign cultures were introduced and how they influence the way Chinese see themselves in their search for a cultural identity free from the constraints of classical tradition. We will read a variety of writers from the Peoples Republic of China, Hong Kong, Taiwan, and Malaysia, in order to examine how modern Chinese literature thrives on cross-cultural elements. All readings will be in English. No prior knowledge is required. Those who are proficient in Chinese are invited to read some of the texts in Chinese.
Not Offered Every Year
1 Course Unit

EALC 6255 Modern Japanese Literature
This course surveys Japanese literature (novels, short stories, poetry, drama, essays) from 1868 to World War II. The purpose is not only to read some of the most important and interesting literary texts of this period, but also to reflect on the ways we read and study literature, and how we draw connections between literature, self, and society. The reading material will be entirely in English.
Fall
1 Course Unit

EALC 6371 New Korean Cinema
In 2019, Bong Joon-ho’s Parasite won the Palme d’Or at the 72nd Cannes Film Festival. This event marked the apex of South Korean cinematic renaissance, having steadily become a tour de force in the international film festival scene since 1997 onwards. This course explores the major auteurs, styles, themes, and currents of the so-called “New Korean Cinema” that emerged in the mid-to-late 1990s to continue to this day. Drawing from texts on critical film and Korean studies, we will pay particular attention to how the selected works re-present, resist, and interweave the sociopolitical climate they concern and are born out of. Using cinema as a lens with which to see the society, we will touch upon major events of the twentieth century including national division, military dictatorship and democratization movements, IMF economic crisis, youth culture, hallyu (the Korean wave), and damunhwa (multiculturalism initiative). In so doing, we will closely examine how each cinematic medium addresses the societal power structure and the role of the “Other” it represents in terms of class, race, gender, and sexuality in the construction of contemporary Korean society. We will also briefly survey the history of South Korean cinema that has evolved hand-in-hand with the history of modern Korea itself, walking through its five different phases (1945-Korean War era; 1955-1972 “Golden Age”; 1973-1979 censorship era; 1980-1996 democratization era; and 1997 onwards). No prior experience of Korean studies courses necessary; all films will be screened with English subtitles.

Mutually Exclusive: EALC 1371
1 Course Unit

EALC 6550 The Politics of Shinto
Shinto-derived images and ideas frequently appear in Japanese anime and film, and journalists and academics frequently mobilize the term Shinto as a way of explaining Japan’s past or envisioning its future. The environmentalist left champions a green Shinto while Shinto-derived ideas serve as red meat for politicians pandering to Japan’s nationalist right. While the influential position Shinto occupies in Japanese sociopolitical life is therefore clear, the term Shinto itself is actually not. Depending on who one asks, Shinto is either the venerable indigenous religion of the Japanese archipelago, the irreducible core of Japanese culture, a tiny subset of Japanese Buddhism, an environmentalist ethic, or some combination of these. This course investigates the multifarious types of Shinto envisioned by these competing interest groups.

Mutually Exclusive: RELS 2710
1 Course Unit

EALC 6761 Traditional Korea and the Human Experience
This course provides a survey of Chosŏn Korea (1392-1910), focusing on the insights this period and place offer us into fundamental problems that have engaged societies throughout history, including those of our present time. Through translated primary-source readings, images, and objects, we will explore topics such as public duties and private desires, exclusion and belonging, the pursuit of power and wealth, legal justice, gender and class relations, the politics of language and writing, and ecological vulnerability and resilience. Students will be invited to contribute comparative perspectives that draw on their knowledge of other societies and times; they will also assess contemporary dramatizations of this period with the historical understanding they will develop throughout the course. On completion, students will gain an overview of politics, society, and culture in traditional Korea that will serve as the foundation for their further study of modern Korean history and contemporary affairs. No prior knowledge of Korea or the Korean language is required.
Mutually Exclusive: EALC 2761
1 Course Unit

EALC 6763 Readings in Korean History
This course introduces students to English-language scholarship on social history of Korea from the founding of the Chosŏn dynasty (1392-1910) to the mid-nineteenth century. Conducted as a reading seminar, the course will examine status and gender in early modern Korean society by considering, among others, descent, kinship, marriage, education, and economy. A reading list of noteworthy studies is intended to help the students map some critical questions and debates that have shaped the historiography. Everyone must participate actively in discussions, provide oral presentations as a discussion leader, and submit two review essays. No knowledge of Korean language or culture is presumed, although graduate students will be encouraged to read selections in the original language. This course satisfies Cross Cultural Analysis requirement.
Fall or Spring
1 Course Unit
EALC 6926 Chinese Martial Arts
This course offers a thematic introduction to the history of martial arts in China. Throughout the semester, we will explore the social, political, and cultural contexts of martial arts practice, from the classical period to the 21st century. The course will take an interdisciplinary approach to situating martial arts practices in history through an examination of religious, literary, and visual sources, against the backdrop of theoretical approaches from across gender studies, anthropology, and cultural theory. The course will be divided into three units. The first unit will focus on the cultural background that led to the emergence of martial arts practices in the pre-modern period. We will examine classical discourses on the human body and its cultivation and the role of medical practices and religious institutions, such as the Shaolin Temple, in the development of martial arts regimens. In the second unit, we will discuss the spread and popularization of martial arts practices in late imperial and modern Chinese society through a close reading of literary sources, such as wuxia novels and other works of fiction. In addition, we will explore the modernization and re-invention of martial arts in the late 19th century and early 20th century, when China attempts to re-establish itself as a modern nation. The third and final unit will be devoted to the global impact of Chinese martial arts in contemporary popular culture. Through a discussion and analysis of Kung Fu films, as well as video games, we will explore the role of martial arts narratives and practices in the construction of gender, cultural, and national identity and the various ways in which they are used by the current Chinese regime to assert its influence in the global arena. No knowledge of Chinese is presumed, and all readings will be available in English on the Canvas website in PDF form. Graduate students may take this course as EALC 6926 and should see the instructor to discuss requirements for graduate credit. Not Offered Every Year 1 Course Unit

EALC 7101 Archaeology of Northeast Asia
This seminar explores the major civilizations of Northeast Asia (Beijing, Northern Hebei, Liaoning, Jilin, Heilongjiang, Korea, and Eastern Mongolia; and in the early period, Japan) from the early CE centuries through the seventeenth. The sources of evidence are archaeological sites, palaces, monasteries, tombs, and excavated objects. Not Offered Every Year 1 Course Unit

EALC 7111 Tang China and Nara Japan
This is a seminar about Tang China and Nara Japan, and Early Heian Japan, Unified Silla Korea, Northeast Asia under Parhae, and Uyghur Inner Asia through their cities, palaces, monasteries, Buddhist art, and painting. We begin by studying material remains of the two best-documented civilizations of East Asian in the seventh-nineteenth centuries. Using painting, sculpture, ceramics, and architecture of Tang China and Nara Japan, we investigate the validity of the frequent assessment of an international Tang through material remains in China and Japan. We then move to Korea, Mongolia, and Central Asia. Students will have a wide range of topics to work on. They will be encouraged to find comparative topics. This seminar is an opportunity for students to use Chinese, Japanese, or Korean in research papers. There are no exams. Readings will be assigned to the whole group and to individual students for short presentations every week. Graduate students will write and present research papers. 1 Course Unit

EALC 7116 Chinese Art Under the Mongols
The Yuan Dynasty (1257-1368), the period of Mongolian rule, was the only time in Chinese history when China was part of a larger empire that spanned the Asian continent. Using architecture, sculpture, painting, and excavated evidence, this course examines the unique results of an international Asian world centered in China. Not Offered Every Year 1 Course Unit

EALC 7121 Life and Death in Han China
Using maps, city-panning, architecture, wall painting, sculpture, and minor arts as evidence, the course will examine the attitudes toward life and death in Han (206 BCE-AD 220) China. Fall or Spring 1 Course Unit

EALC 7140 Japanese Art Seminar
Seminar in early modern, modern, or contemporary Japanese art. Topics vary from semester to semester. Not Offered Every Year Also Offered As: ARTH 5150 1 Course Unit

EALC 7141 Ukiyo-e: Beyond the Great Wave
In this seminar we will take a closer look at the prints, paintings, and illustrated books produced in the genre known as "ukiyo-e," the "pictures of the floating world." We'll begin by asking how the "Great Wave" became a global icon and we'll bust the myth of prints being used as wrapping paper. As we learn the history of the genre, from 1600 to ca. 1850, we'll also make critical interventions into that narrative, asking how "ukiyo-e" became a genre within a larger artistic sphere; how publishers collaborated with designers to construct artistic personae; how illustrated books contributed to knowledge formations; and how concepts of authenticity and authorship remain critical to its understanding. This course will also consider how internet resources affect our understanding of the work of art. Students need not have any Japanese language skills, but should have taken related courses in art history or East Asian Studies. Advanced undergraduates and graduate students preferred. Not Offered Every Year Also Offered As: ARTH 5130 1 Course Unit

EALC 7142 Utamaro and his Contemporaries
In this seminar we will take a closer look at the prints, paintings, and illustrated books produced by one of ukiyo-e's most famous artists, Kitagawa Utamaro (1753?-1806), with special focus upon works to be included in an upcoming exhibition. We will begin by surveying the larger history of the "pictures of the floating world" (ukiyo-e) and pay close attention to Utamaro's teacher and his contemporaries. The status of the artist, the role of the publisher, networks of possible patrons, and Utamaro's legacy are among the key issues the seminar will address. Our analysis will further attend to the ways in which works by Utamaro and other ukiyo-e artists were evaluated and appreciated in late 19th-century France by such figures as Edmond de Goncourt, Hayashi Tadamashi, and Siegfried Bing, among others. Students will have the opportunity to study works in local and regional collections, including the Kislak Center, the Philadelphia Museum of Art, and the Freer/Sackler Galleries. Undergraduate students admitted by permission only. Fall or Spring Also Offered As: ARTH 5140 1 Course Unit
EALC 7180 Archaeology of Central Asia
A site by site investigation of Buddhist and non-Buddhist ruins in Central Asia. Included are Nisa, Khwarezm, Pyandzhikent, Khalchayan, Ay-Khanum, Bamyan, Miran, Tumshuk, Kizil, Kucha, Khotan, Adzhina-Tepe, Khocho, Khara-Khoto, and Bezeklik.
Fall or Spring
1 Course Unit
EALC 7211 Modern Chinese Poetry in a Global Context
The tumultuous political and economic history of modern China has been mirrored in and shaped by equally fundamental revolutions in language and poetic expression. In this course, we will take Chinese poetry as a crucible in which we can observe the interacting forces of literary history and social change. From diplomats who saw poetry as a medium for cultural translation between China and the world, to revolutionaries who enlisted poetry in the project of social transformation, we will examine the lives and works of some of China's most prominent poets and ask, what can we learn about modern China from reading their poetry? In asking this question, we will also reckon with the strengths and limitations of using poetry as an historical source. In addition to poems, the course will include fiction, essays, photographs, and films by both Chinese and non-Chinese artists that place our poets in a broader context. We will pay close attention to how these poets represent China's place in the world, as well as the role of language in social change. Topics of discussion include: national identity, revolution, translation, gender, the body, ethnicity, and technology. Familiarity with Chinese or related cultural context is beneficial, but not required. This course introduces students to Chinese poetry in English translation. Students will leave the course with an in-depth understanding of the main figures, themes, and techniques of Chinese poetry, and will be introduced to some of the major developments in the history of China. Through a focus on primary texts, students will develop the vocabulary and analytical skills to appreciate and analyze poetry in translation and will gain confidence as writers thinking about literary texts.

EALC 7244 War and Literature in Japan: Tales of the Heike
Our subject is Tale of the Heike, a multifaceted narrative of the twelfth-century battles that brought the Taira clan down and led to the establishment of Japan's first military government. We will read the Heike tales with an eye toward how they fictionalize history and idealize certain types, most notably loyal women and warriors; the development of the warrior tale genre; central aspects of the Japanese ethos; and later works of literature based on episodes and characters from the Tale of the Heike. All material is in English translation. (Students of Japanese language may learn to read a famous section in the original.) There are no prerequisites.
Not Offered Every Year
1 Course Unit
EALC 7246 The Tale of Genji
"Crowning masterpiece of Japanese literature," "the world's first novel," "fountainhead of Japanese literary and aesthetic culture," "a great soap opera in the vein of Jacqueline Susann." Readers over the centuries have praised the Tale of Genji, the monumental prose tale finished just after the year 1000, in a variety of ways. In this course we will read the latest English translation of Murasaki Shikibu's work. We will watch as Genji loses his mother at a tender age, is cast out of the royal family, and begins a quest to fill the void she left. Along the way, Genji's loyalty to all the women he encounters forges his reputation as the ideal lover. We will consider gender issues in the female author's portrayal of this rake, and question the changing audience, from bored court women to censurios monks, from adoring nationalists to comic book adaptors. Study of the tale requires consideration of poetry, imagery, costume, music, history, religion, theater, political and material culture, all of which will be components of the course. We will also trace the effect of the tale's many motifs, from flora and fauna to murderously jealous spirits, on later literature and conceptions of human emotions. All material is in English translation. There are no prerequisites.
Not Offered Every Year
1 Course Unit
EALC 7251 Japanese Science Fiction and Fantasy
This course will provide an overview of the major tropes, themes, and interpretations of contemporary Japanese science fiction and fantasy. As we establish a foundational knowledge of the history and structural formulations of genre fiction in Japan, we will cover topics such as folklore, high fantasy, apocalypse, dystopia, magical realism, posthumanism, video games, and transnational media franchises and cross-cultural marketing. By the end of the semester, students will possess a deeper understanding and appreciation of the role that science fiction and fantasy play in shaping contemporary media cultures in Japan and around the world.
1 Course Unit
EALC 7255 Literary Criticism and Theory in Japanese Literature
While the focus of this seminar will shift from year to year, the aim is to enable students to gain 1) a basic understanding of various theoretical approaches to literature, 2) familiarity with the histories and conventions of criticism, literary and otherwise, in Japan; 3) a few theoretical tools to think in complex ways about some of the most interesting and controversial issues of today, such as nationalism, imperialism, colonialism, postmodernism, and feminism, with particular focus on Japan's position in the world. The course is primarily intended for graduate students but is also open to advanced undergraduates with permission of the instructor. The course is taught in English, and all of the readings will be available in English translation. An optional discussion section may be arranged for those students who are able and willing to read and discuss materials in Japanese.
Not Offered Every Year
Also Offered As: COML 7255
1 Course Unit
EALC 7355 Japanese Theater
Japan has one of the richest and most varied theatrical traditions in the world. In this course, we will examine Japanese theater in historical and comparative contexts. The readings and discussions will cover all areas of the theatrical experience (script, acting, stage design, costumes, music, and audience). Audio-visual material will be used whenever appropriate and possible. The class will be conducted in English, with all English materials.
Fall or Spring
1 Course Unit
EALC 7424 Gender and Sexuality in Chinese History
This course examines gender and sexuality in Chinese history from ancient to contemporary times. It focuses on historiographical developments and methods of studying gender and sexuality in history as well as in Chinese history. The readings will include, but not be limited to, works by Robin Wang, Paul Goldin, Jen-der Lee, Patricia Ebrey, Beverly Bossier, Charlotte Furth, Susan Mann, Dorothy Ko, Francesca Bray, Yi-Li Wu, Matthew Sommer, Janet Theiss, Siyen Fei, Judith Zeitlin, Keith McMahon, Nicole Barnes, Gail Hershatter, Tani Barlow, and Lisa Rofel. Spring
1 Course Unit

EALC 7425 Gender, Religion, and China
This course examines the interrelationship among “gender,” “religion,” and “China” as conceptual and historical categories. We ask, for example, how gender plays critical and constitutive roles in Chinese religious traditions, how religion can be used both to reinforce and to challenge gender norms, how religious women impact Chinese society and culture, and what the construction of “China” as a cultural identity and as a nation-state has to do with women, gender, and religion. We will also think about what assumptions we have when speaking of gender, religion, and China, and the infinite possibilities when we strive to think beyond. We will read three kinds of materials: (1) scholarship on gender and religion in historical and contemporary China as well as the Chinese-speaking world, (2) scholarship concerning theories and methodology of gender and religious studies not necessarily focused on China, and (3) historical record of religious women in English translation. Not Offered Every Year
Also Offered As: RELS 7425
1 Course Unit

EALC 7429 Sex and Society in Ancient China
Ancient Chinese writers considered sexual activity to be an essential component of humanity, and the study of human sexuality to be essential to the study of human history. Sexuality constituted a fundamental source of imagery and categories that informed the classical Chinese conception of social, political, and military relationships. This course will survey the major sources dealing with sex and society in ancient China. There are no prerequisites, and no knowledge of Chinese is presumed. Not Offered Every Year
1 Course Unit

EALC 7522 Medicine and Healing in China
This course explores Chinese medicine and healing culture, its diversity, and its change over time. We will discuss topics including the establishment of canonical medicine, Daoist approaches to healing, and longevity, diverse views of the body and disease, the emergence of treatments for women, medical construction of sex difference and imagination of female sexuality, the thriving and decline of female healers, the identity of scholar physicians, the transmission of medical knowledge, domestic and cross-regional drug market, healer-patient relations, and new visions of traditional Chinese medicine in modern China. Not Offered Every Year
1 Course Unit

EALC 7523 Chinese Aesthetics
This seminar investigates classical Chinese conceptions of art and beauty as exemplified in philosophy, literature, music, painting, calligraphy, and architecture. All readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirements for graduate credit. Not Offered Every Year
1 Course Unit

EALC 7524 Daoist Traditions
This course examines the history of various intellectual and religious traditions that came to be known as Daoist (or Taoist in the Wade-Giles Romanization). We will begin with a critical review of the twentieth-century reinvention of Daoism and the new classification of religious versus philosophical Daoism, before tracing chronologically the textual, institutional, and social history of Daoist traditions from the fourth century B.C.E. While familiarizing students with the key concepts, practices, and organizations developed in the history of Daoism, this class emphasizes the specific socio-political context of each of them. Throughout the course, we will think critically about the labeling of Daoist (as well as Confucian and Buddhist) in Chinese history and in modern scholarship. We will also question modern demarcations between philosophy, religion, and science, as well as that between the spiritual and the physical. Not Offered Every Year
Also Offered As: RELS 7524
1 Course Unit

EALC 7528 Apocalypse and Utopia in China
Representations of a perfect society and imagined scenarios of a dystopian or apocalyptic future are a common features of all human societies. Philosophical, religious, and literary attempts to imagine alternative futures and critique present conditions enjoyed widespread popularity and considerable influence throughout Chinese history. The goal of this course will be to introduce students to the major themes and trends in utopian and apocalyptic thought in China, from the premodern age to our times. In the first part of the semester, we will learn about the utopian and apocalyptic narratives that emerged in early and medieval China. We will begin by discussing the two archetypal models of a utopian society in early China: the Confucian harmonious moral society and its Daoist counterpart of an idyllic secluded community located in faraway lands. We will then turn our attention to the emergence of organized religion and the utopian and apocalyptic scenarios promoted by Daoist and Buddhist writers and religious innovators. In the second part of the semester, we will focus on the modern and contemporary periods and the study the impact of the introduction of Western utopian and millenarian narratives on the Chinese imagination. In addition to surveying some real-world attempts to establish a utopian society, such as the 19th century Taiping Rebellion, Mao Zedong’s attempts to fashion China into a Community Utopia in the 20th century, and the 21st century eco-village green movement, students will be introduced to a wide variety of literary and cinematic texts that try to imagine a possible future - from the utopian sci-fi nationalism of The Wandering Earth to the dystopian fiction of leading writers such as Han Song, Chen Qufan, and Han Jingfang. Using these works as case studies, we will strive to ascertain the role of utopianism as a tool of political, social, and environmental criticism and as a way to construct a better and more just society in the 21st century. No knowledge of Chinese is necessary - all readings will be in English. As a split-level seminar, the course will be discussion-based. Students will be asked to post weekly 500-word response papers in which they will analyze and critique the readings. The goal of this task is to help students familiarize themselves with the assigned sources before the in-class discussion thus facilitating a meaningful and productive discussion. For their final project, students will conduct their own research on a topic of their choice and present it during the last meeting. Undergraduate paper will be limited to 10 pages; graduate papers should be around 20-25 pages, including original-language research. Not Offered Every Year
1 Course Unit
EALC 7531 Chinese Law and Society
This course is an introduction to the study of law and society in China in a comparative and global context. We will begin by considering the tradition of imperial Chinese law and its social and philosophical foundations. We will then turn to the confrontation between the Qing empire and Euro-American imperial powers in the nineteenth century and the attendant collision between European and Chinese notions of sovereignty. Next, we will consider early twentieth-century law reforms as the Qing empire was transformed into the constitutional form of a modern republic, followed by the introduction of socialist law and the establishment of the People's Republic of China. The course will conclude with post-Mao reforms and their implications for the future of Chinese law and society. Throughout the course, we will pay attention to the use of historical and comparative methods. What are the potentials and liabilities of using law as an analytical category in cross-cultural study? What happens when "Eastern" and "Western" legal cultures come in contact with each other? How is law related to capitalism and socialism? How does law structure political and socio-economic relations globally? How does law produce as well as constrain subjects and identities? What is the relationship between law, gender, and sexuality?

EALC 7590 Gender and Sexuality in Japan
If you have ever wondered about the following questions, then this is the right course for you: Is Japan a hyper-feminine nation of smiling geisha and obedient wives? Is it a hyper-masculine nation of samurai and economic warriors? Is it true that Japanese wives control the household? Is it true that Japanese men suffer from over-dependence on their mothers? What do young Japanese women and young men worry about? What does the government think about the future of Japanese women and men? Assuming that expressions of gender and sexuality are deeply influenced by cultural and social factors, and that they also show profound differences regionally and historically, this course examines a variety of texts—historical, biographical, autobiographical, fictional, non-fictional, visual, cinematic, analytical, theoretical—in order to better understand the complexity of any attempts to answer the above questions.
Not Offered Every Year
1 Course Unit

EALC 7570 Introduction to Classical Chinese I
This course is an introduction to the classical written language, beginning with Shadick, and the attendant collision between European and Chinese notions of sovereignty. Next, we will consider early twentieth-century law reforms as the Qing empire was transformed into the constitutional form of a modern republic, followed by the introduction of socialist law and the establishment of the People's Republic of China. The course will conclude with post-Mao reforms and their implications for the future of Chinese law and society. Throughout the course, we will pay attention to the use of historical and comparative methods. What are the potentials and liabilities of using law as an analytical category in cross-cultural study? What happens when "Eastern" and "Western" legal cultures come in contact with each other? How is law related to capitalism and socialism? How does law structure political and socio-economic relations globally? How does law produce as well as constrain subjects and identities? What is the relationship between law, gender, and sexuality?
Spring
Mutually Exclusive: EALC 3531
1 Course Unit

EALC 7571 Introduction to Classical Chinese II
Continuation of Introduction to Classical Chinese I, which is the only prerequisite for this course. Upon completion of Shadick, readings in a wide selection of texts with Chinese commentaries may be taken up. These readings are in part chosen to reflect student interest. This is the second half of a year-long course. Those who enroll must take both semesters.
Spring
Mutually Exclusive: EALC 3531
1 Course Unit

EALC 7621 Introduction to Classical Chinese I
Introduction to the classical written language, beginning with Shadick, First Course in Literary Chinese. Students with a background in Japanese, Korean, Cantonese, Taiwanese, and other East Asian languages are welcome; it is not necessary to know Mandarin. The course begins from scratch, and swiftly but rigorously develops the ability to read a wide variety of classical and semi-classical styles. Original texts from the 6th century BC to the 20th century AD are studied. This course is taught in English and there are no prerequisites.
Fall
Mutually Exclusive: EALC 3621
1 Course Unit

EALC 7622 Introduction to Classical Chinese II
Continuation of Introduction to Classical Chinese I, which is the only prerequisite for this course. Upon completion of Shadick, readings in a wide selection of texts with Chinese commentaries may be taken up. These readings are in part chosen to reflect student interest. This is the second half of a year-long course. Those who enroll must take both semesters.

1 Course Unit

EALC 7641 Readings in Classical Japanese I
Readings in classical texts drawn from the Heian, Kamakura, Muromachi, and Edo periods. Introduction to the different styles of classical Japanese, and to classical Japanese as a whole.
Fall
Prerequisite: JPAN 0600
1 Course Unit

EALC 7681 Introduction to Classical Mongolian
In this class students who already know some modern Mongolian in the Cyrillic script will learn how to transfer that knowledge to the reading of first post-classical, and then classical texts written in the vertical or Uyghur-Mongolian script. Topics covered will include the Mongolian alphabetic script, dealing with ambiguous readings, scholarly transcription, vowel harmony and syllable structure, post-classical and classical forms of major declensions, converses, verbal nouns, and finite verbs, syntax, pronunciation and scribal readings. Readings will be adjusted to interests, but as a rule will include selections from short stories, diaries, chronicles, Buddhist translations, government documents, popular didactic poetry, ritual texts, and traditional narratives. Students will also be introduced to the most important reference works helpful in reading classical and post-classical Mongolian.
Fall
1 Course Unit
EALC 7682 Introduction to Classical Mongolian II
Continuation of EALC 3681/EALC 7681, which is the only prerequisite for this course. Upon completion of the basic introduction to grammar, spelling rules, and diachronic levels (pre-classical, classical, post-classical), readings in a wide selection of texts with Mongolian commentaries may be taken up. These readings are in part chosen to reflect student interest. This is the second half of a year-long course. Those who enroll should take both semesters.

1 Course Unit

EALC 7720 Early Chinese History
This seminar covers the span of Chinese history from the Bronze Age to the end of the Han dynasty in A.D. 220. No knowledge of Chinese is presumed, but EALC 001 (Introduction to Chinese Civilization) is a prerequisite. Graduate students who wish to enroll should meet with the instructor to discuss additional requirements for graduate credit.
Spring
1 Course Unit

EALC 7721 Law in Pre-Modern China
This course, intended for graduate students and advanced undergraduates, offers a survey of the sources and research problems of pre-modern Chinese law. For reasons to be examined in the course, traditional Sinological education has neglected law as a legitimate field of inquiry; consequently, the secondary literature is surprisingly meager. Our readings will take us from the Warring States Period to the Qing dynasty—an interval of over two millennia—and will cover several varieties of legal documents, including statutes, handbooks, court records, and theoretical treatises. All the readings will be in English, and no knowledge of Chinese is presumed. Graduate students should see the instructor to discuss requirement for graduate credit.
Not Offered Every Year
1 Course Unit

EALC 7744 Law and Violence in Pre-Modern Japan
This course will be an exploration of premodern Japanese history through the lens of violence. The centuries under consideration (roughly, the eighth through nineteenth) were characterized by greatly varying levels of violence, both of the state-sanctioned variety (war, punishments for law-breakers and political losers) and of the non-sanctioned variety (piracy, banditry, warrior and peasant rebellions). Examining a wide variety of translated sources, from diaries to chronicles, from legal codes to fiction, we shall examine the changing social, political, economic, and cultural contexts of violence, in order to interrogate not only why certain periods were remarkably peaceful while others were not, but also why violence took different forms in relation to different circumstances. We shall consider how contemporaries made sense of the violence that surrounded them (or didn’t) and how they divided the acceptable use of force from the wanton and society-threatening abuse of it. The course will feature presentations and several (very short) papers.
Not Offered Every Year
1 Course Unit

EALC 7783 Pastoralism & Mobility
"Pastoralism and Mobility" will examine the society and history of mobile pastoralists (nomads) in Inner Asia from earliest times to the present. Peoples covered will include Mongols, Tibetans, Turkic nomads (such as Kazakhs, Kyrgyz, and Turkmen), and their ancestors and predecessors. The class on focus on questions such as: Is there a distinctive form of Inner Asian pastoralist society? At the grass roots level? At the elite level? How have states (native and foreign) influenced Inner Asian pastoralist society in pre-modern and modern contexts? How how Inner Asian pastoralists influenced neighboring states? What role does kinship play in governing group formation, property, and status in Inner Asian pastoralist society? Does this role vary over time, space, or ethnic background? If so, how? What purposes does mobility serve in Inner Asian societies? How have various forms of livestock lease-holding changed and shaped wealth in Inner Asian pastoralist society? How did class differentiation emerge & function in pre-modern pastoralist societies? What happens when pastoralists become farmers? How have modern schemes of social improvement and productivity, especially collectivization and decollectivization, shaped pastoralist lives?

Not Offered Every Year
1 Course Unit

EALC 8102 Twentieth-Century Art in East Asia: Modernity and Confrontation
This seminar considers modern and contemporary art in China, Japan and Korea over the course of the twentieth century. What does it mean to make modern art and whom should it serve were essential questions in this century in East Asia. In this course the confrontations between modernity and tradition, state and self, the colonizer and the colonized, and collecting and the market are all issues under consideration. We begin with a study of the way "modern art" was defined at the turn of the century, its place in the nation state, the promotion of oil painting in Academic styles, and the call to preserve "national" styles. We also consider how the avant-garde pursuit of individuality constituted a confrontation over state-sponsored "modernism," and how these confrontations played out in world's fairs and expositions (and continue today). We will further engage how Japan's imperialist actions against its neighbors had an impact on artistic development in territories it controlled, and the place of the work of art as propaganda in Japan's war effort. Turning to the postwar era, we will study how China's Communist Revolution, the Korean War, and the Occupation in Japan likewise established new paradigms for the production and reception of art, as well as more recent confrontations between art and politics in recent decades and the place of Chinese, Korean and Japanese art in the contemporary market.

EALC 8211 Language, Nation, and Diaspora in East Asia and the World
This course examines the nexus between language, nation, and diaspora by bringing literary and cultural texts together with foundational and cutting-edge scholarship. Recent scholarship has attempted to account for the history, politics, aesthetics, and rich complexity of texts produced at or across the boundaries of national and linguistic communities. This course focuses on East Asia in the modern period and the texts produced by diasporic, migrant, exile, and other global communities thereof in order to investigate and reconsider how scholars might account for such texts. Topics for discussion include, for example: diaspora and migration, cosmopolitanism and universalism, nation and nationalism, translation and multilingualism, media and mediation, gender and sexuality, and the human and posthuman. Our readings will include a wide range of scholarship drawn from across disciplines and regions of focus, as well as literary, cultural, and cinematic texts which will allow us to think through the ideas put forth in scholarship.
1 Course Unit

EALC 8290 Approaches to Literary Texts
Most seminars focus on literary texts composed during a single historical period; this course is unusual in inviting students to consider the challenges of approaching texts from a range of different historical eras. Taught by a team of literary specialists representing diverse periods and linguistic traditions and conducted as a hands-on workshop, this seminar is designed to help students of literature and related disciplines gain expertise in analysis and interpretation of literary works across the boundaries of time, geography, and language, from classic to modern. Students will approach literature as a historical discipline and learn about key methodological issues and questions that specialists in each period and field ask about texts that their disciplines study. The diachronic and cross-cultural perspectives inform discussions of language and style, text types and genres, notions of alterity, fictionality, literariness, symbolism, intertextuality, materiality, and interfaces with other disciplines. This is a unique opportunity to learn in one course about diverse literary approaches from specialists in different fields.

1 Course Unit

EALC 8301 History of the Book in East Asia
From handscrolls to manga, books play a vital role in East Asian societies. In this seminar we will introduce the spread of book cultures across East Asia and reconsider the role and impact of material texts on societies in China, Korea, and Japan. Among the questions we'll engage are: What is a book, an author, or an edition? How do readers affect books? How do publishers decide when to use illustrations, woodblock printing, or movable type? How has the history of books differed in China, Japan, and Korea from the history of the book in the West? We will consider various media (bamboo, paper, silk, and the digital), formats (scrolls, folded books, bound books, small to oversize), and the tensions between handwritten manuscript and printed pages. Hands-on sessions may include paper-making, bookbinding, and printing. This is an Objects-Based Learning course, using materials from the Kislak Center for Special Collections, Rare Books and Manuscripts, and the Penn Museum, with visits to the Philadelphia Museum of Art and the Free Library of Philadelphia. Requires no knowledge of any Asian language.

EALC 8521 Tang-Song Religious and Medical Texts
This seminar aims at developing the skill in reading religious and medical texts of a range of different genres from the Tang-Song period, including treatises in medical theory, no sological texts, recipe compilations, material medical, macrobiotic texts, Buddhist and Daoist meditation and ritual instructions, as well as case histories in anecdotal forms. There are a variety of topics we can choose to focus on the studying those texts, and the choice will be made on the students' research interests. Each week we will look at one type of texts, consider its edition, textual history, chapter organization and genre (sometimes with background readings), read line-by-line a sample text assigned in advance, as well as sight-read short samples that students bring to class. At least one year Classical Chinese is required.
Not Offered Every Year
Prerequisite: CHIN 491 AND CHIN 492
1 Course Unit

EALC 8540 Japanese Religions
A broad survey of Japanese religions from ancient times to the present. Topics include kami worship, Buddhism, Shinto, Shugendo, Onmyodo, "new religions", and Japanese variants of Christianity and Islam. Students will make weekly presentations on reading material in class and will have two major written assignments. This course serves as preparation for a comprehensive exam in Japanese religions or for dissertation research on some aspect of Japanese religions.

EALC 8588 Religion & Ethnicity in Inner Asia  
"Religion and Ethnicity in Inner Asia" will examine these two phenomena and their interaction in Inner Asia from earliest times to the present. The class will cover Mongolia, Tibet, Kazakhstan, and Turkic and Mongolian peoples of Russia and China. Religions addressed primarily include Buddhism, Islam, shamanism, and secularism. Why "ethnicity and religion"? In practice the scholarly research and literature on these two topics in Inner Asia have been closely related. In addition to theoretical works on ethnicity, nationalism, religion and identity, the class will focus on issues such as ethnicity and religious conversions, place-based ethnic and religious identities, ethnicity and the Chinese and Russian states, nationalism, nationality policy, reformist and atheist secularisms, revivalist and apocalyptic movements, and the intersection of ethnicity, race, sexuality, and international networks.  
1 Course Unit

EALC 8600 Chinese Language Pedagogy and Methods  
This graduate course is designed to equip students with the most advanced and up-to-date theoretical knowledge and practical skills of teaching modern Chinese with emphasis on the instruction of beginning and intermediate levels. The theoretical component introduces you to both mainstream and innovative theoretical frameworks in second-language acquisition and sociology of education, including teaching within the National Standards; communication-based audio-lingo approach; backward design; prosodic syntax in Chinese; official knowledge; tracking; ecologies of resources; assessment and testing. The practical component emphasizes everyday classroom situations and discusses diverse teaching concepts and the development of individual teaching strategies and styles. Special attention will be given to concrete teaching and learning strategies within the communication-based audio-lingo approach, including Chinese grammar illustration, corrective feedback, teaching techniques, educational technologies, etc. Chinese proficiency at the advanced level is required because this course will be taught in both Chinese and English, and many of the reading materials are in Chinese.

1 Course Unit
EALC 8747 Readings in Premodern Japanese History: War & Peace, 1000-1850
This seminar is an introduction to the most recent historiography on premodern Japan, with a special attention to work focused on the medieval and early modern periods (twelfth through nineteenth centuries). The course will range broadly from religious history to social history, from new takes on biography and material culture to new approaches to think of Japanese's relation to the other, within the archipelago and beyond. Each week will feature a monograph published in the last decade or so, alone or (when possible) in conversation with earlier pieces on similar subjects. Students will be expected to take turns presenting on readings, to write three short book reviews during the course of the semester and a longer seminar paper at the end of the semester (to be submitted by 12/15). The short papers should be handed in no more than three weeks after the book was discussed in class.
Not Offered Every Year

EALC 8801 Theory in/and East Asia
"Theory" can be exciting and seductive to some scholars, but intimidating or pretentious to others. Unfortunately, this difference in feeling about theoretical scholarship and discussion has a tendency to produce a divide in academia between those who "do theory" and those who do not. This graduate seminar pursues the question of how theory can be engaged in the context of East Asian cultural studies, with the goal of collectively working through texts to understand how theoretical reflection opens up possibilities for productive conversations across disciplinary boundaries. Many critiques have been made of the way "traveling theory" serves as a Euro-American universal applied to the "raw material" of East Asian texts, or a transdisciplinary common language in the Humanities and Social Sciences. Instead, we will take such critiques as a starting point to pragmatically and creatively explore the intersections and interactions of "theory" and "East Asia," emphasizing the archival, historical, political, and institutional contexts that motivate theorization. In that spirit, special attention will be given to discussing what problems we find in our own work that require theoretical consideration, and how such considerations might contribute to, challenge, or transform theory originating outside of East Asia. Readings will primarily be in English, but may also include Japanese, Chinese, or Korean depending on student interest and language abilities.
Not Offered Every Year
1 Course Unit

EALC 8820 Sinological Methods
This seminar is designed to acquaint graduate students with the basic methods and resources of Sino logical research. The course will begin with an overview of essential reference works and aids to study, such as dictionaries and concordances, and continue with a survey of the major primary sources for the study of traditional Chinese history. Students are required to demonstrate the use of the methods learned in the course in a research paper, to be presented to the class in the form of a brief lecture at the end of the semester. Only graduate students may enroll in this course. The prerequisites are reading knowledge of modern Chinese and two years of the classical language. Familiarity with Japanese, though not required, would prove helpful.
Not Offered Every Year
1 Course Unit

EALC 8840 Japanese Literature: Research Methods in the Classical Tradition
Introduction to bibliographic tools for research in pre-modern literature. Emphasis on hands-on library work, including how to use libraries in Japan. Covers history and terminology of bibliography. Students may attend lectures in EALC 152/552 simultaneously, when offered. Final project will use reference tools for substantive research in individual student’s area of interest.
Not Offered Every Year

Economics (ECON)

ECON 0100 Introduction to Micro Economics
Introduction to economic analysis and its application. Theory of supply and demand, costs and revenues of the firm under perfect competition, monopoly and oligopoly, pricing of factors of production, income distribution, and theory of international trade. Econ 1 deals primarily with microeconomics.
Fall or Spring
Mutually Exclusive: ECON 0110
1 Course Unit
ECON 0120 Strategic Reasoning
This course is about strategically interdependent decisions. In such situations, the outcome of your actions depends also on the actions of others. When making your choice, you have to think what the others will choose, who in turn are thinking what you will be choosing, and so on. Game Theory offers several concepts and insights for understanding such situations, and for making better strategic choices. This course will introduce and develop some basic ideas from game theory, using illustrations, applications, and cases drawn from business, economics, politics, sports, and even fiction and movies. Some interactive games will be played in class. There will be little formal theory, and the only pre-requisites are some high-school algebra and having taken Econ 1. However, general numeracy (facility interpreting and doing numerical graphs, tables, and arithmetic calculations) is very important. This course will also be accepted by the Economics department as an Econ course, to be counted toward the minor in Economics (or as an Econ elective).

Fall
Also Offered As: PPE 3001
Prerequisite: ECON 0100
1 Course Unit

ECON 0200 Introductory Economics: Macro
Introduction to economic analysis and its application. An examination of a market economy to provide an understanding of how the size and composition of national output are determined. Elements of monetary and fiscal policy, international trade, economic development, and comparative economic systems.

Fall or Spring
Mutually Exclusive: ECON 0110
Prerequisite: ECON 0100
1 Course Unit

ECON 0410 Public Policy Analysis
This course provides an introduction to the economic method for analyzing public policy questions. It develops the implications of this method for the role of government in a market economy and for the analysis of specific public projects.

Fall or Spring
Prerequisite: (ECON 0100 AND ECON 0200) or ECON 0110
1 Course Unit

ECON 0420 Political Economy
This course examines the effects of strategic behavior on political outcomes and government policies. Topics and applications may include voting behavior, candidate competition, voting systems, social choice and welfare, policy divergence, redistributive policies and theories of political transitions.

Fall or Spring
Prerequisite: (ECON 0100 AND ECON 0200) or ECON 0110
1 Course Unit

ECON 0430 Labor Economics
The course begins with an extensive discussion of models of labor market demand and supply. The rest of the course addresses a variety of related topics including the school-to-work transition, job training, employee benefits, the role of labor unions, discrimination, workforce diversity, poverty, and public policy.

Spring
Prerequisite: ECON 0100 OR ECON 0110
1 Course Unit

ECON 0440 Law and Economics
The relationship of economic principles to law and the use of economic analysis to study legal problems. Topics will include: property rights and intellectual property; analysis of antitrust and economic analysis of legal decision making.

Fall or Spring
1 Course Unit

ECON 0450 Industrial Organization
Theories of various industrial organizational structures and problems are developed, including monopoly, oligopoly, moral hazard and adverse selection. These theories are then applied to the study of various industries, antitrust cases, and regulatory issues.

Fall or Spring
Prerequisite: ECON 0100 OR ECON 0110
1 Course Unit

ECON 0460 Economics and Theories of Fairness
Free markets excel at producing wealth, but seem to do so at the cost of economic inequality. Is this inequality unjust? Is it a problem economics and public policy should solve? Liberal democracies have traditionally had the protection of private property as a core mandate. But they also have varying degrees of redistribution in order to fund social welfare systems. How can we reconcile these objectives which seem to conflict? Is the protection of individual rights more important than the promotion of the greatest good for all? To what extent can personal liberty and the common good be reconciled? Are current entitlement programs like Medicare unfair to the younger generation? Is our current natural resource usage unfair to future generations? In this course, we will use the philosophical concept of justice to address these and other related questions. We will draw from the economic history, political theory, and the history of philosophy in order to acquire a framework for understanding the concepts of justice, liberty, rights, and equality. We shall then apply this historical and conceptual framework to discussion topics and case studies drawn from present day economics and contemporary social issues. In this way, we shall come to understand economics as more than a social science of laws and theorems. Instead we shall see how economics as an applied science influences the well-being of the whole of society.

Fall
1 Course Unit
ECON 0465 Economics and Philosophy
This course examines some of the ways in which economics as a social science is related to philosophy. We start with a discussion of the definition, scope, and methodology of economics, reading Robbins on the definition of economics, Mill on the science of political economy and Friedman’s essay on methodology, along with some of its critical responses. We then consider three central concepts of economics which have their roots in philosophy: rationality, utility, and welfare, and we examine the philosophical assumptions in each of these economic concepts. Economics assumes a form of instrumental rationality by which individuals seek to maximize their utility. We consider the origins of this concept of rationality, its extension into rational choice theory, and the critiques it has inspired. Our next topic is the concept of utility, which originates in philosophy but which receives a technical definition in economics. Finally, we turn to welfare economics, which is the most normative part of economic science, where we consider topics such as preference satisfaction and interpersonal comparisons of utility. We also raise the question throughout whether these concepts are rightly used in economics, and whether welfare economics can in fact promote well-being. In addition to the four major topics (methodology, rationality, utility, and welfare), we will also devote one class each to four topics debated in journal articles by some of the most important economists in recent history. These topics are: --Is underinvestment in basic research a market failure? (Arrow v. Demsetz); --What are the market consequences of imperfect information? (Hayek v. Stiglitz); --What are the moral dimensions of economic growth, specifically as it relates to the environment? (B. Friedman v. T. Jackson); --Is it ethical for the state to “nudge” citizens towards desired behaviors? (Thaler and Sunstein v. Grüne-Yanoff); and Reviewing the views expressed in these debates will allow students to form their own opinions on major topics in economics where the arguments are largely philosophical. The goal of the overall course is to help students develop a more critical understanding of the assumptions of economics as it’s practiced as a social science.
Spring
Prerequisite: ECON 0100 AND ECON 0200
1 Course Unit

ECON 0500 International Economics
Introduction to the theory of international trade and international monetary economics. The theoretical background is used as a basis for discussion of policy issues. Patterns of international trade and production; gains from trade; tariffs, and impediments to trade; foreign exchange markets, balance of payments, capital flows, financial crises, coordination of monetary and fiscal policy in a global economy.
Fall or Spring
Prerequisite: (ECON 0100 AND ECON 0200) OR ECON 0110
1 Course Unit

ECON 0510 Development Economics
This course presents an overview of the field of development economics. The general aim is to show how economic analysis has been applied to issues related to developing countries. Among the topics covered are: income distribution, poverty, health, population growth, migration, growth, and the rural economy.
Fall or Spring
Prerequisite: ECON 0100 OR ECON 0110
1 Course Unit

ECON 0610 American Capitalism
A broad overview of American economic history will be provided by focusing on the following topics: colonial trade patterns, the growth of the market economy, the political economy of slavery, industrial expansion, segmentation in the labor force and changes in work, technological and organizational innovations, business cycles, the rise of the corporate welfare state, the growth of monopoly capitalism, and current economic problems in historical perspective.

Also Offered As: HIST 1161
1 Course Unit

ECON 0615 The History of the International Monetary System and the Rise of the US Dollar
The course will cover the modern evolution of the international monetary system going all the way back to the era when sterling became the leading international currencies. It is arranged thematically and chronologically both. The lessons and readings will introduce students to the principal evolutions of the international monetary system and at the same time, it will give them an understanding of regimes, their mechanics and the geopolitical economies behind systemic shifts. Students need not have an economic background but must be prepared to read about exchange rates (and world politics). Special focus on: The early modern international monetary system. How Amsterdam and London captured the Spanish treasure. Beyond the West (Ottoman Empire, India, China). The Napoleonic wars and the rise of sterling. Hong-Kong: Silver, Opium, and the Recycling of Surpluses. The emergence of the Gold Standard. Bimetallism: The US election of 1796. Sterling and Key Currencies before WWI. The First World War and the origins of dollar supremacy. When the dollar displaced sterling (1920s). The collapse of the international gold standard (1930s). The Bretton Woods System. The rise and rise of the US dollar. Currency competition (Dollar, Euro, Yuan Renminbi). The meaning of cryptocurrencies.
Also Offered As: HIST 3965
1 Course Unit

ECON 0620 Financial Meltdown, Past and Present
Economic history is increasingly recognized as a crucial source of policy advice and is invoked with growing frequency in public debates. In particular, the subprime crisis in 2008 and after has generated a demand for “historical perspective” that would improve the understanding of the causes of financial turmoil and facilitate the prevention of comparable catastrophes. This course begins with a review of the principal features of the subprime crisis of 2008 and asks, so to speak, “how did we get there?” It answers by providing historical insights that shed light on crucial aspects of financial disasters. This is a history course, engaging with topics pertaining to economics, law and politics (national and international). Students with diverse backgrounds are expected to benefit from this course through acquiring a concrete knowledge of the historical evolution of fundamental institutions of financial capitalism. Ultimately, students enrolling in this course are expected to achieve proficiency in historically informed discussion of the mechanisms that were played out in the subprime crisis and beyond.
Not Offered Every Year
Also Offered As: HIST 1731
1 Course Unit
ECON 0625 Introduction to Business, Economic and Financial History

Business, Economic and Financial History plays a crucial role today in informing the views of business leaders, policy makers, reformers and public intellectuals. This seminar provides students with the opportunity to acquire a command of the key elements of this important intellectual field. The seminar format enables us to do this engagingly through reading and discussion. Students acquire a knowledge of the fundamental texts and controversies. Each meeting focuses on one foundational debate and provides a means to be up to date with the insights gleaned from rigorous economic history. We will examine twelve important debates and students will be asked to write a paper. The debates will include such questions as: What is growth and how can it be measured? What caused the "great divergence" in long run development among countries? How can we "understand" the rise and fall of slavery and its long shadow today? What is globalization and when did it begin? Did the Gold Standard and interwar fiscal and monetary policy orthodoxy cause the great depression? How can we explain the evolution of inequality in the very long run?

Also Offered As: HIST 3710
1 Course Unit

ECON 0630 The Economics and Financing of Health Care Delivery

The course provides an application of economic models to demand, supply, and their interaction in the medical economy. Influences on demand, especially health status, insurance coverage, and income will be analyzed. Physician decisions on the pricing and form of their own services, and on the advice they offer about other services, will be considered. Competition in medical care markets, especially for hospital services, will be studied. Special emphasis will be placed on government as demander of medical care services. Changes in Medicare and regulation of managed care are among the public policy issues to be addressed. Prerequisite: If course requirement not met, permission of instructor required.

Fall or Spring
Also Offered As: ECON 0390, HCMG 2020
Prerequisite: ECON 0100 OR ECON 0110
1 Course Unit

ECON 2100 Intermediate Microeconomics

Theories of consumer behavior, demand, production, costs, the firm in various market contexts, factor employment, factor incomes, elementary general equilibrium, and welfare.

Fall or Spring
Mutually Exclusive: BEPP 2500
Prerequisite: ECON 0100 AND ECON 0200 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 2200 Intermediate Macroeconomics

Facts and theories about the determination of per capita income and its differences across countries and across time. The study of economic fluctuations in output and employment. The role of government in influencing these aggregate variables: monetary and fiscal policy.

Fall or Spring
Mutually Exclusive: FNCE 1010
Prerequisite: ECON 2100 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 2300 Statistics for Economists

The course focuses on elementary probability and inferential statistical techniques. The course begins with a survey of basic descriptive statistics and data sources and then covers elementary probability theory, sampling, estimation, hypothesis testing, correlation, and regression. The course focuses on practical issues involved in the substantive interpretation of economic data using the techniques of statistical inference. For this reason empirical case studies that apply the techniques to real-life data are stressed and discussed throughout the course, and students are required to perform several statistical analyses of their own.

Fall or Spring
Prerequisite: ECON 0100 AND ECON 0200 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 2310 Econometric Methods and Models

This course focuses on econometric techniques and their application in economic analysis and decision-making, building on ECON 2300 to incorporate the many regression complications that routinely occur in econometric environments. Micro-econometric complications include nonlinearity, non-normality, heteroskedasticity, limited dependent variables of various sorts, endogeneity and instrumental variables, and panel data. Macro-econometric topics include trend, seasonality, serial correlation, lagged dependent variables, structural change, dynamic heteroskedasticity, and optimal prediction. Students are required to perform several econometric analyses in a modern environment such as R.

Fall or Spring
Prerequisite: ECON 2100 AND ECON 2300 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4100 Game Theory

An introduction to game theory and its applications to economic analysis. The course will provide a theoretical overview of modern game theory, emphasizing common themes in the analysis of strategic behavior in different social science contexts. The economic applications will be drawn from different areas including trade, corporate strategy and public policy.

Fall or Spring
Prerequisite: ECON 2100 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4101 Game Theory Honors

This is an honors game theory class; permission is necessary to enroll. An introduction to game theory and its applications to economic analysis. The course will provide a theoretical overview of modern game theory, emphasizing common themes in the analysis of strategic behavior in different social science contexts. The economic applications will be drawn from different areas including trade, corporate strategy and public policy.

Fall or Spring
1 Course Unit
ECON 4110 Economics of Family
This course will study modern family economics. The class will develop economic models to study topics such as female labor supply, fertility, marriage and divorce, women's liberation, premarital sex and parental socialization, investment in health, and retirement. This is an advanced undergraduate class. Calculus is an integral part of the course. Some elementary probability theory is drawn upon. Students unwilling to learn some of the tools used in modern economic should not take this class. Not Offered Every Year
Prerequisite: ECON 2100 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4120 Social Choice Theory
This course investigates a topic which lies at the heart of economic, social and political sciences, namely the aggregation of individual preferences. Can a society as a whole exhibit preferences as individuals do? Can these preferences be based on individual ones, and show the same level of coherence? Which process can lead from individual preferences to the preferences of the society? At the end of the 18th century, the pioneers in the field already realized that mathematics is the only language powerful enough to make deep progress in the understanding of these questions. The formalization involves pure logic as well as geometry and combinatorics. Not Offered Every Year
Prerequisite: ECON 2100 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4130 Market Design
Market design is broadly about designing interventions in economic systems so as to enhance their performance. The power and potential of market design has recently entered a new era of possibility with the rise of Artificial Intelligence. Artificial Intelligence is concerned with the design of intelligent autonomous systems. Such systems are rapidly transforming our society and economy and have been enabled by major advances in cloud computing and network telecommunications. Yet underlying the technological surface of many AI-oriented applications are fundamental economic and econometric principles which are central to their design and implementation. In short, to perform well, an AI system must "think like economists" - it must: 1. Make predictions about its environment; 2. Test causal hypotheses about the effect of various actions they can take, and; 3. Make decisions about an optimal plan of action in the face of uncertainty, which is a cycle that repeats and iteratively improves. Many of the established success stories in AI today have largely been focused on achieving (1), the trend is towards AI increasingly encompassing (2) and (3). In this course we aim to isolate these economic principles and understand their role in the modern development of AI, as well as gaining an appreciation for what the proliferation of AI based technologies means for the economy in which we live. Although the course will be principally interested in the former, we won't fully shy away from some discussion of the latter. Topics include human judgment and decision making biases (a light intro to behavioral economics), predictive machine learning and regularization, causal inference as distinct from prediction with application to product pricing, and reinforcement learning for dynamic decisions. Fall or Spring
Prerequisite: ECON 2100 AND ECON 2300 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4140 Decision Making Under Uncertainty
This course will show how individuals make decisions in a world full of uncertainties, both normatively and descriptively. This theory will help us build skills in understanding and analyzing a choice problem with uncertainty in a systematic fashion, as well as deepening our understanding of the fundamental concept of a utility function, which plays a critical role in economic modeling. The course requires a substantial ability of abstract thinking. Homework is intended to be thought-provoking rather than skill-sharpening. Not Offered Every Year
Prerequisite: ECON 2100 AND ECON 2300 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4150 Mathematical Economics
This semester long course will introduce students to a variety of mathematical topics associated with convexity, optimization and fixed points that are used in Economic theory. The use of these techniques will be illustrated with a host of economic applications. Students who have not taken ECON 2100 require instructor permission. Spring, odd numbered years only
Prerequisite: MATH 3140 AND MATH 3600 AND ECON 2100
1 Course Unit

ECON 4160 Behavioral Economics
People often systematically deviate from predictions of standard models in economics. Behavioral economics is an emerging subfield of modern economics that incorporates insights from psychology and other social sciences into economics to improve realism of standard models. This course reviews some of the standard assumptions in economics and evidence on how human behavior systematically departs from these assumptions. Several well-known behavioral theories that explain such deviations and their implications will be discussed. Topics may include (but not limited to) context-dependence, prospect theory, loss aversion, present bias, self-control, reference-dependence, limited attention, biased beliefs, fairness, and biases in strategic reasoning. Spring
Prerequisite: ECON 2100 AND ECON 2300 AND (MATH 1080 OR MATH 1410)
1 Course Unit

ECON 4200 Economic Growth
The process of economic growth and the sources of differences in economic performance across nations are some of the most interesting, important and challenging areas in modern social science. You cannot travel or read the news without wondering why differences in standards of living among countries are so large. The primary purpose of this course is to introduce undergraduate students to these major issues and to the theoretical tools necessary for studying them. The course therefore strives to provide students with a solid background in dynamic economic analysis, as well as empirical examples and data analysis. Fall or Spring
Prerequisite: ECON 2100 AND (ECON 2200 OR FNCE 1010) AND ECON 2300 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit
**ECON 4205 Structural changes in the modern macroeconomy**
Over the past few decades, the U.S. as well as other advanced economies have undergone a secular transformation: while overall economic growth has slowed down mildly, the fruits of economic growth have been spread unevenly. Income and wealth inequality have increased, the labor share of national income has decreased, economic activity has increasingly concentrated at a few superstar firms, and business dynamism has declined. The observed developments have generated strong reactions across the political spectrum. Is the American Dream really still alive, or might it be that a large fraction of the population simply will no longer be able to productively contribute to society? The aim of this course is to introduce advanced undergraduate students to the main empirical facts and theoretical tools involved in studying these developments through a macroeconomic lens. We will carefully analyze the data using the tools of applied (micro-)economics and interpret them using basic macroeconomic models. Interested students should have taken ECON 2100, ECON 2200, ECON 2300, MATH 1400, MATH 1410, or MATH 1510. Some basic knowledge of regression analysis is also recommended.
Fall
1 Course Unit

**ECON 4210 Numerical Methods for Macroeconomists**
This course will study numerical methods as used in modern macroeconomics. Students will learn how to solve nonlinear equations, difference equations, interpolate functions, smooth data, and conduct Monte Carlo simulations on the computer. This will be done while studying economic problems, such as the determination of labor supply, economic growth and business cycle analysis. Calculus is an integral part of the course and some elementary probability theory will be drawn upon. The MATLAB programming language will be used.
Fall or Spring
Prerequisite: ECON 2100 AND (ECON 2200 OR FNCE 1010) AND (MATH 1400 OR MATH 1070 AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

**ECON 4220 Monetary and Fiscal Policies**
This is an advanced course in macroeconomics. A relatively simple, but well defined and internally consistent model of the U.S. economy is set up and used to study how output is generated given the initial resources, how output is divided between consumption and addition to capital stock, and how this process accumulates over time. The role of prices including the rate of interest in this process is also reviewed, and monetary and fiscal policies needed to improve the performance of the economy under such circumstances are discussed.
Fall or Spring
Prerequisite: ECON 2100 AND (ECON 2200 OR FNCE 1010) AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

**ECON 4230 Macro-Modeling**
This is an advanced undergraduate course in models of economic growth. Students will be introduced to the workhorse theoretical models that are used to understand growth by modern macroeconomic researchers and policy makers. The types of questions that we will address include: Why are some countries richer than others? Why do some countries grow quickly while others stagnate? Why did modern economic growth start in Western Europe? What can governments do to accelerate economic growth? How does economic growth interact with demographic and geographic factors? We will build theoretical models that can be used to answer these questions. There will be a strong focus on emphasizing the microeconomic foundations of models, and using the language of mathematics to express the underlying assumptions and assess their implications for policy. Hence, there are strict mathematical prerequisites. We will also compare the predictions of our models with the data. Thus, a fair amount of econometrics will be required. A class in statistics and econometrics is highly recommended.
Not Offered Every Year
Prerequisite: ECON 2100 AND (ECON 2200 OR FNCE 1010) AND (MATH 1400 OR MATH 1070 AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

**ECON 4240 Money and Banking**
Money and Banking. This course studies the role that financial markets, institutions, and money play in resource allocation. Financial intermediation and the role of banks in the economic system are analyzed and the economic rationale behind banking regulation is studies. The course examines how monetary policy influences interest rates and asset markets, such as the bond market and the stock market. Finally, the instruments and goals of monetary policy are discussed, focusing in particular on credibility and commitment for central banks. All of the questions are explored analytically, using the tools of economic theory.
Fall or Spring
Prerequisite: ECON 2100 AND (ECON 2200 OR FNCE 1010) AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

**ECON 4310 Macro-Econometric Techniques and Applications**
This course provides a deeper treatment of time-series econometric methods used in macroeconomic and financial applications, such as nonstationarity, unit roots, and cointegration; structural evolution and breaks; point, interval and density forecasts; forecast evaluation and combination; vector autoregression including impulse-response estimation and analysis; dynamic factor models and dimensionality reduction; univariate and multivariate stochastic volatility models; and prediction markets.
Fall or Spring
Prerequisite: ECON 2100 AND (ECON 2200 OR FNCE 1010) AND ECON 2300 AND ECON 2310 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit
ECON 4320 Micro-econometric Techniques and Applications
This course provides a deeper treatment of econometric methods and issues as relevant for microeconomic applications, such as non-parametric function estimation; endogeneity and identification (strong and weak); generalized method of moments estimation; randomized and quasi-randomized methods for causal estimation; design strategies such as regression discontinuity and differences-in-differences; program evaluation; and quantile regression.
Fall or Spring
Prerequisite: ECON 2100 AND ECON 2310 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4330 Econometric Machine Learning Methods and Models
This course covers econometric methods, machine learning methods, and their interface, focusing on aspects of estimation, inference, and prediction in causal and non-causal environments. Topics may include Bayesian learning; recursive estimation and optimal filtering; randomized controlled trials and their approximation; latent variables; classification; topic analysis; LDA models; neural networks; random forests; regularization (shrinkage, selection, ...); network estimation and description.
Fall or Spring
Prerequisite: ECON 2300 AND ECON 2310 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1080)
1 Course Unit

ECON 4340 Empirical Economics of Climate Change
This course provides a broad introduction to the economics of climate change. The relevant theory is covered, but the emphasis throughout is empirical. Topics may include background in geophysics and econometrics; bi-directional feedback relationships between climate change and economic activity; global warming dynamics as manifest in temperature and sea ice dynamics; economic strategies, policies, and institutions for climate change mitigation and adaptation (including trading or taxing carbon, hedging climate risk in financial markets, and monetary and supervisory policy).
Fall
Prerequisite: ECON 2100 AND (ECON 2200 OR FNCE 1010) AND ECON 2300 AND ECON 2310 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4405 Economic Program Evaluation
Does increasing the minimum wage reduce employment? Do smaller class sizes improve students’ achievement? Does Medicare improve its recipients’ health status? Program evaluation is an essential part of policy making and the political debate. More generally, causality and the identification of causal effects are at the heart of many questions in economics. The goal of this class is to give students a precise understanding of what causality is, and a working knowledge of empirical methods used in economics to estimate causal effects and evaluate public policy. Recommended: ECON 2310.
Prerequisite: ECON 2100 AND ECON 2300 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4410 Public Finance
This course has two parts. The first looks at market and government failures and discusses the need for public policies as well as limits to their effectiveness including the evaluation of public projects using cost benefit analysis. The second part focuses on the economic analysis of taxation, including the economic incidence and efficiency of taxes.
Fall or Spring
Prerequisite: ECON 2100 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4420 Political Economy
This course examines the political and economic determinants of government policies. The course presents economic arguments for government action in the private economy. How government decides policies via simple majority voting, representative legislatures, and executive veto and agenda-setting politics will be studied. Applications include government spending and redistributive policies.
Fall or Spring
Prerequisite: ECON 2100 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4430 Labor Economics
Labor supply and labor demand, income distribution, labor market contracts and work incentives, human capital, labor market discrimination, job training and unemployment.
Fall or Spring
Prerequisite: ECON 2100 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4440 Law and Economics
This course will use basic microeconomic tools to understand how the law often, but not always, promotes economic efficiency. Among the areas to be discussed will be tort law, property law, intellectual property, antitrust cases, and regulatory issues. The distinction between common law and legislative law will be drawn.
Fall or Spring
Prerequisite: ECON 2100 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4450 Industrial Organization
Theories of various industrial organizational structures and problems are developed, including monopoly, oligopoly, nonlinear pricing and price discrimination. These theories are used to model various industries, antitrust cases, and regulatory issues.
Fall or Spring
Prerequisite: ECON 2100 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit
ECON 4460 Health Economics
In this course we will use the tools of microeconomics to analyze the functioning of the health care system. We will draw from the sub-disciplines of information economics, industrial organization, labor economics, public economics, and behavioral economics. The primary goal is to use these tools to develop a critical analysis of the functioning of the health care system as well as of the policies aimed at improving it. We will learn about US specific institutional details and policies (most notably the Affordable Care Act), and we will compare them to other important international experiences.
Fall or Spring
Prerequisite: ECON 2100 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4470 Urban Fiscal Policy
The purpose of this course is to examine the financing of governments in the urban economy. Topics to be covered include the causes and consequences of the urban fiscal crisis, the design of optimal tax and spending policies for local governments, funding of public infrastructures and the workings of the municipal bond market, privatization of government services, and public financial systems for emerging economies. Applications include analyses of recent fiscal crises, local services and taxes as important determinants of real estate prices, the infrastructure crisis, financing and the provision of public education, and fiscal constitutions for new democracies using South Africa as an example.
Fall or Spring
Prerequisite: ECON 2100 AND (ECON 2200 OR FNCE 1010) AND ECON 2300 AND ECON 2310 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4480 Economics of Education
The course focuses on the educational decisions, including individual choices, institutional strategies and government policies. It is an elective course in economics and it is designed for junior and senior students. During the first part of the course we will go over the mathematical and empirical tools needed to understand and perform quantitative analysis on topics in the economics of education. Students should expect to work on optimization methods, regression analysis and causal inference analysis. We will use Stata (https://www.stata.com/) as statistical software. After we have built a solid foundation of knowledge, we will cover the first "real" topic of the economics of education: the return to schooling. During this phase of the course we seek to address two questions: what are the benefits that an individual acquires (i.e. in terms of earnings in the labor market or career opportunities) by attending more years of school and what are the benefits for society as a whole? While these questions seem to have a simple explanation, we will discover that they are actually quite challenging and require a more complex explanation. Once we have analyzed the benefits of schooling, we will study what motivates some students to further their education for more years, as opposed to others. In particular, we will focus on the differences in the quality of environments that children face throughout childhood (e.g.: family environment and school/classroom environment) and the consequences for observed inequities. Finally, in the remaining portion of the course we will study the evaluations of different policies that have been implemented in the past from previous governments, with the goal of gaining insight for possible future policy recommendations.
Spring
Prerequisite: ECON 2100 AND (ECON 2200 OR FNCE 1010) AND ECON 2300 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4490 The Digital Economy
This is an advanced undergraduate course on the digital economy. Our two main goals are (a) to understand how people and companies interact in digital markets and (b) to understand how digital markets should be designed. The course uses a combination of theoretical modeling and empirical evidence in order to achieve those goals. We analyze some key features that are prevalent in digital markets, including network effects, two-sided markets, search and matching, reputation systems, and the use of data. We also zoom in on individual markets, such as search engines, e-commerce platforms, and the gig economy.
Spring
Prerequisite: ECON 2100 AND ECON 2310 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4510 International Trade
Structure of the world economy; theory of international trade; economic growth and international trade; international trade policy; developed countries; developing countries. Direct investment, technology transfers, and the multinational firm.
Fall or Spring
Prerequisite: ECON 2100 AND (ECON 2200 OR FNCE 1010) AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit
ECON 4520 International Finance
International monetary economics with emphasis on economic policy in an open economy. Topics covered in the course include: balance-of-payments adjustment, theories of exchange rate determination, the effects of exchange rate devaluation, macroeconomic policy under fixed and floating exchange rates, the Euro-dollar market, currency and balance of payments crises.
Fall or Spring
Prerequisite: ECON 2100 AND (ECON 2200 OR FNCE 1010) AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4530 Topics in Development
This course studies institutions in developing economies. The first section of the course will cover the organization of production in traditional agrarian societies. Topics will include land, labor and credit markets. The second section of the course will focus on the role of the community in facilitating the transition to the modern market economy. Here we will study how the community spreads information, permits the formation of informal networks and organizes collective institutions, allowing individuals to take advantage of new economic opportunities.
Not Offered Every Year
Prerequisite: ECON 2100 AND (ECON 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4540 China: Institutions and the Economy
The rise of China since its economic reform starting from 1978 is one of the most important developments the world witnessed in the twenty-first century. In this seminar course, we explore topics including the political logic of China's economic reform, the institutional foundations of the Chinese economic growth miracle, as well as detailed analysis of Chinese financial markets, housing markets, fiscal reform, corruption/anti-corruption, labor market transitions, China's integration into the world economy, village democracy and its impact on resource allocation, the impact of population ageing, the impact of China on US economy and politics, among others. The discussions will focus on China, but will relate broadly to emerging and developed economies. The course will be based on reading and discussing research articles and books selected by the instructors.
Prerequisite: ECON 2100 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4545 Finance and Growth from a Historical Perspective
This course focuses on the interception between finance and economic growth by studying some of the most important events in economic history that have taken place over the last few centuries. Starting with the emergence of the modern capital markets and economic growth, the course examines in depth, major developments in financial history, such as the classical gold standard, the origins of central banking, the Great Depression, and the Bretton Woods system. However, this course goes beyond any standard course on financial history and examines how finance has affected economic growth in the long-run, from an international perspective and starts in the seventeenth century in Europe, up to the 1990s in South-East Asia.
Spring
Prerequisite: ECON 2100 AND (ECON 2200 OR FNCE 1010) AND ECON 2300 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4550 The Political Economy of Early America
This course will study the political economy of Early America, from the British Settlement to c. 1820. In particular, we will explore the forces behind the economic growth of the British colonies, the economic forces behind the Revolution, the economic consequences of the Revolution, the political economy of the constitutional convention and ratification, the role of SCOTUS in creating a national market, and the opposing Hamilton-Jefferson views of an American economy. Early America is a fascinating and rich historical period, and we will need to skip many issues of interest. Nevertheless, we hope to provide you with a good overview of how a group of small peripheral colonies created an institutional arrangement that allowed them, in less than two centuries, to become the biggest economy in the world.
Spring
Prerequisite: ECON 2100 AND (ECON 2200 OR FNCE 1010) AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4560 History of Economic Thought
This course surveys the history of the development of economic thought, beginning with the Classical school and the works of Smith, Ricardo, J.S. Mill, Marx and others and continuing to the 20th century thought, including Keynes, Hayek, and Arrow.
Spring, odd numbered years only
Prerequisite: ECON 2100 AND (ECON 2200 OR FNCE 1010) AND ECON 2300 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4610 Foundations of Market Economies
This course will study the historical and intellectual forces behind the appearance of market economies on the world stage. The voyages of exploration undertaken by Europeans in the 15th and 16th century created, in just a few decades, a global economy. By 1600, silver from Mexico was exchanged in Manila for ceramics made in Nanjing (China). After a long trip through the Pacific, Mexico, and the Atlantic, the ceramics ended up in the tables of prosperous merchants in Bruges (modern day Belgium). How did this integrated global economy appear? How did global interconnections over the centuries shape our current world? How did markets emerge and influence these interconnections? Who were the winners of globalization? And who were the losers? How did economists, political scientists, and others think about the strengths and weakness of market economies? This course will explore these questions and the role that markets have played in it from the late 15th century to the present. Even if the economic theory will structure much of the discussion, insights from intellectual history, cultural history, microhistory, legal history, and institutional history will help to frame the main narrative. The course will be, as well, truly global. First, beyond the traditional focus of economic history courses on Europe and the Americas, particular attention will be devoted to Africa and Asia. Second, the priority will be to highlight the interconnections between the different regions and to understand how the people living in them negotiated the opportunities and tensions created by the economic transformations triggered by globalization and how they conceptualized the changing lives around them. Finally, the class will highlight how diverse intellectual traditions handled the challenges presented by historical change.
Fall or Spring
Prerequisite: ECON 2100 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit
ECON 4900 Honors Seminar
Students prepare an honors thesis in economics over the academic year, supervised by a faculty member of their choice. In ECON 4900 (fall) and ECON 4910 (spring), students present their work in progress to the class. Any student intending to do empirical work in the thesis should have completed ECON 2300 and ECON 2310.
Fall
Prerequisite: ECON 2100 AND ECON 2200 AND ECON 2300 AND ECON 2310 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1510 OR MATH 1080)
1 Course Unit

ECON 4910 Honors Seminar (II)
Students prepare an honors thesis in economics over the academic year, supervised by a faculty member of their choice. In ECON 4900 (fall) and ECON 4910 (spring), students present their work in progress to the class. Any student intending to do empirical work in the thesis should have completed ECON 2300 and ECON 2310.
Spring
Prerequisite: ECON 2100 AND ECON 2200 AND ECON 2300 AND ECON 2310 AND MATH 1400 AND MATH 1410
1 Course Unit

ECON 4999 Independent Study
Individual study and research under the direction of a member of the Economics Department faculty. At a minimum, the student must write a major paper summarizing, unifying, and interpreting the results of the study. This is a one semester, one c.u. course.
Fall or Spring
Prerequisite: ECON 2100 AND ECON 2200 AND ECON 2300 AND (MATH 1400 OR MATH 1070) AND (MATH 1410 OR MATH 1080)
1 Course Unit

ECON 6100 Microeconomic Theory
Basic tools of microeconomic theory: consumer choice, firm behavior, partial and general equilibrium theory. This is a more theoretical treatment of the basic tools of microeconomic analysis than ECON 2100.
Fall
1 Course Unit

ECON 6110 Game Theory and Applications
A graduate level introduction to decision making under uncertainty, applied game theory, and information economics.
Spring
Prerequisite: ECON 6100
1 Course Unit

ECON 7100 Microeconomic Theory I
Nonlinear programming, theory of the consumer and producer, general equilibrium.
Fall
1 Course Unit

ECON 7110 Microeconomic Theory II
Game theory, decision making under uncertainty, information economics.
Spring
1 Course Unit

ECON 7200 Macroeconomic Theory I
Dynamic programming, search theory, neoclassical growth theory, asset pricing, business cycles.
Fall
0.5-1 Course Unit

ECON 7210 Macroeconomic Theory II
Spring
1 Course Unit

ECON 7300 Econometrics I: Fundamentals
Violations of classical linear regression assumptions, nonlinear regression models (including logit, probit, etc.), diagnostic testing, distributed lag models, panel data models, identification, linear simultaneous-equations model.
Fall
0.5-1 Course Unit

ECON 7310 Econometrics II: Methods & Models
Analysis in time and frequency domains, state space representations, Kalman filtering, conditional heteroskedasticity, nonlinear and nonparametric methods for time series, integration, co-integration, numerical and simulation techniques.
Spring
1 Course Unit

ECON 7500A Third Year PhD Seminar
The transition from student to frontier researcher is quite difficult. This course is aimed at starting graduates on their first major paper. It will meet once a week over the entire year. An important element in the course is developing what is essentially a study group of the participants to give each other feedback and suggestions. Students should anticipate doing a 30 minute presentation every 2-3 weeks. This gives you enough time to make progress, but also keeps you on pace to have a final project well advanced by the end of the course.
Fall
0.5 Course Units

ECON 7500B Third Year PhD Research Seminar
Transition from student to frontier researcher is quite difficult. This course is aimed at starting our graduate students on their first major paper. It will meet once a week over the entire year. Only offered to the Economics Department 3rd year PhD students. A important element in the course is developing what is essentially a study group of the participants to give each other feedback and suggestions. Students should anticipate doing a 30 minute presentation every 2-3 weeks.
Spring

Fall or Spring
Prerequisite: ECON 7100 AND ECON 7200 AND ECON 7110 AND ECON 7210 AND ECON 7300 AND ECON 7310
0.5-1 Course Unit

ECON 8300 Topics in Advanced Econometrics
Topics in Advanced Economic Theory and Mathematical Economics
Fall or Spring
Prerequisite: ECON 7100 AND ECON 7200 AND ECON 7110 AND ECON 7210 AND ECON 7300 AND ECON 7310
0.5-1 Course Unit

ECON 8310 Econometrics III: Advanced Techniques of Cross-Section Econometrics
Qualitative response models, panel data, censoring, truncation, selection bias, errors in variables, latent variable models, survey design, advanced techniques of semiparametric estimation and inference in cross-sectional environments. Disequilibrium models. Methods of simulated moments.
Fall or Spring
Prerequisite: ECON 7100 AND ECON 7200 AND ECON 7110 AND ECON 7210 AND ECON 7300 AND ECON 7310
1 Course Unit

ECON 8320 Econometrics IV: Advanced Techniques of Time-Series Econometrics
Focuses on macro-econometrics. Topics include comparison of Bayesian and frequentist inference in nonstandard settings (e.g. time series models with persistent roots), Bayesian inference in VARS and DSGE models including modern computational tools such as Gibbs sampling, MCMC, Sequential Monte Carlo, particle filtering, etc., and tools for evaluating DSGE models.
Fall or Spring
Prerequisite: ECON 7100 AND ECON 7200 AND ECON 7110 AND ECON 7210 AND ECON 7300 AND ECON 7310
1 Course Unit

ECON 8400 Topics in Advanced Empirical Microeconomics
Topics in Advanced Economic Theory and Mathematical Economics
Fall or Spring
Prerequisite: ECON 7100 AND ECON 7200 AND ECON 7110 AND ECON 7210 AND ECON 7300 AND ECON 7310
0.5 Course Units

ECON 8410 Public Economics
Public goods, externalities, uncertainty, and income redistribution as sources of market failures; private market and collective choice models as possible correcting mechanisms. Microeconomic theories of taxation and political models affecting economic variables.
Fall or Spring
Prerequisite: ECON 7100 AND ECON 7200 AND ECON 7110 AND ECON 7210 AND ECON 7300 AND ECON 7310
0.5 Course Units

ECON 8411 Public Economics II
Expenditures: Alternative theories of public choice; transfers to the poor; transfers to special interests and rent seeking; social insurance; publicly provided private goods; public production and bureaucracy. Taxation: Tax incidence in partial and general equilibrium; excess burden analysis. Topics on tax incidence and efficiency: lifetime incidence and excess burden, dynamic incidence, the open economy. Normative theories of taxation: Optimal commodity and income taxation. The political economy of income taxation.
Fall or Spring
Prerequisite: ECON 7100 AND ECON 7200 AND ECON 7110 AND ECON 7210 AND ECON 7300 AND ECON 7310
0.5 Course Units

ECON 8430 Economics of Labor I
Topics include: Theories of the supply and demand for labor; wage determination, wage differentials, labor market discrimination, unemployment, occupational choice and dynamics of specific labor markets, theory of matching, trade unions. The theory and empirics of human capital accumulation, intertemporal labor supply, search, intergenerational mobility of income and wealth, contracts and bargaining, efficiency wage models, principal/agent models, and signaling models.
Fall or Spring
Prerequisite: ECON 7100 AND ECON 7200 AND ECON 7110 AND ECON 7210 AND ECON 7300 AND ECON 7310 AND ECON 8310
1 Course Unit

ECON 8431 Economics of Labor II
A continuation of ECON 8430.
Fall or Spring
Prerequisite: ECON 7100 AND ECON 7200 AND ECON 7110 AND ECON 7210 AND ECON 7300 AND ECON 7310 AND ECON 8310 AND ECON 8430
0.5 Course Units

ECON 8450 Empirical Methods for Industrial Organization
The goal of the course is to explore links between theory and data in order to identify and test implications of economic models. Reduced form and structural approaches will be used to study a variety of topics that include: Estimation of multiproduct cost functions; detection of collusion, multmarket contact, and network externalities; asymmetric information; auctions and nonlinear pricing; price competition and product differentiation; and complementarities: innovation and organizational design.
Fall or Spring

Education (EDUC)

EDUC 1450 (Re)Making U.S. Schools
What is the purpose of schooling? Why does education seem to be in a constant state of reform? How best to close the entrenched and pernicious opportunity gaps that characterize school systems in the United States? In this first-year seminar, we will consider and debate these questions as we explore the history and politics of schooling in the U.S. over the last half-century. Topics include political movements for racial justice in schools, policy and legal efforts addressing equal opportunity, the rise of standards-based reform, school choice dilemmas, and community control of schools. Our goal is to develop a deeper understanding of the processes by which U.S. society constructs, prioritizes, and addresses education.
1 Course Unit

EDUC 2002 Urban Education
This course explores the relationships between forms of cultural production and transmission (schooling, family and community socialization, peer group subcultures and media representations) and relations of inequality in American society. Working with a broad definition of "education" as varied forms of social learning, we will concentrate particularly on the cultural processes that produce as well as potentially transform class, race, ethnic and gender differences and identities. From this vantage point, we will then consider the role that schools can and/or should play in challenging inequalities in America.
Fall or Spring
1 Course Unit

EDUC 2445 Civil Dialogue Seminar: Civic Engagement In A Divided Nation
The goal of this course is to help students develop concepts, tools, dispositions, and skills that will help them engage productively in the ongoing experiment of American democracy. This nation's founders created a governmental structure that sets up an ongoing and expansive conversation about how to manage the tensions and tradeoffs between competing values and notions of the public good. These tensions can never be fully resolved or eliminated; they are intrinsic to the American experiment. Every generation must struggle to find its own balance, in no small part because in every era people who previously had been unjustly excluded from the conversation find a way to be heard. That inevitably introduces new values and changes how enduring ones get interpreted. The challenge of each generation is to develop that capacity to its fullest. The goal of this course is to equip you to engage fully in your generation's renewal of the conversation. Class sessions will use a variety of modalities: lecture, discussion, case studies, opportunities to experiment with the tools and techniques of civil dialogue and writing. Each session will include some theory or historical context, a case study, exploration of a key concept of civic dialogue with a related tool or technique, and an interactive exercise. This course is part of a larger effort by the university (called the Paideia program) to help Penn students build these skills.
Fall or Spring
Also Offered As: COMM 2445, URBS 2445
1 Course Unit

EDUC 2535 Psychology of Women
Critical analyses of the psychological theories of female development, and introduction to feminist scholarship on gender development and sexuality.
Fall or Spring
1 Course Unit

EDUC 2541 Educational Psychology
Current issues and research, applying psychological theory to educational practice. As such, this course will explore the fundamental themes in behavioral, developmental, and cognitive areas of psychology as they relate to education. Topics include: learning, motivation, growth and development, cognitive processes, intelligence tests, measurements, evaluations, etc.
Fall or Spring
1 Course Unit
EDUC 2551 SNF Paideia Course: Mindfulness and Human Development
This course will introduce the student to the many ways in which mindfulness is currently being implemented to support the health and success of students of all ages. Mindfulness-Based Stress Reduction (MBSR), which utilizes secularized practices from Asian and South Asian traditions for the remediation of various health concerns, has revolutionized behavioral medicine, and the scientific evaluation of MBSR has shed new light on the biomechanical pathways linking mind and body. This course will 1) explore fundamental principles underlying mindfulness, 2) the scientific data on its effects, and 3) the ways in which mindfulness is being applied to clinical and educational settings to support healthy human development. Contemplative practices include all forms of meditation, including contemplative dimensions of yoga, tai chi, qigong and other mind-body wellness activities. By far the most well known contemplative practice in the U.S. today is "mindfulness." Mindfulness meditation was introduced into clinical medicine in the 1980's in the form of Mindfulness-Based Stress Reduction (MBSR) by Jon Kabat-Zinn and his colleagues at U Mass; since that time it has had a significant impact on psychoneuroimmunology, clinical medicine, and especially behavioral medicine. Both psychological theory and practice have slowly been transformed by new findings emerging from mindfulness research. Brain imaging studies of persons engaged in meditation suggest that focused mental activities can actually change cerebral blood flow (Newberg et al. 2010), brain morphology and neural circuitry, in addition to strengthening the immune system (Davidson et al 2003) and improving attention skills (Jha et al 2007). MBSR has been repeatedly documented to be effective in treating mental health problems, particularly depression and anxiety, in numerous adult populations (Goyal et al 2014). Now, researchers are testing MBSR and other mindfulness approaches in children and adolescents as both a way to treat social-emotional dysfunction as well as to promote health and enhance social-emotional well-being. 
Fall
1 Course Unit

EDUC 3123 Tutoring School: Theory and Practic
This course represents an opportunity for students to participate in academically-based community service involving tutoring in a West Philadelphia public school. This course will serve a need for those students who are already tutoring through the West Philadelphia Tutoring Project or other campus tutoring. It will also be available to individuals who are interested in tutoring for the first time.
Spring
Also Offered As: URBS 3230
1 Course Unit

EDUC 3545 Psychology of Personal Growth
Intellectual, emotional and behavioral development in the college years. Illustrative topics: developing intellectual and social competence; developing personal and career goals; managing interpersonal relationships; values and behavior. Recommended for submatriculation in Psychological Services Master's Degree program.
Fall or Spring
Also Offered As: GSWS 3440
1 Course Unit

EDUC 3560 Human Development in Global Perspective
A life-span (infancy to adulthood) approach to development. Topics include: biological, physical, social and cognitive basis of development. Films and guest speakers are often included.
Fall or Spring
1 Course Unit

EDUC 3726 Tutoring in Urban Public Elementary Schools: A Child Development Perspective
The course provides an opportunity for undergraduate students to participate in academically-based community service learning. Students will be studying early childhood development and learning while providing direct, one-to-one tutoring services to young students in Philadelphia public elementary schools. The course will cover foundational dimensions of the cognitive and social development of preschool and elementary school students from a multicultural perspective. The course will place a special emphasis on the multiple contexts that influence children's development and learning and how aspects of classroom environment (i.e., curriculum and classroom management strategies) can impact children's achievement. Also, students will consider a range of larger issues impacting urban education embedded in American society. The course structure has three major components: 1) lecture related directly to readings on early childhood development and key observation and listening skills necessary for effective tutoring, 2) weekly contact with a preschool or elementary school student as a volunteer tutor and active consideration of how to enhance the student learning, and 3) discussion and reflection of personal and societal issues related to being a volunteer tutor in a large urban public school.
Fall
Also Offered As: URBS 3260
1 Course Unit

EDUC 4014 Children's Literature
Theoretical and practical aspects of the study of literature for children. Students develop both wide familiarity with children’s books, and understanding of how children's literature fits into the elementary school curriculum.
Fall or Spring

EDUC 5007 Teaching & Learning in Student Centered Classrooms
Most teachers have ambitious goals for their classrooms. They strive to make their classrooms spaces where students engage in authentic and meaningful work, where students collaborate on challenging and complex tasks, and where students develop deep disciplinary knowledge and the skills and mindsets that are necessary for their success in college, career, and society. However, many classrooms fall short of this ambitious vision. This course explores the challenges and opportunities teachers face when they attempt to build student-centered learning environments, and offers educators tangible insights and practices to support their work.

EDUC 5018 Integrating the Arts in the K-8 Classroom  
It is an unfortunate state of public elementary and middle level education that programs and time spent in arts education are becoming more and more limited, as school leaders feel the pressure to prepare their students for mandated assessments. In this context, it is essential that K-8 educators enter schools prepared to fill this gap through the development of opportunities for children to explore their worlds and express their knowledge through creative channels. This course has been designed to emphasize student-centered pedagogies and to prepare teachers to utilize the arts as one mechanism for building culturally responsive classrooms. This course will prepare K-8 teachers to enact lessons that support students in authentic, collaborative, iterative learning through the creative integration of visual arts and music. The course is split into two modules, one that focuses on visual arts and one that focuses on integration of music. Additionally, this course supports the development of Pennsylvania Department of Education (PDE) PreK-8 teacher competencies. Prerequisite: Admission to the UTAP program or permission of instructor.
Summer Term  
0.5-1 Course Unit

EDUC 5020 Literacy in Elementary/Middle Schools  
In this course, the interconnections of language, literacy and culture are explored in order to build a knowledge base and understanding of how children learn to read and write. Emphasis will be on how to teach and develop literacy curriculum in the elementary grades, and on how close listening and observation of children in their classroom contexts, combined with a critical reading of research and theory, can inform teaching practices. A central tenet of this course is that the best teachers of reading and writing are themselves active and engaged readers and writers. An important goal is to combine an inquiry approach to teaching and learning with an inquiry approach to thinking about how we teach. Offered within the Urban Teaching Apprenticeship Program.
Fall  
1 Course Unit

EDUC 5021 Science Methods: Project-Based Learning Approaches  
The goal of this course is to prepare teachers to facilitate science learning in the elementary and middle school. Special emphasis is placed on striving for a balance between curricular goals; individual needs and interests; and the nature of science. Offered within the Urban Teaching Apprenticeship Program.
Fall  
1 Course Unit

EDUC 5023 Social Studies in the Elementary and Middle Schools  
This course will focus on teaching and learning in the content area of social studies. Curricular and pedagogical theories and practices will be examined for their educational significance, meaningful integration of content areas, respect for students’ cultures (past and present), and contribution to social justice issues. Offered within the Urban Teaching Apprenticeship Program.
Spring  
0.5-1 Course Unit
EDUC 5030 Cultivating Creativity in the K-8 Classroom  
This course is an introduction to maker education and project-based learning, and will prepare K-8 teachers to enact classroom practices that support students in authentic, collaborative, iterative learning through the use of a variety of creative and technological mediums. Classes will consist of a combination of lecture, discussion, and maker lab. This course is about learning to teach and teach others how to make. Students will explore a variety of techniques including basic circuitry, coding, architecture, and design while seeking a balance between free exploration and discovery within parameters. Prerequisite: Admission to the UTAP program or permission of instructor required.  
Summer Term  
0.5-1 Course Unit

EDUC 5031 Mathematics in the Elementary and Middle Schools  
Learning to teach mathematics in ways that foster mathematical understanding and enjoyment for every student requires that teachers draw on different kinds of knowledge, skills, and dispositions. In addition to developing an understanding of central mathematical ideas, learning to teach math involves learning about learners, the understandings and conceptions they hold, and the processes through which they learn. It also involves developing skill in constructing tasks that engage students in mathematical exploration, creating an environment that facilitates reasoning, and finding ways to analyze and learn from one’s own teaching. Offered within the Urban Teaching Apprenticeship Program.  
Fall  
1 Course Unit

EDUC 5040 Differentiating Instruction for Diverse Learners/Special Education & Bilingual Students  
This course engages student teachers working with diverse learners, presenting factual information about specific areas of need situated within a socio-cultural framework. It addresses content related to both special education and English language learners in four areas: (1) Introduction to Special Education; (2) Learning Categories; (3) Issues in Special Education; and (4) Working with English Language Learners. Offered within the Urban Teaching Apprenticeship Program. Prerequisite: Permission needed from department  
Two Term Class, Student must enter first term; credit given after both terms are complete  
0.5-1 Course Unit

EDUC 5054 Managing Collaborative Learning Environments in Urban Contexts  
This course marks the beginnings of your year-long inquiry as preservice teachers, and hopefully your career-long inquiry as committed educational professionals, into the challenges of and opportunities for teaching and learning in urban settings. The theories and practices explored in this course are offered as foundations for instructional approaches that are intentional, reflective, inquiry-based, and learner-centered. As we investigate multiple dimensions of teaching and learning (curriculum design, learning theories, instructional techniques, etc.), you will have opportunities to both clarify and challenge the assumptions, beliefs, hopes, fears, and goals that you bring to your preparation to teach in urban secondary schools. Offered within the Urban Teaching Apprenticeship Program.  
Summer Term  
1 Course Unit

EDUC 5055 Advanced Field Seminar: Student-Centered Social Justice Pedagogy  
This course focuses on praxis—the mutually supporting roles of theory and practice that bring rigor and relevance to the work of educational professionals. This course is designed to give student teachers opportunities to develop pedagogical orientations, to learn from “problems of practice” at placement sites, and to enrich student teachers’ theoretical and practical knowledge. All of these experiences will inform the master’s portfolio and will prepare teachers to continue to see themselves and their practice as continuing sites for research. Offered within the Urban Teaching Apprenticeship Program.  
Spring  
1-3 Course Units

EDUC 5056 Advanced Field Seminar for STEM Inquiry in Secondary Schools  
This course focuses on praxis—the mutually supporting roles of theory and practice that bring rigor and relevance to the work of educational professionals. This course is designed to give student teachers opportunities to develop pedagogical orientations, to learn from “problems of practice” at placement sites, and to enrich student teachers’ theoretical and practical knowledge. All of these experiences will inform the master’s portfolio and will prepare teachers to continue to see themselves and their practice as continuing sites for research. Offered within the Urban Teaching Apprenticeship Program.

EDUC 5065 Introduction to Teaching & Classroom Routines  
This course is designed to support summer fieldwork in libraries, and serves as a bridge between fieldwork and course and fieldwork that begins in the fall. The course begins with a set of experiences in local communities which, along with courses, helps apprentices learn about neighborhoods and communities in which schools are located. This course provides apprentices with approaches to establishing classroom/group norms and practices allowing teachers to develop relationships with children. Apprentices will learn to establish routines and activities to be used in summer and fall fieldwork, as well as the professional cycle of planning, enacting, observing, and reflecting in a professional learning community. This course will also contribute to apprentices’ understanding of literacy and math learning in the K-8 classroom. Prerequisite: Admission to the UTAP program or permission of the instructor.  
Summer Term  
1 Course Unit

EDUC 5100 Experimental Course (Teaching, Learning, and Leadership)  
1 Course Unit
EDUC 513 Development of the Young Child
This course will blend an explanatory and descriptive account of behavioral evolution over the early years of life. After a review of "grand" developmental theory and the major themes of child change (from images to representation; from dependence to independence; from instinctual to social beings), this course will survey the child's passage from infancy through the early school years. While the emphasis will be on the nature of the child--what she/he sees, feels, thinks, fantasizes, wants and loves--these realities will be understood in terms of developmental theory. At each stage, the course will review the development of cognition, personal identity, socialization, and morality in pluralistic contexts.
Fall
0.5-1 Course Unit

EDUC 514 Diversity and Social Justice in American K-12 Education
In this course, students will develop a critical understanding of how various markers of social difference mediate the privileging of some and the marginalization of others within K-12 schools. Additionally, by considering their potential to act as agents of change, students will devise and share strategies for anti-oppressive educational practices.
Fall
1 Course Unit

EDUC 515 Educational and Social Entrepreneurship
This course provides an understanding of the nature of entrepreneurship related to public/private/for profit and non-profit educational and social organizations. The course focuses on issues of management, strategies and financing of early stage entrepreneurial ventures, and on entrepreneurship in established educational organizations.

1 Course Unit

EDUC 5151 Outside the School Box: History, Policy and Alternatives
So, we all know that we've been educated by many factors - schools, family, media, community organizations, religious institutions, employers, health agencies, social movements, and so on. Yet when we speak about "education," we often collapse it instantly into "schooling." What if we didn't? This discussion-based course takes on that challenge. What if we look at education as it actually happens, in ways inclusive of but reaching well beyond schooling? What if we step outside the school box into which we're often putting education? What are the implications for how we think about education, about particular configurations of educating institutions in any current educational ecosystem, about public and private purposes, and about what it means to be a professional in education? How do we wrap our arms around "education" when it suddenly encompasses, well, all of those entities that intentionally educate us? Viewing education more broadly than schooling, we will pursue a conversation between historical and current challenges, toward understanding the present implications – for practice, for policy, for professions – if we were to make such a basic shift conceptually and operationally. Students will explore several historical case studies, conceptual frames, current models in the field, and policy challenges, culminating in a related research project of your choice.
Fall
1 Course Unit

EDUC 5152 Video Games and Virtual Worlds as Sites for Learning
Drawing on work from the education, psychology, communication, and the growing field of games studies, we will examine the history of video games, research on game play and players, review how researchers from different disciplines have conceptualized and investigated learning in playing and designing games, and what we know about possible outcomes. We will also address issues of gender, race and violence that have been prominent in discussions about the impact of games.
Spring
1 Course Unit

EDUC 5154 Dashboards for Discovery and Learning Applications
As online learning tools have become more prominent, dashboards have emerged as a way for helping students, teachers, and other stakeholders in navigating learning data. They can provide both formative and summative information about a wide range of data and a wide range of stakeholders. However, learning can take many forms and does not always require (or result from) a linear path. Successful learning often requires persevering in the face of obstacles, but allowing learners to stagnate in such a space for too long can be demotivating. Likewise, we have also seen research that suggests that results in short term learning gains do not always lead to long term success. Even digital learning systems with substantial automation require data to be presented in a way that is relevant for the given stakeholders. This course explores starts with an overview of the kinds of digital learning systems currently available and a high-level view of the kinds of measurement constructs that have been modeled using their data. It then covers the kinds of motivational principles, cognitive biases, and other data visualization principles that are important to communicating different kinds of data. Finally, it culminates in the development of a novel dashboard system, the design of which students will justify both with a review of the literature and with a mini-usability study.
Fall or Spring
1 Course Unit

EDUC 5155 Technology for Educators
The aim of this course is to provide educators with hands-on experience with a range of technologies. During the course we will explore and learn how to handle web-based, free technologies that can be used by educators to design educational activities appropriate for their students.
Summer Term
1 Course Unit

EDUC 5156 Technology for Educators
This course is designed to provide an overview of the major discussions in the field, and policy challenges, culminating in a related research project of your choice.
Fall
1 Course Unit

EDUC 5180 Gender & Education
This course is designed to provide an overview of the major discussions and debates in the area of gender and education. While the intersections of gender, race, class, ethnicity, and sexuality are emphasized throughout this course, the focus of the research we will read is on gender and education in English-speaking countries. We will examine theoretical frameworks of gender and use these to read popular literature, examine teaching practices and teachers with respect to gender, using case studies to investigate the topics.
Not Offered Every Year
1 Course Unit
EDUC 5183 Adaptive Learning
More and more education takes place asynchronously and online, but relatively little asynchronous instruction takes advantage of the technological advancements that have taken place in recent decades, replicating traditional models for instruction online. In this class, you will learn about the pedagogy and technology of adaptive learning systems, individualized and personalized technology that helps students construct understanding and develop skill. We will read and reflect on both classic and recent papers on this technology, and study many of the successful examples of adaptive learning systems, both systems that have scaled and systems that have failed to scale. We will investigate key methods this type of learning leverages, and key pedagogies it affords.
Fall
1 Course Unit

EDUC 5204 Citizen Sociolinguistics
In this course we will draw on the Internet and daily news (internet circulated, usually) to find “Citizen Sociolinguists” who speak with authority, while juxtaposing these media with the usual scholarly sources.
Not Offered Every Year
1 Course Unit

EDUC 5208 Classroom Discourse and Interaction
In this course students will read research that investigates the role of classroom interaction in learning and human development. Students will also learn how to “do” discourse analysis using real classroom data. Students will practice and critique methods for analyzing classroom discourse data as teachers, with an aim of developing a critical awareness of our own language use and role in society.
Fall
1 Course Unit

EDUC 5212 Communication and Culture in Context
This course brings together scholarship in pragmatics, interactional sociolinguistics, and critical discourse analysis to help language teachers and intercultural educators foster pedagogies that respond to the complexities of living in a multilingual/multicultural society. Through a series of readings, small research projects, and activities, participants will develop a collection of educational practices that focus on 1) raising metalinguistic awareness, 2) developing resources and strategies for communicating across perceived social and cultural boundaries, and 3) assessing intercultural interactional competence.
Not Offered Every Year
1 Course Unit

EDUC 5216 Content-Based Instruction
This course offers students opportunities to investigate, observe, design practice, and critically evaluate the integration of content and language teaching - Content Based Instruction. The settings investigated include thematic English Language teaching; co-teaching and peer coaching by ESL and content teacher teams; and sheltered content instruction, among others. Standards, integrations of tasks, and special language requirements in various content areas are reviewed.
Summer Term
1 Course Unit

EDUC 5220 Pedagogy and Action for Critical Education
This graduate-level course is designed in collaboration with students and is centered on student-facilitated critical dialogue. Students in this course will engage with salient dimensions and theoretical foundations of issues, such as social justice, diversity, intersectionality, oppression, and more, within educational spaces. Through course activities and discussions, as well as student designed and facilitated classes, students will examine issues related to anti-oppressive education and develop skills in workshop design and facilitation that will empower them to work towards social change as community members, educators, and/or researchers.
Spring
1 Course Unit

EDUC 5224 Curriculum and Materials Development for English Language Teaching
This course is designed for those who are ready to develop skills in curriculum, course and materials design. The objectives of the course include learning how (a) to become able to analytically respond to readings on curriculum, course and materials development; (b) to analyze the sociocultural, economic, linguistic and occupational contexts of language teaching programs; (c) to design an original semester-long ESL/EFL course; (d) to design original pedagogical tasks and supplementary materials; and (e) to design in a group. EDUC 527 & EDUC 537 provide essential background for this advanced course. Prerequisite: Permission from instructor is required.
Fall
Prerequisite: EDUC 6215 AND EDUC 6205
1 Course Unit

EDUC 5232 Indigenous Education and Language Revitalization
The course examines Indigenous education and language revitalization from an international perspective, considering questions like: What policies, ideologies, and discourses shape the history of Indigenous education? What roles do pan-Indigenous and international organizations play? What does decolonizing and Indigenizing schooling look like? How do Indigenous epistemologies, ways of knowing, being and relating influence education? What does culturally relevant schooling mean in Indigenous contexts? What are the roles of Indigenous communities in language revitalization and educational processes?
Not Offered Every Year
1 Course Unit

EDUC 5236 Intercultural Communication and Miscommunication
This course considers ways in which intercultural communication is inherently more troublesome than intra-cultural communication. The course examines various perspectives on the nature of culture, communication, “miscommunication” and inter-cultural relations. The course criticizes two commonly held assumptions: 1) that “cultures” are unitary and unchanging and 2) that inter-cultural contact and communication is inherently more problematic than intra-cultural communication. The course considers ways in which intercultural communication has important consequences in education, medicine, social services, business settings, and international contact situations.

1 Course Unit
EDUC 5240 Language and Gender
This course traces the development of research on language and gender, introducing key theoretical issues and methodological concerns in this area. Participants will consider how gender ideologies shape and are shaped by language use, with particular attention to how research findings can be applied to educational and other professional settings.
Not Offered Every Year
Also Offered As: GSWS 5720
1 Course Unit

EDUC 5248 Language Assessment
This course covers a basic theoretical and practical foundation in language assessment, with particular emphasis on assessments used in second and foreign language education. The course covers various kinds of testing (both formal testing and performance-based assessment), theoretical and technical issues associated with test development, administration, the social influences of testing, and future directions in language assessment.
Spring
1 Course Unit

EDUC 5252 Language Diversity and Education
Exploration of issues affecting educational policy and classroom practice in multilingual, multicultural settings, with an emphasis on ethnographic research. Selected U.S. and international cases illustrate concerns relating to learners' bilingual/bicultural/biliterate development in formal educational settings. Topics include policy contexts, program structures, teaching and learning in the multilingual classroom, discourses and identities in multilingual education policy and practice, and the role of teachers, researchers, and communities in implementing change in schools.
Fall
Also Offered As: LALS 6610
1 Course Unit

EDUC 5256 Linguistic Anthropology of Education
Linguistic anthropologists study the role of language use in culturally patterned behavior. The course focuses on recent research by linguistic anthropologists in educational settings in the US and Europe marked by increasing linguistic and cultural diversity. The goal of the course is to uncover useful tools that contemporary linguistic anthropology offers to educational research.
Spring
Prerequisite: EDUC 6210
1 Course Unit

EDUC 5264 Structure of English
The goal of this course is to increase students' explicit knowledge of selected isolatable parts of the English language and to identify their pedagogical applications with respect to the needs of learners of English as a foreign/second language. This goal is realized through an investigation of: 1) frequently occurring linguistic forms and the rules and principles that govern the way that these forms can be combined and ordered; 2) the meanings that can attach to these forms; and 3) the social functions associated with these forms.
Spring
1 Course Unit

EDUC 5268 Teaching Performance Art for Cross-Cultural Education
This class examines issues related to cultural communities and the arts, specifically performance, writing and storytelling as an educational tool for generating cross cultural and intercultural understanding, dialogue and exchange. Assignments will focus on, cross-cultural research and dialogue, and skill building in teaching, writing and performance. Students will also develop an understanding of how performance can be used to enhance classroom activities in elementary/middle/secondary/ post secondary classroom curricula.
Fall
1 Course Unit

EDUC 5270 Selected Topics in ELX: Adult Literacy for ELLs
The focus for each semester will vary to reflect those issues most relevant to current concerns in educational linguistics.

EDUC 5280 Teaching Writing in Multilingual Contexts
This course introduces participants to a range of theoretical and practical issues related to second language literacy development, with a particular emphasis on writing instruction. An intensive service-learning project offers course participants the opportunity to work with developing writers in a bilingual community organization. The dual emphasis on theory and pedagogy is intended to create space for critical reflection on the characteristics, production, teaching, and assessment of written texts in bi/multilingual educational settings.
Not Offered Every Year
1 Course Unit
EDUC 5281 Teaching Multilingual Immigrant Youth
Immigrant youth often face the dual challenge of learning a new language and learning academic content in that language simultaneously. Many educators, however, struggle to identify and implement instructional practices that acknowledge immigrant learners’ strengths, while also attending to their linguistic, academic, and social needs. This course brings insights and findings from sociolinguistics to bear on research on teaching practices to develop a situated, interactionally mindful approach to supporting the language and literacy development of multilingual youth in contexts of migration. An intensive service-learning project offers course participants the opportunity to “learn by doing” by working closely with multilingual youth in a community-based, immigrant-serving organization. Although the course takes the case of immigrant and first-generation students attending U.S. elementary and secondary schools as its starting point, discussion of the implications and applications to other educational and national contexts is encouraged. The goal of this course is to prepare educators to work with multilingual immigrant youth in contextually sensitive, theoretically informed, interactionally attuned, and humanizing ways.
Fall
1 Course Unit

EDUC 5299 TESOL Classroom Fundamentals
This course focuses on the fundamental teaching skills that you need as a language educator. It is designed to help you develop effective ways of doing as much as knowing and thinking about language teaching and learning within a reflective practice framework.
Spring
Prerequisite: EDUC 6215 AND EDUC 6205
1 Course Unit

EDUC 5325 Fieldwork in Language in Education
Supervised fieldwork for individuals preparing to work with reading specialist/teachers in school settings.
Fall or Spring
1 Course Unit

EDUC 5333 Forming and Reforming the Elementary Reading/Writing/Literacy Curriculum
Students explore the theory and practice of constructivist approaches to teaching reading/writing/talking across the curriculum. They read widely and discuss issues that are informed by theory and research in many fields of inquiry including children's and adolescent literature, educational linguistics, cognitive psychology, curriculum, and anthropology and assessment. They write and share integrative journals; develop, teach and reflect upon holistic lessons; and complete an individual or group project of their own choosing.
Fall
1 Course Unit

EDUC 5335 Literature for Children and Adolescents
Theoretical and practical aspects of the study of literature for children and adolescents. Students develop both wide familiarity with children's/adolescents' books and understanding of how literature can be used in elementary/middle/secondary school curricula. Students complete course projects that focus on literature in specific classroom, research, home, or professional contexts.
Fall
1 Course Unit

EDUC 5378 Teaching Reading and Study in Colleges and Universities
This course is designed for both pre-service and experienced instructors and administrators who are interested in teaching and/or researching the concept of academic literacies and the array of academic skills in postsecondary settings, and/or directing programs in reading, writing and study strategies at the postsecondary level. The course presents theoretical frameworks relevant to the teaching of study strategies, theories of cognitive development, and practical instructional methods. Emphasis is placed on the process and content of such instruction, materials and methods for teaching, and ways to organize postsecondary literacy programs.
Fall
1 Course Unit

EDUC 5382 Theories and Pedagogies of Teaching Writing
This seminar examines various theories and pedagogies of teaching writing in multilingual, multimodal contexts. It explores the historical and ideological underpinnings of contemporary theories of writing and attends to how writing, and the teaching of writing, is shifting in a mobile, networked, and global age.
Fall
1 Course Unit

EDUC 5388 Digital Literacies in a Networked World
This graduate seminar is designed to explore how literacy and learning are changing as people participate with digital technologies across intersecting local and global networks. Participants will collaboratively investigate how young people's digital literacies—their culturally and socially situated meaning making practices mediated by digital tools—emerge in relation to constantly shifting technologies of communication and are constructed, reconstructed, negotiated, and embodied in multiple semiotic systems across everyday contexts. This course highlights how digital literacies are situated, and how these socio-cultural understandings illuminate issues of power and privilege.
Spring
1 Course Unit

EDUC 5404 Systems Thinking for International Development and Educational Change
This course explores what it means to take a "systems approach" to understanding international development, particularly as it relates to the design and implementation of projects supported at least in part by international aid and donor institutions. We focus overall on the education sector, but we begin with a broader view of complex adaptive systems and international development, drawing upon case studies about education, water, sanitation, health, savings groups, empowering the disabled, climate change and community radio, and others. There is ample room for the course to appeal to those focused on sectors other than education. We build upon a deep discussion of the complexity of development contexts. Next, we turn to systems thinking and "theories of change." We ultimately go deepest into educational processes, politics, systems and outcomes. Concerns for governance and accountability have increased attention to "systems thinking" in the design and implementation of public services, including education plans and educational reform; therefore, reformers must grasp the range of meanings of an "education system" as complex, multidimensional processes, interactions, and institutional structures. Students will learn to use systems thinking to approach, define, understand and analyze the biggest challenges to improving social outcomes—so called "wicked problems".
Fall or Spring
1 Course Unit
EDUC 5406 International Early Childhood Policies and Programs
This course focuses on early childhood development research, policies, and practices in low and middle-income countries. The first part of the course reviews the evidence for investing in young children from economic, health, and education perspectives. The second part of the course discusses current issues related to designing, implementing, and evaluating quality, contextually-appropriate early childhood interventions.
Fall
1 Course Unit

EDUC 5412 Policy Planning in International Educational Development: Theory and Practice
This course focuses on education policy in low and middle-income countries. The first part examines global policy frameworks and international institutions/actors that shape education reform efforts. The second part covers the contexts, processes, and tools for national education policy planning. The third part analyzes a series of current cross-national education policy issues.
Spring
1 Course Unit

EDUC 5414 Economics of Education in Developing Countries
This is a course on economics of education, a field within the subject of economics that draws upon many areas of economic specialization. The course focuses on developing countries and includes papers and case-studies covering themes such as returns to investment in education, production, costs and financing of education, teacher labor markets, economic growth, education markets, and equity issues.
Fall
1 Course Unit

EDUC 5418 Global Governance and Cooperation: International Education Policy and Practice
This course focuses on the intersection of global education policy and international development. Drawing on diverse disciplinary perspectives – including policy sciences, international relations, and development studies – students will explore the role of global governance institutions and international development policy in facilitating or constraining progress toward the Sustainable Development Goals. Through course assignments and in-class discussions with development practitioners, students will examine how actors and institutions influence the global governance of education and its implementation in low- and middle-income countries. By the end of the course, students will have deepened their understanding of the history, current status, and future directions of international cooperation in education and acquired analytical skills to contribute to the global education policy field. The course is open to all graduate students with interests in global education, public policy, and international development. The format includes mandatory synchronous sessions twice a week along with weekly asynchronous assignments.
Summer Term
1 Course Unit

EDUC 5428 Participatory Educational Research in Global Perspective: Theory and Practice
This course examines participatory models and frameworks in relation to international applied educational development research. Through a critical examination of approaches to international applied development research, the course examines real-world models of development research in order to examine questions regarding the nature of knowledge, post-colonial histories, researcher positionalities, and the relationships between concepts, theory, methodology, community, and identity. Course focuses on participatory methodologies as cross-sector strategy frameworks for sustainable, equitable, locally driven educational development efforts.
Fall
1 Course Unit

EDUC 5430 Migration, Displacement, and Education
This course examines the effects of migration (forced and voluntary) on education in a variety of contexts across the world (including the United States). The course reviews sociological and anthropological theories of immigrant incorporation and inclusion. Such frameworks are then applied to migration through case studies of im/migrants, refugees, and displaced persons in order to consider educational practices, programs and policies that address the effects of migration and displacement on education in diverse contexts.
Fall
Also Offered As: LALS 5430
1 Course Unit

EDUC 5431 Global Citizenship
This course examines the possibilities and limitations of conceiving of and realizing citizenship on a global scale. Readings, guest lecturers, and discussions will focus on dilemmas associated with addressing issues that transcend national boundaries. In particular, the course compares global/local dynamics that emerge across different types of improvement efforts focusing on distinctive institutions and social domains, including: educational development; human rights; humanitarian aid; free trade; micro-finance initiatives; and the global environmental movement. The course has two objectives: to explore research and theoretical work related to global citizenship, social engagement, and international development; and to discuss ethical and practical issues that emerge in the local contexts where development initiatives are implemented.
Spring
Also Offered As: ANTH 5460, URBS 5460
1 Course Unit
EDUC 5433 Decolonizing Education
Frantz Fanon (1963) writes that decolonization "sets out to change the order of the world." This course approaches decolonization in and around Education not as a "metaphor" for "civil and human rights-based social justice projects" couched in diversity, inclusion, and equity (Tuck and Yang 2012), but as part of a range of political projects and experiments that have sought to fundamentally reorder global structures, systems, and relations of power. Though prevailing philosophies about the meaning and purpose of Education cast schooling as a critical pathway to democratic, socially just, and inclusive societies, the historical foundations and contemporary realities of formal education in the Global South complicate theses ideals. For much of the formerly colonized world, Western education was one of the earliest and most enduring imperial projects, which deliberately undermined indigenous systems of knowing and learning in order to produce "good" subjects for incorporation into colonial regimes. Despite the promises of post-colonial nationhood, in most parts of the world, education still retains this function as the primary instrument of elite re/production and social stratification. And, yet, education is also typically imagined as central to decolonial and anti-imperial projects, improving social conditions, and forms of social and political belonging. This course interrogates histories and contemporary realities related to the politics and possibilities of Education from the vantage point of the Global South, which here signals a geography of relative geopolitical power indexing relations of development/underdevelopment, core/periphery, and empire/colony. By considering the various ways education has been part of decolonizing projects, we will investigate the relationships between education and indigenous ways of knowing and learning, colonialism, nationalism, conflict, class re/production, spatial and social mobilities, among other thematic strands. Moreover, in centering the periphery, we will explore the theoretical openings that "theory from the (Global) South" offers for decolonial epistemologies and pedagogies.
Not Offered Every Year
1 Course Unit

EDUC 5435 Youth Cultural Formations
This course explores anthropological perspectives on peer-based youth cultures. It explores how educational institutions, media (fashion, music, magazines), and states shape youth cultures in cross-cultural contexts through social processes such as capitalism, nationalism, and increasing globalization. The course emphasizes ethnographies and histories which explore the relationship of these wider social processes to the lived realities of young people, situated in class, gender, national and race-specific contexts.
Fall or Spring
1 Course Unit

EDUC 5436 Philosophical Aspects of Education Policy
This course, which is unofficially titled 'Justice goes to School' explores the philosophical or normative foundations of educational policy decisions. School choice, standards-based reform, civic education, children's and parents' rights, school finance reform - how do different arguments for these policies view the role of schools in society? What are their concept of the person, and their view of the educated person? We will consider arguments for and against a variety of contemporary educational policies. Students are encouraged, if they are interested, to bring to class educational policy decision that perplex or intrigue them.
Fall or Spring
1 Course Unit

EDUC 5437 Interfaith Dialogue in Action
This ABCS course explores religious pluralism and interfaith dialogue and action on college campuses. It brings together students with diverse faith commitments (including atheism) to engage with and learn from one another in academic study, dialogue, and service.
Spring
1 Course Unit

EDUC 5438 Education Law and Policy
This course examines major court cases in the United States and considers their impact on education policy and practice. We consider the arguments for different court decisions in light of normative principles, precedents, and both intended and actual consequences. The court cases discussed will vary, including topics such as school finance litigation and its impact on equity since Rodriguez; speech protections for students and teachers in K-12 and in higher education since Tinker; integration, affirmative action and racial equity since Brown in both K-12 and higher education; and other cases.
Fall, even numbered years only
1 Course Unit

EDUC 5439 Examining the School to Prison Pipeline: Implications of History, Policy, and Race
The term school-to-prison pipeline typically refers to a disturbing trend in which punitive policies have led to children being funneled out of schools and into the criminal justice system at an alarming rate. This course: 1. Examines the historical context and policies that have contributed to the school-to-prison pipeline.
Fall or Spring
1 Course Unit

EDUC 5443 Education and the American Metropolis
Education and the American City centers on major trends and factors that have shaped cities and their preK-16 school systems since the Second World War, including racial discrimination, migration and immigration, suburbanization, deindustrialization, U.S. housing policy, social welfare policy, and urban renewal.
Not Offered Every Year
1 Course Unit
EDUC 5445 Ethics & Schools
This course explores the ethical elements of the work of schooling by examining ethical dilemmas faced by teachers, administrators, and policy makers. This course also explores how ethics should be taught in schools (and if it should be taught at all). The course raises and engages with the following questions: How can educators approach ethical dilemmas in their everyday work? How might an educator respond when she believes school-based policies and procedures are not in a student’s best interest? How might an educator balance responses to particular events with system’s level transformation? Should policy makers pander to upper-middle class parents to attract them to urban districts? How can individual teachers and entire schools teach ethics?
Not Offered Every Year
1 Course Unit

EDUC 5449 The Social & Political Philosophy of Education
Is the purpose of education to allow individuals to better themselves by pursuing personal tastes and interests, or should education be primarily aimed at creating good citizens or good members of a group? Is there a way of reconciling these two aims? Assuming that adult relations with children are inherently paternalistic, is it possible for children to be educated for future autonomy to pursue major life goals free from such paternalistic control; and if so, how? How much, if any control over education can be allocated to the state, even when this conflicts with the educational goals parents have for their children? Such questions are especially relevant in multicultural or pluralistic societies in which some groups within a liberal state are non-liberal. Should a liberal democratic state intervene in education to ensure the development of children’s personal autonomy, or must toleration of non-liberal groups prevail even at the expense of children’s autonomy?
Not Offered Every Year
1 Course Unit

EDUC 5450 Economic Development, Education, and Inequality in East Asia
Where are East Asian economies and education headed? Can a new model of East Asian economy and education be established to achieve economic sustainability and equity in rapidly changing global contexts? In this seminar, we will survey 1) evolution of the East Asian economic model, focusing on changes in economic development strategies, labor market structures, and relationships with global economies; and 2) features of East Asian educational systems, focusing on educational opportunities and learning outcomes. In reviewing East Asian economy and education, a central question is not only how productive East Asian economy and education is but also how equal economic and educational opportunities are in the region. In the final part of the seminar, students will come up with some policy recommendations for East Asian economy and education to better achieve economic sustainability and equity. This graduate-level course is also open to advanced undergraduate students.

1 Course Unit

EDUC 5453 History of American Education
This course will examine the growth and development of American schools, from the colonial era into the present. By 1850, the United States sent a greater fraction of its children to school than any other nation on earth. Why? What did young people learn there? And, most of all, how did these institutions both reflect and shape our evolving conceptions of "America" itself? In an incredibly diverse society, the answers were never simple. Americans have always defined their nation in a myriad of contrasting and often contradictory ways. So they have also clashed vehemently over their schools, which remain our central public vehicle for deliberating and disseminating the values that we wish to transmit to our young. Our course will pay close attention to these education-related debates, especially in the realms of race, class, and religion. When immigrants came here from other shores, would they have to relinquish their old cultures and languages? When African-Americans won their freedom from bondage, what status would they assume? And as different religious denominations fanned out across the country, how would they balance the uncompromising demands of faith with the pluralistic imperatives of democracy? All of these questions came into relief at school, where the answers changed dramatically over time. Early American teachers blithely assumed that newcomers would abandon their old-world habits and tongues; today, "multicultural education" seeks to preserve or even to celebrate these distinctive patterns. Post-emancipation white philanthropists designed vocational curricula for freed African-Americans, imagining blacks as loyal serfs; but Black citizens demanded a more academic education, which would set them on the road to equality. Protestants and Catholics both used the public schools to teach their faith systems until the early 1960s, when the courts barred them from doing so; but religious controversies continue to hound the schools, especially on matters like evolution and sex education. How should our public schools address such dilemmas? How can the schools provide a “common” education, as Horace Mann called it, melding us into an integrated whole while still respecting our inevitable differences?
Spring
1 Course Unit

EDUC 5455 Merit and America
What constitutes merit? What should constitute merit? These questions are both philosophical and practical - and are faced by every educator in some form. The notion of meritocracy has long been at the heart of varied discourses about the place of education in American society. Merit is most often understood as inhering in consistent and individual personality traits such as competency, intelligence, and diligence. And yet, every individual is embedded in complex social worlds that are culturally specific and historically contingent. Drawing on a broad array of disciplines and literatures, this seminar-style course challenges students to consider how ideas of merit and its measurement are shaped by American history, culture, and society, and to articulate their own views as they move toward their professional goals.
Not Offered Every Year
1 Course Unit
EDUC 5457 Education and the Culture Wars: Historical and Contemporary Perspectives
America is wracked by "culture wars," pitting different moral and religious values against each other. But these conflicts are hardly new. Since the founding of the Republic, we have battled over religion, sex, gender, and race. And many of these conflicts have entered our schools, which remain our primary vehicle for deliberating and determining who we are. What languages should we use in school? What should we teach young people about sex? About race? About religion? Most of all, what stories should we tell about the nation itself? This course will probe these issues and also help students write primary-source research papers that examine different culture wars in American education.
Fall
1 Course Unit

EDUC 5459 Activism Beyond the Classroom
ACTIVISM BEYOND THE CLASSROOM (ABC) invites you to engage in participatory inquiry and public scholarship related to grassroots activism around education and social justice, in collaboration with Philadelphia community activists and one another. Together, we will explore how to form the coalition(s), theory, and praxis necessary to transform social conditions. In the first part of the course, we critically examine theories of power, resistance, and liberatory transformation to share knowledges and build a critical vocabulary with which we will investigate the contested rhetorical and political terrain of our present moment. The notion of praxis, a guiding principle of the course, signals the processes through which "theory" is both embodied and realized. As such, in the second part of the course, we will experiment with how theory can be brought to bear on contemporary struggles around education—and, conversely, how the practices of activism can inform our learning, scholarship, and pedagogies. ABC is an Academically Based Community Service course supported by the Netter Center for Community Partnerships. Our work will crosscut three areas: (1) inquiry-based working groups, (2) community engagements, and (3) public forms of scholarship, including a class podcast, opinion essays, and a course website located at: www.activismbeyondtheclassroom.com.
Not Offered Every Year
1 Course Unit

EDUC 5466 Ethnographic Filmmaking
This ethnographic methodology course considers filmmaking/videography as a tool in conducting ethnographic research as well as a medium for presenting academic research to scholarly and non-scholarly audiences. The course engages the methodological and theoretical implications of capturing data and crafting social scientific accounts/narratives in images and sounds. Students are required to put theory into practice by conducting ethnographic research and producing an ethnographic film as their final project. In service to that goal, students will read about ethnography (as a social scientific method and representational genre), learn and utilize ethnographic methods in fieldwork, watch non-fiction films (to be analyzed for formal properties and implicit assumptions about culture/sociality), and acquire rigorous training in the skills and craft of digital video production. This is an ABCS course, and students will produce short ethnographic films with students in Philadelphia high schools as part of a partnership project with the School District of Philadelphia. Due to the time needed for ethnographic film production, this is a year-long course, which will meet periodically in both the fall and spring semesters.
Two Term Class, Student must enter first term; credit given after both terms are complete
Also Offered As: ANTH 5830
1 Course Unit

EDUC 5467 Community Youth Filmmaking
This course focuses on how the filmmaking medium and process can provide a means for engaging youth in ethnographically grounded civic action projects where they learn about, reflect on, and communicate to others about their issues in their schools and communities. Students receive advanced training in film and video for social change. A project-based service-learning course, students collaborate with Philadelphia high school students and community groups to make films and videos that encourage creative self-expression and represent issues important to youth, schools, and local communities. Stories and themes on emotional well-being, safety, health, environmental issues, racism and social justice are particularly encouraged. A central thread throughout is to assess and reflect upon the strengths (and weaknesses) of contemporary film (digital, online) in fostering debate, discussion and catalyzing community action and social change. The filmmaking medium and process itself is explored as a means to engage and interact with communities. This course provides a grounding in theories, concepts, methods and practices of community engagement derived from Community Participatory Video, Youth Participatory Action Research (YPAR) and Ethnographic methods. For the very first time, Penn students will be trained to operate a state-of-the-art TV studio at PSTV (Philadelphia Schools TV). At the end of the semester approved films will be screened with an accompanying panel discussion at an event at the School District of Philadelphia (SDP). These films will also be broadcast on Comcast Philadelphia's PSTV Channel 52 and webcast via the district's website and YouTube channel. This is an ABCS course, and students will produce short ethnographic films with students in Philadelphia high schools as part of a partnership project with the School District of Philadelphia. EDUC 5466 Ethnographic Filmmaking (or equivalent) is a pre-requisite or permission of instructor.

1 Course Unit

EDUC 5480 Inter/National Development and Education
In recent years the construct of "global development" has come under increasing scrutiny, leading some scholars and practitioners to wonder whether development remains a useful concept. In this course, we will actively engage in this debate through a survey of the development literature in the field of education. We will examine theoretical frameworks and historical perspectives that will allow us to develop a better understanding of what is meant by "development" as well as recognize how these concepts relate to basic educational planning and practice in various international contexts. Prerequisite: Prior graduate work in related areas recommended. The course will work from primary and secondary materials on theories, research, and applications used to promote global development and basic education. Some programs are carried out by multinational/bilateral agencies such as World Bank, Unicef, UNESCO, and USAID, while others are undertaken by intermediary organizations (such as NGOs and universities) and local organizations or individual specialists. Issues include a range of social, economic and political obstacles to the provision of quality education. The goal of this course is to improve your understanding of how different theories of education and development influence educational policy, priorities, and programs of international, national, and local institutions. Prerequisite: Prior graduate work in related areas recommended.
Fall
1 Course Unit
EDUC 5490 School and Society in America  
This course reviews the major empirical and theoretical research from the social history, and social theory on the development, organization and governance of American education, and the relationship between schooling and the principal institutions and social structures of American society.  
Fall, Spring, and Summer Terms  
1 Course Unit

EDUC 5495 Anthropology and Education  
An introduction to the intent, approach, and contribution of anthropology to the study of socialization and schooling in cross-cultural perspective. Education is examined in traditional, colonial, and complex industrial societies.  
Fall, Spring, and Summer Terms  
Also Offered As: ANTH 5470, URBS 5470  
1 Course Unit

EDUC 5522 Psychology of the African-American  
Using an Afro-centric philosophical understanding of the world, this course will focus on psychological issues related to African Americans, including the history of African American psychology, its application across the life span, and contemporary community issues.  
Spring  
Also Offered As: AFRC 5220  
1 Course Unit

EDUC 5538 Stereotype Threat, Impostor Phenomenon, and African Americans  
This course critically examines stereotype threat and impostor phenomenon as they relate to African Americans. Both stereotype threat and impostor phenomenon negatively affect African Americans. The apprehension experienced by African Americans that they might behave in a manner that confirms an existing negative cultural stereotype is stereotype threat, which usually results in reduced effectiveness in African Americans' performance. Stereotype threat is linked with impostor phenomenon. Impostor phenomenon is an internal experience of intellectual phoniness in authentically talented individuals, in which they doubt their accomplishments and fear being exposed as a fraud. While stereotype threat relies on broad generalization, the impostor phenomenon describes feelings of personal inadequacy, especially in high-achieving African Americans. This course will explore the evolving meanings connected to both stereotype threat and impostor phenomenon in relation to African Americans.  
Fall  
Also Offered As: AFRC 6020  
1 Course Unit

EDUC 5552 Foundations of Education for Diverse Learners  
An introduction to Special Education including the history, the legal regulation of Special Education, and an examination of critical issues.  
Not Offered Every Year  
1 Course Unit

EDUC 5553 Developmental Theories: Applications with Adolescents  
Focuses on theories of adolescent development and the nature of transactions among adolescents, peers, teachers, specialists, and significant others. Also covers methods of intervening to promote psychological growth.  
Fall  
0.5-1 Course Unit

EDUC 5558 Developmental Theories: Applications with Young Adults  
This course is designed as a collaborative inquiry toward constructing and elaborating upon theories of young adult development and interactions with young adults as counselors, teachers, family members, and higher education administrators. Using a seminar or working group format, participants explore the relationships among developmental theory, sociocultural contexts of young adults, practice (e.g., interventions, relationships), and research. Using literature from empirical and popular, mainstream sources, participants will engage in learning of how young adults navigate the transition from adolescence to adulthood. Specific topics to be addressed include, “the quarterlife crisis,” financial needs of young adults, relationships, family, and career exploration and crystallization.  
Not Offered Every Year  
1 Course Unit

EDUC 5560 Human Development  
Provides an introduction to physical, social, cognitive, emotional and linguistic development from infancy to adulthood. Major theories related to human development will be discussed along with methods of intervention for individuals in various life stages.  
Fall or Spring  
1 Course Unit

EDUC 5561 Adolescent Development  
An interdisciplinary view will be used to frame biological, psychological, and social development among adolescents. Special emphasis will be placed on how contextual factors influence developmental outcomes. Theories of adolescent development and methods of intervention will also be discussed.  
1 Course Unit

EDUC 5562 Personality & Social Development  
The effects of social processes on human development in the interlocking contexts of parents, family, peers, school, communities and culture are considered during the major developmental periods of infancy, childhood, adolescence and adulthood. The course examines what is unique about social developments, how social relationships can be defined, and what are the social precursors and consequences of specific developmental changes.  
Fall  
1 Course Unit

EDUC 5568 Cognitive Development  
This course examines the cognitive development of the child from infancy to adolescence with an emphasis on cultural context. Topics include: origins of thinking, Piaget, Vygotsky, intelligence, development of learning and memory, language development, and moral development.  
Fall  
Prerequisite: EDUC 5560  
1 Course Unit

EDUC 5570 Qualitative Studies of Developmental Interventions  
This course is designed to introduce students to innovative approaches to the psychology of education, especially with regard to populations from at-risk contexts, sociocultural dimensions of education, and social-emotional learning.  
Not Offered Every Year  
1 Course Unit
EDUC 5571 Topics of Psychology in Education: Mindfulness and Healthy Development
This course is designed to introduce students to innovative approaches to the psychology of education, especially with regard to populations from at-risk contexts, sociocultural dimensions of education, and social-emotional learning.
Not Offered Every Year
Also Offered As: AFRC 5573
1 Course Unit

EDUC 5573 Psychoeducational Interactions with Black Males
The purpose of this course is to provide students with an opportunity to consider mandates, models, and methods related to enhancing the learning and development of preschool and early elementary school children. This course emphasizes the application of developmental psychology and multicultural perspectives to the design of effective classroom-based strategies. Students will consider a "whole-child" approach to understanding children's classroom behavior in context. Major assignments will involve gathering and synthesizing information about children in routine classroom situations. This information will be used to better understand children's needs and strengths and how they are manifested in transaction with classroom contexts. Students will focus on one or more students to conduct a comprehensive child study of the child in context. This contact must include opportunities to observe children in a natural setting and interact with them on a regular basis throughout the semester. The placement needs to be approved by the professor. If students do not have a regular classroom contact, one will be arranged.
Spring
1 Course Unit

EDUC 5580 Developmental Theories & Applications with Children

1 Course Unit

EDUC 5581 Advanced Psychology of Women
The course is intended for those who already have a foundation in the study of the psychology of women and want to expand their understanding of the provision of psychological services to include a contextual, feminist, and relational perspective. Theoretical and applied practices regarding women's mental health, issues of diversity, sexuality and relationships for women will be addressed. Prerequisite: Introduction to Psychology and an undergraduate course in the Psychology of Women or approval by professor.
Also Offered As: GSWS 5810
1 Course Unit

EDUC 5584 Basic Counseling Skills
This course will teach basic counseling skills to students not seeking a license in professional counseling as a way to help them connect with and work well with others. It will predominantly be oriented towards skill building. We will review/discuss a selection of basic counseling skills and use in-class demonstrations to practice these skills. This course is required for the Counseling and Human Development Skills Concentration.
Spring
1 Course Unit

EDUC 5585 Advanced Group and Family Counseling
This course focuses on the basics of systems intervention with a specific focus on families and groups. The purpose is to develop more advanced knowledge of practical therapeutic problem-solving skills at the graduate student level using ecological, systemic, and cultural perspectives. Students will be exposed to advanced group therapy strategies with children, youth, and adults, with family interventions across various mental health diagnostic populations, and how to intervene within groups and families in which cultural differences and styles are key themes. Prerequisite: Students must be enrolled in the M. Phil. Ed. in Professional Counseling Program. Students will also be challenged to develop a preliminary rationale for a systemic theory of behavior change. Given the diversity of clients that counselors see professionally, some advanced and demonstrated knowledge of how cultural differences will be addressed in the counseling session and in the relationships of larger societal institutions will be expected. This course will satisfy the Group work II requirement of the MPE program in Professional Counseling and Psychology. The course also fits within the APHD theme of Applied Psychology: Intervention and Certification. Prerequisite: Students must be enrolled in the M. Phil. Ed. in Professional Counseling Program.
1 Course Unit

EDUC 5587 Human Sexuality
All persons have moments that elicit reflection on issues related to myriad aspects of sexuality. When working with people in clinical or school settings, these issues are ubiquitous. This course will provide a broad understanding of sexuality and specific ways to address sexuality problems.
Spring
1 Course Unit
EDUC 5588 Autism, Language, and Reasoning
The field of autism has generated growing interest, with increases in diagnosed cases, increased inclusion in regular education classrooms of students with autism spectrum disorders, growing recognition of neurodiversity and concomitant attempts to improve accommodations for and acceptance of adults with autism in society at large, an ever broadening repertoire of interventions and accommodations for autism, and ongoing discoveries in cognitive science and neurobiology. In many ways, examining the issues surrounding autism spectrum disorders provides insights into special needs, neurodiversity, and disability rights in general. This course focuses on the social, linguistic, cognitive, educational, and disability rights aspects of autism, including implications for treatment, accommodation, and counseling. We examine the challenges that individuals with autism have in acquiring language, in deducing the perspectives of other people (Theory of Mind), in engaging in certain types of cognitive tasks, and in having their voices heard by others. We examine, as well, the unusual talents and intellectual strengths that many ASD individuals exhibit. Students interested in working with individuals on the autism spectrum in educational and counseling settings will gain insight into: • How autism spectrum disorders affect the acquisition of social and academic skills • The availability and efficacy of different types of interventions and accommodations • Issues relating to neurodiversity and disability rights • Strategies for guiding students with autism spectrum disorders through K12 schools and beyond
Fall
1 Course Unit

EDUC 5594 Race/Ethnicity in Human Development
This interdisciplinary course will employ a critical perspective on minority youth development, analyze the existing literature, and propose alternative explanations for observed phenomena. It will consider pertinent issues and theories of middle childhood, adolescent and young adult development.
Not Offered Every Year
1 Course Unit

EDUC 5730 The Evolution of Assessment: Classroom and Policy Uses
This course explores the evolution and diverse uses of assessment in four major areas: the historical roots of testing and the development of the achievement testing industry; the rising interest and exploration of alternative forms of assessment; how teachers employ a variety of assessments in their classrooms; and how policymakers use assessment for decision-making and accountability purposes. Prerequisite: Permission needed from department.
Not Offered Every Year
1 Course Unit

EDUC 5760 Applied Research Methods to Inform Policy and Practice
The class is designed to provide students with a grounding in the theory and application of policy creation and implementation processes, as well as the knowledge and tools to guide program and policy evaluation, including the alignment of questions to appropriate methods of research; judging the quality of research evidence; and designing strong analysis and evaluation strategies.
Fall
1 Course Unit

EDUC 5780 American Education Reform: History, Policy, Practice
An examination of major trends, central tendencies, and turning points in American education reform, giving particular attention to contemporary developments such as accountability laws and school choice. This historical development of the federal role in American schooling is also considered, as is the history of school desegregation. What is the purpose of "school"? How have schools evolved across time, and how have Americans tried to change them? And what can we learn from this long history of reform?
Fall
1 Course Unit

EDUC 5782 Sociology of Education
This course provides an overview of key theoretical perspectives and topics in the sociology of education, including expansion of formal educational systems; the extent to which educational systems contribute to or inhibit social mobility; inequality of educational inputs and outcomes by race, social class, and gender; and the social organization of educational institutions, including sources of authority, community, and alienation. The course includes both K-12 and higher education topics.
Fall
1 Course Unit

EDUC 5804 Contemporary Issues in Higher Education
An introduction to the central issues and management problems in contemporary American higher education.
Fall or Spring
1 Course Unit

EDUC 5805 Globalization & the University
The aim of this course is to help students understand the basic concept of globalization, how it impacts higher education in general, and how it shapes the global market for human capital and fosters private sector and for profit provision and diversifies modes of delivery of higher education. The seminars cover the nature of globalization and the way it affects the movement of people between economies to gain and apply skills and knowledge, the creation of branch campuses, the growth of transnational education and the importance of brands and information in the global higher education market.
Fall
1 Course Unit

EDUC 5812 University-Community Partnerships
Ranging from civic engagement to economic development, institutions of higher education in the United States have long been involved in a variety of relationships with their local communities; in recent years, there has been increasing attention paid to the opportunities and challenges implicit in those relationships. In this course, students will study and discuss the history, rationales, and manifestations of the partnerships that have developed. Through readings, faculty-and student-led discussions, guest lecturers, and policy-oriented projects, students will develop better understandings of the many topics surrounding university-community partnership activities. Among other themes we will consider institutional roles and relationships, service learning, community perspectives, issues relevant to diverse populations, policy, and evaluation.
Fall
1 Course Unit
EDUC 5832 Pursuing Institutions of Excellence: Strategies, Choices, Pitfalls & Possibilities
The aim of this course is to help students understand how universities pursue excellence by examining national and institutional strategies to become high performing institutions. The seminar series will look at the basic concepts of organizational culture and the merits and flaws of different conceptions of excellence.
Fall
1 Course Unit

EDUC 5841 Access & Choice in American Higher Education
College enrollment is a complex process that is shaped by the economic, social and policy context, higher education institutions, K-12 schools, families, and students. The course will examine the theoretical perspectives that are used to understand college access and choice processes. The implications of various policies and practices for college access and choice will also be explored, with particular attention to the effects of these policies for underrepresented groups. As an Academically Based Community Service (ABCS) course, this course is also designed to generate tangible recommendations that program administrators and institutional leaders may be used to improve college access and choice.
Not Offered Every Year
1 Course Unit

EDUC 5843 Understanding Minority Serving Institutions
Students taking this course will learn about the historical context of HBCUs in educating African Americans, and how their role has changed since the mid-1800's. Specific contemporary challenges and successes related to HBCUs will be covered and relate to control, and enrollment, accreditation, funding, degree completion, and outreach/retention programming. Students will become familiar with MBCUs in their own right, as well as in comparison to other postsecondary institutions.
Spring
1 Course Unit

EDUC 5853 Academic Advising in Higher Education
Academic advising in higher education differs within and across institutions and has evolved in its method of delivery, yet consistently focuses on and is attributed to student success. Key advising concepts, theoretical approaches, and relational skills to support students in the college environment will be examined in this course. Attention will be given to best practices and advising diverse student populations with academic planning, goal setting, and decision-making. An understanding of policies related to privacy, confidentiality, and university considerations will also be discussed. This course provides a foundation in academic advising, strategies and skills needed to promote institutional mission and goals, and equips aspiring and current professional advisors with the resources to assist collegians in having holistic and gratifying experiences in higher education.
Fall or Spring
1 Course Unit

EDUC 5856 Higher Education Finance
Designed for non-financial managers, this course provides students with an introduction to basic concepts related to the finance of higher education. It examines the forces that influence the financing of higher education at both the state and federal levels. It addresses both the macro-economic and micro-economic issues related to higher education finance. In addition, students will be introduced to issues related to institutional finance.
Fall
1 Course Unit

EDUC 5869 Administration of Student Life
This course covers a variety of issues in the management of student services on campus. After examining the historical context of student affairs and the theoretical frameworks of student development, students explore ways to most effectively administer the numerous activities that comprise student affairs programs.
Fall or Spring
1 Course Unit

EDUC 5873 Higher Education Policy: What Can We Learn from Other Countries?
This course examines the proposition that policy makers, educational leaders and practitioners can learn from what has worked and failed in higher education policy and practice in other nations.
Fall
1 Course Unit

EDUC 5892 Professional Development in Higher Education
To prepare for a career in higher education, students are engaged in a 20-hour a week assistantship in the field. This course complements and enhances the graduate assistantship. Emphasizing practical application of theory and skill development, the course does the following: provides students with tools to embark on a successful job search; offers networking opportunities with administrators in higher education; and introduces students to relevant and timely literature and resources in higher education professional development.
Fall
1 Course Unit

EDUC 5894 Diversity in Higher Education
This course explores issues of diversity as they pertain to higher education, including race, ethnicity, gender, class, religion, sexual orientation, ideology, etc. Rather than focusing on specific populations of people, the course will tackle issues of diversity within the context of concrete higher education functions and problems.

1 Course Unit

EDUC 6030 Teaching in the Middle and Secondary Schools: English
This course is a collaborative inquiry into the dynamic concept of adolescent literacy and its potential as an organizing construct for improving teaching and learning. It provides opportunities to investigate a variety of resources including our own histories as well as a range of print, digital and visual texts and to conduct fieldwork in various middle and secondary school classrooms where youth are being positioned (and positioning themselves) as literacy learners and literacy being defined, performed, practiced, interrogated, and interpreted, within and beyond the school curricula. By engaging with youth, in various texts and contexts and for a range of purposes, participants will try to make sense of how adolescents negotiate their worlds, in school and out. The approach to literacy is interdisciplinary, drawing from the domains of literature, composition, linguistics, curriculum theory, anthropology and psychology and from theory, research and practice of both university-based and school-based teachers, writers and researchers. The intent is to pose and refine questions about what it means to teach literacy in ways that take seriously what youth bring to school as their own knowledge and passions, cultural and linguistic resources. Fall
1 Course Unit

EDUC 6041 Culturally Responsive Pedagogy in Urban Secondary Schools
While a wealth of evidence has illustrated the role of culture in mediating learning & engagement in educational spaces, responding to the pedagogical impact of culture remains challenging for many educational practitioners and institutions. This course will tackle that challenge by exploring the affordances of culturally responsive pedagogies, defined briefly as the philosophical beliefs and conceptual understandings of the interactions between cultures, learners, and educational contexts that guide the design and facilitation of learning experiences. Through course texts and discussions, dialogue with local educators, and inquiry- and practice-oriented assignments, this course will expose students to culturally responsive strategies for engaging, educating, and empowering students in urban secondary schools. Prerequisite: Admission to the UTAP program or permission of instructor. Fall
1 Course Unit

EDUC 6042 School, Society & Self
Teaching is a work of the whole self; and teachers are the lynchpins of schools and schooling in American society. The purpose of this course is to develop a critical understanding of the larger forces at play in our work as educators, and conceptualize what that means for the day-to-day of our teaching practice. In this course, we will explore the ways in which American schools have been molded by the social, political, economic, cultural, and ideological forces in society at large. By historically linking the development of educational initiatives to notions of power, nation building, and citizenship, this class furthers an understanding of the assumptions about the purpose of education within this democratic nation, and its role(s) within our current social and political climate. Additionally, we will explore how the work of teaching can support transformation, rather than reproduction, of these macro-level injustices and inequalities. We will draw on students’ experiential knowledge of schools and teaching to imagine how urban educators can transform the socially reproductive practices of schools. The work of increasing access to opportunity has been a path walked by educators, individually and collectively, and schools, by leaders and as organizations, and by reformers. With these understandings about self, school, and society, we seek to create a community of practice of equity- and justice-minded teachers, driven by the belief that we are all co-learners in our endeavor as teachers and as citizens, and that we are all co-participants in a democratic society. Prerequisite: Admission to the UTAP program or permission of department. Summer Term
1 Course Unit

EDUC 6057 Advanced Methods in Middle & Secondary Schools: Math
Formal teaching and learning are on-going processes that require an examination of our practice and purpose through self-reflection, self-evaluation, collegial and student/teacher interaction, and personal and professional growth. This course is the second half of a content-specific secondary methods sequence that is geared toward teaching middle and high school English, math, science and social studies in an urban setting. Special focus will be on content, pedagogical strategies as well as specific skills and Pennsylvania and national standards. We will work together as teacher-researchers to combine theory with practice to increase our understanding and utilization of an inquiry based, multiple perspective, constructivist approach to teaching. Offered within the Urban Teaching Apprenticeship Program. Spring

EDUC 6111 Educational Assessment of and for Learning
This course introduces the essential theories and practices of cognition based educational assessment and the focus will be on exploring the implications of recent developments in cognitive psychology and learning theories for educational assessment by reviewing available assessment examples and research assessment prototypes. It includes topics like, what is the purpose of assessment, how can we design fair and valid assessments to elicit student cognition, how technologies can support the measurement of student cognition and learning processes, and assessment and social justice and accessibility issues.
Spring
1 Course Unit

EDUC 6116 Master’s Foundations of Teaching and Learning
The course explores theoretical and empirical perspectives on the questions: What is knowledge and knowing? What is teaching? How do contexts influence teaching, knowing, and learning? A central goal of the course is to encourage students to consider these questions and their interconnections for themselves, to examine ways scholars and practitioners have answered them, and to develop an analytical framework to use in examining contemporary practices in settings that include formal and informal, urban and international. Prerequisite: Permission needed from department.
Fall
1 Course Unit

EDUC 6118 Leadership in Educational Institutions
In this course class members will simultaneously engage in an academic study of educational leadership focusing on Pre-K-12 schools and school districts, and in a continuing leadership development laboratory experience designed to increase one's personal efficacy as leader. A basic assumption for the course is that leadership is a central component of schooling; teaching is considered as foremost a leadership activity, whether with five year olds or high school seniors, and successful schools and districts are assumed to have capable leaders. The course will give particular attention to the recent shift in role expectations for school leaders - from competent manager to accountable instructional leader - and what this shift means in relation to the day-to-day work of educational leaders.
Spring
1 Course Unit

EDUC 6123 Big Data, Education, and Society
This class discusses the potential and risks of big data-based learning analytics. We will discuss the uses, applications, and benefits of analytics, the relationship between validity and risk, and potential ways to mitigate and reduce risks. We will discuss these issues in the context of existing and emerging educational systems.
Spring
1 Course Unit

EDUC 6130 Introduction to Mixed-Methods Research
This course introduces students to the theory, history, and practice of mixed methods research. Students will build skills in design and implementation of studies that incorporate both qualitative and quantitative methods. Theoretical framing, research questions, design and selection of methods, sampling, instrumentation and data collection, and analysis are addressed.
Spring
1 Course Unit
EDUC 6137 Contemporary Issues in Science and Technology Education Research
This course focuses on topics that represent some of the most salient and contemporary issues in science education research today. The syllabus moves through four sections that address: 1) Curriculum and Content (What and Why); 2) Learning Processes (How); 3) Contexts (When and Where); and 4) Teaching and Teacher Education (Who). Not Offered Every Year
1 Course Unit

EDUC 6139 Design of Learning Environments
This course is a survey of the kinds of theories, methods, design considerations, and applications through which educational researchers understand and design environments to improve learning. The course features the most recent trends in learning primarily through educational technologies. It includes perspectives that consider, who is learning, how it is being learned, what design characteristics are needed to ensure learning takes place in different learning environments, and societal and technological influences on learning. Four main learning goals underpin the course content: 1) Understanding learning needs of youth and adults as they interact in school and in society; 2) Investigating the main learning theories and methods influencing the field and how they are instantiated in practice; 3) Examining and reflecting on how technologically designed learning environments address important learning challenges; and 4) Evaluating how these learning environments and applications have helped learning, how they have not, and how they can be improved. Prerequisite: EDUC 616 or learning theories is preferred and will be reviewed at registration.
Fall or Spring
Prerequisite: EDUC 6116
1 Course Unit

EDUC 6144 Learning Sciences: Past, Present, Future
This course is a survey of the kinds of theories, methods, and applications through which educational researchers understand learning and how to improve it. The course is designed to provide information about how the field of the learning sciences emerged, has evolved, and is growing to address current and future learning needs. The learning sciences is a relatively new field of research in education that began in the late 80s. It is an interdisciplinary field consisting of researchers who study among other things, cognition, science and math education, language literacy, anthropological and sociological perspectives, computer science, and educational psychology. Learning scientists study learning as it happens in real world contexts and design resources and environments to improve learning in those contexts. This can happen in school, in informal places, at work, and online. Although the learning sciences is continually evolving, what remains true of the tenets of this educational field is that learning happens through mediated processes that most often require collaboration with others whereby learning is inextricably linked to context and culture. Prerequisite: EDUC 6116 or learning theories course is preferred and will be reviewed at registration.
Fall or Spring
1 Course Unit

EDUC 6150 Technologies for Language Learning and Teaching
In the last decade, the landscape of second language learning and teaching has moved online. Numerous edtech ventures have funneled hundreds of million dollars into online tutoring in English for young students by companies like VIPKid, mobile apps like DuoLingo have used gamification to keep millions of learners of second languages motivated, and social robots are being developed to support young children's language development. In this course we address critical questions: How can technology applications be supportive of second language learning and teaching for young and adult learners? What works and what doesn’t work? What evidence do we have? To answer these questions, we bring together research and design two academic fields: (1) Theories and instructional approaches for teaching and learning a second language; and (2) Theories and designs using technologies for learning and teaching. Our goal is to examine how the integration of these two efforts can result in more supportive and effective learning and teaching in a time, in which technologies provide new opportunities and challenges for second language learning and teaching.

1 Course Unit

EDUC 6159 How Innovations Flourish
A common misconception is that innovations are self-contained ideas, but in fact they arise from the more complex interplay between the ideas and the surrounding environment. This course is a survey of contemporary innovative developments, topics, and trends taking place in education across the world. It focuses on the education innovations themselves, the conditions under which they succeed or not, their interactions with context, and their underlying processes and mechanisms for change. Close analysis will be directed at the core mechanisms for change. Close analysis will be directed at the core methods people use to bring these current innovations to the field in a variety of new ways to improve learning and the multiple frameworks by which they can be assessed and applied to real-world examples. The course examines new pedagogies and approaches to teaching and learning, learning sciences research and its growing influence on solution development, technologies that continually respond to and lead change, and an emerging culture where learning takes place anytime, anywhere. The course will explore how these innovations can transform education systems to offer equitable access, experiences and outcomes for all.
Spring
1 Course Unit

EDUC 6160 Museum Education
Since the nineteenth century, museums have played a key role in the collection and dissemination of knowledge, and today their educational programs play a vital role for an array of communities. This seminar provides an introduction into museum education, the fields that influence it, pedagogical approaches used, and contemporary challenges.
Spring
1 Course Unit

EDUC 6165 Research on Teaching
This course is designed to explore the research literature on classroom teaching processes as well as the contrasting conceptual and methodological approaches upon which this literature is based. The course introduces students to the major substantive areas in the field, develops a critical perspective on contrasting paradigms, and raises questions about the implication of research on teaching for curriculum, instruction, evaluation, and teacher education.
Spring, even numbered years only
1 Course Unit
EDUC 6168 Master's Seminar in Teaching, Learning, and Leadership
This seminar explores key foundational questions for graduate-level work: How is academic knowledge formed and reproduced? How do we engage with and interrogate the scholarly research? And, how do we participate in the academic conversation around a topic? The Master’s Seminar introduces students to academic discourse, disciplinary writing conventions, and research practices. As part of this course, students are guided through preparing a literature review on a topic of their choice. This review, in turn, forms the foundation for their Capstone Proposal and Project that are required for the completion of the M.S.Ed. degree.
1 Course Unit

EDUC 6177 Whiteness and Education
Whiteness as a sociopolitical formation has shaped the very essence of educational spaces and processes in the United States. Drawing upon scholarly perspectives from whiteness studies and educational studies, this course will examine the material and ideological effects of whiteness on teaching and learning in American K-12 and higher educational institutions. By identifying the dilemmas associated with uncritical attitudes toward whiteness as a sociopolitical and pedagogical phenomenon, this course will encourage students to consider more liberatory approaches to naming and negotiating whiteness in American education. This is a graduate-level course that presumes introductory-level prior knowledge in educational studies and critical studies of race.
Not Offered Every Year
1 Course Unit

EDUC 6178 Gender and Sexuality in Education
This seminar gives an overview of the intersections and interplay among gender, sexuality, and education through theory, practice, current discussions, and analysis of varied contexts in English speaking countries (e.g. the United States, Canada, Great Britain, and Australia). After examining the theoretical foundations of genders and sexualities, we will look at their histories and effects in K-12 schools and colleges and universities as well as explore special topics.
Fall
Also Offered As: GSWS 6780
1 Course Unit

EDUC 6186 In/Informal Learning Experience
The In/Informal Learning Experiences Internship covers the theory, research, and practice of informal learning. The course is designed to provide background readings, a discussion forum of central issues in informal learning, and a place to share and exchange internship experiences. This course does not provide students with an internship. Internships are optional and must be secured independently.
1 Course Unit

EDUC 6188 Politics of School Reform
In this seminar we’ll explore the political causes and consequences of school reform in the post-Brown era. Coverage will be eclectic so as to give participants a broad, interdisciplinary background in the field. We’ll draw primarily from politics of education scholarship, but we’ll reach beyond and examine work from political science, sociology, and history. We’ll structure our exploration by considering five fundamental approaches to school reform: (1) equal opportunity, (2) standards and accountability, (3) professionalization and teacher effectiveness, (4) marketization and private sector initiatives, and (5) community control.
Fall or Spring
1 Course Unit

EDUC 6189 Contemporary Issues in Mathematics Curriculum
Educational leaders and policy makers in the U.S. have long used curriculum reform to drive change in K-12 teaching and schooling practices. This course examines the assumptions underlying this approach and examines the related research evidence.
Spring, even numbered years only
1 Course Unit

EDUC 6191 Core Methods in Educational Data Mining
Students will learn how to execute core educational data mining methods in standard software packages, the limitations of existing implementations of these methods, and when and why to use these methods. The course will also cover how EDM differs from more traditional statistical and psychometric approaches. Prerequisite: Prior experience with either statistics or computer science recommended.
Fall
Prerequisite: EDUC 6667
1 Course Unit

EDUC 6200 Introduction to Applied Linguistics
This course introduces first year students in the ICC and TESOL specializations to critical issues, perspectives, and practices central to the study of applied linguistics. The purpose of this course is to build a preliminary conceptual framework and strong practical foundation for understanding the interactional dynamics of intercultural encounters and the socio-cognitive dimensions of language education. Through weekly readings, brief lectures, and discussions, students will explore the origins and purposes of applied linguistics as an academic discipline, analyze some ways in which applied linguists have conceptualized language and language learning, and consider how perspectives from applied linguistics can be used to understand and address questions and problems involving language in educational, institutional, and community settings. In addition, through in-class activities, short homework assignments, and focused writing tasks, students will examine, engage in, and reflect on an array of linguistic issues and practices central to the work of applied linguistics and begin to form their own identities as applied linguists.
Fall
1 Course Unit

EDUC 6205 Linguistics in Education
For students with little or no linguistics background. An introduction to the basic levels of language (phonetics and phonology, morphology and semantics, syntax, pragmatics) with special emphasis on the relevance of linguistic concepts to education. Other topics may include bi/multilingualism, language variation, and language acquisition.
Fall
1 Course Unit

EDUC 6210 Sociolinguistics in Education
The educational consequences of linguistic and cultural diversity. A broad overview of sociolinguistics, introducing both early foundational work and current issues in the field. Topics include language contact and language prestige, multilingualism and language ecology, regional and stylistic variation, verbal repertoire and communicative competence, language and social identity, codeswitching and diglossia, language socialization and language ideology, as they relate to educational policy and practice in the United States and around the world.
Fall or Spring
1 Course Unit
EDUC 6215 Approaches to Teaching English and Other Modern Languages
This course provides students with an introduction to theory and practice in second and foreign language teaching. Students will (a) develop an understanding of the history of language teaching practice and how such a perspective informs current day approaches, (b) explore the relationship between the context in which the language is learned and taught and classroom practice, and (c) develop an awareness of teaching principles central to a personal pedagogical approach and teaching philosophy. Students should have a field site where they can observe, participate, and collect classroom data.
Fall
1 Course Unit

EDUC 6216 Approaches to Teaching Chinese
This course provides an overview of the theory and practice of Chinese language teaching. Students will explore current issues pertaining to Chinese teaching pedagogy and curricular. There will be opportunities for students to lead discussions, observe classes, create lesson plans, and teach Chinese classes at local Chinese schools.
Spring
1 Course Unit

EDUC 6220 Discursive Approaches in Intercultural Communication
This course offers a discourse-based approach and hands-on introduction to the field of intercultural communication, from the micro-level of interpersonal interaction to the macro-level of institutional practice. Through a series of readings and service learning projects in multicultural settings, students will hone their observational and analytic abilities, while gaining an appreciation of and facility for participating in the communicative diversity around them. Topics will include a repertoire approach to examining language in use, interpretation and metacommentary, and the possibility of intervention to facilitate new communicative patterns.
Fall
1 Course Unit

EDUC 6229 Ethnography for Intercultural Communication
This course is for practitioners and researchers engaging in and thinking about mentoring, supervision, and fieldwork in teacher education and counseling as well as in social work and other applied development fields.
Fall
1 Course Unit

EDUC 6306 Literacy Research, Theory, and Practice
This graduate seminar is a capstone course in the Reading, Writing, and Literacy master's program, designed to help students develop understandings about key theoretical underpinnings of literacy research. As a foundational course, the seminar will explore how literacy has been conceptualized over time and across disciplines, examining how literacy has functioned as a touchstone issue in policy and practice as people debate what 'counts' as literacy. While we explore these debates, we focus particularly on contemporary literacy theories that understand literacy to be multiple, ideological, and socially situated practices grounded in specific contexts that are fundamentally linked to broader social, cultural, and political power structures. Inquiry sits at the heart of the course, with students developing an online learning portfolio centered around their individual research, course readings, and prior experiences. Students will reflect on their RWL program of study, write about conceptual territories at the heart of the program, and curate materials from the semester and their program of study to demonstrate their learning and development over time. Students will work with coaches as well as engage in a workshop learning environment, culminating in an online learning portfolio and presentation to RWL faculty.
Prerequisite: EDUC 5333
1 Course Unit

EDUC 6326 Literacy, Discourse, and Interaction
This course draws on varying pedagogical and personal perspectives to explore conceptions of reading comprehension and how it can be taught to children and adolescents. Focus will be given to how certain ways of structuring dialogue about a text profoundly change how readers think about and do reading.
1 Course Unit

EDUC 6329 Teaching English/Language and Literacy in Middle and Secondary Schools
This course is a collaborative inquiry into the dynamic concept of adolescent literacy and its potential as an organizing construct for improving teaching and learning. It provides opportunities to investigate a variety of resources including our own histories as well as a range of print, digital and visual texts and to conduct fieldwork in various middle and secondary school classrooms where youth are being positioned (and positioning themselves) as literacy learners and literacy being defined, performed, practiced, interrogated, and interpreted, within and beyond the school curricula. By engaging with youth, in various texts and contexts and for a range of purposes, participants will try to make sense of how adolescents negotiate their worlds, in school and out. The approach to literacy is interdisciplinary, drawing from the domains of literature, composition, linguistics, curriculum theory, anthropology and psychology and from theory, research and practice of both university-based and school-based teachers, writers and researchers. The intent is to pose and refine questions about what it means to teach literacy in ways that take seriously what youth bring to school as their own knowledge and passions, cultural and linguistic resources.
Fall
1 Course Unit

EDUC 6333 Selected Topics in RWL: Literacy and Learning Differences
Examines a topic of current interest to theory, research, and practice in writing.
Summer Term
1 Course Unit
EDUC 6334 Selected Topics in RWL: Critical Literacies
Examines a topic of current interest to theory, research, and practice in writing.
Summer Term
1 Course Unit

EDUC 6335 Assessing Language and Learning Differences
This course exposes students to a wide variety of assessments used to look closely at growth in reading/writing/literacy. Students critique both formal and informal approaches to assessment as well as complete structured observations of learners within diverse instructional contexts. Emphases include contextual and affective components of reading/language difficulties, innovative assessment procedures, observational strategies and collaborative inquiry. Auditors not permitted.
Spring
Prerequisite: EDUC 5333
1 Course Unit

EDUC 6336 Young Adult Literature, Media & Culture
This course acquaints students with the ever-expanding body of literature written for young adults, considering the theoretical and pedagogical issues it raises. Readings include many young adult novels; empirical research on adolescent response to literature; and literary theory.
Spring
1 Course Unit

EDUC 6345 Issues in Education and Health: Disparities and Prevention in Schools and Communities
Drawing upon research and scholarship in health and education, this course aims to deepen our knowledge, understanding, and ability to effect positive change in the health and health practices of students and families in urban settings, using schools and community agencies as sites of engagement.
Spring
1 Course Unit

EDUC 6346 Seminar in Practitioner Inquiry
This course is designed as a collaborative investigation into practitioner inquiry and the work of inquiry communities in K-16 and graduate/professional school settings, professional networks and community-based organizations. The focus is on conceptual and methodological frameworks and methods of practitioner inquiry and the contexts, purposes and practices of differently situated inquiry communities. Participants will explore a range of practitioner inquiry traditions and texts that go by terms such as action, collaborative, critical, community-based, participatory, autobiographical, emancipatory, narrative and pedagogical. They will also conduct an inquiry based on their particular interests and contexts. The course will emphasize practitioner inquiry that intentionally engages issues of equity, access and culture in educational settings.
Spring, odd numbered years only
1 Course Unit

EDUC 6371 Adult Literacy
Teaching reading/writing/literacy to adults for whom English is a first or second language. Topics include contrasting conceptions of literacy and learning; participatory literacy programs; instruction and curriculum for adults with diverse cultural and linguistic backgrounds and nationalities; alternative/performance-based assessment; and practitioner research in adult literacy education.
Fall
1 Course Unit

EDUC 6381 Literacy and Illustrated Texts: Picturebooks, Comics and Graphic Novels
Students develop familiarity with illustrated materials - including picture books, comics, and graphic novels - while cultivating understanding of how illustrated texts like these can be used in 21st century elementary/middle/secondary literacy curricula. Students complete individualized and group course projects that focus on illustrated texts in specific classroom, research, critical, theoretical, home, community, and/or professional contexts.
Not Offered Every Year
1 Course Unit

EDUC 6402 Curriculum & Pedagogy in International Contexts
This course provides an international and comparative perspective on school climate using available case studies, examples and relevant articles from developed as well as developing countries. Topics include definitions and models of school climate, trends in the field, assessment mechanisms, policy discussions, challenges in the field, etc.
Spring
1 Course Unit

EDUC 6410 Global Perspectives on School Climate
This course explores the problems, issues, and approaches to teacher preparation and the development of curricula and instructional materials, particularly (though not exclusively) in developing country contexts through a seminar styled class and a hands-on semester long project.
Spring
1 Course Unit

EDUC 6420 Curriculum & Pedagogy in International Contexts
This course surveys the field of qualitative research and focuses on foundational philosophies of and approaches to qualitative research. The course focuses on the stages of qualitative research including the development of researchable questions, research designs, conceptual frameworks, methodological stances, data collection and analysis and instrument design and implementation.
Fall, Spring, and Summer Terms
1 Course Unit

EDUC 6460 Qualitative Methods: Principles and Techniques
This course covers theories, methods, and applications of monitoring and evaluation for educational and social programs, with special emphasis on international education development. Topics include basic statistical concepts, program theory, process and outcome assessment, concepts in survey methods, introduction to causal inference, introductory regression analysis, and an overview of impact assessments and cost-benefit/cost-effectiveness analysis.
Fall
0-1 Course Unit
EDUC 6480 International Educational Development in Practice: Tools, Techniques and Ethics
This course covers the broad arena of international educational development practice by introducing students to a variety of tools used in international educational development work. It is a required course for IEDP Masters students and is offered in the Fall semester only. Coursework is built around the project cycle and will acquaint you with current approaches to development and accompanying tools employed by a variety of international development organizations. Specifically, you will gain skills to determine how to gather adequate information, interpret information and put this information into clear and helpful frameworks for formulating recommendations for action. To learn these skills, you will work in small groups on a technical proposal throughout the semester. Throughout the semester, we will seek a more nuanced understanding of the general context and the role of institutions in global development work, while being aware of local realities and ethical issues that make development as contested locally as it is at national and global levels. Development from this perspective is not primarily a technical enterprise, although it does require skill with "techniques". Rather it involves a process of heralding the best available information to facilitate the mobilization of resources and people to engender development - a development process whose focus is broadening people's capacities, opportunities, choices, and access to social justice.
Spring
0-1 Course Unit

EDUC 6482 Masters Proseminar in International Educational Development
This course covers the broad professional arena of international educational development. It is designed to provide an analytical perspective on applied research and policy as undertaken by UN, donor and non-profit agencies, with a focus on developing countries. Such work will require analyzing intellectual and technical challenges of working in international education and human development, especially around issues of social and public policy as developed through writing policy briefs. Several specialists and speakers will be invited as guests throughout the semester.
Spring
1 Course Unit

EDUC 6490 Master's Seminar in Education, Culture, and Society
This seminar explores key foundational questions for graduate-level work: How is academic knowledge formed and reproduced? How do we engage with and interrogate the scholarly research? And, how do we participate in the academic conversation around a topic? The Master's Paper Seminar introduces students to academic discourse, disciplinary writing conventions, and research practices. As part of this course, students are guided through preparing a Capstone Project on a topic of their choice (TLL MSEd and LST MSEd students) or a literature review of a topic of their choice (ECS MSEd students). This review, in turn, forms the foundation of their Capstone Proposal and Capstone Project (TLL and LST students) or 30-40 page paper (ECS students) that are required for the completion of the M.S.Ed degree.
0.5-1 Course Unit

EDUC 6503 Wellness and Addictions Counseling
This course will provide an overview of addictions and addiction counseling from research, theory, and applied perspectives. It will also explore contemporary conceptions of “wellness” and wellness-promotion strategies, particularly for people struggling with addictions. Applied skills for addressing wellness and addiction will be framed within current evidence-based research. Prerequisite: Students must be enrolled in the M. Phil. ED. in Professional Counseling Program.
Fall
1 Course Unit

EDUC 6510 Cultural Perspectives on Human Development
This course focuses on children’s and adolescents’ development from cultural and cross-cultural perspectives. Topics include traditional and recent theories of cultural influence on development, research strategies, socialization values and practices, and socioemotional and cognitive functions such as aggression and conflict, shyness, and academic achievement in cultural context. Issues involving ethnicity and social and cultural changes are also discussed.
1 Course Unit

EDUC 6512 LGBT Counseling & Development
In the past quarter century, the awareness of the unique issues facing lesbian, gay, bisexual and transgender (LGBT) individuals has expanded and become essential knowledge in our work as educators, providers of psychological services, and other service provision fields. This course provides a contextual and applied understanding the interactional processes facing LGBT individuals.
Not Offered Every Year
Also Offered As: GSWS 6120
1 Course Unit

EDUC 6513 Group Counseling
Through didactic and experimental learning activities, students will explore various theoretical approaches to groups, learn and apply principles of group dynamics, develop familiarity with ethical, legal and professional standards relative to group leadership, learn member roles and functions in group, examine group counseling in a multicultural context, and relate these issues to the leader’s interpersonal style and behavior. Applications to specific developmental stages and contexts will be explored.
1 Course Unit

EDUC 6515 Parenting and Children's Educational Development
Theory and research on family influences on achievement development, models of the home-learning environment; parental involvement in schools.
Not Offered Every Year
1 Course Unit

EDUC 6517 Counseling for School to Career Transitions
This psychology course will focus on the developmental and emotional changes that coincide with adolescents’ conceptions of work and work-related activities. As a course in career psychology, students will be exposed to readings from multiple disciplinary perspectives and will be expected to learn how to work with youth as they struggle through decisions on career and moving beyond the safety of childhood and adolescence. In addition, students will learn about the family-youth and school-student relational dynamics and that occur simultaneous to the adolescent’s development of a work ethic.
Spring
1 Course Unit
EDUC 6558 Diagnosis and Psychopathology
In this course, students will explore the etiology, course, and prevalence of psychological disorders of childhood and adolescence. Particular focus is on the role of these issues in the developing person within the context of family, school, and culture. Major clinical and empirical classification systems (DSMIV and the new DSM5) are examined, as well as some of the diagnostic and assessment strategies used to aid the conceptualization and treatment of these disorders.
1 Course Unit

EDUC 6563 Sociocultural Foundations in Counseling
The course provides an understanding of sociocultural concepts essential to the work of counselors and providers of psychological services. This course provides a contextual and applied understanding of working with socioculturally diverse clients. The purpose of this course is to expand one's understanding of the impact of sociocultural and contextual factors, social-psychological influences, the role of values, and the interaction of identities in counseling and psychological services. Both intervention and prevention strategies will be addressed. The student will be required to demonstrate a working knowledge of key concepts in sociocultural psychology and the topical areas addressed in the course.
Spring
1 Course Unit

EDUC 6577 Information and Communications Technologies for Education and Development in Global Perspective
The importance of the relationship between education, technology, and social-economic development is increasing in the U.S. and around the world. What are new information and communications technologies (ICTs), how are they being deployed, and for what reasons? Are new ICTs a means for delivering skill-based or distance education information, and in what ways are they becoming a part of societies today? What constitute, then, ICTs for Development (ICT4D), and what role do they play in societies that are ‘industrialized’ and ‘developing’.
Spring
1 Course Unit

EDUC 6585 Career Counseling and Development
Career development is studied as an aspect of general development theories of educational and vocational choice and adjustment; psychological aspects of occupations. Prerequisite: Permission needed from instructor.
Summer Term
1 Course Unit

EDUC 6586 Counseling Interventions
This course will provide an overview of the approaches to various psychological interventions with a focus on theory, key concepts, and therapeutic processes. The purpose of this course is to develop a knowledge base of the underlying principles and approaches of psychological interventions. Students will be required to demonstrate a working knowledge of the key concepts of the psychotherapeutic approaches presented, distinguish between different approaches, and make a preliminary rationale for the use of a particular approach. Students also are expected to develop a critical perspective and demonstrate the ability to analyze theories and interventions. Prerequisite: Admission to Counseling and Mental Health Services.
Fall
1 Course Unit

EDUC 6587 Counseling Ethics & Professional Principles
This course will provide the student with an opportunity to learn and incorporate the multifaceted roles of the professional counselor and assist the student in developing a sense of their professional identity. In this process, the course will focus on the professional role of the counselor; ethics and their application across situations and professional settings; and gaining strong professional communication abilities. The primary goals of the course are to develop the student’s awareness of their roles and responsibilities as a professional, incorporating ethical standards as a counselor, increasing professional communication skills, and understanding the roles of counselor across professional settings.
Fall
1 Course Unit

EDUC 6588 Counseling Practicum
Seminar and lab to accompany supervised practicum or apprenticeship experiences in schools, colleges, or community agencies. Placement to be arranged by instructor.
Two Term Class, Student must enter first term; credit given after both terms are complete
1 Course Unit

EDUC 6625 Data Processing and Analysis
Use of Statistical Software including Statistical Analysis (SAS) to effectively build a wide variety of datasets for use to address a range of empirical research questions. Evaluate conventional methods for dealing with missing data and apply contemporary methods using SAS.
Fall
Prerequisite: EDUC 6667
1 Course Unit

EDUC 6657 Introductory Statistics for Educational Research
Scales of measurement; indices of central tendency and variability; product-movement correlation; introduction to the chi-squared; Z, T, and F distributions.
Fall, Spring, and Summer Terms
1 Course Unit

EDUC 6680 Evaluation of Policies, Programs and Projects
Basic evaluation policy and methods for determining nature and severity of problems, implementation of programs relative effects and cost-effectiveness of interventions to reduce problems, design and conduct of evaluation studies in education, social services, crime and delinquency, in the U.S. and other countries.
Fall
Prerequisite: EDUC 6667
1 Course Unit

EDUC 6683 Survey Methods & Design
This course covers the methods and design of field surveys in the U.S. and other countries in education, the social sciences, criminal justice research, and other areas. It covers methods of eliciting information through household, mail, telephone surveys, methods of assuring privacy, enhancing cooperation rates and related matters. Finally, the fundamentals of statistical sampling and sample design are handled. Much of the course is based on contemporary surveys sponsored by the National Center for Education Statistics and other federal, state and local agencies.
Spring
Prerequisite: EDUC 6667
1 Course Unit
EDUC 6684 Measurement & Assessment
Analysis of primary assessment concepts including basic theoretical principles, types and purposes of assessment devices, levels of measurement, standardization and norming, and methods to support reliability and validity; special focus on appropriate test interpretation, fairness, measurement of change, and incremental validity; application of standards for test development, usage, and critique in education, health care, public policy, and scientific inquiry.
Fall
1 Course Unit

EDUC 6720 Methods of Economic Evaluation in Education
Methods of economic evaluation are a critical component of evidence for policymaking. Economic evaluations, mainly cost-effectiveness and benefit-cost analysis, contribute information about costs relative to impacts. Rigorous evidence on effects, and the resources used to produce them, aids in selecting between policy alternatives. This course is designed to provide a strong foundation to prepare researchers to apply the "ingredients method", a rigorous method of evaluating the costs of educational programs. The course is structured to build understanding of the concepts and methods of economic evaluation, the consumption and critique of economic evaluations, and the application of the ingredients method to conduct economic evaluations. More specifically, the goals of the course are: 1) development of a clear and strong understanding of economic evaluation in education; 2) ability to discuss and write about concepts of economic evaluation; 3) assess work for strengths and weaknesses of rigor; 4) design research on cost-effectiveness; 5) conduct research applying methods covered in class to contribute to the field. To achieve these goals, the course will focus on reading and discussion of the textbook and methodological papers on concepts and methods; reading, presenting, discussing, and critiquing published research articles and reports; applying methods and concepts in exercises, group projects, and independent research proposals. Prerequisites: Prior coursework in regression, causal analysis, and program evaluation are helpful but not required. Experience in economics or calculus is not required for this course.
1 Course Unit

EDUC 6734 Child Development and Social Policy
The purpose of this course is to focus on major US social policies impacting our most vulnerable subpopulations of children living in poverty. The class will explore how developmental science can provide a broad conceptual framework to inform the construction of social policies for children and evaluate their effectiveness. Since much of the social policy issues for children in the US public square are currently hotly debated, the class format will incorporate debate and require students to actively research and defend positions on existing policies. Class size will be set at a level to maximize interaction and involvement.
Spring
1 Course Unit

EDUC 6736 Education Finance Policy
This course examines the legal, political and economic issues surrounding how public schools are funded, including equity, productivity and the interaction of finance and school reform. Through readings, discussion and written assignments, students will develop and apply policy analysis skills to the area of education finance.
Fall or Spring
1 Course Unit

EDUC 6738 Education Policy Issues
This course is an introduction to the process of conducting educational research. Its purpose is to help students learn to approach problems like researchers by examining and critiquing existing research and developing coherent "researchable" questions. Students will carry out a substantial independent project where they will develop elements of a research proposal.
Fall or Spring
1 Course Unit

EDUC 6739 Applied Policy Analysis
This course emphasizes meaningful and practical learning experiences that will prepare students to be informed about and reflective of empirical policy analyses. In addition, this course provides the foundations to develop/improve the ability to interpret and objectively evaluate studies and research in the field of education; know the fundamentals of policy analysis; demonstrate an understanding of the appropriate use of which method to select; and cultivate the skills to critically assess educational research. These aims are achieved through lecture, textbook and journal readings, powerpoint presentation, and grant proposal writing.
1 Course Unit

EDUC 6784 Economic Aspects of Educational Policy
This course has two main goals. One is to teach students to apply economic principals to analyze a wide range of educational policy issues. The other is to provide students with a foundation in contemporary education policy issues. The course is designed to address analytic issues relevant to a wide range of educational professionals, including managers, policy makers, and evaluators. The course will be divided into five units: (1) principles of economic analysis in the context of education policy; (2) the economics of early care and education; (3) cost-effectiveness analysis; (4) human capital investment; and (5) education finance.
Fall or Spring
1 Course Unit

EDUC 6804 Ethics and Leadership in Higher Education
This course looks critically at the various theories of leadership with a special emphasis on the ethical dimensions of leadership. Leadership theory and practice reveal that there is no one approach that is best or that works in all situations. Aspiring leaders must have a variety of lenses through which they can analyze and understand the elements involved in ethical leadership. At the end of the course students will be able to apply essential concepts of ethical decision making and leadership - the role of trust and the ability to build trust, the uses of power, the importance of good decision-making, the conflicting priorities that arise from living out your core values in the workplace.
Fall
1 Course Unit

EDUC 6807 Faculty and Academic Governance
Introduction to selected issues pertaining to faculty and academic governance, such as: Who governs American colleges and universities? What are the respective roles of the president, the board of trustees, the faculty, and students in institutional decision making? The course will also explore key contemporary governance issues.
Fall
1 Course Unit
EDUC 6808 Organizational Change in Higher Education
Colleges and universities today face tremendous challenges—calls by external constituents for greater accountability, scarcity of resources, greater competition, and pedagogical innovations. The need for change, and for change agents, in our institutions of higher learning has never been greater. This course examines organizational change both theoretically and practically in college and university settings. Students will be introduced to many of the most current, influential, and promising theories about how change occurs at the departmental, institutional and system level. Using case studies, we will apply these frameworks in order to diagnose and develop constructive strategies for meaningful change. Not Offered Every Year
1 Course Unit

EDUC 6811 Higher Education Data Systems
Being a proficient consumer or capable producer of data-driven insights requires knowledge of higher education context and policy, a firm handle on research methods, and familiarity with the various sources of available data. In this class, we will explore postsecondary data sets at the national, state, and institutional levels, discuss the kinds of insights these data sets allow, and investigate the shortcomings inherent in these data. By reading recent examples of published work using these data sets and through hands-on activities, we will explore social, political, financial, and ethical issues related to evaluation in higher education. A central goal of this class is to give students the opportunity to work with a variety of data sets and learn to report key findings from the data.
Fall or Spring
1 Course Unit

EDUC 6819 College Student Health
College Student Health explores postsecondary student health issues from historical and research perspectives, including stress, sleep, sexual health and safety, alcohol and other drugs, and mental health and wellness, among other topics. This course surveys the roles, responsibilities, and best practices of campus health professionals. Not Offered Every Year
1 Course Unit

EDUC 6820 Enrollment Management
Enrollment management is an organizational concept of strategies for achieving institutional goals. The course provides an overview of multiple enrollment management models, the evolution and maturation of these models, the related implications of these organizational structures and strategies, and the benefits and drawbacks on institutions and their markets.
Spring
1 Course Unit

EDUC 6824 Gender in College
Examined in this course are theories and interdisciplinary perspectives pertaining to gender on college and university campuses. Emphasis is placed on the social construction of gender, gendered institutional norms and practices, gender disparities on college campuses, and the unique experiential realities of women, men, and transgender persons in a variety of roles and postsecondary educational contexts. Not Offered Every Year
1 Course Unit

EDUC 6831 Research Topics
This seminar offers students a collaborative setting in which to explore a topical area, craft a literature review and refine their research questions. The course will be of special interest to doctoral candidates who are drawn to an area of inquiry (e.g., presidential leadership, diversity, access, organizational change) but now wish to elicit from it a discrete "researchable" question. Prerequisite: Permission needed from department.
Not Offered Every Year
1 Course Unit

EDUC 6840 History of American Higher Education
This interactive course focuses on the history of American higher education from the Colonial period through the current day. An emphasis is placed on underrepresented institutions and individuals. Students will have the opportunity to make connections between historical trends and movements and current issues.
Fall
1 Course Unit

EDUC 6845 Geography of Opportunity
This course is designed to explore the subfield of urban geography and its use in education and higher education scholarship. Readings will cover theoretical and conceptual foundations such as postcolonial theory, nationalism, Black geographies, and AfroLatin American hemispheric thought. Students will engage in ethnographic research methods for their culminating paper, exploring the City of Philadelphia and its "education" landscape. We engage questions such as: What does educational opportunity consist of in Philadelphia? How do we define the construct of education? How is opportunity conceived? What are the spatial and non-spatial parameters?
Fall or Spring
1 Course Unit

EDUC 6856 College and University Teaching
In this class, students will learn how to systematically plan for a university course, develop a teaching philosophy, create a course syllabus relevant to their discipline and expertise, design and implement evaluation instruments to assess teaching and learning, experiment with a range of technologies to advance teaching, and participate in a teaching simulation. This course also incorporates issues of diversity with regard to teaching.
Not Offered Every Year
1 Course Unit

EDUC 6871 The High Impact University: the Social Purposes of Universities
This course focuses on the social and civic role universities and colleges in diverse national contexts. It explores the diverse national and social contexts in which universities both respond to and help to shape. It explores the role of university as citizen and social and economic actor. Finally, it focuses on the changing role of higher education in knowledge economies with a focus on diverse contexts.
1 Course Unit

EDUC 6872 The Evolving Global Landscape
Higher education, while a national (or local) responsibility, is shaped by global forces — economic, social, political and technological. This course focuses on the trends in globalization and the ways in which those forces impact universities positively and negatively. It addresses globalization and its discontents; the disruption and innovation that globalization creates and reinforces, and the ways in which global forces make universities more, rather than less, important in the global dialogue of human development.
1 Course Unit
EDUC 6872A The Evolving Global Landscape
Higher education, while a national (or local) responsibility, is shaped by global forces—economic, social, political and technological. This course focuses on the trends in globalization and the ways in which those forces impact universities positively and negatively. It addresses globalization and its discontents; the disruption and innovation that globalization creates and reinforces, and the ways in which global forces make universities more, rather than less, important in the global dialogue of human development.
0-1 Course Unit

EDUC 6872B The Evolving Global Landscape

EDUC 6873B Magnifying the Mission
The traditional mission of teaching, research and service continues to evolve in response to changing public expectations for higher education. This course focuses on ensuring meaningful and impactful student engagement; the foundational role of research and the ways new knowledge can be leveraged to address problems; and the ways in which the teaching and learning functions are changing in light of technology innovation and increased demands for measurable outcomes.
0-1 Course Unit

EDUC 6874 Governance, Change, & Strategy
Effective universities require effective management and governance to lead change and drive innovation. This course focuses on how leaders lead and affect intentional institutional change; the role of strategy and planning as vehicles for intentional long-term change; and the ways in which institutional level governance can positively impact the trajectories of institutions.
1 Course Unit

EDUC 6874A Governance, Change, & Strategy
Effective universities require effective management and governance to lead change and drive innovation. This course focuses on how leaders lead and affect intentional institutional change; the role of strategy and planning as vehicles for intentional long-term change; and the ways in which institutional level governance can positively impact the trajectories of institutions.
0-1 Course Unit

EDUC 6874B Governance, Change, & Strategy
Effective universities require effective management and governance to lead change and drive innovation. This course focuses on how leaders lead and affect intentional institutional change; the role of strategy and planning as vehicles for intentional long-term change; and the ways in which institutional level governance can positively impact the trajectories of institutions.
0-1 Course Unit

EDUC 6875 University in its External Context
The notion of higher education being an Ivory Tower, separate from the world, is nostalgia if not outright myth. Universities are very much shaped by the contexts in which they operate. They need to be responsive to political, economic and social trends. What happens outside universities impacts what happens inside of them. This course seeks to understand how universities must operate in and leaders must shape the political context; the role regulation and politics play; and how university leaders must ensure quality and relevance.

0-1 Course Unit

EDUC 6893 Student Development in College Environments
An overview of college student development theory is offered in this course. Specifically, three families of theory are explored: 1) Psychosocial and identity, 2) cognitive-structural, and 3) environmental. The theories are discussed in terms of their foundations, constructs, and applicability to work in various functional areas of higher education.
Fall or Spring
1 Course Unit

EDUC 6894 College Athletics and Higher Education: Money, Power, Politics
Higher Education campus leaders should understand the roles and issues facing college sports in the 21st century. This course provided a holistic view of the impact of athletics has on enrollment and retention, institutional finances, diversity and inclusion, and the legal and risk management challenges it brings to your campus organization. The course will also examine the powerful external influences on athletics, including trustees, donors and sports media.
Fall or Spring
1 Course Unit

EDUC 7102 Conceptual Models of School Leadership & Organization
We will explore conceptual models of organization and leadership in order to develop our knowledge of how classrooms, schools, and education systems function. Our approach will be to consider foundational theoretical works alongside their recent empirical applications. Throughout the semester we will use case studies to help illuminate our understanding.
Fall or Spring
1 Course Unit

EDUC 7119 Research on Teacher Education and Learning to Teach
This course focuses on issues of research, practice, and policy related to teacher education at the preservice, induction, and continuing education levels in the United States and internationally. The course is designed as a seminar to engage participants in the study of teacher education through interaction with researchers and policy-makers, through in-depth study of critical issues in the field, and through engagement with teacher education programs. It is anticipated that each course participant will develop a literature review focusing on one or more topics related to critical issues in teacher education.
Fall
1 Course Unit

EDUC 7122 Reforming Philadelphia Schools: A Research Practicum on Community Engagement
This Academically Based Community Service (ABCS) course offers a unique opportunity for students to directly contribute to school improvement efforts in Philadelphia. Teams of students will consult with a local public school with the goal of conducting actionable research with broad policy relevance to the community engagement in education sector. Teams will submit a final report and present their findings at a public venue. The course is designed as a research practicum because understanding community engagement in education as it occurs in practice will provide insights that are unlikely to surface if we merely considered it in the abstract. The experience will provide students a set of skills appropriate to the design, interpretation, and presentation of research on community engagement in education. But we are much more ambitious in our aims. Our consultancies are also meant to help a local community solve an immediate problem of educational relevance. The course is suitable for graduate and undergraduate students with an interest in education, policy, and civil society.
Fall or Spring
1 Course Unit
EDUC 7132 Doctoral Proseminar on Education Research
This seminar is designed to enable first-year doctoral students at Penn GSE to understand the broad and diverse field of educational research and the driving debates within the broader field and sub-fields. A primary goal of the course is to support students’ developing identities as educational scholars and to help them develop the intellectual skills and stances they will draw upon in doctoral work. We will pay particular attention to the multidisciplinary nature of education research, how individual disciplines and theoretical traditions approach education problems in complementary or contrasting ways, and how educational research functions at the intersection of policy and practice. The seminar seeks to encourage an intellectual community among doctoral students across Penn GSE divisions and programs and to build familiarity with professional norms and expectations. This seminar is intended to build on and complement related courses and activities that are offered by individual Penn GSE divisions.
Fall
1 Course Unit

EDUC 7140 Social Foundations of Teaching and Learning
Teaching and learning are social phenomena that reflect and inform the aims, anxieties, and conflicts of the social contexts within which they unfold. Engagements in thoughtful and effective educational research and practice demand nuanced understandings of the complicated and evolving relationships between educational enterprises and the societies that shape them. In this course, we will examine the social foundations of teaching and learning. Specifically, through a series of theoretical lenses, we will question how social formations like democracy, capitalism, race, feminism, and networked publics have attempted to define the goals and substance of educational endeavors. Additionally, we will consider the implications of the social foundations of teaching and learning for our own work as educational scholars and practitioners.
Spring
1 Course Unit

EDUC 7201 Methods of Discourse Analysis
This course introduces several methodological approaches that have been developed to do discourse analysis. The course intends primarily to provide students with various methodological tools for studying naturally-occurring speech. Assignments include both reading and weekly data analysis exercises. Prerequisite: This course is designed to follow after Qualitative Modes of Inquiry (EDUC 6460) and as such it is suggested that students have some background in qualitative methods before enrolling.
Not Offered Every Year
1 Course Unit

EDUC 7220 Seminar in Microethnography
This course provides an introduction to theory and method in the unified analysis of verbal and nonverbal behavior as it is culturally patterned, socially organized, and socially organizing in face-to-face interaction, in an approach that integrates participant observation with the detailed analysis of audiovisual records. Students read relevant literature in linguistic anthropology, interactional sociolinguistics, conversation analysis, and embodiment in social interaction. Class requirements include in-class reading presentations, a small microethnographic research project, and several short data analysis reports drawing on differing levels of analysis and differing theoretical orientations. Students review and apply methods of audiovisual data collection, transcription, processing, archiving, and presentation.
Spring
1 Course Unit

EDUC 7225 Second Language Development
This course provides an introduction to theory and research on second/multilingual language development. Linguistic, cognitive, social, political, and educational perspectives are considered through readings, lectures, activities, and assignments. Students gain an understanding of research design, methodology, and documentation through guided analysis of published studies and an opportunity to design research projects.
Spring
1 Course Unit

EDUC 7230 Experiential Learning Design for Intercultural Communication
Provides new and experienced educators the opportunity to learn and practice training design and facilitation using the principles of experiential and adult learning. Prerequisite: If course requirement not met, permission of instructor required.
Spring
Prerequisite: EDUC 6220
1 Course Unit

EDUC 7313 Responding to Literature: An Interdisciplinary Perspective
This course deals with the ways in which readers respond to and transact with literary texts, and aims at helping students understand the nature of the variety of ways in which literature interfaces with our lives. Three different types of discourse are read: literary criticism; empirical research on response to literature; and literary texts themselves. Various types of literary criticism are considered, including (but certainly not limited to) what is commonly called “reader response criticism;” text-based criticism; and criticism that contextualizes literature socially and historically. The empirical research on response deals with ways in which readers of various ages interact with literature, mostly in school settings; some attention is given to instructional design and critique of methodology. The literary texts range from picturebooks to literature for young adults.
Fall
1 Course Unit

EDUC 7323 Multicultural Issues in Education
This course examines critical issues, problems, and perspectives in multicultural education. Intended to focus on access to literacy and educational opportunity, the course will engage class members in discussions around a variety of topics in educational practice, research, and policy. Specifically, the course will (1) review theoretical frameworks in multicultural education, (2) analyze the issues of race, racism, and culture in historical and contemporary perspective, and (3) identify obstacles to participation in the educational process by diverse cultural and ethnic groups. Students will be required to complete field experiences and classroom activities that enable them to reflect on their own belief systems, practices, and educational experiences.
Fall
Also Offered As: AFRC 7230
1 Course Unit

EDUC 7324 Literacy: Social and Historical Perspectives
A review of the cross-cultural and historical literature on writing and reading with emphasis on the identification of norms and practices which affect the teaching and learning of reading and literacy today. Special attention to the social functions of literacy in work, home, and school settings and to myths regarding the consequences of literacy for cognition, socio-economic mobility, and predictability, and the predictability of citizen behaviors.
Not Offered Every Year
1 Course Unit
EDUC 7335 Tutorial Work in Reading/Writing/Literacy
Tutorial in Reading Writing and Literacy, is designed for participants to gain knowledge and insight into the major challenges facing learners in their quest for proficiency in literacy. The course participants investigate and develop instructional plans for the literacy needs of learners in pre-K to 12th grade settings. Course participants will investigate the roles and responsibilities of the literacy specialist as related to identifying the needs of learners and planning appropriate instruction to meet those needs. Prerequisite: Permission needed from instructor.

Spring
1 Course Unit

EDUC 7337 Research in Teaching Writing
This doctoral seminar explores theories and research on writing, investigating current and traditional areas of inquiry in the field of writing studies. As class participants review and analyze theoretical and empirical literature on writing and teaching writing, the seminar will offer students opportunities to compose texts and reflect on their roles as writers in the academy through collaborative inquiry. Participants will think together about the purposes, functions, and consequences of writing in diverse communities and across school and out-of-school settings. The course will pay particular attention to how writing is shifting in a mobile, networked, global age, and how multimodality, interactivity, and hybridity characterize our composing lives.

Spring, even numbered years only
1 Course Unit

EDUC 7460 Qualitative Research: Concepts, Methods and Design
This course surveys the field of qualitative research and focuses on foundational philosophies of and approaches to qualitative research. The course focuses on the stages of qualitative research including the development of researchable questions, research designs, conceptual frameworks, methodological stances, data collection and analysis and instrument design and implementation.

Fall, Spring, and Summer Terms
1 Course Unit

EDUC 7462 Advanced Topics in Monitoring & Evaluation in IED
This is a sequel to the Principles of M&E course offered in the fall. The course will review both theories as well as methods of program evaluation in a deeper way using papers and technical reports as case studies, with special emphasis on international education development.

Spring
1 Course Unit

EDUC 7464 Advanced Qualitative and Case Study Research
This course explores epistemological and methodological choices and stances in qualitative research as well as advanced research methods including qualitative research design and concept mapping, sampling/participant selection, interviewing, coding and data analysis, instrument development and triangulation techniques.

Spring
Prerequisite: EDUC 6460 OR EDUC 7460
1 Course Unit

EDUC 7468 Ethnographic Research Methods
A course in ethnographic participant observational research; its substantive orientation, literature, and methods. Emphasis is on the interpretive study of social organization and culture in educational settings, formal and informal. Methods of data collection and analysis, critical review of examples of ethnographic research reports, and research design and proposal preparation are among the topics and activities included in this course. Prerequisite: This course is designed to follow after Qualitative Modes of Inquiry (EDUC 682) and as such it is suggested that students have some background in qualitative methods before enrolling.

Not Offered Every Year
Also Offered As: SOCI 7468
1 Course Unit

EDUC 7509 Peer Relationships in Childhood and Adolescence
This course focuses on various aspects of children’s peer relationships, especially with regard to their significance for human development. The roles of family, community, and socio-cultural contexts in the development of interpersonal competence and relationships are discussed. The course explores possible intervention strategies to help children with peer relationship difficulties.

Spring
1 Course Unit

EDUC 7517 Professional Internship in Counseling I
The course will consist of experiential and small group learning, with a focus on practicing and refining skills related to advanced work in psychological services, including the application of various techniques of counseling, ethical considerations, and critiques of live and simulated counseling sessions through role-playing, audio and visual taping.

Prerequisite: Formal admission into Professional Counseling and Psychology M. Phil. Program.

Fall
1 Course Unit

EDUC 7518 Professional Internship in Counseling II
Lab seminar group with a seminar group leader is the second component of the Professional Counseling Internship course. Lab will provide students with exposure to others’ experiences in different types of internships, working with a variety of different client populations.

Prerequisite: Students must be enrolled in the M. Phil. Ed. in Professional Counseling Program. A primary goal of this course is to help each student refine his/her evolving knowledge of self as a provider of psychological services to others. Students will also evaluate contexts of practice and the professional skills, ethics and practices inherent in effective provision of counseling and psychological services. This course consists of two components: CLASS MEETINGS, during which the full group will meet to address issues related to work in various internships, as well as discuss the development of advanced counseling skills and issues; and, LAB SEMINAR GROUP which consists of 7-8 masters students with a seminar group lab leader. Prerequisite: Students must be enrolled in the M. Phil. ED. in Professional Counseling Program.

Spring
0-1 Course Unit
EDUC 7525 Advanced Professional Practice in Communities, Agencies and Organizations
The purpose of this course is to expand the student’s awareness of the multifaceted responsibilities and roles of school counselors in primary and secondary school settings. Through readings, class discussions and guest lectures, it is intended that students will acquire additional competencies and a broader appreciation for professional issues confronted by school counselors and varied responsibilities they have in helping students focus on academic, personal, social and career development in an effort to achieve success in school and lead fulfilling lives. An important emphasis of this course will be on school counseling from an ecological and multicultural perspective. Prerequisite: Students must be enrolled in the M. Phil. ED in Professional Counseling Program. Spring
1 Course Unit

EDUC 7531 Risk, Resilience, and Prevention Science
Examines the definition and measurement of risk and resilience from the perspectives of developmental psychology and ecological theories of development; introduces students to the conceptual and practical integration of intervention and prevention sciences to address social, emotional, educational, and health problems across childhood. Fall
1 Course Unit

EDUC 7539 Poverty and Child Development
The goal of this course is to help students develop a coherent understanding of the ways in which poverty affects families and children, the different needs of families and children across different developmental stages of childhood, and the intersection between poverty and education. Spring
1 Course Unit

EDUC 7548 Neuroscience, Brain Development, and Learning
Neuroscience has made tremendous progress toward understanding the neural bases of cognition. The development of the human brain in response to maturation and learning is of particular interest to educators. This course provides an overview of brain development and methods used in cognitive neuroscience and how research in the brain sciences can inform educational practices and policies. Topics include brain development, methods of cognitive neuroscience, neural development in audition, vision, and motor skills, neural processing of language, neuroscience of learning differences, and changes in the brain associated with environment, such as socioeconomic status. 1 Course Unit

EDUC 7550 Trauma & Counseling
Due to the overwhelming incidence of trauma, adversity, and toxic stress among consumers of mental health services and the potential profound and pervasive impact of trauma on development, it is essential that mental health professionals gain the necessary knowledge, competencies, and skills to foster resilience and healing. This course explores how trauma impacts not only one’s cognitive and emotional processing, but also dysregulates one’s neurophysiology, and discusses evidence-based assessments and interventions that counselors can use to help alleviate the negative impact of trauma with their clients. This course is designed to provide foundational trauma education for students who aspire to work within school and/or mental health settings and to promote their ability to recognize trauma responses, to create trauma-sensitive educational and clinical environments to foster learning, growth and health and to develop trauma responsive counseling skills. 1 Course Unit

EDUC 7564 Cognitive Processes
Basic concepts, theory, and research in cognitive science, problem-solving, psycholinguistics, memory, perception and social cognition. Special topics may include reading, bilingualism, computer modeling, and cognitive theory applied to education and non-education settings. Prerequisite: EDUC 5568 1 Course Unit

EDUC 7566 Advanced Professional Counseling Interventions
This course will focus on advanced issues in the clinical practice of professional psychology with children, adolescents and adults where students will practice clinical skills in role-played therapeutic situations. Students will be using this class as preparation for the formal clinical examination required by all Master of Philosophy in Education students prior to graduation from the Professional Psychology and Counseling program. Prerequisite: Admission into Professional Counseling M. Phil. Ed. Program Fall 1 Course Unit

EDUC 7582 Assessment for Counselors I
A critical analysis of tests and clinical methods in assessment as related to theories of intelligence, and includes: 1) factors influencing assessments; 2) assessment theory; 3) assessment practices; 4) interpretations of assessments. Prerequisite: Admission to Professional Counseling M. Phil. Ed. Program. 1 Course Unit

EDUC 7585 Selected Topics in Professional Psychology
Consideration of research and theory, on selected advanced topics. Prerequisite: Admission to Counseling & Mental health Services or Professional Counseling M. Phil. Program Not Offered Every Year 1 Course Unit

EDUC 7665 Introduction to Causal Inference for Educational Research
Offers applied introduction to methods of causal inference for evaluation research; introduces students to statistical models for causal inference based on randomized controlled trials and observational studies; includes discussion of special topics such as replication and generalizability that touch upon issues related to implementation and implications of experimental/quasi-experimental research. Spring Prerequisite: EDUC 6667 1 Course Unit

EDUC 7667 Regression and Analysis of Variance
This course covers design of controlled randomized experiments, analysis of survey data and controlled field experiments, including statistical models, regression, hypothesis testing, relevant data analysis and reporting. Fall or Spring Prerequisite: EDUC 6667 1 Course Unit
EDUC 7668 Measurement Theory and Test Construction
Design of ability, achievement, and performance measures such as those applied for high-stakes decision making in large-scale assessment and for diagnosis and classification of individuals; advanced true-score and item response theory, item formatting, analysis, selection, calibration, linking, and scaling; analysis of reliability for continuous, ordinal, nominal, and composite scales; analysis of differential item functioning; unidimensionality, and local independence; model contrasting, test equating, and scaling for longitudinal assessment; standards and cut-point setting.
Not Offered Every Year
Prerequisite: EDUC 6684
1 Course Unit

EDUC 7671 Factor Analysis and Scale Development
Advanced measurement theory; exploratory and confirmatory item factoring and clustering for self-report, observational, rating, performance, and personality instruments; factoring of dichotomous and ordered categorical data, full-information factoring; scaling procedures, hierarchical structure, full-information bifactor structure, invariance, generality, reliability, validity, interpretation, and scientific reporting.
Prerequisite: Introductory Statistics
1 Course Unit

EDUC 7677 Structural Equations Modeling
Theory and application of means modeling and longitudinal analysis through structural equations, including observed and confirmatory factor analysis measurement models using multiple observed indicators to define sets of latent variables, and regression relationships among multiple latent variables; advanced applications for repeated measures and multilevel growth modeling in educational and social science research. Prerequisite: Introductory Statistics
1 Course Unit

EDUC 7708 The Social Organization of Schooling
In this graduate-level seminar, we will explore educational and sociological concepts of organization, leadership, and the professions in order to develop our knowledge of how classrooms, schools, and school systems function. Our approach will be to consider foundational theoretical works alongside their recent empirical applications. Our goal is to understand and assess how different conceptual perspectives on the organization of schools inform educational research, policy, and practice.
1 Course Unit

EDUC 7742 Teachers and Teaching Policy
Explores research, policies, and practices that promote a high-quality teacher workforce, and effective instruction. Topics include recruitment, retention, mentoring, induction, professional development, certification, value-added, merit pay, etc. Appropriate for students from different programs, including education, social/public policy, psychology, political science, sociology, business, and current and future teachers and school leaders.
Fall or Spring
1 Course Unit

EDUC 7762 Introduction to Applied Quantitative Methods for Education Research: Pre-K to 20
An introduction to the interpretation and use of data about education policy issues through the use of computer-assisted methods of statistical analysis. Emphasis is on the implications for educational policy and research design.
Fall
1 Course Unit

EDUC 7770 Education Policy Research Practicum
This course will partner students with educational leaders to conduct client-based, applied education research projects. Students will engage in original empirical analysis, learning how to use empirical evidence to support the work of policymakers and practitioners, and will complete written policy reports and present their findings to clients.
Prerequisite: EDUC 5760 AND (EDUC 6667 OR EDUC 7762)
1 Course Unit

EDUC 7771 The Intersection of Leadership Theory and Practice
With a growing recognition of the complexities that face leaders in education and other social organizations, understanding the work of leadership is paramount. Theoretical and practical scholarship has provided insights and guidance about different lenses on leadership and how these understandings can help leaders develop more functional, resilient, and productive professional environments. This seminar will examine the major theories of leaders and bridge leadership ideas with practical application through case studies of leadership in different contexts. It will introduce students to the perspectives, typologies and conceptual frameworks that situate and guide current and future leadership in organizations.

1 Course Unit

EDUC 7772 Expanding Civic Opportunities for Youth
This Academically Based Community Service (ABCS) course is designed for Penn graduate and undergraduate students invested in youth civic empowerment. Students design multi-session, project-based lessons on collective problem solving on a contemporary issue (for example, climate justice, political redistricting, or school gentrification). Students will then facilitate their workshops in Philadelphia public school classrooms.
As part of the course, students will develop and implement an internal assessment plan that may include observation protocols, post-lesson debriefings, participant focus groups, and teacher interviews. The data from these assessment tools will contribute to a final report.
Spring
1 Course Unit

EDUC 7804 Economics of Higher Education
Covers selected topics in the economics of higher education, including investment and consumption theories, cost functions, university investment practices and principles, and academic labor markets.
Fall
1 Course Unit

EDUC 7805 Proseminar in Research & Analysis
This course is designed to provide students with the skills, information, and resources that are necessary to develop a research proposal. This course will also examine strategies for completing proposals and dissertations. A variety of research designs and approaches to educational research will be explored. Through this course, students will become both informed consumers of research and effective designers of research. Prerequisite: Permission needed from department.
Fall
1 Course Unit
EDUC 7814 Law and Higher Education
An examination of the most important state and federal laws governing U.S. colleges and universities, with an emphasis on current legal problems.
Fall
1 Course Unit

EDUC 7815 Case Studies in Higher Education Administration
This course is designed to enhance understanding of decision making in higher education administration. Based on case studies, students will analyze, propose policies, generate action plans and implementation procedures, and assess the potential consequences of their administrative decisions.
Not Offered Every Year
1 Course Unit

EDUC 7816 Public Policy Issues in Higher Education
A study of the most influential federal and state policies, legislation and practices affecting colleges and universities.
Spring
1 Course Unit

EDUC 7828 Advanced Public Policy Seminar in Higher Education
Students explore higher education in one state and collaboratively develop a case study to understand the relationship between state policies and higher education performance. Through readings, interviews and student presentations, students learn about the context, the performance, and the public policies influencing higher education performance.
Spring
1 Course Unit

EDUC 7833 Students' Transitions from High School to College and to the Job Market
Scope and Audience: This course is appropriate for both masters level and doctoral level students in fields relevant to education, policy, or social science. Special emphasis will be given to develop research proposal that address gaps detected in the literature pertaining to issues and factors affecting students’ transitions from high school to college and to the job market. The ultimate goal of the coursework is to critically analyze and have informed opinions of the state of knowledge regarding factors affecting students’ college choice, access, and success, as well as how these choices impact their job market prospects. Course Description and Objectives: This course examines existing research on the analysis of college access and success, the transition from high school to college, community colleges, labor market opportunities, and the policies, interventions, and initiatives that have been developed to address inequities and inequities in students’ college plans, academic preparation, and financial access. Particular attention will be paid to issues of poverty, race, and ethnicity. The topics studied are informed by sociological, economic, and anthropological theories. Given that community colleges enroll close to 50% of total undergraduate students, and serve as the primary provider of college education for underrepresented, first-generation, low-income, and minoritized students, their role as a potential equalizing engine in the American higher education system will be studied. Specifically, we will study the diverse set of theoretical frameworks and methods that researchers have been using to understand these institutions and will assess the extensive evidence we have to date regarding their effects on education and labor market outcomes. Expectations: Students are expected to be engaged intellectual thinkers and active participants in the pursuit of knowledge, not just passive recipients of information. This course is reading intensive and the majority of class time will be spent in a seminar format discussing the assigned readings. There will be opportunities for students to take turns leading discussion sessions using a set of guiding questions generated by the students own creative and original thinking with the help of the instructor. These student-professor led discussion sessions will occupy about half of our class time while the other half will be lecture and presentation by the instructor along with presentation of work in progress of final papers to gain collective feedback.
Fall

EDUC 7836 Quasi-Experimental Design
Quasi-experimental design is the set of statistical procedures designed to reduce bias inherent to the analysis of observational data. This course covers the most pressing quasi-experimental techniques employed in the social sciences, with an especial emphasis on education issues. The class combines lecture and lab exercises complemented with real-life examples.
Spring
1 Course Unit

EDUC 7844 Building Inclusive Communities in Higher Education
This course provides students an opportunity to apply their knowledge related to the practice of higher education administration. The goal of the course is to advance students’ understanding of climate on today’s campuses and to utilize diverse methods to create inclusive spaces on campus for all institutional stakeholders.
Spring
1 Course Unit
EDUC 7847 Social and Statistical Network Analysis
Network analysis aims to find structure among a variety of connections/settings. This course highlights the inferential/statistical aspect of network analysis which overcomes its main limitation of being depicted as a descriptive tool. Since applications of network analysis to education research are emerging, course participants will gain a competitive job-market advantage.
Fall
1 Course Unit

EDUC 7848 Spatial Socio-Econometric Modeling
Despite the vast availability of data that can be linked to earth's surface (AKA geo-referenced or geo-located), most research continue to ignore or omit the influence of location on the outcomes of interest. For example, assume one is interested in measuring the impact of an intervention taking place in some school districts across a given state. Assume further that a variety of school-level administrative indicators are readily available for model inclusion, whereas other place-based indicators require extra data gathering, management, and methods before they can be statistically accounted for. In scenarios like this, researchers typically proceed to model the intervention effects without considering other place-based variables that surely impact students' performance over and above their within school experiences. That is, given that where individuals experiences life transcends school boundaries, the omission of out-of-school localized factors such as neighborhood-level poverty, crime, or unemployment levels, equates to ignoring and/or assuming that those factors bear no effect on such individuals' prospects of success. The overarching purpose of this course is threefold. First, it discusses the most recent theories on neighborhood effects, equality of opportunity and environmental determinism as the foundations for the applications and methods covered in the course. Second, the course moves to introduce a survey of geolocated data sources that can be incorporated in traditional socio-econometric research. Third, the course provides participants with tools and methods to visualize and model datasets with spatial elements in order to reach conclusions and offer recommendations that consider the relevance of space and place. It is hoped that the incorporation of these place-based indicators may provide more robust and precise evidence, (as) compared to evidence reached with methods that ignore such a structure contained in places where units of analyses are spatially situated.

EDUC 7849 Modeling Leadership Resilience through Chaos, Crisis, Calamity, Calumny, and Catastrophe
Institutions, agencies, NGOs, industries, and educational systems are vulnerable to disruptions that can escalate rapidly to truly catastrophic conditions. Local, national, and international incidents — including those caused by natural disasters, human behavior, infrastructure failures, and acts of terror — can pose serious threats to the health and wellness of individuals and cohort groups of community members and to the normative functioning of institutional entities. These conditions, also, within the heightened immediacy of globally interconnected electronic communications modalities, must be optimally ameliorated under compressed time pressures amidst highly volatile circumstances that can be peopled with disaffected and/or seditious stakeholders. In response to these potential threats, many entities, institutions, and educational systems have pro-actively developed strategic risk-management and crisis response frameworks that they attempt to implement consistently, effectively, and efficiently to maintain mission-critical functions and to restore institutional stasis after a disruption. Leaders who most consistently foment institutional resilience are those who are: (a) strategically nimble, decisive, purposeful, and optimistic; and, therefore (b) most adept at meeting the vagaries of institutional crises using critical incident response and recovery models that are optimally crafted to use the strengths of their individual and leadership team’s styles and institutional culture. The core goal of the Modeling Resilient Leadership through Crisis, Calamity, Calumny, and Catastrophe course is to acquaint students with categories of crises endemic to institutions, agencies, and systems; to help them understand the importance of crisis mitigation advance planning including the elements of a crisis management plan and the value of “tabletop” practice; to increase their knowledge of how leadership styles and characteristics contribute to leadership resilience through institutional crises, and to survey institutional crisis response variables including: threat and vulnerability analysis, crisis communications, stakeholders, and audiences.
1 Course Unit

EDUC 7870 New Models for Postsecondary Education
Not Offered Every Year
1 Course Unit

EDUC 8215 TESOL Practice Teaching
Fieldwork course for TESOL students. This course focuses on reflective teaching practice, providing a space for students to combine theory and practice as they apply the theoretical constructs of TESOL coursework to their own language teaching. Students will become accurate and systematic observers of and thinkers about their own teaching methodology, in order to continue to develop into increasingly effective language teachers. The theme of a student-centered language classroom will be explored through scholarly literature, pedagogical techniques, and students’ own classroom teaching. To participate in this course, a student must be teaching a language class for the majority of the semester. Prerequisite: Permission needed from the department.
Fall
Prerequisite: EDUC 6215 AND EDUC 6205
1 Course Unit

2023-24 Catalog | Generated 08/02/23
EDUC 8225 TESOL Seminar
A weekly seminar that seeks to consolidate, broaden, and deepen knowledge of the main themes, trends, issues, and practices in the field of TESOL. Students will demonstrate their ability to observe, analyze, and reflect upon their teaching as they make connections between theory and practice, all critical skills for ongoing professional development which relate to the students' final project, a reflective-analytical or action research paper. The project is based on a thirty-hour teaching internship completed during the semester in which the students are enrolled in EDUC 563. The project is individually designed and subject to the instructor's approval. All students in the M.S.Ed./TESOL and Language & Literacy must submit a proposal for the internship in the semester before they take the Seminar. Prerequisite: Permission needed from the department.
Fall or Spring
Prerequisite: EDUC 8215
1 Course Unit

EDUC 8230 ICC Seminar
Prior to enrolling in this course, all students in the MS.Ed ICC program must conduct ethnographic (participant-observation) fieldwork in the context of a supervised internship of at least 160 hours, usually during the summer between the first and second year. The supervised internship, involving placement of the student in an approved field site, is individually designed and is subject to approval; students must submit a Proposal describing their ethnographic project in the semester prior to undertaking fieldwork. This course offers guidance as students complete the portfolio or reflective paper, which is based on their experience and the ethnographic data they collected during their fieldwork placement. Through this course, students in the M.S.Ed./ICC program will discuss ways to conceptualize their fieldwork experience, situate it meaningfully within the field of intercultural communication, locate and analyze relevant research literature, and prepare the portfolio or reflective paper, with an overall goal of developing the ability to communicate clearly and effectively for an academic and/or professional audience. Prerequisite: Eight or more courses toward M. S. Ed. degree in Intercultural Communication. Prerequisite: Eight or more courses toward M. S. Ed. degree in Intercultural Communication. Permission needed from department.
Spring
1 Course Unit

EDUC 8334 Theories of Reading
This course is designed as a collaborative inquiry toward constructing and elaborating theories of practice as teachers and/or researchers of reading. Using a seminar or working group format, participants explore the relationships among theory, reading, practice, pedagogy and research. The course's conceptualization is informed primarily by (1) frameworks from critical, feminist and culturally-centered literatures which foreground issues of equity, representation, and ethics; and (2) current conversations in the field of literacy where the definitions, purposes, and practices of reading have been made problematic. It also invites participants to engage the notion that knowledge for teaching and research comes from inquiry into the questions, issues, and contradictions that arise from everyday life. The course provides historical lenses for comparative analyses of theoretical frameworks and research paradigms as well as opportunities to investigate participants' individual histories as well as teaching and research interests.
Fall, even numbered years only
1 Course Unit

EDUC 8336 Issues in Instructional Leadership in Reading and Writing
Participants will consider current critical issues in Reading, Writing, and Literacy, such as: improving accountability and assessment; approaches to professional development and curriculum development; and the use of scientifically "valid" research to advance literacy learning.
Spring
1 Course Unit

EDUC 8405 Culture/Power/Subjectivities
This doctoral level course will introduce students to a conceptual language and theoretical tools for analyzing and explaining the complex intersection of racialized, ethnic, gendered, sexual, and classed differences and asymmetrical social relations. The students will examine critically the interrelationships between culture, power, and subjectivity through a close reading of classical and contemporary social theory. Emphasis will be given to assessing the power of various theories for conceptualizing and explaining mechanisms of social stratification as well as the basis of social order and processes of social change.
Not Offered Every Year
Also Offered As: ANTH 7040, URBS 7060
Prerequisite: EDUC 5495
1 Course Unit

EDUC 8436 Narrating the Self
This seminar explores, in some linguistic detail, how narrators can partly construct their selves while telling autobiographical stories. The seminar addresses three questions: What is the structure of narrative discourse? How might we construct ourselves by telling stories about ourselves? If narrative is central to self-constructions, what is "the self"?
Not Offered Every Year
1 Course Unit

EDUC 8466 Craft of Ethnography
This course is designed to follow after Ethnographic Research Methods (EDUC 7468). In the introductory course, students learned how to use qualitative methods in conducting a brief field study. This advanced level course focuses on research design and specifically the craft of ethnographic research. Students will apply what they learn in the course in writing a proposal for a dissertation research project. Prerequisite: Must have completed EDUC 7468 or equivalent introductory qualitative methods course.
Not Offered Every Year
Also Offered As: ANTH 7070
1 Course Unit

EDUC 8480 International Educational Development Doctoral Proseminar
The IEDP Doctoral Proseminar covers the broad arena of international educational development. Drawing on the research experiences of the faculty and of the enrolled doctoral students, the course allows for the analysis of intellectual and technical challenges of working in international education and development, especially around issues of social and public policy.
Fall or Spring
1 Course Unit

EDUC 8490 Education, Culture and Society
This course surveys basic issues in the philosophical and social foundations of education, addressing basic questions about the purpose of education, mostly through reading primary texts. Intended for incoming doctoral students.
Fall
1 Course Unit
EDUC 8560 ISHD Proseminar
This course gives students the opportunity to better understand their own psychological development and how this interacts with their scholarship and professional development. Required course for ISHD students.
Fall
1 Course Unit

EDUC 8629 Policy Research
Study of the roles of scientific inquiry in development and assessment of contemporary educational and social policy. Analysis and application of foundational research, statistical and psychometric methods to inform a variety of policy topics and related issues and problems encountered in policy formation and evaluation.
Spring
Prerequisite: EDUC 6667
1 Course Unit

EDUC 8671 Randomized Trials and Experiments
This course will cover three alternatives to conventional modeling in the social sciences: (1) design and execution of field trials in education and other social sectors including criminology, (2) quasi-experiments especially contemporary research comparing results of randomized and non-randomized trials, and (3) analysis for descriptive and exploratory purposes. The course themes include causal inference, vulnerability of models applied to observational data, recent developments computer-intensive inductive approaches to data, and related matters. Although some methodological background papers will be discussed, the seminar is case study oriented with readings from contemporary research on the topics from peer reviewed journals and well-vetted reports issued by governmental and nongovernment agencies. Cases will include work supported by IES on effects of Odyssey Math, for example, and work in the crime and justice arena. We will study the work of scholars affiliated with Penn who are actively involved in randomized and non-randomized trials, for instance, and the work of colleagues at other universities (Berkeley, Northwestern, Wisconsin, Princeton, others) and colleagues in non-profit and for profit research organizations such as Analytica, AIR, Mathematica and others that contribute to learning in this arena.
Fall
1 Course Unit

EDUC 8680 Complex, Multilevel, and Longitudinal Research Models
Strategy, application, interpretation, and reporting for simple and complex factorial, repeated measures, time series, higher-order growth, unbalanced, and multiple constant and inconstant covariates designs; error covariance structure modeling, hierarchical linear modeling, multilevel cross-classification modeling, multilevel individual growth-curve modeling, multiple-group multilevel modeling, multilevel generalized linear modeling for discrete outcomes (multilevel multiple logistic regression); Receiver Operating Characteristic curve analysis; latent growth mixture modeling.
Fall
Prerequisite: EDUC 7667
1 Course Unit

EDUC 8681 Classifications, Profiles, and Latent Growth Mixture Models
Multivariate strategies for prediction of binary, ordered and categorical outcomes and for classification accuracy and hypothesis testing; finite mixture modeling for discovery, validity and explanation of latent subgroups of profiles and change trajectories. Methods include multiple logistic and multinomial logistic regression, Receiver Operating Characteristic curve analysis, multiple discriminant analysis, hierarchical cluster analysis, multidimensional classification analysis, latent profile analysis, latent transition analysis, and latent growth mixture modeling.
Spring
Prerequisite: EDUC 7667
1 Course Unit

EDUC 8710 Advanced Analysis in the Economics of Education
This course will review current papers in the economics of education, with a focus on policy research related to the provision and regulation of publicly provided education. The course pays special attention to: i) the use of causal research designs in answering questions relevant for policy, and ii) the application of economic principles to issues in education. The course is designed as a seminar for Ph.D. students to build skills in critiquing studies that employ experimental and quasi-experimental methods, such as randomized control trials, regression discontinuity, instrumental variables, etc. The papers covered in the course will examine questions in education policy through the perspective of economics and issues related to trade-offs, incentives, the analytic process, and the distribution of costs and benefits. Students will also be asked to consider applications of these methods and their related assumptions, in their own work. The course is intended for students who have a solid understanding of methods typically used in econometrics or statistics to estimate causal effects. Prerequisite: This course is primarily intended for Ph.D. students who have taken or who are currently taking a course on experimental and quasi-experimental methods of causal inference and who have had an introductory course in economic perspectives in education research.
1 Course Unit

EDUC 8762 Applied Research & Reporting
Hands-on experience presenting applied research. Students will be guided through a research project of relevance to education or social policy chosen by the student, with assistance from the instructor. The course entails presenting findings from the analysis of one or more data sets of the students’ choosing. The students will present work based on journal-length paper expectations based on their research and respond to the reviews of classmates and the instructor. Prerequisite: Competence in basic statistics and computer literacy.
Fall
1 Course Unit

EDUC 9126 Doctoral Foundations of Teaching and Learning
The course explores theoretical and empirical perspectives on the questions: What is knowledge and knowing? What is learning? What is teaching? How do contexts influence teaching, knowing and learning? A central goal of the course is to encourage students to consider these questions and their interconnections for themselves, to examine ways scholars and practitioners have answered them, and to develop an analytical framework to use in examining contemporary practices in settings that include formal and informal, urban and international.
Spring
1 Course Unit
EDUC 9205 Research Seminar: Language Policy and Education
Seminar participants are introduced to concepts, theories, and methods in the field of language planning and policy, which they then apply in developing their own library-based research on specific language planning cases from around the world. Cases may include: official language decisions, instructional medium choices, literacy initiatives, gender-neutral language reforms, foreign/heritage/second language pedagogy and policy, indigenous language revitalization efforts, or other language-related decisions and policies at international, national or local levels. Prerequisite: Permission needed from instructor.
Not Offered Every Year
1 Course Unit

EDUC 9210 Issues in Second Language Acquisition
This course is designed for students to be able to analyze, synthesize and discuss second language acquisition theory and research on the basis of intensive reading of work that reflects perennial and current issues in the field. Comparisons and connections are drawn from theoretical and empirical literature on second language acquisition processes, constraints, and interventions. Relevant research methods are also addressed. Topics, issues, and readings are updated each time the course is offered. Prerequisite: Permission needed from instructor.
Not Offered Every Year
Prerequisite: EDUC 7225
1 Course Unit

EDUC 9215 Genealogies of Race and Language in Educational Research
This course explores the historical and contemporary co-construction of race and language in educational research. As opposed to treating race and language as self-evident and universal concepts, the course adopts a genealogical perspective that examines their historical development within the context of European colonialism and critically analyzes the legacy of these colonial ideologies in contemporary educational research, policy and practice. Students engage with a range of foundational theoretical and methodological texts to develop a robust understanding of the historical and contemporary relationship between race and language. Students also read, analyze and critique educational research that has sought to apply these theoretical and methodological insights. The course will culminate in students undertaking genealogical research projects on questions of race and language connected to their own educational research interests.
Fall
Also Offered As: LALS 9215
1 Course Unit

EDUC 9317 Research Seminar: Language and Power
The course examines the relationship between language, meaning and power in their social context. The course is organized around a number of core themes: Language studies rooted in Critical Discourse analysis; The application of Bourdieu's concepts to this field; multi modality; the growing concern with 'Superdiversity' that links Local/Global; academic literacies, with particular reference to the writing required in students' own contexts; and methodological issues in researching language and power; and we then bring all of this to bear on our own context under the heading 'language in education'.
Not Offered Every Year
1 Course Unit

EDUC 9320 Research Seminar in Reading and Writing
For doctoral candidates and others engaged in research and advanced professional study in the field of literacy.
Spring
1 Course Unit

EDUC 9325 Research Seminar in Literacy
This seminar is designed for students to be able to analyze, synthesize and discuss research on the field of literacy. They then apply in their own projects, which may include a range of literacy-related topics such as education, politics, culture, and the media.
Not Offered Every Year
1 Course Unit

EDUC 9360 Advanced Research in Human Learning and Development
Selected topics from human learning, human development, cognitive processes, social psychology, and personality.

EDUC 9764 Research Seminar in Applied Research Synthesis Methods
Issues in research design, development of a literature review, and dissertation proposal.
Fall
1 Course Unit

Education - Education Entrepreneurship (EDEN)

These courses are only for students enrolled in the Education Entrepreneurship program.

EDEN 5010 Entrepreneurship in Education
Entrepreneurship in Education provides an understanding of the nature of entrepreneurship related to public/private/for profit and non-profit educational and social organizations. The course focuses on issues of management, strategies and financing of early stage entrepreneurial ventures, and on entrepreneurship in established educational organizations. Students will learn the fundamentals of business plan design and development. This course is only available to students in the Education Entrepreneurship program. Prerequisite: Enrollment in Education Entrepreneurship program.
Summer Term
0.5-1 Course Unit

EDEN 5020 Foundations of Education
Foundations of Education surveys basic issues in the philosophical and social foundations of education. The course addresses basic questions about the purpose of education, the appropriate treatment for children from different cultural and economic groups and the relationship between rigor and relevance. Intended for advanced Masters and doctoral students. Prerequisite: Enrollment in Education Entrepreneurship program.
Summer Term
0.5-1 Course Unit

EDEN 5030 Management in Education
Management in Education introduces the critical management skills involved in planning, structuring, controlling and leading an organization. The course provides a framework for understanding issues involved in both managing and being managed. The class develops a systems view of organizations, examining organizations as part of a context, including but not limited to environment, strategy, structure, culture, tasks, people and outputs. Students consider how managerial decisions made in any one of these domains affect decisions in each of the others. Prerequisite: Enrollment in Education Entrepreneurship program.
Summer Term
0.5-1 Course Unit
EDEN 5040 Capstone (Part 1)
The Capstone Experience is the culminating project of the EdEnt Program. Students acquire and develop the foundations for the ideation, design and launch of an innovative education venture whether entrepreneurial or intrapreneurial. The process of developing the project is an integrative one that brings together the concepts, tools, approaches and frameworks learned throughout the Program. Students start with an idea, build a business case, and then validate their idea using a series of evaluative methods and tests learned through coursework, independent research, product/service design and development activities. The Capstone Experience concludes with the presentation of a new Venture Pitch and the submission of a pro forma Business Plan suitable for presenting to prospective customers, end users, investors, funders, business partners, staff and other ecosystem stakeholders. The process equips an entrepreneur or an intrapreneur to tackle the next steps of launching their venture - whether that is building a minimally viable product, testing with customers, bringing on team members or seeking funding. Prerequisite: Enrollment Education Entrepreneurship program. Fall 0.5-1 Course Unit

EDEN 5040A Capstone
The Capstone Experience is the culminating project of the EdEnt Program. Students acquire and develop the foundations for the ideation, design and launch of an innovative education venture whether entrepreneurial or intrapreneurial. The process of developing the project is an integrative one that brings together the concepts, tools, approaches and frameworks learned throughout the Program. Students start with an idea, build a business case, and then validate their idea using a series of evaluative methods and tests learned through coursework, independent research, product/service design and development activities. The Capstone Experience concludes with the presentation of a new Venture Pitch and the submission of a pro forma Business Plan suitable for presenting to prospective customers, end users, investors, funders, business partners, staff and other ecosystem stakeholders. The process equips an entrepreneur or an intrapreneur to tackle the next steps of launching their venture - whether that is building a minimally viable product, testing with customers, bringing on team members or seeking funding. Prerequisite: Enrollment Education Entrepreneurship program. Fall 0-0.5 Course Units

EDEN 5040B Capstone
The Capstone Experience is the culminating project of the EdEnt Program. Students acquire and develop the foundations for the ideation, design and launch of an innovative education venture whether entrepreneurial or intrapreneurial. The process of developing the project is an integrative one that brings together the concepts, tools, approaches and frameworks learned throughout the Program. Students start with an idea, build a business case, and then validate their idea using a series of evaluative methods and tests learned through coursework, independent research, product/service design and development activities. The Capstone Experience concludes with the presentation of a new Venture Pitch and the submission of a pro forma Business Plan suitable for presenting to prospective customers, end users, investors, funders, business partners, staff and other ecosystem stakeholders. The process equips an entrepreneur or an intrapreneur to tackle the next steps of launching their venture - whether that is building a minimally viable product, testing with customers, bringing on team members or seeking funding. Prerequisite: Enrollment Education Entrepreneurship program. Spring 0-0.5 Course Units

EDEN 5040C Capstone
The Capstone Experience is the culminating project of the EdEnt Program. Students acquire and develop the foundations for the ideation, design and launch of an innovative education venture whether entrepreneurial or intrapreneurial. The process of developing the project is an integrative one that brings together the concepts, tools, approaches and frameworks learned throughout the Program. Students start with an idea, build a business case, and then validate their idea using a series of evaluative methods and tests learned through coursework, independent research, product/service design and development activities. Prerequisite: Enrollment Education Entrepreneurship program. Summer Term 0-0.5 Course Units

EDEN 5050 Foundations of Teaching, Learning & Curriculum
Teaching, Learning & Curriculum explores theoretical and empirical perspectives on the questions: What is knowledge and knowing? What is learning? What is teaching? How do contexts influence teaching, knowing, and learning? A central goal of the course is to encourage students to consider these questions and their interconnections, to examine ways scholars and practitioners have answered them, and to develop an analytical framework to use in examining contemporary practices in settings that include formal and informal, urban and international. Prerequisite: Enrollment in Education Entrepreneurship program. Fall 0.5-1 Course Unit

EDEN 5050 Economics of Education: Intro
This is a survey course at the introductory level designed to provide an overview of selected theoretical, conceptual and empirical perspectives on topics in the economics of education. We will apply economic principles to analyze a wide range of educational issues. This course assumes that students have no background in economics. Many of the readings will contain technical economic material, but the focus will be on the conceptual, theoretical and empirical findings of economic research within education. It is expected that you reflect on the findings we cover and how these findings may inform and relate to your educational and professional experiences, and how economic theory and empirical evidence might inform your business plan ideas. As we move through the course, you should gain a solid understanding of how economists think about and study education-related issues. Prerequisite: Enrollment Education Entrepreneurship program. Fall 0-0.5 Course Units

EDEN 5060 Design of Learning Environments
Design of Learning Environments examines different theoretical frames and strategies related to the study and design of learning environments in school, community and online contexts. Physical, social and cognitive aspects of learning situations are considered as students evaluate current research and applications in a variety of existing educational learning environments. Prerequisite: Enrollment in Education Entrepreneurship program. Spring 0.5-1 Course Unit
EDEN 5080 Technology Strategy
Technology Strategy is designed to meet the needs of future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using technology to improve business processes and offerings. The class will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems. Prerequisite: Enrollment in Education Entrepreneurship program.
Spring
0.5-1 Course Unit

EDEN 5090 Marketing for Entrepreneurs
Marketing for Entrepreneurs addresses how to design and implement the best combination of marketing efforts to carry out a firm’s strategy in its target markets. Specifically, this course seeks to develop the student’s (1) understanding of how the enterprise can benefit by creating and delivering value to its customers and stakeholders, and (2) skills in applying the analytical concepts and tools of marketing to such decisions as segmentation and targeting, branding, pricing, distribution, and promotion. Prerequisite: Enrollment in Education Entrepreneurship program.
Fall
0.5-1 Course Unit

EDEN 5100 Evaluation for Education Innovation
Evaluation for Education Innovation explores the use of exploratory, dynamic and adaptive frameworks for the evaluation of social sector programs, services and products. The course draws upon core principles and methodologies from business, design, entrepreneurship, engineering and the social sciences to help build, assess and scale education innovations. Students will learn how to assess effectiveness, quality, and value through real-world education cases, and how to use evaluation tools to drive the development of their education ventures. This course is only available to students in the Education Entrepreneurship program.
Spring
0.5-1 Course Unit

EDEN 5110 Economics of Education: Entrepreneurial Finance
Entrepreneurial Finance provides a step-by-step introduction to core finance concepts in the context of new venture design and innovation implementation planning. Main areas of course focus are solution pricing, creation of a sustainable business model, and development of a robust financial model. In this course, students will learn to use financial analytical tools and frameworks to enable a venture/innovation launch. Students will build a financial model for the venture one that will assist in making critical choices and assessing the attractiveness of an enterprise to potential stakeholders. Closing the course, we will address issues of funding and fundraising strategy. The emphasis of the course is on assisting students to apply knowledge and concepts towards their personal professional and career aspirations. Prerequisite: Enrollment in Education Entrepreneurship program.
0.5-1 Course Unit

EDEN 5130 Design of Learning Environments 2- Design Thinking
This course is structured for students to learn design thinking principles experientially. Design thinking is a critical tool and problem-solving methodology that is human-centered; values qualitative research merged with quantitative metrics; and applies prototyping to services, processes and experiences. Students will apply design thinking methods to conduct basic qualitative research and work to develop a new model for transformation on a real and relevant education challenge. This course is ideal for working professionals in the education, non-profit and social entrepreneurship sectors, wanting to apply a robust methodology that yields innovative insights and actionable results. This course is only available to students in the Education Entrepreneurship program.
0.5-1 Course Unit

EDEN 5140 Foundations of Education - Ecosystem
Through this course, students will examine global trends impacting education and learning; analyze their own enterprise idea in the context of the global EdTech Market Landscape; evaluate one possible scenario for the future of education and generated critical questions about the implications of different scenarios; and assessed the role of different data for decision making at the education market level. Prerequisite: Enrollment in Education Entrepreneurship program.
0.5-1 Course Unit

EDEN 5150 Capstone (Part 2)
The Capstone Experience is the culminating project of the EdEnt Program. Students acquire and develop the foundations for the ideation, design and launch of an innovative education venture whether entrepreneurial or intrapreneurial. The process of developing the project is an integrative one that brings together the concepts, tools, approaches and frameworks learned throughout the Program. Students start with an idea, build a business case, and then validate their idea using a series of evaluative methods and tests learned through coursework, independent research, product/service design and development activities. The Capstone Experience concludes with the presentation of a new Venture Pitch and the submission of a pro forma Business Plan suitable for presenting to prospective customers, end users, investors, funders, business partners, staff and other ecosystem stakeholders. The process equips an entrepreneur or an intrapreneur to tackle the next steps of launching their venture whether that is building a minimally viable product, testing with customers, bringing on team members or seeking funding. Prerequisite: Enrollment in Education Entrepreneurship program.
0.5-1 Course Unit

EDEN 6010 Schools as Organizations
Schools as Organizations focuses on the theory and research concerned with the organizational and occupational side to schools and teaching. The course draws from multiple fields and perspectives, including: organizational theory; the sociology of organizations, occupations and work; educational administration; and school leadership. The objective is to have students understand and evaluate a series of different perspectives from theory, research and policy concerned with the character of the teaching occupation and the organization of schools. Prerequisite: Enrollment in the Education Entrepreneurship program.
Summer Term
0.5-1 Course Unit
EDEN 6020 Technology Strategy (Part 2)
Technology Strategy is designed to meet the needs of future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using technology to improve business processes and offerings. The class will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems. Prerequisite: Enrollment in Education Entrepreneurship program. Summer Term 0.5-1 Course Unit

EDHE 5010 Introduction to Doctoral Studies
Introduction to Doctoral Studies provides an introduction and orientation to the Executive Doctorate in Higher Education Management. This course highlights resources, strategies, and expectations for earning the Doctor of Education degree at Penn through GSE's Executive Doctorate program. Discussions center on students' background and goals, program curriculum and milestones, library resources and academic writing. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management. Summer Term 0.5 Course Units

EDHE 5020 Contemporary Issues
By introducing the key issues confronting (primarily American) higher education, this course will encourage students to develop the capacity to identify, summarize and critique arguments and perspectives on these issues. Students will think concretely about the key research questions that need to be asked and answered to move these issues forward, and will begin to develop an appreciation for the kinds of data that are available to describe and analyze these issues. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management. Summer Term 0.5 Course Units

EDHE 5030 Why History Matters
How an institution remembers its history, what use it makes of its important historical moments, and how the interpretation of those events divide or coalesce an institutions stakeholders shape our understanding of the past and, often quite powerfully, shape the present. The task in Why History Matters is to use contemporary writing and original documents to sort through historical events as historians understand them and simultaneously to ask how those events shape our current views of higher education. The module argues that historical moments are rarely simply events that once happened. They matter because interpretations of the events - some of which occurred over long periods of time- are both controversial and become part of the institutional culture at an institution. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management. Fall 0.33 Course Units

EDHE 5040 Proseminar I
The purpose of Proseminar is to introduce students to the fundamentals of doctoral study: how to read scholarly materials critically, how to systematically review literature relevant to an area of inquiry, and how to formulate a focused research question (or set of interrelated questions). This course will help students conceptualize their research projects for their dissertations and assist them in formulating rough drafts of dissertation proposals. During monthly meetings, students spend much of their time developing literature reviews on their topics of interest and preparing for their dissertation proposal hearings. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management. Summer Term 0.5 Course Units

EDHE 5050 Proseminar II
This module builds upon Proseminar I and continues to explore the fundamentals of doctoral study: how to read scholarly materials critically, how to systematically review literature relevant to an area of inquiry, and how to formulate a focused research question (or set of interrelated questions). This course will help students conceptualize their research projects for their dissertations and assist them in formulating rough drafts of dissertation proposals. During monthly meetings, students spend much of their time developing literature reviews on their topics of interest and preparing for their dissertation proposal hearings. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management. Summer Term 0.67 Course Units

EDHE 5060 Strategic Management Research I
Through exploring key issues related to strategic management, students will come to an understanding of the types of possible research questions that might be pursued to enhance decision-making. This module will cover a set of topics at the heart of strategic management including management, governance, leadership, and strategic planning while maintaining focus on how the changing context of higher education influences these topics. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management. Fall 1 Course Unit

EDHE 5070 Quantitative Methods I
This course provides an overview of basic quantitative methods applicable to applied research in higher education. Students will develop the ability to recognize good data and good evidence, including the distinctions between data and evidence within the context of institutional decision-making. The course includes attention to basic approaches to quantitative research, methods of collecting and analyzing data, and usefulness of data and analyses for decision-making, and will draw on the real problems students in the class are facing in their current jobs. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management. Fall 0.33 Course Units
EDHE 5070A Quantitative Methods I
This course provides an overview of basic quantitative methods applicable to applied research in higher education. Students will develop the ability to recognize good data and good evidence, including the distinctions between data and evidence within the context of institutional decision-making. The course includes attention to basic approaches to quantitative research, methods of collecting and analyzing data, and usefulness of data and analyses for decision-making, and will draw on the real problems students in the class are facing in their current jobs. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Fall
0.33 Course Units

EDHE 5070B Quantitative Methods I
This course provides an overview of basic quantitative methods applicable to applied research in higher education. Students will develop the ability to recognize good data and good evidence, including the distinctions between data and evidence within the context of institutional decision-making. The course includes attention to basic approaches to quantitative research, methods of collecting and analyzing data, and usefulness of data and analyses for decision-making, and will draw on the real problems students in the class are facing in their current jobs. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Spring
0.33 Course Units

EDHE 5080A Qualitative Methods I
Intended to provide a survey of the field of qualitative research, this course focuses on foundational philosophies of qualitative inquiry and develops tools needed to conduct qualitative research. The course is designed to support students in developing a critical understanding of the various stages of qualitative research including the development of researchable questions, theoretical and conceptual frameworks, methodological stances and approaches, data collection and analysis plans as well as instrument design and implementation. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Fall
0.67 Course Units

EDHE 5080B Qualitative Methods I
Intended to provide a survey of the field of qualitative research, this course focuses on foundational philosophies of qualitative inquiry and develops tools needed to conduct qualitative research. The course is designed to support students in developing a critical understanding of the various stages of qualitative research including the development of researchable questions, theoretical and conceptual frameworks, methodological stances and approaches, data collection and analysis plans as well as instrument design and implementation. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Spring
0.67 Course Units

EDHE 5090 Public Policy
This module is designed to help students embrace a better understanding of the broad economic/political pressures facing colleges/universities today, the role of the state and federal governments and how these roles have changed over time, the public institutional tradeoffs related to changing policy environments at the state/federal level, and the political context of higher education and emerging issues related to public accountability. Through coursework, students examining one or more states in-depth, in terms of demographic, economic, and policy contexts as it relates to higher education. Course meets in Boulder, CO. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Fall
1 Course Unit

EDHE 5100 Leadership and Change
The module on Leadership explores how executives and senior managers in higher education can think strategically and communicate persuasively, act decisively, and build leadership and teamwork in their organizations. Students apply theory and models to real world cases, both contemporary and historical, from multiple industries. Students focus on building leadership and teamwork to anticipate challenges ahead of serving long-term organizational interests, executing decisions and policies with integrity, and identifying an mentoring those whose leadership will be needed in the future. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Fall or Spring
0.33 Course Units

EDHE 5110 Leading Small Colleges
This module focuses on strategies for the sustainability and growth of small colleges, asking what is required to improve competitive standing, particularly among top colleges. Students analyze real data from an institution to develop an action plan to address this question, with the assumptions made and questions asked to arrive at this plan carefully scrutinized during class discussion. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Fall or Spring
0.33 Course Units
EDHE 5120 Proseminar III
This module builds upon Proseminar II and continues to explore the fundamentals of doctoral study: how to read scholarly materials critically, how to systematically review literature relevant to an area of inquiry, and how to formulate a focused research question (or set of interrelated questions). This course will help students conceptualize their research projects for their dissertations and assist them in formulating rough drafts of dissertation proposals. During monthly meetings, students spend much of their time developing literature reviews on their topics of interest and preparing for their dissertation proposal hearings. EDHE 5190 The University and its Community
This course will focus on the past, present, and likely future of university-community relationships. It will provide an overview of university-community conflict, cooperation and collaboration from the colonial college to the present. Particular emphasis will be placed on developments since the early 1990s and the birth of what might be termed the engaged, democratic, civic university responsibility movement. Various approaches to university-community partnerships in the US and abroad will be discussed. Through readings, discussion, and written assignments, students will develop strategies for developing effective democratic partnerships that would positively impact the community and the university and powerfully contribute to student learning and development. Prerequisite: Enrollment in Executive Doctorate in Higher Education.

EDHE 5260 Managing Change in Higher Education I
The social context, the expectations, and the consumers of post-secondary learning and credentials have evolved significantly over the history of higher education in the US. They continue to evolve in ways that must shape the operation of our colleges and universities, the student experience, and the outcomes that result. Change is essential for healthy survival, so why are institutions designed to teach evolving knowledge, nurture curiosity, and model continuous improvement so hard to change? What management and leadership skills are needed to manage the facilitation of change despite institutional inertia? How can we identify and prioritize necessary changes, especially when resources are limited? This course explores research and theory on how higher education leaders, at all levels, in all types of institutions, can manage the change process, with close attention to practical, proven strategies from within and outside of higher education.

EDHE 6010 International Context
The Higher Education in International Contexts course provides students with exposure to issues facing international higher education and uses this exposure to reflect on higher education in the United States. The course will be centered on an experiential field research project. Students will travel to another country to meet and collaborate with higher education leaders there to learn firsthand about the challenges and opportunities associated with developing and transforming higher education. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Summer Term
2 Course Units

EDHE 6015 Research Perspectives Focusing on Successful Research Projects
This Module comprises five conversations about research. The Module's central premise, simply stated, is that truly influential research focuses on a puzzle a researcher wants to solve as elegantly and completely as possible. The module's goals include developing a capacity to identify the specific puzzle a researcher has set out to solve, to judge whether the proposed solution is satisfactory or not, whether the puzzle can or should lead to additional research, and whether the research represents a significant methodological advancement.

EDHE 6020 Student and Campus Services
A scan of most any American college or university will reveal a wide variety of services, functions and activities offered in support of student learning, student expectations and student life. Such functions include robust athletic and recreation programs, comprehensive health care and comprehensive arts, culture, diversity and community service programs. Many argue the essential nature of these functions; other decry the excessive hand-holding of students and the substantial expense of these services and functions. In this module, students will review the complex landscape of campus services intended predominantly for student support and engagement. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Fall
0.33 Course Units

EDHE 6030 Technology
In this module we will discuss a range of Information Technology goals (and challenges) shared by most colleges and universities, and they may be pursued through local IT infrastructure or services contracted with external entities. We will discuss IT challenges and opportunities especially relevant to the higher education sector, making the practice of IT at a college or university different from IT in most small and large corporations. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Fall or Spring
0.33 Course Units

EDHE 6040 Higher Education Law
This module explores topics such as contract law, employment law, Constitutional law (freedom of speech, due process, equal protection), tort law (liability for negligence), anti-discrimination laws, and administrative law. The premise of this module is that a successful higher education executive has an understanding of the legal environment in which colleges and universities must function today. The objective of the module is to provide this understanding. From a pragmatic perspective, this knowledge enables a higher education administrator to employ preventive legal strategies in institutional decision-making. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Fall
0.33 Course Units

EDHE 6050 Enrollment Management
Enrollment management is an organizational concept with a varying set of associated strategies for achieving institutional goals. Based on institutional type and mission, these goals can range from increasing and diversifying enrollment to optimizing tuition revenue. The impact of enrollment management over the last several decades has caused institutional leaders and the public to recast their strategic foci and reexamine their values regarding higher education. This course will provide an overview of multiple enrollment management models. Students will be asked to consider the evolution and maturation of these models, the related implications of these organizational structures and strategies, and the benefits and drawbacks of enrollment management on institutions and the marketplace. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Fall
0.33 Course Units

EDHE 6060 Dissertation Workshop I
Designed to support students through the dissertation process, this course will cover topics such as: submitting to the IRB; selecting an analytic strategy; data collection and management; coding and data analysis; and structuring dissertation chapters. Students will us a structured timeline in order to successfully defend their dissertations in the spring of their second year of the program. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Fall
1 Course Unit

EDHE 6070 Higher Ed Entrepreneurship
The purpose of this module is to focus on an emerging future in light of today’s demands, particularly balancing entrepreneurial demands with public purpose objectives. This module asks, 1) what is the future going to hold? and 2) how must college and university leaders respond? Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Fall
0.33 Course Units

EDHE 6080 New Models for Post-Secondary Education
This course will create a foundation to understand the push for reform in higher education, examine in depth several new approaches to post-secondary education in the United States, and develop frameworks for assessing new models of post-secondary education. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Fall
0.33 Course Units

EDHE 6090 Capstone Seminar
The Capstone module offers a culminating experience for students to share and discuss their intellectual and professional experiences in the program and how this has prepared them for the future. It is also an opportunity for students to provide feedback on the curriculum, pedagogy, and other program elements. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Spring
0.33 Course Units

EDHE 6100 Advancement
In this course, students will develop an in-depth understanding of institutional advancement and an ability to relate it to the broader management of colleges and universities. The course focuses primarily on how colleges and universities attract voluntary support, and will begin with an overview of advancement and external relations before moving on to fundraising specific issues. The history of fundraising, fundraising theory, fundraising ethics, fundraising tactics and other related topics will be discussed. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Spring
0.33 Course Units

EDHE 6110 Teaching and Learning
Through this course, students will be able to articulate the importance of student learning from a variety of perspectives; explain the role of organizational culture and how it interfaces with student learning; understand how issues of diversity and inclusive excellence support student learning; clarify what responsibilities administrators have as campus leaders to ensure student learning; identify existing barriers to student learning; and develop strategies to overcome those barriers. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Spring
0.33 Course Units
EDHE 6120 Negotiating & Bargaining
Through role-plays and exercises in class, the module addresses conflict management and negotiations through focusing on behavioral skills rather than substantive knowledge, putting relatively straightforward conceptual material to use in the context of real situations. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Spring
0.33 Course Units
EDHE 6130 Dissertation Workshop II
The purpose of this module is to build on and explore additional topics presented in Dissertation Workshop I. Designed to support students through the dissertation process, this course will cover topics such as: submitting to the IRB; selecting an analytic strategy; data collection and management; coding and data analysis; and structuring dissertation chapters. Students will use a structured timeline in order to successfully defend their dissertations in the spring of their second year of the program. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Spring
1 Course Unit
EDHE 6140 Ethics and Leadership
This module introduces some models of organizational and leadership ethics and uses case discussions and personal experiences to explore and better understand the ethical dilemmas that face leaders in higher education. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Spring
0.33 Course Units
EDHE 6150 Leadership and Change for Higher Education's Future
Most discussions of higher education's future focus on key and familiar trends- demographics, technology, funding, new organizational models, etc. While each trend will affect higher education, the reality is that leaders will face a multitude of challenges simultaneously and those trends will interact with each other. How can higher education leaders explore those trends and issues sufficiently and begin to prepare for how, as a set, they may impact higher education? Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
Fall
0.33 Course Units
EDHE 6160 Advanced Topics in Higher Education Management III
Seminar on special topics on higher education. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
0.33 Course Units
EDHE 6170 Community Colleges
This module examines the historical origins, evolving mission, programmatic similarities and differences, demographics, performance, finances, governance, and presidential leadership of U.S. community colleges. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
0.33 Course Units
EDHE 6180 Virtual Distance Learning
In this course, you will experience Virtual Distance Analytics by participating in the Virtual Distance Index Assessment, receive your own Virtual Distance Management Report, detailing where Virtual Distance is most likely impacting you and your organization as well as content to master Virtual Distance in order to reduce and manage it over time for better educational outcomes. You will learn new leadership skills and core competencies to enhance your effectiveness in the Digital Age and help your students maximize their educational potential during this process of digital transformation. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.
0.33 Course Units
EDHE 6190 Quality/Risk Management
This module will focus on what leaders can do to induce a culture of quality within an academic environment. This course is only for students enrolled in the Higher Education Management executive program. Prerequisite: Enrollment in Executive Doctorate in Higher Education Management.

EDPR 6060 Capstone Preparation
At the end of the ISTR program, second-year students are expected to submit a final portfolio in website form to satisfy the requirements for their master's thesis. The goals of this course is to assist students in beginning to develop a vision for their final portfolio. Together, three portfolio check-ins, along with a full portfolio draft, are designed to scaffold this process for students. Spring of Year 2 .5 Credits 0.5 Course Units

EDPR 6070 Sharing Practitioner Research in Professional Settings
The goal of this course is to support students in developing their skills in how to be in continual conversation with other educational professionals. This capstone course requires second-year students to present their work to colleagues across the ISTR schools in order to begin conversations and generate excitement and new questions for students as they enter their post-ISTR professional life. Spring of Year 2 .5 Credits 0.5 Course Units
EDPR 6080 Advanced Field Seminar II
This course carries credit for the weekly school-based course for the spring of the 2nd year. During this course, which functions as a field seminar, fellows receive focused support around planning, grading, assessment, and other school duties such as coaching and advising. This course also supports students to observe other members of the school community and learn from school-based experts in counseling, learning differences, and diversity. Prerequisite: Enrollment in Independent School Teaching Residency Program.

EDPR 6090 Final Master’s Portfolio Seminar
This course requires students in their second year of the ISTR program to demonstrate their learning, reflecting on and discussing their own trajectory as an educator thus far by bringing together artifacts, texts, and experiences from across the three strands of the ISTR program. Broadly, their portfolio will tell the story of who they are as educators and how they have come to be the educator they are today. This course is a core graduation requirement, thus students cannot graduate without a passing grade for the final portfolio.

EDPR 6100 Methods II- World Language
In the second of two subject methods courses, students focus on foundations of disciplinary knowledge for their subject area. Courses focusing on English, history, mathematics, science, and world languages are offered. In this course, students focus on planning larger units of instruction from one to multiple weeks. Prerequisite: Enrollment in Independent School Teaching Residency Program.

EDPR 6100A Methods II- World Language

EDME 5030 Managing Technology in Curriculum in Medical Education
This course is embedded in a block of three courses focusing on learning and technology in medical education. This course focuses on selecting, embedding and managing technology in the medical education curriculum. Topics include the role of experiential learning in medical education, simulation, the virtual learning environment and emerging technologies, group dynamics, and the instructor-learner relationship. Prerequisite: Enrollment in Medical Education program.
Fall
1 Course Unit
EDME 5040 Evidence Based Medical Education
This course is embedded in a block of three courses focusing on research in medical education. This course focuses on research and research methods in medical education. Topics include quantitative, qualitative, and mixed methods research design in medical education. Specifically, students will explore the philosophical foundation of research, conducting the literature review, introduction to quantitative and qualitative data collection and analysis, the role of language in research, and developing research questions. Prerequisite: Enrollment in Medical Education program.
Spring
1 Course Unit

EDME 5050 Assessing Medical Instruction
This course is embedded in a block of three courses focusing on research in medical education. This course focuses on research and research methods to measure the effectiveness of medical education practices. Topics include assessment of learning outcomes, how to critically evaluate medical education research, evaluating the impact of learning interventions, and evidence-based decision making. Prerequisite: Enrollment in Medical Education program.
Spring
1 Course Unit

EDME 5060 Evidence Based Medical Education II
This course is embedded in a block of three courses focusing on research in medical education. This course focuses on advanced topics in research and research methods in medical education, as well as the development of medical educator skills. Specific topics include advanced quantitative, qualitative, and mixed methods research skills, and medical educator skills (e.g., story development, coaching, remediation and feedback, and presentation skills). Prerequisite: Enrollment in Medical Education program.
Summer Term
1 Course Unit

EDME 6010 Leadership Skills in Education
This course is embedded in a block of three courses focusing on leadership in healthcare and medical education. This course focuses on leadership theories, models, and skills. Topics include a historical review of leadership theories and models, as well as an exploration of current research on leading education in organizations. Students will explore the competency-based approach to understanding effective leadership, emotional intelligence, employee engagement and happiness at work, and team dynamics as they relate to the medical education context. Prerequisite: Enrollment in Medical Education program.
Summer Term
1 Course Unit

EDME 6020 Leadership Effectiveness in Medical Education
This course is embedded in a block of three courses focusing on leadership in healthcare and medical education. This course focuses on individual leadership development and will provide students with experiences, perspectives, and theories that will enable them to better understand themselves in the context of a diverse, changing world and a rapidly changing industry. Topics covered include adult development, adult learning, perception, bias, diversity and inclusion, emotional and social intelligence, and the role of values and ethics in leadership. Prerequisite: Enrollment in Medical Education program.
Fall
1 Course Unit

EDME 6030 Directing Education Programs
This course is embedded in a block of three courses focusing on leadership in healthcare and medical education. This course focuses how to lead medical education in a complex organization embedded in a complex and changing industry. Students will explore a systems perspective of organizational effectiveness, focusing on current research and practices in the areas of organizational culture, organizational change, organizational effectiveness, and organizational diagnosis. Prerequisite: Enrollment in Medical Education program.
Fall
1 Course Unit

EDME 6040 Capstone: Leadership in Medical Education I
This course focuses on academic and practical skills needed to prepare students for the final Capstone assignment, inclusive of all elements of the masters thesis portfolio. Specific topics include influencing across cultural boundaries in organizations, building teams to create sustainable change, and advanced medical educator skills (e.g., story development, coaching, remediation and feedback, and presentation skills). Prerequisite: Enrollment in Medical Education program.

Education - Mid-Career Educational & Organizational Leadership (EDMC)
These courses are only for students enrolled in the Mid-Career Doctoral Program in Educational & Organizational Leadership.

EDMC 5000 Mid-Career Educational Leadership Experimental Course
This topic course explores multiple and different aspects of Mid-Career Educational Leadership. Specific course topics vary from year to year. Consult with the program for current course offerings.
0.5-1 Course Unit

EDMC 5000A Mid-Career Educational Leadership Experimental Course
This topic course explores multiple and different aspects of Mid-Career Educational Leadership. Specific course topics vary from year to year. Consult with the program for current course offerings.
Not Offered Every Year
0-1 Course Unit

EDMC 5000B Mid-Career Educational Leadership Experimental Course
This topic course explores multiple and different aspects of Mid-Career Educational Leadership. Specific course topics vary from year to year. Consult with the program for current course offerings.
Not Offered Every Year
0-1 Course Unit

EDMC 6010 Leading Teams and Fostering Learning Communities
This module is designed to help students learn what is known about teams and team leadership. It will be both research and case based. Drawing on the research literature, it will help students understand the nature of the different kinds of work teams are asked to do and how teams may be structured for effectiveness, depending on their objectives. Students will be asked to examine cases that reflect different objectives and different designs. Through a field-based assignment and other experiential learning opportunities, particular emphasis will be given to the various kinds of teams and groups principals, heads of schools, superintendents and others associated with the educational enterprise must work with and lead.
Summer Term
0.5 Course Units
EDMC 6020 Social Foundations of Education
In this module, you will have the opportunity to scrutinize the ethical, political, and philosophical principles underlying our educational practices. In the first session we will consider competing visions of the goals and aims of education. We will then explore various proposals for the scope and content of schooling in a democratic and multicultural society, and some of the challenges that arise therein. We will conclude with normative frameworks and conceptual resources that will enable you to translate abstract and philosophical thinking into effective and thoughtful action. Throughout the course you will learn how to read historical and contemporary works of scholarship with analytical precision, how to distill complex ideas for a wider and non-specialist audience, and how to reason thoughtfully with others about ethically and politically contested issues.
Summer Term
0.5 Course Units

EDMC 6040 Online Research and Writing
Independent writing and research time for students. Supported by writing coach.
Summer Term
1.5 Course Unit

EDMC 6050A Frameworks for Understanding Literacy, Teaching & Learning
Designed as a collaborative inquiry, this module will provide a range of contexts for exploring the nature and purposes of literacy education in the 21st century. Individually and collectively, we will unpack the “conceptual frameworks”—the images, practices, assumptions, and beliefs—that structure our understanding of what it means to teach and learn literacy in various settings. We will “read” critically the current literature, classroom and school practices, as well as the public/policy discourse about literacy. From our reading, writing and talking, we hope to develop richer and more compelling understandings of what counts as literacy teaching and learning in order to pursue important issues about leadership for literacy learning. Our process will entail investigation into your literacy history/herstory, various educational settings, and current policies related to literacy education - with an emphasis on considering questions that are most pertinent to your current workplace and career aspirations.
Two Term Class, Student may enter either term; credit given after both terms are complete
0.25 Course Units

EDMC 6060 Exploring Frameworks for Learners and Learning
This module will use a contextual approach to examine individual developmental issues across the life-course, specifically learner’s identities and pathways to learning. In addition to investigating how children learn at school, home, and in their communities, students in the course will become their own units of analyses. It is sometimes advantageous in fields of education and social science to regard oneself and life experiences as a point of departure in order to make sense of larger social forces. To that end, we will reflect on our own learning at different points throughout our lives and within a variety of social and educational contexts. This approach assumes that educational leaders might better understand and respond to developmental issues and identity formation of teachers and students by (re)examining our own biographies as learners and professionals and the interconnectedness of these roles and the expectations associated with them.
Fall
0.5 Course Units

EDMC 6070 Qualitative Research Methods I
This year-long course will introduce students to the foundations, theories, methods, and practices of qualitative inquiry broadly and practitioner research specifically. This course is intended to teach students, who are educational leaders, what research is, both historically and currently, and in terms of its promise for guiding informed, inquiry-based practices, including the practices of change and reform. Further, this course is designed to prepare students to conduct qualitative research in their own educational or community-based settings. Students will be guided through a systematic and self-reflective process of learning to become reflective, ethical, and critical researchers. Students will be supported as they develop a theoretically strong practice of qualitative research that is directly informed by their own professional experiences, questions, and contexts.
Fall
0.5 Course Units
EDMC 6080 Quantitative Methods I
This module focuses on the use of statistics for analyzing numerical data from educational contexts. The course materials and assignments are designed to help you gain the skills and knowledge required to plan and conduct high quality quantitative research. As such, the curriculum for this course focuses on the statistical methods most frequently used in education research and provides examples of the application of these methods using real data. This is an applied methods course, so the content will not be highly technical. While we will discuss some of the details of the mathematics behind statistics, we will place much more emphasis on understanding the concepts behind the statistics. What does each method do? How does it work? How do we interpret the results?
Fall
0.5 Course Units

EDMC 6100 Public Leadership: Philosophy
In the US and many other countries, schools are often seen as having a responsibility to prepare students for citizenship in the nation or the world. So how does and should school prepare students for citizenship? In this module we will examine citizenship as a key aim of schooling. The tensions around this and other aims of schooling, the accommodation of difference, and the role of patriotism in education will be explored in relation to the preparation of the next generation of citizens. The overarching goal of the module is to explore how philosophy and theory concerning civic education can be used as a tool to deepen and contextualize problems that educational leaders encounter. The practical skills we will seek to build involve using academic and philosophical writing to analyze (in discourse and in writing) questions at the intersection of civic education and school leadership.
Fall
0.5 Course Units

EDMC 6110 Understanding Race and Politics
Using a culturally responsive philosophical world view and a racial socialization framework, this course will cover theoretical frames for shifting educational leaders’ assessment, engagement, and processing, and problem-solving of racial tension within educational contexts. The course will follow a self-development, emotions processing and interactive role-playing format where participants will offer experience from their own schooling and employment challenges where racial politics are at play. This course fits within the Understanding Context, Self, Others, Vision & Direction theme of the Mid-Career program. The objectives of this course include helping students to develop useful knowledge on racial literacy and practice of racial negotiation skills in the following areas: theorizing about managing racial politics in urban schooling, identifying the impact of racial microaggressions on psychological adjustment, applying problem-solving strategies to address racial tensions in relationships, policies, and curricula.

0.5 Course Units

EDMC 6120 Introduction to Education Research
This course is designed as a seminar that will introduce incoming Mid-Career doctoral students to reading, critiquing, and conceptualizing rigorous research in education. Quantitative, qualitative, and mixed methods examples of thoughtful, systematic, and well-executed research will be carefully examined. These texts will be analyzed in detail as a way to prepare students to understand and synthesize such research in their professional lives, other coursework, and later, for their dissertations and in their leadership as a whole. In particular, students will learn about the construction of effective research questions, the major quantitative and qualitative approaches to educational research, and what inferences can (and cannot) be made from the most common research designs. Students will also examine assumptions that underlay research questions in terms of sets of relationships between core concepts and processes, correlation, causation, and so on.

EDMC 6150A Public Leadership: History
This module will examine how Americans have used their public schools to make citizens, from the birth of the republic into the present. By 1850, the United States sent a greater fraction of its children to school than any other nation on earth. Why? What did young people learn there? And, most of all, how did these institutions both reflect and shape our evolving conceptions of America itself?
Two Term Class, Student may enter either term; credit given after both terms are complete

EDMC 6160 Leadership Seminar: Theory & Cases
This seminar is an opportunity to examine the challenges of leading organizational change. Central to enhancing one's leadership practice is the deepening of one's competency to frame and reframe challenges. At heart, this module is meant to raise questions and considerations around how we formulate problems and understand challenges and their potential solutions. It also aims to expand our understanding of interdisciplinary and cross-sector considerations in how we understand leadership and leading change. The format of this module intentionally brings together varying perspectives on leadership practice through four separate sessions taught by different instructors. The goal of the seminar is to help you further develop and build increased reframing skills. Conceptual frames will include change management theories, equity/social justice, and other recent leadership theory.

EDMC 6170 Exploring/Enacting Leadership for STEM
Broken into two parts, students will more deeply study and examine leadership in math and science, respectively. The goal of this integrated “non-module” is to provide you opportunities to explore leadership “problems of practice” related to math and science curriculum and instruction in your organization or for those you serve. Rather than participating in a traditional course, you will join a working group focused on a contemporary, practical challenge related to each subject area that education leaders must address. Your working group will develop a plan to address the challenge, implement the plan, and will then share with the rest of the cohort and community the product of your research and analysis. In the style of problem-based learning, you will be introduced to key readings and concepts in the fields of both math and science education through taking on the activities of the working group.

EDMC 7010 Proseminar I (Research Methods)
The goal of this course is to support you in your first steps toward forming your dissertation proposal. Beginning this process can be daunting for many doctoral students, but the clearer you are in articulating your research questions and the more knowledgeable you are about the research literature informing your questions, the more successful you will be in efficiently completing a strong proposal. To this end, we will focus on the relationship between reviewing the research literature, developing a conceptual framework, asking researchable questions, and choosing appropriate methods for addressing such questions.
Summer Term
0.5 Course Units

EDMC 7020 Leadership and Emotional Intelligence
The Leadership and Emotional Intelligence Module will focus on concepts and practices that will enable you to become a great leader. Through the study of social and emotional intelligence, you will become familiar with competencies that actually work in the real world of organizations and institutions. You will learn how these concepts have been identified, how they can be applied, and how to develop them in yourself and others. As part of the course, you will engage in reflective exercises that enable you to focus specifically on your own leadership - your strengths, your weaknesses, your vision for yourself as a person and as a professional, and how you plan to realize this vision and your goals.
Summer Term
0.5 Course Units

EDMC 7030 Public Policy Workshop I
This course will be an in-depth, intensive examination of educational policy and politics in American schooling. We will explore major policy issues and practices that influence the experiences of teachers and children in educational institutions while locating educational politics in larger social policy contexts. Students will develop their skills for policy inquiry through analysis of the development, implementation, evaluation, and revision of policy initiatives and explore how policy issues are experienced within school sites. In addition, students will deepen their understandings of the roles of the federal, state, and local government in education, and will broaden their understanding and familiarity with major interest groups that have influence (formal and informal) over the politics of education. Finally, students will assess how competing values, preferences and purposes in education influence the ways in which we assess and evaluate educational policy. We will center issues of race, racism, and justice each day.

EDMC 7080 Research Proposal & Instrument Design I
In the first module, students will receive structured assistance as they develop a solid research plan that includes refining their research questions’ theoretical framework, identify and marshal literature in support of the planned study, devise a research design, identify and/or construct instruments to collect data, and produce a plan for analysis. Ideally, the first module will culminate in the completion of the dissertation proposal. The second module will focus on data collection and analysis as well as study implications. The two modules in this course are designed to provide structured support to students as they proceed with their dissertation work. While there will be didactic instruction on selected topics, significant time will be spent in small groups iteratively and collaboratively working through common challenges that students face in developing an empirical piece of research that emerges from their practice.
Fall

Fall
1 Course Unit

EDMC 7100 Organizational Diagnostics
We will explore sociological theories of organization in order to develop our diagnostic knowledge of how classrooms, schools, and education systems function. Our approach will be to consider foundational theoretical works alongside recent empirical applications. We will use case studies to help illuminate our understanding. In order to ground these concepts, students will diagnose cultural, political, and institutional facets of an educational organization.
Fall
0.5 Course Units

EDMC 7110 Engaging the Polis and Public of U.S. School Reform Landscape I
This module starts from the premise that schools are not only educational, but also social, political, and physical infrastructure. As such, they influence and are influenced by factors outside the traditional bounds of "education." In this course, we will use the frameworks, tools, and knowledge from planning and urban studies to turn a spatial lens on schools. We will grapple with the "place" of schooling within neighborhoods, cities, and regions. Substantively, we examine non-school arenas (i.e., housing, transportation, neighborhood development) and the ways these contextual factors set conditions for learning. We practice using specific tools and methods to make sense of schools in space and as place-based institutions. Additionally, having analysis of the what is necessary but never sufficient; we also have to think about the how.
To that end, we explore strategies for cross-sector collaboration across organizations, agencies, and with community and student stakeholders. We anchor discussions and make sense of readings and concepts in problems you identify from your practice. Through class meetings, course assignments, and multiple modes for learning, you will think about and share how concepts and tools from outside education inform and transform your own practice as an educator, administrator, and scholar.
Spring
0.5 Course Units

EDMC 7120 Data Informed Inquiries
The goal of this module is to learn to apply the concept of data informed improvement into our daily practice. The field of educational improvement shares a set of goals, frameworks, and methods with other fields like organizational learning in sociology, continuous improvement in business and evidence-informed improvements in medicine. Each of these fields has its own set of frameworks and language to describe the improvement process, but they are all based on the notion of using data to inform continuous learning and improvement.

0.5 Course Units

EDMC 7180 Instructional Technology
What does it mean to integrate technology into instruction? What is “technology”? Is it limited to the latest digital devices – computers, tablets, smartphones, and 3D printers? Or is it something more broad – the tools we use to augment spaces and practices for teaching and learning? We may agree that a laptop is a technology, but what about the technical innovations that enchanted policymakers, school leaders, and teachers of the past: moveable desks, overhead projectors, personal chalkboards, bell-schedules, or pencils? Even if we were to resolve these tensions, we are still left with the question of “integration.” What is it we integrate when we bring technologies into schools and classrooms? Are we integrating tools to be pedagogical resources – that is, as instruments to aid in making instruction more efficient or effective? Or are we integrating them to keep up with the demands of a changing world – one where students are expected to be prepared for “jobs that don’t yet exist” or to adapt to shifting standards for college- and career-readiness? How we answer such questions will undoubtedly shape our approach to technological integration. This module is designed as a shared inquiry into such questions and the beliefs and assumptions that condition our own (and others’) ways of addressing them. It involves exploration and analysis of historical and contemporary ideas about instructional technology, as well as the development of practical applications for such theories. Our focus will be on K–12 contexts; however, we will also consider how relevant experiences and practices with technologies outside of schools are related to what happens within.

EDMC 8010 Proseminar II: Data Analysis and Reporting
The goals of this module are twofold. First, it aims to provide students with a set of practical skills for making sense of qualitative and mixed data. Students will practice organizing and coding qualitative data, use various techniques to develop hypotheses and draw conclusions based on data, and apply these skills to their own dissertation research. Second, this module seeks to enable each student to make significant progress on his/her research over the course of the week.
Summer Term
0.5 Course Units

EDMC 8030 Dissertation/Research
Dedicated dissertation research hours in year three of the program. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Summer Term
2 Course Units

EDMC 8050A Inquiry Seminar
The purpose of the Inquiry Community session is two-fold: to provide students with assistance with problems that occur in the process of doing qualitative or quantitative data analysis and to develop reflective processes for examining data that students can use in their settings of practice. The sessions should serve the practical purpose of providing students with support as they solve problems associated with issues of interpretation, and work toward the completion of their dissertations. Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Two Term Class, Student may enter either term; credit given after both terms are complete
0.25 Course Units
EDMC 8050B Inquiry Seminar
The purpose of the Inquiry Community session is two-fold: to provide students with assistance with problems that occur in the process of doing qualitative or quantitative data analysis and to develop reflective processes for examining data that students can use in their settings of practice. The sessions should serve the practical purpose of providing students with support as they solve problems associated with issues of interpretation, and work toward the completion of their dissertations.

0.5 Course Units

EDMC 8060 Advanced Issues in Educational Leadership I
As a capstone integrative experience, this module allows students to revisit core themes raised in various modules during the program and provides an opportunity to extend prior module work in new synthetic ways. Sessions will revisit each student's leadership philosophy; engage constructs of decision-making and judgment; continue discussions around diversity and privilege; explore issues related to specialized topics such as school finance, entrepreneurship in education, and system-level leadership; engage alumni leadership challenges; re-engage data analysis; take a further view into the global field of educational leadership; and reprise the three-year program experience.
Fall

Dedicated dissertation research hours in year three of the program.
Prerequisite: Enrollment in Mid-Career Doctoral Program in Educational Leadership.
Fall
1.5 Course Unit

EDMC 8080 Leading Instructional and Curricular Change
This course is the Capstone Module for the Instructional Leadership strand of the Mid-Career Doctorate Program. A first emphasis of the module will be on several topics that have not yet been directly addressed during the program. The module is designed to provide opportunity to deal more intensively with topics and others that are identified through our initial discussions. A second focus of this course is on the process of collaborative problem-posing and problem-solving around issues in instructional leadership you are currently facing. To engage these topics and issues, we will draw on your experience as well as what has been addressed so far in the Instructional Leadership modules.

EDMC 8120A Engaging the Polis and Public Of U.S. School Reform II
What is the purpose of schooling? Why does education seem to be in a constant state of reform? How best to close opportunity gaps that characterize school systems in the United States? In this doctoral seminar, we will consider and debate these questions as we explore recent scholarship illuminating the politics of school reform. We will cover four topics: (a) desegregation, resegregation, and gentrification, (b) political movements for racial justice in schools, (c) teacher, teaching, and teacher education reform, and (d) equity and choice tradeoffs. Our goal is to develop a deeper understanding of the processes by which U.S. society constructs, prioritizes, and addresses education.
Two Term Class, Student may enter either term; credit given after both terms are complete

Education - Penn Chief Learning Officer (EDCL)

These courses are only available to students in the Penn Chief Learning Officer program.

EDCL 7010 Learning Technology in the Workplace
This course is embedded in a block of three courses focusing on the role of technology in learning at work. This course focuses on the evolution of technology in organizations and a review of the most current technologies in use in organizational learning today. Topics include the history of and new directions in learning technologies, emerging learning technologies, security and privacy in a high-tech world, evaluating technological solutions for organizational learning needs, and evaluating learning technologies in light of organizational goals. This course is only available to students in the Penn Chief Learning Officer program.
1-1.5 Course Unit
EDCL 7020 Technology Strategies for Corporate Learners
This course is embedded in a block of three courses focusing on the role of technology in learning at work. This course focuses on the role of technology in advancing learning in organizations. Topics include designing technology-enabled learning environments, using simulations, games, and apps, choosing and evaluating e-tools, educational entrepreneurship, evaluating technology-enabled learning interventions. Prerequisite: Enrollment in Penn Chief Learning Officer program.
1-1.5 Course Unit

EDCL 7030 Managing Technology in the Workplace
This course is embedded in a block of three courses focusing on the role of technology in learning at work. This course focuses on managing learning technologies in the modern organization. Topics include identification and selection of learning technologies, managing change, communication skills to influence decisions about technology change/adoption/implementation, and implementation of learning technologies. Prerequisite: Enrollment in Penn Chief Learning Officer program.
1-1.5 Course Unit

EDCL 7040 Individual Effectiveness
This course is embedded in a block of four courses focusing on leadership in organization. This course focuses on individual leadership development and will provide students with experiences, perspectives, and theories that will enable them to better understand themselves in the context of a diverse and changing world. Topics covered include adult development, adult learning, perception, bias, diversity and inclusion, emotional and social intelligence, and the role of values and ethics in leadership. Prerequisite: Enrollment in Penn Chief Learning Officer program.
1-1.5 Course Unit

EDCL 7050 Organizational Leadership
This course is embedded in a block of four courses focusing on leadership in organization. This course focuses on leadership in the context of the modern organization. Students will review the history of management science as well as current research and practices in the areas of organizational culture, organizational change, organizational effectiveness, organizational diagnosis, engagement and happiness at work, and coping with stress in leadership roles. Prerequisite: Enrollment in Penn Chief Learning Officer program.
1-1.5 Course Unit

EDCL 7060 Functional Leadership
This course is embedded in a block of four courses focusing on leadership in organization. This course focuses on managing teams within and across all functions of the organization, as well as functions in the organization that are responsible for talent management, leadership development, and human resources. Topics covered include team dynamics, organizational structure, talent management, and the impact of historical models and theories as well as globalization and demographic shifts that impact organizations. Prerequisite: Enrollment in Penn Chief Learning Officer program.
1-1.5 Course Unit

EDCL 7070 Learning Leader as Performance Consultant
This course is embedded in a block of three courses focusing on organizational learning. This course focuses on research and current practices in leadership development and organizational effectiveness. Topics covered include the models of individual change and development, the relationships among and between individual, team and organizational effectiveness, individual and large-scale leadership development, executive coaching, aligning and integrating learning and performance with organizational goals, and evaluation of learning interventions. Prerequisite: Enrollment in Penn Chief Learning Officer program.
1-1.5 Course Unit

EDCL 7080 Organizational Effectiveness
This course is embedded in a block of three courses focusing on organizational learning. This course focuses on the role of learning and development in organizational effectiveness. Topics covered include current learning practices in organizations, historical and current research on the efficacy of learning interventions in organizations, and designing learning interventions for individuals and groups in organizations. Prerequisite: Enrollment in Penn Chief Learning Officer program.
1-1.5 Course Unit

EDCL 7090 Organizational Learning
This course is embedded in a block of three courses focusing on organizational learning. This course focuses on theories and models of learning in organizations. Topics include learning theories, pedagogy and curriculum in adult learning, implications of the diverse global workforce for learning and development in organizations, organizational success and learning in an uncertain environment, and assessment of learning in organizations. Prerequisite: Enrollment in Penn Chief Learning Officer program.
1-1.5 Course Unit

EDCL 7100 Individual and Social Learning
This course is embedded in a block of three courses focusing on organizational learning. This course focuses on the role of cognition in learning as well as the impact of the social context on individual learning and change. Topics covered include the cultural foundations of learning, action learning, informal learning, and the impact of organizational culture on individual learning and organizational change. Prerequisite: Enrollment in Penn Chief Learning Officer program.
1-1.5 Course Unit

EDCL 7110 Marketing for Executives
This course is embedded in block of three courses focusing on business acumen. This course focuses on strategic marketing. Topics covered include research and practices related to branding, managing innovation, customer contact and customer service, communication in business, crisis communication, the interaction of marketing and strategy, and the impact of marketing on organizational effectiveness. Prerequisite: Enrollment in Penn Chief Learning Officer program.
1-1.5 Course Unit

EDCL 7120 Finance for Executives
This course is embedded in a block of three courses focusing on business acumen. This course focuses on business and corporate finance. Topics include basic financial tools, and practices, global finance, micro- and macroeconomics in the context of business finance, strategy and decision making, the relationship between strategy and finance, strategy execution, mergers and acquisition, and governance. Prerequisite: Enrollment in Penn Chief Learning Officer program.
1-1.5 Course Unit
EDCL 7130 Management for Executives
This course is embedded block of three courses focusing on business acumen. This course focuses on topics impacting the modern business world, as well as topics impacting not-for-profit, government and non-governmental organizations. Specific topics include global trends and strategy, people analytics, talent management, employee engagement, entrepreneurship, and social entrepreneurship. Prerequisite: Enrollment in Penn Chief Learning Officer program.
1-1.5 Course Unit

EDCL 7140 Masters Thesis (CLO)
This course guides students through a process of identifying a topic, reviewing historical and current literature, forming an argument for a research study, and writing the masters thesis. Prerequisite: Enrollment in Penn Chief Learning Officer program.
1 Course Unit

EDCL 7140A Masters Thesis (CLO)
This course guides students through a process of identifying a topic, reviewing historical and current literature, forming an argument for a research study, and writing the masters thesis. Prerequisite: Enrollment in Penn Chief Learning Officer program.
0-1 Course Unit

EDCL 7140B Masters Thesis (CLO)
This course guides students through a process of identifying a topic, reviewing historical and current literature, forming an argument for a research study, and writing the masters thesis. Prerequisite: Enrollment in Penn Chief Learning Officer program.
Fall
0-1 Course Unit

EDCL 7150 Qualitative Data Analysis
The course is embedded in a block of three courses focusing on evidence-based research. This course focuses on qualitative research in organizations. Topics include researcher positionality, theoretical and conceptual frameworks, the role of research questions in instrument development, common qualitative research data collection methods (e.g. interviews and focus groups), qualitative data analysis methods (e.g. coding, thematic analysis), and research ethics. Prerequisite: Enrollment in Penn Chief Learning Officer program.
1 Course Unit

EDCL 7160 Quantitative Data Analysis
The course is embedded in a block of three courses focusing on evidence-based research. This course focuses on qualitative research in organizations. Topics include hypothesis design and testing, variables, descriptive and analytic statistics, and critically evaluating quantitative and mixed methods research. Prerequisite: Enrollment in Penn Chief Learning Officer program.
1-1.5 Course Unit

EDCL 7170 Research Design & Delivery
The course is embedded in a block of three courses focusing on evidence-based research. This course focuses on qualitative, quantitative, and mixed methods research design. Topics include designing conceptual frameworks, designing research questions, conducting a literature review, designing qualitative and quantitative data collection and analysis methods (e.g. designing interview protocols and surveys), and research ethics. Prerequisite: Enrollment in Penn Chief Learning Officer program.
1-1.5 Course Unit

EDCL 8020 Practicum (CLO)
Practical application of academic program content. Prerequisite: Enrollment in Penn Chief Learning Officer program.
0 Course Units

EDCL 9950 Advanced Dissertation Research Methods
This course provides students with further development of research and writing skills, guidance on the formation of a research question, literature review, and research design for the doctoral dissertation. The course also provides guidance on conducting doctoral research and writing the dissertation. Under guidance of the chair of the dissertation committee, students will write a dissertation to be evaluated by the committee chair and committee members. Prerequisite: Enrollment in Penn Chief Learning Officer program.
0 Course Units

Education - School & Mental Health Counseling (EDSC)

These courses are only available to students in the Executive Program in School and Mental Health Counseling.

EDSC 5010 Ethics & Professional Principles in School & Mental Health Counseling
This course is designed to fulfill the Professional Orientation requirement of state licensure, as well as the Ethics and Professional Orientation requirement of the Planned Program of Study. It provides an opportunity for students to learn clinical skills and to refine skill application with clients. Students are also able to integrate theory and the other components of the program (Human Growth & Development, Social & Cultural Foundations, Helping Relationships) into practical application in this course. This course will assist students in the development of their knowledge and skills in ethical decision-making, ethical standards related to the field of school and mental counseling. In addition, a primary goal of this course is to help each student increase his/her knowledge of self as a provider of counseling services to others. Prerequisite: Enrollment in Executive Program in School and Mental Health Counseling.
Summer Term
1 Course Unit

EDSC 5020 Counseling Interventions: Theory & Practice
This course will provide an overview of several of the primary theories of counseling, along with the key concepts and therapeutic processes related to those theories. Students will be guided to demonstrate a working knowledge of the theories presented, to be able to distinguish between different approaches, and develop a preliminary rationale for the use of a particular approach. The main objectives of the course are for the student to develop a working knowledge of the theories of counseling and the practical counseling interventions derived from those theoretical perspectives, and to begin practicing the applications of this knowledge. Prerequisite: Enrollment in Executive Program in School and Mental Health Counseling.
Summer Term
1 Course Unit
EDSC 5030 School & Mental Health Counseling: Practicum I
This course emphasizes practical counseling experience utilizing rudimentary counseling skills when working with approved supervisors in school counseling programs, mental health agencies, and recording volunteer practice clients. All practicum sites have been pre-approved to meet certification standards. A primary purpose of this course is to provide beginning counseling students with a supportive learning environment and ground them in practical skills and application to the counseling profession. Students will have opportunities to practice, enhance, and refine their emerging counseling skills acquired in class, as well as through structured supervised learning opportunities in schools and clinical settings. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.

Summer Term
1 Course Unit

EDSC 5040 Assessment for Counselors in School & Mental Health Counseling
This course seeks to help students understand the assessment process including the theoretical and historical basis as well as legal and ethical concerns. Students will develop knowledge of concepts of measurement including descriptive statistics, central tendency, norms, reliability, validity, etc. This course will also review assessment as it relates to educational law, entitlement decisions, and high stakes accountability, in addition to teaching students how to implement assessment techniques through observation, interview and ecological and environmental methods. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.

Fall
1 Course Unit

EDSC 5050 Sociocultural Foundations in Counseling
Understanding sociocultural and individual differences is essential to the work of counselors. This course provides a contextual and applied understanding of working with clients who are culturally diverse. The purpose of this course is to expand one’s understanding of the impact of sociocultural and contextual factors, the interaction of identities, and the application of this knowledge to working with underserved and under-addressed individuals in counseling. Both intervention and prevention strategies will be addressed. The student will be required to demonstrate a working knowledge of key concepts in sociocultural counseling and the topical areas addressed in the course. Prerequisite: Enrollment in Executive Program in School and Mental Health Counseling.

1 Course Unit

EDSC 5060 School & Mental Health Counseling: Practicum I (Continued)
This course emphasizes practical counseling experience utilizing rudimentary counseling skills when working with approved supervisors in school counseling programs, mental health agencies, and recording volunteer practice clients. All practicum sites have been pre-approved to meet certification standards. A primary purpose of this course is to provide beginning counseling students with a supportive learning environment and ground them in practical skills and application to the counseling profession. Students will have opportunities to practice, enhance, and refine their emerging counseling skills acquired in class, as well as through structured supervised learning opportunities in schools and clinical settings. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.

0 Course Units

EDSC 5070 Human Development
This course explores the characteristics of developmental change over time - from infancy through late adulthood - and the processes or mechanisms underlying these changes. Students will gain an understanding of the fundamental theories and research traditions of the field, how variations in context influence development, and how theory and research can be applied to real world issues. Using a cultural ecological framework, we will examine theoretical approaches to the study of human development emphasizing the importance of contextual factors (e.g., race, ethnicity, culture, gender, socioeconomic status, historical moment, etc.) and individual perceptions in understanding growth and change. Students will be encouraged to explore developmental change and growth as they occur across different developmental periods of life and within a wide variety of settings and cultural contexts in order to help them begin to crystallize their own world-views and conceptual frameworks of human development. Throughout the semester we will search for new ideas, challenge old ones, and wrestle with paradoxical issues. Prerequisite: Enrollment in Executive Program in School and Mental Health Counseling.

0-1 Course Unit

EDSC 5080 Applied Quantitative Methods
This course is designed for counselors in training. To that end, this course will cover topics related to statistics and research methodology using instructional strategies intended to build the capacity of counselors-in-training to understand, interpret and use statistics and research methods to support their work with students, school staff, and school administrators. The majority of the course will involve a balance of lecture, discussion, and interactive practice activities, linking statistics and research methods to counseling and the real-world responsibilities of counselors-in-training. Prerequisite: Enrollment in Executive Program in School and Mental Health Counseling.
Spring
1 Course Unit

EDSC 5090 Career Counseling & Development
This course addresses career development throughout the life span. It includes the nature of work, career assessment measures, classification systems, and theory related to vocational planning. Student self-assessment, career guidance programs, and unique needs of special populations are covered. Prerequisite: Enrollment in Executive Program in School and Mental Health Counseling.
Spring
1 Course Unit

EDSC 5100 Group Counseling
This course is designed as an introduction to the use of groups in counseling practice. Its chief purpose is to provide students with an overview of basic elements of group process, with a focus on stages of group development; guidelines for multicultural practice; ethical and professional issues in group practice; and group leadership. The course is a combination of didactic and experiential elements, including demonstrations, short lectures, discussions of group process concerns, and questions and answers. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Spring
1 Course Unit

EDSC 5110 School & Mental Health Counseling: Practicum II
This course emphasizes practical counseling experience utilizing rudimentary counseling skills when working with approved supervisors in school counseling programs, mental health agencies, and recording volunteer practice clients. All practicum sites have been pre-approved to meet certification standards. A primary purpose of this course is to provide beginning counseling students with a supportive learning environment and ground them in practical skills and application to the counseling profession. Students will have opportunities to practice, enhance, and refine their emerging counseling skills acquired in class, as well as, through structured supervised learning opportunities in schools and clinical settings. The Practicum is the initial opportunity for students to synthesize and integrate theoretical information from course work into their individual counseling and small group work. These objectives are met at the clinical site, through individual recorded client sessions, and in class. An additional aim of this course is to help students increase and explore their own self-knowledge as providers of counseling services to others. The course promotes an awareness and better understanding of oneself, how individual understanding may impact professional practice; appreciation of others, reinforcing the importance of empathic attention to the needs of others differing from ones own (cultural, educational, and socioeconomic background); and professional development, emphasizing skill building, ethics, and providing counseling services. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Spring
1 Course Unit

EDSC 5120 School & Mental Health Counseling: Practicum III
This course is a continuation of Practicum II for students who need to complete their field placements. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Summer Term
0 Course Units

EDSC 6010 School and Mental Health Counseling: Internship I
This course provides the experience necessary to develop the skills to implement a comprehensive, developmental, and collaborative school counseling or mental health program. The course also translates knowledge, skills, attitudes to practice, and competencies that foster professionalism in school and community settings. Students will also complete supervised field experiences that provide actual on-the-job experience for a minimum of 420 clock hours of instructional experience for school counselor certification and/or 600 clock hours of supervised internship and a minimum of 240 hours of direct service to individuals and groups for Licensed Professional Counselor (LPC) eligibility. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Summer Term
1 Course Unit
EDSC 6020 Advanced Group & Family Systems Counseling
This course will focus on the basics of systems intervention with a specific focus on families and groups, and a second focus on diversity and racial stress and literacy in systems. The purpose is to develop more advanced knowledge of practical therapeutic problem-solving skills at the graduate student level using ecological, systemic, and cultural perspectives. Students will be exposed to basic group therapy strategies with children and youth, with family interventions across various school-based emotional health diagnostic populations, and how to intervene within groups and families in which cultural differences and styles are key themes. The student will be required to demonstrate a working knowledge of the key concepts in systems intervention, to make preliminary judgments about how to apply various strategies to specific problems in a variety of naturalized and formal therapeutic contexts including schools, homes, and community centers, and evaluated on the ability to react spontaneously to moment-by-moment shifts in group and family therapy processes. Students will also be challenged to develop a preliminary rationale for a systemic theory of behavior change. Given the diversity of clients that counselors see professionally, some demonstrated knowledge of how cultural differences will be addressed in the counseling session and in the relationships of larger societal institutions will be expected. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Summer Term
1 Course Unit

EDSC 6030 Advanced Professional Development: Utilizing & Building Resources within Community Agencies & Orgs
This course is structured to create an intellectual and practice-driven inquiry community in which you as students have the opportunity to deepen and expand your understanding of the multifaceted professional roles and responsibilities of school and mental health counselors, as well as the complex systems in which these roles are formed and enacted. The primary goal of the course is to support you in developing an inquiry stance on your practice (Cochran-Smith & Lytle, 2009) as a means of enhancing the quality and meaning of your work and professional identity. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Two Term Class, Student must enter first term; credit given after both terms are complete

EDSC 6040 Foundations in Education for Diverse Learners
This course is intended to engage you in thoughtful discussion about working with diverse learners while presenting factual information about specific areas of need. Our work will be situated within a socio-cultural framework that sees our students as resources that enrich our counseling work and their communities. In this class, we will address content related to both Special Education/Students with Disabilities and English Language Learners. As such, we use three major themes as central to school counseling work and professionalism: Supporting students with disabilities and English language learners; development of inclusive and empowering student practices and environments; and supporting positive school, community and life goals which affirm diversity and ensure equitable outcomes for all students. Over the course of the semester, you will have an opportunity to clarify and challenge your beliefs about working with students with diverse learning needs in your role as a school counselor, in urban and diverse environments. In particular, through course readings, discussion, and projects students will be challenged to think deeply and thoroughly about educating diverse students in schools, through the following core elements: a) taking an inquiry stance; b) urban contexts of schools, c) supporting social justice & equity, d) integrating theory with practice. In doing so, students will critically examine their own role in providing services to students which will support equitable, positive, student- and family-centered school and life outcomes. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.

Fall
0 Course Units
EDSC 6060 Advanced Counseling Skills & Human Sexuality
This course will be a hybrid course combining advanced counseling skills and counseling related to human sexuality issues. The advanced counseling skills portion of the class will be understood as an elaboration of the basic understanding of theoretical interventions learned in the first year of the program by presenting students with information about case conceptualization and more advanced intervention from three major theoretical orientations (cognitive behavioral, psychoanalytic, and emotion-focused therapy). There will also be a brief consideration of what it means to integrate and combine different theoretical approaches, if they really are as different as we think. Topics in human sexuality that commonly present in school and mental health settings will be used as the context for applying advanced skills. This course aims to present students with factual information about advanced skills and human sexuality while also providing an atmosphere in which self-reflection and affective learning can facilitate counselor development in the areas of advanced skills and human sexuality. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.

EDSC 6070 Healthy Development & Psychopathology
This course will familiarize counseling students with the major mental disorders, as well as with conceptions of mental health, mental health promotion, resilience and recovery. It is important that counselors, regardless of concentration or specialization, be acquainted with the language, taxonomy, conceptualizations, and developments in the study of psychopathology, as well as a sense of the lived experience of people with mental disorders. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.

EDSC 6080 Research and Evaluation Seminar in Counseling and Education
This course focuses on the application of research concepts and use of data in comprehensive school counseling programs. The course materials, exercises and assignments are designed to help students gain and use practical skills required to make data-based decisions. Specifically, students will learn to use data to: identify needs within the school; identify possible interventions and programs to address the needs; implement interventions and programs; monitor and evaluate the interventions to demonstrate the results of the interventions; and use data to advocate for the profession, the work, and for students. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.

EDSC 6080A Research and Evaluation Seminar in Counseling and Education
This course focuses on the application of research concepts and use of data in comprehensive school counseling programs. The course materials, exercises and assignments are designed to help students gain and use practical skills required to make data-based decisions. Specifically, students will learn to use data to: identify needs within the school; identify possible interventions and programs to address the needs; implement interventions and programs; monitor and evaluate the interventions to demonstrate the results of the interventions; and use data to advocate for the profession, the work, and for students. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.

EDSC 6080B Research and Evaluation Seminar in Counseling and Education
This course focuses on the application of research concepts and use of data in comprehensive school counseling programs. The course materials, exercises and assignments are designed to help students gain and use practical skills required to make data-based decisions. Specifically, students will learn to use data to: identify needs within the school; identify possible interventions and programs to address the needs; implement interventions and programs; monitor and evaluate the interventions to demonstrate the results of the interventions; and use data to advocate for the profession, the work, and for students. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.

EDSC 6060 Advanced Counseling Skills & Human Sexuality
This course will be a hybrid course combining advanced counseling skills and counseling related to human sexuality issues. The advanced counseling skills portion of the class will be understood as an elaboration of the basic understanding of theoretical interventions learned in the first year of the program by presenting students with information about case conceptualization and more advanced intervention from three major theoretical orientations (cognitive behavioral, psychoanalytic, and emotion-focused therapy). There will also be a brief consideration of what it means to integrate and combine different theoretical approaches, if they really are as different as we think. Topics in human sexuality that commonly present in school and mental health settings will be used as the context for applying advanced skills. This course aims to present students with factual information about advanced skills and human sexuality while also providing an atmosphere in which self-reflection and affective learning can facilitate counselor development in the areas of advanced skills and human sexuality. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.

EDSC 6070 Healthy Development & Psychopathology
This course will familiarize counseling students with the major mental disorders, as well as with conceptions of mental health, mental health promotion, resilience and recovery. It is important that counselors, regardless of concentration or specialization, be acquainted with the language, taxonomy, conceptualizations, and developments in the study of psychopathology, as well as a sense of the lived experience of people with mental disorders. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.

EDSC 6080 Research and Evaluation Seminar in Counseling and Education
This course focuses on the application of research concepts and use of data in comprehensive school counseling programs. The course materials, exercises and assignments are designed to help students gain and use practical skills required to make data-based decisions. Specifically, students will learn to use data to: identify needs within the school; identify possible interventions and programs to address the needs; implement interventions and programs; monitor and evaluate the interventions to demonstrate the results of the interventions; and use data to advocate for the profession, the work, and for students. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.

EDSC 6080A Research and Evaluation Seminar in Counseling and Education
This course focuses on the application of research concepts and use of data in comprehensive school counseling programs. The course materials, exercises and assignments are designed to help students gain and use practical skills required to make data-based decisions. Specifically, students will learn to use data to: identify needs within the school; identify possible interventions and programs to address the needs; implement interventions and programs; monitor and evaluate the interventions to demonstrate the results of the interventions; and use data to advocate for the profession, the work, and for students. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.

EDSC 6080B Research and Evaluation Seminar in Counseling and Education
This course focuses on the application of research concepts and use of data in comprehensive school counseling programs. The course materials, exercises and assignments are designed to help students gain and use practical skills required to make data-based decisions. Specifically, students will learn to use data to: identify needs within the school; identify possible interventions and programs to address the needs; implement interventions and programs; monitor and evaluate the interventions to demonstrate the results of the interventions; and use data to advocate for the profession, the work, and for students. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
EDSC 6110 Wellness & Addiction Counseling
This course will provide an overview of the foundations of addictions from a theoretical, practical, and applicable standpoint. The basics of understanding the process of screening, assessing and treating addictions will be discussed as well as a focus on the strengths and wellness perspective of persons with addictions. In addition, students will gain an understanding of the effects and treatment of co-occurring disorders (e.g., addiction and depression). Addiction lingo, positive psychology, and the various types of addictions will be addressed along with etiological models and current approaches for treatment. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.
Spring
1 Course Unit

EDSC 6120 Trauma in School & Mental Health Counseling
Due to the overwhelming incidence of trauma, adversity, and toxic stress among consumers of mental health services and the potential profound and pervasive impact of trauma on development, it is essential that mental health professionals gain the necessary knowledge, competencies, and skills to foster resilience and healing. This course explores how trauma impacts not only cognitive and emotional processing, but also dysregulates neurophysiology, and discusses evidence based assessments and interventions that counselors can use to help alleviate the negative impact of trauma with their clients. This course is designed to provide foundational trauma education for mental health professionals working within schools and community settings to promote their ability to recognize trauma responses, to create trauma-sensitive educational and clinical environments to foster learning, growth and health and to develop trauma responsive counseling skills. Prerequisite: Enrollment in the Executive Program in School and Mental Health Counseling.

Education - School Leadership (EDSL)

These courses are only available to students in the School Leadership Program.

EDSL 5010A Sustainability In Schools
Addresses an issue of great relevance to schools in the 21st century. As the leadership program comes to a close, students in this course will look at the issue of sustainability across the financial, environmental, and programmatic dimensions of school life. Prerequisite: Enrollment in School Leadership Program.
Spring
0-1 Course Unit

EDSL 5010B Sustainability In Schools
Addresses an issue of great relevance to schools in the 21st century. As the leadership program comes to a close, students in this course will look at the issue of sustainability across the financial, environmental, and programmatic dimensions of school life. Prerequisite: Enrollment in School Leadership Program.
Spring
0-1 Course Unit

EDSL 5020 Leadership in Public, Independent & Parochial Schools
Encourage students to consider the challenges of leadership in public, independent, and parochial schools as part of the broader discussion of educational leadership in elementary and secondary education. The course will seek to identify themes that have implications for independent, parochial, and public schools and will seek to establish interconnections. Prerequisite: Enrollment in School Leadership Program.
Spring
1 Course Unit

EDSL 5020A Leadership in Public, Independent & Parochial Schools
Encourage students to consider the challenges of leadership in public, independent, and parochial schools as part of the broader discussion of educational leadership in elementary and secondary education. The course will seek to identify themes that have implications for independent, parochial, and public schools and will seek to establish interconnections. Prerequisite: Enrollment in School Leadership Program.
Spring
0-1 Course Unit

EDSL 5020B Leadership in Public, Independent & Parochial Schools
Encourage students to consider the challenges of leadership in public, independent, and parochial schools as part of the broader discussion of educational leadership in elementary and secondary education. The course will seek to identify themes that have implications for independent, parochial, and public schools and will seek to establish interconnections. Prerequisite: Enrollment in School Leadership Program.
Spring
0-1 Course Unit

EDSL 5030 Developing Instructional Leadership in Practice
Emphasizes how to connect organizational systems with schools' instructional missions. Prerequisite: Enrollment in School Leadership Program.
Spring
1 Course Unit

EDSL 5040 Field Internship Seminar: Inquiring Into Organizational and Legal Dimensions of Principal Leadership
Provides the systems-thinking lens through which students inquire into how an individual's organizational leadership can support continuous school improvement through attention to school climate, program coherence, and effectiveness of instruction. Prerequisite: Enrollment in School Leadership Program.
Spring
1 Course Unit
EDSL 5050 Aligning Fiscal, Human, and Community Resources in Support of the School's Instructional Mission
Emphasizes the connections between the school's mission and daily decision-making (including managing budgets and funding streams, use of space, use of time, and scheduling and assignments of staff and students). Prerequisite: Enrollment in School Leadership Program. 
Fall, Spring, and Summer Terms
1 Course Unit
EDSL 5050A Aligning Fiscal, Human, and Community Resources in Support of the School's Instructional Mission
Emphasizes the connections between the school's mission and daily decision-making (including managing budgets and funding streams, use of space, use of time, and scheduling and assignments of staff and students). Prerequisite: Enrollment in School Leadership Program.
Spring
0-1 Course Unit
EDSL 5050B Aligning Fiscal, Human, and Community Resources in Support of the School's Instructional Mission
Emphasizes the connections between the school's mission and daily decision-making (including managing budgets and funding streams, use of space, use of time, and scheduling and assignments of staff and students). Prerequisite: Enrollment in School Leadership Program.
Spring
0-1 Course Unit
EDSL 5060 Instructional Leadership to Promote Learning
The first course of the program, Instructional Leadership to Promote Learning begins with an exploration of values and beliefs underlying leadership in schools. Prerequisite: Enrollment in School Leadership Program.
Fall
1 Course Unit
EDSL 5070 Practitioner Research
Addresses an important goal of the program: developing school leaders who are skilled practitioner researchers. As an outgrowth of this course, students will engage in a practitioner research project that is the culminating experience of the program. Prerequisite: Enrollment in School Leadership Program.

Education - Urban Teaching Residency Certificate (EDTC)
These courses are only available to students in the Urban Teaching Residency program.

EDTC 5030 Methods: Elementary A
This course is designed to enhance literacy and mathematics instruction that engages all students as readers, thinkers and sense makers. In this course, we will explore the interrelationship of language, literacy, numeracy, and culture, and will co-construct a knowledge base for understanding how children learn. We will also develop and practice new routines for teaching literacy and mathematics that build on students interests, curiosities, and informal knowledge. Throughout the course, you will be encouraged to critically reflect on continually develop your teaching practice. Course readings, discussions, and assignments will offer opportunities to think in both theoretical terms and practical terms about your teaching. Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall
Also Offered As: EDTF 5030
1 Course Unit

EDTC 5040 Methods: Middle Years A
This course focuses on you as both a learner and a teacher of mathematics and science. Its development is premised on the notion that in order for you to foster understanding and engagement for all your students, you have to develop and draw on different kinds of knowledge, skills, and dispositions. As a result, the course is designed to help you hone your practice as a teacher of mathematics and science, and involves you learning about learners (yourself included), the understandings and conceptions they hold, and the developmental processes through which they learn. It also involves developing skills in teaching practices that engage students in mathematical and scientific exploration, creating an environment that facilitates reasoning and promotes inquiry, and finding ways to analyze and learn from your own teaching. Good teaching is essentially a decision laden process, and the decisions you make are contextually based. Consequently, the aim of the course is to provide you with a bag of tricks that are applicable or generalizable to all situations, but rather to help you develop necessary tools for thinking and working as a teacher. These tools include ways to explore scientific and mathematical content, assess your students understanding on an ongoing basis, and help all your students develop as learners of mathematics and science. Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall
Also Offered As: EDTF 5040
1 Course Unit

EDTC 5050 Methods: English A (Middle Level and Secondary)
This course is designed for preservice and working educators and is intended to weave theory into practice. In this data and standards driven climate, educators are often hit with buzzwords instead of solid theory and solid pedagogy. The framework for the course is to provide a foundation in theory and then explores how that theory works within and against existing practices in schools. We will be reflecting on practice and designing and redesigning lessons and units based on theory and best practices for adolescent literacy. This course is an overview of the theory and pedagogy needed for effective English language arts instruction. Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall
Also Offered As: EDTF 5050
1 Course Unit

EDTC 5060 Methods: Science A
The purpose of this class is to introduce middle level and secondary science teachers to pedagogy, content and methodologies supported by a three-pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall
Also Offered As: EDTF 5060
1 Course Unit

EDTC 5070 Methods: Social Studies A
This is an introductory course for students earning middle levels or secondary social studies certification in Pennsylvania.
Fall
Also Offered As: EDTF 5070
1 Course Unit

EDTC 5080 Methods: World Languages A
The objectives of this course are for teachers to be able to: Align the four domains of professional practice with world languages pedagogy, recognize and demonstrate how pedagogical theories inform effective methodologies, incorporate a variety of standards-driven instructional practices using communicative techniques that engage students, research, identify and use resources that encourage student-centered learning practices, investigate and utilize a variety of assessments that effectively measure student performance and enhance proficiency, participate in local, state and national professional World Languages organizational activities including workshops and/or conferences. Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall
Also Offered As: EDTF 5080
1 Course Unit

EDTC 5120 Methods: 7-12 Science (Chemistry)
The purpose of this class is to introduce secondary science teachers to pedagogy, content and methodologies supported by a three-pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall or Spring
Also Offered As: EDTF 5120
1 Course Unit
EDTC 5130 Methods: 7-12 Science (Physics)
The purpose of this class is to introduce secondary science teachers to pedagogy, content and methodologies supported by a three-pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall or Spring
Also Offered As: EDTF 5130
1 Course Unit

EDTC 5150 Child Development
This course explores the origins and context of urban education in the United States by critically examining how schools reproduce and sustain systemic inequality. We will examine historical, political, economic, and socio-cultural frameworks for understanding urban schools, students and teachers. Through course readings, field visits and class discussions, we explore the following: (1) student, teacher and researcher perspectives on urban education, (2) the broader sociopolitical urban context of K-12 schooling in cities, (3) teaching and learning in urban settings and (4) ideas about re-imagining urban education. Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall
Also Offered As: EDTF 5150
1 Course Unit

EDTC 5200 Methods: Mathematics A
The goal of this course is to enhance the teaching and learning of mathematics through a focus on the practical application of pedagogical theory. Each week we will engage in discussions and activities centered on different pedagogical approaches, using lessons covering specific mathematical concepts as demonstration tools. We will also use class time to reflect on experiences from our current teaching positions, and we will work together to develop solutions to problems that arise within our daily classroom experience. I aim to provide you with lesson and curricular development experience, multiple teaching techniques, and an engaging and supportive classroom environment to help us all develop as teachers and learners. Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall
Also Offered As: EDTF 5200
1 Course Unit

EDTC 5210 Foundations Special Educ
This course strives to teach students who are working towards certification in general education problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who are eligible for Individualized Education Programming (IEPs) under the Individuals with Disabilities Act (IDEA). We will learn what constitutes disabilities in this population and issues surrounding providing this populations with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with implementing and IEP in the general education, or inclusive, environment. Students will discuss the appropriateness of various academic environments as children with disabilities progress from elementary to secondary education, and transition into adulthood. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. In addition, time will be spent in this course discussing the education of students who are English Language Learners from the standpoint of sheltered instruction and the use of WIDA lesson planning. A holistic approach to educating all students, with an emphasis on academic, social, emotional, behavioral, and transition skills area focus. Content will be presented through online lecture, hands on projects, and reading. It is expected that students will work within their current teaching placement and with actual students to complete some, if not all, of the 7 projects. Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall or Spring
Also Offered As: EDTF 5210
0-1 Course Unit

EDTC 5240 School & Society Seminar
This course is designed to provide students with an opportunity to investigate the philosophical underpinnings, social context, and current discourse of education and schooling in the United States. By historically linking the development of educational initiatives to notions of power, nation building, and citizenship, this class furthers an understanding of the assumptions about the purpose of education within this democratic nation, and its role(s) within our current social and political climate. Discussions of differential access to power and resources will be central to this class, thereby providing a forum for critically exploring educational policy, teaching practices, and the aims and purposes of education that are intimately connected to the social stratification and reproduction. We will draw on students experiential knowledge of schools and teaching to imagine how urban educators can transform the socially reproductive practices of schools. Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall or Spring
Also Offered As: EDTF 5240
1 Course Unit
EDTC 5270 Social, Emotional, and Behavioral Interventions
This course is designed to provide students with a comprehensive understanding of students who present with social, emotional, and behavioral difficulties. The course will focus on the definitions, characteristics, prevalence, causes, and assessment of emotional and behavioral disorders. Effective teaching practices will be integrated in the course, including education service placements, functional behavior assessment, ABA, positive behavior supports and social skills instruction. Current issues in the field will also be explored. There will be a focus on the direct application of knowledge and skills to the classroom, as well as the expectation that students' teaching experiences will inform discussion and learning. Prerequisite: Enrollment in Urban Teaching Residency Program.

Spring
Also Offered As: EDTF 5270
1 Course Unit

EDTC 5290 Language and Literacy Acquisition
This course addresses research-based instructional strategies for teaching literacy (including language development, reading, writing, and speaking) to learners in grade levels PreK-12 as well as practical and effective modifications for diverse learners (including struggling readers, English language learners, and students with learning disabilities in reading, as well as students with a wide range of disabilities requiring accommodations (cognitive, linguistic, physical, and social)). Formative and summative assessments of emergent and content literacy, including components of literacy (phonological awareness, word analysis, comprehension, vocabulary, fluency) will also be addressed. Also included are factors which influence literacy acquisition (including, but not limited to: English Language Learners), social and cultural implications for language and literacy development, as well as lifelong literacy for children and adolescents who struggle in literacy. Prerequisite: Enrollment in Urban Teaching Residency Program.

Also Offered As: EDTF 5290
1 Course Unit

EDTC 5300 Contempary Issues in Urban Education
This course explores the origins and context of urban education in the United States by critically examining how schools reproduce and sustain systemic inequality. We will examine historical, political, economic, and socio-cultural frameworks for understanding urban schools, students and teachers. Through course readings, field visits and class discussions, we explore the following: (1) student, teacher and researcher perspectives on urban education, (2) the broader sociopolitical urban context of K-12 schooling in cities, (3) teaching and learning in urban settings and (4) ideas about re-imagining urban education. Prerequisite: Enrollment in Urban Teaching Residency Program.

Fall
0.5-1 Course Unit

EDTC 5300B Contemp Issues Urban Ed
This course explores the origins and context of urban education in the United States by critically examining how schools reproduce and sustain systemic inequality. We will examine historical, political, economic, and socio-cultural frameworks for understanding urban schools, students and teachers. Through course readings, field visits and class discussions, we explore the following: (1) student, teacher and researcher perspectives on urban education, (2) the broader sociopolitical urban context of K-12 schooling in cities, (3) teaching and learning in urban settings and (4) ideas about re-imagining urban education. Prerequisite: Enrollment in Urban Teaching Residency Program.

Fall

EDTC 5310 Methods: Elementary B
In this course we will be examining many aspects of the teaching of science and social studies in elementary schools today. The importance of the National Science and Social Studies Education Standards, the Next Generation of Science Standards, and the Pennsylvania State Standards in curriculum development and reform will be explored in depth. Among the topics covered will be planning science and social studies instruction to include inquiry and integrated concepts, developing authentic assessments involving a variety of tools, creating and maintaining a safe laboratory and learning environment that meets the needs of diverse learners, and the integration of technology into science and social studies education. Prerequisite: Enrollment in Urban Teaching Residency Program.

Spring
Also Offered As: EDTF 5310
1 Course Unit

EDTC 5320 Methods: Middle Years B
Middle school teachers are involved in the constant process of increasing students’ active reading and writing about content area texts within the high-pressure environment of state accountability. Middle Years Methods offers practical strategies and applications that help establish a literate classroom environment in support of learning across all subject areas. Teachers learn approaches to help them establish literate classroom environments that are rich in problem-solving, critical thinking, logical reasoning concepts focused on state and national standards, and practical techniques that investigate and connect content in all subject areas to the real world. Middle Years Methods is structured to allow participants the opportunity to explore strategies and concepts for increasing student reading and writing proficiency. Prerequisite: Enrollment in Urban Teaching Residency Program.

Spring
Also Offered As: EDTF 5320
1 Course Unit

EDTC 5330 Methods: English B
This course is designed for preservice and working educators and is intended to weave theory into practice. In this data and standards driven climate, educators are often hit with buzzwords instead of solid theory and solid pedagogy. The framework for the course builds from ELA Methods A. We will begin the semester by exploring the self, culturally relevant pedagogy, and how these things impact our practice. Then we will explore a variety of practices for teaching reading, writing, listening, and speaking. The practices for teaching reading, writing, listening, and speaking align to Special Education Competencies IV. Pedagogy. Prerequisite: Enrollment in Urban Teaching Residency Program.

Spring
Also Offered As: EDTF 5330
1 Course Unit
EDTC 5340 Methods: Science B
This course is the second course in the three-course series that addresses teaching and learning in middle and secondary science classrooms. The methods topics have been carefully selected to represent current and relevant areas in science education research and are geared toward understanding issues impacting students, teachers and schools in the modern urban society. The course is premised on several organizing themes in education: Assessing misconceptions, teaching through multiple intelligences, expanding instructional practices, teaching science in urban schools, culturally relevant pedagogies, gender, professional learning communities and workforce development, problem-based learning, current STEM fields of research, citizenship science, and ethical decision making. Prerequisite: Enrollment in Urban Teaching Residency Program.
Spring
Also Offered As: EDTF 5340
1 Course Unit

EDTC 5350 Methods: World Languages B
This course includes theoretical and practical applications for the teaching of world languages based on the five "C" goal areas: Communication, Cultures, Comparisons, Connections, and Communities of the World-Readiness Standards for Learning Languages. Approaches and techniques will be explored to equip world language teachers with the knowledge and tools necessary to create a student-centered, standards-driven classroom. Prerequisite: Enrollment in Urban Teaching Residency Program.
Spring
Also Offered As: EDTF 5350
1 Course Unit

EDTC 5360 Methods: Mathematics B
Mathematics Methods B is enhancing student learning through knowing the content, planning around our knowledge and reflecting on our practice and our practice and our students thinking. Each week we will think about mathematics through talking about mathematics, doing mathematics, and presenting mathematics, as we will learn to expect our students to do. Each week we will spend time both learning concepts behind the mathematics taught and learned in middle and high school, with a couple of topics from elementary school that have bearing on middle and high school mathematics. We will learn about these concepts in ways that you will be able to use in the classroom, giving you experiences with different methods. Prerequisite: Enrollment in Urban Teaching Residency Program.
Spring
Also Offered As: EDTF 5360
1 Course Unit

EDTC 5370 Methods: Social Studies B
This course is designed to enable middle years and secondary social studies teachers to expand their pedagogical practice. We will examine curriculum theory and instructional practices as they relate to the middle years and secondary social studies classroom. The course seeks to weave theory into practice by increasing students' pedagogical content knowledge with the ultimate goal of improving instruction in practitioners' classrooms. Essential Questions: · What does effective teaching look like in the SS classroom? · How can I strategically design and implement instruction to best meet the needs of my students? · How can I promote authentic engagement for culturally diverse students? · What does it take to guide students from dependent to independent learners?
Spring
Also Offered As: EDTF 5370
1 Course Unit

EDTC 6010 Methods: Advanced Elementary
This course has been designed for first and second year teachers who are currently teaching in elementary classrooms. Our work together will build upon the course work you completed this year, your past experiences as a student and a teacher, and your current classroom practices. In this course, we explore the interrelationship of language, literacy, numeracy and culture in order to co-construct a knowledge base for understanding how children learn. We will interrogate our own teaching practices in an effort to make our classrooms more content-rich and child-centered. Our work will span content areas - math, literacy, social studies, and science - emphasizing both their interconnectedness and their particularity. The course will offer opportunity to think in both theoretical terms and practical terms about implications of our teaching. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTF 6010
1 Course Unit

EDTC 6040 Methods: Advanced English
This course is designed to give working teachers intensive, hands-on practice with research-based pedagogy that they need to address the immediate challenges of teaching English in urban public schools. Students will develop plans for a full course, several conceptual units, and eight weeks of daily lesson plans. In addition, students will develop and present various instructional routines, which the class will critique. Finally, students will share resources with each other and engage in problem-solving of their real-world classroom issues. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTF 6040

EDTC 6060 Methods: Advanced World Languages
As a sequel to your introductory world language teaching and learning courses, this course assumes a level of familiarity with theoretical and practical approaches to world language teaching and learning such as: communicative language teaching, task-based instruction, student centered instruction, and national and state standards. Building on this background, we will examine and analyze the use of emerging key concepts in world language education as well as consider critical perspectives to more traditional pedagogical approaches. Our exploration of world language learning and teaching methods will be grounded in praxis; that is, we will consider how theoretical and research-based approaches inform classroom practices, experiences, and beliefs, and vice versa. Accordingly, the course will provide opportunities for you to bridge theory and practice through an ongoing cycle of discussion, in-class application, and learning experiences such as collaborative activities, peer feedback, self-reflection, brief presentations, and the design of instruction materials. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTF 6060
1 Course Unit

EDTC 6070 Advanced Social Studies Methods
This course is designed to give working teachers intensive, hands-on practice with research-based pedagogy that they need to address the immediate challenges of teaching Social Studies in urban public schools. Students will develop plans for a full course, several conceptual units, and eight weeks of daily lesson plans. In addition, students will develop and present various instructional routines, which the class will critique. Finally, students will share resources with each other and engage in problem-solving of their real-world classroom issues.
Spring
Also Offered As: EDTF 6070
1 Course Unit

EDTC 6180 Methods: Advanced Mathematics
This course will focus on gaining a deeper understanding of the methods of mathematics teaching practice. This course will provide students the opportunity to put theory into practice through in class demonstrations of mathematical pedagogical practices. Through in class and online discussions, students will reflect on current teaching practices and the impact that these practices have on learning. It is my goal to support each student in further creating effective student-centered rational behind all teaching decisions. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTF 6180
1 Course Unit

EDTC 6250 Culturally Responsive Pedagogy
What is culturally responsive (or relevant) pedagogy? What does it look like, what does it consist of, how is it done, who can do it, when and where can it enter? Is it effective, and for whom? What are the impediments and limitations? What are its roots? What can its future look like, and what can it mean for urban education, student success, and community empowerment? This course will explore these questions and more, providing a theoretical grounding to push this field further, and practical tools to incorporate into current and future teaching and learning activities. The course will also look closely at various intersections (critical race theory, critical pedagogy, gender studies, social justice, multiculturalism, diversity/equity), sociopolitical landscapes, and educational reform efforts, to understand how culturally responsive pedagogy fits within the broader narratives. The class is intentionally designed as a seminar/workshop. Class activities will include full group discussions, small group breakout sessions, video clips, informal presentations, and possible guest speakers. Students are expected to actively engage with both the readings and in class activities. Prerequisite: Enrollment in Urban Teaching Residency Program.
Spring
Also Offered As: EDTF 6250
1 Course Unit

EDTC 7010 Educating Students with Disabilities - Part II
The purpose of this course is to teach students problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who have disabilities related to specific learning disabilities. We will learn what constitutes disabilities in this population and issues surrounding providing this population with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with creating and implementing an IEP for students in the population. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. Instructional techniques and assessments strategies will be a focus. Prerequisite: Enrollment in Urban Teaching Residency Program.
Spring
Also Offered As: EDTF 7010
1 Course Unit

EDTC 7020 Special Education Law & Processes
This course is designed to provide students with an understanding of special education processes, including the evaluation processes, exceptionalties and eligibility, the development and delivery of Individual Education Plans, as well as theories and best educational practices in the field and profession of special education. Students will become familiar with the Individuals with Disabilities in Education Act (IDEA), the cornerstone of special education law, Section 504 of the Americans with Disabilities Act, and Pennsylvania statutes and regulations governing special education law. Issues related to an understanding of the evaluation and determination of exceptionalities in a cultural context will be explored. There will be a focus on the direct application of knowledge and skills to the classroom, as well as the expectation that students teaching experiences will inform discussion and learning. Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall
Also Offered As: EDTF 7020
1 Course Unit
EDTC 7030 Educating Students with Disabilities - Part I
The purpose of this course is to teach students problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who are eligible to take alternative state testing. We will learn what constitutes disabilities in this population with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with creating and implementing an IEP for students in the population. Students will discuss the appropriateness of various academic environments as children with more encompassing disabilities progress from elementary to secondary education, and transition into adulthood. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. A holistic approach to educating this population, with an emphasis on social, emotional, behavioral, transition and life skills are a focus. Students will receive a grade of a pass or fail at the conclusion of the fall term. 40 mandatory hours of fieldwork will take place in the spring semester. This will allow students to demonstrate learning acquired in the course work in a realistic setting. At the conclusion of the spring semester, a grade will be issued. Content will be presented through on line lecture, hands on projects, reading and fieldwork experience. Prerequisite: Enrollment in Urban Teaching Residency Program. Fall
Also Offered As: EDTF 7030
1 Course Unit

EDTF 5030 Methods: Elementary A
This course is designed to enhance literacy and mathematics instruction that engages all students as readers, thinkers and sense makers. In this course, we will explore the interrelationship of language, literacy, numeracy, and culture, and will co-construct a knowledge base for understanding how children learn. We will also develop and practice new routines for teaching literacy and mathematics that build on students interests, curiosities, and informal knowledge. Throughout the course, you will be encouraged to critically reflect on continually develop your teaching practice. Course readings, discussions, and assignments will offer opportunities to think in both theoretical terms and practical terms about your teaching. Prerequisite: Enrollment in Urban Teaching Residency Program. Fall
Also Offered As: EDTC 5030
1 Course Unit

Education - Urban Teaching Residency Master’s (EDTF)
These courses are only available to students in the Urban Teaching Residency program.

EDTF 5030 Methods: Social Studies A
This is an introductory course for students earning middle levels or secondary social studies certification in Pennsylvania. This course is designed to introduce middle level and secondary social studies teachers to pedagogy, content and methodologies supported by a three-pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). Prerequisite: Enrollment in Urban Teaching Residency Program. Fall
Also Offered As: EDTF 5030
1 Course Unit

EDTF 5040 Methods: Middle Years A
This course focuses on you as both a learner and a teacher of mathematics and science. Its development is premised on the notion that in order for you to foster understanding and engagement for all your students, you have to develop and draw on different kinds of knowledge, skills, and dispositions. As a result, the course is designed to help you hone your practice as a teacher of mathematics and science and involves you learning about learners (yourself included), the understandings and conceptions they hold, and the developmental processes through which they learn. It also involves developing skills in teaching practices that engage students in mathematical and scientific exploration, creating an environment that facilitates reasoning and promotes inquiry, and finding ways to analyze and learn from your own teaching. Good teaching is essentially a decision laden process, and the decisions you make are contextually based. Consequently, the aim of the course is not to provide you with a bag of tricks that are applicable or generalizable to all situations, but rather to help you develop necessary tools for thinking and working as a teacher. These tools include ways to explore scientific and mathematical content, assess your students understanding on an ongoing basis, and help all your students develop as learners of mathematics and science. Prerequisite: Enrollment in Urban Teaching Residency Program. Fall
Also Offered As: EDTF 5040
1 Course Unit

EDTF 5050 Methods: English A (Middle Level and Secondary)
This course is designed for preservice and working educators and is intended to weave theory into practice. In this data and standards driven climate, educators are often hit with buzzwords instead of solid theory and solid pedagogy. The framework for the course is to provide a foundation in theory and then explores how that theory works within and against existing practices in schools. We will be reflecting on practice and designing and redesigning lessons and units based on theory and best practices for adolescent literacy. This course is an overview of the theory and pedagogy needed for effective English language arts instruction. Prerequisite: Enrollment in Urban Teaching Residency Program. Fall
Also Offered As: EDTF 5050
1 Course Unit

EDTF 5060 Methods: Science A
The purpose of this class is to introduce middle level and secondary science teachers to pedagogy, content and methodologies supported by a three-pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). Prerequisite: Enrollment in Urban Teaching Residency Program. Fall
Also Offered As: EDTF 5060
1 Course Unit

EDTF 5070 Methods: Social Studies A
This is an introductory course for students earning middle levels or secondary social studies certification in Pennsylvania. Fall
Also Offered As: EDTF 5070
1 Course Unit
EDTF 5080 Methods: World Languages A
The objectives of this course are for teachers to be able to: Align the four domains of professional practice with world languages pedagogy, recognize and demonstrate how pedagogical theories inform effective methodologies, incorporate a variety of standards-driven instructional practices using communicative techniques that engage students, research, identify and use resources that encourage student-centered learning practices, investigate and utilize a variety of assessments that effectively measure student performance and enhance proficiency, participate in local, state and national professional World Languages organizational activities including workshops and/or conferences. Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall
Also Offered As: EDTC 5080
1 Course Unit

EDTF 5120 Methods: 7-12 Science (Chemistry)
The purpose of this class is to introduce secondary science teachers to pedagogy, content and methodologies supported by a three-pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall or Spring
Also Offered As: EDTC 5120
1 Course Unit

EDTF 5130 Methods: 7-12 Science (Physics)
The purpose of this class is to introduce secondary science teachers to pedagogy, content and methodologies supported by a three-pillar foundation: teaching diverse learners (cultural responsiveness), curriculum development (Understanding by Design) and demonstration of knowledge and skill acquisition (high leverage practices and competencies). Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall or Spring
Also Offered As: EDTC 5130
1 Course Unit

EDTF 5150 Child Development
This course explores the origins and context of urban education in the United States by critically examining how schools reproduce and sustain systemic inequality. We will examine historical, political, economic, and socio-cultural frameworks for understanding urban schools, students and teachers. Through course readings, field visits and class discussions, we explore the following: (1) student, teacher and researcher perspectives on urban education, (2) the broader sociopolitical urban context of K-12 schooling in cities, (3) teaching and learning in urban settings and (4) ideas about re-imagining urban education. Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall
Also Offered As: EDTC 5150
1 Course Unit

EDTF 5200 Methods: Mathematics A
The goal of this course is to enhance the teaching and learning of mathematics through a focus on the practical application of pedagogical theory. Each week we will engage in discussions and activities centered on different pedagogical approaches, using lessons covering specific mathematical concepts as demonstration tools. We will also use class time to reflect on experiences from our current teaching positions, and we will work together to develop solutions to problems that arise within our daily classroom experience. I aim to provide you with lesson and curricular development experience, multiple teaching techniques, and an engaging and supportive classroom environment to help us all develop as teachers and learners. Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall
Also Offered As: EDTC 5200
1 Course Unit

EDTF 5210 Foundations Special Educ
This course strives to teach students who are working towards certification in general education problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who are eligible for Individualized Education Programming (IEPs) under the Individuals with Disabilities Act (IDEA). We will learn what constitutes disabilities in this population and issues surrounding providing this populations with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with implementing and IEP in the general education, or inclusive, environment. Students will discuss the appropriateness of various academic environments as children with disabilities progress from elementary to secondary education, and transition into adulthood. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. In addition, time will be spent in this course discussing the education of students who are English Language Learners from the standpoint of sheltered instruction and the use of WIDA lesson planning. A holistic approach to educating all students, with an emphasis on academic, social, emotional, behavioral, and transition skills area focus. Content will be presented through online lecture, hands on projects, and reading. It is expected that students will work within their current teaching placement and with actual students to complete some, if not all, of the 7 projects. Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall or Spring
Also Offered As: EDTC 5210
0-1 Course Unit
EDTF 5240 School & Society Seminar
This course is designed to provide students with an opportunity to investigate the philosophical underpinnings, social context, and current discourse of education and schooling in the United States. By historically linking the development of educational initiatives to notions of power, nation building, and citizenship, this class furthers an understanding of the assumptions about the purpose of education within this democratic nation, and its role(s) within our current social and political climate. Discussions of differential access to power and resources will be central to this class, thereby providing a forum for critically exploring educational policy, teaching practices, and the aims and purposes of education that are intimately connected to the social stratification and reproduction. We will draw on students experiential knowledge of schools and teaching to imagine how urban educators can transform the socially reproductive practices of schools. Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall or Spring
Also Offered As: EDTC 5240
1 Course Unit

EDTF 5270 Social, Emotional, and Behavioral Interventions
This course is designed to provide students with a comprehensive understanding of students who present with social, emotional, and behavioral difficulties. The course will focus on the definitions, characteristics, prevalence, causes, and assessment of emotional and behavioral disorders. Effective teaching practices will be integrated in the course, including education service placements, functional behavior assessment, ABA, positive behavior supports and social skills instruction. Current issues in the field will also be explored. There will be a focus on the direct application of knowledge and skills to the classroom, as well as the expectation that students’ teaching experiences will inform discussion and learning. Prerequisite: Enrollment in Urban Teaching Residency Program.
Spring
Also Offered As: EDTC 5270
1 Course Unit

EDTF 5290 Language and Literacy Acquisition
This course addresses research-based instructional strategies for teaching literacy (including language development, reading, writing, and speaking) to learners in grades PreK-12 as well as practical and effective modifications for diverse learners (including struggling readers, English language learners, and students with learning disabilities in reading, as well as students with a wide range of disabilities requiring accommodations (cognitive, linguistic, physical, and social)). Formative and summative assessments of emergent and content literacy, including components of literacy (phonological awareness, word analysis, comprehension, vocabulary, fluency) will also be addressed. Also included are factors which influence literacy acquisition (including, but not limited to: English Language Learners), social and cultural implications for language and literacy development, as well as life-long literacy for children and adolescents who struggle in literacy. Prerequisite: Enrollment in Urban Teaching Residency Program.
Also Offered As: EDTC 5290
1 Course Unit

EDTF 5300 Contemp Issues in Urban Education
This course explores the origins and context of urban education in the United States by critically examining how schools reproduce and sustain systemic inequality. We will examine historical, political, economic, and socio-cultural frameworks for understanding urban schools, students and teachers. Through course readings, field visits and class discussions, we explore the following: (1) student, teacher and researcher perspectives on urban education, (2) the broader sociopolitical urban context of K-12 schooling in cities, (3) teaching and learning in urban settings and (4) ideas about re-imagining urban education. Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall
1 Course Unit

EDTF 5300A Contemp Issues Urban Ed
This course explores the origins and context of urban education in the United States by critically examining how schools reproduce and sustain systemic inequality. We will examine historical, political, economic, and socio-cultural frameworks for understanding urban schools, students and teachers. Through course readings, field visits and class discussions, we explore the following: (1) student, teacher and researcher perspectives on urban education, (2) the broader sociopolitical urban context of K-12 schooling in cities, (3) teaching and learning in urban settings and (4) ideas about re-imagining urban education. EDTF 5310 Methods: Elementary B
In this course we will be examining many aspects of the teaching of science and social studies in elementary schools today. The importance of the National Science and Social Studies Education Standards, the Next Generation of Science Standards, and the Pennsylvania State Standards in curriculum development and reform will be explored in depth. Among the topics covered will be planning science and social studies instruction to include inquiry and integrated concepts, developing authentic assessments involving a variety of tools, creating and maintaining a safe laboratory and learning environment that meets the needs of diverse learners, and the integration of technology into science and social studies education. Prerequisite: Enrollment in Urban Teaching Residency Program.
Spring
Also Offered As: EDTC 5310
1 Course Unit
EDTF 5320 Methods: Middle Years B  
Middle school teachers are involved in the constant process of increasing students’ active reading and writing about content area texts within the high-pressure environment of state accountability. Middle Years Methods offers practical strategies and applications that help establish a literate classroom environment in support of learning across all subject areas. Teachers learn approaches to help them establish literate classroom environments that are rich in problem-solving, critical thinking, logical reasoning concepts focused on state and national standards, and practical techniques that investigate and connect content in all subject areas to the real world. Middle Years Methods is structured to allow participants the opportunity to explore strategies and concepts for increasing student reading and writing proficiency. Prerequisite: Enrollment in Urban Teaching Residency Program.  
Spring  
Also Offered As: EDTC 5320  
1 Course Unit

EDTF 5330 Methods: English B  
This course is designed for preservice and working educators and is intended to weave theory into practice. In this data and standards driven climate, educators are often hit with buzzwords instead of solid theory and solid pedagogy. The framework for the course builds from ELA Methods A. We will begin the semester by exploring the self, culturally relevant pedagogy, and how these things impact our practice. Then we will explore a variety of practices for teaching reading, writing, listening, and speaking. The practices for teaching reading, writing, listening, and speaking align to Special Education Competencies IV. Pedagogy. Prerequisite: Enrollment in Urban Teaching Residency Program.  
Spring  
Also Offered As: EDTF 5330  
1 Course Unit

EDTF 5340 Methods: Science B  
This course is the second course in the three-course series that addresses teaching and learning in middle and secondary science classrooms. The methods topics have been carefully selected to represent current and relevant areas in science education research and are geared toward understanding issues impacting students, teachers and schools in the modern urban society. The course is premised on several organizing themes in education: Assessing misconceptions, teaching through multiple intelligences, expanding instructional practices, teaching science in urban schools, culturally relevant pedagogies, gender, professional learning communities and workforce development, problem-based learning, current STEM fields of research, citizenship science, and ethical decision making. Prerequisite: Enrollment in Urban Teaching Residency Program.  
Spring  
Also Offered As: EDTF 5340  
1 Course Unit

EDTF 5350 Methods: World Languages B  
This course includes theoretical and practical applications for the teaching of world languages based on the five "C" goal areas: Communication, Cultures, Comparisons, Connections, and Communities of the World-Readiness Standards for Learning Languages. Approaches and techniques will be explored to equip world language teachers with the knowledge and tools necessary to create a student-centered, standards-driven classroom. Prerequisite: Enrollment in Urban Teaching Residency Program.  
Spring  
Also Offered As: EDTF 5350  
1 Course Unit

EDTF 5360 Methods: Mathematics B  
Mathematics Methods B is enhancing student learning through knowing the content, planning around our knowledge and reflecting on our practice and our practice and our students thinking. Each week we will think about mathematics through talking about mathematics, doing mathematics, and presenting mathematics, as we will learn to expect our students to do. Each week we will spend time both learning concepts behind the mathematics taught and learned in middle and high school, with a couple of topics from elementary school that have bearing on middle and high school mathematics. We will learn about these concepts in ways that you will be able to use in the classroom, giving you experiences with different methods. Prerequisite: Enrollment in Urban Teaching Residency Program.  
Spring  
Also Offered As: EDTF 5360  
1 Course Unit

EDTF 5370 Methods: Social Studies B  
This course is designed to enable middle years and secondary social studies teachers to expand their pedagogical practice. We will examine curriculum theory and instructional practices as they relate to the middle years and secondary social studies classroom. The course seeks to weave theory into practice by increasing students’ pedagogical content knowledge with the ultimate goal of improving instruction in practitioners’ classrooms. Essential Questions · What does effective teaching look like in the SS classroom? · How can I strategically design and implement instruction to best meet the needs of my students? · How can I promote authentic engagement for culturally diverse students? · What does it take to guide students from dependent to independent learners?  
Spring

EDTF 6010 Methods: Advanced Elementary  
This course has been designed for first and second year teachers who are currently teaching in elementary classrooms. Our work together will build upon the course work you completed this year, your past experiences as a student and a teacher, and your current classroom practices. In this course, we explore the interrelationship of language, literacy, numeracy and culture in order to co-construct a knowledge base for understanding how children learn. We will interrogate our own teaching practices in an effort to make our classrooms more content-rich and child-centered. Our work will span content areas - math, literacy, social studies, and science - emphasizing both their interconnectedness and their particularity. The course will offer opportunity to think in both theoretical terms and practical terms about implications of our teaching. Prerequisite: Enrollment in Urban Teaching Residency Program.  
Also Offered As: EDTF 6010

1 Course Unit

**EDTF 6190 Research Seminar**
Research plays a critical role in education. Discipline-specific studies are used to evaluate new curricula and educational programming, and to better understand classroom and school environments. The ability to both use and to be a critical consumer of this literature is essential for educators. In this course, we examine multiple research and evaluation methodologies, their applicability to issues in education, and the use of research findings to develop educational policy. The course provides an overview of research design and qualitative and quantitative data collection and analysis. A key goal is to equip students with the knowledge they need to become critical consumers and strategic users of educational research. Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall
1 Course Unit
EDTF 6250 Culturally Responsive Pedagogy
What is culturally responsive (or relevant) pedagogy? What does it look like, what does it consist of, how is it done, who can do it, when and where can it enter? Is it effective, and for whom? What are the impediments and limitations? What are its roots? What can its future look like, and what can it mean for urban education, student success, and community empowerment? This course will explore these questions and more, providing a theoretical grounding to push this field further, and practical tools to incorporate into current and future teaching and learning activities. The course will also look closely at various intersections (critical race theory, critical pedagogy, gender studies, social justice, multiculturalism, diversity/equity), sociopolitical landscapes, and educational reform efforts, to understand how culturally responsive pedagogy fits within the broader narratives. The class is intentionally designed as a seminar/workshop. Class activities will include full group discussions, small group breakouts, video clips, informal presentations, and possible guest speakers. Students are expected to actively engage both with the readings and in class activities. Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall

EDTF 6270 Outside of the School Box
This course explores education broadly, focusing on the interconnections between individuals, families, and policy as each relates to urban public schools. Drawing from a critical sociocultural lens, Outside the School Box also engages with ongoing discussions of school quality and public policy. Major topics include the impact of housing selection on the makeup of urban public schools; teacher training, recruitment and retention; and causes and effects of market-driven educational systems. Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall
1 Course Unit

EDTF 6280 Racial Literacy
This course will provide you with opportunities to explore the experiences, perspectives, and contributions of various cultures, groups, and individuals while exposing you to the knowledge, skills, and tools that are necessary to become a racially competent and highly effective educator. We will learn how racial literacy is defined, practiced, acquired, and used ensure that culturally responsive practices are a substantial piece of your pedagogical framework. This course will introduce a number of different racial perspectives about the same subject matter in an effort to demonstrate that understanding different viewpoints can improve ones ability to respond accordingly. Through storytelling, journaling, stress management practice, role-playing, and open exchange and dialogue you will see how racial literacy is established by reflecting on in-the-moment stress reactions. We will support you as you learn how to address diversity related topics in ways that create teaching and learning environments where mutual respect and trust form the basis of the relationships between you and the communities you serve. Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall or Spring
1 Course Unit

EDTF 7010 Educating Students with Disabilities - Part II
The purpose of this course is to teach students problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who have disabilities related to specific learning disabilities. We will learn what constitutes disabilities in this population and issues surrounding providing this population with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with creating and implementing an IEP for students in the population. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. Instructional techniques and assessments strategies will be a focus. Prerequisite: Enrollment in Urban Teaching Residency Program.
Spring
Also Offered As: EDTC 7010
1 Course Unit

EDTF 7020 Special Education Law & Processes
This course is designed to provide students with an understanding of special education processes, including the evaluation processes, exceptionailities and eligibility, the development and delivery of Individual Education Plans, as well as theories and best educational practices in the field and profession of special education. Students will become familiar with the Individuals with Disabilities in Education Act (IDEA), the cornerstone of special education law, Section 504 of the Americans with Disabilities Act, and Pennsylvania statutes and regulations governing special education law. Issues related to an understanding of the evaluation and determination of exceptionalities in a cultural context will be explored. There will be a focus on the direct application of knowledge and skills to the classroom, as well as the expectation that students teaching experiences will inform discussion and learning. Prerequisite: Enrollment in Urban Teaching Residency Program.

1 Course Unit

EDTF 7030 Educating Students with Disabilities - Part I
The purpose of this course is to teach students problem solving strategies, teaching techniques, itinerant services, team and community building, and types of disabilities found in students who are eligible to take alternative state testing. We will learn what constitutes disabilities in this population with an effective education. Students will explore the ramifications, jargon, specific goals and objectives included with creating and implementing an IEP for students in the population. Students will discuss the appropriateness of various academic environments as children with more encompassing disabilities progress from elementary to secondary education, and transition into adulthood. General issues surrounding the topic of inclusion and the least restrictive environment will be addressed. A holistic approach to educating this population, with an emphasis on social, emotional, behavioral, transition and life skills are a focus. Students will receive a grade of a pass or fail at the conclusion of the fall term. 40 mandatory hours of fieldwork will take place in the spring semester. This will allow students to demonstrate learning acquired in the course work in a realistic setting. At the conclusion of the spring semester, a grade will be issued. Content will be presented through on line lecture, hands on projects, reading and fieldwork experience. Prerequisite: Enrollment in Urban Teaching Residency Program.
Fall
Also Offered As: EDTC 7030
1 Course Unit
EDTF 7040 Special Education Capstone - Part I
In this course, students who are working towards their Masters of Education in the Urban Teaching Residency Program will be involved in the process of designing and utilizing research in education. Students will learn the components of an educational research project including hypothesis development, literature review techniques, and various research methodologies including action research, data collection and analysis. Significant topics in education will be discussed. Students will be required to complete a preliminary literature review, Capstone Project Proposal and completed literature review in the fall term, followed by methodology, data analysis and discussion in the spring term. Both semesters will include whole group and individual instruction that will support the completion of a comprehensive Capstone Project that addresses a notable issue in education. Prerequisite: Enrollment in Urban Teaching Residency Program.

Spring
0-1 Course Unit

EDTF 7050 Urban Education Capstone Writing Seminar
This course is designed as a writing seminar in order to complete a thesis for a master's degree. Students are required to develop a research question and methods for data collection, analyze existing literature related to the research question, collect data, analyze the data, and draw conclusions from the data. There will be four whole class sessions and at least three individual writing conferences. During the whole class sessions, students will learn how to plan, execute, and analyze research. Since this class is a writing seminar, be prepared to spend time in class drafting, conferencing, and/or researching. Prerequisite: Enrollment in Urban Teaching Residency Program.

Spring
1 Course Unit

EDTF 7060 Special Education Capstone - Part II
In the second session of the Special Education Capstone students will continue the writing process with finalizing edited Literature Review sections from session I, and learning how to write and develop research based methodology appropriate for each student’s project. The course will then break apart the components of data analysis and discussion with students moving through the research process to compose each. The semester is comprised of face to face sessions in whole group and individual conferences. Prerequisite: Enrollment in Urban Teaching Residency Program.

Spring
0-1 Course Unit

**Electrical & Systems Engineering (ESE)**

ESE 0099 Undergraduate Research and/or Independent Study
An opportunity for the student to become closely associated with a professor in (1) a research effort to develop research skills and technique and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student's academic level. To register for this course, the student and professor jointly submit a detailed proposal to the undergraduate curriculum chairman no later than the end of the first week of the term. Fall or Spring
0.5-2 Course Units

ESE 1110 Atoms, Bits, Circuits and Systems
Introduction to the principles underlying electrical and systems engineering. Concepts used in designing circuits, processing signals on analog and digital devices, implementing computation on embedded systems, analyzing communication networks, and understanding complex systems will be discussed in lectures and illustrated in the laboratory. This course provides an overview of the challenges and tools that Electrical Engineers and Systems Engineers address and some of the necessary foundations for students interested in more advanced courses in ESE.

Fall
1 Course Unit

ESE 1120 Engineering Electromagnetics
This course covers basic topics in electromagnetics, namely, electric charge, electric field, electric energy, conductors, insulators, dielectric materials, capacitors, electric current, magnetic field, inductors, Faraday's law of induction, alternating current (AC), impedance, Maxwell's equations, electromagnetic and optical wave propagation, with emphasis on engineering issues. Relevant topics are emphasized in our lectures in order to prepare students for other courses in ESE that rely on the contents on this course. Several laboratory experiments accompany the course to provide hands-on experience on some of the topics in the lecture and prepare students for the capstone project. Pre-requisites MATH 1400 and PHYS 0150/ PHYS 0170/ MEAM 1100 or with permission of the instructor. It is recommended but not required that MATH 1410 be taken concurrently.

Spring
Prerequisites: MATH 1400 AND (PHYS 0150 OR PHYS 0140 PHYS 0170/ MEAM 1100) OR with permission of instructor. It is recommended but not required that MATH 1410 be taken concurrently.
1.5 Course Unit

ESE 1500 Digital Audio Basics
Primer on digital audio. Overview of signal processing, sampling, compression, human psychoacoustics, MP3, intellectual property, hardware and software platform components, and networking (i.e., the basic technical underpinnings of modern MP3 players and cell phones).

Spring
Prerequisite: CIS 1100 OR ENGR 1050
1 Course Unit

ESE 1900 Silicon Garage: Introduction to Open Source Hardware and Software Platforms
Project-centric learning course for non-ESE majors on microprocessor control of physical systems using open-source hardware and software platforms. Students will work in teams to develop software controlled systems based on the Arduino and Raspberry-Pi that interface with the real world (sensors, actuators, motors) and each other (networking).

Prerequisite: High School Physics and Math

Spring
0.5 Course Units
ESE 2000 Artificial Intelligence Lab: Data, Systems, and Decisions
The purpose of this course is to introduce students to the basic concepts of systems engineering, data sciences, and machine learning. The course will cover the engineering cycle and expose students to the notions of data, systems, models, decisions, and requirements. The course empowers students to use statistical analysis, signal processing, and optimization techniques to process data in decision making systems. It also empowers students to use machine learning techniques for the same purpose. The relative strengths of each approach are discussed. Students are exposed to techniques to process data with temporal, spatial, and network structure as well as to deterministic and Markov dynamical system models.
Spring
1 Course Unit

ESE 2040 Decision Models
This first course in decision making will introduce you to quantitative models for decision and design in the sciences, engineering, machine learning, data science, logistics, and economics. Through application-based case studies, you will be shown how to (i) formalize a decision problem as a mathematical optimization problem, and (ii) solve the resulting optimization problem using Python scientific computing modules. You will also be given a brief introduction to the optimization algorithms and programming tools underpinning contemporary deep learning and shown how to apply them to decision and design problems.
Fall
Prerequisite: MATH 1400
1 Course Unit

ESE 2100 Introduction to Dynamic Systems
This first course in systems modeling covers linear and nonlinear systems in both continuous and discrete time. Topics covered include linearization and stability analysis, elementary bifurcations, and an introduction to chaotic dynamics. Extensive applications to mechanical, electrical, biological, social, and economic/financial systems are included. The course will use both analytical and numerical/symbolic tools.
Fall
1 Course Unit

ESE 2150 Electrical Circuits and Systems
This course gives an introduction of modern electric and electronic circuits and systems. Designing, building and experimenting with electrical and electronic circuits are challenging and fun. It starts with basic electric circuit analysis techniques of linear circuits. Today mathematical analysis is used to gain insight that supports design; and more detailed and accurate representations of circuit performance are obtained using computer simulation. It continues with 1st order and 2nd order circuits in both the time and frequency domains. It discusses the frequency behavior of circuits and the use of transfer functions. It continues with introduction of non-linear elements such as diodes and MOSFET (MOS) transistors. Applications include analog and digital circuits, such as single stage amplifiers and simple logic gates. A weekly lab accompanies the course where concepts discussed in class will be illustrated by hands-on projects; students will be exposed to state-of-the-art test equipment and software tools (LabView, Spice).
Fall
Prerequisite: ESE 1120
1.5 Course Unit

ESE 2180 Electronic, Photonic, and Electromechanical Devices
This first course in electronic, photonic and electromechanical devices introduces students to the design, physics and operation of physical devices found in today's applications. The course describes semiconductor electronic and optoelectronic devices, including light-emitting diodes, photodetectors, photovoltaics, transistors and memory; optical and electromagnetic devices, such as waveguides, fibers, transmission lines, antennas, gratings, and imaging devices; and electromechanical actuators, sensors, transducers, machines and systems.
Fall
Prerequisite: ESE 1120
1.5 Course Unit

ESE 2240 Signal and Information Processing
Introduction to signal and information processing (SIP). In SIP we discern patterns in data and extract the patterns from noise. Foundations of deterministic SIP in the form of frequency domain analysis, sampling, and linear filtering. Random signals and the modifications of deterministic tools that are necessary to deal with them. Multidimensional SIP where the goal is to analyze signals that are indexed by more than one parameter. Includes a hands-on lab component that implements SIP as standalone applications on modern mobile platforms.
Spring
Prerequisite: MATH 1400
1.5 Course Unit

ESE 2900 Introduction to Electrical and Systems Engineering Research Methodology
Introduction to the nature and process of engineering research as represented by ongoing ESE faculty (and collaborating colleagues' and industrial partners') research projects. Joint class exercises in how to pursue effective background technical reading, pitch a proposal, and aim for the discovery of new human knowledge to complement the individually mentored topic specific project work.
Spring
0.5 Course Units

ESE 2910 Introduction to Electrical and Systems Engineering Research and Design
Students contract with a faculty mentor to conduct scaffolded original research in a topic of mutual interest. Prepare project report on research findings.
Spring
Prerequisite: ESE 2900 OR Permission of Instructor
1 Course Unit

ESE 2920 Invention Studio
This is a project-centric course for ESE majors to engage in circuit layout and prototype design skills. Students will work in teams to develop printed circuit boards using industry standard tools like Altium and learn mechanical prototyping skills using Solidworks. Emphasis will be on developing sound printed circuit board layout practices using circuitry knowledge that they acquire in ESE 2150 and ESE 3700. A module on using Cypress PSoC will introduce students to recent developments in analog/digital co-design.
Fall
Prerequisite: ESE 2150
.5 Course Units

ESE 2960 Study Abroad
1 Course Unit
ESE 3010 Engineering Probability
This course introduces students to the mathematical foundations of the theory of probability and its rich applications. The course begins with an exploration of combinatorial probabilities in the classical setting of games of chance, proceeds to the development of an axiomatic, fully mathematical theory of probability, and concludes with the discovery of the remarkable limit laws and the eminence grise of the classical theory, the central limit theorem. The topics covered include: discrete and continuous probability spaces, distributions, mass functions, densities; conditional probability; independence; the Bernoulli schema; the binomial, Poisson, and waiting time distributions; uniform, exponential, normal, and related densities; expectation, variance, moments; conditional expectation; generating functions, characteristic functions; inequalities, tail bounds, and limit laws. But a bald listing of topics does not do justice to the subject: the material is presented in its lush and glorious historical context, the mathematical theory buttressed and made vivid by rich and beautiful applications drawn from the world around us. The student will see surprises in election-day counting of ballots, a historical wager the sun will rise tomorrow, the folly of gambling, the sad news about lethal genes, the curiously persistent illusion of the hot hand in sports, the unreasonable efficacy of polls and its implications to medical testing, and a host of other beguiling settings.
Spring
Prerequisite: MATH 1410 or permission of instructor
1 Course Unit

ESE 3030 Stochastic Systems Analysis and Simulation
This analysis is usually complemented with numerical analysis of experimental outcomes. This class covers topics in probability and random processes, Markov chains, Poisson processes, stationary and Gaussian processes. Besides the theoretical toolbox that we build, we explore applications in communication networks, search engines, deciphering algorithms, molecular biology and more.
Fall
Prerequisite: ESE 3010 or permission of instructor
1 Course Unit

ESE 3050 Foundations of Data Science
Introduction to a broad range of tools to analyze large volumes of data in order to transform them into actionable decisions. Using case studies and hands-on exercises, the student will have the opportunity to practice and increase their data analysis skills.
Fall
Prerequisite: ESE 3010 or permission of instructor
1 Course Unit

ESE 3060 Deep Learning: A Hands-on Introduction
This course will serve as an introductory and hands-on dive into the area of deep learning. The main goal is to educate the students on (i) the commonly-used neural network architectures and proficiency in training them, (ii) Some of the main problems that deep learning systems have successfully addressed (formulation, architecture, data sets, etc). There will be no theory in this course. After finishing this course, the students should be very comfortable with pytorch programming as well as training deep learning models.
Fall
Prerequisite: ESE 2240
1 Course Unit

ESE 3190 Fundamentals of Solid-State Circuits
Analysis and design of basic active circuits involving semiconductor devices including diodes and bipolar transistors. Single stage, differential, multi-stage, and operational amplifiers will be discussed including their high frequency response. Wave shaping circuits, filters, feedback, stability, and power amplifiers will also be covered. A weekly three-hour laboratory will illustrate concepts and circuits discussed in the class.
Spring
Prerequisite: ESE 2150 or permission of instructor
1.5 Course Unit

ESE 3250 Fourier Analysis and Applications in Engineering, Mathematics, and the Sciences
This course focuses on the mathematics behind Fourier theory and a wide variety of its applications in diverse problems in mathematics, engineering, and the sciences. The course is very mathematical in content and students signing up for it should have junior or senior standing. The topics covered are chosen from: functions and signals; systems of differential equations; superposition, memory, and non-linearity; resonance, eigenfunctions; the Fourier series and transforms, spectra; convergence theorems; inner product spaces; mean-square approximation; interpolation and prediction, sampling; random processes, stationarity; wavelets, Brownian motion; stability and control, Laplace transforms. Prerequisite: Junior or Senior standing
The applications of the mathematical theory that will be presented vary from year to year but a representative sample include: polynomial approximation, Weierstrass's theorem; efficient computation via Monte Carlo; linear and non-linear oscillators; the isoperimetric problem; the heat equation, underwater communication; the wave equation, tides; testing for randomness, fraud; nowhere differentiable continuous functions; does Brownian motion exist?; error-correction; phase conjugate optics and four-wave mixing; cryptography and secure communications; how fast can we compute?; X-ray crystallography; cosmology; and what the diffusion equation has to say about mathematical finance and arbitrage opportunities.
Fall
Prerequisite: ESE 2240 or permission of instructor
1 Course Unit

ESE 3300 Principles of Optics and Photonics
This course introduces the fundamental principles of optics, photonics, and antennas alongside a range of applications. Specific topics include: Maxwell's equations and the wave equation; light propagation and interaction with materials; geometric/ray optics and polarization; wave optics; diffraction and gratings; waveguides and fiber optics; optical cavities; lasers and light sources; antennas and applications to wireless communication. Prerequisite: Permission of instructor
Prerequisite: ESE 2150 or permission of instructor
1 Course Unit
ESE 3360 Nanofabrication of Electrical Devices
This course is an intermediate undergraduate course in the understanding, fabrication, and characterization of electrical, optical, electromagnetic, and/or electromechanical nanodevices; i.e., micro- and nanoscale devices which have significant relevance to electrical engineering. Example devices of interest include transistors, microelectromechanical systems (MEMS), and optical and optoelectronic devices (including photovoltaic devices). Weekly laboratory sessions will enable the fabrication and characterization of a subset of electrical nanodevices. Students will learn basic physics and modeling of electrical nanodevices as well as acquire hands-on skill in their fabrication and characterization. Prerequisite: If course requirements not met, permission of instructor required.

Spring
Prerequisite: ESE 2180 or permission of instructor
1.5 Course Unit

ESE 3400 Medical Devices Laboratory
With the demand for personalized medicine and health care, the need for consumer medical devices has risen. Traditionally devices have been designed from the ground up, but with more standardized components and software tools devices can be built to fulfill this need. This course will introduce design of medical devices. Students will learn the basics of sensors, signal conditioning, data acquisition and analysis, biopotential, biopotential electrodes, biomedical instrumentation, examples of biological signal measurement and electronics safety. This will be a lab based inquiry into medical device design. Prerequisites: Some exposure to circuit/electronics; Calculus and familiarity with signals
1 Course Unit

ESE 3500 Embedded Systems/Microcontroller Laboratory
An introduction to interfacing real-world sensors and actuators to embedded microprocessor systems. Concepts needed for building electronic systems for real-time operation and user interaction, such as digital input/outputs, interrupt service routines, serial communications, and analog-to-digital conversion will be covered. The course will conclude with a final project where student-designed projects are featured in presentations and demonstrations. Prerequisite: Prior programming experience in any language

Spring
Prerequisite: ESE 2150 AND CIS 1200 (or permission of instructor)
1.5 Course Unit

ESE 3600 TinyML: Tiny Machine Learning for Embedded Systems
Tiny Machine Learning for Embedded Systems is a cutting-edge field that brings the transformative power of machine learning (ML) to the performance-constrained and power-constrained domain of embedded systems to develop useful and exciting Internet of Things solutions. This is an introductory course at the intersection of Machine Learning (ML) and Embedded Internet of Things (IoT) Devices which covers machine learning applications and algorithms using embedded hardware, sensors, actuators and software. Embedding machine learning in a device at the extreme end point - right at the data source - is fundamentally different from general data-center style machine learning. Embedded ML is all about real-time processing of time-series data that comes directly from sensors. By the end of this course, students will collect and preprocess data to build a dataset, design a model, train a model, evaluate and optimize the pipeline, convert the model to run on hardware, deploy the model on a microcontroller, make inference and roll out applications. This will enable future applications development across medical devices, home appliances, industrial automation, wild-life conservation, smart agriculture and many more. Prerequisites: Basic knowledge of programming (CIS1100 or equivalent) and basic knowledge of Python and basic knowledge of electronics and circuits. We provide the background, tools and assignments for machine learning and embedded systems using TensorFlow, Google Colab, and ARM Cortex32 hardware platforms.
Prerequisite: CIS 1200 or permission of instructor
1 Course Unit

ESE 3700 Circuit-Level Modeling, Design, and Optimization for Digital Systems
Circuit-level design and modeling of gates, storage, and interconnect. Emphasis on understanding physical aspects which drive energy, delay, area, and noise in digital circuits. Impact of physical effects on design and achievable performance.

Fall
Prerequisite: ESE 2150 or permission of instructor
1 Course Unit

ESE 4000 Engineering Economics
This course investigates methods of economic analysis for decision making among alternative courses of action in engineering applications. Topics include: cost-driven design economics, break-even analysis, money-time relationships, rates of return, cost estimation, depreciation and taxes, foreign exchange rates, life cycle analysis, benefit-cost ratios, risk analysis, capital financing and allocation, and financial statement analysis. Case studies apply these topics to actual engineering problems.
Prerequisite: Knowledge of Differential Calculus
Fall
Mutually Exclusive: ESE 5400
1 Course Unit
ESE 4010 Complex Networks
The course covers the methodological foundations of network formation and utilization. It introduces various mathematical models for random and strategic, static and dynamic formation of networks. The models for random static formation span, Erdos Renyi Graphs and Power law topologies. Threshold properties underlying these formations will be rigorously proved. The dynamic formations will introduce mean field based deterministic models for network evolution. Techniques for approximately analyzing various key network features such as component sizes will be introduced. These analyses will culminate in tools for approximate analysis of efficacy of various immunization strategies considering epidemic disease spread over networks. A solid background in undergraduate probability is required (e.g. ESE 3010, STAT 4300, ENM 3210, CIS 2610 or equivalent).

Spring
Mutually Exclusive: ESE 5010
Prerequisite: ESE 3010 or permission of instructor
1 Course Unit

ESE 4020 Statistics for Data Science
The course covers the methodological foundations of data science, emphasizing basic concepts in statistics and learning theory, but also modern methodologies. Learning of distributions and their parameters. Testing of multiple hypotheses. Linear and nonlinear regression and prediction. Classification. Uncertainty quantification. Model validation. Clustering. Dimensionality reduction. Probably approximately correct (PAC) learning. Such theoretical concepts are further complemented by example applications, case studies (datasets), and programming exercises (in Python) drawn from electrical engineering, computer science, the life sciences, finance, and social networks.

Fall
Mutually Exclusive: ESE 5420
Prerequisite: ESE 3010 or permission of instructor
1 Course Unit

ESE 4070 Introduction to Networks and Protocols
This is an introductory course on packet networks and associated protocols, with a particular emphasis on IP-based networks such as the Internet. The course introduces design and implementation choices that underlie the development of modern networks, and emphasizes basic analytical understanding of the concepts. Topics are covered in a mostly "top down" approach starting with web HTTP protocol followed by transport layer protocols such as TCP and UDP. Congestion control of TCP is extensively covered. Network layer solutions, including IP addressing and routing are covered next, before exploring link layer solutions including multiple access strategies, local area networks (Ethernet and 802.11). The objectives of the course include basic understanding of the network protocol stack and hands-on experience analyzing protocol behavior using wireshark.

Fall
Mutually Exclusive: ESE 5070
Prerequisite: ESE 3010 or permission of instructor
1 Course Unit

ESE 4190 Analog Integrated Circuits
Design of analog circuits and subsystems using primarily MOS technologies at the transistor and higher levels. Transistor level design of building block circuits such as op amps, comparators, sample and hold circuits, voltage and current references, capacitors and resistor and class AB output stages. The Cadence Design System will be used to capture schematics and run simulations using Spectre for some homework problems and for the course project. Topics of stability, noise, device matching through good layout practice will also be covered. Students who take ESE 4190 will not be able to take ESE 5720 later. More will be expected of ESE 5720 students in the design project. Prerequisite: If course requirement not met, permission of instructor required.

Fall
Mutually Exclusive: ESE 5720
Prerequisite: ESE 3190 or permission of instructor
1 Course Unit

ESE 4210 Control For Autonomous Robots
This course introduces the hardware, software and control technology used in autonomous ground vehicles, commonly called "self-driving cars." The weekly laboratory sessions focus on development of a small-scale autonomous car, incrementally enhancing the sensors, software, and control algorithms to culminate in a demonstration in a realistic outdoor operating environment. Students will learn basic physics and modeling; controls design and analysis in Matlab and Simulink; software implementation in C and Python; sensor systems and filtering methods for IMUs, GPS, and computer vision systems; and path planning from fixed map data. Prerequisite: If course requirement not met, permission of instructor required.

Fall
Also Offered As: MEAM 4210
Prerequisite: ESE 2240 OR MEAM 2110 or permission of instructor
1.5 Course Unit

ESE 4230 Quantum Engineering
Quantum engineering - the design, fabrication, and control of quantum coherent devices - has emerged as a multidisciplinary field spanning physics, electrical engineering, materials science, chemistry, and biology, with the potential for transformational advances in computation, secure communication, and nanoscale sensing. This course surveys the state of the art in quantum hardware, beginning with an overview of the physical implementation requirements for a quantum computer and proceeding to a synopsis of the leading contenders for quantum building blocks, including spins in semiconductors, superconducting circuits, photons, and atoms. The course combines background material on the fundamental physics and engineering principles required to build and control these devices with readings drawn from the current literature, including promising architectures for scaling physical qubits into larger devices and secure communication networks, and for nanoscale sensing applications impacting biology, chemistry, and materials. Prerequisite: If course requirement not met, permission of instructor required.

Spring
Mutually Exclusive: ESE 5230
Prerequisite: ESE 5130 or permission of instructor
1 Course Unit
ESE 4440 Project Management
Most work that engineers do is project work and most project work is teamwork. Even when working individually, engineering tasks are usually part of a larger project. This course focuses on developing the sociotechnical knowledge and skills critical to success throughout one's career whether as a project team member, a project team manager/leader, or a project sponsor. Sociotechnical theory will show us that it doesn't work to focus on the social system or the technical system independent of or in isolation of each other. It is the interplay, the interaction between the behavioral (e.g., communication, conflict management, decision making) and the technical (e.g., SMART goals, scheduling, budgeting, tracking) aspects of project work that most influences project success. Open systems theory will allow us to examine projects at various system levels: the individual, the team, the organization, and people or groups in the organization's environment such as suppliers, regulators, competitors, customers and clients.
Two Term Class, Student may enter either term; credit given for either
Mutually Exclusive: ESE 5440
Prerequisite: ESE 3040
1 Course Unit

ESE 4500 Senior Design Project I - EE and SSE
This is the first of a two-semester sequence in electrical and systems engineering senior design. Student work will focus on project/team definition, systems analysis, identification alternative design strategies and determination (experimental or by simulation) or specifications necessary for a detailed design. Project definition is focused on defining a product prototype that provides specific value to a least one identified user group. Students will receive guidance on preparing professional written and oral presentations. Each project team will submit a project proposal and two written project reports that include coherent technical presentations, block diagrams and other illustrations appropriate to the project. Each student will deliver two formal Powerpoint presentations to an audience comprised of peers, instructors and project advisors. During the semester there will be periodic individual-team project reviews.
Prerequisite: Senior Standing or permission of the instructor
Fall
Prerequisite: Senior Standing
1 Course Unit

ESE 4510 Senior Design Project II - EE and SSE
This is the second of a two-term sequence in electrical and systems engineering senior design. Student work will focus on completing the product prototype design undertaken in ESE 450 and successfully implementing the said product prototype. Success will be verified using experimental and/or simulation methods appropriate to the project that test the degree to which the project objectives are achieved. Each project team will prepare a poster to support a final project presentation and demonstration to peers, faculty and external judges. The course will conclude with the submission of a final project written team report. During the semester there will be periodic project reviews with individual teams.
Spring
Prerequisite: ESE 4500 or permission of instructor
1 Course Unit

ESE 5000 Linear Systems Theory
This graduate-level course focuses on continuous and discrete n-dimensional linear systems with m inputs and p outputs in a time domain based on linear operators. The course covers general discussions of linear systems such as, linearization of non-linear systems, existence and uniqueness of state-equation solutions, transition matrices and their properties, methods for computing functions of matrices and transition matrices and state-variable changes. It also includes z-transform and Laplace transform methods for time-invariant systems and Floquet decomposition methods for periodic systems. The course then moves to stability analysis, including: uniform stability, uniform exponential stability, asymptotic stability, uniform asymptotic stability, Lyapunov transformations, Lyapunov stability criteria, eigenvalues conditions and input-output stability analysis. Applications involving the topics of controllability, observability, realizability, minimal realization, controller and observer forms, linear feedback, and state feedback stabilization are included, as time permits. Open to graduates and undergraduates who have taken undergraduate courses in linear algebra and differential equations.
Fall
1 Course Unit

ESE 5010 Networking - Theory and Fundamentals
Networks constitute an important component of modern technology and society. Networks have traditionally dominated communication technology in form of communication networks, distribution of energy in form of power grid networks, and have more recently emerged as a tool for social connectivity in form of social networks. In this course, we will study mathematical techniques that are key to the design and analysis of different kinds of networks. First, we will investigate techniques for modeling evolution of networks. Specifically, we will consider random graphs (all or none connectivity, size of components, diameters under random connectivity), small world problem, network formation and the role of topology in the evolution of networks. Next, we will investigate different kinds of stochastic processes that model the flow of information in networks. Specifically, we will develop the theory of markov processes, renewal processes, and basic queueing, diffusion models, epidemics and rumor spreading in networks.
Spring
Mutually Exclusive: ESE 4010
Prerequisite: ESE 5300
1 Course Unit

ESE 5030 Simulation Modeling and Analysis
This course provides a study of discrete-event systems simulation in the areas of queuing, inventory and reliability systems as well as Markov Chains, Random-Walks and Monte-Carlo systems. The course examines many probability distributions used in simulation studies as well as the Poisson process. Fundamental to most simulation studies is the ability to generate reliable random numbers and so the course investigates the basic properties of random numbers and techniques used for the generation and testing of pseudo-random numbers. Random numbers are then used to generate other random variable using the methods of inverse-transform, convolution, composition and acceptance/rejection. Finally, since most inputs to simulation are probabilistic instead of deterministic in nature, the course examines some techniques used for identifying the probabilistic nature of input data. These include identifying distributional families with sample data, using maximum-likelihood methods for parameter estimating within a given family and testing the final choice of distribution using chi-squared goodness-of-fit.
Spring
1 Course Unit
ESE 5050 Feedback Control Design and Analysis
Basic methods for analysis and design of feedback control in systems. Applications to practical systems. Methods presented include time response analysis, frequency response analysis, root locus, Nyquist and Bode plots, and the state-space approach.
Spring
Also Offered As: MEAM 5130
Prerequisite: MEAM 3210 OR ESE 2100
1 Course Unit

ESE 5060 Introduction to Optimization Theory
Introduction to mathematical optimization for graduate students who would like to be intelligent and sophisticated users of mathematical programming but do not necessarily plan to specialize in this area. Linear, integer and nonlinear programming are covered, including the fundamentals of each topic together with a sense of the state-of-the-art and expected directions of future progress. Homework and projects emphasize modeling and solution analysis, and introduce the students to a large variety of application areas.
Fall
1 Course Unit

ESE 5070 Introduction to Networks and Protocols
This is an introductory course on packet networks and associated protocols, with a particular emphasis on IP-based networks such as the Internet. The course introduces design and implementation choices that underlie the development of modern networks, and emphasizes basic analytical understanding of the concepts. Topics are covered in a mostly "bottom-up" approach starting with a brief review of physical layer issues such as digital transmission, error correction and error recovery strategies. This is followed by a discussion of link layer aspects, including multiple access strategies, local area networks (Ethernet and 802.11 wireless LANs), and general store-and-forward packet switching. Network layer solutions, including IP addressing, naming, and routing are covered next, before exploring transport layer and congestion control protocols (UDP and TCP). Finally, basic approaches for quality-of-service and network security are examined. Specific applications and aspects of data compression and streaming may also be covered.
Fall
Mutually Exclusive: ESE 4070
1 Course Unit

ESE 5090 Quantum Circuits and Systems
Quantum information processing promises new paradigms in secure communication, powerful new simulation techniques, and exponential speedups over classical techniques for a select range of problems. This course will cover the basics of quantum mechanics and introduce students to a circuit-based model for quantum computing. In the course, several of the key algorithms that have motivated the pursuit of large-scale universal quantum computers will be explored. The scalability of quantum computers from a circuits perspective will be covered including error correction techniques. Students will also gain hands-on experience in programming cloud-based quantum computers. Students should have previously taken an undergraduate course in linear algebra such as MATH 2400 or ESE 2240.
Spring
1 Course Unit

ESE 5100 Electromagnetic and Optics
This course reviews electrostatics, magnetostatics, electric and magnetic materials, induction, Maxwell's equations, potentials and boundary-value problems. Topics selected from the areas of wave propagation, wave guidance, antennas, and diffraction will be explored with the goal of equipping students to read current research literature in electromagnetics, microwaves, and optics.
Fall
1 Course Unit

ESE 5120 Dynamical Systems for Engineering and Biological Applications
This midlevel course in nonlinear dynamics focuses on the analysis of low dimensional, continuous time models for describing and understanding complex behavior in physical, biological and engineered systems. We assume some background knowledge of ordinary differential equations, and develop at an engineering applications level the concepts and tools of qualitative dynamical systems theory with major focus on analysis and some on synthesis.
Fall
1 Course Unit

ESE 5130 Prin of Quantum Tech
Fall
1 Course Unit

ESE 5140 Graph Neural Networks
Graph Neural Networks (GNNs) are information processing architectures for signals supported on graphs. They have been developed and are presented in this course as generalizations of the convolutional neural networks (CNNs) that are used to process signals in time and space. The focus of this course is in large scale problems involving high dimensional signals. In these settings fully connected neural networks fail to scale. CNNs are the tool for enabling scalable learning for signals in time and space. GNNs are the tool for enabling scalable learning for signals supported on graphs.
Fall
1 Course Unit

ESE 5150 Internet of Things Sensors and Systems
The course is designed to introduce sensors and their networks and systems that are increasingly pervasive and form the physical device layer of the Internet of Things. Sensors transduce input signals into measured outputs within and between chemical, thermal, mechanical, optical, electrical, and magnetic domains. The course will describe the physical principles of operation, the characteristics, and the figures of merit of different sensors and their integration in networks and systems, highlighting common electronic interfaces that are used. The sensors and systems will be described as case studies to show how these devices are used to monitor and regulate processes in applications in agriculture, the environment, the home, manufacturing, health, transportation, and human activity. The course is structured with a combination of lectures, in-class and at-home labs, and research paper reading/in-class discussion.
Spring
1 Course Unit
ESE 5160 IoT Edge Computing
This course was developed to bring lessons learned from the product design industry into the classroom - specifically focusing on Internet of Things (IoT) device development and deployment. To achieve the highest level of knowledge transfer, the course will incorporate device design theory with discussions of real-world product failures and successes - as well as a heavy hands-on component to build a device from end to end. Students will learn to use industry standard tools, such as Altium, Atmel Studio, and IBM Watson - allowing them the same level of power and customization at the disposable of startups and Fortune 500 companies alike. Prerequisite: If course requirement not met, permission of instructor required.
Spring
Prerequisite: ESE 5190
1 Course Unit

ESE 5190 Smart Devices
An embedded system is the product of a marriage between hardware and software. Embedded systems have grown to be ubiquitous in the modern world - from simple temperature controlled kettles to intricate smart watches with a plethora of functions squeezed into one small package to complex rovers for space exploration. This course introduces the theory and practice of developing embedded systems through exploration of modern microcontroller architectures and culminates in a final project where students have the opportunity to synthesize and apply their knowledge in a project of their own design. Previous programming experience (Preferably C); Some exposure to circuit/electronics; Undergraduates who have taken ESE 3500 are not permitted to take this course.
Fall
Also Offered As: IPD 5190
Prerequisite: CIS 1200 AND ESE 3500
1 Course Unit

ESE 5210 The Physics of Solid State Energy Devices
An advanced undergraduate course or graduate level course on the fundamental physical principles underlying the operation of traditional semiconducting electronic and optoelectronic devices and extends these concepts to novel nanoscale electronic and optoelectronic devices. The course assumes an undergraduate level understanding of semiconductors physics, as found in ESE 2180 or PHYS 1240. The course builds on the physics of solid state semiconductor devices to develop the operation and application of semiconductors and their devices in energy conversion devices such as solar photovoltaics, thermophotovoltaics, and thermoelectrics, to supply energy. The course also considers the importance of the design of modern semiconductor transistor technology to operate at low-power in CMOS. Prerequisite: If course requirement not met, permission of instructor required.
Spring
Prerequisite: ESE 2180 OR PHYS 1240
1 Course Unit

ESE 5230 Quantum Engineering
Quantum engineering - the design, fabrication, and control of quantum coherent devices - has emerged as a multidisciplinary field spanning physics, electrical engineering, materials science, chemistry, and biology, with the potential for transformational advances in computation, secure communication, and nanoscale sensing. This course surveys the state of the art in quantum hardware, beginning with an overview of the physical implementation requirements for a quantum computer and proceeding to a synopsis of the leading contenders for quantum building blocks, including spins in semiconductors, superconducting circuits, photons, and atoms. The course combines background material on the fundamental physics and engineering principles required to build and control these devices with readings drawn from the current literature, including promising architectures for scaling physical qubits into larger devices and secure communication networks, and for nanoscale sensing applications impacting biology, chemistry, and materials science.
Spring
Mutually Exclusive: ESE 4230
Prerequisite: PHYS 4411
1 Course Unit

ESE 5250 Nanoscale Science and Engineering
Overview of existing device and manufacturing technologies in microelectronics, optoelectronics, magnetic storage, Microsystems, and biotechnology. Overview of near- and long-term challenges facing those fields. Near- and long-term prospects of nanoscience and related technologies for the evolutionary sustainment of current approaches, and for the development of revolutionary designs and applications. Prerequisite: If course requirement not met, permission of instructor required.
Fall
Also Offered As: MSE 5250
Prerequisite: ESE 2180 OR PHYS 1240
1 Course Unit

ESE 5280 Estimation and Detection Theory
Statistical decision making constitutes the core of multiple engineering systems like communication, networking, signal processing, control, market dynamics, biological systems, data processing, etc. We strive to introduce mathematical theories that formulate statistical decision and obtain decision making algorithms with application to one or more of the above domains. This course will be offered every other year.
Fall or Spring
Prerequisite: ESE 5300
1 Course Unit

ESE 5290 Introduction to Micro- and Nano-electromechanical Technologies
Spring
Also Offered As: MEAM 5290
1 Course Unit
**ESE 5300 Elements of Probability Theory**
This rapidly moving course provides a rigorous development of fundamental ideas in probability theory and random processes. The course is suitable for students seeking a rigorous graduate level exposure to probabilistic ideas and principles with applications in diverse settings. The topics covered are drawn from: abstract probability spaces; combinatorial probabilities; conditional probability; Bayes’s rule and the theorem of total probability; independence; connections with the theory of numbers, Borel’s normal law; rare events, Poisson laws, and the Lovasz local lemma; arithmetic and lattice distributions arising from the Bernoulli scheme; limit laws and characterizations of the binomial and Poisson distributions; continuous distributions in one and more dimensions; the uniform, exponential, normal, and related distributions; random variables, distribution functions; orthogonal and stationary random processes; the Gaussian process, Brownian motion; random number generation and statistical tests of randomness; mathematical expectation and the Lebesgue theory; expectations of functions, moments, convolutions; operator methods and distributional convergence, the central limit theorem, selection principles; conditional expectation; tail inequalities, concentration convergence in probability and almost surely, the law of large numbers, the law of the iterated logarithm; Poisson approximation, Janson’s inequality, the Stein-Chen method; moment generating functions, renewal theory; characteristic functions.

Fall  
1 Course Unit

**ESE 5310 Digital Signal Processing**
This course covers the fundamentals of discrete-time signals and systems and digital filters. Specific topics covered include: review of discrete-time signal and linear system representations in the time and frequency domain, and convolution; discrete-time Fourier transform (DTFT); Z-transforms; frequency response of linear discrete-time systems; sampling of continuous-time signals, analog to digital conversion, sampling-rate conversion; basic discrete-time filter structures and types; finite impulse response (FIR) and infinite impulse response (IIR) filters; design of FIR and IIR filters; discrete Fourier transform (DFT), the fast Fourier transform (FFT) algorithm and its applications in filtering and spectrum estimation.

Fall  
1 Course Unit

**ESE 5320 System-on-a-Chip Architecture**
Motivation, design, programming, optimization, and use of modern System-on-a-Chip (SoC) architectures. Hands-on coverage of the breadth of computer engineering within the context of SoC platforms from gates to application software, including on-chip memories and communication networks, I/O interfacing, RTL design of accelerators, processors, concurrency, firmware and OS/infrastructure software. Formulating parallel decompositions, hardware and software solutions, hardware/software tradeoffs, and hardware/software codesign. Attention to real-time requirements. Undergraduates: CIS 240, ESE 350; Graduate: Working knowledge of C.

Fall  
1 Course Unit

**ESE 5330 Stochastic Processes**
Stochastic modeling and analysis is key in understanding physical phenomena as well as designing new systems and quantifying various trade-offs and aspects of those designs. The course develops the foundations of stochastic processes and aims to provide engineering students with a mathematical, yet intuitive, toolbox to work with random processes. Topics covered include random walks, counting processes, renewal processes, Markov models and Markov decision processes, and martingales. Tools and techniques studied in this class are at the core of various fields ranging from engineering to social sciences and biology. Solid background in probability, preferably advanced probability, is required (e.g. ESE 3010 or equivalent). Some calculus and linear algebra will be needed (e.g. MATH 1040 and MATH 2400)

Fall  
1 Course Unit

**ESE 5350 Electronic Design Automation**
Formulation, automation, and analysis of design mapping problems with emphasis on VLSI and computational realizations. Major themes include: formulating and abstracting problems, figures of merit (e.g. Energy, Delay, Throughput, Area, Mapping Time), representation, traditional decomposition of flow (logic optimization, covering, scheduling, retiming, assignment, partitioning, placement, routing), and techniques for solving problems (e.g., greedy, dynamic programming, search, (integer) linear programming, graph algorithms, randomization, satisfiability). Digital logic, Programming (need to be Not Offered Every Year)

1 Course Unit

**ESE 5360 Nanofabrication and Nanocharacterization**
This course is intended for first year graduate students interested in the experimental practice of nanotechnology. In the context of a hands-on laboratory experience, students will gain familiarity with both top-down and bottom-up fabrication and characterization technologies. This will be achieved through the realization of a variety of micro- and nanoscale structures and devices that can exhibit either classical or quantum effects at the small scale. Although concepts relevant to the laboratories will be emphasized in lecture, it is expected that students will already have been exposed to many of the underlying theoretical concepts of nanotechnology in previous courses. Prerequisite: If course requirement not met, permission instructor required.

Spring  
Prerequisite: ESE 5250 OR MSE 5250

1 Course Unit

**ESE 5390 Hardware/Software Co-Design for Machine Learning**
The course is designed to introduce an engineering discipline at the intersection of machine learning and hardware systems to fill the gap. The covered topics include basics of deep learning, deep learning frameworks, deep learning on contemporary computing platforms (CPU, GPU, FPGA) and programmable accelerators (TPU), performance measures, numerical representation and customized data types for deep learning, co-optimization of deep learning algorithms, software and hardware, training for deep learning and complex deep learning models. The course is structured with a combination of lectures, labs, research paper reading/in-class discussion, a final project and guest lectures with state-of-the-art industry practices.

Fall  
1 Course Unit
ESE 5400 Engineering Economics
This course is cross-listed with an advanced-level undergraduate course (ESE 4000). Topics include: money-time relationships, discrete and continuous compounding, equivalence of cash flows, internal and external rate of return, design and production economics, life cycle cost analysis, depreciation, after-tax cash flow analysis, cost of capital, capital financing and allocation, parametric cost estimating models, pricing, foreign exchange rates, stochastic risk analysis, replacement analysis, benefit-cost analysis, and analysis of financial statements. Case studies apply these topics to engineering systems. Students are not required to do additional work compared to ESE 4000 students. The work-load is identical.
Fall
Mutually Exclusive: ESE 4000
1 Course Unit

ESE 5410 Machine Learning for Data Science
The course covers the methodological foundations of data science, emphasizing basic concepts in statistics and learning theory, but also modern methodologies. Learning of distributions and their parameters. Testing of multiple hypotheses. Linear and nonlinear regression and prediction. Classification. Dimensionality reduction. Probably approximately correct (PAC) learning. Such theoretical concepts are further complemented by example applications, case studies (datasets), and programming exercises (in Python) drawn from electrical engineering, computer science, the life sciences, finance, and social networks.
Fall or Spring
Prerequisite: CIT 5920
1 Course Unit

ESE 5420 Statistics for Data Science
The course covers the methodological foundations of data science, emphasizing basic concepts in statistics and learning theory, but also modern methodologies. Learning of distributions and their parameters. Testing of multiple hypotheses. Linear and nonlinear regression and prediction. Classification. Uncertainty quantification. Model validation. Clustering. Dimensionality reduction. Probably approximately correct (PAC) learning. Such theoretical concepts are further complemented by example applications, case studies (datasets), and programming exercises (in Python) drawn from electrical engineering, computer science, the life sciences, finance, and social networks.
Fall
Mutually Exclusive: ESE 4020
1 Course Unit

ESE 5430 Human Systems Engineering
This course is an introduction to human systems engineering, examining the various human factors that influence the spectrum of human performance and human systems integration. We will examine both theoretical and practical applications, emphasizing fundamental human cognitive and performance issues. Specific topics include: human performance characteristics related to perception, attention, comprehension, memory, decision making, and the role of automation in human systems integration.
Fall or Spring
1 Course Unit

ESE 5440 Project Management
Most work that engineers do is project work and most project work is teamwork. Even when working individually, engineering tasks are usually part of a larger project. This course focuses on developing the sociotechnical knowledge and skills critical to success throughout one's career whether as a project team member, a project team manager/leader, or a project sponsor. Sociotechnical theory will show us that it doesn't work to focus on the social system or the technical system independent of or in isolation of each other. It is the interplay, the interaction between the behavioral (e.g., communication, conflict management, decision making) and the technical (e.g., SMART goals, scheduling, budgeting, tracking) aspects of project work that most influences project success.
Open systems theory will allow us to examine projects at various system levels: the individual, the team, the organization, and people or groups in the organization's environment such as suppliers, regulators, competitors, customers and clients.
Two Term Class, Student may enter either term; credit given for either
Mutually Exclusive: ESE 4440
Prerequisite: ESE 3040
1 Course Unit

ESE 5450 Data Mining: Learning from Massive Datasets
Many scientific and commercial applications require us to obtain insights from massive, high-dimensional data sets. In this graduate-level course, students will learn to apply, analyze and evaluate principled, state-of-the-art techniques from statistics, algorithms and discrete and convex optimization for learning from such large data sets. The course both covers theoretical foundations and practical applications.
Spring
1 Course Unit

ESE 5460 Principles of Deep Learning
Introductory class in machine learning and optimization. CIS 5190, CIS 5200, ESE 5450, ESE 3040, ESE 5040, ESE 6050 recommended or permission of the instructor.
Fall
1 Course Unit

ESE 5470 Introduction to Legged Locomotion
This course reviews three decades' development of agile legged machines, treating past and recent advances as well as remaining formidable challenges in the materials selection, design, and programming of robots that can run, leap and climb through complicated, unstructured terrain. Emphasis is on developing understanding of and facility using key dynamical primitives whose composition allows more complicated behaviors to emerge from simpler constituents.
Several historical case studies will be used to illustrate how advances have rewarded interdisciplinary thinking about animals, materials, mathematics and mechatronics. Course credit will be based on problem sets and coding exercises.
1 Course Unit

ESE 5480 Transportation Planning Methods
This course introduces students to the development and use of the 4-step urban transportation model (trip generation-trip distribution-mode choice-traffic assignment) for community and metropolitan mobility planning. Using the VISUM transportation desktop planning package, students will learn how to build and test their own models, apply them to real projects, and critique the results. Prerequisite: CPLN 5050 or other planning statistics course.
Spring
Also Offered As: CPLN 6500
Prerequisite: CPLN 5050
1 Course Unit
ESE 5500 Advance Transportation Seminar
Air transportation is a fascinating multi-disciplinary area of transportation bringing together business, planning, engineering, and policy. In this course, we explore the air transportation system from multiple perspectives through a series of lessons and case studies. Topics will include airport and intercity multimodal environmental planning, network design and reliability, air traffic management and recovery from irregular operations, airline operations, economics, and fuel, air transportation sustainability, and land use issues related to air transportation systems. This course will introduce concepts in economics and behavioral modeling, operations research, statistics, environmental planning, and human factors that are used in aviation and are applicable to other transportation systems. The course will emphasize learning through lessons, guest lectures, case studies of airport development and an individual group and research project.
Spring
Also Offered As: BEPP 7610
Prerequisite: ESE 5500
1 Course Unit

ESE 5660 Networked Neuroscience
The human brain produces complex functions using a range of system components over varying temporal and spatial scales. These components are couples together by heterogeneous interactions, forming an intricate information-processing network. In this course, we will cover the use of network science in understanding such large-scale and neuronal-level brain circuitry. Prerequisite: Graduate standing or permission of the instructor. Experience with Linear Algebra and MATLAB.
Spring
Also Offered As: BE 5660
1 Course Unit

ESE 5670 Risk Analysis and Environmental Management
This course will introduce students to concepts in risk governance. We will delve into the three pillars of risk analysis: risk assessment, risk management, and risk communication. The course will spend time on risk financing, including insurance markets. There will be particular emphasis on climate risk management, including both physical impact risk and transition risk, although the course will also discuss several other examples, including management of environmental risks, terrorism, and cyber-security, among other examples. The course will cover how people perceive risks and the impact this has on risk management. We will explore public policy surrounding risk management and how the public and private sector can successfully work together to build resilience, particularly to changing risks.
Fall or Spring
Also Offered As: BEPP 7610, OIDD 7610
1 Course Unit

ESE 5700 Digital Integrated Circuits and VLSI-Fundamentals
Explores the design aspects involved in the realization of an integrated circuit from device up to the register/subsystem level. It addresses major design methodologies with emphasis placed on the structured design. The course includes the study of MOS device characteristics, the critical interconnect and gate characteristics which determine the performance of VLSI circuits, and NMOS and CMOS logic design. Students will use state-of-the-art CAD tools to verify designs and develop efficient circuit layouts.
Spring
Prerequisite: ESE 3190
1 Course Unit

ESE 5720 Analog Integrated Circuits
Design of analog circuits and subsystems using bipolar and MOS technologies at the transistor and higher levels. Transistor level design of building block circuits such as op amps, comparators, sample and hold circuits, voltage and current references, capacitors and resistor arrays, and class AB output stages. The course will include a design project of an analog circuit. The course will use the Cadence Design System for schematic capture and simulation with Spectre circuit simulator. This course is similar to ESE 5700, except that it will not require the use of the physical layout tools associated with VLSI design and implementation.
Fall
Mutually Exclusive: ESE 4190
Prerequisite: ESE 3190
1 Course Unit

ESE 5780 RFIC (Radio Frequency Integrated Circuit) Design
Introduction to RF (Radio Frequency) and Microwave Theory, Components, and Systems. The course aims at providing knowledge in RF transceiver design at both microwave and millimeter-wave frequencies. Both system and circuit level perspective will be addressed, supported by modeling and simulation using professional tools (including Agilent ADS, Sonnet, and Cadence Design Systems). Topics include: Transmission Line Theory, S-parameters, Smith Chart for matching network design, stability, noise, and mixed signal design. RF devices covered will include: hybrid/Wilkinson/Lange 3dB couplers, Small Signal Amplifiers (SSA), Low Noise Amps (LNA), and Power Amps (PA). CMOS technology will be largely used to design the devices mentioned.
Spring
Prerequisite: ESE 5720
1 Course Unit

ESE 5800 Power Electronics
Addressing today's energy and environmental challenges requires efficient energy conversion techniques. This course will discuss the circuits that efficiently convert ac power to dc power, dc power from one voltage level to another, and dc power to ac power. The lecture will discuss the components used in these circuits (e.g., transistors, diodes, capacitors, inductors) in detail to highlight their behavior in a practical implementation. In addition, the class will have lab sessions where students will obtain hands-on experience with power electronic circuits. Students should have taken an introductory circuits course like ESE 2150 or equivalent.
Fall
1 Course Unit

ESE 5970 Master's Thesis
For students working on an advanced research leading to the completion of a Master's thesis.
Fall or Spring
1-2 Course Units

ESE 5990 Independent Study for Master's credit
Fall or Spring
1-4 Course Units
ESE 6050 Modern Convex Optimization
This course concentrates on recognizing and solving convex optimization problems that arise in engineering. Topics include: convex sets, functions, and optimization problems. Basis of convex analysis. Linear, quadratic, geometric, and semidefinite programming. Optimality conditions, duality theory, theorems of alternative, and applications. Interior-point methods, ellipsoid algorithm and barrier methods, self-concordance. Applications to signal processing, control, digital and analog circuit design, computation geometry, statistics, and mechanical engineering. Knowledge of linear algebra and willingness to do programming. Exposure to numerical computing, optimization, and application fields is helpful but not required.
Spring
1 Course Unit

ESE 6060 Combinatorial Optimization
The course will cover polyhedral theory, structural results and their applications to designing algorithms. Specific topics to be covered include: matchings and their applications, connectivity properties of graphs, matroids and optimization including matroid intersection and union, submodular set functions and applications, arborescences and branchings.
Prerequisite: ESE 5040
1 Course Unit

ESE 6110 Nanophotonics: Light at the Nanoscale
This course is intended for first and second year graduate students interested in nanoscale optics and photonics. Building on prior coursework in electromagnetism, this course provides a theoretical foundation and up-to-date survey of the key principles and phenomena relevant to the field of nanophotonics. Topics discussed include light-matter interaction through Maxwell’s equations, photonic band theory and photonic crystals, plasmonic structures and devices, metamaterials and metasurfaces, PT-symmetric & topological photonic systems. Applications of nanophotonic devices and principles to a wide range of scenarios will also be explored in depth, including for renewable energy, information processing, imaging and sensing. Experimental techniques used in nanophotonics will be concurrently introduced and discussed.
Prerequisite: Permission of instructor
Fall or Spring
1 Course Unit

ESE 6150 F1/10 Autonomous Racing Cars
This hands-on, lab-centered course is for senior undergraduates and graduate students interested in the fields of artificial perception, motion planning, control theory, and applied machine learning. It is also for students interested in the burgeoning field of autonomous driving. This course introduces the students to the hardware, software and algorithms involved in building and racing an autonomous race car. Every week, students take two lectures and complete an extensive hands-on lab. By Week 6, the students will have built, programmed and driven a 1/10th scale autonomous race car. By Week 10, the students will have learned fundamental principles in perception, planning and control and will race using map-based approaches. In the last 6 weeks, they develop and implement advanced racing strategies, computer vision and machine learning algorithms that will give their team the edge in the race that concludes the course. Prerequisites: C++ and Python programming, Matrix algebra, Differential equations, Signals and Systems
1 Course Unit

ESE 6170 Non-Linear Control Theory
The course provides a basic understanding of nonlinear systems phenomena and studies analysis and control design problems of nonlinear systems. The main analysis tools that will be presented are Lyapunov theory for stability, including the well known LaSalle’s invariance principle, and barrier function theory for safety of both autonomous and non-autonomous systems. Further topics include input-output stability, passivity, and the center manifold theorem. The main control tools that will be presented are feedback linearization, backstepping, as well as recent results on learning control Lyapunov and control barrier functions from data. Examples will be taken from mechanical and robotic systems.
Not Offered Every Year
Also Offered As: MEAM 6130
Prerequisite: ESE 5000
1 Course Unit

ESE 6180 Learning for Dynamics and Control
This course will provide students an introduction to the emerging area at the intersection of machine learning, dynamics, and control. We will investigate machine learning and data-driven algorithms that interact with the physical world, with an emphasis on a holistic understanding of the interplay between concepts from control theory (e.g., feedback, stability, robustness) and machine learning (e.g., generalization, sample-complexity). Topics of study will include learning models of dynamical systems, using these models to robustly meet performance objectives, optimally refining models to improve performance, and verifying the safety of machine learning enabled control systems. The course will also expose students to the ethical considerations that need to be considered when designing learning algorithms that interact with and are placed in feedback with the world. The course will consist of lectures, and students will be evaluated based on traditional and programming assignments, as well as a final project.
Fall
1 Course Unit

ESE 6190 Model Predictive Control
Increased system complexity and more demanding performance requirements have rendered traditional control laws inadequate regardless if simple PID loops are considered or robust feedback controllers designed according to some H2/infinity criterion. Applications ranging from the process industries to the automotive and the communications sector are making increased use of Model Predictive Control (MPC) where a fixed control law is replaced by on-line optimization performed over a receding horizon. The advantage is that MPC can deal with almost any time-varying process and specifications, limited only by the availability of real-time computer power. In the last few years we have seen tremendous progress in this interdisciplinary area where fundamentals of systems theory, computation and optimization interact. For example, methods have emerged to handle hybrid systems, i.e. systems comprising both continuous and discrete components. Also, it is now possible to perform most of the computations off-line thus reducing the control law to a simple look-up table.
Spring
1 Course Unit
ESE 6210 Nanoelectronics
This is a graduate level course on fundamental operating principles and physics of semiconductor devices in reduced or highly scaled dimensions. The course will include topics and concepts covering basic quantum mechanics and solid state physics of nanostructures as well as device transport and characterization, materials and fabrication. A basic knowledge of semiconductor physics and devices is assumed. The course will build upon basic quantum mechanics and solid state physics concepts to understand the operation of nanoscale semiconductor devices and physics of electrons in confined dimensions. The course will also provide a historical perspective on micro and nanoelectronics, discuss the future of semiconductor computing technologies, cutting edge research in nanomaterials, device fabrication as well as provide a perspective on materials and technology challenges. Prerequisite: If course requirement not met, permission of instructor required.
Spring
1 Course Unit
ESE 6250 Nanorobotics
Nanorobotics is a field at the forefront of nano-science and engineering that seeks to create synthetic systems that sense and respond to their environment at dimensions comparable to biological microorganisms. This course explores the topic of small machines: What materials should we use to make these devices? How should they be powered or locomote? What capacities can they have for memory or information processing? How can they be made to interface safely with biological systems? This course covers the major frameworks for building small machines, including self-assembled systems (DNA nanotechnology, biohacking) and those fabricated by top-down lithography (self-folding systems, synthetic micro-swimmers, smart-dust). Particular emphasis is given to exploring physical principles that can be used to analyze the strengths and limitations of current robot designs at the micro and nanoscale.
1 Course Unit
ESE 6350 Distributed Systems
This research seminar deals with tools, methods, and algorithms for analysis and design of distributed dynamical systems. These are large collections of dynamical systems that are spatially interconnected to form a collective task or achieve a global behavior using local interactions. Over the past decade such systems have been studied in disciplines as diverse as statistical physics, computer graphics, robotics, and control theory. The purpose of this course is to build a mathematical foundation for study of such systems by exploring the interplay of control theory, distributed optimization, dynamical systems, graph theory, and algebraic topology. Assignments will consist of reading and researching the recent literature in this area. Topics covered in distributed coordination and consensus algorithms over networks, coverage problems, effects of delay in large scale networks. Power law graphs, gossip and consensus algorithms, synchronization phenomena in natural and engineered systems, etc.
Not Offered Every Year
1 Course Unit
ESE 6500 Learning in Robotics
This course will cover the mathematical fundamentals and applications of machine learning algorithms to mobile robotics. Possible topics that will be discussed include probabilistic generative models for sensory feature learning. Bayesian filtering for localization and mapping, dimensionality reduction techniques for motor control, and reinforcement learning of behaviors. Students are expected to have a solid mathematical background in machine learning and signal processing, and will be expected to implement algorithms on a mobile robot platform for their course projects. Grading will be based upon course project assignments as well as class participation. Students will need permission from the instructor. They will be expected to have a good mathematical background with knowledge of machine learning techniques at the level of ESE 5310, as well as have some robotics experience.
Spring
1 Course Unit
ESE 6650 Datacenter Architecture
This course covers advanced topics in data centers with an emphasis on computer architecture and systems. This course surveys recent advances in processor, memory, network, and storage. And it surveys modern software systems in computing clouds. Discussion-oriented classes focus on in-depth analysis of readings. Students will learn to reason about datacenter performance and energy efficiency. Students will complete a collaborative research project. Final project and paper required. Appropriate for graduate and advanced undergraduate students. After completing this course, students should be able to • Understand design, management of datacenter architectures and system software. • Read architecture and systems papers critically. • Write constructive paper reviews • Identify open research problems in datacenter architecture • Design and execute a research project to address an open research problem There are no required prerequisites, but coursework that includes one or more of the following courses is strongly recommended: ESE 4070/ESE 5070, ESE 5190, ESE 5320, ESE 5390, CIS 3800, CIS 4550/CIS 5550, or CIS 4710/CIS 5710.
Fall or Spring
1 Course Unit
ESE 6680 Mixed Signal Circuit Design and Modeling
This course will introduce design and analysis of mixed-signal integrated circuits. Topics include: Sampling and quantization, Sampling circuits, Switched capacitor circuits and filters, Comparators, Offset compensation, DACs/ADCs (flash, delta-sigma, pipeline, SAR), Oversampling, INL/DNL, FOM. The course will end with a final design project using analysis and design techniques learned in the course. Students must provide a written report with explanations to their design choices either with equations or simulation analysis/insight along with performance results.
Spring
1 Course Unit
ESE 6710 High Frequency Power Electronics
Miniaturization remains a challenge in power electronic systems for energy applications, whose overall goal is to increase energy efficiency and reduce waste. In this course, we will study the design of resonant converters that can operate at higher frequencies than their hard-switched counterparts and achieve higher control bandwidth and power density. We will explore practical design issues and trade-offs in selecting converter topologies in high-performance applications. We will also discuss the design and modeling of high-frequency magnetic elements, gate drives, and resonant snubbers. Students should have taken a power electronics class like ESE 5800 or equivalent.
Fall
1 Course Unit

ESE 6720 Integrated Communication Systems
This is an advanced radio frequency (RF) circuit design course that includes analysis and design of high-frequency and high-speed integrated communication circuits at both transistor and system levels. Students gradually design and simulate different blocks of an RF receiver and combine these blocks to form the receiver as their final project. We assume some background knowledge of device physics, electromagnetics, circuit theory, control theory, and stochastic processes.
Fall or Spring
Prerequisite: ESE 4190 OR ESE 5720
1 Course Unit

ESE 6730 Integrated Photonic Systems
Analysis and design of photonic integrated systems at both device and system levels including architectures, photonic integrated circuit technologies, passive components (nano-waveguides, resonators, couplers, and Y-junctions) and active components (lasers, modulators, and photodiodes) are studied. The emphasis is on silicon photonics.
Prerequisite: If course requirement not met, permission of instructor required.
Spring
Prerequisite: ESE 5100
1 Course Unit

ESE 6740 Information Theory
Deterministic and probabilistic information. The pigeon-hole principle. Entropy, relative entropy, and mutual information. Random processes and entropy rate. The asymptotic equipartition property. Optimal codes and data compression. Channel capacity. Source channel coding. The ubiquitous nature of the theory will be illustrated with a selection of applications drawn from among: universal source coding, vector quantization, network communication, the stock market, hypothesis testing, algorithmic computation and kolmogorov complexity, and thermodynamics.
Not Offered Every Year
Prerequisite: ESE 5300
1 Course Unit

ESE 6760 Coding Theory
Coding theory for telecommunications with emphasis on the algebraic theory of cyclic codes using finite field arithmetic, decoding of BCH and Reed-Solomon codes, finite field Fourier transform and algebraic geometry codes, convolutional codes and trellis decoding algorithms, graph based codes, Berrou codes and Gallager codes, turbo decoding, iterative decoding. And belief propagation.
Not Offered Every Year
1 Course Unit

ESE 6800 Special Topics in Electrical and Systems Engineering
Advanced and specialized topics in both theory and application areas. Students should check Graduate Group office for offerings during each registration period.
Not Offered Every Year
1 Course Unit

ESE 8950 Teaching Practicum
Participation of graduate students in the teaching mission of the department will help to develop teaching, presentation, leadership, and interpersonal skills while assisting the department in discharging its teaching responsibilities. All doctoral students are required to participate under faculty guidance in the teaching mission of the department. This requirement will be satisfied by completing two 0.5 course units of teaching practicum (ESE 895). Each 0.5 course unit of teaching practicum will consist of the equivalent of 10 hours of effort per week for one semester. As a part of the preparation for and fulfillment of the teaching practicum requirement, the student will attend seminars emphasizing teaching and communication skills, lead recitations, lead tutorials, supervise laborato experiments, develop instructional laboratories, develop instructional materiaand grade homeworks, laboratory reports, and exams. A teacher training seminar will be conducted the day before the first day of classes of the Fall semester. Attendance is mandatory for all second-year students. As much as possible, the grading aspect of the teaching practicum course will be such as not to exceed 50% of the usual teaching assistant commitment time. Some of the recitations will be supervised and feedback and comments will be provided to the student by the faculty member responsible for the course. At the completion of every 0.5 course unit of teach, the student will receive a Satisfactory/Unsatisfactory grade and a written evaluation by the faculty member responsible for the course. The evaluation will beon comments of the students taking the course and the impressions of the facult
Fall or Spring
0.5-1 Course Unit

ESE 8990 Independent Study for PhD credit
For students who are studying a specific advanced subject area in electrical engineering. Students must submit a proposal outlining and detailing the study area, along with the faculty supervisor's consent, to the graduate group chair for approval. A maximum of 1 c.u. of ESE 8990 may be applied toward the MSE degree requirements. A maximum of 2 c.u.'s of ESE 8990 may be applied toward the Ph.D. degree requirements.

ESE 9990 Thesis/Dissertation Research
For students working on an advanced research program leading to the completion of master's thesis or Ph.D. dissertation requirements.
Fall or Spring
1-4 Course Units
Energy Management and Policy (ENMG)

ENMG 5020 Introduction to Energy Policy
This course provides an advanced introduction to the design and delivery of energy policy at various levels of government in the U.S. and beyond. Energy presents theoretical and practical challenges across many disciplines and professions, especially in the context of economic development and environmental sustainability at scales ranging from local to global. This course is intended to provide a broad overview of the institutions, legal frameworks, technologies, and markets involved in energy policy by exploring theories and case studies across these topics, with an emphasis on the energy transition necessitated by climate change. That said, a full introduction to energy policy requires multiple courses and Penn offers many salient ones across several schools including Law, Wharton, Weitzman, SAS, and SEAS. The primary goal of this course is to teach students how to think—rather than what to know—about energy policy. As such, this course provides both (a) a foundation for students who want to take additional courses on energy law, markets, technology, or policy and (b) a synthesis for students who have taken such courses and want to connect ideas and issues across disciplines and professions. Our seminar sessions will be largely discussion and exercise based to allow students to develop skills as energy policy analysts and to collectively theorize connections between laws, institutions, policy design, and outcomes.
Fall
1 Course Unit

ENMG 5030 Topics in Energy Policy
This seminar will explore a collection of ideas influencing energy policy development in the U.S. and around the world. Our platform for this exploration will be seven recent books to be discussed during the semester. These books each contribute important insights to seven ideas that influence energy policy: Narrative, Transition, Measurement, Systems, Subsidiarity, Disruption, Attachment. Books for 2018 will be chosen over the summer; the 2017 books are listed here as examples: Policy Paradox (2011) by Stone, Climate Shock (2015) by Wagner and Weitzman, Power Density (2015) by Smil, Connectography (2016) by Khanna, Climate of Hope (2017) by Bloomberg and Pope, Utility of the Future (2016) by MIT Energy Initiative, Retreat from a Rising Sea (2016) by Pilkey, Pilkey-Jarvis, Pilkey.

ENMG 5070 Ideas in Energy Policy
This seminar will explore a collection of ideas influencing energy policy development in the U.S. and around the world. Our platform for this exploration will be seven recent books to be discussed during the semester. These books each contribute important insights to seven ideas that influence energy policy: Narrative, Transition, Measurement, Systems, Subsidiarity, Disruption, Attachment.
1 Course Unit

ENMG 5080 Geopolitics of Energy in Russia and Eurasia
Russia is one of the major players in the international energy market: third largest oil producer after the U.S. and Saudi Arabia and second-largest (after the U.S.) natural gas producers (2019). It is also a top coal and nuclear power producer. But the geopolitical might that the country holds with respect to energy markets stems not as much from how much energy it produces as from how much energy it exports. Today Russia leads global natural gas exports and trails only the Kingdom of Saudi Arabia in oil exports. Russia is also reliably one of the top coal-exporting countries. This class will explore the geopolitics of energy focusing on the role of Russia as a leading global energy supplier. In doing so, it hopes to provide a slightly different understanding of global energy that is usually taught from either the U.S. or OPEC angle.

1 Course Unit
ENMG 5100 Societal Grand Challenges at the Interface of Technology and Policy
This new collaborative course – co-taught by faculty from the Kleinman Center for Energy Policy, Weitzman School of Design and School of Engineering and Applied Science – uses societal grand challenges as scenarios for identifying repeatable, process-oriented best practices for solving complex, systemic problems in the energy transition. This course is intended for graduate students with a background in either the social sciences (economics, political science, law, or policy) or who are in STEM programs (science and engineering). This course will complement the material covered in the Kleinman Center Introduction to Energy Policy course (ENMG 5020) taught in the fall. It will be an opportunity to learn from one another and build a holistic understanding of the technical and policy dimensions of the energy transition and the global response to climate change and environmental degradation. The course will be broken into three chapters. For the first third of the semester, we will focus on basics of policy and engineering literacy, with each student bringing their own expertise to the table. The best way to truly understand a topic is to teach it, and this chapter of the course will focus on learning how to talk across disciplines and approach challenges in new and unfamiliar ways. The middle third of this course will be built around case studies of grand societal challenges; some of which have seen considerable progress towards being solved, others which are still the subject of great uncertainty and disagreement. Among other topics, this course will explore: The impact of sweeping standards on building and appliance efficiency; the rapid development and mutual reinforcement of renewable energy technologies and policy; the ability of policy to facilitate healthy competition between technologies (hydrogen vs batteries, for example); The allocation of scarce CCUS resources to abate difficult to decarbonize products like cement, steel, and plastics; the importance of grid regulation and market design in ensuring future energy reliability and affordability; and the need for transition-ready environmental policies that protect ecosystems and communities without hindering access to critical resources (metals, minerals, land, etc.). The final third of the semester will be structured largely around group projects for which students with diverse expertise will work together to identify a grand societal challenge and isolate the technical and policy barriers to solving this challenge. These groups will give regular updates to the rest of the class and will work towards making a meaningful contribution to solving their challenge through collaborative problem solving, design, and research. This course will deliver content learning outcomes about technical, societal, and policy aspects of focal grand challenges, while providing all participants (including instructors) experience and skills to address community-derived problems in teams composed of members from disciplines that rarely collaborate. Over time, this course will serve as a working, iterative “laboratory” on parameters that affect the success of convergence style research and problem solving.

ENMG 5120 “Not Just a Commercial Deal”: Contemporary Trends in European Energy Security and Sanctions Policy
The Russian Federation’s full-scale invasion of Ukraine in February 2022 has fundamentally altered post-Cold War security norms across the European continent. This includes a reinvigorated Transatlantic approach to supporting European energy security. For example, Western Europe had for years built up a strategic security vulnerability through an over-reliance on Russian hydrocarbon resources, in particular natural gas, as well as critical infrastructure owned by Kremlin-controlled enterprises. Europe is now embarking on a transformational shift to end its longstanding dependence on Russian hydrocarbons that provides an opportunity to both decouple from an authoritarian neighbor and decarbonize its energy supply to address the climate crisis. Meanwhile, policymakers on both sides of the Atlantic have aimed to deprive the Russian government of the financial and technical means of prosecuting its military aggression in Ukraine through comprehensive sanctions and technology export control regimes. This course will explore the history of European dependence on Russian energy resources and critical infrastructure projects and will analyze how the Russian Federation has ‘weaponized energy’ against European democracies before and after it’s invasion of Ukraine, including through trends of strategic corruption and elite capture. The course will assess as a case study the current European energy infrastructure landscape and ask students to propose infrastructure, regulatory, and physical/cyber security strategies from the perspective of a practitioner of transatlantic energy diplomacy. This course will also explore contemporary trends in energy sanctions and technology export controls policies crafted by democratic states worldwide. We will review recent U.S. and European sanctions policies through the framework of existing and proposed Russia sanctions, including analysis of sanctions implemented through Executive Order and Congressional legislation, and similar legislation enacted by the European Union. The course will take a multidisciplinary approach, combining primary source readings with classroom simulations drawing on the historical, policy, science, and technology drivers of effective European energy security strategies.

EAS 0097 Embed Controlled Gardening
A service course intended to integrate concepts of basic physics, biology and electronics and systems engineering for the benefit of Penn engineering students, teachers and students from two minority centered community public schools. The course will engage the participants in the design and implementation of indoors cultivating systems using photo-voltaic (PV) technology to energize LED emulating the needed solar radiation for plant growth, a liquid nutrient distribution system, sensors / actuators capable of selecting the harvestable plants and keeping track of overall system parameters.
Fall or Spring
1 Course Unit

EAS 2030 Engineering Ethics
In this course, students will study the social, political, environmental and economic context of engineering practice. Students will develop an analytical toolkit to identify and address ethical challenges and opportunities in the engineering profession, including studies of risk and safety, professional responsibility, and global perspectives. The course will begin with a foundation in the history of engineering practice and major Western ethical and philosophical theories. Students will then apply this material to both historical case studies, such as Bhopal, the NASA Shuttle Program, and Three Mile Island, as well as contemporary issues in big data, artificial intelligence, and diversity within the profession. Students will consider how engineers, as well as governments, the media, and other stakeholders, address such issues.
Fall or Spring
1 Course Unit

EAS 2040 Technical Innovation & Civil Discourse in a Dynamic World
The promises of today’s emerging technologies include longer, healthier lives; safer, faster, and more efficient transportation; and immediate, far-reaching communication mechanisms. Recent advances in machine learning, autonomous systems, nanomaterials, and neurotechnologies offer the potential to dramatically change the way our global society lives, works and shares information. With such prolific power, these technologies also pose new challenges and risks such as reduced individual privacy, political repercussions, and inequitable access to the benefits of technology. Rapid technological innovation often outpaces and challenges established legal regulations, cultural norms, and societal frameworks of communications. A robust civil discourse anchored in technical expertise, cultural context, and inclusivity can foster the optimization of the benefits of emerging technologies. This course is aimed in preparing undergraduate students to engage in and lead such discourses. The students will consider a series of engineering innovations from technical, legal and social perspectives and will hone the analytical and communication skills necessary to identify and address opportunities for civil discourse. Undergraduates must have passed the WRIT requirement.

EAS 2440 Curiosity: Ancient and Modern Thinking about Thinking
This course will examine two approaches to the still unanswered question of what happens when we humans come up with new knowledge. How should we describe the impulse, or set of impulses, that leads us to seek it? What is happening when we achieve it? And how do we describe the new state in which we find ourselves after we have it? We will study the work of contemporary physicists and cognitive scientists on these questions along side the approaches developed by the two most powerful thinkers from antiquity on the topic, Plato and Aristotle.

Also Offered As: CLST 3803, INTG 3440
1 Course Unit
EAS 2610 Emerging Technologies and the Future of the World
Technological change is always occurring, but the rate of change seems to be accelerating. Advances in robotics, artificial intelligence, cyber, biotechnology, and other arenas generate promise as well as peril for humanity. Will these emerging technologies unleash the innovative capacity of the world, generating new opportunities that help people live meaningful lives? Alternatively, are automation and other technologies chipping away at the labor market in a way that could create severe generational dislocation at best, and national and international turmoil at worst? These questions are important, and have consequences for how we live our lives, how nations interact, and the future of the world writ large. Emerging technologies could shape public policy at the local, national, and international level, and raise questions of fairness, ethics, and transparency. This course takes a unique approach, combining insights from engineering, political science, and law in an interdisciplinary way that will expose students both to the key technologies that could shape the future and ways to think about their potential politics, and society.
Fall or Spring
Also Offered As: INTG 2610, PSCI 2401
1 Course Unit

EAS 3010 Climate Policy and Technology
The course will exam Pacala and Socolow’s hypothesis that “Humanity already possesses the fundamental scientific, technical and industrial know-how to solve the carbon and climate problem for the next half-century.” Fifteen “climate stabilization wedges” i.e., strategies that each have the potential to reduce carbon emissions by 1 billion tons per year by 2054, will be examined in detail. Technology and economics will be reviewed. Socio-political barriers to mass-scale implementation will be discussed. Pacala and Socolow note "Every element in this portfolio has passed beyond the laboratory bench and demonstration project; many are already implemented somewhere at full industrial scale".
Fall or Spring
Mutually Exclusive: EAS 5050
1 Course Unit

EAS 3060 Electricity and Systems Markets
The course discusses the existing electricity system from technical, economic, and policy perspectives. Basic power system engineering will be reviewed early in the course. Generation, transmission, distribution, and end-use technologies and economics will be discussed. Additional topics will include system operation, industry organization, government regulation, the evolution of power markets, environmental policy, and emerging technologies.
Fall or Spring
Mutually Exclusive: EAS 5060
1 Course Unit

EAS 3200 Basic Chemical Process Safety
Process safety is an important but often overlooked aspect of a chemical engineer’s education. When working in chemical engineering, it’s simply not possible to learn by trial and error when the error can have catastrophic or dangerous implications. Students will learn the important technical fundamentals to allow them to contribute to a safer future. Chemical process safety is a scientific discipline as important as chemical production. What the students learn here could literally save their life. At the conclusion of the course, the expectation is that students should be able to identify hazards, safety risks and perform inherently safer design for chemical processes. By the end of the course, students will achieve Level I certification from SACHE (Safety and Chemical Engineering Education), a division of AIChE.

Prerequisite: CBE 1600
1 Course Unit

EAS 3220 Immunology for Bioengineers
Immunology is fast growing field that is critical to human health and therapeutic development and engineering. To better prepare bioengineers for a career in immunotherapy and biotech areas, it is essential for them to learn the fundamental knowledge of the immune system and the diseases associated as well as common and emerging technologies used in immunological research. This will not only enable the students to communicate more effectively in a multidisciplinary team, it will also empower them to take advantage of their training in engineering and mathematics to develop tools to analyze the immune system with great depth, solve important questions in immunology, and engineering new therapeutics. Therefore, the goal of this course is to provide the immunology foundation for engineering students and technical background of commonly used tools and emerging technologies in immunological research. The course is open to upper level undergraduate students who have taken courses in biochemistry and/or cell biology.
1 Course Unit
EAS 4010 Energy and Its Impacts: Technology, Environment, Economics, Sustainability
The objective is to introduce students to one of the most dominating and compelling areas of human existence and endeavor: energy, with its foundations in technology, from a quantitative sustainability viewpoint with its association to economics and impacts on environment and society. This introduction is intended both for general education and awareness and for preparation for careers related to this field, with emphasis on explaining the technological foundation. The course spans from basic principles to applications. A review of energy consumption, use, and resources; environmental impacts, sustainability and design of sustainable energy systems; introductory aspects of energy economics and carbon trading; methods of energy analysis; forecasting; energy storage; electricity generation and distribution systems (steam and gas turbine based power plans, fuel cells), fossil fuel energy (gas, oil, coal) including nonconventional types (shale gas and oil, oil sands, coalbed and tight-sand gas), nuclear energy wastes: brief introduction to renewable energy use: brief introduction to solar, wind, hydroelectric, geothermal, biomass; energy for buildings, energy for transportation (cars, aircraft, and ships); prospects for future energy systems: fusion, power, power generation in space. Students interested in specializing in one or two energy topics can do so by choosing them as their course project assignments. Prerequisite: Any University student interested in energy and its impacts, who is a Junior or Senior. Students taking the course EAS 5010 will be given assignments commensurate with graduate standing.

EAS 4030 Energy Systems and Policy
This is a survey course that will examine the current U.S. energy industry, from production to consumption, and its impacts on local, regional, and the global environment. The course will seek to provide a fuller understanding of existing energy systems, ranging from technical overviews of each, a review of industry organization, and an exploration of the well-established policy framework each operates within. Near-term demands upon each energy supply system will be discussed, with particular focus on environmental constraints. Policy options facing each energy industry will be reviewed.
Fall or Spring
Mutually Exclusive: EAS 5030
1 Course Unit

EAS 4080 Building Leadership
This course will build students' personal leadership skills by helping them to kick-start a venture that they are passionate about. Ideas could range from a non-profit to help provide tutoring skills to local under-represented youth, to designing a product that could be launched on a crowdsourcing platform to creating a movement to drive more minority representation in books/media. Students must bring their own idea for their project and as we work to build it out, they will develop the leadership skills needed to bring it to life (e.g., networking, harnessing an ecosystem, building out a project plan). Lectures will be a mix lessons on real-world skill building (e.g., for networking - where to start, who to contact) with activities that will be specifically applied to the student's venture. In addition, guest lecturers will be brought in so that students can learn from their leadership journeys. Students will also be paired with mentors to act as a sounding board and there will be weekly in-class discussions on their projects so that students can push each other as well - similar to how CEO roundtables work. At the end of this course, the goal will be to build enough momentum that students can take their project and continue to build it outside of class. Students will also be pushed to “think big” so that their ideas from just a passion project to something that will have an impact. Prerequisite: Idea for the Passion Project that you want to build and Permission of the instructor.
Summer Term
1 Course Unit

EAS 4990 Senior Capstone Project
The Senior Capstone Project is required for all BAS degree students, in lieu of the senior design course. The Capstone Project provides an opportunity for the student to apply the theoretical ideas and tools learned from other courses. The project is usually applied, rather than theoretical, exercise, and should focus on a real world problem related to the career goals of the student. The one-semester project may be completed in either the fall or spring term of the senior year, and must be done under the supervision of a sponsoring faculty member. To register for this course, the student must submit a detailed proposal, signed by the supervising professor, and the student’s faculty advisor, to the Office of Academic Programs two weeks prior to the start of the term.

1 Course Unit

EAS 5050 Climate Policy and Technology
The course will exam Pacala and Socolow’s hypothesis that "Humanity already possesses the fundamental scientific, technical and industrial know-how to solve the carbon and climate problem for the next half-century" Fifteen "climate stabilization wedges" i.e., strategies that each have the potential to reduce carbon emissions by 1 billion tons per year by 2054, will be examined in detail. Technology and economics will be reviewed. Socio-political barriers to mass-scale implementation will be discussed. Pacala and Socolow note "Every element in this portfolio has passed beyond the laboratory bench and demonstration project; many are already implemented somewhere at full industrial scale".
Fall or Spring
Mutually Exclusive: EAS 3010
1 Course Unit

EAS 5060 Electricity and Systems Markets
The course discusses the existing electricity system from technical, economic, and policy perspectives. Basic power system engineering will be reviewed early in the course. Generation, transmission, distribution, and end-use technologies and economics will be discussed. Additional topics will include system operation, industry organization, government regulation, the evolution of power markets, environmental policy, and emerging technologies.
Spring
Mutually Exclusive: EAS 3060
1 Course Unit

EAS 5070 Intellectual Property and Business Law for Engineers
Engineers are often on the front line of innovation. The goal of this course is to introduce engineering students to the basics of Intellectual property (IP) and business laws that they will encounter throughout their careers. Understanding these laws is critical for the protection of IP and for the creation and success of high-tech start-up ventures. Market advantage in large part springs from a company’s IP. Without legal protection and correct business formation, proprietary designs, processes, and inventions could be freely used by competitors, ruining market advantage. A basic understanding of IP laws, contractual transactions, employment agreements, business structures, and debt-equity financing will help engineering students to become effective employees or entrepreneurs, to acquire investors, and to achieve success. Though open to students of all disciplines, the course will use case studies particular relevance to students of engineering and applied science.
Fall or Spring
1 Course Unit

EAS 5100 Technical Communication and Academic Writing for Non-native Speakers of English
EAS 510 is a writing course designed for graduate students at both the master’s and Ph.D. levels. The features of academic writing used in American universities will be explored by analyzing sample texts, papers in various academic disciplines, and the students’ own writing. A variety of rhetorical patterns will be practiced. Attention will be paid to organization, development of ideas, clarity, coherence, style, grammar, mechanics. Instructor permission required for undergraduates.
Fall or Spring
1 Course Unit
EAS 5110 Societal Grand Challenges at the Interface of Technology and Policy

This new collaborative course – co-taught by faculty from the Kleinman Center for Energy Policy, Weitzman School of Design and School of Engineering and Applied Science – uses societal grand challenges as scenarios for identifying repeatable, process-oriented best practices for solving complex, systemic problems in the energy transition. This course is intended for graduate students with a background in either the social sciences (economics, political science, law, or policy) or who are in STEM programs (science and engineering). This course will complement the material covered in the Kleinman Center Introduction to Energy Policy course (ENMG 5020) taught in the fall. It will be an opportunity to learn from one another and build a holistic understanding of the technical and policy dimensions of the energy transition and the global response to climate change and environmental degradation. The course will be broken into three chapters. For the first third of the semester, we will focus on basics of policy and engineering literacy, with each student bringing their own expertise to the table. The best way to truly understand a topic is to teach it, and this chapter of the course will focus on learning how to talk across disciplines and approach challenges in new and unfamiliar ways. The middle third of this course will be built around case studies of grand societal challenges; some of which have seen considerable progress towards being solved, others which are still the subject of great uncertainty and disagreement. Among other topics, this course will explore: The impact of sweeping standards on building and appliance efficiency; the rapid development and mutual reinforcement of renewable energy technologies and policy; the ability of policy to facilitate healthy competition between technologies (hydrogen vs batteries, for example); The allocation of scarce CCUS resources to abate difficult to decarbonize products like cement, steel, and plastics; the importance of grid regulation and market design in ensuring future energy reliability and affordability; and the need for transition-ready environmental policies that protect ecosystems and communities without hindering access to critical resources (metals, minerals, land, etc.). The final third of the semester will be structured largely around group projects for which students with diverse expertise will work together to identify a grand societal challenge and isolate the technical and policy barriers to solving this challenge. These groups will give regular updates to the rest of the class and will work towards making a meaningful contribution to solving their challenge through collaborative problem solving, design, and research. This course will deliver content learning outcomes about technical, societal, and policy aspects of focal grand challenges, while providing all participants (including instructors) experience and skills to address community-derived problems in teams composed of members from disciplines that rarely collaborate. Over time, this course will serve as a working, iterative “laboratory” on parameters that affect the success of convergence style research and problem solving.

Spring
Also Offered As: ENMG 5100
1 Course Unit

EAS 5120 Engineering Negotiation

The goal of this course is to teach students of engineering and applied science to be effective negotiators. It aims to improve the way these students communicate virtually any human interaction. The course intends to improve the ability of engineers and other technology disciplines to gain more support more quickly for projects, research product and services development, and marketing. For those wanting to be entrepreneurs or intrapreneurs, the course is designed essentially to find the most value possible in starting up and running companies. Based on Professor Diamond’s innovative and renowned model of negotiation, it is intended to assist those for whom technical expertise is not enough to persuade others, internally and externally, to provide resources, promotions and project approvals; or to resolve disputes, solve problems and gain more opportunities. Rejecting the 40-year-old notions of power, leverage and logic, the course focuses on persuasion by making better human connections, uncovering perceptions and emotions, and structuring agreements to be both collaborative and fair. This course is entrepreneurial in nature and can provide many times more value than traditional persuasion. The Getting More book has sold more than 1 million copies around the world and is also used by universities, corporations (Google), and U.S. Special Operations (SEALs, Green Berets, Special Forces, Marines) to save lives and reduce conflict. From the first day, students will do interactive cases based their own engineering-related problems and based on current problems in the news. There will be diagnostics enabling every student to assess his/her skill and improvements.

Fall or Spring
1 Course Unit

EAS 5450 Engineering Entrepreneurship I

Engineers and scientists create and lead great companies, hiring managers when and where needed to help execute their vision. Designed expressly for students having a keen interest in technological innovation, this course investigates the roles of inventors and founders in successful technology ventures. Through case studies and guest speakers, we introduce the knowledge and skills needed to recognize and seize a high-tech entrepreneurial opportunity - be it a product or service - and then successfully launch a startup or spin-off company. The course studies key areas of intellectual property, its protection and strategic value; opportunity analysis and concept testing; shaping technology driven inventions into customer-driven products; constructing defensible competitive strategies; acquiring resources in the form of capital, people and strategic partners; and the founder’s leadership role in an emerging high-tech company. Throughout the course emphasis is placed on decisions faced by founders, and on the sequential risks and determinants of success in the early growth phase of a technology venture. The course is designed for, but not restricted to, students of engineering and applied science and assumes no prior business education. Prerequisite: Third or Fourth year or Graduate standing

Fall or Spring
Also Offered As: IPD 5450
1 Course Unit
EAS 5460 Engineering Entrepreneurship II
This course is the sequel to EAS 545 and focuses on the planning process for a new technology venture. Like its prerequisite, the course is designed expressly for students of engineering and applied science having a keen interest in technological innovation. Whereas EAS 545 investigates the sequential stages of engineering entrepreneurship from the initial idea through the early growth phase of a startup company, EAS 546 provides hands-on experience in developing a business plan for such a venture. Working in teams, students prepare and present a comprehensive business plan for a high-tech opportunity. The course expands on topics from EAS 545 with more in-depth attention to: industry and marketplace analysis; competitive strategies related to high-tech product/service positioning, marketing, development and operations; and preparation of sound financial plans. Effective written and verbal presentation skills are emphasized throughout the course. Ultimately, each team presents its plan to a distinguished panel of recognized entrepreneurs, investors and advisors from the high-tech industry.
Fall or Spring
Prerequisite: EAS 5450
1 Course Unit

EAS 5490 Engineering Entrepreneurship Lab
Engineering Entrepreneurship Lab applies the principles of engineering and engineering entrepreneurship to a real-world problem of your specific field of study or professional interest. You will develop a venture based on a high-tech concept of your choosing (the one that you submitted as part of your application to the course). Like its prerequisite, EAS545 Engineering Entrepreneurship I, the course is designed expressly for students of engineering and applied science having a keen interest in technological innovation. Throughout the course you will formulate and test hypotheses using Lean Startup methodologies to develop key aspects of the venture including product development, customer and market development, team building and operations, and financial modeling and planning. The primary objective of the course is to develop a venture characterized by market-driven, high-tech product-service offering with a clear and validated product-market fit, an operational plan to bring your offering to market, and a plan to secure the resources required for execution of your plan. As discussed in EAS545, primary market research is essential to achieving product-market fit and validating all aspects of your business model. The success of your venture and your grade in the course will depend on the results of this research and testing process. Ideally, your work in this course results in pursuit of your high-tech venture outside of class and beyond the hallowed halls of Penn!
Spring
Prerequisite: EAS 5450
1 Course Unit

EAS 5740 How to Use Data
This course is an introduction for those who want to learn about the mechanics of data, performing data analysis to gain insights, applying data science techniques to make predictions, and applying data analytics to answer questions and to address interesting business problems. Students will learn how to interpret and frame business problems to be addressed by analytics. The course will also cover different elements of the data analytics process, including data wrangling and cleaning, data exploration and descriptive analytics, data modeling, machine learning, predictive analytics, data visualization and the presentation of analysis and insights using data storytelling.
Prerequisite: CIT 5910
.5 Course Units

EAS 5830 Blockchains
This course is an introduction to the technology that powers blockchains like Bitcoin and Ethereum. We will cover the key cryptographic tools that enable blockchains—collision-resistant hash functions and digital signature schemes. We’ll learn about the architecture of different blockchains, their consensus mechanisms, economics and how to interact with them. The assignments in this course are primarily coding-based. We will learn to read and write from the blockchain using Python libraries, and write our own smart contracts in Solidity. At the end of this course, students should understand the power and limitations of blockchain technology and be able to develop software that interacts with current blockchain platforms.
Prerequisite: CIT 5910 AND CIT 5920
0.5 Course Units

EAS 5900 Commercializing Information Technology
EAS 590 provides real world, hands-on learning on what it’s like to actually start a high-tech company. We do that by using the Lean LaunchPad framework for Web start-ups. This class is not about how to write a business plan. Instead you will be getting your hands dirty talking to customers, partners, competitors, as you encounter the chaos and uncertainty of how a start-up actually works. EAS 590 provides real world, hands-on learning on what it’s like to actually start a high-tech company. We do that by using the Lean LaunchPad framework for Web start-ups. EAS 5910 Leading Technology Teams
Engineers routinely work in teams collaborating with experts from multiple fields to address increasingly large complex problems/opportunities. EAS 591, Leading Technology Teams, focuses on the dynamics of innovative, interdisciplinary, cross-functional teams. We examine ways to improve team performance by exploring technology leadership issues from multiple perspectives (i.e., the individual, the team, and the organization). Developing skills to be an effective technology team member, leader, and/or sponsor will provide you with a competitive advantage, and will also provide leads for your future job. EAS 591 is required as part of your application to the course. Like its prerequisite, the course is designed expressly for students of engineering and applied science having a keen interest in technological innovation. Whereas EAS 545 is designed expressly for students of engineering and applied science having a keen interest in technological innovation, EAS 591 provides hands-on experience in developing a comprehensive business plan for a high-tech opportunity. Working in teams, students prepare and present a comprehensive business plan for a high-tech opportunity. 1 Course Unit

EAS 5920 Service Learning and Leadership
This course is designed to train the student leaders for service learning programs and exposes students to relevant skills, including leadership, risk management, cultural competency, and organizational dynamics.
1 Course Unit
EAS 5950 Foundations of Leadership
The goal of EAS 595 is to increase your capacity to effectively lead throughout your career and wherever you find yourself in an organization. This involves understanding and learning about yourself and about working effectively with others. The course starts with an identification of values, strengths, preferences and passions. It then proceeds with the personal and interpersonal and moves through the strategic aspects of leadership by bringing together aspects of management science, social psychology, psychology of personality and behavioral economics. Topics include teamwork and team dynamics, identifying life's goals and dreams, decision making, valuing differences, understanding the dynamics of influence, using power with integrity, giving and receiving feedback, leading change, and discovering where we can make our contribution.
Fall or Spring
1 Course Unit

EAS 8950 Professional Master’s Academic Field Studies
This class allow master’s students to pursue full-time internship opportunities in the Fall semester to apply what they have learned in practice. The student is required to work 20-40 hours a week, 12-15 week long full-time internships. International students under this academic field study track will be eligible for full-time CPT. As part of the application for field studies, students have to attach their coursework plan and receive approval from their program director to make sure they can meet all program requirements in 10 CU’s (11 CU’s for BIOT). Prerequisites: This class is restricted to SEAS Master’s students only. Students can apply after their first two semesters of academic work at Penn. Students must complete at least 6 CU’s (course units) between their first two semesters during their first year. Academic field studies can only be done once for the duration of a master’s student studies at Penn. For students pursuing a single Master’s degree, the field study period is usually the summer and continuing into the Fall semester of the second year. This option is not permitted in the final semester in which the student is graduating. As part of the application for field studies, students have to attach their coursework plan and receive approval from their program director to make sure they can meet all program requirements in 10 CU’s (11 CU’s for BIOT). Students on a single master’s degree have to graduate within 2 years. Dual degree masters students have to graduate within 3 years. Student must be in good academic standing (minimum GPA 3.0) with their program and the University. Those that are not, are unable to apply for the track. It is the student’s responsibility to apply for CPT through ISSS. Students have to submit an academic field study proposal at least one month before the Spring term ends. Students that receive an offer to extend their Summer internship, must turn in their proposal no later than August 1st. Proposal requires details on internship work, explain relevance to student’s field of study, and requires a supervising faculty member. Students apply for field study has to have an internship offer from company. It is not the responsibility of Penn to help students find an internship.
Fall or Spring
1 Course Unit

EAS 8960 Professional Master’s Career Development
This class on professional career development broadly exposes students to organized workshops and seminar talks related to career development and research development. In career development, workshops will be held by career services staff related to identifying career interests, interview strategies, and career fair preparation. The research seminar talks are geared toward giving students exposure to research activities at Penn. The research seminar talks will be offered by individual departments and research programs, and include invited talks by external or internal faculty members. Students will receive a S/U grade and submit a final report at the end of the semester. Prerequisite: This class is restricted o SEAS Master’s student only. Master’s students can take the class at any time. However, the recommendation time to take this course is Fall semester of the second year.
Fall or Spring
1 Course Unit

ENGR 1010 Introduction to Engineering: Energy, Environment and Sustainability
This course is intended to introduce students to the field of engineering. It will expose students to the engineering disciplines through hands-on laboratory experiences. In addition, the course will provide tutorials on how to use important software packages as well as a "Professional Preparation" module through studies of communication (writing and speaking skills), ethics, leadership and teamwork. This course is ideal for any freshman interested in exploring the possibility of studying engineering at Penn. The course counts as an engineering requirement in SEAS.
Fall
1 Course Unit

ENGR 1050 Introduction to Scientific Computing
This course will provide an introduction to computation and data analysis using MATLAB - an industry standard programming and visualization environment. The course will cover the fundamentals of computing including: variables, functions, decisions, iteration, and recursion. These concepts will be illustrated through examples and assignments which show how computing is applied to various scientific and engineering problems. Examples will be drawn from the simulation of physical and chemical systems, the analysis of experimental data, Monte Carlo numerical experiments, image processing, and the creation of graphical user interfaces. This course does not assume any prior programming experience but will make use of basic concepts from calculus and Newtonian physics.
Fall
1 Course Unit
ENGR 1400 Penn Global Seminar: Robotics and Rehabilitation
This course focuses on understanding the design of intelligent technologies for rehabilitation diagnostics and intervention, which include using biomechanics, computer science, robotics and mechatronics design principles. Beyond technology, this course explores the design process in which medical technology is developed for foreign economies, cultures, and healthcare systems. Student projects focus on understanding stake-holders needs and developing technology able to address a Jamaican client rehabilitation needs.
Spring
1 Course Unit

ENGR 2120 Concepts in Micro- and Nanotechnology
Seminar/Lecture course on micro- and nanotechnology intended for nonspecialists. This course will discuss how very small structures and devices, as well as systems comprising these devices, are fabricated and characterized, with application examples from microelectronics, microelectromechanical systems, and quantum devices and systems. Current societal and ethical implications of micro- and nanotechnology, as well as creation and exploitation of commercial opportunities, will be discussed. Prerequisite: If course requirement not met, permission of instructor.
Fall or Spring
1 Course Unit

ENGR 2500 Energy Systems, Resources and Technology
The course will present a comprehensive overview of the global demand for energy, and the resource availability and technology used in its current and future supply. Through a personal energy audit, students will be made aware of the extensive role that energy plays in modern life, both directly, through electricity and transportation fuel, and indirectly in the manufacturing of goods they use. The course will cover how that energy is supplied, the anticipated global growth in energy demand, the resource availability and the role of science and technology in meeting that demand in a world concerned about climate change. The roles of conservation, improved efficiency and renewable energy in meeting future demand in a sustainable, environmentally benign way will be covered. Prerequisite: Basic understanding of chemistry and physics.
Fall
1 Course Unit

ENGR 3440 Answering Questions with Data, for Everyone
This course targets undergraduate students, such as Juniors and Seniors. Just about every student at UPenn and in particular in engineering is using progressively larger datasets to ask scientific questions. This course will break down how we use data and modeling to ask scientific questions and teach the basic tools to do so. The goal of this course is to allow any student who needs to use data to ask questions to see which computational tools they need to use and to use existing tools to ask those questions. All teaching will be small group and team based. The course will use a broad set of data representative of the school. The course is open to upper level undergraduate students who have some knowledge of Python.
1 Course Unit

ENGR 4500 Biotechnology, Immunology, Vaccines and COVID-19
This course will start with the fundamentals of biotechnology, and no prior knowledge of biotechnology is necessary. Some chemistry is needed to understand how biological systems work. We will cover basic concepts in biotechnology, including DNA, RNA, the Central Dogma, proteins, recombinant DNA technology, polymerase chain reaction, DNA sequencing, the functioning of the immune system, acquired vs. innate immunity, viruses (including HIV, influenza, adenovirus, and coronavirus), gene therapy, CRISPR-Cas9 editing, drug discovery, types of pharmaceuticals (including small molecule inhibitors and monoclonal antibodies), vaccines, clinical trials. Some quantitative principles will be used to quantifying the strength of binding, calculate the dynamics of enzymes, writing and solving simple epidemiological models, methods for making and purifying drugs and vaccines. The course will end with specific case study of coronavirus pandemic, types of drugs proposed and their mechanism of action, and vaccine development.
Fall
Mutually Exclusive: ENGR 5500
1 Course Unit

ENGR 5030 Engineering in Oil, Gas and Coal, from Production to End Use
While conventional wisdom is that the world is running out of fossil fuels, technical advances such as deep water production, directional drilling, hydrofracturing, and the refining of non-conventional crude oil sources has increased the resource base significantly and there are well over 100 years of reserves of oil, natural gas and coal. The effect of technology advances has been most profound in the United States, where net energy imports are projected to fall to 12% of consumption by 2020. Excellent, highly technical careers are available in these industries, with opportunities to reduce their impact on the environment and in particular on climate change. The course will cover engineering technology in oil, natural gas and coal from production through end use. It will equip graduating students with the knowledge to contribute in these industries and to participate in informed debate about them.
Spring
1 Course Unit

ENGR 5040 Fundamental Concepts in Nanotechnology
This is a Master's level course that seeks to teach the physics needed to begin a study of engineering and science at the nanometer scale. Since the nanometer scale is so close to the quantum scale, much of the course deals with an introduction to quantum mechanics but the course also includes discussions in solid-state physics, electricity and magnetism and mechanics. The objective of the course is to teach the physics that an engineering student would need to have in order to do experimental work at the nanometer scale. In addition, this course will prepare the student to take more advanced courses in the Nanotechnology Program. Prerequisite: Senior or Master's standing in Engineering or permission of the instructor. Classical Physics (PHYS 0150, PHYS 0151) or equivalent and some of MATH 2400 (ODEs) would be desirable but not necessary.

ENM 3600 Introduction to Data-driven Modeling
From recognizing voice, text or images to designing more efficient airplane wings and discovering new drugs, machine learning is introducing a transformative set of tools in data analysis with increasing impact across engineering, sciences, and commercial applications. In this course, you will learn about principles and algorithms for extracting patterns from data and and making effective automated predictions. We will cover concepts such as regression, classification, density estimation, feature extraction, sampling and probabilistic modeling, and provide a formal understanding of how, why, and when these methods work in the context of analyzing physical, biological, and engineering systems.
Fall
Prerequisite: ENGR 1050 AND MATH 2400
1 Course Unit

ENM 3750 Biological Data Science I - Fundamentals of Biostatistics
The goal of this course is to equip bioengineering undergraduates with fundamental concepts in applied probability, exploratory data analysis and statistical inference. Students will learn statistical principles in the context of solving biomedical research problems.
Spring
1 Course Unit

ENM 5020 Numerical Methods and Modeling
This course provides an advanced introduction to various numerical methods for solving systems of algebraic equations (linear and nonlinear) and differential equations (ordinary and partial). Techniques covered include Newton’s method, implicit and explicit time stepping, and the finite difference and finite element methods. The MATLAB software package will be used to implement the various methods and execute representative calculations.
Spring
1 Course Unit

ENM 5030 Introduction to Probability and Statistics
Fall
Prerequisite: MATH 2400
1 Course Unit
ENM 5100 Foundations of Engineering Mathematics - I
This is the first course of a two semester sequence, but each course is self contained. Over the two semesters topics are drawn from various branches of applied mathematics that are relevant to engineering and applied science. These include: Linear Algebra and Vector Spaces, Hilbert spaces, Higher-Dimensional Calculus, Vector Analysis, Differential Geometry, Tensor Analysis, Optimization and Variational Calculus, Ordinary and Partial Differential Equations, Initial-Value and Boundary-Value Problems, Green's Functions, Special Functions, Fourier Analysis, Integral Transforms and Numerical Analysis. The fall course emphasizes the study of Hilbert spaces, ordinary and partial differential equations, the initial-value, boundary-value problem, and related topics. Prerequisites: Some of MATH 2400 (ODEs) or equivalent and some of MATH 3120 (Linear Algebra) would be desirable but not necessary.

Fall
1 Course Unit

ENM 5110 Foundations of Engineering Mathematics - II
This is the second course of a two semester sequence, but each course is self contained. Over the two semesters topics are drawn from various branches of applied mathematics that are relevant to engineering and applied science. These include: Linear Algebra and Vector Spaces, Hilbert spaces, Higher-Dimensional Calculus, Vector Analysis, Differential Geometry, Tensor Analysis, Optimization and Variational Calculus, Ordinary and Partial Differential Equations, Initial-Value and Boundary-Value Problems, Green's Functions, Special Functions, Fourier Analysis, Integral Transforms and Numerical Analysis. The spring course emphasizes the study of Vector Analysis: space curves, Frenet-Serret formulae, vector theorems, reciprocal systems, co- and contra-variant components, orthogonal curvilinear systems. Matrix theory: Gauss-Jordan elimination, eigenvalues and eigenvectors, quadratic and canonical forms. Variational calculus: Euler-Lagrange equation. Tensor Analysis: Einstein summation, tensors of arbitrary order, dyads and polyads, outer and inner products, quotient law, metric tensor, Euclidean and Riemannian spaces, physical components, covariant differentiation, detailed evaluation of Christoffel symbols, Ricci's theorem, intrinsic differentiation, generalized acceleration, Geodesics. The spring course emphasizes the study of Vector Analysis: space curves, Frenet-Serret formulae, vector theorems, reciprocal systems, co- and contra-variant components, orthogonal curvilinear systems. Matrix theory: Gauss-Jordan elimination, eigenvalues and eigenvectors, quadratic and canonical forms. Variational calculus: Euler-Lagrange equation. 1 Course Unit

ENM 5120 Nonlinear Dynamics and Chaos

Fall or Spring
1 Course Unit

ENM 5200 Principles and Techniques of Applied Math I
This course is targeted to engineering PhD students in all areas. It will focus on the study of linear spaces (both finite and infinite dimensional) and of operators defined on such spaces. This course will also show students how powerful methods developed by the study of linear spaces can be used to systematically solve problems in engineering. The emphasis in this course will not be on abstract theory and proofs but on techniques that can be used to solve problems. Some examples of techniques that will be studied include Fourier series, Green's functions for ordinary and partial differential operators, eigenvalue problems for ordinary differential equations, singular value decomposition of matrices, etc. Prerequisite: Basic theory of ordinary and partial differential equations.

Fall
1 Course Unit

ENM 5210 Principles and Techniques of Applied Math II
This course is a continuation of ENM 5200 (or equivalent) and deals with classical methods in applied mathematics. The topics to be covered include: Functions of a Complex Variable, Partial Differential Equations, Asymptotic and Perturbation Methods, and Convex Analysis and Variational Methods.

Spring
1 Course Unit
ENM 5220 Numerical Methods for PDEs
The objective of the course is to provide training in fundamentals of numerical analysis at the PhD level. This course does not explore methods tailored to specific physics subdomain. Instead, general ideas and systematic procedures for construction and analysis of numerical methods are introduced, which can be applied to diverse disciplines of computational science seeking numerical solution of complex differential equations. The course begins with the techniques for numerical differentiation/integration and solution of system of ODEs, which later is integrated into techniques for solution of PDEs of various types (hyperbolic, parabolic, and elliptic ones). Measures of stability and accuracy are presented, with emphasis on preserving symmetries of differential operators to preclude unphysical solution growth or decay. Spectral methods based on Sturm-Liouville eigenfunctions are covered. Utility and limitation of the widely used methods for computation of broadband phenomena are illustrated. Students will have first-hand experience writing their own computer programs, and also come to view critically the numerical output generated by a computer. Background on linear algebra and ordinary/partial differential equations at the level of ENM 5100 and basic MATLAB experience. Undergraduates require instructor permission to enroll.
Spring, odd numbered years only
1 Course Unit

ENM 5310 Data-driven Modeling and Probabilistic Scientific Computing
We will revisit classical scientific computing from a statistical learning viewpoint. In this new computing paradigm, differential equations, conservation laws, and data act as complementary agents in a predictive modeling pipeline. This course aims to explore the potential of modern machine learning as a unifying computational tool that enables learning models from experimental data, inferring solutions to differential equations, blending information from a hierarchy of models, quantifying uncertainty in computations, and efficiently optimizing complex engineering systems. Prerequisite: Programming in Python and MATLAB
Not Offered Every Year
1 Course Unit

ENM 5400 Topics In Computational Science and Engineering
This course is focused on techniques for numerical solutions of ordinary and partial differential equations. The course will introduce algorithms and their analysis for ODEs; finite element analysis for elliptic, parabolic and hyperbolic PDEs; approximation theory and error estimates for FEM. Prerequisite: Background in ordinary and partial differential equations, proficiency in a programming language such as MATLAB, C, Fortran
Not Offered Every Year
1 Course Unit

English (ENGL)

ENGL 0010 Study of a Medieval or Renaissance Author
This course introduces students to literary study through the works of a single, major author from the Medieval or Renaissance period. Reading an individual author across an entire career offers students the rare opportunity to examine works from several critical perspectives in a single course. What is the author’s relation to his or her time? How do our author’s works help us to understand literary history? And how might we understand our author’s legacy through performance, tributes, adaptations, or sequels? Exposing students to a range of approaches and assignments, this course is an ideal introduction to literary study. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Fall or Spring
1 Course Unit

ENGL 0011 Study of a Woman Writer
This course introduces students to literary study through the works of a major woman writer. Reading an individual author across an entire career offers students the rare opportunity to examine works from several critical perspectives in a single course. How do our author’s works help us to understand literary and cultural history? And how might we understand our author’s legacy through performance, tributes, adaptations, or sequels? Exposing students to a range of approaches and assignments, this course is an ideal introduction to literary study. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.

Also Offered As: GSWS 0011
1 Course Unit

ENGL 0012 Study of an African American Author
This course introduces students to literary study through the works of a major African American author. Reading an individual author across an entire career offers students the rare opportunity to examine works from several critical perspectives in a single course. How do our author’s works help us to understand literary and cultural history? And how might we understand our author’s legacy through performance, tributes, adaptations, or sequels? Exposing students to a range of approaches and assignments, this course is an ideal introduction to literary study. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Fall or Spring
Also Offered As: AFRC 0012
1 Course Unit

ENGL 0020 Study of a Literary Theme
This introduction to literary study examines a compelling literary theme. The theme’s function within specific historical contexts, within literary history generally, and within contemporary culture, will all be emphasized. In presenting a range of materials and perspectives, this course is an ideal introduction to literary study. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Fall or Spring
1 Course Unit

ENGL 0021 Study of a Theme in Cinema
This introduction to literary study examines a compelling theme central to a set of cinematic texts. The theme’s function within specific historical contexts, within literature history generally, and within contemporary culture, will all be emphasized. In presenting a range of materials and perspectives, this course is an ideal introduction to literary study. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Fall or Spring
1 Course Unit

ENGL 0022 Study of a Theme in Global Literature
This introduction to literary study examines a compelling literary theme by attending to texts from around the globe. The theme’s function within multiple historical and regional contexts, within literary history generally, and within contemporary culture, will all be emphasized. In presenting a range of materials and perspectives, this course is an ideal introduction to literary study. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Fall or Spring
Also Offered As: COML 0022
1 Course Unit
ENGL 0023 Study of a Theme Related to Gender & Sexuality
This introduction to literary study examines a compelling literary theme related to questions of gender and sexuality. The theme’s function within specific historical contexts, within literary history generally, and within contemporary culture, will all be emphasized. In presenting a range of materials and perspectives, this course is an ideal introduction to literary study. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Fall or Spring
Also Offered As: GSWS 0023
1 Course Unit

ENGL 0024 Study of a Theme: Monsters in Film and Literature
This course studies literature and film featuring a wide assortment of monsters across a range of genres, cultures, and time periods. It also serves as an introduction to film analysis and readings in cultural studies and literary theory. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Also Offered As: CIMS 0024
1 Course Unit

ENGL 0030 Study of a Literary Genre
An introduction to literary study through a genre; whether it be the novel, drama, the short story, the graphic novel, or poetry. Versions of this course will vary widely in the selection of texts assigned. Some versions will begin with traditional texts, including a sampling of works in translation. Others will focus exclusively on modern and contemporary examples. This course is designed for the General Requirement, and is ideal for the students wishing to take an English course but not necessarily intending to major. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Fall or Spring
1 Course Unit

ENGL 0038 Study of a Genre: World Autobiography
An introduction to literary study through world literature. The course will introduce you to the manifold connections between theories of world literature and fields such as globalization studies, translation studies, comparative literature, and postcolonial studies. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Also Offered As: COML 0038
1 Course Unit

ENGL 0039 Narrative Across Cultures
The purpose of this course is to present a variety of narrative genres and to discuss and illustrate the modes whereby they can be analyzed. We will be looking at shorter types of narrative: short stories, novellas, and fables, and also some extracts from longer works such as autobiographies. While some works will come from the Anglo-American tradition, a larger number will be selected from European and non-Western cultural traditions and from earlier time-periods. The course will thus offer ample opportunity for the exploration of the translation of cultural values in a comparative perspective.
Fall or Spring
Also Offered As: COML 1025, NELC 1960, SAST 1124, THAR 1025
1 Course Unit

ENGL 0040 Study of a Literary Period
This is an introduction to literary study through a survey of works from a specific historical period. This course is ideal for students wishing to explore a significant era, and it presents a range of texts and contexts for understanding the cultural products of a period. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Fall or Spring
1 Course Unit

ENGL 0041 Study of a Period in Cinematic History
This is an introduction to the study of cinema and culture through a survey of works from a specific historical period. This course is ideal for students wishing to explore a significant era, and it presents a range of films and contexts for understanding the cultural products of a period. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
Fall or Spring
Also Offered As: CIMS 0041, COML 0041
1 Course Unit

ENGL 0042 Study of a Period: Medieval/Renaissance
This is an introduction to literary study through a survey of works from a specific historical period—in this case, Medieval and/or Renaissance. This course is ideal for students wishing to explore a significant era, and it presents a range of texts and contexts for understanding the cultural products of a period. This course is designed for the General Requirement, and is ideal for the students wishing to take an English course but not necessarily intending to major. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
1 Course Unit

ENGL 0043 Study of a Period: Literature of the Long 18th Century
This is an introduction to literary study through a survey of works from a specific historical period—in this case, the Long 18th Century. This course is ideal for students wishing to explore a significant era, and it presents a range of texts and contexts for understanding the cultural products of a period. This course is designed for the General Requirement, and is ideal for the students wishing to take an English course but not necessarily intending to major. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
1 Course Unit

ENGL 0044 Study of a Period: The 19th Century
This is an introduction to literary study through a survey of works from a specific historical period—in this case, the 19th Century. This course is ideal for students wishing to explore a significant era, and it presents a range of texts and contexts for understanding the cultural products of a period. This course is designed for the General Requirement, and is ideal for the students wishing to take an English course but not necessarily intending to major. See the English Department’s website at www/english.upenn.edu for a description of the current offerings.
1 Course Unit
ENGL 0045 Study of a Period: The Twenty-First Century
This is an introduction to literary study through a survey of works from a specific historical period—in this case, Twenty-First Century literature. This course is ideal for students wishing to explore a significant era, and it presents a range of texts and contexts for understanding the cultural products of a period. This course is designed for the General Requirement, and is ideal for the students wishing to take an English course but not necessarily intending to major. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
1 Course Unit

ENGL 0050 History and Theory of Sexuality
What is sexuality? Does it exist in the body or in the mind? Is it a collection of actions, desires, and fantasies, or is it rather a disposition, a way of seeing oneself, an identity? Does what we want depend on who we are? Does what we define as to who we are? This course will address such questions by introducing students to several classic texts in the history and theory of sexuality and by looking at key moments in the struggle for sexual and gender freedom. The history we trace will focus on the effects of the "invention of homosexuality" in the late-nineteenth century; the history of butch/femme community; the cultural moment of Stonewall and gay liberation; the "Sex Wars" of the 1980s; women of color and queer of color critiques; responses to HIV/AIDS; and the emergence of the transgender rights movement. We will also consider the meaning of "queer," global sexualities, same-sex marriage, the politics of emotion, and gay normalization.
Fall or Spring
1 Course Unit

ENGL 0052 Literature and Society: Introduction to Psychoanalysis
The course will introduce students to the broad and ever-expanding spectrum of psychoanalytic ideas and techniques, through reading and discussion of major works by some of its most influential figures. We will also read some literary, historical, philosophical, and anthropological works that have special relevance to the psychoanalytic exploration of the human condition. In addition to the other requirements it satisfies, this course may also be counted toward completion of the Psychoanalytic Studies minor (http://web.sas.upenn.edu/psys/). See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: COML 0052
1 Course Unit

ENGL 0060 Introduction to Literature and Law
An introduction not only to representations of the law and legal processes in literary texts, but also to the theories of reading, representation, and interpretation that form the foundation of both legal and literary analysis. See the English Department’s website at www.english.upenn.edu for a description of our current offerings.
Fall or Spring
1 Course Unit

ENGL 0070 Literature and Medicine: 1650 to the Present
This course offers a comprehensive study of significant changes and continuities in the history of medicine from 1650 to the present day, alongside works of literature that exemplify the shifting notions of the doctor and sickness in the Western medical tradition. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Fall or Spring
1 Course Unit

ENGL 0137 Penn Theatre in London--Penn English London Program
This course is the centerpiece of the Penn English London Program. As part of this course, you will study with a renowned theatre critic and make frequent theatre visits. London is one of the most exciting theatre centers in the world, and this course has a focus on live performance, providing an incomparable opportunity to learn about a wide range of dramatic forms, acting styles, theatrical conventions, and playing spaces. Students attend three performances each week, produced by companies such as the National Theatre, the Royal Court, and Shakespeare’s Globe. We will also see a diverse selection of pieces staged not only in the historic theatres of the West End, but also in smaller fringe theatres. Class meetings will include presentations on the theatres we visit, analysis of plays, and discussions about the productions we have seen. Readings for the class will include selected plays and contextual material to prepare us for theatre viewing; written work will consist of responses to performances. Field trips are likely to include a backstage visit of the National Theatre, and possibly a visit to the theatre collection at the Victoria and Albert Museum.
1 Course Unit

ENGL 0159 Gender and Society
This course will introduce students to the ways in which sex, gender, and sexuality mark our bodies, influence our perceptions of self and others, organize families and work like, delimit opportunities for individuals and groups of people, as well as impact the terms of local and transnational economic exchange. We will explore the ways in which sex, gender, and sexuality work with other markers of difference and social status such as race, age, nationality, and ability to further demarcate possibilities, freedoms, choices, and opportunities available to people.
Fall or Spring
Also Offered As: GSWS 0002
1 Course Unit

ENGL 0160 Introduction to Sexuality Studies and Queer Theory
This course will introduce student to the historical and intellectual forces that led to the emergence of queer theory as a distinct field, as well as to recent and ongoing debates about gender, sexuality, embodiment, race, privacy, global power, and social norms. We will begin by tracing queer theory’s conceptual heritage and prehistory in psychoanalysis, deconstruction and poststructuralism, the history of sexuality, gay and lesbian studies, woman-of-color feminism, the feminist sex wars, and the AIDS crisis. We will then study the key terms and concepts of the foundational queer work of the 1990s and early 2000s. Finally, we will turn to the new questions and issues that queer theory has addressed in roughly the past decade. Students will write several short papers.
Fall
Also Offered As: COML 0030, ENGL 2303, GSWS 0003
1 Course Unit

ENGL 0300 Medieval Worlds
In this freshman seminar, we will read a variety of premodern texts that try to take the whole world into account. We will trace the geographical imaginations and cultural encounters of early writers across different genres, from maps, to Islamic, Jewish, and Christian travel narratives, such as the account of John de Mandeville (one of Christopher Columbus’s favorite writers); to monstrous encyclopedias and books of beasts, such as the "Wonders of the East"; to universal chronicles and Alexander the Great romances. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
Fall or Spring
1 Course Unit
ENGL 0301 First Year Seminar--Emotions
The field known as "History of the Emotions" has gained tremendous prominence in literary and cultural studies. But do emotions have a history? If so, what methods do we use for discovering and recounting that history? To what extent does history of the emotions borrow from other fields? These include all the fields that relate to what we call "emotions studies": psychology, sociological, political theory, philosophy, and neuroscience. In this seminar we will explore some key methodologies and subject matters for history of the emotions. We'll look at some philosophical reflections on emotion (including Plato, Aristotle, and the Stoics, as well as more recent moral philosophers); we'll also look at political theorists, including Thomas Hobbes; we'll explore psychoanalytic perspectives, historical research, and some of the work of neuroscientists; and we will take these ideas into explorations of art, literature, and music. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

An introduction to writing about Literature, with emphasis on Asian American literature and culture.
Also Offered As: ASAM 0010
1 Course Unit

ENGL 0303 First Year Seminar: National Epics
In this course we will consider texts that become "national epics," texts that in some sense come to "represent" a nation. How and when might such imaginative texts emerge? Nations change, and old poems may no longer serve. Can the Song of Roland, once compulsory study for all schoolchildren in France, still be required reading today-- especially if I am French Muslim? What about El Cid in Spain? How do some texts-- such as the Mahabharata in India, or Journey to the West in China-- seem more adaptable than others? The course begins in western Europe, but then pivots across Eurasian space to become gradually more global. Most all of us have complex family histories: Chinese-American, French Canadian, Latino/a/x, Jewish American, Pennsylvania Dutch, Lenni Lenape. Some students may choose to investigate, for their final project, family histories (and hence their own, personal connection to "national epics").
Also Offered As: COML 0303
1 Course Unit

ENGL 0304 First Year Seminar: Dangerous Literature
This first-year seminar explores literary works that were called or perceived dangerous, revealing a literary history of censorship, prohibition, and book burning--be it for moral, political, or religious reasons. By studying dangerous literature closely and transhistorically, students will acquire knowledge about the texts as well as historical, aesthetic, and philosophical contexts from which they emerged. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
1 Course Unit

ENGL 0305 First Year Seminar: Fiction and Connectivity
This First Year Seminar explores the ways in which long narratives, from ancient epic to 21st-century TV serials, have always engaged their audiences by providing a sense of connection among individuals, and by modeling the relationship between individuals and society. This seminar will zero-in on this aspect of storytelling's cultural function. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

ENGL 0306 Spiegel-Wilks First-Year Seminar
The primary goal of the first-year seminar program is to provide every first-year student the opportunity for a direct personal encounter with a faculty member in a small setting devoted to a significant intellectual endeavor. Specific topics are posted at the beginning of each academic year. This Spiegel-Wilks seminar focuses exclusively on contemporary art.
Fall or Spring
Also Offered As: ARTH 0501
1 Course Unit

ENGL 0307 First Year Seminar: Lyric Poetry and Life Writing
What kind of life writing is poetry? When we say that the raw expression of thought and feeling is not art, but a poem is, what do we mean? What is gained (and what lost) when writers give poetic form to experiences and emotions? In this seminar, we'll investigate that question by reading a series of modern poets alongside other forms of life writing that they produced, including, for example, letters and diaries, autobiographies and memoirs, essays and fiction. We'll start with some quick case studies on Wordsworth, Whitman, and Dickinson. For the remainder of the semester, we'll work intensively on Elizabeth Bishop, Robert Lowell, Ted Hughes, Sylvia Plath, Philip Larkin, Robert Frost, Langston Hughes, Audre Lorde, Bob Dylan, and Claudia Rankine.

ENGL 0509 Dante's Divine Comedy
In this course we will read the Inferno, the Purgatorio and the Paradiso, focusing on a series of interrelated problems raised by the poem: authority, fiction, history, politics and language. Particular attention will be given to how the Commedia presents itself as Dante's autobiography, and to how the autobiographical narrative serves as a unifying thread for this supremely rich literary text. Supplementary readings will include Virgil's Aeneid and selections from Ovid's Metamorphoses. All readings and written work will be in English. Italian or Italian Studies credit will require reading Italian texts in their original language and writing about their themes in Italian. This course may be taken for graduate credit, but additional work and meetings with the instructor will be required.
Not Offered Every Year
Also Offered As: COML 3330, ITAL 3330
1 Course Unit

ENGL 0510 Benjamin Franklin Seminar: National Epics (Med/Ren)
A course that traces how particular literary texts, very often medieval, are adopted to become foundational for national literatures. Key moments of emphasis will be the early nineteenth century, the 1930s, and (to some extent) the unfolding present. Some texts immediately suggest themselves for analysis. The Song of Roland, for example, has long been fought over between France and Germany; each new war inspires new editions on both sides. The French colonial education system, highly centralized, long made the Chanson de Roland a key text, with the theme of Islamic attack on the European mainland especially timely, it was thought, during the Algerian war of independence. Germany also sees the Niebelungenlied as a key text, aligning it with the Rhine as an impeccably Germanic: but the Danube, especially as envisioned by Stefan Zweig, offers an alternative, hybridized, highly hyphenated cultural vision in running its Germanic-Judaic-Slavic-Roman course to the Black Sea. The course will not be devoted exclusively to western Europe. Delicate issues arise as nations determine what their national epic needs to be. Russia, for example, needs the text known as The Song of Igor to be genuine, since it is the only Russian epic to predate the Mongol invasion. The text was discovered in 1797 and then promptly lost in Moscow's great fire of 1812; suggestions that it might have been a fake have to be handled with care in Putin's Russia. Similarly, discussing putative Mughal (Islamic) elements in so-called "Hindu epics" can also be a delicate matter. Some "uses of the medieval" have been exercised for reactionary and revisionist causes in the USA, but such use is much more extravagant east of Prague. And what, exactly, is the national epic of the USA?

ENGL 0531 Benjamin Franklin Seminar: Gender, Sexuality, and Literature
This seminar focuses on literary, cultural, and political expressions of gender and sexuality. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
Also Offered As: GSWS 0531
1 Course Unit

ENGL 0540 Benjamin Franklin Seminar: History of Literary Criticism
This is a course on the history of literary theory, a survey of major debates about literature, poetics, and ideas about what literary texts should do, from ancient Greece to examples of modern European thought. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
Also Offered As: CLST 3508, COML 0540
1 Course Unit

ENGL 0541 Psychoanalysis and Autobiography
Both psychoanalysis and autobiography are ways of re-telling a life. Psychoanalysis is often called "the talking cure" because, as patients tell the analyst more and more about their lives (their thoughts, dreams, memories, hopes, fears, relationships, jobs, and fantasies), they start to recognize themselves in new ways, and this can help them overcome conflicts, impasses, bad feelings, and even psychiatric illnesses that have kept them from flourishing. Autobiographers do something similar as they remember, re-examine, and re-tell their lives - though one very important difference is that they do so, not privately in a psychoanalyst's office, but publicly in books that anyone may read. This seminar is a comparative exploration of these different ways of a re-telling a life. This seminar is usually team-taught by a humanities scholar and a practicing psychoanalyst.
Fall
Also Offered As: COML 3097, GSWS 3890
1 Course Unit

ENGL 0549 Writing About Art Seminar
What does it mean to write about art? What are the historical origins of this undertaking? How does language mediate the intellectual, somatic, and cultural rapport between the viewing self and the physical object? As an initial response to these questions we will examine the writings of the Tuscan artist and critic Giorgio Vasari (1511-1574), the biographer of such renowned artists as Leonardo, Raphael, Donatello, and Michelangelo. We will also read the letters of famous artists from the early modern period, and examine the theoretical forays of artists such as Albrecht DÄ"rer, who attempted to sketch the relationship between the memory and the imagination. Finally, we will look to examples of works of art for how we might read visual images as expressive of theories about what are and what it can do.
Not Offered Every Year
Also Offered As: ARTH 3510, GRMN 1302, ITAL 3610

1 Course Unit

ENGL 0591 The History Computer Animation
This course will look at computer animation as an art form, a series of technological innovations and an industry. We will explore the way in which artistic, technical, historical, and cultural conditions have shaped the development of computer animation. Topics will include the impact of early motion graphics experiments in the sixties, the contributions of university- and corporation-funded research, commercial production, and the rise of Pixar. We will consider the companies and personalities in computer animation who have shaped the art form and continue to influence it, the contributions to computer animation from visionaries around the world, and current day applications of animated imagery. Throughout the course, we will screen important works from the canon of computer animation, including the earliest computer-animated shorts, scenes from Beauty and the Beast, the first Pixar shorts, Toy Story, Final Fantasy and works done internationally to forward the art and the industry.
Not Offered Every Year
Also Offered As: ARTH 3871, CIMS 3201, FNAR 3182
1 Course Unit

ENGL 0593 The Animation Of Disney
No organization has exerted as much influence on popular culture and the art form of animation as The Walt Disney Company. For decades, Disney films were the standard by which all other animated films were measured. This course will examine the biography and philosophy of founder Walt Disney, as well as The Walt Disney Company’s impact on animation art, storytelling and technology, the entertainment industry, and American popular culture. We will consider Disney’s most influential early films, look at the 1960s when Disney’s importance in popular culture began to erode, and analyze the films that led to the Disney renaissance of the late 1980s/early 1990s. We will also assess the subsequent purchase of Pixar Animation Studios and the overall impact Pixar has had on Disney. The class will also look at recent trends and innovations, including live-action remakes and Disney+.
Not Offered Every Year
Also Offered As: ARTH 3873, CIMS 3203, FNAR 3184
1 Course Unit

ENGL 0594 History Children's TV
This course will survey the history of children’s television from the invention of television through the present, with an emphasis on series development and production, artistry, and the colorful personalities who built this industry. We’ll consider important figures including Fred Rogers, Bill Hanna and Joe Barbera, Joan Ganz Cooney, Jim Henson and Walt Disney. We will discuss the history of animated cartoons that were made specifically for television, Saturday morning production, the rise of Japanese cartoons from the 1960s through Pokemon, and the growth of children’s cable channels in the 90s, as well as other landmark moments. We’ll also assess the impact of streaming platforms on television and the future of children’s media.
Not Offered Every Year
Also Offered As: ARTH 3874, CIMS 3204, FNAR 3185
1 Course Unit
ENGL 0595 Global TV
This course explores a broad media landscape through new critical and conceptual approaches. It is designated as a Benjamin Franklin Seminar. This course maps the footprints of television at a global scale. Adopting comparative approaches, we will be studying TV’s formation of national and global discourses, and thereby recognizing not only television’s impact on processes of globalization, but also the ability of television to matter globally. Working through concepts of “broadcasting,” “flow,” “circulation,” and “circumvention,” the course examines the movement of (and blocks encountered by) television programs and signals across national borders and cultures. The course particularly focuses on how global television cultures have been transformed due to shifts from broadcasting technologies to (Internet) streaming services? Navigating from United States and Cuba to India and Egypt, the readings in the course illuminate how particular televisual genres, institutions, and reception practices emerged in various countries during specific historical periods. We shall be addressing a range of questions: what kind of global phenomenon is television? Can we study television in countries where we do not know the existing local languages? In what different ways (through what platforms, interfaces, and screens) do people in different continents access televsional content? What explains the growing transnational exports of Turkish and Korean TV dramas? What is the need to historically trace the infrastructural systems like satellites (and optical fiber cables) that made (and continue to make) transmission of television programming possible across the world? How do fans circumvent geo-blocking to watch live sporting events? Assignments include submitting weekly discussion questions and a final paper. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

Fall or Spring
Also Offered As: CIMS 3781
1 Course Unit

ENGL 0596 Benjamin Franklin Seminar: Charles Chaplin’s Films and the Politics of Silence
This BFS seminar focuses on the variety pantomime inherited by twentieth-century film from the Commedia dell’Arte and European Music Hall stages. Emphasis will be placed on how pantomime was used by filmmaker Charles Chaplin between the years 1914–1940. We shall consider important moments in the history of European pantomime that coalesced in his silent films. Also Offered As: CIMS 0596
1 Course Unit

ENGL 0599 Cinema and Civil Rights
This undergraduate seminar will examine key moments in the history of civil rights through a cinematic lens. Over the course of the semester, we will explore how filmmakers have depicted the lives, aspirations, and strategies of those who have struggled for equal rights; how different struggles have intersected with each other; what aesthetic strategies have been adopted to represent freedom and the denial of it; and how effective cinematic efforts to contribute to increased freedom have been as well as what criteria we use to evaluate success or failure in the first place. Each week, we will watch a film and read a series of texts that will be drawn from a variety of arenas, including histories of civil rights; civil rights pamphlets and speeches; filmmaker interviews; film and media theory; memoirs; and theories of race, gender and sexuality. Course requirements: mutual respect; completion of all readings and screenings; participation in class discussion; weekly online responses; a final project that can be a research paper, film, art project, or community-based initiative.
Not Offered Every Year
Also Offered As: AFRC 3930, ARTH 3930, CIMS 3930, GSWS 3930
1 Course Unit

ENGL 0700 Critical-Creative Approaches to Literature
This course enables students to think and write creatively as a means to the critical understanding of literary texts. It seeks to advance students understanding of literature, its formal elements, and its relationship to culture and history through the use of creative projects instead of or alongside more traditional critical writing. See the English Department’s website at www.english.upenn.edu for a description of current offerings. Not Offered Every Year
1 Course Unit

ENGL 0720 Critical-Creative: Contemporary Black Feminism: Saidiya Hartman and Gayl Jones
This critical-creative seminar on contemporary black feminism considers collaborative writing as an element of black feminist practice and offers students the chance to immerse themselves in the works of philosopher Saidiya Hartman and novelist Gayl Jones, as well as weave an essay together throughout the semester. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
1 Course Unit

ENGL 0755 Listening in Troubled Times (SNF Paideia Program Course)
In this course, we will explore histories and theories of listening and the power of listening as a means to connect with other times and spaces. This course is part of the Stavros Niarchos Foundation (SNF) Paideia Program. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Also Offered As: ANTH 1755
1 Course Unit

ENGL 0759 Critical Creative Seminar: Ecology in New Wave Science Fiction
This critical-creative seminar explores the rise of New Wave science fiction to explore the interrelations between gender, colonialism, language and ecology. Students will also have an opportunity to write their own ecological speculative fiction. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
1 Course Unit

ENGL 0765 Podcasting
This creative-critical seminar situates the podcast historically, analyzes current instantiations of the genre, and teaches hands-on skills to create your own podcasts. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

1 Course Unit

ENGL 0999 Independent Study in Language and Literature
Supervised reading and research.
Fall or Spring
1 Course Unit

ENGL 1002 The Bible As Literature
Successive generations have found the Bible to be a text which requires - even demands - extensive interpretation. This course explores the Bible as literature, considering such matters as the artistic arrangement and stylistic qualities of individual episodes as well as the larger thematic patterns of both the Old and New Testaments and the Apocrypha. A good part of the course is spent looking at the place of the Bible in cultural and literary history and the influence of such biblical figures as Adam and Eve, David, and Susanna on writers of poetry, drama, and fiction in the English and American literary traditions. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 1009 Classical Traditions
A broad consideration of the ways in which writers and artists from the early modern era to the present day have responded to the classical tradition, borrowing from, imitating, questioning, and challenging their classical predecessors. Through modern reworkings of ancient epic, tragedy, biography, and lyric by authors ranging from Shakespeare and Racine to contemporary poets, painters, and filmmakers, we will ask what the terms "classical" and "tradition" might mean and will track the continuities and differences between antiquity and the modern world. Should we see ancient Greek and Roman culture as an inheritance, a valuable source of wealth bequeathed to the modern age? Or is there something wrong with that picture? How do ancient texts have to be adapted and transformed if they are to speak to modern conditions and concerns? This is an introductory-level course open to anyone who cares about the relationship between the present and the past.
Not Offered Every Year
Also Offered As: CLST 1700
1 Course Unit

ENGL 1010 Old English
This course introduces students to the powerful and influential corpus of Old English literature. We will read a wide variety of texts: short poems such as The Wonderer, The Seafarer, The Wife's Lament and the passionate religious poem The Dream of The Rood; chronicles such as The Battle Of Maldon Against The Vikings, The Old Testament, Exodus and Bede's Conversion Of The English; and selections from the greatest of all English epics, Beowulf. Readings will be in Old English, and the first few weeks of the course will be devoted to mastering Old English prosody, vocabulary, and grammar (as well as a crash course on the early history of the English language). During the last few weeks we may read modern criticism of Old English poetry, or we will consider the modern poetic reception of Old English literature and explore theories and problems of translation, reading translations of Old English poems by Yeats, Auden, Tolkien, and Heaney. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 1011 Medieval Literature and Culture
This course introduces students to four hundred years of English literary culture, from approximately 1100 to 1500. This period was marked by major transformations, not only with respect to government, law, religious practice, intellectual life, England's relation to the Continent (during the 100 Years War), the organization of society (especially after the Black Death), the circulation of literary texts, and the status of authors. Topics may include medieval women writers, manuscript production, literatures of revolt, courtly culture, Crusades, cross-Channel influences, and religious controversy. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 1012 Romance
This course will focus on what is arguably the most extravagant, adventurous, and fantastical of the literary genres: the Romance. We will read a number of medieval and renaissance romance narratives, in verse and prose, beginning with the Arthurian romances (Malory's Morte D'Arthur, Sir Gawain And The Green Knight) and continuing with as many (and as much) of the great renaissance romances as time will allow: Sir Philip Sidney's Arcadia, Edmund Spenser's The Faerie Queen, and Lady Mary Wroth's Urania. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 1013 Chaucer: Poetry, Voice, and Interpretation
Watching Chaucer at work, modern poet Lavinia Greenlaw says, is like meeting English "before the paint has dried." Before rules (even of spelling) have hardened. Before live oral performance is subordinated to written record. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
Also Offered As: COML 1013
1 Course Unit

ENGL 1014 King Arthur: Medieval to Modern
In this course, we will study nearly 1000 years of literature about King Arthur from around the world. We will think about what Arthurian legends mean to the way we write history and the ways in which we view our collective pasts (and futures). See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: COML 1014
1 Course Unit

ENGL 1015 Sagas and Skalds: Old Norse Literature in Translation
This course introduces students to the powerful and influential corpus of Old Norse literature and to the cultural and historical landscape of Viking and medieval Scandinavia. Students will explore mythological and heroic verse, court poetry, law codes, runic inscriptions, and the famed Icelandic sagas to develop a deeper understanding of one of the most significant literary traditions in high medieval Europe, and to myth-bust popular misconceptions about who 'the Vikings' were and how they lived. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Fall or Spring
Also Offered As: COML 1015
1 Course Unit
ENGL 1020 Literature Before 1660
This course will introduce students to key works of English literature written before 1660. It will explore the major literary genres of this period, as well as the social and cultural contexts in which they were produced. The course will examine how literature texts articulate changes in language and form, as well as in concepts of family, nation, and community during the medieval and early modern periods. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Fall or Spring
Also Offered As: GSWS 1043
1 Course Unit

ENGL 1021 Introduction to Renaissance Literature and Culture
This course will survey the cultural history of sixteenth- and seventeenth-century England. Interdisciplinary in nature and drawing on the latest methodologies and insights of English studies, we will explore how aesthetics, politics, and social traditions shaped literature at this vital and turbulent time of English history. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
Also Offered As: COML 1021
1 Course Unit

ENGL 1022 The Age of Milton
This course explores the literature of the 17th Century through the works of John Milton’s major works (selected sonnets, Comus, Areopagitica, Paradise Lost, Paradise Regained, and Samson Agonistes), and his contemporaries. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 1030 18th-Century British Literature
An introduction to British literary and cultural history in the eighteenth century. Typically, this course will contain materials from the later seventeenth to the early nineteenth centuries—from the Restoration and Glorious Revolution through the Enlightenmenet, the American and French Revolutions, and the Napoleonic Wars—though it need not cover the entire period. We will read plays, poetry and prose in order to understand the aesthetic, intellectual, social and political issues of literary production and achievement in this period. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 1040 The Romantic Period
This course offers an introduction to the literature of the Romantic period (ca. 1770-1830). Some versions of this course will incorporate European romantic writers, while others will focus exclusively on Anglo-American romanticism, and survey authors such as Austen, Blake, Brodken Brown, Byron, Coleridge, Emerson, Irving, Keats, Radcliffe, Scott, Shelley, and Wordsworth. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
Also Offered As: GSWS 1041
1 Course Unit

ENGL 1045 Romantic and Victorian Poetry
This course will focus on (mostly) British poetry from the early Romantic period through the late Victorian era on the edge of modernism. We will practice different ways of reading as we discuss major and minor works in various forms, meters, and genres, along with significant movements in poetics and the social worlds that made them. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
1 Course Unit

ENGL 1051 19th-Century British Literature
In 1815 in the wake of the battle of Waterloo, Great Britain controlled a staggering quarter of the world’s landmass and half of its gross national product. This course will begin with the Napoleonic Wars and this Regency aftermath to survey a century of British literature – from Romanticism through the revolutions of 1848 and the Victorian and Edwardian periods to the beginning of the first World War. Most versions of this course will read both novels and poetry, often focusing on the relation between the two and their function within nineteenth century culture. Others may incorporate drama and non-fiction prose. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 1052 19th-Century American Literature
A consideration of outstanding literary treatments of American culture from the early Federalist period to the beginnings of the First World War. We will traverse literary genres, reading autobiographies and travel accounts as well as fiction and poetry. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 1055 Books on Film: Adapting the Victorians
This course considers how stories are told differently through different media and to different audiences, and how such differences inform the many decisions involved in the translation of works across media and across time. To do so, we will consider key literary works (novels, stories, plays) from Victorian literature as well as their adaptations for film and television. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: COMS 1055
1 Course Unit

ENGL 1056 Sherlock in the Multiverse
This course will consider the transmedia phenomenon of Sherlock Holmes. We will begin with his detective antecedents, we’ll then dive into Conan Doyle’s Victorian-era Sherlock, and finally explore Sherlock’s contemporary life in new novels, short stories, screenplays, tv series and computer games. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: COMS 1056
1 Course Unit
ENGL 1070 Modernisms and Modernities
This class explores the international emergence of modernism, typically from the middle of the 19th century to the middle of the 20th century. We will examine the links between modernity, the avant-garde, and various national modernisms that emerged alongside them. Resolutely transatlantic and open to French, Spanish, Italian, German, or Russian influences, this course assumes the very concept of Modernism to necessitate an international perspective focusing on the new in literature and the arts -- including film, the theatre, music, and the visual arts. The philosophies of modernism will also be surveyed and concise introductions provided to important thinkers like Marx, Nietzsche, Sorel, Bergson, Freud, and Benjamin. See the English Department's website at www.english.upenn.edu for a description of the current offerings. Not Offered Every Year
Also Offered As: COML 1070
1 Course Unit

ENGL 1011 Irish Literature
This course will provide an introduction to modern Irish literature, focusing on the tension between Ireland's violent history and its heroic mythology. This tension leaves its mark not only on the ravaged landscape, but also on the English language, which displays its "foreignness" most strongly in the hands of Irish writers. Readings will span the genres of poetry, drama, fiction, and history, and will include works by Sommerville and Ross, Yeats, George Moore, Joyce, Synge, O'Casey, Beckett, Edna O'Brien, and Brian Friel. See the English Department's website at www.english.upenn.edu for a description of the current offerings. Not Offered Every Year
Also Offered As: LALS 1202
1 Course Unit

ENGL 1095 Novel to Film Adaptation
This is an intermediate-level course centered on the study of novels and their film adaptations. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
1 Course Unit

ENGL 1091 Modern America
This course is concerned with American literature and cultural life from the turn of the century until about 1950. The course emphasizes the period between the two World Wars and emphasizes as well the intellectual and cultural milieu in which the writers found themselves. Works by the following writers are usually included: James, Eliot, Frost, Fitzgerald, Faulkner, West, Stevens, DuBois, Williams, Wharton, Stein, West, Moore, and Hemingway. See the English Department's website at www.english.upenn.edu for a description of the current offerings. Not Offered Every Year
1 Course Unit
ENGL 1145 Rewriting American Classics
This course will examine the way of number of classic American literary works, by authors ranging from Melville and Dickinson to Faulkner, have been vividly rewritten by contemporary writers and filmmakers. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
1 Course Unit

ENGL 1179 World Literature
How do we think ‘the world’ as such? Globalizing economic paradigms encourage one model that, while it connects distant regions with the ease of a finger-tap, also homogenizes the world, manufacturing patterns of sameness behind simulations of diversity. Our current world-political situation encourages another model, in which fundamental differences are held to warrant the consolidation of borders between Us and Them, "our world" and "theirs." This course begins with the proposal that there are other ways to encounter the world, that are politically compelling, ethically important, and personally enriching–and that the study of literature can help tease out these new paths. Through the idea of World Literature, this course introduces students to the appreciation and critical analysis of literary texts, with the aim of navigating calls for universality or particularity (and perhaps both) in fiction and film. "World literature" here refers not merely to the usual definition of "books written in places other than the US and Europe," but any form of cultural production that explores and pushes at the limits of a particular world, that steps between and beyond worlds, or that heralds the coming of new worlds still within us, waiting to be born. And though, as we read and discuss our texts, we will glide about in space and time from the inner landscape of a private mind to the reaches of the farthest galaxies, knowledge of languages other than English will not be required, and neither will any prior familiarity with the literary humanities. In the company of drunken kings, botanical witches, ambisexual alien lifeforms, and storytellers who’ve lost their voice, we will reflect on, and collectively navigate, our encounters with the faraway and the familiar–and thus train to think through the challenges of concepts such as translation, narrative, and ideology. Texts include Kazuo Ishiguro, Ursula K. LeGuin, Salman Rushdie, Werner Herzog, Jamaica Kincaid, Russell Hoban, Hiroshi Teshigahara, Arundhati Roy, and Abbas Kiarostami.

ENGL 1190 Introduction to Postcolonial Literature
English is a global language with a distinctly imperial history, and this course serves as an essential introduction to literary works produced in or about the former European colonies. The focus will be poetry, film, fiction and non fiction and at least two geographic areas spanning the Americas, South Asia, the Caribbean and Africa as they reflect the impact of colonial rule on the cultural representations of identity, nationalism, race, class and gender. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
Also Offered As: CIMS 1190, COML 1190
1 Course Unit

ENGL 1191 Community, Freedom, Violence: Writing the South Asian City
The South Asian city—as space, symbol, and memory—is the subject of this course. Through a range of readings in English and in translation, we will gain a sense for the history of the city and the ways in which it is a setting for protest and nostalgia, social transformation and solitary wandering. We will see reflections of the city in the detective novels sold in its train stations, the stories scribbled in its cafes, and films produced in its backlots. Readings will attempt to address urban spaces across South Asia through a range of works, which we will examine in the context of secondary readings, including histories and ethnological works that take up life in the modern city. Students will finish this course prepared to pursue projects dealing with the urban from multiple disciplinary perspectives. This course is suitable for anyone interested in the culture, society, or literature of South Asia, and assumes no background in South Asian languages.
Fall or Spring
Also Offered As: COML 1121, SAST 1120, URBS 1120
1 Course Unit

ENGL 1200 African-American Literature
An introduction to African-American literature, ranging across a wide spectrum of moments, methodologies, and ideological postures, from Reconstruction and the Harlem Renaissance to the Civil Rights Movement. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
Also Offered As: AFRC 1200, GSWS 1201
1 Course Unit

ENGL 1210 Literatures of Jazz
That modernism is steeped as much in the rituals of race as of innovation is most evident in the emergence of the music we have come to know as jazz, which results from collaborations and confrontations taking place both across and within the color line. In this course we will look at jazz and the literary representations it engendered in order to understand modern American culture. We will explore a dizzying variety of forms, including autobiography and album liner notes, biography, poetry, fiction, and cinema. We'll examine how race, gender, and class influenced the development of jazz music, and then will use jazz music to develop critical approaches to literary form. Students are not required to have a critical understanding of music. Class will involve visits from musicians and critics, as well as field trips to some of Philadelphia’s most vibrant jazz venues. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
Also Offered As: AFRC 1210

ENGL 1220 Caribbean Literature
This course will introduce students to Caribbean literature. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
Also Offered As: AFRC 0082, COML 0082
1 Course Unit
ENGL 1260 Latinx Literature and Culture
This course offers a broad introduction to the study of Latinx culture. We will examine literature, theater, visual art, and popular cultural forms, including murals, poster art, graffiti, guerilla urban interventions, novels, poetry, short stories, and film. In each instance, we will study this work within its historical context and with close attention to the ways it illuminates class formation, racialization, and ideologies of gender and sexuality as they shape Latinx experience in the U.S. Topics addressed in the course will include immigration and border policy, revolutionary nationalism and its critique, anti-imperialist thought, Latinx feminisms, queer latinidades, ideology, identity formation, and social movements. While we will address key texts, historical events, and intellectual currents from the late 19th century and early 20th century, the course will focus primarily on literature and art from the 1960s to the present. All texts will be in English.
Not Offered Every Year
Also Offered As: ARTH 2679, COML 1260, GSWS 1260, LALS 1260
1 Course Unit

ENGL 1270 Asian American Literature
An overview of Asian American literature from its beginnings at the turn of the twentieth century to the present. This course covers a wide range of Asian American novels, plays, and poems, situating them in the contexts of American history and minority communities and considering the variety of formal strategies these different texts take. See the English Department's website at www/english.upenn.edu for a description of the current offerings.
Not Offered Every Year
Also Offered As: ASAM 0103
1 Course Unit

ENGL 1271 American Musical Theatre
The American musical is an unapologetically popular art form, but many of the works that come from this tradition have advanced and contributed to the canon of theatre as a whole. In this course we will focus on both music and texts to explore ways in which the musical builds on existing theatrical traditions, as well as alters and reshapes them. Finally, it is precisely because the musical is a popular theatrical form that we can discuss changing public tastes, and the financial pressures inherent in mounting a production. Beginning with early roots in operetta, we will survey the works of prominent writers in the American musical theatre, including Kern, Berlin, Gershwins, Porter, Rodgers, Hart, Hammerstein, Bernstein, Sondheim and others. Class lecture/discussions will be illustrated with recorded examples.
Not Offered Every Year
Also Offered As: CIMS 1271, THAR 1271

ENGL 1272 Topics in Asian American Literature and Culture
This seminar explores Asian American literature and culture intensively; specific course topics will vary from year to year. See the English Department's website at www/english.upenn.edu for a description of the current offerings.
Also Offered As: ASAM 1210
1 Course Unit

ENGL 1273 Dark Comedy in Theatre and Film
This course will examine the "troublesome genre" of dark comedy by looking at the ways in which theatre and film use comic and tragic structures and traditions to explore concepts and stories seemingly at odds with those traditions. Although not always organized chronologically in time, we will examine the formal and structural characteristics of tragicomedy by tracing its development, from some of its earliest roots in Roman comedy, to its manifestation in contemporary films and plays. Aside from close readings of plays and analysis of films, we will read selected critical essays and theory to enhance our understanding of how dark comedies subvert categories and expectations. We will look at how dark comedies affect audiences and read sections of plays aloud in class. Issues to be considered include comparing the way the genre translates across theatre and film (adaptation) and examining the unique placement of the genre at the heart of contemporary American culture. Students will have the opportunity to experiment with creating tragicomic effect through performance in their presentations. The class is a seminar, with required participation in discussions. Other assignments include an 8-10 page paper and a presentation. We will read plays by authors as diverse as Plautus, Anton Chekhov, and Lynn Nottage, and filmmakers including Charlie Chaplin, Sofia Coppola, and Bong Joon-ho.
Also Offered As: CIMS 1273, THAR 1273
1 Course Unit

ENGL 1279 Women in Theatre and Performance
What is feminist theatre? How do artists use live performance to provoke not only thought and feeling, but also social, personal, and political change? This course will examine a wide array of plays and performances by and about women; these pieces are, in turn, serious, hilarious, outrageous, poignant--and always provocative. Our focus will be on English-language works from the late 20th century to the present (#metoo) moment. We will read these performance texts and/or view them on stage/screen; we will also read essays that provide contextual background on feminist theatre theory and history. Throughout the semester, we will engage diverse perspectives on women and race, ethnicity, class, sexuality, and gender identity; the issues we encounter will also include marriage and motherhood, career and community, feminism and friendship, and patriarchy and power. The class will take full advantage of any related events occurring on campus or in the city, and will feature visits with guest speakers. Students will have the opportunity to pursue research on their own areas of interest (some recent examples are "women in comedy," trans performance, drag kings, feminist directing, etc.).

1 Course Unit
ENGL 1289 Jewish Films and Literature
From the 1922 silent film "Hungry Hearts" through the first "talkie," "The Jazz Singer," produced in 1927, and beyond "Schindler's List," Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare's "King Lear" to Sholom Aleichem's "Teyve the Dairyman," primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we "read" literature and film, b) the various ways that the media of fiction, drama, and film "translate" Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience.

ENGL 1295 Italian History on the Table
"Mangia, mangia!" is an expression commonly associated with the American stereotype of Italians, whose cuisine is popular throughout the world. But is the perceived Italian love of food the same in the United States and in Italy? Is it an issue of quantity or quality? Of socioeconomics, politics, education, health ...? Global, local or maybe, glocal? In this course, we will explore the role of food in Italian culture and in the shaping of the Italic identity, in Italy and abroad since antiquity. We will trace its evolution through literary documents, works of art, music and film, as well as family recipes and cooking tools; from ancient Rome to Dante and Boccaccio, to Stanley Tucci's Big Night; from court banquets to food trucks that, while always a feature at Italian fairs and banquets to food trucks that, while always a feature at Italian fairs and open air markets, are now being "Americanized" under the influence of American cooking shows on Italian television. This course will be taught in English. It is an OBL (Object Based Learning) Course and will include class visits, in person and/or virtual, to the Penn Museum and to the Rare Book and Manuscript Library. It counts also as a credit for the minor in Global Medieval Studies.

Also Offered As: ITAL 1920
1 Course Unit

ENGL 1296 Black Italy: Transnational Identities and Narratives in Afro-Italian Literature
This course focuses on how the migration movements to Italy, mainly from the Maghreb and the Horn of Africa in the '80s and '90s contributed to change Italy's status and image. From a country of emigration to other parts of the world, Italy became - as many historians, geographers, and scholars have observed - an immigration site, playing a pivotal role in the African diaspora. In the shadow of Italy's colonialist heritage (a past that Italy still has not fully confronted), these phenomena of mass migration challenge, complicate, and develop the notion of Italian-ness and undermine the fixity of an Italian identity in favor of multicultural and transnational identities. This course focuses on several Black Italian artists, writers, filmmakers, and activists of Somali, Eritrean, Ethiopian, and Egyptian origins (e.g. migrants or children of immigrants who were born or raised in Italy and children of mixed-race unions) who contribute to broaden the definition of Italian-ness and to challenge its racial, social, and cultural boundaries. Students will analyze short stories, novels, documentaries, songs, blogs, journal articles by Igiaba Scego, Cristina Ali Farah, Gabriella Ghermandi, Medhin Paolos, Fred Kudjo Kuwornu, Amir Issaa, Amara Lakhouz, Pap Khouma, and Kaha Mohamed Aden, among others. They describe their multicultural identities, their senses of belonging, their feelings for the place that is depriving them of foundational rights (such as citizenship or a legal status), their nostalgia for their homeland or the countries where their parents were born, their fights to find or create a social and literal space where being recognized not as foreigners or worse as "clandestini." Their works offer an original, complex, and multilayered depiction of contemporary Italy and its social and cultural changes, where the African community is becoming larger and better represented. Some questions this course will ask include: what are the historical and geographical components of blackness in Italy? How, if at all, have these phenomena of migration changed Italian identity? How do black Italians live within the context of anti-blackness? How do these Italian writers and artists relate to African American histories and experiences of diaspora? How can African Italian literature contribute to a deeper understanding of the Black diaspora in Europe and elsewhere? The course will pursue answers to these questions by exploring issues of race, color, gender, class, nationality, identity, citizenship, social justice in post-colonial Italy while drawing on related disciplines such as Geography, Mediterranean Studies, Diaspora Studies, Post-Colonialism, and Media and Cultural Studies. Course taught in English. Course Material in English.

ENGL 1300 Theories of Gender and Sexuality
What makes men and women different? What is the nature of desire? This course introduces students to a long history of speculation about the meaning and nature of gender and sexuality – a history fundamental to literary representation and the business of making meaning. We will consider theories from Aristophanes’s speech in Plato’s Symposium to recent feminist and queer theory. Authors treated might include: Plato, Shakespeare, J. S. Mill, Mary Wollstonecraft, Sigmund Freud, Virginia Woolf, Simone de Beauvoir, Adrienne Rich, Audre Lorde, Michel Foucault, Gayle Rubin, Catherine MacKinnon, Eve Kosofsky Sedgwick, Judith Butler, bell hooks, Leo Bersani, Gloria Anzaldúa, David Halperin, Cherrie Moraga, Donna Haraway, Gayatri Spivak, Diana Fuss, Rosemary Hennesey, Chandra Tadpole Mohanty, and Susan Stryker. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 1330 Writing Women, Part 1
This is a sophomore-level course designed for students who are curious about the literary and social history of women’s writing between 1660 and 1700. We’ll survey the work of influential writers of the time period who identified as female, and add a few texts by men writing about women. We’ll consider how women’s writing participated in the many worlds from which women were excluded — the worlds of inherited literary tradition, formal education, commerce, religious debate, and contemporary politics, to name a few. The course focuses on authors resident in “Great Britain” (a national entity still under development during this time, as we shall see) between the Restoration of Charles II in 1660 and the turn of the eighteenth century. Another course, ENGL 1331, focuses on 1700-1790. Students may take one or both of these stand-alone courses. No prerequisites required. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: GSWS 1330
1 Course Unit

ENGL 1331 Writing Women, Part 2: Sexuality and Power, 1700-1799
"Sexuality and Power" is an intermediate-level course organized as a collaborative seminar. The eighteenth century (1700-1799) in Britain was an exciting time. Literacy’s long-policed borders were being relaxed, and publication was allowed to flourish largely free of censorship. As the set of those allowed to participate in public discourse slowly expanded, new opportunities arose for literate women. We will focus on the work of important female-identified writers from the period. Students from all disciplines are welcome. There are no prerequisites. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: GSWS 1331
1 Course Unit

ENGL 1395 Gender and Popular Culture
This course examines the representation of gender in American popular culture from the twentieth and twenty-first centuries. We will examine texts across television and film, pop music, popular print media, social media, advertising, and fashion, and we will engage the historic relationship between these pop texts and sociopolitical movements. We will also read critical texts from the feminist and queer tradition on desire and sexuality, race, religion, and political power. And we will consider how the methods and modalities of gender studies can inform our understanding of pop culture. Students are responsible for three short papers of 3-5 pages and a final paper of 10-15 pages that showcase their original research around the themes of the class.
Also Offered As: GSWS 2400
1 Course Unit

ENGL 1400 Introduction to Literary Theory
This course introduces students to major issues in the history of literary theory, and provides an excellent foundation for the English major or minor. Treating the work of Plato and Aristotle as well as contemporary criticism, we will consider the fundamental issues that arise from representation, making meaning, appropriation and adaptation, categorization and genre, historicity and genealogy, and historicity and temporality. We will consider major movements in the history of theory including the "New" Criticism of the 1920s and 30s, structuralism and post-structuralism, Marxism and psychoanalysis, feminism, cultural studies, critical race theory, and queer theory. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year

1 Course Unit

ENGL 1409 Introduction to Literary Study
This course has three broad aims: first, it will introduce students to a selection of compelling contemporary narratives; second, it will provide prospective students of literature and film, as well as interested students headed for other majors, with fundamental skills in literary, visual, and cultural analysis; and, third, it will encourage a meditation on the function of literature and culture in our world, where commodities, people, and ideas have been constantly in motion. Questions for discussion will therefore include: the meaning of terms like “globalization,” “translation,” and “world literature”; the transnational reach and circulation of texts; migration and engagement with “others”; violence, trauma, and memory; terrorism and the state; and the ethic of cosmopolitanism. Our collective endeavor will be to think about narrative forms as modes of mediating and engaging with the vast and complex world we inhabit today. See COML website for current semester’s description at https://complit.sas.upenn.edu/course-list/2019A
Fall or Spring
Also Offered As: COML 1000

ENGL 1425 Freud's Objects
How do we look at objects? And which stories can objects tell? These are questions that have been asked quite regularly by Art Historians or Museum Curators, but they take a central place within the context of psychoanalytic studies as well. The seminar "Freud's Objects" will offer an introduction to Sigmund Freud's life and times, as well as to psychoanalytic studies. We will focus on objects owned by Freud that he imbued with special significance, and on Freud's writings that focus on specific objects. Finally, we will deal with a re-interpretation of the "object" in psychoanalytic theory, via a discussion of texts by British psychoanalysts such as Melanie Klein and Donald Winnicott.

This course, framed as a psychoanalytic study of the child, focuses on English-language children's literature from the 19th Century to the present. See the English Department's website at www/english.upenn.edu for a description of the current offerings.
Also Offered As: COML 1427, GSWS 1427
1 Course Unit

ENGL 1445 Universal Language: From the Tower of Babel to Artificial Intelligence
This is a course in European intellectual history. It explores the historical trajectory, from antiquity to the present day, of the idea that there once was, and again could be, a universal and perfect language among the human race. If recovered, it can explain the origins and meaning of human experience, and can enable universal understanding and world peace. The tantalizing question of the possibility of a universal language have been vital and thought-provoking throughout the history of humanity. The idea that the language spoken by Adam and Eve was a language which perfectly expressed the nature of all earthly objects and concepts has occupied the minds of intellectuals for almost two millennia. In defiance of the Christian biblical myth of the confusion of languages and nations at the Tower of Babel, they have over and over tried to overcome divine punishment and discover the path back to harmonious existence. By recovering or recreating a universal language, theologians hoped to be able to experience the divine; philosophers believed that it would enable apprehension of the laws of nature, while mystic cabbalists saw in it direct access to hidden knowledge. In reconstructing a proto-language, 19th-century Indo-Europeanist philologists saw the means to study the early stages of human development. Even in the 20th century, romantic idealists, such as the inventor of Esperanto Ludwik Zamenhof, strived to construct languages to enable understanding among estranged nations. For writers and poets of all times, from Cyrano de Bergerac to Velimir Khlebnikov, the idea of a universal and perfect language has been an inexhaustible source of inspiration. Today, this idea echoes in theories of universal and generative grammars, in approaching English as a global tongue, and in various attempts to create artificial languages, even a language for cosmic communication. Each week we address a particular period and set of theories to learn about universal language projects, but above all, the course examines fundamental questions of what language is and how it functions in human society.

ENGL 1449 War and Representation
This class will explore complications of representing war in the 20th and 21st centuries. War poses problems of perception, knowledge, and language. The notional "fog of war" describes a disturbing discrepancy between agents and actions of war; the extreme nature of the violence of warfare tests the limits of cognition, emotion, and memory; war's traditional dependence on declaration is often warped by language games—"police action," "military intervention," "nation-building," or palpably unnamed and unacknowledged state violence. Faced with the radical uncertainty that forms of war bring, modern and contemporary authors have experimented in historically, geographically, experientially and artistically particular ways, forcing us to reconsider even seemingly basic definitions of what a war story can be. Where does a war narrative happen? On the battlefield, in the internment camp, in the suburbs, in the ocean, in the ruins of cities, in the bloodstream? Who narrates war? Soldiers, refugees, gossips, economists, witnesses, bureaucrats, survivors, children, journalists, descendants and inheritors of trauma, historians, those who were never there? How does literature respond to the rise of terrorist or ideology war, the philosophical and material consequences of biological and cyber wars, the role of the nuclear state? How does the problem of war and representation disturb the difference between fiction and non-fiction? How do utilitarian practices of representation—propaganda, nationalist messaging, memorialization, xenophobic depiction—affect the approaches we use to study art? Finally, is it possible to read a narrative barely touched or merely contextualized by war and attend to the question of war's shaping influence? The class will concentrate on literary objects—short stories, and graphic novels—as well as film and television. Students of every level and major are welcome in and encouraged to join this class, regardless of literary experience.

ENGL 1509 Science and Literature
Science fiction has become the mythology of modern technological civilization, providing vivid means for imagining (and proclaiming) the shape of things to come. This interdisciplinary seminar will consider SF in multiple manifestations -- literature, film and TV shows, visual art and architecture. We will debate how the genre has shaped ideas about scientific knowledge, the position of humans in the universe, and our possible futures by examining themes including time travel, robots and androids, alien encounters, extraterrestrial journeys, and the nature of intelligent life. This seminar will consider SF from the perspective of the history of science and technology critically and comparatively, with a primary focus on social and cultural contexts in addition to literary aspects.

Also Offered As: STSC 1101
1 Course Unit
ENGL 1521 In Dark Times: The Dystopian Imagination in Literature and Film
This CWiC course will offer a guided introduction to the one of the most resilient genres of the human imagination: dystopian and apocalyptic fiction. Like a group of survivors huddled around a campfire, we will turn to literature and cinema to debate some of the big questions about the future of science, technology, religion, and capitalism. This course is designed as a Critical Speaking Seminar, and the majority of class assignments will be devoted to oral presentations: including a Parliamentary-style debate and a video essay. We will begin by reading some of the early, influential works in the dystopian genre by authors like Mary Shelley, H.G. Wells, and Aldous Huxley. Next, we will explore the paranoid, schizophrenic world of Cold-War-era dystopias by J.G Ballard, Philip K. Dick and Octavia Butler. We will conclude by reading contemporary climate fiction by the likes of Margaret Atwood and Kim Stanley Robinson. Alongside the literary material, we will also track the changing nature of dystopian cinema—from classics like Metropolis (1927) and La Jetee (1962) to the latest Zombie film. By the end of course, students will have a firm grasp of the history of the genre and will be able to draw on this knowledge to effectively debate issues related to privacy, big business, animal rights, climate change, migration etc.
Also Offered As: CIMS 0050
1 Course Unit

ENGL 1579 Sustainability & Utopianism
This seminar explores how the humanities can contribute to discussions of sustainability. We begin by investigating the contested term itself, paying close attention to critics and activists who deplore the very idea that we should try to sustain our, in their eyes, dystopian present, one marked by environmental catastrophe as well as by an assault on the educational ideals long embodied in the humanities. We then turn to classic humanist texts on utopia, beginning with More’s fictive island of 1517. The “origins of environmentalism” lie in such depictions of island edens (Richard Grove), and our course proceeds to analyze classic utopian texts from American, English, and German literatures. Readings extend to utopian visions from Europe and America of the nineteenth and twentieth centuries, as well as literary and visual texts that deal with contemporary nuclear and flood catastrophes. Authors include: Bill McKibben, Jill Kerr Conway, Christopher Newfield, Thomas More, Francis Bacon, Karl Marx, Henry David Thoreau, Robert Owens, William Morris, Charlotte Perkins Gilman, Ayn Rand, Christa Wolf, and others.

ENGL 1589 Liquid Histories and Floating Archives
Climate change transforms the natural and built environments, and it is re-shaping how we understand, make sense, and care for our past. Climate changes history. This course explores the Anthropocene, the age when humans are remaking earth’s systems, from an on-water perspective. In on-line dialogue and video conferences with research teams in port cities on four continents, this undergraduate course focuses on Philadelphia as one case study of how rising waters are transfiguring urban history, as well as its present and future. Students projects take them into the archives at the Independence Seaport Museum and at Bartram’s Garden. Field trips by boat on the Schuylkill and Delaware Rivers and on land to the Port of Philadelphia and to the John Heinz National Wildlife Refuge invite transhistorical dialogues about how colonial and then industrial-era energy and port infrastructure transformed the region’s vast tidal marshlands wetlands. Excursions also help document how extreme rain events, storms, and rising waters are re-making the built environment, redrawing lines that had demarcated land from water. In dialogue with one another and invited guest artists, writers, and landscape architects, students final projects consider how our waters might themselves be read and investigated as archives. What do rising seas subsume and hold? Whose stories do they tell? What floats to the surface?

ENGL 1595 Ecocritical Lit: Nature, Ecology and the Literary Imagination
This course introduces students to ecocritical literature. It is an exploration of how language and literature engages with and shapes our relations to and our understandings of the natural world. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ENVS 1410
1 Course Unit

ENGL 1599 Spirituality in the Age of Global Warming: Designing a Digital Mapping Project in Scalar
We are living in the midst of one of the most severe crises in the Earth’s history. Science confirms the glaciers are melting, hurricanes are growing more intense, and the oceans are rising. But there is also a deeply spiritual dimension to global warming that does not factor into the scientific explanations of the Anthropocene. “Spirituality” will be defined not in terms of one particular religion, but in relationship to a passionate study of the environment and nature. Readings will include materials from both the sciences and the humanities such as Donella Meadows’s Thinking in Systems, Elizabeth Kolbert’s The Sixth Extinction, Barbara Kingsolver’s Flight Behavior, and films such as Black Fish and Wale Rider. The theoretical focus of the course will be how “multispecies partnerships” can help us better understand and mitigate the effects of Climate Change. This class will work collaboratively on a digital archive with an interactive mapping interface designed in Scalar. This newly developed platform allows for the creation of multimedia exhibits that will document how Global Warming is affecting coral reefs in the tropics, glaciers in the Arctic and Antarctic, rainforests in the Amazon and rivers of Philadelphia. Students will also work individually to design interactive maps on the Scalar platform documenting their own more personal interactions with the environment.

Also Offered As: ENVS 2430, RELS 2460
1 Course Unit
ENGL 1600 Cultures of The Book
The impact of various technologies (from writing to various forms of manuscript to print to electronics) on the way the written word gives shape to a culture. The emphasis is on western cultures from Plato to the present, but participation by students with interest or expertise in non-western cultures will be of great value to the group as a whole. The course offers an ideal perspective from which students can consider meta-issues surrounding their own special interests in a wide variety of fields, as well as learn to think about the way in which traditional fields of study are linked by common inherited cultural practices and constructions. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Not Offered Every Year 1 Course Unit

ENGL 1609 Introduction to Print Culture
This course examines the writing, printing, dissemination, interpretation, and censorship of specific works in Early modern England, France, Italy, Spain and America. The course is an introduction to the history of authorship, publishing, and reading at the age of print culture from Gutenberg to Franklin. All the texts analyzed in the course (the Bible, Montaigne’s Essays, Shakespeare’s plays, Don Quixote, Pamela among them) are available in English but the course pays particular attention to the massive range of translations in early modern period. Its main focus are the relation between the “printing revolution” and scribal culture, censorship and transgression, the birth of the author and collaborative writing, and reading practices from humanist techniques to reading of the novels. The course is based on the exceptional collections of rare books and manuscripts at Penn and in Philadelphia and it is taught in the Van Pelt Library. Fall or Spring Also Offered As: HIST 2203 1 Course Unit

ENGL 1650 Introduction to Digital Humanities
This course provides an introduction to foundational skills common in digital humanities (DH). It covers a range of new technologies and methods and will empower scholars in literary studies and across humanities disciplines to take advantage of established and emerging digital research tools. Students will learn basic coding techniques that will enable them to work with a range data including literary texts and utilize techniques such as text mining, network analysis, and other computational approaches. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Fall or Spring Also Offered As: COML 1650, HIST 0870 1 Course Unit

ENGL 1670 Data Science for the Humanities
This course will provide you with a practical introduction to data-driven inquiry in the humanities, with a focus on statistical analysis in the Python programming language. (No prior knowledge of programming is required or expected). See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Spring Mutually Exclusive: PHYS 1100 1 Course Unit

ENGL 1710 Rise of the Novel
This course explores the history of the British novel and the diverse strategies of style, structure, characterization, and narrative techniques it has deployed since the late seventeenth century. While works from the eighteenth and nineteenth centuries will form the core of the reading, some versions of this course will include twentieth-century works. All will provide students with the opportunity to test the advantages and limitations of a variety of critical approaches to the novel as a genre. Readings may include works by Behn, Swift, Defoe, Richardson, Fielding, Lennox, Smollett, Burney, Scott, Austen, the Brontes, Dickens, Eliot, Hardy, Conrad, Joyce, Lawrence, Woolf, Rhys, Greene, Naipaul, Carter, Rushdie, and Coetzee. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Not Offered Every Year 1 Course Unit

ENGL 1720 18th-Century Novel
This survey of the novel addresses key questions about the novel’s "rise" in the eighteenth century on both sides of the Atlantic, as well as attending to the cultural conditions that attended this new literary form. How did the concurrent "rise" of the middle classes and the emergence of an increasingly female reading public affect the form and preoccupations of early novels? What role did institutions like literary reviews, libraries, and the church play in the novel's early reception? While readings will vary from course to course, students should expect to read such authors as Austen, Behn, Brockden Brown, Burney, Defoe, Fielding, Richardson, Rowlandson, Rowson, Scott, and Smollett. See the English Department's website at www.english.upenn.edu for a description of the current offerings. Not Offered Every Year 1 Course Unit

ENGL 1730 19th-Century Novel
This survey of the novel addresses key questions about the novel’s “rise” in the eighteenth century on both sides of the Atlantic, as well as attending to the cultural conditions that attended this new literary form. How did the concurrent “rise” of the middle classes and the emergence of an increasingly female reading public affect the form and preoccupations of early novels? What role did institutions like literary reviews, libraries, and the church play in the novel’s early reception? While readings will vary from course to course, students should expect to read such authors as Austen, Behn, Brockden Brown, Burney, Defoe, Fielding, Richardson, Rowlandson, Rowson, Scott, and Smollett. The course will explore the themes, techniques, and styles of the nineteenth-century novel. It will focus not only on the large structural and thematic patterns and problems within each novel but also on the act of reading as a historically specific cultural ritual in itself. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Not Offered Every Year 1 Course Unit

ENGL 1740 20th-Century British Novel
This course traces the development of the novel across the twentieth-century. The course will consider the formal innovations of the modern novel (challenges to realism, stream of consciousness, fragmentation, etc.) in relation to major historical shifts in the period. Authors treated might include: Conrad, Lawrence, Joyce, Forster, Woolf, Cather, Faulkner, Hemingway, Achebe, Greene, Rhys, Baldwin, Naipaul, Pynchon, Rushdie, and Morrison. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Not Offered Every Year Also Offered As: COML 1740 1 Course Unit
ENGL 1745 Writing the Self: Life-Writing, Fiction, Representation
This course investigates how people try to understand who they are by writing about their lives. It will cover a broad range of forms, including memoirs, novels, essay films, and even celebrity autobiographies. The course will be international and in focus and will ask how the notion of self may shift, not only according to the demands of different genres, but in different literary, linguistic, and social contexts. Questions probed will include the following: How does a writer's language—or languages—shape how they think of themselves? To what extent is a sense of self and identity shaped by exclusion and othering? Is self-writing a form of translation and performance, especially in multilingual contexts? What can memoir teach us about the ways writers navigate global literary institutions that shape our knowledge of World Literature? How do various forms of life-writing enable people on the margins, whether sexual, gendered, or racial, to craft narratives that encapsulate their experience? Can telling one's own story bring joy, affirmation, and greater transcultural or even global understanding? In sum, this course proposes to illuminate the many ways in which writing becomes meaningful for those who take it up. The format of the seminar will require students to offer oral presentations on the readings and invite them to craft their own experiences and memories in inventive narrative forms.
Spring, even numbered years only
Also Offered As: COML 0015, GSWS 0051
1 Course Unit

ENGL 1800 Intro to Poetry and Poetics
What is poetry and what place does it have among literary forms? What is its relation to culture, history, and our sense of speakers and audiences? This course will focus on various problems in poetic practice and theory, ranging from ancient theories of poetry of Plato and Aristotle to contemporary problems in poetics. In some semesters a particular school of poets may be the focus; in others a historical issue of literary transmission, or a problem of poetic genres, such as lyric, narrative, and dramatic poetry, may be emphasized. The course will provide a basic knowledge of scansion in English with some sense of the historical development of metrics. This course is a good foundation for those who want to continue to study poetry in literary history and for creative writers concentrating on poetry. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 1810 Sounding Poetry
Never before has poetry been so inescapable. Hip hop, the soundtrack of our times, has made rhyme, meter, and word-play part of our daily lives. How did this happen? This course ranges through oral and lyric traditions in Europe, the Americas, and the Commonwealth. See the English Department's website at www.english.upenn.edu for a description of current offerings.
Fall
Also Offered As: AFRC 1810, COML 1810
1 Course Unit

ENGL 1820 British Poetry 1660 - 1914
This course provides students with a survey of British poetry and poetics from the Restoration to the Modern period, and usually will include writers ranging from Aphra Behn and Alexander Pope to Thomas Hardy. Typically, this course will contain materials from the later seventeenth to the early nineteenth centuries—from the Restoration and Glorious Revolution through the Enlightenment, the American and French Revolutions, and the Napoleonic Wars—though it need not cover the entire period. We will read plays, poetry and prose in order to understand the aesthetic, intellectual, social and political issues of literary production and achievement in this period. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Fall or Spring
1 Course Unit

ENGL 1830 American Poetry
Some versions of this course survey American poetry from the colonial period to the present, while others begin with Whitman and Dickinson and move directly into the 20th century and beyond. Typically students read and discuss the poetry of Williams, Stein, Niedecker, H.D., Pound, Stevens, Fearing, Rakoksi, McKay, Cullen, Wilbur, Plath, Rich, Ginsberg, Kerouac, Waldman, Creeley, Ashberry, O'Hara, Corman, Bernstein, Howe, Perelman, Silliman, and Retallack. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 1840 20th-Century Poetry
From abstraction to beat, from socialism to negritude, from expressionism to eco-poetry, from surrealism to visual poetry, from collage to digital poetry, the poetry of the twentieth century has been characterized by both the varieties of its forms and the range of its practitioners. This course will offer a broad overview of many of the major trends and a few minor eddies in the immensely rich, wonderfully varied, ideologically and aesthetically charged field. The course will cover many of the radical poetry movements and individual innovations, along with the more conventional and idiosyncratic work, and will provide examples of political, social, ethnic, and national poetics, both in the Americas and Europe, and beyond to the rest of the world. While most of the poetry covered will be in English, works in translation, and indeed the art of translation, will be an essential component the course. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 1859 The Play: Structure, Style, Meaning
How does one read a play? Theatre, as a discipline, focuses on the traditions of live performance. In those traditions, a play text must be read not only as a piece of literature, but as a kind of "blueprint" from which productions are built. This course will introduce students to a variety of approaches to reading plays and performance pieces. Drawing on a wide range of dramatic texts from different periods and places, we will examine how plays are made, considering issues such as structure, genre, style, character, and language, as well as the use of time, space, and theatrical effects. Although the course is devoted to the reading and analysis of plays, we will also view selected live and/or filmed versions of several of the scripts we study, assessing their translation from page to stage.
Fall or Spring
Also Offered As: COML 1859, THAR 0103
1 Course Unit
ENGL 1860 Early Drama

Early drama in English had its roots as much in Christianity as in Classical antiquity. What grew into the theater of Shakespeare began as networks of strolling players and church authorities in market towns sponsoring cycles of "miracle" and "mystery" plays. This course will introduce students to major dramatic works of the medieval and early modern periods, including plays written for the public stage, closet dramas, masques, mayoral pageants and other kinds of performances. The course will also pay attention to the development of different dramatic genres during these periods, as well as the social and cultural contexts in which they were produced. Students thus will explore the history of drama in English through the renaissance to the closing of the theaters in 1641 and their eventual reopening in 1660. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

Not Offered Every Year
1 Course Unit

ENGL 1870 Drama from 1660 - 1840

This course surveys drama from the Restoration through the Romantic period, and in so doing explores arguably the most tumultuous period of British and American Theater history. These years saw the reopening of the theaters in London in 1660 after their having been closed through two decades of Civil War and Puritan rule. They witnessed the introduction of actresses to the stage, the development of scenery and the modern drop-apron stage, the establishment of theatrical monopolies in 1660 and stringent censorship in 1737, and the gradual introduction, acceptance, and eventual celebration of the stage in America. Perhaps most importantly, they oversaw some of the best comedies and farces in the English language, the introduction of pantomime and the two-show evening, sustained experimentation with music and spectacle on stage, and the transformation of tragedy into a star vehicle for actors and actresses like David Garrick, Sarah Siddons, John Philip Kemble, and Edmund Kean. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

Not Offered Every Year
1 Course Unit

ENGL 1875 Theatre, History, Culture II: Romantics, Realists and Revolutionaries

This course investigates the history of theatre practice from the end of the Eighteenth-Century to the present, with an emphasis on the interplay of mainstream practices with the newly emerging aesthetics of acting, scenography, and theatrical theory, and the interplay of popular entertainment and audiences with the self-defined aesthetic elitism of the Avant Garde. Among the aesthetics and phenomena we will examine are romanticism and melodrama; bourgeois realism and revolutionary naturalism; emotional-realist acting; the reaction against realism; political theatre; physical theatre; theatre and media; non-dramatic theatre; and theatre that challenges long-standing categories of national identity, empire, gender, and sexuality.

Also Offered As: THAR 0102
1 Course Unit

ENGL 1880 African American Drama: From the 1920's to the present

This course will introduce students to Pulitzer-prize winning plays such as Lynn Nottage's Sweat, groundbreaking plays such as Ntozake Shange's For Colored Girls, as well as less known plays that show the wide range of form and themes in 20th and 21st century African American drama. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

Fall or Spring
Also Offered As: AFRC 1880, THAR 1880
1 Course Unit

ENGL 1889 On the Stage and in the Streets: An Introduction to Performance Studies

What do Hamilton, RuPaul's Drag Race, political protest, TikTok Ratatouille, and Queen Elizabeth's funeral have in common? They all compose repertoires of performance. From artistic performances in theatres, galleries, and concert halls to an individual's comportment in everyday life, to sporting events, celebrations, courtroom proceedings, performance studies explores what happens when embodied activities are repeatable and given to be seen. In this course we ask: what is performance? How do we describe, analyze, and interpret it? What do theatre and everyday life have in common? How does performance legitimize or challenge the exercise of power? How has social media shifted our understanding of the relationship of our daily lives to performance? How does culture shape what is considered to be performance and how it functions? What isn't performance? Throughout the semester students will apply key readings in performance theory to case studies drawn from global repertoires of contemporary and historical performance. In addition to analyzing artistic performances, we will also consider sporting events, celebrations, political events, and the performance of everyday life. We will attend to the challenges provoked by performance's embodied, ephemeral, affective, effective, relational, and contingent aspects. Coursework will include discussion posts, class facilitation, and the opportunity to choose between a research paper or creative project for the final assessment.

Also Offered As: ANTH 1104, COML 0104, THAR 0104
1 Course Unit

ENGL 1891 Broadway Musicals in the 21st Century

Wicked, Spring Awakening, Dear Evan Hansen, Hadestown. And of course, Hamilton. The innovations we see in Broadway musicals since 2000 are particularly fascinating in that they, so to speak, boldly go where no musicals have gone before—while at the same time honoring and building on the long-standing traditions of this beloved form. From the powerfully romantic Light in the Piazza, which nods to roots in European operetta, to the boundary-defying Black queerness of A Strange Loop... and everything in between. In this course, we will go year by through musical theater from the quarter-century, to see where the form has gone recently... and where it's headed. In addition to the works already mentioned, we'll look at Caroline or Change, The Color Purple, In the Heights, Fun Home, and more. This course will also consider some recent "revisals," like director Daniel Fish's Oklahoma!, and Marianne Elliott's gender-reassigned Company. reinterpretations of classic American musicals that imagine them in more contemporary light.

Also Offered As: CIMS 1275, THAR 1272
1 Course Unit
ENGL 1896 Backstage Drama in Theatre and Film
Inviting audiences into a special relationship with illusion, backstage dramas (whether on film or on stage) and plays-within-plays reach beyond and alongside traditional plot-driven narratives, to reflect on the process of representation itself. Drawing from classical debates about the relationships between reality, illusion, representation, and imitation (mimesis), we will examine a variety of plays and films as we articulate the complex network of responses and underlying assumptions (whether cultural, political, or social), about art and life, that these works engage.
Fall, odd numbered years only
Also Offered As: ARTH 2830, THAR 2830
1 Course Unit

ENGL 1900 World Film History to 1945
This course surveys the history of world film from cinema's precursors to 1945. We will develop methods for analyzing film while examining the growth of film as an art, an industry, a technology, and a political instrument. Topics include the emergence of film technology and early film audiences, the rise of narrative film and birth of Hollywood, national film industries and movements, African-American independent film, the emergence of the genre film (the western, film noir, and romantic comedies), ethnographic and documentary film, animated films, censorship, the MPDDA and Hays Code, and the introduction of sound. We will conclude with the transformation of several film industries into propaganda tools during World War II (including the Nazi, Soviet, and US film industries). In addition to contemporary theories that investigate the development of cinema and visual culture during the first half of the 20th century, we will read key texts that contributed to the emergence of film theory. There are no prerequisites. Students are required to attend screenings or watch films on their own.
Fall or Spring
Also Offered As: ARTH 1080, CIMS 1010, COML 1011
1 Course Unit

ENGL 1901 World Film History 1945-Present
Focusing on movies made after 1945, this course allows students to learn and to sharpen methods, terminologies, and tools needed for the critical analysis of film. Beginning with the cinematic revolution signaled by the Italian Neo-Realism (of Rossellini and De Sica), we will follow the evolution of postwar cinema through the French New Wave (of Godard, Resnais, and Varda), American movies of the 1950s and 1960s (including the New Hollywood cinema of Coppola and Scorsese), and the various other new wave movements of the 1960s, 1970s and 1980s (such as the New German Cinema). We will then selectively examine some of the most important films of the last two decades, including those of U.S. independent film movement and movies from Iran, China, and elsewhere in an expanding global cinema culture. There will be precise attention paid to formal and stylistic techniques in editing, mise-en-scene, and sound, as well as to the narrative, non-narrative, and generic organizations of film. At the same time, those formal features will be closely linked to historical and cultural distinctions and changes, ranging from the Paramount Decision of 1948 to the digital convergences that are defining screen culture today. There are no prerequisites. Requirements will include readings in film history and film analysis, an analytical essay, a research paper, a final exam, and active participation.

1 Course Unit

ENGL 1950 Television and New Media
How and when do media become digital? What does digitization afford and what is lost as television and cinema become digitized? As lots of things around us turn digital, have we started telling stories, sharing experiences, and replaying memories differently? What has happened to television and life after New Media? How have television audiences been transformed by algorithmic cultures of Netflix and Hulu? How have (social) media transformed socialities as ephemeral snaps and swiped intimacies become part of the "new" digital/phone cultures? This is an introductory survey course and we discuss a wide variety of media technologies and phenomena that include: cloud computing, Internet of Things, trolls, distribution platforms, optical fiber cables, surveillance tactics, social media, and race in cyberspace. We also examine emerging mobile phone cultures in the Global South and the environmental impact of digitization. Course activities include Tumblr blog posts and Instagram curations. The final project could take the form of either a critical essay (of 2000 words) or a media project.

ENGL 2083 Faking it: Liars, Imitators and Cheats in Literature and Film
Deception and lies are a constant theme and a mechanism of narrative art. For a genre literally synonymous with falsehood, fiction has always been touchy about its relationship to truth: Does the novel neutrally represent reality or does it re-create it? Are characters like living, breathing real people, or are they mere simulations? And if they’re just words on a page (or images on a screen), why are we so moved by their adventures, loves and misfortunes? In this class, we will explore and expand on these questions by focusing on novels and films that deal explicitly and exclusively with fakers, shapeshifters and doppelgangers, lies of necessity and of opportunity, as well as with works that revel in exposing their own manipulative artificiality. We will read psychoanalysts, sociologists, philosophers, and postcolonial thinkers and ask, What does it mean to be authentic? How malleable are our individual identity, race, gender and sexuality? What forces shape it, and how constant is this shape? Are we the same selves when we have a conversation as when we give a presentation? Do we remain ourselves when we talk to customers at our service jobs, to teachers, to students? When we “pass” as a different race? When we speak in a different accent? How do we reconcile the conflicting demands of “be yourself” and “fake it till you make it”? What is the relation between our presentation of ourselves and our selves? Novels and shorts stories for discussion might include classics like Nella Larsen’s Passing, Vladimir Nabokov’s Despair and Patricia Highsmith’s The Talented Mr. Ripley, as well as movies like Gaslight, The Battle of Algiers, The Yes Men, and American Psycho. While much of the weekly work in this class will be reading-and-discussion based, oral presentations – keenly aware of their own artifice – will count toward half of the final grade. A final oral presentation will be based on a creative project in conversation with class materials. The course would satisfy those interested in fulfilling the Advanced Film and Literature and Global Literature and Film requirements. This is a CWIC course, Communication Within the Curriculum.
Spring, even numbered years only
Also Offered As: CIMS 2083, COML 2083
1 Course Unit

ENGL 2085 Nuclear Fictions
The novel and the nuclear, the book and the Bomb: in this course we’ll explore how fiction has grappled with the memory of Hiroshima and Nagasaki, the prospect of nuclear apocalypse, and the present-tense violence of nuclear colonialism. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
1 Course Unit

ENGL 2091 The Novel in the Age of the Audiobook
This class is both a critical survey of important recent English-language novels, and a history of the audiobook and its effects on authors, readers, and literary markets. See the English Department website’s at: www.english.upenn.edu for a description of the current offerings.
1 Course Unit

ENGL 2092 Kelly Writers House Fellows Seminar
This seminar features visits by eminent writers as “Fellows” of the Kelly Writers House, the student-conceived writing arts collaborative at 3805 Locust Walk. Throughout the semester we will study the work of these writers—and some of the materials “around” them that make the particular contemporary context in which each operates so compelling. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
Also Offered As: GSWS 2092
1 Course Unit

ENGL 2093 Imagined Past
This course explores an aspect of early American literature intensively. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Fall or Spring
Also Offered As: CIMS 2093
1 Course Unit

ENGL 2100 Paris Modern: Spiral City
Paris has been shaped by a mixture of organic development, which is still today perceptible in the “snail” pattern of its arrondissements whose numbers, from 1 to 20, coil around a central island several times so as to exemplify a “spiral city,” and of the violent cuts, interruptions and sudden transformations that again and again forced it to catch up with modern times, the most visible of which was Baron Haussmann’s destruction of medieval sections of the city to make room for huge boulevards. Thus Parisian modernism has always consisted in a negotiation between the old and the new, and a specific meaning of modernity allegorized for Louis Aragon, the Surrealists and Walter Benjamin consisted in old-fashioned arcades built in the middle of the 19th century and obsolete by the time they turned into icons of Paris. The aim of the class will be to provide conceptual and pragmatic (visual, experiential) links between a number of texts, theories and films deploying various concepts of the modern in Paris, with a guided tour of the main places discussed. The course that Professors Jean Michel Rabate (English) and Ken Lum (Fine Arts) will lead studies Paris as a work of science-fiction where its many futures are embedded in its many pasts, where discontinuity is a continuous process and where the curving line of the snail’s shell is a line of ceaseless curling resulting in a perennial oscillation where an outside converts into an inside and an inside then converts to an outside. The course will travel to Paris over spring break to get an in-depth look at the topics discussed in class.
Fall or Spring
Also Offered As: FNAR 3100
1 Course Unit

ENGL 2111 Irish Literature Seminar
This course explores an aspect of modern Irish literature intensively. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Fall or Spring
1 Course Unit

ENGL 2120 American Literature Seminar
This course explores an aspect of American literature intensively; specific course topics will vary, and have included “American Authors and the Imagined Past” and “American Gothic.” See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
Also Offered As: GSWS 2120
1 Course Unit

ENGL 2130 Early American Literature Seminar
This course explores an aspect of early American literature intensively. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 2135 Early American Literature Seminar
This course explores the rise of the “dime novel” across the late eighteenth and nineteenth centuries in the United States. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: LALS 2135
1 Course Unit
ENGL 2140 Modern American Literature Seminar
This course explores an aspect of Modern American literature intensively. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Not Offered Every Year 1 Course Unit

ENGL 2145 Failure to Communicate (SNF Paideia Program Course)
This seminar examines “failure to communicate” in a variety of cultural areas, among them literature, romance, politics, theater, law, science, war, and education. Materials will include literary fiction, plays, poetry, film, TV, and assorted nonfiction, journalism and scholarship. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Also Offered As: CIMS 2145 1 Course Unit

ENGL 2150 Trans-Atlantic Literature Seminar
This course examines in-depth trans-Atlantic literature that emerges from and deals with the links and tensions between Europe and the Americas. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Not Offered Every Year 1 Course Unit

ENGL 2179 The Mediterranean and the World, 1450-1700
Using as our guides the works of Miguel de Cervantes, Michael de Montaigne, William Shakespeare, Baldassare Castiglione, Antonio de Sosa, Elias al-Musili, Ogier Ghiselin de Busbecq, Aḥmad ibn Qāsim Ibn al-Ḥājari, María de Zayas y Sotomayor, and many others, this seminar will analyze the social mutations, religious confrontations, political conflicts, cultural productions and circulation of books and ideas that characterized the Mediterranean world during the sixteenth and seventeenth centuries. Based on a close reading of the authors mentioned above, this seminar will focus on the study of the central transformations – political, religious, cultural, and literary – in the early modern Mediterranean world. Students will also be introduced to original materials belonging to the Rare Books and Manuscripts Collections of the Library: early modern editions of some of the books read in the class, printed ephemera, or manuscript documents belonging to the Lea Collection. Students are expected to be active participants in this class; class attendance, participation, and oral presentations will be required. Students will write a final paper, around 15 pages. Students majoring in History can opt to write a research paper (20 pages) using original primary sources, to fulfill the department research requirement. Fall or Spring Also Offered As: HIST 3602 Mutually Exclusive: HIST 2602 1 Course Unit

ENGL 2180 Literature of Africa and the African Diaspora
This course explores an aspect of the literature of Africa and the African Diaspora intensively. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Not Offered Every Year Also Offered As: COML 2180 1 Course Unit

ENGL 2190 Postcolonial Literature Seminar
This course explores an aspect of Postcolonial literature intensively. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Not Offered Every Year Also Offered As: COML 2190 1 Course Unit

ENGL 2191 The Dictator Novel as Global Form
In this seminar, we will explore the ways in which twentieth- and twenty-first-century writers across the globe have responded to tyrants and tyrannical regimes. Our focus will be a set of outstanding contemporary novels from Latin America, Europe, the Caribbean, Africa, and Asia. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Also Offered As: COML 2191 1 Course Unit

ENGL 2192 Narrating Survival
This course critically examines the way in which "survival" has been/continues to be defined as individual triumph in the 20th and 21st century. The intent here is to dig deeper into current buzzwords like "resilience," "wellness," "grit," and "care" to ask how such concepts have been constructed in different socio-historical moments, by and for whom, and towards what (social, cultural, political, economic) ends. We will pay special attention to the central role that the child plays in these discourses as an icon of both ultimate vulnerability and idealized resilience, and we'll consider the burdens and privileges that such centering might confer upon real-life children. We engage with a generically diverse body of contemporary multiethnic and transnational literature featuring children and young people in crisis, including texts from Black, Latine, Native, Asian and White U.S. writers as well as Dutch, Argentine, Iranian, Malaysian, and Afghan authors. All non-English texts will be read in English translation, with the option for students to read in the original language if they wish and are able. Learning to dialogue across cultures and learning from such interactions with these texts and one other will be an essential part of our approach to exploring these complex questions. Also Offered As: ASAM 1211, COML 2192 1 Course Unit

ENGL 2200 African-American Literature Seminar
In this advanced seminar, students will be introduced to a variety of approaches to African American literature, and to a wide spectrum of methodologies and ideological postures (for example, The Black Arts Movement). The course will present an assortment of emphases, some of them focused on geography (for example, the Harlem Renaissance), others focused on genre (autobiography, poetry or drama), the politics of gender and class, or a particular grouping of authors. See the English Department's website at www.english.upenn.edu for a description of the current offerings. Not Offered Every Year Also Offered As: AFRC 2200 1 Course Unit

ENGL 2210 (T)rap Music
This course examines the coming to pass of trap music from several perspectives: 1) that of its technological foundations and innovations (the Roland 808, Auto-tune, FL Studio (FruityLoops), etc.); 2) that of its masters/mastery (its transformation of stardom through the figures of the producer (Metro Boomin) and the rock star (Future)); 3) that of its interpretability and effects (what does the music say and do to us). We will thus engage with this music as a practice of art and form of technosociality that manifests uncanny and maximal attunement with the now. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Not Offered Every Year Also Offered As: AFRC 2211 1 Course Unit
ENGL 2222 August Wilson and Beyond
"The people need to know the story. See how they fit into it. See what part they play." - August Wilson, King Hedley II
If you want to get to know community members from West Philadelphia, collaborate deeply with classmates, gain deeper and more nuanced understandings of African American history and culture, engage in a wide range of learning methods, and explore some of the most treasured plays in the American theatre, then this is the course for you. No previous experience required, just curiosity and willingness to engage. In this intergenerational seminar, Penn students together with older community members read groundbreaking playwright August Wilson's American Century Cycle: ten plays that form an iconic picture of African American traditions, traumas, and triumphs through the decades, nearly all told through the lens of Pittsburgh's Hill District neighborhood. (Two of Wilson's plays are receiving fresh attention with recent acclaimed film versions: Fences with Denzel Washington and Viola Davis; Ma Rainey's Black Bottom with Davis and Chadwick Boseman.) Class participants develop relationships with one another while exploring the history and culture that shaped these powerful plays. As an Academically Based Community Service (ABCS) course, the class plans and hosts events for a multigenerational, West Philadelphia-focused audience with community partners West Philadelphia Cultural Alliance / Paul Robeson House & Museum, and Theatre in the X. Class members come to a deeper understanding of Black life in Philadelphia through stories community members share in oral history interviews. These stories form the basis for an original performance the class creates, presented at an end-of-semester gathering. Wilson's plays provide the bridge between class members from various generations and backgrounds. The group embodies collaborative service through the art and connection-building conversations it offers to the community.

Fall
Also Offered As: AFRC 2325, THAR 2325
1 Course Unit

ENGL 2250 Race and Ethnicity Seminar
This course explores an aspect of race and ethnicity intensively. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

This course is an advanced-level seminar on Asian American culture and politics. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
Also Offered As: ASAM 2200
1 Course Unit

ENGL 2272 In/Visible: Asian American Cultural Critique
This interdisciplinary seminar examines how popular cultural representations frame Asian Americans as either invisible or hypervisible — our explorations will move across race and national origin, language and class, gender and sexuality. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ARTH 3749, ASAM 2272, GSWS 2272
1 Course Unit
ENGL 2275 The Chinese Body and Spatial Consumption in Chinatown
This is a primarily an art and planning course that centers on the representation of the oriental, specifically the Chinese, in both its historical and present contexts. The localization of the Chinese throughout the Americas within Chinatown precincts were also subject to representational imaginings that were negotiated through the lens of civic planning. This course will study the often fraught negotiation between representation and planning. The hyper-urbanization of China over the past several decades has radically altered traditional conceptions of public space in China. Mass migration from rural to urban areas has meant very high population densities in Chinese cities. Traditional courtyards surrounded by housing and other modestly scaled buildings are rapidly disappearing, incongruent with the demands of heated property development. Moreover, Chinese cities have comparatively little public green space per resident compared to equivalents in the West. Zoning in Chinese cities is also much more varied for any given area than what one would find in cities such as New York, Paris, and London. Intensifying density of urban areas precludes the construction of large public squares. Furthermore, large public squares tend to be either intensively congested and overcrowded or underused due to their oversight by government that render such spaces somewhat opprobrious in terms of use. Historically, the urban courtyards of temples, native place associations, and provincial guilds served as public spaces of gathering. They were also sites of festivals and the conducting of neighborhood and civic business. These spaces have become increasingly privatized or commodified with entrance fees. The air-conditioned concourses of enclosed shopping malls or busy outdoor market streets have become de facto public spaces in China where collective window shopping or promenading is the primary activity rather than bodily repose as one might find in a public space in a large Western city. The seminar/studio will investigate the meaning of the term public in the constitution of Chinese space, audience and critical voice through firstly the enclave of Chinatown and secondly through examples from China. The course will look into the changing conceptualization of public space in Chinatown as it has declined in its traditional form and become reinvented in the form of high-end shopping centered districts. This flux has its roots in post-1979 China as well as the post-1997 reversion of Hong Kong to China. As such, the course will examine the situation of rapid urbanization in China and the concomitant relationship to new Chinese (and Asian) districts in the North American urban and suburban landscape ie Vancouver, Toronto, Arlington (Virginia), Oakland, Los Angeles valley and Queens (Flushing), New York. In what ways can artists and designers respond to and challenge these conceptualizations of the old and the new within the context of urban change? What of the changing formations of the Chinese subject through the experiences of embodiment? How is public space produced through an ethnically bracketed bodily presence. Findings will be translated by the student as tools for design and public art imaginings. This course will include a week s trip to San Francisco to study how intense growth in the city has all but usurped old Chinatown while new and more vibrant Chinese centers have emerged in multiple other districts within the city and the suburbs.
Also Offered As: ASAM 3130, FNAR 3060

ENGL 2401 Literature and Theory Seminar: Theories of World Literature
This course is an introduction to efforts—beginning in the nineteenth century, but with special attention to the late-twentieth and twenty-first centuries—to develop theoretical models and corresponding critical practices for the comprehensive study of world literature. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: COML 2401
1 Course Unit

ENGL 2402 What is Capitalism? Theories of Marx and Marxism
At their root, Marx and Marxsists try to examine the problems with both capitalism and the political and economic discourses that justify or ignore those problems. Today, many around the globe are also reflecting on capitalism’s problems, in the hope of imagining and realizing a better future. This course will trace some of the origins of that renewed inquiry, and examine its limits and possibilities in today’s world. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: COML 2402, GSWS 2410
1 Course Unit
ENGL 2403 Marx’s Century
This course will introduce you to Karl Marx in the context of his century, and it will consider the nineteenth century in turn through the lens of his revolutionary social analysis. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: COML 2403
1 Course Unit

ENGL 2405 Global Feminisms
Feminism has both united women and also generated debates between women of different races, locations and sexual orientations, across the world, and also within the US. Feminism means both understanding the construction of gender and sexuality in society, and challenging the oppressive structures that constrain people of all genders. As such, there can be no single feminism that is globally relevant. How should we, located in a prestigious US university, locate our own ideas about gender and sexuality in a global framework? Each week we will engage with a piece of work—fiction, autobiography, film, historical or activist writing—from a different part of the world. Through them we will explore how histories of colonialism, slavery and race, nation-making and war have led to very different conceptions of the family, sexuality, gender identities the body, labor, and agency around the world. Texts and films will likely include: Domitila Barrios de Chungara, Let Me Speak; Angela Davis, Women, Race and Class; Urvashi Butalia, The Other Side of Silence; Veronique Tadjo, Queen Pokou, Saidiya Hartmann, Lose Your Mother; Joan Scott, The Politics of the Veil; Gaiutra Bahadur, Coolie Woman, The Odyssey of Indenture; Marjane Satrapi Persepolis; Marijie Meerman, Chain of Love; Ousmane Sembene Moolade; A. Revathi, The Truth About Me: A Hijra Life Story; Ama Ata Aidoo, Our Sister Killjoy. Satisfies the Cross-Cultural Requirement of the College’s General Education Curriculum; Fulfills Sectors 1 and 2 of the English major.
Also Offered As: GSWS 2405
1 Course Unit

ENGL 2420 Cultural Studies Seminar
This course explores an aspect of cultural studies intensively. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 2542 Brazilian Baroque
This lecture course explores the art, architecture, and visual culture of the Portuguese Empire with emphasis on Brazil and its relations with Africa and Asia.
Not Offered Every Year
Also Offered As: AFRC 2542, ARTH 2542, LALS 2542
1 Course Unit

ENGL 2570 On Thoughts Occasioned By
The Essay Film is an important tradition within the various genres that constitute the field of Film and Video Art. Through the element of time it differentiates itself from its literary and photographic antecedents. It borrows selectively from both narrative fiction and documentary - highly subjective and occasionally poetic but without perhaps the burden of truth. The Essay Film is an attempt to dimensionalize our experience of the world and our place in it. It represents an argument, a meditation, a critical engagement with a place, a time or a subject. This is a combination seminar/studio course. Through readings, screenings and discussion students will gain an historical perspective on the genre. The core assignment is for each student to complete a short film (20 minutes max.) in the tradition of the Essay Film.
Also Offered As: FNAR 3040
1 Course Unit

ENGL 2595 Imagining Environmental Justice
Advanced seminar in Environmental Humanities centered around issues of international environmental justice. Sustained engagement with Indigenous North American, African American, Palestinian, and South African imaginary traditions will highlight diverse ways of relating to land, water and nonhuman animals challenge that challenge capitalist and colonial logics of extraction. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
Also Offered As: ANTH 3390, COML 2595
1 Course Unit

ENGL 2596 Ecocritical Seminar: Remediating the Environment
In this course, we will interrogate the term “remediation” as meaning both environmental restoration and media representation. Students will be introduced to the fields of ecocriticism and ecomedia by examining how a variety of materials—from bestselling books to billboards, documentaries, and websites—have informed the cultural imagination of the environment. Students will also discover how media communications and publications can help to remediate the environment in the face of climate catastrophe. This course can be counted as an elective toward the Environmental Humanities minor and as fulfilling the minor’s public engagement component. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: CIMS 2506
1 Course Unit
ENGL 2603 Writing, Publishing, and Reading in Early Modern Europe and the Americas
In this course we will consider the writing, publication, and reading of texts created on both sides of the Atlantic in early modern times, from the era of Gutenberg to that of Franklin, and in many languages. The seminar will be held in the Kislak Center for Special Collections, Rare Books and Manuscripts in Van Pelt Library and make substantial use of its exceptional, multilingual collections, including early manuscripts, illustrated books, plays marked for performance, and censored books. Any written or printed object can be said to have a double nature: both textual and material. We will introduce this approach and related methodologies: the history of the book; the history of reading; connected history; bibliography; and textual criticism. We will focus on particular case studies and also think broadly about the global history of written culture, and about relations between scribal and print culture, between writing and reading, between national traditions, and between what is and what is not "literature." We encourage students with diverse linguistic backgrounds to enroll. As part of the seminar, students will engage in a research project which can be based in the primary source collections of the Kislak Center. History Majors or Minors may use this course to fulfill the US, Europe, or Latin America geographic requirement if that region is the focus of their research paper. Also Offered As: COML 3603, HIST 3603
1 Course Unit

ENGL 2604 American Books/Books in America
This course investigates book histories and the worlds of readers, printers, publishers, and libraries in the Americas, from the colonial period through the nineteenth century. See the English Department's website at www.english.upenn.edu for a description of the current offerings. Also Offered As: HIST 2104
1 Course Unit

ENGL 2605 The Mediterranean World in the Age of Don Quixote
Using as our guides the works of Miguel de Cervantes, Michel de Montaigne, William Shakespeare, Baldassare Castiglione, Antonio de Sosa, Elias al-Musili, and many others, this seminar will analyze the social mutations, religious confrontations, political conflicts, cultural productions and circulation of books, ideas and goods that characterized the Mediterranean world during the sixteenth and seventeenth centuries. Based on close readings of primary and secondary sources, this seminar will focus on the study of the main transformations—political, economic, religious, cultural, and literary—in the early modern Mediterranean world. Students will also be introduced to and learn to analyze original materials from the Library's Kislak Center, where the class will meet, including early modern editions of books we will discuss, maps, ephemera, and manuscript documents. *History Majors will have the opportunity to write a 15-page paper to fulfill the Major research requirement* Also Offered As: HIST 2602
Mutually Exclusive: HIST 3602
1 Course Unit

ENGL 2621 Prints and Politics: From the Early Modern Era to Our Times
By the late fifteenth century, mechanically reproducible images were reshaping the social world. Connecting new audiences across geographies through access to the same visual information, prints launched propagandistic missions, fomented rebellion against authorities, and built networks of progressive thinkers who could envision alternative futures. Prints played a key role in developing what constituted news. Mass-distributed images delivered the mistreatment of the "Indians" by the Spanish and portrayed the packing of Africans on a slave ship. Goya's etchings protested the repression of the Second of May uprising, while the silkscreens of Andy Warhol repeated the image of police dogs attacking civil rights activists in Birmingham. Covering a five-hundred-year history, this course will focus on how printed images created communities and acted as exclusionary devices. We will train our eyes on examples from local collections. Also Offered As: ARTH 3621
1 Course Unit

ENGL 2639 Art Now
One of the most striking features of today's art world is the conspicuous place occupied in it by the photographic image. Large-scale color photographs and time-based installations in projections are everywhere. Looking back, we can see that much of the art making of the past 60 years has also been defined by this medium, regardless of the form it takes. Photographic images have inspired countless paintings, appeared in combines and installations, morphed into sculptures, drawings and performances, and served both as the object and the vehicle of institutional critique. They are also an increasingly important exhibition site: where most of us go to see earthworks, happenings and body-art. This course is a three-part exploration of our photographic present. Spring Also Offered As: ARTH 2940, GSWS 2940, VLST 2360
1 Course Unit

ENGL 2663 Spiegel-Wilks Seminar
Topic varies from semester to semester. While not having any specific pre-requisites, this seminar in contemporary art is designed for junior and senior majors in art history with some knowledge in the field. When appropriate, it may feature special guests from the art world, international travel, and/or curatorial opportunities. Not Offered Every Year Also Offered As: ARTH 3970
1 Course Unit

ENGL 2665 Fakes, Forgeries and Forensics in Digital Media
Fake images on social media are just one of the latest examples of fabrications and modifications that have taken media into dubious territory throughout history. This course will analyze the history of fakes and forgeries and consider whether they devalue the original or not, or even have value in themselves. Along the way, students will learn how fakes and forgeries have been created, what tools can be used to counter the onslaught of illicit creations, and the arts and humanities debates that have arisen surrounding them. After evaluating the ways various media have been modified over time, this course will show students how to use photo manipulation tools to modify digital media. It will also show students how to perform various detailed analyses of digital media to determine their legitimacy. A final project will bring these tools together, as groups of students create a fake or forgery, consider its implications and evaluate a tool's ability to detect it. Fall Also Offered As: CIMS 2665
1 Course Unit
ENGL 2700 Novel Seminar
This course explores an aspect of the novel intensively, asking how novels work and what they do to us and for us. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 2720 18th-Century Novel Seminar

1 Course Unit

ENGL 2831 Walt Whitman and the People's Press
Walt Whitman and the People's Press: A Course to Design and Program a Mobile Printing Space as a Public Art Project. Inspired by Whitman at 200, a region-wide celebration of Walt Whitman, this hands-on and collaborative course will engage students with artists, writers, community leaders and the public to design and program a mobile poetry printing facility that recognizes the complicated legacy of Walt Whitman in the 21st Century. To do this students and instructors will consider Whitman's poetry as well as in his historical period and his place in Philadelphia and Camden. At the same time students will learn to use a press, design materials and create their own multimedia responses to Whitman. Students in this course should expect to read a great deal of poetry but also to be ready to work with their classmates to create responses to Whitman and to see and experience Philadelphia and Camden in new ways.

ENGL 2841 Mourning and Sexuality in the English Elegy
From antiquity to the present, poets have written elegies to express their diverse experiences of the mingling of love and loss. In this advanced seminar on poetic history, genre, and form, we'll explore a major poetic genre—the elegy—in relation to its two, intertwined themes: death and sex. All of the elegies we'll read raise challenging questions about desire, identification, reproduction, gender, and sexuality. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: GSWS 2841
1 Course Unit
ENGL 2850 The Black Arts Movement: Theatre and Performance
This course examines the Theatre and Performance practices of the Black Arts Movement from the mid-1960s to mid-1970s. The Black Arts Movement (BAM) emerges in New York, New Jersey, Chicago, Los Angeles, San Francisco, and Philadelphia among other locations, as a cultural component of the Black Power Movement, and its legacy continues to this day. BAM artists, poets, playwrights, musicians, dancers, producers, directors, and teachers, shared a goal to develop an alternative theatre based in Africanist and Black aesthetics combining poetry, music, and dance in a non-linear fashion allowing stories to emerge through alternative and abstract structures that are activist in nature. We will ground our examination of the period in a growing global black consciousness, as well as the relationship between black aesthetics and self-determination. The course will explore a breadth of mid twentieth century Black experimental theatre ranging from Jean Genet’s The Blacks and Imamu Amiri Baraka’s Black Arts Repertory Theater and School, to Ntozake Shange’s Choreopoems, and the performance poetry Jayme Cortez. The course culminates in the work of present-day performance artists that have taken up and evolved the form. The course is designed to incorporate theory and practice through play and poetry readings, movement investigations, student presentations of Theatre/Performance Artists, and viewing performances either virtually or in person. Students will develop either a choreopoem of their own or curate an imagined Black Arts Movement theatre festival or season.

ENGL 2874 The Musical Theatre of Stephen Sondheim
Just days before Stephen Sondheim died in November 2021, he attended a revival of Assassins at Classic Stage Company, as well as a radical rethinking of Company that had transferred from London to New York. A few days later, a public performance of the song “Sunday” was organized in Duffy Square by Lin-Manuel Miranda. A new production of Into the Woods is currently on Broadway, and another of Sweeney Todd is planned for February 2023. Though it’s been nearly 15 years since Sondheim’s final new musical, he is very much part of our theatrical present—through his own works, which continue to be produced internationally, and through his influence on several generations of composers, lyricists, and more. Still today, among theatre critics and a large sector of the public, Sondheim is generally considered the most significant composer and lyricist in the contemporary theatre; he is, in fact, accorded the kind of serious consideration generally reserved for “legitimate” playwrights.
In this seminar, we will examine in detail Stephen Sondheim’s writing over six decades. We’ll begin with Sondheim’s earliest work as a lyricist, collaborating with composers Jule Styne (Gypsy), Leonard Bernstein (West Side Story), and later, Richard Rodgers (Do I Hear a Waltz?). Beginning in 1970, Sondheim – now both composer and lyricist – in partnership with director Harold Prince produced a series of musicals (including Company, Follies and Sweeney Todd,) still thought to be among the most innovative and substantial in the history of the genre. We will also focus on Sondheim’s musicals after his 1981 break with Prince. These later works, created with writers and directors including James Lapine (Sunday in the Park with George, Into the Woods, Passion), Jerry Zaks (Assassins), and John Doyle (Road Show) are often smaller in scale, intensely personal, and incorporate elements of performance art and popular culture. Finally, we will consider revival productions of Sondheim’s work, which often are reconceived from their original form, often with Sondheim’s involvement and occasional rewriting. This course is open to all students interested in theatre and musical theatre. The ability to read music is not required.
Also Offered As: CIMS 1274, THAR 1274
1 Course Unit

ENGL 2879 Acting Shakespeare
All the world’s a stage and Shakespeare’s plays were written to be performed on it. In this open-level acting course we’ll explore the performance of three of Shakespeare’s greatest dramatic works (Hamlet, Twelfth Night, and Romeo and Juliet). We’ll dive deep into the language, verse, rhetoric, and dramaturgy of Shakespeare’s texts to create performances that are passionate, spontaneous, and real. Through acting exercises, text analysis, scene study, and vocal training, we will develop the skills needed to bring Shakespeare’s dramatic works to their most impactful life. Students will leave the course not only with techniques to perform and appreciate Shakespeare’s work, but with expressive tools that will serve them in all kinds of performance or public speaking.
Not Offered Every Year
Also Offered As: THAR 2236
1 Course Unit
ENGL 2880 Theatre and Politics
This course will examine the relationship between theatre and politics in the twentieth and twenty-first centuries. How do theatre artists navigate their artistic and political aims? How do we distinguish between art and propaganda? Throughout the semester we will ask how the unique components of theatre—its poetic structure, engagement with spectators, aesthetics of representation, relationship to reality, and rehearsal process—contribute to its political capacity. Students will read a variety of plays drawn from late twentieth century and contemporary global theatre practice alongside political and aesthetic theory to interrogate the relationship between artistic production, power, and resistance. We will conclude with a consideration of the ways politics is itself a performance, considering how power is supported by theatrical means and how performance functions in resistance movements.
Also Offered As: COML 2820, LALS 2820, THAR 2820
1 Course Unit

ENGL 2881 The Threat of Climate Change and Theatre
Can theatre save the world? In the face of the climate crisis, this question feels especially urgent. This course will consider the relationship of theatre to the environment and climate change, looking at how we got to this point, and where we might go from here. We will consider how ideas about the environment have been spread through classic texts such as Shakespeare's The Tempest and Ibsen's Enemy of the People. We'll compare how non-western performances offer different relationships with the environment. And we'll analyze how performance has responded to climate anxiety; through visions of dystopia and an end of the world, as in Caryl Churchill's The Skriker and Anne Washburn's Mr. Burns, A Post-Electric Play; through arts activism; and through experimental performance like environmental and immersive theatre. This course is for anyone who is concerned about climate change and interested in how the arts could respond. Most sessions will function as seminar, with short lectures and in-depth discussion about artistic and theoretical texts. We will also workshop different ideas on their feet. The aim is for students to become comfortable enough with this artistic and theoretical mode that they can critique performances across genres from this perspective, articulate their own relationship to it, and see how it might inform their own work.
Also Offered As: THAR 2820
1 Course Unit

ENGL 2882 Method Acting: From Self to Stage and Screen
What, exactly, is “method acting”? Jeremy Strong became notorious on television's Succession for “staying in character” while filming, to the great irritation of his castmates. Jared Leto “transformed” himself by gaining sixty pounds for a role in Chapter 27, then losing another thirty for a role in Dallas Buyer’s Club. Are such approaches really “method” acting? Are they healthy and sustainable? And do they produce truly compelling performances? This course aims to demystify “the method” through a combination of historical inquiry and hands-on acting work. We will explore the cultural phenomenon of “the method” by tracing its historical, theatrical roots, from the core theories and practices of Russian actor-director Konstantin Stanislavsky through the American Group Theatre experiments of the 1930s, the heyday of New York’s Actors Studio in the 1950s, and its culmination in iconic stage and film performances. (One prime example is Marlon Brando’s famed portrayal of Stanley in Tennessee Williams’s A Streetcar Named Desire, as directed by Elia Kazan). Our studies will involve reading historical, theoretical, and dramatic texts, viewing selected films, and practicing acting exercises. Course assessment will comprise participation, facilitation, short responses, and a final project that can take the form of a research paper, presentation, or performance.
Also Offered As: CIMS 2810, THAR 2810

1 Course Unit

ENGL 2890 Icons in Performance: Actors and Others Who Have Shaped the Arts
Many talented performers bring works to life on a stage or in film. But a select few artists are so distinctive they become icons, defining for audiences—often for many years beyond their careers—the art they serve. Marlon Brando defined a new kind of American acting. Sidney Poitier broke the color barrier for leading man movie stars. Maria Callas showed that opera was equal parts theatre and music. Greta Garbo helped us understand the visual power of a film image. This seminar course will focus on iconic performers, directors and others, and the roles they play in defining their art forms. It is part analysis (interpreting in detail what it is these artists do) and part cultural study (why it matters, and also seeking to understand the larger circumstances at play in forging an icon). In addition to the performers mentioned above, we’ll also study Mae West, Fred Astaire, Marilyn Monroe, Elvis Presley, Judy Garland, Frank Sinatra, and more. We will also look at a handful of iconic directors—including Alfred Hitchcock, Douglas Sirk, and others—whose style makes a definitive mark on American film and theater. And we will also look at how critics (in addition to popular audiences) assess performers through comparisons, and by understanding the evolution and tradition of the art. To support our work, we will use film, audio recordings, scripts, criticism and analytical essays, biography, and more.
Also Offered As: CIMS 2840, THAR 2840
1 Course Unit
ENGL 2999 Dramaturgy
This course will examine the functions and methods of the dramaturg—the person in the theatrical process who advises the artistic collaborators on (among other things) new play development, the structure of the script, the playwright’s biography and other writings, the play’s first production and its subsequent production history, and the historical and regional details of the period depicted in the plays action. We will study the history of the dramaturg in the American theatre and discuss contemporary issues relating to the dramaturg’s contribution to the theatrical production (including the legal debates about the dramaturg’s contribution to the creation of RENT). And, in creative teams, the class will create dramaturgical portfolios for a season of imaginary (and, potentially, a few actual) theatrical productions.

1 Course Unit

ENGL 2901 Film Festivals
This course is an exploration of multiple forces that explain the growth, global spread and institutionalization of international film festivals. The global boom in film industry has resulted in an incredible proliferation of film festivals taking place all around the world, and festivals have become one of the biggest growth industries. A dizzying convergence site of cinephilia, media spectacle, business agendas and geopolitical purposes, film festivals offer a fruitful ground on which to investigate the contemporary global cinema network. Film festivals will be approached as a site where numerous lines of the world cinema map come together, from culture and commerce, experimentation and entertainment, political interests and global business patterns. To analyze the network of film festivals, we will address a wide range of issues, including historical and geopolitical forces that shape the development of festivals, festivals as an alternative marketplace, festivals as a media event, programming and agenda setting, prizes, cinephilia, and city marketing. Individual case studies of international film festivals—Cannes, Berlin, Venice, Rotterdam, Karlovy Vary, Toronto, Sundance among others—will enable us to address all these diverse issues but also to establish a theoretical framework with which to approach the study of film festival. For students planning to attend the Penn-in-Cannes program, this course provides an excellent foundation that will prepare you for the on-site experience of the King of all festivals.

ENGL 2933 Japanese Cinema
This course is a survey of Japanese cinema from the silent period to the present. Students will learn about different Japanese film genres and histories, including (but not limited to) the benshi tradition, jidaigeki (period films), yakuza films, Pink Film, experimental/arthouse, J-horror, and anime. Although the course will introduce several key Japanese auteurs (Mizoguchi, Ozu, Kurosawa, Oshima, Suzuki, etc.), it will emphasize lesser known directors and movements in the history of Japanese film, especially in the experimental, arthouse, and documentary productions of the 1960s and 1970s. Finally, in addition to providing background knowledge in the history of Japanese cinema, one of the central goals of the course will be to interrogate the concept of “national” cinema, and to place Japanese film history within a international context. Fall or Spring
Also Offered As: ARTH 3100, CIMS 3100
1 Course Unit

ENGL 2934 Cinema and Socialism
Films from socialist countries are often labeled and dismissed as “propaganda” in Western democratic societies. This course complicates this simplistic view, arguing for the value in understanding the ties between socialist governments, the cinematic arts, and everything in between. We will examine films from past and present socialist countries such as the Soviet Union, China, North Korea, and Cuba, as well as films made with socialist aspirations. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

ENGL 2951 Virtual Reality Lab
In this collaboration between Penn and the Philadelphia Museum of Art (PMA), students will work with with curators to create virtual reality projects connected to the museum’s collections. This course mixes virtual reality theory, history, and practice. We will read a wide range of scholarship, manifestoes, and memoirs that examine virtual reality and other immersive technologies, stretching from the 18th century to today. We will explore virtual reality projects, including narrative and documentary films, commercial applications, and games. We will work with many different virtual reality systems. And we will learn the basics of creating virtual reality, making fully immersive 3-D, 360-degree films with geospatial soundscapes. Finally, we will take what we have learned out of the classroom, working with the Philadelphia Museum of Art curators to create virtual reality experiences based around the museum’s objects and exhibits. Students will gain an understanding of the unique approaches needed to appeal to museum visitors in a public setting, so we can make viable experiences for them. No previous knowledge of VR or experience is necessary.
Not Offered Every Year
Also Offered As: CIMS 2950
1 Course Unit

ENGL 2952 Mobile Phone Cultures
Over the years, the cellphone or the mobile phone ceased to be just an extension of the landline telephone as a range of locative, social and networked media converged into it. Even as they have global impact, mobile media technologies influence and are influenced by socio-cultural factors in specific places, and so mobile phone cultures are both global and local at the same time. In this course, we will be studying the revolutions in youth culture, desire, gender norms, and political propaganda that are emerging as new hardware, apps, and internet services are being added to mobile media. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: CIMS 2952
1 Course Unit
ENGL 2953 Digital Infrastructures & Platforms
Platforms ranging from ride-hailing and food delivery apps (Uber and Swiggy) to subscription-based audiovisual content providers (Netflix and SonyLIV) mediate multisided transactions (markets) and operate based on algorithmic collection, circulation, and monetization of user data. In this course, we will engage with a variety of readings about multi-situated study of apps, paying attention to both app interfaces as well as their connection to backend systems and infrastructures like content delivery networks and software development kits. In what ways do processes of data storage/distribution, content encryption/decryption and encoding/decoding make “seamless” streaming on Hulu/Prime Video and instantaneous digital payments on Venmo and PayTM possible? We will begin with how infrastructures have been studied in the past, and then in particular focus on media infrastructures such as satellite systems, optical fiber cables, cell antennas, and data centers. The course readings will consider the varied definitions of platforms and examine the socio-political effects of the proliferation of platforms in different regions of the world. In studying superapps and platforms like WeChat (China), LINE (Japan), and Jio (India), we will try to comprehend in what ways have discourses of platformization been shaped by governmental regulation, cultural practices, and socio-politics of regions. We will explore questions like: in what ways are infrastructures and apps related? How do content creators and SVoD audiences navigate algorithmic opacity? Why do BigTech companies float competing discourses about platforms? What are the connections between infrastructural investments and platform capitalism? What does it mean to have digital lives in a platform society? In what ways do digital infrastructures and platforms create the foundations for smart cities and Internet of Things? Course assignments include a final research paper (2000 words) as well as project-based case studies of platform companies and socio-material assessments of infrastructures.

1 Course Unit

ENGL 2970 Participatory Community Media, 1970-Present
What would it mean to understand the history of American cinema through the lens of participatory community media, collectively-made films made by and for specific communities to address personal, social and political needs using a range of affordable technologies and platforms, including 16mm film, Portapak, video, cable access television, satellite, digital video, mobile phones, social media, and drones? What methodologies do participatory community media makers employ, and how might those methods challenge and transform the methods used for cinema and media scholarship? How would such an approach to filmmaking challenge our understanding of terms like “authorship,” “amateur,” “exhibition,” “distribution,” “venue,” “completion,” “criticism,” “documentary,” “performance,” “narrative,” “community,” and “success”? How might we understand these U.S.-based works within a more expansive set of transnational conversations about the transformational capacities of collective media practices? This course will address these and other questions through a deep engagement with the films that make up the national traveling exhibition curated by Louis Massiah and Patricia R. Zimmerman, We Tell: Fifty Years of Participatory Community Media, which foregrounds six major themes: Body Publics (public health and sexualities); Collaborative Knowledges (intergenerational dialogue); Environments of Race and Place (immigration, migration, and racial identities unique to specific environments); States of Violence (war and the American criminal justice system); Turf (gentrification, homelessness, housing, and urban space); and Wages of Work (job opportunities, occupations, wages, unemployment, and underemployment). As part of that engagement, we will study the history of a series of Community Media Centers from around the U.S., including Philadelphia’s own Scribe Video Center, founded in 1982 by Louis Massiah, this course’s co-instructor. This is an undergraduate seminar, but it also available to graduate students in the form of group-guided independent studies. The course requirements include: weekly screenings, readings, and seminar discussions with class members and visiting practitioners, and completing both short assignments and a longer research paper.

ENGL 3001 First-Year Seminar: Creative Writing
First-Year Seminars will afford entering students who are considering literary and creative writing study as their focus the opportunity to explore a particular and limited subject with a professor whose current work lies in that area. Topics may range from first-person storytelling to poetry and fiction to writing about art and other themes. Small class size will insure all students the opportunity to participate in lively discussions. Students may expect frequent and extensive writing assignments, but these seminars are not writing courses; rather, they are intensive introductions to the serious study of literature and creative writing.
Fall or Spring

1 Course Unit

ENGL 3024 Introduction to Creative Writing: Imitations and Writing in Form
How can the imitation of literary forms be a way into improving your writing? This course works around the idea of imitation as a way of constructing generative practices of writing. We’ll begin by looking at examples of literary forms and their imitations before we work on our own imitation and how to use them - or how break them into any style. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.

ENGL 3025 Introduction to Creative Writing: Writing Asian American Lives
What does it mean to be Asian American? How do religion, ethnicity, gender, class, nationality, and immigration status define this group? This course will explore these questions through an introductory fiction, nonfiction, and poetry creative writing workshop. In addition to critiquing each other’s short stories, essays, and poems, we will read works by a number of authors as springboards to examine representations of identity, inclusion, and exclusion. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall
Also Offered As: ASAM 1200
1 Course Unit

ENGL 3026 Introduction to Creative Writing: Writing Real Science
Most if not all fiction and nonfiction requires some kind of research. Our readings will explore how writers incorporate scientific knowledge into their prose without compromising craft. This course will explore ways to bring real science into our pieces and make them fun, exciting and fresh. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Also Offered As: ASAM 1226
1 Course Unit

ENGL 3027 Introduction to Creative Writing: Poetry and Life Writing
An introduction to the craft of poetry and life writing. We will focus on the main tools of poetry, such as sound, image, and enjambment, as well as the forms of life writing, including narrative, description, and personal commentary. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Not Offered Every Year
1 Course Unit

ENGL 3028 Introduction to Creative Writing: Breath and Movement
Amid an intensifying climate crisis and widespread air pollution, an ongoing airborne pandemic, and the terrible refrain of “I can’t breathe” that has echoed for a decade, the politicization of breath speaks to the precarity of our time. In this creative writing workshop, we will engage with poetry, prose, and performance to study how artists and writers are thinking about breath and movement today. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
1 Course Unit

ENGL 3029 Introduction to Creative Writing: Through the 1619 Project
This introductory creative writing workshop offers an opportunity to hone creative writing skills through the revelatory framework of Nikole Hannah-Jones's 1619 Project. Through a study of this country's foundations and present tense, students will write, workshop, and revise poems and short prose throughout the semester. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Spring
1 Course Unit

ENGL 3100 Poetry Workshop
In this workshop, students will work across a range of poetic forms that may include list, lyric, documentary, collage, erasure, epistolary, sound-based, prose, performative, and other shapes and experiments, and will explore how contemporary poetry and poetics make us think differently about language and meaning. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3101 Poetry Workshop
Students will develop techniques for generating poems along with the critical tools necessary to revise and complete them. Through in-class exercises, weekly writing assignments, readings of established and emerging poets, and class critique, students will acquire an assortment of resources that will help them develop a more concrete sense of voice, rhythm, prosody, metaphor, and images as well as a deeper understanding of how these things come together to make a successful poem. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
Also Offered As: AFRC 3101
1 Course Unit

ENGL 3102 Attention Poetics
This is a poetry workshop about paying close attention: to the ordinary and the ephemeral, as well as to the extraordinary and the large, often inexorable systems around us. Experienced poets and students new to poetry are all welcome. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Also Offered As: GSWS 3102
1 Course Unit

ENGL 3104 Poetry Lab
A creative writing workshop in which students will learn to experiment and deepen their writing practice using the tools of poetry. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Also Offered As: GSWS 3104
1 Course Unit

ENGL 3105 Advanced Poetry Writing Workshop
This workshop is suitable for students with some prior experience in poetry who are interested in pushing their practice and learning new poetic forms, such as long poems, serial poems, cross-genre work, multimedia poetry, or poetry informed by research. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit
ENGL 3201 Fiction Workshop: Flash Fiction
We live in an age of condensed information. Where does the art of fiction fit into our soundbite-driven lives? Short-form fiction - also called flash fiction, sudden fiction, or microfiction - is more than just "really short stories." Every word in a piece of microfiction is the proverbial ant, carrying fifty times its own weight. Students will read short-works of fiction and will write and workshop their own. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3202 Speculative Fiction
Some of the most powerful and popular storytelling across history has examined the nuances of the human condition in our own future, in alternate realities, and on other worlds, using ghosts, gods, magic, talking animals, animate machines, or the walking dead. In this workshop course, we will learn techniques to weave our own speculative tales. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
1 Course Unit

ENGL 3203 Horror, Mystery, Suspense
Students should come prepared to read a wide range of speculative fiction in horror, mystery, and suspense, and to craft their own canny, uncanny, and original contributions to the genres of slow-ratcheted, nigh-unbearable tension and white-knuckle, heart-pounding terror. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
1 Course Unit

ENGL 3204 The Art of Haunting
In this reading-intensive speculative fiction workshop course, we will explore the literature and art of haunted spaces and write our own tales of haunting. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
1 Course Unit

ENGL 3205 Science Fiction
A speculative creative writing workshop devoted to science fiction. Students can expect to read texts by a variety of practitioners of science fiction, complete regular writing assignments, and workshop writing by their peers. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall
1 Course Unit

ENGL 3206 Fantasy
A speculative writing workshop devoted to the genres of fantasy. Students can expect to read texts by a variety of practitioners of fantasy, complete regular writing assignments, and workshop writing by their peers. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
1 Course Unit
ENGL 3207 I Was a Teenage Monster: Coming of Age in Speculative Writing
This writing workshop explores representations growing up strange. How can fantastic exaggeration accurately represent coming-of-age experiences and the trials of teenhood? We'll examine monstering in TV, film, comics, novels, and poems, and write our own stories, poems, or essays of the strange and the monstrous. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall
1 Course Unit

ENGL 3208 Advanced Fiction Workshop: Short Fiction
This workshop is suitable for students with some prior experience in fiction who are interested in pushing their practice further. Students will write and workshop their own original stories as well as discuss works of fiction. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3209 The Novella
A creative writing workshop devoted to the art and practice of the novella, the genre of fiction that in its length and breadth dwells between the short story and the full-length novel. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3210 The Novel
In this course, students will make progress on, or in some cases complete, a full-length novel. Ideal for students who have already put thought into and begun work on their novel. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3211 Fiction Workshop: Friends and Frenemies
How many kinds of love exist among friends? What is the difference between friendship and romance? In what ways do the ideals of femme, mas, trans, and cis complicate friendship? What are sisterhoods and what are bromances? What is a frenemy? What do race and class have to do with ardor and amity? This fiction workshop will explore not only how we experience friendship, but also how we write it. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall
1 Course Unit

ENGL 3212 Autofiction
What we write can feel close to home, our characters and events firmly rooted in the real. But what is the overlap between writer and character? Writer and story? In this writing workshop, students will study the modern tradition of autofiction, or fictionalized autobiography, and write autofiction of their own. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall
1 Course Unit

ENGL 3213 Fiction Workshop: Divergent Words
This fiction writing workshop invites students to be apprenticed by visceral, divergent literature, and through collaborative discussion, weekly writing, and drafting and workshop of our own original pieces, illuminate our own divergent writing practice. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Not Offered Every Year
1 Course Unit

ENGL 3214 Points of View: Writing Polyvocal Fiction
Do multiple characters in a work of fiction experience the same event from different points of view, or do they examine different events in kaleidoscopic perspectives? This polyvocal fiction workshop will interrogate how we write one story from the point of view of two or more characters. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Not Offered Every Year
1 Course Unit

ENGL 3215 The Art of Fiction
In this generative, interactive workshop we’ll investigate literary fiction technique through a series of directed prompts designed to unfetter your imagination and bring your fiction writing to the next level. This class is appropriate for fiction writers of every level. Come prepared to take creative risks as you deepen your art and advance your craft. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
1 Course Unit

ENGL 3250 Writing for Children
A creative writing workshop devoted to the art and practice of writing for children. Students can expect to read texts by a variety of practitioners of the genre, complete regular writing assignments, and workshop writing by their peers. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3251 Writing for Children
Also Offered As: AFRC 3251
1 Course Unit

ENGL 3252 Writing for Young Adults
This writing workshop will explore the craft of young adult literature. Students will focus on concerns crucial to writing about and for teens, such as voice, point of view, immediacy, and pacing, and will draw on the many possibilities available in YA literary fiction: blurred genres, unreliable narrators, surrealism, retellings, and issues of identity and self-discovery. We will look beyond straightforward prose into forms such as epistolary and verse novels and other experimental mashups. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit
ENGL 3253 Writing for Young Adults
This writing workshop will explore the craft of young adult literature. Students will focus on concerns crucial to writing about and for teens, such as voice, point of view, immediacy, and pacing, and will draw on the many possibilities available in YA literary fiction: blurred genres, unreliable narrators, surrealism, retellings, and issues of identity and self-discovery. We will look beyond straightforward prose into forms such as epistolary and verse novels and other experimental mashups. Fall or Spring
Also Offered As: AFRC 3255
1 Course Unit

ENGL 3256 Advanced Writing for Young Adults
This workshop is suitable for students with some prior experience in writing for young adults and want to spend the semester making significant progress toward the completion of a YA novel. All YA genres are welcome and celebrated, from realism to speculative fiction, and those writing YA crossover (sometimes called new adult) are also welcome. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3257 Advanced Writing for Young Adults
This workshop is suitable for students with some prior experience in writing for young adults and want to spend the semester making significant progress toward a major work for young adults. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
Also Offered As: AFRC 3257
1 Course Unit

ENGL 3300 Creative Nonfiction Workshop: Exploring the Genre
A workshop course in the writing of creative nonfiction. Topics may include memoir, family history, travel writing, documentary, and other genres in which literary structures are brought to bear on the writing of nonfiction prose. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3301 Essays, Fragments, Collage: The Art of the Moment
In this creative nonfiction writing workshop we'll explore the moments of our lives through prompts that range from the tactile to the auditory, the documented to the whispered. We'll write and workshop works in essay, fragment, collage, and memoir. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3302 Experimental Nonfiction
A creative nonfiction workshop with an emphasis on writing that doesn't quite fit into any particular genre. While narrative nonfiction often fears straying too far from stale and safe "journalistic" techniques, we will cook up our own new theories for what it means to compose radical contemporary nonfiction. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3303 Creative Nonfiction Workshop: The Art of Experience
Experience can be an elusive thing to capture: a strange hybrid of the highly subjective and the more tangible zone of perceptible fact. How do we strike a balance in narrative nonfiction? Each week we will review classics in the genre, do in-class writing exercises, go on periodic "experiential" assignments, and explore how the art of playing around with the raw material of everyday life (i.e., "reality") can make for great and unexpected stories. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3304 Creative Nonfiction Workshop: Travel Writing
This creative nonfiction workshop focuses on travel as a deliberate act or an act of improvisation, as never-ending process or a fixed journey. Students will observe themselves as travelers and record what they see and what happens around them. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3305 Creative Nonfiction Workshop: Youth Voices Amplified
Youth Voices Amplified is an improvisational workshop in creative nonfiction that connects you to current reporting opportunities; gives you structured choice in assignments; and teaches you how to write about hard subjects for and about young people. Big questions about the social, emotional, relational and physical structures that affect young people require clear, engaging prose that avoids self-importance. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit
ENGL 3306 Writing and Politics
This is a course for students who are looking for ways to use their writing to participate in electoral politics. Student writers will use many forms, including essay, social media posts, videos, scripts, and podcasts, to explore our desire to live responsibly in the world and to have a say in the systems that govern and structure us. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Also Offered As: AFRC 3306
1 Course Unit

ENGL 3307 Creative Nonfiction Writing
A workshop course focused on the art and craft of the essay. In addition to discussing essay form, students will collaboratively workshop their own original writing. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall
1 Course Unit

ENGL 3308 Cooking with Words
This writing workshop will be devoted to the topic of food, although it is not, strictly speaking, a course on food writing. Instead, we will read a manageable and engaging syllabus of writers who have used food in their work and then craft our own original writing using food as the catalyst for the larger story. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Not Offered Every Year
1 Course Unit

ENGL 3350 Advanced Creative Nonfiction Workshop: Narrative Nonfiction
This is a course for students who love the written word and desire to advance their ability to write and craft narrative nonfiction. It is a course in applying devices of fiction to nonfiction writing without compromise of facts. Writing will be emphasized, and so will avenues of storytelling through such components as creating a narrative spine, building a dramatic plot, character development, scene-setting and use of quotes, and significant reportage. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3351 Writing About Mental Health and Addiction
There are many reasons mental illness and addiction are so pervasive, and so difficult to treat and discuss. But there is one baseline problem we can immediately address: learning how to do more effective writing about behavioral health. In this advanced writing course, one of the first of its kind for undergraduates in the country, students explore nonfiction writing on behavioral health and then create, workshop, and rewrite their own work in memoir, narrative longform, investigative reporting, medical science writing, or some combination of these. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3352 Creative Nonfiction: Look In; Look Out
Creative nonfiction is an art form that calls on both the literary techniques of fiction and the reporting strategies of journalism. This advanced workshop uses essay and memoir genres to explore connections between the personal and the universal. Students will experiment with narrative stance and form such as lyric, hermit crab, braided, and epistolary. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3353 Advanced Creative Nonfiction: Xfic
In this advanced creative nonfiction workshop, students write and publish work in Xfic, Penn's innovative nonfiction literary journal. In Xfic, test the boundaries of longform creative nonfiction through innovative and experimental techniques. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3354 Writing Humor and Comedy
A writing workshop devoted to helping students develop their skills in humor and comedy writing. Topics may include writing for the page as well as comedy sketches and short plays for performance. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3355 Memoir Workshop
A creative writing workshop devoted to the craft of memoir. Students will work with some of the forms of memoir, including personal narrative, dialogue, description, and character development, and will explore how memoir can expand our understanding of truth, imagination, memory, and why a story matters. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
1 Course Unit

ENGL 3356 Asian American Nonfiction Workshop
Contemporary literature has seen a recent rise of Asian American nonfiction writing, particularly in the form of essays and memoirs. Asian American writers are reshaping the form of the immigration story and the personal narrative, and are adding their voices to the pressing topics of political activism, STEM, and mental health. This course will include readings by authors such as Hsu, Hong, Nunez, Chang, Fan, Wang, Jacob, and Kalanithi, among others. For memoir and personal pieces, we will discuss how these writers transform their own material through craft, structure, and perspective. For essays, we will discuss how writers use research (and, yes, craft!) to present difficult and/or technical information in an engaging way. Students will write and workshop their own pieces of nonfiction (8-12 pages), with a choice of memoir or essay. No prior experience is necessary except for an eagerness to engage with the material and an open-mindedness during workshop discussions.
Also Offered As: ASAM 3356
1 Course Unit

ENGL 3340 Journalistic Writing: Exploring the Genre
Journalism has been called the first rough draft of history, because it attempts to answer a basic everyday question: What's happening? This workshop-based course explores the techniques that make a good journalism story, including fact gathering, ledes, structure, kickers, interviewing, quotes, description, and journalistic ethics, and the basic skills needed to produce journalism across print and digital mediums. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit
ENGL 3401 Entrepreneurial Journalism
This class is designed to help students develop their own digital journalism models. Working alone or in small groups, students will conceive of a unique site or app and then spend the semester fine-tuning the concept and developing a basic business plan before presenting them before a panel of outside judges and competing for seed funding. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3402 Guinea-Pig Journalism
Guinea-pig journalism is nonfiction writing in which the author seeks out new experiences and writes about them in the first person. The genre can include travel writing, undercover investigative reporting, comic narratives of unusual self-experiments, and more. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3403 Food Journalism
A creative writing workshop devoted to the craft of food journalism. Writing exercises and assignments may include restaurant reviews, food memoirs, interviews, profiles, and reportage. Students will be encouraged to think through the links between food and culture, identity, politics, and history. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3404 Environmental Journalism
A creative writing workshop devoted to journalistic writing about the environment. Taking inspiration from the long history of naturalist writing as well as the current state of reporting on the climate, students will craft their own reportage, opinion pieces, and criticism. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3405 Magazine Journalism
A creative writing workshop devoted to writing for print and digital magazines. We will delve into what it takes to report for a range of mainstream and independent magazine outlets; explore how time works in longform reporting and the specific demands magazines place on storytelling; design and practice pitching stories to magazine editors; and produce our own original work. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.

ENGL 3406 Writing about Health and Medicine
In this creative writing workshop, we'll focus on the fundamentals of good science journalism, with an emphasis on how to evaluate the strength of published research and integrate it into our own writing for a broad audience. This course is designed both for students who have little background in science and for science and pre-med students who want to become stronger writers. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.

1 Course Unit

ENGL 3408 Long-Form Journalism
The so-called “New Journalists” have thrived ever since the iconoclastic 1960s, their chief impact on the field of journalism being to write fact-based journalism that reads like fiction. We will study and practice the novelistic techniques of this sort of journalism, including narrative storytelling, dramatic arcs, structural cliffhangers, shifting points of view, author’s voice, and dialogue as action. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3409 Documentary Writing
A creative writing workshop devoted to the art of documentary writing. Assignments may include working with found materials; observation and reportage; fact-based reporting; documentary work in literary genres; and learning from documentary film. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3410 Writing from Photographs
A creative writing course built entirely around crafting our own writing out of photographs. We will consider the image as documentary source, as thematic constraint, or as narrative inspiration as we write and workshop our own original pieces in this collaborative course. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3411 Writing about the Arts and Popular Culture
This workshop-oriented course concentrates on all aspects of writing about artistic endeavor, including criticism, reviews, profiles, and essays. For the purposes of this class, the arts will be interpreted broadly, and students will be write about both the fine arts and popular culture, including fashion, sports, and entertainment. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3412 Advanced Writing Projects in the Arts and Popular Culture
This advanced course in writing about the arts and popular culture (interpreted broadly) is limited in enrollment and focuses on a semester-long project that each student defines in consultation with the instructor: most typically, a lengthy feature (6,000+ words) of the sort that regularly appears in the New Yorker, the New York Times Magazine or Rolling Stone, but other approaches to the project will be considered. Ideally, students will have already taken Writing about the Arts and Popular Culture, but that is not a firm prerequisite and other students should absolutely feel free to consider this course. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Spring
1 Course Unit
ENGL 3413 Journalistic Storytelling
Journalistic Storytelling is about mastering the mechanics of effective nonfiction narrative storytelling. What are the best ways to put the reader into your story? What are the elements that make a piece work? What are the elements of a good opening? When is it better to “show” as opposed to “tell”? When is it best to use first, second or third person? We’ll work in different genres, including observational pieces, profiles, personal pieces, and long-form third-person pieces. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3414 Journalistic Writing in Science, Technology, Society
This workshop is intended for students interested in using popular science writing to broaden public understanding of science, technology, and society. Good science writing helps the public understand how to judge scientific claims; students will hone journalistic skills such as how to research a topic; how to identify interviewees and conduct interviews; and how to redraft and edit. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
Also Offered As: STSC 2202
1 Course Unit

ENGL 3415 Global Journalism
Students in this course will have an opportunity to write in a variety of modes, including factual reportage, op-ed, review, and analysis about people and places that take them beyond their own immediate experience. The intent is to use reporting to enlarge the area of personal experience, thus enabling students to become more conscious of, and to move beyond, cultural assumptions, presuppositions, and prejudices. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3416 The Art of the Profile
Students in this class will explore and practice the key elements of profile-writing: gaining access to the profile subject; conducting an effective interview and extracting quotes that reveal the person; observing the profile subject in action; extracting details that reveal the person; and making the profile subject compelling and relatable for the reader. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3417 Political Journalism
The prime goal of this course is to help students develop political writing skills: a respect for factual reporting, context and perspective, and informed opinion. This course will explore the daunting challenges that political journalists face when writing about polarizing topics for polarized audiences while grappling with the thorny issues of “objectivity” and “balance.” This course is designed to be timely, so we’ll closely monitor breaking stories as they arise. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3418 Political Commentary Writing
This course focuses entirely on the daunting art of political commentary writing. Students will track the news as it unfolds, and, most importantly, write commentary pieces in a shared publication space for this course. At a time when Americans are more awash in opinions than ever before, the aim is to master the craft of writing clear, responsible, incisive, substantive, and entertaining point-of-view journalism backed up with factual research. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3419 Political Journalism: The Congressional Midterms
This course focuses entirely on the daunting art of writing political journalism about the congressional midterms. Students who are passionate about writing and politics will track current congressional midterm campaigns and write for collaborative workshop. At a time when Americans are more awash in opinions than ever before, the aim is to master the craft of writing clear, responsible, incisive, substantive, and entertaining journalism backed up with factual research. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3420 Political Journalism: The Presidential Primaries
This course focuses entirely on the daunting art of writing political journalism about the presidential primaries. Students who are passionate about writing and politics will track the current presidential primary campaigns and write for collaborative workshop. At a time when Americans are more awash in opinions than ever before, the aim is to master the craft of writing clear, responsible, incisive, substantive, and entertaining journalism backed up with factual research. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3421 Political Journalism: The Presidential Election
This in-depth course on political journalism will feature the clash between candidates who seek office in the White House. Students will write weekly, chronicling and analyzing the twists and turns of campaign rhetoric, campaign ads, and media coverage; presidential debates will be grist for much of our writing. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3422 Advanced Long-Form Nonfiction
An advanced course in long-form nonfiction journalistic writing for a select group of experienced and self-starting student writers. Ideally, each accepted member will have already taken one or two nonfiction workshops. This is a kind of master course, limited in enrollment and devoted to your pursuit of a reporting and writing project you may have long wished to take up but never had the opportunity. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Spring
1 Course Unit
ENGL 3423 Planet on the Brink: Climate and Environment Journalism
A course for students who want to try their hand at formulating publication-quality fact and opinion pieces on urgent topics that regularly command today's headlines, such as global warming; the sixth extinction; and how to prevent the next pandemic. A course for STEM students who are writing-curious; journalism students interested in sci-tech writing; and prose writers who care about using facts to tell urgently important stories. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
1 Course Unit

ENGL 3424 Let It Rock: The Rolling Stones, Writing and Creativity
A creative writing workshop devoted to criticism, reviews, profiles, interviews and essays about the Rolling Stones. This course will focus on the band's songs, films, solo projects and lifestyles as a source of creative inspiration. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Not Offered Every Year
1 Course Unit

ENGL 3425 Station to Station: The Art and Life of David Bowie
A creative writing workshop devoted to criticism, reviews, profiles, interviews and essays about David Bowie. This course will focus on Bowie's music, films, and other projects as sources of creative inspiration. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Not Offered Every Year
1 Course Unit

ENGL 3426 The Art of Editing
A course for student writers of all kinds who are seeking hands-on experience in editing, whether copyediting and proofreading, line editing, developmental editing, or content editing. Topics covered may include the technical aspects of editing, the publishing profession, and the politics of language standards. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
1 Course Unit

ENGL 3428 Deep Dive Arts and Culture Writing
This course focuses on a semester-long project that takes a deep dive into some aspect of arts and culture. Students will be invited to chart their own course into a topic they are passionate about, whether it be an aspect of the fine arts or a crucial element in pop culture, fashion, sports, comedy, or some other field. Ideally, students will have already taken Writing about the Arts and Popular Culture, but that is not a firm prerequisite and other students should absolutely feel free to consider this course. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Spring
1 Course Unit

ENGL 3501 Writing and Witnessing
This course will explore one of the fundamental questions we face as humans: how do we bear witness to ourselves and to the world? How do we live and write with a sense of response-ability to one another? How does our writing grapple with traumatic histories that continue to shape our world and who we are in it? The very word “witnessing” contains a conundrum within it: it means both to give testimony, such as in a court of law, and to bear witness to something beyond understanding. In this class, we will explore both senses of the term “witness” as we study work by writers such as Harriet Jacobs, Paul Celan, M. NourbeSe Philip, Bhanu Kapil, Layli Long Soldier, Claudia Rankine, Juliana Spahr, and others that wrestles with how to be a witness to oneself and others during a time of ongoing war, colonialism, racism, climate change, and other disasters. Students are welcome in this class no matter what stage you are at with writing, and whether you write poetry or prose or plays or make other kinds of art. Regardless of your experience, in this class you'll be considered an "author," which in its definition also means a "witness." We will examine and question what authorship can do in the world, and we will analyze and explore the fine lines among being a witness, a bystander, a participant, a spectator, and an ally. In this class you will critically analyze and write responses to class readings; you'll do writing exercises related to the work we read; and you'll complete (and be workshoped on) a portfolio of creative writing (and/or art) that bears witness to events that matter to you.
Not Offered Every Year
Also Offered As: COML 3501, GSWS 3501
1 Course Unit

ENGL 3502 Writing and Borders
Many writings are influenced by crossings, borders, and war. But many of these writings also exceed the limits of form: the drive to put down experience in poems spills out into prose, and vice versa; the borders of poetic form seem to be incapable of holding or transferring experience into language. Students will explore their own experimentations across borders. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Not Offered Every Year
1 Course Unit

ENGL 3504 Across Forms: Art and Writing
What if a poem spoke from inside a photograph? What if a sculpture unfurled a political manifesto? What if a story wasn't just like a dance, but was a dance-or a key component of a video, drawing, performance, or painting? In this course, artists and writers will develop new works that integrate the forms, materials, and concerns of both art and writing. Many artists and writers employ writing in their practices, but many writers have practices that go beyond the page and deserve attention as art. This course will employ critique and workshop, pedagogic methodologies from art and writing respectively, to support and interrogate cross-pollination between writing and art practices. Additionally, the course will examine a field of artists and writers who are working with intersections between art and writing to create dynamic new ways of seeing, reading, and experiencing.
Fall
Also Offered As: FNAR 3080
Mutually Exclusive: FNAR 5056
1 Course Unit
ENGL 3508 Queer Forms
Queer and trans writers have always queered form, constantly inventing new ways to express new forms of becoming. And yet, much of the attention paid to LGBTQ+ writing has focused on identity and content rather than looking at the many innovations in form that queer and trans writers are always producing. This multi-genre creative/critical workshop will examine some of the methods contemporary LGBTQ+ writers have used to queer genre and form in their writing, whether they are working through fiction, poetry, essay, play/performance, or some combination thereof. Queer theorist José Esteban Muñoz’s notions of disidentification and queer futurity will help guide our thinking in this course. Students will read and write creative/critical responses each week to a wide range of writing that queers form. The class will include weekly workshop and students will work towards a final project that incorporates all they have learned over the term, generating ever new queer forms of making.
Also Offered As: COML 3508, GSWS 3508
1 Course Unit

ENGL 3510 Making Comics
Open to both beginners and enthusiasts alike, this creative writing workshop will expose students to the unique language of comics and allow students to create their own stories in the medium. Through essential critical readings, practical homework, and lab assignments, students will develop an understanding of how text and sequential images combine, and will take on a variety of roles in the making of comics (writing, illustrating, page layout, inking, character creation, and more). To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3511 Writing through Culture and Art
This is a year-long creative writing class, given as a collaboration between the Center for Programs in Contemporary Writing and the Philadelphia Museum of Art. Students will be encouraged to develop correspondent methods of responding to the PMA’s exhibitions. The class will involve regular trips to attend concerts, museums and lectures. Students will have access to the most cutting-edge artists today via class visits and studio visits, and the course will culminate in a publication of student work. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Fall or Spring
1 Course Unit

ENGL 3512 Duchamp Is My Lawyer
This course examines the impact of copyright law on artists and creative industries. Looking at publishing, music, film, and software, we will ask how the law drives the adoption of new media, and we will consider how regulation influences artistic decisions. A mix of the theoretical with the practical, we will be using UbuWeb (the largest and oldest site dedicated to the free distribution of the avant-garde) as our main case study. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Spring
Also Offered As: CIMS 3512
1 Course Unit

ENGL 3513 Cities and Stories
So much of what we know about cities comes from the stories we tell about them. This course takes the city-in-stories as both our subject and our muse. We will work across genres and disciplines, reading a mix of fiction and nonfiction in which cities figure prominently, from Italo Calvino’s Invisible Cities to Sarah Broom’s Yellow House. We’ll go from Mumbai, in Katherine Boo’s Behind the Beautiful Forevers, to Oakland, in Tommy Orange’s There There. With each text, we’ll examine how the city is represented, including what and who we see and don’t see, and the role it plays in the narrative. We’ll also explore the author’s craft and write our own creative nonfiction about city streets and neighborhoods. The class will be part discussion-based seminar and part peer-review writing workshop. It is open to both creative writing and urban studies students excited to explore the intersections between our stories, our cities, and ourselves.

Also Offered As: URBS 3500
1 Course Unit

ENGL 3514 Writing Towards Transformation
Writing Towards Transformation is a critical and creative writing workshop focused on developing works across genres that express and elaborate upon current and historical conditions of crisis and injustice. Using guided meditation, critical feedback and healthy, ethical discussion, the students of the class will develop manuscripts of poems, short stories, essays, plays and/or screenplays that in some way articulate their analysis of the present and the past towards a transformative future. We will read essays, manifestos, theater and fiction as well as view films that will hopefully inspire each student to develop texts and scripts of hope. Writers used as models of inspiration will include Gary Indiana, Valerie Solanas, June Jordan, Bertolt Brecht, Cherrie Moraga, Leslie Feinberg and Toni Cade Bambara, among many others. This is a graduate level course open to undergraduates by permission of the instructor.
Also Offered As: GSWS 3514, LALS 3514
1 Course Unit

ENGL 3515 Translating Laughter
While this course will deal with the history and theory of translation at large, the practical aspect of the course or the workshop component of it will focus on translating humor from various texts and mediums. We will begin by examining the history and theory of translation, read theory on translation and parody, and examine specific passages and how they manifest themselves in literary and visual translations. Finally, we will set workshops to present, share, and examine the effects of our translations together. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
1 Course Unit

ENGL 3516 Writing as Translation
This workshop course is devoted to creative writing as inherently a form of translation. Some or all students will try their hands at writing their own translations, although please note that knowledge of a language other than English is not required. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
1 Course Unit
ENGL 3517 Plague Lab: Writing through Infection and Affliction
How do we write through a plague? In this creative writing class we will begin with the question of how plagues make and disrupt meaning. In addition to canonical examples, we’ll explore off-center, anti-colonial, and non-Western literary and popular culture works. Students will then produce across a number of genres including poetry, fiction, memoir, zines, double-blind studies, sculpture, installation, performance, or found object scavenging. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Not Offered Every Year
Also Offered As: FNAR 3517, THAR 1117
1 Course Unit

ENGL 3600 Screenwriting Workshop
This is a workshop-style course for those who have thought they had a terrific idea for a movie but didn't know where to begin. The class will focus on learning the basic tenets of classical dramatic structure and how this (ideally) will serve as the backbone for the screenplay of the aforementioned terrific idea. Each student should, by the end of the semester, have at least thirty pages of a screenplay completed. Classic and not-so-classic screenplays will be required reading for every class, and students will also become acquainted with how the business of selling and producing one's screenplay actually happens.
Fall or Spring
Also Offered As: CIMS 1160
1 Course Unit

ENGL 3601 Advanced Screenwriting
This is a workshop style course for students who have completed a screenwriting class, or have a draft of a screenplay they wish to improve or want to learn everything in one shot and are ready to do a lot of writing, and even more rewriting.
Fall or Spring
Also Offered As: CIMS 1300
1 Course Unit

ENGL 3603 Writing for Television
This is a workshop-style course for those who have an interest in writing for television. The course will consist of two parts: First, students will develop premise lines, beat sheets and outlines for an episode of an existing television show. Second, students will develop their own idea for a television series which will culminate in the writing of the first 30 pages of an original television pilot.
Fall or Spring
Also Offered As: CIMS 1170
1 Course Unit

ENGL 3604 Playwriting Workshop
This course is designed as a hands-on workshop in the art and craft of dramatic writing. It involves the study of new plays, the systematic exploration of such elements as storymaking, plot, structure, theme, character, dialogue, setting, etc.; and most importantly, the development of students’ own short plays through a series of written assignments and in-class exercises. Since a great deal of this work takes place in class - through lectures, discussions, spontaneous writing exercises, and the reading of student work - weekly attendance and active participation is crucial. At the end of the semester, students’ plays are read in a staged reading environment by professional actors.
Spring
Also Offered As: THAR 0114
1 Course Unit

ENGL 3605 Advanced Playwriting
This course is intended to reinforce and build upon the areas covered in Level 1 Playwriting (THAR 0114) so that students can refine the skills they've acquired and take them to the next level. Topics covered will include techniques for approaching the first draft, in-depth characterization, dramatic structure, conflict, shaping the action, language/dialogue (incl.subtext, rhythm, imagery, exposition etc), how to analyse your own work as a playwright, dealing with feedback, the drafting process, techniques for rewriting, collaboration (with directors, actors etc) and the 'business of the art' - working with theatres, agents, dramaturgs etc. Students will undertake to write their own one-act plays over the course. The classes will be a mixture of lecture, discussion, study of dramatic texts, writing exercises and in-class analysis of students' work.
Not Offered Every Year
Also Offered As: THAR 0114
Prerequisite: THAR 0114
1 Course Unit

ENGL 3606 Experimental Playwriting
A course on writing for theater and performance. Students will take cues from myriad experimental playwrights and performance artists who have challenged conventional ideas of what a script should look and sound like, how narrative is constructed, how characters are built, and what a setting can be. This class will push beyond the formal structures of the well-made play script and address how writers explore and reinvent form and language as a means for radical change. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Not Offered Every Year
Also Offered As: THAR 3606
1 Course Unit

ENGL 3607 Adaptation
This course is designed to explore the techniques and practices of adaptation in order to transform stories not originally written for the stage into plays. We will reimagine material from other media, considering how the original author’s intent intersects with a student’s own artistic voice. Through reading and writing exercises, we will focus on themes, characters, setting, as well as theatricality, and better understand the value of transferring ideas from the page to the stage. Students will investigate what makes a story stage worthy as they work to create a short play from source material of their choosing.
Also Offered As: THAR 1115
1 Course Unit
ENGL 3608 The Planets in my Pen: Experiments in Writing, Visual Art & Performance
The Planets in my Pen is a multi-genre creative arts workshop constellated around experimentation. We will be looking at innovative writing, visual art and film as models for the making of poetry, fiction, memoir, drawing, painting, sculpture, installation, plays and performance. The genres, techniques and movements of science fiction, surrealism, performance art and the political essay will be key with an emphasis on feminist, queer, left and anticolonial models of art and world making. The works of William S. Burroughs, John Rechy, Nelly Santiago, Jean Genet, Ntozake Shange, Octavia Butler, Adrienne Kennedy, Lucrecia Martel, Aimé Césaire, Jamaica Kincaid, Regina Jose Galindo, Raul Ruiz, Josefina Baez, Zadie Smith and Cherrie Moraga will be among those read, viewed and studied. As their final project students will submit a final manuscript, performance and/or art object as well as participate in a public reading/viewing/screening.
Also Offered As: GSWS 3600, LALS 3600, THAR 3600
1 Course Unit

ENGL 3609 The Short Film: Writing, Producing and Directing
In this class students will write and prepare a short film for production with the INTENT to direct it. The first half of class is devoted to coming up with an idea and writing a short film with a total run time of around 8-12 minutes. This is the ideal length for a short. The second half of the class is devoted to preparing to shoot the film which will include scheduling, budgeting, casting, crewing up, location scouting and creating a directorial look book for the film. At the end of class each student will have a short film script and all the necessary materials to start production of that film. The below documents are required to pass the class and presented as one all inclusive PDF document at the end of the semester.
Fall or Spring
Also Offered As: CIMS 1180
1 Course Unit

ENGL 3630 Here I/We Stand: Writing/Performing Self and Community
This writing for performance workshop will focus on the creation of plays, solo performance, collectively devised work, screenplays and videos. Students can work in both the autobiographical mode common to one person shows, traditional theater and screenplay form as well as avant-garde and experimental techniques. We will write and use theater exercises to develop character and narratives that either directly or obliquely speak to the conditions of subjects who struggle to make art and sense out of self and community, history and society, memory and fantasy. We will read the work of playwrights and solo performers as well as view film and video with an emphasis on the work of leftist, feminist, queer/trans, BIPOC and social justice artists such as Jean Genet, Bertolt Brecht, Ntozake Shange, Adrienne Kennedy, Cherrie Moraga, Luis Alfaro, Holly Hughes, Kate Bornstein, Ana Mendieta, Valerie Solanas, Wallace Shawn, Tomata du Plenty, Teatro Campesino and ACT UP.
Also Offered As: GSWS 3630
1 Course Unit

ENGL 3650 Self-Scripting: Writing through Body and Space
Students in Self-Scripting will write through a variety of exercises and activities that put text into play with the body and space. Over the course of the semester, students will actively engage space and composition as they develop and explore scriptwriting for performance. This course aims to expand on techniques for writing plays, poetry, and experimental biography. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.

ENGL 3651 Passion Projects: Radical Experiments in Writing Plays, Screenplays, and Pilots
This creative writing workshop will focus on writing for screen, stage and internet and is open to undergraduate and graduate students at every level of writing experience. The course will be writing intensive and also include the reading and analysis of feminist, trans, queer, working class and racially liberatory plays, films, television and performance as models of inspiration. Meditation, drawing, theater games, improv exercises, screenings and outings to see work on and off campus will round out this holistic and experimental approach to making work that illuminates and entertains audiences from across the US and global audience spectrum.
Also Offered As: GSWS 3651, LALS 3651
1 Course Unit

ENGL 3652 Is This Really Happening? Performance and Contemporary Political Horizons
This class addresses the meeting points inside of and between a range of resistant performance practices with a focus on artists using performance to address political and social encounters in the contemporary moment. Performance, a chaotic and unruly category that slides across music, dance, theater and visual art, has long been a container for resistant actions/activities that bring aesthetics and politics into dynamic dialogue. Embracing works, gestures, movements, sounds and embodiments that push against and beyond the conventions of a given genre, performance can't help but rub uncomfortably against the status quo. Scholars working across Performance Studies and Black Studies importantly expanded critical discourse around performance to address the entanglement of the medium with physical, psychic, spatial and temporal inhabitations of violence and power. Generating copious genealogies of embodied resistance, this scholarship instigates a complex, interdisciplinary and multidimensional perspective on intersections between art and life, performance and politics. The class hosts a series of public lectures, presentations and performances by visual artists, choreographers, theater artists, composers/musicians, performers, curators and activists engaged with the social and political moment. Presentations will be open to the public with students in the course developing in-depth research into the work of each visiting artist/performer/presenter to engage the larger context of each visitor's scholarship and/or practice through readings, discussion and in-class presentations. This course is open to all interested students. No prior requisites or experience with performance or the performing arts is necessary.
Also Offered As: FNAR 3160, GSWS 0860

Discussions will address emergent research methods, advanced writing and critical thinking issues, and debates surrounding canonization. See the English Department's website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4502 One Series: Medieval/Renaissance with Difference and Diaspora
This seminar offers students the opportunity to undertake a semester-long in-depth study of a major literary text from the Medieval and/or Renaissance period with a focus on Difference and Diaspora. Discussions will address emergent research methods, advanced writing and critical thinking issues, and debates surrounding canonization. See the English Department's website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4503 One Series: Medieval/Renaissance with Theory & Poetics and Difference and Diaspora
This seminar offers students the opportunity to undertake a semester-long in-depth study of a major literary text from the Medieval and/or Renaissance period with a focus on both Theory & Poetics and Difference & Diaspora. Discussions will address emergent research methods, advanced writing and critical thinking issues, and debates surrounding canonization. See the English Department's website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4504 One Series: Literature of the Long 18th Century
This seminar offers students the opportunity to undertake a semester-long in-depth study of a major literary text from the Long 18th Century. Discussions will address emergent research methods, advanced writing and critical thinking issues, and debates surrounding canonization. See the English Department's website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4505 One Series: Literature of the Long 18th Century with Theory and Poetics
This seminar offers students the opportunity to undertake a semester-long in-depth study of a major literary text from the Long 18th Century with a focus on Theory and Poetics. Discussions will address emergent research methods, advanced writing and critical thinking issues, and debates surrounding canonization. See the English Department's website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4506 One Series: Literature of the Long 18th Century with Difference and Diaspora
This seminar offers students the opportunity to undertake a semester-long in-depth study of a major literary text from the Long 18th Century with a focus on Difference and Diaspora. Discussions will address emergent research methods, advanced writing and critical thinking issues, and debates surrounding canonization. See the English Department's website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4507 One Series: Literature of the Long 18th Century with Theory & Poetics and Difference and Diaspora
This seminar offers students the opportunity to undertake a semester-long in-depth study of a major literary text from the Long 18th Century with a focus on Theory & Poetics and Difference & Diaspora. Discussions will address emergent research methods, advanced writing and critical thinking issues, and debates surrounding canonization. See the English Department's website at www.english.upenn.edu for a description of current offerings.
1 Course Unit
ENGL 4508 One Series--19th Century Literature
This seminar offers students the opportunity to undertake a semester-long in-depth study of a major literary text from the 19th Century. Discussions will address emergent research methods, advanced writing and critical thinking issues, and debates surrounding canonization. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4509 One Series--19th Century Lit with Theory and Poetics
This seminar offers students the opportunity to undertake a semester-long in-depth study of a major literary text from the 19th Century with a focus on Theory and Poetics. Discussions will address emergent research methods, advanced writing and critical thinking issues, and debates surrounding canonization. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4510 One Series--19th Century Lit with Difference and Diaspora
This seminar offers students the opportunity to undertake a semester-long in-depth study of a major literary text from the 19th Century with a focus on Difference and Diaspora. Discussions will address emergent research methods, advanced writing and critical thinking issues, and debates surrounding canonization. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4511 One Series--19th Century Lit with Theory & Poetics and Difference & Diaspora
This seminar offers students the opportunity to undertake a semester-long in-depth study of a major literary text from the 19th Century with a focus on Theory & Poetics and Difference & Diaspora. Discussions will address emergent research methods, advanced writing and critical thinking issues, and debates surrounding canonization. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4512 One Series--20th/21st Century
This seminar offers students the opportunity to undertake a semester-long in-depth study of a major literary text from the 20th/21st Century. Discussions will address emergent research methods, advanced writing and critical thinking issues, and debates surrounding canonization. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4513 One Series--20th/21st Century with Theory and Poetics
This seminar offers students the opportunity to undertake a semester-long in-depth study of a major literary text from the 20th/21st Century with a focus on Theory and Poetics. Discussions will address emergent research methods, advanced writing and critical thinking issues, and debates surrounding canonization. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4514 One Series--20th/21st Century with Difference and Diaspora
This seminar offers students the opportunity to undertake a semester-long in-depth study of a major literary text from the 20th/21st Century with a focus on Difference and Diaspora. Discussions will address emergent research methods, advanced writing and critical thinking issues, and debates surrounding canonization. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4515 One Series--20th/21st Century with Theory & Poetics and Difference & Diaspora
This seminar offers students the opportunity to undertake a semester-long in-depth study of a major literary text from the 20th/21st Century with a focus on Theory & Poetics and Difference & Diaspora. Discussions will address emergent research methods, advanced writing and critical thinking issues, and debates surrounding canonization. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
Also Offered As: CIMS 4516
1 Course Unit

ENGL 4516 One Series--Major Film
This seminar offers students the opportunity to undertake a semester-long in-depth study of a major film regardless of origin. Discussions will address emergent research methods, advanced writing and critical thinking issues, and debates surrounding canonization. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4517 One Series--Love and Rockets: The Great American Comic Book
This One Series course explores Love and Rockets, an anthology comic book series created by the collective known as Los Bros Hernandez and published continuously since 1978. We will approach the series through the lenses of Comics Studies and Latinx Studies. Is it true, as one scholar says, that, "Love and Rockets is the closest thing we have to The Great American Comic Book?" How does the series continue or challenge the legacy of the underground comix movement of the 1960s and 1970s? We will consider how Love and Rockets incorporates elements of the anarchist LA punk scene, challenges notions of Latinidad, and expands the visual vernacular of gender & sexuality in American comics. Alongside two representative volumes from Love and Rockets, we will read criticism, watch documentaries, incorporate our own comics research, and write comics of our own. Assignments will include brief research exercises and short writing in various forms. For the final projects, students will have the choice of a critical essay or creative project. Students will come away from the class with increased visual literacy as well as a basic theoretical framework for ethnic studies writ large.
Also Offered As: LALS 4517
1 Course Unit

ENGL 4599 Study Abroad--Advanced Seminar
Study Abroad number reserved for XCAT requests that fulfill Advanced Seminar for English
1 Course Unit

ENGL 4955 JRS Med/Ren & 20C-21C Lit
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address research methods, advanced writing and critical thinking issues, as well as debates in both Medieval/Renaissance and 20th and/or 21st Century Literature. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
1 Course Unit
ENGL 4956 JRS Med/Ren & 20C-21C Lit with Theory and Poetics
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address research methods, advanced writing and critical thinking issues, Theory and Poetics, as well as debates in both Medieval/Renaissance and 20th and/or 21st Century Literature. See the English Department's website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4957 JRS Med/Ren & 20C-21C Lit with Difference and Diaspora
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address research methods, advanced writing and critical thinking issues, Difference and Diaspora, as well as debates in both Medieval/Renaissance and 20th and/or 21st Century Literature. See the English Department's website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4958 JRS Med/Ren & 20C-21C Lit with Theory and Poetics & Difference and Diaspora
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address research methods, advanced writing and critical thinking issues, Theory, Poetics, Difference and Diaspora, as well as debates in both Medieval/Renaissance and 20th and/or 21st Century Literature. See the English Department's website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4976 JRS 19C Lit & 20C-21C Lit
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address research methods, advanced writing and critical thinking issues, as well as debates in both 19th Century literature and 20th and/or 21st Century Literature. See the English Department's website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4977 JRS 19C Lit & 20C-21C Lit with Difference and Diaspora
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address research methods, advanced writing and critical thinking issues, as well as debates in both 19th Century literature and 20th and/or 21st Century Literature. See the English Department's website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4978 JRS 19C Lit & 20C-21C Lit with Theory and Poetics
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address research methods, advanced writing and critical thinking issues, Theory and Poetics, as well as debates in both 19th Century literature and 20th and/or 21st Century Literature. See the English Department's website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4979 JRS 19C Lit & 20C-21C Lit with Theory and Poetics and Difference and Diaspora
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address research methods, advanced writing and critical thinking issues, Theory and Poetics, Difference and Diaspora, as well as debates in both 19th Century literature and 20th and/or 21st Century Literature. See the English Department's website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4980 JRS 20C-21C Lit with Theory & Poetics and Difference and Diaspora
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address research methods, advanced writing and critical thinking issues, Theory and Poetics, as well as debates in both 20th and/or 21st Century Literature, with an added focus on difference and diaspora. See the English Department's website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4984 JRS Med/Ren
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address research methods, advanced writing and critical thinking issues, Theory and Poetics, as well as debates within the Medieval and/or Renaissance period. See the English Department's website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4985 JRS Med/Ren with Theory & Poetics
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address research methods, advanced writing and critical thinking issues, Theory and Poetics, as well as debates within the Medieval and/or Renaissance period. See the English Department's website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4986 JRS Med/Ren with Difference and Diaspora
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address research methods, advanced writing and critical thinking issues, Theory and Poetics, as well as debates within the Medieval and/or Renaissance period, with a focus on difference and diaspora. See the English Department's website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4987 JRS Med/Ren with Theory & Poetics and Difference and Diaspora
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address research methods, advanced writing and critical thinking issues, Theory and Poetics, as well as debates within the Medieval and/or Renaissance period, with an added focus on difference and diaspora. See the English Department's website at www.english.upenn.edu for a description of current offerings.
1 Course Unit
ENGL 4988 JRS Long 18C Lit
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address research methods, advanced writing and critical thinking issues, and debates within the Literature of the Long 18th Century period. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4989 JRS Long 18C Lit with Theory and Poetics
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address research methods, advanced writing and critical thinking issues, Theory and Poetics, as well as debates within the Literature of the Long 18th Century period. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4990 JRS Long 18C Lit with Difference and Diaspora
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address research methods, advanced writing and critical thinking issues, and debates within the Literature of the Long 18th Century period, with a focus on difference and diaspora. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4991 JRS Long 18C Lit with Theory & Poetics and Difference and Diaspora
This course offers English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address research methods, advanced writing and critical thinking issues, Theory and Poetics, as well as debates in the Literature of the Long 18th Century period, with an added focus on difference and diaspora. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
Fall or Spring
1 Course Unit

ENGL 4992 JRS 19C Literature
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address research methods, advanced writing and critical thinking issues, and debates within 19th Century Literature. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
1 Course Unit

ENGL 4993 JRS 19C Literature with Theory & Poetics
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address research methods, advanced writing and critical thinking issues, Theory and Poetics, as well as debates within 19th Century Literature. See the English Department’s website at www.english.upenn.edu for a description of current offerings.

ENGL 4998 JRS 20C-21C Literature with Difference and Diaspora
This course offers junior English majors the opportunity to design and undertake a semester-long research and writing project in an advanced seminar setting. Discussions will address research methods, advanced writing and critical thinking issues, and debates within 20th Century Literature, with a focus on difference and diaspora. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
1 Course Unit
**ENGL 5001 Cinema and Globalization**
In this course, we will study a number of films (mainly feature films, but also a few documentaries) that deal with a complicated nexus of issues that have come to be discussed under the rubric of "globalization." Among these are the increasingly extensive networks of money and power, the transnational flow of commodities and cultural forms, and the accelerated global movement of people, whether as tourists or migrants. At stake, throughout, will be the ways in which our present geographical, economic, social, and political order can be understood and represented. What new narrative forms have arisen to make sense of contemporary conditions? Films will include: The Year of Living Dangerously, Perfumed Nightmare, Dirty Pretty Things, Monsoon Wedding, Babel, Y Tu Mama Tambien, Maria Full of Grace, In This Word, Darwin's Nightmare, Black Gold, Life and Debt, The Constant Gardener, Syriana, and Children of Men. In addition to studying the assigned films carefully, students will also be expected to read a selection of theoretical works on globalization (including Zygmunt Bauman's Globalization: The Human Consequences) and, where appropriate, the novels on which the assigned films are based. Advance viewing of the films is required. (I find it is best to place films on reserve for students’ use, or to ask that students get their own DVDs from Amazon or Netflix, but screenings can certainly be arranged.) Writing requirements: either a mid-term and final paper, or an in-class power point presentation and final paper. Not Offered Every Year
Also Offered As: CIMS 5001
1 Course Unit

**ENGL 5002 Hollywood Film Industry**
This is a course on the history of Hollywood. It seeks to unravel Hollywood's complex workings and explains how the business and politics of the film industry translate into the art of film. We will trace the American film industry from Edison to the internet, asking questions such as: What is the relationship between Hollywood and independent film? How has the global spread of Hollywood since the 1920s changed the film industry? How has Hollywood responded to crises in American politics (e.g., world wars, the cold war, terrorism)? And how have new technologies such as synchronized sound, color cinematography, television, home video, computer graphics, and other digital technologies changed film and Hollywood? We will look closely at representative studios (Paramount, Disney, and others), representative filmmakers (Mary Pickford, Frank Capra, and George Lucas, among many others), and we will examine the impact of industrial changes on the screen. Not Offered Every Year
Also Offered As: CIMS 5002
1 Course Unit

**ENGL 5003 Copyright and Culture**
In this course, we will look at the history of copyright law and explore the ways that copyright has both responded to new media and driven art and entertainment. How, for example, is a new medium (photography, film, the Internet, etc.) defined in relation to existing media? What constitutes originality in collage painting, hip hop music, or computer software? What are the limits of fair use? And how have artists, engineers and creative industries responded to various changes in copyright law? A major focus of the course will be the lessons of history for the current copyright debates over such issues as file sharing, online video, and remix culture. In this course, we will look at the history of copyright law and explore the ways that copyright has both responded to new media and driven art and entertainment. How, for example, is a new medium (photography, film, the Internet, etc.) defined in relation to existing media? What constitutes originality in collage painting, hip hop music, or computer software? Also Offered As: CIMS 5003
1 Course Unit

**ENGL 5004 Horror Cinema**
The course will explore European Horror Cinema from the 1970s to the present time, focusing on a number of cult films that have helped rejuvenate and redefine the genre in a radically modern sense by pushing the envelope in terms of subversive representation of gore, violence and sex. We will look at various national cinemas (primarily Western Europe – Italy, France, Spain, Germany, Belgium, The Netherlands – with the occasional foray into Eastern Europe and Scandinavia) and at a range of subgenres (giallo, mondo, slasher, survival, snuff, ...) or iconic figures (ghosts, vampires, cannibals, serial killers, ...). Issues of ethics, ideology, gender, sexuality, violence, spectatorship will be discussed through a variety of critical lenses (psychoanalysis, socio-historical and cultural context, aesthetics, politics...). The class will be conducted entirely in English. Be prepared for provocative, graphic, transgressive film viewing experiences. Not for the faint of heart!
Not Offered Every Year
Also Offered As: CIMS 5004

**ENGL 5010 Introduction to Old English Language and Literature**
This is an accelerated study of the basic language of Anglo-Saxon England, together with a critical reading of a variety of texts, both prose and poetry. See the English Department’s website at www.english.upenn.edu for a description of the current offerings. Not Offered Every Year
1 Course Unit
ENGL 5030 Transnational TV
How are television and nation historically related, and how has television been part of new kinds of nationalization and globalization projects? Television content like telenovelas or BBC news have often transnationally moved and television infrastructures like satellites and optical fiber cables have had a global footprint. We will discuss both the local situatedness of televical production and reception cultures as well as their ability to impact global issues and discourses. The course is interested in how television schedules historically have been part of everyday lives of people and how more recently, on-demand TV content shapes and is shaped by quotidian rhythms of people’s lives in different countries with specific socio-cultural contexts. The course particularly focuses on how global television cultures have been transformed due to shifts from broadcasting technologies to (Internet) streaming services: In what ways has the television landscape changed and remained the same with the emergence of global subscription TV platforms like Netflix and Prime Video as they commission and develop content in collaboration with local and national artists and practitioners? How are regional streamers competing with and resisting the expansion of Netflix? What explains the growing transnational exports of Turkish dizi and Korean TV dramas? We will attend to both emerging genres of content and trace the new distribution circuits of transnational television.
Not Offered Every Year
Also Offered As: CIMS 5030
1 Course Unit

ENGL 5050 Digital Humanities Studies
This course is designed to introduce advanced undergraduate and graduate students to the range of new opportunities for literary research afforded by Digital Humanities and recent technological innovation. Digital Humanities: you’ve heard of it. Maybe you’re excited about it, maybe you’re skeptical. Regardless of your primary area of study, this course will give you the critical vocabularies and hands-on experience necessary to understand the changing landscape of the humanities today. Topics will include quantitative analysis, digital editing and bibliography, network visualization, public humanities, and the future of scholarly publishing. Although we will spend a good portion of our time together working directly with new tools and methods, our goal will not be technological proficiency so much as critical competence and facility with digital theories and concepts. We will engage deeply with media archaeology, feminist technology studies, critical algorithm studies, and the history of material texts; and we will attend carefully to the politics of race, gender, and sexuality in the field. Students will have the opportunity to pursue their own scalable digital project. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Fall or Spring
Also Offered As: CIMS 5051, COML 5050
1 Course Unit

ENGL 5180 King Arthur: Medieval to Modern
From the Middle Ages to the present, stories about King Arthur, the brave deeds of the nights of the Round Table, and Merlin’s mysterious prophecies have mesmerized readers and audiences. In this course, we will study nearly 1000 years of literature about King Arthur, beginning with Geoffrey of Monmouth’s twelfth-century History of the Kings of Britain and Sir Gawain and the Green Knight, and ending with Mark Twain, Alfred Lord Tennyson, and the fantasy fiction classic, T. H. White’s Once and Future King. We will also be reading authors who repurposed Arthurian literature to think about gender relations (for example, Elizabeth Phelps’ critique of domesticity), colonialism and nationalism (Wales and India), and religious cultures (for example, the medieval Hebrew version of King Arthur). Throughout the course, we will think about what Arthurian legends mean to the way we write history and the ways in which we view our collective pasts (and futures). Assignments will include response papers, an oral presentation, and a final paper.
Not Offered Every Year
1 Course Unit

ENGL 5240 Topics in Medieval Studies
This course covers topics in Medieval literature. Its emphasis varies with instructor. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
Also Offered As: COML 5240, GSWS 5240
1 Course Unit

ENGL 5245 Topics in Medieval Studies: Premodern Animals (c.500-c.1500)
From St. Cuthbert, whose freezing feet were warmed by otters, to St. Guinefort, a miracle-performing greyhound in 13th-century France, to Melusine, the half-fish, half-woman ancestress of the house of Luxembourg (now the Starbucks logo), medieval narratives are deeply inventive in their portrayal of human-animal interactions. This course introduces students to critical animals studies via medieval literature and culture. We will read a range of genres, from philosophical commentaries on Aristotle and theological commentaries on Noah’s ark to werewolf poems, beast fables, political satires, saints’ lives, chivalric romances, bestiaries, natural encyclopaedias, dietary treatises and travel narratives. Among the many topics we will explore are the following: animals in premodern law; comfort and companion animals; vegetarianism across religious cultures; animal symbolism and human virtue; taxonomies of species in relation to race, gender, and class; literary animals and political subversion; menageries and collecting across medieval Europe, the Near East, and Asia; medieval notions of hybridity, compositeness, trans-species identity, and interspecies relationships; art and the global traffic in animals (e.g., ivory, parchment); European encounters with New World animals; and the legacy of medieval animals in contemporary philosophy and media. No prior knowledge of medieval literature is required. Students from all disciplines are welcome.
Also Offered As: CLST 7710, COML 5245, RELS 6101
1 Course Unit

ENGL 5250 Chaucer
An advanced introduction to Chaucer’s poetry and Chaucer criticism. Reading and discussion of the dream visions, Troilus and Criseyde, and selections from Canterbury Tales, from the viewpoint of Chaucer’s development as a narrative artist. See the English Department’s website at www.english.upenn.edu for a description of current offerings.

ENGL 5430 Environmental Humanities: Theory, Method, Practice
Environmental Humanities: Theory, Methods, Practice is a seminar-style
course designed to introduce students to the trans- and interdisciplinary
field of environmental humanities. Weekly readings and discussions will
be complemented by guest speakers from a range of disciplines including
ecology, atmospheric science, computing, history of science, medicine,
anthropology, literature, and the visual arts. Participants will develop their
own research questions and a final project, with special consideration
given to building the multi-disciplinary collaborative teams research in
the environmental humanities often requires.

ENGL 5440 18th-century Visual Cultures of Race & Empire
This course approaches the Western history of race and racial
classification (1600-1800) with a focus on visual and material culture,
natural history, and science that connected Atlantic and Pacific worlds.
Across the long eighteenth century, new knowledges about human
diversity and species distinctions emerged alongside intensifications of
global trade with Asia. The course will include case studies of chinoiserie
textiles, portraits of consuming individuals, natural history prints and
maps, Chinese export porcelain and furnishings, and "blackamoor"
sculpture. Objects of visual and material culture will be studied alongside
readings on regional and world histories that asserted universal freedoms
as well as hierarchies of human, animal, and plant-kind. Keeping in
mind that the idea of race continues to be a distributed phenomenon
- across color, gender, class, religion, speech, culture - we will explore
changing vocabularies of difference, particularly concerning skin color,
across a range of texts and images. Knowledge often does not take
written or literary form, and for this reason, we will study examples of
visual and material culture as well as forms of technology that were
critical to defining human varieties, to use the eighteenth-century term.
Although we will be reading texts in English, some in translation, we will
also account for European and non-European knowledge traditions -
vernacular, indigenous - that informed scientific and imaginative writings
about the globe. Topics may include cultural and species distinction,
global circulations of commodities between the East and West Indies,
the transatlantic slave trade, the casta system of racial classification
in the Americas, religious and scientific explanations of blackness and
whiteness, and visual representations of non-European people.

1 Course Unit
ENGL 5530 British Women Writers
A study of British women writers, often focusing on the women authors who came into prominence between 1775 and 1825. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 5560 Topics in 19th-Century British Literature
This course covers topics in nineteenth-century British Literature, its specific emphasis varying with the instructor. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 5600 The Novel
This course will provide an intensive introduction to the study of the novel, approaching the genre from a range of theoretical, critical, and historical perspectives. It may examine conflicting versions of the novel's history (including debates about its relationship to the making of the individual, the nation-state, empire, capital, racial and class formations, secularism, the history of sexuality, democracy, print and other media, etc.), or it may focus on theories of the novel, narratology, or a particular problem in novel criticism. It may attend to a specific form or subgenre of fiction, or it may comprise a survey of genres and texts. See the English Department's website at: www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 5640 British Modernism
An introduction to British Literary Modernism. Specific emphasis will depend on instructor. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 5690 Topics in 20th-Century American Literature
This course covers topics in 20th-century literature, its emphasis varying with instructor. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 5700 Topics in Afro-Diasporic Literature and Culture
This course treats some important aspect of African American and Afro-Diasporic literature and culture. Some recent versions of the course have focused on the emergence of African-American women writers, on the relation between African-American literature and cultural studies, and on the Harlem Renaissance. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year

1 Course Unit

ENGL 5735 Topics in Criticism: What is Poetics?
What is poetics? How does it differ from other forms of criticism in terms of both attitude or posture and method? In terms of practices of art and politics, What is its relationship to poieis and ethics -- what is poetics? -- as articulated by such varied thinkers as Joan Retallack, Denise Ferreira Da Silva and R.A. Judy What's to be observed about the current turn of black studies toward poetics? For the seminar, let's think about the above as matters of a) critical inquiry b) art practice and c) professional discipline. It may be possible to triangulate by way of "critique" and "aesthetics." Proposing the inseparability of critical inquiry and writing practice, the final assignment will be deemed experimental since the monograph-ish essay won't be presumed. Consequently, we will discuss the institutional state/status of what participants will have made. Possible readings include Michel Foucault, What is Critique?; Gilles Deleuze and Felix Guattari, What is Philosophy?; Hortense Spillers, Black, White & in Color (selections); Joan Retallack, The Poethical Wager; Denise Ferreira Da Silva, Unpayable Debt; Boris Groys, Going Public; Rachel Zolf, No One's Witness; Leslie Scalapino, Objects in the Terrifying Tense/Longing from Taking Place.

1 Course Unit

ENGL 5740 Introduction to Bibliography
This course offers an introduction to the principles of descriptive and analytic bibliography and textual editing. The history of authorship, manuscript production, printing, publishing, and reading will be addressed as they inform an understanding of how a particular text came to be the way it is. Diverse theories of editing will be studied and put into practice with short passages. The course is generally suitable for students working in any historical period, but particular emphases specified in the current offerings on the English website. www.english.upenn.edu
Not Offered Every Year
1 Course Unit
ENGL 5745 Material Texts
This course offers an introduction to the relationship of texts to their production, circulation, and physical forms, including the history of textual production and reproduction. Students will gain technical expertise and experience through a series of hands-on exercises in bibliographical analysis, but will mainly practice a "way of seeing" material texts that can be brought to bear on literary criticism, cultural or media studies, and historiography, beyond the technical work of bibliography. Different instructors will emphasize different aspects of this topic. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 5790 Provocative Performance
What is feminist theatre? How do artists use live performance to provoke not only thought and feeling, but also social, personal, and political change? This course will examine a wide array of plays and performances by and about women; these pieces are, in turn, serious, hilarious, outrageous, poignantly-and always provocative. Our focus will be on English-language works from the late 20th century to the present (#metoo) moment. We will read these performance texts and/or view them on stage/screen; we will also read essays that provide contextual background on feminist theatre theory and history. Throughout the semester, we will engage diverse perspectives on women and race, ethnicity, class, sexuality, and gender identity; the issues we encounter will also include marriage and motherhood, career and community, feminism and friendship, and patriarchy and power. The class will take full advantage of any related events occurring on campus or in the city, and will feature visits with guest speakers. Students will have the opportunity to pursue research on their own areas of interest (some recent examples are "women in comedy," trans performance, drag kings, feminist directing, etc.).

1 Course Unit

ENGL 5931 Contemporary Film Theory
In this course, we will dig in to a variety of contemporary film theory debates in the context of earlier texts with which they engage or against which they define themselves. We will also watch films weekly and consider the relationship between theory and practice. Course requirements: ; completion of all readings and screenings; participation in class discussion; weekly online responses; 20-25 page paper.
Not Offered Every Year
Also Offered As: ARTH 5931, CIMS 5931, GSWS 5931
1 Course Unit
ENGL 5932 The Place of Film and Media Theory
Taking its title from a recent special issue in the journal Framework, this seminar will engage the where of film and media theory. At a moment when this discourse, often presumed to have roots in Anglo and Western European traditions, is purportedly undergoing a global turn, we will consider how some of film and media theory’s key terms and preoccupations including realism, documentary, genre, identity, sound, spectatorship, nation, auteur, and screens are being inflected by expanded geographic, linguistic, aesthetic and cultural frames. We will grapple with some of the logistical challenges, motivations, resistances, and questions that scholars encounter as they attempt to shift film and media theory’s borders; compare contemporary efforts to broaden the discourse’s geographic horizon with earlier efforts to do the same; and consider what happens to the viewer’s sense of space and place in different media environments. Course requirements: full participation in readings, screenings, discussion, and class presentations; 20-25 page research paper + annotated bibliography.
Not Offered Every Year
Also Offered As: ARTH 5932, CIMS 5932, GSWS 5932
1 Course Unit

ENGL 5933 Cinema and Media Studies Methods
This proseminar will introduce a range of methodological approaches (and some debates about them) informing the somewhat sprawling interdisciplinary field of Cinema and Media Studies. It aims to equip students with a diverse—though not comprehensive—toolbox with which to begin conducting research in this field; an historical framework for understanding current methods in context; and a space for reflecting on both how to develop rigorous methodologies for emerging questions and how methods interact with disciplines, ideologies, and theories. Students in this class will also engage scholars participating in the Cinema and Media Studies colloquium series in practical discussions about their methodological choices. The course’s assignments will provide students with opportunities to explore a particular methodology in some depth through a variety of lenses that might include pedagogy, the conference presentation, grant applications, the written essay, or an essay in an alternative format, such as the graphic or video essay. Throughout, we will be trying to develop practical skills for the academic profession. Although our readings engage a variety of cinema and media objects, this course will be textually based. No prior experience needed. The course is open to upper-level undergraduates with relevant coursework in the field by permission of instructor only. Course Requirements: Complete assigned readings and actively participate in class discussion: 20%; Reading responses: 10%; Annotated bibliography or course syllabus on a particular methodology: 20%; SCMS methodology-focused conference paper proposal according to SCMS format: 10%; Research paper, grant proposal, or essay in an alternative format using the methodology explored in the syllabus or bibliography: 40%.

ENGL 5940 Theories of Nationalism
You cannot build a wall to stop the free flow of literary and creative ideas. But in constructing narratives of national identity, states have long adopted particular texts as "foundational." Very often these texts have been epics or romances designated "medieval," that is, associated with the period in which specific vernaculars or "mother tongues" first emerged. France and Germany, for example, have long fought over who "owns" the Strasbourg oaths, or the Chanson de Roland; new editions of this epic poem, written in French but telling of Frankish (Germanic) warriors, have been produced (on both sides) every time these two countries go to war. In this course we will thus study both a range of "medieval" texts and the ways in which they have been claimed, edited, and disseminated to serve particular nationalist agendas. Particular attention will be paid to the early nineteenth century, and to the 1930s. Delicate issues arise as nations determine what their national epic needs to be. Russia, for example, needs the text known as The Song of Igor to be genuine, since it is the only Russian epic to predate the Mongol invasion. The text was discovered in 1797 and then promptly lost in Moscow’s great fire of 1812; suggestions that it might have been a fake have to be handled with care in Putin’s Russia. Similarly, discussing putative Mughal (Islamic) elements in so-called "Hindu epics" can also be a delicate matter. Some "uses of the medieval" have been exercised for reactionary and revisionist causes in the USA, but such use is much more extravagant east of Prague. And what, exactly, is the national epic of the USA? What, for that matter, of England? Beowulf has long been celebrated as an English Ur-text, but is set in Denmark, is full of Danes (and has been claimed for Ulster by Seamus Heaney). Malory’s Morte Darthur was chosen to provide scenes for the queen’s new robing room (following the fire that largely destroyed the Palace of Westminster in 1834), but Queen Victoria found the designs unacceptable: too much popery and adultery. Foundations of literary history still in force today are rooted in nineteenth-century historiography: thus we have The Cambridge History of Italian Literature and The Cambridge History of German Literature, each covering a millennium, even though political entities by the name of Italy and Germany did not exist until the later nineteenth century. What alternative ways of narrating literary history might be found? Itinerary models, which do not observe national boundaries, might be explored, and also the cultural history of watercourses, such as the Rhine, Danube, or Nile. The exact choice of texts to be studied will depend in part on the interests of those who choose to enroll. Faculty with particular regional expertise will be invited to visit specific classes.

Also Offered As: COML 5980, GSWS 5980
1 Course Unit

ENGL 5991 Media, Platform, Experience
This graduate seminar explores processes and sites of production, distribution, and consumption of audio-visual contents in the contemporary media environment with a focus on both platform logics and user interaction experiences. While “new” media, such as social media, cellphone apps, streaming platforms, video games, and drones increasingly dominate everyday life, “old” media including film, television, and books do not disappear but continue to be consumed and transformed in a new media ecology. Crossing the old/new divide, this course seeks to delineate a fuller picture of the choices, constraints, and experiences available for contemporary media users situated in both the Global North and South. We will attend to both the infrastructures and platforms shaping the circulatory dynamics of the current global media landscape as well as the phenomenological dimensions of media consumption by combining broad discussions of interface, algorithms, temporality, screen, and post-cinema, etc., with case studies that examine specific platforms (e.g. Netflix, Bilibili) and media forms (e.g. Gifs, reaction videos, etc.).
Not Offered Every Year

ENGL 6120 Hannah Arendt: Literature, Philosophy, Politics
The seminar will focus on Arendt’s major work, The Origins of Totalitarianism (and its three parts, Anti-Semitism, Imperialism, Totalitarianism). We will also discuss the reception of this work and consider its relevance today.
Not Offered Every Year
Also Offered As: COML 6120, GRMN 6120, JWST 6120, PHIL 5439
1 Course Unit

ENGL 6160 Approaches to Literary Texts
Most seminars focus on literary texts composed during a single historical period; this course is unusual in inviting students to consider the challenges of approaching texts from a range of different historical eras. Taught by a team of literary specialists representing diverse periods and linguistic traditions and conducted as a hands-on workshop, this seminar is designed to help students of literature and related disciplines gain expertise in analysis and interpretation of literary works across the boundaries of time, geography, and language, from classic to modern. Students will approach literature as a historical discipline and learn about key methodological issues and questions that specialists in each period and field ask about texts that their disciplines study. The diachronic and cross-cultural perspectives inform discussions of language and style, text types and genres, notions of alterity, fictiveness, literariness, symbolism, intertextuality, materiality, and interfaces with other disciplines. This is a unique opportunity to learn in one course about diverse literary approaches from specialists in different fields.

1 Course Unit

ENGL 6400 Franz Kafka and J. M. Coetzee
This seminar will listen attentively to the echoes of Franz Kafka in the novels of J.M. Coetzee. Building on Gilles Deleuze and Felix Guattari’s concept of a minor literature, elaborated on the example of Kafka’s oeuvre, we will situate Kafka against the backdrop of the German-speaking Jewish community of Habsburg-era Prague and read Coetzee within the context of apartheid and his native South Africa. Beyond an investigation of empire and its aftermath, this course will consider the arguably posthuman ethics of these authors, examining them through the lens of animal studies and the environmental humanities in order to reveal how they anticipate and participate in current thinking on the Anthropocene. Reading Kafka’s fables beside Coetzee’s allegorical narratives, the seminar will follow the twisted course taken by literary justice from the Josef K. of Kafka’s Trial to Coetzee’s Life and Times of Michael K. Alongside these two towering figures, the influence of and affinities with other German-language authors (Heinrich von Kleist, Hugo von Hofmannsthal, Robert Walser) and Anglophone contemporaries (Samuel Beckett, Nadine Gordimer, Cormac McCarthy) will also be considered. Other works to be read will include Kafka’s Castle, in the Penal Colony, Metamorphosis and late animal stories as well as Coetzee’s In the Heart of the Country, Waiting for the Barbarians and Elizabeth Costello. Advanced undergraduates may enroll with the permission of the instructor. Readings and discussions in English.

Also Offered As: COML 5400, GRMN 5400
1 Course Unit
ENGL 6490 Socialist and Post-Socialist Worlds
In 1989-1991, a whole world, perhaps many worlds, vanished: the worlds of socialism. In this graduate seminar we will investigate key cultural works, theoretical constructs and contexts spanning the socialist world(s), focused around the USSR, which was for many the (not uncontested) center of the socialist cosmos. Further, we will study the cultural and political interrelationships between the socialist world(s) and anticolonial and left movements in the developing and the capitalist developed nations alike. Finally, we will investigate the aftermath left behind as these world(s) crumbled or were transformed beyond recognition at the end of the twentieth century. Our work will be ramified by consideration of a number of critical and methodological tools for the study of these many histories and geographies. The purview of the course is dauntingly large - global in scale - and therefore "coverage" will of necessity be incomplete. In addition to the lead instructor, a number of guest instructors from Penn and from other institutions will join us to lead our investigations into specific geographies, moments and areas. Additionally, four weeks have been left without content, to be filled in via consensus decision by the members of the seminar.

ENGL 6770 Black Speculative Futures
Why do black cultural producers turn to the speculative? What, in turn, is speculative about blackness? These questions frame this seminar's exploration of how black artists, theorists, and activists imagine different futures, often in the service of critiquing power asymmetries and creating radical transformation in the present. We will explore how the speculative works differently across black literature, visual culture and performance. Additionally, inspired by the multi-disciplinary work that we encounter in the course, we will experiment with crafting our own embodied speculative art in order to better understand its function as both art practice and politics. The course will be divided between discussions centered on close reading of primary and secondary material and creative writing/movement exploration (no previous movement experience necessary). Occasional guest lectures with visiting artists will provide additional fodder for our critical and creative work.

ENGL 7050 Interdisciplinary Approaches to Literature
This course will explore one or more interdisciplinary approaches to literature. Literary relationships to science, art, or music may provide the focus. See the English Department's website at www/english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 7052 Form, Figure, Metaphor
This course will explore the tensions and overlaps between three concepts in literary studies: form, figure, and metaphor. Through readings of works in literary theory, literature, and literary criticism, we will ask what it means to pay attention to the form of a literary text, whether at the micro scale of its literary figures or the macro scale of its overarching structure. We will historicize the shifting relations between our three key terms by exploring their role in ancient rhetoric, Victorian aesthetic theory, Russian formalism, the New Criticism, and deconstruction, among other literary-critical schools. Special attention will be paid to the notion of metaphor as it operates across genres and disciplines. While our focus will be on modern European and American literary theory, students will come away with interpretive tools beneficial to the study of literature of any period or genre.
Also Offered As: COML 6860
1 Course Unit

ENGL 7060 Ancient and Medieval Theories and Therapies of the Soul
This course focuses on premodern conceptions of the 'soul', the force felt to animate and energize a human body for as long as it was considered alive, and to activate virtually all aspects of its behavior through time. Premodern concepts of the soul attempted to account for a person's emotions and desires, perceptions, thoughts, memory, intellect, moral behavior, and sometimes physical condition. The course will trace the various ancient theories of the soul from the Presocratics, Plato, Aristotle, Stoic thought in Greek and Latin, medical writers (Hippocrates, Hellenistic doctors, Galen), and Neoplatonists, to the medieval receptions and transformations of ancient thought, including Augustine and Boethius, Avicenna's interpretation of Aristotle and its medieval influence, and Aquinas and other later medieval ethicists. These premodern conceptions of the soul have a surprisingly long afterlife, reaching into the literary cultures and psychological movements of early modernity and beyond. Knowledge of Greek or Latin not required, but see the following: The seminar will meet for one two-hour session per week, and a separate one-hour 'breakout' session during which students who have registered for GREK 7203 will meet to study a selection texts in Greek, and students who have registered for COML/ENGL will meet to discuss medieval or early modern texts relevant to their fields of study.

1 Course Unit

ENGL 7340 Renaissance Drama
This is an advanced course in Renaissance drama which will include plays by non-Shakespearean dramatists such as Marlowe, Jonson, and Middleton. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 7360 Renaissance Studies
This is an advanced topics course treating some important issue in contemporary Renaissance studies. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 7390 Milton
An examination of Milton’s major poetry and prose with some emphasis on the social and political context of his work. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 7450 Restoration and 18th-Century Fiction
This is an advanced course in the fiction of the Restoration and the 18th Century, the period of “The rise of the novel”. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 7480 Studies in the Eighteenth Century
This course varies in its emphases, but in recent years has explored the theory of narrative both from the point of view of eighteenth-century novelists and thinkers as well as from the perspective of contemporary theory. Specific attention is paid to issues of class, gender, and ideology. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 7530 Victorian British Literature
An advanced seminar treating some topics in Victorian British Literature, usually focusing on non-fiction or on poetry. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 7600 Realisms Seminar--19th Century to Contemporary
An advanced graduate seminar focused on Realism and spanning several centuries. This two-part course will consider the literary history of realism and will take on some fundamental epistemological questions entailed by the novel’s attempts to represent the real. We will read major theories of realism alongside canonical and marginal realist fiction. Emily Steinlight will address the variously formal, aesthetic, political, and epistemological status of realism in nineteenth-century novels and in theories old and new; some discussion will focus on the concept of totality and on the uneven histories and revitalized uses of realism across contexts. Heather Love will address the relation between classical realism, hyperrealism, and modernist/avant-garde departures in the 20th and 21st centuries, with special attention paid to the role of observation and description in literature and the social sciences. The range of readings may include novels by Honoré de Balzac, George Eliot, Leo Tolstoy, George Gissing, Mariano Azuela, Virginia Woolf, Patricia Highsmith, Nicholson Baker, Georges Perec, Karl Ove Knausgaard, and Rachel Cusk, as well as critical and theoretical work by Viktor Schklovsky, Georg Lukács, Ian Watt, Roland Barthes, Catherine Gallagher, Fredric Jameson, Elaine Freedgood, Anna Kornbluh, Colleen Lye, the Warwick Research Collective, and others.
Also Offered As: COML 7600
1 Course Unit
ENGL 7610 British Modernism
This course treats one or more of the strains of British modernism in fiction, poetry, or the arts. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 7680 Genres of Writing
Please check the department's website for the course description: https://www.english.upenn.edu. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 7690 Feminist Theory
Specific topic varies. The seminar will bring together the study of early modern English literature and culture with histories and theories of gender, sexuality and race. Contact with 'the East' (Turkey, the Moluccas, North Africa and India) and the West (the Americas and the Caribbean) reshaped attitudes to identity and desire. How does this history allow us to understand, and often interrogate, modern theories of desire and difference? Conversely, how do postcolonial and other contemporary perspectives allow us to re-read this past? See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 7700 Afro-American Literature
An advanced seminar in African-American literature and culture. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 7710 Textual Production
This course is based on library work and is intended as a practical introduction to graduate research. It addresses questions of the history of the book, of print culture, and of such categories as "work," "character," and "author," as well as of gender and sexuality, through a detailed study of the (re)production of Shakespearean texts from the seventeenth to the twentieth century. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 7730 Modernism
An interdisciplinary and international examination of modernism, usually treating European as well as British and American modernists.
Not Offered Every Year
Also Offered As: COML 7670
1 Course Unit

ENGL 7740 Postmodernism
An advanced seminar on postmodernist culture. Recently offered as a study of relationship between poetry and theory in contemporary culture, with readings in poststructuralist, feminist, marxist, and postcolonial theory and in poets of the Black Mountain and Language groups. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 7750 African Literature
An advanced seminar in anglophone African literature, possibly including a few works in translation. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 7780 20th-Century Aesthetics
This course explores notions that have conditioned 20th century attitudes toward beauty among them ornament, form, fetish, the artifact "women", the moves to 20th century fiction, art manifestos, theory, and such phenomena as beauty contests and art adjudications. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 7785 Topics in Post-45 Literature, Cold War
This course considers the literature and culture of the Cold War period (1945-1991). Different instructors will emphasize different topics within these fields. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 7830 Major American Author
A seminar treating any one of the major American Writers. Past versions have focused on Melville, Whitman, Twain, James, Pound, Eliot, and others. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 7900 Recent Issues in Critical Theory
See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 7901 Recent Issues in Critical Theory Related to Gender & Sexuality
This course will provide an overview of critical theory related to the study of gender and/or sexuality. Different instructors will emphasize different topics within these fields. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
Also Offered As: COML 7901, GSWS 7901
1 Course Unit
ENGL 7905 Modern Literary Theory and Criticism
This course will provide an overview of major European thinkers in critical theory of the 20th and 21st centuries. We will pay particular attention to critical currents that originated in Eastern European avant-garde and early socialist contexts and their legacies and successors. Topics covered will include: Russian Formalism and its successors in Structuralism and Deconstruction (Shklovsky, Levi-Strauss, Jakobson, Derrida); Bakhtin and his circle, dialogism and its later western reception; debates over aesthetics and politics of the 1930s (Lukacs, Brecht, Adorno, Benjamin, Radek, Clement Greenberg); the October group; Marxism, new Left criticism, and later lefts (Althusser, Williams, Eagleton, Jameson, Zizek).
Fall or Spring
Also Offered As: COML 6050, ENGL 6050, FREN 6050, GRMN 6050, ITAL 6050, REES 6435
1 Course Unit

ENGL 7920 Study of a Genre: The Manifesto
If ubiquity confers significance, the manifesto is a major literary form, and yet it has been relatively marginalized in genre studies, where attention to the manifesto has been largely devoted to anthologies. In this seminar we will focus on the manifesto as a genre by exploring its histories, rhetorics, definitions and reception from a Black Studies framework. Associated with politics, art, literature, pedagogy, film, and new technologies, the manifesto involves the taking of an engaged position that is tied to the moment of its enunciation. The manifesto's individual or collective authors seek to provoke radical change through critique and the modeling of new ways of being through language and images. Included on the syllabus will be anticolonial, anti-racist, feminist, LGBTQ manifestos of the 18th through 21st centuries from throughout the Black world. In addition to leading class discussion, students will be responsible for a seminar paper or a final project to be developed in consultation with the instructor.
Not Offered Every Year
Also Offered As: AFRC 7920, LALS 6971, SPAN 6971
1 Course Unit

ENGL 7940 Postcolonial Literature
An advanced seminar treating a specific topic or issue in Postcolonial Literature. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 7950 Topics in Poetics
Topics in poetics will vary in its emphasis depending on the instructor. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 7971 Afro-Latin America
In-depth analysis of the black experience in Latin America and the Spanish, French and English-speaking Caribbean, since slavery to the present. The course opens with a general examination of the existence of Afro-descendants in the Americas, through the study of fundamental historical, political and sociocultural processes. This panoramic view provides the basic tools for the scrutiny of a broad selection of literary, musical, visual, performance, and cinematic works, which leads to the comprehension of the different ethical-aesthetic strategies used to express the Afro-diasporic experience. Essential concepts such as negritude, creolite, and mestizaje, as well as the most relevant theories on identity and identification in Latin America and the Caribbean, will be thoroughly examined, in articulation with the interpretation of artistic works. Power, nationalism, citizenship, violence, religious beliefs, family and community structures, migration, motherhood and fatherhood, national and gender identities, eroticism, and sexuality are some of the main issues discussed in this seminar.
Not Offered Every Year
Also Offered As: AFRC 6971, LALS 6971, SPAN 6971
1 Course Unit

ENGL 7990 Topics in American Literature
An advanced topics course in American literature, with the curriculum fixed by the instructor. Recently offered with a focus on American Literature of Social Action and Social Vision. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
1 Course Unit

ENGL 8000 Teaching of Literature and Composition
A course combining literary study with training in teaching. These courses will normally be taken by students in their first semester of teaching.
Fall
1 Course Unit

ENGL 8500 Field List
Students work with an adviser to focus the area of their dissertation research. They take an examination on the field in the Spring and develop a dissertation proposal. 
Fall or Spring
1 Course Unit

ENGL 8510 Dissertation Proposal
A continuation of ENGL 8500.
Fall or Spring
1 Course Unit

ENGL 8550 Dissertation Proposal
A continuation of ENGL 8500.
Fall or Spring
1 Course Unit

ENGL 9000 The Short Story
A workshop course devoted to the craft of short fiction. Assignments will include informal exercises as well as formal crafted pieces.
1 Course Unit

ENGL 9001 Fiction Workshop
A workshop course in the craft of fiction.
1 Course Unit

ENGL 9002 Memoir Workshop
A creative writing workshop devoted to the craft of memoir. Students will work with some of the forms of memoir, including personal narrative, dialogue, description, and character development, and will explore how memoir can expand our understanding of truth, imagination, memory, and why a story matters.
1 Course Unit
ENGL 9005 Finding Voice: Perspectives on Race, Class and Gender
This writing workshop explores the influence of identity, primarily race, class, gender, and sexuality, on the ways we convey our personal truths to the world.
Not Offered Every Year
Also Offered As: AFRC 9005, GSWS 9005, URBS 9005
1 Course Unit

ENGL 9006 Learning from James Baldwin
This class will examine the intellectual legacy that James Baldwin left to present-day writers such as Toni Morrison, Charles Johnson, Ta-Nehisi Coates, Thulani Davis, Caryl Phillips, and others. We will spend time reading and discussing Baldwin’s novels, short stories, plays and essays, and students will research subjects of their own choosing about Baldwin’s life and art.
Also Offered As: AFRC 9006, GSWS 9006, URBS 9006
1 Course Unit

ENGL 9007 Writing through Music
This writing workshop will focus on the provocative interchanges between music and creative writing. We will consider music of all kinds, all genres (jazz, classical, hip-hop, ambient, folk, electronic, experimental, etc.), as a springboard for the imagination, as a counterpoint to forms of language, and as a tool for cultivating creative writing practices.
1 Course Unit

ENGL 9008 Writing Experiments
A workshop course devoted to cultivating experimental approaches in your writing. Practitioners of prose, poetry, and mixed-genre writing—as well as students who are new to any of these genres—are all welcome. We will test the boundaries of form and language as we hone our skills, experiment with new tools, read a number of writings by authors who break the rules, and explore what taking risks can teach us about our craft.
1 Course Unit

ENGL 9009 Creative Research: A Writer’s Workshop
Many writers think of research as a “task” that is somehow separate from writing. In truth, it’s as much a part of the process as waiting for le mot juste. Research is much more than gathering material and filling in the blanks. It is the process of discovering your material at its deepest source. Students in this course will adopt a mindset of discovery and playfulness as we explore a variety of innovative research methods and hone the fine art of looking right under your nose.
Not Offered Every Year
1 Course Unit

ENGL 9010 Writing for Young Readers
A creative writing workshop devoted to writing for young readers. Young adult, middle-grade, and other kinds of writing will be addressed.
1 Course Unit

ENGL 9011 Screenwriting
This creative writing workshop is devoted to writing scripts for film, video, and television.
1 Course Unit

ENGL 9012 Journalistic Writing
This course is devoted to the art of journalistic writing and will address genres such as straight news, narrative longform, interviews, profiles, criticism, features, and more, as well as writing for a range of platforms, including newspapers, magazines, and websites.
1 Course Unit

ENGL 9013 Memoir Writing
This memoir workshop will shine light on the human experience as viewed through your personal lens. We’ll see how memoir can illuminate larger cultural themes - from the inhumanity of war, to racism, misogyny, and economic inequality - as viewed through lived experiences.
Also Offered As: GSWS 9013, URBS 9013
1 Course Unit

ENGL 9015 Writing and Place
In this creative writing workshop we will consider how writing about place - geography, architecture, landscape, cities, and so on - opens up both our imaginations and our ideas about literary form. Course offerings may include workshops devoted to poetry, fiction, travel writing, and cross-genre writing.
1 Course Unit

ENGL 9016 Being Human: A Personal Approach to Race, Class & Gender
In this workshop, we will address the ways race, class, and gender impact our lives, our work, and our culture. As a class, we will create connection and community by practicing deep listening, daily writing, deep reading, and the sharing of ideas and observations.
Not Offered Every Year
Also Offered As: AFRC 9016, GSWS 9016, URBS 9016
1 Course Unit

ENGL 9017 Considering Race, Class and Punishment in the American Prison System
This graduate writing seminar will examine the origins, myths, and realities of the complex industry that currently imprisons more than 2,300,000 men, women and teens in America’s city, county, state and federal prisons - the largest prison population and highest per-capita rate of imprisonment in the world.
Not Offered Every Year
Also Offered As: AFRC 9017, GSWS 9017, URBS 9017

English Literature (ENLT)

The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

ENLT 1000 Ways of Reading
1 Course Unit
ENLT 1200 Literature, Culture, and Society
Stories matter. They encourage imagination through visions of what could be, even as they challenge us to think critically about the historical realities that influence our daily experiences. Stories also connect us within a web of social and cultural relations that are often hidden in plain view. In this course, we'll explore what this means for each of us through reading, writing, and other forms of active engagement with a wide array of literary texts. Some texts will challenge us to question who we are, what we think, and which roles we play in the world. Others will invite us to reflect on how meaning-making operates across genre, space, and time. But all will offer us examples of why storytelling is a key component of what makes us human. This course is for everyone, including folks who might not traditionally gravitate toward studying literature. During our time together, we'll build foundations for close reading and critical analysis while engaging with physical and digital texts—from classical epics to future-focused media. We'll even play with emergent ideas about society and culture that propose concrete steps for making a better world. The goal is to practice deep work with diverse stories that reflect who we are and what we hope to become. Essential Questions: The course will revolve around five guiding questions, including: • How do literary texts reflect, challenge, and influence cultural norms, identities, and societal structures? • What roles do narratives play in shaping our perceptions of social hierarchies, politics, and power relations? • How can we craft compelling, thoughtful, responses to complex work? • How do we interpret notions of gender, race, and class through literature? • What can creative work teach us about our personal and professional lives? Course Block Contributions: • English Literature • Social Difference, Diversity, Equity, and Inclusion Concentration Contributions: • Creative Studies • Literature, Culture, and Tradition • Individualized Studies
1 Course Unit

ENLT 1400 History in Eight Books
This course provides a broad overview of the history of literature in English from the tenth century to the twentieth. Rather than aim for complete coverage of a thousand years of literary production, we will spend each week delving deeply into one text from a particular historical moment, reading eight works in total. We will familiarize ourselves with literary texts – such as A Midsummer Night’s Dream, Leaves of Grass, and Beloved – that range widely in form, genre, and thematic concern; we will examine how these texts negotiate their sociocultural contexts instead of merely reproducing them; and we will practice how to ask productive questions about literature. Assignments will include regular discussion posts, close reading exercises, a critical bibliography, and a final paper.
1 Course Unit

ENLT 2000 Topics in English Literature
Topics in English Literature. Topics offered will differ.
Fall or Spring
1 Course Unit

ENLT 3000 Radical Literature
In 2018, Dan Rather on the left and Nikki Haley on the right claimed that dissent is As American as apple pie. This course examines the roots of that statement and the repercussions of dissent on national identity and literary production. Class readings and discussions address dissenters who are known for their political positions, such as Thomas Paine and Frederick Douglass, and those who known for their dissent from literary norms, such as Emily Dickinson and Walt Whitman. Explore questions of literary style, its connection to politics, and how dissenting politics call for rethinking literary norms while also connecting to time-honored literary values. Through discussions, papers, and a research project, you can discover what values Americans share around political and stylistic dissent that continue to resonate today.
1 Course Unit

Environmental Studies (ENVS)

ENVS 0053 Sustainable Development and Culture in Latin America
This interdisciplinary course exposes students to the three dimensions of sustainable development - environmental, economic, and social - through an examination of three products - peyote, coca, and coffee - that are crucial in shaping modern identity in areas of Latin America. The course integrates this analysis of sustainable development in relation to cultural sustainability and cultural practices associated with peyote, coca, and coffee and their rich, traditional heritage and place in literature, film, and the arts.
Fall, even numbered years only
Also Offered As: ANTH 0091, LALS 0091, SPAN 0091
1 Course Unit
ENVS 0054 Latinx Environmental Justice
This course explores the involvement of the Latinx environmental justice movement since the 1960s. It addresses theories and concepts of environmental racism and environmental justice, underscoring how Latinx have challenged, expanded, and contributed to the environmental justice discourse. In this course, students will explore national case studies of environmental and racial injustice as they bear on Latinx communities both in rural areas and in urban barrios throughout the United States. The course will analyze these case studies through the lens of Latinx artistic and literary texts (essays, paintings, short stories, documentaries, and short films) as they provide a unique historic and multicultural perspective of the Latinx experience with environmental injustice and of how Latinxs imagine alternative transitions and responses to environmental marginalization. In addition, the works of Latinx artists and writers will serve as case studies to deconstruct racial stereotypes of Latinx as unconcerned about environmental issues, shedding light on how they share a broad engagement with environmental ideas. The case studies analyzed in this course emphasize race and class differences between farmworkers and urban barrio residents and how they affect their respective struggles. The unit on farmworkers will focus on workplace health issues such as toxic chemicals and collective bargaining contracts. The unit on urban barrios will focus on gentrification, affordable housing, and toxic substances in the home. We will also review current and past programs that have been organized to address the aforementioned problems. This is an Academically Based Community Service Course (ABCS course) through which students will learn from and provide support to a Latinx-serving organization in the City of Philadelphia on preventing exposure to hazardous substances, thus bridging the information gap on environmental justice issues in the Latinx community in Philadelphia. Information dissemination and education efforts will be conducted by collaborating with Esperanza Academy Charter School in Philadelphia to implement lessons on preventing exposure to hazardous substances. Studying environmental justice and pairing it with community service will heighten students’ awareness of the complexities of culture, race, gender, and class while providing them with an invaluable experience of cross-cultural understanding.

Spring
Also Offered As: ANTH 0930, LALS 0093, SPAN 0093, URBS 0093
1 Course Unit

ENVS 1000 Introduction to Environmental Science
This course will explore the physical science of the Earth’s environment and human interactions with it. Coverage will include the Earth’s various environmental systems, various environmental problems, and the direct and indirect causes of these environmental problems. Freshman seminar will mirror the ENVS 1000 recitation, and have additional discussions and social media projects.

Spring
1 Course Unit

ENVS 1020 Humans and the Earth System: How it Works, How We Got Here, and How to Save Our Planet
As our planet’s climate changes, it is imperative to understand the basic structures of the earth system and our connections to these, past, present, and future. The goal of this course is to help students develop an integrated understanding of climate change, linking the fundamental science - from the microscopic to the global scale - to human actions and possible futures. This course brings together approaches from environmental science, social sciences, history, and policy. Beyond providing basic climate and environmental literacy, we will also explore current and projected impacts of change, including changes to human life and biodiversity as well as other physical and biological systems. The course is divided into three units: 1. Science: what are the chemical and physical drivers of our changing climate, and what are the biological, health and environmental implications so far. 2. Impacts: how human activity has affected environments and climate so far and how climate change is currently impacting society, nature, agriculture, health, cities, and the most vulnerable communities. 3. Solutions: the roles of policy, business, agriculture, planning, and personal choices. The course is open to undergraduate students of all disciplines. While the reading and weekly assignments will be specific to the module, students may define a capstone project that reflects their academic interests.

Spring
Also Offered As: ANTH 1610
1 Course Unit

ENVS 1040 Water Worlds: Cultural Responses to Sea Level Rise & Catastrophic Flooding
As a result of climate change, the world that will take shape in the course of this century will be decidedly more inundated with water than we’re accustomed to. The polar ice caps are melting, glaciers are retreating, ocean levels are rising, polar bear habitat is disappearing, countries are jockeying for control over a new Arctic passage, while low-lying cities and small island nations are confronting the possibility of their own demise. Catastrophic flooding events are increasing in frequency, as are extreme droughts. Hurricane-related storm surges, tsunamis, and raging rivers have devastated regions on a local and global scale. In this seminar we will turn to the narratives and images that the human imagination has produced in response to the experience of overwhelming watery invasion, from Noah to New Orleans. Objects of analysis will include mythology, ancient and early modern diluvialism, literature, art, film, and commemorative practice. The basic question we’ll be asking is: What can we learn from the humanities that will be helpful for confronting the problems and challenges caused by climate change and sea level rise?

Not Offered Every Year
Also Offered As: CIMS 1130, COML 1130, GRMN 1130
1 Course Unit
ENVS 1043 Repairing the Planet: Tools for the Climate Emergency
This course is a comprehensive introduction to the climate emergency and the tools with which we can fight it. It will integrate natural science, social science, philosophy of science, history, ethics, and policy. The course opens with an overview of the historical discovery of global warming and our contemporary understanding of climate change. We then turn to the framework that the United Nations' Intergovernmental Panel on Climate Change has developed to study climate risks, focusing on both general issues and case studies throughout the world. The existence and severity of these risks raises questions of climate justice at many levels: individuals to individuals, countries to countries, and the present generation to future generations. We will study these issues in detail, and then examine the policy tools developed to address them. Although we will discuss national and sub-national policy and policy proposals such as the Green New Deal, special attention will be given to global policy tools, especially the Framework Convention on Climate Change and the Paris Agreement. In addition to standard writing assignments, students will have a chance to develop policy proposals that address the core issues of the class.
Also Offered As: PHIL 1571
1 Course Unit

ENVS 1050 Sustainability & Utopianism
This seminar explores how the humanities can contribute to discussions of sustainability. We begin by investigating the contested term itself, paying close attention to critics and activists who deplore the very idea that we should try to sustain our, in their eyes, dystopian present, one marked by environmental catastrophe as well as by an assault on the educational ideals long embodied in the humanities. We then turn to classic humanist texts on utopia, beginning with More's fictive island of 1517. The "origins of environmentalism" lie in such depictions of island edens (Richard Grove), and our course proceeds to analyze classic utopian tests from American, English, and German literatures. Readings extend to utopian visions from Europe and America of the nineteenth and twentieth centuries, as well as literary and visual texts that deal with contemporary nuclear and flood catastrophes. Authors include: Bill McKibben, Jill Kerr Conway, Christopher Newfield, Thomas More, Francis Bacon, Karl Marx, Henry David Thoreau, Robert Owens, William Morris, Charlotte Perkins Gilman, Ayn Rand, Christa Wolf, and others.
Not Offered Every Year
Also Offered As: COML 1160, ENGL 1579, GRMN 1160, STSC 1160
1 Course Unit

ENVS 1410 Ecocritical Lit: Nature, Ecology and the Literary Imagination
This course introduces students to ecocritical literature. It is an exploration of how language and literature engages with and shapes our relations to and our understandings of the natural world. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ENGL 1595
1 Course Unit

ENVS 1440 Liquid Histories and Floating Archives
Climate change transforms the natural and built environments, and it is re-shaping how we understand, make sense, and care for our past. Climate changes history. This course explores the Anthropocene, the age when humans are remaking earth's systems, from an on-water perspective. In on-line dialogue and video conferences with research teams in port cities on four continents, this undergraduate course focuses on Philadelphia as one case study of how rising waters are transfiguring urban history, as well as its present and future. Students' projects take them into the archives at the Independence Seaport Museum and at Bartram's Garden. Field trips by boat on the Schuylkill and Delaware Rivers and on land to the Port of Philadelphia and to the John Heinz National Wildlife Refuge invite transhistorical dialogues about how colonial and then industrial-era energy and port infrastructure transformed the region's vast tidal marshlands wetlands. Excursions also help documenting how extreme rain events, storms, and rising waters are re-making the built environment, redrawing lines that had demarcated land from water. In dialogue with one another and invited guest artists, writers, and landscape architects, students' final projects consider how our waters might themselves be read and investigated as archives. What do rising seas subsume and hold? Whose stories do they tell? What floats to the surface?
Not Offered Every Year
Also Offered As: ANTH 1440, COML 1140, ENGL 1589, GRMN 1140, HIST 0872
1 Course Unit

ENVS 1450 Global Sustainabilities
This research-oriented seminar focuses on the ways in which "sustainability" and "sustainable development" are linguistically and culturally translated into the world's languages. We may take the terms for granted, but they have only really been on the global stage since they were widely introduced in the 1987 United Nations report, Our Common Future. Seminar participants will first become acquainted with the cultural and conceptual history of the terms and the UN framework within which sustainability efforts directly or indirectly operate. Having established the significance of cultural and linguistic difference in conceiving and implementing sustainability, participants will collaboratively develop a research methodology in order to begin collecting and analyzing data. We will draw heavily on Penn's diverse language communities and international units. Seminar members will work together and individually to build an increasingly comprehensive website that provides information about the world's languages of sustainability.
Not Offered Every Year
Also Offered As: COML 1170, GRMN 1170
1 Course Unit
ENVS 1540 Comparative Cultures of Sustainability
Sustainability is more than science, engineering, policy, and design. Surveying the world, we see that the politics and practice of sustainability play out in different ways depending on cultural factors. Some cultures are more prone to pursue ecological goals than others. Why? Do the environmental history and experience of a nation affect policy? Do nature and the environment play a crucial role in the cultural memory of a nation? Can cultural tools be effectively leveraged in order to win approval for a politics of sustainability? And what can we, as residents of a country where climate change and global warming are flashpoints in an enduring culture war, learn from other cultures? This course is designed to equip undergraduate students with the historical and cultural tools necessary to understand the cultural aspects of sustainability in two countries noted for their ecological leadership and cultural innovation, Germany and the Netherlands. This hybrid course combines online instruction with a short-term study abroad experience in Berlin and Rotterdam. During the pre-tip online portion of the course, students will become acquainted with the cultural histories of German and Dutch attitudes toward sustainability and the environment through a combination of recorded lectures by the instructor, reading assignments, viewing assignments (documentary and feature films), threaded discussions, and short written assignments. The goal of the pre-tip instruction are to help students develop tools for analyzing and interpreting cultural difference, construct working models of German and Dutch concepts of sustainability, and formulate hypotheses about the relation between culture and policy in Germany and the Netherlands. The class will spend a total of ten days in Europe: five days in Berlin and five days in the area of Rotterdam. The days will be jam-packed with visits to important sites of sustainable practice; discussion with policy makers, activists, and scientists; and immersion in the cultures of the Netherlands and Germany. Upon our return from Europe, the class will debrief and students will present online projects. There are no prerequisites or language requirements.
Summer Term

ENVS 1550 Forest Worlds: Mapping the Arboreal Imaginary in Literature and Film
The destruction of the world’s forests through wild fires, deforestation, and global heating threatens planetary bio-diversity and may even, as a 2020 shows, trigger civilizational collapse. Can the humanities help us think differently about the forest? At the same time that forests of the world are in crisis, the “rights of nature” movement is making progress in forcing courts to acknowledge the legal “personhood” of forests and other ecosystems. The stories that humans have told and continue to tell about forests are a source for the imaginative and cultural content of that claim. At a time when humans seem unable to curb the destructive practices that place themselves, biodiversity, and forests at risk, the humanities give us access to a record of the complex inter-relationship between forests and humanity. Forest Worlds serves as an introduction to the environmental humanities. The environmental humanities offer a perspective on the climate emergency and the human dimension of climate change that are typically not part of the study of climate science or climate policy. Students receive instruction in the methods of the humanities - cultural analysis and interpretation of literature and film - in relation to texts that illuminate patterns of human behavior, thought, and affect with regard to living in and with nature.

ENVS 1615 Urban Environments: Speaking About Lead in West Philadelphia
Lead poisoning can cause learning disabilities, impaired hearing, behavioral problems, and at very high levels, seizures, coma and even death. Children up to the age of six are especially at risk because of their developing systems; they often ingest lead chips and dust while playing in their home and yards. In ENVS 1615, Penn undergraduates learn about the epidemiology of lead poisoning, the pathways of exposure, and methods for community outreach and education. Penn students collaborate with middle school and high school teachers in West Philadelphia to engage middle school children in exercises that apply environmental research relating to lead poisoning to their homes and neighborhoods.
Fall
1 Course Unit

ENVS 1625 Community Based Environmental Health
From the fall of the Roman Empire to Love Canal to the epidemics of asthma, childhood obesity and lead poisoning in West Philadelphia, the impact of the environment on health has been a continuous challenge to society. The environment can affect people’s health more strongly than biological factors, medical care and lifestyle. The water we drink, the food we eat, the air we breathe, and the neighborhood we live in are all components of the environment that impact our health. Some estimates, based on morbidity and mortality statistics, indicate that the impact of the environment on health is as high as 80%. These impacts are particularly significant in urban areas like West Philadelphia. Over the last 20 years, the field of environmental health has matured and expanded to become one of the most comprehensive and humanly relevant disciplines in science. This course will examine not only the toxicity of physical agents, but also the effects on human health of lifestyle, social and economic factors, and the built environment. Topics include cancer clusters, water borne diseases, radon and lung cancer, lead poisoning, environmental tobacco smoke, respiratory diseases and obesity. Students will research the health impacts of classic industrial pollution case studies in the US. Class discussions will also include risk communication, community outreach and education, access to health care and impact on vulnerable populations. Each student will have the opportunity to focus on Public Health, Environmental Protection, Public Policy, and Environmental Education issues as they discuss approaches to mitigating environmental health risks. This honors seminar will consist of lectures, guest speakers, readings, student presentations, discussions, research, and community service. The students will have two small research assignments including an Environmental and Health Policy Analysis and an Industrial Pollution Case Study Analysis. Both assignments will include class presentations. The major research assignment for the course will be a problem-oriented research paper and presentation on a topic related to community-based environmental health selected by the student. In this paper, the student must also devise practical recommendations for the problem based on their research.
Fall
1 Course Unit
ENVS 1635 Urban Environments: Prevention of Tobacco Smoking in Adolescents
Cigarette smoking is a major public health problem. The Centers for Disease Control and Prevention reports that more than 80% of current adult tobacco users started smoking before age 18. The National Youth Tobacco Survey indicated that 12.8% of middle school students and 34.8% of high school students in their study used some form of tobacco products. In ENVS 1635, Penn undergraduates learn about the short and long term physiological consequences of smoking, social influences and peer norms regarding tobacco use, the effectiveness of cessation programs, tobacco advocacy and the impact of the tobacco settlement. Penn students will collaborate with teachers in West Philadelphia to prepare and deliver lessons to middle school students. The undergraduates will survey and evaluate middle school and Penn student smoking. One of the course goals is to raise awareness of the middle school children to prevent addiction to tobacco smoke during adolescence. Collaboration with the middle schools gives Penn students the opportunity to apply their study of the prevention of tobacco smoking to real world situations.
Spring
1 Course Unit

ENVS 1645 Urban Environments: The Urban Asthma Epidemic
Asthma as a pediatric chronic disease is undergoing a dramatic and unexplained increase. It has become the number one cause of public school absenteeism and now accounts for a significant number of childhood deaths each year in the USA. The Surgeon General of the United States has characterized childhood asthma as an epidemic. In ENVS 1645, Penn undergraduates learn about the epidemiology of urban asthma, the debate about the probable causes of the current asthma crisis, and the nature and distribution of environmental factors that modern medicine describes as potential triggers of asthma episodes. Penn students will co-teach asthma classes offered in public schools in West Philadelphia and survey asthma caregivers, providing them with the opportunity to apply theoretical knowledge to real-world situations, promote community education and awareness about asthma, and use problem-solving learning to enhance student education in environmental health.
Spring
1 Course Unit

ENVS 1650 The Role of Water in Urban Sustainability and Resiliency
This course will provide an overview of the cross-disciplinary fields of civil engineering, environmental sciences, urban hydrology, landscape architecture, green building, public outreach and politics. Students will be expected to conduct field investigations, review scientific data and create indicator reports, working with stakeholders and presenting the results at an annual symposium. There is no metaphor like water itself to describe the cumulative effects of our practices, with every upstream action having an impact downstream. In our urban environment, too often we find degraded streams filled with trash, silt, weeds and dilapidated structures. The water may look clean, but is it? We blame others, but the condition of the creeks is directly related to how we manage our water resources and our land. In cities, these resources are often our homes, our streets and our communities. This course will define the current issues of the urban ecosystem and how we move toward managing this system in a sustainable manner. We will gain an understanding of the dynamic, reciprocal relationship between practices in an watershed and its waterfront. Topics discussed include: drinking water quality and protection, green infrastructure, urban impacts of climate change, watershed monitoring, public education, creating strategies and more.
Not Offered Every Year
Prerequisite: ENVS 1000 OR EASC 1000
1 Course Unit

ENVS 1665 Air Pollution: Sources & Effects in Urban Environments
This is an ABCS course designed to provide the student with an understanding of air pollution at the local, regional and global levels. The nature, composition, and properties of air pollutants in the atmosphere will also be studied. The course will focus on Philadelphia's air quality and how air pollutants have an adverse effect on the health of the residents. The recent designation by IARC of Air Pollution as a known carcinogen will be explored. How the community is exposed to air pollutants with consideration of vulnerable populations will be considered. Through a partnership with Philadelphia Air Management Service (AMS) agency the science of air monitoring and trends over time will be explored. Philadelphia's current non-attainment status for PM2.5. and ozone will be studied. Philadelphia's current initiatives to improvethe air quality of the city will be discussed. Students will learn to measure PM2.5 in outdoor and indoor settings and develop community-based outreach tools to effectively inform the community of Philadelphia regarding air pollution. The outreach tools developed by students may be presentations, written materials, apps, websites or other strategies for enhancing environmental health literacy of the community. A project based approach will be used to include student monitoring of area schools, school bus routes, and the community at large. The data collected will be presented to students in the partner elementary school in West Philadelphia. Upon completion of this course, students should expect to have attained a broad understanding of and familiarity with the sources, fate, and the environmental impacts and health effects of air pollutants.
Fall
1 Course Unit

ENVS 2390 Freshwater Ecology
Survey of the physical, chemical and biological properties of freshwater ecosystems, both riverine and lentic, natural and polluted.
Spring
Also Offered As: BIOL 4615
Mutually Exclusive: BIOL 5615
Prerequisite: BIOL 1101 OR BIOL 1121
1 Course Unit
ENVS 2400 Petrosylvania: Reckoning with Fossil Fuel
Fossil fuel powered the making--now the unmaking--of the modern world. As the first fossil fuel state, Pennsylvania led the United States toward an energy-intensive economy, a technological pathway with planetary consequences. The purpose of this seminar is to perform a historical accounting--and an ethical reckoning--of coal, oil, and natural gas. Specifically, students will investigate the histories and legacies of fossil fuel in connection to three entities: the Commonwealth of Pennsylvania, the City of Philadelphia, and the University of Pennsylvania. Under instructor guidance, students will do original research, some of it online, much of it in archives, on and off campus, in and around Philadelphia. Philly-based research may also involve fieldwork. While based in historical sources and methods, this course intersects with business, finance, policy, environmental science, environmental engineering, urban and regional planning, public health, and social justice. Student projects may take multiple forms, individual and collaborative, from traditional papers to data visualizations prepared with assistance from the Price Lab for Digital Humanities. Through their research, students will contribute to a multi-year project that will ultimately be made available to the public.
Also Offered As: HIST 2157
1 Course Unit

ENVS 2410 Religion and Ecology
This class will introduce the overlaps between religion and ecology. Rather than assuming that there is a necessary positive or negative relationship between religion and ecology, we will look at how these relationships have materialized in complicated ways at different moments in history. We'll consider perspectives and case studies from a range of different traditions, with a special attention paid to the genesis of the field of Religion and Ecology in critiques of Christian attitudes toward the environment in the 1960s and 1970s. Not Offered Every Year
Also Offered As: ANTH 2110, RELS 2110
1 Course Unit

ENVS 2420 Animals and Religion
Religion is full of animals—lions and lambs, monkeys and elephants, buffalo and snakes, even mythical beasts. The identity of the human being is explained, in many traditions, by contrast with the identity of other species. We know who we are because we know who they are, or do we? This course interrogates—through an exploration of sacred texts, art, film, and museum artifacts—the tension present in many traditions between an anthropocentric prioritization of the human being and religious resources that encourage a valuing of other animal species. We'll explore the way animals function both as religious objects and as religious subjects across diverse traditions, asking how human-animal relationships have shaped religion and how religion has shaped the way we think about and interact with other animals. We'll ask how religion has engaged with animals over time and across global cultures, understanding them as symbols, messengers, and manifestations of the divine; as material for ritual and sacrifice; as kin and subordinates; as food and as filth; as helpmeets and as tempters. How have these perspectives shaped animal ethics, influencing the treatment, use, and consumption of animals and their bodies? Finally, we'll ask what it means that we ourselves are evolved animals. How does our own animality factor into the practice of human religion? Is our religious capacity part of what sets us apart from other animals or is religiosity a trait we might expect to find in other species? To what extent is religion a function of the animal?

Also Offered As: ANTH 2120, RELS 2120
1 Course Unit

ENVS 2430 Spirituality in the Age of Global Warming: Designing a Digital Mapping Project in Scalar
We are living in the midst of one of the most severe crises in the Earth's history. Science confirms the glaciers are melting, hurricanes are growing more intense, and the oceans are rising. But there is also a deeply spiritual dimension to global warming that does not factor into the scientific explanations of the Anthropocene. "Spirituality" will be defined not in terms of one particular religion, but in relationship to a passionate study of the environment and nature. Readings will include materials from both the sciences and the humanities such as Donella Meadows's Thinking in Systems, Elizabeth Kolbert's The Sixth Extinction, Barbara Kingsolver's Flight Behavior, and films such as Black Fish and Wale Rider. The theoretical focus of the course will be how "multispecies partnerships" can help us better understand and mitigate the effects of Climate Change. This class will work collaboratively on a digital archive with an interactive mapping interface designed in Scalar. This newly developed platform allows for the creation of multimedia exhibits that will document how Global Warming is affecting coral reefs in the tropics, glaciers in the Arctic and Antarctic, rainforests in the Amazon and rivers of Philadelphia. Students will also work individually to design interactive maps on the Scalar platform documenting their own more personal interactions with the environment.
Not Offered Every Year
Also Offered As: ENGL 1599, RELS 2460
1 Course Unit
ENVS 2440 Extreme Heat: White Nationalism in the Age of Climate Change
The Amazon is burning. The glaciers are melting. Heat waves, hurricanes, earthquakes, floods, wildfires, and droughts devastate ever larger swathes of the earth, producing crop failures, air pollution, soil erosion, famine and terrifying individual hardship. At the same, time the so-called Western World is literally walling itself off from the millions who are fleeing from disaster and war with what little they can carry. White militants chant “blood and soil” and “Jews will not replace us,” social media spreads memes and talking points about “white genocide” and “white replacement” and online ideologues fantasize about building white ethnostates. Are these developments connected? Is there a causal relationship? Or are these conditions purely coincidental? Increasingly, arguments about limits to growth, sustainability, development and climate change have come to stand in competitive tension with arguments for social and racial equality. Why is that case? What are the claims and underlying anxieties that polarize western societies? How do white nationalist movements relate to populist and fascist movements in the first half of the 20th century? What is new and different about them now? What is the relationship between environmentalism, rightwing populism and the climate crisis? And how have societies responded to the climate crisis, wealth inequality, finite resources and the threat posed by self-radicalizing white nationalist groups? Also Offered As: HIST 2707
1 Course Unit

ENVS 2984 Maritime Science and Technology: Woods Hole Sea Semester
A rigorous semester-length academic and practical experience leading to an understanding of the oceans. The Sea Semester is composed of two intensive six-week components taken off-campus. The Shore Component is six weeks at Woods Hole, Massachusetts, with formal study in: Oceanography, Maritime Studies, and Nautical Science. This is followed by six weeks aboard a sailing research vessel, during which students conduct oceanographic research projects as part of the courses, Practical Oceanography I and II. Maritime Studies. A multidisciplinary study of the history, literature, and art of our maritime heritage, and the political and economic problems of contemporary maritime affairs. Nautical Science. The technologies of operation at sea. Concepts of navigation, naval architecture, ship construction, marine engineering systems, and ship management are taught from their bases in physics, mathematics, and astronomy. Practical Oceanography I. Taken aboard SSV Westward or SSV Corwith Cramer. Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During two lectures daily and while standing watch, students learn the operation of basic oceanographic equipment, the methodologies involved in the collection, reduction, and analysis of oceanographic data, and the attendant operations of a sailing oceanographic research vessel. Practical Oceanography II. Taken aboard SSV Westward or SSV Corwith Cramer. Students assume increasing responsibility for conducting oceanographic research and the attendant operations of the vessel. The individual student is responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operation of the vessel. Each student completes an individual oceanographic research project designed during the shore component.
Fall or Spring

1 Course Unit

ENVS 3053 Sustainable Development And Culture in Latin America
This interdisciplinary course exposes students to the three dimensions of sustainable development—environmental, economic, and social—through an examination of three products—peyote, coca, and coffee—that are crucial in shaping modern identity in areas of Latin America. The course integrates this analysis of sustainable development in relation to cultural sustainability and cultural practices associated with peyote, coca, and coffee and their rich, traditional heritage and place in literature, film, and the arts. This is an upper level seminar open to majors and minors of Spanish and those who have completed Pre-requisite SPAN 1800 or SPAN 1900 or permission of the Undergraduate Chair.
Fall, even numbered years only
Also Offered As: LALS 3910, SPAN 3910
Prerequisite: SPAN 1800 OR SPAN 1900
1 Course Unit

ENVS 3100 Environmental Case Studies
This course, through the analysis of many different environmental cases studies, aims to introduce students to myriad earth and environmental issues—understanding how humans interact, affect and are influenced by our environment—as well as giving students an introduction to how complex cases are analyzed and what goes into decision-making at the individual, group, state, federal and global levels. The class analyzes 1-2 case studies each week, beginning with at-home preparatory assignments for each class, followed by in-class activities such as debates, drafting action plans, role-playing and group decision-making simulations. Each student will also research and develop a case study of their own, including a lesson plan for how the case study would be taught to a later college class.
Not Offered Every Year
Prerequisite: EESC 1000 OR ENVS 1000 OR permission of instructor
1 Course Unit

ENVS 3103 Penn Global Seminar: Case Studies in Environmental Sustainability
A detailed, comprehensive investigation of selected environmental sustainability problems specific to a selected region. This course aims to introduce students to myriad Earth and environmental issues (understanding how humans interact, affect and are influenced by our environment) through the analysis of several environmental case studies, as well as giving students an introduction to how complex cases are analyzed and what goes into decision-making at the individual, group, state, federal and global levels. The course includes an intensive international field trip - locations will vary by offering.
Spring, even numbered years only
Prerequisite: ENVS 1000 OR EASC 1000 OR EASC 1060 OR EASC 1050 OR EASC 1030
1 Course Unit
ENVS 3445 Latinx Environmental Justice
This course explores the involvement of the Latinx environmental justice movement since the 1960s. It addresses theories and concepts of environmental racism and environmental justice, underscoring how Latinx have challenged, expanded, and contributed to the environmental justice discourse. In this course, students will explore national case studies of environmental and racial injustice as they bear on Latinx communities both in rural areas and in urban barrios throughout the United States. The course will analyze these case studies through the lens of Latinx artistic and literary texts (essays, paintings, short stories, documentaries, and short films) as they provide a unique historic and multicultural perspective of the Latinx experience with environmental injustice and of how Latinxs imagine alternative transitions and responses to environmental marginalization. In addition, the works of Latinx artists and writers will serve as case studies to deconstruct racial stereotypes of Latinxs as uninterested about environmental issues, shedding light on how they share a broad engagement with environmental ideas. The case studies analyzed in this course emphasize race and class differences between farmworkers and urban barrio residents and how they affect their respective struggles. The unit on farmworkers will focus on workplace health issues such as toxic chemicals and collective bargaining contracts. The unit on urban barrios will focus on gentrification, affordable housing, and toxic substances in the home. We will also review current and past programs that have been organized to address the aforementioned problems. This is an Academically Based Community Service Course (ABCS course) through which students will learn from and provide support to a Latinx-serving organization in the City of Philadelphia on preventing exposure to hazardous substances, thus bridging the information gap on environmental justice issues in the Latinx community in Philadelphia. Information dissemination and education efforts will be conducted by collaborating with Esperanza Academy Charter School in Philadelphia to implement lessons on preventing exposure to hazardous substances. Studying environmental justice and pairing it with community service will heighten students' awareness of the complexities of culture, race, gender, and class while providing them with an invaluable experience of cross-cultural understanding.

ENVS 3500 Principles of Sustainability
What is sustainability? Can any fundamental concepts, principles or framework be constructed that adequately describes the search for sustainability? Is there a meaningful methodology? Sustainability science is a trans-disciplinary approach in which the quantitative and qualitative, natural and social, and theory and practice are reconciled and creatively combined. The objective of this course is to provide an in-depth analysis of the foundational concepts, principles, processes and practices of sustainability science. The course will explore three foundational laws governing sustainability: the law of limits to growth, the second law of thermodynamics, and the law of self-organization. Students will examine how these laws operate in biological, ecological, and physical systems, and then apply them to social, economic and political systems.

ENVS 3550 Sustainable Goods
The study of sustainability—the long-term viability of humans in harmony with the environment—has been identified as a critical issue for society and industry and is evolving to examine how society should conduct itself in order to survive. This issue impacts the consumer goods that we use in our lives, the processes that are designed to make these goods, and the raw materials that we obtain to create these goods. The questions that we will examine will be: can these goods be obtained, made, and consumed in a fashion that allows the current quality of life to be maintained (or enhanced) for future generations? Can these processes be sustainable? A review of consumer goods is necessary as the starting point in order to understand the basic needs of people in society and why people consume goods as they do. Subsequently, each student will choose a product to examine in detail and will research the product for its impact with respect to natural resource selection, production, use, and disposal/reuse.

ENVS 3700 GIS: Mapping Places & Analyzing Spaces
This course is a hands-on introduction to the concepts and capabilities of geographic information systems (GIS). Students will develop the skills necessary for carrying out basic GIS projects and for advanced GIS coursework. The class will focus on a broad range of functional and practical applications, ranging from environmental science and planning to land use history, social demography, and public health. By the end of the course, students will be able to find, organize, map, and analyze data using both vector (i.e. drawing-based) and raster (i.e. image-based) GIS tools, while developing an appreciation for basic cartographic principles relating to map presentation. This course fulfills the spatial analysis requirement for ENVS and EASC Majors. Previous experience in the use of GIS is not required.

ENVS 3997 Environmental Studies Research Seminar for Juniors
This seminar is designed to help Juniors prepare for the Senior Thesis research. Topic selection, advisor identification, funding options, and basic research methods will be discussed.

ENVS 4200 The Anthropocene: Human-dominated Earth
How much have humans altered the planet they live on? Beyond climate change, humans have altered the Earth's land, oceans and biosphere to such an extent that the concept of a new geologic epoch defined by the action of humans is seriously debated. This seminar will examine the origins of the Anthropocene, the ways in which humans have altered Earth systems, whether or not these alterations warrant a new geologic designation, and what the future potentially holds for both humans and the planet.

ENVS 3500 Principles of Sustainability
What is sustainability? Can any fundamental concepts, principles or framework be constructed that adequately describes the search for sustainability? Is there a meaningful methodology? Sustainability science is a trans-disciplinary approach in which the quantitative and qualitative, natural and social, and theory and practice are reconciled and creatively combined. The objective of this course is to provide an in-depth analysis of the foundational concepts, principles, processes and practices of sustainability science. The course will explore three foundational laws governing sustainability: the law of limits to growth, the second law of thermodynamics, and the law of self-organization. 1 Course Unit
ENVS 4250 Our Water Planet

Water, the “universal solvent”, is a miraculous substance that makes Earth unique in the solar system and, possibly, the galaxy. This course will dive into the wondrous physical and chemical properties of water from the micro (water properties and composition) to macro (global water resources) scale and highlight its role in sculpting almost every facet of Earth’s environment. Water will be examined within a scientific framework, from wicked water problems to wondrous water bodies to the paradox of an abundant yet incredibly precious resource. We will study the vital role of water in life, its movement across our planet, its part in the growth (and downfall) of civilizations, and the ways in which humans are having profound impacts on all aspects of the water cycle. We will also look at how water interacts with other Earth systems, use topical case studies to examine water issues in the Anthropocene and examine what lies in store for water quality and availability in the twenty-first century during an era of rapid environmental change. Assignments will include class presentations, an opinion piece, and a review article for a leading journal. This course will include a local field trip.

1 Course Unit

ENVS 5100 Proseminar: Contemporary Issues in Environmental Studies
A detailed, comprehensive investigation of selected environmental problems. This is the first course taken by students entering the Master of Environmental Studies Program.
Fall or Spring
1 Course Unit

ENVS 5204 Regional Ecology: Restoration and Management to Build Resilience
Using the regional geology as a framework for comparison, this online course aims to 1) introduce the varied ecosystems of the region extending from the Atlantic Ocean to the Appalachian Mountains, 2) provide an approach to site analysis that examines connections between climate, geology, topography, hydrology, soils, vegetation, wildlife, and disturbance, both natural and anthropogenic, and 3) investigate restoration and management efforts to build resilience in a changing climate. We will study natural and modified areas representative of regional physiographic provinces (areas of similar geology and topography) to better understand landscape patterns and processes as well as case studies of restoration and management projects. Students will complete weekly assignments and a research project involving a presentation and paper on a topic of interest. *This is an online course*+
1 Course Unit

ENVS 5220 Sustainable Agriculture and Product Stewardship.
This course will focus on how food is produced around the globe and inputs required to ensure food security. Topics explored include: Integrated Pest Management, Precision Agriculture, Product Stewardship, Biodiversity, Botanicals, Organics and Synthetic Products, GMOS, Sustainable Development Goals, Regulations, Stakeholders (Growers, NGOs, consumers, etc.), and Food waste.
1 Course Unit

ENVS 5310 The History and Science of Climate Change
This course will provide an understanding of the Earth’s climate system and how and why this has changed through time. The emphasis will be placed on spatial and temporal scales in the modern system while exploring the evidence for past change, possible mechanisms to explain these changes and the implications of these changes to past, present and future global climate. Students will learn to reconstruct the history and scales of climate change through the use of proxies; understand the mechanisms that act to drive climate change; show and understanding of the long-term natural climate variability on a global and regional scale; understand the importance of natural environmental change, against which to assess human impacts, recent climate change and issues of future environmental change.
1 Course Unit

ENVS 5404 Wetlands
The course focuses on the natural history of different wetland types including climate, geology, and hydrology factors that influence wetland development Associated soil, vegetation, and wildlife characteristics and key ecological processes will be covered as well. Lectures will be supplemented with weekend wetland types, ranging from tidal salt marshes to non-tidal marshes, swamps, and glacial bogs in order to provide field experience in wetland identification, characterization, and functional assessment. Outside speakers will discuss issues in wetland seed bank ecology, federal regulation, and mitigation. Students will present a short paper on the ecology of a wetland animal and a longer term paper on a selected wetland topic. Readings from the text, assorted journal papers, government technical documents, and book excerpts will provide a broad overview of the multifaceted field of wetland study.

ENVS 5410 Environmental Humanities: Theory, Method, Practice
Environmental Humanities: Theory, Methods, Practice is a seminar-style course designed to introduce students to the trans- and interdisciplinary field of environmental humanities. Weekly readings and discussions will be complemented by guest speakers from a range of disciplines including ecology, atmospheric science, computing, history of science, medicine, anthropology, literature, and the visual arts. Participants will develop their own research questions and a final project, with special consideration given to building the multi-disciplinary collaborative teams research in the environmental humanities often requires.

Also Offered As: COML 5430, ENGL 5430, GRMN 5430, SPAN 5430
1 Course Unit
ENVS 5414 Conservation and Land Management
Using protected lands in the Delaware Valley, this field-based course will explore various strategies for open-space conservation and protection. In addition, students will be introduced to land management techniques used on such sites to restore or preserve land trust properties in accordance with goals set for their use or protection. Sustainable land uses such as community supported agriculture, ecovillages, and permaculture design will be covered. Emphasis will be placed on developing skills in "Reading the Landscape" to determine conservation and restoration priorities. Students will produce a site assessment report on sites that they visit. Summer Term
1 Course Unit

ENVS 5440 Public Environmental Humanities
This broadly interdisciplinary course is designed for Graduate and Undergraduate Fellows in the Penn Program in Environmental Humanities (PPEH) who hail from departments across Arts and Sciences as well as other schools at the university. The course is also open to others with permission of the instructors. Work in environmental humanities by necessity spans academic disciplines. By design, it can also address and engage publics beyond traditional academic settings. This seminar, with limited enrollment, explores best practices in public environmental humanities. Students receive close mentoring to develop and execute cross-disciplinary, public engagement projects on the environment. In spring 2018, participants have the opportunity to participate in PPEH's public engagement projects on urban waters and environmental data. These ongoing projects document the variety of uses that Philadelphians make of federal climate and environmental data, in and beyond city government; they also shine light on climate and environmental challenges our city faces and the kinds of data we need to address them. Working with five community partners across Philadelphia, including the City's Office of Sustainability, students in this course will develop data use stories and surface the specific environmental questions neighborhoods have and the kinds of data they find useful. The course hosts guest speakers and research partners from related public engagement projects across the planet; community, neighborhood, open data, and open science advocates; and project partners in government in the City of Philadelphia and Commonwealth of Pennsylvania. Course assignments include: * 2 short-form essays (course blog posts); * a 12-hour research stay (conducted over multiple visits) with a community course partner to canvas data uses and desires; * authorship of 3 multimedia data stories; * co-organization and participation in a city-wide data storytelling event on May 2, 2018.

1 Course Unit

ENVS 5440 Developing Environmental Policy
When we think of environmental policies in the USA, we may think of one or more laws geared to improve our nation's air, water, ecosystems, and biodiversity. However, environmental policies and policy-making comprise more than just specific laws and regulations. Making and implementing environmental policy is a process influenced by multiple political, cultural, and economic factors in addition to scientific factors, all of which impact the ability of policies to be effective, that is, to actually improve the environment. In this course, we develop a framework to analyze the effectiveness of the social actors, process and outcomes of environmental policy-making. We ask questions such as: How do policy makers define environmental problems and solutions? Who are the social actors involved in the process? How are policies created and negotiated? What underlying assumptions and realities about the roles of government and society shape policy instruments and design? Are science and risk accurate or distorted? How are social and environmental justice intertwined? To answer these complex questions, we contextualize and critically analyze policies to determine how both government and society impact on regulatory approaches. We study the institutions involved and examine social and ecological outcomes of environmental policies. We also discuss contemporary issues and policy situations that arise throughout the course of the semester, and comment on them in a class blog. Finally, students will select an environmental issue and formulate a policy proposal to recommend to decisionmakers.
Spring
1 Course Unit

ENVS 5706 Modeling Geographical Objects
This course offers a broad and practical introduction to the acquisition, storage, retrieval, maintenance, use, and presentation of digital cartographic data with both image and drawing based geographic information systems (GIS) for a variety of environmental science, planning, and management applications. Its major objectives are to provide the training necessary to make productive use of at least two well known software packages, and to establish the conceptual foundation on which to build further skills and knowledge in late practice.
Fall
1 Course Unit

ENVS 5716 Modeling Geographical Space
This course explores the nature and use of digital geographic information systems (GIS) for the analysis and synthesis of spatial patterns and processes through 'cartographic modeling'. Cartographic modeling is a general but well defined methodology that can be used to address a wide variety of analytical mapping applications in a clear and consistent manner. It does so by decomposing both data and data-processing tasks into elemental components that can then be recomposed with relative ease and with great flexibility.
Spring
1 Course Unit

ENVS 5744 Regional Field Ecology
Over the course of six Sunday field trips, we will travel from the barrier islands along the Atlantic Ocean in southern New Jersey to the Pocono Mountains in northeastern Pennsylvania, visiting representative sites of the diverse landscapes in the region along the way. At each site we will study and consider interactions between geology, topography, hydrology, soils, vegetation, wildlife, and disturbance. Students will summarize field trip data in a weekly site report. Evening class meetings will provide the opportunity to review field trips and reports and preview upcoming trips. Six all-day Sunday field trips are required.
Summer Term
1 Course Unit
ENVS 6220 Conservation Management in the Delaware Valley
Using protected lands in the Delaware Valley, this field-based course will explore various strategies for open space conservation and protection, along with cultural perspectives on land preservation. In addition, students will be introduced to land management techniques used on such sites to restore or preserve them in accordance with goals set for their use or protection. Emphasis will be placed on developing skills in "reading the landscape" to determine conservation and restoration priorities. Students will produce a paper based on notes from field trips, class, and readings.
Not Offered Every Year
1 Course Unit

ENVS 6221 Topics Course in Resource Management
This is a topics course exploring resource management issues.
1 Course Unit

ENVS 6224 Bioremediation
This course is an introduction to current and developing techniques for analyzing environmental contamination and for remediation of damaged environments. Knowledge of these options is important for students interested in public/law applications and environmental/landscape design and as a starting point for those pursuing a more science-oriented understanding. The first portion of this course will address bioindicators-the use of living systems to assess environmental contamination. These include systems ranging from biochemical assays to monitoring of whole organisms or ecosystems, as well as techniques ranging from laboratory to field and satellite surveys. The second portion of the course will introduce technologies for bioremediation-the use of living systems to restore contaminated environments. The technologies scale from single-species systems to complex ecosystems such as constructed wetlands; case studies will be examined. Students will be expected to participate in field trips, as well as prepare a final paper examining a particular technology in detail.

1 Course Unit

ENVS 6225 Charting a New Course for the Water Industry
We are entering an era of growing water infrastructure failures and remaining "legacy" water pollution challenges. Fortunately, a network of global water CEOs from water utilities, industry and engineering consulting are leading the water sector towards innovative change. They are finding solutions at the intersection of science, engineering/technology and policy and paving the path forward for our water industry and our global water resources. This short course is led by the former CEO of Philadelphia Water and the Chair of the Leading Utilities of the World Network. Professor of Practice Howard Neukrug will lead a series of discussions on: (1) a brief history of water infrastructure systems in the US and the paradox of how our water resources have been used, valued, and priced over time; (2) a specific focus on the past 50 years of Philadelphia’s efforts to meet the challenges of the Clean Water Act and Safe Drinking Water Act through leadership in the legislative, regulatory, management, and policy and research arenas of the water business; and (3) personal interviews with key water leaders on their greatest challenges past and future and how they are managing change and innovation towards more sustainable water systems in the 21st century.
Not Offered Every Year
0.5 Course Units

ENVS 6300 The Future of Water
From Wall Street to rural Sub-Saharan Africa, technology innovation to aging infrastructure-this course will explore the; impact of water and consider what future leaders need to know about the dynamics of the industry, investment and business opportunities, and water-related risk; Opportunities for water are booming around the world, in large part because of existing or looming shortages and decades of underinvestment, population growth, rapid industrialization and urbanization, pollution, and climate change. Water is the only irreplaceable natural resource on the planet. Its critical role in every aspect of the global economy, could, in fact, lead it to be the next gold or the next oil. This course will address the fundamentals of the water sector from an international perspective. The future of water will be critical to our global economic, social and political development and will likely become one of the most influential factors in business decisions for the future. Furthermore, it is essential for leaders across all sectors-from pharmaceuticals to financials, energy to agriculture—to understand how to sustainably manage and account for water resources, capitalize on new technologies, mitigate water-related risks and navigate through complex and dynamic policy and regulation. The course will engage students in high-level discussion and strategy formation, challenging them to develop creative and sustainable solutions to some of the greatest challenges facing environmental, business and water industry leaders today. Interactive sessions and projects will provide an introduction to appropriately managing, valuing and investing in water assets to create sustainable and compelling business opportunities.
Fall
1 Course Unit
ENVS 6302 Climate Technology: Finance and Policy
The growing field of climate technology requires a multifaceted skill set anchored in a sound understanding of finance and policy. This course is designed for students interested in the climate economy seeking to gain functional proficiency in climate finance and policy. The course will cover four key areas of the climate economy from a finance and policy angle: electrification, carbon management, critical minerals & materials, and breakthrough technologies. The finance portion of the course will deliver a basic understanding of the financial reporting of companies within the given subsector, functionality of the relevant technologies, capital structure of relevant companies, and general business model of relevant companies. The policy portion of the course will deliver a basic understanding of the salient policies and issues facing companies in the aforementioned subsectors as well as sector wide headwinds and tailwinds catalyzed by policy. Throughout the course, students will build a financial model, business plan, and present their end deliverable in a shark tank format at the end of the course with observers drawn from the field to provide networking opportunities.
Fall
1 Course Unit

ENVS 6434 Avifaunal Ecology: Studying ornithological principles & behaviors to indicate ecosystem health
This class will explore the foundations of avifaunal biology and ecology using a combination of hands-on classroom and in-the-field experiences. Classroom content includes physiology, anatomy, and morphology of birds. The fall migration of birds in North America is an epic and often tragic event. Sampling birds in migration has resulted in foundational understandings about stopover habitats, species-specific energy budgets and has helped realize the complete life cycle of hundreds of species. We will enter the field and participate in actual ornithological research, explore avifaunal ecology through birdwatching, and meet with regional leaders in the ornithological field.
Spring
1 Course Unit

ENVS 6440 Meaningful Participation: Race, Place and Environmental Justice
This course will focus on a critical exploration of the social movements and policies related to environmental injustices from a community development perspective. The course includes an overview of the Environmental Justice Movement as an evolution from the Civil Rights Movement as well as an exploration of the political economy of environmental inequalities and uneven development that contribute to urban land use patterns that catalyze a range of environmental injustices. This course will emphasize authentic engagement of frontline communities to address a range of environmental inequalities using urban planning and community based solutions. Exploring a Philadelphia-area organization is a key component in this course.
Not Offered Every Year
1 Course Unit

ENVS 6450 Environmental Activism: Actors, Approaches, and Outcomes
From Rachel Carlson to Greta Thunberg – and whether via public blockades or behind-the-scenes boardroom votes – activism has been a driving force of change on environmental issues. This course will offer an overview of environmental activism, including players, strategies and tactics, and impacts. Students will explore various types of activists (e.g., grassroots, NGO, employee, investor) and the relationships between activism aimed at businesses vs. governments. The course will help students understand the historical roots of environmental activism, and what influence current demographics, public opinion, and technology have had, including on recent climate activism. Through case studies, news stories, academic readings, and class discussion, students will learn the various roles activists play, how activism impacts business practices and laws, and many of the ways companies relate to activists. Quizzes, case analyses, and other methods will be used to demonstrate mastery of the material.
1 Course Unit

ENVS 6520 Sustainable Estuaries: An Investigation of Resources & Recovery
This course will evaluate the multiple factors that must function to ensure the sustainability of estuaries of national significance. Since the beginning of the environmental movement in the 1960s, we have attempted to protect and improve our watersheds and estuaries through a series of environmental laws, but we learned over the last three decades that regulatory-based “command & control” approaches may have achieved their limits of success, and we now need to think more holistically in order to achieve the Clean Water Act goal of “fishable and swimmable” waters. In this course we will explore the new collaborative strategies and partnerships, which are available, and how social, economic and cultural factors are equally important as regulation to achieve estuary restoration. The National Estuary Program (NEP) was established in 1987 by amendments to the Clean Water Act (Section 320) to identify, restore and protect estuaries along the coasts of the U.S. Unlike traditional regulatory approaches to environmental protection, the NEP targets a broad range of issues and engages local communities in the process. The program focuses not just on improving water quality in an estuary, but on maintaining the integrity of the whole system - its chemical, physical, and biological properties, as well as its economic, recreational, and aesthetic. This course will examine the twenty estuaries of national significance, including the Chesapeake and the Delaware Bays, in an effort to define the condition of estuaries in the US and what strategies can be utilized to attain water quality and habitat goals while achieving important socioeconomic needs of the estuary’s diverse stakeholders. You will examine the history of estuary management, the factors that stress water quality and habitat, and what strategies are commonly used to reduce risks while safeguarding the environment and public health.
Summer Term
1 Course Unit
ENVS 6530 Corporate Sustainability Strategies
Before the year 2000, "environmental management" for a business was typically driven by the need to respond to restrictions imposed by environmental regulation. But, at the dawn of the new millennium, leading businesses began to change their concept of environmental management to look beyond simply meeting governmental dictates. These organizations began to evolve and utilize "environmental strategy" to create new ways of growing their businesses by bringing sustainability to the core of their business strategies. This seismic shift in view was accompanied by a bottom line emphasis that, in some cases, turned sustainability efforts into profit centers. Sustainability increasingly is not hidden within the silo of environmental, health, and safety departments but has become much more seamlessly integrated into the operations of corporate functional disciplines. Today, to effectively work in senior management, an executive needs to be knowledgeable not only about his or her specific business function but also how his or her business will be impacted by governmental regulations, policies, corporate sustainability initiatives, green marketing regulations, industry guidelines or 'best practices,' new sustainable technologies, energy planning, environmental performance metrics, and required reporting on the environmental impact of their business unit.

Spring
1 Course Unit

ENVS 6550 Life Cycle Assessment
In order to make sensible decisions on products or projects, people need to understand the environmental impacts of these actions. Life cycle assessment (LCA) is a process to assess environmental impacts throughout the different stages of a product or project's life cycle. This seminar is intended to be comprehensive and covers material extraction, processing, manufacture, distribution, use and end of life reuse, recovery or disposal. The objective of conducting an LCA is to compare the full range of environmental impacts that emanate from the provision of these products or services and then use that information to improve the situation to minimize or eliminate harm. The focus of this class will be to understand the phases of an LCA as well as conduct LCAs that compare the impacts of two related options. This course will enable the student to conduct LCAs and examine the use of software that could be used in this regard. The classic examples are cloth vs. disposable diapers, paper vs. ceramic cups, and so on. This course will enable the student to conduct LCAs and examine the use of software that could be used in this regard.

Fall
Prerequisite: ENVS 6550
1 Course Unit

ENVS 6551 The Principles of Mapping for Environmental Justice
Environmental Justice (EJ) mapping examines the intersection of environmental burdens and the vulnerable communities disproportionately impacted by their harm. From redlining to the static maps that first showed the correlation between race and waste, and moving through to today's truly dynamic EJ mapping tools, The Principles of Mapping for Environmental Justice explores how mapping quite literally puts EJ on the environmental movement landscape. This is not a GIS course, nor a course on EJ generally, but an examination into the core components that are inherent to EJ mapping principles. Come explore the indicators and methodologies used by federal, state and local governments and the policy they influence, such as President Biden’s Justice40 Initiative. Not Offered Every Year
Prerequisite: ENVS 6550
1 Course Unit

ENVS 6555 Gender and Climate Crisis
The devastating impacts of climate change such as water scarcity, floods, migration, and sea level rise, are not gender neutral. Men and women, boys and girls are affected differently by these crises even though they live in the same household. Women and girls are more likely to face inequality in access to education and jobs, health, and safety with the current approaches to combating climate change. Climate action therefore must be investigated from a gender lens. Long-standing social norms around women providing food and water for their families have increasingly put them at risk of poor physical and mental health, sexual abuse, and lack of formal education. Further, the abuse of younger boys in water-scarce areas often goes undiscovered because of the cultural restrictions and taboos around homosexuality. In recent years, a small number of extraordinary women have emerged as global leaders in tackling the climate crisis. However, generally, women and the LGBTQIA+ community are greatly under-represented in high-level climate negotiations; tend to be disproportionately vulnerable to climate impacts, and climate solutions tend to ignore gender-specific issues perpetuating in a general bias of infrastructure and services not being gender-inclusive. This course will discuss such gender impacts of climate change, gender inclusion in climate-related workplaces, examples of gender empowerment, and ways by which gender-inclusive climate action can be designed.

ENVS 6557 Introduction to Superfund Sites and Health Effects of Hazardous Waste
Superfund hazardous waste sites are prevalent in our nation and the exposures to toxicants from these sites raise immediate health concerns. The aims of this course are to educate students about such sites and provide a scientific basis for hazard identification, hazard characterization, risk communication and risk management. The course will describe the effect of these hazardous chemicals on the ecosystem and vice-versa, and remediation and mitigation approaches. These environmental science issues will lead into the environmental health aspects of exposures including: biomonitoring (external and internal dose, biomarkers and the exposome), toxicological properties of contaminants and mode-of-action. The course will be complemented with visits to two Superfund sites in the region: Ambler (asbestos) and Palmerton (heavy metals). Prerequisite: 400 level course in Biology/Chemistry and Biochemistry
Also Offered As: PHRM 6570
1 Course Unit
ENVS 6611 Floodplain Management in a Changing Climate
According to a 2019 paper by Scott A. Kulp and Benjamin H. Strauss, published in Nature Communications, 230 million people worldwide occupy land that is less than 1 meter above current high tide. By 2100, land now home to 200 million people could sit permanently below the high tide line as a result of rising sea levels from heat-trapping pollution from human activities. Add to these coastal challenges the inherent flood risks in riverine and urban settings. How do we prepare and adapt? The class will explore the challenge of floodplain management in a changing climate through lectures, discussions, talks by guest experts, readings and multimedia. Our class will look at the United States National Flood Insurance Program, examine its goals, critique its 50-year plus history and debate reforms to the program at the same time the U.S. Congress is considering long over due reauthorization of the program. We will look at resiliency efforts that states and local governments are pursuing and the new and evolving city- and state-level position of Chief Resiliency Officer. In class we will cover hazard mitigation planning, land use, hard and natural infrastructure, regulations, the Community Rating System and other issues pertaining to flooding and climate change, including social justice and public health issues. The class will have a field trip to the New Jersey coast to explore high tide flooding and adaptation measures being taken. Throughout the course, material will be introduced to aid the student in taking the Certified Floodplain Manager exam administered by the Association of State Floodplain Managers. This optional test, should the student pass, will provide credentialing that is well recognized throughout the United States and sought by government and the private sectors. While the course is heavily weighted in the United States, students are encouraged to introduce case studies, experiences, comparisons and ultimately consider focusing on countries, regions and locales that are outside the United States for the students Course Project.

Fall
1 Course Unit

ENVS 6620 Global Water Conference in Stockholm, Sweden
The global water and sanitation crisis kills over 4,000 children each day and represents one of the biggest health problems in the world. At the University of Pennsylvania school year 2010-2011 was declared the “Year of Water” in recognition of the many challenges that lie ahead as global increases in population and affluence and the influences of climate change will stress limited water resources. Each year the Stockholm International Water Institute convenes a Conference with experts from around the globe to exchange the latest water research findings and develop new networks. Students will attend the Conference, present research by presentations/posters, document a key issue, interview experts, and meet colleagues with common interests. They will also help other organizations at the Conference.

Summer Term
1 Course Unit

ENVS 6641 Topics in Water Policy
This course will explore various themes such as the UN Millennium Development Goals, EPA regulatory practices, and global water policy and governance.

Spring
1 Course Unit

ENVS 6675 Global Supply Chain Decarbonization
After four generations of explosive global trade growth, a growing awareness of climate change and other environmental externalities has triggered a global movement toward decarbonization, localization and re-shoring. ESG pressure from investors as well as carbon-related taxes, incentives and reporting requirements are driving operations and supply management to go green. However, lowering the carbon profile of global supply chains is a massive undertaking. This class teaches a proven sequence of management decision-making frameworks and optimization tools for eliminating carbon throughout the supply chain. Students will apply logistical and supply management models that integrate carbon objectives with cost, service level, and other conventional supply chain management objectives, making the course valuable for supply chain professionals and students alike. The combination of academic constructs and real-life case studies is designed to equip students to successfully lead their companies’ decarbonization programs. It also prepares students to take the optional REVchain™ supply chain decarbonization certificate exam.

Spring
1 Course Unit

ENVS 6810 Environmental Enforcement
The goal of the course is to provide students with an introduction to the role of enforcement in federal, state and local environmental regulatory programs. Emphasis will be placed on federal enforcement actions initiated by the U.S. Environmental Protection Agency and U.S. Department of Justice. The course will provide students with an introduction to the American Legal System and legal concepts, like standing, jurisdiction, and burden of proof. A number of case studies and classroom exercises will be utilized as part of the discussion of civil and criminal enforcement actions. For example, a detailed case study will be presented concerning a successful prosecution by the federal government of a wastewater treatment plant operator (from the receipt of the initial tip through the sentencing of the defendant). A theme of all classes, presentations and assignments will be the role of the environmental professional in the enforcement context (e.g., the environmental professional who testifies as an expert in a judicial proceeding, or performs an audit that becomes the subject of a self-disclosure to EPA).

Fall
1 Course Unit

ENVS 6820 The US Water Industry in the 21st Century
This course is taught by the former Philadelphia Water Commissioner, the CEO of a $1 billion water, wastewater and stormwater utility. The objective of the course is to expose the student to the inner workings and management of the US water industry and the transformation of this industry to a 21st-century sustainable utility model. Influences from new technologies and aging infrastructure, acceptable levels of risk, public and private sector competition, climate change, the bottled water industry, resource recovery, rates and affordability and other issues will be investigated. The context of the class discussions will center on how politics, vision and leadership are used to create and implement change in a traditional utility structure. The role of environmentalism, infrastructure financing, water/wastewater treatment facility operations, public affairs and media, and designing a capital improvement program are examples of other topic areas.

<tbody>
<tr>
<td>ENVS 6830</td>
<td>Sustainable Resource Recovery from Wastes</td>
<td>This qualitative course will introduce students to sustainable waste management for resource recovery. We are a consumer-driven planet; the use of fossil fuels, mining for virgin materials, irresponsible water utilization, and relentless waste generation have only been degrading our planet at an alarming rate. Technology and policy innovations can help avoid extracting virgin materials and growing feedstock crops for industrial production and instead make use of waste feedstocks. Waste materials such as food waste, plastics, and electronic wastes are rich in energy and critical minerals which can be harnessed to achieve a lower environmental impact and greater socio-economic benefits. The goal of sustainable waste management for resource recovery is to keep materials in use as long as possible by taking a multiple ‘R’ approach: Reuse, Reduce, Recycle, Renew, Repair, Remanufacture, Recover, Repurpose, and Regulate. Not Offered Every Year 1 Course Unit</td>
</tr>
<tr>
<td>ENVS 6840</td>
<td>Energy, Waste and the Environment</td>
<td>The aim of this course is to provide an incentive to use geochemical and mineralogical principles to address and solve major environmental problems. The students identify the problems that are associated with different types of waste. This course covers a wide range of problems associated with the waste arising from the generation of electricity. The main topics will be the uranium cycle, characterization of nuclear waste, and the containment and disposal of nuclear waste. Based on insights from the nuclear fuel cycle, solutions are presented that diminish the environmental impacts of coal and biomass combustion products, incineration of municipal solid waste, toxic waste due to refuse incineration, and landfills and landfill gases. Spring 1 Course Unit</td>
</tr>
<tr>
<td>ENVS 6850</td>
<td>Resiliency, Health &amp; Built Environment</td>
<td>Overnight field trips required Aug 20-21, 2020 and Aug 24-25, 2020. Additional fees apply. Healthy resilient communities are successful outcomes of built places. This course is designed for MES students to build area expertise through lectures, on-site visits and real time simulations. Students will travel to New York City and Washington DC to learn about these topics and observe current practices first hand. Through the design and synthesis of place, including educational and health facilities, and the workplace, the class will investigate the impact of Social Determinants of Health and sustainability. They will also integrate resiliency planning to address impacts of sea level rise, severe heat and different climate and environmental conditions affecting the built environment. Course work covers design and planning theory that intersects with diseases, mental health, climate action and their inter- connectivity. Case studies, seminars and tours of projects and health departments will bring to focus how the built environment can be a culprit and a solution. 1 Course Unit</td>
</tr>
<tr>
<td>ENVS 6860</td>
<td>Risk Assessment: Science &amp; Policy Challenges</td>
<td>How do government policy-makers make decisions about potential threats to human health and the environment in the face of scientific uncertainty? The course develops the concept of Risk Assessment from the publication of the 1983 National Research Council (NRC) report commonly known as the &quot;Red Book&quot; which was used to rank the initial hazardous waste sites under the Superfund program. Using a variety of teaching tools, including lectures, panel discussions, and case studies, the course examines how public policy decisions regarding environmental risk are made and how effective those decisions are at reducing risks to affected populations. The course focuses on the complex interaction of science, economics, politics, laws, and regulations in dealing with environmental and public health risks. The course will begin with a review of the policy process and methods used in evaluating human health and environmental risks, including the traditional steps in the risk assessment process, including quantitative and qualitative aspects of hazard identification, dose-response assessment, exposure assessment, and risk characterization. The course will then focus on how scientific uncertainty, risk perceptions, socio-economic disparities, risk communication, and politics influence environmental risk-based decision-making. Issues such as special populations (e.g., children, elderly, immune-compromised, woman of pregnancy age, etc.) must be considered when developing risk reduction strategies. The use of the &quot;precautionary principle&quot; will be discussed in the context of different types of environmental stressors (e.g., pesticides, chemicals, climate change, air pollution, water quality, and land use) and how this important controversial principle is applied differently in contrasting national and European risk management policies. Summer Term 1 Course Unit</td>

Epidemiology (EPID)

EPID 5100 Introductory Epidemiology
This course provides an introduction to the fundamentals of research in clinical epidemiology. It covers definitions of epidemiology; measures of disease frequency, measures of effect and association; epidemiologic study designs, including randomized clinical trials, cohort and case-control studies, cross-sectional surveys, and meta-analysis; and an overview of the conduct and analysis of epidemiologic studies. The course is composed of a series of 2-hour lectures and in-class lab sessions, designed to reinforce concepts introduced in the lectures. Summer Term
1 Course Unit

EPID 5260 Biostatistics for Epidemiologic Methods I
The first half of this course will cover graphical methods, probability, discrete and continuous distributions, estimation, confidence intervals, and one-sample hypothesis testing. Emphasis is placed on understanding the proper application and interpretation of the methods. The second half of this course will cover two-sample hypothesis testing, nonparametric techniques, sample size determination, correlation, regression, analysis of variance, and analysis of covariance. Emphasis is placed on understanding the proper application and underlying assumptions of the methods presented. Laboratory sessions focus on the use of the STATA statistical package and applications to clinical data. Prerequisite: Permission of instructor. This course runs from mid summer to mid fall term. There is a corresponding lab. 1 Course Unit

EPID 5250A Biostatistics for Epidemiologic Methods I
The first half of this course will cover graphical methods, probability, discrete and continuous distributions, estimation, confidence intervals, and one-sample hypothesis testing. Emphasis is placed on understanding the proper application and interpretation of the methods. The second half of this course will cover two-sample hypothesis testing, nonparametric techniques, sample size determination, correlation, regression, analysis of variance, and analysis of covariance. Emphasis is placed on understanding the proper application and underlying assumptions of the methods presented. Laboratory sessions focus on the use of the STATA statistical package and applications to clinical data. Prerequisite: Permission of instructor. This course runs from mid summer to mid fall term. There is a corresponding lab. 1 Course Unit

EPID 5250B Biostatistics for Epidemiologic Methods I
The first half of this course will cover graphical methods, probability, discrete and continuous distributions, estimation, confidence intervals, and one-sample hypothesis testing. Emphasis is placed on understanding the proper application and interpretation of the methods. The second half of this course will cover two-sample hypothesis testing, nonparametric techniques, sample size determination, correlation, regression, analysis of variance, and analysis of covariance. Emphasis is placed on understanding the proper application and underlying assumptions of the methods presented. Laboratory sessions focus on the use of the STATA statistical package and applications to clinical data. Prerequisite: Permission of instructor. This course runs from mid summer to mid fall term. There is a corresponding lab. 0 Course Units

EPID 5270 Biostatistics for Epidemiologic Methods II
The first half of this course covers concepts in biostatistics as applied to epidemiology, primarily categorical data analysis, analysis of case-control, cross-sectional, cohort studies, and clinical trials. Topics include simple analysis of epidemiologic measures of effect; stratified analysis; confounding; interaction, the use of matching, and sample size determination. Emphasis is placed on understanding the proper application and underlying assumptions of the methods presented. Laboratory sessions focus on the use of the STATA and other statistical packages and applications to clinical data. The second half of this course covers concepts in biostatistics as applied to epidemiology, primarily multivariable models in epidemiology for analyzing case-control, cross-sectional, cohort studies, and clinical trials. Topics include logistic, conditional logistic, and Poisson regression methods; and simple survival analyses including Cox regression. Emphasis is placed on understanding the proper application and underlying assumptions of the methods presented. Laboratory sessions focus on the use of STATA and other statistical packages and applications to clinical data. Prerequisite: This course runs from mid fall to mid spring term. There is a corresponding lab. 1 Course Unit

EPID 5270A Biostatistics for Epidemiologic Methods II
The first half of this course covers concepts in biostatistics as applied to epidemiology, primarily categorical data analysis, analysis of case-control, cross-sectional, cohort studies, and clinical trials. Topics include simple analysis of epidemiologic measures of effect; stratified analysis; confounding; interaction, the use of matching, and sample size determination. The second half of this course covers concepts in biostatistics as applied to epidemiology, primarily multivariable models in epidemiology for analyzing case-control, cross-sectional, cohort studies, and clinical trials. Topics include logistic, conditional logistic, and Poisson regression methods; simple survival analyses including Cox regression. Emphasis is placed on understanding the proper application and underlying assumptions of the methods presented. Laboratory sessions focus on the use of STATA statistical package and applications to clinical data. Prerequisite: This course runs from mid fall to mid spring term. There is a corresponding lab. Prerequisite: EPID 5260 AND EPID 5260B 1 Course Unit

EPID 5270B Biostatistics for Epidemiologic Methods II
The first half of this course covers concepts in biostatistics as applied to epidemiology, primarily categorical data analysis, analysis of case-control, cross-sectional, cohort studies, and clinical trials. Topics include simple analysis of epidemiologic measures of effect; stratified analysis; confounding; interaction, the use of matching, and sample size determination. The second half of this course covers concepts in biostatistics as applied to epidemiology, primarily multivariable models in epidemiology for analyzing case-control, cross-sectional, cohort studies, and clinical trials. Topics include logistic, conditional logistic, and Poisson regression methods; simple survival analyses including Cox regression. Emphasis is placed on understanding the proper application and underlying assumptions of the methods presented. Laboratory sessions focus on the use of STATA statistical package and applications to clinical data. Prerequisite: This course runs from mid fall to mid spring term. There is a corresponding lab. Prerequisite: EPID 5260A AND EPID 5260B 0 Course Units
EPID 5340 Qualitative Methods in the Study of Health, Disease and Medical Systems
This course combines informal lecture and discussion with practical exercises to build specific skills for conducting qualitative research on healthcare, broadly defined. Readings include books and papers about research methodology and articles that provide exemplars and pitfalls of qualitative research. Specific topics covered include: the role of theory in qualitative research, method-research question fit, collecting different types of qualitative data (observation, interview, focus group, text, video), ethical issues in qualitative research, establishing rigor in qualitative research, introduction to qualitative data analysis using software, mixing methods, approaches for obtaining grant funding for qualitative research and writing up qualitative research studies for publication. Prerequisite: Previous course work in research methods or permission of course director.
Fall
1 Course Unit

EPID 5360 Data Management and Visualization I
The objective of this two-course series is to enhance MSCE students’ comfort and acumen in all aspects of clinical epidemiological data management and presentation, particularly graphical representation of results. The course progresses from best practices in data collection and database use to advanced data management, summarization of results, and data visualization, all of which are grounded in the prioritization of producing efficient and reproducible research processes. The course will cover and develop skills in: basic data collection, harmonization, and integration with Stata software; best practices for data variable derivation and creation; assessing and dealing with missing data; merging and appending datasets; management of dates and times; assessing free text data; dealing with specific data types such as ICD-9 and 10 codes, cost data, management of longitudinal and time-to-event data; production of descriptive and regression tables (for all regression types); descriptive and regression model visualization; and the use of Stata Markdown files such that research reports can be created directly from Stata. By the end of the two-course series, students will become fluent in the Stata statistical language and be uniquely positioned to advance their independent clinical epidemiological careers through best research and data presentation practices.
Spring
0.5 Course Units

EPID 5370 Data Management and Visualization II
The objective of this two-course series is to enhance MSCE students’ comfort and acumen in all aspects of clinical epidemiological data management and presentation, particularly graphical representation of results. The course progresses from best practices in data collection and database use to advanced data management, summarization of results, and data visualization, all of which are grounded in the prioritization of producing efficient and reproducible research processes. The course will cover and develop skills in: basic data collection, harmonization, and integration with Stata software; best practices for data variable derivation and creation; assessing and dealing with missing data; merging and appending datasets; management of dates and times; assessing free text data; dealing with specific data types such as ICD-9 and 10 codes, cost data, management of longitudinal and time-to-event data; production of descriptive and regression tables (for all regression types); descriptive and regression model visualization; and the use of Stata Markdown files such that research reports can be created directly from Stata. By the end of the two-course series, students will become fluent in the Stata statistical language and be uniquely positioned to advance their independent clinical epidemiological careers through best research and data presentation practices.
Summer Term
0.5 Course Units

EPID 5420 Measurement of Health in Epidemiology
This course addresses the measurement of epidemiological variables, which broadly encompasses the tasks involved in obtaining data, without which analyses cannot proceed. Course topics to be discussed include: defining the concepts of exposure, disease, and health; approaches to measuring exposures, which may be personal (i.e., psychological, behavioral, biological, or genetic) or environmental (i.e., physical, chemical, social, or organizational); approaches to measuring disease and health status; assessing the validity and reliability of measurement instruments; problems of misclassification of exposure status and disease status; missing data; instrument (e.g., questionnaire) development; and qualitative methods. Prerequisite: If course requirement not met, permission of course director.
Fall
Prerequisite: EPID 5100 AND EPID 5260
0.5 Course Units

EPID 5460 Clinical Database Research Methodology
This course will discuss appropriate selection of healthcare databases for research questions of interest; assessment of drug exposures; validation of health outcomes of interest; and addressing biases, confounding, and missing data in databases. We will also review key aspects of research protocol development for database studies and discuss research grant applications related to these studies. Prerequisite: If course requirement not met, permission of course director required.
Prerequisite: EPID 5100 AND EPID 5260
0.5 Course Units
EPID 5500 Clinical Economics and Decision Making
This course focuses on the application of decision analysis and economic analysis to clinical and policy research. It provides an introduction to the general tools for decision analysis, including decision trees and Markov models, assessment of costs and patient preferences, and assessment of cost-effectiveness. Special emphasis is placed on second-order Monte Carlo analysis and its use in the construction of measures of sampling uncertainty for cost-effectiveness analysis. Seminars will include didactic material, practical exercises that include problem solving, critically analyzing published articles and learning to use computer software that facilitates decision and economic analyses.
Spring
Also Offered As: HPR 5500
1 Course Unit

EPID 5600 Issues in Research Protocol Development
This seminar focuses on major issues in research protocol development, including methodologic issues regarding different research designs, development of research questions, and plans for analysis. Each student will present his or her research protocol for open discussion during one of the seminar sessions. Prerequisite: Restricted to MSCE degree students.
Spring
0.25 Course Units

EPID 5700 Critical Appraisal of the Medical Literature
This seminar focuses on techniques for critical appraisal of the medical literature. Each student will be responsible for at least one critical appraisal session covering different epidemiologic topics (including the evaluation of diagnostic tests, clinical course and prognosis of disease, disease etiology or causation, therapy, quality of clinical care, economic evaluation, and meta-analysis). Each week, a student will critically appraise a journal article and lead the discussion concerning that article. Prerequisite: Restricted to MSCE degree students.
Spring
0.25 Course Units

EPID 5750 Introduction to Genetic Epidemiology
There is an increasing need for researchers to understand the genetic basis of incorporating the collection and analysis of genetic information into studies of health. The objectives of this course are to provide students with an understanding of the uses of molecular and genetic epidemiologists. This course consists of a series of discussions focused on the critical appraisal of genetic/molecular epidemiology. After completing this course, students will be able to read and interpret the mendepidemiology literature, and understand data collection and analysis approachesmolecular and genetic epidemiological studies. Prerequisite: Permission of course director. Students enrolling in this class are expected to have a working knowledge of epidemiology, biostatistics, and human genetics. Students who do not meet these requirements may be allowed to enroll in the class, but may be required to undertake supplemental readings and/or tutorials to obtain the necessary background.
Spring
1 Course Unit

EPID 5800 Outcomes Research
This course is divided into two main parts. The first part addresses issues related to the measurement of quality in health care. Included is a review of the classical structure-process-outcome quality paradigm. The paradigm's strengths and limitations are addressed. This part especially focuses on outcome measures of quality, and examines the validity of alternative measures. The second part deals with observational, or quasi-experimental, research studies. It addresses the advantages and limitations of alternative designs, and covers the role of clinical risk adjustment in observational studies of medical interventions. It focuses on the problem of selection bias, and reviews recent methods for dealing with this bias, such as instrumental variables. Prerequisite: Introductory course in statistics including regression methods. Permission of instructor if prerequisite is not met.
Fall
Also Offered As: HPR 5800
1 Course Unit

EPID 5820 Systematic Review and Meta-Analysis
This course will provide an introduction to the fundamentals of systematic reviews and meta-analysis. It will cover introductory principles of meta-analysis; protocol development; search strategies; data abstraction methods; quality assessment; meta-analytic methods; and applications of meta-analysis.
Fall, odd numbered years only
Prerequisite: EPID 5100 AND EPID 5260
1 Course Unit

EPID 5840 Health Disparities Research
This course will provide an overview of research in health disparities. It will cover the historical aspects, concepts, policy, economic, genomic and social perspectives of health disparities. It will provide students with methodological tools for health disparities research and introduce students to ongoing health disparities research by current Penn and affiliated faculty members. The course is composed of a series of weekly small group lectures and discussion, including critical appraisal of published papers, guest faculty presentations, and student presentations. Students will be expected to attend weekly meetings and participate in class discussions, prepare and lead discussions of assigned papers, review assigned readings, and draft and present a scientific protocol of their choosing related to health disparities.
Spring
Prerequisite: EPID 5100 AND EPID 5260
1 Course Unit

EPID 6000 Data Science for Biomedical Informatics
In this course, we will use R and other freely available software to learn fundamental data science applied to a range of biomedical informatics topics, including those making use of health and genomic data. After completing this course, students will be able to retrieve and clean data, perform explanatory analyses, build models to answer scientific questions, and present visually appealing results to accompany data analyses; be familiar with various biomedical data types and resources related to them; and know how to create reproducible and easily sharable results with R and GitHub. Recommended prerequisite: Introductory-level statistics course. Familiarity with programming or a willingness to devote time to learn it. NOTE: Non-majors need permission from the department.
Fall
Also Offered As: BMIN 5030
1 Course Unit
EPID 6100 Tutorial in Epidemiologic Research
This is a tutorial given by each student's MSCE mentor. The mentor and student meet regularly, usually weekly. Topics include discussion and review of epidemiologic concepts and principles, guided readings in the epidemiology of a specific health area, and the development of the research protocol. Credit for this course is awarded upon completion of a research project protocol, the one to be used to fulfill the MSCE thesis requirement, which must be approved by the student's mentor. Evaluation is based on the grade received for the protocol.
Fall or Spring
0.5-1 Course Unit

EPID 6199 Testing Course
Testing Course Attributes
0.5-1 Course Unit

EPID 6210 Longitudinal and Clustered Data in Epidemiologic Research
An introduction to the principles of and methods for longitudinal and clustered data analysis with special emphasis on clinical, epidemiologic, and public health applications. Designed for advanced MS and PhD-level students in epidemiology and related fields. Marginal and conditional methods for continuous and binary outcomes. Mixed effects and hierarchical models. Simulations for power calculations. Software will include Stata and R. Prerequisite: Completion of EPID 5260 and 5270 or equivalent preparation in biostatistics, including generalized linear models. Completion of semester course in principles of epidemiology or equivalent. Good working knowledge of Stata and SAS and familiarity with principles of first-year calculus and matrix algebra. Permission of course director.
Fall
1 Course Unit

EPID 6220 Applied Regression Models for Categorical Data
This course will provide in-depth treatment of several topics in categorical data analysis. After a brief review of methods for contingency tables, we will introduce the idea of generalized linear models, and focus on two special cases – multiple logistic regression and log-linear models. Each topic will be presented in detail by stating the model and covering parameter estimation and interpretation, inference, model building, regression diagnostics, and assessment of model fit. Finally, we will cover extensions to both models, including models for multinomial data, analysis of matched-pair data, and random effects models. Topics will be illustrated in class with examples, and we will discuss the use of Stata to conduct the analyses. Offered first half of fall term.
Fall
Prerequisite: EPID 5100 AND EPID 5260 AND EPID 5270
0.5 Course Units

EPID 6230 Survival Data Analysis
This course will focus on the specialized issues related to the analysis of survival or time-to-event data. The course begins by closely examining the features unique to survival data that distinguish these data from other more familiar types. Topics include non-parametric survival analysis methods, common survival functions, parametric survival models, the proportional hazards model, and common model-checking methods. All methods will be illustrated by in-class examples and homework sets. Prerequisite: Students should be comfortable with basic calculus concepts (e.g., derivatives, integrals, etc).
Fall
Prerequisite: EPID 5100 AND EPID 5260 AND EPID 5270
0.5 Course Units

EPID 6240 Methods in Patient-Centered Outcomes and Effectiveness Research
The goal of this course is to provide a broad overview of methods used in patient centered outcomes and effectiveness research. Expert faculty will lecture on topics such as standards for research questions, systematic reviews, patient/stakeholder engagement, causal inference, heterogeneity of treatment effect, handling missing data, data registries, pragmatic trials, diagnostic tests, health care disparities, evaluating the impact of communication interventions, and testing innovations in health care systems. Grading will largely be based on participation in class discussions. Prerequisite: Permission of instructor
Spring
1 Course Unit

EPID 6250 Advanced Biostatistical Methods for Multivariable Prediction Models
This course is an introduction to statistical methods that can be used to evaluate biomarker prognostic studies and multivariate prediction models. Topics will include biostatistical evaluation of biomarkers, predictive models based on various regression modeling strategies and classification trees, assessing the predictive ability of a model; internal and external validation of models; and updating prognostic models with new variables or for use in different populations. Students will learn about the statistical methods that are required by current reporting guidelines for biomarker prognostic studies or the reporting guidelines for multivariable prediction models. Prerequisite: Working knowledge of either Stata, SAS or R to fit regression, logistic regression and/or Cox regression models. Permission of course director for students outside of School of Medicine graduate programs.
Fall
Prerequisite: EPID 5260 AND EPID 5270 AND (EPID 6220 OR EPID 6230)
0.5 Course Units

EPID 6300 Clinical Trials
This course is to serve as a general introduction to clinical trials and will emphasize trial design issues. This is not a course on the biostatistics of clinical trials. It is expected that at the conclusion of the course, a student will be able to plan a clinical trial. Each class will consist of a two-hour lecture followed by a one-hour discussion. The weekly session will focus on either a group discussion of the assigned reading or a practical application based on the material presented during the two-hour lecture. Students will be evaluated on their participation in class (20%); a clinical trial document (50%), which should include the rationale for the study, study design, objectives and endpoints, sample size and analysis sections, and consent form; and a class presentation of their trial or another topic (30%). Prerequisite: Permission of instructor.
Spring
Also Offered As: REG 6300
Prerequisite: EPID 5100 AND EPID 5260
1 Course Unit

EPID 6320 Introduction to Biomedical and Health Informatics
This course is designed to provide a survey of the major topic areas in medical informatics, especially as they apply to clinical research. Through a series of lectures and demonstrations, students will learn about topics such as databases, natural language, clinical information systems, networks, artificial intelligence and machine learning applications, decision support, imaging and graphics, and the use of computers in education.
Fall
1 Course Unit
**EPID 6340 Clinical Trial Outcomes: Measurement, Analysis and Interpretation**
This course is intended to teach students the skills necessary to select and/or design appropriate outcomes for a clinical trial. Students will focus on recent changes in our understanding of clinical trial outcome measurements, analyses, and interpretation for both subjective and objective phenomena, such as adherence, use of multiple outcomes, and clinical importance. While design issues for clinical trials are the main focus, other types of clinical studies will be considered as appropriate. Students will be expected to learn about the problems inherent in the design of outcome measures of health and how to apply different epidemiologic and biostatistical concepts toward a solution. It is expected that at the conclusion of the course, students will be able to plan a clinical trial with a valid, responsive and interpretable outcome. The class will meet once weekly for a 60-minute lecture on a topic, followed by a 60- to 90-minute discussion of how that topic applies to the specific issues of interest to the students or the instructor. Prerequisite: Permission of instructor.  
Fall  
Prerequisite: EPID 5100  
1 Course Unit

**EPID 6400 Advanced Topics in Epidemiology**
This course is designed to introduce students to advanced epidemiologic methods through a series of readings and discussions. The course aims to deepen the students’ understanding of important concepts and controversies in contemporary epidemiology and to enhance their ability to think critically about empirical epidemiologic research. The course is intended for students who are already familiar with the fundamentals of epidemiology and biostatistics, and who wish to gain an understanding of the complex issues underlying epidemiologic study design and interpretation. Each week, one student will be responsible for leading a portion of the discussion of the assigned readings, in conjunction with a faculty member. Topics include: causal inference; study designs; use of large databases for research; predicting outcomes; and complex sampling methods. Prerequisite: Permission of instructor.  
Spring  
Prerequisite: EPID 5100 AND EPID 5260 AND EPID 5270  
1 Course Unit

**EPID 6440 Cardiopulmonary Epidemiology**
This is an advanced course that addresses epidemiologic research issues as they apply to important clinical topics in cardiovascular and pulmonary medicine. Lectures and workshops are designed to acquaint students with the classic literature in the fields of cardiovascular and pulmonary epidemiology, to use a body of literature to demonstrate the strengths and weaknesses of epidemiologic research designs as they have been applied to cardiovascular and pulmonary medicine, to expose students to the range of topics studied, to teach advanced epidemiologic principles using a problem-based approach, and to stimulate students to develop independent research questions. Prerequisite: Permission of instructor.  
Summer Term  
Prerequisite: EPID 5100 AND EPID 5260 AND EPID 5270  
1 Course Unit

**EPID 6450 Research Methods in Cancer Epidemiology**
Research in cancer etiology, prevention, treatment, and control includes a wide range of subject matter science, from the initial molecular changes that precede the development of cancer to issues of primary care guidelines for cancer survivors. The course reviews the possible study designs applied to cancer etiology, prevention, treatment, and control. These include randomized controlled trials and multiple types of observational studies (cohort, case-control, cross-sectional). Other topics will include causal inference, bias, and effect modification. Prerequisite: Permission of instructor.  
Spring  
Prerequisite: EPID 5100 AND EPID 5260 AND EPID 5270  
1 Course Unit

**EPID 6460 Reproductive Epidemiology**
This is an advanced course that addresses epidemiologic research issues as they apply to important clinical topics in obstetrics and gynecology and related clinical disciplines. Lectures and workshops are designed to acquaint students with important issues in the field of reproductive epidemiology, to use a body of literature to demonstrate the strengths and weaknesses of epidemiologic research designs as they have been applied to obstetrics and gynecology and related clinical disciplines, to expose students to the range of topics studied, to teach advanced epidemiologic principles using a problem-based approach, and to stimulate students interested in reproductive epidemiology to develop independent research questions.  
Spring, odd numbered years only  
1 Course Unit

**EPID 6300 Clinical Trials: Design and Analysis**
This course is intended to follow and be complementary to EPID 6300: Clinical Trials. It will build on the basic principles of design, conduct, and analysis introduced in that course and will go into more detail on particular approaches. Topics covered will include noninferiority trials, phase 1 designs, multi-stage and other adaptive designs, graphical data presentations and current ethical controversies in clinical trials.  
Fall  
Prerequisite: EPID 6300  
1 Course Unit

**EPID 6360 Epidemiological Methods in Acute Care Research**
This is an advanced course addressing epidemiologic issues as they apply to important clinical topics in acute care, including emergency, hospital, and critical care medicine. Lectures and discussions will have two primary goals: 1) to explore epidemiologic methods specific to acute care settings (i.e., choice of outcomes, risk adjustment); and 2) to explore the epidemiology of particular diseases (e.g., sepsis, acute lung injury, hospital acquired infections) and research questions of current importance in these areas. This course will acquaint students with the classic literature in the field of adult and pediatric urgent care, emergency medicine, and critical care epidemiology, teach advanced epidemiologic principles using a problem-based approach, and demonstrate the strengths and weaknesses of epidemiologic research methodologies as they have been applied to acute care. Prerequisite: Permission of instructor.  
Not Offered Every Year  
Prerequisite: EPID 5100 AND EPID 5260  
1 Course Unit

**EPID 6380 Topics in Clinical Trial Design and Analysis**
This course is intended to follow and be complementary to EPID 6300: Clinical Trials. It will build on the basic principles of design, conduct, and analysis introduced in that course and will go into more detail on particular approaches. Topics covered will include noninferiority trials, phase 1 designs, multi-stage and other adaptive designs, graphical data presentations and current ethical controversies in clinical trials.  
Fall  
Prerequisite: EPID 6300  
1 Course Unit

**EPID 6460 Reproductive Epidemiology**
This is an advanced course that addresses epidemiologic research issues as they apply to important clinical topics in obstetrics and gynecology and related clinical disciplines. Lectures and workshops are designed to acquaint students with important issues in the field of reproductive epidemiology, to use a body of literature to demonstrate the strengths and weaknesses of epidemiologic research designs as they have been applied to obstetrics and gynecology and related clinical disciplines, to expose students to the range of topics studied, to teach advanced epidemiologic principles using a problem-based approach, and to stimulate students interested in reproductive epidemiology to develop independent research questions.  
Spring, odd numbered years only  
1 Course Unit
EPID 6520 Renal and Urologic Epidemiology
The objective of this course is to prepare students to function as effective, independent researchers in the fields of renal and urologic epidemiology by providing the students an understanding of how epidemiologic research can and has advanced the knowledge of diseases in treatments of renal and urologic medicine. The structure of the course consists of a lecture series, accompanying workshops, and student presentations. The goals of the course are to acquaint students with some of the classic literature in the fields of renal and urologic epidemiology; to use a body of literature to demonstrate the strengths and weaknesses of epidemiologic research designs as they have been applied to renal and urologic medicine; to teach advanced epidemiologic principles using a problem-based approach; to expose students to the rationale of topics studied by faculty in the CCEB and the adult and pediatric nephrology and urology divisions at Penn and CHOP; and to stimulate students interested in renal and urologic epidemiology so that they may develop independent research questions. Prerequisite: Permission of instructor.
Spring, even numbered years only
Prerequisite: EPID 5100 AND EPID 5260 AND EPID 5270
1 Course Unit

EPID 6560 Research Methods in Infectious Diseases Epidemiology
This will be an advanced course addressing epidemiologic issues as they apply to important clinical topics in infectious diseases. Lectures and discussions will serve two primary goals: 1) to explore epidemiologic methods specific to infectious diseases (e.g., adherence to therapy) or that have important applications to infectious diseases (e.g., molecular epidemiology); and 2) to explore the epidemiology of particular infectious diseases or syndromes (e.g., HIV). This course will acquaint students with the classic literature in the field of infectious diseases epidemiology, teach advanced epidemiologic principles using a problem-based approach, and demonstrate the strengths and weaknesses of research methodologies as they have been applied to infectious diseases. Prerequisite: Permission from instructor is needed.
Summer Term
Prerequisite: EPID 5100 AND EPID 5260 AND EPID 5270
1 Course Unit

EPID 6580 Gastroenterology Epidemiology
This course provides an in-depth presentation of advanced methodologic issues in conducting clinical epidemiologic research in the field of gastroenterology. Prerequisite: Permission of instructor.
Spring, even numbered years only
Prerequisite: EPID 5100 AND EPID 5260 AND EPID 5270
1 Course Unit

EPID 6640 Methods in Neurologic Clinical Epidemiology
This course will introduce students to methods and study design principles that are specific or unique to clinical research and trials in neurology, child neurology, neuro-ophthalmology, neurosurgery, and related fields. Prerequisite: Permission of instructor
Spring, odd numbered years only
0.5 Course Units

EPID 6660 Methods for Real-World Evidence on Therapeutics
The purpose of this course is to explore and integrate concepts and considerations that are key to the conduct of pharmacoepidemiologic research. The format will be a mixture of seminar, instructor-led discussion, student-led discussion, and student presentations. Papers from the applied and methods literature will be used to illustrate concepts and as springboards for discussion. Topics covered include use of automated databases/pharmacogenomics, and approaches to addressing confounding.
Spring
Prerequisite: EPID 5100 AND EPID 5260 AND EPID 5270
1 Course Unit

EPID 6720 Biostatistical Methods for Addressing Confounding
This course is designed to teach epidemiology students the statistical principles of analysis specific to pharmacoepidemiology study designs including the use of propensity scores, inverse probability weighting, instrumental variables and time varying covariates. Each of the twelve sessions includes both a lecture component and a laboratory component. Students will learn the statistical principles and then apply them to example study datasets. Students must participate in all sessions and must have previously completed biostatistics for epidemiologic methods I and II (EPID 5260 A/B and 5270 A/B). Laboratory sessions will be conducted on students’ laptops using STATA software. Prerequisite: Permission of the instructor(s).
Summer Term
Prerequisite: EPID 5260 AND EPID 5270
1 Course Unit

EPID 6740 Measuring the Microbiome: Methods and Tools
This is an advanced course addressing the methods and tools used to analyze microbiome data, as well as their implications for clinical study design. The course will include: (1) lectures focused on how the microbiome is measured, approaches to the analysis of highly multivariate microbiome data, and the bioinformatic tools used to execute these analyses; (2) hands-on R and command-line coding to build familiarity with commonly used tools and analytic methods; and (3) short, practical assignments to reinforce the lectures and classwork. The course will acquaint students with classic literature in the field of microbiome research and prepare students to integrate microbiome data collection and analysis with epidemiologic research methodologies. Prerequisite: Permission of instructor if course prerequisites not met
Not Offered Every Year
Prerequisite: EPID 5100 AND EPID 5260 AND EPID 5270
1 Course Unit
EPID 6750 Advanced Methods for Analysis of Complex Genetic Traits
The advent of high-throughput genotyping has created unprecedented opportunities to characterize in detail information related to genome, epigenome and transcriptome. Such technological advancements have offered exciting opportunities for biological discovery as well as translation of biological data for targeted therapies. However, investigation of genetic polymorphisms, epigenetic signatures, gene transcription, biomarkers and their relationship with environmental factors and disease outcomes requires a thorough understanding of a wide range of experimental methods and statistical approaches. Through critical review of the current literature, this course will provide understanding on various "-OMICS" approaches for the study of complex disorders and traits. Students will also understand and present advanced statistical methods and how such concepts can be applied. Prerequisite: Introduction to Genetic Epidemiology or equivalent; training in study design and statistical analysis related to statistical genetics and molecular epidemiology, and permission of course directors. Not Offered Every Year
1 Course Unit

EPID 6990 Lab Rotation
Student lab rotation.
0-1 Course Unit

EPID 7000 Doctoral Seminar in Epidemiology
The course is intended to meet the needs of PhD students over the entire program from the coursework phase through the dissertation defense, and is intended to optimize cross-fertilization between the students at all phases of their program. Restricted to Epidemiology Doctoral Students. Prerequisite: Permission of instructor.
1 Course Unit

EPID 7010 Introduction to Epidemiologic Research
This course is intended to provide in-depth, exposure to the theory and methods of epidemiologic research. Topics to be covered include causal inference, measures of disease frequency and association, study design, bias and confounding, validity, and epidemiologic analysis. Prerequisite: Quantitative proficiency. Knowledge and/or experience in working in biomedical research. Permission of instructor.
1 Course Unit

EPID 7012 Nutritional Epidemiology
This course introduces students to key concepts and methods in Nutritional Epidemiology to equip them with the tools needed to design, analyze, and critically evaluate population-based nutrition research. The course also reviews several specific diet/disease relationships, integrating information from secular trends, cohort studies, clinical trials, and animal experiments. Knowledge in nutrition is useful but not required. Prerequisites include introductory epidemiology.
Fall
Prerequisite: EPID 7010 AND EPID 5100 AND PUBH 5020
1 Course Unit

EPID 7020 Advanced topics in Epidemiologic Research
The overarching goal of this course is to expose doctoral students in epidemiology to advanced epidemiologic and statistical research methods and theories that are limitedly or not otherwise covered in courses available in the curriculum. Topics that will be covered include reporting guidelines and best practices for reporting statistical methods and results, handling missing data, purposeful selection and application of propensity scores, selected topics in longitudinal and clustered data analysis, contemporary topics in statistical inference and use of p-values and other Frequentist statistical methods, Bayesian theory and inference, and topics selected in collaboration with students and the Graduate Group in Epidemiology and Biostatistics (GGEB) each term. This course is intended for doctoral students in the PhD program in Epidemiology. However, students from other graduate groups are welcome, as long as they meet the pre-requisites; such students are welcome during any year of study. Three learning objectives have been developed for this course; (i) provide students with an understanding of modern and cutting-edge quantitative methods, advanced topics, and best practices in epidemiologic, statistical, and biomedical research; (ii) develop students competence and confidence in statistical programing to support accurate and reproducible epidemiologic and biostatistical analyses; (iii) improve the ability of students to make informed decisions regarding the selection of analytic methods in their individual and collaborative research projects. This course emphasizes the following core competencies: knowledge within program area (epidemiologic and biostatistical methods); research skills (study planning, critically appraising published research); quantitative and computational methodologies (data manipulation, data analysis, statistical coding and debugging, Bayesian inference, data visualization, purposeful statistical inference, and model selection). Through technical lectures, reading of carefully selected peer-reviewed tutorials, critical appraisal of published research studies, and in-class statistical coding laboratory sessions, this course will provide instruction on rigorous and informed statistical model selection, estimation, and interpretation.
Spring
Prerequisite: EPID 5260 AND EPID 5270 AND EPID 7010
1 Course Unit

EPID 7040 Methods for Social Epidemiologic Research
This course is intended to provide students in epidemiology, biostatistics, and other disciplines with an in-depth introduction to the principles and methods of social epidemiology.
Spring
Prerequisite: EPID 7010 AND EPID 7020
1 Course Unit

EPID 7050 Grantwriting and Scientific Writing
This course is a two-part training course providing students with (a) guidance and hands-on experience with grant writing; and (b) writing and reviewing scientific papers and abstracts as well as core skills in scientific presentation. The first part of the course will provide a comprehensive overview of and experience with the grant writing process. The second part of the course will expose students to the key elements of scientific writing in epidemiology, with an emphasis on constructing each component of a scientific paper (introduction, methods, results, discussion); adhering to widely-used reporting standards; elements of the peer review process; and selection of appropriate journals for reporting their work.
Fall
Prerequisite: EPID 7010 AND EPID 7020 AND EPID 6000 AND HPR 6080
1 Course Unit
EPID 7110 Environmental Epidemiology
Environmental Epidemiology is an advanced epidemiology course that addresses epidemiological research methods used to study environmental exposures from air pollution to heavy metals, and from industrial pollutants to consumer product chemicals. The course will provide an overview of major study designs in environmental epidemiology, including cohort studies, panel studies, natural experiments, randomized controlled trials, time-series, and case-crossover studies. The course will discuss disease outcomes related to environmental exposures, including cancer and diseases of cardiovascular, respiratory, urinary, reproductive, and nervous systems. Case studies in environmental epidemiology will be discussed to provide details of research methods and findings. Prerequisite: It is recommended, although not required, that students had an introductory epidemiology course and an introductory biostatistics course. Fall 1 Course Unit

EPID 7140 Grant Writing/Review
This course will assist students in the design of an NIH grant (F-32, K, R21 or R01) for submission by enhancing their appreciation of the specifics of the grant writing process and in understanding the grant review process. This course is designed to provide background, training, and practice with the writing and submitting of NIH style grants. As a minimum all students who enroll will be expected to write and submit a reasonable draft of a full NIH style grant proposal by the end of the term. During the process, the portions of each proposal will be reviewed as a group by the other students in the course. In response to each review, students are expected to revise their grant sections. Prerequisite: If course requirement not met, permission of instructor required. Summer Term Also Offered As: HPR 7140 1 Course Unit

Prerequisite: EPID 5100 AND EPID 5260 AND EPID 5600 AND EPID 5700 0.5 Course Units

EPID 8990 Pre-Dissertation Lab Rot
0.5-3 Course Units

EPID 9900 Master's Thesis
These are a series of tutorial sessions conducted by the student's mentor intended to support the student's efforts in developing a research protocol, designing a research project, and completing the study. Fall or Spring 0.5-5 Course Units

EPID 9950 Dissertation
0 Course Units

Ethics (ETHC)

The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

ETHC 2000 Ethics & Society
Philosophy has aptly been described as "the attempt to tackle questions that come naturally to children, using methods that come naturally to lawyers". In this course, we investigate some of these questions and work on developing some of the tools used by those methods. Our topical focus is some of the main questions in moral philosophy, especially as they apply to certain pressing ethical problems. The course focuses extensively on ethical problems of great importance to our current situation, from climate change to abortion to donating to aid organizations. In addition, we use these debates to understand and test more general ethical theories. 1 Course Unit

Filipino (FILP)

FILP 0100 Beginning Filipino I
An introduction to the spoken and written Tagalog (Filipino) language. This will prepare and develop students' basic skills in speaking, listening, reading and writing Filipino at its beginning level. Two Term Class, Student must enter first term; credit given after both terms are complete 1 Course Unit

FILP 0200 Beginning Filipino II
A continuation of Beginning Filipino I, this class building on previous lessons on speaking, listening, reading and writing Filipino at its beginning level. 1 Course Unit

FILP 0300 Intermediate Filipino I
A continuation of Beginning Filipino II, the spoken and written Tagalog (Filipino) language. This course will develop the communicative competence of the students in handling limited communicative tasks, reading simple connected texts and writing short dialogues. Two Term Class, Student must enter first term; credit given even if second term not complete 1 Course Unit

FILP 0400 Intermediate Filipino II
A continuation of Intermediate Filipino I, the goal of this course is for students to be semi-fluent in handling everyday tasks like asking and giving directions, talking about vacation, and narrating news and events. Fall 1 Course Unit

FILP 0500 Filipino Language and Culture
The Filipino Language and Culture is an advanced language and culture course offered to students who are in the upper immediate level of Filipino Language or those who had been certified to be proficient in Filipino language. Two Term Class, Student must enter first term; credit given after both terms are complete 1 Course Unit
Finance (FNCE)

FNCE 0001 Introduction to Financial Markets and the Global Economy
This course aims to provide a timely framework to understand economic recessions and expansions and the financial markets' response to world events. The Covid recession reduced the size of the world's economies and output. What does this mean? How is output connected to employment? How are exchange rates determined in global capital markets? We will introduce the policy options of government spending. We will discuss, as data become available, the continuing impact of the coronavirus on the domestic and the global economy.
Fall or Spring
0.5 Course Units

FNCE 0002 Essentials of Personal Finance
This course introduces students to the key financial concepts through the lens of personal financial decisions, centering on financing one's education, culminating in a capstone project evaluating student loan offers.
Fall or Spring
0.5 Course Units

FNCE 1000 Corporate Finance
This course provides an introduction to the theory, the methods, and the concerns of corporate finance. The concepts developed in FNCE 1000 form the foundation for all elective finance courses. The main topics include: 1) the time value of money and capital budgeting techniques; 2) uncertainty and the trade-off between risk and return; 3) security market efficiency; 4) optimal capital structure, and 5) dividend policy decisions.
ACCT 1010 + STAT 1010 may be taken concurrently.
Fall or Spring
Mutually Exclusive: FNCE 1008, FNCE 6110
Prerequisite: (ECON 0100 AND ECON 0200) OR (ECON 0110 AND (MATH 1400 OR MATH 1070))
1 Course Unit

FNCE 1008 Corporate Finance (Honors)
This course provides an introduction to the theory, the methods, and the concerns of corporate finance. The concepts developed in FNCE 1000 form the foundation for all elective finance courses. The main topics include: 1) the time value of money and capital budgeting techniques; 2) uncertainty and the trade-off between risk and return; 3) security market efficiency; 4) optimal capital structure, and 5) dividend policy decisions.
ACCT 1010 + STAT 1010 may be taken concurrently. Honors sections require MATH 1400 or MATH 1070 as a prerequisite. Application process.
Mutually Exclusive: FNCE 1000, FNCE 6110
Prerequisite: (ECON 0100 AND ECON 0200) OR (ECON 0110 AND (MATH 1400 OR MATH 1070))
1 Course Unit

FNCE 1010 Monetary Economics and the Global Economy
This is an intermediate-level course in macroeconomics and the global economy, including topics in monetary and international economics. The goal is to provide a unified framework for understanding macroeconomic events and policy, which govern the global economic environment of business. The course analyzes the determinants and behavior of employment, production, demand and profits; inflation, interest rates, asset prices, and wages; exchange rates and international flows of goods and assets; including the interaction of the real economy with monetary policy and the financial system. The analysis is applied to current events, both in the US and abroad. Students cannot receive credit for taking both FNCE 1010 and ECON 2200. Wharton students are required to take FNCE 1010.
Fall or Spring
Mutually Exclusive: ECON 2200, FNCE 1018, FNCE 6130
Prerequisite: (ECON 0100 AND ECON 0200) OR (ECON 0110 AND (MATH 1400 OR MATH 1070))
1 Course Unit

FNCE 1018 Monetary Economics and the Global Economy (Honors)
This is an intermediate-level course in macroeconomics and the global economy, including topics in monetary and international economics. The goal is to provide a unified framework for understanding macroeconomic events and policy, which govern the global economic environment of business. The course analyzes the determinants and behavior of employment, production, demand and profits; inflation, interest rates, asset prices, and wages; exchange rates and international flows of goods and assets; including the interaction of the real economy with monetary policy and the financial system. The analysis is applied to current events, both in the US and abroad. Students cannot receive credit for taking both FNCE 1010 and ECON 2200. Wharton students are required to take FNCE 1010. Honors sections require MATH 1400 or MATH 1070 as a prerequisite. Application process.
Mutually Exclusive: ECON 2200, FNCE 1010, FNCE 6130
Prerequisite: (ECON 0100 AND ECON 0200) OR (ECON 0110 AND (MATH 1400 OR MATH 1070))
1 Course Unit

FNCE 2020 Consumer Financial Decision Making
Research shows that many individuals are profoundly underinformed about important financial facts and financial products, which frequently lead them to make mistakes and lose money. Moreover, consumer finance comprises an enormous sector of the economy, including products like credit cards, student loans, mortgages, retail banking, insurance, and a wide variety of retirement savings vehicles and investment alternatives. Additionally, recent breakthroughs in the FinTech arena are integrating innovative approaches to help consumers. Though virtually all people use these products, many find financial decisions to be confusing and complex, rendering them susceptible to fraud and deception. As a result, government regulation plays a major role in these markets. This course intended for Penn undergraduates considers economic models of household decisions and examines evidence on how consumers are managing (and mismanaging) their finances. Although academic research has historically placed more attention on corporate finance, household finance is receiving a brighter spotlight now-- partly due to its role in the recent financial crisis. Thus the course is geared toward those seeking to take charge of their own financial futures, anyone interested in policy debates over consumer financial decision making, and future FinTech entrepreneurs.
Fall
Also Offered As: BEPP 2020
1 Course Unit

2023-24 Catalog | Generated 08/02/23
FNCE 2030 Advanced Corporate Finance
This course discusses the theory and empirical evidence related to the various investment and financing policies of the firm and attempts to improve decision-making ability in these areas. This course covers aspects of financial management not covered in FNCE 1000, including mergers and acquisitions, corporate reorganizations, financial planning and working capital management. It also offers a more rigorous coverage of topics discussed in FNCE 1000, such as investment under uncertainty, cost of capital, capital structure, pricing of selected financial instruments and dividend policy.
Fall or Spring
Mutually Exclusive: FNCE 7030
Prerequisite: FNCE 1000
1 Course Unit

FNCE 2050 Investment Management
This course studies the concepts and evidence relevant to the management of investment portfolios. Topics include diversification, asset allocation, portfolio optimization, factor models, the relation between risk and return, trading, passive (e.g., index-fund) and active (e.g., hedge-fund, long-short) strategies, mutual funds, performance evaluation, long-horizon investing and simulation. The course deals very little with individual security valuation and discretionary investing (i.e., "equity research" or "stock picking"). In addition to course prerequisites, STAT 1020 may be taken concurrently.
Fall or Spring
Mutually Exclusive: FNCE 7050
Prerequisite: FNCE 1000 AND STAT 1010
1 Course Unit

FNCE 2070 Valuation
The focus of this course is on the valuation of companies. The course covers current conceptual and theoretical valuation frameworks and translates those frameworks into practical approaches for valuing companies. The relevant accounting topics and the appropriate finance theory are integrated to show how to implement the valuation frameworks discussed on a step-by-step basis. The course teaches how to develop the required information for valuing companies from financial statements and other information sources in a real-world setting. Topics covered in depth include discounted cash flow techniques and price multiples. In addition, the course covers other valuation techniques.
Fall or Spring
Mutually Exclusive: FNCE 7070
Prerequisite: FNCE 1000 AND ACCT 1010 AND STAT 1010
1 Course Unit

FNCE 2090 Real Estate Investment: Analysis and Financing
This course provides an introduction to real estate with a focus on investment and financing issues. Project evaluation, financing strategies, investment decision making and real estate capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format with discussion required. The course contains cases that help students evaluate the impact of more complex financing and capital markets tools used in real estate. There are case studies and two midterms, (depending on instructor).
Fall or Spring
Also Offered As: REAL 2090
Prerequisite: FNCE 1000
1 Course Unit

FNCE 2170 Financial Derivatives
(Formerly FNCE 206) This course covers one of the most exciting and fundamental areas in finance. Financial derivatives serve as building blocks to understand broad classes of financial problems, such as complex asset portfolios, strategic corporate decisions, and stages in venture capital investing. The main objective of this course is build intuition and skills on (1) pricing and hedging of derivative securities, and (2) using them for investment and risk management. In terms of methodologies, we apply the non-arbitrage principle and the law of one price to dynamic models through three different approaches: the binomial tree model, the Black-Scholes-Merton option pricing model, and the simulation-based risk neutral pricing approach. The course covers a wide range of applications, including the use of derivatives in asset management, the valuation of corporate securities such as stocks and corporate bonds with embedded options, interest rate and credit derivatives, as well as crude oil derivatives. We emphasize practical considerations of implementing strategies using derivatives as tools, especially when no-arbitrage conditions do not hold. STAT 1020 may be taken concurrently.
Fall or Spring
Mutually Exclusive: FNCE 7170
Prerequisite: FNCE 1000
1 Course Unit

FNCE 2190 International Financial Markets and Cryptocurrencies
Major topics include foreign exchange rates, international money markets, currency and interest rate derivatives, international stock and bond portfolios, and cryptocurrencies. Students learn about the features of financial instruments and the motivations of market participants. The class focuses on risk management, investing, and arbitrage in these markets. In addition to course prerequisites, FNCE 1010 is recommended but not required.
Fall or Spring
Mutually Exclusive: FNCE 7190
Prerequisite: FNCE 1000 AND STAT 1010
1 Course Unit

FNCE 2250 Fixed Income Securities
(Formerly FNCE 235) This course covers fixed income securities (including fixed income derivatives) and provides an introduction to the markets in which they are traded, as well as to the tools that are used to value these securities and to assess and manage their risk. Quantitative models play a key role in the valuation and risk management of these securities. As a result, although every effort will be made to introduce the various pricing models and techniques as intuitively as possible and the technical requirements are limited to basic calculus and statistics, the class is by its nature quantitative and will require a steady amount of work. In addition, some computer proficiency will be required for the assignments, although familiarity with a spreadsheet program (such as Microsoft Excel) will suffice. In addition to course prerequisites, FNCE 1010 is recommended.
Fall or Spring
Mutually Exclusive: FNCE 7250
Prerequisite: FNCE 1000
1 Course Unit
FNCE 2300 Urban Fiscal Policy
This course will examine the provision of public services for firms and people through cities. Why cities exist, when fiscal policy fails, investments in infrastructure, realities of local governments such as inequality, crime, corruption, high cost of living, congestion, and unfunded pensions and debt, will be covered. We will pay special attention to recent topics, such as partnerships with the private sector, enterprise zones, the role of technology, environmental challenges, and real estate policies that promote housing affordability, such as rent control and inclusionary zoning.

Fall
Also Offered As: BEPP 2300, REAL 2300
1 Course Unit

FNCE 2310 Global Valuation and Risk Analysis
(Formerly FNCE 208/International Corporate Finance) This course analyzes the financial management problems that result from operating in global environments. Key topics include managing currency risk through hedging and financing, calculating the cost of capital for foreign operations, assessing sovereign risks, capital budgeting from a project and parent perspective, and international taxation and financing, measuring exchange rate exposure, calculating the cost of capital for foreign operations, assessment of sovereign risks, capital budgeting from a project and parent perspective, and international taxation.

Spring
Mutually Exclusive: FNCE 7310
Prerequisite: FNCE 1000
1 Course Unit

FNCE 2320 International Banking
(Formerly FNCE 220) This course focuses on international financial institutions, especially the activities of global, systemically important banks. We will examine how current and historical events are reshaping the industry and highlight the basic analytics of managing a bank's exposure to liquidity, credit, market and reputational risk. Most classes will begin with discussion of a current event related to course topics. Three team projects will be assigned that will give you deeper exposure to analytic techniques related to the course. Throughout the semester, we will discuss public policy issues facing the international financial system. In addition to course prerequisites, FNCE 1010 is recommended.

Spring
Mutually Exclusive: FNCE 7320
Prerequisite: FNCE 1000
1 Course Unit

FNCE 2370 Data Science for Finance
This course will introduce students to data science for financial applications using the Python programming language and its ecosystem of packages (e.g., Dask, Matplotlib, Numpy, Numba, Pandas, SciPy, Scikit-Learn, StatsModels). To do so, students will investigate a variety of empirical questions from different areas within finance including: FinTech, investment management, corporate finance, corporate governance, venture capital, private equity, and entrepreneurial finance. The course will highlight how big data and data analytics shape the way finance is practiced. Some programming experience is helpful though knowledge of Python is not assumed.

Fall
Mutually Exclusive: FNCE 7370
Prerequisite: FNCE 1000 AND STAT 1020
1 Course Unit

FNCE 2380 Capital Markets
The objective of this course is to give you a broad understanding of the framework and evolution of U.S. capital markets, the instruments that are traded, the mechanisms that facilitate their trading and issuance, and the motivations of issuers and investors across different asset classes. The course will highlight the problems that capital market participants are seeking to solve, which you can use in your post-Wharton careers to evaluate future market innovations. We will consider design, issuance, and pricing of financial instruments, the arbitrage strategies which keep their prices in-line with one another and the associated economic and financial stability issues. We will draw from events in the aftermath of the recent financial crisis, which illustrate financing innovations and associated risks, as well as policy responses that can change the nature of these markets. In addition to course prerequisites, FNCE 1010 is recommended.

Fall or Spring
Mutually Exclusive: FNCE 7380
Prerequisite: FNCE 1000
1 Course Unit

FNCE 2390 Behavioral Finance
This course combines insights from behavioral economics and psychology to shed light on anomalous decisions by investors and possibly behavior of asset prices. Its content is designed to both complement and challenge the "rational" investment paradigms developed in the early finance classes. It introduces students to much modern theoretical and empirical research showing this paradigm to be insufficient to describe various features of actual financial markets. The course structure involves early lectures, several cases, and a final project involving "real life" examples and some modern research methods. In the capstone project students research and explore a specific behavioral bias or a profitable investment opportunity. Students will work in groups to simulate the behavior of, say, a portfolio management team looking for a new trading strategy; a consulting firm advising corporations on issues of financial management; or an entrepreneurial start-up developing a retail financial product. The main deliverable is in a form of a "pitch" to potential clients to be delivered both in the form of a group presentation in class and a formal write-up to be submitted by the due date.

Spring
Mutually Exclusive: FNCE 7390
Prerequisite: FNCE 1000
1 Course Unit

FNCE 2400 Central Banks, Macroeconomic Policy and Financial Markets
(Formerly FNCE 393) Understanding and predicting central banking decision making and behavior is crucial for all market participants from asset managers and traders to private consumers. This course aims to provide the methods and knowledge on how central banks and governments think and implement policies to reach the goals of price and financial stability as well as support of growth and employment. The core of the course connects between the legal and actual goals that central banks follow and the related economic analysis on which these goals and policies are set. We explain the economic rationale for the policy prescriptions to reach the goals and how these policies are actually implemented by the Federal Reserve Bank (Fed) in the US, the European Central Bank (ECB), Bank of Israel (BOI) and some remarks on other countries. We use data, current events of the 2007-2018 period as the basis for discussion and assignments. All of these are aimed understanding how and why the Fed, the ECB and the BOI set their policies. For each we shall simulate in class current decisions based on assignment related to past policies and the theory presented in class.
Fall
Mutually Exclusive: FNCE 7400
Prerequisite: FNCE 1000 AND FNCE 1010 AND STAT 1020
1 Course Unit

FNCE 2500 Venture Capital and the Finance of Innovation
This course covers the finance of technological innovation, with a focus on the valuation tools useful in the venture capital industry. These tools include the "venture capital method," comparables analysis, discounted cash flow analysis, contingent-claims analysis. The primary audience for this course is finance majors interested in careers in venture capital or in R&D-intensive companies in health care or information technology.
Fall or Spring
Mutually Exclusive: FNCE 7500
Prerequisite: FNCE 1000
1 Course Unit

FNCE 2510 The Finance of Buyouts and Acquisitions
The course focuses on financial tools, techniques, and best practices used in buyouts (financial buyers) and acquisitions (strategic buyers). While it will touch upon various strategic, organizational, and general management issues, the main lens for studying these transactions will be a financial one. It will explore how different buyers approach the process of finding, evaluating, and analyzing opportunities in the corporate-control market; how they structure deals and how deal structure affects both value creation and value division; how they add value after transaction completion; and how they realize their ultimate objectives (such as enhanced market position or a profitable exit). The course is divided into two broad modules. The first module covers mergers and acquisitions, and the second one studies buyouts by private equity partnerships. FNCE 2030 or FNCE 2070 are recommended.
Fall or Spring
Mutually Exclusive: FNCE 7510
Prerequisite: FNCE 1000
1 Course Unit

FNCE 2530 Distressed Investing and Value Creation
(Formerly FNCE 341) This course familiarizes students with financial, strategic and legal issues associated with the restructuring of financially distressed firms and investment in distressed securities. The objective is to give students the concepts and tools necessary to assess the often-complex situation facing a firm in financial distress. The course covers the various options available for distressed firms, such as out-of-court workouts, exchange offers, prepackaged and pre-negotiated, bankruptcies, distressed asset sales, 363 auctions, and Chapter 11 reorganization. We consider distressed debt as an asset class, develop techniques for investing in distressed securities and assess investment opportunities using the concepts of value investing. Students will sharpen their conceptual knowledge of finance and valuation in order to properly estimate the value of a distressed firm, and its securities. We will also address the importance of value creation and how to manage for value creation to either resolve distress or avoid it in the first place. FNCE 2030 or FNCE 2070 are recommended.
Fall
Mutually Exclusive: FNCE 7530
Prerequisite: FNCE 1000
1 Course Unit

FNCE 2540 ESG and Impact Investing
This course explores Impact Investing, a discipline that seeks to generate social benefits as well as financial returns. From tiny beginnings, the impact investment space has expanded and now commands significant attention from policymakers, wealthy and public-spirited individuals, academia and, not least, the world’s largest asset managers and philanthropic foundations. Evangelists believe it may be the key to freeing the world from poverty. Skeptics think it will remain confined to the boutique. Regardless, Impact Investing is becoming a distinct career specialization for finance professionals despite the diverse skillset each must have and the uncertainty of the new field’s growth. In addition to prerequisites, FNCE 2050 is recommended but not required.
Fall
Mutually Exclusive: FNCE 7540
Prerequisite: FNCE 1000
1 Course Unit

FNCE 2550 Energy Finance
The objective of this course is to provide students with detailed knowledge of corporate structures, valuation methods, project finance, risk management practices, corporate governance issues, and geopolitical risks in the energy industry. In general, this course seeks to provide students with an overall context for understanding energy issues and risks, and how these might affect financing and investment decisions for both providers of energy and end-users of energy. FNCE 2030 or FNCE 2070 are recommended but not required.
Fall
Mutually Exclusive: FNCE 7560
Prerequisite: FNCE 1000
1 Course Unit
FNCE 2570 Foundations of Asset Pricing
This course will cover methods and topics that form the foundations of modern asset pricing. These include: investment decisions under uncertainty, mean-variance theory, capital market equilibrium, arbitrage pricing theory, state prices, dynamic programming, and risk-neutral valuation as applied to option prices and fixed-income securities. Upon completion of this course, students should acquire a clear understanding of the major principles concerning individuals' portfolio decisions under uncertainty and the valuations of financial securities. In addition to the prerequisites of one of the following courses is recommended FNCE 205; BEPP 250; MATH 360; STAT 433.
Spring
Mutually Exclusive: FNCE 7570
Prerequisite: FNCE 1000 AND FNCE 1010 AND MATH 1410 AND MATH 3120 AND STAT 4300
1 Course Unit

FNCE 2800 FinTech
(Formerly FNCE 385) The course exposes students to this fast-growing and exciting intersection between finance (Fin) and technology (Tech) while emphasizing the role data and analytics play. The course is structured around three main FinTech areas: (i) Lending/Banking services, (ii) Clearing (iii) Trading. It provides specific coverage and examples of developments from (1) market-place lending, (2) blockchain and distributed ledgers, (3) quantitative trading and its use of non-standard inputs. In each of these areas, we start by analyzing the marketplace, the incumbents, and then proceed to analyze the impact of the most relevant technologies have on the business. The course is built around data/code examples, cases, guest lectures, and group projects. Student are thus expected to work in teams and demonstrate a high level of independent learning and initiative.
Spring
Mutually Exclusive: FNCE 7800

0.5 Course Units

FNCE 2830 Strategic Equity Finance
This course discusses actual situations where companies need to make strategic decisions on raising equity capital. We will address different phases of a company's life cycle. Through these cases, from the decision-makers perspective, we will explore the different paths that can be taken and consider issues This half-semester course combines lectures and cases, and will go through actual situation where companies need to make strategic decisions on raising equity capital. We will address different phases of a company's life cycle. Through these cases, from the decision-makers perspective, we will explore the different paths that can be taken and consider issues such as investor activism, governance and regulatory and valuation impact.
Spring
Mutually Exclusive: FNCE 7830
Prerequisite: FNCE 1000
0.5 Course Units

FNCE 2970 Taxes and Business Strategy
The objective of this course is to develop a framework for understanding how taxes affect business decisions. The key themes of the framework - all parties, all taxes and all costs - are applied to decision contexts such as investments, compensation, organizational form, and mergers and acquisitions. The ultimate goal is to provide a new approach to thinking about taxes that will be valuable even as laws and governments change. If ACCT 2970 is not offered in a given year, Undergraduate students interested in ACCT 2970 will need to submit a permission through Path@Penn.edu. All prerequisites need to be completed in order to receive a permit. Also this class will follow the MBA calendar.
Spring
Also Offered As: ACCT 2970
Prerequisite: ACCT 1010 AND FNCE 1010
1 Course Unit

FNCE 2970 Corporate Restructuring
This course explores the highly active and sophisticated deal making environment that is the hallmark of modern corporate restructuring. The course is primarily comprised of two key components. The first is groundwork-laying lectures that focus on fundamental rights and obligations of debtors, creditors, and other parties in interest in the various types of major chapter 11 cases, providing critical insight into understanding the motivations, strategies, and available tools for chapter 11 participants (which also serve as the foundation for out-of-court deals). The second element of the course is a series of case study panels based on market trends from the previous year that bring together key participants from recent deals, including the CEO or chairman of the company, the judge, the lead banker and lead lawyer, and the lead investors to give their insight and perspectives to the class.
Fall
Mutually Exclusive: FNCE 7910, LAW 9080
Prerequisite: FNCE 1000
1 Course Unit

FNCE 3110 Infrastructure Investing
Infrastructure covers roads and bridges (the original infrastructure), to railroads, airports (the more recent infrastructure), to telecommunications and solar and wind power installations (modern infrastructure). There is a vast amount of public (taxpayer) and private (typically private equity or banks) money directed into infrastructure investments. This course covers infrastructure financing and investing from various angles. We will provide descriptions of types of infrastructure, examine the financing needs of different infrastructure projects, consider the historic role of public and private funding, assess the changing needs of consumers, role of technology and the increasing demands posed by a globalizing economy. We will also examine infrastructure investing as a alternative asset class from the investors' perspective. FNCE 2030 or FNCE 2070 are recommended.
Mutually Exclusive: FNCE 8110
Prerequisite: FNCE 1000
0.5-1 Course Unit
FNCE 3510 ASP. Finance and Society
This interdisciplinary course delves into the history of different economic and financial systems around the world. Students will analyze the economic and financial interactions between individuals, financial and non-financial corporations, governments, and the media under various systems and through the pre-modern, modern and postmodern eras. After theoretically exploring each system and their underlying philosophy, students critically evaluate them through data-driven analysis. In the process, the course offers students a rigorous introduction to the scientific method and its enlightenment origins, as well as the resulting empirical tools used in the social sciences. The course will be intellectually rigorous but not overly mathematical.
Fall or Spring
Prerequisite: FNCE 1000 AND FNCE 1010
0.5 Course Units

FNCE 3860 ASP. Hedge Funds
This course will cover critical aspects and characteristics of hedge funds and the hedge fund industry. It will look at the legal foundations and structures of hedge funds including the primary regulations in the U.S. and abroad that are most relevant for hedge funds. It will also present the major hedge fund strategies, describe operation, control, administration, due diligence and valuation issues. Performance evaluation and investing in hedge funds from the investor’s perspective will be discussed as will be issues of potential changes in regulation, risk management, and the use of leverage. The format of the course will mix lectures with presentations from industry participants, hedge fund managers, those who invest in hedge funds, those who advise them and provide services to them, and those who regulate them. Those who want to launch a hedge fund, join an existing one, invest in one, or provide services to one will want to register for this course.
Fall
Prerequisite: FNCE 1000
0.5 Course Units

FNCE 3920 Financial Engineering
This course expands the key insights from the prior quantitative finance classes such as Derivatives and Fixed Income by using more advanced tools in statistics and applied mathematics. Its focus is on devising new and innovative financial products, often employing financial derivatives and related dynamic strategies, to address portfolio and risk-management problems. The course structure involves an introductory lectures and case discussions in the first half, and a capstone "real life" group project where students will seek to address specific problems in finance faced by sell-side banks, and buy-side corporate clients or investment funds. Each project will focus on practical economic needs and standard activities of a specific client and/or bank and the use of derivatives and dynamic strategies to solve them. Programming skills and an exposure to numerical methods are an important part of the project in this course.
Mutually Exclusive: FNCE 8920
Prerequisite: FNCE 1000
0.5-1 Course Unit

FNCE 3990 Supervised Study in Finance
Integrates the work of the various courses and familiarizes the student with the tools and techniques of research.
Prerequisite: FNCE 1000 AND FNCE 1010
0.5-1 Course Unit

FNCE 4010 Advanced Topics in PE
This course will cover a variety of applied topics in private equity (PE) with a focus on growth and later-stage buyout transactions. It will have a primarily U.S.-centric view that is largely applicable to other markets. Venture capital is not explicitly addressed in this course. Course topics will address the entirety of the deal process and value creation in the post-acquisition period, and will include the following: - LBO modeling - Commercial due diligence (principles and execution) - Debt financing - Sale & purchase agreements (SPA) - Accounting diligence - Deal structuring - Operations & Value creation Throughout the course, students will learn about each element of the deal process through in-class lectures, while concurrently applying those learnings to former transactions (these must be old enough that sharing material is no longer sensitive). The in-class lectures will cover conceptual frameworks, practical considerations and real-world case studies and examples. There will be four assignments in this course. The first three assignments will apply these learnings to the art of the deal through a real world lens. In the last assignment, students will develop a value creation plan for designated public companies "TargetCo1" and "TargetCo2". Students are expected to actively engage in classroom discussions, challenging one another and the instructors about how to think through these issues in an ever-evolving investment world. In addition, throughout the course, students are expected to work as a team on the assignments.
Fall or Spring
Mutually Exclusive: FNCE 8010
Prerequisite: (FNCE 1000 OR FNCE 1008) AND (FNCE 1010 OR FNCE 1018) AND WH 1010 AND WH 2010 AND MGMT 3010
1 Course Unit

FNCE 4020 Shareholder Activism
The aim of the course is to provide an introduction to shareholder activism. The course makes use of lectures and case studies. The lectures expose the students to the institutional and empirical facts as well as approaches followed by leading shareholder activists. The case studies are designed to provide students experience in formulating potential opportunities for value creation through active engagement.
Assignments require students to develop/practice skills on fundamental analysis. Completion of either FNCE 2030 or FNCE 2070 is recommended.
Fall
Mutually Exclusive: FNCE 8020
Prerequisite: (FNCE 1000 OR FNCE 1008) AND (FNCE 1010 OR FNCE 1018) AND WH 1010 AND WH 2010 AND MGMT 3010
1 Course Unit

FNCE 6110 Corporate Finance
This course serves as an introduction to business finance (corporate financial management and investments) for both non-majors and majors preparing for upper-level course work. The primary objective is to provide the framework, concepts, and tools for analyzing financial decisions based on fundamental principles of modern financial theory. The approach is rigorous and analytical. Topics covered include discounted cash flow techniques; corporate capital budgeting and valuation; investment decisions under uncertainty; capital asset pricing; options; and market efficiency. The course will also analyze corporate financial policy, including capital structure, cost of capital, dividend policy, and related issues. Additional topics will differ according to individual instructors.
Fall or Spring
Mutually Exclusive: FNCE 1000
1 Course Unit
FNCE 6130 Macroeconomics and the Global Economic Environment
This course is required for all students except those who, having prior training in macroeconomics, money and banking, and stabilization policy at an intermediate or advanced level, can obtain a waiver by passing an examination. The purpose of the course is to train students to think systematically about the current state of the economy and macroeconomic policy, and to be able to evaluate the economic environment within which business and financial decisions are made. The course emphasizes the use of economic theory to understand the workings of financial markets and the operation and impact of government policies. We will study the determinants of the level of national income, employment, investment, interest rates, the supply of money, inflation, exchange rates, and the formulation and operation of stabilization policies.
Fall or Spring
Mutually Exclusive: FNCE 1010
1 Course Unit

FNCE 6210 Corporate Finance (Half CU)
(Formerly FNCE 614) This half-semester course serves as an introduction to corporate investments for non-majors. The primary objective is to provide a framework, concepts, and tools for analyzing financial decisions based on fundamental principles of modern financial theory. Topics covered include discounted cash flow techniques, corporate capital budgeting and valuation, investment decisions under uncertainty, and capital asset pricing. The approach is rigorous and analytical but the course will not cover several topics included in the full semester Corporate Finance course, including: market efficiency, corporate financial policy (including capital structure, cost of capital, dividend policy, and related issues), and options.
Fall or Spring
0.5 Course Units

FNCE 6230 Macroeconomics and The Global Economic Environment (Half CU)
(Formerly FNCE 615) This half-semester course in Macroeconomics is intended for non-finance majors. The goal of this course is to provide the foundation needed to recognize and understand broad economic and financial movements in the global economy. Key topics include national income accounting, production and economic growth, employment, business cycles, monetary and fiscal policy, and international finance. By the end of this course, students will be able to evaluate and discuss the global economic environment in which business and financial decisions are made.
Fall or Spring
0.5 Course Units

FNCE 7030 Advanced Corporate Finance
(Formerly FNCE 726) The objective of this course is to study the major decision-making areas of managerial finance and some selected topics in financial theory. The course reviews the theory and empirical evidence related to the investment and financing policies of the firm and attempts to develop decision-making ability in these areas. This course serves as an extension of FNCE 6110. Some areas of financial management not covered in FNCE 6110 are covered in FNCE 7030. These may include leasing, mergers and acquisitions, corporate reorganizations, financial planning, and working capital management, and some other selected topics. Other areas that are covered in FNCE 6110 are covered more in depth and more rigorously in FNCE 7030. These include investment decision making under uncertainty, cost of capital, capital structure, pricing of selected financial instruments and corporate liabilities, and dividend policy.
Fall or Spring
Mutually Exclusive: FNCE 2030
Prerequisite: FNCE 6110
1 Course Unit

FNCE 7050 Investment Management
(Formerly FNCE 720) This course studies the concepts and evidence relevant to the management of investment portfolios. Topics include diversification, asset allocation, portfolio optimization, factor models, the relation between risk and return, trading, passive (e.g., index-fund) and active (e.g., hedge-fund, long-short) strategies, mutual funds, performance evaluation, long-horizon investing and simulation. The course deals very little with individual security valuation and discretionary investing (i.e., “equity research” or “stock picking”).
Fall or Spring
Mutually Exclusive: FNCE 2050
Prerequisite: FNCE 6110
1 Course Unit

FNCE 7070 Valuation
(Formerly FNCE 728) The focus of this course is on the valuation of companies. The course covers current conceptual and theoretical valuation frameworks and translates those frameworks into practical approaches for valuing companies. The relevant accounting topics and the appropriate finance theory are integrated to show how to implement the valuation frameworks discussed on a step-by-step basis. The course teaches how to develop the required information for valuing companies from financial statements and other information sources in a real-world setting. Topics covered in depth include discounted cash flow techniques and price multiples. In addition, the course covers other valuation techniques such as leveraged buyout analysis.
Fall or Spring
Mutually Exclusive: FNCE 2070
Prerequisite: FNCE 6110 AND (ACCT 6110 OR ACCT 6130) AND (STAT 6130 OR STAT 6210)
0.5-1 Course Unit
FNCE 7170 Financial Derivatives
This course covers one of the most exciting and fundamental areas in finance. Financial derivatives serve as building blocks to understand broad classes of financial problems, such as complex asset portfolios, strategic corporate decisions, and stages in venture capital investing. The main objective of this course is build intuition and skills on (1) pricing and hedging of derivative securities, and (2) using them for investment and risk management. In terms of methodologies, we apply the non-arbitrage principle and the law of one price to dynamic models through three different approaches: the binomial tree model, the Black-Scholes-Merton option pricing model, and the simulation-based risk neutral pricing approach. The course covers a wide range of applications, including the use of derivatives in asset management, the valuation of corporate securities such as stocks and corporate bonds with embedded options, interest rate and credit derivatives, as well as crude oil derivatives. We emphasize practical considerations of implementing strategies using derivatives as tools, especially when no-arbitrage conditions do not hold. Fall or Spring
Mutually Exclusive: FNCE 2170
Prerequisite: FNCE 6110
1 Course Unit

FNCE 7190 International Financial Markets and Cryptocurrencies
Major topics include foreign exchange rates, international money markets, currency and interest rate derivatives, international stock and bond portfolios, and cryptocurrencies. Students learn about the features of financial instruments and the motivations of market participants. The class focuses on risk management, investing, and arbitrage in these markets. In addition to course prerequisites, FNCE 6130 is recommended but not required. Fall or Spring
Mutually Exclusive: FNCE 2190
Prerequisite: FNCE 6110
1 Course Unit

FNCE 7210 Real Estate Investment: Analysis and Financing
This course provides an introduction to real estate with a focus on investment and financing issues. Project evaluation, financing strategies, investment decision making and capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format with discussion required. The course contains cases that help students evaluate the impact of more complex financing and capital markets tools used in real estate. Lecture with discussion required. Fall or Spring
Also Offered As: REAL 7210
Prerequisite: FNCE 6110
0.5-1 Course Unit

FNCE 7250 Fixed Income Securities
This course covers fixed income securities (including fixed income derivatives) and provides an introduction to the markets in which they are traded, as well as to the tools that are used to value these securities and to assess and manage their risk. Quantitative models play a key role in the valuation and risk management of these securities. In addition to course prerequisites, FNCE 6130 is recommended but not required. Fall
Mutually Exclusive: FNCE 2250
Prerequisite: FNCE 6110 AND (STAT 6130 OR STAT 6210)
1 Course Unit

FNCE 7300 Urban Fiscal Policy
This course will examine the provision of public services for firms and people through cities. Why cities exist, when fiscal policy fails, investments in infrastructure, realities of local governments such as inequality, crime, corruption, high cost of living, congestion, and unfunded pensions and debt, will be covered. We will pay special attention to recent topics, such as partnerships with the private sector, enterprise zones, the role of technology, environmental challenges, and real estate policies that promote housing affordability, such as rent control and inclusionary zoning. Fall
Also Offered As: BEPP 7730, REAL 7300
1 Course Unit

FNCE 7310 Global Valuation and Risk Analysis
(Formerly named International Corporate Finance) This course analyzes the financial management problems that result from operating in global environments. Key topics include managing currency risk through hedging and financing, calculating the cost of capital for foreign operations, assessing sovereign risks, capital budgeting from a project and parent perspective, and international taxation. Spring
Mutually Exclusive: FNCE 2310
Prerequisite: FNCE 6110
1 Course Unit

FNCE 7320 International Banking
This course focuses on international financial institutions, especially the activities of global, systemically important banks. We will examine how current and historical events are reshaping the industry and highlight the basic analytics of managing a bank’s exposure to liquidity, credit, market and reputational risk. Most classes will begin with discussion of a current event related to course topics. Three team projects will be assigned that will give you deeper exposure to analytic techniques related to the course. Throughout the semester, we will discuss public policy issues facing the international financial system. In addition to course prerequisites, FNCE 6130 is recommended. Spring
Mutually Exclusive: FNCE 2320
Prerequisite: FNCE 6110
1 Course Unit

FNCE 7370 Data Science for Finance
This course will introduce students to data science for financial applications using the Python programming language and its ecosystem of packages (e.g., Dask, Matplotlib, Numpy, Numba, Pandas, SciPy, Scikit-Learn, StatsModels). To do so, students will investigate a variety of empirical questions from different areas within finance by way of data labs, or case studies that rely on data and analytics. Some of the areas that may be covered in the course, subject to time constraints, include: FinTech, investment management, corporate finance, corporate governance, venture capital, private equity. The course will highlight how big data and data analytics shape the way finance is practiced. Some programming and experience is helpful though knowledge of Python is not assumed. Spring
Mutually Exclusive: FNCE 2370
Prerequisite: FNCE 6110
1 Course Unit
FNCE 7380 Capital Markets
The objective of this course is to give you a broad understanding of the instruments traded in modern financial markets, the mechanisms that facilitate their trading and issuance, as well as, the motivations of issuers and investors across different asset classes. The course will balance functional and institutional perspectives by highlighting the problems capital markets participants are seeking to solve, as well as, the existing assets and markets which have arisen to accomplish these goals. We will consider design, issuance, and pricing of financial instruments, the arbitrage strategies which keep their prices in-line with one another, and the associated economic and financial stability issues. The course is taught in lecture format, and illustrates key concepts by drawing on a collection of case studies and visits from industry experts. FNCE 6130 is recommended but not required.

Fall or Spring
Mutually Exclusive: FNCE 2380
Prerequisite: FNCE 6110
0.5-1 Course Unit

FNCE 7390 Behavioral Finance
There is an abundance of evidence suggesting that the standard economic paradigm - rational agents in an efficient market - does not adequately describe behavior in financial markets. In this course, we will survey the evidence and use psychology to guide alternative theories of financial markets. Along the way, we will address the standard argument that smart, profit-seeking agents can correct any distortions caused by irrational investors. Further, we will examine more closely the preferences and trading decisions of individual investors. We will argue that their systematic biases can aggregate into observed market inefficiencies, thus giving rise to apparently profitable trading strategies. The latter part of the course extends the analysis to corporate decision making. We then explore the evidence for both views in the context of capital structure, investment, dividend, and merger decisions. In addition to prerequisites, FNCE 7050 is highly recommended but not required.

Spring
Mutually Exclusive: FNCE 2390, FNCE 4030
Prerequisite: FNCE 6110
1 Course Unit

FNCE 7400 Central Banks, Macroeconomic Policy and Financial Markets
(Formerly FNCE 893) Understanding and predicting central banking decision making and behavior is crucial for all market participants from asset managers and traders to private consumers. This course aims to provide the methods and knowledge on how central banks and governments think and implement policies to reach the goals of price and financial stability as well as support of growth and employment. The core of the course connects between the legal and actual goals that central banks follow and the related economic analysis on which these goals and policies are set. We explain the economic rationale for the policy prescriptions to reach the goals and how these policies are actually implemented by the Federal Reserve Bank (Fed) in the US, the European Central Bank (ECB), Bank of Israel (BOI) and some remarks on other countries. We use data, current events of the 2007-2018 period as the basis for discussion and assignments. The second half of the class discusses the implications of these policies for equity and bond valuations. Students will be asked to forecast live policy decisions and implied market valuations.

Fall
Mutually Exclusive: FNCE 2400
Prerequisite: FNCE 6130 AND STAT 6130
1 Course Unit

FNCE 7500 Venture Capital and the Finance of Innovation
This course covers the finance of technological innovation, with a focus on the valuation tools useful in the venture capital industry. These tools include the "venture capital method," comparables analysis, discounted cash flow analysis, contingent-claims analysis. The primary audience for this course is finance majors interested in careers in venture capital or in R&D-intensive companies in health care or information technology.

Spring
Mutually Exclusive: FNCE 2500
Prerequisite: FNCE 6110
0.5-1 Course Unit

FNCE 7510 The Finance of Buyouts and Acquisitions
The course focuses on financial tools, techniques, and best practices used in buyouts (financial buyers) and acquisitions (strategic buyers). While it will touch upon various strategic, organizational, and general management issues, the main lens for studying these transactions will be a financial one. It will explore how different buyers approach the process of finding, evaluating, and analyzing opportunities in the corporate-control market; how they structure deals and how deal structure affects both value creation and value division; how they add value after transaction completion; and how they realize their ultimate objectives (such as enhanced market position or a profitable exit). The course is divided into two broad modules. The first module covers mergers and acquisitions, and the second one studies buyouts by private equity partnerships. FNCE 7030 or FNCE 7070 are recommended.

Fall
Mutually Exclusive: FNCE 2510
Prerequisite: FNCE 6110
0.5-1 Course Unit

FNCE 7530 Distressed Investing and Value Creation
(Formerly FNCE 841) This course familiarizes students with financial, strategic and legal issues associated with the restructuring of financially distressed firms and investment in distressed securities. The objective is to give students the concepts and tools necessary to assess the often-complex situation facing a firm in financial distress. The course covers the various options available for distressed firms, such as out-of-court workouts, exchange offers, prepackaged and pre-negotiated, bankruptcies, distressed asset sales, 363 auctions, and Chapter 11 reorganization. We consider distressed debt as an asset class, develop techniques for investing in distressed securities and assess investment opportunities using the concepts of value investing. Students will sharpen their conceptual knowledge of finance and valuation in order to properly estimate the value of a distressed firm, and its securities. We will also address the importance of value creation and how to manage for value creation to either resolve distress or avoid it in the first place. FNCE 7030 or FNCE 7070 are recommended.

Fall or Spring
Mutually Exclusive: FNCE 2530
Prerequisite: FNCE 6110
1 Course Unit
FNCE 7540 ESG and Impact Investing
This course explores Impact Investing, a discipline that seeks to generate social benefits as well as financial returns. From tiny beginnings, the Impact Investment space has expanded and now commands significant attention from policymakers, wealthy and public-spirited individuals, academia and, not least, the world’s largest asset managers and philanthropic foundations. Evangelists believe it may be the key to freeing the world from poverty. Skeptics think it will remain confined to the boutique. Regardless, Impact Investing is becoming a distinct career specialization for finance professionals despite the diverse skillset each must have and the uncertainty of the new field’s growth. In addition to prerequisites, FNCE 7050 is recommended but not required.
Spring
Mutually Exclusive: FNCE 2540
Prerequisite: FNCE 6110
0.5-1 Course Unit

FNCE 7560 Energy Finance
The objective of this course is to provide students with detailed knowledge of corporate structures, valuation methods, project finance, risk management practices, corporate governance issues, and geopolitical risks in the energy industry. In general, this course seeks to provide students with an overall context for understanding energy issues and risks, and how these might affect financing and investment decisions for both providers of energy and end-users of energy. FNCE 7030 and FNCE 7070 are recommended but not required.
Spring
Mutually Exclusive: FNCE 2560
Prerequisite: FNCE 6110
1 Course Unit

FNCE 7570 Foundations of Asset Pricing
This course will cover methods and topics that form the foundations of modern asset pricing. These include: investment decisions under uncertainty, mean-variance theory, capital market equilibrium, arbitrage pricing theory, state prices, dynamic programming, and risk-neutral valuation as applied to option prices and fixed-income securities. Upon completion of this course, students should acquire a clear understanding of the major principles concerning individuals’ portfolio decisions under uncertainty and the valuations of financial securities. FNCE 7050 is recommended but not required.
Spring
Mutually Exclusive: FNCE 2570
Prerequisite: FNCE 6110
1 Course Unit

FNCE 7800 FinTech
(Formerly FNCE 885) The course exposes students to this fast-growing and exciting intersection between finance (Fin) and technology (Tech) while emphasizing the role data and analytics play. The course is structured around three main FinTech areas: (i) Lending/Banking services, (ii) Clearing (iii) Trading. It provides specific coverage and examples of developments from (1) market-place lending, (2) blockchain and distributed ledgers, (3) quantitative trading and its use of non-standard inputs. In each of these areas, we start by analyzing the marketplace, the incumbents, and then proceed to analyze the impact of the most relevant technologies have on the business. The course is built around data/code examples, cases, guest lectures, and group projects. Student are thus expected to work in teams and demonstrate a high level of independent learning and initiative.
Spring
Mutually Exclusive: FNCE 2800
Prerequisite: FNCE 6110
0.5 Course Units

FNCE 7830 Strategic Equity Finance
This course discusses actual situations where companies need to make strategic decisions on raising equity capital. We will address different phases of a company’s life cycle. Through these cases, from the decision-makers perspective, we will explore the different paths that can be taken and consider issues. This half-semester course combines lectures and cases, and will go through actual situation where companies need to make strategic decisions on raising equity capital. We will address different phases of a company’s life cycle. Through these cases, from the decision-makers perspective, we will explore the different paths that can be taken and consider issues such as investor activism, governance and regulatory and valuation impact.
Spring
Mutually Exclusive: FNCE 2830
Prerequisite: FNCE 6110
0.5 Course Units

FNCE 7850 Business Strategy & Corp
This course explores strategic, business and legal decision making in a fluid real world corporate context. Classes will cover a series of timely financial and legal subjects as well as case studies that deal with topical problems in corporate governance, investment strategy, finance, private equity, executive compensation, and potential corporate and criminal behavior. Press, public market reaction, and governmental/political considerations will be integrated into the discussion. All students will be required to participate in one major and two minor team projects. An equal number of graduate law and business students will be enrolled in this class.
Also Offered As: LGST 7850
Prerequisite: FNCE 6110
1 Course Unit
FNCE 7910 Corporate Restructuring
This course explores the highly active and sophisticated deal making environment that is the hallmark of modern corporate restructuring. The course is primarily comprised of two key components. The first is groundwork-laying lectures that focus on fundamental rights and obligations of debtors, creditors, and other parties in interest in the various types of major chapter 11 cases, providing critical insight into understanding the motivations, strategies, and available tools for chapter 11 participants (which also serve as the foundation for out-of-court deals). The second element of the course is a series of case study panels based on market trends from the previous year that bring together key participants from recent deals, including the CEO or chairman of the company, the judge, the lead banker and lead lawyer, and the lead investors to give their insight and perspectives to the class.
Fall
Mutually Exclusive: FNCE 2910, LAW 9080
0.5-1 Course Unit

FNCE 7970 Taxes and Business Strategy
The objective of this course is to develop a framework for understanding how taxes affect business decisions. Traditional finance and strategy courses do not consider the role of taxes. Similarly, traditional tax courses often ignore the richness of the decision context in which tax factors operate. The key themes of the framework - all parties, all taxes and all costs - are applied to decision contexts such as investments, compensation, organizational form, regulated industries, financial instruments, tax-sheltered investments, mergers and acquisitions, multinational, and multistate. The ultimate goal is to provide a new approach to thinking about taxes (and all forms of government intervention) that will be valuable even as laws and governments change.
Fall or Spring
Also Offered As: ACCT 8970
Prerequisite: (ACCT 6110 OR ACCT 6130) AND FNCE 6110
0.5-1 Course Unit

FNCE 8010 Corporate Restructuring
This course explores the highly active and sophisticated deal making environment that is the hallmark of modern corporate restructuring. The course is primarily comprised of two key components. The first is groundwork-laying lectures that focus on fundamental rights and obligations of debtors, creditors, and other parties in interest in the various types of major chapter 11 cases, providing critical insight into understanding the motivations, strategies, and available tools for chapter 11 participants (which also serve as the foundation for out-of-court deals). The second element of the course is a series of case study panels based on market trends from the previous year that bring together key participants from recent deals, including the CEO or chairman of the company, the judge, the lead banker and lead lawyer, and the lead investors to give their insight and perspectives to the class.

FNCE 8020 Shareholder Activism
(Formerly FNCE 887) The aim of the course is to provide an introduction to shareholder activism. The course makes use of lectures and case studies. The lectures expose the students to the institutional and empirical facts as well as approaches followed by leading shareholder activists. The case studies are designed to provide students an experience on identifying potential opportunity for value creation through active engagement. Assignments require students to develop/practice skills on fundamental analysis.
Fall
Mutually Exclusive: FNCE 4020
Prerequisite: FNCE 6110
1 Course Unit

FNCE 8110 ASP: Infrastructure Investing
Infrastructure covers roads and bridges (the original infrastructure), to railroads, airports (the more recent infrastructure), to telecommunications and solar and wind power installations (modern infrastructure). There is a vast amount of public (taxpayer) and private (typically private equity or banks) money directed into infrastructure investments. This course covers infrastructure financing and investing from various angles. We will provide descriptions of types of infrastructure, examine the financing needs of different infrastructure projects, consider the historic role of public and private funding, assess the changing needs of consumers, role of technology and the increasing demands posed by a globalizing economy. We will also examine infrastructure investing as an alternative asset class from the investors’ perspective. FNCE 7030 or FNCE 7070 are recommended.
Mutually Exclusive: FNCE 3110
Prerequisite: FNCE 6110
0.5-1 Course Unit

FNCE 8120 The Finance, Economics and Law of Fiscal Crises
The focus will be on the causes of fiscal crises, a careful detailing of who wins and who loses, and then on how such crises might be resolved and, perhaps most importantly, how they might be prevented in the future. The course will draw upon the fiscal experiences of US local governments (New York, Philadelphia, Detroit, Orange County, Puerto Rico), utilities (WPPSS) and states (Illinois), and the international experience from such countries as Greece, Brazil, and Argentina. The cost of such crises for citizens, pensioners, and bond holders can be significant. We seek to understand the underlying economic, political, and legal/regulatory causes of such events so that they may be prevented in the future. The importance of private information and public regulation for disciplining the fiscal performance of democratically elected governments will be a central concern. We believe strongly that diagnosing and treating the “disease” of fiscal mismanagement is an interdisciplinary endeavor drawing on finance, economics, political science, and the law. Students with backgrounds in any of these disciplines are welcome.
Prerequisite: FNCE 6110
1 Course Unit
FNCE 8860 ASP: Hedge Funds
This course will cover critical aspects and characteristics of hedge funds and the hedge fund industry. It will look at the legal foundations and structures of hedge funds including the primary regulations in the U.S. and abroad that are most relevant for hedge funds. It will also present the major hedge fund strategies, describe operation, control, administration, due diligence and valuation issues. Performance evaluation and investing in hedge funds from the investor’s perspective will be discussed as will be issues of potential changes in regulation, risk management, and the use of leverage. The format of the course will mix lectures with presentations from industry participants, hedge fund managers, those who invest in hedge funds, those who advise them and provide services to them, and those who regulate them. Those who want to launch a hedge fund, join an existing one, invest in one, or provide services to one will want to register for this course.
Prerequisite: FNCE 6110
0.5 Course Units

FNCE 8920 Financial Engineering
This class covers advanced pricing models for equity, fixed income and credit derivatives. It aims at: 1) Introducing the main models used in practical applications to price and hedge derivatives; 2) Understanding their comparative advantages and limitations, as well as how they are calibrated and applied. As part of team assignments, students will be asked to calibrate and implement the models introduced in the class using software of their choice.
Mutually Exclusive: FNCE 3920
Prerequisite: FNCE 7170 OR FNCE 7250
1 Course Unit

FNCE 8950 Global Business Week (GBW)
The Global Business Week (GBW) is set of classes offered annually to WEMBA second years. They are often repeated, but try to accommodate student interest along with faculty expertise and willingness, so can change with some regularity.
0.5 Course Units

FNCE 8960 Global Modular Course
Open to MBA, Executive MBA and Undergraduate students, these modular courses are intended to provide unique educational experiences to students in a regional context that has particular resonance with the topic. Taught around the globe, the modular courses help us enrich the curriculum and research on our own campuses in Philadelphia and San Francisco.
Not Offered Every Year
Mutually Exclusive: WH 2150
0.5 Course Units

FNCE 8970 Finance in Emerging Markets (GMC)
This is a Wharton Global Modular Course on Finance in the Middle East and North Africa. Its objective is to bring students, academics and industry experts together to study financial markets, practice, and institutions in this region.
Not Offered Every Year
Mutually Exclusive: WH 2140
0.5 Course Units

FNCE 8990 Independent Study Project in Finance
Independent Study Projects require extensive independent work and a considerable amount of writing. ISP in Finance are intended to give students the opportunity to study a particular topic in Finance in greater depth than is covered in the curriculum. The application for ISP's should outline a plan of study that requires at least as much work as a typical course in the Finance Department that meets twice a week. Applications for FNCE 8990 ISP's will not be accepted after the THIRD WEEK OF THE SEMESTER. ISP's must be supervised by a Standing Faculty member of the Finance Department.
Prerequisite: FNCE 6110 AND FNCE 6130
0.5-1 Course Unit

FNCE 9110 Financial Economics
The objective of this course is to undertake a rigorous study of the theoretical foundations of modern financial economics. The course will cover the central themes of modern finance including individual investment decisions under uncertainty, stochastic dominance, mean variance theory, capital market equilibrium and asset valuation, arbitrage pricing theory, option pricing, and incomplete markets, and the potential application of these themes. Upon completion of this course, students should acquire a clear understanding of the major theoretical results concerning individuals' consumption and portfolio decisions under uncertainty and their implications for the valuation of securities.
Fall
Prerequisite: ECON 6100 OR ECON 7100
1 Course Unit

FNCE 9120 Corporate Finance and Financial Institutions
This course provides students with an overview of the basic contributions in the modern theory of corporate finance and financial institutions. The course is methodology oriented in that students are required to master necessary technical tools for each topic. The topics covered may include capital structure, distribution policy, financial intermediation, incomplete financial contracting, initial and seasoned public offerings, market for corporate control, product market corporate finance interactions, corporate reorganization and bankruptcy, financing in imperfect markets, security design under adverse selection and moral hazard, and some selected topics.
Spring
Prerequisite: ECON 6100 OR ECON 7100
1 Course Unit

FNCE 9210 Introduction to Empirical Methods in Finance
This course is an introduction to empirical methods commonly employed in finance. It provides the background for FNCE 934, Empirical Research in Finance. The course is organized around empirical papers with an emphasis on econometric methods. A heavy reliance will be placed on analysis of financial data.
Spring
Prerequisite: FNCE 9110 AND STAT 5100 AND STAT 5110
1 Course Unit

FNCE 9220 Continuous-Time Financial Economics
This course covers some advanced material on the theory of financial markets developed over the last two decades. The emphasis is on dynamic asset pricing and consumption choices in a continuous time setting. The articles discussed include many classical papers in the field as well as some of the most recent developments. The lectures will emphasize the concepts and technical tools needed to understand the articles.
Fall
Prerequisite: FNCE 9110 AND ECON 7100 AND 7110
1 Course Unit
FNCE 9230 Financial Economics Under Imperfect Information
This course covers general equilibrium and rational expectations, foundations of the theory of information; learning from prices in rational expectations equilibrium models, moral hazard, adverse selection, and signaling bidding theories.
Not Offered Every Year
Prerequisite: FNCE 9220
1 Course Unit

FNCE 9240 Intertemporal Macroeconomics and Finance
This is a doctoral level course on macroeconomics, with special emphasis on intertemporal choice under uncertainty and topics related to finance. Topics include: optimal consumption and saving, the stochastic growth model, q-theory of investment, (incomplete) risk sharing and asset pricing. The course will cover and apply techniques, including dynamic programming, to solve dynamic optimization problems under uncertainty. Numerical solution methods are also discussed.
Spring
1 Course Unit

FNCE 9250 Topics in Asset Pricing
This course exposes student to recent development in the asset pricing literature. The starting point for the course is the standard neo-classical rational expectations framework. We will then investigate where this framework has succeeded and where it has not. Recently documented deviations from the framework in the literature are discussed and placed in context. The course will also focus on hypothesis development, recent research methods, and research writing. The ultimate objective is for students to develop their own hypotheses and research ideas, resulting in a paper.
Not Offered Every Year
Prerequisite: ECON 6100 OR ECON 7100
1 Course Unit

FNCE 9260 Empirical Methods in Corporate Finance
The course will cover a variety of micro-econometric models and methods including panel data models, program evaluation methods e.g. difference in differences, matching techniques, regression discontinuity design, instrumental variables, duration models, structural estimation, simulated methods of moments. The structure of the course consists of lectures, student presentations, and empirical exercises. Published studies will be utilized in a variety of fields such as corporate finance, labor economics, and industrial organization to illustrate the various techniques. The goal of the course is to provide students with a working knowledge of various econometric techniques that they can apply in their own research. As such, the emphasis of the course is on applications, not theory. Students are required to have taken a graduate sequence in Econometrics, you should be comfortable with econometrics at the level of William Green's "Econometric Analysis of Cross-Section and Panel Data".
Fall
Prerequisite: STAT 5210
1 Course Unit

FNCE 9270 Topics in Corporate Finance
This course covers advanced theory and empirical investigations; financial decisions of the firm, dividends, capital structure, mergers, and takeovers.
Not Offered Every Year
Prerequisite: FNCE 9220
1 Course Unit

FNCE 9330 International Finance
To provide an understanding of selected topics of current academic research in the areas of international finance and its intersection with international macroeconomics; to teach interested students the tools for conducting research in this field. Each topic will be developed beginning with early classic papers and then updated through the current status of the profession. The typical target audience comprises students in their second year or later. Prerequisite: Completion of first year course requirements
Fall
1 Course Unit

FNCE 9340 Empirical Methods In Asset Pricing
This course has three main objectives: The first object is to introduce students to the fundamental works and the frontier of research in dynamic asset pricing. We will cover recent models that have been proposed to shed light on intriguing and important empirical patterns in the cross section and in the time series. Topics include non-separable utilities, market incompleteness, learning, uncertainty, differences of opinions, ex-ante and ex-post asymmetric information, ambiguity and Knightian uncertainty. The second objective is to teach students how to think of asset pricing research under a bigger or richer framework. We shall focus on the interactions between asset pricing and other fields such as macroeconomics, corporate finance, financial institutions, and international finance. The goal of investigating the joint dynamics is not only to better understand how asset prices are determined, but also (maybe more importantly) how would asset pricing dynamics affect other important economic variables such as investment, corporate payout and financing, unemployment, risk sharing, and international capital flows. Students will learn production-based asset pricing models, particularly the asset pricing models with investment-specific technology shocks, risk shocks, financial friction, searching frictions and information frictions. Of course, the advanced solution methods will focus too. The third objective is to introduce advanced empirical methods to analyze the data and the quantitative dynamic models. It includes how to estimate structural dynamic models, how evaluate structural models beyond goodness-of-fit tests, how confront the models predictions with empirical data by simulation and re-sampling techniques, and how to efficiently test models and explore new patterns using asset pricing and macro data.
Fall
Prerequisite: FNCE 9110 AND FNCE 9210
1 Course Unit

FNCE 9370 Topics in Macro Finance
This is an advanced course in quantitative theory applied to macro and finance models. It is intended for doctoral students in finance, economics and related fields. The course focuses on four broad theoretical literatures: (i) firm investment and growth; (ii) corporate, household and sovereign debt; (iii) asset pricing in general equilibrium; and (iv) equilibrium macro models with a financial sector. My approach is to develop and discuss in detail a unified framework that is suited to address most topics, usually covering a few central topics and the core papers. We then discuss the more recent literature, highlighting how authors combine and expand upon the core ideas. This part of the course usually relies on regular student presentations.
Fall
Prerequisite: FNCE 9110
1 Course Unit
FNCE 9500 Research Seminar in Finance
This course may be offered (and taken by a student) several times a year with varying topics.
Fall or Spring
1 Course Unit

Fine Arts (FNAR)

FNAR 0010 Drawing I
This course is designed to develop visual awareness and perceptual acuity through the process of drawing. Students learn to sharpen perceptual skills through observational drawing, and to explore the expressive potential of drawing. A variety of problems and media will be presented in order to familiarize students with various methods of working and ways of communicating ideas visually. Subject matter will include object study, still life, interior and exterior space, self-portrait and the figure. Different techniques and materials (charcoal, graphite, ink, collage) are explored in order to understand the relationship between means, material and concept. Critical thinking skills are developed through frequent class critiques and through the presentation of and research into historical and contemporary precedent in drawing.
Fall or Spring
Also Offered As: VLST 2530
1 Course Unit

FNAR 0020 Contemporary Art Studio
This course offers an introduction to studio-based practices aimed at synthesizing the expansive potentialities of art through exposure to a diverse set of approaches, their histories, and contemporary applications. A wide range of multi-disciplinary projects will provide students with skills to conceptualize and visualize material investigations. Lectures, readings, films, visiting lectures, field trips, and critiques, will provide a historic and theoretical foundation for critical inquiry.
Fall or Spring
Also Offered As: VLST 2510
1 Course Unit

FNAR 0030 Space/Form
In this studio-based course, students are introduced to a wide range of approaches and techniques explore surface, space, and time (2D, 3D, 4D). Traditional sculptural materials and techniques will be investigated along with more ephemeral interventions in space such as sound, light, and projection. Through lectures, readings, and critiques, students will explore the history of installation and interactive sculptural work, discover new directions in contemporary art, and develop self-directed projects that interrogate historical, social, and psychological conditions of the built environment.
Mutually Exclusive: FNAR 5002
1 Course Unit

FNAR 1010 Video I
In this studio based course, students are introduced to video production and postproduction as well as to selected historical and theoretical texts addressing the medium of video. Students will be taught basic camera operation, sound recording and lighting, as well as basic video and sound editing and exporting using various screening and installation formats. In addition to a range of short assignment-based exercises, students will be expected to complete three short projects over the course of the semester. Critiques of these projects are crucial to the course as students are expected to speak at length about the formal, technical, critical and historical dimensions of their works. Weekly readings in philosophy, critical theory, artist statements and literature are assigned. The course will also include weekly screenings of films and videos, introducing students to the history of video art as well as to other contemporary practices.
Fall or Spring
Also Offered As: CIMS 0610, VLST 2610
1 Course Unit

FNAR 1020 Photography Practices
This course is an introduction to the basic principles, strategies and processes of photographic practice. It is designed to broaden the student's aesthetic explorations and to help the student develop a visual language based on cross-disciplinary artistic practice. Through a series of projects and exercises students will be exposed to a range of camera formats, techniques and encouraged to experiment with the multiple modes and roles of photography - both analogue and digital. Attention will also be given to developing an understanding of critical aesthetic and historical issues in photography. Students will examine a range of historical and contemporary photowork as an essential part of understanding the possibilities of image making. This course is primarily for first-years and sophomores. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
Fall or Spring
Also Offered As: VLST 2600
1 Course Unit

FNAR 1030 Introduction to Photography
This course is an introduction to the basic processes and techniques of black & white photography. Students will learn how to expose and process 35mm film, SLR camera operation, darkroom procedures & printing, basic lighting and controlled applications. It begins with an emphasis on understanding and mastering technical procedures and evolves into an investigation of the creative and expressive possibilities of making images. This is a project-based course, where students will begin to develop their personal vision, their understanding of aesthetic issues and photographic history. Assignments, ideas and important examples of contemporary art will be presented via a series of slide lectures, critiques and discussion. No previous experience necessary. 35mm SLR cameras will be available throughout the semester for reservation and checkout from the photography equipment room.
Fall or Spring
Also Offered As: VLST 2510
1 Course Unit
FNAR 1040 Digital Photography
This class offers an in-depth technical and conceptual foundation in digital imagery and the opportunity to explore the creative, expressive possibilities of photography. Students will become proficient with the basic use of the camera, techniques of digital capture, color management and color correction. They will also develop competency in scanning, retouching, printing and a variety of manipulation techniques in Photoshop. Through weekly lectures and critiques, students will become familiar with some of the most critical issues of representation, consider examples from photo history, analyze the impact of new technologies and social media. With an emphasis on structured shooting assignments, students are encouraged to experiment, expand their visual vocabulary while refining their technical skills. No previous experience is necessary. Although it is beneficial for students to have their own Digital SLR camera, registered students may reserve and checkout Digital SLR cameras and other high-end equipment from the department.
Fall or Spring
Also Offered As: VLST 2650
1 Course Unit

FNAR 1050 Mixed Media Animation
Mixed Media Animation is a contemporary survey of stop-motion animation concepts and techniques. Students use digital SLR cameras, scanners and digital compositing software to produce works in hand-drawn animation, puppet and clay animation, sand animation, and multiplane collage animation. Screenings and discussions in the course introduce key historical examples of animation demonstrating how these techniques have been used in meaningful ways. Students then learn how to compose two or more of these methods with matte painting, computer animation or video.
Fall or Spring
Also Offered As: CIMS 2890
1 Course Unit

FNAR 1060 Sculpture I
As an introduction to traditional and contemporary three-dimensional practice, this course is concerned with the concepts and methodologies surrounding three-dimensional art making in our time. Students experiment with a variety of modes of production, and develop some of the fundamental techniques used in sculpture. In addition to these investigations, assignments relative to the history and social impact of these practices are reinforced through readings and group discussion. Processes covered include use of the Fab Lab, wood construction, clay, paper, mixed media, and more.
Fall or Spring
Also Offered As: VLST 2520
1 Course Unit

FNAR 1070 Intro to Clay
This course introduces clay as a sculptural medium through fundamental clay-building techniques, mold making, model making, and casting. Through experimentation with these methods, this course promotes an understanding of materials, processes, visual concepts and techniques for creating three-dimensional forms in space. In addition to using different water-based clays and plaster, other materials such as wax, plastilint, paper pulp, and cardboard will be explored. Students will explore the full range of clay’s capabilities and its role in contemporary art through lectures, readings, demonstrations, and assignments that incorporate conceptual and technical issues.
1 Course Unit

FNAR 1080 Figure Drawing I
Students work directly from the nude model and focus on its articulation through an understanding of anatomical structure and function. Students will investigate a broad variety of drawing techniques and materials. The model will be used as the sole element in a composition and as a contextualized element.
Fall or Spring
Prerequisite: FNAR 0010
1 Course Unit

FNAR 1090 Painting I
Painting I is an introduction to the methods and materials of oil painting. This course begins with an investigation of color and color relationships. The beginning of the semester will cover technical issues and develop the student’s ability to create a convincing sense of form in space using mass, color, light and composition. The majority of work is from direct observation including object study, still life, landscape, interior and exterior space and the self portrait. Class problems advance sequentially with attention paid to perceptual clarity, the selection and development of imagery, the process of synthesis and translation, color, structure and composition, content and personal expression. Students will become familiar with contemporary and art historical precedent in order to familiarize them with the history of visual ideas and find appropriate solutions to their painting problems.
Fall or Spring

FNAR 1100 Introduction to Printmaking
The course offers an introduction to several forms of printmaking including: intaglio, screen printing, relief, and monoprinting. Through in-class demonstrations students are introduced to various approaches to making and printing in each medium. The course enhances a student’s capacity for developing images through two-dimensional design and conceptual processes. Technical and conceptual skills are developed through discussions and critiques.
Spring
Also Offered As: VLST 2500
1 Course Unit

FNAR 1110 The Big Picture: Mural Arts in Philadelphia
The history and practice of the contemporary mural movement couples step by step analysis of the process of designing with painting a mural. In addition students will learn to see mural art as a tool for social change. This course combines theory with practice. Students will design and paint a large outdoor mural in West Philadelphia in collaboration with Philadelphia high school students and community groups. The class is co-taught by Jane Golden, director of the Mural Arts Program in Philadelphia, and Shirle Walinsky, a mural arts painter and founder of Southeast by Southeast project, a community center for Burmese refugees in South Philadelphia.
Fall or Spring
Also Offered As: URBS 1110, VLST 3220
1 Course Unit
FNAR 1120 Bodies Bodies Bodies: An Introduction to Performance Art
Theater, Dance, Music, Opera, Film, Reality Television, Installation, Intervention, Social Encounters, Protests, Lectures, Seminars...what are the edges and borders of what we call “performance”? What, exactly, makes something “performance art” a “performance” or “performative”? How does an artist employ time, space, and audience to create a performance work? What do we mean when we talk about “the body”? In this course, we’ll delve into a survey and practice of making performance. This course is intended to introduce students of various disciplines to the central components of Performance art. Following a hybridized module, the class will present students with a cursory introduction to a history of performance art; its theoretical framings and critical inquiries and various approaches to making, through lecture, seminar, and in-class performance workshops. This introduction will invite students to make their own performance work using a variety of techniques and frameworks discovered through workshops, readings, and viewings of work by feminist, queer, anti-capitalist, and anti-colonial artists and theorists. Through solo and collective exercises in movement, installation, speech, sound, drama, and choreography, we will learn the basic tools of making a performance composition that challenges the boundaries of traditional dance and theater (while also welcoming any traditional training at one’s disposal.) Throughout the semester, students will attend performances and screenings, guest artist lectures, performance workshops, and present a final performance project utilizing personal research, skills, and interests discovered through our weekly sessions.
Mutually Exclusive: FNAR 5120
1 Course Unit

FNAR 1490 Performing Parables: Ragas and Sagas of the Sundarban
In this course writer Amitav Ghosh invites Penn students to engage his ongoing collaboration with the musician/performer Ali Sethi to stage his newest book Jungle Nama. Ghosh’s book Jungle Nama employs dwipdipoyar verse form and the popular folk tale of Bon Bibi the guardian spirit of the Sundarban to address the eroding ecosystem of the Sundarban. In this course students will work in a short intensive collaborative process with the artists to realize a lyric and musical performance of Jungle Nama. The class employs both academic research and performance methodologies to guide students through histories of traditional Indian performance and folk takes and a thorough examination of Ghosh’s source materials and influences (including studies of the Sundarban and its ecosystem). The course is co-taught with Director Brooke O’Harra. O’Harra, Ghosh and Sethi will lead students in a rigorous process of research, development and rehearsal, culminating in a public performance of a musical version of Jungle Nama. All levels and experience are welcome. Performance roles will be cast based on individual interests. In addition to performance roles, students will assume responsibility for other aspects of the process and production. In advance of registration, students are asked to audition and/or interview for the course depending upon initial interest. Actors, singers, dancers, musicians, artists and scholars are all encouraged to apply. Course specifics: The course will run until March 3 with an intensive 4-week rehearsal and development period that culminates in a live performance. Space is limited. Permission required.
1 Course Unit

FNAR 2020 Documentary Video
Documentary Video is an intensive production course involving the exploration of concepts, techniques, concerns, and aesthetics of the short form documentary. Building on camera, sound, and editing skills acquired in Video I, students will produce a portfolio of short videos and one longer project over the course of the semester using advanced level camera and sound equipment. One short presentation on a genre, technique, maker, or contemporary concern selected by the student is required.
Fall
Also Offered As: CIMS 0630
Prerequisite: FNAR 1010
1 Course Unit

FNAR 2020 Video II
Video II offers opportunities to further explore the role of cinematic narrative technique, non-narrative forms, digital video cinematography, editing, and screen aesthetics. Through a series of several video projects and a variety of technical exercises, students will refine their ability to articulate technically and conceptually complex creative projects in digital cinema. In addition, one presentation on a contemporary issue related to the application of cinematic storytelling and/or the cultural context of digital video is required.
Fall or Spring
Also Offered As: CIMS 0620
Prerequisite: FNAR 1010
1 Course Unit

FNAR 2030 Cinema Production
This course focuses on the practices and theory of producing narrative based cinema. Members of the course will become the film crew and produce a short digital film. Workshops on producing, directing, lighting, camera, sound and editing will build skills necessary for the hands-on production shoots. Visiting lecturers will critically discuss the individual roles of production in the context of the history of film.
Fall
Also Offered As: CIMS 0650
Prerequisite: FNAR 1010
1 Course Unit

FNAR 2040 Advanced Video Projects
This course is structured to create a focused environment and support for individual inquiries and projects. Students will present and discuss their work in one to one meetings with the instructor and in group critiques. Readings, screenings, and technical demonstrations will vary depending on students’ past history as well as technical, theoretical, and aesthetic interests.
Not Offered Every Year
Prerequisite: FNAR 1010
1 Course Unit
FNAR 2050 Image and Sound Editing
This course presents an in-depth look at the storytelling power of image and sound in both narrative and documentary motion pictures. Students apply a theoretical framework in ongoing workshops, exploring practical approaches to picture editing and sound design. Students edit scenes with a variety of aesthetic approaches, and create story-driven soundtracks with the use of sound FX, dialogue replacement, Foley's, music and mixing. Students not only learn critical skills that expand creative possibilities, but also broaden their understanding of the critical relationship between image and sound.

Fall or Spring
Prerequisite: FNAR 1010 OR FNAR 1060 OR FNAR 1020 OR FNAR 1010
1 Course Unit

FNAR 2060 Advanced Lens Based Projects
Advanced Lens Based Projects (ALBP) is structured to create an open environment for students to develop a series of self-determined projects using any variety of image capture technologies. Mobile devices and DSLRs have blended the function of moving and still image capture while computers have become ubiquitous as instruments of display and dissemination. This has consequently led to the increasingly collapsed boundaries of artistic mediums. ALBP is a studio class where students will explore different modes of production and address the expanding field of exhibition strategies. Additionally the class will foster a transdisciplinary approach to critiquing work and emphasize the shared context of the works reception. Readings, screenings, discussions and critiques make up the curriculum along with dedicated studio time. Each student is required to complete 3 self-determined projects using still or moving image capture technologies. Grades will be determined through participation, completion of assignments and the students' formal and critical engagement with the technology. While the focus of this course is not technical, prior knowledge of camera functions and post-production techniques is expected.

Prerequisite: FNAR 1010 OR FNAR 1020 OR FNAR 1030 OR FNAR 1040
1 Course Unit

FNAR 2070 Performance/Camera: Performance and-with-through-for Cameras
This intermediate course will explore the wide and expansive territories of art-making that exist between live performance and mediated image making-both still and moving. For much of the 21st century, the mediums of performance, video and photography have been weaving in and out of contact. Performance is known and understood largely through its documentation: sometimes voluminous and sometimes little more than a single photograph. On the other side, video, film and photography each developed through widespread explorations that were deeply entwined with the "capturing" of bodies on film. Using photography, video and performance in equal parts, the course is a hands-on exploration of this capacious terrain. The course will be structured by a series of bi-weekly assignments that allow for individual and collective production. The course will also include a regular schedule of short readings and presentations/screenings of existing works.

Prerequisite: FNAR 1010 AND FNAR 1040
1 Course Unit

FNAR 2080 Performance Studio
This course supports the individual and collaborative production of performance works. As the medium of performance consists of diverse forms, actions, activities, practices and methodologies, the course allows for an open exploration in terms of material and form. Students are invited to utilize technologies, materials and methodologies from other mediums and/or disciplines such as video, photography, writing and sound. In addition to the production component, the course will examine multiple histories of performance through readings, screenings and directed research.

Prerequisite: FNAR 0010 OR FNAR 1060 OR FNAR 1020 OR FNAR 1010
1 Course Unit

FNAR 2090 Hand-Drawn Computer Animation
Using software tools designed for hand-drawn animation, students will develop animation skills applicable to all forms of animation. In this course students will learn to draw with a sense of urgency and purpose as they represent motion and drama in a series of frames. Through careful study of natural movements, precedents in the history of animation, and through the completion of a series of animation projects students will develop strategies for representing naturalistic movement, inventing meaningful transformations of form, and storytelling.

Not Offered Every Year
Prerequisite: DSGN 0010
1 Course Unit

FNAR 2100 Computer Animation
Through a series of studio projects this course introduces techniques of 2D and 3D computer animation. Emphasis is placed on time-based design and storytelling through animation performance and montage. Students will develop new sensitivities to movement, composition, cinematography, editing, sound, color and lighting.

Fall or Spring
Prerequisite: FNAR 1010 OR FNAR 1020 OR FNAR 1030 OR FNAR 1040
1 Course Unit

FNAR 2110 Digital Photography II
In this course students will continue to develop conceptual, technical, aesthetic and formal strategies in digital photography, expanding their artistic process while refining their critical approach to researched subject matter. The class will be driven initially by a series of assignments formulated to further expose students to broad possibilities related to the medium and then they will be guided towards the evolution of a personalized body of work that is culturally, theoretically and historically informed. We will be examining key issues surrounding the digital image in contemporary society, led through a combination of class lectures, readings, group discussions, and critiques. Students will further their knowledge of image control and manipulation, retouching and collage, advanced color management; become familiar with high-end equipment and lighting, and develop professional printing skills. In addition to learning these advanced imaging practices, this course will also emphasize an investigation of critical thought surrounding contemporary visual culture and the role of digital media in the creation of art.

Prerequisite: FNAR 1040
1 Course Unit
FNAR 2120 Reconfiguring Portraiture
As methods of representation are constantly shifting, one thing is clear - the photographic portrait is not what is used to be. Exploring both traditional and contemporary methods of portraiture, this class will uncover and discuss the ways in which we perceive each other in imagery, both as individuals and as groups. Throughout the semester, we will consider how portraits deal with truth, physical absence, the gaze, cultural embodiment, voyeurism and the digital persona. This course will build on the combination of perception, technology, and practice. Throughout the semester, students will advance by learning lighting techniques and strategies of presentation - as these core skills will become tools in the execution of project concepts. In tandem with each project, students will encounter and discuss a wide array of photography and writings from the past to the present, in an effort to understand the meanings and psychological effects of freezing the human image in time. Spring
Prerequisite: FNAR 1030 OR FNAR 1040
1 Course Unit

FNAR 2140 Photography and Fashion
Since the invention of photography, the fashion industry has been one of the cornerstones of creative expression, innovation and visionary provocations. Contemporary fashion photography has continued to attract a leading group of image-makers that continue the tradition of creating artwork that not only is being published in cutting edge magazines such as V, Another Magazine and Citizen K, but also are exhibiting their work in various galleries and museums around the world. This course is designed for students who are interested in creating contemporary fashion images through specific assignments that define the process: lighting in studio or location, working with fashion designers, stylists, models, hair/ makeup artists, and the application of a variety of post production techniques, via Photoshop. The class will explore modern constructs that define the importance of branding, marketing, advertising and the relationship of fashion photography in contemporary art and culture today. Fall
Prerequisite: FNAR 1030 OR FNAR 1040
1 Course Unit

FNAR 2150 Photography and Fiction
Photography has historically been a medium of fact, but with the ubiquity of digital technology and the ever-increasing ease with which images can be manipulated, it is becoming more difficult to distinguish the authentic from the artificial. The conversation surrounding truth is pervasive in today's contemporary culture. With the weaponization of fake news and propaganda, subliminal advertising, deep fake videos, and constructed identities on social media, we are living in a critical time. This course will encompass a broad range of meanings when it comes to fiction, from elaborately staging for the camera in the form of re-enactment and role-play to using digital technology to construct new meanings & realities. This class will examine and trace the history of photographic fiction, paying special attention to the complex negotiations between the decisive moment, the constructed tableau, and the digitally altered image. There will be a combination of class lectures, studio projects, assigned readings, visiting artists, film screenings, field trips, and class critiques. Spring
Prerequisite: FNAR 1030 OR FNAR 1040
1 Course Unit

FNAR 2160 Counter the Land: Photography and the Landscape
Starting with the representation of landscape in painting in the early 1800s, this course will then move through Pictorialism and the Modernist movement in photography. Revisiting the later half of the 20th century, we will begin to consider the shifting practices of landscape and the ways it has been photographically depicted up to the present. Collaborating with the Brandywine River Museum of Art in Chadds Ford, students will begin their photographic exploration with the work of Andrea Wyeth and the landscape of the Brandywine Valley. As we consider Wyeth, the images of James Welling will also be introduced. Credited for pioneering new forms of representation in photography in the 1970s, Welling also revisited the work of Wyeth from 2010-2015, and committed to a fresh (and challenging) look at tradition. Working with imagery and text, this class will also touch on conceptual art, the New Topographics, and postmodernism. Through these various concentrations, students will consider and counter the traditions that they are already familiar with, while creating work based on issues of the landscape today. Questions about meaning, politics, social critique, land rights, technology and methods of presentation will be encouraged and explored throughout the course. Spring
Prerequisite: FNAR 1030 OR FNAR 1040
1 Course Unit

FNAR 2170 Dispersive Lenses
This studio course will explore the nexus between photography, sculpture, installation, drawing, painting, and the moving image. The course is informed by the printed image, as students will explore how photography can encourage thinking in other mediums, in addition to how other mediums can influence the making of photography. When does an abstract painting appear more like a photograph? How can a photograph suggest ways to make a video? Can a sculpture exist as a photograph? A variety of assignments will expose students to interdisciplinary approaches addressing these questions and more. Class projects will be supported by regular slide lectures, group critiques, and readings examining modern and contemporary artists and practices. Spring
Prerequisite: FNAR 1030 OR FNAR 1040 OR FNAR 1010
1 Course Unit

FNAR 2180 Photography Studio Abroad
This Traveling Studio is offered every other spring term to upper level photography & related media students. It is a cross-cultural visual investigation, exploring the contradictions and significance of the chosen city. This course incorporates multi-disciplinary research in preparation for the trip; exploring various fields of knowledge production such as art, history, social sciences, markets and governance. Class discussion, readings and individual research will be focused towards the development of each student's photo/media project, which will be realized while abroad. After returning to Philadelphia, students will develop and refine their work; the remaining classes will emphasize critique, editing, printing and presentation options. The final projects will be included in a group exhibition at the end of the semester. Admission to the course is on a competitive basis. Spring
Mutually Exclusive: FNAR 5034
1 Course Unit
**FNAR 2200 Drawing Investigations**
Drawing is a fundamental means of visualization and a hub for thinking, constructing, and engaging in a wide variety of creative activities and problem solving. This studio class explores drawing in both its traditional and contemporary forms. The projects are designed to help students in all disciplines find ways express and clarify their ideas through the process of drawing. The semester begins with the refinement of perceptual skills acquired in Drawing I, while encouraging experimentation through the introduction of color, abstract agendas, conceptual problem solving, and collaborative exercises, as well as new materials, techniques and large format drawings. Particular attention is given to ways to conduct visual research in the development of personal imagery. Assignments are thematic or conceptually based with ample opportunity for individual approaches to media, subject, scale and process. The goal is to strengthen facility, develop clarity in intent and expand expression. Attention is paid to the development of perceptual sensitivity, methods of image construction, and the processes of synthesis and transformation in order to communicate ideas through visual means. Recommended for students in all areas.
Fall or Spring
Prerequisite: FNAR 0010
1 Course Unit

**FNAR 2220 Painting II**
Painting II presents an ongoing exploration of the techniques, problems and poetics of painting, the nuances of the painting language, and the development of a personal direction. A wide variety of problems will address such issues as color, composition, and the development of imagery, process, and content. Students are expected to improve in technical handling of paints and move towards developing personal modes of seeing, interpreting, and thinking for themselves. This course introduces different topics, strategies and individual challenges each semester, so it may be repeated with advanced course numbers.
Fall or Spring
Prerequisite: FNAR 1090
1 Course Unit

**FNAR 2240 Painting Studio**
Painting Studio IV focuses on continuing the student's exploration of techniques, problems, and poetics of painting, the nuances of the painting language, and the development of a personal direction. While students may choose to work on assigned projects (either in consultation with the instructor or following the projects that the Painting II/III students may be involved in), the emphasis is on the investigation of the student's own sensibility. Students will be expected to engage in ongoing critical analysis of their own practices and assumptions.
Fall or Spring
Prerequisite: FNAR 0010 AND FNAR 2230
1 Course Unit

---

**FNAR 2250 Interdisciplinary Studio: Sites of Convergence and Hybridity**
This course takes an experimental multimedia approach to investigating some of the boundaries in contemporary art making practices. Painting, photography, video, design and sculpture intersect, overlap, and converge in complicated ways. Projects will be designed to explore hybrid forms, collage, space/ installation, and color through a variety of strategic and conceptual proposals as students work towards unique ways of expanding their own work. Weekly readings, critiques, and presentations will be integrated with studio projects. This studio/seminar is appropriate for students at all levels and from all areas of Fine Arts and Design.
Spring
Prerequisite: FNAR 0010 OR FNAR 1060 OR FNAR 1020 OR FNAR 231 OR DSGN 0010
1 Course Unit

**FNAR 2270 Printmaking: Etching**
The class will challenge the possibilities of experimental drawing and ways of creating incisions and textures using copper plates as the matrix, which then will be printed on paper and other materials. The class offers full technical and historical description of each individual process: Dry Point, Etching, Hard ground, Soft Ground, Aquatint, Shine Cole', Spit-Biting, Sugar Lift, Color Printing and Viscosity printing.
Fall or Spring
1 Course Unit

**FNAR 2280 Printmaking: Screen Printing**
This course is an introduction to technical skills and investigative processes in screen printing and relief and examines methods for combining digital technology with traditional print media. The course introduces students to several contemporary applications of silkscreen and relief printmaking including techniques in multi-color printing, photo-based silkscreening, digital printing, woodcut, linocut, and letterpress. Demonstrations include photo and image manipulation, color separating and output techniques, hand carving and printing, as well as drawing and collage. Both traditional and experimental approaches are explored and encouraged and technical and conceptual skills are developed through discussions and critiques.
Fall
1 Course Unit

**FNAR 2290 Printmaking & Publications: Intro to Independent Publishing and Artists' Publications**
This course introduces students to independent publishing and artists' publications through print methods in letterpress, Risograph, and Xerox. The class will focus on the self-published artists’ zine/book as an affordable, accessible, and easily reproducible format for exploring ideas, disseminating artists’ work, and collaborating across disciplines. Students will learn a range of skills, including techniques in both mechanized and hand-pulled forms of printed media (Risograph, copy machine, Vandercook letterpress); short-run editions and binding; design and layout; pre-press and print production; and the web as it relates to and supports independent and democratic modes of distribution. Students will learn about and become acquainted with some of the most significant independent publishers working today and throughout history. Students will leave class having completed three individual projects: a 16-page booklet/zine; a carefully considered online publication, and a final collaborative book designed, developed and published as a class. The course commences with a field trip to New York City's Printed Matter, one of the oldest and most important nonprofit facilities dedicated to the promotion of artists’ books, where students will be encouraged to submit a publication by semester's end.
Spring
1 Course Unit
**FNAR 2310 Advanced Sculpture: Installation & Interventions**

In this course students will create sculptural installations and spatial interventions that explore site specificity and architectural environments. A range of traditional sculptural materials and techniques will be investigated along with more ephemeral interventions in space such as sound, light, and projection. Through lectures, readings, and critiques, students will explore the history of installation and interactive sculptural work and develop self-directed projects that interrogate historical, social, and psychological conditions of the built environment.

Mutually Exclusive: FNAR 5410
Prerequisite: FNAR 1060
1 Course Unit

**FNAR 2320 Queer Imaginings**

Queer is a fluid, unfixed and undefinable space offering endless utopian possibilities & potentials concerning gender, sexuality, personal autonomy and agency. Queer Imaginings is a forum for the reimagining of Queer representation/s. This course provides a safe space to mine, critique and analyze Queer imagery, both historical & contemporary. We will explore the ways in which Queerness is approached, represented & manipulated in pop culture, politics, society and the media. Students enrolled in this studio/seminar course will partake in discussions and research pertaining to Queer images and their intersections with race, trans/nonbinary-equality, feminism, disability & class structure. These complex subjects will inspire respectful debate throughout the course, and most importantly, generate robust discussion about the work students create. Prompted through select readings and visual presentations, students will be guided to research, analyze and create artworks, which are inspired by various topics related to Queerness. A special emphasis will be placed upon issues arising around visibility, erasure & inclusivity. This forum offers a space to reexamine, research and propose new representations of Queerness. This is primarily a lens-based course with expansive possibilities (interdisciplinary, transdisciplinary, multidisciplinary).

1 Course Unit

**FNAR 2330 Experimental Clay**

In this course students will examine and explore the sculptural foundations of clay in the world of contemporary art and design, by experimenting with its sculptural materiality, as a means to develop ideas in large-scale and unconventional ways. Through investigative and conceptually driven projects, students will use clay and other non-traditional materials to make modular structures that incorporate advanced mold-making, casting, and advanced building techniques to develop their own artistic voice through the expansive medium of clay.

1 Course Unit

**FNAR 2410 If night is a weed and day grows less**

If Night Is A Weed And Day Grows Less The title of this class posits a shift in balance: of the natural order, of the built environment, of the body politic, of perception. The result is a creeping entropy that can either be embraced or redirected. Taking a morphological approach to image making students can use any variety of televsual image capture technologies. From analog to digital, satellite imagery to scanner. Time arrested or accelerated. Night for day and weeds for gardens, the work produced should ask us to slow down and reassess the objectives of form, language, image and place, to create new prototypes for engagement and new modes of understanding our environment and perhaps even to reinvent the conventions of landscape as a genre.

Readings, screenings, discussions and critiques make up the curriculum along with studio time. Each student is required to complete a visual essay that addresses these themes using image capture technologies.

Mutually Exclusive: FNAR 5410

1 Course Unit
FNAR 3030 A Virus in the Culture: Social Critique in Media Arts
In order to change the world, we must first learn how to infect it. A Virus in the Culture is a studio class that examines and generates various forms of media resistance to dominant hegemonic systems of power and control. Using filmmaking, publication design and interactive media we'll think through and develop responses to some of the most pressing issues facing us today. We'll look at historical models from the agitprop design work of Gee Vaucher for Anarcho-punk band Crass to Chris Marker's film Le Fond de L'Air Est Rouge, a radical analysis of global social and political turmoil in the late 60s and early 70s. We'll also look at experimental contemporary design firms like Metahaven who question the role of designers and filmmakers today - Bypassing the power dynamics of clients and briefs they took it upon themselves to create a graphic identity for WikiLeaks. Each example broadens the definition and possibilities of practice to create a more porous engagement with audiences and users while informing the practice of social critique today. Considering a diverse range of topics from education policy, to the rights of environmental refugees, we'll use the class to workshop a singular comprehensive project that targets researches and responds to a specific contested position. The outcome of which will be a class produced short film, publication and website that unpacks the social, cultural, and economic complexities of our subject. This class is co-taught by David Hartt, an artist and filmmaker along with graphic designer, Mark Owens. Reading, screenings, discussions and critiques make up the curriculum along with studio time. While the focus of this course is not technical, prior knowledge of design programs, camera functions, and post-production techniques is expected.
Fall
Prerequisite: FNAR 1010
1 Course Unit

FNAR 3040 On Thoughts Occasioned By
The Essay Film is an important tradition within the various genres that constitute the field of Film and Video Art. Through the element of time it differentiates itself from its literary and photographic antecedents. It borrows selectively from both narrative fiction and documentary - highly subjective and occasionally poetic but without perhaps the burden of truth. The Essay Film is an attempt to dimensionalize our experience of the world and our place in it. It represents an argument, a meditation, a critical engagement with a place, a time or a subject. This is a combination seminar/studio course. Through readings, screenings and discussion students will gain an historical perspective on the genre. The core assignment is for each student to complete a short film (20 minutes max.) in the tradition of the Essay Film.
Also Offered As: ENGL 2570
1 Course Unit

FNAR 3050 Critical Issues in Art
Perspectives on Critical Issues aims to engage students in an ongoing and informed study of both historical and contemporary issues in a spirit of curiosity and critique. We will investigate how these concepts can clarify and complicate our creative practice and our understanding of the contemporary art world. This seminar will explore the shifts in artistic production, theory and criticism and topics will range from traditional investigations of aesthetics, Modernism, Post-Modernism and contemporary themes. Through discussions of assigned readings, class presentations, films, lectures, and field trips, this seminar will help establish a critical and theoretical foundation where your own beliefs and doubts about art and culture will be called into question and will provoke an ongoing inquiry into how you understand art, you own creative process, and the relationship of art and artists to society and creative culture.
Spring
1 Course Unit
FNAR 3060 The Chinese Body and Spatial Consumption in Chinatown
This is a primarily an art and planning course that centers on the representation of the oriental, specifically the Chinese, in both its historical and present contexts. The localization of the Chinese throughout the Americas within Chinatown precincts were also subject to representational imaginings that were negotiated through the lens of civic planning. This course will study the often fraught negotiation between representation and planning. The hyper-urbanization of China over the past several decades has radically altered traditional conceptions of public space in China. Mass migration from rural to urban areas has meant very high population densities in Chinese cities. Traditional courtyards surrounded by housing and other modestly scaled buildings are rapidly disappearing, incongruent with the demands of heated property development Moreover, Chinese cities have comparatively little public green space per resident compared to equivalents in the West. Zoning in Chinese cities is also much more varied for any given area than what one would find in cities such as New York, Paris, and London. Intensifying density of urban areas precludes the construction of large public squares. Furthermore, large public squares tend to be either intensively congested and overcrowded or underused due to their oversight by government that render such spaces somewhat oppressive in terms of use. Historically, the urban courtyards of temples, native place associations, and provincial guilds served as public spaces of gathering. They were also sites of festivals and the conducting of neighborhood and civic business. These spaces have become increasingly privatized or commodified with entrance fees. The air-conditioned concourses of enclosed shopping malls or busy outdoor market streets have become de facto public spaces in China where collective window shopping or promenading is the primary activity rather than bodily repose as one might find in a public space in a large Western city. The seminar/studio will investigate the meaning of the term public in the constitution of Chinese space, audience and critical voice through firstly the enclave of Chinatown and secondly through examples from China. The course will look into the changing conceptualization of public space in Chinatown as it has declined in its traditional form and become reinvented in the form of high-end shopping centered districts. This flux has its roots in post 1979 China as well as the post 1997 reversion of Hong Kong to China. As such, the course will examine the situation of rapid urbanization in China and the concomitant relationship to new Chinese (and Asian) districts in the North American urban and suburban landscape ie Vancouver, Toronto, Arlington (Virginia), Oakland, Los Angeles valley and Queens (Flushing), New York. In what ways can artists and designers respond to and challenge these conceptualizations of the old and the new within the context of urban change? What of the changing formations of the Chinese subject through the experiences of embodiment? How is public space produced through an ethnically bracketed bodily presence. Findings will be translated by the student as tools for design and public art imaginings This course will include a week s trip to San Francisco to study how intense growth in the city has all but usurped old Chinatown while new and more vibrant Chinese centers have emerged in multiple other districts within the city and the suburbs. Also Offered As: ASAM 3130, ENGL 2275
1 Course Unit

FNAR 3070 Tiananmen Square: A Case Study for Fine Arts and Landscape Architecture
This course takes as its subject the systems of representation and design that have historically and presently operate in Tiananmen Square in Beijing. There have been several incarnations of Tiananmen Square since its original form in 1651. During Imperial times and through the period of foreign legations, the square was once surrounded by walls and gates, creating a city within a city. With the advent of the Republic of China established on January 1, 1912, much of the enclosures were removed, opening up for public use previously restricted imperial areas. After the Communist Revolution in 1949, planning was afoot to enlarge the square. With its enlargement completed in 1958, the square expanded its footprint by four-fold, making it one of the largest public squares in the world. The enlarged and remodeled square coincided with the completion of the massive Monument to the People's Heroes. In 1976, a large mausoleum containing the preserved body of Mao Zedong was built near the site of the former Gate of China, further increasing the size of the square. In the 1990s, the building of the National Grand Theatre and expansion of the National Museum on grounds contiguous to the square necessitated further alterations to both the Eastern and Western skirts of the square. In recent years, there have been a widening debate regarding the transformation of the concrete heavy and by and large featureless square into a green space. Today, Tiananmen Square holds sacrosanct status to the Communist revolution of 1949, designed more for military parades and massive public rallies than public space repose. In a city that has few green spaces, such a verdant transformation in the heart of the Chinese capital would signal a radical symbolic deviation to China’s development-first guiding principles. The square fronts Tiananmen Gate and the Forbidden City and is situated at the intersection of the historical east-west and north- south axes. Chang’An Avenue, important for military processions, separates the square from Tiananmen Gate and is considered the most important thoroughfare in the Capital and the path of the east west number one subway line. The entirety of the Tiananmen Square area is marked by ideology and political prominence, often confusingly. Tiananmen Tower, functions as a conflation of monumental facade with political embodiment. This course will focus on imagined interventions through public art and landscape design within Tiananmen Square and its contiguous areas. It is a studio practice course with a significant seminar component that will include lectures and readings relating to issues of public space and urban design in contemporary China. The course will also study the development of contemporary art in China. The tragic events of Tiananmen Square in 1989 represented a turning point in terms of a generation of Western exiled Chinese artists and curators including Hou Hanru, Chen Zhen, Xu Min, Huang Yong Ping and Yan Pei Ming among many others. The class will study the strategies deployed by these so-called First Generation of Chinese artists. Making use of their double identity as traditionally taught Chinese artist residing in the West, their art offered a pointed critique of both China and the West. The course will include a trip to Beijing.
Spring
1 Course Unit
FNAR 3080 Across Forms: Art and Writing
What if a poem spoke from inside a photograph? What if a sculpture unfurled a political manifesto? What if a story wasn’t just like a dance, but was a dance— or a key component of a video, drawing, performance, or painting? In this course, artists and writers will develop new works that integrate the forms, materials, and concerns of both art and writing. Many artists employ writing in their practices, but may not look at the texts they create as writing. And many writers have practices that go beyond the page and deserve attention as art. This course will employ critique and workshop, pedagogic methodologies from art and writing respectively, to support and interrogate cross-pollination between writing and art practices. Additionally, the course will will examine a field of artists and writers who are working with intersections between art and writing to create dynamic new ways of seeing, reading, and experiencing.

Fall
Also Offered As: ENGL 3504
Mutually Exclusive: FNAR 5056
1 Course Unit

FNAR 3090 Art and Social Work: Art and the Ecology of Justice
How can the arts help us build a more just society? How can the arts transform social structures and systems? Public health crises involving clean water (Flint), police violence (Baltimore), and a lack of economic and educational opportunity following reentry (Philadelphia) make legible the need for a new visual language that critiques these conditions and challenges entrenched structural inequalities. We will engage the work of creative practitioners who are mapping new relationships between art and social justice and directly impacting individual and communal well-being. In so doing, the course seeks to challenge traditional constructions of public health, which often isolate individual histories from their social life and their relation to families, communities, and geographies. Readings will build upon disciplinary perspectives in the arts, humanities, and social policy. Requirements include weekly readings, class participation, and a collaborative final project. The course will meet in the Health Ecologies Lab at Slought Foundation, an arts organization on campus.

Spring
1 Course Unit

FNAR 3100 Paris Modern: Spiral City
Paris has been shaped by a mixture of organic development, which is still today perceptible in the “snail” pattern of its arrondissements whose numbers, from 1 to 20, coil around a central island several times so as to exemplify a “spiral city,” and of the violent cuts, interruptions and sudden transformations that again and again forced it to catch up with modern times, the most visible of which was Baron Haussmann’s destruction of medieval sections of the city to make room for huge boulevards. Thus Parisian modernism has always consisted in a negotiation between the old and the new, and a specific meaning of modernity allegorized for Louis Aragon, the Surrealists and Walter Benjamin consisted in old-fashioned arcades built in the middle of the 19th century and obsolete by the time they turned into icons of Paris. The aim of the class will be to provide conceptual and pragmatic (visual, experiential) links between a number of texts, theories and films deploying various concepts of the modern in Paris, with a guided tour of the main places discussed.

The course that Professors Jean Michel Rabate (English) and Ken Lum (Fine Arts) will lead studies Paris as a work of science-fiction where its many futures are embedded in its many pasts, where discontinuity is a continuous process and where the curving line of the snail’s shell is a line of ceaseless curling resulting in a perennial oscillation where an outside converts into an inside and an inside then converts to an outside. The course will travel to Paris over spring break to get an in-depth look at the topics discussed in class.

Fall or Spring
Also Offered As: ENGL 2110
1 Course Unit

FNAR 3110 Public Art and Issues of Spatial Production
The French social philosopher Michel de Certeau upset the common understanding of the relationship between space and place by elevating space as practice place. By this, he meant that place is but a set of geographical particularities that has no dynamic meaning unless activated through social engagement so that space is produced. Spatial practice is a key concept in the modern understanding of the city as a society of abstract space, one in which the problem of human alienation is riven with the logic of spatial spectacularization. Public Art is often employed to address or mollify such urban problems through concepts of historical reconstruction or institutional critique, including possibly testing the limits of public expression. Historical markers play a somewhat different role by calling attention to lost or negative histories, albeit most often vetted through the language of tourism factoids. This course will examine the discursive issues at play in respect to art and markers, particularly for Philadelphia. Additionally, important public art works from around the world will be examined. The course will also include the occasional visit of several key works downtown in which the question of what can and cannot said will be pondered.

Spring
1 Course Unit
FNAR 3120 Photographic Thinking
This course will explore the vitality and range of photography as a discursive practice by analyzing the way images are structured and deployed in contemporary art and wider media culture. Students will be introduced to the key issues surrounding photography now-led through these questions by lectures, readings, group discussion and project-based work. A series of photo-assignments challenge the students to integrate critical thought with practice, exploring a range of formal strategies and thematic frameworks that affect the meaning of their images. Students should have a strong interest in philosophy and art histories (especially the history of photography.) They should be motivated to work independently and experiment creatively. There are no prerequisites for this course. It is intended for all different levels of technical experience, but the minimum requirements are a digital camera, a basic familiarity with Photoshop and access to a computer with imaging software.
1 Course Unit

FNAR 3130 Mystics & Visionaries: Arts and Other Ways of Knowing
As a pioneer of abstraction in the early 1900’s, Hilma Af Klint channeled a complex and highly original body of abstract symbolic work in secrecy. Using the upcoming Hilma Af Klint exhibition at the Guggenheim as a focus and departure point, this course will explore the ways in which artists have accessed alternative ways of seeing, knowing, and embodying non-visible realities as a source for their work. Accessing spiritual realms has been the subject of early European Modernisms investigations into Theosophy and Anthroposophy, as well as the primary intention of Tibetan Thangkas and Indian Tantra paintings. Postmodernism’s crisis of belief and skepticism generated a cultural situation wherein the subject of spirituality was marginalized, ridiculed as anti-intellectual, and in disgrace. The Hilma Af Klint exhibition and surge of interest in her work signifies a new moment, where questions about consciousness and the nature of reality are being addressed with renewed vigor. How do we create space in a technology driven world for experiences that attempt to align the viewer/maker with the contemplative realm, heightened states of consciousness, or transcendence? We will examine a wide field of artists in an attempt to understand the possibilities of the “spiritual” in art and contemporary culture. This seminar will engage in readings, lectures, discussions, projects, and field trips. This course is appropriate for both grad and undergrad, art majors and non-majors alike.
1 Course Unit

FNAR 3140 Civic Studio
Civic Studio is an engaged research praxis that delves in the significant theories, methodologies, and practices of public and socially-engaged artwork. Students draw from arts- and place-based modes of inquiry toward collaborative projects with fellow classmates, artists, and organizations in Philadelphia and beyond, while pursuing semester-long individual research. Each semester, students work with and as embedded practitioners in exhibitions, installations, and other artistic platforms throughout the city. In turn, through readings, site visits, and site-specific work, students gain creative and critical capacity for producing their own final projects about a particular street, intersection, or site in the city. Through Civic Studio students are able to reflect upon and practice public work with artistic, scholarly, and civic aims.
1 Course Unit

FNAR 3150 Monument Lab: Praxis Approaches to Socially-Engaged Public Art
What makes an exceptional socially-engaged public artwork or project? For those who practice in the field, the question invites careful consideration of aesthetics, process, participation, staging, and interpretation. Across the better part of the last decade, this line of inquiry has fueled the work of Monument Lab, a public art and history studio based in Philadelphia. With deep roots and close ties to the Department of Fine Arts’s Center for Public Art and Space, and methods interanimating contemporary art and pedagogy, Monument Lab works with artists, students, activists, municipal agencies, and cultural institutions on exploratory approaches to public engagement and collective memory. The Monument Lab course in Fine Arts explores the theoretical study and practical applications of public art. The course operates as a socially-engaged “civic studio” to engage case studies, debate key issues in the field, meet with artists and practitioners, conduct site and studio visits, and practice direct methods for producing individual and collaborative public projects. Focusing on the intersection of theory and practice, the praxis course highlights engaged methods piloted by Monument Lab in citywide exhibitions and special projects, especially to focus on themes and models for participation, public engagement, co-creation, curation, temporary installation, and socially engaged art-making. Each student will embark on a semester-long independent project, as well as participate in a group initiative centered on a current Monument Lab project in Philadelphia to gain experience in the field of socially-engaged public art.
1 Course Unit

FNAR 3160 Is This Really Happening? Performance and Contemporary Political Horizons
This class addresses the meeting points inside of and between a range of resistant performance practices with a focus on artists using performance to address political and social encounters in the contemporary moment. Performance, a chaotic and unruly category that slides across music, dance, theater and visual art, has long been a container for resistant actions/activities that bring aesthetics and politics into dynamic dialogue. Embracing works, gestures, movements, sounds and embodiments that push against and beyond the conventions of a given genre, performance can’t help but rub uncomfortably against the status quo. Scholars working across Performance Studies and Black Studies importantly expanded critical discourse around performance to address the entanglement of the medium with physical, psychic, spatial and temporal inhabitations of violence and power. Generating copious genealogies of embodied resistance, this scholarship instigates a complex, interdisciplinary and multidimensional perspective on intersections between art and life, performance and politics. The class hosts a series of public lectures, presentations and performances by visual artists, choreographers, theater artists, composers/musicans, performers, curators and activists engaged with the social and political moment. Presentations will be open to the public with students in the course developing in-depth research into the work of each visiting artist/performer/presenter to engage the larger context of each visitor’s scholarship and/or practice through readings, discussion and in-class presentations. This course is open to all interested students. No prior requisites or experience with performance or the performing arts is necessary.
Also Offered As: ENGL 3652, GSWS 0860
1 Course Unit
FNAR 3180 Advanced Projects in Animation
This course will focus on developing and producing projects that utilize advanced approaches to 2D and 3D computer animation. We will engage emerging techniques of visualization such as data-driven animation, algorithmic animation, working in hybrid forms of stop-motion, hand-drawn and 3D computer animation, working with dynamic physical simulations, rigging animated characters, or structures. The meeting pattern of the course will enable members to complete ambitious independent or group based animation projects and to share the methods that they develop along the way.
Not Offered Every Year
1 Course Unit

FNAR 3181 The History of American Animation
This course will look at American animation as an art form, a technology and an industry. We will explore the ways in which artistic, technical, historical, and cultural conditions shape the development of animation and in turn, how animation impacts viewers. Topics will include trends in animation and their relation to contemporary popular culture, issues of art versus commerce in the creation of cartoons, the intersection of animation and politics, and shifts in style and technique throughout the years. We will look at the personalities in animation who have shaped the art form and continue to influence it, the rise in animation's popularity, and current-day applications of animated imagery. Case studies will include Pixar, Walt Disney, UPA, television cartoons, stop motion animation, and the movie, Who Framed Roger Rabbit.

Also Offered As: ARTH 3870, CIMS 3200
1 Course Unit

FNAR 3182 The History Computer Animation
This course will look at computer animation as an art form, a series of technological innovations and an industry. We will explore the way in which artistic, technical, historical, and cultural conditions have shaped the development of computer animation. Topics will include the impact of early motion graphics experiments in the sixties, the contributions of university- and corporation-funded research, commercial production, and the rise of Pixar. We will consider the companies and personalities in computer animation who have shaped the art form and continue to influence it, the contributions to computer animation from visionaries around the world, and current day applications of animated imagery. Throughout the course, we will screen important works from the canon of computer animation, including the earliest computer-animated shorts, scenes from Beauty and the Beast, the first Pixar shorts, Toy Story, Final Fantasy and works done internationally to forward the art and the industry.

Also Offered As: ARTH 3871, CIMS 3201, ENGL 0591
1 Course Unit

FNAR 3184 The Animation Of Disney
No organization has exerted as much influence on popular culture and the art form of animation as The Walt Disney Company. For decades, Disney films were the standard by which all other animated films were measured. This course will examine the biography and philosophy of founder Walt Disney, as well as The Walt Disney Company's impact on animation art, storytelling and technology, the entertainment industry, and American popular culture. We will consider Disney's most influential early films, look at the 1960s when Disney's importance in popular culture began to erode, and analyze the films that led to the Disney renaissance of the late 1980s/early 1990s. We will also assess the subsequent purchase of Pixar Animation Studios and the overall impact Pixar has had on Disney. The class will also look at recent trends and innovations, including live-action remakes and Disney+.
Not Offered Every Year
Also Offered As: ARTH 3873, CIMS 3203, ENGL 0593
1 Course Unit

FNAR 3185 History Children's TV
This course will survey the history of children's television from the invention of television through the present, with an emphasis on series development and production, artistry, and the colorful personalities who built this industry. We'll consider important figures including Fred Rogers, Bill Hanna and Joe Barbera, Joan Ganz Cooney, Jim Henson and Walt Disney. We will discuss the history of animated cartoons that were made specifically for television, Saturday morning production, the rise of Japanese cartoons from the 1960s through Pokemon, and the growth of children's cable channels in the 90s, as well as other landmark moments. We'll also assess the impact of streaming platforms on television and the future of children's media.
Not Offered Every Year
Also Offered As: ARTH 3874, CIMS 3204, ENGL 0594
1 Course Unit

FNAR 3250 MATTERS: Connecting Arts + Design to Materials, and Materials to Labor + Land
How does matter transform into material, and back again? What hidden labor, sites, social and ecological costs and processes go into the production of a “blank” canvas and other “raw” materials? And why--for artists, designers, architects, preservationists, creative educators, builders, and anyone working with materials--do these realities matter? This course connects arts and design learners to considerations, sites, and cycles around production and disposal of the defining materials of their creative fields (ex. paper, wood, glass, pigment, "the internet"), laying groundwork for creative practice rooted in social and ecological awareness, repair and care. A hybrid research seminar, field exploration, and studio investigation, the structure of this course alternates between reading/response/research, field trips and guest visitors (including a partnership affiliation with RAIR Philly), and time for responsive “making” and material experimentation/synthesis. In this course, students will collaboratively define key terms and concerns around material sustainability, discard studies, land and labor relations vis-a-vis creative work. Students will experience local sites of material extraction, production and disposal (through approx 5 field trips taking place during class time). Students will formulate individual or group questions around a specific material, leading to a final independent project, and class exhibition. This course will engage students in forming a material ethics to guide future creative work.
Also Offered As: DSGN 3250
1 Course Unit
FNAR 3300 Public Art and Issues of Spatial Production
The French social philosopher Michel de Certeau upset the common understanding of the relationship between space and place by elevating space as practice place. By this, he meant that place is but a set of geo-physical particularities that has no dynamic meaning unless activated through social engagement so that space is produced. Spatial practice is a key concept in the modern understanding of the city as a society of abstract space, one in which the problem of human alienation is riven with the logic of spatial spectacularization. Public Art is often employed to address or mollify such urban problems through concepts of historical reconstruction or institutional critique, including possibly testing the limits of public expression. Historical markers play a somewhat different role by calling attention to lost or negative histories, albeit most often vetted through the language of tourism factoids. This course will examine the discursive issues at play in respect to art and markers, particularly for Philadelphia. Additionally, important public art works from around the world will be examined. The course will also include the occasional visit of several key works downtown in which the question of what can and cannot said will be pondered.
Fall
1 Course Unit

FNAR 3517 Plague Lab: Writing through Infection and Affliction
How do we write through a plague? In this creative writing class we will begin with the question of how plagues make and disrupt meaning. In addition to canonical examples, we'll explore off-center, anti-colonial, and non-Western literary and popular culture works. Students will then produce across a number of genres including poetry, fiction, memoir, zines, double-blind studies, sculpture, installation, performance, or found object scavenging. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.

Also Offered As: ENGL 3517, THAR 1117
1 Course Unit

FNAR 3664 Documentary Ethnography for Museum of Exhibition practices
This course will investigate research modalities that center around documentary storytelling in the museum context. During the semester, we will examine research strategies that collaborate with curatorial experts. The class will utilize cinematic techniques that investigate cultural narratives revolving around cultural heritage sites, rituals and ceremonies, artifacts, materials and living traditions. Students will engage Solomon's process of her creation of the new digital and in-gallery content that will reframe the Metropolitan Museum's African art galleries. The semester will culminate in students creating their own short film content that will screen publicly in the gallery at the end of the semester.

Also Offered As: ANTH 3664, CIMS 3664
1 Course Unit

FNAR 3770 Black Speculative Futures
Why do black cultural producers turn to the speculative? What, in turn, is speculative about blackness? These questions frame this seminar's exploration of how black artists, theorists, and activists imagine different futures, often in the service of critiquing power asymmetries and creating radical transformation in the present. We will explore how the speculative works differently across black literature, visual culture and performance. Additionally, inspired by the multi-disciplinary work that we encounter in the course, we will experiment with crafting our own embodied speculative art in order to better understand its function as both art practice and politics. The course will be divided between discussions centered on close reading of primary and secondary material and creative writing/movement exploration (no previous movement experience necessary). Occasional guest lectures with visiting artists will provide additional fodder for our critical and creative work.

FNAR 4020 Fine Arts Senior Seminar Project (Fall)
This rigorous pair of courses, one offered in the Fall and one offered in the Spring semester, are designed as the capstone of the Fine Arts major and are required for all graduating fine arts seniors. They can only be taken in the senior year. Students work in individual studio spaces provided by the department and then meet with faculty for seminar, critique, and professional practice exercises. Through individual and group critiques, students begin to conceptualize their final thesis exhibition or project. The senior seminar allows students to create lasting professional relationships with the fine arts faculty and visiting lecturers. The fall semester culminates in a group exhibition of senior student work paired with final semester critiques.
Fall
1 Course Unit

FNAR 4030 Fine Arts Senior Seminar Project (Spring)
The Spring semester seminar culminates in a senior thesis exhibition for each graduating student. These exhibitions have traditionally been held as a small group exhibition featuring a few students in one group, or as a larger end of semester exhibition with each student installing a series of works. The format of the exhibition will be determined during the fall semester by the senior faculty. The process of preparing, installing, and promoting the thesis exhibition is covered in detail throughout the semester. Students will work in their on-campus studio spaces to produce dynamic, thoughtful and well-crafted work that will serve as their final portfolio. They will present their portfolio of work during a final critique before graduation.
Spring
1 Course Unit
FNAR 4100 Urban Communities and the Arts
Urban Communities and the Arts concerns itself with Arts, Music and Activism in Philadelphia. We investigate the social, economic and cultural fabric from which activism in the arts arises. To do so, we will investigate the histories and artistic reactions to oppression in Philadelphia by drawing on specific examples from various sections of the city and through the media of music, visual art, theater, and dance. The long history of systemic and individual oppression in the US manifests itself in different ways in various urban neighborhoods in Philly and artists of various genres and inclinations participate in activism in many different ways. Examples of artistic and musical responses to the various forms of oppression will be offered and class participants will be asked to bring their own examples to share and analyze. By visiting significant arts practitioners and organizations that provide access to arts education and justice work, participants will have a hands-on experience to unpack the dynamics of artistic production in city life. In addition to art as an outlet for exposing oppression, we will also consider the ways that art and music become markers of the uniqueness of a neighborhood or city, which further complicates the idea of art as a tool for activism. Participants in Urban Communities and the Arts will unpack the role of music and art in defining city or neighborhood cultures by considering a few key sectors that reveal the ways in which cities fail to provide equal access to resources or participate in outright discrimination. At the same time, cities continue to cultivate creative spaces and socio-economic opportunities for economic gain and social understanding through art and music. It is the contradictions that this course will concern itself with and out of our study we will invite course participants to respond creatively. Participants will create either an original work of art, music or intellectual response like a visually interesting research poster as part of a final art/music show. Ultimately students will be asked to reflect back on the role of art in social and political activism to better understand the successes and failures of such movements as they come to define the ethos of city life and its limits.
Not Offered Every Year
Also Offered As: URBS 4100
1 Course Unit

FNAR 5003 Contemporary Art Studio
This course offers an introduction to studio-based practices aimed at synthesizing the expansive potentialities of art through exposure to a diverse set of approaches, their histories, and contemporary applications. A wide range of multi-disciplinary projects will provide students with skills to conceptualize and visualize material investigations. Lectures, readings, films, visiting lectures, field trips, and critiques, will provide a historic and theoretical foundation for critical inquiry.
1 Course Unit

FNAR 5004 Video I
In this studio based course, students are introduced to video production and postproduction as well as to selected historical and theoretical texts addressing the medium of video. Students will be taught basic camera operation, sound recording and lighting, as well as basic video and sound editing and exporting using various screening and installation formats. In addition to a range of short assignment-based exercises, students will be expected to complete three short projects over the course of the semester. Critiques of these projects are crucial to the course as students are expected to speak at length about the formal, technical, critical and historical dimensions of their works. Weekly readings in philosophy, critical theory, artist statements and literature are assinged. The course will also include weekly screenings of films and videos, introducing students to the history of video art as well as to other contemporary practices.
Fall or Spring
1 Course Unit

FNAR 5007 Digital Photography
This class offers an in-depth technical and conceptual foundation in digital imagery and the opportunity to explore the creative, expressive possibilities of photography. Students will become proficient with the basic use of the camera, techniques of digital capture, color management and color correction. They will also develop competency in scanning, retouching, printing and a variety of manipulation techniques in Photoshop. Through weekly lectures and critiques, students will become familiar with some of the most critical issues of representation, consider examples from photo history, analyze the impact of new technologies and social media. With an emphasis on structured shooting assignments, students are encouraged to experiment, expand their visual vocabulary while refining their technical skills. No previous experience is necessary. Although it is beneficial for students to have their own Digital SLR camera, registered students may reserve and checkout Digital SLR cameras and other high-end equipment from the department.
Fall or Spring
1 Course Unit

FNAR 5008 Mixed Media Animation
Mixed Media Animation is a contemporary survey of stop-motion animation concepts and techniques. Students use digital SLR cameras, scanners and digital compositing software to produce works in hand-drawn animation, puppet and clay animation, sand animation, and multiplane collage animation. Screenings and discussions in the course introduce key historical examples of animation demonstrating how these techniques have been used in meaningful ways. Students then learn how to composite two or more of these methods with matte painting, computer animation or video.
1 Course Unit

FNAR 5010 Graduate Studio I
First year studio for MFA students’ core pursuit of self-directed interdisciplinary problems that contribute to one or more of the visual arts disciplines.
Fall
1-2 Course Units
FNAR 5011 Intro to Clay
This course introduces clay as a sculptural medium through fundamental clay-building techniques, mold making, model making, and casting. Through experimentation with these methods, this course promotes an understanding of materials, processes, visual concepts and techniques for creating three-dimensional forms in space. In addition to using different water-based clays and plaster, other materials such as wax, plastilene, paper pulp, and cardboard will be explored. Students will explore the full range of clay capabilities and its role in contemporary art through lectures, readings, demonstrations, and assignments that incorporate conceptual and technical issues.
1 Course Unit

FNAR 5012 Figure Drawing I
Students work directly from the nude model and focus on its articulation through an understanding of anatomical structure and function. Students will investigate a broad variety of drawing techniques and materials. The model will be used as the sole element in a composition and as a contextualized element.
Fall or Spring
Prerequisite: FNAR 5230
1 Course Unit

FNAR 5013 Painting I
Painting I is an introduction to the methods and materials of oil painting. This course begins with an investigation of color and color relationships. The beginning of the semester will cover technical issues and develop the student’s ability to create a convincing sense of form in space using mass, color, light and composition. The majority of work is from direct observation including object study, still life, landscape, interior and exterior space and the self portrait. Class problems advance sequentially with attention paid to perceptual clarity, the selection and development of imagery, the process of synthesis and translation, color, structure and composition, content and personal expression. Students will become familiar with contemporary and art historical precedent in order to familiarize them with the history of visual ideas and find appropriate solutions to their painting problems.
Fall or Spring
Prerequisite: FNAR 5230
1 Course Unit

FNAR 5014 Introduction to Printmaking
The course offers an introduction to several forms of printmaking including: intaglio, screen printing, relief, and monoprinting. Through in-class demonstrations students are introduced to various approaches to making and printing in each medium. The course enhances a student’s capacity for developing images through two-dimensional design and conceptual processes. Technical and conceptual skills are developed through discussions and critiques.
Spring
1 Course Unit

FNAR 5015 Documentary Video
Documentary Video is an intensive production course involving the exploration of concepts, techniques, concerns, and aesthetics of the short form documentary. Building on camera, sound, and editing skills acquired in Video I, students will produce a portfolio of short videos and one longer project over the course of the semester using advanced level camera and sound equipment. One short presentation on a genre, technique, maker, or contemporary concern selected by the student is required.
Fall
1 Course Unit

FNAR 5016 Video II
Video II offers opportunities to further explore the role of cinematic narrative technique, non-narrative forms, digital video cinematography, editing, and screen aesthetics. Through a series of several video projects and a variety of technical exercises, students will refine their ability to articulate technically and conceptually complex creative projects in digital cinema. In addition, one presentation on a contemporary issue related to the application of cinematic storytelling and/or the cultural context of digital video is required.
Fall or Spring
1 Course Unit

FNAR 5017 Cinema Production
This course focuses on the practices and theory of producing narrative based cinema. Members of the course will become the film crew and produce a short digital film. Workshops on producing, directing, lighting, camera, sound and editing will build skills necessary for the hands-on production shoots. Visiting lecturers will critically discuss the individual roles of production in the context of the history of film.
Fall
1 Course Unit

FNAR 5018 Advanced Video Projects
This course is structured to create a focused environment and support for individual inquiries and projects. Students will present and discuss their work in one on one meetings with the instructor and in group critiques. Readings, screenings, and technical demonstrations will vary depending on students’ past history as well as technical, theoretical, and aesthetic interests.
Not Offered Every Year
Prerequisite: FNAR 5004
1 Course Unit

FNAR 5020 Graduate Studio II
Second year studio for MFA students’ core pursuit of self-directed interdisciplinary problems that contribute to one or more of the visual art disciplines.
Spring
1-2 Course Units

FNAR 5021 Advanced Lens Based Projects
Advanced Lens Based Projects (ALBP) is structured to create an open environment for students to develop a series of self-determined projects using any variety of image capture technologies. Mobile devices and DSLRs have blended the function of moving and still image capture while computers have become ubiquitous as instruments of display and dissemination. This has consequently led to the increasingly collapsed boundaries of artistic mediums. ALBP is a studio class where students will explore different modes of production and address the expanding field of exhibition strategies. Additionally, the class will foster a transdisciplinary approach to critiquing work and emphasize the shared context of the works reception. Readings, screenings, discussions, and critiques make up the curriculum along with dedicated studio time. Each student is required to complete three self-determined projects using still or moving image capture technologies. Grades will be determined through participation, completion of assignments, and the students’ formal and critical engagement with the technology. While the focus of this course is not technical, prior knowledge of camera functions and post-production techniques is expected.
Fall or Spring
Prerequisite: FNAR 1010 OR FNAR 1020 OR FNAR 1030 OR FNAR 1040
1 Course Unit
FNAR 5022 Performance/Camera: Performance and-with-through-for Cameras
This intermediate course will explore the wide and expansive territories of art-making that exist between live performance and mediated image making-both still and moving. For much of the 21st century, the mediums of performance, video and photography have been weaving in and out of contact. Performance is known and understood largely through its documentation: sometimes voluminous and sometimes little more than a single photograph. On the other side, video, film and photography each developed through widespread explorations that were deeply entwined with the "capturing" of bodies on film. Using photography, video and performance in equal parts, the course is a hands-on exploration of this capacious terrain. The course will be structured by a series of bi-weekly assignments that allow for individual and collective production. The course will also include a regular schedule of short readings and presentations/screenings of existing works.
Fall
Prerequisite: FNAR 6610 OR FNAR 6400
1 Course Unit

FNAR 5023 Performance Studio
This course supports the individual and collaborative production of performance works. As the medium of performance consists of diverse forms, actions, activities, practices and methodologies, the course allows for an open exploration in terms of material and form. Students are invited to utilize technologies, materials and methodologies from other mediums and/or disciplines such as video, photography, writing and sound. In addition to the production component, the course will examine multiple histories of performance through readings, screenings and directed research.
Spring
Prerequisite: FNAR 5230 OR FNAR 5450 OR FNAR 6400 OR FNAR 6610
1 Course Unit

FNAR 5024 Hand-Drawn Computer Animation
Using software tools designed for hand-drawn animation, students will develop animation skills applicable to all forms of animation. In this course students will learn to draw with a sense of urgency and purpose as they represent motion and drama in a series of frames. Through careful study of natural movements, precedents in the history of animation, and through the completion of a series of animation projects students will develop strategies for representing naturalistic movement, inventing meaningful transformations of form, and storytelling.
Not Offered Every Year
1 Course Unit

FNAR 5025 Computer Animation
Through a series of studio projects this course introduces techniques of 2D and 3D computer animation. Emphasis is placed on time-based design and storytelling through animation performance and montage. Students will develop new sensitivities to movement, composition, cinematography, editing, sound, color and lighting.
Fall or Spring
1 Course Unit

FNAR 5026 Digital Photography II
In this course students will continue to develop conceptual, technical, aesthetic and formal strategies in digital photography, expanding their artistic process while refining their critical approach to researched subject matter. The class will be driven initially by a series of assignments formulated to further expose students to broad possibilities related to the medium and then they will be guided towards the evolution of a personalized body of work that is culturally, theoretically and historically informed. We will be examining key issues surrounding the digital image in contemporary society, led through a combination of class lectures, readings, group discussions, film screenings, gallery visits and class critiquess. Students will further their knowledge of image control and manipulation, retouching and collage, advanced color management; become familiar with high-end camera and lighting equipment and develop professional printing skills. In addition to learning these advanced imaging practices, this course will also emphasize an investigation of critical thought surrounding contemporary visual culture and the role of digital media in the creation of art.
Fall
Prerequisite: FNAR 6400
1 Course Unit

FNAR 5027 Reconfiguring Portraiture
As methods of representation are constantly shifting, one thing is clear - the photographic portrait is not what is used to be. Exploring both traditional and contemporary methods of portraiture, this class will uncover and discuss the ways in which we perceive each other in imagery, both as individuals and as groups. Throughout the semester, we will consider how portraits deal with truth, physical absence, the gaze, cultural embodiment, voyeurism and the digital persona. This course will build on the combination of perception, technology, and practice. Throughout the semester, students will advance by learning lighting techniques and strategies of presentation - as these core skills will become tools in the execution of project concepts. In tandem with each project, students will encounter and discuss a wide array of photography and writings from the past to the present, in an effort to understand the meanings and psychological effects of freezing the human image in time.
Spring
Prerequisite: FNAR 5710 OR FNAR 6400
1 Course Unit

FNAR 5029 Photography & Fashion
Since the invention of photography, the fashion industry has been one of the cornerstones of creative expression, innovation and visionary provocation. Contemporary fashion photography has continued to attract a leading group of image-makers that continue the tradition of creating artwork that not only is being published in cutting edge magazines such as V, Another Magazine and Citizen K, but also are exhibiting their work in various galleries and museums around the world. This course is designed for students who are interested in creating contemporary fashion images through specific assignments that define the process: lighting in studio or location, working with fashion designers, stylists, models, hair/ make up artists, and the application of a variety of post production techniques, via Photoshop. The class will explore modern constructs that define the importance of branding, marketing, advertising and the relationship of fashion photography in contemporary art and culture today.
Prerequisite: FNAR 5710 OR FNAR 6400
1 Course Unit
FNAR 5030 Sachs Research: Imaginary Modernisms
Over the course of the 2017-2018 school year, but officially as Spring 2018, credited course, I am inviting a group of 6-8 MFA students to participate as a group in a project focused on research, dialogue and the essential "possibilities" available to any artist to participate in the constant rewriting and redefining of art history. Students will participate in a body of research and readings leading to my upcoming participation in Rice University’s Campbell Lecture Series in March 2018 and an associated publication with the University of Chicago Press. The lectures are divided into three distinct parts over three nights, all of which focus on alternate approaches to modernism. Part I investigates the "Literary" theory of architecture by Bruno Taut and Paul Scheerbart. Part II is concerned with the painting practices of Hilma af Klint and Blinky Palermo. And Part III discusses the music of Sun Ra and Pauline Oliveros. Students participating in Imaginary Modernisms will meet and work with me in a series of scheduled and structured activities. beginning with a visit to Philadelphia in November for personal studio visits with each of the 6-8 students, not as a critique but to get to know you and your work a bit. Participation includes three trips to New York, each for two days. These 2-day trips will each involve one day at my studio in Brooklyn, to discuss the readings and research, as well as to observe the development of ongoing sculptural artworks being created in my studio, and a second day of self-guided visits to exhibitions and performances that I will suggest, with an optional meeting together for lunch or dinner. Readings for these meetings will be sent to you in advance of trip. Participating students should be prepared to read various texts along with me for the 5 month project duration. This is an essential part of the project and this should be a pleasurable process, so those who do not have time to add a medium amount of reading to their schedules, followed by group discussion, should probably not apply. The only other requirement will be preparing for an exchange with undergraduate students at Rice University in March. For our trip to Houston in March, there will be three nights of lectures, one participatory performance, one exhibition opening reception, plus visits and interaction with curators at the Menil Collection, the Museum of Fine Arts Houston, the Contemporary Arts Museum Houston and the Core Program (an important option for MFA students post graduation.)

Spring
1 Course Unit

FNAR 5031 Photogaphy and Fiction
In spite of photography's traditional relationship with fact, the medium has been a vehicle for fiction since the very beginning. Fiction and photography encompass a broad range of meanings, from elaborately staging and performing for the camera, to manipulations using digital technology such as Photoshop to construct the work. This class will examine and trace the history of manipulated photography while paying special attention to the complex negotiations between the decisive moment, the constructed tableau, and the digitally manipulated image. There will be a combination of class lectures, studio projects, assigned readings, visiting artists, film screenings, field trips, and class critiques.

Spring
Prerequisite: FNAR 1030 OR FNAR 6400
1 Course Unit

FNAR 5032 Counter the Land: Photography and the Landscape
Starting with the representation of landscape in painting in the early 1800s, the course will then move through Pictorialism and the Modernist movement in photography. Revisiting the later half of the 20th century, we will begin to consider the shifting practices of landscape and the ways it has been photographically depicted up to the present. Collaborating with the Brandywine River Museum of Art in Chadds Ford, students will begin their photographic exploration with the work of Andrea Wyeth and the landscape of the Brandywine Valley. As we consider Wyeth, the images of James Welling will also be introduced. Credited for pioneering new forms of representation in photography in the 1970s, Welling also revisited the work of Wyeth from 2010-2015, and committed to a fresh (and challenging) look at tradition. Working with imagery and text, this class will also touch on conceptual art, the New Topographics, and postmodernism. Through these various concentrations, students will consider and counter the traditions that they are already familiar with, while creating work based on issues of the landscape today. Questions about meaning, politics, social critique, land rights, technology and methods of presentation will be encouraged and explored throughout the course.

Fall
Prerequisite: FNAR 5710 OR FNAR 6400
1 Course Unit

FNAR 5033 Dispersive Lens
This studio course will explore the nexus between photography, sculpture, installation, drawing, painting, and the moving image. The course is informed by the printed image, as students will explore how photography can encourage thinking in other mediums, in addition to how other mediums can influence the making of photography. When does an abstract painting appear more like a photograph? How can a photograph suggest ways to make a video? Can a sculpture exist as a photograph? A variety of assignments will expose students to interdisciplinary approaches addressing these questions and more. Class projects will be supported by regular slide lectures, group critiques, and readings examining modern and contemporary artists and practices.

Spring
Prerequisite: FNAR 5710 OR FNAR 6400 OR FNAR 6610
1 Course Unit

FNAR 5034 Photography Studio Abroad
This Traveling Studio is offered every other spring term to upper level photography & related media students. It is a cross-cultural visual investigation, exploring the contradicitions and significance of the chosen city. This course incorporates multi-disciplinary research in preparation for the trip; exploring various fields of knowledge production such as art, history, social sciences, markets and governance. Class discussion, readings and individual research will be focused towards the development of each student's photo/media project, which will be realized while abroad. After returning to Philadelphia, students will develop and refine their work; the remaining classes will emphasize critique, editing, printing and presentation options. The final projects will be included in a group exhibition at the end of the semester. Admission to the course is on a competitive basis.

Spring, even numbered years only
Mutually Exclusive: FNAR 2180
1 Course Unit
FNAR 5035 The Body and Photography
The last few decades have introduced dramatic changes in the way we interact with each other, the way we communicate, the way we date, watch porn, etc. Ethical concerns have arisen with scientific advances such as stem cell research, fertility drugs, Botox, cloning and erectile dysfunction. This studio course will investigate the myriad ways in which the corporeal is addressed and manipulated in contemporary art, science, religion, pop culture and media. Students will develop photographic projects related to updated questions concerning gender, sexuality and social issues. Lectures, readings and class discussion will focus and inform their individual work.
Spring
1 Course Unit

FNAR 5036 Drawing Investigations
Drawing is a fundamental means of visualization and a hub for thinking, constructing, and engaging in a wide variety of creative activities and problemsolving. This studio class explores drawing in both its traditional and contemporary forms. The projects are designed to help students in all disciplines find ways express and clarify their ideas through the process of drawing. The semester begins with the refinement of perceptual skills acquired in Drawing I, while encouraging experimentation through the introduction of color, abstract agendas, conceptual problem solving, and collaborative exercises, as well as new materials, techniques and large format drawings. Particular attention is given to ways to conduct visual research in the development of personal imagery. Assignments are thematic or conceptually based with ample opportunity for individual approaches to media, subject, scale and process. The goal is to strengthen facility, develop clarity in intent and expand expression. Attention is paid to the development of perceptual sensitivity, methods of image construction, and the processes of synthesis and transformation in order to communicate ideas through visual means. Recommended for students in all areas.
Fall or Spring
Prerequisite: FNAR 5230
1 Course Unit

FNAR 5038 Painting II
Painting II presents an ongoing exploration of the techniques, problems and poetics of painting, the nuances of the painting language, and the development of a personal direction. A wide variety of problems will address such issues as color, composition, and the development of imagery, process, and content. Students are expected to improve in technical handling of paints and move towards developing personal modes of seeing, interpreting, and thinking for themselves. This course introduces different topics, strategies and individual challenges each semester, so it may be repeated with advanced course numbers.
Fall or Spring
Prerequisite: FNAR 5310
1 Course Unit

FNAR 5040 Painting Studio
Painting Studio IV focuses on continuing the student’s exploration of techniques, problems, and poetics of painting, the nuances of the painting language, and the development of a personal direction. While students may choose to work on assigned projects (either in consultation with the instructor or following the projects that the Painting II/III students may be involved in), the emphasis is on the investigation of the student’s own sensibility. Students will be expected to engage in ongoing critical analysis of their own practices and assumptions.
Fall or Spring
Prerequisite: FNAR 5230 AND FNAR 5330
1 Course Unit

FNAR 5041 Interdisciplinary Studio: Sites of Convergence and Hybridity
This course takes an experimental multimedia approach to investigating some of the boundaries in contemporary art making practices. Painting, photography, video, design and sculpture intersect, overlap, and converge in complicated ways. Projects will be designed to explore hybrid forms, collage, space/ installation, and color through a variety of strategic and conceptual proposals as students work towards unique ways of expanding their own work. Weekly readings, critiques, and presentations will be integrated with studio projects. This studio/seminar is appropriate for students at all levels and from all areas of Fine Arts and Design.
Spring
Prerequisite: FNAR 5230 OR FNAR 5450 OR FNAR 6400 OR FNAR 5310 OR FNAR 6360
1 Course Unit

FNAR 5043 Printmaking: Etching
The class will challenge the possibilities of experimental drawing and ways of creating incisions and textures using copper plates as the matrix, which then will be printed on paper and other materials. The class offers full technical and historical description of each individual process: Dry Point, Etching, Hard ground, Soft Ground, Aquatint, Shine Cole’, Spitz-Biting, Sugar Lift, Color Printing and Viscosity printing.
Fall or Spring
1 Course Unit

FNAR 5044 Printmaking: Screen Printing
This course is an introduction to technical skills and investigative processes in screen printing and relief and examines methods for combining digital technology with traditional print media. The course introduces students to several contemporary applications of silkscreen and relief printmaking including techniques in multi-color printing, photo-based silkscreening, digital printing, woodcut, linocut, and letterpress. Demonstrations include photo and image manipulation, color separating and output techniques, hand carving and printing, as well as drawing and collage. Both traditional and experimental approaches are explored and encouraged and technical and conceptual skills are developed through discussions and critiques.
Fall
1 Course Unit

FNAR 5045 Printmaking & Publications: Intro to Independent Publishing and Artists' Publications
This course introduces students to independent publishing and artists’ publications through print methods in letterpress, Risograph, and Xerox. The class will focus on the self-published artists’ zine/book as an affordable, accessible, and easily reproducible format for exploring ideas, disseminating artists’ work, and collaborating across disciplines. Students will learn a range of skills, including techniques in both mechanized and hand-pulled forms of printed media (Risograph, copy machine, Vandercook letterpress); short-run editions and binding; design and layout; pre-press and print production; and the web as it relates to and supports independent and democratic modes of distribution. Students will learn about and become acquainted with some of the most significant independent publishers working today and throughout history. Students will leave class having completed three individual projects: a 16-page booklet/zine; a carefully considered online publication, and a final collaborative book designed, developed and published as a class. The course commences with a field trip to New York City’s Printed Matter, one of the oldest and most important nonprofit facilities dedicated to the promotion of artists’ books, where students will be encouraged to submit a publication by semester’s end.
Fall
1 Course Unit
FNAR 5047 Advanced Sculpture: Installation & Intervention
In this course students will create sculptural installations and spatial interventions that explore site specificity and architectural environments. A range of traditional sculptural materials and techniques will be investigated along with more ephemeral interventions in space such as sound, light, and projection. Through lectures, readings, and critiques, students will explore the history of installation and interactive sculptural work and develop self-directed projects that interrogate historical, social, and psychological conditions of the built environment.
Mutually Exclusive: FNAR 2310

FNAR 5048 Nonhuman Photography
Our culture is increasingly made up of nonhuman actors. Facial recognition algorithms spend more hours "seeing" in a day than humans; drones equipped with visual sensors conduct our warfare; voice chat bots call businesses and make appointments for us. Meanwhile, humans conduct labor that we view as the work of bots: posting disinformation for political gain, or mass-producing children's YouTube videos for ad revenue. As objects begin to see and think, how can we understand the role of human agency and the possibilities (or lack thereof) for artistic expression in this space? What does the future of art look like when more photographs are taken as surveillance than by individuals, or when important cultural producers are nonhuman intelligences? In Nonhuman Photography, we will attempt to interrogate these ideas from an artist's perspective, approaching nonhuman agents and the various components that comprise them both as tools for studio work and as generative entities in their own right. Over the course of the semester we will read and discuss these issues extensively, while engaging in studio projects in a variety of media. While the course bears the title "photography", we will find that many of these tools will be non-photographic or para-photographic, and as a result many of our studio projects will be interdisciplinary. This course takes its name from Joanna Zylińska’s Nonhuman Photography, parts of which we will examine over the course of the semester.

FNAR 5049 Machine for Seeing: Architecture and the Moving Image
Architecture's relationship with cinema was established with the very first motion picture. In Sortie de l'usine Lumiere de Lyon by Auguste and Louis Lumiere we see a didactic presentation of film titles as workers from the Lumiere brother's factory stream forth from its interior at days end. In many ways the context of the film is its subject as well. The title of the class plays on Le Corbusier's maxim that architecture is machine for living and perhaps cinema is simply a machine for helping us understand the vast construct of our built environment. A device, which allows us to imagine even greater follies or more importantly to think critically about architecture's relationship with and impact on society. Readings, screenings, discussions and critiques make up the curriculum along with studio time. Students will produce their own film and we will look at films produced by a range of practitioners: From architects speculating on the nature of and use of public space and urban development to documentarians researching the pathologies of neo-liberalism and its effect on the privatization of space. We will also look at the work of artists who engage with the poetics of space and who unpack the conflicted legacies of the built environment.

FNAR 5050 A Virus in the Culture: Social Critique in Media Arts
In order to change the world, we must first learn how to infect it. A Virus in the Culture is a studio class that examines and generates various forms of media resistance to dominant hegemonic systems of power and control. Using filmmaking, publication design and interactive media we'll think through and develop responses to some of the most pressing issues facing us today. We'll look at historical models from the agitprop design work of Gee Vaucher for Anarcho-punk band Crass to Chris Marker's film Le Fond de L'Air Est Rouge, a radical analysis of global social and political turmoil in the late 60s and early 70s. We'll also look at experimental contemporary design firms like Metahaven who question the role of designers and filmmakers today - Bypassing the power dynamics of clients and briefs they took it upon themselves to create a graphic identity for WikiLeaks. Each example broadens the definition and possibilities of practice to create a more porous engagement with audiences and users while informing the practice of social critique today. Considering a diverse range of topics from education policy, to the rights of environmental refugees, we'll use the class to workshop a singular comprehensive project that targets researches and responds to a specific contested position. The outcome of which will be a class produced short film, publication and website that unpacks the social, cultural, and economic complexities of our subject. This class is co-taught by David Hartt, an artist and filmmaker along with graphic designer, Mark Owens. Reading, screenings, discussions and critiques make up the curriculum along with studio time. While the focus of this course is not technical, prior knowledge of design programs, camera functions, and post-production techniques is expected.
Fall
Prerequisite: FNAR 6610
1 Course Unit

FNAR 5054 The Chinese Body and Spatial Consumption in Chinatown
This course looks at representations of the Chinese (and Asian body) since the Limehouse district in East London and the advent of Chinese contract laborers to the Americas in the 19th century. The localization of the Chinese throughout the Americas within Chinatown precincts were also subject to representational imaginings that were negotiated through the lens of civic planning, literature and later in cinema. Chinatowns are ultimately a product of racism. They were created as a political and social support system for newly arrived Chinese immigrants. While Chinese laborers arrived into the United States in 1840 and in significant numbers into Canada about 1860, Chinese contract workers were encouraged to immigrate to the Americas as an inexpensive source of labor, especially after the end of the American Civil War. Industrial leaders in America, Canada and elsewhere in the Americas (Mexico, Cuba, Peru, etc) saw the arrival of Chinese workers as a victory for commercial interests. However, the celebration was short-lived, as anti-Chinese sentiment quickly transformed into anti-Chinese hysteria. Rather than attacking the vested interests that exploit foreign labor as embodied by the Chinese worker, racist unions with the cooperation of civic leaders and the police deemed it safer to burn Chinatowns than capitalist property. Deeply under-studied to this day is the number of mass murders of Chinese workers in the 19th century by anti-Chinese thugs. This seminar will focus in on how the body of the Chinese (and Asian) was imagined and reimagined multiple times from the middle of the 19th century to today.

FNAR 5055 Tiananmen Square: A Case Study for Fine Arts and Landscape Architecture

This course takes as its subject the systems of representation and design that have historically and presently operate in Tiananmen Square in Beijing. There have been several incarnations of Tiananmen Square since its original form in 1651. During Imperial times and through the period of foreign legations, the square was once surrounded by walls and gates, creating a city within a city. With the advent of the Republic of China established on January 1, 1912, much of the enclosures were removed, opening up for public use previously restricted imperial areas. After the Communist Revolution in 1949, planning was afoot to enlarge the square. With its enlargement completed in 1958, the square expanded its footprint by four-fold, making it one of the largest public squares in the world. The enlarged and remodeled square coincided with the completion of the massive Monument to the People’s Heroes. In 1976, a large mausoleum containing the preserved body of Mao Zedong was built near the site of the former Gate of China, further increasing the size of the square. In the 1990s, the building of the National Grand Theatre and expansion of the National Museum on grounds contiguous to the square necessitated further alterations to both the Eastern and Western skirts of the square. In recent years, there have been a widening debate regarding the transformation of the concrete heavy and by and large featureless square into a green space. Today, Tiananmen Square holds sacrosanct status to the Communist revolution of 1949, designed more for military parades and massive public rallies than public space repose. In a city that has few green spaces, such a verdant transformation in the heart of the Chinese capital would signal a radical symbolic deviation to China’s development-first guiding principles. The square fronts Tiananmen Gate and the Forbidden City and is situated at the intersection of the historical east-west and north-south axes. Chang’An Avenue, important for military processions, separates the square from Tiananmen Gate and is considered the most important thoroughfare in the Capital and the path of the east west number one subway line. The entirety of the Tiananmen Square area is marked by ideology and political prominence, often confusingly. Tiananmen Tower, functions as a conflation of monumental facade with political embodiment. This course will focus on imagined interventions through public art and landscape design within Tiananmen Square and its contiguous areas. It is a studio practice course with a significant seminar component that will include lectures and readings relating to issues of public space and urban design in contemporary China. The course will also study the development of contemporary art in China. The tragic events of Tiananmen Square in 1989 represented a turning point in terms of a generation of Western exiled Chinese artists and curators including Hou Hanru, Chen Zhen, Xu Min, Huang Yong Ping and Yan Pei Ming among many others. The class will study the strategies deployed by these so-called First Generation of Chinese artists. Making use of their double identity as traditionally taught Chinese artist residing in the West, their art offered a pointed critique of both China and the West. The course will include a trip to Beijing.

FNAR 5056 Across Forms: Art and Writing

What if a poem spoke from inside a photograph? What if a sculpture unfurled a political manifesto? What if a story wasn’t just like a dance, but was a dance—or a key component of a video, drawing, performance, or painting? In this course, artists and writers will develop new works that integrate the forms, materials, and concerns of both art and writing. Many artists employ writing in their practices, but may not look at the texts they create as writing. And many writers have practices that go beyond the page and deserve attention as art. This course will employ critique and workshop, pedagogic methodologies from art and writing respectively, to support and interrogate cross-pollination between writing and art practices. Additionally, the course will will examine a field of artists and writers who are working with intersections between art and writing to create dynamic new ways of seeing, reading, and experiencing.

Fall

1 Course Unit

FNAR 5057 Art and Social Work: Art and the Ecology of Justice

How can the arts help us build a more just society? How can the arts transform social structures and systems? Public health crises involving clean water (Flint), police violence (Baltimore), and a lack of economic and educational opportunity following reentry (Philadelphia) make legible the need for a new visual language that critiques these conditions and challenges entrenched structural inequalities. We will engage the work of creative practitioners who are mapping new relationships between art and social justice and directly impacting individual and communal well-being. In so doing, the course seeks to challenge traditional constructions of public health, which often isolate individual histories from their social life and their relation to families, communities, and geographies. Readings will build upon disciplinary perspectives in the arts, humanities, and social policy. Requirements include weekly readings, class participation, and a collaborative final project. The course will meet in the Health Ecologies Lab at Slought Foundation, an arts organization on campus.

FNAR 5058 Paris Modern: Spiral City
Paris has been shaped by a mixture of organic development, which is still today perceptible in the "snail" pattern of its arrondissements whose numbers, from 1 to 20, coil around a central island several times so as to exemplify a "spiral city," and of the violent cuts, interruptions and sudden transformations that again and again forced it to catch up with modern times, the most visible of which was Baron Haussmann's destruction of medieval sections of the city to make room for huge boulevards. Thus Parisian modernism has always consisted in a negotiation between the old and the new, and a specific meaning of modernity allegorized for Louis Aragon, the Surrealists and Walter Benjamin consisted in old-fashioned arcades built in the middle of the 19th century and obsolete by the time they turned into icons of Paris. The aim of the class will be to provide conceptual and pragmatic (visual, experiential) links between a number of texts, theories and films deploying various concepts of the modern in Paris, with a guided tour of the main places discussed. The course that Professors Jean Michel Rabate (English) and Ken Lum (Fine Arts) will lead studies Paris as a work of science-fiction where its many futures are embedded in its many pasts, where discontinuity is a continuous process and where the curving line of the snail's shell is a line of ceaseless curling resulting in a perennial oscillation where an outside converts into an inside and an inside then converts to an outside. The course will travel to Paris over spring break to get an in-depth look at the topics discussed in class.
1 Course Unit

FNAR 5059 Public Art and Issues of Spatial Production
The French social philosopher Michel de Certeau upset the common understanding of the relationship between space and place by elevating space as practice place. By this, he meant that place is but a set of geo-physical particularities that has no dynamic meaning unless activated through social engagement so that space is produced. Spatial practice is a key concept in the modern understanding of the city as a society of abstract space, one in which the problem of human alienation is riven with the logic of spatial spectacularization. Public Art is often employed to address or mollify such urban problems through concepts of historical reconstruction or institutional critique, including possibly testing the limits of public expression. Historical markers play a somewhat different role by calling attention to lost or negative histories, albeit most often vetted through the language of tourism factoids. This course will examine the discursive issues at play in respect to art and markers, particularly for Philadelphia. Additionally, important public art works from around the world will be examined. The course will also include the occasional visit of several key works downtown in which the question of what can and cannot said will be pondered.

FNAR 5061 Mystics & Visionaries: Arts and Other Ways of Knowing
As a pioneer of abstraction in the early 1900’s, Hilma Af Klint channeled a complex and highly original body of abstract symbolic work in secrecy. Using the upcoming Hilma Af Klint exhibition at the Guggenheim as a focus and departure point, this course will explore the ways in which artists have accessed alternative ways of seeing, knowing, and embodying non-visible realities as a source for their work. Accessing spiritual realms has been the subject of early European Modernisms investigations into Theosophy and Anthroposophy, as well as the primary intention of Tibetan Thangkas and Indian Tantra paintings. Postmodernism's crisis of belief and skepticism generated a cultural situation wherein the subject of spirituality was marginalized, ridiculed as anti-intellectual, and in disgrace. The Hilma Af Klint exhibition and surge of interest in her work signifies a new moment, where questions about consciousness and the nature of reality are being addressed with renewed vigor. How do we create space in a technology driven world for experiences that attempt to align the viewer/maker with the contemplative realm, heightened states of consciousness, or transcendence? We will examine a wide field of artists in an attempt to understand the possibilities of the "spiritual" in art and contemporary culture. This seminar will engage in readings, lectures, discussions, projects, and field trips. This course is appropriate for both grad and undergrad, art majors and non-majors alike.
Fall
1 Course Unit

FNAR 5062 Civic Studio
Civic Studio is an engaged research course that explores significant theories, methods, and practices of public and socially-engaged artwork. Students draw from arts- and place-based modes of inquiry toward collaborative projects with fellow classmates, artists, and organizations in Philadelphia and beyond, while pursuing semester-long individual projects that build on their own independent interests and pursuits. Each semester, students work with and as embedded practitioners in exhibitions, installations, research projects, and other artistic platforms throughout the city. In turn, through readings, site visits, and site-specific work, students gain creative and critical capacty for producing their own final projects. Through Civic Studio students are able to reflect upon and practice public work with artistic, scholarly, and civic aims.
