An introduction to the intent, approach, and contribution of anthropology to the study of socialization and schooling in cross-cultural perspective. Education is examined in traditional, colonial, and complex industrial societies.
Fall, Spring, and Summer Terms
Also Offered As: EDUC 5495, URBS 5470
1 Course Unit
ANTH 5480 Colonialism and its Legacies
In this course we explore the history and long-term consequences of European colonial expansion, with a primary focus on Eurasia and on the British Empire, though we will range further afield as needed. Rather than attempting a comprehensive historical overview, we will use a series of case studies to illustrate changing understandings of colonialism and associated processes, including anti-colonial movements, decolonization, postcoloniality, and the enduring effects of colonialism in the present. This is a seminar-style course.
Not Offered Every Year
1 Course Unit

ANTH 5490 Topics in Archaeological Method and Theory
The subject matter of this seminar will vary by term and instructor. Each course will concern itself with contemporary archaeology through an in-depth examination of new directions in archaeological method and theory. Please check https://www.sas.upenn.edu/anthropology/courses/topics-courses for the term-specific course description.
Not Offered Every Year
1 Course Unit

ANTH 5500 Critical Ethnography
"This graduate course introduces students to theories, practices, and critiques of critical ethnography. Ethnography – an approach to the study of culture which anthropologist James Clifford described as a process that "translates experiences into text" - will have our full attention. This process of translation, although seemingly straightforward, requires layers of interpretation, selection, and the imposition of a viewpoint or politics. While ethnography is often narrowly conceived of as a methodology, this course considers ethnography as a mode of inquiry, as a philosophy, as an ongoing question and performance. We wrestle with notions of "the self" and "the other" at the intersection of imbricated cultural and performance worlds. Together we'll ask: How is ethnography both critical and performatve? What is the relationship between theory and method? How can we evaluate ethnographic work? And finally, what kinds of ethnographers do we want to be? This course considers a range of ethnographic examples in order to analyze both the craft and the stakes of "translating experiences into text."
Not Offered Every Year
Also Offered As: AFRC 5500
1 Course Unit

ANTH 5510 Experimenting with Ethnography: Craft, Genre & Conceptual Work
This course takes inspiration from conversations and practices occurring at the interfaces of cultural anthropology, creative nonfiction, and experimental ethnography. Anthropologist Stuart McLean (2017) has asked: "What might become of anthropology if it were to suspend its sometime claims to be a social science? What if it were to turn instead to exploring its affinities with art and literature as a mode of engaged creative practice carried forward in a world heterogeneously composed of humans and other than humans?" At the same time, the emergence of the environmental and medical humanities as academic disciplines in the twenty-first century reflect the growing conviction that environmental and public health problems cannot be solved by science and technology alone. Instead, the need for public engaged writing and experimental methods and alliance building between the arts and social and natural sciences ask us to reflect about the craft, expanding genre, and conceptual work of our ethnographic practice. In this course, we will push our methodological premises and analytical training to experiment with the contexts, human interlocutors, matters of concern, and diverse materialities that emerge from and participate in our ethnographic research. This is a writing intensive seminar, and we will workshop different elements of the craft of ethnographic writing, as well as introduce several multimodal techniques into our modes of ethnographic conceptualization.
Fall or Spring
1 Course Unit

ANTH 5564 Colonial Ecologies
This seminar explores the historical ecology of European colonial expansion in a comparative framework, concentrating on the production of "periphery" and the transformation of incorporated societies and environments. We begin with a discussion of the theoretical frameworks, sources of evidence, and analytical strategies employed by researchers to address the conjunction of environmental and human history in colonial contexts, including underdevelopment and global systems of circulation; political ecology; and ecological imperialism. We then discuss the circulation of persons, crops, invasives, and microbes as fundamental conditions of emerging global systems. Drawing on these elements, we discuss landscapes as sites of misrecognition, rationalization, and cultural production. This discussion sets the stage for an examination of novel forms of economic and ecological production, including the emergence of the 'drug foods', the transformation of forest products, and the rise of the plantation. We then consider the political ecology of crisis in colonial settings, including agrarian collapse, famine, and 'ecological poverty'.
Not Offered Every Year
1 Course Unit
ANTH 5570 Archaeology of Landscapes
Traditionally, archaeological research has focused on the "site" or "sites." Regional investigation tends to stress settlement pattern and settlement system determined through archaeological site survey. This seminar will stress the space between the sites or "points" on the landscape. Most previous attempts at "landscape archaeology" tended to focus on the relationship of sites and the natural environment. This course will highlight the cultural, "anthropogenic," or "built environment"--in this case human modification and transformation of the natural landscape in the form of pathways, roads, causeways, monuments, walls, agricultural fields and their boundaries, gardens, astronomical and calendrical alignments, and water distribution networks. Features will be examined in terms of the "social logic" or formal patterning of cultural space. These can provide insights into indigenous structures such as measurement systems, land tenure, social organization, engineering, cosmology, calendric, astronomy, cognition, and ritual practices. Landscapes are also the medium for understanding everyday life, experience, movement, memory, identity, time, and historical ecology. Ethnographic, ethnohistorical, and archaeological case studies will be investigated from both the Old and New Worlds.

Also Offered As: AAMW 5570, LALS 5570
1 Course Unit

ANTH 5669 Audio Ethnography
This is an intensive, graduate-level, practice-based course in which students will record, edit, and produce anthropologically informed audio works that record and interpret culture and lived experience. Projects in this class will look beyond conventional linguistic or musical codes to sounds whose semiotic or affective value may be less immediately evident. Through the process of making location recordings, analyzing those recordings, composing them into autonomous works, and critiquing every step of the way, this course will engage with questions of ethnomusicology, ethnographic cinema, sound art, sound mapping, soundscape composition, and experimental nonfiction media practices which involve location recording. Through weekly sound projections and home listening, students will also gain a familiarity with existing genres and uses of nonfiction audio in anthropology and related fields.
Not Offered Every Year
1 Course Unit

ANTH 5700 Oil to Diamonds: The Political Economy of Natural Resources in Africa
This course examines the ways in which the processes of the extraction, refining, sale and use of natural resources -- including oil and diamond -- in Africa produce complex regional and global dynamics. We explore how values are placed on resources, how such values, the regimes of valuation, commodification and the social formations that are (re)produced by these regimes lead to cooperation and conflict in the contemporary African state, including in the relationships of resource-rich African countries with global powers. Specific cases will be examined against the backdrop of theoretical insights to encourage comparative analyses beyond Africa. Some audio-visual materials will be used to enhance the understanding of the political economy and sociality of natural resources.
Fall
Also Offered As: AFRC 5700, SOCI 5700
Mutually Exclusive: AFRC 4500
1 Course Unit

ANTH 5720 Geophysical Prospection for Archaeology
Near-surface geophysical prospection methods are now widely used in archaeology as they allow archaeologists to rapidly map broad areas, minimize or avoid destructive excavation, and perceive physical dimensions of archaeological features that are outside of the range of human perception. This course will cover the theory of geophysical sensors commonly used in archaeological investigations and the methods for collecting, processing, and interpreting geophysical data from archaeological contexts. We will review the physical properties of common archaeological and paleoenvironmental targets, the processes that led to their deposition and formation, and how human activity is reflected in anomalies recorded through geophysical survey through lectures, readings, and discussion. Students will gain experience collecting data in the field with various sensors at archaeological sites in the region. A large proportion of the course will be computer-based as students work with data from geophysical sensors, focusing on the fundamentals of data processing, data fusion, and interpretation. Some familiarity with GIS is recommended.
Spring, odd numbered years only
Also Offered As: AAMW 5720, CLST 7315, NELC 5925
1 Course Unit
**ANTH 5770 Everyday States: The Anthropology of Power and Politics**

While anthropologists have long been interested in political systems, they have in recent years made the modern state a critical site of ethnographic analysis. By focusing on everyday practice of officials in the Global North and South, anthropologists have drawn attention to the creative ways in which state actors and subjects of rule make and maintain its powerful institutions. Even as bureaucracies are formalized and instituted as sites of rational order and even-handed administration, scholars of everyday state formation have drawn attention to the ways that state authority depends on and reproduces racialized, gendered and geopolitical inequality. Indeed, like many other social institutions, racialized states are constituted through differentiated relations between government workers and the governed, through everyday rituals of violence and sovereignty, discipline and improvement. The class begins with a review of some influential theorizations of the modern state. Next, we focus on how political authority and social difference are produced by the everyday work of states. We attend to the colonial, racialized and gendered workings of states- particularly through their efforts to discipline black and brown bodies through sovereign violence and differentiated plans and programs of development. Finally, we will conclude the class by attending to the political work of subordinated groups as they demand distributive justice, equity and full citizenship in 'most of the world.'

Spring, even numbered years only
1 Course Unit

**ANTH 5780 The Biology of Inequality**

What is a more important predictor of how long you will live, the genes you inherit from your parents or the zip code where you were raised? In this class, we will try to answer this question and others regarding the origins of social disparities in health in the US. The course will also consider the broader global context, and ask why the US spends so much money on health care, but lags behind many nations in key indicators of population health. We will examine how social stratification by race/ethnicity, national origin, sexual orientation, education, and neighborhood quality shapes our biology and the health status of individuals, families, and populations; and, conversely, how health itself can be a fundamental determinant of key social outcomes such as educational achievement. This class takes a biocultural perspective seeking to understand how social inequalities interact with human biology, especially nutrition, health, and physiological stress. The course begins by reviewing perspectives on various forms of inequality and the ways inequalities become embodied as biology (including a review of biological systems and processes), and introduces several overlapping biocultural models that have emerged from anthropology and public health. A series of readings and case studies follow that link some aspect of human biology (nutrition, health, reproduction, psychosocial stress) to poverty and inequalities, and try to present both quantitative and qualitative aspects of these linkages, as well as how inequalities and poor health reinforce and reproduce each other. In order to be successful, this class requires engagement, participation, and discussion.

Not Offered Every Year
1 Course Unit

**ANTH 5805 Ruins and Reconstruction**

This class examines our enduring fascination with ruins coupled with our commitments to reconstruction from theoretical, ethical, socio-political and practical perspectives. This includes analyzing international conventions and principles, to the work of heritage agencies and NGOs, to the implications for specific local communities and development trajectories. We will explore global case studies featuring archaeological and monumental sites with an attention to context and communities, as well as the construction of expertise and implications of international intervention. Issues of conservation from the material to the digital will also be examined. Throughout the course we will be asking what a future in ruins holds for a variety of fields and disciplines, as well as those who have most to win or lose in the preservation of the past.

Also Offered As: CLST 7317, HSPV 5850, NELC 5950
1 Course Unit
**ANTH 5809 It was the Law at the Time: Museums, Colonialism, and the Question of Property**

Current discussions about who owns cultural property, especially in relation to objects acquired under and during Europe’s colonial project, form their arguments, limits and possibilities around international legal instruments such as UNESCO’s conventions on cultural property. Like broader claims for reparations by formally colonized peoples, legal demands for reparations or restitution with regard to cases of colonial injustice often run up against responses such as ‘it was the law at the time’ or ‘it was a long, long time ago and therefore there are no legal venues for claimants today’. The CARICOM-claim regarding reparations for slavery submitted by a number of Caribbean states, as well as demands regarding cultural treasures looted in the late 19th century in different parts of Africa and elsewhere, are clear examples of this phenomenon. Proposed solution for these conflicts almost always circumvent questions of ownership (at the time) or other legal possibilities. They are sought in extra-legal ways. Increased attention for these and similar cases have fueled new research into the histories of slavery and colonialism, and into the provenance of colonial cultural objects in Western museums. Similarly there is an increasing number of research projects that explore, for example, the fate of colonial objects in Europe, in relation to the fate of Nazi-looted art. While the legal limits of current claims form part of the investigation of many of these studies, they often fail to pay serious attention to the relationship between the law and the colonial project itself. Importantly, they also fail to explore the relationship between the law, questions of property and the ‘creation’ of the colonized subject. This seminar will focus on these conflicts and will interrogate the role of law within the colonial era, especially with regard to the legal fashioning of hierarchies of colonial subjects and colonial objects. In what ways is the law implicated the colonial project itself, and what role did it place in the fashioning of colonial subjects and colonial objects? Moreover, what role should an attentiveness at the law play in today’s debates around reparation or restitution? These are some of the key questions that the course will explore. Bringing together readings from legal and political philosophy, material culture and critical heritage studies, this course explores some of the key debates and texts surrounding questions of law, philosophy, colonialism and questions around reparations or restitution of cultural objects. Students will be introduced to the works of some of the key thinkers on which contemporary notions of ownership, the legal subject and (cultural) property are based, probing their genealogy in relation to the racial hierarchies established under the colonial project. We will explore both the history and application of legal frameworks that governed colonial subjects and (cultural) objects alike and their basis in legal philosophy. Is there reason to rethink the role of law within debates around reparations and restitution? And, last but not least: are there reasons to rethink the idea of property itself? What other genealogies of the law can we trace to think differently about ownership of (cultural) property?

1 Course Unit

---

**ANTH 5830 Ethnographic Filmmaking**

This ethnographic methodology course considers filmmaking/videography as a tool in conducting ethnographic research as well as a medium for presenting academic research to scholarly and non-scholarly audiences. The course engages the methodological and theoretical implications of capturing data and crafting social scientific accounts/narratives in images and sounds. Students are required to put theory into practice by conducting ethnographic research and producing an ethnographic film as their final project. In service to that goal, students will read about ethnography (as a social scientific method and representational genre), learn and utilize ethnographic methods in fieldwork, watch non-fiction films (to be analyzed for formal properties and implicit assumptions about culture/sociality), and acquire rigorous training in the skills and craft of digital video production. This is an ABS class, and students will produce short ethnographic films with students in Philadelphia high schools as part of a partnership project with the School District of Philadelphia. Due to the time needed for ethnographic film production, this is a year-long course, which will meet periodically in both the fall and spring semesters.

Two Term Class, Student must enter first term; credit given after both terms are complete
Also Offered As: EDUC 5466
1 Course Unit

---

**ANTH 5840 World Heritage in Global Conflict**

Heritage is always political. Such a statement might refer to the everyday politics of local stakeholder interests on one end of the spectrum, or the volatile politics of destruction and erasure of heritage during conflict, on the other. If heritage is always political then one might expect that the workings of World Heritage might be especially fraught given the international dimension. In particular, the intergovernmental system of UNESCO World Heritage must navigate the inherent tension between state sovereignty and nationalist interests and the wider concerns of a universal regime. The World Heritage List has almost 1200 properties has many such contentious examples, including sites in Iraq, Mali, Syria, Crimea, Palestine, Armenia and Cambodia. As an organization UNESCO was born of war with an explicit mission to end global conflict and help the world rebuild materially and morally yet has found its own history increasingly entwined with that of international politics and violence.

Fall or Spring
Also Offered As: HSPV 5840
1 Course Unit

---

**ANTH 5857 Cultural Heritage and Conflict**

Intentional destruction of cultural heritage is designed to erase the presence of a people in history and has become an all too familiar feature of the devastation wrought by contemporary violence and "ethnic cleansing." Recent cases appear frequently in news headlines and include such well-known examples as the 2001 demolition of the Bamiyan Buddhas in Afghanistan, the 2012 destruction of Sufi shrines in Timbuktu, Mali, and the recent obliteration of historic sites across Syria and Iraq. This course explores this phenomenon by examining such questions as: Why is cultural heritage targeted in conflict? Under what circumstances? By whom? In so doing, we will engage with readings that discuss the historical development of the international laws and norms that aim to protect cultural heritage during conflict and examples successful and unsuccessful humanitarian interventions.

Spring
1 Course Unit
ANTH 5893 Natural and Cultural Heritage in Global Perspective
This seminar will explore the ideas surrounding the theories, discourses, and practices surrounding natural and cultural heritage. Heritage has become inscribed in the planning of urban and rural landscapes, designed as tourist destinations, and considered a universal good in global cosmopolitan society. But it would be well to ask: what kind of “nature” and “culture” has been labeled as heritage? What kind of organizations, economics, and politics are necessary to sustain it? How are these put in place? By whom? For whom? Over the course of the semester, students will engage with readings that discuss how cultural and natural heritage is communicated to the public and the relationship between academic critique and pragmatic social engagement.
Spring
1 Course Unit

ANTH 5988 The Economics of Heritage
Governmental resources for archaeological and heritage sites are declining worldwide while commercial and economic development initiatives are threatening the fabric of heritage and the larger landscape environment to ever greater degrees. As a consequence, the competition for resources to protect and preserve heritage is intensifying, as is the challenge to articulate the value of heritage resources vs. competing commercial or public projects. This is the context for understanding the issues surrounding the definition of the value of cultural heritage assets and the tools available for their measurement and management. This course explores in some depth issues relating to the economic analysis of heritage and culture. It is designed to provide students with a foundational understanding of the economics of heritage-related projects, the tools and techniques available for their analysis and the ethical and practical issues of public policy and private actions that determine the future of heritage resources. Readings and case studies will explore technical, practical and ethical issues that arise in cultural heritage economics. Relevant analytical techniques will be introduced and particular emphasis will be placed on commercial, government and community issues unique to heritage-related activities. Special emphasis will be placed upon developing pertinent strategies for the tourist industry. Students will produce one case-study project intended to integrate the technical and practical aspects of the course.
1 Course Unit

ANTH 5910 Multi-Modal Ethnography: Anthropology Beyond Text
What does the digital age mean for humanistic, social scientific, and professional inquiry and practice? How do non-text based formats - such as film, dance and other kinds of performance, creative writing, and soundscapes - transform both the processes and products of research? How do they inform and transform our disciplines, and what might this mean for the communities with which we work? This advanced undergraduate seminar will address these (and other related) questions. Taught by the invited Fellows from the Center for Experimental Ethnography, this course will take shape differently each semester according to the Fellow’s area of expertise and practice. Students will be encouraged to explore alternative formats of representation that move beyond text while still being grounded in ethnographic research, and they will develop skills in relevant media. https://www.sas.upenn.edu/anthropology/courses/topics-courses
Fall or Spring
1 Course Unit

ANTH 5940 Indigenous Theory & Decolonizing Methodologies
This course will delve into some of the innovative theoretical approaches and interpretations, rooted in long-standing Indigenous ontologies, that are emerging within the inter-disciplinary field of Native American and Indigenous Studies. Decolonial projects highlight Indigenous conceptions of materiality, kinship, and landscape, while also critically examining the impact of colonizing ideologies, and undoing antiquated and biased colonial settler interpretations. Students will learn practical methods for deploying Indigenous theory and decolonizing methodologies in diverse research settings. Course readings and interviews with Indigenous knowledge-keepers will feature innovative socio-cultural, ethnohistorical, museological, and archaeological research projects that emphasize processes of consultation and collaboration. Individual case studies will focus on: ecological knowledges; territorial sovereignty; community-based archaeological research; and the reclamation and preservation of cultural heritage. The goal is to understand how academic research can be more inclusive of, and more responsible to, Indigenous communities.
Not Offered Every Year
1 Course Unit

ANTH 5970 Contemporary Artists in Conversation: Reckoning and Repair
In this project-based learning course, students will develop skills in interviewing, oral history, and podcast production by hosting a series of conversations with visiting contemporary artists including participating artists in the transformative, multi-site exhibit, “Rising Sun-Artists and an Uncertain America” (a Spring 2022 collaboration between the Philadelphia Academy of Fine Arts and the African American Museum of Philadelphia). Following the exhibit plan, this course focuses thematically on how these contemporary artists tackle the “disquieting canonical history of the United States”, and how their diverse practices speak to the “re-appraisal, reformation, reckoning, and repair necessary to find a collective way forward” at this critical social moment. This course considers contemporary art as a complementary method of scholarship to ethnography, giving students hands-on experience in exploring how conversations between art and anthropology can open up avenues for collaborative, ethical, and engaged scholarship. This course is designed to be fruitful for students with all levels of experience, including beginners with little prior podcasting/media experience. Students will be tasked with conducting ethnographic oral histories in interviews with artists, but also attending to the specific assumptions and conventions of representation that artists use, and the way they intervene into social challenges of reckoning and repair in their practice.
Not Offered Every Year
1 Course Unit

ANTH 6000 Contemporary Archaeology in Theory
This graduate seminar addresses contemporary anthropological archaeology and considers the varied ways inferences are made about past and present human behavior from the archaeological record. It reviews such fundamental topics as the use of analogy, Middle Range theory, symbolism and meaning, social and cultural evolution, ideology and power, feminism and gender, and indigenous (non-Western) perspectives. It also foregrounds basic issues regarding heritage, looting, and ethics.
Fall
1 Course Unit
ANTH 6010 Contemporary Approaches to the Study of Culture and Society
A critical examination of recent history and theory in cultural and social anthropology. Topics include structural-functionalism, symbolic anthropology, post-modern theory. Emphasis is on major schools and trends in America, Britain, and France.
Spring
1 Course Unit

ANTH 6020 Evolutionary Anthropology
This course will explore various subfields of biological anthropology to better understand what it means to be human. Special attention will be paid to current issues and problems in these subfields, and the different ways in which researchers are attempting to understand and uncover the details of human evolution. Among the areas that are explored in this course are paleoanthropology, primatology, human biology, molecular anthropology, evolutionary medicine, epigenetics, and human life history. Specific issues to be explored include the primate roots of human behavior, brain and language evolution, new fossil hominins, the origins of anatomically modern humans, and modern human migration history.
Spring
1 Course Unit

ANTH 6030 Language in Culture and Society
First-year anthropology graduate students or Instructor Permission. Examination of properties of human language which enable social persons to interpret the cultural world and to act within it. Topics include: principles of lexical and grammatical organization; the role of language structure (grammar) and linguistic context (indexicality) in discursive activity; referential uses of language; social interaction; markers of social role, identity, and group-belonging; criteria by which models of linguistic form and function are formulated; the empirical limits within which different models have explanatory value.
Fall
1 Course Unit

ANTH 6070 Primate Behavior and Ecology
This course explores the behavior of wild primates and the ecological models that attempt to explain the evolution of these behaviors. The evolution and taxonomy of primates will be reviewed, followed by a brief history of wild primate studies. We will then explore primate behavior through theoretical frameworks ranging from socioecological theory to sexual selection. Topics discussed include, but are not limited to, socioecology, aggression, kinship, cooperation, reproductive strategies, cognition, and conservation. Those enrolled in the graduate section (ANTH 6070) will have additional responsibilities assigned.
Not Offered Every Year
Also Offered As: AAMW 6070
Mutually Exclusive: ANTH 2070
1 Course Unit

ANTH 6090 Psychoanalysis and Anthropology
This course will introduce students to the rich literature that has grown up around the encounter between psychoanalysis and anthropology, from totem and taboo, to studies of the Oedipus complex, child-rearing practices, ritual symbolism, mythology, and dreams. The class will also look to the future, endeavoring to examine as well such issues as the role of computers (are they self objects?) and the internet (including such online games as “Second Life”), dreams in space alien abduction narratives, sexuality in advertising, political psychology, and other contemporary issues. This course counts towards the Psychoanalytic Studies (PSYS) Minor.
Not Offered Every Year
1 Course Unit

ANTH 6110 Topics In Anthropology and the Modern World
This course relates anthropological models and methods to current problems in the Modern World. The overall objective is to show how the research findings and analytical concepts of anthropology may be used to illuminate and explain events as they have unfolded in the recent news and in the course of the semester. Each edition of the course will focus on a particular country or region that has been in the news.
Fall
Also Offered As: NELC 6650
1 Course Unit

ANTH 6180 Anthropology and Praxis
This course focuses on real world community problems, engaged scholarship, and the evaluation of actively-running Penn programs intended to improve social conditions in West Philadelphia. Two trends emerge in public interest social science that students will explore through research and evaluation: 1.) merging problem solving with theory and analysis in the interest of change motivated by a commitment to social justice, racial harmony, equality, and human rights; and 2.) engaging in public debate on human issues to make the research results accessible to a broad audience. As part of the course, students will learn the foundations of anthropology, social theory, and evaluation as they work with qualitative and quantitative data while conducting an evaluation based on community and partner need. Students will gain direct experience conducting evaluation research as a collaborative process and have an opportunity to engage in academically-based community service with a focus on social change.
Not Offered Every Year
Mutually Exclusive: ANTH 3180
1 Course Unit

ANTH 6200 Directed Reading and Research
To be arranged only by consultation with academic adviser and faculty member(s) to be involved; a proposed syllabus must be presented for approval, and written papers will be required without exception. On approval of these papers one copy must be presented to the Department of Anthropology office for filing.
Fall or Spring
1 Course Unit

ANTH 6220 Historical Archaeology Laboratory
Parallel graduate course to ANTH 1220. Lab class will meet in three hour sections on Fridays and Saturdays and will involve the analysis of artifacts, documentary records, oral historic sources and period illustrations collected on Southern New Jersey historic sites and Silver Reef, a ghost town in Southwestern Utah. No previous archaeological or lab experience is required. Course may be repeated for credit.
Spring
1 Course Unit
ANTH 6260 Intensity
This course examines the manner in which humans encounter the continuous and gradable features of phenomena in social life - sensory qualities of objects, people's aspirations and affect, pitch movement during voiced talk, monsoons and sea breezes, biological growth and environmental degradation, migratory flows in transnational settings - and attempt to evaluate or convert them into discrete dimensions of social life. We examine how intensities and gradients are managed in everyday life as well as in institutional settings - through government policies, scientific protocols, surveillance regimes, infrastructural agendas - and we survey the ways in which everyday and institutional practices reflect and shape each other in societies across the world. In particular, we explore the question of what an anthropology of intensity might look like, and how it may reconfigure approaches to the ethnographic study of human affairs.
1 Course Unit

ANTH 6280 Language in Culture and Society: Special Topics
The course is devoted to a single research topic of contemporary interest in linguistic anthropology. Topics vary from year to year. Readings locate current debates in relation to longstanding assumptions in the literature and new directions in contemporary research.
Not Offered Every Year
1 Course Unit

ANTH 6307 Contemporary Native Americans
This course examines the social and political lives of contemporary Native American Indians in the United States and Canada. Topics include: Indigenous identity; homelands and natural resources; popular culture and media; Indigenous arts and cultural expression; museum representations; athletics; gender relations; tribal recognition and sovereignty; and resistance movements. We will consider the origins of federal programs and legislation that have become essential to the protection of Native American freedoms. Students can expect to gain an appreciation of the complexity and cultural diversity of Native communities and tribal nations and insights into their interactions with other cultures over time.
Not Offered Every Year
1 Course Unit

ANTH 6329 Psychoanalytic and Anthropological Perspectives on Childhood
How do people become who they are, both similar to others and uniquely individual? How might these similarities and differences be shaped by childhood experiences in family, community, and societies around the world? How do children develop emotionally? Morally? What features of human development, expression of emotions, and relational patterns are universal for our species? What features are not universal? And what is and is not known about these questions? In this course, we will consider these and many other questions. We will read about and discuss complex and dynamic interactions between culture and individual psychology, and between nature and nurture from birth to adulthood. We will carefully examine various phases of human development as described by psychoanalysts and anthropologists. The course includes anthropologic and psychoanalytic readings and videotapes, as well as literature, fairy tales, and mythologies from cultures around the world. The instructors are both psychoanalysts, one a psychiatrist and one a pediatrician. The course counts towards the Psychoanalytic Studies (PSYS) Minor.
Not Offered Every Year
1 Course Unit

ANTH 6340 Feminist Ethnography
This course will investigate the relationships among women, gender, sexuality, and anthropological research. We will begin by exploring the trajectory of research interest in women and gender, drawing first from the early work on gender and sex by anthropologists like Margaret Mead and Ruth Benedict; moving through the 1970s and 1980s arguments about gender, culture, and political economy; arriving at more current concerns with gender, race, sexuality, and empire. For the rest of the semester, we will critically read contemporary ethnographies addressing pressing issues such as nationalism, militarism, neoliberalism and fundamentalism. Throughout, we will investigate what it means not only to "write women's worlds", but also to analyze broader socio-cultural, political, and economic processes through a gendered lens. We will, finally, address the various ways feminist anthropology fundamentally challenged the discipline's epistemological certainties, as well as how it continues to transform our understanding of the foundations of the modern world.
Not Offered Every Year
1 Course Unit

ANTH 6420 Ethnographies in Linguistic Anthropology
This course provides graduate students in linguistic anthropology and allied fields an opportunity for sustained, critical engagement with ethnographic monographs in linguistic and semiotic anthropology. Readings vary yearly, but run the gamut from the classical or 'canonical' to the contemporary or 'experimental.' Recurring concerns include: the nature of the ethnographic monograph as text-artifact; the presentation and exposition of ethnographic and linguistic particulars; questions of 'authorial voice'; and the registers, genres, and styles of ethnographic representation obtaining in the linguistic anthropological tradition.
Spring
1 Course Unit

ANTH 6460 Molecular Anthropology
In this course, we will explore the molecular revolution in biological anthropology. In particular, we will examine how molecular data can be used to illuminate anthropological question concerning human origins, evolution and biological variation. Some of the specific topics to be covered in this course are the phylogenetic relationships among primates, kinship in apes and monkeys, the hominoid trichotomy, modern human origins and migrations, Neanderthal and Denisovan admixture with modern humans, biogenetics of skin color, and physiological, phenotypic and disease adaptations.
Not Offered Every Year
1 Course Unit

ANTH 6530 Social Theory from Kant to Deleuze
The course examines the work of 20th century writers like Weber, Bourdieu, Foucault and Deleuze in the light of the intellectual traditions to which they belong, including the work of writers like Kant, Hegel, Marx, and Nietzsche. Particular attention is given to the philosophical roots of the models of society proposed by specific authors and the question of the applicability of such models to ethnographically based anthropological research.
Not Offered Every Year
1 Course Unit
ANTH 6550 Methods and Grantwriting for Anthropological Research
This course is designed for third- and fourth-year graduate students in anthropology who are working on their dissertation research proposals and submitting grants. Graduate students from other departments who will be submitting grant proposals that include an ethnographic component are also welcome. Students will develop their proposals throughout the course of the semester, and will meet important fall submission deadlines. They will begin by working with various databases to search funding sources relevant to the research they plan to conduct. In class sessions, they will also work with the professor and their peers to refine their research questions, their methods, the relationship of any previous research to their dissertation fieldwork, and the broader theoretical and "real-world" significance of their proposed projects. Finally, students will also have the opportunity to have live "chats" with representatives from funding agencies, thereby gaining a better sense of what particular foundations are looking for in a proposal.
Fall
1 Course Unit

ANTH 6552 The State, Civil Society, and Democracy in Africa
This course examines the nature and dynamics of the state and civil society in Africa and how these determine the career of democracy, democratization and democratic rule. It considers different accounts of the state in Africa (or the African state), civil society and democracy in elaborating an informed understanding of the political, economic and social processes in the continent. How does the nature of the state in Africa account for the nature of the civil society and vice versa? How can the career of democracy in the continent illuminate our understanding of the nature of state-society relations? How robust is the relationship between civil society and the state? How can we account for the relationships among civil society, the state and democratic institutions? What are the local, regional, and global forces that nurture and/or hinder democratic practices, including electoral democracy? These questions are confronted in light of their implications for, and complex interactions with, different social formations, institutions, groups, and social practices including gender, ethnicity, nationalism, race, religion, social protest, political institutions, economic formations, etc., etc.

ANTH 6550 Methods and Grantwriting for Anthropological Research
This course is designed for third- and fourth-year graduate students in anthropology who are working on their dissertation research proposals and submitting grants. Graduate students from other departments who will be submitting grant proposals that include an ethnographic component are also welcome. Students will develop their proposals throughout the course of the semester, and will meet important fall submission deadlines. They will begin by working with various databases to search funding sources relevant to the research they plan to conduct. In class sessions, they will also work with the professor and their peers to refine their research questions, their methods, the relationship of any previous research to their dissertation fieldwork, and the broader theoretical and "real-world" significance of their proposed projects. Finally, students will also have the opportunity to have live "chats" with representatives from funding agencies, thereby gaining a better sense of what particular foundations are looking for in a proposal.

ANTH 6570 Research Design
This is a practical course on the challenges of designing research projects in anthropology with a special focus on the dissertation project. We will discuss how to select and refine a topic that is, ideally, important without being impossible. Interesting research can often be described or understood in multiple ways, and we will practice recasting project proposals for different kinds of audiences and formats. We will also consider issues of methodology, or the logic of method. Specific kinds of questions tend to lead to specific field and lab methods, and it is important to match your questions to your ways of answering them. This is not, however, a methods course. If you need to learn ethnography, ceramic analysis, textual analysis or some other set of methods, you should look for specific instruction in that field. Instead, we will consider how to assemble a research project that is well-structured, significant, and feasible using one or more analytical strategies. Research design is critical not only for planning research appropriate to your questions but also serves as the basis for successful proposals. Proposal-writing is a specific genre you will need to master; the final product for this course is therefore a research proposal. We will discuss the format of the proposal in detail. Not all proposals need to follow the same template, but there is a family resemblance to successful proposals; thus, although we will follow advice for writing scientific proposals, more humanistically-oriented students should not find this to be a problem.
Not Offered Every Year
1 Course Unit

ANTH 6580 Discourse Seminar
This seminar explores the interface between discourse, culture, and social processes. It is designed for graduate students in anthropology and related disciplines who (1) wish to study some aspect of culture from the perspective of discourse, including not only discourse in the form of linguistic signs but also discourse as film or other multimodal signs; and (2) themselves have or will acquire during the semester materials (texts, recordings, ethnographic data, etc.) that they wish to analyze from an anthropological point view or who are preparing dissertation proposals dealing these issues. While the course is designed with these two purposes, graduate students interested in studying literature on discourse for other purposes are also welcomed. Class sessions will include discussion of theoretical issues in the study of discourse, as well as writings by contemporary authors dealing with semiotics, discourse, and film. The seminar is designed for maximum flexibility in accommodating students interests and needs.
Fall or Spring
1 Course Unit

ANTH 6664 Documentary Ethnography for Museum of Exhibition practices
This course will investigate research modalities that center around documentary storytelling in the museum context. During the semester, we will examine research strategies that collaborate with curatorial expertise. The class will utilize cinematic techniques that investigate cultural narratives revolving around cultural heritage sites, rituals and ceremonies, artifacts, materials and living traditions. Students will engage Solomon’s process of her creation of the new digital and in-gallery content that will reframe the Metropolitan Museum’s African art galleries. e semester will culminate in students creating their own short lm content that will screen publicly in the gallery at the end of the semester.

Mutually Exclusive: ANTH 3664
1 Course Unit
ANTH 6665 Fables from the Flesh: Black feminist movement and the embodied archive
Drawing inspiration from Harge's multiform fable project FLY | DROWN and Audre Lorde's conception of biomythography, students will trace their interiority to realize and imagine how personal histories, ancestral inheritance, and metaphysics live/move through the body. We will translate and transform stories of the flesh into a series of compositional modalities—which may include text, movement, performance, sound, and installation—to create lexicons that honor subjectivity as form. Informed by surrender, refusal, imagination, and self-sovereignty; we will situate our embodied archives as vessels for fable writing, create and correct myths through movement, and expand our relationship to memory, time, space, and illegibility. Throughout the course, we will turn to Black feminist literary and performance works employing fable, myth, and ancestral legacies including but not limited to: Toni Morrison's Beloved, Aretha Franklin's gospel music, Jaamil Olawale Kosoko's Chameleon, and a close reading of Harge's FLY | DROWN. The room will be grounded in practices of Black fellowship, moving between study group, kickback, ceremony, cypher, and incubator. We will oscillate between these formats depending on the needs of the course and the cohort.

1 Course Unit

ANTH 6770 Black Speculative Futures
Why do black cultural producers turn to the speculative? What, in turn, is speculative about blackness? These questions frame this seminar's exploration of how black artists, theorists, and activists imagine different futures, often in the service of critiquing power asymmetries and creating radical transformation in the present. We will explore how the speculative works differently across black literature, visual culture and performance. Additionally, inspired by the multi-disciplinary work that we encounter in the course, we will experiment with crafting our own embodied speculative art in order to better understand its function as both art practice and politics. The course will be divided between discussions centered on close reading of primary and secondary material and creative writing/movement exploration (no previous movement experience necessary). Occasional guest lectures with visiting artists will provide additional fodder for our critical and creative work.

Also Offered As: AFRC 6770, ENGL 6770
1 Course Unit

ANTH 6804 Sighting Black Girlhood
The COVID-19 pandemic exposed the deep inequities of our social systems, and protests against police killings drew broader attention to anti-Black state violence worldwide, yet the gendered dimensions of these problems are not always fully understood. While many in the public have come to recognize the suffering of Black boys and men as acute and eventful, Black girls' suffering has remained largely invisible, a slow confluence of violence that often go unaddressed. As one way to bring the issues facing Black girls globally to public attention, and to celebrate and support Black girls, this course will provide a background for understanding the challenges faced by Black girls in Philadelphia, Jamaica, and South Africa. We will frame these challenges historically and geopolitically, drawing attention to the issues that contribute to the invisibility of the ordinary Black girl in diverse sites, as well as the resources that will begin to address them. This course also aims to equip students to understand the relationships between research and creative work, and to see artistic production as a catalyst for community-building and critical thinking and action. Toward this end, we will work with a number of partners in Philadelphia, including the Colored Girls Museum and Black Lives Matter-Philly. Because this course is part of a broader project, we will travel as a class to Jamaica during the summer of 2022 and students will participate in a range of projects there, working with partners in the arts, community engagement, and legal advocacy. The question motivating our project is: What are the personal, psychic, spiritual, and economic costs and benefits associated with Black girls fully exercising their humanity?

Mutually Exclusive: ANTH 3804
1 Course Unit

ANTH 6840 Religion and Society in World History
Anthropologists have never found a society that did not have ideas, rituals and practice that falls easily into our category of "religion" (a term coined in Roman times to cover everything relating to assumptions about supernatural forces in any cultural context). So how can we define religion now, over two thousand years since the end of the "Axial Age" (800-200 BCE) that produced all the major religious ideas, that would allow us to include all the forms we know not only of Judaism, Buddhism, Christianity and Islam, but also Confucianism, Hinduism, Jainism, Shinto, Sikhism, Taoism, and Zoroastrianism, and the religions of the small isolated communities we found during the colonial period in Africa and Australia? And why has religious practice been declining in the Western world since the middle of the 20th century? Is the anthropology of religion a different subject now than what it was a hundred years ago? The religions that we know historically, because they are based on texts, especially Christianity and Islam, have obviously changed in many ways since their early days, and it is easy to see a relationship between the way they changed and what was going on in the societies that carried them: Christianity spread through the Roman Empire; Islam spread from Mesopotamia along trade routes, west to Egypt and North Africa, and east into central Asia and north China. It will be interesting to study the various constituents of religion (e.g. Faith, Law, Authority, Ritual, Sacraments, morality, spirituality) comparatively between each of the religions for which we have sufficient data, religious wars, and see the historical significance of (for example) the French Revolution, the Pope, and Ayatollah Ruhollah Khomeini.

1 Course Unit
ANTH 6980 Intensive Language Training in Anthropology
This course is designed to allow graduate students to obtain in-depth training in a scholarly language that will be utilized for dissertation fieldwork and satisfying the language exam for the Department of Anthropology Graduate Program. Through this intensive training in the oral and written forms of a language, students will accelerate their competency in it, while also potentially preparing themselves for advanced language training through tutorials or summer immersion programs.
Fall or Spring
1 Course Unit

ANTH 6999 Independent Study in South Asian Archaeology
This course provides a broad overview of the archaeology and early history of South Asia, a region that includes present-day India, Pakistan, Bangladesh, Sri Lanka, Nepal, Myanmar, Bhutan, and the Maldives. Beginning with a brief overview of the Paleolithic, we will discuss the multiple origins of early agriculture, the development of early states in the Indus river basin and beyond, the second urbanization, the expansion of institutionalized forms of religion, long-distance trade, social differentiation, and the rise of states as empires. No background in archaeology is required. The class will produce a collaborative spatial database of archaeological sites for selected time periods and will produce a document describing some of the major historical changes in South Asia as illustrated by the archaeological database.

ANTH 7000 Colloquium Seminar
This graduate seminar is a full year course open to second year anthropology graduate students. Other interested students should contact the instructors for permission before enrolling. Topic changes each year, corresponding to the Penn Anthropology Department Colloquium series.
Two Term Class, Student may enter either term; credit given for either 1 Course Unit

ANTH 7030 Readings & Research In Linguistic Anthropology
The course is designed for students and faculty interested in discussing current research and/or research topics in any area of linguistic or semiotic anthropology. The primary intent of the course is to familiarize students with the literature on selected research topics and to develop their own research agendas in the light of the literature. Students may enroll on an S/U basis for 0.5 CU per semester. The course may be repeated for credit up to 4 times.
Two Term Class, Student may enter either term; credit given for either 1 Course Unit

ANTH 7040 Culture/Power/Subjectivities
This doctoral level course will introduce students to a conceptual language and theoretical tools for analyzing and explaining the complex intersection of racialized, ethnic, gendered, sexual, and classed differences and asymmetrical social relations. The students will examine critically the interrelationships between culture, power, and subjectivity through a close reading of classical and contemporary social theory. Emphasis will be given to assessing the power of various theories for conceptualizing and explaining mechanisms of social stratification as well as the basis of social order and processes of social change.

ANTH 7307 Intellectual Histories of South Asia in Global Context: Genealogies of the Present
This graduate seminar explores intellectual histories of contemporary South Asia. Readings will trace selected literary, cultural, political, religious, and linguistic genealogies that have shaped present-day understandings, practices, alliances and categories of thought in South Asia. Particular attention will be placed on 19th and 20th century global influences and interactions, including with England, Ireland, Germany, the Soviet Union/Russia, Turkey and the Arab World, East and Southeast Asia, the United States, and Africa. Topics will include histories of mapping and census efforts, publishing projects (including those funded by the Soviet Union and the United States), international conferences (e.g., the 1893 World’s Parliament of Religions at the World’s Fair in Chicago, 1955 Bandung Conference, the 2009 Durban Conference), technological influences and exchanges, and educational institutions and practices. The course will also include discussions of methods for carrying out intellectual history projects and would therefore be of use for students conducting research in other regions of the world.
Not Offered Every Year
Also Offered As: SAST 7307
1 Course Unit
ANTH 7410 Anthropology of Affect
This course draws upon three anthropological literatures pertaining to affect. One, growing out of Darwin's observations in *The Expression of Emotions in Man and Animals*, looks at the evolutionary and neurobiological bases of affect. A second developed in connection with psychoanalysis, and centers upon insights gained through empathic and introspective processes. A third arose with cultural studies and reactions within anthropology to structuralism, including research on cross-cultural variation in the conceptualization of emotions. The course is appropriate for graduate students interested in exploring the linkages among these literatures, and who envision or are already actively undertaking research for which knowledge of them is pertinent. Students outside of the Anthropology Department should contact the instructor to request a permit.

1 Course Unit

ANTH 7704 State, Society, and Culture in South Asia
This interdisciplinary course introduces graduate students to both classic and more recent theoretical frameworks used in understanding and analyzing society, culture, and the state, with particular reference to South Asia. Topics include bureaucracy and the state; power and performance; hierarchy and individualism; caste, community, and domination; money and markets; credit and debt; globalization and consumption; economic liberalization and political transformations; local and trans-local contexts of meaning; the environment, politics, and urban and rural ecologies; and culture and the changing shape of politics. Particular emphasis will be placed on the ways in which recent ethnographic and historical monographs have positioned their interventions in relation to broader debates and scholarship, both within scholarship on South Asia and more generally.

Applied Math & Computational Science (AMCS)

AMCS 5100 Complex Analysis
Complex numbers, DeMoivre's theorem, complex valued functions of a complex variable, the derivative, analytic functions, the Cauchy-Riemann equations, complex integration, Cauchy's integral theorem, residues, computation of definite integrals by residues, and elementary conformal mapping.
Mutually Exclusive: MATH 4100
1 Course Unit

AMCS 5141 Advanced Linear Algebra
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Canonical forms; Scalar products; Euclidean, unitary and symplectic spaces; Orthogonal and Unitary operators; Tensor products and polylinear maps; Symmetric and skew-symmetric tensors and exterior algebra.
Also Offered As: MATH 5140
Mutually Exclusive: MATH 3140
Prerequisite: MATH 2400
1 Course Unit

AMCS 5200 Ordinary Differential Equations
After a rapid review of the basic techniques for solving equations, the course will discuss one or more of the following topics: stability of linear and nonlinear systems, boundary value problems and orthogonal functions, numerical techniques, Laplace transform methods.
Fall or Spring
Mutually Exclusive: MATH 4200
Prerequisite: MATH 2400
1 Course Unit

AMCS 5250 Partial Dif Equations
Method of separation of variables will be applied to solve the wave, heat, and Laplace equations. In addition, one or more of the following topics will be covered: qualitative properties of solutions of various equations (characteristics, maximum principles, uniqueness theorems), Laplace and Fourier transform methods, and approximation techniques.
Fall
Prerequisite: MATH 2400
1 Course Unit

AMCS 5461 Advanced Applied Probability
The required background is (1) enough math background to understand proof techniques in real analysis (closed sets, uniform coverage, fourier series, etc.) and (2) some exposure to probability theory at an intuitive level (a course at the level of Ross’s probability text or some exposure to probability in a statistics class).
Fall
Also Offered As: MATH 5460
1 Course Unit

AMCS 5670 Mathematical Computation Methods for Modeling Biological Systems
This course will cover topics in systems biology at the molecular/cellular scale. The emphasis will be on quantitative aspects of molecular biology, with possible subjects including probabilistic aspects of DNA replication, transcription, translation, as well as gene regulatory networks and signaling. The class will involve analyzing and simulating models of biological behavior using MATLAB. Prerequisite: Graduate standing or permission of the instructor.
Fall or Spring
Also Offered As: BE 5670, GCB 5670
1 Course Unit
AMCS 5681 Mathematical Modeling in Physiology and Cell Biology
Mathematical modeling is increasingly becoming a standard technique in physiology and cell biology. In this class, we will cover some classical models in physiology and cell biology. Half of the course will be devoted to electrophysiology (Hodgkin-Huxley model, action potential propagation and related topics), which has arguably been the most successful area of application of mathematical techniques to biology. We will then consider models of molecular motors and muscle mechanics, of pattern formation and cell polarization. Not Offered Every Year
Also Offered As: BIOL 5568
1 Course Unit

AMCS 5840 The Mathematics of Medical Imaging and Measurement
The last several decades have seen major revolutions in both medical and non-medical and imaging technologies. Underlying all of these advances are sophisticated mathematical tools to model the measurement process and reconstruct images. This course begins with an introduction of the mathematical models and then proceeds to discuss the integral transforms that underlie these models: the Fourier transform, the Radon transform and the Laplace transform. We discuss how each of these transforms is inverted, both in theory and in practice. Along the way we study interpolation, sampling, approximation theory, filtering and noise analysis. This course assumes a thorough knowledge of linear algebra and a knowledge of analysis at the undergraduate level (MATH 3140 and MATH 3600 and MATH 3610, or MATH 5080 and MATH 5090).
Not Offered Every Year
Also Offered As: MATH 6480, STAT 9300
Prerequisite: MATH 1410 AND (MATH 3600 OR MATH 5080) AND (MATH 3610 OR MATH 5090)
1 Course Unit

AMCS 5999 Independent Study
Independent Study allows students to pursue academic interests not available in regularly offered courses. Students must consult with their academic advisor to formulate a project directly related to the student’s research interests. All independent study courses are subject to the approval of the AMCS Graduate Group Chair.
1 Course Unit

AMCS 6025 Numerical and Applied Analysis I
We turn to linear algebra and the structural properties of linear systems of equations relevant to their numerical solution. In this context we introduce eigenvalues and the spectral theory of matrices. Methods appropriate to the numerical solution of very large systems are discussed. We discuss modern techniques using randomized algorithms for fast matrix-vector multiplication, and fast direct solvers. Topics covered include the classical Fast Multipole Method, the interpolative decomposition, structured matrix algebra, randomized methods for low-rank approximation, and fast direct solvers for sparse matrices. These techniques are of central importance in applications of linear algebra to the numerical solution of PDE, and in Machine Learning. The theoretical content of this course is illustrated and supplemented throughout the year with substantial computational examples and assignments.
1 Course Unit

AMCS 6035 Numerical and Applied Analysis II
We will cover asymptotic methods, primarily for differential equations. In many problems of applied mathematics, there is a small parameter in the problem. Asymptotic analysis represents a collection of methods that takes advantage of the smallness of this parameter. After a brief discussion of non-dimensionalization, we will discuss regular perturbation methods, matched asymptotics, method of multiple scales, WKB approximation, and homogenization. Other topics will be discussed, time permitting. The prerequisite for this class is some familiarity with differential equations, but required background will be reviewed in class.
1 Course Unit

AMCS 6081 Analysis
Complex analysis: analyticity, Cauchy theory, meromorphic functions, isolated singularities, analytic continuation, Runge’s theorem, d-bar equation, Mittag-Leffler theorem, harmonic and sub-harmonic functions, Riemann mapping theorem, Fourier transform from the analytic perspective. Introduction to real analysis: Weierstrass approximation, Lebesgue measure in Euclidean spaces, Borel measures and convergence theorems, C0 and the Riesz-Markov theorem, Lp-spaces, Fubini Theorem.
Fall or Spring
Also Offered As: MATH 6080
1 Course Unit

AMCS 6091 Analysis
Fall or Spring
Also Offered As: MATH 6090
Prerequisite: MATH 6080
1 Course Unit

AMCS 6109 Analysis
Measure theoretic foundations, laws of large numbers, large deviations, distributional limit theorems, Poisson processes, random walks, stopping times.
Fall
Also Offered As: MATH 6109
Prerequisite: MATH 6480, STAT 9300
1 Course Unit

AMCS 6491 Stochastic Processes
Continuation of MATH 6480/STAT 9300, the 2nd part of Probability Theory for PhD students in the math or statistics department. The main topics include Brownian motion, martingales, Ito’s formula, and their applications to random walk and PDE.
Not Offered Every Year
Also Offered As: MATH 6490, STAT 9310
1 Course Unit

AMCS 8105 Reading Seminar
Reading Seminar
1 Course Unit

AMCS 9999 Independent Study & Research
Study under the direction of a faculty member.
0.5-4 Course Units
Applied Positive Psychology (APOP)

APOP 1000 Introduction to Positive Psychology
Positive psychology is the scientific study of what helps people live full lives. This introductory course focuses on the science of thriving, addressing questions such as what it means to be “happy” and how we can cultivate well-being as individuals, in organizations, and in communities. Explore the foundations of positive psychology, understand the components of well-being, and learn the theory, empirical research, and collective wisdom that supports this conceptual framework. This hands-on course includes experiments and small-group activities designed to help you build your own well-being and participate in an engaged learning community. The instructor recommends that you acquire two texts for this course, either by purchasing them or checking them out of your library: A Primer in Positive Psychology by Christopher Peterson and Flourish: A Visionary New Understanding of Happiness and Well-being by Martin E.P. Seligman. For those pursuing a Certificate in Applied Positive Psychology, this course is strongly recommended as a prerequisite for the other three courses.
1 Course Unit

APOP 1200 Human Flourishing: Strengths and Resilience
What does it mean to flourish? What are we like when we are at our best? What helps us bounce back from challenges and adversity? Continuing the exploration of the science of positive psychology, students delve deeply into the study of character strengths as a framework for building positive character and well-being, and explore the concept of resilience, or the ability to overcome challenging situations. In this course, we explore how we can leverage our strengths to more effectively contribute to the greater world and enhance our own well-being. We also study the physical and psychological protective factors that constitute resilience, and how they are cultivated. Students learn about these topics from a scientific and experiential perspective, both as individuals and within our learning community. This course will have required synchronous sessions and the instructor will offer a choice of times. Students will have a more robust learning experience in this course if they first complete Introduction to Positive Psychology.
Also Offered As: LEAD 3500
1 Course Unit

APOP 2000 Positive Psychology at Work
If flourishing is related to our lived daily experience, and approximately 50% of our waking hours are spent working, how do our workplaces contribute to, and diminish, our ability to thrive? Students are exposed to an array of research-informed strategies that have been applied in a variety of disciplines and workplaces, including business, education, health care, and nonprofit organizations. Exploration of case studies and salient research topics such as relationships at work, positive leadership, prosocial behavior, and our sense of meaning and purpose, guide our learning. Students gain an understanding of the variables that contribute to our ability to flourish at work and understand how we both experience and shape our work environments through our individual contributions. This course will have required synchronous sessions and the instructor will offer a choice of times.
Also Offered As: LEAD 3600
1 Course Unit

APOP 2200 Flourishing with Others: Building Thriving Relationships
Interpersonal relationships are key for happiness and well-being. Christopher Peterson, one of the pioneers of positive psychology used to say that the field could be summarized in three words: “Other people matter.” In this course, we will take a deep dive into the research on relationships that work well and foster well-being. We will study positive relationships at different levels, from the closest ones, like families and romantic partnerships, to friendships, relationships between colleagues and in teams at work, to broader communities, and our relationship with nature and our planet. For each of these domains, we will learn practical ways to nurture and improve relationships and to help people flourish through them. This class will combine academic rigor with experiential learning, and it will provide many opportunities for self-reflection, conversation in small teams and applied "experiments" in students’ lives.
1 Course Unit

APOP 2900 Understanding the Science of Positive Psychology
Information about positive psychology research has proliferated in the popular press. How can we become better critical consumers of that information, and ensure we are capable of discerning the nuances of scientific studies? In this course, students will be introduced to some of the methods and approaches used to conduct well-being research and how to interpret the results of that research responsibly. Students will explore how positive psychology concepts are operationalized and measured, learn the strengths and shortcomings of study design, and differentiate between drawing conclusions from a single study vs. a broader body of research within a field. Students will also practice reading and dissecting primary research articles, extracting important information, and distilling this information through accessible scientific communication. This is not a statistics nor a methods course—the goal is to equip students to be critical and informed consumers of research in positive psychology and of the popular articles that describe that research. This course also involves weekly synchronous recitation sessions (scheduling varies). Students will have a more robust learning experience in this course if they first complete Introduction to Positive Psychology.
1 Course Unit

APOP 3200 Morality and the Good Life
Morality pervades everyday life. Far from being confined to the ivory tower, we make moral decisions and engage in moral behavior every day, ranging from the ordinary (e.g., whether to volunteer or return a lost wallet) to the extreme (e.g., whether to donate one’s kidney to a stranger or fight and die for a cause). Morality is central to our evaluations of ourselves and others, and to the wellbeing of ourselves and the societies in which we live. In this course, you will learn about psychological research on morality. We will cover topics such as (1) How people make moral judgments, (2) How and why people have differing judgments of everything from tax rates to dietary preferences, (3) Psychological factors contributing to moral (e.g., altruistic) behavior, and (4) Intersections between moral psychology and our ideals, aspirations and well-being at the individual and societal level. This course aims to introduce you to the psychology of morality, to enable you to be more aware of and effective in navigating moral challenges in daily life.
1 Course Unit
ARAB 0120 Beginning Arabic I
This is a beginner course in Modern Standard Arabic (MSA). It will introduce you to the speaking, listening, reading, and writing skills in the standard means of communication in the Arab world. The course is proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course, students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in other words (using the terminology of the government’s Foreign Service Institute), from 'incipient survival' to 'full survival' in the native-speaking environment.
Fall 1 Course Unit

ARAB 0200 Elementary Arabic II
This course is a continuation of first semester Elementary Arabic, and builds on the speaking, listening, reading and writing skills in the standard means of communication in the Arab World. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course, students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale.
Spring Prerequisite: ARAB 0100 1 Course Unit

ARAB 0250 Intensive Elementary Arabic I & II
This is a six-week intensive beginners' course in Modern Standard Arabic (MSA). It will introduce the student to speaking, listening, reading, and writing skills in the standard means of communication in the Arab world. The course is proficiency-based, implying that all activities are aimed at placing the student in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course, students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in other words (using the terminology of the government’s Foreign Service Institute), from 'incipient survival' to 'full survival' in the native-speaking environment.
Summer Term 2 Course Units

ARAB 0300 Intermediate Arabic III
This is the continuation of the Elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment. Evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale.
Fall Prerequisite: ARAB 0200 1 Course Unit

ARAB 0320 Continuing Arabic III
This is the continuation of Beginning Arabic II. It is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). However, it should be emphasized that you will need a longer period of study to achieve proficiency in Arabic. We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale.
Fall 1 Course Unit

ARAB 0350 Intensive Intermediate Arabic III
This is an intensive college-level course in Modern Standard Arabic (MSA). The course is proficiency-based, implying that all activities are aimed at placing the student in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course, students will range in proficiency from Advanced Mid to Advanced High on the ACTFL scale; in other words (using the terminology of the government’s Foreign Service Institute), from 'incipient survival' to 'full survival' in the native-speaking environment.
Summer Term 2 Course Units
ARAB 0400 Intermediate Arabic IV
This is the continuation of the first semester Intermediate Arabic. This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment. Evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). We anticipate that students will achieve Intermediate High according to the ACTFL scale.
Spring
Prerequisite: ARAB 0300
1 Course Unit

ARAB 0420 Continuing Arabic IV
This is the continuation of Continuing Arabic III. It is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). Completion of this course fulfills the language requirement in the College of Liberal and Professional Studies. However, it should be emphasized that you will need a longer period of study to achieve proficiency in Arabic. We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale.
Spring
Prerequisite: ARAB 0320
1 Course Unit

ARAB 0450 Intensive Intermediate Arabic I&II
This is a six-week intensive course offered in the summer through LPS; see Penn Summer Course Guide. This course is also proficiency-based, implying that all activities within the course are aimed at placing the student in the context of the native-speaking environment from the very beginning. As in ARAB 0100 - ARAB 0200 or ARAB 0250, evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). Completion of this course fulfills the College of Arts and Sciences language requirement in Arabic. However, it should be emphasized that the student will need a longer period of study to achieve proficiency in Arabic. We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale.
Summer Term
2 Course Units

ARAB 0500 Advanced Intermediate Arabic I
This is a proficiency-based course which builds on the lessons from Intermediate Arabic. Emphasis continues to be on all four language skills: Speaking, Listening, Reading, & Writing. The readings for the class are chosen from actual texts from both medieval and modern Arabic in a variety of fields and subjects. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both Achievement- and proficiency-based.
Fall
Prerequisite: ARAB 0400
1 Course Unit

ARAB 0600 Advanced Intermediate Arabic II
This course is a continuation of first semester Advanced Intermediate Arabic. Emphasis continues to be on all four language skills: Speaking, Listening, Reading, & Writing. The readings for the class are chosen from actual texts from both medieval and modern Arabic in a variety of fields and subjects. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both Achievement- and proficiency-based.
Spring
Prerequisite: ARAB 0500
1 Course Unit

ARAB 0650 Intensive Advanced Intermediate Arabic I&II
This is a six-week intensive course offered in the summer through LPS; see Penn Summer Course Guide. It continues from the first intermediate course, and emphasis continues to be on all four language skills: speaking, listening, reading, and writing. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both achievement-based and proficiency-based. There is no Oral Proficiency Interview at the end of this session, but we anticipate that by the end of this, third year students will range in proficiency from Intermediate High to Advanced Mid on the ACTFL scale.
Summer Term
2 Course Units

ARAB 0700 The Adab Tradition
This is a survey of pre-modern Arabic prose. Selections will be made from major books of Adab, compilations of akhb ar, the Qur n, the s rah, and critical treatise. Readings will be accompanied by excerpts from modern critical scholarship on the topic in Arabic. The class is taught in MSA with oral presentations and writing assignments in MSA.
Not Offered Every Year
1 Course Unit

ARAB 2198 Study Abroad: Major Credit
Study Abroad Credit
1 Course Unit

ARAB 4000 Advanced Arabic and Syntax I
Advanced syntax through the reading of Arab grammarians. This course is designed to give the student experience in reading whole works in Arabic and giving reports on them. Readings are by medieval and modern writers.
Fall
Prerequisite: ARAB 0600
1 Course Unit

ARAB 4020 Advanced Spoken Standard Arabic
The course will concentrate on the reading and speaking skills at the advanced level. Students will be assigned reading and audio-visual materials on which to prepare oral classroom presentations. Final examination in the course will be based on performance in the oral proficiency interview.
Fall or Spring
Prerequisite: ARAB 0600
1 Course Unit

ARAB 4030 Colloquial Arabic
A one-semester, introductory course to the spoken Arabic of one of the regions of the Arab world, chosen according to the dialect of instructor.
Fall or Spring
Prerequisite: ARAB 0200
1 Course Unit
ARAB 4040 Readings in the Qur’an and Tafsir
This course has two goals: to introduce undergraduate students to reading the Qur’an in Arabic, and to enhance the speaking, listening, and writing skills in MSA. Through the reading and study of selected major Qur’anic narratives and commentary (tafsir), students will become familiar with Qur’anic vocabulary, style, recitation practices, and other intricacies of the Qur’anic text. All students will also memorize a short sura of their choice and practice reciting it in an aesthetically appropriate manner (typically suras 1, 112, 113, or 114). Taught in MSA with writing assignments in MSA.
Spring, odd numbered years only
Prerequisite: ARAB 0500
1 Course Unit

ARAB 4050 Arabic Readings in Belles-Lettres
Through engaging with authentic texts, this advanced class aims to activate the language skills students have learned in previous language courses. We will read selections from Arabic poetry and prose and will respond to them in writing, discussion and translation. We will focus on close reading, relying on our knowledge of grammar. We will also work to develop writing, comprehension, and speaking skills through short critical responses and oral presentations. All class discussions will be conducted in Arabic.
Fall
Mutually Exclusive: ARAB 6750
Prerequisite: ARAB 0600 OR ARAB 6600
1 Course Unit

ARAB 4060 Arabic Readings in the Social Sciences and the Media
This course trains students to be proficient with written materials and media in MSA. This class will explore the Middle East through timely analysis of Arabic media as well as original analysis of the ideological, intellectual, social, cultural, and religious background to current events, including the Arab Spring and its aftermath. It is intended that, upon completion of this course, students will be able to work independently with a variety of media texts at different levels. Taught in MSA with writing assignments in MSA.
Spring, even numbered years only
Prerequisite: ARAB 0600 OR ARAB 6600
1 Course Unit

ARAB 4070 Readings in Arabic Literature
Through engaging with authentic texts, this advanced class aims to activate the language skills students have learned in previous language courses. We will read selections from the modern Arabic short story and will respond to them in writing, discussion and translation. We will focus on close reading, relying on our knowledge of grammar. We will also work to develop writing, comprehension, and speaking skills through short critical responses and oral presentations. All class discussions will be conducted in Arabic.
Not Offered Every Year
1 Course Unit

ARAB 4080 Introduction to Pre-Modern Arabic Texts
This course aims to provide incoming graduate students and advanced undergraduate students with an introduction to issues in Arabic grammar and syntax that commonly arise in pre-modern Arabic texts. Students will also be introduced to, and expected to consult, the standard reference works used as aids in reading such texts. Students will be expected to prepare a text or set of texts assigned by the instructor for each session. It is intended that, upon completion of this course, students will be able to work independently with a wide variety of pre-modern Arabic texts. Although the texts in this course are pre-modern, the course reinforces MSA reading skills.
Fall, even numbered years only
Prerequisite: ARAB 0600 OR ARAB 6600
1 Course Unit

ARAB 4090 History & Fiction in Arabic
This course is intended to provide a more advanced exposure to Arabic language skills beyond those offered by the standard Arabic curriculum, particularly in reading, writing, and grammar of MSA and some exposure to historical forms of Arabic like Classical Arabic and Middle Arabic, not to mention important genres like the modern academic article, memoirs, chronicles, and biography. Students will refine their reading skills and will be able to read at a quicker rate by the end of the semester, and increase their active vocabulary accordingly. Students will also practice writing and explore some of the finer points of Arabic grammar. Along the way, students will learn a good bit about the history of the Arab world, and grapple with the fuzzy border between history and memory, fact and fiction.
1 Course Unit

ARAB 5030 Arabic: Reading Historical Manuscripts
This advanced readings course provides students with the opportunity to study Arabic-language Islamic legal texts from all periods, including the Qur’an, Hadith, premodern and Ottoman-period texts, and modern positive legislation and constitutions to the extent that they are related to or invoke Islamic law.
Not Offered Every Year
1 Course Unit

ARAB 5300 Advanced Spoken Standard Arabic
The course will concentrate on the reading and speaking skills at the advanced level. Students will be assigned reading and audio-visual materials on which to prepare oral classroom presentations. Final examination in the course will be based on performance in the oral proficiency interview. Taught in MSA with writing assignments in MSA.
Fall
Prerequisite: ARAB 0600 OR ARAB 6600
1 Course Unit

ARAB 5400 Readings in Islamic Law
This advanced readings course provides students with the opportunity to study Arabic-language Islamic legal texts from all periods, including the Qur’an, Hadith, premodern and Ottoman-period texts, and modern positive legislation and constitutions to the extent that they are related to or invoke Islamic law.
Not Offered Every Year
Prerequisite: ARAB 0600 OR ARAB 6600
1 Course Unit
ARAB 6100 Elementary Arabic I
This is the beginners course in Modern Standard Arabic (MSA). It will introduce you to the speaking, listening, reading and writing skills in the standard means of communication in the Arab World. The course is proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. Evaluation is done by the more traditional testing methods (vocabulary tests, dictations, grammar and translation exercises). We anticipate that by the end of this course, students will range in proficiency from Novice High to Intermediate Low on the ACTFL scale; in other words (using the terminology of the government’s Foreign Service Institute), from ‘incipient survival’ to ‘full’ survival in the native-speaking environment.
Two Term Class, Student must enter first term; credit given after both terms are complete
1 Course Unit

ARAB 6200 Elementary Arabic II
This course is a continuation of ARAB 0100/ARAB 6100. For the second semester: completion of the first semester or permission of the instructor.
Two Term Class, Student must enter first term; credit given after both terms are complete
Prerequisite: ARAB 6100
1 Course Unit

ARAB 6300 Intermediate Arabic III
This is the continuation of the Elementary course at the graduate level. This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. This is the continuation of ARAB 0100 and ARAB 0200, the elementary course in Modern Standard Arabic (MSA). This course is also proficiency-based, implying that all activities within the course are aimed at placing you, the learner, in the context of the native-speaking environment from the very beginning. As in ARAB 0100 - ARAB 0200, evaluation is done by the more traditional testing methods (vocabulary tests, grammar and translation exercises). We anticipate that students range from Intermediate Low to Intermediate High according to the ACTFL scale.
Two Term Class, Student must enter first term; credit given after both terms are complete
Prerequisite: ARAB 6200
1 Course Unit

ARAB 6400 Intermediate Arabic IV
This course is a continuation of Intermediate Arabic III at the graduate level.
Two Term Class, Student must enter first term; credit given after both terms are complete
Prerequisite: ARAB 6300
1 Course Unit

ARAB 6500 Advanced Intermediate Arabic I
This is a proficiency-based course which continues from the first intermediate course, ARAB 0300/ARAB 0400. Emphasis continues to be on all four language skills: Speaking, Listening, Reading, & Writing. The readings for the class are chosen from actual texts from both medieval and modern Arabic in a variety of fields and subjects. Students will be expected to give classroom presentations and to write short essays in Arabic. Evaluation will be both Achievement- and proficiency-based.
Prerequisite: ARAB 6400
1 Course Unit

ARAB 6600 Advanced Intermediate Arabic II
This course is a continuation of Advanced Intermediate Arabic I at the graduate level.
Two Term Class, Student must enter first term; credit given after both terms are complete
Prerequisite: ARAB 6500
1 Course Unit

ARAB 6720 Colloquial Arabic
A one-semester, introductory course to the spoken Arabic of one of the regions of the Arab world, chosen according to the dialect of instructor.
Not Offered Every Year
Prerequisite: ARAB 0200
1 Course Unit

ARAB 6750 Arabic Readings in Belles Lettres
Through engaging with authentic texts, this advanced class aims to activate the language skills students have learned in previous language courses. We will read selections from Arabic poetry and prose and will respond to them in writing, discussion and translation. We will focus on close reading, relying on our knowledge of grammar. We will also work to develop writing, comprehension, and speaking skills through short critical responses and oral presentations. All class discussions will be conducted in Arabic.
Spring
Mutually Exclusive: ARAB 4050
1 Course Unit

ARAB 6800 Advanced Arabic and Syntax I
Advanced syntax through the reading of Arab grammarians. Development of reading in bulk. Emphasis on classical Arabic read in works by medieval and modern writers. This course is designed to give the student experience in reading whole works in Arabic and giving reports on them.
Fall or Spring
Prerequisite: ARAB 6600
1 Course Unit

ARAB 7000 Topics in Islamic Studies
Topics vary from year to year in accordance with the interests and needs of students. Although this course typically focuses on premodern Arabic texts, the readings reinforce MSA reading skills.
Not Offered Every Year
Prerequisite: ARAB 4080
1 Course Unit

ARAB 7020 Arabic Texts in Islamic History
This is a graduate seminar course in which different genres of premodern Arabic texts are covered at the advanced graduate level. Students in this course are expected to be able to read and prepare (vowel, parse, and translate) passages from Arabic texts on a weekly basis and to be able to discuss them critically during the class itself. Topics are chosen to reflect student interest. Recent and potential topics include: Geographers and travel accounts; biographical dictionaries; chronicles; heresiography; poetry; memoir and sira. Although this course typically focuses on premodern Arabic texts, the readings reinforce MSA reading skills.
Not Offered Every Year
Prerequisite: ARAB 0600
1 Course Unit
Architecture (ARCH)

ARCH 0110 Design, Race, and Climate Justice
Through a critical and historical lens, students will examine material, spatial, and ecological practices in architecture and design that perpetuate racial injustices and exacerbate climate injustices. This course will challenge students to consider the ways in which design decisions negatively impact black, indigenous, and other people of color, while also causing harm to the environment. The extraction of raw materials for production often leads to the displacement of communities, destruction of habitats and ecosystems, and the depletion of finite natural resources. Historically, urban planning and design has been used to enforce racial segregation and deny access to services and amenities to non-whites. The siting of toxic waste facilities, highways, and industrial zones in low-income communities of color has had devastating impacts on public health and quality of life. Probing the intersectional relationships between design, race, and climate change, students will engage with a range of texts, multimedia content, case studies, and hands-on projects. By the end of the semester, they will have a deeper understanding of the ways in which design impacts communities and the environment and be equipped with knowledge to advance a more just, equitable, and resilient future.

Fall
1 Course Unit

ARCH 0111 Architecture in the Anthropocene
This course will use architecture and the built environmental as a lens to investigate the emerging field of environmental humanities. Our goal will be to analyze and understand these new intellectual frameworks in order to consider the relationship between global environmental challenges and the process of constructing the built environment. As such, we will oscillate between social and political theory, environmental history, and architectural history and theory. Issues of importance will include: theories of risk, the role of nature in political conflicts; images, design and environmental communication; and the relationship between speculative design and other narratives of the future. These conceptual frameworks will be read alongside examples of related creative projects in art, literature, and architecture, and will be amplified through presentations and discussions with studio faculty and other visitors to the course.

Fall
1 Course Unit

ARCH 0318 Topographical Stories: Architecture, Literature, and Cities
This course will argue a simple thesis: that the spaces of our lives record the stories of our lives. Architecture and literature will be studied, through built works and texts, the latter from both author-architects and fiction writers (novelists, short story writers, and poets). Urban settings throughout the world will occupy our attention, in Berlin, New York, Paris, Milan, London, Venice, Vienna, Chicago, and Shanghai. In much the same way that literacy is both cultivated and preserved in books, cultural memory obtains legible shape in buildings, persisting as long as they do. In a time when so much in life seems in flux social norms, family structures, political allegiances, and so on the power of architecture to give practical affairs orientation and stability is especially important. This course will study how architectural settings provide palpable structure for the events of our lives, particularly those events that occur in cities and their institutions, for cities have always been and remain culture’s most efficient and eloquent articulation. Unlike literature, film, or advertising, architecture performs its signifying role rather quietly and unobtrusively; but this fact does not diminish its capacity to allow us to feel “at home” in many and varied settings. This will be clear to non-architects as soon as they reflect on the role played by domestic arrangements, for even the most prosaic events cannot unfold unless the settings in which they are to occur are “in order.” Less clear perhaps, but no less important is the role that architecture plays in our understanding and experience of community, civility, and the common good. The course will be structured in two parts. The first part, much shorter than the second, will be thematic and a-historical. In the opening lectures the basic topics of the course will be introduced, as will be the questions to be asked of the writings, images, buildings, and cities taken up in part two. The second group of studies will look at a number of cities in Europe, the USA, and China. To make the volume of study materials manageable, we will concentrate on developments in the last hundred to hundred and fifty years. The writings of author architects will provide us with some insight into the ways architecture has served a “narrative” function in these cities, but we will also read stories, poems, and parts of novels that augment and enrich those architectural accounts. The idea is that stories about spaces will clarify the ways that spaces are stories.

Spring
1 Course Unit

ARCH 1010 Introduction to Design
An investigation of an object-oriented design process utilizing digital drawings, rapid prototyping, and digital fabrication techniques. This course introduces design as a creative act marking out a synthesis based on observation of a problem, interpretation of possibilities, and translation of a concept into meaningful three-dimensional objects that engage with society and social justice. The course includes a weekly lecture and studio component.

Fall
Also Offered As: DSGN 1011
1 Course Unit
**ARCH 1020 Introduction to Architecture**
An exploration of the design process utilizing drawing and model-making techniques. Skills of representation and fabrication are introduced in the context of the development of each student's capacity to observe, interpret, and translate design concepts into physical form. The course includes a weekly lecture and studio component. The primary purpose of this course is to introduce the fundamental concepts and basic skills necessary in the design of a work of architecture. Fundamental concepts include a basic understanding of description, projection, and fabrication – in both two and three dimensions. Basic skills include freehand sketching and drawing, computer-aided drawing (orthographic and axonometric) and the fabrication of scale models using hand, power, and digital tools.

Spring
1 Course Unit

**ARCH 2010 Design Fundamentals I**
This studio course develops drawing and model-making skills with emphasis on digital representation and digital fabrication. The capacity of nature-inspired design is explored as a foundation for the creative production of new forms of expression. As the second course in the five-semester cumulative sequence of required design studios, ARCH 2010 is preceded by ARCH 1020, an exploration of orthogonal geometry and orthographic and axonometric projection. ARCH 2010 focuses on the non-orthogonal geometries of animate form as the basis for the development of analogical and prototypical structures utilizing 3D digital modeling software and digital fabrication. In ARCH 2020, the design studio following ARCH 2010, students explore the movement of the body as a basis for design.

Fall
Prerequisite: ARCH 1010 AND ARCH 1020
1.5 Course Unit

**ARCH 2020 Design Fundamentals II**
A studio course exploring the relationship between two-dimensional images and three-dimensional digital and physical models. This studio course develops advanced techniques in digital representation and fabrication through an investigation of the theme of inhabitation in architecture. In the previous semester (ARCH 2010), you looked to nature to study, analyze and then translate complex geometry as it occurs in the natural world. This biomorphic study laid the foundation to learn how to describe non-Euclidean geometries through drawing techniques. Building on this knowledge, in ARCH 2020 you will learn to collect data by carefully mapping a body’s movement during a specific activity. You will analyze, document and ultimately represent this data through drawing. Through this process, you will build an understanding of how a body in motion inhabits space. The range of motion your body maps will be the frame of reference to design a site-specific architectonic enclosure. You will continue to expand your knowledge of digital drawing and fabrication tools using Rhino as your primary 3D modeling software as well as V-Ray for rendering.

Spring
Prerequisite: ARCH 2010
1.5 Course Unit

**ARCH 3010 Architecture Design I**
An introduction to the design of architecture in the city. Students explore the relationships between two-dimensional patterns and their corresponding three-dimensional interpretations through the orthographic drawings of plan, section, and elevation and three-dimensional digital and physical models. ARCH 3010 focuses on Architecture's connective role as a whole comprised of parts (a building comprised of components) a contributing part of a whole (a building within an urban, suburban, or rural environment).

Fall
Prerequisite: ARCH 2020
2 Course Units

**ARCH 3020 Architecture Design II**
An introduction to the design of architecture in the landscape. Issues of mapping, placement, scale, and construction are explored through studio design projects, site visits, and discussions. Course work focuses on the preparation and presentation of design projects emphasizing analytical skills along with the development of imaginative invention and judgment.

Spring
Prerequisite: ARCH 3010
2 Course Units

**ARCH 3030 Design Fundamentals**
The creation of a successful product requires the integration of design, engineering, and marketing. The purpose of this intensive studio course is to introduce basic concepts in the design of three-dimensional products. For purposes of the course, design is understood as a creative act of synthesis expressed through various modes of 2-dimensional and 3-dimensional representation. The course develops basic design skills ranging from hand sketching to the use of digital modeling software and rapid prototyping. Fulfills the requirement for a design background course in the interdisciplinary graduate program in Integrated Product Design (IPD).

Summer Term
1 Course Unit
ARCH 3101 Spatial Reparations: Material and Territorial Practices of Justice
This interdisciplinary seminar will look at the ways in which acts of historical repair and justice have been materially negotiated through landscapes, sites, buildings, and objects. Historic and collective trauma – from the injustices of colonialism, slavery, war, dispossession, genocide, and ecocide – often involves multiple, interconnected scales of harm, and accordingly demands responses that consider multiple forms of healing. Forms of repair might include the restoration of a local ecosystem, the establishment of an archive, the preservation of a building or street, legal acknowledgement of heirs, the transfer of property rights, or the repatriation of artworks. This course will consider these interdisciplinary approaches and strategies of redemption through both readings and case studies. Case studies will be international in scope and will focus on the ways in which an engaged approach to history can inform responses through landscape, community activism, architecture, monuments, artworks, exhibitions, or archives. Students are not required to have a background in architecture, and students from different disciplinary backgrounds and interests are encouraged to participate. One of the goals of this course is to explore how architectural, urban planning, and landscape approaches to reparations offer forms of knowledge that are productive for other fields. But we will also look at how different disciplines can contribute unique responses to addressing historical trauma and injustice. Classes will consist of weekly discussions of readings, peer feedback on final projects, and student presentations chosen from suggested case studies. As a final project, students may write a research or critical essay, or may produce a visual or graphic work that includes a written component.
Spring
1 Course Unit

ARCH 3110 Theory I: Geometry in Architecture
Following a brief historical overview of Euclidean, stereotomic, projective and descriptive geometry in pre-modern architecture and design, the course examines the writings and works of early 20th-century designers who used regulating lines and numerical harmonic scales to generate and regulate architectural form in accordance with the golden section ratio and the dynamic symmetry of root rectangles. Also examined are works of mid 20th-century architecture based on traditional geometric constructions–conic sections (circles, ellipse, hyperbola and parabola) and ruled surfaces (cylinders, cones, hyperboloids, and hyperbolic paraboloids), as well as those derived from polyhedral and geodesic structures. Following an introduction to the geometry of free-form curves characteristic of the digital turn in late 20th-century architecture–including Bezier, B-spline, NURBS (non-uniform rational B-spline), and developable surfaces–the course concludes with an overview of recent efforts to utilize curvature in contemporary architecture within a set of more definitive geometrical and disciplinary boundaries.
Fall
1 Course Unit

ARCH 4110 Theory I: Geometry in Architecture
Following a brief historical overview of Euclidean, stereotomic, projective and descriptive geometry in pre-modern architecture, the course examines the writings and works of early 20th-century modern architects who used regulating lines and numerical harmonic scales to generate and regulate architectural form in accordance with the golden section ratio and the dynamic symmetry of root rectangles. Also examined are works of mid 20th-century architecture based on traditional geometric constructions–conic sections (circles, ellipse, hyperbola and parabola) and ruled surfaces (cylinders, cones, hyperboloids, and hyperbolic paraboloids), as well as those derived from polyhedral and geodesic structures. Following an introduction to the geometry of free-form curves characteristic of the digital turn in late 20th-century architecture–including Bezier, B-spline, NURBS (non-uniform rational B-spline), and developable surfaces–the course concludes with an overview of recent efforts to utilize curvature in contemporary architecture within a set of more definitive geometrical and disciplinary boundaries.
Fall
1 Course Unit

ARCH 4120 Theory II: Architecture as Cultural Ecology
This course will study and argue a single thesis: that the architects of the early 20th century did not neglect the environmental and cultural context of their buildings because they were narrowly focused on the production of free-standing and radically new objects of design, but developed designs that combined attention to environmental issues with both imaginative approaches to social and cultural purposes and a new understanding of aesthetic content. A review of contemporary ecological mandates will begin the course. That will then be contrasted with historical and ancient conceptions. In depth studies of specific buildings will follow, viewed as cultural ecologies. The course will then turn to the materials and elements of architecture that have been used to construct cultural ecologies. With a more nuanced view of our inheritance we will ask what is not only possible but necessary for architecture in our time, in both its landscape and urban contexts.
Spring
Prerequisite: ARCH 4110
1 Course Unit

ARCH 4020 Advanced Design Seminar
ARCH 4020: Advanced Design Seminar builds on projects and student work completed in ARCH 4010: Advanced Design, refining the studio projects in consideration of real-life constraints and opportunities. It allows students to develop in-depth research and design skills in partnership with community groups and/or industry partners. Addressing questions of design feasibility that extend beyond the scope of an architecture design studio, students will learn how issues such as economics, financing, constructability, design standards, zoning, and building codes ultimately impact the evolution of a project. Students will sharpen their communication and representation skills while creatively responding to the constraints and opportunities inherent within the practice of architecture.
Spring
1 Course Unit

ARCH 4010 Advanced Design Workshop
Advanced design course that engages contemporary contexts of architecture through historical, socio-cultural, and environmental frameworks. Students develop skills for collaboration, self-evaluation, and peer critique while learning how to effectively communicate design ideas to a public audience.
Fall
Prerequisite: ARCH 3020
2 Course Units
ARCH 4310 Construction I
Lecture course exploring the basic principles of architectural technology and building construction. The course is focused on building material, methods of on-site and off-site preparation, material assemblies, and the performance of materials. Topics discussed include load bearing masonry structures of small to medium size (typical row house construction), heavy and light wood frame construction, sustainable construction practices, emerging + engineered materials, and integrated building practices. The course also introduces students to Building Information Modeling (BIM) via the production of construction documents.
Fall
Mutually Exclusive: ARCH 5310
0.5 Course Units

ARCH 4320 Construction II
A continuation of Construction I, focusing on light and heavy steel frame construction, concrete construction, light and heavyweight cladding systems and systems building. Spring
Mutually Exclusive: ARCH 5320
1 Course Unit

ARCH 4330 Building Systems Integration
What makes buildings livable and buildable. After the initial concept design and massing studies are complete the next step is detailing. This seminar will examine the detail, how they can inform and enhance a building’s design. The primary goals of a building is that it stands up to external forces, protects inhabitants from the elements and provides a healthy environment. This course will look at the individual components of structure, skin and systems. More importantly though, it will examine the connections between them. The class will begin with lectures examining the different systems and then progress into applying these ideas as a whole to individual studio projects. The final results of this course will be a 3D wall section with accompanying details. These details will be developed in a variety of software as chosen by the student. Recommended options are Revit, Rhino, AutoCAD.
Fall
0.5 Course Units

ARCH 4350 Structures I
Theory applied toward structural form. A review of one-dimensional structural elements; a study of arches, slabs and plates, curved surface structures, lateral and dynamic loads; survey of current and future structural technology. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored.
Fall
Mutually Exclusive: ARCH 5350
0.5 Course Units

ARCH 4360 Structures II
A continuation of the equilibrium analysis of structures covered in Structures I. The study of static and hyperstatic systems and design of their elements. Flexural theory, elastic and plastic. Design for combined stresses; prestressing. The study of graphic statics and the design of trusses. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored.
Spring
Mutually Exclusive: ARCH 5360
0.5 Course Units

ARCH 4998 Senior Thesis
The architecture senior thesis provides students with the opportunity to undertake an independent critical and speculative exploration of a chosen theme. The theme is required to connect architecture with at least one other discipline or subject in the College of Arts and Science. In addition, the questions formulated should establish a concrete link to debates that can be identified as architectural, whether belonging to the realm of individual buildings, urbanism, or product design. This means, that departing from a humanistic question, students should seek to establish clear connections to architectural discourse in the process of conducting their thesis. The thesis project initiates a set of issues and methods that students may continue to develop as they embark on their future professional and intellectual careers. Although the thesis is conceived independently, it is conducted under the supervision of faculty advisors and the thesis coordinator. For additional information, please contact the Chair of Undergraduate Architecture.
Spring
Prerequisite: ARCH 3010
1 Course Unit

ARCH 5000 Summer Preparatory Design Studio
The Summer Preparatory Studio offers an intensive drawing and design experience to candidates for admission to the Graduate Program in Architecture who have not completed the necessary design studio prerequisites or who are required to have additional design experience to qualify for matriculation into the Master of Architecture Professional Degree Program in September. Enrollment in this program does not count towards the Master of Architecture degree. The intent of the drawing component of the course is to familiarize the student with primarily black and white mediums (pencil, charcoal, ink, etc.). Exercises are designed to sharpen the student’s ability to see selectively and to transform image to paper through both line and tonal renditions in freehand sketch form. Exercises will also familiarize the student with basic drafting skills necessary for architectural communication and provide an introduction to computer-aided design through applications of the intensive Rhino and Illustrator tutorials given in the Digital Navigation course. The design part of the course presents a rhythm of basic three-dimensional design studies and simple architectural studio investigations. These are intended to build fundamental skills and acquaint the student with the architectural issues of form/space, conceptualization, transformation of scale, simple functional and constructional problems and a sensitivity to context. Course enrollment is by permit only.
Summer Term
2 Course Units

ARCH 5010 Design Studio I
An introductory architectural design studio through which students develop critical, analytical and speculative design abilities in architecture. Students develop representational techniques for the analysis of social and cultural constructs, and formulate propositions for situating built form in the arena of the urban and suburban environment. The studio initiates innovation through a sequence of projects, spatial models and rule sets that introduce each student to rule-based design processes-- in which a reversal of expectations leads to the creation of novel spaces and structures. It introduces computation, geometric techniques, and digital fabrication. Projects explore the formation of space in relation to the body, and the developments of small scale public programs.
Fall
Corequisite: ARCH 5210
2 Course Units
ARCH 5020 Design Studio II
This studio explores urban architecture as an embodiment of cultural values. Siting, enclosure of space and tectonic definition are stressed in order to challenge students to project relevant and inventive architectural situations.
Spring
Corequisite: ARCH 5220
2 Course Units

ARCH 5110 History and Theory I
The first of three required courses in the history and theory of architecture, this is a lecture course with discussion groups that meet weekly with teaching assistants. The course explores fundamental ideas and models of architecture that have emerged over the past three hundred years.
Fall
1 Course Unit

ARCH 5120 History and Theory II
How do architecture, urbanism, and the environment reflect the dominant social, economic, and political changes of the twentieth and twenty-first centuries and how did its vast geopolitical shifts such as Imperialism, Fascism, the Cold War, Neoliberalism, the "War on Terror," and Nationalism reshape architecture culture? How might architecture culture respond and help construct its resistant variants, anti-fascism, anti-imperialism, decolonization, and making "quieter places" in Donna Haraway’s sense? How do critical frameworks to rethink positivism, efficiency, standardization, and even utopian thinking become revised through the lenses of queer, postcolonial, critical race, and eco-feminist theory in postwar architectural production? And how do these frameworks allow us to conceive of more equitable ways of being in the world while thinking with a varied pasts? This course provides twelve discursive and theoretical frameworks to rethink architectural history in the twentieth and twenty-first century. Through twelve lectures the course traces critical questions confronting architectural modernity from the violence of settler colonialism to the possibilities of making kin. While we will trace instances of architecture, city planning, landscape and infrastructural developments that corresponded to dominant ways of conceiving modernity and its analog progress narratives, the course is mainly interested in considering resistant paradigms that elide attempts to speak of a unified or homogenous notion of modernity. The course will be active and interactive and will include building a collaborative dictionary of architectural terms.
Spring
1 Course Unit

ARCH 5210 Visual Studies I
The study of analysis and projection through drawing and computer visualization
Fall
Corequisite: ARCH 5010
0.5 Course Units

ARCH 5220 Visual Studies II
A continuation of the study of analysis and projection through drawing and computer visualization.
Spring
Corequisite: ARCH 5020
0.5 Course Units

ARCH 5310 Construction I
Lecture course exploring the basic principles of architectural technology and building construction. The course is focused on building material, methods of on-site and off-site preparation, material assemblies, and the performance of materials. Topics discussed include load bearing masonry structures of small to medium size (typical row house construction), heavy and light wood frame construction, sustainable construction practices, emerging + engineered materials, and integrated building practices. The course also introduces students to Building Information Modeling (BIM) via the production of construction documents.
Fall
Mutually Exclusive: ARCH 4310
0.5 Course Units

ARCH 5320 Construction II
A continuation of Construction I, focusing on light and heavy steel frame construction, concrete construction, light and heavyweight cladding systems and systems building.
Spring
Mutually Exclusive: ARCH 4320
1 Course Unit

ARCH 5350 Structures I
Theory applied toward structural form. A review of one-dimensional structural elements; a study of arches, slabs and plates, curved surface structures, lateral and dynamic loads; survey of current and future structural technology. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored.
Fall
Mutually Exclusive: ARCH 4350
0.5 Course Units

ARCH 5360 Structures II
A continuation of the equilibrium analysis of structures covered in Structures I. The study of static and hyperstatic systems and design of their elements. Flexural theory, elastic and plastic. Design for combined stresses; prestressing. The study of graphic statics and the design of trusses. The course comprises both lectures and a weekly laboratory in which various structural elements, systems, materials and technical principles are explored.
Spring
Mutually Exclusive: ARCH 4360
0.5 Course Units

ARCH 5990 First Year Technology Lab
ARCH 5999 is a required lab/workshop that accompanies the core technology sequence in the M.Arch program in both the Fall and Spring terms. This non-graded lab section will offer additional instruction, workshops, lab time, and other support to the first year technology courses. Enrollment in ARCH 5999 is required for all undergraduate and graduate Architecture students taking ARCH 4350/5350, ARCH 4356/5356, ARCH 4310/5310, and/or ARCH 4320/5320.
0 Course Units
ARCH 6010 Design Studio III
In this studio, students engage architecture in its role as a cultural agent and examine the way buildings establish and organize dynamic relationships between site, program and material. The design of a complex building of approximately 50,000 SF provides the pedagogical focus for this research. Students extend skills in geometrical organization, site analysis and building massing/orientation to relate to program organization, circulation and egress, building systems and materials. The conceptual focus centered on the program of dwelling and how this program can be employed to develop and promote dynamic relationships and conditions through time, both within the building and between the building and the context. Through research and experimentation students integrate ecological processes into their design methodology to support design innovations in the building’s structure, its construction assemblies, environmental systems, and materials. Students work towards a high level of design resolution and visual representation, including the articulation of the building structure and its material assembly/enclosure.
Fall
Corequisite: ARCH 6210
2 Course Units

ARCH 6020 Design Studio IV
This studio enables students to develop and resolve the design of a building in terms of program, organization, construction and the integration of structures, enclosure and environmental systems as well as life safety issues. Students select from a range of individually-directed studios within this overall framework. Each instructor develops a different approach and project for their section of this studio. Studios incorporate the expertise of external consultants in advanced areas of technology, engineering and manufacturing.
Spring
2 Course Units

ARCH 6110 History and Theory III
This is the third and final required course in the history and theory of architecture. It is a lecture course that examines selected topics, figures, projects, and theories from the history of architecture and related design fields during the 20th century. The course also draws on related and parallel historical material from other disciplines and arts, placing architecture into a broader socio-cultural-political-technological context. Seminars with teaching assistants complement the lectures.
Fall
1 Course Unit

ARCH 6210 Visual Studies III
The final of the Visual Studies half-credit courses. Drawings are explored as visual repositories of data from which information can be gleaned, geometries tested, designs refined and transmitted. Salient strengths of various digital media programs are identified and developed through assignments that address the specific intentions and challenges of the design studio project.
Fall
Corequisite: ARCH 6010
0.5 Course Units

ARCH 6310 D3 Data, Design, Delivery
A study of the active integration of various building systems in exemplary architectural projects. To deepen students’ understanding of the process of building, the course compares the process of design and construction in buildings of similar type. The course brings forward the nature of the relationship between architectural design and engineering systems, and highlights the crucial communication skills required by both the architect and the engineer.
Fall
0.5 Course Units

ARCH 6330 Environmental Systems I
An introduction to the influence of thermal and luminous phenomenon in the history and practice of architecture. Issues of climate, health and environmental sustainability are explored as they relate to architecture in its natural context. The classes include lectures, site visits and field exploration.
Spring
0.5 Course Units

ARCH 6340 Environmental Systems II
Considers the environmental systems of larger, more complex buildings. Contemporary buildings are characterized by the use of systems such as ventilation, heating, cooling, dehumidification, lighting, communications, and controls that not only have their own demands, but interact dynamically with one another. Their relationship to the classic architectural questions about building size and shape are even more complex. With the introduction of sophisticated feedback and control systems, architects are faced with conditions that are virtually animate and coextensive at many scales with the natural and man-made environments in which they are placed.
Spring
.5 Course Units

ARCH 6360 Material Formations
Material Formations introduces robotic production and material dynamics as active agents in design rationalization and expression. The course investigates opportunities for designers to synthesize multiple performance criteria within architecture. Theory, Case-Studies and practical tutorials will focus on the incorporation of analytical, simulation, generative computation and robot fabrication concerns within design. While production is traditionally viewed as an explicit and final act of execution, the course explores the potential for all aspects of building production and use to participate within the creative design process, potentially producing performance and affect. Students will develop skills and experience in computer programming, physics-based simulation, and robot motion planning. A design research project will be undertaken through a number of discrete assignments that require the synthesis of structural performance along with material and robotic production constraints. The course will explore design as the outcome of materially formative processed of computation and production. Structure: the course will commence with weekly lectures and computer-based tutorials, and culminate in a series of intensive incremental learning, and prepare groups to work on a final assignment which involves the robotic fabrication of a small design prototype.
Spring
1 Course Unit
ARCH 6710 Professional Practice I
The course consists of a series of workshops that introduce students to a diverse range of practices. The course goal is to gain an understanding of the profession by using the project process as a framework. The course comprises a survey of the architectural profession - its licensing and legal requirements; its evolving types of practice, fees and compensation; its adherence to the constraints of codes and regulatory agencies, client desires and budgets; and its place among competing and allied professions and financial interests. The workshops are a critical forum for discussion to understand the forces which at times both impede and encourage innovation and leadership. Students learn how architects develop the skills necessary to effectively communicate to clients, colleagues, and user groups. Trends such as globalization, ethics, entrepreneurship, sustainability issues and technology shifts are analyzed in their capacity to affect the practice of an architect.

Spring
0.5 Course Units

ARCH 6741 Curricular Practical Training: Academic Year
Course Description This course provides international Architecture department students the opportunity for practical training in architecture in the United States (CPT). The course develops critical thinking about the organization, operation, and ethics of professional practice in city planning. This course will allow international M.Arch/MSD students to work in an internship in the United States during the academic year without shortening their limited OPT time. The course is offered for .20 course units. The employment must relate to the major and the experience must be part of the program of study. Course enrollment is by permit only.
0.2 Course Units

ARCH 6850 Environmental Readings
In this seminar, we will explore this green thread and analyze its influence on how we shape our environments through design and planning. The course has three parts. Throughout, the influence of literature on design and planning theory will be explored. The first part will focus on three most important theorists in environmental planning and landscape architecture: Frederick Law Olmstead Sr., Charles Eliot and Ian McHarg. The second part of the course will critically explore current theories in environmental planning and landscape architecture. The topics include: frameworks for cultural landscape studies, the future of the vernacular, ecological design and planning, sustainable and regenerative design, the languages of landscapes, and evolving views of landscape aesthetics and ethics. In the third part of the course, students will build on the readings to develop their own theory for ecological planning or, alternatively, landscape architecture. While literacy and critical inquiry are addressed throughout the course, critical thinking is especially important for this final section.
Fall
Also Offered As: CPLN 6850, LARP 6850
1 Course Unit

ARCH 6980 Architectural Association (AA), London
An advanced Architectural Design Studio taught by Homa Farjadi in London at the Architectural Association’s School of Architecture. Topics engage aspects of urban life and urban form in London, and vary from year to year. During the fifth term of the Master of Architecture program, up to fifteen students a year may enroll for the semester abroad program in London, England. This is coordinated by Prof. Homa Farjadi and is housed at the Architectural Association (AA), located on Bedford Square in the heart of Bloomsbury. Students enroll in a special design studio, ARCH 702, taught by Prof. Farjadi, and in two elective courses offered by the faculty at the AA.
Fall
2 Course Units

ARCH 6999 Second Year Technology Lab
ARCH 6999 is a required lab/workshop that accompanies the core technology sequence in the M.Arch program in both the Fall and Spring terms. This non-graded lab section will offer additional instruction, workshops, lab time, and other support to the second year technology courses. Enrollment in ARCH 5999 is required for all Master of Architecture students taking ARCH 6330, ARCH 6340, ARCH 6310, and/or ARCH 6360.
0 Course Units

ARCH 7010 Studio V
These advanced elective studios provide opportunities for focused exploration of particular themes in contemporary landscape architecture. Important emerging and accomplished designers, often from divergent points-of-view, interests and backgrounds, are invited to run these studios. Collaborative options (between Landscape and the Departments of Architecture or City Planning) are sometimes offered across the School. In addition to our own faculty who offer some of these studios (Fabiani Giannetto, Gouverneur, Marcinkoski, Mathur, M'Closkey, Neises, Olin, Pezvner, Sanders, Tomlin), visitors have included Paolo Burgi (Switzerland), Peter Latz (Munich), Bernard Lassus (Paris), Margie Ruddick (Philadelphia), Chris Reed (Boston), Peter Beard (London), Nicholas Quennell (New York), Ken Smith (New York), Raymond Gastil (New York), Alessandro Tagliolini (Italy), Ignacio Bunster (Philadelphia), Perry Kulper (Los Angeles), James Wines (New York), Lee Weitnraub (New York), Charles Waldheim (Chicago), Stanislaus Fung (Australia), Dennis Wedlick (New York), Sandro Marpillero (New York), Peter Connolly (Australia), and former associate professor Anna Neri. More recent visitors have been Claire Fellman (New York), Catherine Mosbach (Paris), Nanako Unemoto/Neil Cook (New York), Valerio Morabito (Italy), Carol and Colin Franklin (Philadelphia), Keith Kaseman (Philadelphia), Silvia Benedito (New York), Claudia Taborda (Lisbon), Mark Thomann (New York), Jerry Van Eyck (New York), and Martin Rein-Cano (Berlin).
Fall
2 Course Units

ARCH 7030 Advanced Architectural Design Studio
An Advanced Architectural Design Studio specifically tailored to post-professional students. Through this studio, students engage in the challenges and opportunities presented by changes in society, technology, and urban experience. Through design projects, they explore alternative modes and markets for practice, along with new directions and new tools for design.
Fall
2 Course Units
ARCH 7040 Advanced Design: Research Studio
In the final semester of the program, students select from three options:
1) an elective design studio, selected from among the advanced architectural design studios offered by the Department of Architecture; 2) a research studio, the exploration of a topic or theme established by an individual faculty member or group of faculty members; or 3) an independent thesis, the exploration of a topic or theme under the supervision of a thesis advisor.
Spring
2 Course Units

ARCH 7050 MSD-AAD Design Research Studio
Students learn from industry leaders by electing their Design research Studio. The second semester design research studio focuses on large scale detail leading to a building design.
2 Course Units

ARCH 7060 Independent Thesis
In the final semester of the program, students select from three options:
1) An elective design studio; selected from among the advanced architectural design studios offered by the Department of Architecture; 2) a research studio, the exploration of a topic or theme established by an individual faculty member or group of faculty members; or 3) an independent thesis, the exploration of a topic or theme under the supervision of a thesis advisor.
Spring
2 Course Units

ARCH 7070 AAD Fabrication Studio
The final studio course in the MSD-AAD sequence. Through this studio, students engage in the challenges and opportunities presented by changes in society, technology, and urban experience. Through design projects, they explore alternative modes and markets for practice, along with new directions and new tools for design.
Summer Term
2 Course Units

ARCH 7080 Bioclimatic Design Studio
An advanced design studio for the MSD-EBD program that synthesizes the concepts and techniques of environmental building design. Topics and materials for the studio are developed in ARCH 7520: EBD Research Seminar, and summarized in a research report at the end of studio.
Summer Term
Prerequisite: ARCH 7510 AND ARCH 7520 AND ARCH 7530
2 Course Units

ARCH 7090 Environmental Building Design Research Studio
Architecture is a process of discovery, of deciding what to work on, before it ever becomes a matter of design (disegno, drawing). For environmental building design, the process of discovery is even more profound, involving issues of resource consumption, modes of living and working, and of ecological interconnection that have to be explored before questions of performance can even be addressed. This design studio uses research at multiple scales to identify the topic of the studio, then student teams develop design for buildings of maximum (ecological) power.
Fall
Prerequisite: ARCH 7080 AND ARCH 7510 AND ARCH 7520 AND ARCH 7530
2 Course Units

ARCH 7100 Contemporary Theory 1989-Present
A chronological overview of the approaches and attitudes adopted by architects, theorists and inter-disciplinary writers from 1993- today that have helped shape the current discourse of architecture. This course will introduce and contextualize key projects, and polemics over the last 25 years. Central themes in this course include the impact of digital technologies and methods of design, production and materiality. These are explored through texts, movements, projects and buildings that help form an overview that has shaped the contemporary condition that we live in. There have been a myriad of different approaches and through a select set of readings and lectures students will be exposed to crucial texts, projects and buildings making students versatile and knowledgeable in the important concepts that shape our current discourse. A focus will be the organization, configuration and articulation of buildings and the conceptual and cultural arguments they are associated. Formal, organizational and material characteristics of this period will be explored. This class will develop students’ knowledge and provide a platform from which they can continue the discussions surrounding architectural thought and practice. The students will learn to communicate their ideas verbally and in writing. Contemporary topics in architecture theory and projects are introduced in a weekly lecture format critical to the shaping of our discipline today. A weekly recitation session allows students to engage with the readings critically in the subject matter. A mid-term and final paper are required to pass this class. (Topics to be covered: Seminal projects and buildings in the last 25 years, situating the architects work within a culture of debate and discourse identifying the important readings surrounding each building/project.)
This course is a requirement of the MSD-AAD curriculum.
Spring
1 Course Unit

ARCH 7110 Topics in Architecture Theory I
A seminar on advanced topics in architectural design and theory. Topics and instructors will vary.
Fall

A seminar on advanced topics in architectural design and theory. Topics and instructors will vary.
1 Course Unit

ARCH 7122 Topics in Architecture Theory II
A seminar on advanced topics in architectural design and theory. Topics and instructors will vary.
1 Course Unit

ARCH 7123 Topics in Architecture Theory II
A seminar on advanced topics in architectural design and theory. Topics and instructors will vary.
1 Course Unit
ARCH 7130 Ecological Thinking in Art and Architecture
This seminar will address the diverse narratives of ecological thinking in the history of art, architecture, and urban planning during the 20th century. The course will contextualize and interrogate contemporary disciplinary discourses as well as historical assumptions related to ecological thinking in art and architectural history and environmentally-conscious practices. By mapping received trajectories of Eco Art, Ecocritical Art History, and Ecological Histories of Architecture and Urban Planning, the course will work from a subtly hidden foundation of eco-historical knowledge that connects these fields of inquiry, while also critiquing these trajectories and seeking to provide more focused and robust alternatives for knowledge production in the present. It aims to attract students from the School of Arts and Sciences and the Weitzman School of Design in a discussion on the interconnected histories of art and architecture during the 20th century.
Also Offered As: ARTH 5770
1 Course Unit

ARCH 7140 Museum as Site: Critique, Intervention and Production
In this course, we will take the museum as a site for critique, invention, and production. As architecture, cultural institution, and site of performance, the museum offers many relevant opportunities. Students will visit, analyze, and discuss a number of local exhibitions and produce their own intervention in individual or group projects. Exhibition design, design of museum, the process of curating, producing artworks ranging from paintings to installation and performance, as well as attention to conservation, installation, museum education, and the logistics and economics of exhibitions will be discussed on site and in seminar. These topics and others will be open for students to engage as part of their own creative work produced for the class and an online exhibition.
Spring
1 Course Unit

ARCH 7150 Contemporary Aesthetic Theory
This course offers a framework for a provocative history of ideas about beauty as they relate to contemporary thinking and their production of form in architecture. In a world increasingly defined by visuality, the concepts of beauty and visual sensation are not mere intellectual exercises but standards that define the very nature of design practice across disciplines, and that are essential to the worlds of objects, automobiles, furniture and architecture in the twenty-first century.
Aesthetic theory is about beauty and about form and how it affects us every day. As architecture practice changes, the tools that are used to create form change due to new technologies, new materials and new tools for fabrication and aesthetics gives us an important way in to understanding the relationship between the object created and the user. This occurs in contemporary cultural landscapes in which we exist, and aesthetics is the organizing element. Through lectures and discussions of aesthetics readings in recitations focused on the object, students will work on a term paper that brings a clear understanding of aesthetics and its role in participating in culture through the objects of the automobile, furniture and architecture industries.
1 Course Unit

ARCH 7180 History and Theory of Architecture and Climate
This seminar will explore the history of buildings as mechanisms of climate management, and the theoretical and conceptual frameworks that pertain. In particular, we will examine how visual and mediatic interventions became a crucial aspect of architectural engagement with climate systems, and how, simultaneously, architectural image-making techniques became an important interdisciplinary site for understanding the cultural effects of scientific knowledge.
Spring
1 Course Unit

ARCH 7190 Archigram and Its Legacy: London, A Technotopia
Acknowledging the ubiquitous proliferation of "Hi-Tech" architecture in contemporary London, this research seminar examines the scope of technology as it emerges and re-emerges in the work of various architects currently dominating the city. This scope includes the last strains of post-war urbanism which spawned a legacy of radical architecture directly contributing to the Hi-Tech; a particular focus of the course will be the contributing and contrasting influence provided by the counter-cultural groups of the 60's - Archigram, Superstudio, the Metabolists and others. Using the premise of Archigram's idea of infrastructure, both literal and of event, the course will attempt to discover relational networks between works of the present day (Rogers, Foster, Grimshaw, etc.). As this work practices upon and within public space, an understanding of the contribution of technology to urban theatricality will evolve which is relevant to contemporary spheres of technological design practices. Students will be required to produce and present a term research paper.
Fall
1 Course Unit
ARCH 7200 Visual Literacy and its Culture
The digital turn in the creative fields resulted in profound transformations of techniques, aesthetics and underlying concepts in the development of contemporary visual culture. The dissemination and consumption of information through images through all types of media platforms influence and re-define (for better or worse) all aspects of our culture and reality. It is vital to develop a deep knowledge of the current visual concepts and techniques in arts, photography, cinema, product design and architecture to claim a critical stance through which we can positively contribute to the evolution of contemporary culture. The discipline of architecture has been deeply influenced by the digital shift in modes of design and visualization which yielded a wide array of directions within the architectural discourse, especially with questions and problems regarding representation. One clear outcome of this transformational period is the diversity of new representational strategies to seek alternative modes of visualization. It is clear that no one representational medium can be defined as the locus of architectural thought and architecture, as a cultural practice, can no longer be defined through the output of a single medium. The reality of our discipline is that we work through collective mediums and conventions of drawings, models, images, simulations, texts, prototypes and buildings to visualize architectural concepts. These mediums all require degrees of expertise in techniques that are necessary for their execution: they all involve conceptual depth that define their disciplinary positions; they all require translations across each other to enable subjective work-flows; they all require aesthetic attitudes to influence the development of visual culture in architecture. This course will introduce the AAD majors to contemporary topics of visualization in arts, photography, cinema and architecture. They will explore multiple mediums of representation to help them gain the vital visual literacy to excel in the program. Students will be introduced to discursive background and contemporary concepts of line drawing, fabricated object and constructed image as they work through 3 distinct projects during the semester. Each exercise will be initiated by a topical lecture and be followed by weekly pin ups to advance student projects. (Topics to be covered: Discourse of Contemporary Line Drawing, Multi-part 3D Printing, Vacuform/CNC Milling, Digital/Analog Surface Articulation, Rendering, Abstraction and Realism, Montage/Collage/ Photorealism)
Spring
1 Course Unit

ARCH 7210 Designing Smart Objects for Play and Learning
Today’s children enjoy a wide array of play experiences, with stories, learning, characters and games that exist as physical stand-alone objects or toys enhanced with electronics or software. In this course, students will explore the domain of play and learning in order to develop original proposals for new product experiences that are at once tangible, immersive and dynamic. They will conduct research into education and psychology while also gaining hands-on exposure to new product manifestations in a variety of forms, both physical and digital. Students will be challenged to work in teams to explore concepts, share research and build prototypes of their experiences in the form of static objects that may have accompanying electronic devices or software. Final design proposals will consider future distribution models for product experiences such as 3D printing, virtual reality and software- hardware integration. Instruction will be part seminar and part workshop, providing research guidance and encouraging connections will subject matter experts throughout the Penn campus.
Fall
Also Offered As: IPD 5210
1 Course Unit

ARCH 7240 Technology in Design
The aim of this course is to understand the new medium of architecture within the format of a research seminar. The subject matter of new media is to be examined and placed in a disciplinary trajectory of building design and construction technology that adapts to material and digital discoveries. We will also build prototype with the new media, and establish a disciplinary knowledge for ourselves. The seminar is interested in testing the architecture-machine relationship, moving away from architecture that looks like machines into architecture that behaves like machines: An intelligence (based on the conceptual premise of a project and in the design of a system), as part of a process (related to the generative realm of architecture) and as the object itself and its embedded intelligence.
Spring
1 Course Unit

ARCH 7250 Design Thinking
Creating new product concepts was once a specialized pursuit exclusively performed by design professionals in isolation from the rest of an organization. Today’s products are developed in a holistic process involving a collaboration among many disciplines. Design thinking - incorporating processes, approaches, and working methods from traditional designers’ toolkits - has become a way of generating innovative ideas to challenging problems and refining those ideas. Rapid prototyping techniques, affordable and accessible prototyping platforms, and an iterative mindset have enabled people to more reliably translate those ideas into implementable solutions. In this course, students will be exposed to these techniques and learn how to engage in a human-centered design process.
Fall
Also Offered As: IPD 5720
1 Course Unit

ARCH 7260 Furniture Design Strategic Process
Like architecture, furniture exists at the intersection of idea and physical form. Due to the specific scale that furniture occupies, however, this physical form relates not only to the environment in which the furniture is set, but also intimately to the physical bodies that interact with and around it. Additionally, as a manufactured product, often specified in large quantities, furniture must also address not only poetic considerations, but practical and economic ones as well. Instead of being seen as one-off objects, the furniture created in this seminar focuses on furniture development as a strategic design process where the designer’s role is to understand the various responsibilities to each stakeholder (client/ manufacturer, market/customer, environment) and the additional considerations (materials, processes, manufacturability, etc.), and ultimately translate these points into a potentially successful product. In order to approach furniture in this manner, the course will be structured around specific design briefs and clustered into three distinct but continuous stages. First, through focused research into stakeholder needs and potential market opportunities, students will craft tailored design proposals and development concepts accordingly. Next, students will work toward visualizing a concept, complete with sketches, small mock-ups, scale- model prototypes, technical drawings, connections and other pertinent details in order to refine their proposals and secure a real world understanding of the manufacturing processes and the potential obstacles created by their decisions. From insights gained and feedback from these steps, students will ultimately develop a final design proposal for a piece, collection, or system of furniture that successfully leverages their understanding of a thoughtful and deliberate design strategy.
Spring
1 Course Unit
ARCH 7280 Design of Contemporary Products: Design for Equity, Inclusion and Accessibility

The power of design to shape the world we live in is increasingly obvious, as is the responsibility of designers to challenge our assumptions about who designs, who is included or marginalized by our designs, and how we can make sure that all design is inclusive design. This course will address issues around designing for equity, inclusion and accessibility and co-design. We will ask, What is inclusive design? Who does it serve? What should it look like? To answer these questions, we will engage with the current discourse around designing for equity, inclusion and accessibility, with a particular focus on accessibility. We will engage with disability justice frameworks and critical disability studies to challenge our assumptions about disability and engagement. And we will connect with members of the disability community and co-design along with them. This course is intended for anyone who considers themselves a designer of physical or digital products, places, or services who wants to prioritize inclusion in their practice.

Spring

Also Offered As: IPD 5280

1 Course Unit

ARCH 7300 Techniques, Morphology, and Detailing

The course will focus on design, morphology detailing, and the construction of a pavilion on a chosen site. The course will develop through hands-on workshops and will focus on acquiring knowledge through making, (Techné), understanding the morphological transformation of a given geometric packing, and building using readily available materials. The process consists of building and testing physical models that simulate the actual pavilion in order to ultimately realize the desired design. The second half of the semester will focus on using lightweight construction materials to fabricate the pavilion's actual components, including structural elements, molded components, and joints, which are required for the pavilion's final assembly. Additionally, students will learn to organize design and fabrication teams, control design and production schedules, and work with a set budget, which requires keeping track of construction costs and forecasting required procurements, including material quantities takeoff, ordering materials and scheduling deliveries.

Spring

1 Course Unit

ARCH 7310 Experiments in Structures

This course studies the relationships between geometric space and those structural systems that amplify tension. Experiments using the hand (touch and force) in coordination with the eye (sight and geometry) will be done during the construction and observation of physical models. Verbal, mathematical and computer models are secondary to the reality of the physical model. However these models will be used to give dimension and document the experiments. Team reports will serve as interim and final examinations. In typology, masonry structures in compression (e.g., vault and dome) correlate with "Classical" space, and steel or reinforced concrete structures in flexure (e.g., frame, slab and column) with "Modernist" space. We seek the spatial correlates to tensile systems of both textiles (woven or braided fabrics where both warp and weft are tensile), and baskets (where the warp is tensile and the weft is compressive). In addition to the experiments, we will examine Le Ricolais' structural models held by the Architectural Archives.

ARCH 7320 Technology Designated Elective

Several sections are offered from which students make a selection.

Spring

1 Course Unit

ARCH 7321 Technology Designated Elective

Technology Designated Electives enable students to deepen their understanding of architectural issues, and M.Arch students must complete 1 CU of any ARCH 732x and/or ARCH 736x course(s). But these courses are not limited to students in the department of architecture.

ARCH 7322 Technology Designated Elective

Technology Designated Electives enable students to deepen their understanding of architectural issues, and M.Arch students must complete 1 CU of any ARCH 732x and/or ARCH 736x course(s). But these courses are not limited to students in the department of architecture.

ARCH 7323 Technology Designated Elective

Technology Designated Electives enable students to deepen their understanding of architectural issues, and M.Arch students must complete 1 CU of any ARCH 732x and/or ARCH 736x course(s). But these courses are not limited to students in the department of architecture.

ARCH 7324 Technology Designated Elective

Technology Designated Electives enable students to deepen their understanding of architectural issues, and M.Arch students must complete 1 CU of any ARCH 732x and/or ARCH 736x course(s). But these courses are not limited to students in the department of architecture.

ARCH 7325 Technology Designated Elective

Technology Designated Electives enable students to deepen their understanding of architectural issues, and M.Arch students must complete 1 CU of any ARCH 732x and/or ARCH 736x course(s). But these courses are not limited to students in the department of architecture.
ARCH 7326 Technology Designated Elective
Technology Designated Electives enable students to deepen their understanding of architectural issues, and M.Arch students must complete 1 CU of any ARCH 732x and/or ARCH 736x course(s). But these courses are not limited to students in the department of architecture any graduate student at Weitzman is invited to register for a Technology Designated Elective of interest, space permitting. Topics vary between semesters, and specific details can be found in the “Section Details” area in course search.
1 Course Unit

ARCH 7330 New Materials and Methods
The primary goal of this course is to help students formulate a robust research proposal for their culminating design studio in digital large-scale fabrication and robotics manufacturing using new materials such as carbon fiber and other composites. The course provides a forum for critical discussion of contemporary design practices that is exploratory and speculative in nature. In addition to collaborative thinking and debate students will develop their own research interests to formulate contemporary positions in the making of architecture through the research of materials and their fabrication methods.
Fall

1 Course Unit

ARCH 7340 Ecological Architecture - Contemporary Practices
Architecture is an inherently exploitive act - we take resources from the earth to produce waste and pollution when we construct and operate buildings. As global citizens, we have an ethical responsibility to minimize these negative impacts. As creative professionals, however, we have a unique ability to go farther than simply being "less bad." We are learning to design in ways that can help heal the damage and regenerate our environment. This course explores these evolving approaches to design - from neo-indigenous to eco-tech to LEED to biomimicry to living buildings. Taught by a practicing architect with many years of experience designing green buildings, the course also features guest lecturers from complementary fields - landscape architects, hydrologists, recycling contractors and materials specialists. Coursework includes in-class discussion, short essays and longer research projects.

ARCH 7370 Semi-Fictitious Realms: A History and Future of Virtual Reality
The pursuit of immersive digital experiences has long been a goal of the computing industry. Early wearable displays designed in the 1960s depicted simple three-dimensional graphics in ways that had never been seen before. Through trial and error, digital pioneers reframed the relationship between user and machine, and over the last five decades, have made strides that advanced both the input and output mechanisms we are so comfortable with today. As a field, architecture has been reliant on these advancements to design and document buildings, but these tools still leave the architect removed from the physicality of the design, with their work depicted as 2D lines or 3D planes alone. This course will study the evolutionary advancements made that now allow us to fully inhabit digital worlds through Virtual Reality. Using the Unity Video Game Engine, students will generate immersive, photo-realistic models of unbuilt architectural works and explore digital/physical interactivity. These models will be designed to have compatibility with both 6-DOF and 3-DOF Virtual Reality equipment as well as flythrough-style experiences for keyboard and mouse using various web-hosting platforms. From the terraces of Paul Rudolph's Lower Manhattan Expressway to Boullée's Cenotaph for Newton, the goal of this course is to breathe new life into places and spaces that have, until this time, never been built or occupied.
Fall
1 Course Unit

ARCH 7371 Remixed Realities
This course will introduce students to workflows for authoring VR content in the Unity 3D Video Game Engine, teach them skills in developing custom interactions with the C# coding language, and challenge them to create speculative mixed reality scenarios. Students will explore several forms of mixed reality in a series of exercises leading up to a final narrative-based VR experience. We will speculate on the occupation of physical/digital hybrids by using a calibration routine to align digital geometry to physical spaces in VR; create volumetric documentary experiences using reality capture techniques to record existing spaces and objects; and develop rich VR experiences using remixed volumetrically captured geometry, digital geometry, and physical spaces.
1 Course Unit
ARCH 7380 The Modern House: Technology Then and Now
In the current age of new fabrication methodologies, methods are emerging for the conception and design of the contemporary house which have radical potential for enclosure, habitation and practices of daily life. This course begins by examining the canonical houses of the original avant-garde - Adolf Loos, Frank Lloyd Wright, Le Corbusier, Mies van der Rohe and Alvar Aalto - on the premise that their houses were working manifestos for rethinking space, form and indeed ideas of life itself - all of which were prompted by new concepts of construction. From this spectrum of issues, contemporary houses and contemporary methods and materials will be studied extensively to develop equally new ideas between matter and quotidian life. As the primary task of the course, students will work in teams to develop highly detailed constructional proposals for a portion of a speculative home.
Spring
1 Course Unit

ARCH 7390 New Approaches to an Architecture of Health
Health care is taking on a new role in our society - with a refocusing from episodic care for those who are ill or symptomatic to providing life-long care geared towards maintaining wellness. These changes are evident across numerous areas of design, from wearable technologies that track and analyze, to large scale building initiatives that aim to create healthier environments and improve lives through strategic planning initiatives. A concrete, physical representation of this paradigm shift can be found within the hospital building itself and in the new manner in which hospitals are looking to serve their patients and care for their clinicians. Simultaneously both public and private spaces, hospitals are complex systems in which sickness, health, hospitality, technology, emergency, and community share space and compete for resource. In order to frame our present day understanding of the role of architecture (and design) in fostering health for individuals and within communities, this seminar will begin with an exploration of the historical and contemporary perspectives on the role of the architect and built environment on health. (Parallels between design and our ever-changing understanding of the biological, social, and environmental causes of sickness and disease will also be explored.) During this conversation, students will read articles and study recently constructed projects in order to examine the ways in which the architects approached these topics through built form. Following from this foundation, students will craft arguments for a new approach to the individual, the community, health, and architecture through a written response and architecturally designed scenario that argues for their perspective on how architecture can and should shape the health of those who inhabit it. Throughout the course, students will engage in weekly readings (and discussions) of critical texts exploring ideas around the role and impact of architecture on health. Various content experts will be included in the course to provide additional insights into key areas of theory and practice in order to lend additional perspectives and ground the conversation.
Fall
1 Course Unit

ARCH 7410 Architecture Design Innovation
The mastery of techniques, whether in design, production or both, does not necessarily yield great architecture. As we all know, the most advanced techniques can still yield average designs. Architects are becoming increasingly adept at producing complexity & integrating digital design and fabrication techniques into their design process - yet there are few truly elegant projects. Only certain projects that are sophisticated at the level of technique achieve elegance. This seminar explores some of the instances in which designers are able to move beyond technique, by commanding them to such a degree as to achieve elegant aesthetics within the formal development of projects.
Fall
1 Course Unit

ARCH 7420 Function of Fashion in Architecture
The Function of Fashion in Architecture will survey the history of fashion and the architectural parallels starting from Ancient Civilization to Present. The focus will be on the relevance of garment design, methods and techniques and their potential to redefine current architectural elements such as envelope, structure, seams, tectonics and details. The functional, tectonic and structural properties of garment design will be explored as generative platforms to conceptualize very specific architectural elements. One of the challenges in the course is the re-invention of a means of assessment, the development of notations and techniques that will document the forces and the production of difference in the spatial manifestations of the generative systems.
Spring
1 Course Unit

ARCH 7430 Form and Algorithm
The critical parameter will be to develop the potential beyond finite forms of explicit and parametric modeling towards non-linear algorithmic processes. We will seek novel patterns of organization, structure, and articulation as architectural expressions within the emergent properties of feedback loops and rule-based systems. This seminar will accommodate both introductory and advanced levels. No previous scripting experience is necessary. It will consist of a series of introductory sessions, obligatory intensive workshops, lectures followed by suggested readings, and will gradually focus on individual projects. Students will be encouraged to investigate the limits of algorithmic design both theoretically and in practice through a scripting environment.
Fall
1 Course Unit

ARCH 7440 Image, Object, Architecture
As we have entered a postdigital era, the dominance of a purely technological approach as a vehicle for design innovation has waned. Questions of substance and disciplinary autonomy have found their way back into the contemporary cultural discourse, enriching the way we examine and deploy advanced technologies towards novel expressions in architecture. This seminar will investigate, through the production of estranged objects, opportunities for design that are being generated at the intersection of machinic and human minds, and speculate on possible futures in which concepts of nature and technology have been inseparably intertwined.
Spring
Also Offered As: IPD 5440
1 Course Unit
ARCH 7460 Cinema and Architecture in Translation
Cinema and Architecture in Translation is a seminar that will survey key cinematic moments and techniques within the history of film and find new intersections between architecture and narratives. The focus will be on the relevance of mise-en-scène, the background and building figures of architecture and future speculations of the city, yet in relation to narrative dynamics. One of the challenges is to consider techniques that will affect both conceptualization and the production of spatial manifestations using potent visual platforms. Current pre and post-production techniques in film making methods are converging with architectural digital representation. This is an opportunity that provides fertile ground for architects to re-examine the 'digital' in a variety of scales in relation to impactful narratives and visualizations. These tools, specifically the technique of "matte-painting" will be explored in this course. There is a rich history in constructing images, speculative worlds and scenes for the film industry. We will explore the parallels between the tools and strategies of cinematic visualization as it relates to advanced architectural image making. Students will have the opportunity to analyze filmic scene making, learn advanced representation and techniques in matte painting and zbrush. Above all this course will engage students in the conceptual as well as practical complementarities of architecture and cinema, while watching some of the best films ever made and the most provocative and insightful books to help process them. An important aspect of this course will be to explore the differences between "real" architecture and the cinematic architecture. The expansive Space and Time in which cinematic architecture is located, creates an incubator where true innovated speculation can occur. This is an advanced representation course that produces 2D images and narrative texts.
Spring
1 Course Unit

ARCH 7470 Robotic Fabrication
Automation and robotics have helped manufacturing increase productivity by 1,500% since 1945 (McKinsey 2017). In contrast, however, construction productivity has remained relatively stagnant during the same time. The construction industry is facing pressure to change. For the robotics industry, construction presents potential use cases and unique applications that can utilize a variety of evolving technologies from drones, ground robotics, teleoperation, machine vision, additive manufacturing, and assistive robotics. These technologies take advantage of the digital revolution and utilize ideas in automobile and aerospace engineering. Our interest in these technologies is that they open new opportunities for design. Robotic fabrication will explore the theory and design of a project that will form a component of the culminating design studio for the MSD AAD program. Theory will be exorloled through a series of lectures and the design component will focus on a one to one scale fabrication of a project determined by the design studio curriculum.
Summer Term
1 Course Unit

ARCH 7480 Architecture and the New Elegance
This design seminar will define and elaborate on the following topics for the digital discourse - the contemporary diagram, technique, structural thinking, systemic thinking and aesthetic projections. Technological innovations establish new status quos and updated platforms from which to operate and launch further innovations. Design research practices continually reinvent themselves and the techniques they use to stay ahead of such developments. Reinvention can come through techniques that have already been set in motion. Mastery of techniques remains important and underpins the use of digital technologies in the design and manufacturing of elegant buildings. But, ultimately, a highly sophisticated formal language propels aesthetics. The repositioning of design intent and the complex order generated by the behavioral techniques of multi-agent systems has implications for the affects which are generated as well as the nature of hierarchy within architecture. The distributed non-linear operation of swarm systems intrinsically resists the discrete articulation of hierarchies within Modern architecture and contemporary parametric component logic. The bottom-up nature of swarm systems refocuses tectonic concerns on the assemblage at the micro scale rather than the sequential subdivision of program or form. The seminar will explore strategies for high population agent models through the use of lightweight algorithmic environments, in particular the Java-based platform Processing.
Spring
1 Course Unit

ARCH 7490 Indeterminate Delineations
Architecture has always been closely entangled with modes of vision. Devices ranging from Durer’s perspective machine to the photographic eye have strongly shaped the way we think and design the built environment of our cities. A strange loop is in place here: our world-views provide the development of specific modes of representation, of engagement with the world, and in turn they begin to have an impact in that same world, becoming an active element in the way we understand it. Put more simply, it is the technologies through which we see and experience the built environment that define the way we construct it. In this class, we will focus on visual and physical points as anchors to tie modes of vision with modes of construction. Points play an important role in the history of visuality: if during Impressionism and Pointillism they were devised to delineate the contrast and alignments between what we see and how we see it in an attempt to investigate the mechanics of vision, it was during the post war period that Max Wertheimer’s work at the Berlin School of Gesalt Psychology leveraged them as graphic elements to understand part to whole relationships central to Bauhaus’ design pedagogy. Today, imaging technologies are once again placing points as central elements in the construction of our contemporary visual language, transforming ever-growing datasets of partial images in three dimensional machine readable survey models: it is with points and aggregated clouds that we are constructing the figure of our cities. As such, they become a necessary site of design investigation to move beyong monolithic views of the world. This class leverages the bi-product of scanning technologies - point clouds and image making - to explore inclusive modes of delineations: a visual sensibility to engage with the multifaceted nature of the built environment.
Fall
1 Course Unit
ARCH 7500 Parafictional Objects
This representation/design seminar explores the aesthetics of estrangement in realism through various mediums. The reality of the discipline is that architecture is a post-medium effort. Drawings, Renderings, Models, Prototypes, Computations, Simulations, Texts, and Buildings are all put forward by architects as a speculative proposal for the reality of the future. Students will explore the reconfiguration of a "found object" in multiple mediums and represent parafictional scenarios in various techniques of realism. At a time when rendering engines enable the production of hyper-realistic images within the discipline without any critical representational agenda, it has become ever more imperative to rigorously speculate on realism.

Fall
1 Course Unit

ARCH 7510 Ecology, Technology, and Design
This course will examine the ecological nature of design at a range of scales, from the most intimate aspects of product design to the largest infrastructures, from the use of water in bathroom to the flow of traffic on the highway. It is a first principle of ecological design that everything is connected, and that activities at one scale can have quite different effects at other scales, so the immediate goal of the course will be to identify useful and characteristic modes of analyzing the systematic, ecological nature of design work, from the concept of the ecological footprint to market share. The course will also draw on the history of and philosophy of technology to understand the particular intensity of contemporary society, which is now characterized by the powerful concept of the complex, self-regulating system. The system has become both the dominant mode of explanation and the first principle of design and organization. The course will also draw on the history and philosophy of technology to understand the particular intensity of contemporary society, which is now characterized by the powerful concept of the complex, self-regulating system. The system has become both the dominant mode of explanation and the first principle of design and organization.

Fall
1 Course Unit

ARCH 7520 EBD Research Seminar
Directed student research of selected topics in environmental building design. These topics will be further explored in ARCH 7080: Bioclimatic Design Studio and will provide the basis for the research documents developed with each student’s design project. Course work will include lectures, discussions, weekly readings, and in-class exercises. Each student will be required to make a presentation and submit a research report.

Fall
1 Course Unit

ARCH 7530 Building Performance Simulation
The course provides students with an understanding of building design simulation methods, hands-on experience in using computer simulation models, and exploration of the technologies, underlying principles, and potential applications of simulation tools in architecture. Classroom lecturers are given each week, with a series of analysis projects to provide students with hands-on experience using computer models. This course is required and reserved for MSD-EBD students.

Fall
1 Course Unit

ARCH 7540 Performance Design Workshop
The workshop applies simulation and diagramming techniques to a series of discrete design projects at different scales. The emphasis is on refinement and optimization of performance based building design. Performance analysis techniques can provide enormous amounts of information to support the design process, acting as feedback mechanisms for improved performance, but careful interpretation and implementation are required to achieve better buildings. Energy, lighting, and air flow are the three main domains covered in the workshop. Students will learn how to utilize domain tools at an advanced level, and utilize them as applications to examine the environmental performance of existing buildings. Using the results of analytical techniques, the students will develop high-performance design strategies in all three domains. Lectures will be given on specific topics each week. A series of analytical class exercises will be assigned to provide students with hands-on experience in using the computer models. A case-study building will be provided at the beginning of the course and students will model different components each week throughout the semester. Every week students present the progress of their work, which will be used to correct methodological and technical issues. Energy, lighting, and air flow are the three main domains covered in the workshop. Students will learn how to utilize domain tools at an advanced level, and utilize them as applications to examine the environmental performance of existing buildings. Using the results of analytical techniques, the students will develop high-performance design strategies in all three domains. ARCH 7550 Environmental Innovation and Prototyping
The MSD-EBD students will develop research papers related to the work done in ARCH 7080 Bioclimatic Studio and ARCH 7540. The students will learn how to plan and conduct experiments and will develop the tools to write research papers based on these experiments. During the semester, exemplar case-studies of novel work in architectural technology will be presented to the students by the instructor and guest lecturers. The prototype developed during the course may be a digital prototype such as a simulation tool, or a physical prototype which will be tested using sensing techniques.

1 Course Unit

ARCH 7580 Resilience: Project Energos, Nevada, Japan, Taiwan
This seminar explores a broad range of topics around the subject of Resilience and Sustainability. We will use a green infrastructure property development currently under construction in real time as our focus, Project Energos, a massive green field site in Nevada by Los Angeles developer TerraScale. This research seminar will support a subsequent 700-level studio offering in Fall. Students are welcome to enroll in this seminar with or without taking the studio. The subject is relevant to all students interested in understanding how action is currently being taken in the United States through a global lens advancing a resilient agenda.

Spring
1 Course Unit
ARCH 7610 Introduction to Real Estate Development for Architects
The course introduces students to the participants and components to the development process, as well as specific development strategies and design tools for engaging them. Design in this sense is not simply a vision, or a concept utilized for obtaining approvals, it is understood as an encompassing set of procedures that both allow for and ensure that goals are being met at all stages of a project, from early conception through the approval process and building construction. Students will learn how to engage municipal land-use laws and regulations, produce strategies for geometric development based on land-use and environmental constraints, and use simulation to perform value-adding operations to a development proposal. Through lectures and exercises, students will have the opportunity to analyze a building and the redevelopment procedures surrounding it, and develop a geometric response and then parse data from that model to drive a series of documents relating to project cost, funding, and schedule. These documents will be analyzed against a variety of construction means and funding models so time- and cost-effective basis that meets design intentions can be developed. This course is primarily intended for Architecture Students who wish to enroll in the Real Estate Design and Development Certificate.
1 Course Unit

ARCH 7620 Design and Development
This course provides an overview of the real estate development business looked at in relationship to urban design, city planning, and architectural design. It provides exposure to the many real-world considerations of private sector development as well as an introduction to the language of real estate. The class focuses on various commercial building types and product offerings with examples of how planning, architectural and other design professions fit into creation of real estate value and the development process. This will cover the practical considerations and typical trade-offs of commercial business practices and real estate investment parameters and how these influence the ways developers and designers work. Industry sectors may include housing (single, multifamily and affordable), office, retail, hospitality, and industrial, with project types ranging from greenfield, adaptive reuse, downtown development, mixed-use projects, and planned communities. Through exercises, lectures and case studies, we'll address what drives the decisions designers and non-designers make in the development process, and provide insight to help designers understand what makes developers tick. Visiting lecturers (typically architects and developers) will provide real-world examples. Weekly written exercises, case studies and presentation assignments stress critical thinking, evaluating projects by how well they do their job and analyzing how that job is defined.

Spring

ARCH 7650 Project Management
This course is an introduction to techniques and tools of managing the design and construction of large, and small, construction projects. Topics include project delivery systems, management tools, cost-control and budgeting systems, professional roles. Case studies serve to illustrate applications. Cost and schedule control systems are described. Case studies illustrate the application of techniques in the field.
Spring
1 Course Unit

ARCH 7680 Real Estate Development
This course evaluates "ground-up" development as well as re-hab, re-development, and acquisition investments. We examine raw and developed land and the similarities and differences of traditional real estate product types including office, R & D, retail, warehouses, single family and multi-family residential, mixed use, and land as well as "specialty" uses like golf courses, assisted living, and fractional share ownership. Emphasis is on concise analysis and decision making. We discuss the development process with topics including market analysis, site acquisition, due diligence, zoning, entitlements, approvals, site planning, building design, construction, financing, leasing, and ongoing management and disposition. Special topics like workouts and running a development company are also discussed. Course lessons apply to all markets but the class discusses U.S. markets only. Throughout the course, we focus on risk management and leadership issues. Numerous guest lecturers who are leaders in the real estate industry participate in the learning process. Format: predominately case analysis and discussion, some lectures, project visits.
Also Offered As: REAL 8210
Prerequisite: REAL 7210 OR FNCE 7210
1 Course Unit

ARCH 7710 Professional Practice II
A continuation of ARCH 6710. Further study of the organizational structures of architectural practices today, especially those beyond the architect's office. The course is designed as a series of lectures, workshops and discussions that allows students and future practitioners the opportunity to consider and develop the analytical skills required to create buildings in the world of practice.

A four to six week program of study in various locations. For program details: www.design.upenn.edu/architecture/graduate/graduate-architecture-study-abroad
0-1 Course Unit

ARCH 7910 ARCH Summer Institute: Digiblast
This is a non-credit course for entering Master of Architecture students. The course will cover digital modeling and workflow and will prepare students for techniques used in the Architecture program's 5000 and 6000 level design studios. Course enrollment is by permit only.
Summer Term
0 Course Units
ARCH 7920 ARCH Summer Institute: Advanced Architectural Design Digital Workshop
This is a non-credit course for entering Master of Science in Design: Advanced Architectural Design students. The Digital Methods workshop provides a comprehensive introduction to four elements critical to the workflow of the graduate studios at PennDesign: 3D modeling, scripting, visualization and fabrication. Short daily lectures situating digital technologies in contemporary design practice are followed by hands-on tutorials in Maya and Rhinoceros. The first half of the workshop provides an operative knowledge of the many geometry types, modeling techniques, scripting languages and simulation tools available for studio work. Visualization techniques are also introduced, and students will learn to efficiently produce presentation-quality renderings, animations and technical line drawings from digital models. Students also learn protocols for transferring data between various design software packages and how to create data compatible with PennDesign’s digital fabrication equipment. Course fee: $750.00. Course enrollment is by permit only.
Summer Term
0 Course Units

ARCH 7930 ARCH Summer Institute: History of Architecture
This is a non-credit course for entering Master of Architecture students. The course will cover western architecture from ancient Egypt to the modern age and will satisfy the history pre-requisite condition for matriculation in the fall. Course fee: $750.00. Course enrollment is by permit only.
Summer Term
0 Course Units

ARCH 7940 ARCH Summer Institute: Physics for Architects
This is a non-credit course for entering Master of Architecture students. The course will cover the following: mechanics, heat, light, sound and electricity. The course will satisfy the physics pre-requisite condition for matriculation in the fall. Course fee: $750.00. Course enrollment is by permit only.
Summer Term
0 Course Units

ARCH 7990 Environmental Building Design Summer Preparatory Workshop
This is a required, non-credit course for entering Master of Science in Design: Environmental Building Design students. The workshop provides an introduction to digital modeling and scripting techniques for environmental performance analysis. Students also learn protocols for transferring data between various design software packages and how to create data compatible with the School of Design’s plotting and digital fabrication equipment. Course fee: $750.00. Course enrollment is by permit only.
0 Course Units

ARCH 8000 Introduction to 3D Programming
ARCH 8000 is a two week required introductory course for matriculating RAS students. This course introduces computer programming (Python, Grasshopper, etc.) within a 3D modelling/simulation environment, and introduces students to Penn’s ARI Robotics Lab.
0 Course Units

ARCH 8010 Material Agencies: Robotics & Design Lab I: Part I
Material Agencies Section 1 is the half-semester introductory studio to the Master of Science in Design:Robotics and Autonomous Systems (MSD-RAS) program at the University of Pennsylvania Stuart Weitzman School of Design. This course will introduce students to the Robotic Lab through a software / hardware routine to engage the ABB IRB4600-60 6-axes industrial robot with a hot-wire foam cutting end effector. The studio focuses exclusively on working with an industrial robotic arm and a large-scale hot-wire cutter end-effector to cut foam. This relatively simple robotic extension quickly introduces students to the robotic lab, robot interface and ultimately produces tangible results quickly, yet also highlights the designer's need to develop designs within geometrical constraints that are tightly related to specific manufacturing processes – in this case, the hot-wire cutter’s production of ruled surface geometries. Operating through ruled surface geometries enables the designer to have maximum control over the manufactured output whilst removing the need for post-design geometric rationalization or value engineering activities. The architectural project for the studio is a speculative ceilingscape re-design for one of the large galleries in Meyerson Hall that currently features a ubiquitous hung acoustical tile system.
1 Course Unit

ARCH 8011 Material Agencies: Robotics & Design Lab I: Part II
The Fall Material Agencies course consists of two half-semester long sections and is supported by two aligned Core Technical Seminars of half-semester length each. Students will typically work in pairs. Section 1: Programmed Matter: Introduces students to a generative approach to digital design and robotic manufacturing with the goal of unifying design and production within one creative process. The studio will commence with students gaining first-hand experience programming and operating Penn’s industrial robots. 3d design models will be developed in parallel to fabrication experiments and digital simulations. The design brief will focus on a small scale design prototype that is explored at a micro-scale of resolution relative to normative architectural practice. Material placement and material affect will be considered intrinsic to design expression and integral to considerations of space, form, structure and production concerns. The brief will focus on a small scale object or architectural part design with ornamental features. The course introduces material dynamics, robot programming, 3d modelling and computer programming within design. Section 2: Manipulative Matter explores both robotic fabrication and the use of sensors and actuators within responsive fabricated objects or architectural elements. Design Prototyping involving manipulation-based Manufacture. Eg. Sheet metal folding. This will complement the first studio by requiring more pre-determined design intent, fabrication rationalization and robot sensor and electrical integration. A final design prototype will demonstrate embodied material intelligence - through an integrative approach to material organization, electronic circuitry, production and design. Electronic wiring and parts will be integrated within larger material prototypes through fabrication methods such as: inlays, additive manufacturing, casting, soldering, painting, laser-cutting, or milling.
Fall
1 Course Unit
ARCH 8020 Material Agencies: Robotics & Design Lab II
This course will leverage knowledge gained by students in the Fall and set an ambitious aim for the experimentation, development and demonstration of a robotically manufactured design prototype that is intrinsically related to a bespoke production process. The end product will involve a 1:1 part or whole, physically fabricated work that will be accompanied by either a live demonstration or video production. During the first half of the semester students will engage in the development of bespoke robotic tooling, sensor and programming capabilities in order to create novel manufacturing processes that explore ideas of intelligent or autonomous manufacturing with an emphasis on responsive or manipulation based processes. Industry processes will be leveraged yet re-cast through creative engagement with manufacturing materials, tools and production operations. Participants will follow a brief that specifies a line of inquiry or scenario, whilst allowing some degree of self-direction. Projects will engage in a speculative and critical approach to architectural design, production and use while leveraging robotics platforms, methods for machine vision, sensing and learning, in addition to an engagement with material dynamics and computer programming within design research. A successful project is expected to: demonstrate a rigorously crafted design artifact; explore novel approaches to design, material fabrication and user engagement, questioning the role and nature of architecture's physical and cultural contribution; and explore novel forms of robotic production and representation. Some proposals will involve live or filmed demonstrator performances. All projects will require a computer simulation or animation that demonstrates a temporal consideration for design, manufacture or use. The course introduces robot tooling, sensor-feedback procedures, 1:1 material prototyping, and building design with tectonic considerations. Examples of potentially relevant industry processes include: sheet-metal bending, incremental metal forming, additive and subtractive manufacturing.
2 Course Units

ARCH 8030 General Overview of Algorithmic Design and Robotic Fabrication
Directly supports ARCH 8010 Material Agencies I: Section 1. This seminar will teach students computer and robot programming skills that will be utilized to deliver a complimentary and integral aspect of design-prototyping and fabrication work. Topics will vary in application to suit the studio brief. Participants will be introduced to the Robotics Lab, and will learn to set up ABB Industrial Robot tasks. Design algorithms will be developed that establish a conceptual relationship to the manufacturing process and attempt to leverage it for creative forms of design expression whilst addressing material and production performance constraints. Examples include computer programming that simulates a material placement and robotic manufacturing process such as additive manufacturing, filament winding or weaving, and utilizes these tasks in a generative design methodology, where design character, variation in material organization is evaluated relative to performance criteria such as material quantities, production time, etc. Submissions will be technical in nature and will also be implemented within ARCH 8010 prototypes. The course provides a foundation for more specialist technical development in Semester 2.
0.5 Course Units

ARCH 8040 Advanced RAS Programming
This course will support ARCH 8020 Material Agencies II with a greater level of technical competency and detail. More ambitious functionality will be developed that will enable student's greater degrees of freedom and creativity in their engagement with design and production processes. While students will not engage in science/engineering development, research and software developed in such disciplines will be applied within design, fabrication and user occupation orientated scenarios. Topics will vary in application to suit studio briefs and shifting capabilities within industry and academia. Examples include mechanical and electrical design for bespoke robot tooling, use of Computer Vision for real-time sensing and live behavior-based adaptation, machine learning in design or fabrication applications, or deeper engagement in robot communication and control (E.g. Linux ROS Robot programming framework).
1 Course Unit

ARCH 8050 Intro to Cyberphysical Systems
Directly supports ARCH 8010 Material Agencies I: Section 2. This seminar will teach participants to design and assemble electronic circuits using sensors/actuators and micro-controllers, and to program digital and analogue means of data exchange. Students will develop a closed or open loop reactive system that consists of embedded sensor systems that will operate within the Design Studio project prototype, and utilizes feedback from sensors to drive designed affects (E.g. kinetic, lighting, variations in porosity). The course will consider degrees of control, feedback, energy and force in relation to interactions of matter, space and active bodies (human and non-human). Participants will learn how to design electric circuits, solder and weld these and to integrate circuits with micro-processors, sensors and actuators. Exact equipment and methods will vary over time as these technologies evolve rapidly. At present possible micro-controllers utilized include Arduino, Raspberry Pi, Odroid, Intel Nuc, Atom and others. Sensors such as flex, pressure and proximity sensors will be utilized. Possible forms of actuation include servo and stepper motors, linear actuators, NiTinol muscle wire, pneumatic actuators. A Programming Language will be utilized to for the writing of simple control algorithms that clarify how input and output data is processed and acted upon, with a particular focus on leveraging physical world actions within a designed control loop where possible.
0.5 Course Units

ARCH 8060 Experimental Tooling
This course aims to extend knowledge into state of the art materials, material applications and fabrication methods and contribute research and experimental results towards ARCH 8020 Material Agencies II course prototypical projects. Operating predominantly through research and controlled physical experiments, students will develop a material strategy for their ARCH 8020 Material Agencies II work, investigating scientific research papers, industry publications and precedent projects in order to develop know-how in materials and material applications. A material application method will be proposed and experimented with to evaluate and develop use within a robotic fabrication process. Submissions will incorporate experimental test results, methods and precedent research documentation.
1 Course Unit
ARCH 8070 RAS Theory
This seminar provides a theoretical context to the program, relating autonomous robotics and fabrication research to architectural discourse, philosophy, science and technology. The course commences with a historical overview of scientific topics including cybernetics, complexity theory, emergence/self-organization, evolution/developmental biology, behaviour-based robotics. The course also critically assesses present and future societal trajectories in relation to technology, exploring socio-political, ethical and philosophical arguments that concern a broader technological shift that has occurred during the last decade which has given rise to our unquestioned reliance on algorithms within our everyday lives (social media, shopping, navigation), and similar impact from Urban OS’s, Industry 4 and driverless car technologies. Readings cover philosophy, computer science, cybernetics, robotics, sociology, psychology, and will be discussed in relation to their consideration within the domain of architectural design and building technology. Examples include: Blaise Aguera y Arcas, Maurice Conti, Norbert Weiner, Kevin Kelly, Ray Kurzweil, Ed Finn, Donna Haraway, Andre Gorz, Bruce Sterling, Daniel Kahneman, Timothy Morton, Levi Bryant. A theoretical written statement related to ARCH 801 Material Agencies I Section 1 or 2 will be produced by participants within this core seminar.
1 Course Unit

ARCH 8080 Scientific Research and Writing
Following a framing of architectural design-research and theory in Semester 1, this course aims to provide students with knowledge of state of the art robotics and design taking place in the research community and to introduce methods to evaluate and demonstrate academic research that encompasses both creative and technical work. Submissions will include a technical written statement related ARCH 8020 Material Agencies II work, which will be produced by participants under direction within this core seminar. This will train students for additional technical career opportunities and raise the level of discourse and prospects for further research from the program and its participants to a level suitable for continuation within PhD studies.
1 Course Unit

ARCH 8110 Theories of Architecture: Environments, Techniques, and Expressive Means
This theory seminar provides an in-depth review and discussion of key architectural texts on the topics of space, place, climate, networks, form, tectonics, surface, materiality, craft, technology, and digital landscapes. It unfolds the ways in which ideas condition and inspire the practice of architecture, and how architectural creation contributes to the way one thinks discursively about the world. The seminar equips those embarking on careers in teaching, scholarship, and research in architecture with the practices and methods of scholarly inquiry that are typical in the field. Students will read various texts on each topic, respond to the readings, present them, lead discussions, and write a research paper. The seminar is a core requirement for students in the PhD and Master of Science in Architecture programs, who come from both technology and history and theory backgrounds. The seminar is open for registration to all graduate level students. The assignments for non-PhD / MS students are adapted to their level of study.
Fall
1 Course Unit

ARCH 8120 Methods In Architectural Research
Methods in Architectural Research is a seminar aimed at first year, second semester PhD and MS students in Architecture who aim to develop their field definition (biblio + statement) and/or research proposal in pursuit of their advanced research degree. The course is also of interest to M.Arch students interested in advanced forms of academic research. The course will cover the full context of research methods in both the humanities and sciences attendant to architecture. Students will be tasked with identifying and naming a field of study, an initial research question to investigate, a methodology they will employ, and a value proposition for their work.
Spring
1 Course Unit

ARCH 8130 Qualifying Research
This is an independent study course for first year Ph.D. and M.S. students, supervised by a member of the Graduate Group in Architecture. A course of readings and advisor sessions throughout the semester will result in an independent study paper, which will also be used as the student’s qualifying paper for the Qualifying Examination. This research paper will be prepared as if for scholarly publication.
Spring
1 Course Unit

ARCH 8140 The Concept of an Avant-Garde
No historian of architecture has written as intensely about the contradictions of architecture in late-modern society or reflected as deeply on the resulting problems and tasks of architectural historiography as Manfredo Tafuri (1935-1994). For many, the Italian historian’s dismissal of “hopes in design” under conditions of advanced capitalism produced a disciplinary impasse. This in turn led to call to obliter Tafuri - to move beyond his pessimistic and lacerating stance. The seminar will undertake a close reading of one of Tafuri’s most complexly conceived and richly elaborated books, The Sphere and the Labyrinth: Avant-Gardes and Architecture form Piranesi to the 1970s. Initially published in Italian in 1980 and translated into English in 1987, the book represents the first effort to define and historicize the concept of an avant-garde specifically in architecture. Its content centers on the radical formal and urban experiments of the first three decades of the twentieth century. Yet Tafuri surprisingly begins his account with the eighteenth-century inventions of Piranesi, and he concludes with an examination of the “neo-avant-garde” of his own day. In addition to traversing The Sphere and the Labyrinth chapter by chapter - starting with the extraordinary methodological introduction, "The Historical "Project"" - we shall also read a number of primary and secondary sources on the historical contexts under discussion and consider a number of important intertexts that shed light on Tafuri’s position. The objectives of the course are at once historical and historiographic: we shall we shall be concerned both with actual events and with how they have been written into history. Finally, we shall reassess the role of an avant-garde in architecture and compare Tafuri’s conception to that advanced in other disciplines. Is the concept of an avant-garde still viable today? Or should it be consigned to the dustbin of twentieth-century ideas? Assignment for first class: read the introduction to The Sphere and the Labyrinth, pp. 1-21, "The Historical "Project."” A copy of the book is on reserve at the library. Note: the book is out of print. For future classes please make every effort to purchase a used copy or obtain one via interlibrary loan. Copies of individual chapters will also be made available on our class website.
Spring
1 Course Unit
ARCH 8150 Research Report
The candidate for the M.S. in Architecture degree shall prepare a research report in his or her subject of study. The topic of this report must be approved by an advisor. This report will be developed in the independent study courses, undertaken after the eight units of course work has been completed, normally in the summer semester. The purpose of these courses is to give the student an opportunity to synthesize their previous coursework at Penn. Course enrollment is by permit only. Please contact Sarah Lam (ARCH Dept.) at sarahlam@design.upenn.edu.
Fall
2 Course Units

ARCH 8160 Advanced Topics in Architecture Culture from World War II through 2001
This seminar will be taught as an advanced section of ARCH 5120. It is primarily for students who are in their first year of the PhD program in Architecture but it is open to other upper-level students with instructor permission. In addition to the weekly discussion-format seminar on Tuesday afternoons (1.5 hours), students are also expected to attend the lectures associated with ARCH 5120 on Tuesday mornings (10:30-12). Assigned readings will go beyond those on the ARCH 5120 syllabus to include more complex and sophisticated source material. The subject of both ARCH 5120 and ARCH 8120 is the evolution of the culture of architecture from World War II to the turn of the twenty-first century. Starting with the period of wartime planning and postwar reconstruction in the 1940s, we will move decade by decade up to the present century, considering the transformations of modernist culture under the impact of social, political, technological, and urban changes. We will address the challenges posed to architecture from inside as well as outside the discipline and from around the world, attending to material and ideological developments and to relations between individual protagonists and larger historical and institutional forces. Among the wide range of issues at stake are the impact of research and technology coming out of the world war; the intensifying critique of interwar functionalism and debates over monumental humanism, regionalism, history, aesthetics; the effects of suburbanization, expanded mobility, changing demographics, and environmental factors; the phenomena of consumer culture and mass media; the impact of the Cold War and decolonization; the emergence of a "global village" and its intensifying cultural exchanges; the rise of a new architectural avant-garde in the 1960s and the advent of postmodernism; plus more recent ramifications. At the level of theory and methodology, the seminar will be especially concerned with issues of periodization and documentation. We will discuss and debate the question of how "architecture culture" is produced and reproduced at particular moments in history. Seminar discussions will be focused around specific case studies, some to be determined by the instructor, the rest based on in-depth individual research products to be carried out by the members of the class. Each student will work on his or her case-study project over the course of the semester, leading to an in-class presentation and a term paper of 25 pages.
Spring
1 Course Unit

ARCH 8510 Field Bibliography
This course is essentially an independent study, undertaken by doctoral students in preparation for the Candidacy Examination. This course should be taken in conjunction with ARCH 8520 after all other courses have been completed. Normally a member of the student's Dissertation Committee supervises this course.
Two Term Class, Student may enter either term; credit given for either
1 Course Unit

ARCH 8520 Dissertation Proposal
This course is essentially an independent study, undertaken by doctoral students in order to write the Proposal for the Dissertation. The Proposal is prepared before and defended during the Candidacy Examination. This course should be taken in conjunction with ARCH 8510 after all other courses have been completed. Normally a member of the student's Dissertation Committee supervises this course.
Two Term Class, Student may enter either term; credit given for either
1 Course Unit

ARCH 9950 Dissertation
Writing and submitting a dissertation are among the final steps leading to the award of the PhD degree. At the University of Pennsylvania, a student presents and defends the dissertation publicly, and then, with the approval of the dissertation committee and graduate group chair, submits the final manuscript for publication. Finally, the PhD degree is awarded to the candidate upon the recommendation of the Graduate Council of the Faculties.
Two Term Class, Student may enter either term; credit given for either
0 Course Units

ARCH 9980 Independent Thesis Study
Independent Thesis Study
1 Course Unit

ARCH 9999 Independent Study
This course enables students to undertake self-directed study on a topic in Architecture, under the supervision of a faculty member. Students are required to make a proposal for the study to the Department Chair, outlining the subject and method of investigation, and confirming the course supervisor at least two weeks prior to the beginning of the semester.
Fall or Spring
0.5-2 Course Units

Art & Archaeology of Mediterranean World (AAMW)

AAMW 5020 Mesopotamia 2200-1600 BCE
This seminar style class will focus on two canonical periods of Mesopotamian history from 2100-1600 BCE. It is structured to examine fundamental institutions of kingship, religion, economy, law and literature. Practices well established in Sumer by the end of the third millennium evolved during the first half of the second millennium BCE when Amorite speaking peoples assume central roles in Mesopotamian institutions. The class will be structured around case studies engaging key monuments of art, architecture and literature. It will be team-taught by Prof. Pittman, focusing on material remains and visual arts and by Prof. Steve Tinney who brings expertise to the rich cuneiform textual traditions. Also offered as: ANTH 5024, ARTH 5240, NELC 5020
1 Course Unit
AAMW 5120 Petrography of Cultural Materials
Introduction to thin-section petrography of stone and ceramic archaeological materials. Using polarized light microscopy, the first half of this course will cover the basics of mineralogy and the petrography of igneous, metamorphic and sedimentary rocks. The second half will focus on the petrographic description of ceramic materials, mainly pottery, with emphasis on the interpretation of provenance and technology. As part of this course, students will characterize and analyze archaeological samples from various collections. Prior knowledge of geology is not required.
Not Offered Every Year
Also Offered As: ANTH 5211, CLST 7311
1 Course Unit

AAMW 5190 Ancient Greek Colonies
This seminar examines the archaeology of Greek colonization from the Late Bronze Age to ca. 500 B.C. These colonies were highly diverse in their motivations, physical settings, and political and social structures, as well as in their relationships with mother cities and the new worlds they inhabited. Emphasis is placed on the colonial experience as a cross-cultural and negotiated process; several streams of the changing theoretical and conceptual approaches to Greek colonization are explored. In addition to archaeological and epigraphic evidence, literary and historical traditions are examined. Colonies from the southern Balkan peninsula, Black Sea, Ionia, northern Africa, and Magna Graecia will be the focus of reading and reports. Seminar meetings will consist of oral reports and discussion of these reports and other topics. Depending on the number of participants, each person will be responsible for two or three reports of approximately 30-45 minutes length. Accompanying the oral report will be a PowerPoint document (in most cases), a synopsis/summary of one to two pages, and a bibliography. These will all be posted on the course Canvas site. No later than one week before an oral presentation, the presenter will identify one or two key readings for all to read, in consultation with the instructor. These will be posted, in PDF format, on the Canvas site. One or more visits to the Penn Museum may be built into the course.

Also Offered As: ANCH 7310, CLST 7310
1 Course Unit

AAMW 5200 Aegean Bronze Age Art Seminar
In this class, we will explore the art and cultures of the Aegean Bronze Age in Greece, a period from roughly 3,300-1,100 BCE. From this time, we have the first evidence of complex society in Greece with three geographically and materialistically distinct groups of people located on the Greek Mainland, the Cycladic islands, and the island of Crete. Topics will vary from semester to semester, but may include and not be limited to the examination of the architecture, pottery, wall paintings, stone carvings, jewelry, seals, weapons and other metalwork, and the iconography of these prehistoric arts. We will also delve into issues of the organization of society and the distribution of power, the role of women and men, trade and the unique position of the (rather small) Aegean world as it existed between two huge powerhouses of the ancient Mediterranean: the Ancient Near East and Egypt.

AAMW 5220 Ancient Iranian Art Seminar
This seminar will focus on the environmental, archaeological and textual record for settlement in the Persian/Arabian Gulf region from the Neolithic to the pre-Islamic Late Antique. Emphasis will be on the settlement history and material culture. Special attention will be paid to the close interaction of the local communities on the Arabian side of the Gulf with those on the Iranian/Indus valley side. The patterns of sea faring trade and interaction from Mesopotamia, Iran, Indus Valley and beyond will be considered. It is possible that this class will take a site trip to the UAE during the spring break, if the logistics can be arranged.

Also Offered As: ARTH 5220, NELC 5050
1 Course Unit

AAMW 5230 Narrative in Ancient Art
Art history, and its cousins in religious, social, political and literary studies, have long been fascinated with the question of narrative: how do images engage time, tell stories? These are fundamental questions for ancient Near Eastern, Egyptian and Mediterranean art history and archaeology, whose rich corpus of narrative images is rarely considered in the context of "Western" art. Relations between words and things, texts and images, were as fundamental to the ancient cultures we examine as they are to modern studies. As we weigh classic modern descriptions of narrative and narratology, we will bring to bear recent debates about how (ancient) images, things, monuments, and designed spaces engage with time, space, and event, and interact with cultural memory. We will ask "who is the story for, and why?" for public and private narratives ranging from political histories to mythological encounters. Our case studies will be drawn from the instructors' expertise in Mesopotamian visual culture, and in the visual cultures of the larger Mediterranean world from early Greek antiquity to the Hellenistic, Roman, and Late Antique periods. One central and comparative question, for instance, is the nature of recording history in pictures and texts in the imperial projects of Assyria, Achaemenid Persia, the Hellenistic kingdoms, and Rome.
Also Offered As: ARTH 5230, CLST 5412
1 Course Unit

AAMW 5231 Archaeological Field Methods
This seminar will prepare students for participation in the excavations at the site of ancient Lagash, modern Tell al-Hiba, in southern Iraq that are scheduled to take place in the fall semester. The topics to be considered are introduction to the recording methods, use of equipment, review of the ceramic sequence, methods of recording, drawing, photography. Permission of the instructor required for participation in the class.
Also Offered As: ARTH 5231
1 Course Unit
AAMW 5239 Surface Archaeology
Non-invasive and non-destructive methods make up an ever-greater proportion of archaeological investigations, for both intellectual and practical reasons. These methods comprise collection of data from the surface (pedestrian surface survey, geophysical prospection, geoarchaeology) and from above-ground platforms (drones, aircraft, balloons, kites, satellites), using a variety of sensors from human perception to multispectral scanning devices. The data acquired from these methods complement the contextual information drawn from traditional excavation, but also allow the archaeologist to address diverse research questions at a scale much greater than the excavated site. Aspiring archaeologists should have a good working knowledge of surface archaeological methods. In this course, we will delve deeply into these methods, and read and analyze case studies to expose strengths and weaknesses and to identify best practices. Students will have the opportunity for hands-on training in the Philadelphia area or elsewhere. 
Not Offered Every Year
Also Offered As: ANTH 5231, CLST 5321
1 Course Unit

AAMW 5241 Courtly Life in Mesopotamia, Persia, and the Mediterranean
Who could approach and speak with the Sumerian Queen? What rules governed a banquet with the Persian king? What was the most elegant way to drink wine? Where were the women in the Assyrian court? With hundreds of people crammed into a palace, was hygiene important? How were court guests treated? What games were played at court? Is the stereotypical image of the “Oriental” court characterized by lust, backstairs intrigue, flatteries, and secrets sustainable in the light of new evidence and theoretical approaches? The court at the same time is considered as a large amorphous body in a physical location or an institution, or a group of people, or even to particular events. This seminar style course considers Middle Eastern courts from the Sumerians through the Assyrian and Persian empires articulating shared and diverse features. Textual, visual, material and archaeological sources are considered through sociological and anthropological theories and core concepts such as groups, individuals, ultrasociality, proxemics, sociopetal, sociofrugal and purity to name a few. Comparisons with later courts in the Middle East are welcome. 
Also Offered As: ARTH 5241, NELC 5054
1 Course Unit

AAMW 5250 Borderlines: Art and Artifact in the Roman Empire
What made art and artifacts ‘Roman’, or not, in a Roman world? ‘Roman provincial art’ is an active scholarly category. This seminar reframes it, to test productive models to understand visual culture outside the empire’s Italian heartland from the Late Republic into Late Antiquity, in the Roman polity’s interactions with many peoples in situations of diaspora, colonization, hegemony, conflict, economic exchange, and religious interaction. As ‘Rome’ expanded, cultural relations across many borderlines – social, ethnic, territorial - potentially became cultural politics. A traditional topic for that has been Roman interaction with Greek culture. This seminar extends that range, while tackling ‘Hellenization’, as we reflect on models of ‘Romanization’, globalism and identity formation within the imperium’s boundaries in its provinces and client kingdoms, and also at its frontier zones. Various disciplines apply: art history, archaeology, history, and more. Case studies, evolved with students, may range from Britain to Iran, northern Africa to the Black Sea in space and, in time, from interactions with the Hellenistic East and West and with Iron Age Europe, to the age of Germanic, Sasanian and Ummayad conquests of Roman terrain, ca 3rd c. BCE-7th c. CE. The market in art and artifact, the nature and status of makers, and conditions of patronage and viewing are key considerations. Private and public objects, images, architecture and urbanism, and landscapes can all concern us, as we try out disciplinary approaches that take in eg cultural appropriation, translation and hybridity, creolization, discrepant experience, object agency, and communities of taste and style. ‘Ethnicity’ is a loaded concept in ancient Mediterranean studies, as is ‘race;’ our course must engage those, and the ways in which things and styles have been made to serve those terms. And who owns, is heir to, the cultural legacies we look at, and how to name them, are problems that tangle with current national identity formation, and academic and museum practice. Our own Museum’s holdings can make topics. Students are welcome to bring in interests in language and text cultures, in disciplines outside art history and archaeology, and in other world cultures and epochs.

AAMW 5251 Roman Political Art Seminar
This seminar looks at how Roman things, images and the designed environment so often spoke to political and sociological realities. The material world was not just a document of history: it was history. Open to graduate and undergraduate students. 
Not Offered Every Year
Also Offered As: ARTH 5251, CLST 7404
1 Course Unit
AAMW 5252 Late Antique Art and Artifact Seminar
What is 'Late Antiquity'? In 312 when Roman emperor Constantine inaugurated a Christian empire, 'Roman' culture was centuries old. The period ca. 200-650 CE saw profound transformations that launched Medieval, Byzantine and Islamic traditions. In this epoch of upheaval destruction was frequent but partial: Rome long survived, Constantine's 'new Rome,' Constantinople flourished, and around the Empire both protoglobal visual culture and local forms prospered. Roman cultural models authorized both innovation and passion for tradition: we critique art-historical models for Late Antique 'decline,' analyse habits of material reuse and curation, and look at new Christian and Jewish roles for Roman things as well as polytheist visual survival. Foreign allies and enemies interacted with Greco-Roman Late Antiquity; we visit them too, as in the early Islamic palaces. Media discussed include not just 'monumental' painting, mosaic, sculpture, but also silver, ceramic, ivory, figured textile, glass, painted books, jewelry, coins and more. We look too at Late Antique texts on art, objects, space and viewership. This seminar is open to graduate and undergraduate students.

AAMW 5260 Material & Methods in Mediterranean Archaeology
This course is intended to provide an introduction to archaeological methods and theory in a Mediterranean context, focusing on the contemporary landscape. The class will cover work with museum collections (focusing on the holdings of the Penn Museum), field work and laboratory analysis in order to give students a diverse toolkit that they can later employ in their own original research. Each week, invited lecturers will address the class on different aspects of archaeological methodology in their own research, emphasizing specific themes that will be highlighted in readings and subsequent discussion. The course is divided into three sections: Method and Theory in Mediterranean Archaeology; Museum collections; and Decolonizing Mediterranean Archaeology. The course is designed for new AAMW graduate students, though other graduate students or advanced undergraduate students may participate with the permission of the instructor.

AAMW 5290 The Roman Idea of Landscape
Landscape was one of the most prominent themes in ancient Roman culture. The Roman visual and literary representations of natural scenery were adopted and expanded upon many Hellenistic themes. In the Roman period, however, for the first time in Western culture landscape was singled out as a theme in its own right; it was accurately described, its qualities were praised in the pastoral poetry of Virgil, and its idealized and symbolic representations permeated the public and private spheres: the garden paintings from the underground dining room of the Villa of the Livia at Prima Porta and the Odyssey Landscapes from the Esquiline are but two of many examples. This Roman sensitivity of landscape, attested in contemporary literary and visual sources, found an architectural expression in Roman luxury villas. In the realm of villa designs, gardens and landscapes could be represented in wall painting and realized in design at the same time. The villas provided literally a drawing board for Roman lovers of landscape. Late Republican and early Imperial poems, letters, and agricultural treatises read like expositions of architectural design exercises, vis-à-vis natural, cultivated and designed landscape, and how they delineated blueprints of villas – villa rustica, urbana, suburbana and the like. This course will examine literary and visual representations of natural scenery in the Greek and Roman cultures as well as Roman luxury villa architecture in order to address the ways in which Greek and Roman ideas and idealization of landscape contributed to the creation of a novel language of architecture and landscape architecture. Open to graduate and undergraduate students.

**AAMW 5292 Delos in Context**
Delos was an important cult centre since the archaic period whose activity was inextricably linked to its economic role. Due to its advantageous geographical position in the centre of the Aegean world, Delos commanded a huge cult network that intertwined religious with economic and political activities from the archaic period onwards. Communities competing for political power and leadership exploited the cult network of Delos over time; Ionians, Athenians, the successors of Alexander and finally Romans. This course will focus on three key moments of the island's history – the first Athenian dominion, the period of independence and the second Athenian dominion – in order to highlight the ways in which the competing powers used art and architecture in order to establish their presence on the sacred island. By studying the presence of the Athenians in the sanctuary of Apollo since the sixth century BCE, which culminated in their administration of the sanctuary during the fifth and fourth centuries (the first Athenian dominion), the course will tackle the cultural mannerisms of the period. By examining the architectural development of the sanctuary and the city of Delos during the period of the independence (314-167 BCE) the course will address the monumentalization of the sanctuary and the extension of the city through the euergetism of the successors of Alexander and the emergence of a new form of urban life in the Hellenistic period. The course will finally examine Delos during the period of the second Athenian dominion (167-69 BCE), when the Roman senate decided to make it a "duty free" port under Athenian suzerainty. By addressing the economic and urban developments of the late Hellenistic Delos the course will look at the contemporary trends in art and architecture, which in effect shaped those of the emerging Roman Empire. Open to graduate and undergraduate students. Not Offered Every Year

**AAMW 5293 Topos, Myth, and the Contemporary: Art Pracitices in Archaeological Sites and Mythological Places**
The seminar will map the intellectual agenda of contemporary art practices that engage with archaeological sites and important mythological places in Italy and Greece. Over the past two decades there has been an increasing interest of artists in archaeology and the classical past in Italy and Greece resulting in in situ art installations and performances, as well as reflective presentations of their interactions with the sites in a gallery space. These projects / installations / performances present a range of approaches: from investigations of cultural traditions, national norms and stereotypes that seek to tackle learned preconceptions and received histories of the classical, to the use of the archaeological site, mythologically poignant topos and myth as a backdrop for the contemporary – the Documenta 14 in Athens in 2017 may serve as a representative example of this range. The course will assess the intellectual and cultural landscapes of as well as the political strategies behind these contemporary art practices. Open to graduate and undergraduate students. Not Offered Every Year
Also Offered As: ARTH 5293
1 Course Unit

**AAMW 5305 Topography and Monuments of Ancient Rome**
An intensive exploration of Rome's urban topography during the Republican and Imperial periods (6th c. B.C. through 4th c. A.D.) Using archaeological and textual sources, including the Etruscan and Roman collections of the Penn Museum, the goal will be to reconstruct the built environment and decoration of Rome over the course of a millennium. Of interest to students of classics, archaeology, art history, and architecture. Some familiarity with Rome will be a plus, but is not required. Also Offered As: ARTH 5305, CLST 5305
Mutually Exclusive: CLST 5305
1 Course Unit

**AAMW 5320 The Icon**
This seminar explores the Byzantine icon and its legacy. Spanning nearly two millennia, from the emergence of Christian sacred portraiture to the reception of icon painting by the early twentieth-century Russian avant-garde, the seminar will introduce you to the history, historiography, and theories of the icon. While our focus will be on Byzantium and the wider world of Orthodox Christianity, especially in the Slavic Balkans and Eastern Europe, the seminar will also engage with fundamental questions concerning the nature, status, and agency of images across cultures. Topics to be addressed include iconoclasm and the problem of idolatry; the social and ritual lives of icons; authorship, originality, and replication; viewer response and the cultural construction of vision; the frontier between art and the sacred image; and the afterlife of the icon in modernity. Open to graduate and undergraduate students. Not Offered Every Year
Also Offered As: ARTH 5320, RELS 5022
1 Course Unit

**AAMW 5321 Art and Text in Byzantine Culture**
In Byzantine culture, images and material objects, on one hand, and texts —whether read, spoken, remembered, or inscribed—on the other, were closely interwoven on multiple levels. Debates concerning the role of images in religious devotion during the period known as Iconoclasm generated a huge body of theological writings about art. Descriptions of works of art, either independent or inserted into larger literary compositions, proliferated. In manuscripts, pictures were variously mobilized to complement, illustrate, interpret, or comment on the verbal message. Icons of sacred personages were commonly inscribed not only with identifying labels, but also with special epithets. Moreover, from monumental architecture to personal seals and pieces of jewelry, a vast array of objects bore inscriptions, often in the form of poetic texts, or epigrams. Script, sometimes illegible and nonsensical, also featured as ornament and visual sign. The written word was a source of power and authority as much as a means of communication. The aim of this seminar is to interrogate the interface between art and text in Byzantium. No knowledge of Medieval Greek is required for the course. All the inscriptions and primary sources to be discussed will be available in translation. Open to graduate and undergraduate students. Not Offered Every Year
Also Offered As: ARTH 5321
1 Course Unit
AAMW 5322 On the Wall: Mosaics and Frescoes
This seminar examines the economy, technology, and aesthetics of monumental paintings and mosaics decorating church spaces in Byzantium and the larger Mediterranean world of the Middle Ages. We will explore these site-specific, wall-bound images in the context of their making and reception by attending to the issues of artistic labor and patronage, materiality and pictorial medium, visual communication and ideological programming, and viewership and ritual action. Special consideration will be given to methodology. We will critically assess the traditional and current approaches to the study of monumental pictorial art and, more importantly, seek to formulate new perspectives and methods. Open to graduate and undergraduate students.
Not Offered Every Year
Also Offered As: ARTH 5322
1 Course Unit

AAMW 5323 The Chora Monastery and the World of Late Byzantium
This seminar is envisioned as a wide-ranging exploration of the art and culture of the Late Byzantine period (thirteenth through fifteenth century), with focus upon a key monument, the church of the former Chora monastery (Kariye Camii) in Istanbul. With its superb and highly original architecture, this church preserves an outstanding ensemble of monumental mosaics, frescoes, stone carvings, funerary monuments, colored marbles and glass, and inscriptions. Additionally, we possess a substantial body of texts illuminating various aspects of the monastery's history and, in particular, its restoration in the early fourteenth century by the statesman and scholar Theodore Metochites. The seminar will take this rich material and textual record as a point of entry into the world of Late Byzantium. Topics to be addressed include patronage and politics; artistic practice, visual aesthetics, and materiality; monasticism; death, time, and history; the interplay between art and literary culture; and Byzantium's interactions with the wider Mediterranean world, especially Muslim-ruled Anatolia, the Slavic Balkans, and Italy. Open to graduate and undergraduate students.

Also Offered As: ARTH 5323
1 Course Unit

AAMW 5360 Archaeology of Anatolia
This class is devoted to the archaeology and history of Anatolia (ancient Turkey) from the beginning of the Bronze Age (3000 BC) to the end of the Byzantine period (1453 AD). Emphasis will be placed on the great empires in Anatolia (Hittite, Phrygian, Lydian, Urartian, Persian, Roman, and Byzantine), and on the great cities (Troy, Sardis, Ephesus, Constantinople). The course is intended to complement the major exhibit on Gordion, the Phrygians, and Anatolian archaeology that will open at the Penn Museum in February of 2016 and run for 10 months.
Not Offered Every Year
1 Course Unit

AAMW 5390 Archaeobotany Seminar
In this course we will approach the relationship between plants and people from archaeological and anthropological perspectives in order to investigate diverse plant consumption, use, and management strategies. Topics will include: archaeological formation processes, archaeobotanical sampling and recovery, lab sorting and identification, quantification methods, and archaeobotany as a means of preserving cultural heritage. Students will learn both field procedures and laboratory methods of archaeobotany through a series of hands-on activities and lab-based experiments. The final research project will involve an original in-depth analysis and interpretation of archaeobotanical specimens. By the end of the course, students will feel comfortable reading and evaluating archaeobotanical literature and will have a solid understanding of how archaeobotanists interpret human activities of the past.

1 Course Unit

AAMW 5400 Medieval Art Seminar
Topic varies from semester to semester. For the Spring 2022 semester, the topic will be: Facing Fragments. So many traces of the medieval past come to us in fragmentary form, either literally broken, partial and incomplete, or figuratively, having been ripped from its program or findsite and shipped across the world. This course focuses on the strategies art historians and curators adopt to confront the realities of decontextualized museum collections - of how to face fragments. Considering approaches that range from research methodologies, conservation, installation, and preservation, we will also touch upon questions of restitution and ethics. Co-taught between Penn and the PMA, this course will constitute much hands-on learning.

1 Course Unit

AAMW 5420 Seafaring in the Ancient Greek World
This course explores ships, seafaring, and seafarers of the ancient Greek world from the Bronze Age (Minoans and Mycenaeans) to the Age of Alexander (Hellenistic period). Sources include shipwrecks and related artifacts, artistic representations, and ancient literature. The emphasis is not so much on the technical aspects of shipbuilding and navigation as on the ways that seafaring shaped Greek history and connected the Greeks to a wider world through trade, warfare, colonization, and adventure.

1 Course Unit

AAMW 5460 Museum Internship
The Museum Internship in the spring consists of a research project with Penn Museum collections based on a proposal designed and approved during the fall AAMW Proseminar. It is offered to, and is a requirement for, first-year AAMW graduate students only.
Spring
Prerequisite: CLST 6300
1 Course Unit
AAMW 5500 Archaeologies of Subalternity
This course addresses the various areas and approaches to "otherness" in ancient Mediterranean archaeology, and the power dynamics of oppression. We'll not only examine disempowerment around cultural identity, class, gender and sexuality, and race/ethnicity, but we'll spend equal time pondering how those subjects have been studied - or ignored - by classical archaeologists. The power relationships both inherent in the subjugation of various kinds of people in the ancient world, and in the academic discourses around them, are the themes of the course. While this course will be focused on the Bronze Age through late antique Mediterranean, those with other period/interests are most welcome. Students will be asked to bring their own interests to the course, which help shape the course. Upper-level courses in archaeology, anthropology, or ancient history are recommended prior to enrollment.
Not Offered Every Year
Also Offered As: CLST 5317
1 Course Unit

AAMW 5570 Archaeology of Landscapes
Traditionally, archaeological research has focused on the "site" or "sites." Regional investigation tends to stress settlement pattern and settlement system determined through archaeological site survey. This seminar will stress the space between the sites or "points" on the landscape. Most previous attempts at "landscape archaeology" tended to focus on the relationship of sites and the natural environment. This course will highlight the cultural, "anthropogenic," or "built environment"--in this case human modification and transformation of the natural landscape in the form of pathways, roads, causeways, monuments, walls, agricultural fields and their boundaries, gardens, astronomical and calendrical alignments, and water distribution networks. Features will be examined in terms of the "social logic" or formal patterning of cultural space. These can provide insights into indigenous structures such as measurement systems, land tenure, social organization, engineering, cosmology, calendars, astronomy, cognition, and ritual practices. Landscapes are also the medium for understanding everyday life, experience, movement, memory, identity, time, and historical ecology. Ethnographic, ethnohistorical, and archaeological case studies will be investigated from both the Old and New Worlds.

Also Offered As: ANTH 5570, LALS 5570
1 Course Unit

AAMW 5590 Myth Through Time and In Time
The textual and physical remains of Greek and Roman culture and belief as 'myth' entranced the post-antique European world and its neighbors. Makers, patrons and viewers manipulated these survivals to challenge and speak to a contemporary world. This course focuses on how and why artists and their patrons engaged the mythic and examines the various areas of political and religious life that sought animation through an evocation of narratives from the past. Readings and case studies will engage with very late antique, medieval, and early modern art, turning to the modern and contemporary as well. Moving to the modern lets us examine, among other things, how artists address the exclusionary histories of the past, to enable critiques of myths of supremacy by one gender, race, or culture over others.

1 Course Unit

AAMW 5620 Intro to Digital Archaeology
Students in this course will be exposed to the broad spectrum of digital approaches in archaeology with an emphasis on fieldwork, through a survey of current literature and applied learning opportunities that focus on African American mortuary landscapes of greater Philadelphia. As an Academically Based Community Service (ABCS) course, we will work with stakeholders from cemetery companies, historic preservation advocacy groups, and members of the African Methodist Episcopal Church to collect data from three field sites. We will then use these data to reconstruct the original plans, untangle site taphonomy, and assess our results for each site. Our results will be examined within the broader constellation of threatened and lost African American burial grounds and our interpretations will be shared with community stakeholders using digital storytelling techniques. This course can count toward the minor in Digital Humanities, minor in Archaeological Science and the Graduate Certificate in Archaeological Science.
Also Offered As: ANTH 5220, CLST 5620
Mutually Exclusive: CLST 3307
1 Course Unit

AAMW 5630 Penn Museum Curatorial Seminar: Reconfiguring the Classical World Galleries
The Greek galleries in the Penn Museum were opened in 1994, and the Etruscan and Roman galleries in 2003. The world was very different then, and many of the themes used to frame the artifacts in the galleries are not especially relevant to contemporary students, scholars, and visitors. In this course we will completely reorganize and reinstall the galleries digitally, creating a series of websites that will highlight the new layout and themes. We will work extensively with the Greek Etruscan, and Roman artifacts themselves to reconfigure the galleries, which will highlight the connections between antiquity and the contemporary world, focusing on themes such as armed conflict, trauma, migration, xenophobia, and wealth and poverty.
Also Offered As: CLST 5311
1 Course Unit

AAMW 5720 Geophysical Prospection for Archaeology
Near-surface geophysical prospection methods are now widely used in archaeology as they allow archaeologists to rapidly map broad areas, minimize or avoid destructive excavation, and perceive physical dimensions of archaeological features that are outside of the range of human perception. This course will cover the theory of geophysical sensors commonly used in archaeological investigations and the methods for collecting, processing, and interpreting geophysical data from archaeological contexts. We will review the physical properties of common archaeological and paleoenvironmental targets, the processes that led to their deposition and formation, and how human activity is reflected in anomalies recorded through geophysical survey through lectures, readings, and discussion. Students will gain experience collecting data in the field with various sensors at archaeological sites in the region. A large proportion of the course will be computer-based as students work with data from geophysical sensors, focusing on the fundamentals of data processing, data fusion, and interpretation. Some familiarity with GIS is recommended.
Spring, odd numbered years only
Also Offered As: ANTH 5720, CLST 7315, NELC 5925
1 Course Unit
AAMW 6130 Landscapes and Seascapes of the Ancient Mediterranean

The Mediterranean environment is both diverse and unique, and nurtured numerous complex societies along its shores in antiquity. This seminar offers a primer on theoretical and methodological approaches to studying landscapes and seascapes of the Mediterranean from the Bronze Age to the early modern era, at scales from local to international and on land and underwater. Concepts from processual, post-processual, and current archaeologies will be considered, and field techniques including excavation and surface survey, remote sensing and geophysics, GIS modeling, and ethnography/ethnoarchaeology are examined. Course content and discussion focus on case studies that illustrate how these tools are used to reconstruct the appearance and resources of the natural environment; overland and maritime routes; settlement location, size, function, and demography; social and economic networks; and agricultural, pastoral, and nomadic lifeways. Seminar participants will develop case studies of their own geographical and chronological interest.

AAMW 6180 Art and Architecture in Ancient Egypt

This course will be an introduction to the art, architecture and minor arts that were produced during the three thousand years of ancient Egyptian history. This material will be presented in its cultural and historical contexts through illustrated lectures and will include visits to the collection of the University Museum.

Also Offered As: ARTH 6180, NELC 6105
1 Course Unit

AAMW 6190 Digital Exploration of the Past: Archives, Databases, Maps, and Museums

This course exposes students to digital methods for investigating past environments and societies, including digitization of analog records, the construction and querying of databases, and the creation of digital maps. The ultimate goal of the course will be to carry out a final project that benefits the Penn Museum and the public. In fall 2018, our exploration of digital methods will center around the archaeological site of Ur (Tell el-Muqayyar), located in southern Iraq. Ur was one of the earliest cities in the world, and, thanks to campaigns partly funded by Penn in the 1920s and 1930s, is one of the best-excavated sites in southern Mesopotamia. Here at Penn, we have unparalleled access to archival documentation and artifacts from the site. We will draw upon this access to contribute to an on-going digital humanities project in the Penn Museum (the public "Ur Online" database). In the process, students will re-assess data that has the potential to change anthropological ideas about issues such as the environmental setting of the earliest cities and archaeological ideas about demographic and urban structure within the city of Ur itself. There are no prerequisites, but students must bring an interest in Mesopotamian archaeology and/or the origins of urbanism and be motivated to carry out individual and group research guided by the instructor & classmates.

AAMW 6240 Art of Mesopotamia

Visual expression was first developed in Mesopotamia in the same environment as the invention of writing. This lecture class will introduce the arts of the major periods of Mesopotamian History ending with the “cinematic” effects achieved by the Assyrian artists on the walls of the royal palaces. The strong connection between verbal and visual expression will be traced over the three millennia course of Mesopotamian civilization from the earliest periods through the imperial art of the Assyrians and Babylonians of the first millennium BCE. The class and the assignments will regularly engage with objects in the collections and on display in the galleries of the Penn Museum.

1 Course Unit
AAMW 6250 Greek Art and Artifact
This lecture course surveys Greek art and artifacts from Sicily to the Black Sea from the 10th century BCE to the 2nd century BCE, including the age of Alexander and the Hellenistic Kingdoms. Public sculpture and painting on and around grand buildings and gardens, domestic luxury arts of jewelry, cups and vases, mosaic floors, and cult artefacts are discussed. Also considered are the ways in which heroic epic, religious and political themes are used to engaged viewers’ emotions and served both domestic and the public aims. We discuss the relationships of images and things to space and structure, along with ideas of invention and progress, and the role of monuments, makers and patrons in Greek society.

AAMW 6260 Hellenistic and Roman Art and Artifact
This lecture course surveys the political, religious and domestic arts, patronage and display in Rome’s Mediterranean, from the 2nd c. BCE to Constantine’s 4th-c. Christianized empire. Our subjects are images and decorated objects in their cultural, political and socio-economic contexts (painting, mosaic, sculpture, luxury and mass-produced arts in many media). We start with the Hellenistic cosmopolitan culture of the Greek kingdoms and their neighbors, and late Etruscan and Republican Italy; next we map Imperial Roman art as developed around the capital city Rome, as well as in the provinces of the vast empire.

AAMW 6269 Classical Myth and the Image
The peoples of the ancient Greek and Roman worlds shared a vast body of stories about human and not-human beings set in a legendary deep past or supernatural present - "Classical myth." Even their neighbor cultures took up those stories (or, sometimes, gave them). The stories as spoken, read, or performed turn up in surviving ancient literature. But from the very point when Greek myth began to be written down, those stories were told with images also. Many arts of the Mediterranean world explored myth at temples and sanctuaries, in civic spaces, theaters, parks, houses and palaces, for tombs and trophies - and even on the body upon weapons, clothes and jewelry. Love and desire and hate, hope and fear, war and peace, pleasure and excitement, power and salvation, the nature of this world and the cosmos, justice and duty and heroism, fate and freewill, suffering and crime: mythological images probed the many domains of being human in order to move the emotions and minds of people (and of gods). Our class samples this story art to ask about its makers and viewers and contexts. What, also, were relations between images and texts and language? What about religious belief vs invention, truth vs fiction? What might it mean to look at this ancient art today, and to represent the old stories in post-ancient cultures? The class introduces ways of thinking about what images and things do; we will read in some relevant literature (drama, epic, novels, etc); and our Penn Museum will be a resource. No prerequisites—no prior knowledge of art history, archaeology, myth or Mediterranean antiquity is assumed.

AAMW 6300 Etruscan Art & Archaeology in the Penn Museum
The Etruscans, who spoke a language unlike any others known, were cast by their Greek and Roman rivals as outsiders and enemies: pirates, lovers of luxury, loose women. Today we must rely on the archaeological evidence of painted tombs, decorated Tuscan temples and massive engineering works to correct the picture. The course will survey a millennium (1st millennium BCE) of Etruscan culture through archaeological sites, works of art and everyday material culture, especially illustrated with objects in the collection of the Penn Museum. An additional insight into Italic culture comes from tomb groups excavated for the Museum at the Faliscan settlement of Narce. Students will gain familiarity with the societies of pre-Roman Italy through close study of their vases, jewels, arms, armor, textiles and tools, and even their very bones, and discover a surprising amount of Etruscan heritage surviving today.

AAMW 6320 Byzantine Art and Architecture
This lecture course offers a wide-ranging introduction to the art, architecture, and material culture of Byzantium—a Christian, predominantly Greek-speaking civilization that flourished in the Eastern Mediterranean for over a thousand years. Positioned between the Muslim East and the Latin West, Antiquity and the Early Modern era, Byzantium nurtured a vibrant and highly sophisticated artistic culture. With emphasis placed upon paradigmatic objects and monuments, we will examine an array of artistic media, from mosaics and panel painting to metalwork, ivory carving, book illumination, and embroidery. We will consider the making, consumption, and reception of Byzantine art in a variety of contexts—political, devotional, ritual, and domestic. Topics include the idea of empire and its visual articulation; court culture; the veneration of images and relics; patronage, piety, and self-representation; authorship and artistic agency; materiality and the sensory experience of art; the reception of the “pagan” Greco-Roman past; and the changing nature of Byzantium’s interactions with neighboring cultures.

1 Course Unit

AAMW 6400 Medieval Art
An introductory survey, this lecture course investigates architecture, painting, sculpture, and the "minor arts" of the Middle Ages. Students become familiar with selected major monuments of the Romanesque and Gothic periods, primarily in Western Europe as well as relevant sites around the Mediterranean. Analysis of works emphasizes the cultural context, the thematic content, and the function of objects and monuments. Discussions focus especially on several key themes: the role of luxury in the medieval west; the theological role of images; the revival of classical models and visual modes; social rituals such as pilgrimage and crusading; the cult of the Virgin and the status of women in art; and, more generally, the ideology of visual culture across the political and urban landscapes.

1 Course Unit

AAMW 6425 Late Antique Arts
What is 'Late Antiquity'? In 312 when Roman emperor Constantine inaugurated a Christian empire, 'Roman' culture was centuries old. The period ca. 200-650 CE saw profound transformations that launched Medieval, Byzantine and Islamic traditions. In this epoch of upheaval destruction was frequent but partial: Rome long survived, Constantine's 'new Rome,' Constantinople flourished, and around the Empire both proto-global visual culture and local forms prospered. Roman cultural models authorized both innovation and passion for tradition: we critique art-historical models for Late Antique 'decline,' analyse habits of material reuse and curation, and look at new Christian and Jewish roles for Roman things as well as polytheist visual survival. Foreign allies and enemies interacted with Greco-Roman Late Antiquity; we visit them too, as in the early Islamic palaces. Media discussed include not just 'monumental' painting, mosaic, sculpture, but also silver, ceramic, ivory, figural textile, glass, painted books, jewelry, coins and more. We look too at Late Antique texts on art, objects, space and viewership. This is an advanced undergraduate lecture course.

1 Course Unit
AAMW 6428 Hellenistic Art and Spectacle
Hellenistic usually names art in the age of Mediterranean culture from the 4th century BCE and the rise of Alexander the Great’s Macedon, and the Greco-Macedonian conquest of the Persian Empire, to Cleopatra of Egypt’s defeat by Rome at the end of the Republic. Our course looks also at the age of Augustus and his successors, 1st century CE. While Greek and Macedonian practice in city-states and kingdoms is our launching point, this course also looks at international culture and cultural interaction among peoples from North Africa and Etrusco-Roman Italy, Egypt, Anatolia, the Mideast and Central Asia. We probe art, artifacts, and visual display from a range of settings, from sanctuary to house, palace and parade, and in all media, from marble monuments to pottery and jewelry. Our archaeology of Hellenistic visual culture also looks at the rich body of Hellenistic and Roman texts of art history, art criticism, and the description of objects and image, to better understand the Hellenistic maker, patron, and viewer. No prerequisites.

AAMW 6470 Archaeological Fieldwork in Southern Iraq
After several decades of closure to foreign researchers, the heartland of the world’s earliest cities (southern Iraq) has reopened for archaeological expeditions. This course is a seminar for graduate students who will conduct fieldwork in Spring 2019 at two major Mesopotamian cities, Ur (Tell al-Muqayyar) and Lagash (Tell al-Hiba), as part of Penn-led teams. Leading up to fieldwork, we will conduct a critical review of past investigations at these and other contemporary Mesopotamian sites of the fifth-second millennium BC. We will discuss how recent work in northern Mesopotamia (Syria, SE Turkey, Kurdistan), Anatolia, and South Caucasus provides new archaeological approaches to be applied, new questions to be answered, and new models to be tested in southern Iraq. In the field, students will work alongside the instructor and other archaeological project staff to learn and hone excavation and survey techniques. During and following fieldwork, each student will conduct an independent project on material excavated and surveyed in the field at Ur and/or Lagash. This project should align with the student’s interests and will further the research program of the archaeological teams at Ur and Lagash.

AAMW 7230 Topics in the Art of the Ancient Near East
Topic varies. Fall 2019: During the short period of the Neo Sumerian Empire at the end of the third millennium BCE, Mesopotamian concepts of kingship were crystallized through images, buildings, and textual creations. This seminar will examine this central institution from many points of view that invite cross historical and cross-cultural consideration.
Not Offered Every Year
Also Offered As: ARTH 7230
1 Course Unit

AAMW 7240 Ancient Art of Mesopotamia Seminar
This graduate seminar will address various topics in the visual and architectural arts of ancient Mesopotamia. Topics include: Assyrian Reliefs, Art and Architecture of the Old Akkadian period, Early Dynastic art and architecture, and The Rise of first cities in Mesopotamia and Iran. This course is only open to graduate students.
Not Offered Every Year
Also Offered As: ARTH 7240, NELC 7060
1 Course Unit

AAMW 7259 Troy and Homer
An interdisciplinary seminar focusing on the city of Troy both as an archaeological site and as the setting of the legendary Trojan War. We will consider Homer’s Iliad (with selected sections read in Greek) together with the topography and archaeology of the site of Troy in order to address a series of interrelated questions: What are the points of continuity and discontinuity between the stories told by the literary tradition and the material record? How do both types of evidence contribute to our understanding of political relations and cultural interactions between Greece and Anatolia in the Bronze Age? How do Hittite sources bear on our reconstruction of the events behind the Troy legend? How have the site and the poem contributed to each other’s interpretation in the context of scholarly discovery and debate? We will give some attention to modern receptions of the Troy legend that deliberately combine material and textual elements, such as Cy Twombly’s “Fifty Days at Iliam” and Alice Oswald’s “Memorial: An Excavation of Homer’s Iliad.” The seminar will include a visit to the site of Troy during the Spring Break.
Also Offered As: GREEK 7201
1 Course Unit
AAMW 7260 The Archaeology of Greece and Asia Minor in the Archaic and Classical Periods
An examination of new discoveries and conflicting interpretations in the archaeology of Greece and Asia Minor between the seventh and fourth centuries B.C.E. Both sides of the Aegean will receive equal attention, and emphasis will be placed on sanctuaries, settlements, and cemeteries. Also Offered As: CLST 7304
1 Course Unit

AAMW 7320 Medieval Art History and Theories of the Object
The recent turn to the object across the humanities and social sciences has brought to the fore concerns with the nature of material things, their operation in the world, and their entanglement with humans. This seminar will introduce you to some of the key theoretical writings on the object and material culture and will ask you to interrogate their relevance for the discipline of art history. Our focus will be on the Mediterranean and Western European Middle Ages, but depending on the specific interests of the seminar's participants, we may venture into other historical periods and cultural domains. Topics to be addressed include the social life of things; agency; materiality; the relic; the gift; the miniature; and the question of the human/nonhuman divide. This course is only open to graduate students. Not Offered Every Year Also Offered As: ARTH 7320
1 Course Unit

AAMW 7350 Islamic Art Seminar
This course focuses on art of the Islamic world. Open to graduate students only. Not Offered Every Year Also Offered As: ARTH 7350, NELC 7560
1 Course Unit

AAMW 7370 Islamic Architecture Seminar
This seminar will address the problems of studying architecture in the Islamic world. Considered will be issues of architectural design, regional and trans-regional constructional traditions, structural know-how and innovation, patronage and use. The examples discussed will be mainly religious and social service complexes. Attention will be paid to the manner of transmission of architectural design knowledge and constructional skill. Open to graduate students only. Not Offered Every Year Also Offered As: ARTH 7370, NELC 7561
1 Course Unit

AAMW 7400 Medieval Art Seminar
Alternating specific topic from year to year, this advanced graduate seminar surveys methodological issues concerning the art of the European Middle Ages, broadly conceived. Seminars take advantage of the rich resources of the Philadelphia area. This course is open to graduate students only. Not Offered Every Year Also Offered As: ARTH 7400
1 Course Unit

AAMW 7401 Medieval Art Now Seminar
Where is the study of medieval art today? This advanced graduate seminar surveys the questions and issues relevant to the study of artistic production, both East and West, from 300 to 1500. New methodologies will be placed in their historiographic contexts, and students will read deeply into the problems with which medieval art historians are wrestling with today. The seminar will take advantage of excellent local collections to animate discussions, and focus research papers. Not Offered Every Year Also Offered As: ARTH 7401

Art History (ARTH)

ARTH 0127 The Material Past in a Digital World
The material remains of the human past -objects and spaces- provide tangible evidence of past people's lives. Today's information technologies improve our ability to document, study, and present these materials. But what does it mean to deal with material evidence in a virtual context? In this class, students will learn basic digital methods for studying the past while working with objects, including those in the collections of the Penn Museum. This class will teach relational database design and 3D object modeling. As we learn about acquiring and managing data, we will gain valuable experience in the evaluation and use of digital tools. The digital humanities are a platform both for learning the basic digital literacy students need to succeed in today's world and for discussing the human consequences of these new technologies and data. We will discuss information technology's impact on the study and presentation of the past, including topics such as public participation in archaeological projects, educational technologies in museum galleries, and the issues raised by digitizing and disseminating historic texts and objects. Finally, we will touch on technology's role in the preservation of the past in today's turbulent world. No prior technical experience is required, but we hope students will share an enthusiasm for the past. Also Offered As: ANTH 1303, CLST 1303, HIST 0871
1 Course Unit
ARTH 0141 Museums, Monuments, and Social Justice
Monuments, museums, and heritage are all critical parts of the world that we have created and are shaped by. These institutions and sites often claim to represent our past, who we imagine ourselves to be today, and how we might define our futures. We often rely on museums and monuments to frame history and history’s relationship to our current social and cultural systems. However, in recent years, social, racial, and economic justice movements have pushed us to rethink the function of monuments, museums, and heritage. In particular, these social movements have helped us understand how racism, sexism, and colonialism are responsible for the creation of monuments and museums. This course examines the echoes and continuities of colonial representations in museums and monuments. In addition, we will examine how new ways of commemorating and representing the past can result in a new vision for our future. By visiting a variety of local monuments and sites and by engaging in conversations about accountability and social justice, this course will challenge us to rethink the tangible and intangible ways that we weave the past into the present for the creation of the future.

1 Course Unit

ARTH 0143 The Past Preserved: Conservation In Archaeology
This course explores the scientific conservation of cultural materials from archaeological contexts. It is intended to familiarize students with the basics of artifact conservation but is not intended to train them as conservators. The course will cover how various materials interact with their deposit environments; general techniques for on-site conservation triage and retrieval of delicate materials; what factors need to be considered in planning for artifact conservation; and related topics. Students should expect to gain a thorough understanding of the role of conservation in archaeology and how the two fields interact.
Also Offered As: ANTH 3235, CLST 3315, NELC 4955
Mutually Exclusive: ANTH 5235
1 Course Unit

ARTH 0221 Material World in Archaeological Science
By focusing on the scientific analysis of inorganic archaeological materials, this course will explore processes of creation in the past. Class will take place in the Center for the Analysis of Archaeological Materials (CAAM) and will be team taught in three modules: analysis of lithics, analysis of ceramics and analysis of metals. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how the transformation of materials into objects provides key information about past human behaviors and the socio-economic contexts of production, distribution, exchange and use. Discussion topics will include invention and adoption of new technologies, change and innovation, use of fire, and craft specialization.
Not Offered Every Year
Also Offered As: ANTH 2221, CLST 3302, NELC 2960
1 Course Unit

ARTH 0339 Sacred Stuff: Religious Bodies, Places, and Objects
Does religion start with what’s in our heads? Or are religious commitments made, shaped and strengthened by the people, places, and things around us? This course will explore how religion happens in the material world. We’ll start with classical and contemporary theories on the relationship of religion to stuff. We’ll then consider examples of how religion is animated not just by texts, but through interactions with objects, spaces, bodies, monuments, color, design, architecture, and film. We’ll ask how these material expressions of religion move beyond private faith and connect religion to politics and identity.

ARTH 1010 World Art before 1400
This course serves as a double introduction to art history. First, it surveys the visual arts in a global context from prehistory to the dawn of the modern era. Focusing on multiple premodern cultures and traditions, the course examines a wide variety of art forms, from public monuments and architecture to paintings, textiles, and illustrated books. We will consider this rich material in its historical context and ask how art was made, used, seen, and valued by people in the past. Special emphasis will be placed on cross-cultural connections, interactions, and analogies. Second, the course will introduce you to the practice of art history. You will develop the skills of visual analysis and critical reading and learn the basic methods that scholars employ to interpret works of art and architecture. In the process, you will gain a deeper understanding of the intersection of art, society, and human experience at large. Lectures and group discussions will be complemented by visits to museums and other collections on campus and beyond.
Fall
1 Course Unit
ARTH 1020 The Artist in History, 1400-Now
This course is an introduction to the history of art in a global context from the early 1400s to the present. Lectures will introduce students to significant moments in artistic production in both the Western and Eastern hemispheres through focused studies on crucial aspects of exchange between cultures and continents. Covering an era of increasing economic transactions, imperial conquests, and industrialization, this course will build recursively through themes such as: the emergence of authorial identity and models of artistic collaboration, the traffic of artistic materials and techniques and their adaptation in different cultural settings, and the foregrounding of art to both document and initiate political change. Developing vocabularies to discuss painting, sculpture, architecture, and prints, as well as photography and film, students will learn to analyze art’s decisive role during times of social transformation, including modernization, colonization, and technological advances. We will also examine the role of broad-reaching media and the advent of art criticism in forming public opinion. Assignments will encourage students to think widely across geographies and study intimately local examples in the Philadelphia museums. This course fulfills Sector III: Arts and Letters and counts towards the History of Art major and minor requirements.
Spring
Also Offered As: VLST 2320
1 Course Unit

ARTH 1030 Art and Civilization in East Asia
Introduction to the major artistic traditions of China and Japan and the practices of art history. We will also consider aspects of Korean and Indian artistic traditions as they relate to those of China and Japan. Our approaches will be methodological in addressing how we understand these objects through careful looking; chronological in considering how the arts developed in and through history; and thematic in studying how art and architecture were used for philosophical, religious and material ends. Special attention will be given to the relationship between artistic production and the afterlife; to the impact of Buddhism and its purposes; to painting traditions and their patronages; and to modernist transformations of traditions.

Also Offered As: EALC 0100, VLST 2330
1 Course Unit

ARTH 1040 Art of Global Asia
This course surveys flows of ideas, images, and objects across, within, and beyond Asia. It considers how the art of Asia is and has been global from antiquity through the present, and introduces ‘Asia’, ‘globality’, and ‘art’ as key terms and concepts that shift over time and place. Artistic traditions are presented within broader historical, cultural, social, and economic frameworks, with attention to their local and regional significance. Trade, exchange, and interaction between cultures and groups, including but not limited to artists, pilgrims, merchants, warriors, and rulers, and the transmission of concepts through languages, religions, and philosophies, will be highlighted throughout. We shall address problems of iconophilia and iconoclasm, narrative and temporality, archeology and historiography, ritual and religion, sovereignty and kingship, gender and sexuality, colonialism and nationalism, diasporas and migration as they pertain to the images, objects, and sites of our study. We shall make use of local resources at the Penn Museum and Penn Libraries, as well as other sites, to show how objects retain and inflect these ideas. The course builds out from a central focus on the arts of South Asia or the arts of East Asia, depending upon the specialty of the faculty member teaching the course, with additional faculty offering guest lectures as available. Students with a background in art history, studio art, architecture, history, religion, literature, anthropology, and/or South or East Asian Studies are especially welcome.

1 Course Unit

ARTH 1060 Architect and History
The built environment shapes our lives and this course tackles its underpinning design principles and qualities as well as social and cultural contexts. It is an interpretative look at the built environment or, more precisely, at the ways in which monuments and cities are designed, represented, perceived and construed over time. It introduces students to the interrelated fields of architecture, art history, and urbanism and explores great architectural monuments and cities from the modern to the ancient period, from the US across Europe and from the Mediterranean to Asia. We will assess the built environment as culturally meaningful form and examine a body of historical and cultural material relevant to its interpretation. In doing so, the course seeks to foster a critical understanding of the cultural and artistic processes that have influenced architectural and urban design. The focus will be on understanding these works as results of skilled workmanship as well as social and cultural products. We will tackle ancient and modern perceptions of these monuments and cities by analyzing form, design, structure and by addressing their perceptual qualities through 3D reconstructions and virtual environments, as well as sketchbook assignments. This course fulfills Sector IV, Humanities and Social Sciences.

ARTH 1070 Television and New Media
How and when do media become digital? What does digitization afford and what is lost as television and cinema become digitized? As lots of things around us turn digital, have we started telling stories, sharing experiences, and replaying memories differently? What has happened to television and life after New Media? How have television audiences been transformed by algorithmic cultures of Netflix and Hulu? How have (social) media transformed socialities as ephemeral snaps and swiped intimacies become part of the "new" digital/phone cultures? This is an introductory survey course and we discuss a wide variety of media technologies and phenomena that include: cloud computing, Internet of Things, trolls, distribution platforms, optical fiber cables, surveillance tactics, social media, and race in cyberspace. We also examine emerging mobile phone cultures in the Global South and the environmental impact of digitization. Course activities include Tumblr blog posts and Instagram curations. The final project could take the form of either a critical essay (of 2000 words) or a media project.

ARTH 1080 World Film History to 1945
This course surveys the history of world film from cinema's precursors to 1945. We will develop methods for analyzing film while examining the growth of film as an art, an industry, a technology, and a political instrument. Topics include the emergence of film technology and early film audiences, the rise of narrative film and birth of Hollywood, national film industries and movements, African-American independent film, the emergence of the genre film (the western, film noir, and romantic comedies), ethnographic and documentary film, animated films, censorship, the MPPDA and Hays Code, and the introduction of sound. We will conclude with the transformation of several film industries into propaganda tools during World War II (including the Nazi, Soviet, and US film industries). In addition to contemporary theories that investigate the development of cinema and visual culture during the first half of the 20th century, we will read key texts that contributed to the emergence of film theory. There are no prerequisites. Students are required to attend screenings or watch films on their own.

Also Offered As: CIMS 1020, COML 1022, ENGL 1901
1 Course Unit

ARTH 1090 World Film History 1945-Present
Focusing on movies made after 1945, this course allows students to learn and to sharpen methods, terminologies, and tools needed for the critical analysis of film. Beginning with the cinematic revolution signaled by the Italian Neo-Realism (of Rossellini and De Sica), we will follow the evolution of postwar cinema through the French New Wave (of Godard, Resnais, and Varda), American movies of the 1950s and 1960s (including the New Hollywood cinema of Coppola and Scorsese), and the various other new wave movements of the 1960s, 1970s and 1980s (such as the New German Cinema). We will then selectively examine some of the most important films of the last two decades, including those of U.S. independent film movement and movies from Iran, China, and elsewhere in an expanding global cinema culture. There will be precise attention paid to formal and stylistic techniques in editing, mise-en-scene, and sound, as well as to the narrative, non-narrative, and generic organizations of film. At the same time, those formal features will be closely linked to historical and cultural distinctions and changes, ranging from the Paramount Decision of 1948 to the digital convergences that are defining screen culture today. There are no perquisites. Requirements will include readings in film history and film analysis, an analytical essay, a research paper, a final exam, and active participation.

ARTH 1100 What is Modern Art?
Modernism is not easily defined. For some, the word simply identifies Western art of the last two hundred-odd years. For others, modernism refers to forms of "advanced" visual art, whether the cubist distortions of Pablo Picasso or the alover abstractions of Jackson Pollock, that break with established representational conventions. For still others, the term singles out modes of artistic opposition to the ravages of capitalism, colonialism, industrialization, imperialism, and war that continue to define our world. Among its manifold practices, we find the rise of abstraction, paintings that pretend to show nothing but an instant, dreams and erotic desires set free for everyone to see, and everyday objects elevated to the status of sculpture. At key moments, "Art" itself was declared dead, then resurrected as the solution to the social problems of the era, forming a highly ambivalent relationship to the spheres of politics and history. We will cover the development of Modernism broadly, from the 1860s to the 1960s, introducing many of the best-known figures (like Monet, Van Gogh, Duchamp, and Picasso) and movements (like Impressionism, Cubism, Dada, and Surrealism). Europe and North America will be the focus, but we will frequently look to global developments as well and analyze art made in colonial and diasporic conditions. The standard narratives of Modernism will be questioned at every turn, and artists of color, diverse gender and sexual orientations, as well as national and economic backgrounds studied in depth as well. We will proceed more or less chronologically, doubling back or projecting forward when necessary to understand the determinative historical influences that have shaped the development of modernist idioms in particular times and places. In every instance, we will study works of art that have confronted our culture's visual means—of life, death, consumption, and display—and attempted to work them over into critical form.
1 Course Unit
ARTH 1500 Eye, Mind, and Image
Visual Studies 101 provides an introduction to the collaboration of eye, mind, and image that produces our experience of a visual world. How and what do we see? How do we perceive color, space, and motion? What is an image? Does seeing vary across cultures and time? What can art tell us about vision? Is there a 21st-century form of seeing? This course combines different approaches to the study of vision, drawing from psychology, cognitive science, philosophy, history of art, and fine art. Professors representing two or three disciplines present lectures that demonstrate the methods of their disciplines and draw connections across fields. This course combines different approaches to the study of vision, drawing from psychology, cognitive science, philosophy, history of art, and fine art. ARTH 1800 Introduction to Queer Art
It’s no exaggeration to note that queers have long been at the forefront of innovation in the arts, and that the arts, generally, have been a comfortable home for queers, even at moments when society at large was distinctly hostile. In fact the concepts of modern art and homosexuality that we use today are twins, for they were both founded in the third quarter of the 19th century and grew up together. Introduction to Queer Art thus begins with the coining of the word “homosexual” in 1869, and surveys how a range of mediums including painting, sculpture, poetry, music, and film shifted in response to new definitions of sexuality. Along the way, we will work towards answering two related questions: 1) Why were queer creators largely responsible for the introduction of modernity in the arts, and 2) why do we find so often that queer social and political dissent found form in, and as, aesthetic dissent as well? In creating new forms for art that often seem far removed from any traditional definition of sexuality, including non-objective and abstract art, queer artists pushed the boundaries of normativity, leading to new ways of seeing, hearing, feeling and thinking that often dared to encode queer meanings as part of their formal innovation. We will look into the politics of queer art, and how and why in the US, even amidst often dangerous homophobia, it was queer artists who represented America to itself. Thus, we will cover such key cultural figures such as Walt Whitman, Gertrude Stein, Georgia O’Keeffe, Frank O’Hara, Jasper Johns, Andy Warhol, and Agnes Martin. Throughout, new methods informed by queer, gender, and critical race theory will be utilized.

ARTH 2094 Dress and Fashion in Africa
Throughout Africa, social and cultural identities of ethnicity, gender, generation, rank and status were conveyed in a range of personal ornamentation that reflects the variation of African cultures. The meaning of one particular item of clothing can transform completely when moved across time and space. As one of many forms of expressive culture, dress shape and give forms to social bodies. In the study of dress and fashion, we could note two distinct broad approaches, the historical and the anthropological. While the former focuses on fashion as a western system that shifted across time and space, and linked with capitalism and western modernity; the latter approach defines dress as an assemblage of modification the body. The Africanist proponents of this anthropological approach insisted that fashion is not a dress system specific to the west and not tied with the rise of capitalism. This course will focus on studying the history of African dress by discussing the forces that have impacted and influenced it overtime, such as socioeconomic, colonialism, religion, aesthetics, politics, globalization, and popular culture. The course will also discuss the significance of the different contexts that impacted the choices of what constitute an appropriate attire for distinct situations. African dress in this context is not a fixed relic from the past, but a live cultural item that is influenced by the surrounding forces.

ARTH 2145 Reading Maya Culture: Decipherment and a New Window into the Ancient Americas
The past three decades have seen a revolution in the study of the Ancient Americas, one with far-reaching implications for how we understand indigenous society and culture on this continent. This course will take us on a journey of academic discovery—encompassing language, art, and materiality—that explains how the decipherment of a major writing system has revealed a previously hidden world. The Maya are one of the most distinctive and best-known of Mesoamerican peoples, who live today, as they did in ancient times, in the Yucatan Peninsula and a region that spans modern southern Mexico, the whole of Guatemala and Belize, and the westernmost fringes of Honduras and El Salvador. From as early as 1000 BCE they were erecting major architecture and flourishing for twenty-five more centuries before the invasion of Europeans brought their independence to an end in the sixteenth century CE. Within their elaborate urban spaces, the Maya erected large stone monuments inscribed with imagery and hieroglyphic texts—most of them commissioned in the Classic Period that reaches from 150-900 CE—although the script is also found on many smaller and more intimate objects. For the first century of research these texts proved all but unintelligible, as faulty assumptions and lack of adequate sources left a deep pessimism that they could ever be understood. But beginning in the 1980s major progress in “cracking the code” took place and today we can read almost all inscriptions to some extent, a decent number in their entirety. This course will teach practical skills that allow students with no previous background to read Maya inscriptions and gain access to the history, politics, religious beliefs, and practical material culture they describe. The fabulous design of the hieroglyphs, that at first seem so impenetrable, will be broken-down to reveal not only language but an iconographic system that reveals much about the ancient Maya aesthetics and visual culture.

ARTH 2200 The Ancient Maya: Integrating Material, Text, and Image
Ancient Maya studies is one of the most dynamic and innovative fields in world archaeology today. Emerging as a true historical archaeology only in the past three decades, the decipherment of Maya script now provides a powerful complement and counterpoint to both traditional excavation data and new remote sensing technologies. Equally, the reading of images, and their interaction with texts and artifacts, forms a vital part of our interest in the broader humanistic concerns of worldview and the transcendent—where our primary interest lies in gaining access to past mentalities. This course will provide a comprehensive introduction into current knowledge of the Ancient Maya, with a recurring methodological focus on how different types of evidence are integrated to assemble a persuasive "portrait of the past." This scope of this process is unique in the ancient Americas, since only the Maya offer us the opportunity to read their own descriptions of the world two millennia or more in the past. Geographically, we will be looking at the greater Yucatan Peninsula, which today covers parts of southeastern Mexico, the whole of Guatemala and Belize, and the western extremities of Honduras and El Salvador. Since archaic times (before 1200 BCE) this has been occupied by speakers of the Mayan language group, and millions of people identified as Maya by that means continue to do so today (despite popular notions to the contrary, they have never "disappeared"). No prior knowledge of archaeology or art history is necessary. The course structure is one 3-hour session per week, consisting of a lecture followed by group discussion in seminar-style. Additionally, in Week 6 there will be a virtual tour of the new Mexico and Central American Gallery at Penn Museum. This will introduce the class to the issues of disseminating scholarship and building narratives that are accessible to the wider public.

**ARTH 2250 Greek Art and Artifact**
This lecture course surveys Greek art and artifacts from Sicily to the Black Sea from the 10th century BCE to the 2nd century BCE, including the age of Alexander and the Hellenistic Kingdoms. Public sculpture and painting on and around grand buildings and gardens, domestic luxury arts of jewelry, cups and vases, mosaic floors, and cult artefacts are discussed. Also considered are the ways in which heroic epic, religious and political themes are used to engaged viewers' emotions and served both domestic and the public aims. We discuss the relationships of images and things to space and structure, along with ideas of invention and progress, and the role of monuments, makers and patrons in Greek society.

**ARTH 2260 Hellenistic and Roman Art and Artifact**
This lecture course surveys the political, religious and domestic arts, patronage and display in Rome's Mediterranean, from the 2nd c. BCE to Constantine's 4th-c. Christianized empire. Our subjects are images and decorated objects in their cultural, political and socio-economic contexts (painting, mosaic, sculpture, luxury and mass-produced arts in many media). We start with the Hellenistic cosmopolitan culture of the Greek kingdoms and their neighbors, and late Etruscan and Republican Italy; next we map Imperial Roman art as developed around the capital city Rome, as well as in the provinces of the vast empire.

**ARTH 2269 Classical Myth and the Image**
The peoples of the ancient Greek and Roman worlds shared a vast body of stories about human and not-human beings set in a legendary deep past or supernatural present - "Classical myth." Even their neighbor cultures took up those stories (or, sometimes, gave them). The stories as spoken, read, or performed turn up in surviving ancient literature. But from the very point when Greek myth began to be written down, those stories were told with images also. Many arts of the Mediterranean world explored myth at temples and sanctuaries, in civic spaces, theaters, parks, houses and palaces, for tombs and trophies - and even on the body. We will examine an array of artistic media, from mosaic and panel painting to metalwork, ivory carving, book illumination, and embroidery. We will consider the making, consumption, and reception of Byzantine art in a variety of contexts—political, devotional, ritual, and domestic. Topics include the idea of empire and its visual articulation; court culture; the veneration of images and relics; patronage, piety, and self-representation; authorship and artistic agency; materiality and the sensory experience of art; the reception of the "pagan" Greco-Roman past; and the changing nature of Byzantium's interactions with neighboring cultures.

1 Course Unit

**ARTH 2290 Roman Architecture and Urbanism**
Architecture is the most striking legacy of Rome and the well-preserved remains of Roman buildings dominate our vision of the empire. Although Roman architecture has been studied since the Renaissance, it is only since the middle of the 20th century that it has come to be appreciated for the developments in concrete construction, which led to a revolution in the treatment of interior space and landscape architecture. Indeed, Rome's architectural revolution radically changed both cities and countryside. Romans developed a wide range of new architectural forms and technological innovations in order to meet the increasingly sophisticated and diverse needs of their society. The purpose of the course is to shed light on Roman architectural and urban projects within their social, political, religious, and physical contexts. Throughout, the emphasis will be on concepts of organizing space, issues of structure, materials, decoration and proportion, the role of architecture in Roman society, and on the varied ways that architecture was employed by individuals and communities to express and enhance their status.

**ARTH 2320 Byzantine Art and Architecture**
This lecture course offers a wide-ranging introduction to the art, architecture, and material culture of Byzantium—a Christian, predominantly Greek-speaking civilization that flourished in the Eastern Mediterranean for over a thousand years. Positioned between the Muslim East and the Latin West, Antiquity and the Early Modern era, Byzantium nurtured a vibrant and highly sophisticated artistic culture. With emphasis placed upon paradigmatic objects and monuments, we will examine an array of artistic media, from mosaic and panel painting to metalwork, ivory carving, book illumination, and embroidery. We will consider the making, consumption, and reception of Byzantine art in a variety of contexts—political, devotional, ritual, and domestic. Topics include the idea of empire and its visual articulation; court culture; the veneration of images and relics; patronage, piety, and self-representation; authorship and artistic agency; materiality and the sensory experience of art; the reception of the "pagan" Greco-Roman past; and the changing nature of Byzantium's interactions with neighboring cultures.

**ARTH 2330 Eastern Medieval Art and Architecture**
This lecture course examines art and architecture in the Mediterranean, Eastern and Southeastern Europe, and the Christian Near East between the seventh and the fifteenth century. The focus is upon the Byzantine Empire and neighboring polities, including Bulgaria, Serbia, early Russia, Armenia, Georgia, and the Crusader states. The course introduces students to this immensely rich and multifaceted world through an exploration of key artworks and monuments, addressing in particular issues related to cross-cultural exchange, conflict, and appropriation.

ARTH 2370 Berlin: History, Politics, Culture
What do you know about Berlin’s history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and Koelln to establish a new capital for this country. It will tell the story of Berlin’s rising political prominence in the eighteenth century, and its position as a center of the German and Jewish Enlightenment. It will follow Berlin’s transformation into an industrial city in the nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will conclude its historical survey with a consideration of Berlin’s position as a capital in reunified Germany.
The historical survey will be supplemented by a study of Berlin’s urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker’s housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin, and focus on Berlin’s Jewish history. The course will be interdisciplinary with the fields of German Studies, history, history of art, urban studies, and German-Jewish studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin.

ARTH 2400 Medieval Art
An introductory survey; this lecture course investigates architecture, painting, sculpture, and the “minor arts” of the Middle Ages. Students become familiar with major monuments of the Romanesque and Gothic periods, primarily in Western Europe as well as relevant sites around the Mediterranean basin. Analyses of works emphasize cultural contexts, thematic content, and the function of objects and monuments. Discussions focus such themes as: the circulation of artists, materials and techniques; the relationships between art and power; anthropogenic impact of art making on the environment; the theological role of images; the explosion of secular visual culture; and the role of art in an interconnected world.
Not Offered Every Year
Mutually Exclusive: ARTH 6400
1 Course Unit

ARTH 2450 Gothic Architecture: Gold and Stone
Key monuments of the Middle Ages, the Gothic cathedrals of Western Europe present a synthesis of the theological, economic, and social developments of the twelfth through fourteenth centuries. A harmonious marriage between technology and aesthetics, of political power and imagination, these immense and ingenious structures are as famous for their sculptural programs as they are for the liturgies that animated their spaces. Students will also be introduced to local uses of Gothic in Philadelphia architecture to better understand the lived experiences of these built manifestations of transcendence.

1 Course Unit

ARTH 2451 Bones to Stones: Medieval Pilgrimage Culture
Dry bones, rotted flesh and discarded teeth — these were the heart of medieval pilgrimage culture. The bodily remains of the holy dead, saints and martyrs, spurred thousands of devout believers throughout the Middle Ages to travel to far off lands to venerate these abject traces. This lecture course, while anchored in Western Europe, will consider pilgrimage as a cross-cultural phenomenon, focusing on the resplendent arts, notably reliquaries, and architecture that developed to accommodate the desire to venerate bodily remains of the sacred.

1 Course Unit

ARTH 2500 Michelangelo and the Art of the Italian Renaissance
An introduction to the work of the Renaissance artist Michelangelo (1475-1564); his sculptures, paintings, architecture, poetry, and artistic theory-in relation to his patrons, predecessors, and contemporaries, above all Leonardo and Raphael. Topics include artistic creativity and license, religious devotion, the revival of antiquity, observation of nature, art as problem-solving, the public reception and function of artworks, debates about style, artistic rivalry, and traveling artists. Rather than taking the form of a survey, this course selects works as paradigmatic case studies, and will analyze contemporary attitudes toward art of this period through study of primary sources.

ARTH 2580 Early Modern Japanese Art and the City of Edo
Study of the major art forms and architecture of Tokugawa (or Edo) period (1603-1868). In this lecture course, we will consider how the arts of this era occur within an increasingly urban and modern culture, particularly with regard to the city of Edo. Issues of the articulation of authority in the built environment, the reinvention of classical styles, and patronage will be raised. May include some visits to PMA, Penn Museum, or other local collections.
Not Offered Every Year
Also Offered As: EALC 1141
1 Course Unit

ARTH 2610 Northern Renaissance Art
This course critically examines concepts traditionally associated with the Renaissance by focusing on the exchange of artistic ideas throughout the Holy Roman Empire and across different media, such as the altarpieces of Jan van Eyck, the expressive drawings of Albrecht Durer and Hans Baldung Grien, the peasant studies of Pieter Bruegel and the prints of satirists who wished to remain anonymous. The material is organized thematically around four topics: religious art as piety and politics; antiquity as a source of tradition and imagination; the formulation of a public discourse that exposed social threats; and the distinctiveness of artistic claims of individual achievement. A motif throughout the course is the question of how the survival of fragments may be presented in museum contexts as parts standing in for an absent whole. We will also consider how historians approach designs for works of art now lost or never completed. Encouraging encounters with art and artifacts around the city, assignments focus on objects in Philadelphia collections.

ARTH 2620 Early Netherlands Painting: Angels, Demons, Nudes
Over the course of the fifteenth and sixteenth centuries, painting in the Netherlands experienced dramatic technological advancements: the application of oil on panel allowed for an unprecedented richness of color; experiments with optics led to improved illusions of space; artists rendered light and reflections as never before. Did these advancements in depicting the natural world conflict with or enhance the portrayal of spiritual visions? Did realism pave the way for secular art? In this course, we will look critically at the relationship of science and art, tradition and innovation, the imagined and the experienced. The delicate preciousness of Jan van Eyck, the strange spaces of Petrus Christus, the bizarre hellscapes of Hieronymus Bosch, and the peasant festivals of Peter Bruegel will guide us through these themes.

ARTH 2679 Latinx Literature and Culture
This course offers a broad introduction to the study of Latinx culture. We will examine literature, theater, visual art, and popular cultural forms, including murals, poster art, graffiti, guerrilla urban interventions, novels, poetry, short stories, and film. In each instance, we will study this work within its historical context and with close attention to the ways it illuminates class formation, racialization, and ideologies of gender and sexuality as they shape Latinx experience in the U.S. Topics addressed in the course will include immigration and border policy, revolutionary nationalism and its critique, anti-imperialist thought, Latinx feminisms, queer latinidades, ideology, identity formation, and social movements. While we will address key texts, historical events, and intellectual currents from the late 19th century and early 20th century, the course will focus primarily on literature and art from the 1960s to the present. All texts will be in English.

ARTH 2680 Art and Empire in India, 1750-1900
This course surveys transformations in visual culture between the Mughal and British empires in India from the mid-eighteenth through the nineteenth centuries. We shall consider changes in artistic production, patronage, publics, and viewing protocols in the contexts of the court and bazaar. We shall examine the emergence of new technologies and its impact on visual forms, media, and genres, focusing on the interplay of photography, print, and painting. We shall explore the role of institutions -the art school, the museum, and the archeological survey- and the professions and practices they engendered. We shall analyze how architecture and urban planning created new built environments and social relationships in colonial India. We shall view objects first-hand in the Penn Museum, Penn Libraries, and Philadelphia Museum of Art. This is a reading- and writing-intensive course. Students with a background in related disciplines such as literature, history, religion, anthropology, and South Asian Studies are welcome.

**ARTH 2750 Revolution to Realism: European Art, 1770-1870**
This course surveys the major trends in the arts of Europe and its colonies in the tumultuous decades stretching from the French and Haitian revolutions in the late-eighteenth century to the rise of realism in the mid-nineteenth. Starting with Jacques-Louis David's revolutionary history paintings, we study Napoleonic representations of empire, Goya's imagery of violence, romantic representations of madness and desire, the origins of both nationalist and ecocritical landscape painting, the aesthetics of the industrial revolution, as well as the politicized realism of Gustave Courbet. Some of the themes that will be addressed include: the revolutionary hero, the birth of the public museum, the specters of slavery and colonialism in modern representation, the anxious masculinity of romanticism, the rise of industry and bourgeois culture, the beginnings of photography and caricature, the quest for national identity and, not least, the origins of modernist painting. Throughout, we will strive to recover the original radicalism of art's formal and conceptual innovations at times of profound political and social crisis.

Mutually Exclusive: ARTH 6750
1 Course Unit

**ARTH 2760 Impressionism**
Impressionism opened the pictorial field to light, perception, science, modernity, bourgeoisie leisure and famously the material qualities of paint itself. This course will survey the movement's major contexts and proponents--Manet, Monet, Morisot, Cezanne, Gauguin, Van Gogh, Rodin--from its origins in the 1860's to its demise in the 1890's, as well as its subsequent adaptions throughout the world until World War I. Particular attention is paid to the artists' critical reception and the historical conditions which allowed one nation, France, to claim the emergence of early Modernism so firmly for itself. The course also analyzes the effects of the rapidly changing social and cultural fabric of Paris, and its affects on artistic developments. We also look outside of France's borders to Germany and Britain.
Fall or Spring
1 Course Unit

**ARTH 2770 The Rise of Modernity: Arts of the 19th Century**
The nineteenth century is often considered as fast-paced, politically volatile and new-media obsessed as our own age. This course explores the nineteenth century's claim to have produced the first truly modern culture, focusing on the visual arts and metropolitan spaces of Europe and North America in their intellectual and social contexts. Stretching from the American and French Revolutions to the eve of World War I, topics to be covered include: the rise of capitalist and industrialist culture, art and revolutionary upheaval, global travel and empire, the origins of modernist art and architecture, and new media such as stereoscopes, iron and glass construction, and photography. Major artistic personalities of the age, from Jacques-Louis David and Gustave Courbet to Claude Monet and Vincent Van Gogh, and from Friedrich Schinkel and, Baron Haussmann to Frank Furness and Frank Lloyd Wright, are discussed. Each lecture will be followed by a brief period of discussion, and regular field trips take students to examine art and architecture first hand, in the museums and on the streets of Philadelphia.
Not Offered Every Year
1 Course Unit

**ARTH 2780 American Art**
This lecture course surveys the most important and interesting art produced in the United States (or by American artists living abroad) up through the 1950s. This period encompasses the history of both early and modern art in the U.S., from its first appearances to its rise to prominence and institutionalization. While tracking this history, the course examines art's relation to historical processes of modernization (industrialization, the development of transportation and communications, the spread of corporate organization in business, urbanization, technological development, the rise of mass media and mass markets, etc.) and to the economic polarization, social fragmentation, political conflict, and the cultural changes these developments entailed. In these circumstances, art is drawn simultaneously toward truth and fraud, realism and artifice, science and spirituality, commodification and ephemeralization, nationalism and cosmopolitanism, individualism and collectivity, the past and the future, professionalization and popularity, celebrating modern life and criticizing it.
Fall or Spring
1 Course Unit
ARTH 2781 African American Art
This lecture course focuses on art, architecture, and visual culture made by peoples of African descent in the United States.

ARTH 2810 Modern Architecture, 1900-Present
The architecture of Europe and America from the late nineteenth century until the present is the central subject of this course, but some time is also devoted to Latin American and Asian architecture and to the important issues of modern city planning. Topics discussed include the Arts and Crafts movement, Art Nouveau, Expressionism, Art Deco, the International Style, and Post-modernism. The debate over the role of technology in modern life and art, the search for a universal language of architectural communication, and the insistent demand that architecture serve human society are themes that are traced throughout the course. Among the important figures to be considered are Frank Lloyd Wright, Walter Gropius, Le Corbusier, Louis Kahn, Robert Venturi, and Denise Scott Brown. The course includes weekly discussion sessions and several excursions to view architecture in Philadelphia.

1 Course Unit

ARTH 2850 Modern Art in Africa and Europe
The history of modern art is closely tied to and largely unfolds from the history of Western Imperialism. While the technologies made possible by colonial resource extraction produced new ways of looking, modern conceptions of the nation and how to represent it, developed in dialogue with racialized notions of the other. This course focuses on encounters between the cultures of Africa and Europe, from 1880 to 1960, and on the artistic practices that emerged on both continents as a result. Topics of special interest will include racial difference and the ramifications of colonialism, colonial masquerade, post-colonial monuments and memorials, the African influence on Dada and surrealism, Negritude and interwar Paris, colonial arts education, and the South African built environment under and after Apartheid.

1 Course Unit

ARTH 2860 Modern Art: Picasso to Pollock
Early twentieth-century art in Europe is marked by a number of exciting transformations. This period witnessed the rise of abstraction in painting and sculpture, as well as the inventions of collage, photomontage, constructed sculpture, the ready made and found object, and performance art. Encounters with the arts of Africa, Oceania and other traditions unfamiliar in the West spurred innovations in media, technique, and subject matter. Artists began to respond to the challenge of photography, to organize themselves into movements, and in some cases, to challenge the norms of art through "anti-art." A new gallery system replaced traditional forms of exhibiting and selling art, and artists took on new roles as publicists, manifesto writers, and exhibition organizers. This course examines these developments, with attention to formal innovations as well as cultural and political contexts.

Also Offered As: AFRC 2860
1 Course Unit

ARTH 2870 Postwar Art
At a time of seismic shifts in the American polity, postwar art has too often seemed above the fray. Even as New York came to replace Paris as the epicenter of art world in the post war period, the rapid succession of styles and movements from Abstract Expressionism to Neo-Dada, Pop Art, Minimalism, Conceptual Art and Happenings can seem to have their own internal logic, severed from the historical backdrop of the time. Some of the artists we'll consider include Pollock, Krasner, Rauschenberg, Johns, Warhol, Kusama, Martin, Lichtenstein, Bearden, Oldenburg, LeWitt, Chicago and Judd. In this course, we'll reexamine American art and art criticism in the postwar period alive to everything from the Cold War's virulent anti-communism to the rise of progressive liberation movements around race, ethnicity, sexuality, and gender. In the process, we will repeatedly underscore how art both served, and bit, the hand that fed it.
Also Offered As: GSWS 2870
1 Course Unit

ARTH 2879 Eastern and Central European Art, 1917 to the Present
This is a survey course examining the prolific and significant artistic production of the region in four parts: the rise and fall of the Avant-Garde (1917-1934), the development of Socialist Realism (1934-1953), the embrace of post-war Nonconformism (1953-1989); and the proliferation of contemporary art (1989 - 2023). The course will include Russian artists, where applicable; however, it will intentionally recenter the narrative around artists from the satellite states (Poland, Hungary, Romania) and republics of the Soviet Union (Latvia, Lithuania, Estonia, and Ukraine). In light of the war in Ukraine, additional emphasis on Ukrainian art will be provided. Subtopics will include architecture and graphic design; monuments and memory; colonialism and postcolonialism; feminism and LGBTQAI+; the environment; protest. All readings and lectures will be in English

ARTH 2900 Post War Japanese Cinema
Mizoguchi Kenji, Ozu Yasujiro, and Kurosawa Akira are recognized today as three of the most important and influential directors in Japanese cinema. In their films of the late 1940s and 1950s, these directors focused upon issues surrounding the human condition and the perception of truth, history, beauty, death, and other issues of the postwar period. This lecture course places their films in period context, and pays particular attention to the connections to other visual media, and to how "art" and "history" are being defined in the cinematic context. How other directors also took up these issues, and referred to the "big three" is also be discussed.
Not Offered Every Year
Also Offered As: CIMS 2900, EALC 1340
1 Course Unit
ARTH 2910 East Asian Cinema
This survey course introduces students to major trends, genres, directors, and issues in the cinemas of East Asian countries/regions, including Japan, Korea, China, Hong Kong, and Taiwan. Charting key developments over more than a hundred years from the early twentieth century to the present, this course examines films as aesthetic objects, asking questions about film form, narrative, and style. It also pays attention to the evolution of cinema as an institution (e.g. modes of production, circulation, and exhibition) in different cultural and political contexts. Weekly course materials will include both films (primary sources) and analytical readings (secondary sources). By the end of the course, students are expected to gain broad knowledge of East Asian cinema, develop skills of film analysis, and apply these skills to perform historically informed and culturally sensitive analysis of cinema. Prior knowledge of East Asian languages is NOT required.

ARTH 2940 Art Now
One of the most striking features of today’s art world is the conspicuous place occupied in it by the photographic image. Large-scale color photographs and time-based installations in projections are everywhere. Looking back, we can see that much of the art making of the past 60 years has also been defined by this medium, regardless of the form it takes. Photographic images have inspired countless paintings, appeared in combines and installations, morphed into sculptures, drawings and performances, and served both as the object and the vehicle of institutional critique. They are also an increasingly important exhibition site: where most of us go to see earthworks, happenings and body-art. This course is a three-part exploration of our photographic present.
Spring
Also Offered As: ENGL 2639, GSWS 2940, VLST 2360
1 Course Unit

ARTH 2950 Global Film Theory
This course will provide an introduction to some of the most important film theory debates and allow us to explore how writers and filmmakers from different countries and historical periods have attempted to make sense of the changing phenomenon known as “cinema,” to think cinematically. Topics under consideration may include: spectatorship, authorship, the apparatus, sound, editing, realism, race, gender and sexuality, stardom, the culture industry, the nation and decolonization, what counts as film theory and what counts as cinema, and the challenges of considering film theory in a global context, including the challenge of working across languages. There will be an asynchronous weekly film screening for this course. No knowledge of film theory is presumed.

1 Course Unit

ARTH 2960 Contemporary Art
Many people experience the art of our time as bewildering, shocking, too ordinary (my kid could do that), too intellectual (elitist), or simply not as art. Yet what makes this art engaging is that it raises the question of what art is or can be, employs a range of new materials and technologies, and addresses previously excluded audiences. It invades non-art spaces, blurs the boundaries between text and image, document and performance, asks questions about institutional frames (the museum, gallery, and art journal), and generates new forms of criticism. Much of the “canon” of what counts as important is still in flux, especially for the last twenty years. And the stage is no longer centered only on the United States and Europe, but is becoming increasingly global. The course will introduce students to the major movements and artists since 1980, with emphasis on social and historical context, critical debates, new media, and the changing role of the spectator/participant.

1 Course Unit

ARTH 3020 Methods of Object Study
This immersive hands-on seminar introduces students to methods of analyzing the material, physical, and visual aspects of objects in a museum, gallery, or library context. Students will receive training in curatorial practices, close observational skills, and precise descriptive terminology for materials and techniques. They also will learn about essential tools of conservation and technical analysis.
Not Offered Every Year
1 Course Unit
ARTH 3030 Introduction to Museums
This course introduces students to the history, theory and modern practices of museums. Using the resources of the Penn Museum and other Philadelphia museums, students will study curatorial practice, education, exhibition design and conservation, while exploring the theoretical and ethical issues confronted by museums. Particularly relevant for those interested in archaeology, anthropology, art history, cultural heritage and public education.
Fall or Spring
Also Offered As: CLST 3309
1 Course Unit

ARTH 3060 Venice Biennale Spiegel-Wilks Seminar
Founded in 1895, the Venice Biennale (La Biennale di Venezia) is one of the art world’s most prestigious venues for contemporary art. In this seminar, we will consider the history of the Venice Biennale, its curatorial process for group shows, the role of national pavilions, and related topics, within the larger frame of the international art world. How contemporary artists cross boundaries, challenge expectations, and respond to the site itself are also key issues. The seminar focus will be adapted in each iteration according to the expertise of the instructor, and students will be funded to travel with the instructor to Venice over fall break as part of this site seminar. This course is open to History of Art Juniors and Seniors, admission by permission only.
1 Course Unit

ARTH 3070 The Rise of Image Culture: History and Theories
Today images are everywhere; two centuries ago, they were rare. This seminar considers key historical and theoretical contexts for this change and its social consequences. With the help of some of the strongest critics and theorists of image culture, we will consider five interrelated aspects of the rise of image culture. - First, we will explore how new media and mechanical reproduction has changed the idea of the image over in the free market. - Second, we will explore how images operate through the psyche and gaze and how that operation is tied to social and political power. - Third, we will examine how representations make meaning and form identity in coded systems. - Fourth, we will consider the relationship between visual space and concepts of reality. And finally, we will interrogate how the physical and digital material that images are made from affects their meaning.
Spring
Also Offered As: VLST 3030
1 Course Unit

ARTH 3071 What is an Image?
The course explores various concepts of images. It considers natural images (as in optics), images as artifacts, virtual images, images as representations, and works of art as images. Themes to include: the image controversy in cognitive science, which asks whether some cognitive representations are irreducibly imagistic; the question of whether some images resemble what they represent; the development of the concept of the virtual image and of three-dimensional images; the notions of pictorial representation and non-representational images in art. Readings from C. S. Peirce, Nelson Goodman, Robert Hopkins, Dominic Lopes, W. J. T. Mitchell, John Kulvicki, and Mark Rollins, among others.
Fall
Also Offered As: VLST 3050
1 Course Unit

ARTH 3100 Cinema and Socialism
Films from socialist countries are often labeled and dismissed as "propaganda" in Western democratic societies. This course complicates this simplistic view, arguing for the value in understanding the ties between socialist governments, the cinematic arts, and everything in between. We will examine films from past and present socialist countries such as the Soviet Union, China, North Korea, and Cuba, as well as films made with socialist aspirations. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

Also Offered As: CIMS 3100, EALC 2314, ENGL 2934, REES 3770
1 Course Unit

ARTH 3120 Indian Art Seminar
This seminar addresses topics in the art of India from antiquity to the present emphasizing global connections and comparisons. Topics vary from year to year and might include the arts of the book in South Asia; Indian painting, 1100-now; history and theory of museums in the colony, 1750-1950; photography, cinema, and performance art in South Asia; and art, ecology, and environment in South Asia. We shall explore objects in area collections and incorporate special excursions and programs when possible. A background in South Asian studies or languages is not required. Students from related disciplines such history, anthropology, literary studies, religious studies, feminist studies, cinema and media studies, and architecture are welcome.

ARTH 3130 East Asian Art Seminar
Undergraduate seminar in East Asian art history. Topics vary from semester to semester.
Not Offered Every Year
Also Offered As: EALC 2100
1 Course Unit

ARTH 3131 Contemporary Art in East Asia and the World: Venice Biennale
This undergraduate seminar focuses on issues confronting artists from East Asia working in today’s contemporary art world. We will begin by considering the terms that constitute the definition of the "modern" and the "contemporary," asking how, by whom, and for whom these terms have been configured. By gaining a familiarity with the major styles, media, institutions, artists, and concepts over the twentieth century in East Asia, we will develop tools to analyze how contemporary artists are crossing boundaries, challenging the limits of nationalism, and dealing with shifting political and social grounds. We will take our analysis on site at the Venice Biennale, looking closely at how East Asian artists are participating in, as well as contesting, this influential international exposition. Students will make close studies of national pavilions as well as the international exhibition, generating analyses of these display spaces, and will produce a group website in response to the Biennale as an alternative virtual exhibition. By permission only.
Not Offered Every Year
1 Course Unit

ARTH 3150 Japanese Art Seminar
Undergraduate seminar in early modern, modern, or contemporary Japanese art. Topics vary from semester to semester.
Not Offered Every Year
Also Offered As: EALC 2140
1 Course Unit
ARTH 3170 CU in India - Topics Course
C.U. in India is a hybrid, domestic/overseas course series which provides students with the opportunity to have an applied learning and cultural experience in India or South East Asia where students participate in 1) 28 classroom hours in the Fall term 2) a 12-day trip to India or South East Asia with the instructor during the winter break visiting key sites and conducting original research (sites vary) 3) 28 classroom hours at Penn in the Spring term and 4) a research paper, due at the end of the Spring term. Course enrollment is limited to students admitted to the program. For more information and the program application go to http://sites.sas.upenn.edu/cuinindia This is a 2-CU yearlong course DEADLINE TO REGISTER IS MARCH 31st
Two Term Class, Student must enter first term; credit given after both terms are complete
Also Offered As: COML 2217, GSWS 2217, SAST 2217
1 Course Unit

ARTH 3180 African Art Seminar
This seminar focuses on art of the African continent. It is open to undergraduates only.
Not Offered Every Year
Also Offered As: AFRC 3180
1 Course Unit

ARTH 3200 Aegean Bronze Age Art Seminar
In this class, we will explore the art and cultures of the Aegean Bronze Age in Greece, a period from roughly 3,300-1,100 BCE. The geographic regions of the Greek Mainland, the Cycladic islands, and the island of Crete were home to complex cultural groups that formed a unique Bronze Age society. Topics will vary from semester to semester, and may include and not be limited to the examination of the architecture, pottery, wall paintings, stone carvings, jewelry, seals, weapons and other metalwork, and the iconography of these prehistoric arts. We will also delve into issues of the organization of society and the distribution of power, the role of women and men, trade and the unique position of the (rather small) Aegean world as it existed between two huge powerhouses of the ancient Mediterranean: the Ancient Near East and Egypt.
Not Offered Every Year
1 Course Unit

ARTH 3230 Origins of Art / Origins of Writing
Each of the earliest systems of writing had intimate and enduring ties to pictorial traditions. This seminar addresses the fundamental relationship between texts and visual imagery in the Mesopotamian, Egyptian, Chinese, and Maya traditions. The class will take a comparative approach to examine the parallel development of scripts and images, extending from their earliest beginnings to their on-going lives as mature systems. As the individual scripts became more capable of representing speech, the subject matter, composition, and function of images changed, and one goal of this class is to identify these processes. Emphasis will be put on seeing text and image as collaborative and interactive constructions, in which parts of a single message can be encoded and presented in different ways. The class will make extensive use of the collections and the curatorial expertise of the Penn Museum.
Not Offered Every Year
Also Offered As: ANTH 2330, NELC 3070
1 Course Unit

ARTH 3250 Classical Mythology in the Western Tradition
How and why have artists and viewers, from the Middle Ages to the global present, so often confronted ancient Greek and Roman stories? This undergraduate seminar makes use of local museum collections.
Not Offered Every Year
Also Offered As: CLST 3409
1 Course Unit

ARTH 3251 Arts of the Roman House, Villa, and Palace Seminar
Private and public met in the elite Roman dwelling; this undergraduate seminar looks at the rich record of things and images, in multiple media, and in their spatial contexts, among which Romans chose to live.
Not Offered Every Year
Also Offered As: CLST 3410
1 Course Unit

ARTH 3252 Violence in Ancient Mediterranean Art Seminar
Violence, physical and emotional, pervades the images of the ancient Mediterranean. This undergraduate seminar asks why, how and to what end that occurred; in these and any cultures, why do people look at such images?
Not Offered Every Year
Also Offered As: CLST 3411
1 Course Unit

ARTH 3259 Luxury in the Greco-Roman World: Self-Identity and Self-Indulgence
This undergraduate seminar examines the physical contexts, artifacts and visual narratives of the Greek and Roman cultures that attest the idea of luxury. The topics of the course look at the ways in which Greeks and Romans, on the one hand, defined their personhood through the representations of the self and the other in the arts, and, on the other hand, indulged in their personal manifestations and social interactions. The course is organized in two thematic sections: self-identity (the self, the other, sexuality, death) and self-indulgence (dressing and accessorizing, dining, exercising and bathing, having fun: entertainment and educated leisure lifestyles).
Fall or Spring
1 Course Unit

ARTH 3251 Greek Art, Architecture, and Urbanism
This undergraduate seminar explores key themes in Greek Art, Architecture and Urbanism. Topics vary from semester to semester and may include: “The Greek city,” “The architecture and sculpture of Greek temples,” “The architecture and landscape of Greek sanctuaries.”
Fall or Spring
1 Course Unit

ARTH 3259 Roman Art, Architecture, and Urbanism
This undergraduate seminar explores key themes in Roman Art, Architecture and Urbanism. Topics vary from semester to semester and may include: “Houses and Society,” “The Roman city,” “Pompeii and Herculaneum,” “Designing for luxury: Roman villas and houses,” “The architecture and landscape of Roman sanctuaries.”
Fall or Spring
1 Course Unit
ARTh 3305 Topography and Monuments of Ancient Rome
An intensive exploration of Rome's urban topography during the Republican and Imperial periods (6th c. B.C. through 4th c. A.D.) Using architectural and textual sources, including the Etruscan and Roman collections of the Penn Museum, the goal will be to reconstruct the built environment and decoration of Rome over the course of a millennium. Of interest to students of classics, archaeology, art history, and architecture. Some familiarity with Rome will be a plus, but is not required. Not Offered Every Year
Also Offered As: CLST 3305
Mutually Exclusive: ARTH 5330
1 Course Unit

ARTh 3320 The Byzantine Art of Devotion Seminar
Far from being exclusively a matter of belief and inner feeling, religion in the Byzantine world was intensely material. Icons, reliquaries, illustrated books, and other objects that we now consider under the rubric of "Byzantine art" played a crucial role in shaping one's relationship and interaction with the realm of the sacred. This undergraduate seminar offers an in-depth exploration of the material culture of personal piety in Byzantium. Larger topics to be addressed include icon veneration, the cult of saints and relics, pilgrimage, monasticism, and mysticism. Special consideration is given to the ways in which personal devotion objects functioned as instrument of self-formation. Not Offered Every Year
1 Course Unit

ARTh 3321 Portraiture Seminar
What does it mean to depict a person? And how might culturally specific notions of personal identity and subjectivity inform such an endeavor? This undergraduate seminar takes a broad view of the forms, functions, and meanings of portraiture in the Western tradition. Images across a wide gamut of media, from monumental sculptures to portrait miniatures, will be examined alongside other signs of identity, including seals, heraldic devices, inscriptions, and insignia. Not Offered Every Year
1 Course Unit

ARTh 3330 Material Christianities
What can objects tell us about Christianity? How might a lavish mosaic, a withered body part, a dark crypt, or a pilgrim's oil lamp challenge and complicate visions of the past extracted from texts? This course investigates the first thousand years of Christianity through the lens of material culture. The history of Christianity - from its nebulous beginnings in Palestine to its recognition as the official religion of the Roman Empire and subsequent expansion - is often narrated from a perspective that privileges the writings of elite men. To capture the rich diversity in Christian experience and expression, we will turn to the material practices of religion and explore how things, places, and bodily acts shaped what it meant to be Christian. Building on insights drawn from archaeology, art history, anthropology, and religious studies, we will seek to recover the experiences of diverse and often marginalized subjects and communities, and in the process, will problematize the categories of religion, authority, and identity. Regular visits to the Penn Museum and other collections in Philadelphia will complement lectures and group discussions.
Also Offered As: RELS 3330
Mutually Exclusive: ARTH 5330, RELS 5330
1 Course Unit

ARTh 3400 Medieval Art Seminar
This undergraduate seminar explores through the lens of more focused topics the arts produced in the European Middle Ages, and in adjacent territories, from 800 to 1400. Close readings of primary and secondary sources drive class time, and the rich resources of the Philadelphia area are brought to bear, including the Penn Museum, the Free Library of Philadelphia, the Philadelphia Museum of Art, Glencarn Museum, Bryn Athyn, etc. Students will work on skills relating to research, oral presentations, and academic writing.
1 Course Unit

ARTh 3401 Topics in Medieval Art
Topics vary from semester to semester. For the Spring 2021 semester, the topic will be: Art in the Time of Dante. 2021 marks the 700th anniversary of the death of Dante Alighieri (1265-1321). While his Divine Comedy is the pinnacle of medieval literary arts, Dante was himself interested in the masterpieces of visual arts of his own time – in Italy and abroad. Prominent artists like Cimabue and Giotto are mentioned in his texts, as well as such notorious figures linked to artistic production as the usurer Reginaldo degli Scrovegni or the mercenary Castruccio Castracani. Dante witnessed some of the most dramatic events of the Middle Ages, from the transfer of the papacy to Avignon to the salacious affair of the Tour de Nesle in France – together we will examine the visual culture of this tumultuous time.
1 Course Unit

ARTh 3430 Late Medieval and Renaissance France: Art, Politics, and Power
This undergraduate seminar will examine the commission, production, and display of art at the Valois courts from the start of the Hundred Years War with England in the 1330s to the death of Francis I in 1547. During these two centuries, conflict and conquest shaped the making of artwork in profound and sometimes unexpected ways: precarious dynastic claims could be substantiated through carefully crafted images, while foreign artists (including Rosso Fiorentino, Francesco Primaticcio, and Leonardo da Vinci) could be called upon to boost the monarch's prestige. Investigating the role played by objects in cultural diplomacy and propaganda, this course will examine works in a wide variety of techniques including easel painting, manuscript illumination, tapestry, armor, and metalwork, without neglecting less tangible art forms such as feasting, chivalric tournaments, and royal processions. Topics will include the art of the gift, female patronage, the interaction between text and image, and the role of artists in shaping a royal visual identity. The course will include a visit to the Philadelphia Museum of Art and an illuminated manuscript handling session at the Free Library of Philadelphia.
1 Course Unit

ARTh 3500 Topics in Southern Renaissance Art
Topic varies from semester to semester. For the Spring 2021 semester, the topic will be: Chiaroscuro. In this seminar we will explore the artistic technique known as "chiaroscuro," the contrast between light and shadow so as to produce effects of volume and relief. While we will grapple with chiaroscuro as deployed in architecture, drawings, and prints, our focus will be all the tenebret paintings of Caravaggio. If the lit bodies in Caravaggio's paintings project out boldly in relief, does anything remain and speak in the surrounding darkness?
1 Course Unit
ARTH 3510 Writing About Art Seminar
What does it mean to write about art? What are the historical origins of this undertaking? How does language mediate the intellectual, somatic, and cultural rapport between the viewing self and the physical object? As an initial response to these questions we will examine the writings of the Tuscan artist and critic Giorgio Vasari (1511-1574), the biographer of such renowned artists as Leonardo, Raphael, Donatello, and Michelangelo. We will also read the letters of famous artists from the early modern period, and examine the theoretical forays of artists such as Albrecht Dürer, who attempted to sketch the relationship between the memory and the imagination. Finally, we will look to examples of works of art for how we might read visual images as expressive of theories about what are is and what it can do.
Not Offered Every Year
Also Offered As: ENGL 0549, GRMN 1302, ITAL 3610
1 Course Unit

ARTH 3511 Brazilian Baroque Seminar
This undergraduate lecture explores the art, architecture, and visual culture of the Portuguese Empire with emphasis on Brazil and its relations with Africa and Asia.
Not Offered Every Year
Also Offered As: AFRC 3511, LALS 3511

ARTH 3512 Caravaggio Seminar
This seminar explores the artistic culture of Baroque Rome, with focus on the life and career of Caravaggio. This course is open to graduate and undergraduate students.
Not Offered Every Year
Also Offered As: ITAL 3612
1 Course Unit

ARTH 3560 Freud's Objects
How do we look at objects? And which stories can objects tell? These are questions that have been asked quite regularly by Art Historians or Museum Curators, but they take a central place within the context of psychoanalytic studies as well. The seminar "Freud's Objects" will offer an introduction to Sigmund Freud’s life and times, as well as to psychoanalytic studies. We will focus on objects owned by Freud that he imbued with special significance, and on Freud’s writings that focus on specific objects. Finally, we will deal with a re-interpretation of the "object" in psychoanalytic theory, via a discussion of texts by British psychoanalysts such as Melanie Klein and Donald Winnicott.
Not Offered Every Year
Also Offered As: CLST 3509, COML 2052, ENGL 1425, GRMN 1015
1 Course Unit

ARTH 3562 The Invention of Communication
This undergraduate seminar covers a history of print from Gutenberg to the twenty-first century.
Not Offered Every Year
1 Course Unit

ARTH 3621 Prints and Politics: From the Early Modern Era to Our Times
By the late fifteenth century, mechanically reproducible images were reshaping the social world. Connecting new audiences across geographies through access to the same visual information, prints launched propagandistic missions, fomented rebellion against authorities, and built networks of progressive thinkers who could envision alternative futures. Prints played a key role in developing what constituted news. Mass-distributed images delivered the mistreatment of the “Indians” by the Spanish and portrayed the packing of Africans on a slave ship. Goya’s etchings protested the repression of the Second of May uprising, while the silkscreens of Andy Warhol repeated the image of police dogs attacking civil rights activists in Birmingham. Covering a five-hundred-year history, this course will focus on how printed images created communities and acted as exclusionary devices. We will train our eyes on examples from local collections.
Also Offered As: ENGL 2621
1 Course Unit

ARTH 3630 Early Modern Art Seminar
This seminar takes a thematic approach to the study of European art produced between 1400-1800. Topics, which change annually, include such offerings as “Art and Law;” “Spectacle, Punishment, and Surveillance;” “Prints and Politics” and “The Subject of Nature.” In a given year, we will approach a corpus of objects, images, and performances through a study of three kinds of text: primary sources, secondary art-historical scholarship, and critical theory. Discussions will convene around local museum and library collections.
1 Course Unit

ARTH 3730 American Art Seminar
This undergraduate seminar focuses on the art of the United States, the European American colonies that preceded it, and the increasingly diverse and complicated communities that have come to characterize the modern era. Topics may explore representational, material, and aesthetic aspects of painting, sculpture, and photography; the social and political roles of mass visual and material culture; and histories of exhibitions and museums. The history of artistic genres (portraiture, history, and landscape painting, still life); representational structures (common themes and types); and reproduction technologies (photography, sculpture casting, and printmaking) throughout the history of this nation may also be featured. The class is reading- and discussion-based. It is recommended for art history and other humanities majors and minors.
Not Offered Every Year
1 Course Unit

ARTH 3749 In/Visible: Asian American Cultural Critique
This interdisciplinary seminar examines how popular cultural representations frame Asian Americans as either invisible or hypervisible —our explorations will move across race and national origin, language and class, gender and sexuality. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ASAM 2272, ENGL 2272, GSWS 2272
1 Course Unit
ARTH 3750 Topics in 19th-Century Art
Topic varies from semester to semester. For the Spring 2022 semester, the topic will be: World's Fairs. This seminar will study the manifold novelties first displayed at the nineteenth and early-twentieth century World's Fairs, stretching from 1851 to 1915. Such events-first held in cities like London and Paris, but eventually all over the world-chronicled the period's innovations in art, technology, ethnography, and science. Many of the most crucial inventions were first shown to the public at World's Fairs: electricity, the telephone, and the bicycle, among other innovative artistic techniques and everyday objects. The fairs brought a community of millions of tourists from all over the world together, thereby encoding complex structures of empire and international relations within a pretense to entertainment. The "global" ambitions of universal expositions, and the image of the "world" they helped construct, will come under close scrutiny for its frequent imperial overreach, not least in the controversial practice of human displays. We will also test the thesis that the universal expositions engendered new ways of seeing and engaging with the material world. Finally, we will study the period definitions of "innovation" in industrial production promoted by such large-scale events.

1 Course Unit

ARTH 3790 Performing History
This seminar concentrates on the ways that various peoples in the world make their history by means other than relying on written texts alone. Over the course of the semester, we therefore may be examining such different public events and civic rituals as parades, political and religious processions, local historical pageants, carnivals, historic preservation, museums, military reenactments, and history theme parks. The emphasis in each of these forms, places, and semiotic processes will be on their identity and function as key performances that transform consciousness, shift individuals alternately into both actors and spectators, reframe the everyday as the metaphysical, and intensify the status of cultural values in the histories they present to view. Course requirements: a seminar paper, the topic of which you will discuss with me no later than week five of the course; and a working annotated bibliography and statement of your paper's main thesis. I will say more about these assignments as they approach.

Not Offered Every Year
Also Offered As: ANTH 2154, HIST 3154
1 Course Unit

ARTH 3820 Film Exhibition and Moviemaking
Cinema has always had an audience. From its first appearances in cafes, tea houses, and variety shows to today's fragmented, digital consumption, cinema continues to exist in relation to different ways of looking and experiencing. This course examines how films have been shown and how audiences have watched films in diverse historical and cultural contexts. We will explore how the ways in which film screenings were organized shape both the films being shown and audiences' moviemaking experiences. Based on historical and site-specific investigations, we will also reflect on how our modes of engaging with cinema impact conceptions of what cinema is, what it will be, and what it can be. Unlike most film courses, this course does not focus on analyzing films, but look into the operations of cinema as an institution. There will be field trips to local movie theaters and a final collective project that asks students to curate a special film screening (in-person or online) using innovative formats.

Also Offered As: CIMS 3810
1 Course Unit

ARTH 3830 Queer Modernisms
This course tracks the development of Modernism in America, Western Europe, and specific other locations around the globe, with particular emphasis as to how and why dissident sexualities so often found expression in and as aesthetic dissent. Creating new expressive forms and theories that often seem far removed from any traditional definition of sexuality, queer modernist artists often replaced dangerous forms of social dissent with more prudent forms of formal dissidence. In pursuing these questions, we will place art in its broader social context, seeking to answer such significant problems as how and why forms of artistic representation that were once transparent, eminently legible to all strata of society, increasingly became, under the avant garde, designed to speak only to an elect, to a select few in our culture. We will ask what happens when art deliberately narrows its audience, and how that narrowing is related to questions of sexual difference. What is the relationship between queerness and cultural elitism, a connection generally presumed in popular culture, but rarely examined academically? And finally we will ask about the utility of forms of queer political dissent if those forms remain illegible as queer to a wider audience. Throughout, new methods informed by queer, gender, and critical race theory will be utilized.

Also Offered As: GSWS 3150
1 Course Unit

ARTH 3831 Queer Art Seminar
This course explores art and art history from a Queer Studies perspective, in a global and cross-cultural context. Topics vary from semester to semester and stretch widely in terms of geography and chronology.

Also Offered As: GSWS 3831
1 Course Unit

ARTH 3840 Cuban Visual Culture
This course will focus on the urban history and cultural politics of contemporary Cuba with an emphasis on contemporary art and contemporary developments in the city of Havana. Students will learn about the Spanish influence on early colonial art, the development of formal academic art training and the changes to art instruction and the form and content of art created since the Revolution.

ARTH 3860 20th Century Art in Europe Seminar
Topic varies from semester to semester. For the Fall 2023 semester, the topic will be: Modern Design. This course examines modern design from the turn of the 20th century through the present, including furniture, metalwork, ceramics, glass, plastics, lighting, electronics, and design environments. Our study focuses on design objects in museum collections as well as period journals and criticism. Topics include influential designers and movements of Europe and North America as well as counterparts in Asia, Africa, and South America. We will use design exhibitions at galleries and museums as resource for discussion and writing throughout the term.

Not Offered Every Year
1 Course Unit
ARTH 3870 The History of American Animation
This course will look at American animation as an art form, a technology and an industry. We will explore the ways in which artistic, technical, historical, and cultural conditions shape the development of animation and in turn, how animation impacts viewers. Topics will include trends in animation and their relation to contemporary popular culture, issues of art versus commerce in the creation of cartoons, the intersection of animation and politics, and shifts in style and technique throughout the years. We will look at the personalities in animation who have shaped the art form and continue to influence it, the rise in animation’s popularity, and current-day applications of animated imagery. Case studies will include Pixar, Walt Disney, UPA, television cartoons, stop motion animation, and the movie, Who Framed Roger Rabbit.
Not Offered Every Year
Also Offered As: CIMS 3200, FNAR 3181
1 Course Unit

ARTH 3871 The History Computer Animation
This course will look at computer animation as an art form, a series of technological innovations and an industry. We will explore the way in which artistic, technical, historical, and cultural conditions have shaped the development of computer animation. Topics will include the impact of early motion graphics experiments in the sixties, the contributions of university- and corporation-funded research, commercial production, and the rise of Pixar. We will consider the companies and personalities in computer animation who have shaped the art form and continue to influence it, the contributions to computer animation from visionaries around the world, and current day applications of animated imagery. Throughout the course, we will screen important works from the canon of computer animation, including the earliest computer-animated shorts, scenes from Beauty and the Beast, the first Pixar shorts, Toy Story, Final Fantasy and works done internationally to forward the art and the industry.
Not Offered Every Year
Also Offered As: CIMS 3201, ENGL 0591, FNAR 3182
1 Course Unit

ARTH 3873 The Animation Of Disney
No organization has exerted as much influence on popular culture and the art form of animation as The Walt Disney Company. For decades, Disney films were the standard by which all other animated films were measured. This course will examine the biography and philosophy of founder Walt Disney, as well as The Walt Disney Company’s impact on animation art, storytelling and technology, the entertainment industry, and American popular culture. We will consider Disney’s most influential early films, look at the 1960s when Disney’s importance in popular culture began to erode, and analyze the films that led to the Disney renaissance of the late 1980s/early 1990s. We will also assess the subsequent purchase of Pixar Animation Studios and the overall impact Pixar has had on Disney. The class will also look at recent trends and innovations, including live-action remakes and Disney+. Not Offered Every Year
Also Offered As: CIMS 3203, ENGL 0593, FNAR 3184
1 Course Unit

ARTH 3874 History Children’s TV
This course will survey the history of children’s television from the invention of television through the present, with an emphasis on series development and production, artistry, and the colorful personalities who built this industry. We’ll consider important figures including Fred Rogers, Bill Hanna and Joe Barbera, Joan Ganz Cooney, Jim Henson and Walt Disney. We will discuss the history of animated cartoons that were made specifically for television, Saturday morning production, the rise of Japanese cartoons from the 1960s through Pokemon, and the growth of children’s cable channels in the 90s, as well as other landmark moments. We’ll also assess the impact of streaming platforms on television and the future of children’s media.

ARTH 3910 Film Festivals
This course is an exploration of multiple forces that explain the growth, global spread and institutionalization of international film festivals. The global boom in film industry has resulted in an incredible proliferation of film festivals taking place all around the world, and festivals have become one of the biggest growth industries. A dizzying convergence site of cinephilia, media spectacle, business agendas and geopolitical purposes, film festivals offer a fruitful ground on which to investigate the contemporary global cinema network. Film festivals will be approached as a site where numerous lines of the world cinema map come together, from culture and commerce, experimentation and entertainment, political interests and global business patterns. To analyze the network of film festivals, we will address a wide range of issues, including historical and geopolitical forces that shape the development of festivals, festivals as an alternative marketplace, festivals as a media event, programming and agenda setting, prizes, cinephilia, and city marketing. Individual case studies of international film festivals—Cannes, Berlin, Venice, Rotterdam, Karlovy Vary, Toronto, Sundance among others—will enable us to address all these diverse issues but also to establish a theoretical framework with which to approach the study of film festival. For students planning to attend the Penn-in-Cannes program, this course provides an excellent foundation that will prepare you for the on-site experience of the King of all festivals.

ARTH 3930 Cinema and Civil Rights
This undergraduate seminar will examine key moments in the history of civil rights through a cinematic lens. Over the course of the semester, we will explore how filmmakers have depicted the lives, aspirations, and strategies of those who have struggled for equal rights; how different struggles have intersected with each other; what aesthetic strategies have been adopted to represent freedom and the denial of it; and how effective cinematic efforts to contribute to increased freedom have been as well as what criteria we use to evaluate success or failure in the first place. Each week, we will watch a film and read a series of texts that will be drawn from a variety of arenas, including histories of civil rights; civil rights pamphlets and speeches; filmmaker interviews; film and media theory; memoirs; and theories of race, gender and sexuality.
Course requirements: mutual respect; completion of all readings and screenings; participation in class discussion; weekly online responses; a final project that can be a research paper, film, art project, or community-based initiative.
Not Offered Every Year
Also Offered As: AFRC 3930, CIMS 3930, ENGL 0599, GSWS 3930

ARTH 3931 Participatory Community Media, 1970-Present
What would it mean to understand the history of American cinema through the lens of participatory community media, collectively-made films made by and for specific communities to address personal, social and political needs using a range of affordable technologies and platforms, including 16mm film, Portapak, video, cable access television, satellite, digital video, mobile phones, social media, and drones? What methodologies do participatory community media makers employ, and how might those methods challenge and transform the methods used for cinema and media scholarship? How would such an approach to filmmaking challenge our understanding of terms like "authorship," "amateur," "exhibition," "distribution," "venue," "completion," "criticism," "documentary," "performance," "narrative," "community," and "success"? How might we understand these U.S.-based works within a more expansive set of transnational conversations about the transformational capacities of collective media practices? This course will address these and other questions through a deep engagement with the films that make up the national traveling exhibition curated by Louis Massiah and Patricia R. Zimmerman, We Tell: Fifty Years of Participatory Community Media, which foregrounds six major themes: Body Publics (public health and sexualities); Collaborative Knowledges (intergenerational dialogue); Environments of Race and Place (immigration, migration, and racial identities unique to specific environments); States of Violence (war and the American criminal justice system); Turf (gentrification, homelessness, housing, and urban space); and Wages of Work (job opportunities, occupations, wages, unemployment, and underemployment). As part of that engagement, we will study the history of a series of Community Media Centers from around the U.S., including Philadelphia's own Scribe Video Center, founded in 1982 by Louis Massiah, this course's co-instructor. This is an undergraduate seminar, but it also available to graduate students in the form of group-guided independent studies. The course requirements include: weekly screenings, readings, and seminar discussions with class members and visiting practitioners, and completing both short assignments and a longer research paper. Also Offered As: AFRC 3932, CIMS 3931, COML 3931, ENGL 2970, GWS 3931
Mutually Exclusive: ARTH 6931
1 Course Unit

ARTH 3940 Chinese and Sinophone Cinemas
This course is a survey of Chinese and Sinophone cinemas from the silent era to the present. The Sinophone refers to Sinitic film cultures both inside and outside the People's Republic of China that have been in relatively marginalized positions against the Han-Chinese mainstream, such as Taiwanese, Hong Kong, Tibetan, and transpacific cinemas. One major goal of the course is to interrogate the national cinema framework and to show how the meaning of "Chineseness" has been problematized by filmmakers and critics throughout modern history. Students will learn about important film movements and trends such as leftist cinema from the 1930s, socialist cinema, Taiwanese and Hong Kong New Waves, the Fifth and Sixth Generation filmmakers, and contemporary transnational productions. Attention will be paid to both films known for awards and artistic achievements and popular genres including thrillers, horror, and wuxia (martial art).
Also Offered As: CIMS 3940, EALC 1331

ARTH 4250 Late Antique Arts
What is 'Late Antiquity'? In 312 when Roman emperor Constantine inaugurated a Christian empire, 'Roman' culture was centuries old. The period ca. 200-650 CE saw profound transformations that launched Medieval, Byzantine and Islamic traditions. In this epoch of upheaval destruction was frequent but partial: Rome long survived, Constantine's 'new Rome', Constantinople flourished, and around the Empire both proto-global visual culture and local forms prospered. Roman cultural models authorized both innovation and passion for tradition: we critique art-historical models for Late Antique 'decline', analyse habits of material reuse and curation, and look at new Christian and Jewish roles for Roman things as well as polytheist visual survival. Foreign allies and enemies interacted with Greco-Roman Late Antiquity; we visit them too, as in the early Islamic palaces. Media discussed include not just 'monumental' painting, mosaic, sculpture, but also silver, ceramic, ivory, figural textile, glass, painted books, jewelry, coins and more. We look too at Late Antique texts on art, objects, space and viewership. This is an advanced undergraduate lecture course.

ARTH 4270 Roman Sculpture
Survey of the Republican origins and Imperial development of Roman sculpture - free-standing, relief, and architectural - from ca. 150 BC to 350 AD. We concentrate on sculpture in the capital city and on court and state arts, emphasizing commemorative public sculpture and Roman habits of decorative display; genres examined include relief, portraits, sarcophagi, luxury and minor arts(gems, metalwork, coinage). We evaluate the choice and evolution of styles with reference to the functions of sculptural representation in Roman culture and society.

ARTH 4280 Hellenistic Art and Spectacle
Hellenistic usually names art in the age of Mediteranean culture from the 4th century BCE and the rise of Alexander the Great's Macedon, and the Greco-Macedonian conquest of the Persian Empire, to Cleopatra of Egypt's defeat by Rome at the end of the Republic. Our course looks also at the age of Augustus and his successors, 1st century CE. While Greek and Macedonian practice in city-states and kingdoms is our launching point, this course also looks at international culture and cultural interaction among peoples from North Africa and Etrusco-Roman Italy, Egypt, Anatolia, the Mideast and Central Asia. We probe art, artifacts, and visual display from a range of settings, from sanctuary to house, palace and parade, and in all media, from marble monuments to pottery and jewelry. Our archaeology of Hellenistic visual culture also looks at the rich body of Hellenistic and Roman texts of art history, art criticism, and the description of objects and image, to better understand the Hellenistic maker, patron, and viewer. No prerequisites.
Not Offered Every Year

ARTH 4400 African Art, 600-1400
This course examines the flourishing civilizations of the African continent between the Fall of the Roman Empire and the dawn of the "Age of Discovery." Although material remains of the complex cultures that created exceptional works of art are rare, current archaeology is bringing much new information to the fore, allowing for the first time a preliminary survey of the burgeoning artistic production of the African continent while Europe was building its cathedrals. Bronze casting, gold work, terracotta and wood sculpture, and monumental architecture - the course takes a multi-media approach to understanding the rich foundations of African cultures and their deep interconnection with the rest of the world before the disruptive interventions of colonialism.

ARTH 4980 Senior Thesis
Students with a minimum GPA of 3.5 in the major at the end of the junior year are encouraged to write an honors thesis. Students who choose to write a thesis must meet with the Undergraduate Chair in spring of their junior year to discuss their topic. Research will begin in summer and continue into fall of their senior year, concluding with a paper in the spring term. Students will be registered for ARTH 398 in the Fall and Spring semesters of their senior year. All thesis writers are encouraged to apply for research and travel grants through the Center for Undergraduate Research and Fellowships to support their work. Departmental honors are awarded to students whose thesis receives a grade of A- or higher. Students may also submit their theses in the annual competition for the College Alumni Society David M. Robb Prize in the History of Art. For more information, visit: https://www.sas.upenn.edu/arthistory/undergraduate/honors
Two Term Class, Student must enter first term; credit given after both terms are complete
1 Course Unit

ARTH 5010 Curatorial Seminar
Curatorial seminars expose students to the complexity of studying and working with objects in the context of public display. With the guidance of faculty and museum professionals, students learn what it means to curate an exhibition, create catalogues and gallery text, and/or develop programming for exhibitions of art and visual/material culture.

ARTH 5120 Advanced Topics in Buddhism
This is an advanced course for upper level undergraduates and graduate students on various issues in the study of Buddhist texts, art, and history. Each semester the theme of the course changes. In recent years themes have included: Magic and Ritual, Art and Material Culture, Texts and Contexts, Manuscript Studies. Fall 2013 Topic: Buddhist repertoires (idiosyncratic and personal assemblages of beliefs, reflections, wonderings, possessions, and practices) for a large part, material and sensual. Buddhists are often sustained by their collection, production, and trading of stuff amulets, images, posters, protective drawings, CDs, calendars, films, comic books, and even Buddhist-themed pillow cases, umbrellas, and coffee mugs. Aspirations are interconnected with objects. Beliefs are articulated through objects. Objects are not empty signifiers onto which meaning is placed. The followers and the objects, the collectors and their stuff, are overlooked in the study of religion, even in many studies in the growing field of material culture and religion. What is striking is that these objects of everyday religiosity are often overlooked by art historians as well. Art historians often remove (through photography or physical movement to museums or shops) images and ritual implements from their ritual context and are seen as objets d’art. While art historians influenced by Alfred Gell, Arjun Appadurai, and Daniel Miller have brought the study of ritual objects into the forefront of art historical studies, in terms of methodologies of studying Buddhist art, art historians have generally relegated themselves to the study of either the old and valuable or the static and the curated. This course aims to bring a discussion of art into the study of living Buddhism. Art historians have primarily concentrated on the study of images, stupas, manuscripts, and murals produced by the elite, and primarily made before the twentieth century; 2) study art as it exists and operates in dynamic ritual activities and highly complex synchronic and diachronic relationships; 3) focus on the historical and material turn in the study of images, amulets, and murals in Buddhist monasteries and shrines.

Also Offered As: EALC 5501, RELS 5710
1 Course Unit

ARTH 5130 Ukiyo-e: Beyond the Great Wave
In this seminar we will take a closer look at the prints, paintings, and illustrated books produced in the genre known as "ukiyo-e," the "pictures of the floating world." We'll begin by asking how the "Great Wave" became a global icon and we'll bust the myth of prints being used as wrapping paper. As we learn the history of the genre, from 1600 to ca. 1850, we'll also make critical interventions into that narrative, asking how "ukiyo-e" became a genre within a larger artistic sphere; how publishers collaborated with designers to construct artistic personae; how illustrated books contributed to knowledge formations; and how concepts of authenticity and authorship remain critical to its understanding. This course will also consider how internet resources affect our understanding of the work of art. Students need not have any Japanese language skills, but should have taken related courses in art history or East Asian Studies. Advanced undergraduates and graduate students preferred.
Not Offered Every Year
Also Offered As: EALC 7141
1 Course Unit

ARTH 5140 Utamaro and his Contemporaries
In this seminar we will take a closer look at the prints, paintings, and illustrated books produced by one of ukiyo-e's most famous artists, Kitagawa Utamaro (1753?-1806), with special focus upon works to be included in an upcoming exhibition. We will begin by surveying the larger history of the "pictures of the floating world" (ukiyo-e) and pay close attention to Utamaro's teacher and his contemporaries. The status of the artist, the role of the publisher, networks of possible patrons, and Utamaro's legacy are among the key issues the seminar will address. Our analysis will further attend to the ways in which works by Utamaro and other ukiyo-e artists were evaluated and appreciated in late 19th-century France by such figures as Edmond de Goncourt, Hayashi Tadamashi, and Siegfried Bing, among others. Students will have the opportunity to study works in local and regional collections, including the Kislak Center, the Philadelphia Museum of Art, and the Freer/Sackler Galleries. Undergraduate students admitted by permission only.

ARTH 5170 History of the Book in East Asia
From handscrolls to manga, books play a vital role in East Asian societies. In this seminar we will introduce the spread of book cultures across East Asia and reconsider the role and impact of material texts on societies in China, Korea, and Japan. Among the questions we'll engage are: What is a book, an author, or an edition? How do readers affect books? How do publishers decide when to use illustrations, woodblock printing, or movable type? How has the history of books differed in China, Japan, and Korea from the history of the book in the West? We will consider various media (bamboo, paper, silk, and the digital), formats (scrolls, folded books, bound books, small to oversize), and the tensions between handwritten manuscript and printed pages. Hands-on sessions may include paper-making, bookbinding, and printing. This is an Objects-Based Learning course, using materials from the Kislak Center for Special Collections, Rare Books and Manuscripts, and the Penn Museum, with visits to the Philadelphia Museum of Art and the Free Library of Philadelphia. Requires no knowledge of any Asian language.
Not Offered Every Year
Also Offered As: EALC 8301
1 Course Unit
ARTH 5190 Archiving Jazz: Visuality And Materiality In The Phila Jazz Community 1945-2019
This seminar will be organized around three distinct pathways. First, it will serve as an introduction to Jazz Studies and thus be attentive to the ways that jazz music has sparked an interdisciplinary conversation that is wide-ranging and ongoing. Second, we will be partnering with the African American Museum of Philadelphia to consider jazz within the realm of visual art. In light of efforts to map the “black interior,” how have visual artists (e.g. painters, sculptors, filmmakers, and photographers) sought to represent jazz? Third, we will endeavor to develop partnerships with the Philadelphia (and beyond) jazz community, especially as it pertains to creating and sustaining an archive that serves as way to understand jazz as an instrument of placemaking and also as a vehicle for jazz musicians to take ownership of their narratives. The seminar will meet at the African American Museum of Philadelphia and be team taught with members of the Museum staff. The course will culminate with a virtual exhibit of visual works and archival materials centering on Philadelphia’s jazz community and (if funding is available) a free concert to be held at AAMP. Undergraduates are welcome to register for the course with permission of the instructor.

ARTH 5220 Aegean Bronze Age Art Seminar
In this class, we will explore the art and cultures of the Aegean Bronze Age in Greece, a period from roughly 3,300-1,100 BCE. From this time, we have the first evidence of complex society in Greece with three geographically and materially distinct groups of people located on the Greek Mainland, the Cycladic islands, and the island of Crete. Topics will vary from semester to semester, but may include and not be limited to the examination of the architecture, pottery, wall paintings, stone carvings, jewelry, seals, weapons and other metalwork, and the iconography of these prehistoric arts. We will also delve into issues of the organization of society and the distribution of power, the role of women and men, trade and the unique position of the (rather small) Aegean world as it existed between two huge powerhouses of the ancient Mediterranean: the Ancient Near East and Egypt.

1 Course Unit

ARTH 5230 Narrative in Ancient Art
Art history, and its cousins in religious, social, political and literary studies, have long been fascinated with the question of narrative: how do images engage time, tell stories? These are fundamental questions for ancient Near Eastern, Egyptian and Mediterranean art history and archaeology, whose rich corpus of narrative images is rarely considered in the context of “Western” art. Relations between words and things, texts and images, were as fundamental to the ancient cultures we examine as they are to modern studies. As we weigh classic modern descriptions of narrative and narratology, we will bring to bear recent debates about how (ancient) images, things, monuments, and designed spaces engage with time, space, and event, and interact with cultural memory. We will ask “who is the story for, and why?” for public and private narratives ranging from political histories to mythological encounters. Our case studies will be drawn from the instructors’ expertise in Mesopotamian visual culture, and in the visual cultures of the larger Mediterranean world from early Greek antiquity to the Hellenistic, Roman, and Late Antique periods. One central and comparative question, for instance, is the nature of recording history in pictures and texts in the imperial projects of Assyria, Achaemenid Persia, the Hellenistic kingdoms, and Rome.
Also Offered As: AAMW 5230, CLST 5412
1 Course Unit

ARTH 5231 Archaeological Field Methods
This seminar will prepare students for participation in the excavations at the site of ancient Lagash, modern Tell al-Hiba, in southern Iraq that are scheduled to take place in the fall semester. The topics to be considered are introduction to the recording methods, use of equipment, review of the ceramic sequence, methods of recording, drawing, photography. Permission of the instructor required for participation in the class.
Also Offered As: AAMW 5231
1 Course Unit

ARTH 5240 Mesopotamia 2200-1600 BCE
This seminar style class will focus on two canonical periods of Mesopotamian history from 2100-1600 BCE. It is structured to examine fundamental institutions of kingship, religion, economy, law and literature. Practices well established in Sumer by the end of the third millennium evolved during the first half of the second millennium BCE when Amorite speaking peoples assume central roles in Mesopotamian institutions. The class will be structured around case studies engaging key monuments of art, architecture and literature. It will be team-taught by Prof. Pittman, focusing on material remains and visual arts and by Prof. Steve Tinney who brings expertise to the rich cuneiform textual traditions.
Also Offered As: AAMW 5020, ANTH 5024, NELC 5020
1 Course Unit
ARTh 5241 Courtly Life in Mesopotamia, Persia, and the Mediterranean
Who could approach and speak with the Sumerian Queen? What rules governed a banquet with the Persian king? What was the most elegant way to drink wine? Where were the women in the Assyrian court? With hundreds of people crammed into a palace, was hygiene important? How were court guests treated? What games were played at court? Is the stereotypical image of the “Oriental” court characterized by lust, backstairs intrigue, flatteries, and secrets sustainable in the light of new evidence and theoretical approaches? The court at the same time is considered as a large amorphous body in a physical location or an institution, or a group of people, or even to particular events. This seminar style course considers Middle Eastern courts from the Sumerians through the Assyrian and Persian empires articulating shared and diverse features. Textual, visual, material and archaeological sources are considered through sociological and anthropological theories and core concepts such as groups, individuals, ultrasciality, proxemics, sociopetal, sociofrugal and purity to name a few. Comparisons with later courts in the Middle East are welcome. Also Offered As: AAMW 5241, NELC 5054
1 Course Unit

ARTh 5250 Borderlines: Art and Artifact in the Roman Empire
What made art and artifacts 'Roman', or not, in a Roman world? 'Roman provincial art' is an active scholarly category. This seminar reframes it, to test productive models to understand visual culture outside the empire's Italian heartland from the Late Republic into Late Antiquity, in the Roman polity's interactions with many peoples in situations of diaspora, colonization, hegemony, conflict, economic exchange, and religious interaction. As 'Rome' expanded, cultural relations across many borderlines - social, ethnic, territorial - potentially became cultural politics. A traditional topic for that has been Roman interaction with Greek culture. This seminar extends that range, while tackling 'Hellenization', as we reflect on models of 'Romanization', globalization and identity formation within the imperium's boundaries in its provinces and client kingdoms, and also at its frontier zones. Various disciplines apply: art history, archaeology, history, and more. Case studies, evolved with students, may range from Britain to Iran, northern Africa to the Black Sea in space and, in time, from interactions with the Hellenistic East and West and with Iron Age Europe, to the age of Germanic, Sasanian and Ummayad conquests of Roman terrain, ca 3rd c. BCE-7th c. CE. The market in art and artifact, the nature and status of makers, and conditions of patronage and viewing are key considerations. Private and public objects, images, architecture and urbanism, and landscapes can all concern us, as we try out disciplinary approaches that take in eg cultural appropriation, translation and hybrity, creolization, discrepant experience, object agency, and communities of taste and style. 'Ethnicity' is a loaded concept in ancient Mediterranean studies, as is 'race'; our course must engage those, and the ways in which things and styles have been made to serve those terms. And who owns, is heir to, the cultural legacies we look at, and how to name them, are problems that tangle with current national identity formation, and academic and museum practice. Our own Museum's holdings can make topics. Students are welcome to bring in interests in language and text cultures, in disciplines outside art history and archaeology, and in other world cultures and epochs. ARTh 5254 Myth Through Time and in Time Seminar
The textual and physical remains of Greek and Roman culture and belief as 'myth' entranced the post-antique European world and its neighbors. Makers, patrons and viewers manipulated those survivals to challenge and speak to a contemporary world. This course focuses on how and why artists and their patrons engaged the mythic and examines the various areas of political and religious life that sought animation through an evocative narrative. This seminar is open to graduate and undergraduate students. Not Offered Every Year Also Offered As: AAMW 5254, CLST 7407, ITAL 5254
1 Course Unit
ARITH S290 The Roman Idea of Landscape
Landscape was one of the most prominent themes in ancient Roman culture. The Roman visual and literary representations of natural scenery were adopted and expanded upon many Hellenistic themes. In the Roman period, however, for the first time in Western culture landscape was singled out as a theme in its own right; it was accurately described, its qualities were praised in the pastoral poetry of Virgil, and its idealized and symbolic representations permeated the public and private spheres: the garden paintings from the underground dining room of the Villa of the Livia at Prima Porta and the Odyssey landscapes from the Esquiline are but two of many examples. This Roman sensitivity of landscape, attested in contemporary literary and visual sources, found an architectural expression in Roman luxury villas. In the realm of villa designs, gardens and landscapes could be represented in wall painting and realized in design at the same time. The villas provided literally a drawing board for Roman lovers of landscape. Late Republican and early Imperial poems, letters, and agricultural treatises read like exposés of architectural design exercises, vis-à-vis natural, cultivated and designed landscape, and how they delineated blueprints of villas — villa rustica, urbana, suburbana and the like. This course will examine literary and visual representations of natural scenery in the Greek and Roman cultures as well as Roman luxury villa architecture in order to address the ways in which Greek and Roman ideas and idealization of landscape contributed to the creation of a novel language of architecture and landscape architecture. Open to graduate and undergraduate students.

ARITH S291 Greek and Roman Wall Painting
Painting and pictorial realism, as we know them, were invented in the fourth century BCE. Their effects have survived in the Hellenistic tomb paintings at Vergina, and elsewhere in Macedonia and Thrace, and their ideas have been described by ancient authors. This course examines the surviving Greek and Roman paintings together with ancient sources in order to shed light on the deployment of the pictorial repertoire of classical antiquity.

ARITH S292 Delos in Context
Delos was an important cult centre since the archaic period whose activity was inextricably linked to its economic role. Due to its advantageous geographical position in the centre of the Aegean world, Delos commanded a huge cult network that intertwined religious with economic and political activities from the archaic period onwards. Communities competing for political power and leadership exploited the cult network of Delos over time; Ionians, Athenians, the successors of Alexander and finally Romans. This course will focus on three key moments of the island's history — the first Athenian dominion, the period of independence and the second Athenian dominion — in order to highlight the ways in which the competing powers used art and architecture to define their presence on the sacred island. By studying the presence of the Athenians in the sanctuary of Apollo since the sixth century BCE, which culminated in their administration of the sanctuary during the fifth and fourth centuries (the first Athenian dominion), the course will examine the cultural mannerisms of the period. By examining the architectural development of the sanctuary and the city of Delos during the period of the independence (314-167 BCE) the course will address the monumentalization of the sanctuary and the extension of the city through the euergetism of the successors of Alexander and the emergence of a new form of urban life in the Hellenistic period. The course will finally examine Delos during the period of the second Athenian dominion (167-69 BCE), when the Roman senate decided to make it a "duty free" port under Athenian suzerainty. By addressing the economic and urban developments of the late Hellenistic Delos the course will look at the contemporary trends in art and architecture, which in effect shaped those of the emerging Roman Empire. Open to graduate and undergraduate students.

ARITH S293 Topos, Myth, and the Contemporary: Art Practices in Archaeological Sites and Mythological Places
The seminar will map the intellectual agenda of contemporary art practices that engage with archaeological sites and important mythological places in Italy and Greece. Over the past two decades there has been an increasing interest of artists in archaeology and the classical past in Italy and Greece resulting in in situ art installations and performances, as well as reflective presentations of their interactions with the sites in a gallery space. These projects / installations / performances present a range of approaches: from investigations of cultural traditions, national norms and stereotypes that seek to tackle learned preconceptions and received histories of the classical, to the use of the archaeological site, mythologically poignant topos and myth as a backdrop for the contemporary — the Documenta 14 in Athens in 2017 may serve as a representative example of this range. The course will assess the intellectual and cultural landscapes of as well as the political strategies behind these contemporary art practices. Open to graduate and undergraduate students.

ARTH 5305 Topography and Monuments of Ancient Rome
An intensive exploration of Rome's urban topography during the Republican and Imperial periods (6th c. B.C. through 4th c. A.D.) Using archaeological and textual sources, including the Etruscan and Roman collections of the Penn Museum, the goal will be to reconstruct the built environment and decoration of Rome over the course of a millennium. Of interest to students of classics, archaeology, art history, and architecture. Some familiarity with Rome will be a plus, but is not required.

ARTH 5320 The Icon
This seminar explores the Byzantine icon and its legacy. Spanning nearly two millennia, from the emergence of Christian sacred portraiture to the reception of icon painting by the early twentieth-century Russian avant-garde, the seminar will introduce you to the history, historiography, and theories of the icon. While our focus will be on Byzantium and the wider world of Orthodox Christianity, especially in the Slavic Balkans and Eastern Europe, the seminar will also engage with fundamental questions concerning the nature, status, and agency of images across cultures. Topics to be addressed include iconoclasm and the problem of idolatry; the social and ritual lives of icons; authorship, originality, and replication; viewer response and the cultural construction of vision; the frontier between art and the sacred image; and the afterlife of the icon in modernity. Open to graduate and undergraduate students.

ARTH 5321 Art and Text in Byzantine Culture
In Byzantine culture, images and material objects, on one hand, and texts —whether read, spoken, remembered, or inscribed—on the other, were closely intertwined on multiple levels. Debates concerning the role of images in religious devotion during the period known as Iconoclasm generated a huge body of theological writings about art. Descriptions of works of art, either independent or inserted into larger literary compositions, proliferated. In manuscripts, pictures were variously mobilized to complement, illustrate, interpret, or comment on the verbal message. Icons of sacred personages were commonly inscribed not only with identifying labels, but also with special epithets. Moreover, from monumental architecture to personal seals and pieces of jewelry, a vast array of objects bore inscriptions, often in the form of poetical texts, or epigrams. Script, sometimes illegible and nonsensical, also featured as ornament and visual sign. The written word was a source of power and authority as much as a means of communication. The aim of this seminar is to interrogate the interface between art and text in Byzantium. No knowledge of Medieval Greek is required for the course. All the inscriptions and primary sources to be discussed will be available in translation. Open to graduate and undergraduate students.

ARTH 5322 On the Wall: Mosaics and Frescoes
This seminar examines the economy, technology, and aesthetics of monumental paintings and mosaics decorating church spaces in Byzantium and the larger Mediterranean world of the Middle Ages. We will explore these site-specific, wall-bound images in the context of their making and reception by attending to the issues of artistic labor and patronage, materiality and pictorial medium, visual communication and ideological programming, and viewership and ritual action. Special consideration will be given to methodology. We will critically assess the traditional and current approaches to the study of monumental pictorial art and, more importantly, seek to formulate new perspectives and methods. Open to graduate and undergraduate students.

ARTH 5323 The Chora Monastery and the World of Late Byzantium
This seminar is envisioned as a wide-ranging exploration of the art and culture of the Late Byzantine period (thirteenth through fifteenth century), with focus upon a key monument, the church of the former Chora monastery (Kariye Camii) in Istanbul. With its superb and highly original architecture, this church preserves an outstanding ensemble of monumental mosaics, frescoes, stone carvings, funerary monuments, colored marbles and glass, and inscriptions. Additionally, we possess a substantial body of texts illuminating various aspects of the monastery's history and, in particular, its restoration in the early fourteenth century by the statesman and scholar Theodore Metochites. The seminar will take this rich material and textual record as a point of entry into the world of Late Byzantium. Topics to be addressed include patronage and politics; artistic practice, visual aesthetics, and materiality; monasticism; death, time, and history; the interplay between art and literary culture; and Byzantium's interactions with the wider Mediterranean world, especially Muslim-ruled Anatolia, the Slavic Balkans, and Italy. Open to graduate and undergraduate students.

ARTH 5330 Material Christianities
What can objects tell us about Christianity? How might a lavish mosaic, a withered body part, a dark crypt, or a pilgrim's oil lamp challenge and complicate visions of the past extracted from texts? This course investigates the first thousand years of Christianity through the lens of material culture. The history of Christianity - from its nebulous beginnings in Palestine to its recognition as the official religion of the Roman Empire and subsequent expansion - is often narrated from a perspective that privileges the writings of elite men. To capture the rich diversity in Christian experience and expression, we will turn to the material practices of religion and explore how things, places, and bodily acts shaped what it meant to be Christian. Building on insights drawn from archaeology, art history, anthropology, and religious studies, we will seek to recover the experiences of diverse and often marginalized subjects and communities, and in the process, will problematize the categories of religion, authority, and identity. Regular visits to the Penn Museum and other collections in Philadelphia will complement lectures and group discussions.

Mutually Exclusive: ARTH 3330, RELS 3330
1 Course Unit
ARTH 5360 Manuscript Arts in the Islamic World
This hands-on seminar will explore the long tradition of manuscript-making and manuscript-makers in the Islamic world, using the extensive collections of Arab, Persian, Turkish and Indian volumes at the University of Pennsylvania and the Free Library of Philadelphia. These include copies of the Qur'an (Islam’s holy text) and other religious, scientific, historical and literary texts. Emphasis will be placed on traditional materials and artistic techniques, specifically calligraphy, binding, illumination and illustration, as well as on production methods and the historical, social, and economic contexts in which manuscripts were made, used and collected from early Islamic times to the early modern period. Also at issue will be the ways that Islamic manuscripts were transformed over the centuries as they journeyed from their diverse places of origin (Egypt, Morocco, Syria, Iran, India, etc.) to Philadelphia. The goal is the art historical skills involved in the study of Islamic codices, through close examination, discussion and presentation, and to recognize that every manuscript has a story. Most of the class sessions will be held either at the Kislak Center in Van Pelt Library or at the Free Library on the Parkway. Also Offered As: NELC 5405
1 Course Unit

ARTH 5400 Medieval Art Seminar
Topic varies from semester to semester. For the Spring 2022 semester, the topic will be: Facing Fragments. So many traces of the medieval past come to us in fragmentary form, either literally broken, partial and incomplete, or figuratively, having been ripped from its program or findsite and shipped across the world. This course focuses on the strategies art historians and curators adopt to confront the realities of decontextualized museum collections - of how to face fragments. Considering approaches that range from research methodologies, conservation, installation, and preservation, we will also touch upon questions of restitution and ethics. Co-taught between Penn and the PMA, this course will constitute much hands-on learning. Not Offered Every Year Also Offered As: AAMW 5400
1 Course Unit

ARTH 5430 Topics in Medieval and Renaissance Art
Topic varies from semester to semester. For the Spring 2022 semester, the topic will be: Manuscript Illumination. This course will provide an overview of the history, materials, and techniques of manuscript illumination through the lens of Philadelphia’s rich and varied holdings. The course will also chart the sometimes surprising means by which such objects arrived in North American collections from the nineteenth century through to the present. Handling sessions will form a key part of the course. We will begin by examining items at the Kislak Center before venturing to other local institutions including the Free Library and the Philadelphia Museum of Art, with possible study-day excursions to New York and Baltimore. Student research assignments will involve the close individual study of a single illuminated manuscript.
1 Course Unit

ARTH 5431 Visualizing Science
This seminar focuses on the intersection of visuality and natural knowledge in the pre-modern world. It is open to graduate students and undergraduate students with permission of the instructor. Also Offered As: HSSC 5431
1 Course Unit

ARTH 5500 Pictorial Composition Seminar
This seminar explores the art of composition in two respects: first, composition as the arrangement of words and sentences into prose; second, composition as the organization of visual elements into a painting. Through the writings of key Renaissance writers, we will explore such issues as the mythical origins of the portrait, the role of precious materials in art, the relationship between figure and ground, and the mechanics of describing a painting into words. Open to undergraduate and graduate students. Not Offered Every Year
1 Course Unit

ARTH 5501 Caravaggio Seminar
This seminar explores the artistic culture of Baroque Rome, with focus on the life and career of Caravaggio. This course is open to graduate and undergraduate students. Not Offered Every Year
1 Course Unit

ARTH 5502 What is Painting Seminar
What is painting? Is it art or mere craft? In this seminar we will explore how artists and critics responded to these questions in the Italian Renaissance, specifically through looking at the work of Andrea Mantegna, Giovanni Bellini, Titian, and Tintoretto. In addition to reading some of the most recent scholarship on these artists, we will also visit select paintings in PMA as well as local ateliers and galleries where we will gain insight into the enduring practice of such crafts as goldwork, textiles, and glasswork. Open to graduate and undergraduate students. Not Offered Every Year
1 Course Unit

ARTH 5503 Earthquakes and the Art of Disaster
What makes up a world? How do works of art exist in, conceive, and represent a place? How might the theory and practice of art shed light on our notions of the earth, ground, landscape, soil, and the environment? This seminar will ask the above questions with respect to works of art and art literature from the fourteenth to eighteenth centuries. Topics to be explored may include: theories of stone in the Renaissance, the environmental implications of excavation, the materials and materiality of earth and soil, stoneworking and mining, the aesthetic problem of weight, architecture on bodies of water, and the Lisbon Earthquake of 1755 and other geological disasters. Guests to the seminar from the University of Paris-IV and the University of Zurich will offer opportunities for students to discuss and present their ideas to extramural audiences. Open to graduate and undergraduate students. Not Offered Every Year
1 Course Unit

ARTH 5504 The Language of Art History
What does it mean to write about art? What are the historical origins of this undertaking? How does language mediate the intellectual, somatic, and cultural rapport between the viewing self and the physical object? As an initial response to these questions we will examine the writings of the Tuscan artist and critic Giorgio Vasari (1511-1574), the biographer of such renowned artists as Leonardo, Raphael, Donatello, and Michelangelo. We will also read the letters of famous artists from the early modern period, and examine the theoretical forays of artists such as Albrecht Dürer, who attempted to sketch the relationship between the memory and the imagination. Finally, we will look to examples of works of art for how we might read visual images as expressive of theories about what are is and what it can do. Not Offered Every Year
1 Course Unit
ARTH 5520 High Renaissance Seminar
One Italian poet called his garden "the blending of art and nature." In a garden, he claimed, "one cannot discern whether a thing is the work of one or the other; whether it is a piece of natural artifice or artificial nature." Around the same time, the Italian humanist Jacopo Bonfadio invented the term, terza natura, for gardens seemed to be a "third nature" somehow in between wild first nature and the second built or manipulated world of human endeavor. The history of landscape architecture is a history of man's sometimes misguided efforts to "improve" his surroundings in the search for a beauty that harnessed natural forms through the application of human reason. This seminar will address changing tastes in garden design in Early Modern Europe but will also extend our study further into the past, beyond Europe and forward to the present day. The seminar will introduce themes in garden design and examples from garden history and, in the process, the course will ask the participants to consider different cultural visions of the "beautiful" or "appropriate" landscape and ultimately better understand the history of the gardener's art. Open to undergraduate and graduate students.
1 Course Unit

ARTH 5590 Myth Through Time and In Time
The textual and physical remains of Greek and Roman culture and belief as 'myth' entrenched the post-antique European world and its neighbors. Makers, patrons and viewers manipulated those survivals to challenge and speak to a contemporary world. This course focuses on how and why artists and their patrons engaged the mythic and examines the various areas of political and religious life that sought animation through an evocation of narratives from the past. Readings and case studies will engage with very late antique, medieval, and early modern art, turning to the modern and contemporary as well. Moving to the modern lets us examine, among other things, how artists address the exclusionary histories of the past, to enable critiques of myths of supremacy by one gender, race, or culture over others.

ARTH 5610 Privacy and Society in Seventeenth-Century Dutch Art Seminar
How do paintings offer occasions for personal reflection, and how do they construct social bonds? The aim of this seminar is to develop a set of critical skills for analyzing the different ways in which seventeenth-century Dutch paintings drew upon shared social values, national identity and economic pride, how they appealed to individual buyer tastes, and how they have engaged and continue to engage poetic minds. We will address these matters by paying particular attention to the representation of space, considering domestic interiors, urban settings, church architecture, imperial arenas, and landscapes both real and imagined. Our discussions of how paintings reflect and shape privacy and society will be informed by visits to the Philadelphia Museum of Art, by readings from methodologically diverse essays, and by writing frequently, which will provide us with occasions to test our ideas in response to what we see and read. Open to graduate and undergraduate students.

1 Course Unit

ARTH 5680 18th-century Visual Cultures of Race & Empire
This course approaches the Western history of race and racial classification (1600-1800) with a focus on visual and material culture, natural history, and science that connected Atlantic and Pacific worlds. Across the long eighteenth century, new knowledges about human diversity and species distinctions emerged alongside intensifications of global trade with Asia. The course will include case studies of chinoiserie textiles, portraits of consuming individuals, natural history prints and maps, Chinese export porcelain and furnishings, and "blackamoor" sculpture. Objects of visual and material culture will be studied alongside readings on regional and world histories that asserted universal freedoms as well as hierarchies of human, animal, and plant-kind. Keeping in mind that the idea of race continues to be a distributed phenomenon - across color, gender, class, religion, speech, culture - we will explore changing vocabularies of difference, particularly concerning skin color, across a range of texts and images. Knowledge often does not take written or literary form, and for this reason, we will study examples of visual and material culture as well as forms of technology that were critical to defining human varieties, to use the eighteenth-century term. Although we will be reading texts in English, some in translation, we will also account for European and non-European knowledge traditions - vernacular, indigenous - that informed scientific and imaginative writings about the globe. Topics may include cultural and species distinction, global circulations of commodities between the East and West Indies, the transatlantic slave trade, the casta system of racial classification in the Americas, religious and scientific explanations of blackness and whiteness, and visual representations of non-European people.

ARTh 5760 The Panorama Experience  
Painted panoramas were one of the nineteenth century’s signature popular entertainments. Since its invention in 1787, audiences from cities and towns around the world have admired these circular landscape representations of nature, cities, and battles, which provide an opportunity to escape everyday life by witnessing scenes from the past and far-away places from an unfamiliar perspective. In this seminar, we will consider the phenomenon of the panorama, above all, as a political art form. We will examine the ways in which European and American artists since the nineteenth century have turned to panoramic forms to tell and call into question stories about empire and colonialism, enslavement and freedom struggles, the mastery of natural environments, as well as military victory and loss. As we debate the politics of panoramic forms, we will gain familiarity with a set of related topics from visual and material culture, including vedute, transparencies, magic lantern projections, panoramic wallpaper, dioramas, cartographic representation, history painting, illustrated print culture and pictorial journalism, travel literature and guidebooks, accordion folds and gatefolds, stereoscopes, panoramic photography, panoramic shots in cinema, and immersive environments. In addition to enriching your knowledge of nineteenth-century media history and how to conduct media archaeological research in libraries, archives, and museums, this seminar will offer an overview of approaches to visual culture from social history, gender, race, colonialism, museum studies, print history, sound studies, transnational history, and digital art history, which will be of use for work in a number of interdisciplinary fields. Students with a background in disciplines, such as architecture, literature, history, cinema studies, gender and sexuality studies, Africana Studies, and material texts, are welcome.  
Also Offered As: GRMN 5760  
1 Course Unit  

ARTh 5770 Ecological Thinking in Art and Architecture  
This seminar will address the diverse narratives of ecological thinking in the history of art, architecture, and urban planning during the 20th century. The course will contextualize and interrogate contemporary disciplinary discourses as well as historical assumptions related to ecological thinking in art and architectural history and environmentally-conscious practices. By mapping received trajectories of Eco Art, Ecocritical Art History, and Ecological Histories of Architecture and Urban Planning, the course will work from a subtly hidden foundation of eco-historical knowledge that connects these fields of inquiry, while also critiquing these trajectories and seeking to provide more focused and robust alternatives for knowledge production in the present. It aims to attract students from the School of Arts and Sciences and the Weitzman School of Design in a discussion on the interconnected histories of art and architecture during the 20th century.  
Also Offered As: ARCH 7130

ARTh 5780 American Art Seminar  
This seminar focuses on special topics in the art of the United States. Recent examples have included: portraiture in the US, Philadelphia as an art center, early mass visual culture, and Abstract Expressionism. It is open to all graduate students and undergraduate students with permission of the instructor.  
Not Offered Every Year  
1 Course Unit  

ARTh 5790 Mass Visual Culture in the U.S.  
This seminar will treat the United States as a case study for in-depth examination of the conditions and operations from which a mass visual culture emerged. Our focus will be on the period from 1830 to 1860, when the infrastructure, labor force, institutions, and audiences took shape and when paradigmatic examples of exceptionally successful works were developed. We will compare our empirical findings with some of the influential theories of mass culture developed by Walter Benjamin, Theodor Adorno, Janice Radway, Lauren Berlant, Stuart Hall, and others. Our investigations will excavate the foundations of the image-saturated culture we experience in the 21st century. The development of a mass visual culture was among the epochal changes in the 19th century that made the United States a modernized nation. This involved the industrialization of picture production and the formation of markets large enough to consume print editions in the tens or hundreds of thousands. Despite the fragmentation of the population and the initial absence of an artistic infrastructure, the U. S. proved a fertile ground for mass art. The country rapidly became an innovative locus for advances in the commodification of pictures and in their instrumentalization for purposes of marketing, political persuasion, the circulation of information, education, and entertainment. This course is open to graduate and undergraduate students.

ARTh 5792 Biography and Art History  
Beginning with the ancient Greeks, people have created specific biographical structures as a way to understand and explain the artistic process. Artists have often been labeled as natural prodigies possessing creative powers on par with the divine. This seminar will examine the role that biography plays in the assessment of visual art and the creative process over time and across European and American culture. During the semester we will read art historical texts, watch biographical films, and debate the historical and post-structuralist critical theory that has helped to shape the current cultural construction of the artist. Throughout the seminar we will discuss the underlying debates around these various approaches to biography. This course is open to graduate students and undergraduate students with permission of the instructor.

1 Course Unit

ARTH 5800 Sexuality of Postmodernism
This course is fundamentally concerned with why so many of the defining artists of the postwar generation were queer, indeed such that one could plausibly claim that postmodernism in American art was a queer innovation. Centrally, most of these artists raise the problem of authoriality and its discontents. Deploying a combination of social-historical and theoretical texts, we will approach the problem of the disclaiming of authoriality in post war American art, focusing on the works of John Cage, Robert Rauschenberg, Jasper Johns, Cy Twombly, Robert Indiana, Louise Nevelson, Ellsworth Kelly, Agnes Martin, Leon Polk Smith and not least Andy Warhol. Central to this course will be the continuing salience of the “death of the author” discourse, pioneered in literature by Barthes and Foucault, and in art by every one of the artists we will be examining. What, in short, is the relationship between the rise of an anti-biographical, anti-authorial theoretical framework, and the lived histories of so many queer authors? In asking this question, we are of course self-consciously violating the very premise of one key strand of postmodernist critique—and in so doing attempting to historicize a theoretical frame that is strikingly resistant to historical analysis. (Undergraduates interested in the course should contact Professor Katz.)

1 Course Unit

ARTH 5830 Art, Sex and the Sixties
With a distinct emphasis on performance, film, installation art, video and painting, this course explores the explosion of body-based, nude and erotic work from the 1950 to the 1970s, with particular focus on the 1960s. And it seeks to explore this dynamic not only within the familiar confines of North America and Europe but within Latin America and Asia, too, in what was a nearly simultaneous international emergence of the erotic as a political force in the art world. Reading a range of key voices from Frankfurt School philosopher Herbert Marcuse, to performance artists Carolee Schneemann and Yoko Ono, Neo-Freudian theorist Norman O. Brown and Brazilian theorist and poet Oswald de Andrade, we will examine how and why sexuality became a privileged form of politics at this historical juncture in a range of different contexts across the globe. We will pay particular attention to how and why an art about sex became a camouflaged form of political dissidence in the confines of repressive political dictatorships, as were then rising in Brazil, Argentina, and ultimately Chile. Students interested in feminist, gender or queer theory, Latin American Studies, social revolution, performance studies, post war art and Frankfurt School thought should find the course particularly appealing, but it assumes no background in any of these fields.

ARTH 5871 Topics In Aesthetics
Topic title for Spring 2018: Walter Benjamin. Walter Benjamin (1892-1940) is a philosopher whose writings on art, literature, and politics have had tremendous influence on many disciplines in the Humanities and Social Studies. He has been variously described as one of the leading German-Jewish thinkers, and a secular Marxist theorist. With the publication of a four-volume collection of this works in English, many more of his writings have been made accessible to a wider public. Our seminar will undertake a survey of his work that begins with his studies on language and allegory; and continues with his autobiographical work, his writings on art and literature, and on the imaginary urban spaces of the nineteenth-century.

ARTH 5910 Cinema and the Museum
Cinema and the museum are both important modern cultural institutions that have global relevance. How do cinema and the museum interact with each other conceptually, artistically, and spatially? In this graduate seminar, we will cross the disciplinary boundaries between film and media studies, museum studies, visual studies, and art history. A wide range of phenomena at the intersection of cinema and the museum will be considered, including the museum in films, the museum as an institution of cinema, video arts and moving images in museums, museum exhibitions that interrogate the cinematic medium, and film museums. Examples will be drawn from diverse historical periods and cultural contexts. This course is supported by Spiegel-Wilks funding and will include at least one class field trip.
Also Offered As: CIMS 5910
1 Course Unit

ARTH 5930 Classical Film Theory
At a moment when contemporary film and media theory has become increasingly interested in how earlier film theories can help us understand our moment of transition, this course will give students the opportunity to read closely some of those key early texts that are preoccupied with questions and problems that include: the ontology of film, the psychology of perception, the transition to sound, the politics of mass culture, realism, and ethnography. Course requirements: ; completion of all readings and screenings; participation in class discussion; weekly online responses; 20-25 page paper.

1 Course Unit

ARTH 5932 The Place of Film and Media Theory
Taking its title from a recent special issue in the journal Framework, this seminar will engage the where of film and media theory. At a moment when this discourse, often presumed to have roots in Anglo and Western European traditions, is purportedly undergoing a global turn, we will consider how some of film and media theory’s key terms and preoccupations including realism, documentary, genre, identity, sound, spectatorship, nation, auteur, and screens are being inflected by expanded geographic, linguistic, aesthetic and cultural frames. We will grapple with some of the logistical challenges, motivations, resistances, and questions that scholars encounter as they attempt to shift film and media theory’s borders; compare contemporary efforts to broaden the discourse’s geographic horizon with earlier efforts to do the same; and consider what happens to the viewer’s sense of space and place in different media environments. Course requirements: full participation in readings, screenings, discussion, and class presentations; 20-25 page research paper + annotated bibliography.

1 Course Unit

ARTH 5933 Cinema and Media Studies Methods
This proseminar will introduce a range of methodological approaches (and some debates about them) informing the somewhat sprawling interdisciplinary field of Cinema and Media Studies. It aims to equip students with a diverse—though not comprehensive—toolbox with which to begin conducting research in this field; an historical framework for understanding current methods in context; and a space for reflecting on both how to develop rigorous methodologies for emerging questions and how methods interact with disciplines, ideologies, and theories. Students in this class will also engage scholars participating in the Cinema and Media Studies colloquium series in practical discussions about their methodological choices. The course's assignments will provide students with opportunities to explore a particular methodology in some depth through a variety of lenses that might include pedagogy, the conference presentation, grant applications, the written essay, or an essay in an alternative format, such as the graphic or video essay. Throughout, we will be trying to develop practical skills for the academic profession. Although our readings engage a variety of cinema and media objects, this course will be textually based. No prior experience needed. The course is open to upper-level undergraduates with relevant coursework in the field by permission of instructor only. Course Requirements: Complete assigned readings and actively participate in class discussion: 20%; Reading responses: 10%; Annotated bibliography or course syllabus on a particular methodology: 20%; SCMS methodology-focused conference paper proposal according to SCMS format: 10%; Research paper, grant proposal, or essay in an alternative format using the methodology explored in the syllabus or bibliography: 40%.

ARTH 5940 Media, Platform, Experience
This graduate seminar explores processes and sites of production, distribution, and consumption of audio-visual contents in the contemporary media environment with a focus on both platform logics and user interaction experiences. While “new” media, such as social media, cellphone apps, streaming platforms, video games, and drones increasingly dominate everyday life, “old” media including film, television, and books do not disappear but continue to be consumed and transformed in a new media ecology. Crossing the old/new divide, this course seeks to delineate a fuller picture of the choices, constraints, and experiences available for contemporary media users situated in both the Global North and South. We will attend to both the infrastructures and platforms shaping the circulatory dynamics of the current global media landscape as well as the phenomenological dimensions of media consumption by combining broad discussions of interface, algorithms, temporality, screen, and post-cinema, etc., with case studies that examine specific platforms (e.g. Netflix, Bilibili) and media forms (e.g. GIFs, reaction videos, etc.).

ARTH 5970 The Future of Arts Audiences
Demographic, political, social and generational changes in the U.S. have given rise to new and often unprecedented changes in the expectations audiences have for the role cultural organizations should play in society. Extending beyond traditional definitions of purpose rooted in the type of art or experience offered, cultural organizations are increasingly being held accountable to new or different standards of behavior, beliefs and engagement with the world in order to gain the support of the very audiences necessary for their survival. Adding to this complex combination of factors are the ongoing effects of recent health and social justice crises, including changes in technological usage and shifting patterns of social interaction. Using the latest audience research, and highlighted with first-person accounts from cultural leaders who will be guest speakers for this course, The Future of Arts Audiences will pose a series of challenging yet essential questions necessary for navigating the road ahead for arts participation.

ARTH 6260 Art of Mesopotamia
Visual expression was first developed in Mesopotamia in the same environment as the invention of writing. This lecture class will introduce the arts of the major periods of Mesopotamian History ending with the "cinematic" effects achieved by the Assyrian artists on the walls of the royal palaces. The strong connection between verbal and visual expression will be traced over the three millennia course of Mesopotamian civilization from the earliest periods through the imperial art of the Assyrians and Babylonians of the first millennium BCE. The class and the assignments will regularly engage with objects in the collections and on display in the galleries of the Penn Museum.

ARTH 6250 Greek Art and Artifact
This lecture course surveys Greek art and artifacts from Sicily to the Black Sea from the 10th century BCE to the 2nd century BCE, including the age of Alexander and the Hellenistic Kingdoms. Public sculpture and painting on and around grand buildings and gardens, domestic luxury arts of jewelry, cups and vases, mosaic floors, and cult artefacts are discussed. Also considered are the ways in which heroic epic, religious and political themes are used to engaged viewers’ emotions and served both domestic and the public aims. We discuss the relationships of images and things to space and structure, along with ideas of invention and progress, and the role of monuments, makers and patrons in Greek society.

ARTH 6269 Classical Myth and the Image
The peoples of the ancient Greek and Roman worlds shared a vast body of stories about human and not-human beings set in a legendary deep past or supernatural present - "Classical myth." Even their neighbor cultures took up those stories (or, sometimes, gave them). The stories as spoken, read, or performed turn up in surviving ancient literature. But from the very point when Greek myth began to be written down, those stories were told with images also. Many arts of the Mediterranean world explored myth at temples and sanctuaries, in civic spaces, theaters, parks, houses and palaces, for tombs and trophies - and even on the body upon weapons, clothes and jewelry. Love and desire and hate, hope and fear and consolation, war and peace, pleasure and excitement, power and salvation, the nature of this world and the cosmos, justice and duty and heroism, fate and free will, suffering and crime: mythological images probed the many domains of being human in order to move the emotions and minds of people (and of gods). Our class samples this story art to ask about its makers and viewers and contexts. What, also, were relations between images and texts and language? What about religious belief vs invention, truth vs fiction? What might it mean to look at this ancient art today, and to represent the old stories in post-ancient cultures? The class introduces ways of thinking about what images and things do; we will read in some relevant literature (drama, epic, novels, etc); and our Penn Museum will be a resource. No prerequisites--no prior knowledge of art history, archaeology, myth or Mediterranean antiquity is assumed.

ARTH 6320 Byzantine Art and Architecture
This lecture course offers a wide-ranging introduction to the art, architecture, and material culture of Byzantium—a Christian, predominantly Greek-speaking civilization that flourished in the Eastern Mediterranean for over a thousand years. Positioned between the Muslim East and the Latin West, Antiquity and the Early Modern era, Byzantium nurtured a vibrant and highly sophisticated artistic culture. With emphasis placed upon paradigmatic objects and monuments, we will examine an array of artistic media, from mosaic and panel painting to metalwork, ivory carving, book illumination, and embroidery. We will consider the making, consumption, and reception of Byzantine art in a variety of contexts—political, devotional, ritual, and domestic. Topics include the idea of empire and its visual articulation; court culture; the veneration of images and relics; patronage, piety, and self-representation; authorship and artistic agency; materiality and the sensory experience of art; the reception of the "pagan" Greco-Roman past; and the changing nature of Byzantium's interactions with neighboring cultures.

ARTH 6400 Medieval Art
An introductory survey, this lecture course investigates architecture, painting, sculpture, and the "minor arts" of the Middle Ages. Students become familiar with selected major monuments of the Romanesque and Gothic periods, primarily in Western Europe as well as relevant sites around the Mediterranean. Analysis of works emphasizes the cultural context, the thematic content, and the function of objects and monuments. Discussions focus especially on several key themes: the role of luxury in the medieval west; the theological role of images; the revival of classical models and visual modes; social rituals such as pilgrimage and crusading; the cult of the Virgin and the status of women in art; and, more generally, the ideology of visual culture across the political and urban landscapes.

ARTH 6425 Late Antique Arts
What is ‘Late Antiquity’? In 312 when Roman emperor Constantine inaugurated a Christian empire, ‘Roman’ culture was centuries old. The period ca. 200-650 CE saw profound transformations that launched Medieval, Byzantine and Islamic traditions. In this epoch of upheaval destruction was frequent but partial: Rome long survived, Constantine’s ‘new Rome’, Constantinople flourished, and around the Empire both proto-global visual culture and local forms prospered. Roman cultural models authorized both innovation and passion for tradition: we critique art-historical models for Late Antique ‘decline’, analyse habits of material reuse and curation, and look at new Christian and Jewish roles for Roman things as well as polytheist visual survival. Foreign allies and enemies interacted with Greco-Roman Late Antiquity; we visit them too, as in the early Islamic palaces. Media discussed include not just ‘monumental’ painting, mosaic, sculpture, but also silver, ceramic, ivory, figural textile, glass, painted books, jewelry, coins and more. We look too at Late Antique texts on art, objects, space and viewership. This is an advanced undergraduate lecture course.

ARTH 6428 Hellenistic Art and Spectacle
Hellenistic usually names art in the age of Mediterranean culture from the 4th century BCE and the rise of Alexander the Great’s Macedon, and the Greco-Macedonian conquest of the Persian Empire, to Cleopatra of Egypt’s defeat by Rome at the end of the Republic. Our course looks also at the age of Augustus and his successors, 1st century CE. While Greek and Macedonian practice in city-states and kingdoms is our launching point, this course also looks at international culture and cultural interaction among peoples from North Africa and Etrusco-Roman Italy, Egypt, Anatolia, the Mideast and Central Asia. We probe art, artifacts, and visual display from a range of settings, from sanctuary to house, palace and parade, and in all media, from marble monuments to pottery and jewelry. Our archaeology of Hellenistic visual culture also looks at the rich body of Hellenistic and Roman texts of art history, art criticism, and the description of objects and image, to better understand the Hellenistic maker, patron, and viewer. No prerequisites.

Also Offered As: EALC 5141
1 Course Unit

ARTH 6610 Northern Renaissance Art
This course critically examines concepts traditionally associated with the
Renaissance by focusing on the exchange of artistic ideas throughout the
Holy Roman Empire and across different media, such as the altarpieces
of Jan van Eyck, the expressive drawings of Albrecht Durer and Hans
Baldung Grien, the peasant studies of Pieter Bruegel and the prints of
satirists who wished to remain anonymous. The material is organized
thematically around four topics: religious art as piety and politics;
antiquity as a source of tradition and imagination; the formulation of a
public discourse that exposed social threats; and the distinctiveness of
artistic claims of individual achievement. A motif throughout the course
is the question of how the survival of fragments may be presented in
museum contexts as parts standing in for an absent whole. We will also
consider how historians approach designs for works of art now lost or
never completed. Encouraging encounters with art and artifacts around
the city, assignments focus on objects in Philadelphia collections.

ARTH 6620 Early Netherlandish Painting: Angels, Demons, Nudes
Over the course of the fifteenth and sixteenth centuries, painting in the
Netherlands experienced dramatic technological advancements: the
application of oil on panel allowed for an unprecedented richness of
color; experiments with optics led to improved illusions of space; artists
rendered light and reflections as never before. Did these advancements
in depicting the natural world conflict with or enhance the portrayal of
spiritual visions? Did realism pave the way for secular art? In this course,
we will look critically at the relationship of science and art, tradition and
innovation, the imagined and the experienced. The delicate preciousness
of Jan van Eyck, the strange spaces of Petrus Christus, the bizarre
hellscape of Hieronymus Bosch, and the peasant festivals of Peter
Bruegel will guide us through these themes.

ARTH 6680 Art and Empire in India, 1750-1900
This course surveys transformations in visual culture between the
Mughal and British empires in India from the mid-eighteenth through the
nineteenth centuries. We shall consider changes in artistic production,
patronage, publics, and viewing protocols in the contexts of the court
and bazaar. We shall examine the emergence of new technologies and its
impact on visual forms, media, and genres, focusing on the interplay of
photography, print, and painting. We shall explore the role of institutions
-the art school, the museum, and the archaeological survey-and the
professions and practices they engendered. We shall analyze how
architecture and urban planning created new built environments and
social relationships in colonial India. We shall view objects first-hand in the
Penn Museum, Penn Libraries, and Philadelphia Museum of Art. This
is a reading- and writing-intensive course. Students with a background in
related disciplines such as literature, history, religion, anthropology, and
South Asian Studies are welcome.

ARTH 6750 Revolution to Realism: European Art, 1770-1870
This course surveys the major trends in the arts of Europe and its colonies in the tumultuous decades stretching from the French and Haitian revolutions in the late-eighteenth century to the rise of realism in the mid-nineteenth. Starting with Jacques-Louis David's revolutionary history paintings, we study Napoleonic representations of empire, Goya's imagery of violence, romantic representations of madness and desire, the origins of both nationalist and ecocritical landscape painting, the aesthetics of the industrial revolution, as well as the politicized realism of Gustave Courbet. Some of the themes that will be addressed include: the revolutionary hero, the birth of the public museum, the specters of slavery and colonialism in modern representation, the anxious masculinity of romanticism, the rise of industry and bourgeois culture, the beginnings of photography and caricature, the quest for national identity and, not least, the origins of modernist painting. Throughout, we will strive to recover the original radicalism of art's formal and conceptual innovations at times of profound political and social crisis.

ARTH 6760 Impressionism
Impressionism opened the pictorial field to light, perception, science, modernity, bourgeois leisure and famously the material qualities of paint itself. This course will survey the movement's major contexts and proponents—Manet, Monet, Morisot, Cezanne, Gauguin, Van Gogh, Rodin—from its origins in the 1860's to its demise in the 1890's, as well as its subsequent adaptations throughout the world until World War I. Particular attention is paid to the artists' critical reception and the historical conditions which allowed one nation, France, to claim the emergence of early Modernism so firmly for itself. The course also analyzes the effects of the rapidly changing social and cultural fabric of Paris, and its affects on artistic developments. We also look outside of France's borders to Germany and Britain.
Fall or Spring
1 Course Unit

ARTH 6770 The Rise of Modernity: Arts of the 19th Century
The nineteenth century is often considered as fast-paced, politically volatile and new-media obsessed as our own age. This course explores the nineteenth century's claim to have produced the first truly modern culture, focusing on the visual arts and metropolitan spaces of Europe and North America in their intellectual and social contexts. Stretching from the American and French Revolutions to the eve of World War I, topics to be covered include: the rise of capitalist and industrialist culture, art and revolutionary upheaval, global travel and empire, the origins of modernist art and architecture, and new media such as stereoscopes, iron and glass construction, and photography. Major artistic personalities of the age, from Jacques-Louis David and Gustave Courbet to Claude Monet and Vincent Van Gogh, and from Friedrich Schinkel and, Baron Haussmann to Frank Furness and Frank Lloyd Wright, are discussed. Each lecture will be followed by a brief period of discussion, and regular field trips take students to examine art and architecture first hand, in the museums and on the streets of Philadelphia.

1 Course Unit

ARTH 6780 American Art
This lecture course surveys the most important and interesting art produced in the United States (or by American artists living abroad) up through the 1950s. This period encompasses the history of both early and modern art in the U.S., from its first appearances to its rise to prominence and institutionalization. While tracking this history, the course examines art's relation to historical processes of modernization (industrialization, the development of transportation and communications, the spread of corporate organization in business, urbanization, technological development, the rise of mass media and mass markets, etc.) and to the economic polarization, social fragmentation, political conflict, and the cultural changes these developments entailed. In these circumstances, art is drawn simultaneously toward truth and fraud, realism and artifice, science and spirituality, commodification and ephemerality, nationalism and cosmopolitanism, individualism and collectivity, the past and the future, professionalization and popularity, celebrating modern life and criticizing it.
Fall or Spring

1 Course Unit
ARTh 6781 African American Art
This course surveys the most important and interesting art produced in the United States (or by American artists living abroad) up through the 1950s. This period encompasses the history of both early and modern art in the U.S., from its first appearances to its rise to prominence and institutionalization. While tracking this history, the course examines art's relation to historical processes of modernization (industrialization, the development of transportation and communications, the spread of corporate organization in business, urbanization, technological development, the rise of mass media and mass markets, etc.) and to the economic polarization, social fragmentation, political conflict, and the cultural changes these developments entailed. In these circumstances, art is drawn simultaneously toward truth and fraud, realism and artifice, science and spirituality, commodification and ephemeralism, nationalism and cosmopolitanism, individualism and collectivity, the past and the future, professionalization and popularity, celebrating modern life and criticizing it.

ARTh 6810 Modern Architecture, 1900-Present
The architecture of Europe and America from the late nineteenth century until the present is the central subject of this course, but some time is also devoted to Latin American and Asian architecture and to the important issues of modern city planning. Topics discussed include the Arts and Crafts movement, Art Nouveau, Expressionism, Art Deco, the International Style, and Post-modernism. The debate over the role of technology in modern life and art, the search for a universal language of architectural communication, and the insistent demand that architecture serve human society are themes that are traced throughout the course. Among the important figures to be considered are Frank Lloyd Wright, Walter Gropius, Le Corbusier, Louis Kahn, Robert Venturi, and Denise Scott Brown. The course includes weekly discussion sessions and several excursions to view architecture in Philadelphia.

ARTh 6850 Modern Art in Africa and Europe
The history of modern art is closely tied to and largely unfolds from the history of Western Imperialism. While the technologies made possible by colonial resource extraction produced new ways of looking, modern conceptions of the self and how to represent it developed in dialogue with racialized notions of the other. This course focuses on encounters between the cultures of Africa and Europe, from 1880 to 1960, and on the visual practices that emerged on both continents as a result. Topics of special interest will include racial difference and the birth of photography, colonial masquerade, impressionism, symbols of power in royal arts, cubism, mass marketing and colonial self-fashioning, West African studio photography, world's fairs and the Musee de l'Homme, Dada and surrealism, Negritude and interwar Paris, anti-aesthetics, colonial arts education, National art schools in the age of African independence, humanism and South African photography under Apartheid.

ARTh 6860 Modern Art: Picasso to Pollock
Early twentieth-century art in Europe is marked by a number of exciting transformations. This period witnessed the rise of abstraction in painting and sculpture, as well as the inventions of collage, photomontage, constructed sculpture, the ready made and found object, and performance art. Encounters with the arts of Africa, Oceania and other traditions unfamiliar in the West spurred innovations in media, technique, and subject matter. Artists began to respond to the challenge of photography, to organize themselves into movements, and in some cases, to challenge the norms of art through "anti-art." A new gallery system replaced traditional forms of exhibiting and selling art, and artists took on new roles as publicists, manifesto writers, and exhibition organizers. This course examines these developments, with attention to formal innovations as well as cultural and political contexts. This course requires permission from the instructor.

ARTh 6870 Postwar Art
At a time of seismic shifts in the American polity, postwar art has too often seemed above the fray. Even as New York came to replace Paris as the epicenter of art world in the post war period, the rapid succession of styles and movements from Abstract Expressionism to Neo-Dada, Pop Art, Minimalism, Conceptual Art and Happenings can seem to have their own internal logic, severed from the historical backdrop of the time. Some of the artists we'll consider include Pollock, Krasner, Rauschenberg, Johns, Warhol, Kusama, Martin, Lichtenstein, Bearden, Oldenburg, LeWitt, Chicago and Judd. In this course, we'll reexamine American art and art criticism in the postwar period alive to everything from the Cold War's virulent anti-communism to the rise of progressive liberation movements around race, ethnicity, sexuality, and gender. In the process, we will repeatedly underscore how art both served, and bit, the hand that fed it.

ARTh 6900 Post War Japanese Cinema
Mizoguchi Kenji, Ozu Yasujiro, and Kurosawa Akira are recognized today as three of the most important and influential directors in Japanese cinema. In their films of the late 1940s and 1950s, these directors focused upon issues surrounding the human condition and the perception of truth, history, beauty, death, and other issues of the postwar period. This lecture course places their films in period context, and pays particular attention to the connections to other visual media, and to how "art" and "history" are being defined in the cinematic context. How other directors also took up these issues, and referred to the "big three" is also be discussed.

**ARTH 6910 East Asian Cinema**

This survey course introduces students to major trends, genres, directors, and issues in the cinemas of East Asian countries/regions, including Japan, Korea, China, Hong Kong, and Taiwan. Charting key developments over more than a hundred years from the early twentieth century to the present, this course examines films as aesthetic objects, asking questions about film form, narrative, and style. It also pays attention to the evolution of cinema as an institution (e.g., modes of production, circulation, and exhibition) in different cultural and political contexts. Weekly course materials will include both films (primary sources) and analytical readings (secondary sources). By the end of the course, students are expected to gain broad knowledge of East Asian cinema, develop skills of film analysis, and apply these skills to perform historically informed and culturally sensitive analysis of cinema. Prior knowledge of East Asian languages is NOT required.

**ARTH 6931 Participatory Community Media, 1970-Present**

What would it mean to understand the history of American cinema through the lens of participatory community media, collectively-made films made by and for specific communities to address personal, social and political needs using a range of affordable technologies and platforms, including 16mm film, Portapak video, cable access television, satellite, digital video, mobile phones, social media, and drones? What methodologies do participatory community media makers employ, and how might those methods challenge and transform the methods used for cinema and media scholarship? How would such an approach to filmmaking challenge our understanding of terms like "authorship," "amateur," "exhibition," "distribution," "venue," "completion," "criticism," "documentary," "performance," "narrative," "community," and "success"?

How might we understand these U.S.-based works within a more expansive set of transnational conversations about the transformational capacities of collective media practices? This course will address these and other questions through a deep engagement with the films that make up the national traveling exhibition curated by Louis Massiah and Patricia R. Zimmerman, *We Tell: Fifty Years of Participatory Community Media*, which foregrounds six major themes: Body Publics (public health and sexualities); Collaborative Knowledges (intergenerational dialogue); Environments of Race and Place (immigration, migration, and racial identities unique to specific environments); States of Violence (war and the American criminal justice system); Turf (gentrification, homelessness, housing, and urban space); and Wages of Work (job opportunities, occupations, wages, unemployment, and underemployment). As part of that engagement, we will study the history of a series of Community Media Centers from around the U.S., including Philadelphia's own Scribe Video Center, founded in 1982 by Louis Massiah, this course's co-instructor. This is an undergraduate seminar, but it also available to graduate students in the form of group-guided independent studies.

The course requirements include: weekly screenings, readings, and seminar discussions with class members and visiting practitioners, and completing both short assignments and a longer research paper.

**ARTH 6940 Art Now**

One of the most striking features of today's art world is the conspicuous place occupied in it by the photographic image. Large-scale color photographs and time-based installations in projections are everywhere. Looking back, we can see that much of the art making of the past 60 years has also been defined by this medium, regardless of the form it takes. Photographic images have inspired countless paintings, appeared in combines and installations, morphed into sculptures, drawings and performances, and served both as the object and the vehicle of institutional critique. They are also an increasingly important exhibition site: where most of us go to see earthworks, happenings and body-art. This course is a three-part exploration of our photographic present.

**ARTH 6960 Contemporary Art**

Many people experience the art of our time as bewildering, shocking, too ordinary (my kid could do that), too intellectual (elitist), or simply not as art. Yet what makes this art engaging is that it raises the question of what art is or can be, employs a range of new materials and technologies, and addresses previously excluded audiences. It invades non-art spaces, blurs the boundaries between text and image, document and performance, asks questions about institutional frames (the museum, gallery, and art journal), and generates new forms of criticism. Much of the "canon" of what counts as art is still in flux, especially for the last twenty years. The stage is no longer centered only on the United States and Europe, but is becoming increasingly global. The course will introduce students to the major movements and artists since 1980, with emphasis on social and historical context, critical debates, new media, and the changing role of the spectator/participant.

ARTh 7141 Twentieth-Century Art in East Asia: Modernity and Confrontation
This seminar considers modern and contemporary art in China, Japan and Korea over the course of the twentieth century. What does it mean to make modern art and whom should it serve were essential questions in this century in East Asia. In this course the confrontations between modernity and tradition, state and self, the colonizer and the colonized, and collecting and the market are all issues under consideration. We begin with a study of the way “modern art” was defined at the turn of the century, its place in the nation state, the promotion of oil painting in Academic styles, and the call to preserve “national” styles. We also consider how the avant-garde pursuit of individuality constituted a confrontation over state-sponsored “modernism,” and how these confrontations played out in world’s fairs and expositions (and continue today). We will further engage how Japan’s imperialist actions against its neighbors had an impact on artistic development in territories it controlled, and the place of the work of art as propaganda in Japan’s war effort. Turning to the postwar era, we will study how China's Communist Revolution, the Korean War, and the Occupation in Japan likewise established new paradigms for the production and reception of art, as well as more recent confrontations between art and politics in recent decades and the place of Chinese, Korean and Japanese art in the contemporary market.

ARTH 7600 Early Modern Art Seminar
This seminar takes a thematic approach to the study of European art produced between 1400-1800. Topics, which change annually, include such offerings as “Art and Law;” “Spectacle, Punishment, and Surveillance;” “Prints and Politics” and “The Subject of Nature.” In a given year, we will approach a corpus of objects, images, and performances through a study of three kinds of text: primary sources, secondary art-historical scholarship, and critical theory. Discussions will convene around local museum and library collections. Assignments will develop skills in writing abstracts, preparing conference papers, and developing strong and publishable written work.
1 Course Unit

ARTH 7610 Nature and Labor in Early Modern Art Seminar
In the sixteenth century, the notion of nature as fecund spawned not only images of lushness but also analogies to the artist's mind as a fertile place. The idea of "natural law" was also appealed to as a presumably primal condition, one that established how the earth's resources were to be distributed among its people. Yet the taste for artistic objects in gold, silver, wax, and wood—materials that could be worked into shapes attesting to the owner's dominium over land—led to harvesting processes which met the awareness that nature's resources could run low or even run out. Untappable nature was a functional metaphor, but scarcity was a reality. As a collective effort to write the other side of the story of Renaissance abundance, this seminar will proceed by addressing the question of how the history of art might be told as a description of materials and their potential for the expenditure of natural and human resources. We will address this question by focusing on primary texts, theoretical interventions, and a selection of objects, images, and early books from collections near at hand. Open to graduate students only.

ARTH 7710 19th Century Architecture Seminar
This seminar will explore the exhilarating architectural environment of the period ca. 1750-1900, when a ferocious appetite for artistic invention was let loose in kitchen filled with new knowledge about the entire history of human architecture. Focusing on French, German, and English architecture, the seminar will examine major texts and study important monuments, all considered in their cultural and political contexts. Open to graduate students only.
Not Offered Every Year
1 Course Unit

ARTH 7750 19th Century Art in Europe Seminar
Topic varies from semester to semester. For Fall 2021, the topic will be: The Paris Commune - A Revolution Recorded. The year 2021 marks the 150th anniversary of the Paris Commune, the revolutionary, radically socialist government that ruled the city of Paris briefly, from March to May 1871. Not the first, but in fact the last of the French revolutions of the 18th and 19th centuries, the Commune is arguably the best recorded, most mediated, and most modern one among them. Photography became a tool in revolutionary action, and a mass press reported and illustrated events, receiving global attention. A new tourist economy traded on access and proximity to revolutionary spectacle and trafficked in political souvenirs. An avant-garde art scene developed that responded to the upheaval in novel ways, including artists and writers like Courbet, Manet, Rimbaud, among others. The Communards themselves often saw their political actions as performance and conceived of their acts in aesthetic terms - a fact that continued, for those that survived, into their exile in New Caledonia after the revolution ended abruptly in the aptly-named Bloody Week. The Paris Commune, this is to say, was one of the more performative and artistic revolutions in history and is therefore worth analyzing art historically. Along the way, this seminar will engage the broader question as to how we best study the import of discrete political events through the lens of art history more generally.

1 Course Unit

ARTH 7770 The Long Nineteenth Century: Literature, Philosophy, Culture
The present course will discuss German literature and thought from the period of the French Revolution to the turn of the twentieth century, and put it into a European context. In regard to German literature, this is the period that leads from the Storm and Stress and Romanticism to the political period of the Vormärz, Realism, and finally Expressionism; in philosophy, it moves from German Idealism to the philosophy of Schopenhauer, Nietzsche, and neo-Kantian thought. It is also the period that saw the rise of the novel, and new forms of dramatic works. Painting moved out of the studio into plein air; the invention of photography made an imprint on all arts, and the rise of the newspaper led to new literary genres such as the feuilleton. Economically, Germany experienced the industrial revolution; politically, it was striving for a unification that was finally achieved in 1871. The nineteenth century saw the establishment of the bourgeoisie, the emergence of the German working class, and the idea of the nation state; it also saw Jewish emancipation, and the call for women's rights. Readings will focus on a variety of literary, political, and philosophical texts; and consider a selection of art works.

ARTH 7910 African Film and Media Pedagogy
This graduate seminar offers an intensive, critical, and collaborative study of contemporary African film and media production. The past three decades have seen an unprecedented shift in the African media landscape. Not only has the wide availability of satellite media across the continent made international film and television programming part of African popular culture, but moreover the growing film industries within the continent, most notably Nollywood, have altered how Africans are carving an image of themselves on the big and small screens. In partnership with local, regional, and international film and media centers, we will study a range of films—features, shorts, documentaries, and television shows—paying close attention to the means and sites of production as well as the formal qualities that distinguish these works. Many of the films we will analyze stand out both for their exceptional aesthetic quality as well as their remarkable ability to confront pressing political and social themes. But we will also think about trash: what counts as trashy media, and for whom? Who watches it, where, and why? Other questions we will ask include: What particular indigenous modes of storytelling do African films employ? What categories begin to emerge under the umbrella category of “African film and media,” and where do diasporan film and media practitioners and critics fit in this landscape? How are these films tackling some of the urgent questions of our times, including migration and globalization; ethnic, political, and economic polarization; gender and sexuality; and massive urbanization and industrialization sweeping Africa and other parts of the Global South? What role do festivals in various countries play in shaping media production and distribution? How important is the concept of authorship in this context? And how do these films challenge the dominant western trope of Africa as a spectacle, instead offering novel ways of picturing everyday African experiences that we rarely glimpse in western media? To explore these questions, we will visit multiple sites of film production, distribution, exhibition, and education, including Scribe Video Center in Philadelphia, Sankofa Films in Washington, D.C., and the College of Performing and Visual Art at Addis Ababa University in Ethiopia. Location and knowledge production are inextricably connected, and by considering African media production from these multiple sites, and collaborating with multiple stakeholders, this course offers a directly engaged pedagogy of the complex artistic, cultural, social, and political dynamics of African audiovisual creation. The travel component of this course entails a day trip to Washington, D.C. during the semester (tentative date: April 2, 2020) and a week-long trip to Addis Ababa at the end of the spring term (students applying for this course should be prepared to travel to Addis Ababa May 30, 2020-June 7, 2020). All expenses for travel, accommodation, and food will be covered, but students will need to hold a passport. Ultimately, this course aims to use film and media production to intervene in a larger discourse on how Africa is figured in the global humanities, not as an absent or passive actor but one actively engaged in producing art and humanistic knowledge that has much to teach us and the world. Admission to the course will be by permission only and students are required to submit a short statement of interest (max. 250 words) to dagw@english.upenn.edu and redkaren@sas.upenn.edu. Students must be prepared to travel to Addis Ababa and Washington D.C. as described in the syllabus, and must hold a passport.

ARTH 7920 Reading Against Racism
This course takes as its starting point Audre Lorde's 1981 keynote presentation at the National Women's Studies Association Conference, "The Uses of Anger: Women Responding to Racism." Lorde, critiquing white feminists, states, "I cannot hide my anger to spare you guilt, nor hurt feelings, nor answering anger; for to do so insults and trivializes all our efforts. Guilt is not a response to anger; it is a response to one's own actions or lack of action. If it leads to change then it can be useful, since it is then no longer guilt but the beginning of knowledge. Yet all too often, guilt is just another name for impotence, for defensiveness destructive of communication; it becomes a device to protect ignorance and the continuation of things the way they are, the ultimate protection for changelessness." Eschewing defensiveness, ignorance, and innocence, and opening to meaningful change by engaging the writings of anti-racist and anti-imperialist thinkers, including those focused on the transformation of higher education, this course examines the responsibilities scholars take on when we affirm that "Black Lives Matter," and acknowledges that higher education, including the humanities, is actively implicated in the structures and operations of white privilege Eschewing defensiveness, ignorance, and innocence, and opening to meaningful change by engaging the writings of anti-racist and anti-imperialist thinkers, including those focused on the transformation of higher education, this course examines the responsibilities scholars take on when we affirm that "Black Lives Matter," and acknowledges that higher education, including the humanities, is actively implicated in the structures and operations of white privilege and anti-black racism as well as in other intersectional modes of exclusion, including all forms of discrimination based on race, ethnicity, national origin, ability, class, sexuality, gender, and beliefs. The course aims to approach these urgent but longstanding issues in ways that help us to understand some of the complexities, practicalities, and temporalities of the work of change; to grapple with what Rosalyn Deutsche in Hiroshima After Iraq (2011) describes as "the inseparability of the social and the psychic"; and to seek out effective alternatives to the tendency of politicized academic writing in time of conflict to regress to what Deutsche calls "heroic masculinism." "Reading Against Racism" is imagined as a way of catalyzing active, collective, and long-term anti-racist, anti-imperialist intellectual work. It seeks to participate in the development of more just and inclusive academic modes and spaces by fostering time and structure for thought and self-reflection, by generating ideas for implementation, and by learning from our readings as well as from each other. All students, white and BIPOC, are welcome to participate, but we will begin this course by working together to establish a community agreement that takes account of the different ways in which such a course is likely to be experienced by white and BIPOC people. For example, recognizing that discussions about race and racism require immense emotional labor from BIPOC people in particular, BIPOC students should not be asked to use their personal experiences to frame questions under discussion or to represent any group. We will establish together other guidelines to create as safe and supportive a space (or spaces) for reading, thinking, and acting against racism as we can muster, including deciding how we would like to include in our process tools like trigger warnings, opt-out mechanisms, smaller subgroups, etc. Requirements: Weekly reading; weekly journal for self-reflection (required, but not for submission); participation in discussion; design a syllabus for an introductory course in your field. Thanks to all the students who have generously participated in developing this course and to the scholars who have written the materials we will read.
Also Offered As: CIMS 7920
1 Course Unit
ARTH 7940 Contemporary Art Seminar
Topic varies from semester to semester. For the Spring 2021 semester, the topic will be: Portraiture Now. This graduate seminar examines approaches to portraiture by contemporary artists in the United States and beyond, with a focus on artists of color. We will consider painting, sculpture, photography, prints, drawings, time based media, and conceptual portraiture.
Not Offered Every Year
1 Course Unit

ARTH 7941 Contemporary Art and Theory Seminar
This seminar focuses on special topics in the history and theorization of art and visual culture made (mostly) after the 1960s in, and about, a range of places around the world. Topics might include but are not limited to “The Aesthetics of Solidarity”; “What is Contemporary Form?”; “Decolonization and Decoloniality in History and Practice;” “Temporality and Timeliness in Recent Art”; “What is a Photograph?”; and, “Writing Art Writing Now.” When they are not focused on problematics or theoretical frames of this sort, courses might also be dedicated to the study of individual artists, movements, exhibitions, or territories. When possible, classes will align with local/regional art exhibitions, and it is also possible we may travel to conduct on-site research as the situation allows. Open to all graduate students.
1 Course Unit

Asian American Studies (ASAM)

ASAM 0010 Freshman Seminar on Asian American Lit
An introduction to writing about Literature, with emphasis on Asian American literature and culture.
Also Offered As: ENGL 0322
1 Course Unit

ASAM 0100 Introduction to Asian American Studies
According to the U.S. Census, there are approximately 21 million Asian residents in the U.S. that comprise almost 6 percent of the total population. This relatively small number disguises the critical experiences Asian American communities face in both the local and transnational context. Yet, Asian Americans constitute one of the most heterogeneous racial groups within the U.S. Over the course of this semester we will read about and actively discuss the history of Asian immigration to the U.S., the social construction and experience of race in the U.S., and the political, economic, and cultural contributions of Asian Americans. We will also examine how Asian Americans negotiate/deploy their culture and ethnicity to achieve recognition in multicultural America and how the construction of Asian American identity intersects with class, gender, and sexuality.
Fall
1 Course Unit

ASAM 0101 Asian American Communities
Who is Asian American and how and where do we recognize Asian America? This interdisciplinary course explores the multiple factors that define Asian American identity and community. In order to provide a sketch of the multifaceted experience of this growing minority group, we will discuss a wide variety of texts from scholarly, artistic, and popular (film, cinematic) sources that mark key moments in the cultural history of Asia America. The course will address major themes of community life including migration history, Asian American as model minority, race, class, and transnational scope of Asian America. In combination with the readings, this class will foster and promote independent research based on site visits to various Asian American communities in Philadelphia and will host community leaders as guest lecturers.
Fall or Spring
Also Offered As: URBS 0101
1 Course Unit

ASAM 0102 Introduction to Asian American History
This course will provide an introduction to the history of Asian Pacific Americans, focusing on the wide diversity of migrant experiences, as well as the continuing legacies of Orientalism on American-born APA’s. Issues of race, class, gender, and sexuality will also be examined.
Spring
Also Offered As: HIST 1155
1 Course Unit

ASAM 0103 Asian American Literature
An overview of Asian American literature from its beginnings at the turn of the twentieth century to the present. This course covers a wide range of Asian American novels, plays, and poems, situating them in the contexts of American history and minority communities and considering the variety of formal strategies these different texts take. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
Also Offered As: ENGL 1270
1 Course Unit
ASAM 0115 American Race: A Philadelphia Story (SNF Paideia Program Course)
This course proposes an examination of race with a two-pronged approach: one that broadly links the study of race in the United States with a multi-disciplinary approach and also simultaneously situates specific conversations within the immediate location of Philadelphia, home to the University. The broad historical examination advances key concepts of race and racialization, explores key theoretical methodologies, and highlights major scholarly works. For example, students will engage with the study of race through Africana Studies, Asian American Studies, Urban Studies and through Latin American & Latinx Studies. Readings and methodologies will introduce students to critical issues in education, in literature, in sociology, and with methods in oral history, archival work, and ethnography. Most importantly, this extensive approach highlights the impact of race across multiple communities including Black Americans, immigrant populations, and communities that are marginalized to emphasize connections, relationships, and shared solidarity. Students are intellectually pushed to see the linkages and the impacts of racism across and among all Americans historically and presently. As each theme is introduced a direct example from Philadelphia will be discussed. The combination of the national discourse on race, with an intimate perspective from the City of Philadelphia, engages students both intellectually and civically. The course will be led by Fariha Khan and Fernando Chang-Muy but guest instructors with varied disciplinary backgrounds and guest speakers from local community organizations. Each instructor not only brings specific disciplinary expertise, but also varied community engagement experience.

ASAM 1000 South Asians in the United States
This course investigates the everyday practices and customs of South Asians in America. Every immigrant group has its own history, customs, beliefs and values, making each unique while simultaneously a part of the "melting pot" or salad bowl" of American society. Yet how do people define themselves and their ethnicities living in a diasporic context? By taking into account the burgeoning South Asian American population as our model, this course will explore the basic themes surrounding the lives that immigrants are living in America, and more specifically the identity which the second generation, born and/or raised in American, is developing. South Asians in the U.S. will be divided thematically covering the topics of ethnicity, marriage, gender, religion, and pop culture. Reading and assignments will discuss a variety of issues and viewpoints that are a part of the fabric of South Asia, but will focus on the interpretation of such expressive culture in the United States.

Fall
Also Offered As: SAST 1000
1 Course Unit

ASAM 1010 Asian American Race Relations: Comparative Case Studies and Theories
This course provides an introduction to comparative racial frameworks and case studies in Asian American Studies. In line with an emergent body of work that considers the relational nature of racializations, we will examine how Asian American racial constructions are not only formed in relation to whiteness but also to other groups of color. Starting from the premise that the US is dynamically multiracial, we will consider how Asian Americans have been both "lumped together" with and "counterpointed" to other racially marginalized communities across historical time. Moreover, we will explore how Asian Americans themselves have articulated racial positions both in solidarity with and opposition to other people of color. Lastly, we will survey the different comparative racial frameworks Asian American Studies scholars have developed to understand the shifting terrain of race relations. The course places a particular emphasis on Asian-Black relations and Afro Asian political theory, given the unique juxtaposition of these groups in US racial discourse, the significance of "Blackness" to Asian American political and cultural identities, and the seminal place of these discussions in Comparative Ethnic Studies. Course materials include primary and scholarly readings, media, and material collaboratively gathered by members of the class. We will focus on developing diverse research methods for understanding the relational nature of Asian American racialization and community formation, culminating in individual research projects on case studies chosen by students in consultation with the instructor.

1 Course Unit

ASAM 1020 The Asian American Entrepreneur
From shopkeepers to motel owners, the Asian American entrepreneur is frequently celebrated and offered as proof that the American Dream is achievable and that the United States is a meritocracy. This seminar challenges this view. Through interdisciplinary texts, qualitative research assignments, and speakers, we will explore the transnational forces and structural limitations within the United States that produce Asian ethnic niches and the bamboo ceiling which limits the success of Asian Americans.

Fall
1 Course Unit

ASAM 1200 Introduction to Creative Writing: Writing Asian American Lives
What does it mean to be Asian American? How do religion, ethnicity, gender, class, nationality, and immigration status define this group? This course will explore these questions through an introductory fiction, nonfiction, and poetry creative writing workshop. In addition to critiquing each other's short stories, essays, and poems, we will read works by a number of authors as springboards to examine representations of identity, inclusion, and exclusion. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.

ASAM 1210 Topics in Asian American Literature and Culture
This seminar explores Asian American literature and culture intensively; specific course topics will vary from year to year. See the English Department's website at www/english.upenn.edu for a description of the current offerings.

Also Offered As: ENGL 1272
1 Course Unit
ASAM 1211 Narrating Survival
This course critically examines the way in which "survival" has been/continues to be defined as individual triumph in the 20th and 21st century. The intent here is to dig deeper into current buzzwords like "resilience," "wellness," "grit," and "care" to ask how such concepts have been constructed in different socio-historical moments, by and for whom, and towards what (social, cultural, political, economic) ends. We will pay special attention to the central role that the child plays in these discourses as an icon of both ultimate vulnerability and idealized resilience, and we'll consider the burdens and privileges that such centering might confer upon real-life children. We engage with a generically diverse body of contemporary multiethnic and transnational literature featuring children and young people in crisis, including texts from Black, Latine, Native, Asian and White U.S. writers as well as Dutch, Argentine, Iranian, Malaysian, and Afghan authors. All non-English texts will be read in English translation, with the option for students to read in the original language if they wish and are able. Learning to dialogue across cultures and learning from such interactions with these texts and one other will be an essential part of our approach to exploring these complex questions.
Also Offered As: COML 2192, ENGL 2192
1 Course Unit

ASAM 1226 Introduction to Creative Writing: Writing Real Science
Most if not all fiction and nonfiction requires some kind of research. Our readings will explore how writers incorporate scientific knowledge into their prose without compromising craft. This course will explore ways to bring real science into our pieces and make them fun, exciting and fresh. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.
Also Offered As: ENGL 3026
1 Course Unit

ASAM 1300 Asian American Cinema Movement: Fighting For Representation
Providing a broad introduction to the history of persons of Asian descent living in the United States, this course will specifically examine the Asian American & Pacific Islander American experience as told through the cinematic lens. Equal parts socio-political history and media studies, this course will comprehensively assess factors contributing to the historical under representation of AAPIs in mainstream American media. By contrast, the media texts that we will study reveal a cinematic history that runs parallel to the mainstream, consisting of independently produced films created by and/or starring AAPIs that feature authentic portrayals of the community they represent. Topics will include economics of film production, broadcast television ratings, film festivals as a mechanism of distribution, negative stereotyping, Hollywood whitewashing, cultural appropriation, and media activism. The course will take place once a week and will consist of a brief discussion of the previous week's readings, followed by a lecture, and ending with a full or partial film screening relating to the current week's topic. Additional out of class assignments will be given that involve attending the Philadelphia Asian American Film Festival, tentatively scheduled November 8-18, 2018. Students will have the opportunity to engage with and learn from AAPI filmmakers in attendance at the festival, with additional volunteer opportunities available for extra credit.

ASAM 1400 Asian American Gender and Sexualities
This course explores the intersection of gender, sexuality, and race in Asian America. Through interdisciplinary and cultural texts, students will consider how Asian American gender and sexualities are constructed in relation to racism while learning theories on and methods to study gender, sex, and race. We will discuss masculinities, femininities, race-conscious feminisms, LGBTQ+ identities, interracial and intraracial relationships, and kinship structures.
Spring
Also Offered As: GSWS 1400, SAST 1400
1 Course Unit

ASAM 1410 Asian American Women: Nation, Self and Identity
This course examines the literary constructions of Asian American Womens’ identity in relation to the U.S. nation state. How have the figures of the tiger mother, the Asian nerd, the trafficked woman, the geisha, the war bride, emerged to represent Asian American women, and how have Asian American feminists responded to these problematic racial stereotypes? How does the scholarship on such racialized representations illuminate historical and contemporary configurations of gender, sexuality, race, class, nation, citizenship, migration, empire, war, neoliberalism and globalization as they relate to the lives of Asian American women? In exploring these questions, this course examines Asian American histories, bodies, identities, diasporic communities, representations, and politics through multi- and interdisciplinary approaches, including social science research, literature, popular representations, film, poetry and art.
Spring
Also Offered As: GSWS 1410, SAST 1410
1 Course Unit

ASAM 1500 Asian Americans In Contemporary Society
This course will explore Asian America through sociological frameworks and research. At the outset, we will establish a strong theoretical foundation by studying key sociological theories related to race and ethnicity, assimilation, and racial stratification. Additionally, we will briefly review key turning points in Asian American history. Throughout the semester, we will explore a broad range of contemporary topics, such as racial and ethnic identities (including multiracial identities); racialized desire and interracial relationships; controlling media images and subversive representations; transracial adoption; affirmative action; anti-Asian racism; and the role of the "model minority" myth in contemporary U.S. politics. Above all, this class will critically evaluate the viability of an Asian American panethnic identity while also exploring important axes of heterogeneity (e.g., class, gender, and sexuality) within the broader Asian American category.
Not Offered Every Year
Also Offered As: SOCI 1140
1 Course Unit

ASAM 1510 Race and Ethnic Relations
The course will focus on race and ethnicity in the United States. We begin with a brief history of racial categorization and immigration to the U.S. The course continues by examining a number of topics including racial and ethnic identity, interracial and interethnic friendships and marriage, racial attitudes, mass media images, residential segregation, educational stratification, and labor market outcomes. The course will include discussions of African Americans, Whites, Hispanics, Asian Americans and multiracials.

1 Course Unit

ASAM 1610 Sonic Reverberations of Asia America
This is a course about music as sonic cultural practices of intercultural communication and as lived experience in which racial, ethnic, diasporic, religious, gendered, sexual, national identities are formed and transformed. This course specifically examines how various ideas and meanings of Asia America are enacted and embodied through music performances and other sonic practices. The course also considers how the production and consumption of Asian American as cultural difference through music and sound impacts the making and unmaking of multiculturalism and the American self. Topics will include questions about how music and sound is mobilized within the history and stories of Asian immigration and migration to the U.S.; the impact of the transnational circulation of Asian and Asian American music; representations of AAPs in popular culture; the potentials and limits of music to mitigate social and political problems encountered by Asian American communities; and community building through sonic encounters of Afro-Asian, Asian-Latinx and Caribbean, East Asian/South Asian American solidarities. Critical and reflexive theoretical approaches from ethnomusicology, anthropology, and performance studies, among other related disciplines, will be used to examine a range of styles and genres through close listening to assigned sound recordings and music ethnographies. No previous musical training is required for this course.
Spring
1 Course Unit

ASAM 1620 Madness and Mental Health in East Asian Worlds
Madness, however conceived, can trouble the limits of our worlds. Since COVID-19, questions of mental health have resurfaced with a sense of urgency, as many faced unprecedented changes in collective and intimate life. This course explores madness and mental health in East Asian worlds, across geographies, histories, social-political transformations, and racialized imaginations. How do East Asian therapeutics approach madness, through and beyond the concepts of psychiatry, neuroscience, or even ‘mental health’? What happens when Euro-American diagnostic categories and treatments travel to East Asia as part of missionary and empire-building projects? Bringing together readings in medical and psychological anthropology, as well as history, literature, psychoanalysis, and transcultural psychiatry, we will explore themes such as: shifting concepts of madness in Chinese, Korean, and Japanese medical and spiritual cures, colonial legacies of ‘culture-bound syndromes,’ and race as a site of psychic struggle in Asian American diasporas.
Also Offered As: ANTH 1151, ASAM 1610
1 Course Unit

ASAM 1700 Asian Am Religions
This course examines the changing religious landscape of the United States through a focus on the religious life of Asian Americans. Through interdisciplinary texts and ethnographic field assignments, students will consider how religion and race intersect to inform notions of cultural and political citizenship, community, and culture. Topics to be explored include the impact of 9/11, religious political activism, and the appropriation and commodification of “Asian” religious practices.
Fall
1 Course Unit

ASAM 1800 Psychology of Asian Americans
Using a cultural perspective, this course is intended to provide knowledge of Asian American personality, identity, and its relationship to mental well being; analyze psycho-social research pertinent to Asian Americans; and develop critical thinking skills on Asian American issues through experiential learning/discussions.

1 Course Unit

ASAM 2010 Migration and the Middle East
This reading-and discussion-intensive seminar examines the phenomenon of migration into, out of, within, and across the Middle East and North Africa. We will focus on the period from the late nineteenth century to the present, and will emphasize the cultural (rather than economic) consequences of migration. Along the way we will trace connections between the Middle East and other regions— notably the Americas, sub-Saharan Africa, South Asia, the Caucasus, and Western Europe. Readings are interdisciplinary and include works of history, anthropology, sociology, medical research, literature, political science, geography, and human rights advocacy. As students develop final projects on topics of their choice, we will spend time throughout the semester discussing tactics for research and writing.
Not Offered Every Year
Also Offered As: NELC 1615, SAST 1615
1 Course Unit

ASAM 2100 The Wartime Incarceration of Japanese Americans
This research seminar will consist of a review of representative studies on the Japanese American internment, and a discussion of how social scientists and historians have attempted to explain its complex backgrounds and causes. Through the careful reading of academic works, primary source materials, and visualized narratives (film productions), students will learn the basic historiography of internment studies, research methodologies, and the politics of interpretation pertaining to this particular historical subject. Students will also examine how Japanese Americans and others have attempted to reclaim a history of the wartime incarceration from the realm of “detached” academia in the interest of their lives in the “real” world, and for a goal of “social justice” in general. The class will critically probe the political use of history and memories of selected pasts in both Asian American community and contemporary American society through the controversial issue of the Japanese American internment.
Fall or Spring
Also Offered As: HIST 3150
1 Course Unit
**ASAM 2159 The History of Family Separation**
This course examines the socio-legal history of family separation in the United States. From the period of slavery to the present-day, the United States has a long history of separating and remaking families. Black, Indigenous, poor, disabled, and immigrant communities have navigated the precarious nature of family separation and the legal regime of local, state, and federal law that substantiated it. In this course, we will trace how families have navigated domains of family separation and the reasoning that compelled such separation in the first place. Through an intersectional focus that embraces race, class, disability, and gender, we will underline who has endured family separation and how such separation has remade the very definition of family in the United States. Also Offered As: GSWS 2159, HIST 2159
1 Course Unit

**ASAM 2200 Asian American Literature Seminar**
This course is an advanced-level seminar on Asian American culture and politics. See the English Department's website at www.english.upenn.edu for a description of the current offerings. Not Offered Every Year

1 Course Unit

**ASAM 2600 Asian American Food**
You are what you eat. Asian American Food explores the history, politics, and ethnic identity of food through a cultural lens. Growing food, eating, and sharing meals serve as intimate expressions of self and community. By examining the production and consumption of food, the course investigates the ways that Asian Americans navigate traditions, gender norms, religious dietary laws, food habits, and employment as they create lives in the United States. The course overviews the history of Asian American foodways, but has a particular focus on Philadelphia's Asian American communities.
Spring
Also Offered As: SAST 2600, URBS 2600
1 Course Unit

**ASAM 2610 The Asian Caribbean**
Although Asians have lived in the Americas for centuries, the Asian American community and experience tends to be defined by the post-1965 wave of immigration to the United States. In an effort to correct this narrative this course will explore the histories, experiences, and contributions of some of the forgotten Asians of the Americas. In particular, we will focus on the earlier labor migrations of Chinese and South Asian individuals to the Caribbean and the United States. The experiences of these individuals, who built railroads, cut sugarcane, and replaced African slave labor, complicate our understandings of race today. By examining the legal and social debates surrounding their labor in the 19th century and exploring how their experiences are forgotten and their descendants are rendered invisible today, we will complicate what is Asian America and consider how this history shapes immigration policies today.
Spring
Also Offered As: GSWS 2610, LALS 2601, SAST 2610
1 Course Unit

**ASAM 2620 Global Chinas and Chinese Diasporas**
This seminar delves into the global imprint of contemporary Chinese diasporic communities, examining their significant influence from the lens of multiple sectors and regions—from Wenzhou migrants shaping the fashion industry in Italy to copper mining enterprises in Zambia to Chinese-owned nail salons and massage parlors dotting New York City. This exploration situates Chinese communities within the context of an interconnected world. As China has ascended to become the world's second-largest economy, its impact is not confined within its borders but extends into international politics, culture, commerce, technology, and beyond. This class endeavors to unpack the complexities of China's global engagement and deepen students' understanding of Chinese communities worldwide. The course is divided into two main sections. The first section provides an overview of the historical journey of China on the global stage and an introduction to research methods specific to studying this phenomenon. In the second half, the course adopts a more granular approach, delving into critical topics such as race and ethnicity, gender and family dynamics, transnational identity, educational achievement, labor, entrepreneurship, and soft power.
Also Offered As: SOCI 2933
1 Course Unit
ASAM 2910 Asian Human Rights / Asian American Civil Rights
The last few decades have seen mass migration and movement of people from one place to another: from South, East, and Southeast Asia in the 1970s and 1980s, from Central America in the 1990s, from Africa in 2000s, and in this decade from the Middle East. In Asia, as a result of human rights violations, North Koreans have fled to China, Tibetans to India, and over 3 million individuals fled Southeast Asia in the 1980s. More than one million refugees from Cambodia, Laos, and Vietnam, fled temporarily to Hong Kong, China, the Philippines, Thailand, Malaysia, before resettling in the United States. Philadelphia is host to all of these communities. Some of our own students at Penn are 1st or 2nd generation South and Southeast Asian Americans. This course provides a comparative overview of the history, ethnicity, religion, and cultures of Southeast Asia (and the deep connections with South Asia and East Asia), and their human rights, temporary settlement, and treatment in host countries in the region. The first part of the course will use an international human rights framework to explore the human rights issues that forced people to flee from their countries of origin. The course will challenge and expand students’ understandings of international human rights in the past and in the present with a focus on human rights violations such as: A. Vietnamese fleeing the war in Southeast Asia. B. North Koreans seeking refuge in China and in South Korea. C. Tibetans hoping for protection by crossing the border into India. Given the deep diplomatic and economic relations between Vietnam and India, this international portion of the course will highlight how the two countries in the region, an Asian communist country, and the other, an Asian democratic country handle human rights in similar and different ways. The second part of the course will pivot to the US and explore the civil rights of Asian Americans in the US such as the right to migrate, seek and enjoy asylum, education, housing, employment and health. The course will feature Penn professors as guest speakers so as to expose students to our own in-house experts, their fields and their departments. In addition, As part of a Asian American Studies, South Asia Center, Netter Center ABCS course, students will visit neighborhoods where Asian Americans live, work and play: South Asian neighborhoods in Jersey City, New Jersey; Korean neighborhoods in Olney; Vietnamese and Cambodian neighborhoods in South and West Philly. Students will also intern in host organizations to learn about community needs and strengths.
1 Course Unit

ASAM 3100 American Expansion in the Pacific
This course examines America’s expansion into the Pacific with a focus on the colonization of Hawai‘i and the Philippines. The class deals with various issues, including the meaning of "frontier," imperialism, development of capitalist economies and trade relations in the region, diplomacy and militarism, migration and racism, and colonial histories of the US West, the Pacific Islands, and East Asia.
Fall or Spring
Also Offered As: HIST 1785

ASAM 3110 Immigration and the Making of US Law
This course examines the legal history of the United States to illuminate one of the most urgent issues of our time: immigration. From the late nineteenth century, immigration to the United States changed the legal landscape of the country by challenging the bounds of national citizenship, “separate but equal,” Congressional powers, home ownership, and an array of other topics. In this course, we will trace how immigrants challenged existing orders of their time through major state and federal supreme court cases, and the subsequent aftermaths of their trials. In addition to considering the key legal issues at stake in these cases, this course compels us to consider the dynamics of race, disability, gender, and labor that define the construction of US law in the context of immigration.
Also Offered As: HIST 3910
1 Course Unit
ASAM 3130 The Chinese Body and Spatial Consumption in Chinatown
This is a primarily an art and planning course that centers on the representation of the oriental, specifically the Chinese, in both its historical and present contexts. The localization of the Chinese throughout the Americas within Chinatown precincts were also subject to representational imaginings that were negotiated through the lens of civic planning. This course will study the often fraught negotiation between representation and planning. The hyper-urbanization of China over the past several decades has radically altered traditional conceptions of public space in China. Mass migration from rural to urban areas has meant very high population densities in Chinese cities. Traditional courtyards surrounded by housing and other modestly scaled buildings are rapidly disappearing, incongruent with the demands of heated property development. Moreover, Chinese cities have comparatively little public green space per resident compared to equivalents in the West. Zoning in Chinese cities is also much more varied for any given area than what one would find in cities such as New York, Paris, and London. Intensifying density of urban areas precludes the construction of large public squares. Furthermore, large public squares tend to be either intensively congested and overcrowded or underused due to their oversight by government that render such spaces somewhat opprobrious in terms of use. Historically, the urban courtyards of temples, native place associations, and provincial guilds served as public spaces of gathering. They were also sites of festivals and the conducting of neighbourhood and civic business. These spaces have become increasingly privatized or commodified with entrance fees. The air-conditioned concourses of enclosed shopping malls or busy outdoor market streets have become de facto public spaces in China where collective window shopping or promenading is the primary activity rather than bodily repose as one might find in a public space in a large Western city. The seminar/studio will investigate the meaning of the term public in the constitution of Chinese space, audience and critical voice through firstly the enclave of Chinatown and secondly through examples from China. The course will look into the changing conceptualization of public space in Chinatown as it has declined in its traditional form and become reinvented in the form of high-end shopping centered districts. This flux has its roots in post 1979 China as well as the post 1997 reversion of Hong Kong to China. As such, the course will examine the situation of rapid urbanization in China and the concomitant relationship to new Chinese (and Asian) districts in the North American urban and suburban landscape i.e Vancouver, Toronto, Arlington (Virginia), Oakland, Los Angeles valley and Queens (Flushing), New York. In what ways can artists and designers respond to and challenge these conceptualizations of the old and the new within the context of urban change? What of the changing formations of the Chinese subject through the experiences of embodiment? How is public space produced through an ethnically bracketed bodily presence? Findings will be translated by the student as tools for design and public art imaginings. This course will include a week’s trip to San Francisco to study how intense growth in the city has all but usurped old Chinatown while new and more vibrant Chinese centers have emerged in multiple other districts within the city and the suburbs.
Also Offered As: ENGL 2275, FNAR 3060
1 Course Unit

ASAM 3211 Modern Chinese Poetry in a Global Context
The tumultuous political and economic history of modern China has been mirrored in and shaped by equally fundamental revolutions in language and poetic expression. In this course, we will take Chinese poetry as a crucible in which we can observe the interacting forces of literary history and social change. From diplomats who saw poetry as a medium for cultural translation between China and the world, to revolutionaries who enlisted poetry in the project of social transformation, we will examine the lives and works of some of China’s most prominent poets and ask, what can we learn about modern China from reading their poetry? In asking this question, we will also reckon with the strengths and limitations of using poetry as an historical source. In addition to poems, the course will include fiction, essays, photographs, and films by both Chinese and non-Chinese artists that place our poets in a broader context. We will pay close attention to how these poets represent China’s place in the world, as well as the role of language in social change. Topics of discussion include: national identity, revolution, translation, gender, the body, ethnicity, and technology. Familiarity with Chinese or related cultural context is beneficial, but not required. This course introduces students to Chinese poetry in English translation. Students will leave the course with an in-depth understanding of the main figures, themes, and techniques of Chinese poetry, and will be introduced to some of the major developments in the history of China. Through a focus on primary texts, students will develop the vocabulary and analytical skills to appreciate and analyze poetry in translation and will gain confidence as writers thinking about literary texts.
Not Offered Every Year
Also Offered As: COML 3211, EALC 3211
Mutually Exclusive: EALC 7211
1 Course Unit

ASAM 3356 Asian American Nonfiction Workshop
Contemporary literature has seen a recent rise of Asian American nonfiction writing, particularly in the form of essays and memoirs. Asian American writers are reshaping the form of the immigration story and the personal narrative, and are adding their voices to the pressing topics of political activism, STEM, and mental health. This course will include readings by authors such as Hsu, Hong, Nunez, Chang, Fan, Wang, Jacob, and Kalanithi, amongs others. For memoir and personal pieces, we will discuss how these writers transform their own material through craft, structure, and perspective. For essays, we will discuss how writers use research (and, yes, craft!) to present difficult and/or technical information in an engaging way. Students will write and workshop their own pieces. Also Offered As: ENGL 3356
1 Course Unit
Asian Languages (ALAN)

ALAN 0300 Intermediate Mongolian I
Mongolian is the national language of the independent State of Mongolia and the language of the nomadic warriors Genghis Khan (known to the Mongolians themselves as Chinggis Khan). It is also spoken in China and Siberia. Today Mongolian musical styles like throat singing (khoomii), products like cashmere (nooluur), and tourism to visit Mongolia's nomadic herders (malchid) are making a mark on the world stage. In this class the students will continue with the basics of modern Mongolian language, as spoken in Ulaanbaatar "Red Hero," the country's capital. They will learn in the phonetic Cyrillic script, which was adapted to Mongolian language from Russian in 1945, with a few additional letters. Intermediate and more advanced grammar will be taught through communicative methodology. Students will also have opportunity to experience Mongolian arts, culture, and cooking in and out of class. This is the first semester of Intermediate Mongolian. By the end of two semesters intermediate Mongolian, students will have learned all the noun forms, and all the major verb forms and will be able to form complex, multi-clause sentences, telling stories, expressing their feelings, and making arguments and explanations. They should be able to interact in all basic "survival" situations in Mongolia.

Fall
Prerequisite: ALAN 0200
1 Course Unit

ALAN 0400 Intermediate Mongolian II
This course is a continuation of Intermediate Mongolian I. Mongolian is the national language of the independent State of Mongolia and the language of the nomadic warriors Genghis Khan (known to the Mongolians themselves as Chinggis Khan). It is also spoken in China and Siberia. Today Mongolian musical styles like throat singing (khoomii), products like cashmere (nooluur), and tourism to visit Mongolia's nomadic herders (malchid) are making a mark on the world stage. In this class the students will continue with the basics of modern Mongolian language, as spoken in Ulaanbaatar "Red Hero," the country's capital. They will learn in the phonetic Cyrillic script, which was adapted to Mongolian language from Russian in 1945, with a few additional letters. Intermediate and more advanced grammar will be taught through communicative methodology. Students will also have opportunity to experience Mongolian arts, culture, and cooking in and out of class. This is the first semester of Intermediate Mongolian. By the end of two semesters intermediate Mongolian, students will have learned all the noun forms, and all the major verb forms and will be able to form complex, multi-clause sentences, telling stories, expressing their feelings, and making arguments and explanations. They should be able to interact in all basic "survival" situations in Mongolia.

1 Course Unit

Astronomy (ASTR)

ASTR 0001 A Survey of the Universe
A general survey, designed for the non-major, of the facts and theories of the astronomical universe, from solar system, to stars, to galaxies and cosmology. Topics include planets, satellites, small objects in the solar system, and extraterrestrial life; stars, their evolution, and their final state as white dwarfs, neutron stars, or black holes; galaxies, quasars, large structures, background radiation, and big bang cosmology. Elementary algebra and geometry will be used. This course is not recommended for physical-science majors or engineering students. Engineering students receive no credit for this course. Fulfills quantitative data analysis requirement.

Fall, Spring, and Summer Terms
Mutually Exclusive: ASTR 0006, ASTR 0007
1 Course Unit

ASTR 0006 The Solar System, Exoplanets, and Life
A survey course on planets and life covering our own Solar System and exoplanets orbiting other stars. Topics include the latest results and theories about: the origin and evolution of planetary systems around our Sun and other stars; the detection of exoplanets; the implications of planetary atmospheres for life; and the search for life on other planets in our Solar System. This course is designed for the non-major and elementary algebra and geometry will be used. Physical science majors and engineering students should prefer ASTR 1211 to this course.

Spring
Mutually Exclusive: ASTR 0001, ASTR 0007
1 Course Unit

ASTR 0007 The Big Bang and Beyond
An introductory course for students who do not intend to major in a physical science or engineering, covering theories of the Universe ranging from the ancient perspective to the contemporary hot big bang model, including some notions of Einstein's special and general theories of relativity. Topics will include the solar system, stars, black holes, galaxies, and the structure, origin and future of the Universe itself. Elementary algebra is used. Fulfills quantitative data analysis requirement.

Fall
Mutually Exclusive: ASTR 0001, ASTR 0006
1 Course Unit

ASTR 1211 Introduction to Astrophysics I
A basic course for majors in physical sciences and engineering; required for the astrophysics concentration. The course provides fundamental knowledge of Newtonian gravity and the properties of light and matter as they are relevant for understanding astrophysical objects. Application is made to the observed features of planetary motion, the atmospheres and stars and planets, and the structure and evolution of stars.

Fall
Prerequisite: MATH 1400 OR PHYS 0150
1 Course Unit

ASTR 1212 Introduction to Astrophysics II
A basic course for majors in physical sciences and engineering; required for the astrophysics concentration. The course covers fundamental knowledge of Einstein's gravity, the contents of the universe, and the structure and distribution of galaxies. Emphasis is on the key elements of modern cosmology: the mathematical model of the expanding universe, the cosmic microwave background, the early universe and the emergence of large-scale structure in the present universe.

Spring
Prerequisite: MATH 1410 OR PHYS 0151
1 Course Unit
ASTR 1250 Astronomical Techniques
A laboratory course in astronomical observations and data reduction. This course satisfies one of the requirements for the astrophysics concentration. Topics vary, but include spherical astronomy, timekeeping and coordinate systems, astro-statistics, telescopes, CCD’s, signal processing, imaging, spectroscopy, radio astronomy and data reduction techniques using custom software. Attendance at observational sessions outside of the scheduled class time is required, but times are uncertain due to weather conditions. The course requires small-group work in-class, and substantial out-of-class time. Notes: Course not offered every year. The observatories at DRL are used for experimental and observational practice. Spring, odd numbered years only
Prerequisite: (ASTR 0001 AND MATH 2400 AND MATH 2410) OR (ASTR 0007 AND MATH 2400 AND MATH 2410) OR ASTR 1211 OR ASTR 1212
1 Course Unit

ASTR 3392 Life and Death of Stars
This is an advanced undergraduate course on the life and death of stars. The course will cover the structure of stellar interiors, nuclear reactions and the formation of elements, stellar evolution, supernovae, and the physics of white dwarfs, neutron stars, and black holes. We will approach these topics from both theoretical and observational perspectives. Spring, even numbered years only
1 Course Unit

ASTR 5503 Astronomical Methods and Instrumentation
Techniques of modern astronomical observations, including: detection of light from the radio through gamma rays; sources of noise in astronomical measurements; image analysis and reduction techniques; telescope optics and adaptive optics; spectroscopic measurements; radio interferometry and spectroscopy. Spring, odd numbered years only
1 Course Unit

ASTR 5533 Galaxies: Structure, Dynamics and Formation
Galactic structure and dynamics. Observed scaling relations. Models and observations of galaxy formation and evolution. Enrollment restricted to graduate students. Fall, odd numbered years only
1 Course Unit

Bachelor of Applied Arts and Sciences (BAAS)

The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).

BAAS 4000 The Art of Work
This course is designed to expose students to a scholarly understanding of the modern world of work, examining the many ways that work shapes our identities, communities, and society. Drawing on insights from psychology, sociology, and anthropology, we will explore the cultural and personal dimensions of work, as well as the contemporary challenges and opportunities of the future of work. Topics will include the culture of work, psychological identity and career development, organizational science, work-life wellness, and the future of work. Concurrently, students will be asked to apply their understanding of these concepts to their personal conceptions of career across their lifespan. Our class will also provide ample opportunity, space, and guidance for students to effectively synthesize an iteration of their professional identity based on a variety of factors internal and external to their existence. More specifically, students will work to probe the meaning of their professional narrative, and then, translate how those choices will guide their future endeavors. We will begin by studying the qualitative method of autoethnography. Using this foundation, we will then examine a sociological lens of work, specifically discovering how individual and cultural values, norms, and assumptions intersect with our collective and cultural understandings of careers. Following this, we will turn to psychology to foster the connection between our interests and goals, andprobe how these traits and states guide career pursuits. Additionally, we will discuss the broader concept of identity in its many forms andfashions. Then, we will discuss how career choices contribute to identity development by reading scholars such as Savickas. We also will look to the organizational science literature to learn more about well-being as it relates to work. Concluding this component of the course, we will consider lifelong career development as a continuous process of design and redesign based on internal and external stimuli, and summarize research on well-being and work. Finally, we will delve into Krbmboltz’s theory of career happenstance, which encourages professionals to consider how chance can modify and enhance career trajectory. We also will talk about the future of work, and how learning, un-learning, and re-learning will contribute to career agility. Through satisfactory completion of this course, degree students will be able to: Demonstrate increased knowledge of the broader cultural or conceptual contexts of work, specifically focusing on values, assumptions, and norms Practice design thinking when considering career decision-making, harnessing the power of iterative processes Evaluate the theoretical and practical implications of the relationship between work and life, incorporating appropriate concepts and techniques to integrate personal and professional behaviors for long-term well-being Analyze the intersectionality of personal and professional identity Employ critical thinking to analyze how self-reflection can guide career Formulate future professional plans through the lens of predictions on the future of work, generating increasingly nuanced interpretations of career development and explaining why those plans are congruent to their identity. Each week, assignments will scaffold to support students in the composition of an autoethnography, the final deliverable of this course.
1 Course Unit
BAAS 4080 Senior BAAS Portfolio
BAAS 408 is designed to guide students through the completion of their final milestone for the BAAS degree. Reflective and applied in nature, the experience provides students with space and support as they make meaning of the skills and abilities acquired throughout the program and inform career development. This is an 8-week non-credit course. Fall, Spring, and Summer Terms
0 Course Units

BAAS 4160 Senior BAAS Portfolio
BAAS 4160 is designed to guide students through the completion of their final milestone for the BAAS degree. Reflective and applied in nature, the experience provides students with space and support as they make meaning of the skills and abilities acquired throughout the program and inform career development.

Behavioral & Decision Sciences (BDS)

BDS 5000 Introduction to Behavioral & Decision Sciences
In the past 50 years, social scientists have increasingly used insights from psychology to explore the limitations of the standard, economic model of rational decision-making—a field now known broadly as behavioral science. This course is an introduction to the central concepts of behavioral science, touching on related research in economics, psychology, political science, and more. We also touch on various practical implications of this work for practitioners, from businesspeople to policymakers to everyday people in their day-to-day lives. The topics covered include self-control, procrastination, fairness, cooperation, reference dependence, and choice under uncertainty. The course consists of live and asynchronous core lectures that introduce the central concepts in behavioral science to students, supplemented by a series of exciting guest lectures that bring some of the leading academic voices working in the behavioral sciences to the classroom to share their work and insights.
Summer Term
0.5-1 Course Unit

BDS 5010 Behavioral Science: Theory and Application of Experimental Methods
Our understanding of different mechanisms and (economic) relationships is hampered by a lack of data and—more often than not—either the observation or the data is not reliable. In recent decades, through the work of pioneers in the behavioral and experimental economics fields, such as Daniel Kahneman and Vernon Smith, economics experiments have become a vital part of the scientific discourse, facilitating our understanding of the world we live in (much like in biology, chemistry, physics, etc.). In this course, we will explore economic behavior by developing a research idea, designing an experiment, then carrying out the experiment under controlled conditions. Essentially, you will learn how to think about ideas, generate ideas, and use economic experiments to test them. Permits offered to non-MBDS students if space is available.
1 Course Unit

BDS 5020 Norms and Nudges
Social norms are the rules we live by, and we encounter them in any area of our life. Social norms often guarantee the smooth functioning of a group or organization. Sometimes, however, these norms are inefficient or do not benefit society at large. What can we do to change these harmful collective behaviors? Social psychology, philosophy, sociology, rational- choice, legal theory, and even economics, are investigating and theorizing pro-social behavior, justice motivation, and moral and social norms.
In this course, we will examine the latest and best in this emerging multidisciplinary field. Students will be encouraged to apply its findings and methods to their area of interest.
Mutually Exclusive: PHIL 4470
1 Course Unit

BDS 5030 Behavioral Public Policy
A core MBDS program course requirement, this course addresses methodological issues that apply to each of the policies currently provided by governmental and non-governmental institutions worldwide. We will discuss the conditions that must be satisfied to make policies effective and the behavioral incentives that policy actors face. The course relies on the main theoretical and empirical findings of modern policy analysis and upon an extensive set of case studies. Students are required to master the conceptual material and to confront and solve practical cases in public policy. Permits offered to non-MBDS students if space is available.
1 Course Unit

BDS 5050 Research Methods for Behavioral Science
The course is a survey of methods of research in behavioral and decision sciences. We will cover principles of scientific thinking, operationalizing research questions into testable ideas, and the ethics of behavioral research. A significant portion of the class will be devoted to study designs. We will cover basics of experimental design, quasi-experiments, and observational surveys. The class will also provide an introduction to qualitative research methods, including focus groups, unstructured and semi-structured interviews, and ethnographies. We will conclude the semester with the methods of communicating our findings to different types of audiences. We will analyze research processes and results from the perspective of the information consumer. The class will be useful for those interested in learning how to read and write behavioral science publications and how to design one's own studies. For practical skills in using software to analyze data, see BDS 5220 and BDS 5160.
Fall
1 Course Unit

BDS 5060 Applied Statistics for Behavioral & Decision Sciences
This course is a basic primer for key concepts in statistics needed for anyone that wants to take additional classes in behavioral and decision sciences- or work in a relevant field. This course helps serve as a prerequisite for the MBDS Program.
Summer Term
0.5 Course Units
**BDS 5090 Applied Game Theory**
This course covers basic concepts in game theory and applies these concepts to the social sciences. By the end of the course students will know how to identify Nash equilibria and Pareto optima, understand how to diagram simultaneous and sequential games, and be able to explain how different strategies apply to single play games and repeated games. Topics will include why conflict and cooperation occur among organisms with diverse goals and scarce resources, and how pro-social emotions and norms can alter human behavior in ways that facilitate cooperation. This course helps serve as a prerequisite for the MBDS Program. 
Summer Term  
0.5 Course Units

**BDS 5110 Negotiation Behavior**
We negotiate every day—with merchants, service providers, employers, coworkers, friends, and family-determining the price we will pay, the amount of our compensation, where to go to dinner, who will clean the kitchen, etc. Although negotiations are a ubiquitous part of our everyday lives, many of us know little about the strategy and psychology of effective negotiations. Why do we sometimes get our way, while other times we walk away feeling frustrated by our inability to achieve the agreement we desire? Over the past few decades, research in social psychology and decision science has sought the answer to this question and created a rich body of knowledge on bargaining behavior, leading to a well-validated prescription on how to negotiate. In this course, you will learn both the how and the why of negotiation behavior. Through role-playing exercises, you will be able to evaluate your own negotiation behavior as well as that of your classmates and receive advice on how to optimize it to achieve your desired outcomes. Importantly, you will also read and discuss research articles that have led to such practical advice. Non-MBDS students may request a permit to register through Path@Penn. 
Two Term Class, Student may enter either term; credit given after both terms are complete  
1 Course Unit

**BDS 5120 Power, Persuasion and Influence**
Power and influence are fundamental for taking action in personal relationships, professional contexts and in society in general. To be able to use them effectively, however, we need to understand the nature, sources, uses and development of power and influence in these various contexts. To accomplish this goal, this course will survey theories of power, persuasion and influence from multiple disciplines and discuss their application to everyday actions. Permits offered to non-MBDS students if space is available.  
1 Course Unit

**BDS 5150 Game Theory**
This course provides a way to understand the behavior of individuals and organizations in situations where their actions have a strategic impact on each other. As players can be individuals, organizations, or even countries, this course covers a broad range of strategic settings. As an interdisciplinary tool, game theory is used in a wide range of fields, including economics, political science, psychology, and sociology. Game theory is applied to inform decisions in situations such as price wars between companies, international relations, or even evolutionary biology. In this course students will learn how strategic players map strategies with the payoffs associated with each possible outcome, and how to best respond to the decisions of other players. Strategies refer to the actions that players can take, and payoffs represent the rewards or consequences that players obtain based on their actions and the actions of others. Game theory models are useful not only to analyze the strategic interaction of players, but to predict the outcome of games. Even when most predictions assume that each player acts rationally, meaning that they choose the strategy that maximizes their payoff, we will explicitly consider deviations from this assumption in the course. The course covers both fundamental concepts and applications of game theory. Examples of applications studied in the course include cooperation (like in a social dilemma or a public good game), coordination (as in the weakest link or minimum effort game), and conflict (as in contests and tournaments). These strategic settings will be used to understand how human behavior aligns with the principles and predictions of game theory. The course will provide answers to questions like the following: Why do individuals cooperate with strangers they are never going to meet again? Why do organizations fail to effectively use incentives to coordinate individuals and teams? Why is the sophistication of counterparts so difficult to predict? Why are resources systematically destroyed in wars, and inter-group conflict easily reignites despite its huge cost? The course is composed of a series of self-contained modules addressing these questions with examples and cases. Game theory and behavioral science concepts and tools will be explained from scratch: no pre-existing knowledge is required.  
Fall  
1 Course Unit

**BDS 5160 Data Science and Quantitative Modeling**
(This course fulfills the MBDS program’s quantitative course requirement.) Increasingly, decision-makers and systems rely on intelligent technology to analyze data systematically to improve decision-making. Data science is opening new pathways to improve decision-making in private and public organizations. Through lectures and real-world examples, this course will present a practical understanding of the fundamental methods used by data scientists including data management techniques, quantitative modeling, and data visualization. The primary emphasis is on understanding the fundamental concepts and applications of data science in the context of behavioral and decision sciences. We will cover several algorithms though this is not an algorithms course. We will examine real-world examples and cases to place data science techniques in context, to develop data-analytic thinking, and to illustrate that proper application is as much an art as it is a science. Permits offered to non-MBDS students if space is available.  
Spring  
1 Course Unit
BDS 5210 Judgments & Decisions
This course addresses the ideal standards of judging and deciding, and the ways in which people fall short of these standards, with emphasis on the latter. We will discuss heuristics and other intuitive strategies that people may use in day-to-day thinking, and the biases that result from this use. We will apply this approach to shed light on faulty analyses in medicine, law, and everyday thinking. Understanding the ideals of good thinking and causes of our failure to conform to these ideals may ultimately help improve the decisions we make in private and professional lives. Permits offered to non-MBDS students if space is available.
1 Course Unit

BDS 5220 Statistical Reasoning for Behavioral Science
The complexity of human behavior exceeds that of most phenomena studied in the natural sciences. Any reference about human behavior and decision-making has to rely on statistical methods rather than on deterministic modeling. In this class, students will learn the methods of descriptive and inferential statistics used in behavioral science from the basics to those more commonly used. In this sense, this is a class on theoretical statistics, but we will go beyond theory to apply these methods to answer our own research questions. As such, this is also a class on applied statistics. We will rely heavily on statistical programming languages (namely, R) and version control systems (Git) to create statistical reports. Finally, we will work with new research in the field and learn to critically assess the statistical methods used therein. After completing this class, students will be competent in reading cutting-edge scientific literature, producing their own results using the more commonly used methods, and able to critically assess the limitations of their own and other people’s research. Non-MBDS students must complete a permit request.
1 Course Unit

BDS 5250 Organizational Behavior
In order to successfully manage an organization, its groups, and its individuals, you need to first understand why people in a given organization do what they do. In other words, an understanding of the human side of management and an ability to communicate that understanding are essential to your success in any career you choose. This course assumes that in order to accomplish organizational goals; you will need to work for other people, work with other people, and supervise other people. To do so effectively, you need to understand the behavioral science behind organizations. This course will survey several topics in service of this goal, including decision biases, motivation, power and influence, networks, diversity, team processes and culture. Throughout, you will be asked to demonstrate your knowledge of these concepts and your ability to use them to analyze situations as well as to provide prescriptions for change. Permits offered to non-MBDS students if space is available.
1 Course Unit

BDS 5310 Behavioral Science in Action: Past, Present & Future
This course will combine pragmatic insight with discerning attention to the latest (robust) behavioral science findings. It will focus on providing participants with a good grounding in how behavioral science is applied in practice, and the issues that arise when doing so. For example: What are the common ethical dilemmas and implementation challenges that arise? What are the best ways to ensure behavioral science has an impact in large organizations? What are employers of behavioral scientists looking for? And how should behavioral science be applied differently in the future?
Fall
1 Course Unit

BDS 5400 Explanation and Non-Experimental Methods in Behavioral Science
Applied behavioral scientists must be able to explain what behavioral science is (or behavioral insights are) and how we can leverage them for a better world. What do we mean by “behavioral science and behavioral insights”? How do we use those insights? Whether working in public companies, global non-profits, research institutions, or other organizations, one must interpret, evaluate, and communicate interdisciplinary research with colleagues. Put another way, creating, assessing, and applying behavioral insights from research requires a strong understanding of and ability to communicate about disparate, sometimes competing, social theories, methods, and forms of explanation. This course will provide overviews of major trends in academic disciplines which study human behavior and link these research programs to contemporary B-sci practice. We will investigate the research methods each of these disciplines use which can inform us about human behavior. The two primary modalities of evidence-use in contemporary B-sci - experimental economics and experimental psychology - will be discussed in comparison with non-experimental methods, with a focus on non-experimental methods. Thus, a primary goal of this course is for students to be able to leverage the different kinds of insights gained from different methods in order to create coherent, well-reasoned, and understandable explanations for use in applied settings. Topics covered will include anthropological, sociological, economic, linguistic, and psychological perspectives; AI-use and authorship; and the meta-study of science, among others.
Summer Term
1 Course Unit

BDS 5450 International Organizations & Organizational Influence
This course is meant to build on the skills developed in the rest of the Master of Behavioral and Decision Sciences program, to diversify the scope of applied behavioral science in the context of the non-profit arena, and more broadly speaking, to apply behavioral insights for (pro)social change. This seminar emphasizes the potential use of behavioral science for social transformation and shared quality of life. Goals – Perspective – Practice – Partnerships – Positioning 1. Perspective: Students gain understanding of the scope and workstyle of international and non-profit organizations and are motivated to get involved in social change endeavors. 2. Practice: Students gain work experience in view of future employment opportunities in organizations with a social orientation. 3. Partnerships: Students are connected to potential clients from the nonprofit world. 4. Positioning: Recognition and reputation of UPenn MBDS Program with potential employers from international organizations are raised.
Fall
1 Course Unit
BDS 5550 Groups and Networks
Understanding social groups and networks is a crucial component to understanding the nuances of interdependent behavior. The first aim of the class is to critically examine the theoretical approaches used to conceptualize the formation and performance of social groups as well as their dynamics from a social network perspective. The next part of the course will cover applied aspects of social network data collection and analysis including concepts such as sampling, descriptive statistics, and inferential models. We will discuss the design and implementation of field studies to answer research questions about community formation, homophily, and the spread of behavior and beliefs. The last part of the course will introduce students to agent-based modeling. We will study diffusion, contagion, and the emergence of norms using microsimulations. The course will wrap up with an overview of the presented theories, methods, and approaches of social network analysis and students will have the opportunity to reflect and synthesize about these overarching concepts. Please note: the course will draw from current literature and applied research and while some parts of the course will be taught in R and NetLogo, coding is not the primary focus of the course. Proficiency in R or Netlogo is not required.
1 Course Unit

BDS 5850 Consulting in Behavioral Science
In this course, students will gain a better understanding of applied behavioral science. The course will emphasize oral and written communications and the development of client deliverables, client relations, team work, client presentation, and peer review. Team meetings with clients will take place during weekdays. Permits offered to non-MBDS students if space is available.
1 Course Unit

BDS 5880 Special Topics in Behavioral & Decision Sciences
This course offers students an opportunity to learn, interact with, and discuss cutting edge topic areas in behavioral and decision sciences.
1 Course Unit

BDS 5991 Independent Study
The Independent Study is only open to MBDS students.
1 Course Unit

BDS 5997 Capstone: Consulting with Behavioral Science
The updated MBDS capstone is a two-semester program designed to help students engage with industry and gain a deeper understanding of the field of Behavioral Sciences. In BDS 5997, offered in the fall semester, students will have the opportunity to talk to industry leaders and gain firsthand knowledge on how behavioral science is applied in various organizational settings. They will also learn about the increasing relevance of BeSci insights and tools in organizations, as well as the job market prospects for MBDS graduates. Additionally, Skill BOOSTcamps will be organized to teach students crucial skills that will be useful for their applied capstone course in the Spring.
Fall
0.5 Course Units

BDS 5998 Capstone: Design Challenge
As the second portion of the MBDS capstone, this course will be offered during the spring semester to students who have taken BDS 5997 Capstone: Consulting in Behavioral Science. As part of this course, students will participate in professional development workshops and engage in a Design Challenge. Working in teams, they will use the instructional and strategic input they received in the fall term to tackle specific industry problems. The goal of the program is to prepare students to be industry-ready as soon as they complete the program.
Spring
0.5 Course Units

BDS 5999 Behavioral Science Individual Capstone
Behavioral Science Individual Capstone for cohorts before 2022.

BDS 9900 Master’s Continuation
0 Course Units

Bengali (BENG)

BENG 0100 Beginning Bengali Part I
This course introduces students to colloquial Bengali. It gives equal emphasis to each of the four skills, reading, writing, listening, and speaking. Language will be studied in the context of socio-cultural aspects of West Bengal and Bangladesh. Besides lessons from the text, a major portion of the syllabus will be based on topics drawn from films, cultural events, festivals, food, and religion.
Fall
1 Course Unit

BENG 0200 Beginning Bengali Part II
This course introduces students to colloquial Bengali. It gives equal emphasis to each of the four skills, reading, writing, listening, and speaking. Language will be studied in the context of socio-cultural aspects of West Bengal and Bangladesh. Besides lessons from the text, a major portion of the syllabus will be based on topics drawn from films, cultural events, festivals, food, and religion.
Spring
Prerequisite: BENG 0100 OR BENG 5100
1 Course Unit

BENG 0300 Intermediate Bengali Part I
This course develops the student's prior knowledge of Bengali. An attempt is made to gear the syllabus to meet the specific needs of students. The focus of the course is to develop the oral and aural skills of the learner as well as improve writing skills and reading strategies. Emphasis is also laid on increasing the sociolinguistic and strategic competence of the learners so that they will be able to function in the target culture. Besides discussions on various aspects of Bengali life, students read some short literary texts in the original Bengali version. Two Term Class, Student must enter first term; credit given after both terms are complete
1 Course Unit

BENG 0400 Intermediate Bengali Part II
This course develops the student's prior knowledge of Bengali. An attempt is made to gear the syllabus to meet the specific needs of students. The focus of the course is to develop the oral and aural skills of the learner as well as improve writing skills and reading strategies. Emphasis is also laid on increasing the sociolinguistic and strategic competence of the learners so that they will be able to function in the target culture. Besides discussions on various aspects of Bengali life, students read some short literary texts in the original Bengali version.
Spring
Prerequisite: BENG 0300 OR BENG 5300
1 Course Unit
BENG 1500 Advanced Bengali
The objective of this course is to develop the proficiency level of the students in all the four skills by using different genres of Bengali literature (West Bengal and Bangladesh) as its course content. Reading comprehension will be enhanced as students learn to understand authentic texts at the linguistic and cultural level while discussion (description, narration, supporting opinion) on issues related to these texts aim to hone the oral and written skills. Students will be allowed to work on individual texts & topics (with the instructors permission) for their final project. This is a one semester course. Spring: Bengali Popular Culture - This course aims to use as its content, different aspects of popular Bengali culture as they are represented in media (film, television, magazines, newspapers) and arts (fashion, local and regional art, music). Students will be expected to develop their linguistic skills (description, narration, supporting opinion) and socio-cultural awareness while interacting with these varied types of texts. Students will be allowed to work on individual texts & topics (with the instructors permission) for their final project. This is a one semester course.

Benjamin Franklin Seminars (BENF)

BENF 2230 Philanthropy and Health
This course that brings together the recent literature from the social sciences and health sciences as well as other disciplines to explore how philanthropy impacts health care in society at large, and in particular, the health of the donor and volunteer. Furthermore, the course will include an "ideas in action" component. Students will examine philanthropic donations at work in Philadelphia, as well as engage in philanthropic activities alongside the instructor. The course consists of three parts: Part 1) Philanthropy and Healthcare in Society. The US has a long tradition of channeling philanthropic resources to augment healthcare in society, as the demand for health care exceeds the capacity of individuals or government to fully satisfy the demand. Philanthropic resources, which include both time and money, are emerging as significant means by which the capacity of the healthcare sector is fortified; these include resources for service providers, health care researchers, and health care policy advocates. To understand the heterogeneous impact of philanthropy on healthcare, this part of the course will examine the "who, what, when, where, and how" of philanthropic inputs into healthcare and their impact. Part 2) Health Effects on the Individual Philanthropist: The second part of the course examines individuals who give of their time and money. From decreased mortality to better health outcomes, researchers have carefully documented the effect on individual givers. Recent findings from the health sciences also show what mechanisms might be involved in an individual's psychology and physiology that can explain the beneficial health effects of philanthropic behavior. We will examine recent experimental research along these lines provides further evidence along these lines. Part 3) Ideas in Action: The course will include three specific volunteering events and do so by selecting a healthcare related organization of their choice that uses philanthropic resources. Students will gain first-hand experience as volunteers (and if feasible, as donors) and discuss their experiences with philanthropy in class presentations and relate them to course content.

Fall
1 Course Unit

BENF 2260 Health and Social Justice
This course considers various theoretical approaches to justice and health, motivated by the idea that a moral framework is needed to address the ethical challenges posed by inequalities in access, quality, financial burdens, and resource priorities, as well as rising health care costs. The course includes four parts. The first part examines ethical frameworks that involve various approaches to medical and public health ethics. The second part presents an alternative theory of justice and health, the health capability paradigm (HCP), grounded in human flourishing. The third part explores domestic health policy applications, including equal access, equitable and efficient health financing and insurance, rising costs and allocating resources. The fourth and final part of the course investigates domestic health reform, particularly a normative theory of health policy decision making grounded in political and moral legitimacy. The course scrutinizes the relevance of health justice for governing health at the domestic level, that is within countries, offers a new theory of health and social justice, the health capability paradigm, and of health governance, shared health governance, evaluating current domestic health systems and proposals for reforming them in light of these alternative theoretical frameworks.

Also Offered As: SOCI 2952
1 Course Unit

BENF 2270 Global Health Justice and Governance
This course considers various theoretical approaches to global justice and global governance and analyzes their implications for global health. The course includes two parts. The first part examines accounts of cosmopolitanism, nationalism and other theories of global justice, critically assessing duties ascribed by each that may be owed universally to all persons or confined within associative boundaries of communities or nations. The second part explores applications to global health governance encompassing consideration of human rights and the operation and accountability of global institutions such as the United Nations, the World Bank, and the World Health Organization and national health systems. The course scrutinizes the relevance of global justice for governing the global health realm, proposes a new theory of global health justice, provincial globalism, and of global health governance, shared health governance, evaluating the current global health system and proposals for reforming it in light of these alternative theoretical frameworks.

Spring
1 Course Unit

BENF 2280 Education and International Development
Educational development is central to the policies of every country in the world, and to children, youth and adults everywhere, as the participants in educational systems and agents of change for broader economic and social development. With increased globalization, population migration, and information exchange, there is increasing interest in the differing ways that learning education is organized and experienced around the world. High GNP countries like the U.S. are interested in understanding how they sometimes fail to serve students when compared with other high GNP countries, while many developing countries are struggling to put into place educational systems that assure a basic education for all. Much of this may be usefully understood in the context of the United Nations Sustainable Development Goals (for more detail on the SDGs, see http://www.un.org/sustainabledevelopment/). Both access to schooling and the quality of learning are central to these goals. This course will explore, compare and contrast education and international development models, as they affect the lives and development of children, youth and adults, with an emphasis on poor and developing countries. The course will work from primary and secondary materials on theories, research, and applications used to promote human development and basic education. Some programs are carried out by multinational/bilateral agencies such as World Bank, Unicef, UNESCO, and USAID, while others are undertaken by intermediary organizations (such as NGOs and universities) and local organizations or individual specialists. Issues include a range of social, economic and ethno-political dimensions in the provision of quality education.

Spring
1 Course Unit
BENF 2990 Health Capability
This course examines the idea of health capability. Health capability is the ability to be healthy; it integrates health functioning and health agency. Health capability helps us understand the conditions that facilitate and barriers that impede health and the ability to make healthy choices. Health capabilities are key strengths resulting from individual and societal commitment of human, financial, and physical resources with the goal of helping people thrive. Differences in health capability explain why, for example, personal skills and determination or health beliefs are not enough to achieve health, why people with even the best external conditions can still have poor health, and why a narrow biomedical model of disease is insufficient. Health capability captures the dynamic, interactive, multidimensionality of health and flourishing. Health capability has the effect of creating a virtuous circle; developing people’s health capability enables them to create and support the conditions for their own and other’s health capability and so forth. It offers an evaluation of the aim and success of public policies in terms of people’s lived experiences. The course is motivated by the idea that health capabilities ought to be a primary dimension in which equity in health and public policy is sought. The course includes three parts. The first part engages with the health capability model. The second part examines the health capability profile. The second part explores health capability applications. Twin goals of the course include cultivating the development of students’ knowledge base, values and competencies as well as aiding students in identifying, assessing and expanding their own health capabilities for individual and community health and flourishing.

Biochemistry & Molecular Biophysics (BMB)

BMB 5080 Macromolecular Biophysics: Principles and Methods
This course introduces students to the physical and chemical properties of biological macromolecules, including proteins and nucleic acids. It surveys the biophysical techniques used to study the structure and thermodynamics of macromolecules. It is intended to be a first course for graduate students with an undergraduate background in either physics, chemistry or biology, and no necessary background in biochemistry. Prerequisite: Senior undergraduate or graduate level biochemistry of biophysics.
Fall
1 Course Unit

BMB 5090 Structural and Mechanistic Biochemistry
The course will focus on the key biochemical task areas of living cells. The course progresses from primarily molecular level events, such as storage and translation of genetic information, creation, control and removal of proteins, to higher organization levels such as metabolic pathways, signaling pathways, regulation and homeostasis. Each section will cover structure details of the relevant molecules, appropriate binding/catalysis events, regulatory aspects, and how they fit into the relevant pathway(s) and cell function. Material will be covered with a combination of formal lectures and student presentations. Prerequisite: If course requirements not met, permission of course director required.
Spring
Prerequisite: BMB 5080 AND BIOM 6000
1 Course Unit

BMB 5100 Data Analysis and Scientific Inference
An introductory course in the analysis of data and scientific inference for graduate students in Biochemistry, Molecular Biophysics, and related quantitative biomedical research areas. The course will stress fundamental principles of data analysis, best practice in presenting data, and how to draw sound scientific inferences from the data. The overall goal is to provide students the tools to carry out rigorous and reproducible scientific research.
Spring
1 Course Unit

BMB 5180 Protein Conformation Diseases
Protein misfolding and aggregation has been associated with over 40 human diseases, including Alzheimer’s disease, Parkinson’s disease, amyotrophic lateral sclerosis, prion diseases, alpha (1)-antitrypsin deficiency, inclusion body myopathy, and systemic amyloidoses. This course will include lectures, directed readings and student presentations to cover seminal and current papers on the cell biology of protein conformational diseases including topics such as protein folding and misfolding, protein degradation pathways, effects of protein aggregation on cell function, model systems to study protein aggregation and novel approaches to prevent protein aggregation. Target audience is primarily 1st year CAMB, other BGS graduate students, or students interested in acquiring a cell biological perspective on the topic. MD/PhDs and Postdoc are welcome. MS and undergraduate students must obtain permission from course directors. Class size is limited to 14 students.
Fall
Also Offered As: CAMB 6150
Prerequisite: BIOM 6000
1 Course Unit

BMB 5540 Macromolecular Crystallography: Methods and Applications
This is an introductory course on methods and applications of macromolecular structure determination using X-ray crystallography. The course will be broken up into three parts: 1) Principles of X-ray crystallography involving didactic lectures on the technique with weekly problem sets; 2) Workshops on macromolecular structure determination involving hands-on experience with the technology; 3) Student "journal club" presentations on current high impact publications involving X-ray crystal structure determination. Prerequisite: Undergraduate calculus and trigonometry.
Fall
Also Offered As: CHEM 5550
1 Course Unit

BMB 5580 Biomolecular Spectroscopy and Microscopy
CHEM 5580 covers basic fluorescence spectroscopy and microscopy, as well as advanced topics such as single molecule spectroscopy and non-linear and super-resolution microscopies. There are weekly homework assignments that include problems based on the lectures as well as journal club style reports on by pairs of students on papers relevant to the course material.
Fall
Also Offered As: CHEM 5580
0.5 Course Units
**BMB 5670 Bio-inorganic Chemistry**

The course covers selected topics in bioinorganic chemistry; special emphasis is placed on dioxygen chemistry and electron transfer processes. Course topics include: (i) oxygen uptake and utilization; (ii) diatomic oxygen transport; (iii) diatomic and monatomic oxygen incorporation into substrates; (iv) metalloenzyme-catalyzed C-C bond formation; (v) the metallobiology of DNA; (vi) metal-sulfide proteins; (vii) manganese-containing metalloproteins; (viii) Photosystem II: light-driven electron transfer and the biological water-splitting reaction; (ix) biological electron transfer; (x) electron transfer theory; (xi) mechanisms of energy storage and release; and (xii) long-distance electron transfer reactions.

**Fall or Spring**
Also Offered As: CHEM 5670  
1 Course Unit

**BMB 5810 Techniques of Magnetic Resonance Imaging**

Detailed introduction to the physics and engineering of magnetic resonance imaging as applied to medical diagnosis. Covered are magnetism spatial encoding principles, Fourier analysis, spin relaxation, imaging pulse sequences and pulse design, contrast mechanisms, chemical shift, flow encoding, diffusion and perfusion, and a discussion of the most relevant clinical applications.

**Spring, even numbered years only**
Also Offered As: BE 5810  
1 Course Unit

**BMB 5850 Wistar Institute Cancer Biology Course: Signaling Pathways in Cancer**

This course is intended to provide foundational information about the molecular basis of cancer. When necessary the significance of this information for clinical aspects of cancer is also discussed. The main theme centers around cell cycle checkpoints with specific emphasis on the biochemistry and genetics of DNA damage signaling pathways, DNA damage checkpoints, mitotic checkpoints and their relevance to human cancer. The course is taught by the organizers and guest lecturers from universities and research institutions in the Northeast. Following every lecture, students present a research paper related to the topic of that lecture. The course is intended for first and second year graduate students but all graduate students are welcome to attend. Prerequisite: Undergraduates and Master’s degree candidates require permission from the course directors.

**Fall**
Also Offered As: GCB 5850, PHRM 6500  
1 Course Unit

**BMB 5980 Tutorial**

The tutorial course is designed for in-depth study of a specific topic thorough one-on-one meetings and discussions between the student and a selected BMB faculty member. The intent of the course is to broaden the students knowledge, thus the tutorial may not be taken with the student's current rotation advisor or thesis advisor. Choice of faculty member and topic is by prior mutual agreement between the student and faculty member, subject to approval by the course director. Student and faculty member will typically meet for an hour or so 2-3 times per week. The course may take the form of literature study, or where appropriate, a mini-project (typically computer-based). A tutorial can be used by students to become more deeply acquainted with the literature related to their thesis project or to help prepare students for their Candidacy Exam. Upon completion of the tutorial, students must prepare a written description of the area studied (5-10 typewritten pages).

**Fall, Spring, and Summer Terms**
1 Course Unit

---

**BMB 6010 Fundamentals of Magnetic Resonance**

This course introduces basic theoretical and experimental concepts of magnetic resonance and its applications in biochemistry, biology and medicine. Topics covered include description of the phenomenon of magnetic resonance, and classical and quantum strategies to compute nuclear spin responses in liquids, solids and biological tissues, polarization transfer and multiple quantum effects and their applications in biomedicine. Nuclear spin relaxation in solid-state materials and in biological systems will be discussed. Concepts of magnetic resonance imaging, imaging strategies, image contrast, and diagnostic applications are discussed. The course includes several practicals dealing with the demonstration of NMR hardware and experiments to compute basic NMR parameters on high resolution and clinical MRI scanners. For further details of this course, visit www.mmrccc.upenn.edu

**Fall, odd numbered years only**
0.5 Course Units

**BMB 6050 Drug Discovery and Development**

This course will expose graduate-level students to the process of drug discovery and development. The course will be structured to cover topics from the identification of a disease-relevant target through to Phase III Clinical Trials. The course will be lecture based and there will also be student-led journal club presentations as part of the course. There will also be a writing project consisting of a 3 page proposal of how to advance one of the areas of Drug Discovery & Development covered in the course.

**Spring**
Also Offered As: CAMB 7100, PHRM 6050  
1 Course Unit

**BMB 6180 Applications of High Resolution NMR Spectroscopy to Problems in Structural Biology**

A lecture-based course designed to introduce graduate students to applications of modern high-resolution multinuclear and multidimensional NMR spectroscopy to problems in structural biology. The course will first introduce classical definitions and descriptions of nuclear magnetic resonance and a convenient formalism for the analysis of advanced NMR experiments. Concepts and applications of multidimensional homonuclear 1H NMR and multidimensional heteronuclear spectroscopy of proteins and nucleic acids will be described. Resonance assignment strategies including analysis of triple resonance spectroscopy will be covered. The origin, measurement and extraction of structural restraints and their use in structure determination will be surveyed and illustrated with recent examples. Undergraduate biochemistry and physical chemistry background required.

**Fall, odd numbered years only**
Prerequisite: BMB 6010  
0.5 Course Units

**BMB 6220 Physical Principles of Mechano-Enzymes**

This course will provide an introduction to the biochemical, structural, and mechanical properties of energy-transducing enzymes. We will emphasize the relationships of mechanical, thermal, and chemical forces in mechano-enzyme function.

**Spring, odd numbered years only**
1 Course Unit

---

2023-24 Catalog | Generated 08/02/23
**BMB 6240 Molecular and Physical Basis of Ion Channels**
The course is a journal club format, targeted to graduate and MD/PhD students interested in ion channels from graduate programs in Physiology, Pathology, Neuroscience, Pharmacology, Biochemistry & Molecular Biophysics. It meets for two hours on alternate weeks and is coupled to the Ion Channel Journal Club, which also meets for one hour on the same alternate weeks. A faculty member meets with students to discuss and review the contents of each selected article earlier in the week in preparation for the subsequent Journal Club presentation. The day following the Journal Club the person who discussed the paper meets with the students to answer questions and to discuss the research that goes on in his lab. This elective course is meant to introduce students to the latest advances in ion channel research and includes topics extending from biophysics, structure, and physiology to cell biology and medical applications.
Spring, even numbered years only
0.5 Course Units

**BMB 6260 Mass Spectrometry and Proteomics**
This course will provide a detailed introduction to proteomics and mass spectrometry. The role of mass spectrometry in both characterizing proteins for traditional protein structure-function studies and identification of proteins in proteome studies will be emphasized. Targeted and global proteomes, quantitative protein profiling and compositional proteomics, and applications of proteome studies will be discussed. Intended for first and second year graduate students and others with an interest in proteomics and mass spectrometry.
Spring, odd numbered years only
0.5 Course Units

**BMB 6270 Computer Programming for Biochemists and Biophysicists**
An introductory course on programming and algorithms for scientists with an emphasis on applications to biophysics. Students will learn to write, debug, and execute basic programs through lectures, in-class workshops, and programming projects outside of class. Prerequisite: Permission of instructor for non-BMB students.
0.5 Course Units

**BMB 6320 Probing Structure and Function of Complex RNA-Protein Machines**
RNA-Protein complexes or RNPs can range from simple assemblies to megadalton enzymatic machines. The latter include two of the most abundant and essential enzymatic complexes for converting genes to functional protein - the ribosome and the spliceosome. Understanding the molecular interactions that hold these RNPs together and how these complexes function has required the development of new techniques and pushed the boundaries of quantitative biochemistry. In this course we will take an in-depth look at general concepts common to many RNA binding proteins, the methods used to study protein-RNA and RNA-RNA interactions, and how the complex nature of large RNPs uniquely allow them to achieve their precise functions. The course will be a combination of both lectures and student-lead discussion of recent literature. Students will be evaluated based on their presentations of primary literature and their participation in class discussion.
Fall, even numbered years only
1 Course Unit

**BMB 6340 Cryo-Em**
This is an introductory course on methods and applications of cryo-EM single-particle analysis and tomography. The course will be broken up into three parts: 1) Principles of single-particle reconstruction including hands-on experience with the technology; 2) Principles of cryo-EM tomography including data analysis; 3) Student presentations of their 3D reconstructions and research article
Spring
1 Course Unit

Biochemistry (BCHE)

BCHE 2280 Physical Models of Biological Systems
Classic case studies of successful reductionistic models of complex phenomena, emphasizing the key steps of making estimates, using them to figure out which physical variables and phenomena will be most relevant to a given system, finding analogies to purely physical systems whose behavior is already known, and embodying those in a mathematical model, which is often implemented in computer code. Topics may include bacterial genetics, genetic switches and oscillators; systems that sense or utilize light; superresolution and other new microscopy methods; and vision and other modes of sensory transduction.
Fall
Also Offered As: PHYS 2280
Prerequisite: (PHYS 0101 OR PHYS 0151) AND MATH 1400 AND (MATH 1410 OR MATH 1610)
1 Course Unit

BCHE 2999 Undergraduate Research Projects
Independent Research.
Fall or Spring
1-2 Course Units

BCHE 3000 Senior Research Projects
Research in standing faculty groups in any School for special cases beyond participation in BCHE 404. Proposal required before the end of the add period in any given semester.
Fall or Spring
1 Course Unit

BCHE 4597A Biochemistry Laboratory
Students carry out mentored research broadly relevant to biomolecular science within the groups of individual faculty investigators on or near the Penn campus. Students commit a minimum of 15 hours/week to original research in their host laboratories. In addition to research and assignments, students meet to present and discuss scientific research. Course activities and assignments complement the research effort. Developing effective scientific presentations is an emphasis. Each student must contact the course instructor with information regarding research group (faculty principal investigator) in the spring term prior the fall term of BCHE 4597A. BCHE 4597A and BCHE 4597B is a year-long, 2 cu course required of the Biochemistry major. The course is taken in a Biochemistry major’s final year as an undergraduate.
Fall or Spring
1 Course Unit

BCHE 4597B Biochemistry Laboratory
Students carry out mentored research broadly relevant to biomolecular science within the groups of individual faculty investigators on or near the Penn campus. Students commit a minimum of 15 hours/week to original research in their host laboratories. In addition to research and assignments, students meet to present and discuss scientific research. Course activities and assignments complement the research effort. Developing effective scientific presentations is an emphasis. Each student must contact the course instructor with information regarding research group (faculty principal investigator) in the spring term prior the fall term of BCHE 4597A. BCHE 4597A and BCHE 4597B is a year-long, 2 cu course required of the Biochemistry major. The course is taken in a Biochemistry major’s final year as an undergraduate.
Fall or Spring
1 Course Unit

Bioengineering (BE)

BE 1000 Introduction to Bioengineering
Survey course introducing students to the breadth of bioengineering. Course consists of introductory lectures, guest speakers/panelists, and a series of small assignments that allow students to explore different facets of bioengineering and the Penn Bioengineering program.
Fall
0.5 Course Units

BE 2000 Introduction to Biomechanics
This course investigates the application of statics and strength of materials to soft and hard biologic tissues. The course will cover simple force analyses of the musculoskeletal system and introduces the fundamentals of the mechanics of materials including axial loading, torsion and bending and their application to biomechanics. The lecture and recitation will be complemented with hands-on examples emphasizing connections between theoretical principles and practical applications.
Fall
Prerequisite: MATH 1410 AND (PHYS 0140 OR PHYS 0150)
1 Course Unit
BE 2200 Biomaterials
This course investigates the application of materials science and engineering to biomedical applications, with a focus on polymers, ceramics, and metals. The course will cover concepts related to basic material fabrication and synthesis, structure and property characterization, as well as applications of biomaterials. The lecture and recitation will be complemented with laboratory examples of material assessment and characterization.  
Spring  
Prerequisite: BE 2000 AND CHEM 1022  
1 Course Unit

BE 2700 Bioengineering Laboratory Principles
This course will cover a variety of bioengineering laboratory principles and techniques including data collection, analysis and reporting. Students will explore tools related to mechanics, materials and electronics with applications in the bioengineering field. Corequisite with BE 2200.  
Spring  
Prerequisite: BE 2000 AND (ENGR 1050 OR CIS 1200 OR CIS 1210)  
1 Course Unit

BE 3010 Bioengineering Signals and Systems
Properties of signals and systems; Examples of biological and biomedical signal and systems; Signal operations, continuous and discrete signals; Linear, time invariant systems; Time domain analysis; Systems characterized by linear constant-coefficient differential equations; Fourier analysis with applications to biomedical signals and systems; Introduction to filtering; Sampling and the sampling theorem. Examples vary from year to year, but usually include signals such as the ECG and blood pressure wave, principles of signal coding in the auditory system and cochlear implants, and simple applications in biomedical imaging.  
Fall or Spring  
Prerequisite: (MATH 2400 OR ENM 2400) AND (PHYS 0141 OR PHYS 0151)  
1 Course Unit

BE 3060 Cellular Engineering
The biological cell is a complex machine and its function is at the root of all physiology and many pathologies. Recent advances in molecular and cell biology enable the redesign of cell function. This course aims to develop a quantitative understanding of cell function, and how we might go about changing cell function through intelligent redesign. The course covers topics ranging from receptor binding and endocytosis, cell adhesion and motility, cell function in the immune system, systems and synthetic biology, genetic knockdown and manipulation using CRISPR and gene therapy, and strategies for immunotherapy including chimeric antigen receptor therapy (carT).  
Fall  
Prerequisite: CHEM 1022 AND (MATH 2400 OR ENM 2400) AND (PHYS 0140 OR PHYS 0150) AND (PHYS 0141 OR PHYS 0151) AND BIOL 1121 AND (ENGR 1050 OR CIS 1200 OR CIS 1210)  
1 Course Unit

BE 3090 Bioengineering Modeling, Analysis and Design Laboratory I
BE 3090 is a one course-unit laboratory course with a focus on combining experimental and mathematical approaches to understand biological systems and solve bioengineering problems. The course content integrates concepts from mathematics, physics, signal analysis, control engineering, mass transport, and heat transfer with applications in physiology and pharmacology. Areas of emphasis are model development and validation, statistical analysis, experimental design, error analysis and uncertainty, and scientific writing.  
Fall  
Prerequisite: (ENGR 1050 OR CIS 1200 OR CIS 1210) AND (PHYS 0141 OR PHYS 0151) AND (MATH 2400 OR ENM 2400) AND BE 2000 AND BE 2200 AND BE 2700 AND (ENM 3750 OR ENGR 3440 OR STAT 4310)  
1 Course Unit

BE 3100 Bioengineering Modeling, Analysis and Design Laboratory II
BE 3100 is a one course-unit laboratory course on the design of technology to measure and control biological systems. The course is divided into four modules: (i) microfluidics for point of care diagnostics, (ii) synthetic biology for predicting cellular behavior, (iii) electronics and signal analysis of bioelectrical signals, and (iv) bioanalytical spectroscopy for low-cost diagnostics. Each module will have two components: (i) a series of structured learning exercises to teach key concepts and methods of the topic that we are studying, and (ii) a design challenge, in which the understanding gained in the first component is used to design a solution to an open ended bioengineering challenge.  
Spring  
Prerequisite: (ENGR 1050 OR CIS 1200 OR CIS 1210) AND (PHYS 0141 OR PHYS 0151) AND (MATH 2400 OR ENM 2400) AND BE 2000 AND BE 2200 AND BE 2700 AND AND BE 3010 AND (ENM 3750 OR ENGR 3440 OR STAT 4310)  
1 Course Unit

BE 3300 Self-Assembly of Soft Materials
Soft matter is found in diverse applications including sports (helmets & cloths); food (chocolate, egg); consumer products (e.g., lotions and shampoo); and devices (displays, electronics). Whereas solids and liquids are typically hard and crystalline or soft and fluid, respectively, soft matter can exhibit both solid and liquid like behavior. In this class, we investigate the thermodynamic and dynamic principles common to soft matter as well as soft (weak) forces, self-assembly and phase behavior. Classes of matter include colloidal particles, polymers, liquid crystalline molecules, amphiphilic molecules, biomacromolecules/membranes, and food.  
Fall  
Also Offered As: MSE 3300  
Prerequisite: (MSE 2200 OR BE 2200) AND CHEM 1022 or equivalent  
1 Course Unit

BE 3500 Introduction to Biotransport Processes
Introduction to basic principles of fluid mechanics and of energy and mass transport with emphasis on applications to living systems and biomedical devices.  
Spring  
Prerequisite: (MATH 2400 OR ENM 2400) AND (PHYS 0140 OR PHYS 0150) AND BE 2000  
1 Course Unit

BE 4000 Preceptorship in Clinical Bioengineering
Introduction to the integration of biomedical engineering in clinical medicine through lectures and a preceptorship with clinical faculty. This course is for BE majors ONLY, with preference given to BSE students.  
Spring  
1 Course Unit
**BE 4260 Immunology for Bioengineers**

Immunology is a fast-growing field that is critical to human health and therapeutic development and engineering. To better prepare bioengineers for a career in immunotherapy and biotech areas, it is essential for them to learn the fundamental knowledge of the immune system and the diseases associated as well as common and emerging technologies used in immunological research. This will not only enable the students to communicate more effectively in a multidisciplinary team, it will also empower them to take advantage of their training in engineering and mathematics to develop tools to analyze the immune system with great depth, solve important questions in immunology, and engineering new therapeutics. Therefore, the goal of this course is to provide the immunology foundation for engineering students and technical background of commonly used tools and emerging technologies in immunological research. The course is open to upper level undergraduate students who have taken courses in biochemistry and/or cell biology.

Fall
Mutually Exclusive: BE 5260
1 Course Unit

**BE 4700 Medical Devices**

Lab-based course where students learn the fundamentals of medical device design through hands-on projects using microcontrollers. Students first learn basic design building blocks regularly employed in microcontroller-based medical devices, and then carry out a small design project using those building blocks. Projects are informed by reverse-engineering of competing products, FDA regulations, and marketplace considerations. Prerequisite: Junior or Senior BE Majors only. Students who have taken ESE 3500 or a similar course may not enroll. Permission of instructor required if course prerequisites not met.

Spring
1 Course Unit

**BE 4720 Medical Device Development**

Students will learn the process of developing medical devices that fulfill unmet patient needs. Students will be equipped with an understanding of what is required to lead a startup venture in medical devices including regulatory, legal, fundraising, team building, and leadership. In lab, students will develop a proof-of-concept prototype device. Students will pitch their ideas to real med tech investors. The successful student will leave the class with the knowledge, skills, and confidence to lead a startup venture in medical devices. If desired by the student, the proof-of-concept device can be used as the basis for their senior design project. Junior standing in Bioengineering or permission of the instructor if course prerequisite is not met.

Spring
1 Course Unit

**BE 4800 Introduction to Biomedical Imaging**

Introduction to the mathematical, physical and engineering design principles underlying modern medical imaging systems including x-ray computed tomography, ultrasonic imaging, and magnetic resonance imaging. Mathematical tools including Fourier analysis and the sampling theorem. The Radon transform and related transforms. Filtered back-projection and other reconstruction algorithms. Bloch equations, free induction decay, spin echoes and gradient echoes. Applications include one-dimensional Fourier magnetic resonance imaging, three-dimensional magnetic resonance imaging and slice excitation.

Spring
Prerequisite: BE 3010 OR ESE 3250
1 Course Unit

**BE 4830 Physics of Medical/Molecular Imaging**

This course will provide a comprehensive survey of modern medical imaging modalities and the emerging field of molecular imaging. The basic principles of X-ray, ultrasound, nuclear imaging, and magnetic resonance imaging will be reviewed. The course will also cover concepts related to contrast media and targeted molecular imaging. Topics to be covered include the chemistry and mechanisms of various contrast agents, approaches to identifying molecular markers of disease, ligand screening strategies, and the basic principles of toxicology and pharmacology relevant to imaging agents.

Fall
Mutually Exclusive: BE 5830
Prerequisite: MATH 2410 OR BIOL 2310 OR BE 3050
1 Course Unit

**BE 4900 Independent Project in Bioengineering**

An intensive independent study experience on an engineering or biological science problem related to bioengineering. Requires preparation of a proposal, literature evaluation, and preparation of a paper and presentation. Regular progress reports and meetings with faculty advisor are required. Sophomore, Junior and Senior BE majors only.

Fall or Spring
1 Course Unit

**BE 4920 Independent Project in Bioengineering**

Second semester of an independent project. Sophomore, Junior and Senior BE majors only.

Fall or Spring
1 Course Unit

**BE 4950 Senior Design Project**

Group design projects in various areas of bioengineering. Project ideas are proposed by the students in the Spring semester of the Junior year and refined during the Fall semester. The course guides the students through choosing and understanding an impactful biomedical problem, defining characteristics of a successful design solution to eliminate or mitigate a problem or fulfill a need, identifying and prioritizing constraints, creatively developing potential design solutions, iteratively refining design options, defining and implementing an optimal solution, and evaluating how well the solution fulfills the need. Final oral and written reports are required. Also emphasized are teamwork, project management, time management, regulations/standards, and effective communication.

Seniors in BE or Department Permission.

Fall
1 Course Unit

**BE 4960 Senior Design Project**

Second semester of a two-semester design project. Seniors in BE or Department Permission.

Spring
1 Course Unit

**BE 4970 Senior Thesis in Biomedical Science**

An intensive independent project experience incorporating both technical and non-technical aspects of the student’s chosen career path. Chosen topic should incorporate elements from the student’s career path electives, and may involve advisors for both technical and non-technical elements. Topics may range from biomedical research to societal, technological, and business aspects of Bioengineering. A proposal, regular progress reports and meetings with a faculty advisor, a written thesis, and a presentation are required. Seniors in BAS or Department Permission.

Fall
1 Course Unit
BE 4980 Senior Thesis in Biomedical Science
Second semester of a year-long project. Seniors in BAS or Department Permission.
Spring 1 Course Unit

BE 5020 From Biomedical Science to the Marketplace
This course explores, through own work (this is, own discovery) the transition from fundamental knowledge to its ultimate application in a clinical device or drug. Emphasis is placed upon factors that influence this transition and upon the integrative requirements across many fields necessary to achieve commercial success. Special emphasis is placed upon entrepreneurial strategies, intellectual property, and the FDA process of proving safety and efficacy. Graduate students or permission of the instructor.
Fall 1 Course Unit

BE 5040 Biological Data Science II: Data Mining Principles for Epigenomics
This course will teach upper level undergraduates and graduate students how to answer biological questions by harnessing the wealth of genomic and epigenomic data sets generated by high-throughput sequencing technologies. Graduate students or permission of the instructor
Spring 1 Course Unit

BE 5100 Biomechanics and Biotransport
The course is intended as an introduction to continuum mechanics in both solid and fluid media, with special emphasis on the application to biomedical engineering. Once basic principles are established, the course will cover more advanced concepts in biosolid mechanics that include computational mechanics and bio-constitutive theory. Applications of these advanced concepts to current research problems will be emphasized.
Spring 1 Course Unit

BE 5120 Bioengineering III: Biomaterials
This course provides a comprehensive background in biomaterials. It covers surface properties, mechanical behavior and tissue response of ceramics, polymers and metals used in the body. It also builds on this knowledge to address aspects of tissue engineering, particularly the substrate component of engineering tissue and organs. General Chemistry, basic biomechanics. General Chemistry, basic biomechanics.
Fall 1 Course Unit

BE 5140 Rehab Engineering and Design
Students will learn about problems faced by disabled persons and medical rehabilitation specialists, and how engineering design can be used to solve and ameliorate those problems. The course combines lectures, multiple design projects and exercises, and field trips to clinical rehabilitation facilities. Students will have substantial interaction with clinical faculty, as well as with patients. Prerequisite: Graduate students or permission of the instructor.
Fall Also Offered As: IPD 5040 1 Course Unit

BE 5160 Introduction to High-Performance Scientific Computing
Research problems in the domain of physical, biological and biomedical sciences and engineering often span multiple time and length-scales from the molecular to the organ/organism, owing to the complexity of information transfer underlying biological mechanisms. Multiscale modeling (MSM) and high-performance scientific computing (HPC) have emerged as indispensable tools for tackling such complex problems. However, a paradigm shift in training is now necessary to leverage the rapid advances, and emerging paradigms in HPC — GPU, cloud, exascale supercomputing, quantum computing — that will define the 21st century. This course is a collaboration between Penn, UC Berkeley, and the Extreme Science and Engineering Discovery Environment (XSEDE) which administers several of the federally funded research purpose supercomputing centers in the US. It will be taught as a regular 1 CU course at Penn by adopting a flip-classroom/active learning format. The course is designed to teach students how to program parallel architectures to efficiently solve challenging problems in science and engineering, where very fast computers are required either to perform complex simulations or to analyze enormous datasets. The course is intended to be useful for students from many departments and with different backgrounds, e.g., scholar of Penn Institute for Computational Science, although we will assume reasonable programming skills in a conventional (non-parallel) language, as well as enough mathematical skills to understand the problems and algorithmic solutions presented.
Fall or Spring
Also Offered As: CBE 5060 1 Course Unit

BE 5180 Optical Microscopy
Fall
Prerequisite: MATH 2400 1 Course Unit

BE 5210 Brain-Computer Interfaces
The course is geared to advanced undergraduate and graduate students interested in understanding the basics of implantable neuro-devices, their design, practical implementation, approval, and use. Reading will cover the basics of neuro signals, recording, analysis, classification, modulation, and fundamental principles of Brain-Machine Interfaces. The course will be based upon twice weekly lectures and "hands-on" weekly assignments that teach basic signal recording, feature extraction, classification and practical implementation in clinical systems. Assignments will build incrementally toward constructing a complete, functional BMI system. Fundamental concepts in neurosignals, hardware and software will be reinforced by practical examples and in-depth study. Guest lecturers and demonstrations will supplement regular lectures.
BE 3010 (Signals and Systems) or equivalent, computer programming experience, preferably MATLAB (e.g., as used the BE labs, BE 3100). Some basic neuroscience background (e.g. BIOL 2310, BE 3050, INSC core course), or independent study in neuroscience, is required. This requirement may be waived based upon practical experience on a case by case basis by the instructor.
Spring
Also Offered As: NGG 5210 1 Course Unit
BE 5260 Immunology for Bioengineers
Immunology is a fast-growing field that is critical to human health and therapeutic development and engineering. To better prepare bioengineers for a career in immunotherapy and biotech areas, it is essential for them to learn the fundamental knowledge of the immune system and the diseases associated as well as common and emerging technologies used in immunological research. This will not only enable the students to communicate more effectively in a multidisciplinary team, it will also empower them to take advantage of their training in engineering and mathematics to develop tools to analyze the immune system with great depth, solve important questions in immunology, and engineering new therapeutics. Therefore, the goal of this course is to provide the immunology foundation for engineering students and technical background of commonly used tools and emerging technologies in immunological research. The course is open to upper level undergraduate students who have taken courses in biochemistry and/or cell biology. Fall
Mutually Exclusive: BE 4260
1 Course Unit

BE 5270 Immune Engineering
This course would target graduate students and upper level undergraduate students. This course introduces students to the concept of immune engineering that ranges from vaccine design to cancer immunotherapy and cutting edge tools recently developed in these areas. It is best suited for graduate students and upper level undergraduate students who have had cell biology and immunology. We will build on the topics covered in Immunology and explore deeper questions and applications in cancer immunotherapy, infection, and auto-immune diseases, and high-throughput immune profiling technologies. The course will use a combination of lectures, journal clubs, and a final project presentation that will be discussed mirroring NIH study section format. The course is open to graduate students and upper level undergraduate students who have taken courses in biochemistry and/or cell biology. Fall or Spring
1 Course Unit

BE 5280 Applied Medical Innovation I
Applied Medical Innovation I: Bedside to Bench is a hands-on, project-based team design experience for graduate students, offered in partnership with the Center for Health, Devices, and Technology (Penn Health Tech). The course acts as an idea INCUBATOR for projects originating from unmet clinical needs, identified by clinical collaborators, industry sponsors, and Penn Health Tech partners. By the end of this course, students will understand all aspects of medical device design, innovation, and entrepreneurship, including the importance of a clear problem definition and stakeholder input, an introduction to engineering design principles, and how to navigate the complex pathway by which these products reach patients. The end point of the semester is a final pitch (outlining the need, the solution, and the business opportunity) and a functional prototype with initial proof of concept data. The course is open to all graduate and senior undergraduate students (pre-application required). Fall
1 Course Unit

BE 5290 Applied Medical Innovation II
Applied Medical Innovation II: Bench to Bedside is a hands-on, interdisciplinary, project experience for graduate students, offered in partnership with the Center for Health, Devices, and Technology (Penn Health Tech). The course acts as device ACCELERATOR for projects originating from Applied Medical Innovation I and Penn Health Tech. Students partner with experienced technical teams (clinicians + engineers) to create a commercialization plan for real-world, cutting-edge medical technologies under development at Penn. Students work closely with their interdisciplinary team to identify and validate the clinical need, stakeholder requirements, and business case in order to de-risk the technology, increase commercial potential, and package the idea for follow-on investment. In the second half of the course, students will also gain exposure to medical technology entrepreneurship and investing. The course is open to all graduate and senior undergraduate students (pre-application required). Fall or Spring
1 Course Unit

BE 5300 Theoretical and Computational Neuroscience
This course will develop theoretical and computational approaches to structural and functional organization in the brain. The course will cover: (i) the basic biophysics of neural responses, (ii) neural coding and decoding with an emphasis on sensory systems, (iii) approaches to the study of networks of neurons, (iv) models of adaptation, learning and memory, (v) models of decision making, and (vi) ideas that address why the brain is organized the way that it is. The course will be appropriate for advanced undergraduates and beginning graduate students. A knowledge of multi-variable calculus, linear algebra and differential equations is required (except by permission of the instructor). Prior exposure to neuroscience and/or Matlab programming will be helpful. Spring
Also Offered As: NGG 5940, NRSC 5585, PHYS 5585, PSYC 5390
1 Course Unit

BE 5370 Biomedical Image Analysis
This course covers the fundamentals of advanced quantitative image analysis that apply to all of the major and emerging modalities in biological/biomaterials imaging and in vivo biomedical imaging. While traditional image processing techniques will be discussed to provide context, the emphasis will be on cutting edge aspects of all areas of image analysis (including registration, segmentation, and high-dimensional statistical analysis). Significant coverage of state-of-the-art biomedical research and clinical applications will be incorporated to reinforce the theoretical basis of the analysis methods. Prerequisite: Mathematics through multivariate calculus (MATH 2410), programming experience, as well as some familiarity with linear algebra, basic physics, and statistics. Fall or Spring
Also Offered As: CIS 5370, MPHY 6090
1 Course Unit
BE 5400 Principles of Molecular and Cellular Bioengineering
This course aims to provide theoretical and conceptual principles underlying biomolecular and biological systems. The course will start with basic and advanced concepts in physical chemistry and thermodynamics and introduce statistical mechanics as a tool to understand molecular interactions. The applications will be of relevance to bioengineering and biology disciplines. The course will not shy away from mathematical formulations and will stress the molecular perspective. This course explores physical biology of the cell across several length and timescales, while simultaneously emphasizing molecular specificity and clinical implications such as disease outcome or biomedical applications. The course emphasizes how the basic tools and insights of engineering, physics, chemistry, and mathematics can illuminate the study of molecular and cell biology to make predictive biomedical models and subject them to clinical validation. Drawing on key examples and seminal experiments from the current bioengineering literature, the course demonstrates how quantitative models can help refine our understanding of existing biological data and also be used to make useful clinical predictions. The course blends traditional models in cell biology with the quantitative approach typical in engineering, in order to introduce the student to both the possibilities and boundaries of the emerging field of physical systems biology. While teaching physical model building in cell biology through a practical, case-study approach, the course explores how quantitative modeling based on engineering principles can be used to build a more profound, intuitive understanding of cell biology. Worksheets will be integral to this course. Recitation will comprise of biweekly illustrations of problems and concepts from the worksheets and biweekly quizzes.
Fall or Spring
Also Offered As: CBE 5400
1 Course Unit

BE 5470 Fundamental Techniques of Imaging
This laboratory course covers the fundamentals of modern medical imaging techniques. Students will participate in a series of hands-on exercises, covering the principals of X-ray imaging, CT imaging, photoacoustic imaging, diffusion tensor imaging, localized magnetic resonance (MR) spectroscopy, MR contrast agents, diffuse optical spectroscopy, and bioluminescence imaging. Each lab is designed to reinforce and expand upon material taught in BE 4830/BE 5830 Molecular Imaging and MMP 5070 Physics of Medical Imaging. Graduate students or permission of the instructor.
Spring
1 Course Unit

BE 5510 Biomicrofluidics
The focus of this course is on microfluidics for biomedical applications. Topics to be covered in the first half of this course include microscale phenomena, small-scale fabrication techniques, and sensing technologies that are often leveraged in the development of microfluidic systems for the study of biomolecules, cells, tissues, and organs in living biological systems. In the second half of this course, strong emphasis will be placed on the application of microfluidics in cell biology, bioanalytical chemistry, molecular biology, tissue engineering, and drug discovery. Prerequisite: Experience with an undergraduate level fluid mechanics course is preferred. Examples of relevant SEAS courses include BE 3500 (Biotransport), CBE 3500 (Fluid Mechanics), and MEAM 3020 Fluid Mechanics.
Fall
1 Course Unit

BE 5530 Principles, Methods, and Applications of Tissue Engineering
Tissue engineering demonstrates enormous potential for improving human health. This course explores principles of tissue engineering, drawing upon diverse fields such as developmental biology, cell biology, physiology, transport phenomena, material science, and polymer chemistry. Current and developing methods of tissue engineering, as well as specific applications will be discussed in the context of these principles. A significant component of the course will involve review of current literature within this developing field. Graduate Standing or instructor’s permission.
Spring
1 Course Unit

BE 5540 Engineering Biotechnology
Advanced study of re DNA techniques; bioreactor design for bacteria, mammalian and insect culture; separation methods; chromatography; drug and cell delivery systems; gene therapy; and diagnostics.
Spring
Also Offered As: CBE 5540
1 Course Unit

BE 5550 Continuum Tissue Mechanics
This course introduces tensor calculus and continuum mechanics, with a focus on finite-deformation behavior of biological tissues including skin, tendon/ligament, cartilage, bone, blood vessels, nerves. Senior/Graduate Student in Bioengineering or permission of the instructor.
Spring
1 Course Unit
BE 5550 Nanoscale Systems Biology
NANO-science and engineering approaches to systems in biology are of growing importance. They extend from novel methods, especially microscopies that innovate in novel materials and/or computational modeling which incorporate the physics and chemistry of small scale biology. Proteins and DNA, for example, are highly specialized polymers that interact, catalyze, stretch and bend, move, and/or store information. Membranes are also used extensively by cells to isolate, adhere, deform, and regulate reactions. In this course, students will become familiar with cell & molecular biology and nanobiotechnology through an emphasis on nano-methods, membranes, molecular machines, and ‘polymers’ - from the quantitative perspectives of thermodynamics, statistical physics, and mechanics. We specifically elaborate ideas of energetics, fluctuations and noise, force, kinetics, diffusion, etc. on the nano- thru micro- scale, drawing from very recent examples in the literature. Laboratory experiments will provide hands-on exposure to microscopies in a biological context (eg. fluorescence down to nano-scale, AFM), physical methods (eg. micromanipulation, tracking virus-scale particles or quantum dots), and numerical problems in applied biophysics, chemistry, and engineering. A key goal of the course is to familiarize students with the concepts and technology (plus their limitations) as being employed in current research problems in nanoscale systems biology, extending to nanobiotechnology. Prerequisite: Background in Biology, Physics, Chemistry or Engineering with coursework in Thermodynamics or permission of the instructor. Fall
Also Offered As: CBE 5550, MEAM 5550
1 Course Unit

BE 5560 Molecular Diagnostics for Precision Medicine
This course provides a broad overview of current molecular diagnostics that have been implemented in clinical settings. Students will gain knowledge in the field and they will apply the knowledge to come up with their own ideas on next generation molecular diagnostics that can resolve currently intractable clinical problems. The course also introduces key concepts and emerging concepts in the area of diagnostics. Topics covered in this course include point-of-care diagnostics, microfluidics, microscopy, liquid biopsy, digital assays, microfabrication, molecular probe design, biomarkers, biosensing, commercialization, and machine learning based data analysis. Upon completion of the course, students will have the ability to design their own diagnostic platforms.
Fall
1 Course Unit

BE 5580 Principles of Biological Fabrication
BE 558 introduces methodological approaches that are currently used for the de novo construction of biological molecules - primarily, nucleic acids and proteins - and how to use these molecules to engineer the properties of cells and intact tissue. By the end of the semester, students should (i) possess a molecular-scale understanding of key biological synthesis (ii) and assembly processes, (ii) gain an intuition for how to create novel (iii) methodologies based on these existing processes, and (iii) appreciate (iv) the drivers of technology adoption (e.g. cost, time, ease, and (v) reproducibility). Throughout the course, we will place the material in context of applications in bioengineering and human health, including: protein engineering, drug discovery, synthetic biology & optogenetics, bio-inspired materials, and bio-electronic devices. Graduate standing or permission of the instructor. Undergraduate level biology, physics and chemistry.
Fall, odd numbered years only
1 Course Unit

BE 5590 Multiscale Modeling of Chemical and Biological Systems
This course provides theoretical, conceptual, and hands-on modeling experience on three different length and time scales - (1) electronic structure (A, ps); (2) molecular mechanics (100A, ns); and (3) deterministic and stochastic approaches for microscale systems (um, sec). Students will gain hands-on experience, i.e., running codes on real applications together with the following theoretical formalisms: molecular dynamics, Monte Carlo, free energy methods, deterministic and stochastic modeling, multiscale modeling. Prerequisite: Undergraduate courses in numerical analysis and physical chemistry. Not Offered Every Year
Also Offered As: CBE 5590, SCMP 5590
1 Course Unit

BE 5610 Musculoskeletal Biology and Bioengineering
The goal of this course is to educate students in core principles and expose them to cutting edge research in musculoskeletal biology and bioengineering through (1) lectures covering the basic engineering principles, biological fundamentals, and clinical practices involved in the function, repair, and regeneration of the musculoskeletal tissues; (2) critical review and presentation by student groups of recent and seminal publications in the field related to the basic science, translation, and clinical practice of musculoskeletal biology and bioengineering, with discussion input by faculty members with relevant expertise. This course will place an emphasis on delivering multidisciplinary knowledge of cell and molecular biology, mechanics, material science, imaging, and clinical medicine as it relates to the field of musculoskeletal bioengineering and science. Graduate student standing in Engineering and/or CAMB. Undergraduate students with permission of the instructor.
Fall, odd numbered years only
1 Course Unit

BE 5620 Drug Discovery and Development
Intro to Drug Discovery; Overview of Pharmaceutical Industry and Drug Development Costs, Timelines; High Throughput Screening (HTS); Assay Design and Sensitivity Solid Phase Synthesis and Combinatorial Chemistry; Enzyme Kinetics; Fluorescence, Linearity, Inner-filter effect, quenching; Time dynamics of a Michaelis-Menten Reaction; Competitive Inhibitor; FLINT, FRET, TRF, FP, SPA, alpha-screen; Enzyme HTS (protease); Cell based screening; Fura-2 ratio, loading signaling; Gfpcalmodulin-gfp integrated calcium response; Estrogen/ERE-Luc HTS; Problems with cell based screening (toxicity, permeability, nonspecificity); Instrumentation, Robotics/Automation; Z-factor; SAR, Positioning Scanning; Microarray HTS; IC50, % Conversion in HTS and IC50, Assay Optimization.
Fall
Also Offered As: CBE 5620
1 Course Unit
BE 5650 Developmental Engineering of Tissues
This course discusses systems biology approaches to understanding tissue development, homeostasis, and organogenesis. Emphasis is placed on modern technologies, models, and approaches to understanding collective cell behaviors that sculpt tissue form and function, placing developmental principles within an engineering framework. We will consider morphogenetic, mechanobiology, and micro-engineering/sensing analyses. Senior Standing in Bioengineering or permission of the instructor. In keeping with modern graduate-level engineering classes, this course will assume some basic knowledge of coding and/or willingness to learn coding practices. The course will not attempt to serve as a comprehensive introduction to developmental biology (CAMB 5110: Principles of Development is a recommended potential companion course). However, your success in the course will not require familiarity with developmental biology.
Fall
1 Course Unit

BE 5660 Networked Neuroscience
The human brain produces complex functions using a range of system components over varying temporal and spatial scales. These components are coupled together by heterogeneous interactions, forming an intricate information-processing network. In this course, we will cover the use of network science in understanding such large-scale and neuronal-level brain circuitry. Prerequisite: Graduate standing or permission of the instructor. Experience with Linear Algebra and MATLAB.
Spring
Also Offered As: ESE 5660
1 Course Unit

BE 5670 Mathematical Computation Methods for Modeling Biological Systems
This course will cover topics in systems biology at the molecular/cellular scale. The emphasis will be on quantitative aspects of molecular biology, with possible subjects including probabilistic aspects of DNA replication, transcription, translation, as well as gene regulatory networks and signaling. The class will involve analyzing and simulating models of biological behavior using MATLAB. Prerequisite: Graduate standing or permission of the instructor.
Fall or Spring
Also Offered As: AMCS 5670, GCB 5670
1 Course Unit

BE 5690 Systems Biology of Cell Signaling Behavior
This course discusses the principles of cell signaling and cell decisions. We start from a molecular description of cell signaling components. The course builds towards understanding how their interactions govern cell and tissue behavior and how these processes can breakdown in disease. We conclude with a survey of modern approaches to analyze and manipulate signaling networks to study and control biological systems. Graduate, Junior or Senior standing in Bioengineering or permission of the instructor.
Spring
1 Course Unit

BE 5700 Biomechatronics
Mechatronics is the combination of mechanical, electrical and computer engineering principles in the design of electromechanical systems. Biomechatronics is the application of these principles to human biology and includes orthopaedic, hearing, respiratory, vision and cardiovascular applications. In this hands-on, project-based course, these biomechatronic systems will be explored. Students will learn the basic mechanical and electrical elements needed to complete a biomechatronic design challenge including basic circuits, design considerations, material fabrication, microcontrollers and mechanisms (e.g. converting rotational motion into linear motion). Students will carry out a final design project utilizing these building blocks. A first course in programming (Matlab and/or C++ preferred), Senior standing in BE or permission of the instructor
Fall
1 Course Unit

BE 5710 The Goals of Scientific Inquiry
A key skill needed for a successful career in engineering and applied science is the ability to capitalize on current advances in technology (e.g., big data, data science, machine learning) to solve important problems. To gain this ability a student must go beyond an understanding of the technology itself, and instead must achieve the more challenging capacity to identify tractable problems, to formulate good questions, to initiate big ideas, to guide the advancement of science. In this course, we provide a broad and rich perspective on science as a field, laying the critical groundwork for just such achievements. Prerequisites: The course is open to all graduate students. Undergraduates must have passed Math 2410, ENM 3750 or equivalent, CIS 1200 or higher, and PHYS 0141. PHIL 1800 or similar is beneficial but not required.
Spring, odd numbered years only
1 Course Unit

BE 5730 Special Topics in Bioengineering - 1
This special topics course will focus on emerging topics in Bioengineering at the molecular and cellular level covering genomics, epigenetics, molecular and cellular systems with focus on immunology, cancer, neuroengineering, biomechanics, and other facets of bioengineering. This course is intended for incoming PhD students.
Fall
0 Course Units

BE 5740 Special Topics in Bioengineering - 2
This special topics course will focus on emerging topics in Bioengineering at the macroscale from organ to population level covering genomics, epigenetics, molecular and cellular systems with focus on immunology, cancer, neuroengineering, biomechanics, and other facets of bioengineering. This course is intended for PhD students in their first year of study.
Spring
0-1 Course Unit
BE 5760 The Cell as a Machine
The course is a general survey of cell mechanics, emphasizing problem-based and hypothesis-testing approaches. It is based on the concept that the cell is a complex machine, and that the cell can therefore be understood by first understanding principles of complex functions in robust machines, and then understanding the design and operation of complex functions specifically in cells. The course has been offered internationally for many years using a reverse-classroom format. Lectures, which are given primarily by Michael Sheetz, former director of the Mechanobiology Institute at the National University of Singapore, are pre-recorded and viewed independently by students, who also do outside reading and prepare questions in advance of a live, remote, 2 hour question/discussion session with Dr. Sheetz. The Penn course directors are present at all question/discussion sections, and lead tutorials on site. Homework and exams are graded, and Penn course directors will review them for consistency. Other sites that will be involved in the course in the coming year include Columbia, MIT, and Berkeley. Graduate Standing or permission of the instructor.
Fall
1 Course Unit

BE 5780 Principles of Controlled Release Systems
This course provides a basic understanding of the engineering of controlled release systems specifically geared towards the development of formulations for drug delivery, which stands as a 114 billion dollar industry. The course focuses on topics at the interface between engineering and medicine, such as biomaterials, pharmacokinetics, polymer chemistry, reaction kinetics, and transport phenomena. Design of controlled release systems for transdermal, aerosol, oral, gene, and targeted cellular delivery are discussed with emphasis placed on fabrication, US FDA regulatory considerations, and the relevant physiological milieu. The course comprises (1) foundational lectures that provide the basic tools for the student to elaborate a controlled delivery system, (2) an overview of key current research on biomedical controlled release systems for different pathologies and body compartments, (3) an elevator pitch competition for original ideas that use controlled release systems, and (4) a project; plan and presentation to implement the pitched controlled release; system idea to practice design and problem-solving skills and practice basic elements of business proposal. Graduate students and senior standing in Bioengineering, Chemical and Biomolecular Engineering, or permission of the instructor.
Fall
1 Course Unit

BE 5810 Techniques of Magnetic Resonance Imaging
Detailed introduction to the physics and engineering of magnetic resonance imaging as applied to medical diagnosis. Covered are magnetism spatial encoding principles, Fourier analysis, spin relaxation, imaging pulse sequences and pulse design, contrast mechanisms, chemical shift, flow encoding, diffusion and perfusion, and a discussion of the most relevant clinical applications. Spring, even numbered years only
Also Offered As: BMB 5810
1 Course Unit

BE 5830 Physics of Medical / Molecular Imaging
Physical principles of diagnostic radiology, fluoroscopy, computed tomography; principles of ultrasound and magnetic resonance imaging; radioisotope production, gamma cameras, SPECT systems, PET systems; diagnostic and nuclear medicine facilities and regulations. The course includes a component emphasizing the emerging field of molecular imaging.
Fall
Mutually Exclusive: GE 4830
1 Course Unit

BE 5840 The Mathematics of Medical Imaging and Measurement
The last several decades have seen major revolutions in both medical and non-medical and imaging technologies. Underlying all of these advances are sophisticated mathematical tools to model the measurement process and reconstruct images. This course begins with an introduction of the mathematical models and then proceeds to discuss the integral transforms that underlie these models: the Fourier transform, the Radon transform and the Laplace transform. We discuss how each of these transforms is inverted, both in theory and in practice. Along the way we study interpolation, sampling, approximation theory, filtering and noise analysis. This course assumes a thorough knowledge of linear algebra and a knowledge of analysis at the undergraduate level (MATH 3140 and MATH 3600 and MATH 3610, or MATH 5080 and MATH 5090).
Not Offered Every Year
Also Offered As: AMCS 5840, MATH 5840
Prerequisite: MATH 1410 AND (MATH 3600 OR MATH 5080) AND (MATH 3610 OR MATH 5090)
1 Course Unit

BE 5850 Materials for Bioelectronics
Bioelectronics is an emerging field that involves the use of engineering principles to create devices for applications in biology, medicine, and health sciences. One of the most important aspects of bioelectronics is the development of communication interfaces between biological materials (cells, tissues and organs) and manmade devices for optimal energy delivery and signal transduction efficacies. Progress in materials science and engineering is bringing revolutionary advances to the bionterface design and has unlocked unprecedented applications in various biomedical fields. This course focuses on the materials science and engineering concepts that are of relevance to bioelectronics. It also introduces basic biochemical, biophysical and physiological principles that are required to understand the design and application of bioelectronic devices.
Spring
Also Offered As: MSE 5850
1 Course Unit

BE 5970 Master's Thesis Research
For students working on an advanced research program leading to the completion of master’s thesis.
Fall or Spring
1-2 Course Units

BE 5990 Master's Independent Study
The purpose of BE 5990 is to allow a student to create a customized curriculum to study material beyond or outside the scope of our standard BE course offerings. Independent study is NOT a research or design project, it is a one-on-one or small-group course with a professor. The course should require an effort comparable to that of a regular course, about 10-12 hours per week. A paper or presentation is required.
Fall or Spring
1-4 Course Units
BE 6080 Medical Entrepreneurship: Commercializing Translational Science
This course provides in depth insight into the process by which health technology platforms including scientific discoveries are transformed into viable commercial entities. This includes methods to evaluate market opportunities and derisk critical assumptions within the rapidly changing academic and healthcare environment. Topics include intellectual property creation and licensing, technology transfer, regulatory pathways, raising capital/NIH SBIR/STTR grant funding, go to market strategy, market sizing, formation equity, and recruiting co-founders. The major project will involve the formation of teams that will create a defensible business plan and consummate in a presentation (pitch deck) intended to raise capital. The course will be especially valuable for students who may be considering entrepreneurial career paths including starting a company, working for an early stage venture, healthcare consulting, or assuming innovation leadership roles.
Spring
Also Offered As: MTR 6200
1 Course Unit

BE 6400 Mechanobiology of the Cell and its Microenvironment
This course is geared towards first and second year graduate students in BGS/CAMB and SEAS/BE with an interest in the interface of extracellular matrix (ECM) cell biology and biomechanics. Students will learn about the ECM and adhesion receptors and their impact on the cytoskeleton and signaling, as well as fundamental concepts in biomechanics and engineered materials. We will discuss how these topics can inform the study of cell biology, physiology and disease. An additional objective of the course is to give students experience in leading critical discussions and writing manuscript reviews. Invited outside speakers will complement the strengths of the Penn faculty.
Spring, odd numbered years only
Also Offered As: CAMB 7030
Prerequisite: BIOM 6000
1 Course Unit

BE 6500 Advanced Biomedical Imaging Applications
The course will cover a broad range of biomedical imaging technologies including X-ray, MRI, US, molecular and optical imaging. The curriculum will focus on the design of biomedical imaging based research studies spanning from basic technology development through clinical trials. This discussion oriented course is expected prepare students for integrating imaging technology and biomedical concepts to answer biological and medical questions.
Fall
1 Course Unit

BE 6620 Advanced Molecular Thermodynamics
This course begins with a brief review of classical thermodynamics, including the development of Maxwell relationships and stability analysis. The remainder of the course develops the fundamental framework of statistical mechanics, then reviews various related topics including ideal and interacting gases, Einstein and Debye models of crystals, lattice models of liquids, and the basis of distribution function theory.
Fall
Also Offered As: CBE 6180, MEAM 6620
1 Course Unit

BE 6990 Bioengineering Graduate Seminar
This is a required course for BE PhD candidates and covers topics related to bioengineering and the PhD level graduate studies. The goal is to expose students to a breadth of bioengineering topics beyond their specific dissertation work.
Fall or Spring
0.5 Course Units

BE 7110 Integrative plant and animal mechanobiology
This course aims to provide students with an understanding of biomechanics that spans the plant and animal kingdoms, with the goal of emphasizing principles common to both. Major concepts include 1) Plant and Animal Cell Biology; 2) Solid, Fluid, and Transport Mechanics; and 3) Integrating Biology and Mechanics - Big Questions. In addition to lectures, there will be two journal article discussion sections. Most lectures will be given by Penn faculty, although selected topics (particularly in plant biology and mechanics) will be covered by faculty at other sites through lectures broadcast remotely. The Penn director will be present at all sessions of the class. Undergraduates require special permission from the director.
Fall
Also Offered As: CAMB 7110
1 Course Unit

BE 8990 PhD Independent Study
The purpose of BE 899 is to allow a student to create a customized curriculum to study material beyond or outside the scope of our standard BE course offerings. Rather than a research or design project, BE 899 is a one-on-one or small-group course with a professor. Students must submit a proposal outlining the study area along with the professor's approval. A paper or presentation is required.
Fall or Spring
1-4 Course Units

BE 9950 Doctoral Dissertation Status
Ph.D. Students register for Doctoral Dissertation Status after they have advanced to Ph.D. candidacy by completing the Candidacy Exam which consists of the Dissertation Proposal Defense. Permission required. For PhD candidates only.
Fall or Spring
0 Course Units

BE 9990 Bioengineering Graduate Seminar
For students working on an advanced research program leading to the completion of master’s thesis or Ph.D. dissertation requirements.
Fall or Spring
1-4 Course Units
Bioethics (BIOE)

BIOE 4010 Introduction to Bioethics
This course is intended to serve as an introduction to the academic field of bioethics. Students will be introduced to classic papers, basic concepts, field history and important legal cases in the field. But rather than being a broad survey course of many content areas in bioethics, this course will examine how bioethical arguments are constructed with the objective of mastering both the critique of bioethical arguments and their construction. Therefore, most importantly, this course serves as a "methods course" for learning the skill of persuasive bioethics argument, i.e., "the art of conversion." In some of the course sessions, we will focus on the analysis of arguments made by others. In many of the weeks of the course, we will focus on the process of constructing our own, effective bioethical arguments.
Fall
Mutually Exclusive: BIOE 6010
1 Course Unit

BIOE 4020 Foundations of Bioethics
This course examines the various theoretical approaches to bioethics and critically assesses their underpinnings. Topics to be covered include an examination of various types of ideologies, utilitarianism, virtue ethics, principlism, casuistry, feminist ethics, narrative theory, and pragmatism.
Mutually Exclusive: BIOE 6020
1 Course Unit

BIOE 5050 Sex and Bioethics
While the topics of sex and sexuality have a long and storied history in medical culture, they have been especially complex and problematic in the past century. With the creation of distinct sexually-minded medical fields since the late 19th-century including sexology, psychiatry, and hormonal studies, medicine has also occasioned the very categories and labels of the homosexual, the hermaphrodite, the invert, and the nymphomanic, to name a few. While medical historians and queer theorists have paid almost obsessive attention to these subjects, bioethicists have intervened to a lesser degree and on only a handful of relevant subjects. In this course, we will address the range of historical and theoretical matters that speak to this intersection of bioethics and sex, paying special attention to the health concerns of lesbian, gay, bisexual, trans, queer, and intersex (LGBTQI) persons. Who has sex with whom? What does it mean to pathologize or diagnose such desires? How do we raise the stakes when considering persons who question their sex or who are in sexual transition? And how do such questions reveal the dilemmas of bioethicists at large, not just those related to matters of sex and sexuality? Accordingly, this course will consider a range of historical and contemporary topics which speak to the bioethical dilemmas of the intersection of medicine, sex, and sexuality, including: the gay adolescent, the intersex person, gay-conversion therapies, the prospect of gay gene studies, sex addiction, and blood/organ donation policies in wake of the HIV/AIDS pandemic. Specifically, we will focus on literary sources (poetry, memoirs, diaries, and films) as well as on non-literary accounts (medical texts, bioethical scholarship, legal cases, and historical records) that explore the emotional and somatic aspects of matters related to sex and bioethics.
1 Course Unit

BIOE 5400 Challenging Clinical Ethics: Managing patient/caregiver conflicts through mediation.
The contemporary healthcare system in which patients, families, institutions and a multiplicity of caregivers interact over matters of life and death with legal, ethical, emotional and scientific complexities inherently gives rise to a variety of disputes. Such disputes are frequently highly charged and are often emergent in nature. In recent years, mediation has grown exponentially as a dispute resolution mechanism of choice. Not surprisingly, the success of mediation and a wider understanding of the process, has led to its application in the realm of healthcare disputes with encouraging results. This course will initially provide an overview of classical mediation theory and practice. Students will be introduced to negotiation fundamentals critical to the practice of mediation. Similarities and differences between mediation in the healthcare field, as distinct from other contexts, will be examined. All class members will participate in mediation role-plays designed to simulate disputes of the kind prevalent in healthcare landscape.
Not Offered Every Year
1 Course Unit

BIOE 5450 Mediation Intensive I
Students will be placed in a variety of clinical situations in which they will play the roles of disputants and mediators, with ongoing discussions and critiques of mediator performance. Each student will be videotaped during their mediation to elicit feedback from the group and to catalyze self-criticism. As distinct from the course, BIOE 5400: Challenging Clinical Ethics, in which negotiation and mediation theory are taught as a prelude to clinical simulations, this course references the literature solely in relation to problems encountered in the hands-on mediation of specific cases. Students may take the mediation intensives in any order; they do not need to be taken from I to IV. Students may take all 4 intensive courses, as the material will not be repeated.
0.5-1 Course Unit

BIOE 5460 Mediation Intensive II
Students will have an immersion experience, learning mediation through role-playing simulations. Note that the format is similar to Mediation Intensive I, but the Mediation Intensive II will NOT duplicate simulations. Students in this course will: learn to effectively manage clinical disputes among and between caregivers, patients, and surrogates through mediation; discover how to define problems and assess underlying interests to generate mutually acceptable options; role play in a variety of clinical situations as both disputants and mediators; practice mediation with professional actors; and receive constructive feedback in a supportive environment. Students will also be required to complete a written research paper. Students may take the mediation intensives in any order; they do not need to be taken from I to IV. Students may take all 4 intensive courses, as the material will not be repeated.
0.5-1 Course Unit
BIOE 5470 Mediation Intensive III
Students will have an immersion experience, learning mediation through role-playing simulations. Note that the format is similar to Mediation Intensive I and II, but med. intensive III will NOT duplicate simulations. Students in this course will: learn to effectively manage clinical disputes among and between caregivers, patients, and surrogates through mediation; discover how to define problems and assess underlying interests to generate mutually acceptable options; role play in a variety of clinical situations as both disputants and mediators; practice mediation with professional actors; and receive constructive feedback in a supportive environment. Students will also be required to complete a written research paper. Students may take the mediation intensives in any order; they do not need to be taken from I to IV. Students may take all 4 intensive courses, as the material will not be repeated.
0.5-1 Course Unit

BIOE 5480 Mediation Intensive IV
Students will have an immersion experience, learning mediation through role-playing simulations. Note that the format is similar to earlier mediation intensives but the mediation intensive IV will NOT duplicate simulations. Students in this course will: learn to effectively manage clinical disputes among and between caregivers, patients, and surrogates through mediation; discover how to define problems and assess underlying interests to generate mutually acceptable options; role play in a variety of clinical situations as both disputants and mediators; practice mediation with professional actors; use video-tapes of simulations to improve mediation techniques and strengthen interpersonal skills; receive constructive feedback in a supportive environment. Students may take the mediation intensives in any order; they do not need to be taken from I to IV. Students may take all 4 intensive courses, as the material will not be repeated.
0.5-1 Course Unit

BIOE 5500 Bioethics and Society
This set of courses will deal with bioethical issues in popular culture addressed from a social science perspective. Courses to be offered include: "Sociology of Bioethics," and "Media and the Doctor-Patient Relationship." This is a topics course - for information on the topic currently being offered, please go to the course listing on the Bioethics website: http://www.med.upenn.edu/mb.
Not Offered Every Year
1 Course Unit

BIOE 5510 Race and Bioethics
Much of the mainstream dialogue regarding medicine, technological advances, and healthcare has relied on the premise of fairness and equality. However, this is not the entire story. Many of the advancements we take for granted were produced at the expense of racially marginalized individuals. This course aims to explore those topics and teach bioethics students how to engage with them in a practical way. The course will cover historical bioethical incidents that shaped racially marginalized individuals' relationships with healthcare and science. It will also examine bioethics through the lens of racially marginalized peoples. Lastly, it will also cover various approaches to integrating anti-racist principles into the practice of bioethics.
Not Offered Every Year
1 Course Unit

BIOE 5520 Anthropological Topics in Bioethics
This set of courses provides an introduction to the use of anthropological methods and approaches to address bioethical issues. Courses might include cross-cultural studies of medicine and doctoring, diversity and the culture of medicine, cross-cultural bioethics. This is a topics course - for information on the topics currently being offered, please go to the course listing on the Bioethics website: https://www.med.upenn.edu/mb.
Not Offered Every Year
1 Course Unit

BIOE 5530 Medicine on the Fringes: the Ethics of Alternative, Experimental, and Do-It-Yourself Treatments
Much bioethics literature focuses on issues in mainstream, established medicine — but what are the ethics of therapies, treatments and techniques utilized outside of common practice? This course begins with a historical exploration of "quack medicine" and medical professionalization. We then explore ethical and regulatory issues regarding complementary and alternative medicine, as well as the ethics of providing experimental, off-label, and placebo treatments. Finally, we will examine how individuals are accessing therapeutic techniques outside of the physician's office, via do-it-yourself medical movements, direct-to-consumer health technologies, and medical tourism.
Not Offered Every Year
1 Course Unit

BIOE 5540 Bioethics and Law
This course will present a broad survey of topics at the intersection of law and bioethics. Much of bioethics deals with topics of public policy, and law is the tool of policy. Areas to be covered will range from an overview of American law making to enforcement mechanisms, topics including FDA regulations, state interventions into beginning and end of life issues, privacy, malpractice, healthcare reform, and international issues, including those related to innovation and access to medicines.
Not Offered Every Year
1 Course Unit

BIOE 5550 Bioethics and Technology: Neuroethics
Neuroethics might well be the most rapidly growing area within bioethics; indeed, in some respects neuroethics has grown as an independent field, with its own journals, professional society and institutional centers. This growth over the past decade is partly attributable to the growth of neuroscience itself and to the challenging philosophical and moral questions it inherently raises. A 2012 Royal Society report, observes that an increasingly mechanistic understanding of the brain raises a host of ethical, legal, and social implications. This has laid the foundation for the emergent field of Neuroethics, which examines ethical issues governing the conceptual and practical developments of neuroscience. Irrespective of their validity, even the claims that modern neuroscience entails the re-examination of complex and sensitive topics like free will, consciousness, identity, and responsibility raise significant ethical issues. As such, neuroethics asks questions that extend beyond the usual umbrella of biomedical ethics. This course will, therefore, consider the new knowledge and ways of learning about the brain from scientific and ethico-legal and social standpoints. We will examine the core themes of neuroethics, including cognitive enhancement, the nature of the self and personhood, neuroimaging and privacy, and the ways that all these themes are brought together in matters affecting national security.
1 Course Unit
BIOE 5560 Evidence in Bioethics and Health Policy
The ability to critically appraise scholarly work is a necessary skill to effectively contribute to bioethics and health policy debates, and for development and implementation of health interventions. The object of this course is to provide students with the skills needed to become fluent in reading and assessment of empirical bioethics and health service research. The course will review and evaluate a wide range of qualitative and quantitative methods utilized in bioethics, health policy, and medical research. Specifically, students will learn the conceptual rational for standard qualitative and quantitative methods, their strengths and weaknesses. At course completion, students should be able to critically evaluate empirical research published in top bioethics, health policy, and medical journals. 

Fall
1 Course Unit

BIOE 5570 Disability Bioethics
1 Course Unit

BIOE 5580 Reproductive Health
Whether dealing with personal decisions or public policy, reproductive health matters are almost always controversial and often intractable. It is almost 50 years since the Supreme Court decision Griswold v Connecticut "settled" the right to contraceptives yet the last several years have been marked by increasing legislative action and judicial review of this right. This course will explore the ethical dimensions of reproductive health controversies including: 1) the moral and legal status of the human embryo and fetus in the context of assisted reproduction, embryonic stem cell research and abortion; 2) contraception, including over-the-counter provision of emergency contraception and contraceptives and legislation challenges to contraceptive insurance coverage in the Affordable Care Act; 3) attempts to restrict access to abortion by restricting later term abortion, mandating informed consent and waiting periods, and regulating abortion clinics; 4) maternal-fetal relationship including prenatal testing and the regulation of women's behavior while pregnant; 5) assisted reproduction and 6) global concerns such as sex selective abortion, forced abortion and sterilization and reproductive rights in relation to population dynamics and environmental concerns.
1 Course Unit

BIOE 5590 Speaking For Patients: Ethical Issues in Patient Advocacy
This course examines the role that activism and advocacy play in shaping health care in the United States and abroad. The course combines in-depth exploration of particular case studies—AIDS activism in the 1980s, the billion-dollar breast cancer movement, the anti-vaccine movement—with an analysis of cross-cutting questions and themes. We consider how health advocates contribute to forming personal identities around certain illnesses and conditions, how they mobilize constituents and recruit allies, and how they influence decisions about health policy, research, and practice. We also consider the implications of an increasingly professionalized health advocacy industry and ask how corporate sponsorship has changed the landscape of health activism. In addition, we examine the ethical issues involved in speaking on behalf of others, particularly those (e.g., young children, persons with intellectual disabilities) who cannot speak for themselves.
1 Course Unit

BIOE 5600 Pediatric Ethics
In this course, we will explore the history, conceptual frameworks, and landmark debates of bioethics related to children. We will examine common ethical challenges (e.g., transplantation, critical illness, end of life) when the patient is a child. We will also examine issues unique to children, such as newborn screening, consent vs. assent, the rights and responsibilities of parents, and the role of the courts and the state. We will draw upon theories from moral philosophy, clinical cases, and seminal legal decisions to demonstrate the breadth and complexity of pediatric ethics.
Not Offered Every Year
1 Course Unit

BIOE 5610 Ethics of Science
This Bioethics course will examine ethics as it relates to science. Not Offered Every Year
1 Course Unit

BIOE 5620 Propaganda
A Bioethics examination of truth and persuasion in health and pandemics.
Not Offered Every Year
1 Course Unit

BIOE 5630 History of Bioethics
This course will take an historical approach to the emergence of modern bioethics, the study of ethical issues in medicine and the life sciences. The course will consider pre-20th century medical ethics; the scandals, tragedies and controversies that motivated the modern field; the institutionalization of bioethics in the academy, government, industry and the military; and the recent growing emphasis on ethics in basic life sciences research and development, including genetics, stem cell biology and neuroscience; and the role of bioethics in the rules-based global order. Recurring themes will include physician-patient relations, the ethics of human experimentation, military medical ethics, and human rights theory.
1 Course Unit

BIOE 5640 Social Media, Healthcare, and Medical Ethics
In this course, students will examine the conceptual and ethical challenges posed by the use of artificial intelligence, social media, and the 'internet of things' in healthcare contexts. The course will combine both didactics and discussion to engage students on these issues.
Not Offered Every Year
1 Course Unit
**BIOE 5650 Rationing & Resource Allocation**
You have one liver but three patients awaiting a liver transplant. Who should get the liver? What criteria should be used to select the recipient? Is it fair to give it to an alcoholic? These are some of the questions that arise in the context of rationing and allocating scarce health care resources among particular individuals, and concern what are called micro-allocation decisions. But trade-offs also need to be made at the meso- and macro-level. Budgets of public payers of healthcare, such as governments, and of private ones, such as health plans, are limited: they cannot cover all drugs and services that appear beneficial to patients or physicians. So what services should they provide? Is there a core set of benefits that everyone should be entitled to? If so, by what process should we determine these? How can we make fair decisions, if we know from the outset than not all needs can be met? Using the cases of organs for transplantation, the rationing for vaccines in a flu pandemic, and drug shortages, the course will critically examine alternative theories for allocating scarce resources among individuals. Using both the need to establish priorities for global health aid and to define an essential benefit package for health insurance, the course will critically examine diverse theories for allocation decisions, including cost-effectiveness analysis, age-based rationing and accountability for reasonableness.
Not Offered Every Year
1 Course Unit

**BIOE 5660 Personal Responsibility for Health in Policy and Practice**
Excess body weight is often associated with higher healthcare cost. Should overweight and obese people pay more for health insurance? If we want to encourage people to quit smoking, is it best to give insurance discounts to those who succeed, or impose surcharges on those who do not? Should companies be permitted not to hire smokers? Globally, more than seven in ten deaths are due to chronic diseases, such as stroke, cancer, diabetes or heart disease. In the US, rates are even higher. Good or poor health is typically the result of a number of interacting factors. Genetics, social status, environmental conditions and personal behavior all play a role. In the best case, appeals to personal responsibility can motivate people to achieve oftentimes challenging behavior change. But in the worst case, policies penalize people for factor that are beyond their control. We will critically assess how personal responsibility is conceptualized in law and policy in different countries, and evaluate philosophical, political, economic and health-science related rationales in favor and against personal responsibility for health. Some of the material will be conceptual in nature, but throughout, the discussion will be focused on concrete cases, including obesity, smoking, breast screening, organ donation and medication adherence. We will also discuss controversial new work requirements and other policies aimed at strengthening personal responsibility in Medicaid.
1 Course Unit

**BIOE 5670 Public Health Ethics**
When New York City passed a ban on the sale of large sugary drinks, critics denounced the law as an abuse of government power and an attack on personal freedom. "If people want to be fat, let them be fat," protested one opponent of the law. Though the controversy surrounding the so-called "soda ban" garnered national attention, there is nothing unusual about policies that restrict or shape personal choice in the name of public health. From controls on the sale of certain drugs to healthy eating campaigns, governments regularly take measures to promote healthy behaviors and prevent people from engaging in actions that are harmful to themselves or others. What ethical values justify these sorts of public health inventions and how do they differ from the ethical values that inform clinical care? How far should governments go in limiting individual autonomy in order to achieve public health goals? How should governments and other actors prioritize different public health interventions? This course will explore these and other ethical questions in the context of case studies involving childhood vaccination, infectious disease monitoring and control, safe-injection sites, tobacco control, and other public health efforts.
Not Offered Every Year
1 Course Unit

**BIOE 5720 Global Bioethics**
According to the WHO, around 30 million people with HIV/AIDS should receive anti-retroviral treatment. But only 10 million do. Drugs containing tenofovir—the standard of care in developed countries are expensive. Stavudine-based treatments are much cheaper but have worse side-effects. Is it ethical to use stavudine-based rather than tenofovir-based treatments in sub-Saharan Africa? Smoking rates have decreased drastically in most developed countries. But they are increasing in many developing countries. Established public health measures are not implemented, and the tobacco industry pursues a range of marketing activities that would be unacceptable in developed countries. As a consequence, global deaths from smoking are expected to increase to 1bn by the end of the 21st century, with 80% of deaths in developing countries. Is industry s behavior immoral or normal in a global market? ARDS is a disease of premature newborns. Is it ethical to test a new ARDS drug in Bolivia if the drug—if proven to be effective—will be very expensive and accessible only to the richest people in Bolivia and other developing countries? An overarching question that these different cases raise is whether there are universal ethical standards that should apply to all people, or whether regional variations should be acceptable. Universalists typically argue that there must be no double standards, and that people should be treated the same regardless of where they live. Pragmatists raise concerns about moral imperialism, neo-colonialism, or insufficient respect for cultural or other differences. Increasing globalization fuels debates about which of competing sets of moral standards is the right one. Looking at a range of diverse cases including healthcare research, health policy, flu pandemics, family planning, smoking and obesity policy, and genetically modified crops, this course explores controversies in the cross winds of market forces, politics and ethics, and examines the roles and responsibilities of key actors and international policy guidance.
Fall
1 Course Unit
BIOE 5730 Medicine Through the Artist’s Eyes
From Matthias Grünewald’s Isenheim Altarpiece (c. 1512-1516) with its pox-ridden, emaciated Christ, displayed in a hospital for sick and dying peasants, to Frida Kahlo’s ‘The Broken Column’ (1944), a gut-wrenching self-portrait visualizing her chronic pain after spinal surgery, for hundreds of years, artists have used their work to document, explain, critique, challenge, and glorify medicine, its practitioners, and its institutions. This course will examine artworks from 1450 to today that depict illness and disease, doctors and patients, and medical treatments – or lack thereof. This class offers students an art historical approach to the history of medicine and its critical reception by artists working in different times and geographies. Through class discussions and close readings of scholarly articles, we will consider how the ethics of medicine have or have not changed over the centuries, and how the categories of gender, race, class, sexuality, religion, and physical and mental ability influence medical care. In addition to situating their own approaches to patient care in a vivid, art historical context, students will gain skills in visual analysis and written and oral communication.
1 Course Unit

BIOE 5750 Health Care Reform and the Future of the American Health Care System
This course provides students with a rigorous understanding of the current American health care system and how it is likely to evolve over the next decade. The course will focus on six topics: 1) the development of the current health care system; 2) challenges of health care costs, quality, and access; 3) lessons of previous attempts to reform the system including the Affordable Care Act (ACA); 4) analysis of current policies regarding provider payment, technology, and electronic health records and how various sectors (e.g. public health and hospitals) are evolving in the current system; 5) drug pricing and potential strategies for reform, and 6) future megatrends in American health care system. Throughout the course, lessons will integrate basic health economics, history, health policy, and politics to elucidate key principles for understanding the health care system. The course will also examine at least one other country’s health system for comparison. The course will end with a consideration of the long-term outlook for the structure of the US health system and potential reform. Numerous expert guest speakers will give their perspectives throughout the semester.
Fall
Also Offered As: HCMG 8500
0.5/1 Course Unit

BIOE 5780 Bioethics and Human Rights
The constitution of the World Health Organization enshrines “the highest attainable standard of health as a fundamental right of every human being.” If such a right exists, it is far from being realized. Worldwide, over 1 billion people are living in hunger. Every day, 21,000 children die before their fifth birthday of pneumonia, malaria, diarrhea and other diseases. Even wealthy countries are marked by significant health disparities. In the U.S., for instance, infants born to African-American women are 1.5 to 3 times more likely to die than infants born to women of other races. This course explores the moral principles and the political and legal structures that inform a human rights approach to health. What sorts of freedoms (e.g., to bodily integrity) and entitlements (e.g., to accessible and affordable health care) does a right to the highest attainable standard of health entail? If countries cannot ensure their citizens’ right to the highest attainable standard of health, what responsibility does the international community bear for intervening? Should undocumented and irregular migrants have the same access to health care as citizens? Is a human rights approach to health compatible with using the market to allocate health-related goods? Finally, what are the limitations of analyzing health and formulating health policy using a human rights framework?
1 Course Unit

BIOE 5800 Research Ethics
This seminar is intended to give students a broad overview of research ethics and regulation. The students will come out of the class with an understanding of the historical evolution, moral bases and practical application of biomedical research ethics. The course includes reading assignments, lectures, discussions and practical review of research protocols and in-class interviews with researchers and study subjects. Course topics include: history of human subjects protections, regulatory and ethical frameworks for biomedical research, informed consent theory and application, selection of fair research subjects and payment, confidentiality, secondary uses of data and stored tissue, ethics of international research, pediatric and genetic research and conflicts of interest in biomedical research.
Not Offered Every Year
1 Course Unit

BIOE 5810 Narrative Medicine
How can we use the power of storytelling to understand the medical world? How does narrative medicine help us gain insight into the myriad experiences of patients, caregivers, physicians, and other medical professionals? How do we search for and create meaning in the medical context? Why is this search for meaning important not just for patients, but for all those involved in their care? Last, but certainly not least: how can the study of narrative medicine can help us become better doctors, lawyers, bioethicists, and other professionals involved in patient care? Narrative medicine is an interdisciplinary field that uses skills of close reading, radical listening, and creativity to explore the world of patients, caregivers, and those who provide medical care. It helps us turn a critical eye on what we think we know about the experiences of patients and medical providers, as well as allowing us to examine the cultural influences on the medical system and our concepts of disease, wellness, ability, and disability. We will have lively discussions of all of the above questions (and many more) in this narrative medicine course exploring storytelling in many forms, including fiction (novels, films, short stories, poems), creative non-fiction (essays, graphic novels), as well as discussions with doctors and other medical professionals.
1 Course Unit
BIOE 5900 Ethics in Mental Healthcare
Mental healthcare—which includes, but is not limited to, psychiatry, psychology, and clinical social work—is an especially ethically fraught subdiscipline of the larger medical enterprise. Issues range from garden-variety problems related to informed consent, patient capacity, and clinical professionalism to novel issues related to involuntary treatment, research on mentally ill persons, questions about free will and nosological categories. This course will present a survey of these ethical issues by first introducing foundational concepts from ethical theory and the philosophy of psychiatry and mind. Students will be expected to become conversant in several bioethical approaches and methods and be able to use them to critically examine both historical and contemporary questions in mental healthcare and research.
Not Offered Every Year
1 Course Unit

BIOE 6010 Introduction to Bioethics
This course is intended to serve as an introduction to the academic field of bioethics. Students will be introduced to classic papers, basic concepts, field history and important legal cases in the field. But rather than being a broad survey course of many content areas in bioethics, this course will examine how bioethical arguments are constructed with the objective of mastering both the critique of bioethical arguments and their construction. Therefore, most importantly, this course serves as a “methods course” for learning the skill of persuasive bioethics argument, i.e., “the art of conversion.” In some of the course sessions, we will focus on the analysis of arguments made by others. In many of the weeks of the course, we will focus on the process of constructing our own, effective bioethical arguments.
Fall
Mutually Exclusive: BIOE 4010
1 Course Unit

BIOE 6020 Conceptual Foundations in Bioethics
In this course, students examine the two moral frameworks – deontology and consequentialism – that individuals use to make decisions about right and wrong both in their personal life and in their professional life. These two moral frameworks provide the foundation for bioethical analysis. Understanding these two moral frameworks not only enables one to understand one’s own moral perspective, but also provides the tools to be able to understand ethical arguments made by others. The theory of deontology and consequentialism are supplemented by applications of these frameworks in the bioethical literature. Additionally, students are introduced to the three theoretical contributions to moral analysis created internally in the field of bioethics: casuistry, narrative theory, and principlism.
Spring
Mutually Exclusive: BIOE 4020
1 Course Unit

BIOE 6030 Clinical Ethics
In this course, we will explore paradigmatic clinical ethics debates spanning the life course. Using an interdisciplinary approach, we will consider some of the challenges in clinical decision-making for and with patients, such as assessing patient capacity, deciding for others, rationing at the bedside, and requests for assistance in dying. We will also examine hospital policies related to triage and allocation of scarce medical resources, including ventilators, vaccines, and organs. We will draw upon theories from moral philosophy, legal cases, and contemporaneous reports related to the COVID-19 pandemic to demonstrate the live ethical challenges of clinical practice today.
Not Offered Every Year
1 Course Unit

BIOE 6050 Mentored Research I
This course gives postdoctoral students the opportunity to work with a faculty mentor for one semester. The student chooses a specialized topic in Bioethics and identifies a problem to which they apply research and draw some conclusion. The faculty mentor assesses and submits a grade for this work. This is often resulting in a publishable quality paper.
Fall, Spring, and Summer Terms
1 Course Unit

BIOE 6060 Mentored Research II
This course gives postdoctoral students the opportunity to work with a faculty mentor for one semester. The student chooses a specialized topic in Bioethics and identifies a problem to which they apply research and draw some conclusion. The faculty mentor assesses and submits a grade for this work. This is often resulting in a publishable quality paper.
Fall, Spring, and Summer Terms
1 Course Unit

BIOE 6070 Mentored Research III
This course gives postdoctoral students the opportunity to work with a faculty mentor for one semester. The student chooses a specialized topic in Bioethics and identifies a problem to which they apply research and draw some conclusion. The faculty mentor assesses and submits a grade for this work. This is often resulting in a publishable quality paper.
Fall, Spring, and Summer Terms
1 Course Unit

BIOE 6080 Mentored Research IV
This course gives postdoctoral students the opportunity to work with a faculty mentor for one semester. The student chooses a specialized topic in Bioethics and identifies a problem to which they apply research and draw some conclusion. The faculty mentor assesses and submits a grade for this work. This is often resulting in a publishable quality paper.
Fall, Spring, and Summer Terms
1 Course Unit

BIOE 7010 MBE/MSME Proseminar
This course will provide an opportunity to engage, at an advanced level, with contemporary controversies in bioethics. Each week, we will read and discuss a mix of conceptual and empirical papers and cases.
Fall, Spring, and Summer Terms
1 Course Unit

BIOE 7470 Contemporary Research Issues in Social, Cognitive and Affective Neuroscience
This course is intended to take you from a textbook-level acquaintance with psychology and neuroscience to critical engagement with the primary literature, through lectures, discussion and short written assignments. You will learn to extract, from the dense and detail-laden pages of a journal article, its contribution to the “big picture” of human neuroscience. You will also learn to recognize problematic research practices when they arise, and to analyze and communicate about the strengths and weaknesses of research articles.
Spring
Also Offered As: PSYC 7470
1 Course Unit

BIOE 9900 Mentored Research I
0 Course Units

BIOE 9901 Mentored Research II
0 Course Units

BIOE 9902 Mentored Research III
0 Course Units
BIOE 9960 Master of Bioethics Capstone
This course serves the final MBE project. This course requires students to work with faculty to produce original research that is of publishable quality. Past students have published in Nature, Science, and other prominent journals. This course is only open to students in the Master of Bioethics program.
Fall, Spring, and Summer Terms
1 Course Unit

BIOE 9990 Master of Bioethics Independent Study
This course serves the MBE Independent Study. Directed reading course on a topic not covered in our standard courses. WRITTEN REQUIREMENT: negotiated with advisor but there needs to be some written output – similar to regular class. Student creates a syllabus. Purpose: To learn a new topic of bioethics. Example Topics: Pediatric ethics, Transplant ethics, End of life, Jewish/religion bioethics, Examples of a Independent Study, Compare/Contrast of 2 positions in the field and then decide which position you choose. A response paper for weeks readings. Penn 2 page response paper for different Fall, Spring, and Summer Terms
1 Course Unit

Biology (BIOL)

BIOL 0004 Killer Viruses: What threat do they pose in contemporary society?
The goal of this course is two fold: to provide students with an introductory, practical view of biological systems, and to enable students to evaluate the health threat of viruses as natural or terrorist-driven agents in contemporary society. We are all well aware of the recent emergence of multiple viruses as potential treats to the public health: examples include SARS-CoV-2 and other SARS, HIV, West Nile and Ebola viruses. However, still greater threats may arise by expansion of existing virus, such as smallpox and influenza that we more commonly think of as being either eradicated or harmless. Through this course we will examine the general properties of viruses, our capacity to ward-off common virus infections using the immune response, the general concept of vaccination, the emergence of new virus pathogens, and the capacity of these pathogens to spread within our population based on regional and global culture and finance.
Not Offered Every Year
1 Course Unit

BIOL 0010 Ecological Consequences of Climate Change
Students will read and discuss seminal papers on a number of major topics in the ecology of climate change and the long-term consequences of the effects of climate change on ecological systems. Some of the topics include: effects of climate change on species distributions, disruption of plant pollinator systems and the consequences for ecosystem composition and stability, changes in the distribution and epidemiology of insect-borne infectious diseases, and the consequences of sea level rise and the increased intensity and frequency of severe weather events. Other topics may be covered. Grading will be based on participation in discussions, a paper on an approved topic, and a presentation on the topic of the student’s paper.
Spring
1 Course Unit

BIOL 0014 Descent with Modification: An introduction to the science of evolution
Evolution provides the unifying framework for the biological sciences and has been confirmed by a huge and diverse body of evidence. Public opinion polls show, however, that evolution continues to be socially and politically controversial in the United States. In this first-year seminar, we will explore the scientific basis for evolution by reading and discussing historical sources, a current nonspecialist text on evolution, and selected papers and articles from the scientific and popular literature. With our knowledge of evolutionary fact and theory as background, we will also discuss social and political opposition to the teaching of evolution. Grading will be based on participation in class discussions and on performance in several brief writing assignments. There is no course prerequisite, but high school introductory biology would be helpful. Fall, even numbered years only
1 Course Unit

BIOL 1017 The Biology of Food
This course will examine the ways in which humans manipulate - and have been manipulated by - the organisms we depend on for food, with particular emphasis on the biological factors that influence this interaction. The first part of the course will cover the biology, genetics, evolution, and breeding of cultivated plants and animals; the second part will concern the ecological, economic, and political factors that influence food production. Spring, even numbered years only
1 Course Unit

BIOL 1101 Introduction to Biology A
General principles of biology focusing on the basic chemistry of life, cell biology, molecular biology, and genetics in all types of living organisms. Particular emphasis will be given to links between the fundamental processes covered and current challenges of humankind in the areas of energy, food, and health. Fall or Spring
1.5 Course Unit

BIOL 1102 Introduction to Biology B
General principles of biology focusing on evolution, physiology, development, and ecology in all types of living organisms. Fall or Spring
Prerequisite: BIOL 1101
1.5 Course Unit

BIOL 1110 Introduction to Brain and Behavior
Introduction to the structure and function of the vertebrate nervous system. We begin with the cellular basis of neuronal activities, then discuss the physiological bases of motor control, sensory systems, motivated behaviors, and higher mental processes. This course is intended for students interested in the neurobiology of behavior, ranging from animal behaviors to clinical disorders. Fall or Spring
Also Offered As: NRSC 1110, PSYC 1210
1 Course Unit

2023-24 Catalog | Generated 08/02/23
BIOL 1121 Introduction to Biology - The Molecular Biology of Life
An intensive introductory lecture course covering the cell, molecular biology, biochemistry, and the genetics of animals, bacteria, and viruses. This course is comparable to Biology 1101, but places greater emphasis on molecular mechanisms and experimental approaches. Particular attention is given to the ways in which modern cell biological and molecular genetic methods contribute to our understanding of evolutionary processes, the mechanistic basis of human disease, and recent biotechnological innovations. Students are encouraged to take BIOL 1121 and BIOL 1123 concurrently.
Fall
1 Course Unit

BIOL 1123 Introductory Molecular Biology Laboratory
An intensive introductory laboratory course emphasizing how molecular biology has revolutionized our understanding of cell and organism functions. BIOL 1121 and BIOL 1123 should be taken concurrently.
Fall
Prerequisite: BIOL 1121
.5 Course Units

BIOL 1124 Introductory Organismal Biology Lab
An intensive introductory laboratory course in organismal biology.
Spring
.5 Course Units

BIOL 1604 Humans and the Environment
Intensive exposure to current issues and solutions in contemporary human interactions with the environment. Global in scope, but focused on case histories. Emphasis on providing biological and sociological background for a given major environment-human interaction, and state-of-the-art suggested solutions.
Fall
1 Course Unit

BIOL 1850 Research in Biological Sciences and its Social Impact (SNF Paideia Program Course)
Working to remove the myths about fundamental and translational research, this course focuses on informing students beyond the public perception of biology and biological research. Striving to develop students' scientific communication skills, personal identity in science, and the intersection between research and community, we will engage students through collaboration with the Philadelphia community in addition to lecture and discussion based learning.
Spring
1 Course Unit

BIOL 1999 Clinical & Translational Research
Independent study for students doing research based on data that is generated in a clinical setting. Projects must be sponsored by standing faculty of the University of Pennsylvania and co-sponsored by a faculty member in the Department of Biology. The project must be of biological interest and must use appropriate quantitative or statistical methods. A final paper is required. Apply at the Academic Office, 102 Leidy Labs.
Fall or Spring
1 Course Unit

BIOL 2001 Essentials of Cell Biology
An intermediate level exploration of cell structure and function including membrane structure, intracellular organelles, membrane trafficking, surface receptors and signal transduction, the cytoskeleton, cell motility and communication, and the cell cycle. Cell biology is a dynamic field and recent research discoveries will be included in the lectures.
Fall or Spring
Prerequisite: (BIOL 1101 AND BIOL 1102) OR BIOL 1121
1 Course Unit

BIOL 2010 Cell Biology
A conceptual view of cell structure and function including membrane structure, intracellular organelles, membrane trafficking, surface receptors and signal transduction, the cytoskeleton, cell motility and communication, and the cell cycle. Cell biology is a dynamic field and recent research discoveries will be included in the lectures.
Fall
Prerequisite: (BIOL 1101 AND BIOL 1102) OR BIOL 1121
1 Course Unit

BIOL 2110 Molecular and Cellular Neurobiology
Cellular physiology of neurons and excitable cells; molecular neurobiology and development. Topics include: action potential generation; synaptic transmission; molecular and physiological studies of ion channels; second messengers; simple neural circuits; synaptic plasticity; learning and memory; and neural development.
Fall
Also Offered As: NRSC 2110
Prerequisite: (BIOL 1101 AND BIOL 1102) OR BIOL 1121
1 Course Unit

BIOL 2140 Evolution of Behavior: Animal Behavior
The evolution of behavior in animals will be explored using basic genetic and evolutionary principles. Lectures will highlight behavioral principles using a wide range of animal species, both vertebrate and invertebrate. Examples of behavior include the complex economic decisions related to foraging, migratory birds using geomagnetic fields to find breeding grounds, and the decision individuals make to live in groups. Group living has led to the evolution of social behavior and much of the course will focus on group formation, cooperation among kin, mating systems, territoriality and communication.
Fall
Also Offered As: NRSC 2140, PSYC 2220
Prerequisite: BIOL 1101 OR BIOL 1121 OR PSYC 0001
1 Course Unit

BIOL 2201 Essentials of Molecular Biology and Genetics
This course will survey the discipline of molecular genetics. Mendelian and molecular genetics will be discussed as well as the use of genetic analysis to address questions in all areas of biology. The processes of DNA replication, transcription, and translation will be discussed at the molecular level. Other topics include the regulation of gene expression and genomics. This course is open to students in the College of Liberal and Professional Studies only.
Fall or Spring
Prerequisite: (BIOL 1101 AND BIOL 1102) OR BIOL 1121
1 Course Unit
BIOL 2210 Molecular Biology and Genetics
This course will survey the discipline of molecular genetics. Two broad areas will be considered 1) Molecular Biology: DNA replication, transcription, translation, regulation of gene expression in both prokaryotic and eukaryotic systems, and genomics and 2) Genetics: basic Mendelian & molecular genetics.
Fall or Spring
Prerequisite: BIOL 1101 OR BIOL 1121
1 Course Unit

BIOL 2301 Essentials of Vertebrate Physiology
A comparative and quantitative approach to the physiological function of vertebrates. Topics include muscles, nervous system, cardiovascular system, respiration, and renal function. This course is open to students in the College of Liberal and Professional Studies only.
Fall or Spring
Prerequisite: (BIOL 1101 AND BIOL 1102) OR (BIOL 1121 AND BIOL 1124)
1 Course Unit

BIOL 2311 Human Physiology
This course examines the physiological mechanisms underlying homeostasis in humans. Integration from the cellular to organismal level as well as cooperation of multiple organ systems will be explored. Examples of pathophysiology during disease states will be discussed and highlighted. Although the focus will be on humans, we will study comparative aspects from other vertebrate and non-vertebrate organisms.
Spring
Mutually Exclusive: BIOL 3310
1 Course Unit

BIOL 2410 Evolutionary Biology
Theories and mechanisms of evolution, with emphasis on the genetic basis of evolutionary change.
Spring
Mutually Exclusive: BIOL 5410
Prerequisite: (BIOL 1101 AND BIOL 1102) OR BIOL 1121
1 Course Unit

BIOL 2510 Statistics for Biologists
Introductory probability theory. Principles of statistical methods. Problems of estimation and hypothesis testing in biology and related areas.
Fall
Mutually Exclusive: BIOL 4510, BIOL 5510
Prerequisite: MATH 1400
1 Course Unit

BIOL 2610 Ecology: From individuals to ecosystems
The study of living organisms in their natural environment, spanning the ecological physiology of individuals, the structure of populations, and interactions among species, including the organization of communities and ecosystem function.
Fall
Prerequisite: BIOL 1102 OR BIOL 1121
1 Course Unit

BIOL 2701 Elements of Microbiology
Microbiology plays a central role in diverse areas of human life such as infectious disease, ecology, and biotechnology. This course will cover aspects of modern microbiology with an emphasis on prokaryotic organisms. The topics will include basic aspects of microbial diversity, genetics, and pathogenesis as well as examples of applied microbiology. This course is open to students in the College of Liberal and Professional Studies only.
Fall or Spring
Prerequisite: (BIOL 1101 OR BIOL 1121) AND (BIOL 2201 OR BIOL 2210)
1 Course Unit

BIOL 2801 Essentials of Biochemistry
Intermediate level course covering principles of modern biochemistry. Topics include protein structure, protein purification and characterization, proteomics, enzyme kinetics and mechanisms, membrane structure and function, metabolism, and cellular energy transduction. Emphasis will be on biochemical problem solving, experimental design, and application of quantitative methods in a biological and clinical context. This course is open to students in the College of Liberal and Professional Studies only.
Fall or Spring
Prerequisite: ((BIOL 1101 AND BIOL 1102) OR BIOL 1121) AND CHEM 2410
1 Course Unit

BIOL 2810 Biochemistry
BIOL 204 examines the basic principles of protein structure, protein purification and characterization, proteomics, enzyme kinetics and mechanism, membrane structure and function, metabolism, and cellular energy transduction. The primary objective is to provide life scientists with an appreciation of basic principles of modern biochemistry, and of how the current conceptual and technical framework arose. Emphasis is placed on the experimental approaches and reasoning behind the dissection and reconstitution of these processes in a biological and, in some cases, clinical context. Discussions directed at biochemical problem solving, experimental design and the application of quantitative methods are integral to the course.
Fall or Spring
Prerequisite: (BIOL 1101 OR BIOL 1102) OR BIOL 1121 AND CHEM 2410
1 Course Unit
BIOL 3006 Histology
This course is designed to introduce the undergraduate student to the structure of tissues at the cellular level and to the way in which those tissues are assembled into organs. This knowledge of structure will be the basis for discussion of tissue and organ function. This course is open to students in the College of Liberal and Professional Studies only.
Fall or Spring
Prerequisite: ((BIOL 1101 AND BIOL 1102) OR BIOL 1121) AND (BIOL 2001 OR BIOL 2010)
1 Course Unit

BIOL 3008 Immunology in Action
A foundational understanding of the immune response is central to our ability to address challenges in treating and preventing disease as scientists and to understand advances as citizens. The study of immunology can be daunting, in part because our response is complex and integrates many systems, and in part because the vocabulary that has developed around this discipline is dense with abbreviations and acronyms. In this class, we will work together to demystify the immune system by considering responses in context - for example, by considering how vaccines exploit the ability of the immune system to generate memories, analyzing the design of a CAR-T cell to understand how it can be used to attack tumors, evaluating the remarkable history and current promise of monoclonal antibodies in treatment of inflammatory diseases, and more. The course, which will consist of a combination of weekly interactive synchronous sessions and asynchronous assignments, should provide you with tools to critically evaluate information about advances - and a foundation that will allow you to contribute to new discoveries in this fascinating, dynamic field.
Fall
1 Course Unit

BIOL 3054 Developmental Biology
A view of how an animal embryo is specified to develop and differentiate into a wide spectrum of cell types, and how the spatial patterns and axes of embryos are determined. The course will focus on genetic and molecular approaches, but will also cover the comparative anatomy of developing embryos to the extent necessary to understand the conserved aspects of embryonic patterning. Special emphasis will be placed on organisms with particular advantages for the study of embryonic development: e.g., mouse, frog, zebrafish, and Drosophila. The first half of the course will cover cell fate restrictions, cloning animals using nuclear transfer, stem cell biology, formation of the embryonic axes in vertebrates and Drosophila, and patterning of the neural tube and mesodermal tissues. The second half of the course will focus on emerging ideas and findings in the field, with emphasis on analysis of original literature.
Spring
Prerequisite: BIOL 2010 OR BIOL 2210
1 Course Unit

BIOL 3310 Principles of Human Physiology
Our focus will be on human physiology and we will cover most of the major organ systems in some depth. We seek to understand physiological phenomena using physical and chemical principles where possible. Basic cell and molecular biology, (bio)chemistry, physics and mathematics are prerequisites for the course, although we will quickly review the required background material when needed. Much of the motivation for the study of physiology is to understand disease, which in turn allows us to better appreciate normal physiology. We will discuss disease throughout the class. In physiology, structure often implies function, and we will thus also cover a fair amount of anatomy and histology.
Fall
Mutually Exclusive: BIOL 2310, BIOL 2311
Prerequisite: BIOL 1102 OR BIOL 1121
1 Course Unit

BIOL 3313 Essentials of Pathophysiology
This course is a study of homeostatic changes that occur with disease, and the implications of those changes in the progression and treatment of disease at molecular and cellular levels. Generalized mechanisms of disease as well as diseases of individual organ systems will be examined, with a view to understanding homeostatic compensations that occur as a result of altered function.
Spring
1 Course Unit

BIOL 3430 Comparative Vertebrate Anatomy and Evolution
This course will survey the phylogeny and anatomy of vertebrate organisms from a comparative evolutionary perspective. The lecture will concentrate on the history, diversity, structure and function of vertebrates. A companion lab course, BIOL 3431, is available for those students interested in a more complete understanding of vertebrate anatomy.
Spring
Prerequisite: BIOL 1102 OR BIOL 1121
1 Course Unit

BIOL 3431 Comparative Vertebrate Anatomy Lab
Laboratory portion of BIOL 3430 Comparative Vertebrate Anatomy and Evolution. Students will learn comparative anatomy through dissection of representative vertebrates. Students taking the lab must have credit or register for the lecture course, BIOL 3430.
Spring
Prerequisite: BIOL 3430
0.5 Course Units

BIOL 3625 Marine Biology
An introduction to marine biology and oceanography. Topics will include chemical and physical oceanography, a survey of form, function and phylogeny of algae, invertebrates and vertebrates, and an examination of ecological and evolutionary principles as applied to marine organisms and ecosystems.
Fall
Prerequisite: BIOL 1102 OR BIOL 1121
1 Course Unit
BIOL 3710 Microbial Diversity and Pathogenesis
Microbiology plays a central role in diverse areas of human life such as infectious disease, ecology, and biotechnology. This course will cover aspects of modern microbiology with an emphasis on prokaryotic organisms. The topics will include basic aspects of microbial diversity, genetics, virology, and pathogenesis as well as examples of applied microbiology.
Spring
Prerequisite: ((BIOL 1101 AND BIOL 1102) OR BIOL 1121) AND BIOL 2210
1 Course Unit

BIOL 3711 Microbial Diversity and Pathogenesis Lab
The importance of microbiology in complex issues, such as the impact of the microbiome in human health or as alternative energy sources, is being appreciated more and more each day. This upper level laboratory course provides students with a robust technical skill set while also giving them an opportunity to participate in an authentic research project that may lead to novel discoveries. Students will generate research questions, formulate hypotheses, design experiments, analyze data, and present their research findings to the class. In each project, students will use the cutting edge approach of metagenomics to evaluate the microbial diversity of their environment via Next Generation Sequencing. Students will also examine the function of microbial species within their communities. Potential projects include the isolation of novel antibiotic producers and the antibiotic they produce, designing and optimizing microbial fuel cells that can be used to generate electricity, or isolating antibiotic resistant bacteria and attempting novel approaches to inhibit or prevent their growth.
Spring
Prerequisite: BIOL 3710
1 Course Unit

BIOL 3851 Biology and Society (SNF Paideia Program Course)
This course uses a biological foundation to explore general issues at the interface of biology and society. We will use both historical and contemporary reading materials, with an emphasis on the primary scientific literature, to inform discussions on often controversial issues in biology as well as the social responsibility of scientists to respond to these issues. The course will cover how science has shaped social and political opinions on such topics as race, ethnicity, and gender, as well as how society and politics are influenced by and impact science. This course will provide a background and context in which to consider, anticipate, and respond to biology's present and future ethical and social implications.
Spring
Prerequisite: BIOL 1101 AND (BIOL 1102 OR BIOL 1121)
1 Course Unit

BIOL 3999 Independent Study
Laboratory research with a faculty member in the Department of Biology. Research may also be conducted elsewhere on campus but co-sponsored by a faculty member in Biology. A final paper is required. Apply at the Biology Academic Office, 102 Leidy Labs.
Fall or Spring
1 Course Unit

BIOL 4004 Immunobiology
Early development of microbiology, pathology, and immunobiology; molecular and cellular bases of immune phenomena including: immunity to pathogens, immune diseases, autoimmunity, and hypersensitivity. This course is open to students in the College of Liberal and Professional Studies only.
Fall or Spring
Prerequisite: (BIOL 2001 OR BIOL 2010) AND (BIOL 2201 OR BIOL 2210)
1 Course Unit

BIOL 4007 Cancer Cell Biology
This course will focus on the molecular mechanisms by which fundamental cellular processes are disrupted in the development of cancer.
Fall
Prerequisite: BIOL 2010 AND 2210
1 Course Unit

BIOL 4010 Advanced Cell Biology
This course is designed for beginning graduate students and advanced undergraduates with a particular enthusiasm for cell biology. BIOL 4010 does not attempt to cover all aspects of cell biology, and is therefore not appropriate for students seeking a lecture course which provides a comprehensive survey of the field. Rather, the primary objective of this course is to teach those students considering a career in the biomedical sciences how to read, discuss, and question original research papers effectively. Intensive classroom discussions focus on the experimental methods used, results obtained, interpretation of these results in the context of cell structure and function, and implications for further studies.
Spring
Also Offered As: CAMB 4800
Mutually Exclusive: BIOL 5010
Prerequisite: BIOL 2001 OR BIOL 2010
1 Course Unit

BIOL 4016 Molecular Mechanisms of Infectious Disease Biology
This course is designed for advanced undergraduates and beginning graduate students with a particular interest in infectious disease biology. Note that this course is not a comprehensive survey of the field and is therefore not appropriate for students seeking a lecture course on disease. The primary objective of this course is to teach students considering a career in the biomedical sciences how to read, discuss, and question research papers effectively. Intensive classroom discussions focus on the experimental methods used, results obtained, interpretation of these results in the context of pathogen interactions with host cells and organisms, and implications for basic research and therapeutic development.
Spring
Mutually Exclusive: BIOL 5016
Prerequisite: BIOL 2010
1 Course Unit
BIOL 4018 Cell Communication and Disease
Effective coordination between cells through cell communication and signaling enables multicellular organisms to develop and survive. Conversely, aberrations in these pathways are at the heart of a wide variety of human diseases. In this seminar course, we will discuss the molecular and cellular mechanisms of cell communication using a series of human diseases as a framework. The course will introduce postbac and advanced undergraduate students to the fundamental principles of cell signaling and will explore current questions of interest to the field. The synergistic nature of research directed at understanding basic cell biology, development and physiology with research aimed at elucidation and control of specific human ailments will be emphasized. The course will be comprised of a combination of introductory lectures and extensive discussion of primary literature. Students are expected to have a basic knowledge of cell biology, biochemistry and cell structure. BIOL 2201 and BIOL 2801 are recommended pre-requisites.
Fall
1 Course Unit

BIOL 4024 Cell Motility and the Cytoskeleton
Cytoskeleton and cell motility plays a crucial role in many aspects of normal and pathological physiology of individual cells, tissues, and whole organisms, including morphogenesis, immune response, wound healing, oncogenesis, and infection. This course will cover current topics in cell biology with emphasis on cytoskeleton and cell motility and their roles in these processes. Lectures, student presentations, and discussions in the class will be based on primary scientific literature.
Fall
Mutually Exclusive: BIOL 5024
Prerequisite: BIOL 2010
1 Course Unit

BIOL 4026 Chromosomes and the Cell Cycle
Life depends on the propagation of genetic material from one generation to the next through cycles of genome replication and cell division. The genome is copied by the parent, and one exact copy is inherited by each daughter cell. We will treat chromosomes as discrete entities, rather than collections of genes, that are replicated and divided with high fidelity to ensure that the genome remains stable over many generations. By reading selected primary literature covering several decades, we will build an understanding of the cell cycle by focusing on chromosomes and the associated molecular machinery. We will explore mechanisms that underlie replication and division, particularly control mechanisms that maintain genome integrity and are critical to prevent disease. The goal of the course is to develop a picture of the cell cycle by examining some of the key experiments and insights that have led to our current understanding.
Spring
Also Offered As: CAMB 4860
Mutually Exclusive: BIOL 5026
Prerequisite: BIOL 2010
1 Course Unit

BIOL 4077 The Science and Art of Biotechnology
Biotechnology transforms basic biological research into pharmaceutical therapies. This course will examine some explanations for American biotechnology vitality by studying case histories in which fundamental, biological observations were subsequently developed, successfully and unsuccessfully, for therapeutic applications. Along the way, we will also seek to understand the interactions among academic research institutions, biotechnology companies, large pharmaceutical companies, the Food and Drug Administration, financial institutions, venture groups, and the Patent and Trademark Office. Classes will be highly interactive. Students will present case histories in a critical fashion. Ultimately, students will conduct mock negotiations focused on university technology transfers, clinical trial design, financing, and intellectual property.
Fall
Prerequisite: BIOL 2810 OR BIOL 2010 OR BIOL 2210
1 Course Unit

BIOL 4110 Neural Systems and Behavior
This course will investigate neural processing at the systems level. Principles of how brains encode information will be explored in both sensory (e.g. visual, auditory, olfactory, etc.) and motor systems. Neural encoding strategies will be discussed in relation to the specific behavioral needs of the animal. Examples will be drawn from a variety of different model systems.
Spring
Also Offered As: NRSC 4110, PSYC 3220
Prerequisite: BIOL 2110
1 Course Unit

BIOL 4116 Neural Circuits for Survival
A fundamental goal of neuroscience is to understand how neural circuits in the brain function to influence behavior. The aim of this course is to highlight the neural basis of behavior and discuss modern approaches and novel methods to study the neuronal control of classically studied aspects of behavior. Through a combination of discussions, student presentations, and interactive lectures, we will explore the neural systems that regulate the interactions an animal has with the external world. We will explore sensory systems (such as vision, taste, and olfaction), motor systems, and survival behaviors (such as feeding, drinking, mating, and aggression). The course evaluation will be based largely on written work, participation, and presentations.
Spring
Mutually Exclusive: BIOL 5116
Prerequisite: BIOL 2110
1 Course Unit

BIOL 4119 Biological Basis of Animal Diversity
Animals display extraordinary diversity in their morphology, physiology, and behavior. Traditionally, these topics have been mostly studied from an ecological perspective. This course will focus on recent advances and discoveries that address the underlying biological mechanisms of animal diversity. Specific topics will include the genetic, molecular, and developmental basis of animal morphological diversity, and genetic, molecular, and neural basis of animal behavioral diversity. Students will gain an understanding of how animal diversity is encoded at the different levels of biological organization. The course will be comprised of lectures to introduce topics, discussion of primary literature, and in-class activities.
Spring
Mutually Exclusive: BIOL 5119
1 Course Unit
BIOL 4142 Neurobiology of Learning and Memory
This course focuses on the current state of our knowledge about the neurobiological basis of learning and memory. A combination of lectures and student seminars will explore the molecular and cellular basis of learning in invertebrates and vertebrates from a behavioral and neural perspective.
Fall
Also Offered As: NRSC 4442, PSYC 3301
Prerequisite: BIOL 2110
1 Course Unit

BIOL 4210 Molecular Genetics
A detailed analysis of gene structure and expression in both prokaryotic and eukaryotic organisms. Rapid advances in DNA technology and genomics will be emphasized. The application of these advances to the molecular genetic analysis of development, cell function and disease will be discussed.
Fall
Prerequisite: BIOL 2210
1 Course Unit

BIOL 4231 Genome Science and Genomic Medicine
This course will be a focused study of genomes, genomic techniques, and how these approaches are and will be used in diagnosing and treating human disease. Topics will include genome sequencing, analysis of sequences and microarrays, and new techniques including high-throughput sequencing and reverse genetic analysis with a focus on genome-wide mutant collections.
Spring
Also Offered As: CAMB 4310
Mutually Exclusive: BIOL 5231
Prerequisite: BIOL 2210
1 Course Unit

BIOL 4233 The Genetics of Adaptation: How sex, conflict, and pathogens shape modern genomes
In this course we explore the genetic basis of adaptation. We will investigate the forces that drive adaptation (e.g., environmental stress, pathogens, conflict, sex), the genetic mechanisms of adaptation (protein sequence changes, expression divergence, gene duplication, etc.), and the consequences of adaptation for contemporary cellular functions, developmental processes, and ecological interactions. The class meetings will be structured around both lectures and student-led discussions of the primary literature.
Spring
Mutually Exclusive: BIOL 5233
Prerequisite: BIOL 2210 OR BIOL 2410
1 Course Unit

BIOL 4234 Epigenetics
This course investigates epigenetic phenomena: heritable alternate states of gene activity that do not result from an alteration in nucleotide composition (mutations). Epigenetic mechanisms regulate genome accessibility and cell differentiation. They play a key role in normal development and in oncogenesis. For example both mammalian X-chromosome inactivation and nuclear transfer (cloning) are subject to epigenetic regulation. Amongst the epigenetic mechanisms we will discuss in this course are chromatin organization, histone modification, DNA methylation and non-coding RNAs. The course is geared toward advanced undergraduate and beginning graduate students and is a combination of lectures, student presentations and research presentations by guest speakers. Students will work with the current scientific literature.
Spring
Also Offered As: CAMB 4830
Mutually Exclusive: BIOL 5234
Prerequisite: BIOL 2210
1 Course Unit

BIOL 4235 The RNA World: A functional and computational analysis
A focused study of genomic, biochemical, cellular, and molecular aspects of RNA. Topics of study will include RNA structure, RNA processing and turnover, splicing, ribozymes and riboswitches, RNA editing and modification, RNA interference, endogenous eukaryotic RNA silencing pathways, small RNA biology, computational methodologies for studying RNA biology, and RNA viruses. Lectures, students presentations, and discussions will be based on readings from the primary literature.
Spring, odd numbered years only
Also Offered As: CAMB 4850
Prerequisite: BIOL 2210
1 Course Unit

BIOL 4244 Epigenetics of Human Health and Disease
Epigenetic alterations encompass heritable, non-genetic changes to chromatin (the polymer of DNA plus histone proteins) that influence cellular and organismal processes. This course will examine epigenetic mechanisms in directing development from the earliest stages of growth, and in maintaining normal cellular homeostasis during life. We will also explore how diverse epigenetic processes are at the heart of numerous human disease states. We will review topics ranging from an historical perspective of the discovery of epigenetic mechanisms to the use of modern technology and drug development to target epigenetic mechanisms to increase healthy lifespan and combat human disease. The course will involve a combination of didactic lectures, primary scientific literature and research lectures, and student-led presentations.
Spring, even numbered years only
Also Offered As: CAMB 4930, GCB 4930
Prerequisite: BIOL 2210
1 Course Unit
BIOL 4250 Molecular Genetics of Development
Development is the process by which organisms grow and acquire their final shape. This remarkably complex process requires exquisite spatiotemporal control, and principles of developmental biology have implications for nearly all other biological disciplines. This course is a deep dive into these general biological principles, using plants as a model system. Students will prepare presentations on primary literature and engage in vigorous discussions in a "journal club" format. Our goal is to learn how developmentally significant genes and cellular interactions control differentiation and pattern formation.

Fall
Prerequisite: BIOL 2210
1 Course Unit

BIOL 4256 Molecular Genetics of Neurological Disease
This course will focus on the molecular basis of neurological diseases, exploring in detail key papers that cover topics including defining the disease genes, development of animal models that provide mechanistic insight, and seminal findings that reveal molecular understanding. Diseases covered will include neurological diseases of great focus today such as Alzheimer’s, Fragile-X and autism, motor neuron degeneration, and microsatellite repeat expansion disorders. The course will provide a perspective from initial molecular determination through current status. Students will gain an understanding of how the molecular basis of a disease is discovered (from classical genetics to modern genomics) and how such diseases can be modeled in simple genetic systems for mechanistic insight. The course will be comprised of lectures with detailed analysis of primary literature and in-class activities. Grading will be based on class participation, exams, and written papers. Biology 2210 is a pre-requisite. Seniors are prioritized for the course.

Fall
Also Offered As: NRSC 4266
Prerequisite: BIOL 2210
1 Course Unit

BIOL 4310 Molecular Physiology
This course is designed for advanced undergraduate and graduate students who are interested in molecular physiology of sensory signal transduction. The major topics to cover will be signal transduction mechanisms used by membrane ion channels and receptors that detect the sensory stimuli (light, sound, temperature and taste, for example) and transmit the signals to the nervous system. Modern molecular/structural techniques (patch clamp, protein crystallization, molecular genetics, expression cloning and protein purification) will be introduced along with each topic. References will be primary research articles. Students will critically evaluate research discoveries by reading and presenting one to two original research papers. Each student is required to write a 10-page research proposal and to critique proposals written by fellow students.

Fall
Prerequisite: (BIOL 1101 AND BIOL 1102) OR BIOL 1121
1 Course Unit

BIOL 4313 Energy Transformations and Living off-the-Grid
The course will examine major sources of energy on earth: sunlight, mechanical, chemical and biological, and how this energy is transformed into useful energy for humans — typically electrical energy, heat, mechanical power or food. Considerable emphasis will be on forms of regenerative energy that can be used when living off-the-grid. As a case study, we will examine some approaches taken by the US military to provide energy capability for dismounted Marines operating on foot in austere environments. Faculty lectures will be supplemented by guest lectures from leaders in various areas of science. A major goal of the course is for students to develop an awareness of the amounts of energy they use in their daily lives, and how they might reduce them. As an exercise, students will measure how much energy their smart phones and laptops use in a day and try to generate a comparable amount of energy through physical effort. The course will include lectures, discussion, guest expert lectures, and laboratory measurements.

Spring, even numbered years only
1 Course Unit

BIOL 4314 Molecular Evolution of Physiological Functions
This course is designed for students who are interested in understanding how physiological functions are achieved. Taking advantage of the recent explosion in genetic data and high-resolution protein structure analysis across organisms, the course focuses on the evolution of physiological functions at the genetic, structural, circuit and organismal levels. Examples include the co-evolution of toxins and toxin resistance between hunter and prey, the evolution of substance transport across cell membranes, intracellular signaling cascades, intercellular communication, distributed and centralized nervous systems, neural circuits controlling physiological functions such as feeding, locomotion and visual information processing. Students are expected to learn 1) basic physiological processes, their origin and adaptation, 2) modern genetic, structural and physiological techniques, 3) to critically evaluate research findings, 4) to present scientific papers, and 5) to write a research report.

Spring
Prerequisite: NRSC 1110 OR BIOL 2310 OR BIOL 2210 OR BIOL 2110
1 Course Unit

BIOL 4318 Systems Biology: Integrative physiology and biomechanics of the muscular system
The course will focus on muscle function from the level of molecules to whole animal locomotion. At each level of organization, muscle function will be explored from mechanical and energetic viewpoints. The course will include lectures, demonstrations, and several guest expert lectures. Students will also be introduced to realistic musculo-skeletal modelling and forward dynamic simulations to explore integrated function.

Spring
Prerequisite: NRSC 1110 OR BIOL 2310 OR BIOL 2210 OR BIOL 2110
1 Course Unit

BIOL 4410 Advanced Evolution
Mechanisms of evolution at the genetic and populational levels. Empirical and theoretical approaches to natural selection, population structure, gene flow, and quantitative genetics will be emphasized.

Fall, odd numbered years only
Prerequisite: BIOL 2410
1 Course Unit
BIOL 4411 Evolutionary Ecology
This course will focus on topics at the intersection of evolutionary biology and ecology, including the evolution of cooperation and conflict from genes to societies to ecological communities, life history evolution, and the evolution of interspecific interactions and ecological communities. The course will use a combination of lectures and discussion of readings from the primary literature.
Spring
Prerequisite: BIOL 2410 OR BIOL 2140 OR BIOL 2610
1 Course Unit

BIOL 4430 Evolution and Ecology of Infectious Diseases
This course will focus on fundamental topics related to the ecological and evolutionary processes driving the transmission of pathogenic microbes among hosts including life-history strategies; evolution of pathogenic traits; the impacts of temporal, spatial and host-trait heterogeneity; and factors causing the emergence of an infectious pathogen. Examples will be drawn from human, wildlife, and plant pathogens to illustrate these ecological and evolutionary topics. Students will learn to develop and apply current ecological and evolutionary theory to infectious microbe research and gain practical experience accessing, interpreting and synthesizing the peer-reviewed scientific literature through a combination of popular and scientific readings, discussion, and lecture.
Fall
Mutually Exclusive: BIOL 5430
Prerequisite: BIOL 2410 OR BIOL 2610
1 Course Unit

BIOL 4450 Macroevolution
Macroevolution, or evolution above the population level and on long timescales, as a field addresses fundamental questions about the origins of life, past and present. These include but are not limited to: How are highly dissimilar species related? Why are animals on distant continents so similar? How and when did major groups, like birds or mammals, originate? What drives evolutionary arms races? Why are there so many more species of beetle than crocodile? Why are there more species in the tropics than the arctic? Did dinosaurs prevent the diversification of mammals? Why do some animals survive mass extinction? How can invasive species spread so rapidly? Students will learn important concepts underlying our understanding of modern biodiversity and the fossil record, as well as how to use different methods and lines of evidence, including evolutionary trees (phylogeny), fossil databases, past climate and global events, mathematical modeling, and even modern genomics, to answer fundamental questions about the evolution of life.
Spring, odd numbered years only
Also Offered As: EESC 4550
1 Course Unit

BIOL 4511 Biological Data Analysis
This course focuses on the underlying principles, implementation, and interpretation of statistical methods commonly used in biology. Lectures will incorporate exercises that implement these analyses in the open source software R, as well as exercises in data visualization. We will draw on examples from ecology, evolution, genetics, and genomics.
Spring
Mutually Exclusive: BIOL 5511
Prerequisite: BIOL 2510
1 Course Unit

BIOL 4517 Theoretical Population Biology
Introduction to basic theoretical tools to study the evolutionary and ecological dynamics of populations. Topics to be discussed include: basic population dynamics and population genetics theory, evolutionary game theory/adaptive dynamics, social evolution (kin selection/multilevel selection), life-history evolution, and stochastic models. Other topics may be added based on the specific interests of students in the class.
Spring
Mutually Exclusive: BIOL 5517
Prerequisite: BIOL 2410 AND MATH 1400
1 Course Unit

BIOL 4536 Introduction to Computational Biology & Biological Modeling
The goal of this course is to develop a deeper understanding of techniques and concepts used in Computational Biology. The course will strive to focus on a small set of approaches to gain both theoretical and practical understanding of the methods. We will aim to cover practical issues such as programming and the use of programs, as well as theoretical issues such as algorithm design, statistical data analysis, theory of algorithms and statistics. This course WILL NOT provide a broad survey of the field or teach specific tools but focus on a deep understanding of a small set of topics. We will discuss string algorithms, hidden Markov models, dimension reduction, and machine learning (or phylogeny estimation) for biomedical problems.
Fall
Also Offered As: CIS 4360
Mutually Exclusive: BIOL 5535
Prerequisite: MATH 1400 AND (BIOL 2510 OR BIOL 5510)
1 Course Unit

BIOL 4600 Field Botany
This course focuses on teaching students the Pennsylvania flora, both native and naturalized. Through weekly field trips, students will gain an appreciation for the diversity of plant species and plant communities in PA, and observe and discuss ecological and historical forces that influence plant species occurrences and plant communities. The ability to quickly and accurately identify plants in the field, through both sight identification and the use of a dichotomous key, is the major thrust of this course. Students will also learn how to appropriately collect plant materials for further study/identification in the laboratory and for archiving in an herbarium collection.
Fall
Mutually Exclusive: BIOL 5600
Prerequisite: (BIOL 1101 AND BIOL 1102) OR BIOL 1124
1 Course Unit

BIOL 4615 Freshwater Ecology
Survey of the physical, chemical and biological properties of freshwater ecosystems, both riverine and lentic, natural and polluted.
Spring
Also Offered As: ENVS 2390
Mutually Exclusive: BIOL 5615
Prerequisite: BIOL 1101 OR BIOL 1121
1 Course Unit

BIOL 4623 Plant Ecology
The course consists of both lecture material and hands on research involving questions in plant population or community ecology. Quantitative information from published studies will be discussed and students, working in teams, will summarize and analyze data from class experiments.
Not Offered Every Year
1 Course Unit
BIOL 4669 Plant Physiology Through Space and Time
This course is a lab/lecture/seminar hybrid that will meet once per week for three hours. Each session will consist of mini-lecture/lab, paper discussions/lab, or solely lab efforts. All reading assignments will be available on Canvas (no textbook fees). We will exam various aspects of photosynthesis, water relations and nutrient acquisition in the context of the evolutionary progression of higher plants. With each subject, we will consider, measure, and in some cases model whole-plant physiology while examining sub-cellular-level controls and ecosystem-to-global-level consequences. This course is designed to give molecular biologists through earth-system scientists the tools to measure and understand whole-plant physiological responses to molecular manipulation and environmental variability. All students will learn to appreciate the context of their work on both micro and macro scales.
Spring
Mutually Exclusive: BIOL 5669
Prerequisite: BIOL 2610
1 Course Unit

BIOL 4701 Prokaryotic Microbiology: A Pragmatic View
This interactive course is intended for a small group of students aspiring to pursue research in microbiology, preferably using prokaryotes. Students will study selected papers and will attend the Prokaryotic Microbiology Seminars on Fridays. Specific problems of importance to a given field at a particular time will be critically analyzed and discussed: How were cutting edge techniques of the time used to address these problems? How would the same problems be approached using current techniques? The emphasis of the course will be on learning to become a thoughtful experimentalist rather than acquiring the hottest emerging knowledge.
Spring
1 Course Unit

BIOL 4710 Topics in Prokaryotic Biology: From Molecules to Microbiomes
This course will cover research articles from both the classic and contemporary literature on the genetics, cell biology, and physiology of prokaryotes. The material will focus on a small number of subjects in depth, with an emphasis on how the field has arrived at its current state of knowledge and on exciting new research directions. Possible topics include: stress responses, cell signaling, subcellular organization, bacteriophages, microbial communities, and host-microbe interactions.
Spring, odd numbered years only
Prerequisite: BIOL 2210 OR BIOL 3710
1 Course Unit

BIOL 4825 Biochemistry and Molecular Genetics Superlab
Intensive laboratory class where open-ended, interesting biological problems are explored using modern lab techniques. Topics may include protein structure/function studies; genetic screens, genomics and gene expression studies; proteomics and protein purification techniques; and molecular cloning and DNA manipulation. The course emphasizes developing scientific communication and independent research skills. Course topics reflect the interests of individual Biology faculty members. This course is recommended for students considering independent research.
Fall or Spring
Mutually Exclusive: BIOL 5825
Prerequisite: BIOL 2810 OR BIOL 2010 OR BIOL 2210
1 Course Unit

BIOL 4999 Advanced Independent Study
A second semester of independent study, in most cases extending the research undertaken for the BIOL 3999. Apply at the Biology Academic Office, 102 Leidy Labs.
Fall or Spring
1 Course Unit

BIOL 5010 Advanced Cell Biology
This course is designed for beginning graduate students and advanced undergraduates with a particular enthusiasm for cell biology. BIOL 4010/5010 does not attempt to cover all aspects of cell biology, and is therefore not appropriate for students seeking a lecture course which provides a comprehensive survey of the field. Rather, the primary objective of this course is to teach those students considering a career in the biomedical sciences how to read, discuss, and question original research papers effectively. Intensive classroom discussions focus on the experimental methods used, results obtained, interpretation of these results in the context of cell structure and function, and implications for further studies.
Spring
Mutually Exclusive: BIOL 4010, CAMB 4800
Prerequisite: BIOL 2001 OR BIOL 2010
1 Course Unit

BIOL 5016 Molecular Mechanisms of Infectious Disease Biology
This course is designed for advanced undergraduates and beginning graduate students with a particular interest in infectious disease biology. Note that this course is not a comprehensive survey of the field and is not appropriate for students seeking a lecture course on disease. The primary objective of this course is to teach students considering a career in the biomedical sciences how to read, discuss, and question research papers effectively. Intensive classroom discussions focus on the experimental methods used, results obtained, interpretation of these results in the context of pathogen interactions with host cells and organisms, and implications for basic research and therapeutic development.
Spring
Mutually Exclusive: BIOL 4016
Prerequisite: BIOL 2010
1 Course Unit

BIOL 5022 Cell Signaling
The evolution of multicellularity required that cells be able to both send and receive signals from their neighbors. The development of organs and differentiation of cells and tissues requires reliable and continuous communication between cells. Consequences of inappropriate or anomalous signaling include development abnormalities and cancer. This class will examine mechanisms of cell-to-cell signaling between cells in plants and animals with an emphasis on the cell biology of development.
Fall
Prerequisite: BIOL 2010
1 Course Unit

BIOL 5024 Cell Motility and the Cytoskeleton
Cytoskeleton and cell motility plays a crucial role in many aspects of normal and pathological physiology of individual cells, tissues, and whole organisms, including morphogenesis, immune response, wound healing, onco genesis, and infection. This course will cover current topics in cell biology with emphasis on cytoskeleton and cell motility and their roles in these processes. Lectures, student presentations, and discussions in the class will be based on primary scientific literature.
Fall
Mutually Exclusive: BIOL 4024
Prerequisite: BIOL 2024
1 Course Unit
**BIOL 5026 Chromosomes and the Cell Cycle**  
Life depends on the propagation of genetic material from one generation to the next through cycles of genome replication and cell division. The genome is copied by the parent, and one exact copy is inherited by each daughter cell. We will treat chromosomes as discrete entities, rather than collections of genes, that are replicated and divided with high fidelity to ensure that the genome remains stable over many generations. By reading selected primary literature covering several decades, we will build an understanding of the cell cycle by focusing on chromosomes and the associated molecular machinery. We will explore mechanisms that underlie replication and division, particularly control mechanisms that maintain genome integrity and are critical to prevent disease. The goal of the course is to develop a picture of the cell cycle by examining some of the key experiments and insights that have led to our current understanding.  
Spring
Mutually Exclusive: BIOL 4026  
Prerequisite: BIOL 2010  
1 Course Unit

**BIOL 5116 Neural Circuits for Survival**  
A fundamental goal of neuroscience is to understand how neural circuits in the brain function to influence behavior. The aim of this course is to highlight the neural basis of behavior and discuss modern approaches and novel methods to study the neuronal control of classically studied aspects of behavior. Through a combination of discussions, student presentations, and interactive lectures, we will explore the neural systems that regulate the interactions an animal has with the external world. We will explore sensory systems (such as vision, taste, and olfaction), motor systems, and survival behaviors (such as feeding, drinking, mating, and aggression). The course evaluation will be based largely on written work, participation, and presentations.  
Spring
Mutually Exclusive: BIOL 4116  
Prerequisite: BIOL 2110  
1 Course Unit

**BIOL 5119 Biological Basis of Animal Diversity**  
Animals display extraordinary diversity in their morphology, physiology, and behavior. Traditionally, these topics have been mostly studied from an ecological perspective. This course will focus on recent advances and discoveries that address the underlying biological mechanisms of animal diversity. Specific topics will include the genetic, molecular, and developmental basis of animal morphological diversity, and genetic, molecular, and neural basis of animal behavioral diversity. Students will gain an understanding of how animal diversity is encoded at the different levels of biological organization. The course will be comprised of lectures to introduce topics, discussion of primary literature, and in-class activities.  
Spring
Mutually Exclusive: BIOL 4119  
1 Course Unit

**BIOL 5210 Molecular Biology and Genetics**  
This course will survey the discipline of molecular genetics. Two broad areas will be considered 1) Molecular Biology: DNA replication, transcription, translation, regulation of gene expression in both prokaryotic and eukaryotic systems, and genomics and 2) Genetics: basic Mendelian & molecular genetics.  
Fall or Spring  
Prerequisite: BIOL 1101 OR BIOL 1121  
1 Course Unit

**BIOL 5220 Human Evolutionary Genomics**  
Advanced seminar on current topics in human genomics and human evolution. Topics include the methods used for mapping and sequencing genomes; phylogenetic and population genetic analysis; and detecting variation in the human genome. This course is designed for graduate students but advanced undergraduates with a strong background in genetics are also welcome.  
Spring, odd numbered years only  
Also Offered As: CAMB 5220  
1 Course Unit

**BIOL 5231 Genome Science and Genomic Medicine**  
This course will be a focused study of genomes, genomic techniques, and how these approaches are and will be used in diagnosing and treating human disease. Topics will include genome sequencing, analysis of sequences and microarrays, and new techniques including high-throughput sequencing and reverse genetic analysis with a focus on genome-wide mutant collections.  
Spring
Mutually Exclusive: BIOL 4231  
Prerequisite: BIOL 2210  
1 Course Unit

**BIOL 5233 The Genetics of Adaptation: How sex, conflict, and pathogens shape modern genomes**  
In this course we explore the genetic basis of adaptation. We will investigate the forces that drive adaptation (e.g., environmental stress, pathogens, conflict, sex), the genetic mechanisms of adaptation (protein sequence changes, expression divergence, gene duplication, etc.), and the consequences of adaptation for contemporary cellular functions, developmental processes, and ecological interactions. The class meetings will be structured around both lectures and student-led discussions of the primary literature.  
Spring
Mutually Exclusive: BIOL 4233  
Prerequisite: BIOL 2210 OR BIOL 2410  
1 Course Unit

**BIOL 5234 Epigenetics**  
This course investigates epigenetic phenomena: heritable alternate states of gene activity that do not result from an alteration in nucleotide composition (mutations). Epigenetic mechanisms regulate genome accessibility and cell differentiation. They play a key role in normal development and in oncogenesis. For example both mammalian X-chromosome inactivation and nuclear transfer (cloning) are subject to epigenetic regulation. Amongst the epigenetic mechanisms we will discuss in this course are chromatin organization, histone modification, DNA methylation and non-coding RNAs. The course is geared toward advanced undergraduate and beginning graduate students and is a combination of lectures, student presentations and research presentations by guest speakers. Students will work with the current scientific literature.  
Spring
Mutually Exclusive: BIOL 4234, CAMB 4830  
Prerequisite: BIOL 2210  
1 Course Unit
BIOL 5240 Genetic Analysis
The logic and methodology of genetic analysis in plants and animals. This lecture course will focus on the use of mutations to study gene function and higher order biological processes, methods for reporting and manipulating gene expression, and analysis of the genetic basis of natural variation.
Not Offered Every Year
Prerequisite: BIOL 2210
1 Course Unit

BIOL 5250 Molecular Genetics of Development
Development is the process by which organisms grow and acquire their final shape. This remarkably complex process requires exquisite spatiotemporal control, and principles of developmental biology have implications for nearly all other biological disciplines. This course is a deep dive into these general biological principles, using plants as a model system. Students will prepare presentations on primary literature and engage in vigorous discussions in a "journal club" format. Our goal is to learn how developmentally significant genes and cellular interactions control differentiation and pattern formation.
Spring
Mutually Exclusive: BIOL 4250
Prerequisite: BIOL 2210
1 Course Unit

BIOL 5314 Molecular Evolution of Physiological Functions
This course is designed for students who are interested in understanding how physiological functions are achieved. Taking advantage of the recent explosion in genetic data and high-resolution protein structure analysis across organisms, the course focuses on the evolution of physiological functions at the genetic, structural, circuit and organismal levels. Examples include the co-evolution of toxins and toxin resistance between hunter and prey, the evolution of substance transport across cell membranes, intracellular signaling cascades, intercellular communication, distributed and centralized nervous systems, neural circuits controlling physiological functions such as feeding, locomotion and visual information processing. Students are expected to learn 1) basic physiological processes, their origin and adaptation, 2) modern genetic, structural and physiological techniques, 3) to critically evaluate research findings, 4) to present scientific papers, and 5) to write a research report.
Spring, even numbered years only
Mutually Exclusive: BIOL 4314
Prerequisite: NRSC 1110 OR BIOL 2310 OR BIOL 2210 OR BIOL 2110
1 Course Unit

BIOL 5318 Systems Biology: Integrative physiology and biomechanics of the muscular system
The course will focus on muscle function from the level of molecules to whole animal locomotion. At each level of organization, muscle function will be explored from mechanical and energetic viewpoints. The course will include lectures, demonstrations, and several guest expert lectures. Students will also be introduced to realistic musculo-skeletal modelling and forward dynamic simulations to explore integrated function.
Spring
Mutually Exclusive: BIOL 4318
Prerequisite: BIOL 2310 OR BIOL 2110
1 Course Unit

BIOL 5410 Evolutionary Biology
Theories and mechanisms of evolution, with emphasis on the genetic basis of evolutionary change.
Spring
Mutually Exclusive: BIOL 2410
Prerequisite: (BIOL 1101 AND BIOL 1102) OR BIOL 1121
1 Course Unit

BIOL 5430 Evolution and Ecology of Infectious Diseases
This course will focus on fundamental topics related to the ecological and evolutionary processes driving the transmission of pathogenic microbes among hosts including life-history strategies; evolution of pathogenic traits; the impacts of temporal, spatial and host-trait heterogeneity; and factors causing the emergence of an infectious pathogen. Examples will be drawn from human, wildlife, and plant pathogens to illustrate these ecological and evolutionary topics. Students will learn to develop and apply current ecological and evolutionary theory to infectious microbe research and gain practical experience accessing, interpreting and synthesizing the peer-reviewed scientific literature through a combination of popular and scientific readings, discussion, and lecture.
Fall
Mutually Exclusive: BIOL 4430
Prerequisite: BIOL 2410 OR BIOL 2610
1 Course Unit

BIOL 5510 Statistics for Biologists
Introductory probability theory. Principles of statistical methods. Problems of estimation and hypothesis testing in biology and related areas.
Fall
Mutually Exclusive: BIOL 2510, BIOL 4510
Prerequisite: MATH 1400
1 Course Unit

BIOL 5511 Biological Data Analysis
This course focuses on the underlying principles, implementation, and interpretation of statistical methods commonly used in biology. Lectures will incorporate exercises that implement these analyses in the open source software R, as well as exercises in data visualization. We will draw on examples from ecology, evolution, genetics, and genomics.
Spring
Mutually Exclusive: BIOL 4511
Prerequisite: BIOL 2510
1 Course Unit

BIOL 5517 Theoretical Population Biology
Introduction to basic theoretical tools to study the evolutionary and ecological dynamics of populations. Topics to be discussed include: basic population dynamics and population genetics theory, evolutionary game theory/adaptive dynamics, social evolution (kin selection/multilevel selection), life-history evolution, and stochastic models. Other topics may be added based on the specific interests of students in the class.
Spring
Mutually Exclusive: BIOL 4517
Prerequisite: BIOL 2410 AND MATH 1400
1 Course Unit
BIOL 5535 Introduction to Computational Biology & Biological Modeling
The goal of this course is to develop a deeper understanding of techniques and concepts used in Computational Biology. The course will strive to focus on a small set of approaches to gain both theoretical and practical understanding of the methods. We will aim to cover practical issues such as programming and the use of programs, as well as theoretical issues such as algorithm design, statistical data analysis, theory of algorithms and statistics. This course WILL NOT provide a broad survey of the field nor teach specific tools but focus on a deep understanding of a small set of topics. We will discuss string algorithms, hidden markov models, dimension reduction, and machine learning (or phylogeny estimation) for biomedical problems.
Fall
Mutually Exclusive: BIOL 4536
Prerequisite: MATH 1400 AND (BIOL 2510 OR BIOL 5510)
1 Course Unit

BIOL 5536 Fundamentals of Computational Biology
Introductory computational biology course designed for both biology students and computer science, engineering students. The course will cover fundamentals of algorithms, statistics, and mathematics as applied to biological problems. In particular, emphasis will be given to biological problem modeling and understanding the algorithms and mathematical procedures at the "pencil and paper" level. That is, practical implementation of the algorithms is not taught but principles of the algorithms are covered using small sized examples. Topics to be covered are: genome annotation and string algorithms, pattern search and statistical learning, molecular evolution and phylogenetics, functional genomics and systems level analysis.
Fall
Also Offered As: CIS 5360, GCB 5360
Prerequisite: ((BIOL 1101 AND BIOL 1110) OR BIOL 1121) AND STAT 111
AND STAT 112
1 Course Unit

BIOL 5566 Machine Learning Methods in Natural Science Modeling
This is a course for PhD students in natural sciences with interests in applying latest machine learning and AI approaches to their problem domains. The course will consist of directed readings and covering available tutorials with weekly discussions. The goal is to motivate mutual self-learning through guided discussions. Weekly participation and completion of readings or other assigned materials is essential and lack of attendance will be graded. Topics to be covered will be decided after the first meeting. Prerequisites: multivariate calculus, linear algebra, statistics, and probability.
Not Offered Every Year
Also Offered As: PHYS 5566
1 Course Unit

BIOL 5568 Mathematical Modeling in Physiology and Cell Biology
Mathematical modeling is increasingly becoming a standard technique in physiology and cell biology. In this class, we will cover some classical models in physiology and cell biology. Half of the course will be devoted to electrophysiology (Hodgkin-Huxley model, action potential propagation and related topics), which has arguably been the most successful area of application of mathematical techniques to biology. We will then consider models of molecular motors and muscle mechanics, of pattern formation and cell polarization.
Not Offered Every Year
Also Offered As: AMCS 5681
1 Course Unit

BIOL 5571 Topics in Computational Biology
Course for graduate students planning research in computational biology and genomics. Assigned readings will cover algorithms and data analysis techniques in computational biology. The course will include presentations and discussion of research problems involving computational analysis and there. Active group participation is required. Topics could include string algorithms, probability theory, multivariate statistics, molecular evolution, Markov Models, phylogenetic trees, and machine learning.
Not Offered Every Year
1 Course Unit

BIOL 5600 Field Botany
This course focuses on teaching students the Pennsylvania flora, both native and naturalized. Through weekly field trips, students will gain an appreciation for the diversity of plant species and plant communities in PA, and observe and discuss ecological and historical forces that influence plant species occurrences and plant communities. The ability to quickly and accurately identify plants in the field, through both sight identification and the use of a dichotomous key, is the major thrust of this course. Students will also learn how to appropriately collect plant materials for further study/identification in the laboratory and for archiving in an herbarium collection.
Mutually Exclusive: BIOL 4600
Prerequisite: ((BIOL 1101 AND BIOL 1110) OR BIOL 1124)
1 Course Unit

BIOL 5615 Freshwater Ecology
Survey of the physical, chemical and biological properties of freshwater ecosystems, both riverine and lentic, natural and polluted.
Spring
Mutually Exclusive: BIOL 4615
Prerequisite: BIOL 1101 OR BIOL 1121
1 Course Unit

BIOL 5669 Plant Physiology Through Space and Time
This course is a lab/lecture/seminar hybrid that will meet once per week for three hours. Each session will consist of mini-lecture/lab, paper discussions/lab, or solely lab efforts. All reading assignments will be available on Canvas (no textbook fees). We will exam various aspects of photosynthesis, water relations and nutrient acquisition in the context of the evolutionary progression of higher plants. We will discuss, measure, and in some cases model whole-plant physiology while examining sub-cellular-level controls and ecosystem-to-global-level consequences. This course is designed to give molecular biologists through earth-system scientists the tools to measure and understand whole-plant physiological responses to molecular manipulation and environmental variability. All students will learn to appreciate the context of their work on both micro and macro scales.
Spring
Mutually Exclusive: BIOL 4669
Prerequisite: BIOL 2610
1 Course Unit

BIOL 5710 Microbial Diversity and Pathogenesis
Microbiology plays a central role in diverse areas of human life such as infectious disease, ecology, and biotechnology. This course will cover aspects of modern microbiology with an emphasis on prokaryotic organisms. The topics will include basic aspects of microbial diversity, genetics, virology, and pathogenesis as well as examples of applied microbiology.
Spring
Prerequisite: BIOL 2210
1 Course Unit
BIOL 5711 Microbial Diversity and Pathogenesis Lab
The importance of microbiology in complex issues, such as the impact of the microbiome in human health or as alternative energy sources, is being appreciated more and more each day. This upper level laboratory course provides students with a robust technical skill set while also giving them an opportunity to participate in an authentic research project that may lead to novel discoveries. Students will generate research questions, formulate hypotheses, design experiments, analyze data, and present their research findings to the class. In each project, students will use the cutting edge approach of metagenomics to evaluate the microbial diversity of their environment via Next Generation Sequencing. Students will also examine the function of microbial species within their communities. Potential projects include the isolation of novel antibiotic producers and the antibiotic they produce, designing and optimizing microbial fuel cells that can be used to generate electricity, or isolating antibiotic resistant bacteria and attempting novel approaches to inhibit or prevent their growth.
Spring
1 Course Unit

BIOL 5825 Biochemistry and Molecular Genetics Superlab
Intensive laboratory class where open-ended, interesting biological problems are explored using modern lab techniques. Topics may include protein structure/function studies; genetic screens, genomics and gene expression studies; proteomics and protein purification techniques; and molecular cloning and DNA manipulation. The course emphasizes developing scientific communication and independent research skills. Course topics reflect the interests of individual Biology faculty members. This course is recommended for students considering independent research. Mutually Exclusive: BIOL 4825 Prerequisite: BIOL 2810 OR BIOL 2010 OR BIOL 2210
1 Course Unit

BIOL 5860 Mathematical Modeling in Biology
This course will cover various mathematical models and tools that are used to study modern biological problems. Mathematical models may be drawn from cell biology, physiology, population genetics, or ecology. Tools in dynamical systems or stochastic processes will be introduced as necessary. No prior knowledge of biology is needed to take this course, but some familiarity with differential equations and probability will be assumed.
Fall
Also Offered As: MATH 5861
1 Course Unit

BIOL 5999 Master's Independent Study
Laboratory research for the Master’s of Science in Biology submatriculation program. Apply at the Academic Office, 102 Leidy Labs.
Fall or Spring
0.5-3 Course Units

BIOL 6010 Communication for Biologists
Basic science writing and presentation skills for PhD students in Biology. Designed for second year graduate students preparing for qualifying exams. In the first half of the course, students will produce weekly writing assignments and critique writing submitted by others. In the second half, students will learn techniques for effective research presentations in both seminar style environments and chalk-talk settings.
Spring
1 Course Unit

BIOL 7000 Advanced Topics in Current Biological Research
Integrative seminar on current biological research for first-year PhD students.
Fall
1 Course Unit

BIOL 9999 Independent Study and Research
Advanced laboratory research with a member of the Biology Graduate Group.
Fall or Spring
0.5-4 Course Units

Biomedical Graduate Studies (BIOM)

BIOM 5020 Molecular Basis of Disease
BIOM 502 introduces students to basic mechanisms of disease and examines a different disease each week. The focus of the course will be on understanding the pathophysiology of the diseases and how research has enhanced not only our knowledge of disease mechanisms but has also led to improved therapy for patients with these diseases. This course is reserved for BGS students only. Prerequisite:Permission of course director.
Spring
1 Course Unit

BIOM 5100 Case Studies in Translational Research (CSTR) (Open to MD/PhD and VMD/PhD students only)
This course is open to MD/PhD, VMD/PhD and Biomedical Graduate Studies PhD students. All second year combined degree students are expected to take this course unless excused by Dr. Brass. Enrollment is limited to 24 students but interested VMD/PhD and BGS students are welcome as space permits. Prerequisite:Must be in the MD/PhD or VMD/PhD program and have completes the first year of training. CSTR is a seminar style course where groups of students work with selected Penn faculty to prepare a discussion and literature review on disease topics. Topics will include gene therapy for hemophilia, retinal disease and wound healing, cytokine therapies for immune disorders, genetic sleep disturbances and vaccine development. Most of the course will focus on the analysis of successful translational research projects that are taking place here at Penn.
Fall
1 Course Unit

BIOM 5550 Regulation of the Genome
Regulation of gene expression including chromatin structure, transcription, DNA modification, RNA processing, translation, control of gene expression via microRNAs and post-translational processing. Prerequisite: Permission of instructors.
Spring
1 Course Unit

BIOM 5550 Regulation of the Genome
Regulation of gene expression including chromatin structure, transcription, DNA modification, RNA processing, translation, control of gene expression via microRNAs and post-translational processing. Prerequisite: Permission of instructors.
Spring
1 Course Unit

BGS 0590 Case Study in Current Biological Research
Integrative seminar on current biological research for first-year BGS students. All second year combined degree students are expected to take this course unless excused by Dr. Brass. Enrollment is limited to 24 students but interested BGS students are welcome as space permits. Prerequisite: Permission of course director.
Spring

1 Course Unit
**Biomédicas Bioinformáticas (BMIN)**

**BMIN 5010 Introducción a Biomedicina y Informática de Salud**
Este curso se diseña para proporcionar una visión general de los temas principales en informática biomédica, especialmente aquellos que se aplican a la investigación clínica. A través de una serie de conferencias y demostraciones, los estudiantes aprenderán sobre temas como los estándares de datos médicos, registros de salud electrónica, sistemas de procesamiento de lenguaje natural, investigación biomédica en desarrollo, soporte de toma de decisiones clínicas, informática de imágenes, informática de salud pública, e informática de salud de consumidores. Es recomendado que los estudiantes tengan competencia básica con conceptos biomédicos. Los no-mayores deben obtener permiso de la facultad.

**BMIN 5020 Datos de Base y Integración de Datos en Investigación Biomédica**
Este curso está diseñado para proporcionar una experiencia en profundidad en el diseño, implementación y uso de bases de datos en investigación biomédica, y para proveer a los estudiantes con los conocimientos para diseñar y conducir un proyecto de investigación utilizando datos primarios y secundarios. Los temas que se cubrirán incluyen: arquitecturas de bases de datos, normalización de datos, bases de datos de servidor, concurrencia, validación, lenguaje de consulta estructurada (SQL), implementación, bases de datos cliente-servidor, concurrencia, validación. Todos los ejemplos utilizarán bases de datos o datos de investigación biomédicos. MySQL se utilizará como plataforma de la base de datos para este curso, aunque los principios se aplican en general a investigación biomédica. Los no-mayores deben obtener permiso de la facultad.

**BMIN 5030 Ciencia de Datos para Investigación Biomédica**
En este curso, se utilizarán R y otras herramientas de software libre para aprender de la fundamenta Ciencia de Datos aplicada a una gama de temas de investigación biomédica, incluyendo el uso de datos de salud y genómicos. Después de completar este curso, los estudiantes serán capaces de recuperar y limpiar datos, realizar análisis descriptivos, implementar modelos para responder a preguntas científicas, y presentar resultados atractivos de visualización con datos. Se recomendó como pre-requisito: Introducción a la Ciencia de Datos. Familiarización con el uso de R y GitHub. Los no-mayores deben obtener permiso de la facultad.

**BMIN 5040 Temas Especiales en Investigación Biomédica y de Salud**
Este curso está diseñado para proporcionar una visión general de los temas principales en la investigación biomédica. Cada tema será organizado en módulos temáticos que se presentarán en semanas consecutivas, con la intención de que cada módulo se convierta en su propio "mini-curso". Los temas para cada módulo pueden rotar de semestre a semestre, basado en estos criterios: importancia histórica para el campo de la investigación biomédica; y/o práctica; Corte de desarrollo en informática biomédica; Temas no cubiertos en BMIN 5010; Consenso del programa y la facultad, es recomendado que los estudiantes hayan completado BMIN 5020 y BMIN 5030 antes de inscribirse en este curso. Los no-mayores deben obtener permiso del instructor.
BMIN 5050 Precision Medicine and Health Policy
Through a series of lectures, readings and response papers, students will learn about topics such as medical ethics, unintended consequences of medicine/research, genetics, genetic interpretation, hospital performance, and data mining and informatics methods to assess these factors. The informatics topics covered in this course include: decision support, clinical interpretation of genetics, detection of bias in EHRs, detection of bias in guidelines, methods to ameliorate bias, mapping clinical guidelines to computable standards, hospital performance assessment, machine learning, and artificial intelligence applications in this space. We also cover ways that Race, Sex/Gender, Socioeconomics, and Genetics can alter informatics algorithms and introduce biases into EHR data and algorithms. NOTE: Non-majors need permission from the department.
Fall
1 Course Unit

BMIN 5060 Standards and Clinical Terminologies
This survey course is designed to provide an overview of health information standards and clinical terminologies. Through a series of lectures, demonstrations, and hands-on exercises, students will learn about topics such as standards, interoperability, data modeling, vocabularies, and health information exchange. It is recommended that students have completed BMIN 5010 prior to enrolling in this course. NOTE: Non-majors need permission from the department.
Fall
0.5 Course Units

BMIN 5070 Human Factors
The course will cover four main topic areas: 1. Sociotechnical and human-centered design in biomedical informatics; 2. Evaluation and measurement of usability; 3. Implementation and optimization—including tensions among existing vs revised workflows, new software vs legacy systems, vendor software vs need for new builds, customization, retrofits, dongles, etc.; and 4. Ethics, policy, cybersecurity, and advocacy. Each topic area will incorporate definitions, principles, methods, and applications. We review the terminology, the concepts and underlying assumptions, how key concepts relate to each other, the ways we measure usability and outcomes, and then examine the relevance of the topic's to applied clinical informatics. The course will cover qualitative, quantitative, and computational methods used for the design, implementation, and evaluation of health information technology. The applications section for each topic will use relevant case studies that examine the real-world application of principles and methods. It is recommended that students have completed BMIN 5010 prior to enrolling in this course. NOTE: Non-majors need permission from the department.
Fall
0.5 Course Units

BMIN 5080 Biomedical Information Systems Analysis and Design
This course provides an introduction to the concepts and principles of information systems analysis and design, focusing on the techniques of the Unified Modeling Language and the Unified Process, specifically as these apply to healthcare settings. As a result, there is a strong emphasis on applying these techniques to real-world issues with clinical and clinical research information systems. These include the electronic health record, information systems in clinical specialties, and systems to support the management of data used for clinical research and healthcare administration. This course is required for MBMI students in the Healthcare Quality Informatics Track.
1 Course Unit

BMIN 5090 Consumer and Personal Health Informatics
This course is designed to develop intelligent consumers, managers, and researchers of telehealth and personal health/ consumer health informatics systems through guided exploration into the components of such systems. The course is designed to introduce many of the challenges facing designers and managers of telehealth/ mHealth and remote health care delivery networks. The spectrum of activity ranging from research into implications of system design for applications that bridge geographic distance to the development of practical applications to promote patient engagement is considered in both historical context and in case studies. The current status and future trends of this emerging domain are reviewed. It is recommended that students have some exposure to health care or health systems prior to enrolling in this course. NOTE: Non-majors need permission from the department.
Fall

1 Course Unit

BMIN 5100 Clinical Research Informatics in the Cloud: Analytic Workflows and Infrastructure
Machine learning, analysis, and meaningful visualizations can provide significant insights into clinical research datasets. One of the challenges is to make these tools, and workflows available at scale in a meaningful way for clinicians, data scientists, and patients. In this course, we will focus on cloud-based mechanisms and infrastructure to make analysis workflows broadly available to a wide range of potential users. Students will implement an analytic workflow related to a clinical research dataset and ultimately deploy the workflow as a publicly available service on the internet using AWS services. We will discuss all components related to the development life-cycle of cloud based analytic services including testing, logging, deploying infrastructure, APIs, front-end development and the value of doing research in the cloud. It is expected that students are comfortable with Python coding and have taken a data science class prior to enrolling in this course. Pre-requisites: - Students should have significant experience with programming in Python. - BMIN 5030 or BMIN 5200 or equivalent. - Students are interested in learning to work within the AWS environment.
Prerequisite: BMIN 5030 OR BMIN 5200
1 Course Unit

BMIN 5200 or equivalent. - Students are interested in learning to work within the AWS environment. It is expected that students are comfortable with Python coding and have taken a data science class prior to enrolling in this course. Pre-requisites: - Students should have significant experience with programming in Python. - BMIN 5030 or BMIN 5200 or equivalent. - Students are interested in learning to work within the AWS environment.
Prerequisite: BMIN 5030 OR BMIN 5200
1 Course Unit
BMIN 5200 Foundations of Artificial Intelligence in Health
As a subfield of computer science, artificial intelligence is often used interchangeably with the term 'machine learning', which itself is more accurately a subfield of AI dealing with the broader concept of inductive reasoning. However, a wealth of key prerequisite topics that focus on deductive reasoning align with the bulk of biomedical informatics applications being actively utilized today. These founding principles of AI and their intersection with biomedical informatics are the focus of this first course on artificial intelligence. The course is divided into modules that cover (1) introductory/background materials, (2) knowledge representation, (3) logic, (4) essentials of rule-based systems, (5) search, (6) information structure and inference, and (7) special topics. These topics offer a global foundation for branches of AI application and research in biomedical domains, including concepts that will later support a deeper understanding of inductive reasoning and machine learning. In a practical sense, this course focuses on how biomedical data can be organized, represented, interpreted, searched, and applied in order to derive knowledge, make decisions, and ultimately make predictions while avoiding bias. It is expected that all students will be somewhat familiar with basic biomedical concepts and terminology, statistics. Additionally, students must be familiar with basic computer programming concepts including data structures, control flow, and I/O. Recommended, but not required, that students have taken Introduction to Biomedical Informatics (BMIN 5010), Data Science for Biomedical Informatics (BMIN 5030), and a programming course (any language). No previous exposure to artificial intelligence is assumed.
Fall
1 Course Unit

BMIN 5210 Advanced Methods and Health Applications in Machine Learning
Machine learning studies how computers learn from data and has enormous potential to impact biomedical research and applications. This course will cover fundamental topics in machine learning with an application focus on biomedical informatics. Specifically, the course will cover: supervised learning methods such as linear regression, logistic regression, nearest neighbors, support vector machines, decision trees and random forests; unsupervised learning topics such as clustering and dimensionality reduction; neural networks and deep learning methods for supervised or unsupervised learning tasks, including Convolutional Neural Network (CNN), Recurrent Neural Network (RNN), Auto Encoder (AE), Generative Adversarial Network (GAN), and Graph Neural Network (GNN); and the applications of these machine learning techniques to various biomedical informatics problems via analyzing imaging, biomarker, electronic health record, clinical and/or other biomedical data. The precise topics may vary from year to year based on student interest and developments in the field. Students are required to have completed BMIN525 (Python Class) or equivalent programming experience. It is recommended that students have basic knowledge in data analysis and biomedical research. Basic knowledge of machine learning, linear algebra, statistics and probability is preferred. NOTE: Non-majors need permission from the instructor.
Fall
1 Course Unit

BMIN 5220 Natural Language Processing for Health
The growing volume of unstructured health-related data presents unparalleled challenges and opportunities for informaticians, clinicians, epidemiologists and other public health researchers that seek to mine the rich information "locked" within free-texts. Clinical records, social media, published literature, are all sources designed for human eyes, but not necessarily for automatic processing. In this class, we will survey the most recent natural language processing methods used for identifying and classifying information present in these sources. The class provides learning of health language processing – that is, the fundamental principles and methods of both natural language processing and machine learning and how they are currently applied in the biomedical domain. The class will focus on real problems in the context of health research where data are inherently biased, e.g., noisy, missing, or extremely imbalanced (where instances of interest are rare in the data). Methods for addressing these biases, such as text normalization, rules-based systems, machine learning (supervised, unsupervised, active learning), deep learning, and large language models will be discussed. In-class lectures will be most often taught using Jupyter notebooks and guest speakers presenting how an NLP/ML method was used to solve a driving biomedical use case. This course requires proficiency in python programming demonstrated through examination. NOTE: Non-majors need permission from the instructor.
Spring
1 Course Unit

BMIN 5230 Informatics Prec Med

BMIN 5250 Introduction to Python Programming
This introductory course is designed to provide an overview of the Python programming language including data types, data structures, variables, packages, modules, programming practices, and more. Using lectures and hands-on demonstrations, students will learn how to write Python programs that store, retrieve, represent, transform, analyze, and visualize biomedical and clinical data. Upon completing this introductory course, students will have acquired foundational knowledge using Python to solve problems as well as gained the self-confidence to expand their knowledge of Python well beyond this course. Non-majors need permission from the department.
Fall
1 Course Unit

BMIN 5330 Statistics for Genomics and Biomedical Informatics
BMIN 5330 is an introductory course in probability theory and statistical inference for graduate students in Genomics and Computational Biology. The goal of the course is to provide foundation of basic concepts and tools as well as hands-on practice in their application to problems in genomics. At the completion of the course, students should have an intuitive understanding of basic probability and statistical inference and be prepared to select and execute appropriate statistical approaches in their future research.
Also Offered As: GCB 5330, IMUN 5770
1 Course Unit
Biostatistics (BSTA)

**BSTA 5110 Biostatistics in Practice**
Biostatistics in Practice offers Biostatistics students an opportunity to acquire and demonstrate proficiency in statistical collaboration, data analysis and scientific writing. The project is defined by several elements: A scientific question or hypothesis arising in medical research; the statistical methodology needed to address the question; the development of a study design and/or analysis of a relevant data set; and a summary of the results of these analyses. In most cases, a collaborating medical scientist provides the research question and the data. The student, under the supervision of a biostatistics faculty member, identifies the appropriate statistical methods and conducts the analysis. The analysis should be sufficiently extensive and detailed to support a manuscript publishable in the medical literature. Enrollment open to Biostatistics student only.

*Fall* 1 Course Unit

**BSTA 5500 Applied Regression and Analysis of Variance**
An applied graduate level course in multiple regression and analysis of variance for students who have completed an undergraduate course in basic statistical methods. Emphasis is on practical methods of data analysis and their interpretation. Covers model building, general linear hypothesis, residual analysis, leverage and influence, one-way anova, two-way anova, factorial anova. Primarily for doctoral students in the managerial, behavioral, social and health sciences. Permission of instructor required to enroll.

*Fall* 1 Course Unit

**BSTA 6200 Probability I**
This course covers Elements of (non-measure theoretic) probability necessary for the further study of statistics and biostatistics. Topics include set theory, axioms of probability, counting arguments, conditional probability, random variables and distributions, expectations, generating functions, families of distributions, joint and marginal distributions, hierarchical models, covariance and correlation, random sampling, sampling properties of statistics, modes of convergence, and random number generation. Two semesters of calculus (through multivariate calculus), linear algebra, or permission of the instructor to enroll.

*Fall* 1 Course Unit

**BSTA 6210 Statistical Inference I**
This class will cover the fundamental concepts of statistical inference. Topics include sufficiency, consistency, finding and evaluating point estimators, finding and evaluating interval estimators, hypothesis testing, and asymptotic evaluations for point and interval estimation. Prerequisite: If course requirements not met, permission of instructor.

*Spring* 1 Course Unit

**BSTA 6220 Statistical Inference II**
This class will cover the fundamental concepts of statistical inference. Topics include sufficiency, consistency, finding and evaluating point estimators, finding and evaluating interval estimators, hypothesis testing, and asymptotic evaluations for point and interval estimation.

*Fall* 1 Course Unit

---

**BMIN 5490 Exploring Data Science Methods with Health Care Data**
The growth and development of electronic health records, genetic information, sensor technologies and computing power propelled health care into the big data era. This course will emphasize data science strategies and techniques for extracting knowledge from structured and unstructured data sources. The course will follow the data science process from obtaining raw data, processing and cleaning, conducting exploratory data analysis, building models and algorithms, communication and visualization, to producing data products. Students will participate in hands-on exercises whenever possible using a clinical dataset.

*Spring*

Also Offered As: NURS 8490
1 Course Unit

**BMIN 6060 Applied Clinical Informatics in Quality Improvement**
This four-day intensive graduate institute applies core clinical informatics concepts in the context of quality improvement and patient safety initiatives. Content covered addresses foundational theories, frameworks, and policies of clinical informatics relevant to quality improvement and patient safety as well as practical application of informatics tools relevant to quality improvement efforts and local governance structure. Learners will be exposed to a variety of informatics leaders from across both the University of Pennsylvania Health System and Children’s Hospital of Philadelphia. A hybrid structure of two full, in-person days with two half, virtual days with optional offers hours is intended to allow flexibility for learners while maximizing beneficial interactions between learner, instructors, and building the UPHS/CHOP informatics community.

*Spring*

Also Offered As: HQS 6060
0.5 Course Units

**BMIN 7990 Independent Study**
An opportunity for the biomedical informatics student to become closely associated with a professor to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest that is not covered (or covered in depth) in the biomedical informatics program curriculum. The challenge of the task undertaken must be consistent with the student’s academic level. To register for this course, the student and supervising professor jointly submit a detailed proposal to the program Curriculum Committee via the Program Coordinator not later than two weeks before the beginning of the semester. This course is open only to students enrolled in one of the approved Biomedical Informatics programs. The course can be taken for 0.5 or 1.0cu, depending on the depth and breadth of the proposed independent study.

*Fall or Spring*
0.5-1 Course Unit

**BMIN 9900 Capstone**
The MBMI program requires that students engage in a mentored Capstone Project in clinical informatics during their final year. This is accomplished in the context of a weekly seminar in which students develop, propose, implement, and present their capstone project. During the semester, students meet with their Capstone Advisor, who is also invited to attend the seminars. The seminar affords both students and advisors the opportunity for cross-fertilization of ideas and skills, and ultimately the honing of projects to a high level of value for the students and the clinical environments in which they conduct their projects.

Required Pre-requisite: Minimum of 7 CUs of the required coursework of the MBMI Program
1 Course Unit
**Biostatistics (BSTA)**

**BSTA 6300 Statistical Methods and Data Analysis I**
This first course in statistical methods for data analysis is aimed at first-year Biostatistics students. It focuses on the analysis of continuous data. Topics include descriptive statistics (measures of central tendency and dispersion, shapes of distributions, graphical representations of distributions, transformations, and testing for goodness of fit); populations and sampling (hypotheses of differences and equivalence, statistical errors); one- and two-sample t tests; analysis of variance; correlation; nonparametric tests on means and correlations; estimation (confidence intervals and robust methods); categorical analysis (proportions; statistics and test for comparing proportions; test for matched samples; study design); and regression modeling (simple linear regression, multiple regression, model fitting and testing, partial correlation, residuals, multicollinearity). Examples of medical and biologic data will be used throughout the course, and use of computer software demonstrated. Multivariable calculus and linear algebra and permission of instructor required to enroll.

Fall
Prerequisite: BSTA 6200
1 Course Unit

**BSTA 6320 Statistical Methods for Categorical and Survival Data**
This is the second half of the methods sequence, where the focus shifts to methods for categorical and survival data. Topics in categorical include defining rates; incidence and prevalence; the chi-squared test; Fisher’s exact test and its extension; relative risk and odds-ratio; sensitivity; specificity; predictive values; logistic regression with goodness of fit tests; ROC curves; the Mantel-Haenszel test; McNemar’s test; the Poisson model; and the Kappa statistic. Survival analysis will include defining the survival curve, censoring, and the hazard function; the Kaplan-Meier estimate, Greenwood’s formula and confidence bands; the log rank test; and Cox’s proportional hazards regression model. Examples of medical and biologic data will be used throughout the course, and use of computer software demonstrated.

Spring
Prerequisite: BSTA 6200 AND BSTA 6210 AND BSTA 6300
1 Course Unit

**BSTA 6510 Introduction to Linear Models and Generalized Linear Models**
This course extends the content on linear models in BSTA 630 and BSTA 632 to more advanced concepts and applications of linear models. Topics include the matrix approach to linear models including regression and analysis of variance, general linear hypothesis, estimability, polynomial, piecewise, ridge, and weighted regression, regression and collinearity diagnostics, multiple comparisons, fitting strategies, simple experimental designs (block designs, split plot), random effects models, Best Linear Unbiased Prediction. In addition, generalized linear models will be introduced with emphasis on the binomial, logit and Poisson log-linear models. Applications of methods to example data sets will be emphasized.

Spring
Prerequisite: BSTA 6200 AND BSTA 6300 AND BSTA 6210 AND BSTA 6320
1 Course Unit

**BSTA 6560 Longitudinal Data Analysis**
This course covers both the applied aspects and methods developments in longitudinal data analysis. In the first part, we review the properties of the multivariate normal distribution and cover basic methods in longitudinal data analysis, such as exploratory data analysis, two-stage analysis and mixed-effects models. Focus is on the linear mixed-effects models, where we cover restricted maximum likelihood estimation, estimation and inference for fixed and random effects and models for serial correlations. We will also cover Bayesian inference for linear mixed-effects models. The second part covers advanced topics, including nonlinear mixed-effects models, GEE, generalized linear mixed-effects models, nonparametric longitudinal models, functional mixed-effects models, and joint modeling of longitudinal data and the dropout mechanism. If course requirements are not met, permission of instructor required.

Prerequisite: BSTA 6210 AND (BSTA 6310 OR BSTA 6320) AND BSTA 6510 AND (BSTA 6530 OR BSTA 7540)
0.5 Course Units

**BSTA 6600 Design of Observational Studies**
This course will cover statistical methods for the design and analysis of observational studies. Topics for the course will include epidemiologic study designs, issues of confounding and hidden bias, matching methods, propensity score methods, sensitivity analysis, and instrumental variables. Case studies in biomedical research will be presented as illustrations. Prerequisite: If course requirements not met, permission of instructor required.

0.5 Course Units

**BSTA 6610 Design of Interventional Studies**
This course is designed for graduate students in statistics or biostatistics interested in the statistical methodology underlying the design, conduct, and analysis of clinical trials and related interventional studies. General topics include designs for various types of clinical trials (Phase I, II, III), endpoints and control groups, sample size determination, and sequential methods and adaptive design. Regulatory and ethical issues will also be covered. Prerequisite: If course requirement not met, permission of instructor required.

0.5 Course Units

**BSTA 6650 Longitudinal Data Analysis**
This course covers both the applied aspects and methods developments in longitudinal data analysis. In the first part, we review the properties of the multivariate normal distribution and cover basic methods in longitudinal data analysis, such as exploratory data analysis, two-stage analysis and mixed-effects models. Focus is on the linear mixed-effects models, where we cover restricted maximum likelihood estimation, estimation and inference for fixed and random effects and models for serial correlations. We will also cover Bayesian inference for linear mixed-effects models. The second part covers advanced topics, including nonlinear mixed-effects models, GEE, generalized linear mixed-effects models, nonparametric longitudinal models, functional mixed-effects models, and joint modeling of longitudinal data and the dropout mechanism. If course requirements are not met, permission of instructor required.

Prerequisite: BSTA 6210 AND (BSTA 6310 OR BSTA 6320) AND BSTA 6510 AND (BSTA 6530 OR BSTA 7540)
0.5 Course Units

**BSTA 6700 Statistical Computing**
This course concentrates on computational tools, which are useful for statistical research and for computationally intensive statistics. Through this course you will develop a knowledge base and skill set of a wide range of computational tools needed for statistical research. Topics include computer storage, architecture and arithmetic; random number generation; numerical optimization methods; spline smoothing and penalized likelihood; numerical integration; simulation design; Gibbs sampling; bootstrap methods; and the EM algorithm. Prerequisite: If course requirements not met, permission of instructor required.

Prerequisite: BSTA 6510 AND BSTA 6200 AND BSTA 6210
1 Course Unit

**BSTA 6990 Lab Rotation**
Student lab rotation.
0-4 Course Units
**BSTA 7500 Statistical Methods for Risk Prediction and Precision Medicine**

This is an advanced elective course for graduate students in Biostatistics, Statistics, Epidemiology, and other BGS disciplines. It will cover various topics for evaluating the performance of biomarkers to predict risk of clinical or disease outcomes, specifically including relative, absolute and competing risks for binary and time-to-disease outcomes; statistical inference for quantifying predictive accuracy with binary and time-to-event outcomes; statistical methods and inference for case-control study designs; Efficient study design issues for biomarker evaluation. This course is designed to help students 1) understand various concepts of risk in the medical literature; 2) understand various statistical methods for evaluating prediction performance of biomarkers and diagnostic tests and for designing efficient biomarker studies; 3) improve the ability to read critically papers published in statistical and medical journals on related topics; and 4) develop research ideas for risk prediction. Upon successfully completing this course, students will be able to: 1) Conduct statistical analysis for evaluating prediction performance of biomarkers and diagnostic tests; 2) Have a better ability to read and understand papers published in statistical and medical journals on related topics; and 3) Be well prepared to work on related topics for dissertation.

Fall
Prerequisite: BSTA 6300 AND BSTA 6320
0.5 Course Units

**BSTA 7510 Statistical Methods for Neuroimaging**

This course is intended for students interested in both statistical methodology, and the process of developing this methodology, for the field of neuroimaging. This will include quantitative techniques that allow for inference and prediction from ultra-high dimensional and complex images. In this course, basics of imaging neuroscience and preprocessing will be covered to provide students with requisite knowledge to develop the next generation of statistical approaches for imaging studies. High-performance computational neuroscience tools and approaches for voxel- and region-level analyses will be studied. The multiple testing problem will be discussed, and the state-of-the-art in the area will be examined. Finally, the course will end with a detailed study of multivariate pattern analysis, which aims to harness the power of patterns in images to identify disease effects and provide sensitive and specific biomarkers. The student will be evaluated based on 3 homework assignments and a final in-class presentation. Prerequisite: If course requirement not met, permission of instructor required.

Prerequisite: BSTA 6210 AND BSTA 6510
1 Course Unit

**BSTA 7540 Advanced Survival Analysis**

This advanced survival analysis course will cover statistical theory in counting processes, large sample theory using martingales, and other state of the art theoretical concepts useful in modern survival analysis research. Examples in deriving rank-based tests and Cox regression models as well as their asymptotic properties will be demonstrated using these theoretical concepts. Additional potential topics may include competing risk, recurrent event analysis, multivariate failure time analysis, joint modeling of survival and longitudinal data, sample size calculations, multi-state models, and complex sampling schemes involving failure time data. In addition to satisfying course prerequisites, permission of instructor is required.

Fall
Prerequisite: BSTA 6220
0.5 Course Units

**BSTA 7770 Statistical Methods for Meta-Analyses**

This graduate-level Biostatistics course will introduce the fundamentals of statistical methods for meta-analyses. It will cover key principles of meta-analysis and the statistical rationales behind the analytic models, including univariate meta-analysis, multivariate meta-analysis, meta-analysis of diagnostic test accuracy, network meta-analysis, and multivariate network meta-analysis. Beyond these commonly used models, the course will cover statistical methods and software that investigate and correct for biases in systematic reviews such as publication bias, outcome reporting bias. Advanced statistical inferential tools such as publication bias, outcome reporting bias. Advanced statistical inferential tools such as composite likelihood, pseudolikelihood, integrated likelihood methods, EM algorithms will be introduced. In addition, the course will also cover some practical steps in systematic review including search strategies, data abstraction methods; quality assessment; and writing a meta-analysis report. The course is composed of a series of weekly lectures and small group discussions. Students will be expected to attend weekly lectures, participate in class discussions, review assigned readings, complete homework assignments, and conduct a real-world meta-analysis with a clinically meaningful problem. Fundamentals of Biostatistics background or permission of instructor required to enroll.

1 Course Unit

**BSTA 7820 Stat Meth/Incomplete Data**

Selected topics from public health and biomedical research where "Big data" are being collected and methods are being developed and applied, together with some core statistical methods in high dimensional data analysis. Topics include dimension reduction, detection of novel association in large datasets, regularization and high dimensional regression, ensemble learning and prediction, kernel methods, deep learning and network analysis. R programs will be used throughout the course, other standalone programs will also be used. Prerequisite: If course requirement not met, permission of instructor required.

Spring
1 Course Unit

**BSTA 7870 Methods for Statistical Genetics and Genomics in Complex Human Disease**

This is an advanced elective course for graduate students in Biostatistics, Statistics, Epidemiology, Bioinformatics, Computational Biology, and other BGS disciplines. This course will cover statistical methods for the analysis of genetics and genomics data. Topics covered will include genetic linkage and association analysis, analysis of next-generation sequencing data, including those generated from DNA sequencing and RNA sequencing experiments. Students will be exposed to the latest statistical methodology and computer tools on genetic and genomic data analysis. They will also read and evaluate current statistical genetics and genomics literature. Prerequisite: If course requirements not met, permission of instructor required.

Prerequisite: (BSTA 6300 AND BSTA 6320) OR (EPID 5200 AND EPID 5210)
1 Course Unit
BSTA 7980 Advanced Topics in Biostatistics
This course is designed for second-year PhD students in Biostatistics. The goal is to provide an in-depth exploration of special topics within the field of biostatistics. The course covers a range of advanced statistical methods and their applications in various biostatistical domains, including clinical trials, causal inference, survival analysis, genetics and genomics, neuroimaging, and health informatics. The course emphasizes the unique aspects of these topics and their significance in biomedical research and public health. Throughout the course, ten faculty members will deliver presentations, each focusing on a specific topic.

Bosnian-Croatian-Serbo

BCS 0100 Bosnian-Croatian-Serbian I
This course is the first in the series of first-year courses, intended for students with no previous background in Bosnian, Croatian and Serbian languages. The course develops competence in speaking, reading, writing, and understanding contemporary BCS. At the end of the course students will be comfortable using both Latin and Cyrillic versions of the alphabet and will be able to read simple texts, including signs, menus, short news articles, and short stories. Class work emphasizes development of communicative and cultural competence in real-life situations, spontaneous interactions, pair and group work and is conducted almost entirely in BCS. By the end of the course, you will be able to engage in simple conversations in BSC on topics concerning your daily life. You will also be able to write short personalized messages in BCS.
Not Offered Every Year
1 Course Unit

BCS 0200 Bosnian-Croatian-Serbian II
This course is the second in the series of first-year courses, the continuation of Bosnian-Croatian-Serbian I. The course continues to develop competence in speaking, reading, writing, and understanding contemporary BCS. Class work emphasizes development of communicative and cultural competence in real-life situations, spontaneous interactions, pair and group work and is conducted almost entirely in BCS. By the end of the course, you will be able to engage in simple conversations on many topics in informal and some formal contexts concerning your daily life. You will also be able to write longer personalized messages in BCS.
Not Offered Every Year
1 Course Unit

BCS 0300 Bosnian-Croatian-Serbian III
This course is the first in the series of second-year courses, continuation of Bosnian-Croatian-Serbian II. The course will strengthen students’ competence in speaking, reading, writing, and understanding contemporary BCS and will expand students’ active and passive vocabulary on a variety of topics. Class work emphasizes development of communicative and cultural competence in real-life situations, spontaneous interactions, pair and group work and is conducted almost entirely in BCS. By the end of the course, you will be able to engage in increasingly complex conversations in BCS on many topics in informal and formal contexts concerning your daily life, significant personal and cultural events and situations, important cultural figures. You will be able to write longer messages in a variety of informal and formal contexts.
Not Offered Every Year
1 Course Unit
BCS 0400 Bosnian-Croatian-Serbian IV
This course is the second in the series of second-year courses, continuation of Bosnian-Croatian-Serbian III. The course will continue strengthening and expanding students’ competence in speaking, reading, writing, and understanding contemporary BCS and increasing active and passive vocabulary on a variety of topics. Class work emphasizes development of communicative and cultural competence in real-life situations, spontaneous interactions, pair and group work and is conducted almost entirely in BCS. By the end of the course, you will be able to engage in increasingly complex conversations in BCS on many topics in informal and formal contexts concerning your daily life, significant personal and cultural events, attitudes and perspectives. You will be able to write longer messages in a variety of informal and formal contexts. Satisfies Penn Language Requirement.

1 Course Unit

Business Economics & Public Policy (BEPP)

BEPP 0001 Introduction to Behavioral Economics
Governments and firms set policy in a world of behavioral agents. This course will present economic approaches to these policy problems when individuals act in behavioral ways. Readings will be newspaper articles that will be discussed in class. Assignments -- two problem sets and an exam -- will include qualitative and quantitative analysis.
0.5 Course Units

BEPP 1000 Introductory Economics for Business Students
Microeconomics is the study of the behavior of households and firms, whose collective decisions determine how resources are allocated in a free market economy. We will study when markets are likely to produce "efficient" outcomes, and when government intervention may improve on or harm the competitive market outcome. We will use economic theory to analyze issues like a gas tax to change reliance on oil, minimum wages to increase salaries of the working poor, and government subsidies to increase education. Macroeconomics is the study of the economy as a whole. We will understand how the size of the US economy is determined, how unemployment is measured, how inflation affects life. We will look at policy options that the government and the Federal Reserve Bank face, and discuss pros and cons of their actions. Economic arguments are often used in debates about government policies, discussion of business strategies, and many of life’s other arenas. The goal of the course is to teach you to “think like an economist,” which I hope will help you to understand the world around you, make better economic decisions in your own life, and be a more informed citizen and voter.
Fall
1 Course Unit

BEPP 2010 Public Finance and Policy
This course explores the economics and politics of public policy to provide an analytic framework for considering why, how, and with what success/failure government intervenes in a variety of policy areas. Particular attention will be paid to important policy issues relating to taxation, social security, low-income assistance, health insurance, education (both K-12 and higher ed), the environment, and government deficits. The costs and benefits of alternative policies will be explored along with the distribution of responsibilities between the federal, state and local governments. While the course will focus primarily on U.S. policies, the topics covered (e.g. tax reform, deficits versus austerity, etc.) are currently at the center of the policy debate in many other industrialized countries as well.
Fall or Spring
Mutually Exclusive: BEPP 7700
1 Course Unit

BEPP 2020 Consumer Financial Decision Making
Research shows that many individuals are profoundly underinformed about important financial facts and financial products, which frequently lead them to make mistakes and lose money. Moreover, consumer finance comprises an enormous sector of the economy, including products like credit cards, student loans, mortgages, retail banking, insurance, and a wide variety of retirement savings vehicles and investment alternatives. Additionally, recent breakthroughs in the FinTech arena are integrating innovative approaches to help consumers. Though virtually all people use these products, many find financial decisions to be confusing and complex, rendering them susceptible to fraud and deception. As a result, government regulation plays a major role in these markets. This course intended for Penn undergraduates considers economic models of household decisions and examines evidence on how consumers are managing (and mismanaging) their finances. Although academic research has historically placed more attention on corporate finance, household finance is receiving a brighter spotlight now-- partly due to its role in the recent financial crisis. Thus the course is geared toward those seeking to take charge of their own financial futures, anyone interested in policy debates over consumer financial decision making, and future FinTech entrepreneurs.
Fall
Also Offered As: FNCE 2020
1 Course Unit

BEPP 2030 Business in the Global Political Environment.
This course examines the non-market components of business and the broader political, regulatory, and civil context in which companies function. This course addresses how businesses interact with political and regulatory institutions, as well as the general public, with a focus on the global economy. The first portion examines the realities associated with political economy and the actual making of laws and regulations by imperfect politicians and regulators. The second portion analyzes the economic rationale for legislation and regulation in the presence of market failures. The course covers specific market failures and potential solutions including government regulation.
Fall or Spring
Prerequisite: ECON 0100
1 Course Unit

BEPP 2070 Economics for the Next Hundred Years
TBD
0.5 Course Units
BEPP 2080 Housing Markets
This course is designed for students interested in the economics and operations of housing markets. It is primarily a U.S. focused course, but does include a limited amount of international material for comparative purposes. The class is divided into four sections: (1) supply and demand for housing, including the operations of homebuilders and rental landlords; (2) house prices, including cycles and price dynamics; (3) international comparisons; and (4) public policy analysis applied to a current housing markets-related issue. This course presumes knowledge of intermediate economics, as we will apply that knowledge throughout the semester. For Wharton students, this means you must have passed BEPP 2500 (undergrads) or MGEC 61100 and 6120 for MBA’s. Non-Wharton students should have taken the equivalent course in the College. Lecture with discussion required.
Spring
Also Offered As: REAL 2080
Prerequisite: BEPP 2500
1 Course Unit

BEPP 2110 Tax Policy and Practice in the Philadelphia Community
The academic component of the course will focus on several areas: (1) The Color of Money: Black Banks and the Racial Wealth Gap. Students will read this book throughout the semester to support their understanding of the community that they will be serving. (2) Statutory tax system. Students will learn about the tax system as it relates to individuals and sole proprietors. The VITA training covers general tax preparation, with a specific focus on tax credits available to VITA-eligible taxpayers and the use of VITA software. In addition, one session of the course will include a guest lecture/discussion by Professor Jennifer Blouin. She will focus on statutory tax issues related to organizational form choice for self-employed and gig economy workers, which is an important statutory issue in low-income communities. (3) Social policy debate. Tax policy, including deductions, subsidies and credits, are one tool that lawmakers can use to get more cash in the hands of individuals and families, especially for low-income groups. Students will consider the effectiveness and usefulness of tax policies relative to other tools that the government has available. There are three guest lecturers for the sessions on tax policy: Wharton Professors Alex Rees-Jones and Kent Smetters, and Professor Amy Beth Castro from SP2. (4) Working with people. Volunteering with VITA requires students to work with people from a low-income community on the sensitive issue of personal finances. Students will learn to discuss sensitive financial issues with lower-income adults (including many seniors) through readings and in-class discussions, and by reflecting on their real-life experiences in the local community. This skill is important in a variety of roles such as healthcare (physicians and nurses), business (e.g., the HR function), and education. The community service part of the course is volunteering with VITA, which is the IRS’s "Volunteer Income Tax Assistance" program. Following training, students will perform tax services for the West Philadelphia community during the 2023 tax season. The course will meet once a week in three-hour sessions for 8-9 weeks during the Spring semester. Students are expected to be in the field performing service throughout a significant portion of the semester. As described on the IRS website, the VITA program has operated for over 50 years. Volunteers offer free tax help to people who need assistance in preparing their own tax returns, including: • People who generally make $58,000 or less • Persons with disabilities; and • Limited English-speaking taxpayers.
Spring

1 Course Unit

BEPP 2120 Economic Analysis of Law
This course provides an introduction to the economic analysis of law and legal institutions. Our goal is develop intuitions about the ways law simultaneously shapes and responds to private behavioral incentives. In the first half of the course, we will survey the application of key economic concepts to basic features of the Anglo-American common law of property, contract, and tort. In the second half of the course, we will use the tools developed in our survey to focus in depth on the law of intellectual property.
Fall or Spring
Also Offered As: LGST 2120
1 Course Unit

BEPP 2140 Nonprofit Sector: Economic Challenges and Strategic Responses.
The nonprofit sector plays a key role in the provision of many goods and services which are fundamental in our society and which may be difficult to provide using market mechanisms alone. Education, health care, charitable services, and the arts are some primary examples of these. Nonprofit organizations operate in service of specific social missions rather than profit maximization, but in order to serve those missions effectively while ensuring their own survival, they must also make many of the decisions typically associated with private firms. That is, they must compete for funding, human resources, and consumers of their services, they must manage and invest their resources efficiently, and they must innovate new products and services over time. Importantly, the latter requirements may at times come in conflict with the organizations’ social values. As a result, nonprofit organizations as economic decision-makers confront a number of unique challenges to their success and growth. The goal of this course is to give students a broad overview of the economic, organizational, and strategic concerns facing the non-profit sector. Our objective is to characterize the unique economic environment, identify effective strategic governance, and management approaches, and explore how appropriate measurement techniques can inform the policy treatment of nonprofits. This course is organized around a number of lectures, readings and outside speakers, a midterm exam and a required project.
1 Course Unit

BEPP 2200 Behavioral Economics, Markets, and Public Policy
Behavioral economics has revealed a variety of systematic ways in which people deviate from being perfectly selfish, rational, optimizing agents. These findings have important implications for government policy and firm behavior. This course will explore these implications by answering two main questions: (1) what does behavioral economics imply for when and how the government should intervene in markets? (2) What does behavioral economics imply for firms’ pricing and production decisions? The course will present the standard economic approaches to answering these questions and then explore how answers change when we consider that people act in behavioral ways. Towards the end of the course, we will investigate specific policy questions, allowing us to debate solutions while hearing from policy makers operating in a world of behavioral agents.
Spring
1 Course Unit
BEPP 2300 Urban Fiscal Policy
This course will examine the provision of public services for firms and people through cities. Why cities exist, when fiscal policy fails, investments in infrastructure, realities of local governments such as inequality, crime, corruption, high cost of living, congestion, and unfunded pensions and debt, will be covered. We will pay special attention to recent topics, such as partnerships with the private sector, enterprise zones, the role of technology, environmental challenges, and real estate policies that promote housing affordability, such as rent control and inclusionary zoning.
Spring
Also Offered As: FNCE 2300, REAL 2300

BEPP 2330 Consumers, Firms and Markets in Developing Countries
Nearly four-fifths of the world's population lives in low income or developing countries. Though currently far behind the U.S., the 15 fastest growing economies/markets in the world are all developing countries. And developing countries already account for 6 of the world's 15 largest economies. This course will examine economic life, including consumers, firms and markets, in low income countries. We will apply both economic theory and empirical analysis for analyzing the roles of both business and government in consumption, production and market equilibria.
Fall or Spring
1 Course Unit

BEPP 2360 International Housing Comparisons
This course analyzes housing finance systems and housing market outcomes across the globe. In the US, the course focuses on the development of securitization markets and addresses the current challenges of housing finance reform, including the future of Fannie Mae and Freddie Mac. Internationally, the course covers issues of access to housing and housing informality in developing countries, financial crises arising out of the housing sector, and market-oriented and public policy solutions. The course features a wide array of speakers in finance, government and academia who contribute their perspectives to pressing issues of mortgage market design.
Spring
Also Offered As: REAL 2360
1 Course Unit

BEPP 2500 Managerial Economics
This course will introduce you to "managerial economics" which is the application of microeconomic theory to managerial decision-making. Microeconomic theory is a remarkably useful body of ideas for understanding and analyzing the behavior of individuals and firms in a variety of economic settings. The goal of the course is for you to understand this body of theory well enough so that you can effectively analyze managerial (and other) problems in an economic framework. While this is a "tools" course, we will cover many real-world applications, particularly business applications, so that you can witness the usefulness of these tools and acquire the skills to use them yourself. We will depart from the usual microeconomic theory course by giving more emphasis to prescription: What should a manager do in order to achieve some objective? That course deliverable is to compare with description: Why do firms and consumers act the way they do? The latter will still be quite prominent in this course because only by understanding how other firms and customers behave can a manager determine what is best for him or her to do. Strategic interaction is explored both in product markets and auctions. Finally, the challenges created by asymmetric information - both in the market and within the firm - are investigated.
Fall or Spring
Mutually Exclusive: BEPP 2508, BEPP 9500, ECON 2100

BEPP 2610 Risk Analysis and Environmental Management
This course will introduce students to concepts in risk governance. We will delve into the three pillars of risk analysis: risk assessment, risk management, and risk communication. The course will spend time on risk financing, including insurance markets. There will be particular emphasis on climate risks, although the course will also discuss several other examples, including pandemics, biodiversity loss, and systemic risks, among others. The course will cover how people perceive risks and the impact this has on risk communication and management. We will explore public policy surrounding risk management and how the public and private sectors can successfully work together to build resilience, particularly to changing risks.
Fall or Spring
Also Offered As: OIDD 2610
1 Course Unit

BEPP 2630 Environmental & Energy Economics and Policy
This course examines environmental and energy issues from an economist's perspective. Over the last several decades, energy markets have become some of the most dynamic markets of the world economy, as they experienced a shift from heavy regulation to market-driven incentives. First, we look at scarcity pricing and market power in electricity and gasoline markets. We then study oil and gas markets, with an emphasis on optimal extraction and pricing, and geopolitical risks that investors in hydrocarbon resources face. We then shift gears to the sources of environmental problems, and how policy makers can intervene to solve some of these problems. We talk about the economic rationale for a broad range of possible policies: environmental taxes, subsidies, performance standards and cap-and-trade. In doing so, we discuss fundamental concepts in environmental economics, such as externalities, valuation of the environment and the challenge of designing international agreements. At the end of the course, there will be special attention for the economics and finance of renewable energy and policies to foster its growth. Finally, we discuss the transportation sector, and analyze heavily debated policies such as fuel-economy standards and subsidies for green vehicles. Prerequisites: An introductory microeconomics course (ECON1, or another course approved by the instructor) will be sufficient in most cases; BEPP 250 or an equivalent intermediate microeconomics course is recommended.
Also Offered As: OIDD 2630
1 Course Unit

BEPP 2640 Climate and Financial Markets
Climate change might be the defining challenge of our times, with a wide range of effects on financial markets and the broader economy. At the same time, financial markets play an important role in financing the transition to a net-zero economy. This role, however, is shaped by the information that is available to market participants. In this course, we examine how climate risks—both physical and regulatory—affect firms, financial markets (including carbon and renewable-energy certificate markets), and markets for energy and real estate. We examine the role that firms' disclosures and third-party information sources play. As climate change is high on the agenda of almost every company and government, this course will be valuable both for students with the ambition to pursue a career centered around sustainability and those who want to gain a better understanding of how climate issues affect more traditional roles in the financial sector, consulting, or non-profits. The starting point for this course is that financial market participants increasingly realize that climate change represents an important investment risk. One central concern focuses on transition risks, and in particular on the effects that regulatory responses to climate change have on the business models of carbon-intensive energy companies. We discuss how concerns about various climate risks influence the way investors allocate their capital and exercise their oversight of firms. We start with the price impacts of climate risks in equity, debt and real estate markets, including the role played by shareholder activism and engagement, divestment and portfolio alignment. Next, we study carbon markets with a focus on pricing and discuss strategies to hedge climate risks through financial instruments such as carbon or renewable-energy credits and derivative contracts. We then explore how different firms in the global energy sector—ranging from oil & gas to renewable energy to electric utilities—have responded to climate-related pressures from their investors and other stakeholders. Because outsiders' reactions depend on the information that they have, we investigate the impact of ESG reporting on financial markets and on the choices that managers make. Here, we also discuss the costs and benefits of regulating ESG reporting and the impact of greenwashing. We pay special attention to the impact of climate risk and reporting on decisions inside organizations, such as spin-offs, hedging, catastrophe insurance, and the structure of executive-compensation contracts. Further topics include life-cycle emissions and the social cost of carbon.
Spring
Also Offered As: ACCT 2640
Mutually Exclusive: BEPP 7640
Prerequisite: ACCT 1010 AND BEPP 2500
0.5 Course Units
BEPP 2650 Economics of Diversity and Discrimination
This class will cover the economics of gender, race, and discrimination guided by economic theory and empirical evidence. Topics on gender will include workplace discrimination, policies to promote gender equality, the historical evolution of economic gender roles in the US, and initiatives to promote women's empowerment in developing countries. Topics on race will include an overview of historical economic exclusion and its consequences, the empirical measurement of discrimination, models of discrimination and their shortcomings, and how understanding hidden biases and historical barriers can increase firms' equity and performance. This course is complementary with MGMT 2240/MGMT 6240, and material will not overlap, so students especially interested in diversity issues should seek to take both courses. While MGMT 2240/MGMT 6240 focuses on evidence-based solutions for managing diversity, this course focuses on the economic science of race, gender, and discrimination: How do economists model bias? What does empirical evidence say about the benefits of diversity, and the harms of discrimination? How do we measure whether discrimination is still taking place, despite a growing awareness of diversity and inclusion? What is unique about women as economic agents, and how do we understand gender equality in the workplace in light of this? This class will equip students with economics models and empirical evidence that can serve as a toolkit to analyze both policy and business decisions.
Mutually Exclusive: BEPP 7650
1 Course Unit

BEPP 2800 Applied Data Analysis
This course will examine how and when data can be used specifically to infer whether there is a causal relationship between two variables. We will emphasize (a) the critical role of an underlying economic theory of behavior in interpreting data and guiding analysis, as well as (b) a range of advanced techniques for inferring causality from data, such as randomized controlled trials, regression discontinuity, difference-in-difference, audit study (mystery shopping) approaches and stock-market event studies. The issue of causality, and the relevance of thinking about models and methods for inferring causality, is just as central and important for "Big Data" as it is when working with traditional data sets in business and public policy. The emphasis will not be on proofs and derivations but rather on understanding the underlying concepts, the practical use, implications and limitations of techniques. Students will work intensively with data, drawing from examples in business and public policy, to develop the skills to use data analysis to make better decisions. All analysis will be conducted using R. The goals of the course are for students to become expert consumers able to interpret and evaluate empirical studies as well as expert producers of convincing empirical analysis themselves.

BEPP 2840 Game Theory for Business and Life
The objective of this course is to make you more skilled in strategic reasoning. Strategic situations permeate our lives and we will examine many such situations through the lens of game theory. The course is composed of game-theoretic concepts, applications, and experiential learning. The bulk of the applications are to business situations including product entry, bargaining, managerial incentive contracts, and network effects. Given the ubiquitous presence of strategic situations in human societies, applications will also extend to politics, war, sports, history, crime, theology, and every day life, and cover such topics as steroid use in sports, traffic congestion, corruption, racial discrimination, and sexual harassment. Students will regularly participate in experiments involving strategic reasoning, and form teams to compete in a simulated industry environment.

BEPP 2890 Economic Globalization: Policy, History and Contemporary Issues
This course is intended to deepen understanding of the major contemporary issues in the world economy. The focus is on the "big picture" of global economic developments and the evolution of economic thought over the last one hundred years. The topics include: financial market booms and busts; business cycles; monetary and fiscal policies; inequality; the social welfare state; technological change and economic growth; and international trade and financial arrangements. The time period covers: the Roaring Twenties; the Great Depression, the post war Golden Age (1945-1973); the stagflation of the 1970s; the Washington Consensus era of the market liberalization (1980-2007); and the 2008 financial crisis and Great Recession of 2007-2010 and its aftermath. The course also explores different schools of thought. The course will chronicle and compare economic policy and performance of the United States, Europe, Japan and emerging markets (Asia, Latin America, Africa). Spring

BEPP 2990 Independent Study
Fall or Spring
0.5-1 Course Unit
BEPP 3050 Risk Management
The last financial crisis and subsequent recession provide ample evidence that failure to properly manage risk can result in disaster. Individuals and firms confront risk in nearly all decisions they make. People face uncertainty in their choice of careers, spending and saving decisions, family choices and many other facets of life. Similarly, the value that firms create by designing and marketing good products is at risk from a variety of sources. The bankruptcy of a key supplier, sharp rise in cost of financing, destruction of an important asset, impact of global warming, or a liability suit can quickly squander the value created by firms. In extreme cases, risky outcomes can bankrupt a firm, as has happened recently to manufacturers of automobile parts and a variety of financial service firms. The events since the Global Financial Crisis also offer stark reminders that risk can impose significant costs on individuals, firms, governments, and society as a whole. This course explores how individuals and firms assess and evaluate risk, examines the tolls available to successfully manage risk and discusses real-world phenomena that limit the desired amount of risk-sharing. Our focus is primarily on explaining the products and institutions that will serve you better when making decisions in your future careers and lives.

Prerequisite: BEPP 2500 AND FNCE 1000
1 Course Unit

BEPP 3220 Business Insurance and Estate Planning.
This course presents an analysis of overall private wealth management. This includes planning for disposition of closely-held business interests; the impact of income taxes and other transfer costs on business interests and other assets; integration of life insurance, disability insurance, medical benefits, and long-term care insurance in the financial plan; planning for concentrated asset (e.g. common stock) positions, diversification techniques, and asset allocation strategies; distribution of retirement assets; lifetime giving and estate planning; and analysis of current developments in the creation, conservation, and distribution of estates. Attention also is given to various executive compensation techniques (including restricted stock and stock options) and planning for various employee benefits. The course also covers sophisticated charitable giving techniques and methods for financing education expenses. Reading consist of textbooks, case studies, and bulk pack articles.
Fall or Spring
1 Course Unit

BEPP 4010 Public Policy Analysis
BEPP 4010 fulfills the Wharton capstone requirement with a hands-on approach to addressing a key public policy question at the local, state, national, or global level. The question will vary from year to year in order to ensure it is topical and relevant. A core data set will be provided that is appropriate for addressing the defining question to the capstone course. Students will apply economic reasoning and empirical analysis to produce a report yielding new insight into the question of interest.
Not Offered Every Year
Prerequisite: BEPP 2500 AND WH 1010 AND WH 2010 AND MGMT 3010
0.5 Course Units

BEPP 6200 Behavioral Economics, Markets and Public Policy
Behavioral economics has revealed a variety of systematic ways in which people deviate from being perfectly selfish, rational, optimizing agents. These findings have important implications for government policy and firm behavior. This course will explore these implications by answering two main questions: (1) what does behavioral economics imply for when and how the government should intervene in markets? (2) What does behavioral economics imply for firms’ pricing and production decisions? The course will present the standard economic approaches to answering these questions and then explore how answers change when we consider that people act in behavioral ways. Towards the end of the course, we will investigate specific policy questions, allowing us to debate solutions while hearing from policy makers operating in a world of behavioral agents.

1 Course Unit

BEPP 7080 Housing Markets
This course is designed for students interested in the economics and operations of housing markets. It is primarily a U.S. focused course, but does include a limited amount of international material for comparative purposes. The class is divided into four sections: (1) supply and demand for housing, including the operations of homebuilders and rental landlords; (2) house prices, including cycles and price dynamics; (3) international comparisons; and (4) public policy analysis applied to a current housing markets-related issue. This course presumes knowledge of intermediate economics, as we will apply that knowledge throughout the semester. For Wharton students, this means you must have passed BEPP 2500 (undergrads) or MGEC 6110 for MBA’s. Non-Wharton students should have taken the equivalent course in the College. Lecture with discussion required.

Also Offered As: REAL 7080
Prerequisite: MGEC 6110
1 Course Unit

BEPP 7610 Risk Analysis and Environmental Management
This course will introduce students to concepts in risk governance. We will delve into the three pillars of risk analysis: risk assessment, risk management, and risk communication. The course will spend time on risk financing, including insurance markets. There will be particular emphasis on climate risk management, including both physical impact risk and transition risk, although the course will also discuss several other examples, including management of environmental risks, terrorism, and cyber-security, among other examples. The course will cover how people perceive risks and the impact this has on risk management. We will explore public policy surrounding risk management and how the public and private sector can successfully work together to build resilience, particularly to changing risks.
Fall or Spring
Also Offered As: ESE 5670, OIDD 7610
1 Course Unit
BEPP 7630 Energy Markets & Policy
Over the last several decades, energy markets have become some of the most dynamic markets of the world economy. Traditional fossil fuel and electricity markets have been seen a partial shift from heavy regulation to market-driven incentives, while rising environmental concerns have led to a wide array of new regulations and "environmental markets". The growth of renewable energy could be another source of rapid change, but brings with it a whole new set of technological and policy challenges. This changing energy landscape requires quick adaptation from energy companies, but also offers opportunities to turn regulations into new business. The objective of this course is to provide students with the economist's perspective on a broad range of topics that professionals in the energy industry will encounter. Topics include the effect of competition, market power and scarcity on energy prices, the impact of deregulation on electricity and fossil fuel markets, extraction and pricing of oil and gas, geopolitical uncertainty and risk in hydrocarbon investments, the environmental impact and policies related to the energy sector, environmental cap-and-trade markets, energy efficiency, the economics and finance of renewable energy, and recent developments in the transportation sector.
Also Offered As: OIDD 7630
1 Course Unit

BEPP 7640 Climate and Financial Markets
Climate change might be the defining challenge of our times, with a wide range of effects on financial markets and the broader economy. At the same time, financial markets play an important role in financing the transition to a net-zero economy. This role, however, is shaped by the information that is available to market participants. In this course, we examine how climate risks—both physical and regulatory—affect firms, financial markets (including carbon and renewable-energy certificate markets), and markets for energy and real estate. We examine the role that firms' disclosures and third-party information sources play. As climate change is high on the agenda of almost every company and government, this course will be valuable both for students with the ambition to pursue a career centered around sustainability and those who want to gain a better understanding of how climate issues affect more traditional roles in the financial sector, consulting, or non-profits. The starting point for this course is that financial market participants increasingly realize that climate change represents an important investment risk. One central concern focuses on transition risks, and in particular on the effects that regulatory responses to climate change have on the business models of carbon-intensive energy companies. We discuss how concerns about various climate risks influence the way investors allocate their capital and exercise their oversight of firms. We start with the price impacts of climate risks in equity, debt and real estate markets, including the role played by shareholder activism and engagement, divestment and portfolio alignment. Next, we study carbon markets with a focus on pricing and discuss strategies to hedge climate risks through financial instruments such as carbon or renewable-energy credits and derivative contracts. We then explore how different firms in the global energy sector—ranging from oil & gas to renewable energy to electric utilities—have responded to climate-related pressures from their investors and other stakeholders. Because outsiders' reactions depend on the information that they have, we investigate the impact of ESG reporting on financial markets and on the choices that managers make. Here, we also discuss the costs and benefits of regulating ESG reporting and the impact of greenwashing. We pay special attention to the impact of climate risk and reporting on decisions inside organizations, such as spin-offs, hedging, catastrophe insurance, and the structure of executive-compensation contracts. Further topics include life-cycle emissions and the social cost of carbon.
Spring

Prerequisite: (ACCT 6110 OR ACCT 6130) AND MGEC 6110 AND MGEC 6120
0.5 Course Units
BEPP 7650 Economics of Diversity and Discrimination
This class will cover the economics of gender, race, and discrimination guided by economic theory and empirical evidence. Topics on gender will include workplace discrimination, policies to promote gender equality, the historical evolution of economic gender roles in the US, and initiatives to promote women’s empowerment in developing countries. Topics on race will include an overview of historical economic exclusion and its consequences, the empirical measurement of discrimination, models of discrimination and their shortcomings, and how understanding hidden biases and historical barriers can increase firms’ equity and performance. This course is complementary with MGEC 6110/MGEC 6120, and material will not overlap, so students especially interested in diversity issues should seek to take both courses. While MGEC 6110/MGEC 6120 focuses on evidence-based solutions for managing diversity, this course focuses on the economic science of race, gender, and discrimination: How do economists model bias? What does empirical evidence say about the benefits of diversity, and the harms of discrimination? How do we measure whether discrimination is still taking place, despite a growing awareness of diversity and inclusion? What is unique about women as economic agents, and how do we understand gender equality in the workplace in light of this? This class will equip students with economics models and empirical evidence that can serve as a toolkit to analyze both policy and business decisions. The format will be discussion based, with a short lecture each session and then active class discussion, drawing parallels between research and current events and news articles. Students will also present on various topics throughout the semester. The final project can be either a) an original research project, based on one of the topics discussed in class, or b) a case-style analysis of a modern management or policy dilemma building upon the class material.

BEPP 7700 Public Finance and Policy
This course explores the economics and politics of public policy to provide an analytic framework for considering why, how, and with what success/failure government intervenes in a variety of policy areas. Particular attention will be paid to important policy issues relating to taxation, social security, low-income assistance, health insurance, education (both K-12 and higher ed), the environment, and government deficits. The costs and benefits of alternative policies will be explored along with the distribution of responsibilities between the federal, state, and local governments. While the course will focus primarily on U.S. policies, the topics covered (e.g. tax reform, deficits versus austerity, etc.) are currently at the center of the policy debate in many other industrialized countries as well.
Two Term Class, Student may enter either term; credit given for either
Mutually Exclusive: BEPP 2010
1 Course Unit

BEPP 7730 Urban Fiscal Policy
This course will examine the provision of public services for firms and people through cities. Why cities exist, when fiscal policy fails, investments in infrastructure, realities of local governments such as inequality, crime, corruption, high cost of living, congestion, and unfunded pensions and debt, will be covered. We will pay special attention to recent topics, such as partnerships with the private sector, enterprise zones, the role of technology, environmental challenges, and real estate policies that promote housing affordability, such as rent control and inclusionary zoning.
Fall

BEPP 8110 Risk and Crisis Management.
The growing connectivity of global economies and financial markets has produced widespread risk contagion, resulting in increased volatility and an ever-increasing demand for risk capital. This course focuses on understanding the drivers of risk contagion and ways to restore confidence in worldwide markets for pure and financial risk. The class begins with an evaluation of recent financial and pure risk events: for example, the sovereign debt crisis, Japanese earthquake, and BP Deepwater Horizon. We explore how these events are being financed in innovative ways via the capital and insurance markets. Next we emphasize the role of risk management in the preservation and creation of value, helping firms identify, measure, monitor and manage/finance risk. Doing so results in risk-adjusted returns (or return on risk-adjusted capital) that exceed the cost of capital. We devote substantial focus on the practical implementation of effective risk management/financing, given evolving regulatory and governance standards. In addition, we explore opportunities for corporate growth as well as public/private partnerships. The course will conclude with a discussion of emerging markets and the role of risk management in developing a middle class needing new forms of risk transfer/financing.

BEPP 8930 Advanced Study Projects
“This course closes the gap between the theory of business economics analytics and its actual practice, i.e., how you can really use it in your practice. Normally, this type of comprehensive problem solving would require using coding languages like Python or R. However, the instructor for this course has developed a plugin no-code toolbox for Microsoft Excel that allows for end-to-end analytics, making data analytics accessible to a much wider audience. This software plugin will be provided for free to you. You will learn how to conduct in-depth business analytics based on sensible economics reasoning within Excel. The hands-on experience does not require in-depth software coding, and your new skillset is repeatable for your future projects.”
Fall or Spring
0.5-1 Course Unit

BEPP 8970 Special Topics

0.5-1 Course Unit

BEPP 8980 Global Modular Course
Global Modular Course - MBA
0.5 Course Units

BEPP 9000 Research Seminar
Of the many ways that doctoral students typically learn how to do research, two that are important are watching others give seminar presentations (as in Applied Economics Seminars) and presenting one’s own research. The BEPP 9000 course provides a venue for the latter. Wharton doctoral students enrolled in this course present applied economics research. Presentations both of papers assigned for other classes and of research leading toward a dissertation are appropriate in BEPP 9000. This course aims to help students further develop a hands-on understanding of the research process. All doctoral students with applied microeconomic interests are encouraged to attend and present. Second and third year Applied Economic Ph.D. students are required to enroll in BEPP 9000 and receive one-semester credit per year of participation. Two Term Class, Student may enter either term; credit given after both terms are complete
0.5 Course Units

BEPP 9040 Experimental Economics
This course will help prepare you to run your own economics laboratory and field experiments. Experimental methods have been widely adopted by economists to develop new insights, and some economic theories and hypotheses are uniquely well-suited for testing with experimental tools and data. Achieving high internal and external validity requires careful experimental design. Substantive areas of application in the course will include market equilibrium, asset bubbles, learning in games, public good provision, and labor market relationships. Additional topics may include biases in individual decision-making; field experiments in development economics; and happiness, neuroeconomics, and behavioral/experimental welfare economics. Economists’ typical interests in strategic and market-based interactions raise particular methodological challenges and opportunities.
Not Offered Every Year
Also Offered As: OIDD 9040
1 Course Unit
BEPP 9110 Empirical Public Policy
This course examines econometric research on a variety of topics related to public policy, with the goal of preparing students to undertake academic-caliber research. The course is not an econometrics or statistics course per se; rather, it focuses on research designs with observational data and how econometric techniques are applied in practice. The course aims to train students to do applied economic research that involves measuring effects of theoretical or practical interest. It proceeds in two major parts. The first part examines endogeneity and inference about causal relationships, instrumental variables methods and critiques, and panel data methods. The second part of the course addresses 'structural' econometric modeling. Topics covered in this part include sorting and selection, entry models, and counterfactual analyses of policy changes. The course proceeds by analyzing, in detail, approximately 24 well-known empirical research papers in applied economics or related fields. These include public economics and tax policy, labor economics, law and economics, health care policy, industrial organization and competition, transportation demand and policy, and others. Spring
1 Course Unit

BEPP 9150 Behavioral Economics and Policy Analysis
In this course we will be surveying the ways in which behavioral economics ideas are influencing economic analysis in different "applied micro" fields. A guiding focus of the course will be studying the role of behavioral economics when conducting welfare or policy analysis. The course will begin with a high-level overview of the common themes seen across all the fields we will discuss, and then we will proceed through a series of modules in which we examine the specifics in different applications. Over the course of the semester, we will dive into public finance, health economics, market design, labor economics, and industrial organization. Fall or Spring
Prerequisite: ECON 7110
1 Course Unit

BEPP 9310 Numerical Methods in Economics
The objective of this course is to introduce graduate students to computational approaches for solving economic models. We will formulate economic problems in computationally tractable form and use techniques from numerical analysis to solve them. Examples of computational techniques in the current economics literature as well as discuss areas where these techniques may be useful in future research will be disclosed. We will pay particular attention to methods for solving dynamic optimization problems and computing equilibria of games. The substantive applications will cover a wide range of problems including industrial organization, game theory, macroeconomics, finance, and econometrics. Fall or Spring
1 Course Unit

BEPP 9320 Contract Theory and Applications
The course provides an advanced introduction to the theory of contracts and its mixture of foundational theories and applications to fields such as labor, reguindustrial organization. Spring
1 Course Unit

BEPP 9330 Public Economics: Social Insurance and Government Expenditures
The first part of this course will examine the rationale for and economic impact (e.g. on saving, labor supply, etc.) of social insurance programs such as social security, unemployment insurance and disability insurance. The next major part of the course will explore these same issues for government interventions in health insurance markets. The course will then cover research on public goods, externalities, fiscal federalism, and economic stimulus (including the government's recent response to the "Great Recession") before proceeding to an exploration of the government's role in K-12 and high education. Both theoretical and empirical evidence will be covered along with a mix of classic studies and more cutting-edge research. Throughout the course we will discuss the tradeoffs - for example between the protection and distortion of social insurance programs – that influence government's optional role. While the focus will be on evidence from the U.S., some research from other industrialized and developing countries will also be covered. Fall or Spring
1 Course Unit

BEPP 9410 Development Economics
This course will cover current microeconomic issues of developing countries including poverty, risk, savings, human capital, and institutions. We will also explore the causes and consequences of market failures that are common in many developing countries with a focus on credit, land, and labor markets. The course is designed to introduce recent research with focus on empirical methods and testing theories with data. Fall or Spring
1 Course Unit

BEPP 9500 Managerial Economics
Public goods, externalities, uncertainty, and income redistribution as sources of market failures; private market and collective choice models as possible correcting mechanisms. Microeconomic theories of taxation and public sector expenditures. The administration and organization of the public sector. Fall or Spring
Prerequisite: BEPP 2500

**BEPP 9620 Applied Economics Seminar**
The goal of this course is to help doctoral students develop critical thinking skills through both seminar participation and writing of referee reports. To this end students will attend the Wharton Applied Economics each Wednesday at noon seminar when it meets; prepare two written referee reports on WAE papers per semester, due before the seminar is presented. After attending the seminar and the ensuing discussion of the paper, students will prepare follow-up evaluations of their referee reports, due one week after the seminar.
Two Term Class, Student may enter either term; credit given after both terms are complete
Also Offered As: REAL 9620
0.5-1 Course Unit

**BEPP 9710 Market Design**
The course covers Market Design, the analysis and engineering of market rules and institutions. In the last 60 years practitioners and academics have deliberately engineered the rules of an increasing number of markets, with classic examples including medical resident matching (e.g., NRMP), spectrum auctions (e.g., FCC auctions), and organ donation exchanges. In the last few years, very large markets have been created from scratch, such as eBay, Adwords, and smaller markets like odesk.com and sittercity.com. These designs use a broad set of tools, including economic theory, empirical analysis and experiments (and a fair dose of trial-and-error). With this experience, useful principles have emerged, on what market failures typically have to be addressed, and on which rules work and which do not.
1 Course Unit

**BEPP 9870 Industrial Organization and Competition Policy**
This course focuses on empirical methods and applications of research topics in Industrial Organization. Although not exclusively, the course will focus mostly on the application of econometric techniques used to study specific markets and antitrust policies. The topics that will be covered include the evaluation of market power and mergers, product differentiation, investment and innovation, collusion, price discrimination, vertical relations, entry and product positioning, and the dynamics of industries. The course will also discuss research methodologies related to microeconomic theory, computational methods, and econometric analysis. The applicability of the techniques goes beyond the field of Industrial Organization, and include the Labor, Health, Trade and Public economics.

1 Course Unit

**CAMB 4800 Advanced Cell Biology**
This course is designed for beginning graduate students and advanced undergraduates with a particular enthusiasm for cell biology. Biology 4010 does not attempt to cover all aspects of cell biology, and is therefore not appropriate for students seeking a lecture course which provides a comprehensive survey of the field. Rather, the primary objective of this course is to teach those students considering a career in the biomedical sciences how to read, discuss, and question original research papers effectively. Intensive classroom discussions focus on the experimental methods used, results obtained, interpretation of these results in the context of cell structure and function, and implications for further studies.
Spring
Also Offered As: BIOL 4010
Mutually Exclusive: BIOL 5010
Prerequisite: BIOL 2001 OR BIOL 2010
1 Course Unit

**CAMB 4830 Epigenetics**
This course investigates epigenetic phenomena: heritable alternate states of gene activity that do not result from an alteration in nucleotide composition (mutations). Epigenetic mechanisms regulate genome accessibility and cell differentiation. They play a key role in normal development and in oncogenesis. For example both mammalian X-chromosome inactivation and nuclear transfer (cloning) are subject to epigenetic regulation. Amongst the epigenetic mechanisms we will discuss in this course are chromatin organization, histone modification, DNA methylation and non-coding RNAs. The course is geared toward advanced undergraduate and beginning graduate students and is a combination of lectures, student presentations and research presentations by guest speakers. Students will work with the current scientific literature.
Spring
Also Offered As: BIOL 4234
Mutually Exclusive: BIOL 5234
Prerequisite: BIOL 2210
1 Course Unit

**CAMB 4850 The RNA World: A functional and computational analysis**
A focused study of genomic, biochemical, cellular, and molecular aspects of RNA. Topics of study will include RNA structure, RNA processing and turnover, splicing, ribozymes and riboswitches, RNA editing and modification, RNA interference, endogenous eukaryotic RNA silencing pathways, small RNA biology, computational methodologies for studying RNA biology, and RNA viruses. Lectures, students presentations, and discussions will be based on readings from the primary literature.
Spring, odd numbered years only
Also Offered As: BIOL 4235
Prerequisite: BIOL 2210
1 Course Unit

2023-24 Catalog | Generated 08/02/23
CAMB 4860 Chromosomes and the Cell Cycle
Life depends on the propagation of genetic material from one generation to the next through cycles of genome replication and cell division. The genome is copied by the parent, and one exact copy is inherited by each daughter cell. We will treat chromosomes as discrete entities, rather than collections of genes, that are replicated and divided with high fidelity to ensure that the genome remains stable over many generations. By reading selected primary literature covering several decades, we will build an understanding of the cell cycle by focusing on chromosomes and the associated molecular machinery. We will explore mechanisms that underlie replication and division, particularly control mechanisms that maintain genome integrity and are critical to prevent disease. The goal of the course is to develop a picture of the cell cycle by examining some of the key experiments and insights that have led to our current understanding.
Spring
Also Offered As: BIOL 4026
Mutually Exclusive: BIOL 5026
Prerequisite: BIOL 2010
1 Course Unit

CAMB 4930 Epigenetics of Human Health and Disease
Epigenetic alterations encompass heritable, non-genetic changes to chromatin (the polymer of DNA plus histone proteins) that influence cellular and organismal processes. This course will examine epigenetic mechanisms in directing development from the earliest stages of growth, and in maintaining normal cellular homeostasis during life. We will also explore how diverse epigenetic processes are at the heart of numerous human disease states. We will review topics ranging from an historical perspective of the discovery of epigenetic mechanisms to the use of modern technology and drug development to target epigenetic mechanisms to increase healthy lifespan and combat human disease. The course will involve a combination of didactic lectures, primary scientific literature and research lectures, and student-led presentations.
Spring, even numbered years only
Also Offered As: BIOL 4244, GCB 4930
Prerequisite: BIOL 2210
1 Course Unit

CAMB 5010 Topics in Cancer Biology
Topics in Cancer Biology - more to come. Placeholder course for now
1 Course Unit

CAMB 5020 Topics in Developmental, Stem Cell and Regenerative Biology
Topics in Developmental, Stem Cell and Regenerative Biology
1 Course Unit

CAMB 5030 Topics in Genetics and Epidemiology
Topics in Genetics and Epidemiology - more to come. Placeholder course for now.
1 Course Unit

CAMB 5040 Topics in Gene Therapy and Vaccines
TBD - placeholdering the course for now
1 Course Unit

CAMB 5050 Topics in Cell and Molecular Biology
Topics in Cell and Molecular Biology
1 Course Unit

CAMB 5060 Topics in Microbiology, Virology and Parasitology
Topics in Microbiology, Virology and Parasitology. More info TBD, course is a placeholder for now.
1 Course Unit

CAMB 5070 Topics in Physiology, Metabolism and Cell Biology
Topics in Physiology, Metabolism and Cell Biology. This course will be better defined later. Right now using this as placeholder since we need to get this info in the system by February 20
1 Course Unit

CAMB 5080 Topics in Quantitative Training
Topics in Quantitative Training. This course will be better defined later. Right now using this as placeholder since we need to get this info in the system by February 20
1 Course Unit

CAMB 5100 Immunology for CAMB
The purpose of this course is to provide a thorough grounding in immunology to Cell and Molecular Biology graduate students, with an emphasis on the role of the immune system in combating infectious diseases. This is a required course for CAMB students in the Microbiology, Virology and Parasitology program and the Vaccine and Gene Therapy program, replacing IMMU 506 (Immune Mechanisms). It may also be used as an elective by CAMB students in other programs such as those from the Cancer Biology program and Cell Biology, Physiology and Metabolism program. Prerequisite: If course requirements not met, permission of instructor required. The course is divided into two parts. The first deals with innate immune response with a focus on pattern recognition and subsequent signaling in infection by bacteria, viruses, and parasites. The second half will focus on adaptive immune mechanisms, the structure, function, and molecular biology of antigen receptors and major histocompatibility complex molecules, and the development, activation, and differentiation of lymphocytes and other hematopoietic cells involved in immunity. The course is comprised of two 1.5-hour lectures per week, with Friday journal club on selected weeks.
Spring
Prerequisite: BIOM 6000
1 Course Unit

CAMB 5110 Principles of Development
This graduate course, which will include lectures and readings from the literature, is designed to provide a foundation in the principles of developmental biology. Topics covered will include: the germ line and piRNA, signaling pathways in development, pattern formation and cell specification, gastrulation, tissue differentiation, morphogenesis, cell polarity, epigenetics in development, organogenesis, stem cell biology, regeneration, and developmental evolution. The use of molecular biology, biochemistry, genomics and genetics, cell biology, and embryological manipulations will be discussed in the context of the analysis of developmental mechanisms. Undergraduate background in cell biology and molecular biology required. Non-BGS students require permission from course director to enroll.
Spring
1 Course Unit
CAMB 5120 Cancer Biology and Genetics
The course objective is to introduce the students to important and current concepts in Cancer Biology and Cancer Genetics. The lectures are organized into 4 broad thematic groups: A) Intro to Cancer Biology and Signal Transduction (e.g., tumor suppressor and oncogene function, DNA repair pathways, senescence, apoptosis); B) Intrinsic and Extrinsic Drivers (e.g., tumor microenvironment, hypoxia, angiogenesis); C) Genome regulation and in Primary and Metastatic Tumors and D) Evading Cell Death. The organizers, along with faculty from the School of Medicine, the Wistar Institute, and CHOP, with expertise in the corresponding areas provide lectures for the course. The students are expected to present and participate in discussions of one or more key recent papers. This is a year-long course. Non-CAMB students must contact the course director prior to registration. This course is not for undergraduates. Students must have taken the fall CAMB 5120 course to participate in the spring semester.
Two Term Class, Student may enter either term; credit given after both terms are complete
0.5 Course Units

CAMB 5180 Current Topics in Ion Channels
The course is a seminar format, specifically a journal club format, targeted to graduate students and MD/PhD students interested in ion channels. It meets for one hour, once a week for graduate students and once every other week for the entire group with formal presentation. On alternate weeks a faculty member meets with students to discuss and review the contents of each selected article for the subsequent week’s presentation. This is an elective course meant to excite and intellectually enlighten students regarding the latest advances in ion channel research. It includes a wide range of ion channel topics from basic biophysics, structure, and physiology to cell biology and clinical applications. It is attended by faculty, students, and postdocs from the departments of Physiology, Pathology, Neuroscience, Pharmacology, Biochemistry & Biophysics, Psychiatry. We require a written critique of each paper presented by other participants during the semester, submitted prior to the formal presentation of the paper. This critique will be graded by a faculty member, as will the student’s participation in both the preparatory sessions and formal presentation sessions. A final grade would be based on both of these components.
Fall or Spring
Prerequisite: BIOM 6000
1 Course Unit

CAMB 5220 Human Evolutionary Genomics
Advanced seminar on current topics in human genomics and human evolution. Topics include the methods used for mapping and sequencing genomes; phylogenetic and population genetic analysis; and detecting variation in the human genome. This course is designed for graduate students but advanced undergraduates with a strong background in genetics are also welcome.
Spring, odd numbered years only
Also Offered As: BIOL 5220
1 Course Unit

CAMB 5300 The Cell Cycle, Genome Integrity and Cancer
This seminar course focuses on molecular and biochemical events that regulate cell cycle progression and genome maintenance, and explores how these processes influence cancer etiology and treatment. Specific topics will familiarize students with the key principles and recent developments within these areas. These topics include CDK-Cyclins and their inhibitors, regulation of G1-S and G2-M phase cell cycle transitions, DNA damage checkpoints and repair, the impact of chromatin regulation on DNA repair, and how each of these processes affects cancer etiology and treatment. In depth reading and evaluation of research literature will be primarily used to accomplish these aims, as well as provide instruction on rigorous experimental design and data interpretation. If course requirements not met, permission of instructor required. Preferential registration of Cancer Biology and CAMB students up to the maximum of 12 students applies. Permission to register is required upon exceeding the 12 student limit.
Fall
Prerequisite: BIOM 5550 AND BIOM 6000
1 Course Unit

CAMB 5320 Human Physiology
This course will present a survey of the physiology of most of the major organ systems. It will integrate knowledge of cellular and molecular mechanisms into an understanding of function at the tissue, organ, and organism levels. It will begin with a brief review of membrane physiology, followed by electrophysiology and signaling in nerve. Then, after a brief outline of neural control systems and their role in homeostasis, it will present motility and muscle, the cardiovascular system, respiration, the renal and gastrointestinal systems, and selected topics from the endocrine system, the reproductive systems, environmental and exercise physiology. As well as providing a basis of integrative physiology for students in fields such as physiology, bioengineering and pharmacology, it should be of interest to students of cellular and molecular biology and genetic engineering who will need to appreciate the roles of specific systems and molecules at higher levels of organization. Prerequisite: Although not a formal prerequisite, a good foundation in cell bio level of BIOM/CAMB 6000 (or an equivalent upper level undergraduate strongly recommended. A general understanding of the chemistry biochemistry of macromolecules, and of basic molecular biology is assumed. This course is primarily designed for 2nd year BGS stud year students in BGS or other programs will require the permission instructor. This course is not open to undergraduates.
Fall
Also Offered As: PHRM 5320
1 Course Unit

CAMB 5340 Seminar on current genetic research: Human Disease Modeling in Experimental Sys
An advanced seminar course emphasizing genetic research in model organisms and how it informs modern medicine. Each week a student will present background on a specific human disease. This is followed by an intense discussion by the entire class of 2 recent papers in which model organisms have been used to address the disease mechanism and/or treatment. As a final assignment, students will have the opportunity to write, edit, and publish a “News & Views” style article in the journal "Disease Models and Mechanisms". Offered spring semester. Prerequisite: If course requirements not met, permission of instructor required.
Spring
Also Offered As: NGG 5340
Prerequisite: CAMB 5420 OR CAMB 6050
1 Course Unit
CAMB 5420 Topics in Molecular Medicine
TiMM is planned as a once-weekly seminar course whose goal is to introduce students to the ways in which biomedical research can provide new insights into clinical medicine and, conversely, how knowledge of clinical disease impacts scientific discovery. There are two sections for the course — 401 and 402. Section 401 is for first year MD/PhD students only and section 402 is for VMD/PhD and PhD students.
Fall
Also Offered As: PHRM 5420
1 Course Unit

CAMB 5500 Genetic Principles
This is a required course of the Genetics and Epigenetics Program and is designed to provide students with a comprehensive overview of genetic concepts and methodology. The course is organized into three parts: I Fundamental genetic concepts and tools; II Genetics of model organisms (with focus on worms, flies, zebrafish and mice); III Human genetics and disease. Each week there will be two lectures and one associated discussion/problem-solving session. Discussions emphasize practical aspects of generating and interpreting genetic data. Offered spring semester.
Spring
1 Course Unit

CAMB 5770 Advanced Epigenetics Technology
Second year students in GCB, CAMB (G&E), or IGG programs using genomics methods to measure transcriptomics and epigenomics changes in their experimental systems. The goal is to familiarize students with the latest cutting-edge genomics tools and cover solutions to major experimental and computational challenges in the investigation of genome-wide epigenetic data sets. Students will develop competence in (i) variations of experimental techniques improving resolution and throughout, (ii) issues related to the computational analyses closely related to the various genome-wide assays used to probe epigenetic processes and signals, (iii) computational approaches useful to overcome pitfalls associated to the analysis of a given epigenetic data modality, (iv) methods, techniques and studies on the integration of multi-layer epigenetic data sets.
Spring
Also Offered As: GCB 5770, MTR 5350, PHRM 5350
Prerequisite: (BIOL 4234 OR BIOL 4244) AND GCB 5340 AND (GCB 5350 OR GCB 5360)
1 Course Unit

CAMB 5970 Neural Development, Regeneration and Repair
General Description: The goals of this course are to examine the principles underlying the nervous system development and to learn how understanding developmental mechanisms can inform strategies to promote regeneration and repair. This is not a survey course. Rather, the course will focus on selected topics, for which we will discuss the genetic, molecular and cellular strategies employed to study these problems in different model organisms. Emphasis is on how to interpret and critically evaluate experimental data. Students who are not in one of the BGS graduate programs need instructor permission to enroll.
Fall
Also Offered As: NGG 5970
Prerequisite: BIOM 6000
1 Course Unit

CAMB 6010 Advanced Virology Seminar
This seminar course covers current topics and important concepts in virology. Students will read selected papers on various topics in virology. Each subject will be illustrated by ground-breaking classic papers and innovative recent articles. Students will present a seminar under the guidance of a faculty member. Grades will be based on the quality of the seminar(s) and participation in discussion. Prerequisite: Non-CAMB students must obtain instructor approval.
Spring
Prerequisite: CAMB 7060
1 Course Unit

CAMB 6050 CAMB First Year Seminar
Topics are selected by course instructors and student participants. Course instructors vary yearly. The goal of this course is to provide students with an opportunity to analyze, present, and discuss significant research papers in the field of cell and molecular biology in small group settings. The sections are taught by faculty from the different programs within the Graduate Group. This is a required course for CAMB PhD students. Other BGS students are eligible, space permitting.
Fall
1 Course Unit

CAMB 6080 Regulation of Eukaryotic Gene Transcription
An advanced seminar course emphasizing current topics in gene regulatory mechanisms in eukaryotes. Based on the current literature, presentations and in depth discussions will familiarize the student with recent innovations and developing principles of genome regulation. Students are expected to bring their laptops to class. Non-CAMB students need approval from course directors. MD/PhD students do not need to take BIOM 5550 as prerequisite.
Fall
Prerequisite: BIOM 5550
1 Course Unit
CAMB 6090 Vaccines and Immune Therapeutics
Vaccination is perhaps the most successful medical technological intervention. The goal of this course is to expand on students’ general understanding of the immune system and to focus this understanding towards the application of modern vaccines and immune therapies in the 21st century. The course will provide the student with a sense of how these principles are applied to a vaccine and immune therapeutic development. The course covers basic vaccine science and describes how this science is translated through clinical, regulatory, ethical, and political issues to result in a final vaccine product. The courses’ goal is to leave the student with an understanding of the implications of modern vaccines/immunotherapies and their impact on world health. Initial lectures review immune mechanisms believed to be responsible for vaccine-induced protection from disease. Subsequent lectures build on this background to explore the science of vaccines for diverse pathogens, including agents of bioterrorism, as well as vaccines and immunotherapies for cancer. An appreciation for the application of laboratory science to the clinical development and clinical trials of vaccines are provided. An important focus on the regulatory, safety, and ethical implications of vaccines in different world situations based on true world examples are presented. The financial implications of specific vaccines with these implications for global health is a focus of the course. The course is presented in a lecture-style consisting of multiple distinguished guest lecturers who are experts in their particular area of vaccine development. There are required readings to provide the student context and background for the diverse lectures. Students are graded on course participation and a final project/exam which the students will present. The project is to design a vaccine strategy for a current disease or pathogen of importance that does not as yet have an effective vaccine or immune therapy and present this to the class. Strategies used should build on the material presented in the class lectures. The course is intended for graduate students or medical students in various MS, Ph.D., or MD/Ph.D. programs on the campus, as well as local scientists and professionals in the community. As a prerequisite, students should have taken biology, biochemistry, or immunology courses at the advanced college level. This course is offered in the fall semester. Prerequisite: BIOM 6000

Also Offered As: IMUN 6090
1 Course Unit

CAMB 6100 Molecular Basis of Genetic Therapies
This course focuses on the basic science relevant to achieving efficient and effective gene transfer and genome editing in animal models and humans for the treatment of disease. The course includes units devoted to a variety of vectors useful for gene transfer, the fundamentals of genome editing, and current therapeutic approaches using specific diseases as models. Prior background in biochemistry, cell biology, and molecular biology is essential. Aspects of organ system anatomy and physiology, virology, and immunology that are relevant to the course material are included in the course. Because of rapid movement in this field, specific topics vary somewhat from year to year. Offered every fall. Students not enrolled in a BGS graduate program who wish to take this course must notify Dr. Musunuru in advance in order to be added to a waiting list, given the limited enrollment. Students should send their undergraduate and graduate transcripts (including spring semester) along with their request to Dr. Musunuru via email: kiranmusunuru@gmail.com. This class is not accepting non-BGS masters students or auditors. Background in biochemistry, cell biology, and molecular biology is prerequisite for this course. Fall
1 Course Unit

CAMB 6150 Protein Conformation Diseases
Protein misfolding and aggregation has been associated with over 40 human diseases, including Alzheimer’s disease, Parkinsons disease, amyotrophic lateral sclerosis, prion diseases, alpha (1)-antitrypsin deficiency, inclusion body myopathy, and systemic amyloidoses. This course will include lectures, directed readings and student presentations to cover seminal and current papers on the cell biology of protein conformational diseases including topics such as protein folding and misfolding, protein degradation pathways, effects of protein aggregation on cell function, model systems to study protein aggregation and novel approaches to prevent protein aggregation. Target audience is primarily 1st year CAMB, other BGS graduate students, or students interested in acquiring a cell biological perspective on the topic. MD/PhDs and Postdocs are welcome. MS and undergraduate students must obtain permission from course directors. Class size is limited to 14 students. Fall
Also Offered As: BMB 5180
Prerequisite: BIOM 6000
1 Course Unit
CAMB 6170 Emerging Infectious Diseases
A physician from just 25 years ago would not recognize two of today's most pressing public health problems, AIDS and Hepatitis C, nor be familiar with many other infectious diseases or agents including MERS, Ebola virus, Hantavirus, HTLV-1, HHV-8 and Borrelia burgdorferi. Such a physician might also be dismayed to learn that old enemies such as tuberculosis, malaria, diphtheria, West Nile virus, meningococcal meningitis, Yellow fever, and Dengue have become more (or rather less) prevalent due to antibiotic resistance and other factors. In addition, bioterrorism, long a theoretical possibility, is now part of today's reality and could result in the deliberate introduction of anthrax or other biological agents into the civilian population or the food supply. Thus, with the beginning of the new millennium, the medical profession, the veterinary profession, and the biomedical research establishment are faced with the triple-threat of emerging infectious diseases, reemerging infectious diseases, and bioterrorism. These topics are covered in this course, with an emphasis on student's participation in the discussion. Course open to graduate students only. Other students may petition the course director for permission to enroll. Emerging Infectious Diseases will cover emerging viral, bacterial and parasitic organisms, with lectures being given by faculty from the Schools of Medicine, Veterinary Medicine, Dental Medicine, and Arts and Sciences, and outside lecturers. Epidemiology, immune responses to infection, vaccine and antimicrobial agents, and pathogenesis will be discussed. The course format will include short lectures by various faculty members to provide background information on each topic, followed by extensive discussion by students. Classes will run from 10am to 11:30AM on Mondays and Wednesdays in Johnson 207. Evaluation will be based on presentations of a research manuscript from the literature and participation in discussion sessions. Prerequisite: BIOM 6000 AND CAMB 7060 1 Course Unit

CAMB 6330 Advanced Seminar in Gene Therapy
Class: Each class will involve a review of a manuscript in the field of gene therapy selected by course faculty (Drs. Kurre, Pardi, Melenhorst or Rivella). Two weeks prior to their lecture, faculty will assign one primary research paper plus review articles that provides relevant background. Before the session, each paper will be assigned to a student presenter, who will prepare slides and meet with the faculty lecturers ahead of time. Two faculty will be present for each class. The student leader will introduce the paper and ask the group to each cover a portion of the result section in order to promote discussion, interaction and participation. Each session will last 1 hour, including presentation of the manuscript and Q&A. Each session will cover one paper on a weekly base, alternating these classes with lectures (see below). Each presentation will be utilized to grade the students (70%). Lectures: during each lecture, a faculty or external speakers will lecture for 40 minutes followed by a 15 minutes breakout discussion. The student will attend and ask questions during or at the end of the lecture. These lectures will happen independently from the paper discussion. Dr. Rivella, or a substitute, will also be present at each lecture. Prerequisites: Second year students, who already have notions of cell manipulation, immunotherapy and vector biology. Spring, odd numbered years only 1 Course Unit

CAMB 6320 Cell Control by Signal Transduction Pathways
This course, "Targeting the cancer cell: from mechanism to precision medicine", will examine how various signal transduction mechanisms influence cell functions including replication, growth, transcription, translation and intracellular trafficking. We will also consider how non-cell autonomous mechanisms, such as the tumor microenvironment and the immune system influence cancer cell signaling. We will consider how important signaling pathways, such as Ras, Raf, Notch, Wnt, TGF beta, and various kinases/phosphatases become dysregulated in cancer, as well as delve into how the DNA damage response, immune system, and tumor microenvironment exert important influences on oncogenic signaling. In the first half of the course, invited faculty members will pick 2 relatively recent papers from their field that highlight important areas. Each paper will be assigned to a student, who will meet with the faculty mentor prior to the class to discuss the paper and their presentation. During the class, students will present each paper for approximately 45 minutes with time for discussion. Students will present the important background, break down the paper, look for strengths and weakness and come up with a plan of what the next set of experiments could or should be. In the second half of the course, students will independently pick a relevant paper for in class presentation and will also write a short "News and Views" style article based on the paper they have chosen. The goal of the course is to provide students with a view of the cancer cell that integrates both cell autonomous and non-cell autonomous signals and to use this information to consider how to successfully treat cancer. Spring Also Offered As: NGG 6150, PHRM 6320 Prerequisite: BIOM 6000 1 Course Unit
CAMB 6910 Advanced Topics in Cell Biology & Physiology
This course, together with its companion CAMB 6920, offers an advanced, in-depth analysis of selected topics in cell biology and physiology. CAMB 6910 and 6920 are complementary courses that focus on different aspects of cell biology; these courses are offered on an alternating basis in the spring semester. The courses can be taken in either order, but require BIOM 6000 or an equivalent background in basic cell biology. CAMB 6910 will focus on key issues at the forefront of research in the areas of (1) Channels and transporters, (2) Vesicular and viral trafficking, (3) Tissue mechanics, (4) Heart and muscle physiology, (5) Cytoskeletal dynamics and cell division. The course format pairs faculty presentations with student-led discussion sessions highlighting important papers from the primary literature. Students will be evaluated on their presentations, their participation in class discussions, and weekly problem sets. Offered alternately in the spring semester with CAMB 6920. Permission needed for all non-CAMB students. Advanced undergrads must contact instructor to confirm qualifications.
Spring, odd numbered years only
Prerequisite: BIOM 6000
1 Course Unit

CAMB 6920 Advanced Topics in Cell Biology and Physiology II: Cell Signaling and Metabolism
Cells in complex organisms are required to adapt rapidly in a changing environment. Maintaining homeostasis while performing specialized functions requires that cells respond to extracellular signals as well as fluctuations in a host of intracellular metabolites. This course will cover selected topics and general principles related to signal transduction and the control of metabolic flux in living cells. The course format will include student-led discussion sessions both providing an overview of a topic as well as focusing on important papers from the primary literature. Students will be evaluated on their presentations and participation, as well as problem sets. Offered alternately in the spring semester with CAMB 691.
Spring, even numbered years only
Prerequisite: BIOM 6000
1 Course Unit

CAMB 6950 Scientific Writing
This 7-week course is designed to introduce students to basic scientific writing skills and is based upon the premise that clear writing, giving feedback, and receiving feedback are all essential tools for professional development. While this is not strictly a prelim preparatory course, applying the principles of this course will help improve your prelim writing and your scientific writing in general. Structure: An initial introductory lecture for the entire class is followed by 6 weekly small group sessions. These sessions are conducted as workshops designed to enhance student and faculty engagement to improve scientific writing. During the course, participants review the principles of clear, persuasive writing, and apply these principles to writing for a scientific audience. Particular emphasis is placed on conveying the significance of your research, outlining your aims, and discussing your results. Classes are highly interactive, and the majority of class time will be spent discussing student scientific writing. In order to focus on the techniques of scientific writing, in-class discussion and critiques will not address scientific methodology or interpretations of results. Evaluations: One of the goals of the course is to encourage active and open interaction among students, and grading will be predominantly based on class attendance, participation, and timely submission of assignments, not on the quality of the writing itself. Offered spring semester.
Spring
Prerequisite: (BIOM 5550 AND BIOM 6000) AND CAMB 6050
0.5 Course Units

CAMB 6970 Biology of Stem Cells
The goal of this course is to introduce graduate students to the field of stem cell biology through lectures and reviews of important contributions from the literature. Topics include embryonic stem cells, epigenetics and reprogramming, tissue specific stem cells such as hematopoietic, neuronal and epithelial stem cells, tissue regeneration, and tissue engineering. The future potential and challenges in stem cell and regeneration biology will be discussed. Important aspects of stem cell identification and characterization utilizing multiple model systems will also be a focus. Offered Fall Semester.
Fall
1 Course Unit

CAMB 6980 Elective Tutorials in Cell and Molecular Biology
Interested students must contact the course directors well in advance to get permission to enroll in the course: Dr. Lee (jjl@pennmedicine.upenn.edu) for the fall semester or Dr. Stanger (bstanger@upenn.edu) for the spring semester. Total course enrollment is limited to 12 students (first come, first served). Students will meet weekly with a faculty mentor to focus in-depth on a biomedical topic of their choice. Prior to each semester in which the course is offered, students are encouraged to make arrangements with faculty on their own and contact mentors directly to set up an individualized plan. Student should submit proposed mentors/topics to the course director before enrolling. The course director must approve the plan prior to enrollment. This tutorial course is designed to provide students with an in-depth knowledge of a specific topic in Cell and Molecular biology. The tutorial can be used to enable students to become more deeply acquainted with the literature related to their field of interest or to expand on a topic that the student found interesting in one of their basic courses. It is also intended to improve presentation skills. Final student grades will be based on mentor evaluations as well as a written review-style paper and brief (10 min) presentation to all students enrolled in the course. One-term course offered either term.
Fall or Spring
Prerequisite: BIOM 6000
1 Course Unit

CAMB 6990 Lab Rotation
Student lab rotation.
0-4 Course Units

CAMB 7000 Topics in Microbiology
This course is designed for second year students in the MVP program, and focuses on pathogen-host interactions. Students make a presentation designed for 30 minutes on a topic of their choice. The topic can be something that they are working on, or simply something that they are interested in. They are requested to provide sufficient background, discuss what is known and what is not known about the topic, and then frame two to three Specific Aims. The success of the course rests entirely upon the quality of the faculty and students involved. In past years, the class have been very interactive, with each class lasting about 1.5 hours. The discussions are deliberatly wide-ranging, and review recent literature, techniques, and how to construct a grant. Generally, two faculty will be in attendance. Permission of instructor required to enroll. Students must have taken Immunology and two MVP pathogen classes.
Spring
1 Course Unit
CAMB 7010 Tumor Microenvironment
This course is designed for second year (and up) graduate students interested in learning about the tumor microenvironment. The course will cover the main players of the tumor microenvironment field (stroma, vasculature and immune cells) and emphasize the connections between the basic biology of the tumor microenvironment to potential therapeutic intervention. The goals of this course are to enrich scientific culture, train for clear and concise oral presentations, improve grant-writing skills, and develop critical thinking, professional composure, and discussion skills. The course will be divided into 4 broad topic areas. The course will begin with didactic lectures presented with overviews of Immunology, Stromal cells and extracellular matrix, and Angiogenesis/Endothelial cells. After that each session will be student run and consist of one hour of presentation of a didactic background lecture regarding the salient points of that week’s topic, followed in the second hour by a discussion of a primary research paper(s) to be read in advance of the session by all class participants. Discussions will include specific technical background needed for the paper, presentation of the KEY data in the paper, leading discussion on the data and conclusions drawn from the paper and putting them in the context of the state of the field. Specific requirements for students include: - One to two presentations throughout the course. Students will be guided in choosing the appropriate depth of background nd topic area and ingiving formal presentations and constructive criticism of scientific data. - Submission of a discussion point each week that a student is not presenting, due the night before class. - A Specific Aims Page for a grant using one of his or her two presentations as "preliminary data" or their own research project provided it is related to the tumor microenvironment and is approved by one of the course directors. Evaluation: Students will be evaluated on their participation in class (30%), their presentations (30%), their discussion points (15%) and their Specific Aims Page (25%). Students will be given feedback immediately after their presentations. Prerequisite: First year CAMB core courses must be completed. Course is for 2nd year graduate students and beyond. CB students get first priority followed by other CAMB students. Spring
1 Course Unit

CAMB 7020 Current Biochemical Topics
Participation in the "Dr. George W. Raiziss Biochemical Rounds", a weekly seminar program sponsored by the Department of Biochemistry and Biophysics. Program deals with a wide range of modern biochemical and biophysical topics presented by established investigators selected from our faculty, and by leading scientists from other institutions. Prerequisite: Permission needed from Department
Fall, Spring, and Summer Terms
Also Offered As: BMB 6500
1 Course Unit

CAMB 7030 Mechanobiology of the Cell and its Microenvironment
This course is geared towards first and second graduate students in BGS/CAMB and SEAS/BE with an interest in the interface of extracellular matrix (ECM) cell biology and biomechanics. Students will learn about the ECM and adhesion receptors and their impact on the cytoskeleton and signaling, as well as fundamental concepts in biomechanics and engineered materials. We will discuss how these topics can inform the study of cell biology, physiology and disease. An additional objective of the course is to give students experience in leading critical discussions and writing manuscript reviews. Invited outside speakers will complement the strengths of the Penn faculty. Spring, odd numbered years only
Also Offered As: BE 6400
Prerequisite: BIOM 6000
1 Course Unit

CAMB 7040 Stress Responses in Metabolism and Cancer
The course meets once a week for student presentations and lectures. The first 2-3 weeks encompasses lectures on state-of-the-art metabolic labeling, metabolomics, and other related methodologies. Subsequently, both "historical" and more recent papers in the field of cancer metabolism are reviewed with individual faculty experts in each chosen area. The overall goal of the course is to give students a better understanding of the abrogation of normal cellular metabolism and stress during cancer, and how these interplay with each other to create/retain a malignant state. Grades are dependent on 2 presentations per semester, class participation, and weekly answers to 2-3 questions on the assigned papers. Must have completed first-year CAMB courses to enroll.
Fall
1 Course Unit

CAMB 7050 Advanced Topics in Bacterial-Host Interactions
This course will delve into specific topics in general area of bacterial pathogenesis and bacteria-host interactions. We will be exploring key historical and current papers on topics related to bacterial invasion of and replication within host cells, bacterial interference with host cell signaling pathways, bacterial interactions with host mucosal tissues, and the role of bacterial colonization in shaping and instructing host immune responses. Each week, a student will lead the class in the discussion of published papers on a specific topic. The format of each class will be a 10-15 minute introduction of the key background and underlying questions to be presented by the student, followed by an in-depth analysis by all members of the class of one to two articles. Students will be graded based on their introductory presentation and active participation in the paper discussions. Recommended strong background in cell biology, immunology and/or bacteriology fulfilled by 1st year CAMB (previous BGS) courses. Course is limited to 2nd - 3rd year graduate students or advanced undergraduates with course directors permission.
Spring
1 Course Unit
CAMB 7060 MVP Core
This is a year-long course for the incoming CAMB-MVP students and others wishing to gain a broad overview of pathogens and their interactions with hosts. The course will provide students with key fundamental knowledge of Microbiology, Virology and Parasitology. The course starts with introductory lectures on Concepts of Host-Pathogen interactions. The rest of the course is divided into sections on Bacteriology, Virology and Parasitology. Each week there are three 1 hour class slots that are either lectures on a specific topic or discussions of a relevant paper presented by students. Classes are led by faculty from across the campus and are highly interactive. Evaluation is based on mid and final take home essay topics for each of the three sections. Regular attendance and active participation in the discussions is also part of the evaluation.
Two Term Class, Student may enter either term; credit given after both terms are complete
1 Course Unit

CAMB 7070 Cell and Gene Therapy
This course will provide students with a general overview of translational research in the area of gene and cell therapy. This includes technical considerations, translating preclinical investigation into therapeutics, the execution of gene and cell therapies clinical trials, and key regulatory issues. Entrepreneurial considerations will be discussed as well. By the end of this course, students will understand the basic technologies employed for gene and cell therapy along with approaches and pitfalls to translating these therapies into clinical applications including regulatory and commercial aspects of this emerging area. Prerequisite: For graduate students, at least one prior course in immunology. An undergraduate-level or medical school immunology course is sufficient to meet the prerequisite.
Spring
Also Offered As: MTR 6210, REG 6210
1 Course Unit

CAMB 7080 HIV Virology/Pathogenesis/Cure Seminar/Journal Club
This will be a year-long class, held every other week, that is paper-based utilizing the current literature in HIV virology, pathogenesis and cure research. The class will have a journal club format with attendance and participation open to the full Penn student & postdoc community (teach-your-peers). Enrolled students will be responsible for approximately 4-5 presentations over the duration of the course, as well as for bi-weekly paper selection in conjunction with the instructors and coordinating the presentations by other participants. Prerequisites: Strong background in cell biology, immunology or virology fulfilled by 1st yr CAMB Courses. Course is limited to graduate students. Instructor permission required for non-CAMB graduate students.
Two Term Class, Student may enter either term; credit given after both terms are complete
1 Course Unit

CAMB 7090 Quantitative Imaging and Analysis for Biologists (QIAB)
This course will provide an introduction to the fundamentals of modern light microscopy and image analysis utilizing the free software package, Fiji, as a guide. Topics include fundamentals of basic and advanced light microscopy, image data optimization, and commonly-used processing and analysis tools such as filters, segmentation, tracking, and simple macro programming. The goal is to provide students with the background and confidence required to pursue more advanced quantitative imaging methods as the need arises in their research. Students will be graded based on their active participation in class, completion of hands-on Fiji exercises, and a final presentation describing an application of at least one of the analysis methods covered in class to their own image data. CAMB 7090 is limited to 2nd - 4th-year graduate students who have previous/current experience with light microscopy. Permission to enroll from course directors is required for all students.
0.5 Course Units

CAMB 7100 Drug Discovery and Development
This course will expose graduate-level students to the process of drug discovery and development. The course will be structured to cover topics from the identification of a disease-relevant target through to Phase III Clinical Trials. The course will be lecture based and there will also be student-led journal club presentations as part of the course. There will also be a writing project consisting of a 3 page proposal of how to advance one of the areas of Drug Discovery & Development covered in the course.
Spring
Also Offered As: BMB 6050, PHRM 6050
1 Course Unit

CAMB 7110 Integrative plant and animal mechanobiology
This course aims to provide students with an understanding of biomechanics that spans the plant and animal kingdoms, with the goal of emphasizing principles common to both. Major concepts include 1) Plant and Animal Cell Biology; 2) Solid, Fluid, and Transport Mechanics; and 3) Integrating Biology and Mechanics - Big Questions. In addition to lectures, there will be two journal article discussion sections. Most lectures will be given by Penn faculty, although selected topics (particularly in plant biology and mechanics) will be covered by faculty at other sites through lectures broadcast remotely. The Penn director will be present at all sessions of the class. Undergraduates require special permission from the director.
Fall
Also Offered As: BE 7110
1 Course Unit

CAMB 7120 Topics in Cancer Biology
This course is an elective course for 2nd year Cancer Biology Students on a range of cancer-related topics. The course is designed to expose students to a range of topics in cancer biology, improve writing skills, train students to give clear and concise oral presentations, develop active listening and critical thinking skills as well as discussion skills. The course will also teach students about rigor and reproducibility in experimental design. The course will interface with Cancer Biology WIP talks (which are only given by 3rd year and up students) and complement journal club and prelim preparation. Completion of first-year CAMB courses required to enroll. Course is designed for second-year CAMB students.
Two Term Class, Student may enter either term; credit given for either
1 Course Unit
CAMB 7130 Neuroepigenetics
This is a course intended to bring students up to date concerning our understanding of Neural Epigenetics. It is based on assigned topics and readings covering a variety of experimental systems and concepts in the field of Neuroepigenetics, formal presentations by individual students, critical evaluation of primary data, and in-depth discussion of potential issues and future directions, with goals to: 1) Review basic concepts of epigenetics in the context of neuroscience, 2) Learn to critically evaluate a topic (not a single paper) and set the premise, 3) Improve experimental design and enhance rigor and reproducibility, 4) Catch up with the most recent development in neuroepigenetics, 5) Develop professional presentation skills - be a story teller. Each week will focus on a specific topic of Neuroepigenetics via a "seminar" style presentation by a class member. Prerequisite: If course requirement not met, permission of instructor is required.
Fall
Also Offered As: NGG 7130
Prerequisite: BIOM 5550
1 Course Unit

CAMB 7140 DIYtranscriptomics
As access to high-throughput sequencing technology increases, the bottleneck in biomedical research has shifted from generating data, to analyzing and integrating diverse data types. Addressing these needs requires that students and postdocs equip themselves with a toolkit for data mining and interrogation. This course focuses specifically on studying global gene expression (transcriptomics) through the use of the R programming environment and the Bioconductor suite of software packages - a versatile and robust collection of tools for bioinformatics, statistics, and plotting. During this semester-long course students participate in a mix of lectures and guided code review, all while working with real datasets directly on their laptop. Students will learn to analyze RNAseq data using a lightweight and reusable set of modular scripts that leverage open-source software. In addition, students will learn best practices in data science for working in R/Bioconductor, including creating interactive data visualizations, making their analyses transparent and reproducible, and identifying experimental bias in large datasets. Students are encouraged, but not required, to bring their own RNAseq data to the course. This course requires completion of pre-course materials provided by the instructor.
Fall or Spring
1 Course Unit

CAMB 7520 Genomics
Recent advances in molecular biology, computer science, and engineering have opened up new possibilities for studying the biology of organisms. Biologists now have access to the complete genomic sequence and set of cellular instructions encoded in the DNA of specific organisms, including homo sapiens, dozens of bacterial species, the yeast Saccharomyces cerevisiae, the nematode C. elegans, and the fruit fly Drosophila melanogaster. The goals of the course include the following: 1. introduce the basic principles involved in sequencing genomes, 2. familiarize the students with new instrumentation, informative tools, and laboratory automation technologies related to genomics, 3. teach the students how to access the information and biological materials that are being developed in genomics and 4. examine how these new tools and resources are being applied to basic and translational research. This will be accomplished through in depth discussion of classic and recent papers. Prerequisite: Permission of Instructor.
Spring
Also Offered As: GCB 7520
Prerequisite: GCB 5340
1 Course Unit

CAMB 8990 Pre-Dissertation Lab Rot
Pre-dissertation research lab rotation.
0-4 Course Units

CAMB 9950 Dissertation
0 Course Units

Chemical & Biomolecular Engineering (CBE)

CBE 0099 Undergraduate Research and Independent Study
An opportunity for the student to work closely with a professor in a project to develop skills and technique in research and development. To register for this course, the student writes a one-page proposal that is approved by the professor supervising the research and submitted to the undergraduate curriculum chairman during the first week of the term.
Fall or Spring
1-2 Course Units

CBE 1500 Introduction to Biotechnology
The goal of this course is to teach you the fundamentals of biotechnology and introduce you to concepts in Chemical Engineering along the way. Concepts in Biotechnology that will be covered include, DNA, RNA, the Central Dogma, proteins, recombinant technology, RNA silencing, electrophoresis, chromatography, synthetic biology, pull down assays, PCR, hybridization, array technology, DNA machines, DNA sequencing, and forensics. Concepts in Chemical Engineering that will be covered include the mass balance, scaling laws and the Buckingham-Pi theorem, kinetics of enzyme reactions, thermodynamics of molecular binding, the Langmuir isotherm, separations via chromatography. Reserved for Freshmen only.
Fall
1 Course Unit

CBE 1600 Introduction to Chemical Engineering
Chemical Engineering integrates basic science, mathematics, and engineering principles in a coherent manner that equips Chemical Engineers to tackle a remarkable variety of challenges, "from quantum mechanics to techno-economics". This course introduces students to the subject through a multifaceted lens that emphasizes the generality of conservation laws, physico-chemical phenomena and engineering design principles, in several different settings. These include but are not limited to chemical transformations at scale, energy and environmental science, design and formulation of drugs, food science, materials processing, and biomaterials. Students will develop familiarity with process flow diagrams, computational tools used in Chemical Engineering, foundational concepts pertaining to thermodynamics and transport, and the methods of engineering design. The class also surveys seminal Chemical Engineering contributions that have altered the course of human history. This course is well suited to students entering the major, or any student who is simply curious about how all the pieces come together to design and manufacture the molecules, materials, products and processes that shape everyday life.
Spring
1 Course Unit
CBE 2300 Material and Energy Balances of Chemical Processes
This course introduces the principles of material and energy balances and their applications to the analysis of single- and multiple-phase processes used in the chemical, pharmaceutical, and environmental industries. The course focuses on the conceptual understanding of properties of pure fluids, equations of state, and heat effects accompanying phase changes and chemical reactions, and problem-solving skills needed to solve a wide range of realistic, process-related problems.
Fall
Prerequisite: CBE 1600
1 Course Unit

CBE 2970 Study Abroad
Fall or Spring
1 Course Unit

CBE 3000 Special Topics in Chemical and Biomolecular Engineering
This course will be offered when necessitated by demand and permitted by schedule. The topics covered by the course will vary depending on the particular interests and expertise of the instructor(s). Topics are generally subjects of contemporary concern in the discipline.
Not Offered Every Year
1 Course Unit

CBE 3200 Basic Chemical Process Safety
Process safety is an important but often overlooked aspect of a chemical engineer's education. When working in chemical engineering, it's simply not possible to learn by trial and error when the error can have catastrophic or dangerous implications. Students will learn the important technical fundamentals to allow them to contribute to a safer future. Chemical process safety is a scientific discipline as important as chemical production. What the students learn here could literally save their life. At the conclusion of the course, the expectation is that students should be able to identify hazards, safety risks and perform inherently safer design for chemical processes. By the end of the course, students will achieve Level I certification from SACHE (Safety and Chemical Engineering Education), a division of AIChE.
Spring
Prerequisite: CBE 2310 AND CBE 3500
1 Course Unit

CBE 3250 Renewable Energy
This course covers engineering concepts for renewable energy processes. Fundamental engineering calculations for solar, wind, biofuel, geothermal, and hydroelectric energy production in comparison to oil and gas will be covered. Electric vehicles and energy storage will be discussed. Students will consider the specific needs of public health, safety and welfare in addition to global, cultural, social, environmental and economic factors will be in a particular country for a group project.
Spring
Prerequisite: CHEM 1011 AND PHYS 141
1 Course Unit

CBE 3500 Fluid Mechanics
This course is designed for students to understand the fundamental characteristics of fluids. We will develop, starting from first principles, the basic equations for fluid statics, and use them to assess buoyancy forces and determine the pressure variations in fluids with rigid body rotation. Students will understand in detail the basic types of fluid flow line patterns (eg. streamlines and streamtubes) and the different types of interchangeable energy forms (eg. kinetic, potential, and pressure). It is also important to develop, starting from first principles, the formulations for inviscid and viscous flow problems. These include the discussion of a control system and system boundaries, the detailed construction of conservations equations of mass, energy, and momentum for Newtonian fluids, the derivation of the Navier-Stokes equations, and the determination of appropriate initial and boundary conditions. A final objective of the course is to solve various fluid mechanics problems using control systems, dimensional analysis, and developed equations. Such problems include, but are not limited to, the terminal velocity of a falling sphere, Stokes flow, the relation between the friction factor and the Reynolds number, and flow profiles in numerous geometries.
Fall
Prerequisite: CBE 2310
1 Course Unit

CBE 3510 Heat and Mass Transport
Spring
Prerequisite: CBE 3500
1 Course Unit

CBE 3530 Molecular Thermodynamics and Chemical Kinetics
Fall
Prerequisite: CBE 2310 AND (CHEM 2210 OR MSE 2210)
1 Course Unit
CBE 3600 Chemical Process Control
Spring
Prerequisite: CBE 2300
1 Course Unit

CBE 3710 Separation Processes
The design of industrial methods for separating mixtures. Distillation; liquid-liquid extraction; membranes; absorption. Computer simulations of the processes.
Spring
Prerequisite: CBE 2310
1 Course Unit

CBE 3750 Engineering and the Environment
The course will introduce emerging environmental issues, relevant engineering solutions, and problem-solving techniques to students. The case study approach will be used to assist students to develop and apply the fundamental engineering skills and scientific insights needed to recognize a variety of environmental problems that have profound impacts on all aspects of modern society. Sophomore standing required to enroll.
Spring
1 Course Unit

CBE 3990 Engineering Independent Study
An opportunity for the student to work closely with a professor in a project to develop skills and technique in engineering research and development. To register for this course, the student writes a one-page proposal that is approved by the professor supervising the research and submitted to the undergraduate curriculum chairman during the first week of the term. This course is distinct from CBE 0099 in its emphasis on the engineering aspects of the research topic, and as such it can be used as a CBE elective. In the Project Proposal described on the Application for Independent Study form, the proposal should highlight the engineering aspects of the work. A final report is required to be submitted to the supervising professor and the undergraduate curriculum chair, who will work together to assign a grade.
Fall or Spring
1 Course Unit

CBE 4000 Introduction to Product and Process Design
Introduction to product design, process synthesis, steady-state and batch process simulation, synthesis of separation trains, second-law analysis, heat integration, heat-exchanger design, equipment sizing, and capital cost estimation.
Fall
Prerequisite: CBE 3510 AND CBE 3710
Corequisite: CBE 4510
1 Course Unit

CBE 4100 Chemical Engineering Laboratory
Experimental studies in heat and mass transfer, separations and chemical reactors to verify theoretical concepts and learn laboratory techniques. Methods for analyzing and presenting data. Report preparation and the presentation of an oral technical report.
Fall
Prerequisite: CBE 3510 AND CBE 3710
1 Course Unit

CBE 4300 Introduction to Polymers
Polymer is one of the most widely used materials in our daily life, from the rubber tires to clothes, from photoresists in chip manufacturing to flexible electronics and smart sensors, from Scotch tapes to artificial tissues. This course teaches entry-level knowledge in polymer synthesis, characterization, thermodynamics, and structure-property relationship. Emphasis will be on understanding both chemical and physical aspects of polymers, polymer chain size and molecular interactions that drive the microscopic and macroscopic structures and the resulting physical properties. We will discuss how to apply polymer designs to advance nanotechnology, electronics, energy and biotechnology. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, shape memory polymers, hydrogels, and elastomeric deformation and applications.
Fall
Also Offered As: MSE 4300
Prerequisite: (MSE 2600 OR CBE 2310) AND CHEM 2210 AND MEAM 2030
1 Course Unit

CBE 4470 Societally Significant Soft Matter Solutions
In this course, students will work on case studies for soft matter solutions to problems of societal significance. Examples will be drawn from the pharmaceuticals industry, emerging concepts in carbon capture, process intensification, clean energy, personal care and other fields that exploit our ability to design soft matter systems. The course will take the form of discussions to set societal context, lectures (including guest lecturers who are technical innovators in the field) to provide fundamental underpinnings, and student-led case studies of current approaches in which students critique current solutions and propose competing approaches. This course is designed with students in the junior or senior year in mind. The course is designed to be co-requisite with transport phenomena (CBE 3510 or equivalent), separations (CBE 3710 or equivalent), and thermodynamics (CBE 2310 or equivalent).
Fall
Mutually Exclusive: CBE 5470
1 Course Unit

CBE 4510 Chemical Reactor Design
Fall
Prerequisite: CBE 2310 AND CBE 3510
1 Course Unit

CBE 4590 Product and Process Design Projects
Design of chemical, biochemical, and materials products and processes based on recent advances in chemical and bioengineering technology. Design group weekly meetings with faculty advisor and industrial consultants. Comprehensive design report and formal oral presentation. Heat exchanger design and profitability analysis.
Spring
Prerequisite: CBE 4000
1 Course Unit
CBE 4790 Biotechnology and Biochemical Engineering
The objective of this course is to teach junior CBE students the application of chemical engineering principles to biological systems in order to design biochemical processes. At the end of the course, students should be able to describe a process to produce and isolate a protein from a host cell. Students will work in groups on a current biotechnology topic related to chemical engineering that will be presented to the class and written as a final report. One of the course goals is to prepare students for a successful biotechnology lab experience in CBE 4800. Problem solving, models, open-ended problems, technical communication skills, and teamwork will be emphasized.
Fall
Prerequisite: CBE 2310
1 Course Unit

CBE 4800 Laboratory in Biotechnology and Biochemical Engineering
The laboratory methods covered include CRISPR/Cas9, production of proteins from cells in a bioreactors, purification of proteins by chromatography, and immobilized enzyme reactions. The students write several individual technical memos and submit weekly data analysis assignments. A group presentation and report on a new biotechnology technique is the final assignment for the lab. Oral and written communication skills are emphasized to improve technical communication skills.
Spring
Prerequisite: CBE 4790
1 Course Unit

CBE 5000 Special Topics in Chemical and Biomolecular Engineering
This course will be offered when necessitated by demand and permitted by schedule. The topics covered by the course will vary depending on the particular interests and expertise of the instructor(s). Topics are generally subjects of contemporary concern in the discipline.
Not Offered Every Year
1 Course Unit

CBE 5050 Carbon Capture
Carbon dioxide capture and sequestration has recently emerged as one of the key technologies needed to meeting growing worldwide energy demand while simultaneously reducing carbon dioxide emissions into the atmosphere. The objective of this course is to provide a quantitative introduction into the science and technology of carbon dioxide capture and sequestration. The following topics will be covered. General CO2 chemistry as it applies to capture and sequestration. Applied thermodynamics including minimal work and efficiency calculations for separation. CO2 separation from syngas and flue gas for gasification and combustion processes and the potential for direct air capture. Transportation of CO2 in pipelines and sequestration in deep underground geological formations. Pipeline specifications, monitoring, safety engineering, and costs for long distance transport of CO2. Comparison of options for geological sequestration in oil and gas reservoirs, saline aquifers, and mineral formations. Environmental risk assessment and management. Life cycle analysis
Spring
1 Course Unit

CBE 5060 Introduction to High-Performance Scientific Computing
Research problems in the domain of physical, biological and biomedical sciences and engineering often span multiple time and length-scales from the molecular to the organ/organism, owing to the complexity of information transfer underlying biological mechanisms. Multiscale modeling (MSM) and high-performance scientific computing (HPC) have emerged as indispensable tools for tackling such complex problems. However, a paradigm shift in training is now necessary to leverage the rapid advances, and emerging paradigms in HPC — GPU, cloud, exascale supercomputing, quantum computing — that will define the 21st century. This course is a collaboration between Penn, UC Berkeley, and the Extreme Science and Engineering Discovery Environment (XSEDE) which administers several of the federally funded research purpose supercomputing centers in the US. It will be taught as a regular 1 CU course at Penn by adopting a flip-classroom/active learning format. The course is designed to teach students how to program parallel architectures to efficiently solve challenging problems in science and engineering, where very fast computers are required either to perform complex simulations or to analyze enormous datasets. The course is intended to be useful for students from many departments and with different backgrounds, e.g., scholar of Penn Institute for Computational Science, although we will assume reasonable programming skills in a conventional (non-parallel) language, as well as enough mathematical skills to understand the problems and algorithmic solutions presented.
Fall or Spring
Also Offered As: BE 5160
1 Course Unit

CBE 5080 Probability and Statistics for Biotechnology
The course covers topics in probability theories and statistical techniques, with emphasis placed on the practical problems relevant to the subject areas of biotechnology. The course provides a rigorous introduction to such topics as elements of probability, random variables and probability functions, random samples, parameter estimations, hypothesis testing, regression, analysis of variance, lifetime testing, and nonparametric tests.
Summer Term
1 Course Unit

CBE 5100 Introduction to Polymers
Polymer is one of the most widely used materials in our daily life, from the rubber tires to clothes, from photoresists in chip manufacturing to flexible electronics and smart sensors, from Scotch tapes to artificial tissues. This course teaches entry-level knowledge in polymer synthesis, characterization, thermodynamics, and structure-property relationship. Emphasis will be on understanding both chemical and physical aspects of polymers, polymer chain size and molecular interactions that drive the microscopic and macroscopic structures and the resulting physical properties. We will discuss how to apply polymer designs to advance nanotechnology, electronics, energy and biotechnology. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, shape memory polymers, hydrogels, and elastomeric deformation and applications.
Fall
Also Offered As: MSE 5800
1 Course Unit
CBE 5110 Physical Chemistry of Polymers and Amphiphiles
This course deals with static and dynamic properties of two important classes of soft materials: polymers and amphiphiles. Examples of these materials include DNA, proteins, diblock copolymers, surfactants and phospholipids. The fundamental theories of these materials are critical of understanding polymer processing, nanotechnology, biomembranes and biophysics. Special emphasis will be placed on understanding the chain conformation of polymer chains, thermodynamics of polymer chains, thermodynamics of polymer solutions and melts, dynamics of polymer and statistical thermodynamic principles of self-assembly.
Fall
1 Course Unit

CBE 5140 Data Science and Machine Learning in Chemical Engineering
The main objective of this course is to teach concepts and implementation of deep learning techniques for scientific and engineering problems to advanced undergraduate and graduate students. This course entails various methods, including theory and implementation of deep learning techniques to solve a broad range of computational problems frequently encountered in solid mechanics, fluid mechanics, non-destructive evaluation of materials, systems biology, chemistry, and non-linear dynamics. At the end of the course participants will be able to: (1) Understand the underlying theory and mathematics of deep learning; (2) Analyze and synthesize data in order to model physical, chemical, biological, and engineering systems; (3) Apply physics-informed neural networks (PINNs) to model and simulate multiphysics systems. Students should have prior coursework in advanced calculus, linear algebra, probability, and computer programming in Python.
Spring
Prerequisite: MATH 2400 AND MATH 2410
1 Course Unit

CBE 5150 Chemical Product Design
Introduction to product design, molecular and mixture design, functional and formulated product design, design of device products, pharmaceutical product and process design, optimal batch process design strategies, batch process simulation, six-sigma design
1 Course Unit

CBE 5170 Principles of Genome Engineering
This course covers up-to-date techniques in genome engineering and its application in basic research and translational medicine. Genetic engineering techniques including site-directed DNA recombination (Cre-Lox, Phi31 integrase), genome editing (TALEN, CRISPR/Cas-9), next generation sequencing, and molecular imaging will be covered. Key concepts in genomics, epigenetics, gene regulation will be introduced, and application of genetic engineering techniques in the field of developmental biology, stem cell biology, and synthetic biology will be discussed.
Spring
1 Course Unit

CBE 5220 Polymer Rheology and Processing
This course focuses on applications of rheology to polymer process technologies. It includes a general review of rheological concepts, including viscoelasticity and the influence of shear rate, temperature and pressure on polymer flow properties. The course covers the elementary processing steps common in various types of polymer manufacturing operations including handling of particulate solids, melting, pressurizing and pumping, mixing and devolatilization. Specific polymer processing operations including extrusion, injection molding, compression molding, fiber spinning and wire coating are covered. Emerging polymer processing applications in microelectronics, biomedical devices and recycling are also discussed.
Fall or Spring
1 Course Unit

CBE 5250 Molecular Modeling and Simulations
Students will explore current topics in thermodynamics through molecular simulations and molecular modeling. The requisite statistical mechanics will be conveyed as well as the essential simulation techniques (molecular dynamics, Monte Carlo, etc.). Various approaches for calculating experimentally measurable properties will be presented and used in student projects. Students should have basic familiarity with statistical mechanics.
Fall
1 Course Unit

CBE 5300 Electrochemistry Fundamentals, Practices, and Analysis
This course is aimed at acquiring the necessary knowledge and skills to become an electrochemistry researcher. Basic principles of electrochemistry will be covered that include electrochemical thermodynamics and kinetics, mass transfer, and electric double layer. Those will be accompanied by experimental methods commonly used in electrochemistry such as linear sweep voltammetry, cyclic voltammetry, chronoamperometry, chronopotentiometry, rotating disk electrodes, and electrochemical impedance spectroscopy. The application of such knowledge in the existing and emerging areas of electrochemistry research will be looked at with real examples from the literature. This course is intended to provide students with a learning experience to help them become electrochemists and electrochemical engineers.
Spring
1 Course Unit

CBE 5350 Interfacial Phenomena
This course provides an overview of fundamental concepts in colloid and interface science. Topics include the thermodynamics of interfaces, interfacial interactions (e.g. van der Waals interactions, electrostatics, steric interactions), adsorption, the hydrodynamics and stability of interfacial systems, self-assembly, etc. Connections to self-assembly and directed assembly of nanomaterials and emerging topics are explored. Pre-requisites: undergraduate thermodynamics, some familiarity with concepts of transport phenomena (including fluid flow and mass transfer) and differential equations
Fall or Spring
1 Course Unit
CBE 5400 Principles of Molecular and Cellular Bioengineering
This course aims to provide theoretical and conceptual principles underlying biomolecular and biological systems. The course will start with basic and advanced concepts in physical chemistry and thermodynamics and introduce statistical mechanics as a tool to understand molecular interactions. The applications will be of relevance to bioengineering and biology disciplines. The course will not shy away from mathematical formulations and will stress the molecular perspective. This course explores physical biology of the cell across several length and timescales, while simultaneously emphasizing molecular specificity and clinical implications such as disease outcome or biomedical applications. The course emphasizes how the basic tools and insights of engineering, physics, chemistry, and mathematics can illuminate the study of molecular and cell biology to make predictive biomedicine models and subject them to clinical validation. Drawing on key examples and seminal experiments from the current bioengineering literature, the course demonstrates how quantitative models can help refine our understanding of existing biological data and also be used to make useful clinical predictions. The course blends traditional models in cell biology with the quantitative approach typical in engineering, in order to introduce the student to both the possibilities and boundaries of the emerging field of physical systems biology. While teaching physical model building in cell biology through a practical, case-study approach, the course explores how quantitative modeling based on engineering principles can be used to build a more profound, intuitive understanding of cell biology. Worksheets will be integral to this course. Recitation will comprise of biweekly illustrations of problems and concepts from the worksheets and biweekly quizzes
Fall or Spring
Also Offered As: BE 5400
1 Course Unit

CBE 5440 Computational Science of Energy and Chemical Transformations
Our theoretical and computational capabilities have reached a point where we can do predictions of materials on the computer. This course will introduce students to fundamental concepts and techniques of atomic scale computational modeling. The material will cover electronic structure theory and chemical kinetics. Several well-chosen applications in energy and chemical transformations including study and prediction of properties of chemical systems (heterogeneous, molecular, and biological catalysts) and physical properties of materials will be considered. This course will have modules that will include hands-on computer lab experience and teach the student how to perform electronic structure calculations of energetics which form the basis for the development of a kinetic model for a particular problem, which will be part of a project at the end of the course. Thermodynamics, Kinetics, Physical Chemistry, Quantum Mechanics. Undergraduates should consult and be given permission by the instructor.
Fall or Spring
1 Course Unit

CBE 5450 Electrochemical Energy Conversion and Storage
Fuel cells, electrolysis cells, and batteries are all electrochemical devices for the interconversion between chemical and electrical energy. These devices have inherently high efficiencies and are playing increasingly important roles in both large and small scale electrical power generation, transportation (e.g. hybrid and electric vehicles), and energy storage (e.g. production of H2 via electrolysis). This course will cover the basic electrochemistry and materials science that is needed in order to understand the operation of these devices, their principles of operation, and how they are used in modern applications. Prerequisite: Introductory chemistry and an undergraduate course in thermodynamics (e.g. CBE 2310, MEAM 2030)
Fall or Spring
1 Course Unit

CBE 5460 Fundamentals of Industrial Catalytic Processes
A survey of heterogeneous catalysis as applied to some of the most important industrial processes. The tools used to synthesize and characterize practical catalysts will be discussed, along with the industrial processes that use them.
Spring
1 Course Unit

CBE 5470 Societally Significant Soft Matter Solutions
In this course, students will work on case studies for soft matter solutions to problems of societal significance. Examples will be drawn from the pharmaceuticals industry, emerging concepts in carbon capture, process intensification, clean energy, personal care and other fields that exploit our ability to design soft matter systems. The course will take the form of discussions to set societal context, lectures (including guest lecturers who are technical innovators in the field) to provide fundamental underpinnings, and student-led case studies of current approaches in which students critique current solutions and propose competing approaches. This course is designed with students in the junior or senior year in mind. The course is designed to be co-requisite with transport phenomena (CBE 3510 or equivalent), separations (CBE 3710 or equivalent), and thermodynamics (CBE 2310 or equivalent).
Fall
Mutually Exclusive: CBE 4470

1 Course Unit

CBE 5540 Engineering Biotechnology
Advanced study of re DNA techniques; bioreactor design for bacteria, mammalian and insect culture; separation methods; chromatography; drug and cell delivery systems; gene therapy; and diagnostics.
Spring
Also Offered As: BE 5540
1 Course Unit
CBE 5550 Nanoscale Systems Biology
Nano-science and engineering approaches to systems in biology are of growing importance. They extend from novel methods, especially microscopies that invite innovation to mathematical and/or computational modeling which incorporates the physics and chemistry of small scale biology. Proteins and DNA, for example, are highly specialized polymers that interact, catalyze, stretch and bend, move, and/or store information. Membranes are also used extensively by cells to isolate, adhere, deform, and regulate reactions. In this course, students will become familiar with cell & molecular biology and nanobiotechnology through an emphasis on nano-methods, membranes, molecular machines, and ‘polymers’ - from the quantitative perspectives of thermodynamics, statistical physics, and mechanics. We specifically elaborate ideas of energetics, fluctuations and noise, force, kinetics, diffusion, etc. on the nano- thru micro-scale, drawing from very recent examples in the literature. Laboratory experiments will provide hands-on exposure to microscopies in a biological context (eg. fluorescence down to nano-scale, AFM), physical methods (eg. micromanipulation, tracking virus-scale particles or quantum dots), and numerical problems in applied biophysics, chemistry, and engineering. A key goal of the course is to familiarize students with the concepts and technology (plus their limitations) as being employed in current research problems in nanoscale systems biology, extending to nanobiotechnology. Prerequisite: Background in Biology, Physics, Chemistry or Engineering with coursework in Thermodynamics or permission of the instructor. Fall
Also Offered As: BE 5550, MEAM 5550
1 Course Unit

CBE 5560 The Biochemical Engineering of Wine
This course surveys the biochemical and biochemical unit operations involved in the commercial production of modern wines. Topics will include grape growing, pressing, fermentation, filtration, and packaging/aging. Emphasis will also be placed on yeast microbiology and wine biochemistry. Lectures will be supported by wine tasting sessions to highlight the important characteristics of different wine types. Spring
1 Course Unit

CBE 5570 Stem Cells, Proteomics and Drug Delivery - Soft Matter Fundamentals
Lectures on modern topics and methods in cell and molecular biology and biomedicine from the perspective of soft matter science and engineering. Discussions and homeworks will cover soft matter related tools and concepts used to 1) isolate, grow, and physically characterize stem cells, 2) quantify biomolecular profiles, 3) deliver drugs to these cells and other sites (such as tumors with cancer stem cells) will be discussed. Skills in analytical and professiona presentations, papers and laboratory work will be developed. Background in Biology, Physics, Chemistry or Engineering.
Spring
1 Course Unit

CBE 5590 Multiscale Modeling of Chemical and Biological Systems
This course provides theoretical, conceptual, and hands-on modeling experience on three different length and time scales - (1) electronic structure (A, ps); (2) molecular mechanics (100A, ns); and (3) deterministic and stochastic approaches for microscale systems (um, sec). Students will gain hands-on experience, i.e., running codes on real applications together with the following theoretical formalisms: molecular dynamics, Monte Carlo, free energy methods, deterministic and stochastic modeling, multiscale modeling. Prerequisite: Undergraduate courses in numerical analysis and physical chemistry. Not Offered Every Year
Also Offered As: BE 5590, SCMP 5590
1 Course Unit

CBE 5620 Drug Discovery and Development
Intro to Drug Discovery; Overview of Pharmaceutical Industry and Drug Development Costs, Timelines; High Throughput Screening (HTS); Assay Design and Sensitivity Solid Phase Synthesis and Combinatorial Chemistry; Enzyme Kinetics; Fluorescence, Linearity, Inner-filter effect, quenching; Time dynamics of a Michaelis-Menton Reaction; Competitive Inhibitor; FLINT, FRET, TRF, FP, SPA, alpha-screen; Enzyme HTS (protease); Cell based screening; Fura-2 ratio, loading signaling; Gfpcalmodulin-gfp integrated calcium response; Estrogen/ERE-Luc HTS; Problems with cell based screening (toxicity, permeability, nonspecificity); Instrumentation, Robotics/Automation; Z-factor; SAR, Positioning Scanning; Microarray HTS; IC50, % Conversion in HTS and IC50, Assay Optimization.
Fall
Also Offered As: BE 5620
1 Course Unit

CBE 5640 Drug Delivery Systems: Targeted Therapeutics and Translational Nanomedicine
The topics include the need for new drug delivery systems (DDS), advantages and applications of biotherapeutic drugs, routes for drug transport in the body, pharmacokinetics and biodistribution, nanocarriers as DDS, targeted drug delivery, challenges with developing new DDS, and translational aspects of new DDS. Directors of the course are Miriam Wattenbarger and Vladimir Muzykantov (Pharmacology). In addition to lectures from the course directors, faculty from engineering and medicine will give guest lectures related to their research interests. The students read current journal articles on DDS. The major group assignment for the course is a written and oral group proposal on a new drug delivery system. Technical communication skills and working with students from different disciplines are an important aspects of the course. Spring
Also Offered As: PHRM 5640
1 Course Unit
CBE 5700 Experimental Methods for Polymer Science and Soft Matter - Theory and Practice
This course covers the relevant theory and practical application of experimental methods used to study the structure, dynamics and physico-chemical properties of soft matter and macromolecular materials. Systems of interest include self-assembled polymers and (macro)molecular materials, liquid crystals, colloidal suspensions, biological materials, gels, and other complex fluids. Particular emphasis is placed on the development of kinematic theory for X-ray scattering, methods of structure determination by (x-ray/electron) diffraction, microscopy (optical; atomic force; electron), dynamic scattering (light/ optical; x-ray, neutron) and rheology (bulk and microrheology). Thermomechanical, electronic, and optical property characterization are also addressed. Lectures are complemented by lab exercises and projects. The subject matter is particularly relevant for students conducting experimental research on macromolecular materials, soft matter and complex fluids. Senior standing or permission of the instructor.
Spring
1 Course Unit

CBE 5800 Masters Biotechnology Lab
This lab is an introduction to lab techniques in biochemical engineering and biotechnology for graduate students in SEAS. Students are assumed to have a background in cell and molecular biology or to be co-registered for CBE 5540. Labs will include E. coli gene editing with CRISPR, production of eGFP in E. coli cells and isolation by chromatography, a fed-batch bioreactor to grow yeast cells and determine the growth and yield parameters, analysis of immobilized and soluble enzyme kinetics in a stirred reactor. Each lab will include a data analysis assignment. Three individual technical memos will be assigned, and a group report and presentation will be due at the end of the semester. Oral and written communication skills are emphasized to improve technical communication skills.

CBE 6010 Deep Learning for Scientists and Engineers
The main objective of this course is to teach concepts and implementation of deep learning techniques for scientific and engineering problems to advanced undergraduate and graduate students. This course entails various methods, including theory and implementation of deep learning techniques to solve a broad range of computational problems frequently encountered in solid mechanics, fluid mechanics, non-destructive evaluation of materials, systems biology, chemistry, and non-linear dynamics. At the end of the course participants will be able to: (1) Understand the underlying theory and mathematics of deep learning; (2) Analyze and synthesize data in order to model physical, chemical, biological, and engineering systems; (3) Apply physics-informed learning to model and simulate multiphysics systems. Recommended prerequisites (not mandatory): · Linear algebra: MATH 3120 ·Probability: MATH 1510/CIS 2610/ESE 3010/ENM 5030/STAT 5100 ·Experience with computer programming of Python
Spring
Prerequisite: MATH 2410
1 Course Unit

CBE 6020 Statistical Mechanics of Liquids
The course will focus on advanced concepts and methods in statistical mechanics with a particular emphasis on the liquid state, e.g. aqueous solutions, capillarity, polymers, colloids, glasses, amphiphilic self-assembly, etc. Principles of both equilibrium and non-equilibrium statistical mechanics will be discussed and connections to experimentally measurable quantities will be made wherever possible.
Fall or Spring
1 Course Unit

CBE 6180 Advanced Molecular Thermodynamics
This course begins with a brief review of classical thermodynamics, including the development of Maxwell relationships and stability analysis. The remainder of the course develops the fundamental framework of statistical mechanics, then reviews various related topics including ideal and interacting gases, Einstein and Debye models of crystals, lattice models of liquids, and the basis of distribution function theory.
Fall
Also Offered As: BE 6620, MEAM 6620
1 Course Unit

CBE 6210 Advanced Chemical Kinetics and Reactor Design
Fall
1 Course Unit

CBE 6400 Transport Processes I
This course provides a unified introduction to momentum, energy (heat), and mass transport processes. The basic mechanisms and constitutive laws for the various transport processes will be delineated, and the conservation equations will be derived and applied to internal and external flows. Examples from mechanical, chemical, and biological systems will be used to illustrate fundamental concepts and mathematical methods.
Fall
1 Course Unit

CBE 6410 Transport Processes II (Nanoscale Transport)
A continuation of CBE 6400, with additional emphasis on heat and mass transport. This course aims to teach transport concepts and methods useful in many current CBE laboratory settings. The emphasis will be on microscopic dynamics and transport in both hard and soft systems (e.g. colloids and polymers), of relevance to a variety of biological and biomolecular systems. Wherever possible, will make connections between classical, macroscopic transport, and what is happening microscopically. Will make use of a combination of analytic and algorithmic/numerical methods to facilitate understanding of the material. Physical topics will include stochastic, "single-molecule", non-ideal, hard sphere and frustrated systems, phase transitions, non-equilibrium statistical mechanics and optics. Concepts will include properties of stochastic functions (Gaussian statistics, correlation functions and power spectra), Fourier methods, Convolution, the Central Limit theorem, anomalous diffusion, percolation, and the Fluctuation/ Dissipation theorem. Computational methods will concentrate on Monte Carlo simulations of "toy" models.
Spring
1 Course Unit
CBE 8950 Teaching Practicum
This course provides training in the practical aspects of teaching. The students will work with a faculty member to learn and develop teaching and communication skills. As part of the course, students will participate in a range of activities that may include: giving lectures, leading recitations, supervising laboratory experiments, developing instructional laboratories, developing instructional material, preparing and grading homework assignments and solution sets, and preparing examinations. Feedback on the recitations will be provided to the student by the faculty responsible for the course. The course is graded on a Satisfactory/Unsatisfactory basis. The evaluation will be based on comments of the students taking the course and the impressions of the faculty.

Chemistry (CHEM)

CHEM 0240 First-Year Seminar: From Alchemy to Nanoscience
The imperative to transform matter, find its roots in alchemy and the search for the Philosopher’s Stone, which was thought to contain the secret of turning base metals into gold and also the secret of immortality. We will examine the evolution of the way in which people have thought about matter and its transformations; from the manufacturing of explosives to dyestuffs to pharmaceuticals and perfumes. We will do some simple experiments that demonstrate some of these principles. We will follow the development of the chemical sciences from the works of early alchemists to Renaissance (Newton and Boyle) scientists and modern thinkers (Priestly, Lavoisier, Dalton, Mendeleev and others). This class, which is designed for non-science as well as potential science majors, will involve discussions on readings, as well as field trips to some Philadelphia locations that are notable in the history of chemistry.
Fall
1 Course Unit

CHEM 1000 Academic Based Community Service-Chemistry Outreach
Chemistry service-learning course that provides undergraduate students with opportunities to improve their scientific communication abilities and teaching skills. Undergraduate students will work in groups to develop short science experiments and teaching materials, and students in grades 6-12 from urban public schools in West Philadelphia will visit the Penn campus to perform the experiments. There are typically 6 – 8 visits over the course of the semester, and during these visits, the undergraduates will serve as instructors, teaching their experiment to the visiting students. Undergraduate students will also analyze and discuss journal articles and publications to explore pedagogy and best practices in science communication, as well as develop and demonstrate skills in reflecting critically on issues that arise in your service learning experiences through written post-teaching reflections.
Fall
1 Course Unit

CHEM 1011 Introduction to General Chemistry I
CHEM 1011 is an introductory college-level course in chemistry intended for students with less preparation in high school chemistry and mathematics. The course content parallels that of CHEM 1012, but with emphasis placed on developing problem-solving strategies and developing the underlying chemical principles. The course will take an ‘atoms first’ approach to introductory chemistry, where topical coverage includes an overview of quantum theory, atomic structure, the periodic table, chemical bonding, elementary chemical reactions, stoichiometry, ideal gases, and intermolecular interactions. Topics from mathematics and physics that are necessary to chemical problem-solving will be included as needed. Prerequisite: Students with credit for CHEM 1012 may not enroll in CHEM 1011. Credit will not be awarded for both CHEM 1011 and 1012.
Fall
1 Course Unit

CHEM 1012 General Chemistry I
Basic concepts and principles of chemistry and their applications in chemistry and closely-related fields. The first term emphasizes the understanding of chemical reactions through atomic and molecular structure. This is a university level course, treating the material in sufficient depth so that students can solve chemical problems and understand the principles involved in their solution. It includes an introduction to condensed matter. This course is suitable for majors or non-majors and is recommended to satisfy either major or pre-professional requirements for general chemistry. This course is presented for students with high school chemistry and calculus. Students with a lesser background than this should take CHEM 1011. Prerequisite: Students with credit for CHEM 1011 may not enroll in CHEM 1012. Credit is not awarded for both CHEM 1011 and CHEM 1012.
Fall or Spring
1 Course Unit

CHEM 1020 Introduction to General Chemistry II
CHEM 1020 is the second term of a two-term sequence of general chemistry courses. It is intended for students with a substantial background in high school chemistry and calculus. The course will continue the development of the chemical concepts presented in the first term, with a focus on the quantitative aspects of chemical reactions. Topics include equilibrium, acid-base reactions, rate laws, and chemical kinetics. Prerequisite: CHEM 1011 or equivalent.
Spring
1 Course Unit

CHEM 1025 Structural Biology
This course will explore how biological properties are determined by the microscopic chemical properties of proteins and biomacromolecules. We will discuss how research results, especially those of structural biology, are presented to its various audiences.
Fall or Spring
0.5 Course Units
CHEM 1021 Introduction to General Chemistry II
CHEM 1021 will be the second course in a two-semester sequence in general chemistry, where an introductory foundation in the energetic and dynamic nature of chemical reactivity will be developed. The course will survey general principles of thermodynamics, phase transitions, equilibrium, acid/base chemistry, and chemical kinetics as applied to elementary chemical reactions. Using this foundation, structure and function of organic compounds and solid-state structure will be surveyed upon which the former fundamental principles will be deployed to predict reactivity/stability.
Spring
Prerequisite: CHEM 1011 AND MATH 1300
1 Course Unit

CHEM 1022 General Chemistry II
Continuation of CHEM 1012: General Chemistry I. The second term stresses the thermodynamic approach to chemical reactions, electrochemical processes, and reaction rates and mechanisms. It includes special topics in chemistry.
Fall or Spring
Prerequisite: CHEM 1012 AND MATH 1300
1 Course Unit

CHEM 1101 General Chemistry Laboratory I
A general laboratory course covering aspects of qualitative and quantitative analysis, determination of chemical and physical properties, and chemical synthesis.
Fall or Spring
.5 Course Units

CHEM 1102 General Chemistry Laboratory II
Continuation of CHEM 1101: General Chemistry Laboratory I
Fall or Spring
.5 Course Units

CHEM 1151 Honors Chemistry I
This course will focus on introducing students to the following topics: the nature of the chemical bond (forces, potentials, and quantum mechanics), covalent and non-covalent interactions, properties of gasses, liquids, and solids. Students in section 001 will be introduced to modern computational chemistry methods and section 002 introduces students to modern experimental techniques. Prerequisite: AP Chemistry exam score of 5.
Fall
Corequisite: MATH 1410
1 Course Unit

CHEM 1161 Honors Chemistry II
An advanced course for students who have had very strong background in Chemistry in High School (AP, IB, or equivalent). Advanced material from the general chemistry curriculum will be covered in the context topics selected from current research areas. A continuation of CHEM 1151: Honors Chemistry I, CHEM 1161: Honors Chemistry II will focus on topics in biochemistry and biophysical chemistry relating to thermodynamics, equilibrium, kinetics, and electrochemistry. Prerequisite: Advanced High School Chemistry (AP or equivalent).
Spring
Prerequisite: CHEM 1151
1 Course Unit

CHEM 1200 Environmental Chemistry
The course aims to teach chemical content and principles in the context of significant environmental issues. Topics to be covered include: composition of the atmosphere; protecting the ozone layer; chemistry of global warming; traditional hydrocarbon fuels and energy utilization; water supply, its contaminants, and waste water treatment; acid rain; nuclear energy; and new energy sources. Students will develop critical thinking ability, competence to better assess risks and benefits, and skills that will lead them to be able to make informed decisions about technology-based matters.
Fall or Spring
1 Course Unit

CHEM 2210 Physical Chemistry I
Introductory quantum mechanics, atomic and molecular structure, chemical bonding, and microscopic understanding of physical and chemical properties of molecules.
Fall
Prerequisite: CHEM 1021 AND MATH 1410 AND PHYS 0150
1 Course Unit

CHEM 2220 Physical Chemistry II
Continuation of CHEM 2210: Physical Chemistry I. Principles and applications of thermodynamics, and a molecular-based understanding of macroscopic properties.
Spring
Prerequisite: CHEM 2210 AND PHYS 0151
1 Course Unit

CHEM 2230 Experimental Physical Chemistry I
Important methods, skills, and apparatus used for the acquisition and interpretation of quantitative information about chemical systems will be discussed in principle and used in the laboratory. Students are required to have completed Chem2210 prior to enrolling in Chem2230.
Spring
Prerequisite: CHEM 2210
1 Course Unit

CHEM 2410 Principles of Organic Chemistry I
Fundamental course in organic chemistry based upon the modern concepts of structure and mechanism of reactions.
Fall or Spring
Prerequisite: CHEM 1021 OR CHEM 1022
1 Course Unit

CHEM 2411 Principles of Organic Chemistry I with Laboratory
Fundamental course in organic chemistry based upon the modern concepts of structure and mechanism of reactions. Laboratory included.
Prerequisite: CHEM 1021 OR CHEM 1022 OR CHEM 1161
Corequisite: CHEM 2412
1.5 Course Unit

CHEM 2412 Principles of Organic Chemistry I Laboratory
Lab for CHEM 2411: Principles of Organic Chemistry I with Laboratory
Corequisite: CHEM 2411
0 Course Units

CHEM 2420 Principles of Organic Chemistry II
Continuation of CHEM 2410: Principles of Organic Chemistry I.
Fall or Spring
Prerequisite: CHEM 2410
1 Course Unit
CHEM 2421 Principles of Organic Chemistry II with Laboratory
Continuation of CHEM 2411: Principles of Organic Chemistry I with Laboratory
Prerequisite: CHEM 2411

1.5 Course Unit

CHEM 2422 Principles of Organic Chemistry II Laboratory
Lab for CHEM 2421: Principles of Organic Chemistry II with Laboratory
Prerequisite: CHEM 2411
Corequisite: CHEM 2421
0 Course Units

CHEM 2425 Organic Chemistry II: Principles of Organic Chemistry with applications in Chemical Biology
This course is functionally equivalent to CHEM 2420: Principles of Organic Chemistry II as the second term of CHEM 2410: Principles of Organic Chemistry I, placing the content in the context of biology and medicine. Topics include: 1) alkyl compounds, ethers, epoxides and sulfides in lipids; 2) carboxylic acids and amines in amino acids; 3) aromatic compounds and heterocycles in nucleic acids; and 4) ketones and aldehydes in carbohydrates. The synthesis and mechanism of action of pharmaceuticals that feature these functional groups will also be discussed. Additionally, this course makes use of 3D structure tutorials, recitation sections and visits from biomedical scientists who make use of chemistry in their work.
Spring
Prerequisite: CHEM 2410
1 Course Unit

CHEM 2451 Experimental Organic Chemistry A
A basic laboratory course in which both the theoretical and practical aspects of a variety of organic reactions and multistep syntheses are emphasized. Modern chromatographic, instrumental, and spectroscopic techniques are applied to experimental organic chemistry. CHEM 2410 is a required co-requisite for CHEM 2451 for Penn undergraduate students. LPS students may take CHEM 2410 as a pre-requisite or a co-requisite to CHEM 2451.
Fall
.5 Course Units

CHEM 2452 Experimental Organic Chemistry B
A basic laboratory course in which both the theoretical and practical aspects of a variety of organic reactions and multistep syntheses are emphasized. Modern chromatographic, instrumental, and spectroscopic techniques are applied to experimental organic chemistry. CHEM 2420 is a required co-requisite for CHEM 2452 for Penn undergraduate students. LPS students may take CHEM 2420 (or equivalent) as a pre-requisite or a co-requisite to CHEM 2452.
Spring
.5 Course Units

CHEM 2460 Advanced Synthesis and Spectroscopy Laboratory
Advanced laboratory work on the synthesis, structure, and properties of organic and inorganic compounds. Infrared, ultraviolet, and nuclear magnetic resonance spectroscopy. Lectures cover the theoretical basis and applications of modern spectroscopic methods.
Fall
Prerequisite: (CHEM 2420 OR CHEM 2425) AND CHEM 2450 AND CHEM 2610
Corequisite: CHEM 2610
1 Course Unit

CHEM 2510 Principles of Biological Chemistry
Fundamentals of biological chemistry, including the structure of biological macromolecules and their mechanism of action, intermediary metabolism, and the chemical basis of information transfer. Course can be taken concurrently with CHEM 2420 or CHEM 2425.
Fall or Spring
Prerequisite: CHEM 1021 AND CHEM 2410 AND (CHEM 2420 OR CHEM 2425)
1 Course Unit

CHEM 2610 Inorganic Chemistry I
An introductory survey of the bonding, structure, and reactions of important metal and nonmetal compounds.
Fall
Prerequisite: CHEM 2410 AND (CHEM 2420 OR CHEM 2425)
1 Course Unit

CHEM 2999 Directed Study and Seminar
Independent project under the direction of a faculty member conducting chemistry research.
Fall or Spring
1 Course Unit

CHEM 3999 Independent Research
Independent project under the direction of a faculty member conducting chemistry research.
Fall or Spring
1 Course Unit
CHEM 4950 High Throughput Discovery: A Multidisciplinary Approach to Cancer
The newly developed massively parallel technologies have enabled the simultaneous analysis of many pathways. There are several large scale international efforts to probe the genetics and drug sensitivity of cancer cell lines. However, there are some rare cancers that have not been analyzed in depth. One of these rare cancers is malignant peripheral nerve sheet tumors (MPNST). MPNST, although a rare cancer, are common in patients with neurofibromatosis type. In the course, students will take part in a high throughput discovery effort in two phases. Phase 1 is a training phase, which will consist of quantitative profiling the sensitivity of MPNST cell lines to a library of >120 common and experimental cancer drugs. These will be conducted in the UPenn High Throughput Screening Core. (http://www.med.upenn.edu/cores/High-ThroughputScreeningCore.shtml). While we call this a training phase, the data from this will be subject to rigorous quality control for eventual publication and development of a public database for rare tumors. Phase 2 is an independent research project. Examples of projects include, but are not limited to: Combinatorial screens (synthetic lethal); siRNA screens; novel compound screens; determining mechanisms of cell death; developing tools for data analysis and database development. During phase 2, students will also modify compounds of interest using the Penn Chemistry: Upenn/Merck High Throughput Experimentation Laboratory (https://www.chem.upenn.edu/content/penn-chemistry-upennmerck-high-throughput-experimentation-laboratory), and then retest them for activity to determine structure activity relationships. We will sponsor phase 2 projects relevant to neurofibromatosis. However, in phase two students can also research other areas if they develop sponsorships from professors. We expect the course to be a hypothesis engine that generates ideas for further research. Prerequisites include a strong foundation in biology and chemistry. Students will prepare an abstract proposal by week three on their phase 2 project, and a report, in scientific paper style, due on the last day of the semester.
Spring
Also Offered As: PHRM 4950
1 Course Unit

CHEM 5210 Statistical Mechanics I
Principles of statistical mechanics with applications to systems of chemical interest.
Fall
Prerequisite: CHEM 2220
1 Course Unit

CHEM 5220 Statistical Mechanics II
A continuation of CHEM 5210. The course will emphasize the statistical mechanical description of systems in condensed phases.
Spring
Prerequisite: CHEM 5210
1 Course Unit

CHEM 5230 Quantum Chemistry I
The principles of quantum theory and applications to atomic systems.
Fall
Prerequisite: CHEM 2210
1 Course Unit

CHEM 5240 Quantum Chemistry II
Approximate methods in quantum theory and applications to molecular systems. Topics may include: electronic structure, configuration interaction, DFT, TD-DFT and response theory, electronic dynamics, semiclassical dynamics, vibrational density of states.
Spring
Prerequisite: CHEM 5230
1 Course Unit

CHEM 5250 Molecular Spectroscopy
This course is broken into two sections: (1) optics, and (2) theory of spectroscopy including the discussion of techniques and examples. In the first section you will be introduced to both linear and nonlinear optics, through thinking about how to design optical components in the laboratory setting. the second part of the course is a more traditional spectroscopy course, where different spectroscopies in the visible and infrared spectral region will be discussed. This part of the course will focus on understanding what we can learn from using spectroscopy and what sort of dynamical processes can be observed with different spectroscopic techniques. Topics to be covered include, but are not limited to: optics, time-dependent perturbation theory, lineshapes, density matrix, group theory, selection rules.
Fall or Spring
0.5 Course Units

CHEM 5260 Chemical Dynamics
Theoretical and experimental aspects of important rate processes in chemistry.
Spring
1 Course Unit

CHEM 5410 Chemical Kinetics
This course a high level overview of methods for the study of organic, organometallic, and inorganic reaction mechanism. CHEM 4410 (Mechanisms) or CHEM 5640 (Organometallics) is required. The course will survey thermodynamic and kinetic measurements used in understanding chemical reactions. Topics include kinetic measurements and interpretation, Arrhenius theory, Eyring theory, kinetic isotope effects, Hammett analyses, and electronic structure calculations. Articles discussing these techniques in delineating the reaction mechanisms for problems of current interest will be analyzed. The focus will be on experiments that can be accomplished with readily available analytical tools (NMR, IR, UV, GC, HPLC) and how an understanding of mechanism can be used to optimize reaction yields and selectivities.
Spring
0.5 Course Units
CHEM 5411 Physical Organic Chemistry
CHEM 5411 is a high level overview of classical physical organic chemistry. Undergraduate organic chemistry is a prerequisite. The course is divided into three parts. The first part will be an overview of organic bonding (basic molecular orbital theory, anomic effect), structure (bond lengths, bond angles, conformational analysis), and properties (electronenegativity, nucleophilicity, electrophilicity, acidity, basicity). The second part will be a brief overview of current computational methods including molecular mechanics, Hartree Fock, and density functional calculations. The focus will be on practical applications rather than the theory behind the calculations; students will be able to assess which calculations are most appropriate for a given task. The last part of the course will survey thermodynamic and kinetic measurements used in understanding organic chemical reactions. Topics include Hammett analyses, kinetic measurements and interpretation, the Hammond postulate, Arrhenius theory, Eyring theory, and kinetic isotope effects. Articles discussing these techniques in delineating the organic reaction mechanisms for problems of current interest will be analyzed. The focus will be on experiments that can be accomplished with readily available analytical tools (NMR, IR, UV, GC, HPLC) and how simple physical organic analyses can be used to optimize reaction yields and selectivities.
1 Course Unit

CHEM 5412 Physical Organic Chemistry I
Physical Organic I is an introduction to advanced physical organic chemistry. Mechanism drawing with arrows to denote the movement of an electron density will be a unifying theme. The course will overview organic bonding (basic molecular orbital theory, anomic effect), structure (bond lengths, bond angles, delocalization and resonance, conformational analysis), and reactivity (electronenegativity, nucleophilicity, electrophilicity, acidity, basicity, stereoelectronics).
0.5 Course Units

CHEM 5413 Physical Organic 2
This course a high level overview of methods for the study of organic, organometallic, and inorganic reaction mechanism. The preceding course Chem 5412 or its equivalent must be taken before this course. The course will briefly review basic mechanistic conventions (arrows, radical intermediates, etc.) and then move onto a survey thermodynamic and kinetic measurements used in understanding chemical reactions. Topics include kinetic measurements and interpretation, Arrhenius theory, Eyring theory, kinetic isotope effects, Hammett analyses, and electronic structure calculations. Articles discussing these techniques in delineating the reaction mechanisms for problems of current interest will be analyzed. The focus will be on experiments that can be accomplished with readily available analytical tools (NMR, IR, UV, GC, HPLC) and how an understanding of mechanism can be used to optimize reaction yields and selectivities.
0.5 Course Units

CHEM 5430 Modern Organic Synthesis
Introduction to advanced organic synthesis. Study of important synthetic reactions including: oxidations, reductions, and methods for the formation of carbon-carbon bonds, with an emphasis in chemoselectivity, stereoselectivity and asymmetric synthesis. Survey of modern methods for the synthesis of small, medium and large ring systems. Analysis of modern synthetic strategies, with illustrative examples from total synthesis of natural and unnatural products.
Fall
Prerequisite: CHEM 5440
1 Course Unit

CHEM 5431 Advanced Organic Chemistry 1
This course focuses on organic reactions, reaction mechanisms, and the strategic applications of these reactions in organic synthesis. Topics include symmetry, stereochemistry, stereoselectivity, olefination, olefin metathesis, transition-metal catalyzed cross couplings, cycloadditions, electrocyclizations, sigmatropic rearrangements, and other pericyclic reactions. The material will be illustrated by applications in multistep chemical synthesis. Based on this course, students should be able to read the modern literature, develop independent research proposals in organic chemistry, and succeed in graduate school.
Prerequisites: A basic understanding of Lewis structures, molecular orbitals, hybridization, arrow pushing, stability, and reactivity.
0.5 Course Units

CHEM 5432 Advanced Organic Chemistry 2
This half-semester course continues to emphasize organic reactions, reaction mechanisms, and their strategic applications in complex molecule synthesis. Topics covered include oxidations, reductions, carbon-carbon bond formations, and strategic applications of protecting groups.
Prerequisite: CHEM 5412 AND CHEM 5431
0.5 Course Units

CHEM 5440 Organic Reaction Mechanisms
Study of important types of reactions and functional groups, with emphasis on synthetic usefulness, mechanisms, and stereo electronic principles.
Fall
Prerequisite: CHEM 2420
1 Course Unit

CHEM 5450 Chemical Neuroscience
Natural products, such as tetrodotoxin, kainic acid and morphine, have played a crucial role in the development of neuroscience. Using selected chemical syntheses as a framework, I will provide an introduction to neuroscience for chemists blended with an intense course in synthetic design ("Syntheseplanung"). The structure, function and synthesis of the following molecules will be analyzed: tetrodotoxin, saxitoxin, kainic acid, nicotine, epibatidine, conine, tubocurarine, histrionicotoxin, ibotenic acid, strychnine, picotamine, chrysanthemic acid, ivermectin, muscarine, morphine, salvinorin A, THC, lysergic acid, forskolin, staurosporin, eglumegad, physostigmine, huperzin A, galanthamine, cocaine, reserpine, thapsigargin, ouabagenin, ryanodine, capsaicin, resiniferatoxin, retinal, carotene, menthol, santalol, camphor, and the prostaglandins. The structure and function of important ion channels, GPCRs, transporters and enzymes and their ligands will be discussed using PyMol files.
The goal of this course is to get as many synthetic chemists excited about neuroscience as possible (and a few neuroscientists stoked about synthesis). The importance of structural and pharmacological databases (PDB and IUPHAR, respectively) and the usefulness of the Reaxys database (and SciFinder) for synthetic planning will be demonstrated. Requirements: A familiarity with synthetic organic chemistry and (named) chemical reactions, a mastery of the Nernst equation, and a willingness to learn more about one of the greatest, if not the greatest scientific challenges of our times: to figure out how the human brain work.
0.5 Course Units
CHEM 5510 Biological Chemistry I
Structure, dynamics, and function of biological macromolecules. Properties of macromolecular assemblies, membranes and their compartments. (Formerly, CHEM 450-I).
Fall
Prerequisite: (CHEM 2420 OR CHEM 2425) AND CHEM 2210 AND CHEM 2510
1 Course Unit

CHEM 5520 Biological Chemistry II
Physical and chemical description of macromolecular information transfer. Gene organization, replication, recombination, regulation and expression. (Formerly, CHEM 450-II).
Spring
Prerequisite: (CHEM 2420 OR CHEM 2425) AND CHEM 2220 AND CHEM 2510
1 Course Unit

CHEM 5530 Methods for in vivo biochemical discovery
The course surveys the chemical machinery of the cell, post-translational modifications of proteins and catalytic machinery of enzymes. Through this survey, students will become familiar with the cellular proteome and its fascinating functions and dysfunctions that drive normal physiology and disease states of the cell. Current technologies for in vivo function assignment and unbiased drug-target discovery will be reviewed. Example topics include gene editing, protein profiling, targeted degradation, high-throughput drug screening and quantitative analysis of proteomes/metabolomes from native biological systems. The course couples in-class lecture and discussion with research demonstrations of select methods used for discovery.
Fall or Spring
0.5 Course Units

CHEM 5550 Macromolecular Crystallography: Methods and Applications
This is an introductory course on methods and applications of macromolecular structure determination using X-ray crystallography. The course will be broken up into three parts: 1) Principles of X-ray crystallography involving didactic lectures on the technique with weekly problem sets; 2) Workshops on macromolecular structure determination involving hands-on experience with the technology; 3) Student "journal club" presentations on current high impact publications involving X-ray crystal structure determination. Prerequisite: Undergraduate calculus and trigonometry.
Fall
Also Offered As: BMB 5540
1 Course Unit

CHEM 5570 Mechanisms of Biological Catalysis
Reaction mechanisms in biological (enzymes, abzymes, ribozymes) and biomimetic systems with emphasis on principles of catalysis, role of coenzymes, kinetics, and allosteric control.
Fall or Spring
Prerequisite: CHEM 2420 AND (CHEM 2510 OR BIOL 2810)
1 Course Unit

CHEM 5580 Biomolecular Spectroscopy and Microscopy
CHEM 5580 covers basic fluorescence spectroscopy and microscopy, as well as advanced topics such as single molecule spectroscopy and nonlinear and super-resolution microscopies. There are weekly homework assignments that include problems based on the lectures as well as journal club style reports on by pairs of students on papers relevant to the course material.
Fall
Also Offered As: BMB 5580
0.5 Course Units

CHEM 5620 Inorganic Chemistry II
A detailed treatment of the theory and application of modern physical methods for the elucidation of structure and mechanism in inorganic and organometallic chemistry. An introduction to symmetry and group theory is followed by the application of these concepts to vibrational and electronic spectroscopy of inorganic complexes. Magnetic resonance is discussed in detail, including topics such as EPR, fourier transform methods, dynamic systems, and 2-dimensional NMR.
Fall or Spring
Prerequisite: CHEM 2610
1 Course Unit

CHEM 5640 Organometallics
This course is focused on molecular species that contain metal-carbon bonds, and the role of these compounds in catalytic processes and organic synthesis. Aspects of the synthesis, structure and reactivity of important classes of organometallic compounds such as metallo alkyl, aryl, alkene, alkylidene and alkylidyne complexes are surveyed for the d and f block metals. Emphasis is placed on general patterns of reactivity and recurring themes for reaction mechanisms.
Fall or Spring
1 Course Unit

CHEM 5650 Main Group Chemistry
This course encompasses a comprehensive survey of the chemistry and properties of the p-block elements of the periodic table. Topics include synthesises, structures and reactivities of important compounds. In addition, alternative bonding theories which have been used to explain the unique properties of these compounds are critically examined.
Fall or Spring
1 Course Unit

CHEM 5670 Bio-inorganic Chemistry
The course covers selected topics in bioinorganic chemistry; special emphasis is placed on dioxygen chemistry and electron transfer processes. Course topics include: (i) oxygen uptake and utilization; (ii) diatomic oxygen transport; (iii) diatomic and monatomic oxygen incorporation into substrates; (iv) metalloenzyme-catalyzed C-C bond formation; (v) the metallo-biochemistry of DNA; (vi) metal-sulfide proteins; (vii) manganese-containing metalloproteins; (viii) Photosystem II: light-driven electron transfer and the biological water-splitting reaction; (ix) biological electron transfer; (x) electron transfer theory; (xi) mechanisms of energy storage and release; and (xii) long-distance electron transfer reactions.
Fall or Spring
Also Offered As: BMB 5670
1 Course Unit

CHEM 5680 Bioinorganic Chemistry
This course examines the structure and organization of the chemical literature and introduces techniques of searching this literature, focusing on the logic and thought processes necessary for effective information retrieval. Each technique is illustrated using information tools available at the University of Pennsylvania, and we take an "under the hood" look at the organization and functionality of each tool introduced. Students should choose a course section based on their preferred area of chemistry research: organic, inorganic, biological, and physical chemistry; all four sections are taught at a level appropriate for graduate students and advanced undergraduates. Topics vary by section, but all students learn the basics of subject, author, structure, and reaction searching, and a unit on ethics in publication and scholarly communication completes the course.
Fall or Spring
0.5 Course Units
CHEM 6011 Chemical Information for Biological Chemists
This course examines the structure and organization of the chemical literature in the field of biological chemistry and introduces techniques used to search this literature, focusing on the logic and thought processes necessary for effective information retrieval. The course takes an "under the hood" look at the organization and functionality of a variety of different databases and search systems, and, while learning information retrieval skills, students gradually become familiar with the structure of the chemical literature, the purposes of each genre, and the steps of the scientific publication process. Search skills are taught using a combination of lecture and laboratory activities, and students learn advanced text-based search techniques, protein and nucleotide sequence and structure similarity search strategies, basic substructure and reaction search strategies, and methods of retrieving property information and profiling substances by their properties. Students will also undertake a detailed examination protein and small molecule crystal structure databases. In addition to search skills, the students are exposed to strategies for choosing a publication venue; the use and limitations of citation information when evaluating authors, institutions, and journals; and the basic principles behind peer review. The semester closes with a brief introduction to personal data management and an in-depth discussion of the ethics surrounding scientific communication. The course is taught at a level appropriate for graduate students and advanced undergraduates and requires permission of the instructor to register. Undergraduate students should have taken two semesters of organic chemistry prior to enrolling. Students should have an interest in biochemistry or molecular biology research.
Fall
1 Course Unit

CHEM 6012 Chemical Information for Inorganic and Materials Chemists
This course examines the structure and organization of the chemical literature in the field of inorganic and materials chemistry and introduces techniques used to search this literature, focusing on the logic and thought processes necessary for effective information retrieval. The course takes an "under the hood" look at the organization and functionality of a variety of different databases and search systems, and, while learning information retrieval skills, students gradually become familiar with the structure of the chemical literature, the purposes of each genre, and the steps of the scientific publication process. Search skills are taught using a combination of lecture and laboratory activities, and students learn advanced text-based search techniques; advanced substructure and composition searches, with an emphasis on organometallic and inorganic substances and crystal structure data; reaction search techniques, focusing on catalyzed reactions; and methods of retrieving property information and profiling substances and materials by their properties. In addition to search skills, the students are exposed to strategies for choosing a publication venue; the use and limitations of citation information when evaluating authors, institutions, and journals; and the basic principles behind peer review. The semester closes with a brief introduction to personal data management and an in-depth discussion of the ethics surrounding scientific communication. The course is taught at a level appropriate for graduate students and advanced undergraduates and requires permission of the instructor to register. Undergraduate students should have taken two semesters of organic chemistry prior to enrolling. Students should have an interest in organometallic, inorganic, or materials chemistry.
Spring
1 Course Unit

CHEM 6013 Chemical Information for Organic Chemists
This course examines the structure and organization of the chemical literature in the field of organic chemistry and introduces techniques used to search this literature, focusing on the logic and thought processes necessary for effective information retrieval. The course takes an "under the hood" look at the organization and functionality of a variety of different databases and search systems, and, while learning information retrieval skills, students gradually become familiar with the structure of the chemical literature, the purposes of each genre, and the steps of the scientific publication process. Search skills are taught using a combination of lecture and laboratory activities, and students learn advanced text-based search techniques, complex substructure and reaction search techniques, methods of using the literature for retrosynthetic analysis, and methods of retrieving property information and profiling substances by their properties. In addition to search skills, the students are exposed to strategies for choosing a publication venue; the use and limitations of citation information when evaluating authors, institutions, and journals; and the basic principles behind peer review. The semester closes with a brief introduction to personal data management and an in-depth discussion of the ethics surrounding scientific communication. The course is taught at a level appropriate for graduate students and advanced undergraduates and requires permission of the instructor to register. Undergraduate students should have taken two semesters of organic chemistry prior to enrolling. Students should have an interest in organic chemistry research.
Spring
1 Course Unit

CHEM 6014 Chemical Information for Physical Chemists
This course examines the structure and organization of the chemical literature in the fields of physical and theoretical chemistry chemistry and introduces techniques used to search this literature, focusing on the logic and thought processes necessary for effective information retrieval. The course takes an "under the hood" look at the organization and functionality of a variety of different databases and search systems, and, while learning information retrieval skills, students gradually become familiar with the structure of the chemical literature, the purposes of each genre, and the steps of the scientific publication process. Because of the diversity of research foci in physical and theoretical chemistry, the course is survey in nature, devoting time to a wide variety of tools and search strategies and demonstrating Penn's collections in chemistry, mathematics, physics, materials science, and engineering. In addition to teaching search skills, we briefly examine methods of choosing a publication venue and the use and limitations of citation information when evaluating authors, institutions, and journals. The semester closes with a brief introduction to personal data management and a discussion of the ethics surrounding scientific communication. The course is taught at a level appropriate for graduate students and advanced undergraduates and requires permission of the instructor to register. Undergraduate students should have taken two semesters of organic chemistry prior to enrolling. Students should have an interest in physical or theoretical chemistry research.
Fall
0.5 Course Units

CHEM 6520 Proposal Writing for Biological and Physical Chemists
Students will learn the key components in proposal writing and develop the skills needed to prepare a compelling and original graduate research proposal. The course involves significant writing, in-class discussions and presentations.
Fall
0.5 Course Units
CHEM 6620 Proposal Writing for Inorganic and Organic Chemists
The ability to communicate original, written research proposals is essential to the modern chemist. This course, for graduate students in the organic and inorganic divisions, will promote development of proposal writing skills. Students will develop original ideas, practice written work, graphic design and peer review. Outcomes of the course will include writing (and submission, when eligible) of an NSF GRFP application and a ‘proposed work’ section of a candidacy exam report.
Fall
0.5 Course Units

CHEM 7210 Mathematics for Chemistry
This course examines the basic mathematics needed for physical chemistry, including (but not limited to) a brief review of linear algebra, Fourier transforms, delta functions, optimization, and the residue theorem. Depending on the year, selected other topics will also be included.
Fall or Spring
0.5 Course Units

CHEM 7230 Dynamics of Polymers
This course discusses the structure of polymers from a statistical physics point of view as well as dynamical response of polymeric systems such as mechanical response of polymer melts, polymer glass transition, properties of polymers in solutions, and properties of block copolymers and ionomers.
Fall or Spring
0.5 Course Units

CHEM 7240 Special Topics in Physical Chemistry
will vary based on semester
0.5-1 Course Unit

CHEM 7410 Spectroscopy
The course will provide a continuation of material covered in CHEM 5440 and CHEM 5410, as well as spectroscopy of organic compounds focused mainly on NMR. Topics will include advanced organic mechanisms, electronic structure calculations of organic molecules related to their structure, reactivity, and spectroscopic properties, and Organic Spectroscopic methods for the determination of structure using NMR.
Spring
Prerequisite: CHEM 5440 AND CHEM 5410
0.5 Course Units

CHEM 7412 NMR Spectroscopy
The course will focus on Essential Practical NMR for Chemistry. Topics will include structure elucidation with 1D and 2D NMR spectra, how to obtain high quality NMR spectra on spectrometers, data processing with NMR software such as MNova and TOPSPIN, multi-nuclei NMR including 31P, 19F, 11B, 15N and 2H etc., dynamic and kinetic NMR, and some techniques to provide high resolution 2D NMR spectra.
Spring
Prerequisite: CHEM 5440 AND CHEM 5410
0.5 Course Units

CHEM 7420 Medicinal Chemistry and Drug Design
This course focuses on concepts and strategies in medicinal chemistry, and how it is applied to modern drug discovery and development. Topics include the drug discovery process, drug targets (GRCR?s, enzymes, channels etc.), physical chemistry of molecular interactions between drug and target, drug design, methods for hit and lead identification, lead optimization, chemical biology, natural products chemistry and combinatorial and diversity oriented synthesis. This course is geared to upper level undergraduate students in chemistry or biochemistry, and first year chemistry graduate students. A strong understanding of organic chemistry is required.
Fall or Spring
0.5 Course Units

CHEM 7430 Heterocyclic Chemistry
The course deals with topics in Heterocyclic Chemistry. It covers nitrogen-containing monocyclic hetero rings, examining the most recent syntheses, the reactions and their mechanisms. The course will focus on recent variations and improvements of known heterocycles as well as their synthetic utility. Students will be expected to read critically a recent article on heterocyclic chemistry and do a presentation to the class.
Fall or Spring
0.5 Course Units

This class will discuss selected topics related to Bioinspired synthesis, methods, tactics and strategies. Target molecules, methods and strategies are designed by using biological systems as models.
Fall or Spring
0.5 Course Units

CHEM 7450 Total Synthesis
The focus of this course comprise the development of two synthetic strategies to access architecturally complex natural products of biological significance exploiting innovative chemistry. Lectures towards this end are given. As a project, each student is given a different complex natural product and expected at the end of the course to develop two strategies, one based on asymmetric induction to provide the absolute stereochemical structure, the second where the absolute stereochemistry derives from commercially available starting materials.
Fall or Spring
0.5 Course Units
CHEM 7460 Intermediate Organic Chemistry
This course will include a review of basic reaction mechanisms, stereoelectronic effects, functional groups and acid-base chemistry. The course will emphasize the writing of mechanisms using the curved-arrow notation and organic reactions. Bonding and electronic structure theories and more involved mechanisms will be discussed. Students are expected to have a good working knowledge of reactions, functional groups, stereochemistry and mechanisms from undergraduate organic chemistry. Students will be expected to review basic concepts in Organic Chemistry and spectroscopy. The course will include lectures and recitations, and students are expected to attend and participate.
Fall or Spring
1 Course Unit

CHEM 7470 Bioanalytical Chemistry
This course will provide an introduction to methods and applications of contemporary biochemical techniques and instrumentation used for analysis of biomolecules, including proteins, DNA/RNA and metabolites. Topics covered will include chromatographic and electrophoresis, mass spectrometry, fluorescence microscopy for the detection, characterization and structural analysis of proteins, antibodies and nucleic acids. The focus of the course will be applications in bioanalysis, biopharmaceuticals and biotechnology.
Spring
Prerequisite: CHEM 5510
1 Course Unit

CHEM 7510 Chemical Biology
This course focuses on current topics in Chemical Biology, particularly experiments in which 1) chemical synthesis enables one to probe or control biological systems, or 2) manipulation of biological systems facilitates novel chemical syntheses. The course is broadly divided into two sections, one dealing with the study of individual proteins and nucleic acids, and one dealing with complex cellular systems. As the goal of the course is to familiarize students with innovative recent experimental approaches and to stimulate them to conceive of their own new methodology, students will be responsible for delivering presentations on topics selected from the literature, designing experiments to address currently unsolved problems in Chemical Biology (in take-home examinations), and generating several novel research proposal ideas, one of which will be elaborated into a full proposal.
Fall or Spring
Also Offered As: BMB 7510
1 Course Unit

CHEM 7620 X-ray I
An introduction to the theory and practice of structure determination by X-ray crystallography. Topics discussed include point group and space group symmetry, structure factor theory, data collection methods and a survey of solution methods. The course culminates with a series of real-world structure determinations worked through in-class using the XSeed program package.
Fall or Spring
0.5 Course Units

CHEM 7630 X-ray II
Continuation of X-ray I course, CHEM 7410: Spectroscopy
Fall or Spring
Prerequisite: CHEM 7620
0.5 Course Units

CHEM 7640 Materials Chemistry
This course will provide an introduction of structure-property relationships in materials chemistry on length scales from atomic dimension up to the microscale and then draw on examples of Chemical design for "Energy and Environmental Sustainability." We will introduce the "12 Principles of Green Chemistry" and "12 Principles of Green Engineering" as a guide to modern materials chemistry design and follow a trajectory that proceeds with increasing length scales of ordering in the solid state. We will introduce techniques of x-ray, neutron, electron, and ion beam based scattering, real space imaging and spectroscopies and use these to explore non-crystalline materials (amorphous, glasses, and time permitting quasicrystals and aperiodic systems) and crystalline solids. Studies will proceed from atomic scales through nanoscale, mesoscale, and micro-scale discussing the emergence of band structure and delocalized electronic and optical properties that emerge due to the finite scale of ordering and influence of the surface. Select examples will be drawn from advances in materials for in solar energy utilization with photochemistry and photoelectrochemistry and materials for photovoltaic and enabling advances electrochemical energy conversion and storage.
Spring
1 Course Unit

CHEM 7650 Chemistry of the f-Block Elements
The course encompasses the descriptive chemistry, and topics related to, the f-block including the rare earth metals and actinides. Coverage includes coordination chemistry and periodic trends, electronic structure and magnetism, and modern applications of f-block chemistry including lanthanide ions as spectroscopic probes, separations chemistry, materials chemistry and applications, organo-f-element chemistry, the chemistry of the actinides and transactinides, and reactivity/catalysis with f-block compounds.
Fall or Spring
0.5 Course Units

CHEM 7670 Coordination Chemistry
Ligands have a remarkable ability to alter the properties of metal ions, and the study of this coordination chemistry underlies many modern advances in science, including energy harvesting and storage, chemical catalysis, and sustainability. This course explores the relationships between the identities of ligands and the physical manifestations that result from their binding to metal centers. Topics to be covered include: symmetry and chirality in molecular complexes, variations in coordination number, ligand field effects, recent advanced in bonding theory, and inorganic reaction mechanisms.
Fall or Spring
0.5 Course Units
CHEM 7660 Electrochemistry: Methods and Chemical Applications
The goal of this course is for students to gain an understanding of the principles of electrochemistry along with some practical experience. Potentiometric methods will be discussed in the context of electrochemical equilibrium. Amperometric analytical methods—chronoamperometry, chronocoulometry, stripping voltammetry, cyclic voltammetry, pulse polarography, AC impedance, and hydrodynamic methods—will be described from the perspective of mathematical models of mass transport and electrode kinetics. As time permits, special topics and applications, such as electrochemical energy conversion, spectrophotometry, photoelectrochemistry, ultramicroelectrodes, microfluidics, corrosion, electrochemical synthesis, and scanning electrochemical microscopy, will be covered. To complement and reinforce the material learned in class, students will fabricate electrodes, perform cyclic voltammetry and other experiments, and analyze electrochemical data. Equipment will be available in the instructor’s research laboratory to do these experiments in small groups on students’ own time outside of class. The instructor will provide out-of-class assistance to students who are not yet familiar with the use of electrochemical equipment.
1 Course Unit

CHEM 7670 Applications of Group Theory
This course will provide a fundamental understanding of symmetry, the character tables, how to derive these, and apply them in spectroscopy, and molecular orbital diagrams. The course will require some fundamental understanding of matrix algebra, and apply concepts of symmetry to derive character tables, predict spectroscopic properties of molecules, and derive molecular orbitals diagrams including hybridized orbitals.
0.5 Course Units

CHEM 9999 Independent Study and Research
(1) Advanced study and research in various branches of chemistry. (2) Seminar in current chemical research. (3) Individual tutorial in advanced selected topics.
Fall or Spring
0.5-4 Course Units

Chichewa (CHIC)

CHIC 0100 Elementary Chichewa I
The main objective of this course is to allow students to study an African language of their choice, depending on the availability of the instructor. The course will provide students with linguistics tools which will facilitate their research work in the target country. Cultural aspects of the speakers of the language will be introduced and reinforced.
Fall or Spring
1 Course Unit

CHIC 0200 Elementary Chichewa II
Continuation of AFST 490.
Fall or Spring
1 Course Unit

CHIC 0300 Intermediate Chichewa I
Intermediate level courses in a variety of African languages: Igbo, Shona, Wolof, Malagasy, Chichewa, Setswana, Manding, Afrikaans, Setswana. Focus on oral proficiency and productive language skills. All course are language specific and follow ACTFL proficiency guidelines.
Fall
1 Course Unit

CHIC 0400 Intermediate Chichewa II
Continuation of AFST 492.
Spring
1 Course Unit

Chinese (CHIN)

CHIN 0100 Beginning Chinese I
Along with Beginning Modern Chinese II, Beginning Chinese III (Non-Intensive) and Beginning Chinese IV, this is the first course of a four-semester sequence. By completing all four semesters, students fulfill the College language requirement. The sequence starts each fall. Students cannot begin their study in the spring. This course is designed primarily for students who have little or no prior exposure to Chinese. The objective of the course is to help students build a solid foundation of the four basic skills—listening, speaking, reading, and writing in an interactive and communicative learning environment. The emphasis is on correct pronunciation, accurate tones, and mastery of basic grammatical structures, laying the foundation needed to be able to manage social situations such as relating one’s personal life and experiences, expressing preferences and feelings, ordering meals, purchasing goods, and asking for directions. In order to achieve these goals, students are expected to thoroughly preview and review the materials according to the weekly lesson plan (on course website) prior to attending class. Regular attendance is mandatory and strictly monitored.
Fall
1 Course Unit

CHIN 0105 Spoken Chinese I
This course is designed for students who have little or no previous exposure to Chinese. The main objective of the course is to help students develop their listening and speaking skills. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. Chinese characters will not be taught.
Fall
1 Course Unit

CHIN 0131 Beginning Cantonese I
Beginning Cantonese is a preliminary course for spoken Cantonese. The course provides fundamental aspects of the dialect as experienced in daily life situations and lays the foundation which will enable students to communicate in Cantonese for daily life needs, such as making phone calls, making purchases, getting around by various means of transportation, seeing a doctor, being a guest or a host at dinner, talking about the weather, talking about sports and entertainment, etc. It is strongly recommended that students continue to Beginning Cantonese II to become conversational.
Fall
1 Course Unit

CHIN 0133 Beginning Taiwanese I
Beginning Taiwanese I is designed to help students learn enough to enable them to handle basic social interactions when visiting Taiwan, such as greeting others, introducing yourself, ordering food, asking directions, etc. You will also learn to listen and understand the oral language typically heard in locations such as the grocery store, train station, bus stop, and restaurants.
Fall
1 Course Unit
CHIN 0160 Beginning Business Chinese I
The course is designed for juniors and seniors, and Penn working professionals who have no prior exposure to Chinese, and are interested in learning basic Chinese language and culture for the preparation of a business trip to China. The objective of this course is to build a foundation of basic Chinese in the business context, with a main focus on speaking and listening, and minimal reading. Upon completion, students are expected to be able to converse and interact with people in a variety of traveling settings and in company visits. Topics include meeting people, talking about family, introducing companies, making inquiries and appointments, visiting companies, introducing products, initiating dining invitations, and practicing dining etiquette.
Not Offered Every Year
1 Course Unit

CHIN 0200 Beginning Chinese II
This course is the continuation of Beginning Chinese I and is the second course of a four-semester sequence. By completing all four semesters, students fulfill the College language requirement. The objective of the course is to help students build a solid foundation of the four basic skills—listening, speaking, reading, and writing—in an interactive and communicative learning environment. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. By the end of the semester, students will be able to manage many situations that have immediate concern to them, such as relating one’s personal life and experiences, expressing preferences and feelings, ordering meals, purchasing goods and asking for directions. In order to achieve these goals, students are expected to thoroughly preview and review the materials according to the weekly lesson plan (on course website) prior to attending class. Regular attendance is mandatory and strictly monitored.
Spring
Prerequisite: CHIN 0100 AND CHIN 0300 AND CHIN 0400
1 Course Unit

CHIN 0205 Spoken Chinese II
A continuation of Spoken Chinese I, this course is to help students develop their listening and speaking skills. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. By the end of the semester, students will be able to manage many situations that have immediate concern to them, such as relating one’s personal life and experiences, expressing preferences and feelings, ordering meals, purchasing goods, asking for directions. To achieve this goal, the class is to be conducted in Chinese as much as possible. Chinese characters will also be introduced, but will not be the focus of the class.
Spring
Prerequisite: CHIN 0105
1 Course Unit

CHIN 0210 Intensive Beginning Chinese I & II
Along with Intensive Beginning Chinese III & IV, this is the first course of a two-semester sequence. By completing both semesters, students fulfill the College language requirement. The sequence starts each fall. Students cannot begin their study in the spring. This course covers the same material as Beginning Chinese I & II. The main objective is to help students build a solid foundation of the four basic skills—listening, speaking, reading, and writing. By the end of this course, students should achieve a solid foundation in: 1) pronouncing all the sounds in Mandarin Chinese accurately and comfortably with a good command of the 4 tones; 2) carry out basic conversations in daily activities; 3) recognize and reproduce approximately 600-650 characters; and 4) read edited simple stories and write short notes or letters. Grammatical and cultural issues are discussed during lecture hours. Oral communication tasks are given every week.
Fall
2 Course Units

CHIN 0231 Beginning Cantonese II
A continuation of Beginning Cantonese I, this class is a preliminary course for spoken Cantonese. The course provides fundamental aspects of the dialect as experienced in daily life situations and will enable students to communicate in Cantonese for daily life needs, such as making phone calls, making purchases, getting around by various means of transportation, seeing a doctor, being a guest or a host at dinner, talking about the weather, talking about sports and entertainment, etc.
Spring
Prerequisite: CHIN 0131
1 Course Unit

CHIN 0233 Beginning Taiwanese II
A continuation of Beginning Taiwanese I, this course will cover language training as well as cultural topics including history and political aspects of Taiwan. Conversation topics range from daily conversation to professional and formal situations.
Spring
Prerequisite: CHIN 0133
1 Course Unit

CHIN 0260 Beginning Business Chinese II
A continuation of Beginning Business Chinese I, this course is for those wishing to improve their language skills in a business setting, as well as an understanding of Chinese social development since 1976. The emphasis is on current business development, correct pronunciation, accurate tones and mastery of basic grammatical structures. The main focus is on speaking and listening, with minimal reading. Upon completion, students are expected to be able to converse and interact with people in a variety of traveling settings and company visits. Topics include meeting people, talking about family, introducing companies, making inquiries and appointments, visiting companies, introducing products, initiating dining invitations and practicing dining etiquette.
Spring
Prerequisite: CHIN 0160
1 Course Unit
CHIN 0300 Intermediate Chinese I
This is the third course in a four-semester sequence. By completing all four semesters, students fulfill the College language requirement. The objective of the course is to continue building a solid foundation of the four basic skills—listening, speaking, reading and writing. By the end of this course, students should achieve the following goals: 1) pronounce all the sounds in Mandarin accurately and comfortably with a good command of the four tones; 2) carry out simple dialogues of familiar topics; 3) recognize and reproduce approximately 450-500 characters; and 4) read short textbook stories and write simple notes. In order to develop students’ listening and speaking ability, oral communication tasks are given on each lesson.
Fall
Prerequisite: CHIN 0200
1 Course Unit

CHIN 0301 Intermediate Chinese I
This is the third course in a four-semester sequence. By completing all four semesters, students fulfill the College language requirement. The objective of the course is to continue building a solid foundation of the four basic skills—listening, speaking, reading and writing. By the end of this course, students should achieve the following goals: 1) pronounce all the sounds in Mandarin accurately and comfortably with a good command of the four tones; 2) carry out simple dialogues of familiar topics; 3) recognize and reproduce approximately 450-500 characters; and 4) read short textbook stories and write simple notes. In order to develop students’ listening and speaking ability, oral communication tasks are given on each lesson.
Fall
Prerequisite: CHIN 0200
1 Course Unit

CHIN 0305 Spoken Chinese III
This course is designed for students who have completed one year of college level Chinese classes or equivalent. The main objective of the course is to improve students’ conversational ability in Chinese in order to accomplish day-to-day tasks. These tasks include relating one’s personal life and experiences, expressing preference, feeling and opinion, ordering a meal, purchasing goods, asking for directions, making travel plans, visiting a doctor, attending a social functions etc. Short Chinese movies or television shows will be integrated into the course curriculum. Chinese characters will not be taught.
Fall, even numbered years only
Prerequisite: CHIN 0205
1 Course Unit

CHIN 0320 Reading and Writing in Chinese I (for Fluent Speakers)
The course is designed for students who can speak Chinese but cannot read and write in Chinese characters. The major purpose of this course is to help students develop the ability to use written Mandarin Chinese in linguistically and socially appropriate ways. The literacy goal is to master 350 to 1000 Chinese characters and to reach an intermediate-low level of ACTFL literacy proficiency. The key teaching approach is to holistically read a prodigious amount of materials. Students’ reading abilities will be developed through reading short stories under instructions, and eventually through reading long stories and news independently.
Fall
1 Course Unit

CHIN 0331 Intermediate Cantonese I
Intermediate Cantonese is a course for students who are able to communicate in the dialect in basic survival situations. Through this course, the students will acquire a better understanding of Cantonese and its related culture, and can confidently cope with a wide range of situations. Classes will be conducted through Cantonese textbooks, discussions of various topics, and composition and presentation of students’ own dialogues so that in time they may express more complex ideas and feelings. Continuation to Intermediate Cantonese II is strongly encouraged.
Fall
Prerequisite: CHIN 0231
1 Course Unit

CHIN 0333 Intermediate Taiwanese I
Students will further develop their speaking and listening skills and will be able to communicate with ease and confidence when dealing with everyday routine tasks. Students will also gain skills to process and seek information in Taiwanese. Conversation topics include New Year, folk songs, and Tang poetry. Authentic materials are used for enhancing reading, listening, and speaking practices.
Fall
Prerequisite: CHIN 0233
1 Course Unit

CHIN 0400 Intermediate Chinese II
This is the fourth course in a four-semester sequence. By completing all four semesters, students fulfill the College language requirement. The objective of the course is to continue building a solid foundation of the four basic skills—listening, speaking, reading and writing. By the end of this course, students should achieve the following goals: 1) pronounce all the sounds in Mandarin accurately and comfortably with a good command of the four tones; 2) carry out simple dialogues of familiar topics; 3) recognize and reproduce approximately 600-650 characters; and 4) read short textbook stories and write simple notes. In order to develop students’ listening and speaking ability, oral communication tasks are given every other week.
Spring
Prerequisite: CHIN 0300
1 Course Unit

CHIN 0405 Spoken Chinese IV
This course is the continuation of Spoken Chinese III. The primary goal of the course is to improve students’ conversational ability in Chinese. By the end of the semester, students will reach the survival level, namely, they can accomplish basic day to day tasks. These tasks include relating one’s personal life and experiences, expressing preference, feeling and opinion, ordering a meal, purchasing goods, asking directions, making travel plans, visiting a doctor, attending a social function, etc. Short Chinese movies or television shows will be integrated into the course curriculum. Chinese characters will not be taught.
Spring
Prerequisite: CHIN 0305
1 Course Unit
CHIN 0410 Intensive Intermediate Chinese I & II
Along with Intensive Beginning Chinese I & II, this is the second course of a two-semester sequence. By completing both semesters, students fulfill the College language requirement. This course covers the same material as Intermediate Chinese I & II. The main objective is to help students build a solid foundation of the four basic skills—listening, speaking, reading, and writing. By the end of this course, students should achieve the following goals: 1) pronounce all the sounds in Mandarin Chinese accurately and comfortably with a good command of the 4 tones; 2) carry out basic conversations in daily activities; 3) recognize and reproduce approximately 600-650 characters; and 4) read edited simple stories and write short notes or letters. Grammatical and cultural issues are discussed during lecture hours. Oral communication tasks are given every week. Designed for students who have had limited prior exposure to some form of Chinese (Mandarin or other dialects), but inadequate to advance to the intermediate level. The language practiced in this class will be more formal oral and written style, including more authentic materials reading, listening and viewing.

Spring
Prerequisite: CHIN 0210
2 Course Units

CHIN 0420 Reading and Writing in Chinese II (for Fluent Speakers)
A continuation of Reading/Writing Chinese I, this course is designed for students who can speak Chinese and have reading ability of about 1000 Chinese characters. It is specifically designed for students at the ACTFL intermediate-low reading and writing level. The literacy goal is to master 1000 to 2000 Chinese words and reach the intermediate-mid proficiency level. Reading material covers topics that are meaningful to students not only to increase engagement and confidence in their Chinese reading skills, but also foster students' appreciation and understanding of the Chinese culture.

Spring
Prerequisite: CHIN 0320
1 Course Unit

CHIN 0431 Intermediate Cantonese II
A continuation of Intermediate Cantonese I. Intermediate Cantonese is a course for students who are able to communicate in the dialect in basic survival situations. Through this course, the students will acquire a better understanding of Cantonese and its related culture, and can confidently cope with a wide range of situations. Classes will be conducted through Cantonese textbooks, discussions of various topics, and composition and presentation of students’ own dialogues so that in time they may express more complex ideas and feelings.

Spring
Prerequisite: CHIN 0331
1 Course Unit

CHIN 0432 Intermediate Taiwanese II
This is a continuation of Intermediate Taiwanese I. Students will further develop their speaking and listening skills and will be able to communicate with ease and confidence when dealing with everyday routine tasks. Students will also gain skills to process and seek information in Taiwanese. Conversation topics include the New Year, folk songs and Tang poetry. Authentic materials are used for enhancing reading, listening, and speaking practices.

Spring
Prerequisite: CHIN 0333
1 Course Unit

CHIN 0500 High Intermediate Chinese I
This course aims to develop students’ overall linguistic skills in listening, speaking, reading, and writing Chinese. The specially designed textbook gives introduction to various topics on Chinese culture. Students can expect to gain knowledge about China while they are learning the language. By completion of the course, students are expected to be able to master 1200 most frequently used characters in common reading materials, and to communicate in Chinese.

Fall
Prerequisite: CHIN 0400
1 Course Unit

CHIN 0520 Reading and Writing Chinese III (for Fluent Speakers)
An intermediate reading and writing course designed for students at the ACTFL intermediate-mid reading and writing proficiency. The goal of this course is to reach the intermediate-high level of proficiency. This course concentrates on writing of multi-paragraph essays through the use of conventional rhetorical modes and standard grammatical structures. Students will be given ample time to think and to discuss (the crucial "brainstorming" phase) before writing. The course stresses content, culture and comparison and draws its content from assigned readings and evidence-based argument from texts and other stimuli such as Internet, newspapers and films.

Fall
Prerequisite: CHIN 0420
1 Course Unit

CHIN 0600 High Intermediate Chinese II
This course is the continuation of High Intermediate Chinese I. It aims to further develop students’ overall language skills. The textbook will introduce various topics related to Chinese culture, society, economy, people and their everyday life as well as China’s development since Deng Xiaoping's reform and opening-up policies in 1978. In class, current issues in China will be integrated to provide a new perspective for discussion. The emphasis is not only to consolidate students’ foundation, but also enhance their understanding and distinguish different levels of language. Over the semester, students will have many opportunities to express and share their opinions on various topics related to China via communicative activities, presentations, and written assignments.

Spring
Prerequisite: CHIN 0500
1 Course Unit

CHIN 0620 Reading and Writing Chinese IV (for Fluent Speakers)
This is an intermediate language class presuming basic fluency in speaking and listening and focusing on reading and writing abilities. By the end of the semester students are expected to have mastered the 1200 most commonly used characters and to have the ability to read basic Chinese texts. Students will be prepared for Advanced Modern Chinese, Media Chinese and Business Chinese.

Spring
Prerequisite: CHIN 0520
1 Course Unit
CHIN 0700 Advanced Chinese I
Students learn to work on materials which were written or produced for native speakers, instead of the classroom materials that were written for the non-native speakers. The reading materials include a larger vocabulary with more idioms. Students will also learn how to understand and use certain oral expressions in conversation. They will learn ways to narrate, to describe, and to comment in native Chinese ways. Reading and audio materials are provided and discussed in the classes. Writing and oral presentations in Chinese are required in classroom under instruction. Students will be encouraged to practice oral communication with each other.
Fall
Prerequisite: CHIN 0600
1 Course Unit

CHIN 0701 Advanced Chinese I
Students learn to work on materials which were written or produced for native speakers, instead of the classroom materials that were written for the non-native speakers. The reading materials include a larger vocabulary with more idioms. Students will also learn how to understand and use certain oral expressions in conversation. They will learn ways to narrate, to describe, and to comment in native Chinese ways. Reading and audio materials are provided and discussed in the classes. Writing and oral presentations in Chinese are required in classroom under instruction. Students will be encouraged to practice oral communication with each other.
Fall
Prerequisite: CHIN 0600
1 Course Unit

CHIN 0705 Advanced Spoken Chinese I
This course is designed for students who have completed at least the intermediate level Chinese language course, or have studied the language for at least three years. The objective of this course is to consolidate the knowledge and skills students have acquired from their previous Mandarin Chinese classes and to enhance their oral expressive skills. By the end of the semester, students are expected to be able to carry on a conversation with a native Mandarin speaker on various common topics, including the current issues in China on education, society, politics, culture and history. Students will also learn how to gather information necessary for conducting oral presentations and speeches.
Fall
Prerequisite: CHIN 0600
1 Course Unit

CHIN 0800 Advanced Chinese II
A continuation of Advanced Chinese I, this course continues training in speaking, listening, reading and writing skills so as to reach the advanced-low or advanced-mid level of proficiency. Major topics of the course include Chinese food culture, Chinese architecture, Confucianism in modern China, "educated youth", democracy and relations with Taiwan. Spring
Prerequisite: CHIN 0700
1 Course Unit

CHIN 0805 Advanced Spoken Chinese II
A continuation of Advanced Spoken Chinese I, this class follows the same format, with more discussions on current issues in both China and the US. Examples of topics range from race, religion and gender issues to the internet, cinema and pop cultures. The objective of this course is to consolidate the knowledge and skills students have acquired from their previous Mandarin Chinese classes and to enhance their oral expressive skills. By the end of the semester, students are expected to be able to carry on a conversation with a native Mandarin speaker on various common topics, and to gather information necessary for conducting oral presentations and speeches.
Spring
1 Course Unit

CHIN 0840 Chinese Short Stories
This course is designed for students with advanced level Chinese language training but who need some further refinements on pronunciation, grammar, and vocabulary usage, this course stresses oral discussion, composition, and accuracy of language performance. By reading texts written by contemporary writers, students will also gain knowledge of China from an analytical and comparative perspective.
Fall or Spring
Prerequisite: CHIN 0800
1 Course Unit

CHIN 0860 Business Chinese I
This aim of this course is to enhance students' language skills in a business context and to promote their understanding about business environment and culture in contemporary China. The text is developed from real business cases from real multinational companies that have successfully dealt on the Chinese market. Classes include lectures, drills on vocabulary and sentence patterns, and discussions. Class will be conducted in Chinese. In addition to the course textbook, students will learn to read business news in Chinese selected from the Wall Street Journal.
Fall
Prerequisite: CHIN 0620 AND CHIN 0800
1 Course Unit

CHIN 0865 Business Chinese II
A continuation of Business Chinese I, this course continues language training for business oriented subjects. This course will provide an overview of China's changing macro-environment, while real business cases let us look into individual Chinese companies and their development in the new millennium. By the end of the semester, students are expected to 1) enhance the cultural awareness of contemporary China and the Chinese business world; 2) gain vocabulary and fluency in Chinese to function more confidently and comfortably in real business settings; 3) access business news and information in Chinese; 4) give business presentation in Chinese.
Spring
Prerequisite: CHIN 0800 AND CHIN 0870 AND CHIN 0860
1 Course Unit
CHIN 0870 Media Chinese
This course aims to help students improve their language skills and enlarge their vocabulary through reading online news on Chinese internet. Students will learn formal vocabulary and enhance their grammatical accuracy. Students are encouraged to explore Chinese government and company websites and Baidu Baike, in order to learn how to conduct their own online searches for both professional and academic purposes. Linguistic features in news headlines, accuracy of online translation tools, media censorship, social media usage will also be discussed in this class. The course goal is to help students gain Chinese media literacy by reading, browsing and viewing online materials.
Fall or Spring
Prerequisite: CHIN 0620 AND CHIN 0700 AND CHIN 0840
1 Course Unit

CHIN 1040 Readings in Modern Chinese: Literature I
This course is designed for students who have completed three years of college level Mandarin classes or equivalent. This course may be used to fulfill the language or elective requirement for the EALC or EAST major or minor in the Chinese concentration. The objectives of the course are 1) to help students gain an in-depth, multi-faceted and critical understanding of the Chinese people, Chinese society and Chinese culture; 2) to facilitate students' acquisition of formal or written language; and 3) to develop students' analytical and critical thinking skills. These objectives are achieved primarily through 1) close reading and discussion of original literary texts by 20th century Chinese writers; and 2) regular writing exercises. Students will also view several Chinese films that are related to the topics of the reading text. The class is to be conducted exclusively in Chinese.
Spring
Mutually Exclusive: CHIN 6040
Prerequisite: CHIN 0840 AND CHIN 0870 AND CHIN 0865
1 Course Unit

CHIN 1045 Readings Modern Chinese: Literature II
This course is structured the same as Readings in Modern Chinese Literature I; however, the reading materials and topics are different. This course is designed for students who have completed a minimum of three years of college level Mandarin classes or equivalent. This course may be used to fulfill the language or elective requirement for the EALC or EAST major or minor in the Chinese concentration. The objectives of the course are 1) to help students gain an in-depth, multi-faceted and critical understanding of the Chinese people, Chinese society and Chinese culture; 2) to facilitate students' acquisition of formal or written language; and 3) to develop students' analytical and critical thinking skills. These objectives are achieved primarily through 1) close reading and discussion of original literary texts by 20th century Chinese writers; and 2) regular writing exercises. Students will also view several Chinese films that are related to the topics of the reading text. The class is to be conducted exclusively in Chinese.
Spring

Prerequisite: CHIN 0840 AND CHIN 0870 AND CHIN 0865
1 Course Unit

CHIN 1048 Readings in Modern Chinese: Documents
The main purpose of this content-based course is to promote advance-level language proficiency in reading, writing, speaking and listening. Through the use of modern Chinese documents, the secondary purpose of this course is to facilitate your understanding of the changes of Chinese society in the 20th century. Topics will include the Constitution of China, China's legal system, speeches by Mao Zedong, Deng Xiaoping, Sun Yet-sen and Qiu Jin.
Not Offered Every Year
Mutually Exclusive: CHIN 6048
Prerequisite: CHIN 0870 AND CHIN 0860 AND CHIN 1040
1 Course Unit

CHIN 1050 Introduction to Classical Chinese I
Introduction to the classical written language, beginning with Shadick, First Course in Literary Chinese. Students with a background in Japanese, Korean, Cantonese, Taiwanese, and other East Asian languages are welcome; it is not necessary to know Mandarin. The course begins from scratch, and swiftly but rigorously develops the ability to read a wide variety of classical and semi-classical styles. Original texts from the 6th century BC to the 20th century AD are studied. This course is taught in English and there are no prerequisites.
Fall
Also Offered As: EALC 3621
1 Course Unit

CHIN 1055 Introduction to Classical Chinese II
Continuation of Intro to Classical Chinese I, which is the only prerequisite for this course. Upon completion of Shadick, readings in a wide selection of texts with Chinese commentaries may be taken up. These readings are in part chosen to reflect student interest. This is the second half of a year-long course. Those who enroll must take both semesters.
Spring
Also Offered As: EALC 3622
Mutually Exclusive: EALC 7622
Prerequisite: EALC 3621
1 Course Unit

CHIN 1060 Advanced Business Chinese I
This content-based course provides students with the conceptual framework to understand issues China has been facing since its economic reform in 1978. Topics include WTO principles, the change of China's state-owned enterprises, China's economy in Mao's period, and the pros and cons of globalization. Students will be trained in reading financial articles, discussing international trades, conducting online research and giving business presentations. After the course, students will become more sophisticated in their understanding of China's economic development and in using Chinese business terminology in professional settings. The course assumes basic background in business and advanced level proficiency in Chinese language. The course is NOT open to first-year students with no undergraduate business course.
Fall
Mutually Exclusive: CHIN 6060
Prerequisite: CHIN 0860
1 Course Unit
CHIN 1065 Advanced Business Chinese II
This course is a continuation of Advanced Business Chinese I and follows the same format. Topics include Eastern and Western management styles, the global financial market, China’s financial market reforms, and mergers and acquisitions in China. At the end of the semester, students will submit a business proposal for the final project.
Spring
Mutually Exclusive: CHIN 6065
Prerequisite: CHIN 1060
1 Course Unit

CHIN 1140 Advanced Readings in Chinese Culture
The objective of this advanced level content-based course is to extend and refine students’ language and analytical skills while enhancing an appreciation of Chinese culture. The course is for students with native or near-native competency in Mandarin. Each class will include reading, reflection and interpretation, and the exchange of ideas. All reading materials are in Chinese with no glossary and all are written by scholars whose expertise are either in the contemporary and traditional culture of China, or in comparative study of Chinese and Western thoughts. Topics include: 1) the shared beliefs and behaviors of Chinese people; 2) traditional values and new values in the technological and business society; 3) how affection and love are manifested in Chinese culture; 4) what influenced the surge of popularity of Chinese wuxia fiction; (5) what it means to be descendants of Chinese (huayi) living outside China. The class is conducted exclusively in Mandarin Chinese.
Spring
Mutually Exclusive: CHIN 6140
Prerequisite: CHIN 1040 AND CHIN 1060
1 Course Unit

CHIN 1147 Advanced Readings in Modern Chinese Literature
This course surveys the literary movements of the post-Cultural Revolution era (1978-present). The readings consists of fictional works representative of each literary movement. Students will write four short (1-2 pages, double spaced) "responding" papers and two longer critical essays (5-7 pages double spaced). Each student will also give one oral presentation to the class on an assigned story. This course is designed for students who have achieved native or a near-native level of reading and writing proficiency in Chinese. The class is conducted exclusively in Chinese.
Not Offered Every Year
Prerequisite: CHIN 1040 AND CHIN 1045 AND CHIN 1048 AND CHIN 1060 AND CHIN 1065
1 Course Unit

CHIN 1148 Chinese for Specific Purposes: Legal Chinese
Legal Chinese (CHIN 6148/6149) is a superior-level content-based course providing students with a brief overview of Chinese state laws, legal business cases and the study of legal Chinese terminologies. Through text reading and legal business case discussion, the class engages Penn professional school students and undergraduate social science majors in legal case study, encouraging them to reflect on what they read, as well as giving them the opportunity to experience a course that brings together Chinese legal content and Chinese professional literacy training. The goal of the course is to help students better understand the legal language and content in order to prepare them for specific careers of interest.
Spring
Mutually Exclusive: CHIN 6148

CIMM 3200 Screenwriting

Students are required to complete and revise the first 30 pages of a feature-length screenplay. In place of introductory lectures on story and cinema, an interactive presentation provides multimedia lectures that include sample text, images, and audio and video clips. In addition to two rounds of individual student workshop sessions, students have one-on-one meetings with the instructor conducted through video, audio, or text chat. The final grade is a cumulative assessment of student performance over the course of the term, factoring in all assignments, participation in discussion threads and progress made in the revision of 30 screenplay pages.

1 Course Unit

Cinema and Media Studies (CIMS)

CIMS 0021 Study of a Theme in Cinema

This introduction to literary study examines a compelling theme central to a set of cinematic texts. The theme's function within specific historical contexts, within varying media technologies, and within contemporary culture, will all be emphasized. In presenting a range of materials and perspectives, this course is an ideal introduction to literary study. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

Fall or Spring
Also Offered As: COML 0021, ENGL 0021
1 Course Unit

CIMS 0024 Study of a Theme: Monsters in Film and Literature

This course studies literature and film featuring a wide assortment of monsters across a range of genres, cultures, and time periods. It also serves as an introduction to film analysis and readings in cultural studies and literary theory. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

Also Offered As: ENGL 0024
1 Course Unit

CIMS 0041 Study of a Period in Cinematic History

This is an introduction to the study of cinema and culture through a survey of works from a specific historical period. This course is ideal for students wishing to explore a significant era, and it presents a range of films and contexts for understanding the cultural products of a period. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

1 Course Unit

CIMS 0050 In Dark Times: The Dystopian Imagination in Literature and Film

This CWiC course will offer a guided introduction to the one of the most resilient genres of the human imagination: dystopian and apocalyptic fiction. Like a group of survivors huddled around a campfire, we will turn to literature and cinema to debate some of the big questions about the future of science, technology, religion, and capitalism. This course is designed as a Critical Speaking Seminar, and the majority of class assignments will be devoted to oral presentations: including a Parliamentary-style debate and a video essay. We will begin by reading some of the early, influential works in the dystopian genre by authors like Mary Shelley, H.G. Wells, and Aldous Huxley. Next, we will explore the paranoid, schizophrenic world of Cold-War-era dystopias by J.G. Ballard, Philip K. Dick and Octavia Butler. We will conclude by reading contemporary climate fiction by the likes of Margaret Atwood and Kim Stanley Robinson. Alongside the literary material, we will also track the changing nature of dystopian cinema— from classics like Metropolis (1927) and La Jetée (1962) to the latest Zombie film. By the end of course, students will have a firm grasp of the history of the genre and will be able to draw on this knowledge to effectively debate issues related to privacy, big business, animal rights, climate change, migration etc.

Also Offered As: ENGL 1521
1 Course Unit

CIMS 0080 Laughter and Tricky Topics

This course takes a comparative approach to studying the philosophy and praxis of laughter in a variety of artistic media — texts, films, performances and memes. We will seek to develop a critical apparatus to answer the following questions: How does laughter unite us? How does it divide us? How does it contribute to identity and community formation? We will focus on humoristic expression produced in contexts considered too serious for lightheartedness, such as death, race and gender-related oppression, and disenfranchisement. Together, we will wonder whether everything can be a laughing matter, if irony is even funny (and what does it mean anyway?), and whether humor has the potential to effect meaningful sociopolitical change. Our theoretical corpus will include works by Bakhtin, Baudelaire, Bergson, and Freud, who conceptualized laughter in wildly different ways—respectively as carnivalesque, satanic, social, and as a coping mechanism. In the 1940s, René Ménali, a Franco-Caribbean philosopher, synthesized these early theories and further developed them into a means of resistance for colonial subjects. To see these concepts in action, we will engage with materials spanning three centuries, from a short story written by Jonathan Swift to contemporary French comedies (subtitled in English). Should laughter occur throughout the semester, its causes will be dutifully analyzed and presented in diverse oral and written assignments.

CIMS 0180 Acting for the Camera
This class focuses on teaching students the creative and technical skills needed to excel in on-camera acting. Beginning by exploring theatre techniques to investigate character, relationship and conflict, this class will then focus on identifying the parameters of film & TV scripts of the last five years. Students will learn to identify the primary function of their character within that structure, and to imagine, create, and make playful choices that foster the story being told. By exploring acting techniques that bridge stage and screen, students will gain experience with producing professional self-tapes that reflect current industry standards, understanding the complexity of framing, vocal quality and eyelines in Zoom callbacks, and experimenting with the use of digital media in theatre.
Also Offered As: THAR 0180
1 Course Unit
CIMS 0201 Sci-Fi Cinema
Science Fiction has been a cinematic genre for as long as there has been cinema—at least since Georges Melies's visionary Trip to the Moon in 1902. However, though science fiction films have long been reliable box office earners and cult phenomena, critical acknowledgement and analysis was slow to develop. Still, few genres reflect the sensibility of their age so transparently—if often unconsciously—or provide so many opportunities for filmmakers to simultaneously address social issues and expand the lexicon with new technologies. Given budgetary considerations and the appetite for franchises, science fiction auteurs face a difficult negotiation between artistic expression and lowest common denominator imperatives, the controversy over Terry Gilliam's Brazil (1985) being perhaps the most infamous example. Nevertheless, many notable filmmakers have done their most perceptive and influential work in the scifi realm, including Gilliam, Ridley Scott, David Cronenberg, Paul Verhoeven, James Cameron and Alfonso Cuaron. This course will survey the scope of contemporary science fiction cinema, after looking first at seminal works like Metropolis (1927) and 2001: A Space Odyssey (1968) that continue to cast their shadow over the genre. We will then devote considerable time to a pair of more modern films, Scott's Alien (1979) and Blade Runner (1982), which drew from earlier movements (German expressionism, noir), influenced new ones (cyberpunk) and inspired a rare wave of academic discourse. Over the course of the term we will sample smaller, more independent-minded projects, such as Michel Gondry's Eternal Sunshine of the Spotless Mind (2004) and Spike Jonze's Her (2013) as well as higher profile but much more risky epics from filmmakers such as Steven Spielberg and Christopher Nolan.

1 Course Unit

CIMS 0275 Montage and Revolution: Conceptual Cinema of Sergei Eisenstein
The 1917 Russian Revolution was to inaugurate a new epoch in human history. Working with and within this time of political and cultural upheaval, Sergei Eisenstein inaugurated a revolution in montage technique that would usher a new age of cinema, a new practice of art, and a new way of thinking in images. Eisenstein's cinematic techniques aimed at producing concepts in the language of film. It also sought modes of expression inaccessible to discursive thought. Navigating a tenuous line between art and politics, Eisenstein's works explore the social and political power of affectivity and expressivity, and the cinematic potential for both representing and eliciting emotion in individual viewers and masses alike. In conversation with the tumultuous political and cultural shifts of the Soviet society from the revolutionary 1920s to the age of Stalinism and the World War II, this course will follow Eisenstein's filmography, from his monumental reconstruction of the revolutionary Petersburg in October to the engagement with representations of history during the Stalinist era in Ivan the Terrible. We will engage with Eisenstein's theoretical writings, his cartoons and sketches, public speeches, and his lost and unrealized projects, such as his collaboration with Hollywood and a plan to film Marx's Capital. In this process, we will learn basic tenets of film and aesthetic theory, while practicing the analysis of film with attention to form and content. Following the lead of Eisenstein's artistic and theoretical production, we will engage with questions his work raises: How can cinematography elicit and manipulate the emotions of its viewers? What is expressivity? Can film represent philosophical concepts? What is cinema's relation to propaganda and politics? What is revolutionary about the medium of film, and what is film's role in the revolution? No prior knowledge of Russian history, culture or society is required, nor is specialized knowledge of film history or film analysis. All readings will be in English and all films will be subtitled in English.

CIMS 0390 Penn-in-Cannes
Penn-in-Cannes is designed for students interested in the film industry and international cinema. Using the Cannes Film Festival as its focal point, the program examines the ways in which international film functions in the context of celebrity, marketing, and festivals. The scope and substance of the festival provide a unique opportunity, not only for students of cinema, but also for liberal arts students studying cultural diversity and international relations. In preparation for fieldwork at the Cannes Film Festival in May, two introductory lectures will be held in late March and April on Penn's campus to enable students to learn about the business and art of film festival, in particularly Cannes Film Festival, and contemporary international cinema.

CIMS 0596 Benjamin Franklin Seminar: Charles Chaplin’s Films and the Politics of Silence
This BFS seminar focuses on the variety pantomime inherited by twentieth-century film from the Commedia dell’Arte and European Music Hall stages. Emphasis will be placed on how pantomime was used by filmmaker Charles Chaplin between the years 1914–1940. We shall consider important moments in the history of European pantomime that preceded and influenced Chaplin, then concentrate on how the tradition coalesced in his silent films.
Also Offered As: ENGL 0596
1 Course Unit

CIMS 0610 Video I
In this studio based course, students are introduced to video production and postproduction as well as to selected historical and theoretical texts addressing the medium of video. Students will be taught basic camera operation, sound recording and lighting, as well as basic video and sound editing and exporting using various screening and installation formats. In addition to a range of short assignment-based exercises, students will be expected to complete three short projects over the course of the semester. Critiques of these projects are crucial to the course as students are expected to speak at length about the formal, technical, critical and historical dimensions of their works. Weekly readings in philosophy, critical theory, artist statements and literature are assigned. The course will also include weekly screenings of films and videos, introducing students to the history of video art as well as to other contemporary practices.
Fall or Spring
Also Offered As: FNAR 1010, VLST 2610
1 Course Unit

CIMS 0620 Video II
Video II offers opportunities to further explore the role of cinematic narrative technique, non-narrative forms, digital video cinematography, editing, and screen aesthetics. Through a series of several video projects and a variety of technical exercises, students will refine their ability to articulate technically and conceptually complex creative projects in digital cinema. In addition, one presentation on a contemporary issue related to the application of cinematic storytelling and/or the cultural context of digital video is required.
Fall or Spring
Also Offered As: FNAR 2020
Prerequisite: FNAR 1010
1 Course Unit

CIMS 0630 Documentary Video
Documentary Video is an intensive production course involving the exploration of concepts, techniques, concerns, and aesthetics of the short form documentary. Building on camera, sound, and editing skills acquired in Video I, students will produce a portfolio of short videos and one longer project over the course of the semester using advanced level camera and sound equipment. One short presentation on a genre, technique, maker, or contemporary concern selected by the student is required.
Fall
Also Offered As: FNAR 2030
Prerequisite: FNAR 1010
1 Course Unit

CIMS 0650 Cinema Production
This course focuses on the practices and theory of producing narrative based cinema. Members of the course will become the film crew and produce a short digital film. Workshops on producing, directing, lighting, camera, sound and editing will build skills necessary for the hands-on production shoots. Visiting lecturers will critically discuss the individual roles of production in the context of the history of film.
Fall
Also Offered As: FNAR 2030
Prerequisite: FNAR 1010

CIMS 0700 Iranian Cinema: Gender, Politics and Religion
This seminar explores Iranian culture, society, history and politics through the medium of film. We will examine a variety of cinematic works that represent the social, political, economic and cultural circumstances of contemporary Iran, as well as the diaspora. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the role of cinema in Iranian society and beyond. Discussions topics will also include the place of the Iranian diaspora in cinema, as well as the transnational production, distribution, and consumption of Iranian cinema. Films will include those by internationally acclaimed filmmakers, such as Rakhshan Bani-Etemad, Asghar Farhadi, Bahman Ghobadi, Abbas Kiarostami, Mohsen Makhmalbaf, Dariush Mehrjui, Tahmineh Milani, Jafar Panahi, Marjane Satrapi and others. All films will be subtitled in English. No prior knowledge is required.
Fall
Also Offered As: COML 0700, GSWS 0700, NELC 0700

CIMS 0750 Image and Sound Editing
This course presents an in-depth look at the storytelling power of image and sound in both narrative and documentary motion pictures. Students apply a theoretical framework in ongoing workshops, exploring practical approaches to picture editing and sound design. Students edit scenes with a variety of aesthetic approaches, and create story-driven soundtracks with the use of sound FX, dialogue replacement, foleys, music and mixing. Students not only learn critical skills that expand creative possibilities, but also broaden their understanding of the critical relationship between image and sound.
Spring
Also Offered As: FNAR 2050
Prerequisite: FNAR 1010
1 Course Unit

CIMS 0790 The Religion of Anime
Be it shrine maidens, gods of death, and bodhisattvas fighting for justice; apocalypse, the afterlife, and apotheosis... the popular Japanese illustrated media of manga and anime are replete with religious characters and religious ideas. This course uses popular illustrated media as a tool for tracing the long history of how media and religion have been deeply intertwined in Japan.

Also Offered As: EALC 1550, RELS 0790
1 Course Unit

CIMS 1000 Cinema and Revolution
Can cinema be revolutionary? From Sergei Eisenstein's Battleship Potemkin to Boots Riley's Sorry to Bother You, filmmakers have long grappled with political revolution. In this course we'll study films that take moments of revolutionary upheaval as their subject, and cinema made during times of revolution. Can cinematic techniques challenge the status quo? How do filmmakers navigate the complex politics of cinematic production and distribution in moments of censorship and repression? Are art and propaganda always different? Students will give two oral presentations: one will be a detailed analysis of a single scene, and another will consider the politics of a film of their choosing. Open to all, including those with no prior background in cinema studies.
Fall
Also Offered As: COML 1003
1 Course Unit

CIMS 1010 World Film History to 1945
This course surveys the history of world film from cinema's precursors to 1945. We will develop methods for analyzing film while examining the growth of film as an art, an industry, a technology, and a political instrument. Topics include the emergence of film technology and early film audiences, the rise of narrative film and birth of Hollywood, national film industries and movements, African-American independent film, the emergence of the genre film (the western, film noir, and romantic comedies), ethnographic and documentary film, animated films, censorship, the MPPDA and Hays Code, and the introduction of sound. We will conclude with the transformation of several film industries into propaganda tools during World War II (including the Nazi, Soviet, and US film industries). In addition to contemporary theories that investigate the development of cinema and visual culture during the first half of the 20th century, we will read key texts that contributed to the emergence of film theory. There are no prerequisites. Students are required to attend screenings or watch films on their own.
Fall or Spring
Also Offered As: ARTH 1080, COML 1011, ENGL 1900
1 Course Unit

CIMS 1020 World Film History 1945-Present
Focusing on movies made after 1945, this course allows students to learn and to sharpen methods, terminologies, and tools needed for the critical analysis of film. Beginning with the cinematic revolution signaled by the Italian Neo-Realism (of Rossellini and De Sica), we will follow the evolution of postwar cinema through the French New Wave (of Godard, Resnais, and Varda), American movies of the 1950s and 1960s (including the New Hollywood cinema of Coppola and Scorsese), and the various other new wave movements of the 1960s, 1970s and 1980s (such as the New German Cinema). We will then selectively examine some of the most important films of the last two decades, including those of U.S. independent film movement and movies from Iran, China, and elsewhere in an expanding global cinema culture. There will be precise attention paid to formal and stylistic techniques in editing, mise-en-scene, and sound, as well as to the narrative, non-narrative, and generic organizations of film. At the same time, those formal features will be closely linked to historical and cultural distinctions and changes, ranging from the Paramount Decision of 1948 to the digital convergences that are defining screen culture today. There are no prerequisites. Requirements will include readings in film history and film analysis, an analytical essay, a research paper, a final exam, and active participation.
Fall or Spring
Also Offered As: ARTH 1090, COML 1022, ENGL 1901
1 Course Unit

CIMS 1027 Sex and Representation
This course explores literature that resists normative categories of gender and sexuality. By focusing on figures writing from the margins, we will explore how radical approaches to narrative form and subject-matter invite us to think in new ways about desire and identity. We will read texts that blur the boundaries between fact and fiction, hybridizing the genres of poetry, drama, and autobiography to produce new forms of expression, such as the graphic novel, auto-fiction, and prose poetry. From Virginia Woolf's gender-bending epic, Orlando, to Tony Kushner's Angels in America, this course traces how non-normative desire is produced and policed by social and literary contexts - and how those contexts can be re-imagined and transformed.
Fall or Spring
Also Offered As: COML 1027, GSWS 1027, REES 1481
1 Course Unit
CIMS 1030 Television and New Media
How and when do media become digital? What does digitization afford and what is lost as television and cinema become digitized? As lots of things around us turn digital, have we started telling stories, sharing experiences, and replaying memories differently? What has happened to television and life after New Media? How have television audiences been transformed by algorithmic cultures of Netflix and Hulu? How have (social) media transformed socialities as ephemeral snaps and swiped intimacies become part of the "new" digital/phone cultures? This is an introductory survey course and we discuss a wide variety of media technologies and phenomena that include: cloud computing, Internet of Things, trolls, distribution platforms, optical fiber cables, surveillance tactics, social media, and race in cyberspace. We also examine emerging mobile phone cultures in the Global South and the environmental impact of digitization. Course activities include Tumblr blog posts and Instagram curations. The final project could take the form of either a critical essay (of 2000 words) or a media project.
Spring
Also Offered As: ARTH 1070, COML 1031, ENGL 1950
1 Course Unit

CIMS 1050 Metropolis: Culture of the City
An exploration of modern discourses on and of the city. Topics include: the city as site of avant-garde experimentation; technology and culture; the city as embodiment of social order and disorder; traffic and speed; ways of seeing the city; the crowd; city figures such as the detective, the criminal, the flaneur, the dandy; film as the new medium of the city. Special emphasis on Berlin. Readings by, among others, Dickens, Poe, Baudelaire, Rilke, Doeblin, Marx, Engels, Benjamin, Kracauer. Films include Fritz Lang's Metropolis and Tom Tykwer's Run Lola Run.
Not Offered Every Year
Also Offered As: GRMN 1050, URBS 1050
1 Course Unit

CIMS 1051 The City in Literature and Film
This course focuses on the central place of the city through the history of cinema. The city in question may change depending on the term this course is being offered. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ENGL 1951, URBS 1051
1 Course Unit

CIMS 1055 Books on Film: Adapting the Victorians
This course considers how stories are told differently through different media and to different audiences, and how such differences inform the many decisions involved in the translation of works across media and across time. To do so, we will consider key literary works (novels, stories, plays) from Victorian literature as well as their adaptations for film and television. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ENGL 1055
1 Course Unit

CIMS 1056 Sherlock in the Multiverse
This course will consider the transmedia phenomenon of Sherlock Holmes. We will begin with his detective antecedents, we'll then dive into Conan Doyle's Victorian-era Sherlock, and finally explore Sherlock's contemporary life in new novels, short stories, screenplays, tv series and computer games. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ENGL 1056
1 Course Unit

CIMS 1070 Fascist Cinemas
Cinema played a crucial role in the cultural life of Nazi Germany and other fascist states. As cinema enthusiasts, Goebbels and Hitler were among the first to realize the important ideological potential of film as a mass medium and saw to it that Germany remained a cinema powerhouse producing more than 1000 films during the Nazi era. In Italy, Mussolini, too, declared cinema "the strongest weapon." This course explores the world of "fascist" cinemas ranging from infamous propaganda pieces such as The Triumph of the Will to popular entertainments such as musicals and melodramas. It examines the strange and mutually defining kinship between fascism more broadly and film. We will consider what elements mobilize and connect the film industries of the Axis Powers: style, genre, the aestheticization of politics, the creation of racialized others. More than seventy years later, fascist cinemas challenge us to grapple with issues of more subtle ideological insinuation than we might think. Weekly screenings with subtitles.
Not Offered Every Year
Also Offered As: COML 1071, GRMN 1070, ITAL 1930
1 Course Unit

CIMS 1080 German Cinema
An introduction to the momentous history of German film, from its beginnings before World War One to developments following the fall of the Berlin Wall in 1989 and German reunification in 1990. With an eye to film's place in its historical and political context, the course will explore the "Golden Age" of German cinema in the Weimar Republic, when Berlin vied with Hollywood; the complex relationship between Nazi ideology and entertainment during the Third Reich; the fate of German film-makers in exile during the Hitler years; post-war film production in both West and East Germany; the call for an alternative to "Papa's Kino" and the rise of New German Cinema in the 1960s.

CIMS 1112 Religion and Cinema in India
This seminar examines key themes in the study of religion and Indian cinema. The aim of the seminar is to foreground discussions of performativity, visual culture, representation, and politics in the study of modern South Asian religions. Themes include mythological cinema, gender and sexuality, censorship and the state, and communalism and secularism. The films we will be deploying as case studies will be limited to those produced in Hindi, Telugu and Tamil (the three largest cinema cultures of India). No knowledge of any South Asian language is needed for this course however.
Not Offered Every Year
Also Offered As: RELS 1112, SAST 1112
1 Course Unit

CIMS 1130 Water Worlds: Cultural Responses to Sea Level Rise & Catastrophic Flooding
As a result of climate change, the world that will take shape in the course of this century will be decidedly more inundated with water than we're accustomed to. The polar ice caps are melting, glaciers are retreating, ocean levels are rising, polar bear habitat is disappearing, countries are jockeying for control over a new Arctic passage, while low-lying cities and small island nations are confronting the possibility of their own demise. Catastrophic flooding events are increasing in frequency, as are extreme droughts. Hurricane-related storm surges, tsunamis, and raging rivers have devastated regions on a local and global scale. In this seminar we will turn to the narratives and images that the human imagination has produced in response to the experience of overwhelming watery invasion, from Noah to New Orleans. Objects of analysis will include mythology, ancient and early modern diluvialism, literature, art, film, and commemorative practice. The basic question we'll be asking is: What can we learn from the humanities that will be helpful for confronting the problems and challenges caused by climate change and sea level rise?
Not Offered Every Year
Also Offered As: COML 1130, ENV 1040, GRMN 1130

CIMS 1146 Queer German Cinema
Taught in English. This course offers an introduction into the history of German-language cinema with an emphasis on depictions of lesbian, gay, bisexual, trans and queer themes. The course provides a chronological survey of Queer German Cinema from its beginnings in the Weimar Republic to its most recent and current representatives, accompanied throughout by a discussion of the cultural-political history of gay rights in the German-speaking world. Over the course of the semester, students will learn not only cinematic history but how to write about and close-read film. No knowledge of German or previous knowledge required.
Not Offered Every Year
Also Offered As: GRMN 1146, GSWS 1146
1 Course Unit

CIMS 1160 Screenwriting Workshop
This is a workshop-style course for those who have thought they had a terrific idea for a movie but didn't know where to begin. The class will focus on learning the basic tenets of classical dramatic structure and how this (ideally) will serve as the backbone for the screenplay of the aforementioned terrific idea. Each student should, by the end of the semester, have at least thirty pages of a screenplay completed. Classic and not-so-classic screenplays will be required reading for every class, and students will also become acquainted with how the business of selling and producing one's screenplay actually happens.
Fall or Spring
Also Offered As: ENGL 3600
1 Course Unit

CIMS 1170 Writing for Television
This is a workshop-style course for those who have an interest in writing for television. The course will consist of two parts: First, students will develop premise lines, beats sheets and outlines for an episode of an existing television show. Second, students will develop their own idea for a television series which will culminate in the writing of the first 30 pages of an original television pilot.
Fall or Spring

1 Course Unit

CIMS 1180 The Short Film: Writing, Producing and Directing
In this class students will write and prepare a short film for production with the INTENT to direct it. The first half of class is devoted to coming up with an idea and writing a short film with a total run time of around 8-12 minutes. This is the ideal length for a short. The second half of the class is devoted to preparing to shoot the film which will include scheduling, budgeting, casting, crewing up, location scouting and creating a directorial look book for the film. At the end of class each student will have a short film script and all the necessary materials to start production of that film. The below documents are required to pass the class and presented as one all inclusive PDF document at the end of the semester.

CIMS 1190 Introduction to Postcolonial Literature
English is a global language with a distinctly imperial history, and this course serves as an essential introduction to literary works produced in or about the former European colonies. The focus will be poetry, film, fiction and non fiction and at least two geographic areas spanning the Americas, South Asia, the Caribbean and Africa as they reflect the impact of colonial rule on the cultural representations of identity, nationalism, race, class and gender. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

CIMS 1230 Masterpieces of French Cinema
This course will introduce students to key films of the French film canon, selected over a period ranging from the origins of French cinema to the present. Students will also be introduced to the key critical concepts (such as the notion of the "auteur" film genre) informing the discussion of films in France. The films will be studied in both a historical and theoretical context, related to their period styles (e.g. "le realisme poetique," "la Nouvelle Vague," etc.), their "auteurs," the nature of the French star system, the role of the other arts, as well to the critical debates they have sparked among critics and historians. Students will acquire the analytical tools in French to discuss films as artistic and as cultural texts. Please note: This course follows a Lecture/Recitation format. The Lecture (FREN 1230-401/CIMS 1230-401) is taught in English. For French credit: please register for both FREN 1230-401 (lecture) and FREN 1230-402 (recitation); the FREN 1230-402 recitation is conducted in French. For Cinema Studies credit: please register for CIMS 1230-401 (lecture) and CIMS 1230-403 (recitation); both are taught in English. Prerequisite: Two 200-level courses taken at Penn or equivalent.
Fall

CIMS 1271 American Musical Theatre
The American musical is an unapologetically popular art form, but many of the works that come from this tradition have advanced and contributed to the canon of theatre as a whole. In this course we will focus on both music and texts to explore ways in which the musical builds on existing theatrical traditions, as well as alters and reshapes them. Finally, it is precisely because the musical is a popular theatrical form that we can discuss changing public tastes, and the financial pressures inherent in mounting a production. Beginning with early roots in operetta, we will survey the works of prominent writers in the American musical theatre, including Kern, Berlin, Gershwin, Porter, Rodgers, Hart, Hammerstein, Bernstein, Sondheim and others. Class lecture/discussions will be illustrated with recorded examples.

CIMS 1272 Nationalism and Ethnic Conflict in Film
This course studies the cinematic representation of civil wars, ethnic conflicts, nationalistic doctrines, and genocidal policies. The focus is on the violent developments that took place in Russia and on the Balkans after the collapse of the Soviet Bloc and were conditioned by the new geopolitical dynamics that the fall of communism had already created. We study media broadcasts, documentaries, feature films representing the Eastern, as well as the Western perspective. The films include masterpieces such as "Time of the Gypsies", "Underground", "Prisoner of the Mountains", "Before the Rain", "Behind Enemy Lines", and others.

1 Course Unit

CIMS 1273 Dark Comedy in Theatre and Film
This course will examine the "troublesome genre" of dark comedy by looking at the ways in which theatre and film use comic and tragic structures and traditions to explore concepts and stories seemingly at odds with those traditions. Although not always organized chronologically in time, we will examine the formal and structural characteristics of tragicomedy by tracing its development, from some of its earliest roots in Roman comedy, to its manifestation in contemporary films and plays. Aside from close readings of plays and analysis of films, we will read selected critical essays and theory to enhance our understanding of how dark comedies subvert categories and expectations. We will look at how dark comedies affect audiences and read sections of plays aloud in class. Issues to be considered include comparing the way the genre translates across theatre and film (adaptation) and examining the unique placement of the genre at the heart of contemporary American culture. Students will have the opportunity to experiment with creating tragicomic effect through performance in their presentations. The class is a seminar, with required participation in discussions. Other assignments include an 8-10 page paper and a presentation. We will read plays by authors as diverse as Plautus, Anton Chekhov, and Lynn Nottage, and filmmakers including Charlie Chaplin, Sofia Coppola, and Bong Joon-ho.
Also Offered As: ENGL 1273, THAR 1273
1 Course Unit

CIMS 1274 The Musical Theatre of Stephen Sondheim
Just days before Stephen Sondheim died in November 2021, he attended a revival of Assassins at Classic Stage Company, as well as a radical rethinking of Company that had transferred from London to New York. A few days later, a public performance of the song "Sunday" was organized in Duffy Square by Lin-Manuel Miranda. A new production of Into the Woods is currently on Broadway, and another of Sweeney Todd is planned for February 2023. Though it’s been nearly 15 years since Sondheim’s final new musical, he is very much part of our theatrical present—through his own works, which continue to be produced internationally, and through his influence on several generations of composers, lyricists, and more. Still today, among theatre critics and a large sector of the public, Sondheim is generally considered the most significant composer and lyricist in the contemporary theatre; he is, in fact, accorded the kind of serious consideration generally reserved for "legitimate" playwrights. In this seminar, we will examine in detail Stephen Sondheim’s writing over six decades. We’ll begin with Sondheim’s earliest work as a lyricist, collaborating with composers Jule Styne (Gypsy), Leonard Bernstein (West Side Story), and later, Richard Rodgers (Do I Hear a Waltz?). Beginning in 1970, Sondheim – now both composer and lyricist – in partnership with director Harold Prince produced a series of musicals (including Company, Follies and Sweeney Todd,) still thought to be among the most innovative and substantial in the history of the genre. We will also focus on Sondheim’s musicals after his 1981 break with Prince. These later works, created with writers and directors including James Lapine (Sunday in the Park with George, Into the Woods, Passion), Jerry Zaks (Assassins), and John Doyle (Road Show) are often smaller in scale, intensely personal, and incorporate elements of performance art and popular culture. Finally, we will consider revival productions of Sondheim’s work, which often are reconceived from their original form, often with Sondheim’s involvement and occasional rewriting. This course is open to all students interested in theatre and musical theatre. The ability to read music is not required.
Also Offered As: ENGL 2874, THAR 1274
1 Course Unit

CIMS 1275 Broadway Musicals in the 21st Century
Wicked, Spring Awakening, Dear Evan Hansen, Hadestown. And of course, Hamilton. The innovations we see in Broadway musicals since 2000 are particularly fascinating in that they, so to speak, boldly go where no musicals have gone before—while at the same time honoring and building on the long-standing traditions of this beloved form. From the powerfully romantic Light in the Piazza, which nods to roots in European operetta, to the boundary-defying Black queerness of A Strange Loop... and everything in between. In this course, we will go year by year through musical theater from the quarter-century, to see where the form has gone recently... and where it’s headed. In addition to the works already mentioned, we’ll look at Caroline or Change, The Color Purple, In the Heights, Fun Home, and more. This course will also consider some recent “revisals,” like director Daniel Fish’s Oklahoma!, and Marianne Elliott’s gender-reassigned Company: reinterpretations of classic American musicals that imagine them in more contemporary light.

CIMS 1302 Asian American Cinema Movement: Fighting For Representation
Providing a broad introduction to the history of persons of Asian descent living in the United States, this course will specifically examine the Asian American & Pacific Islander American experience as told through the cinematic lens. Equal parts socio-political history and media studies, this course will comprehensively assess factors contributing to the historical under representation of AAPIs in mainstream American media. By contrast, the media texts that we study will reveal a cinematic history that runs parallel to the mainstream, consisting of independently produced films created by and/or starring AAPIs that feature authentic portrayals of the community they represent. Topics will include economics of film production, broadcast television ratings, film festivals as a mechanism of distribution, negative stereotyping, Hollywood whitewashing, cultural appropriation, and media activism. The course will take place once a week and will consist of a brief discussion of the previous week's readings, followed by a lecture, and ending with a full or partial film screening relating to the current week's topic. Additional out of class assignments will be given that involve attending the Philadelphia Asian American Film Festival, tentatively scheduled November 8-18, 2018. Students will have the opportunity to engage with and learn from AAPI filmmakers in attendance at the festival, with additional volunteer opportunities available for extra credit.
Fall

CIMS 1351 Contemporary Fiction & Film in Japan
This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan's war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, manga, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujirō, Naruse Mikio, Kurosawa Akira, Imamura Shohei, Koreeda Hirokazu, and Beat Takeshi.

CIMS 1358 Histories of Egypt
This course will explore Egypt's impact on the world in several historical eras – the ancient past and its unparalleled legacy; the nineteenth century and nationalism; the twentieth century's wars, peace and music and the twenty-first centuries lessons in revolution. We will examine European Egyptomania and Orientalism in the 19th century, Afrocentrism's ambitions for Egypt, and Egypt's centrality to pan-Arabism and pan-Africanism. And we will explore the history as Egypt's writers, filmmakers, musicians and poets have imagined it from the nineteenth century to the present.
Also Offered As: AFRC 1358, HIST 1358
1 Course Unit

CIMS 1359 Filming the Middle East
This course will take us through the history of the modern Middle East as told by the region's many film-makers. We will explore how cinema developed and grew throughout countries like Egypt, Iran, Syria, Turkey, Lebanon, Israel and Palestine. Unusually for a typical course on the Middle East, we will also pay close attention to North Africa's film industry, with a deep exploration of the cinema of Algeria, Tunisia and Morocco. Sudanese films will be an important part of our study as well. What does it mean to have a national cinema? Many of these countries' film industries grew under European occupation and colonialism. With independence, were more markets available to Middle Eastern films? Where did directors and screenwriters train? Who were the intended audiences for these films? We will watchcanonical films from the region, many of which focus on or reflect the political turmoil and aftermath of wars. But we will also examine the lightness of comedies, which were usually much more popular with Middle Eastern audiences, and which reveal every bit as much about the region's histories. And we will watch and discuss a phenomenon not found in Western cinema - the Ramadan soap operas and historical reenactments that are unique to the Middle East.
Also Offered As: HIST 1359, NELC 1970
1 Course Unit

CIMS 1360 Arab/Israeli Conflict in Literature and Film
This course will explore the origins, the history and, most importantly, the literary and cinematic art of the struggle that has endured for a century over the region that some call the Holy Land, some call Eretz Israel and others call Palestine. We will also consider religious motivations and interpretations that have inspired many involved in this conflict as well as the political consequences of world wars that contributed so greatly to the reconfiguration of the Middle East after the fall of the Ottoman Empire, and after the revelations of the Holocaust in Western Europe. While we will rely on a textbook for historical grounding, the most significant material we will use to learn this history will be films, novels, and short stories. Can the arts lead us to a different understanding of the lives lived through what seems like unending crisis?
Fall or Spring
Also Offered As: HIST 1360, NELC 0675
1 Course Unit
CIMS 1371 New Korean Cinema
In 2019, Bong Joon-ho's Parasite won the Palme d'Or at the 72nd Cannes Film Festival. This event marked the apex of South Korean cinematic renaissance, having steadily become a tour de force in the international film festival scene since 1997 onwards. This course explores the major auteurs, styles, themes, and currents of the so-called “New Korean Cinema” that emerged in the mid-to-late 1990s to continue to this day. Drawing from texts on critical film and Korean studies, we will pay particular attention to how the selected works re-present, resist, and interweave the sociopolitical climate they concern and are born out of. Using cinema as a lens with which to see the society, we will touch upon major events of the twentieth century including national division, military dictatorship and democratization movements, IMF economic crisis, youth culture, hallyu (the Korean wave), and more. In so doing, we will closely examine how each cinematic medium addresses the societal power structure and the role of the “Other” it represents in terms of class, race, gender, and sexuality in the construction of contemporary Korean society. No prior experience of Korean studies courses necessary, all films will be screened with English subtitles.

CIMS 1440 Film Music in Post 1950 Italy
An exploration of cinematic sound through the lens of specific composer/director collaborations in post-1950 Italy, examining scores, soundtracks, and the interaction of diegetic and non-diegetic music with larger soundscapes. Composers Nino Rota and Ennio Morricone serve as case studies, in partnership with directors Fellini, Visconti, Leone, Pontecorve, Pasolini, and Coppola. Highlights include several excerpts form the Fellini/Rota collaboration, including The White Sheik, I vitelloni, The Road, Nights of Cabiria, La dolce vita, 8 1/2, Juliet of the Spirits, Satyricon, The Clowns, Roma, Amarcord, Casanova, and Orchestra Rehearsal. Rota’s music for Visconti will be examined in Senso, the Leopard, and Rocco and his Brothers, along with his Transatlantic collaboration for The Godfather. Morricone’s work with various directors will be discussed in The Good, the Bad, and the Ugly, The Battle of Algiers, and Teorema, as well as for American films such as Malick’s Days of Heaven and Tarantino’s The Hateful Eight. Weekly screenings required. Open to all: music majors, minors, and non-majors; will count toward requirements for music minor. Knowledge of music and Italian helpful but not required. All readings and lectures in English.
Also Offered As: ITAL 1440, MUSC 1440
1 Course Unit

CIMS 1470 Chekhov: Stage & Screen
What’s so funny, Mr. Chekhov? This question is often asked by critics and directors who still are puzzled with Chekhov’s definition of his four major plays as comedies. Traditionally, all of them are staged and directed as dramas, melodramas, or tragedies. Should we cry or should we laugh at Chekhovian characters who commit suicide, or are killed, or simply cannot move to a better place of living? Is the laughable synonymous to comedy and the comic? Should any fatal outcome be considered tragic? All these and other questions will be discussed during the course. The course is intended to provide the participants with a concept of dramatic genre that will assist them in approaching Chekhov’s plays as comedies. In addition to reading Chekhov’s works, Russian and western productions and film adaptations of Chekhov’s works will be screened. Among them are, Vanya on 42nd Street with Andre Gregory, and Four Funny Families. Those who are interested will be welcome to perform and/or direct excerpts from Chekhov’s works.

CIMS 1520 Forest Worlds: Mapping the Arboreal Imaginary in Literature and Film
The destruction of the world’s forests through wild fires, deforestation, and global heating threatens planetary bio-diversity and may even, as a 2020 shows, trigger civilizational collapse. Can the humanities help us think differently about the forest? At the same time that forests of the world are in crisis, the “rights of nature” movement is making progress in forcing courts to acknowledge the legal “personhood” of forests and other ecosystems. The stories that humans have told and continue to tell about forests are a source for the imaginative and cultural content of that claim. At a time when humans seem unable to curb the destructive practices that place themselves, biodiversity, and forests at risk, the humanities give us access to a record of the complex inter-relationship between forests and humanity. Forest Worlds serves as an introduction to the environmental humanities. The environmental humanities offer a perspective on the climate emergency and the human dimension of climate change that are typically not part of the study of climate science or climate policy. Students receive instruction in the methods of the humanities - cultural analysis and interpretation of literature and film - in relation to texts that illuminate patterns of human behavior, thought, and affect with regard to living in and with nature.

CIMS 1900 Italian History on Screen: How Movies Tell the Story of Italy
How has our image of Italy arrived to us? Where does the story begin and who has recounted, rewritten, and rearranged it over the centuries? In this course, we will study Italy's rich and complex past and present. We will carefully read literary and historical texts and thoughtfully watch films in order to attain an understanding of Italy that is as varied and multifaceted as the country itself. Group work, discussions and readings will allow us to examine the problems and trends in the political, cultural and social history from ancient Rome to today. We will focus on: the Roman Empire, Middle Ages, Renaissance, Unification, Turn of the Century, Fascist era, World War II, post-war and contemporary Italy. Lectures and readings are in English.

CIMS 1910 Sicily on Page and Screen
What images come to mind when we hear the words Sicily and Sicilians? Often our thoughts range from scenic vacation spots, delicious seafood and cannoli, and sweet grandmothers dressed in black, to mafia violence, vendettas, and the deep-rooted code of silence, omerta. But, how did these ideas get to us? Is there truth in them? Is there more to this island and its people? Through careful analysis of literary and cinematic representations of this Italian region, and those that do and have inhabited it, we will trace and analyze how Sicilians have represented themselves, how mainland Italians have interpreted Sicilian culture, how outsiders have understood these symbols, how our own perceptions shaped what we thought we knew about this place and, finally, how our own observations will have evolved throughout our studies. We will watch films such as Tornatore's Cinema paradiso and Coppola's The Godfather II, and read texts such as Lampedusa's The Leopard and Maraini's Bagheria. This course aims to increase students' understanding and knowledge of the Sicilian socio-cultural system. It will help students develop their ability to understand and interpret Sicilian culture through close analysis of its history, values, attitudes, and experiences, thereby allowing them to better recognize and examine the values and practices that define their own, as well as others', cultural frameworks.
Summer Term
Also Offered As: ITAL 1910
1 Course Unit

CIMS 2000 Virtual Reality Lab
In this collaboration between Penn and the Philadelphia Museum of Art (PMA), students will work with curators to create virtual reality projects connected to the museum's collections. This course mixes virtual reality theory, history, and practice. We will read a wide range of scholarship, manifestoes, and memoirs that examine virtual reality and other immersive technologies, stretching from the 18th century to today. We will explore virtual reality projects, including narrative and documentary films, commercial applications, and games. We will work with many different virtual reality systems. And we will learn the basics of creating virtual reality, making fully immersive 3-D, 360-degree films with geospatial soundscapes. Finally, we will take what we have learned out of the classroom, working with the Philadelphia Museum of Art curators to create virtual reality experiences based around the museum's objects and exhibits. Students will gain an understanding of the unique approaches needed to appeal to museum visitors in a public setting, so we can make viable experiences for them. No previous knowledge of VR or experience is necessary.

1 Course Unit
CIMS 2001 Modern Science Fiction Cinema
Science Fiction has been a cinematic genre for as long as there has been cinema—at least since Georges Melies's visionary Trip to the Moon in 1902. However, though science fiction films have long been reliable box office earners and cult phenomena, critical acknowledgement and analysis was slow to develop. Still, few genres reflect the sensibility of their age so transparently—if often unconsciously—or provide so many opportunities for filmmakers to simultaneously address social issues and expand the lexicon with new technologies. Given budgetary considerations and the appetite for franchises, science fiction auteurs face a difficult negotiation between artistic expression and lowest common denominator imperatives, the controversy over Terry Gilliam's Brazil (1985) being perhaps the most infamous example. Nevertheless, many notable filmmakers have done their most perceptive and influential work in the sci-fi realm, including Gilliam, Ridley Scott, David Cronenberg, Paul Verhoeven, James Cameron and Alfonso Cuaron. This course will survey the scope of contemporary science fiction cinema, after looking first at seminal works like Metropolis (1927) and 2001: A Space Odyssey (1968) that continue to cast their shadow over the genre. We will then devote considerable time to a pair of more modern films, Scott's Alien (1979) and Blade Runner (1982), which drew from earlier movements (German expressionism, noir), influenced new ones (cyberpunk) and inspired a rare wave of academic discourse. Over the course of the term we will sample smaller, more independent-minded projects, such as Michel Gondry's Eternal Sunshine of the Spotless Mind (2004) and Spike Jonze's Her (2013) as well as higher profile but much more risky epics from filmmakers such as Steven Spielberg and Christopher Nolan. Spring
1 Course Unit

CIMS 2010 Film Festivals
This course is an exploration of multiple forces that explain the growth, global spread and institutionalization of international film festivals. The global boom in film industry has resulted in an incredible proliferation of film festivals taking place all around the world, and festivals have become one of the biggest growth industries. A dizzying convergence of cinephilia, media spectacle, business agendas and geopolitical purposes, film festivals offer a fruitful ground on which to investigate the contemporary global cinema network. Film festivals will be approached as a site where numerous lines of the world cinema map come together, from culture and commerce, experimentation and entertainment, political interests and global business patterns. To analyze the network of film festivals, we will address a wide range of issues, including historical and geopolitical forces that shape the development of festivals, festivals as an alternative marketplace, festivals as a media event, programming and agenda setting, prizes, cinephilia, and city marketing. Individual case studies of international film festivals—Cannes, Berlin, Venice, Rotterdam, Karlovy Vary, Toronto, Sundance among others—will enable us to address all these diverse issues but also to establish a theoretical framework with which to approach the study of film festival. For students planning to attend the Penn-in-Cannes program, this course provides an excellent foundation that will prepare you for the on-site experience of the King of all festivals.

CIMS 2073 Modernist Animals: How to Rethink the Human-Animal Divide
This course explores literary modernism through the lens of Animal Studies. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: COML 2073, ENGL 2073
1 Course Unit

CIMS 2080 20th-Century Literature Seminar
The course explores an aspect of 20th-century literature intensively. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
Also Offered As: ENGL 2080, JWST 2080
1 Course Unit

CIMS 2083 Faking it: Liars, Imitators and Cheats in Literature and Film
Deception and lies are a constant theme and a mechanism of narrative art. For a genre literally synonymous with falsehood, fiction has always been touchy about its relationship to truth. Does the novel neutrally represent reality or does it recreate it? Are characters like living, breathing real people, or are they mere simulations? And if they’re just words on a page (or images on a screen), why are we so moved by their adventures, loves and misfortunes? In this class, we will explore and expand on these questions by focusing on novels and films that deal explicitly and exclusively with fakers, shape-shifters and dopplegangers, lies of necessity and of opportunity, as well as with works that revel in exposing their own manipulative artificiality. We will read psychoanalysts, sociologists, philosophers, and postcolonial thinkers and ask, What does it mean to be authentic? How malleable are our individual identity, race, gender and sexuality? What forces shape it, and how constant is this shape? Are we the same selves when we have a conversation as when we give a presentation? Do we remain ourselves when we talk to customers at our service jobs, to teachers, to students? When we “pass” as a different race? When we speak in a different accent? How do we reconcile the conflicting demands of “be yourself” and “fake it till you make it”? What is the relation between our presentation of ourselves and our selves? Novels and shorts stories for discussion might include classics like Nella Larsen’s Passing, Vladimir Nabokov’s Despair and Patricia Highsmith’s The Talented Mr. Ripley, as well as movies like Gaslight, The Battle of Algiers, The Yes Men, and American Psycho. While much of the weekly work in this class will be reading-and-discussion based, oral presentations – keenly aware of their own artifice – will count toward half of the final grade. A final oral presentation will be based on a creative project in conversation with class materials. The course would satisfy those interested in fulfilling the Advanced Film and Literature and Global Literature and Film requirements. This is a CWiC course, Communication Within the Curriculum.
Spring, even numbered years only
Also Offered As: COML 2083, ENGL 2083
1 Course Unit

CIMS 2145 Failure to Communicate (SNF Paideia Program Course)
This seminar examines “failure to communicate” in a variety of cultural areas, among them literature, romance, politics, theater, law, science, war, and education. Materials will include literary fiction, plays, poetry, film, TV, and assorted nonfiction, journalism and scholarship. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ENGL 2145
1 Course Unit

CIMS 2155 Gender History and American Film
More than any other medium, the motion pictures fostered new ideals and images of modern womanhood and manhood in the United States. Throughout the twentieth century, gender representations on the screen bore a complex relationship to the social, economic, and political transformations marking the lives and consciousness of American men and women. This course explores the history of American gender through film. It treats the motion pictures as a primary source that, juxtaposed with other kinds of historical evidence, opens a window onto gendered work, leisure, sexuality, family life, and politics. We will view a wide range of Hollywood motion pictures since 1900, as well as films by blacklisted artists, feminists, and independent producers.
Spring
Also Offered As: GSWS 2155, HIST 2155
1 Course Unit
CIMS 2270 Contemporary Russia Through Film
This course continues developing students' advanced skills in Russian and offers intensive study of Russian film, arguably the most powerful medium for reflecting changes in modern society. This course will examine Russia's transition to democracy and market economy through the eyes of its most creative and controversial cinematographers. The course will focus on the often agonizing process of changing values and attitudes as the country moves from Soviet to Post-Soviet society. Russian films with English subtitles will be supplemented by readings from contemporary Russian media sources. The course provides an excellent visual introduction to the problems of contemporary Russia society.
Not Offered Every Year
Also Offered As: REES 2270
Mutually Exclusive: REES 5296
Prerequisite: RUSS 1200
1 Course Unit

CIMS 2271 Post-Soviet Russia in Film
This course is intended for students who have spoken Russian at home and seek to improve their capabilities in formal and professional uses of the Russian language. Film is arguably the most powerful medium for reflecting changes in modern society. This course will examine Russia's transition to democracy and market economy through the eyes of its most creative and controversial cinematographers. The course will focus on the often agonizing process of changing values and attitudes as the country moves from Soviet to Post-Soviet society. Russian films with English subtitles will be supplemented by readings from contemporary Russian media sources. The course provides an excellent visual introduction to the problems of contemporary Russia society.

Prerequisite: RUSS 0401
1 Course Unit

CIMS 2355 Classic Icons, Cinematic Images: Popular Culture in the Middle East
The meaning of culture can sometimes best be understood through a look at its popular traditions and the routines of everyday life. This course will grapple with issues of ethnicity, political conflict, and identity in the Middle East by analyzing the culture produced for and consumed by a wide spectrum of the general public in different countries. Political cartoons, photography, novels, film, music, dance, and other modes of cultural expression will be used to explore the historical roots of the political anxieties and social conventions common to many modern Middle Eastern communities. In this way, we will recast studies of politics through an understanding of identity and culture.
Also Offered As: HIST 2355
1 Course Unit

CIMS 2420 Cultural Studies Seminar
This course explores an aspect of cultural studies intensively. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
Also Offered As: ARTH 2930, COML 2420, ENGL 2420
1 Course Unit

CIMS 2430 Twentieth-Century Russian Literature, Film and Culture: Utopia, Revolution and Dissent
This course continues developing students' advanced skills in Russian, and introduces students to major movements and figures of twentieth-century Russian literature and culture. We will read the works of modern Russian writers, and watch and discuss feature films. The course will introduce the first Soviet films and works of the poets of the Silver Age and beginning of the Soviet era as well as the works from later periods up to the Perestroika and Glasnost periods (the late 1980s).
Not Offered Every Year
Also Offered As: REES 2430

1 Course Unit

CIMS 2501 Andrei Tarkovsky: Cinema, Spirit and the Art of the Long Take
Andrei Tarkovsky is universally acknowledged to be the greatest Soviet filmmaker of the last half of the twentieth century. Kurosawa claimed that Tarkovsky had "no equal among film directors alive now." Bergman called his work "a miracle." His films are beautiful, intellectually challenging, and spiritually profound. They also represent a prolonged exploration of the potential of the long take - unusually extended, continuous shots. Tarkovsky's works range from "Ivan's Childhood", a study of wartime experience through the eyes of a child; to "Solaris", a philosophical essay in the form of a science-fiction thriller; to "Andrei Rublev", an investigation of the power of art and spirituality. In this course, we will study Tarkovsky's films and life, with attention to his formal and artistic accomplishments, his thought and writings, and the cultural and political contexts of his work. Each student will learn to analyze film form and content and write two short and one longer paper on some longstanding aspect of Tarkovsky's work of the student's choice.
Not Offered Every Year
Also Offered As: REES 0280
1 Course Unit

CIMS 2506 Ecocritical Seminar: Remediating the Environment
In this course, we will interrogate the term "remediation" as meaning both environmental restoration and media representation. Students will be introduced to the fields of ecocriticism and ecocinema by examining a variety of materials—from bestselling books to billboards, documentaries, and websites—have informed the cultural imagination of the environment. Students will also discover how media communications and publications can help to remediate the environment in the face of climate catastrophe. This course can be counted as an elective toward the Environmental Humanities minor and as fulfilling the minor's public engagement component. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

CIMS 2665 Fakes, Forgeries and Forensics in Digital Media
Fake images on social media are just one of the latest examples of fabrications and modifications that have taken media into dubious territory throughout history. This course will analyze the history of fakes and forgeries and consider whether they devalue the original or not, or even have value in themselves. Along the way, students will learn how fakes and forgeries have been created, what tools can be used to counter the onslaught of illicit creations, and the arts and humanities debates that have arisen surrounding them. After evaluating the ways various media have been modified over time, this course will show students how to use photo manipulation tools to modify digital media. It will also show students how to perform various detailed analyses of digital media to determine their legitimacy. A final project will bring these tools together, as groups of students create a fake or forgery, consider its implications and evaluate a tool's ability to detect it.
Fall
Also Offered As: ENGL 2665
1 Course Unit

CIMS 2670 Computer Animation
Through a series of studio projects this course introduces techniques of 2D and 3D computer animation. Emphasis is placed on time-based design and storytelling through animation performance and montage. Students will develop new sensitivities to movement, composition, cinematography, editing, sound, color and lighting.
Fall or Spring

1 Course Unit

CIMS 2740 Facing America
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these conceptions have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.
Not Offered Every Year
Also Offered As: AFRC 2740, ARTH 2740, LALS 2740
Mutually Exclusive: ARTH 6740
1 Course Unit

CIMS 2750 Russian History in Film
This course draws on fictional, dramatic and cinematic representations of Russian history based on Russian as well as non-Russian sources and interpretations. The analysis targets major modes of imagining, such as narrating, showing and reenacting historical events, personae and epochs justified by different, historically mutating ideological postulates and forms of national self-consciousness. Common stereotypes of picturing Russia from "foreign" perspectives draw special attention. The discussion involves the following themes and outstanding figures: the mighty autocrats Ivan the Terrible, Peter the Great, and Catherine the Great; the tragic ruler Boris Godunov; the brazen rebel and royal impostor Pugachev; the notorious Raspoutine, his uncanny powers, sex-appeal, and court machinations; Lenin and the October Revolution; images of war; times of construction and times of collapse of the Soviet Colossus.

Also Offered As: REES 0270
Mutually Exclusive: REES 5270
1 Course Unit

CIMS 2810 Method Acting: From Self to Stage and Screen
What, exactly, is “method acting”? Jeremy Strong became notorious on television's Succession for “staying in character” while filming, to the great irritation of his castmates. Jared Leto “transformed” himself by gaining sixty pounds for a role in Chapter 27, then losing another thirty for a role in Dallas Buyer's Club. Are such approaches really “method” acting? Are they healthy and sustainable? And do they produce truly compelling performances? This course aims to demystify “the method” through a combination of historical inquiry and hands-on acting work. We will explore the cultural phenomenon of “the method” by tracing its historical, theatrical roots, from the core theories and practices of Russian actor-director Konstantin Stanislavsky through the American Group Theatre experiments of the 1930s, the heyday of New York's Actors Studio in the 1950s, and its culmination in iconic stage and film performances. (One prime example is Marlon Brando's famed portrayal of Stanley in Tennessee Williams's A Streetcar Named Desire, as directed by Elia Kazan). Our studies will involve reading historical, theoretical, and dramatic texts, viewing selected films, and practicing acting exercises. Course assessment will comprise participation, facilitation, short responses, and a final project that can take the form of a research paper, presentation, or performance.
Also Offered As: ENGL 2882, THAR 2810
1 Course Unit
CIMS 2830 Backstage Drama in Theatre and Film
Inviting audiences into a special relationship with illusion, backstage dramas (whether on film or on stage) and plays-within-plays reach beyond and alongside traditional plot-driven narratives, to reflect on the process of representation itself. Drawing from classical debates about the relationships between reality, illusion, representation, and imitation (mimesis), we will examine a variety of plays and films as we articulate the complex network of responses and underlying assumptions (whether cultural, political, or social), about art and life, that these works engage.

Fall, odd numbered years only
Also Offered As: ENGL 1896, THAR 2830
1 Course Unit

CIMS 2840 Icons in Performance: Actors and Others Who Have Shaped the Arts
Many talented performers bring works to life on a stage or in film. But a select few artists are so distinctive they become icons, defining for audiences—often for many years beyond their careers—the art they serve. Marlon Brando defined a new kind of American acting. Sidney Poitier broke the color barrier for leading man movie stars. Maria Callas showed that opera was equal parts theatre and music. Greta Garbo helped us understand the visual power of a film image. This seminar course will focus on iconic performers, directors and others, and the roles they play in defining their art forms. It is part analysis (interpreting in detail what it is these artists do) and part cultural study (why it matters, and also seeking to understand the larger circumstances at play in forging an icon). In addition to the performers mentioned above, we'll also study Mae West, Fred Astaire, Marilyn Monroe, Elvis Presley, Judy Garland, Frank Sinatra, and more. We will also look at a handful of iconic directors—including Alfred Hitchcock, Douglas Sirk, and others—whose style makes a definitive mark on American film and theater. And we will also look at how critics (in addition to popular audiences) assess performers through comparisons, and by understanding the evolution and tradition of the art. To support our work, we will use film, audio recordings, scripts, criticism and analytical essays, biography, and more.

Also Offered As: ENGL 2890, THAR 2840
1 Course Unit

CIMS 2850 Art and Business of Film
The course will explore how a screenplay is conceptualized and developed, the role of agency relationships in the film business, and -casting as wide a net as possible - the financing, production, direction, distribution, exhibition and marketing of both independent and studio films. A combination of lectures by instructors and practitioners, case studies, film screenings, and consulting projects with independent and Hollywood creators, packagers, financiers, exhibitors, distributors and publicists will illustrate the relationship between the art of film and the business of film. Guests will include screenwriters, agents, producers, directors, distributors, film festival curators and film critics. In short, we will try to cover all aspects of making a film, and explore that often-tricky intersection of art and commerce.

Fall or Spring
1 Course Unit

CIMS 2890 Mixed Media Animation
Mixed Media Animation is a contemporary survey of stop-motion animation concepts and techniques. Students use digital SLR cameras, scanners and digital compositing software to produce works in hand-drawn animation, puppet and clay animation, sand animation, and multiplane collage animation. Screenings and discussions in the course introduce key historical examples of animation demonstrating how these techniques have been used in meaningful ways. Students then learn how to composite two or more of these methods with matte painting, computer animation or video.

Fall or Spring
Also Offered As: FNAR 1050
1 Course Unit

CIMS 2900 Post War Japanese Cinema
Mizoguchi Kenji, Ozu Yasujiro, and Kurosawa Akira are recognized today as three of the most important and influential directors in Japanese cinema. In their films of the late 1940s and 1950s, these directors focused upon issues surrounding the human condition and the perception of truth, history, beauty, death, and other issues of the postwar period. This lecture course places their films in period context, and pays particular attention to the connections to other visual media, and to how “art” and “history” are being defined in the cinematic context. How other directors also took up these issues, and referred to the “big three” is also be discussed.

Not Offered Every Year
Also Offered As: ARTH 2900, EALC 1340
1 Course Unit

CIMS 2910 East Asian Cinema
This survey course introduces students to major trends, genres, directors, and issues in the cinemas of East Asian countries/regions, including Japan, Korea, China, Hong Kong, and Taiwan. Charting key developments over more than a hundred years from the early twentieth century to the present, this course examines films as aesthetic objects, asking questions about film form, narrative, and style. It also pays attention to the evolution of cinema as an institution (e.g. modes of production, circulation, and exhibition) in different cultural and political contexts. Weekly course materials will include both films (primary sources) and analytical readings (secondary sources). By the end of the course, students are expected to gain broad knowledge of East Asian cinema, develop skills of film analysis, and apply these skills to perform historically informed and culturally sensitive analysis of cinema. Prior knowledge of East Asian languages is NOT required.

Also Offered As: ARTH 2910, EALC 1116
Mutually Exclusive: ARTH 6910, EALC 5116
1 Course Unit

CIMS 2935 Culture on Trial: Race, Media & Intellectual Property
This course explores the US intellectual property regime's impact on the production, distribution and consumption of media and art. By the end of the class, students will come away with historical, theoretical, and practical understandings of how media technology changes the law and how the law has subsequently responded to changes in media technology. This course is affiliated with CWIC (Communication Within the Curriculum). See the English Department's website at www.english.upenn.edu for a description of the current offerings.

Also Offered As: ENGL 2935, SOCI 2973
1 Course Unit
CIMS 2950 Global Film Theory
This course will provide an introduction to some of the most important film theory debates and allow us to explore how writers and filmmakers from different countries and historical periods have attempted to make sense of the changing phenomenon known as "cinema," to think cinematically. Topics under consideration may include: spectatorship, authorship, the apparatus, sound, editing, realism, race, gender and sexuality, stardom, the culture industry, the nation and decolonization, what counts as film theory and what counts as cinema, and the challenges of considering film theory in a global context, including the challenge of working across languages. There will be an asynchronous weekly film screening for this course. No knowledge of film theory is presumed.
Not Offered Every Year
Also Offered As: ARTH 2950, ARTH 2950, COML 2950, ENGL 2900, GSWS 2950
Mutually Exclusive: ARTH 6950
1 Course Unit

CIMS 2951 Digital and New Media Seminar
This course explores a particular topic in the study of digital and new media in an intensive and in-depth manner. See the English Department's website at: www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
Also Offered As: ARTH 2920, COML 2960, ENGL 2950
1 Course Unit

CIMS 2952 Mobile Phone Cultures
Over the years, the cellphone or the mobile phone ceased to be just an extension of the landline telephone as a range of locative, social and networked media converged into it. Even as they have global impact, mobile media technologies influence and are influenced by socio-cultural factors in specific places, and so mobile phone cultures are both global and local at the same time. In this course, we will be studying the revolutions in youth culture, desire, gender norms, and political propaganda that are emerging as new hardware, apps, and internet services are being added to mobile media. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ENGL 2952
1 Course Unit

CIMS 2953 Digital Infrastructures & Platforms
Platforms ranging from ride-hailing and food delivery apps (Uber and Swiggy) to subscription based audiovisual content providers (Netflix and SonyLIV) mediate multisided transactions (markets) and operate based on algorithmic collection, circulation, and monetization of user data. In this course, we will engage with a variety of readings about multi-situated study of apps, paying attention to both app interfaces as well as their connection to backend systems and infrastructures like content delivery networks and software development kits. In what ways do processes of data storage/distribution, content encryption/decryption and encoding/decoding make "seamless" streaming on Hulu/Prime Video and instantaneous digital payments on Venmo and PayTM possible? We will begin with how infrastructures have been studied in the past, and then in particular focus on media infrastructures such as satellite systems, optical fiber cables, cell antennas, and data centers. The course readings will consider the varied definitions of platforms and examine the socio-political effects of the proliferation of platforms in different regions of the world. In studying superapps and platforms like WeChat (China), LINE (Japan), and Jio (India), we will try to comprehend in what ways have discourses of platformization been shaped by governmental regulation, cultural practices, and socio-politics of regions. We will explore questions like: in what ways are infrastructures and apps related? How do content creators and SVoD audiences navigate algorithmic opacity? Why do BigTech companies float competing discourses about platforms? What are the connections between infrastructural investments and platform capitalism? What does it mean to have digital lives in a platform society? In what ways do digital infrastructures and platforms create the foundations for smart cities and Internet of Things? Course assignments include a final research paper (2000 words) as well as project-based case studies of platform companies and socio-material assessments of infrastructures.

Also Offered As: FREN 3010, GSWS 3010
1 Course Unit
**CIMS 3030 Queer Cinema**

Queer Cinema, in Theory: This course explores the role of cinema in shaping the history of gender and sexuality, at the same time introducing students to some of the most relevant texts in the field of queer, gender and trans studies. While the last decades have been characterized by increasing acceptance of gays, lesbians and trans people into mainstream society, this process has no doubt reproduced new inequalities and asymmetries – in terms of race, class, and gender presentation. Does “queer” still pose a threat to the mainstream or is it now part of the “normal”? Should one welcome the progressive acceptance or queer lives within the mainstream or should one reject it in the name of an indissoluble difference? How do whiteness and homonormativity participate in the structural marginalization of black and trans people? Some of the topics addressed by this course are the "closet" in classical Hollywood cinema and its critique in 1990s queer films such as Happy Together (Wong Kar-wai, 1997); the intersection of sexuality and race in black feminist films such as Born in Flames (Lizzie Borden,1983) and Watermelon Woman (Cheryl Dunye, 1996); the treatment of reproductive labor in experimental feminist films such as Jeanne Dieiman (Chantal Akerman, 1975); the representation of the AIDS crisis in new queer films such as The Living End (Gregg Araki,1992); sex reassignment politics in 2000s Iranian films such as Sex My Life (Bahman Motemedian).

Also Offered As: GSWS 3020, ITAL 3030
1 Course Unit

**CIMS 3040 Japanese Cinema**

This course is a survey of Japanese cinema from the silent period to the present. Students will learn about different Japanese film genres and histories, including (but not limited to) the benshi tradition, jidaigeki (period films), yakuza films, Pink Film, experimental/arthouse, J-horror, and anime. Although the course will introduce several key Japanese auteurs (Mizoguchi, Ozu, Kurosawa, Oshima, Suzuki, etc), it will emphasize lesser known directors and movements in the history of Japanese film, especially in the experimental, arthouse, and documentary productions of the 1960s and 1970s. Finally, in addition to providing background knowledge in the history of Japanese cinema, one of the central goals of the course will be to interrogate the concept of “national” cinema, and to place Japanese film history within a international context. Fall or Spring
Also Offered As: ENGL 2933
1 Course Unit

---

**CIMS 3050 Rome in Cinema: Representations of The Eternal City**

In this course we will look at the different ways in which Rome's cityscape has been represented in 20th and 21st century Italian and American cinemas, intersecting with historical events such as the rise of Italian fascism, WWII, the 1960s economic boom, as well as the political impact of the current migratory crisis in the Mediterranean Sea. Why is Rome often referred to as "The Eternal City"? In what ways has the myth of Rome's eternality been politically exploited throughout Italy's modern history? Students will acquire technical vocabulary to improve their visual interpretation skills, as well as knowledge of some of the most impactful historical and cultural events of last century. Requirements will include readings in cultural and film history, an analytical essay, a research paper, weekly blog posts, and active participation in class discussion. Films may include Roman Holiday (William Wyler, 1953), La Dolce Vita (Federico Fellini, 1960), Accattone (Pier Paolo Pasolini, 1961), The Talented Mr. Ripley (Anthony Minghella, 1999), The Great Beauty (Paolo Sorrentino, 2013).

**CIMS 3200 The History of American Animation**

This course will look at American animation as an art form, a technology and an industry. We will explore the ways in which artistic, technical, historical, and cultural conditions shape the development of animation and in turn, how animation impacts viewers. Topics will include trends in animation and their relation to contemporary popular culture, issues of art versus commerce in the creation of cartoons, the intersection of animation and politics, and shifts in style and technique throughout the years. We will look at the personalities in animation who have shaped the art form and continue to influence it, the rise in animation’s popularity, and current-day applications of animated imagery. Case studies will include Pixar, Walt Disney, UPA, television cartoons, stop motion animation, and the movie, Who Framed Roger Rabbit.

Not Offered Every Year
Also Offered As: ARTH 3870, FNAR 3181
1 Course Unit
CIMS 3201 The History Computer Animation
This course will look at computer animation as an art form, a series of technological innovations and an industry. We will explore the way in which artistic, technical, historical, and cultural conditions have shaped the development of computer animation. Topics will include the impact of early motion graphics experiments in the sixties, the contributions of university- and corporation-funded research, commercial production, and the rise of Pixar. We will consider the companies and personalities in computer animation who have shaped the art form and continue to influence it, the contributions to computer animation from visionaries around the world, and current day applications of animated imagery. Throughout the course, we will screen important works from the canon of computer animation, including the earliest computer-animated shorts, scenes from Beauty and the Beast, the first Pixar shorts, Toy Story, Final Fantasy and works done internationally to forward the art and the industry.

Also Offered As: ARTH 3871, ENGL 0591, FNAR 3182
1 Course Unit

CIMS 3203 The Animation Of Disney
No organization has exerted as much influence on popular culture and the art form of animation as The Walt Disney Company. For decades, Disney films were the standard by which all other animated films were measured. This course will examine the biography and philosophy of founder Walt Disney, as well as The Walt Disney Company's impact on animation art, storytelling and technology, the entertainment industry, and American popular culture. We will consider Disney's most influential early films, look at the 1960s when Disney's importance in popular culture began to erode, and analyze the films that led to the Disney renaissance of the late 1980s/early 1990s. We will also assess the subsequent purchase of Pixar Animation Studios and the overall impact Pixar has had on Disney. The class will also look at recent trends and innovations, including live-action remakes and Disney+.

1 Course Unit

CIMS 3204 History Children's TV
This course will survey the history of children's television from the invention of television through the present, with an emphasis on series development and production, artistry, and the colorful personalities who built this industry. We'll consider important figures including Fred Rogers, Bill Hanna and Joe Barbera, Joan Ganz Cooney, Jim Henson and Walt Disney. We will discuss the history of animated cartoons that were made specifically for television, Saturday morning production, the rise of Japanese cartoons from the 1960s through Pokemon, and the growth of children's cable channels in the 90s, as well as other landmark moments. We'll also assess the impact of streaming platforms on television and the future of children's media.

CIMS 3329 The Rise of Japanese Animation
This course will introduce students to the historical and cultural context of the rise of Japanese animation, focusing on the growth of the anime industry in the late 20th and early 21st centuries. We will explore the development of Japanese animation from the 1960s through the 2000s, examining key works such as Astro Boy, Ghost in the Shell, and Spirited Away. Students will also consider the economic and cultural factors that have shaped the anime industry, including the influence of globalization, cross-cultural exchange, and the role of anime in Asian American identity.

CIMS 3600 Studies in Spanish, Latin American and Latinx Cinema
This course explores fundamental aspects of Spanish, Latin American, and Latinx cinema. Course content may vary. Please see the department website for current course offerings: https://www.sas.upenn.edu/hispanic-portuguese-studies/undergraduate/hispanic-studies.
Fall or Spring
Also Offered As: SPAN 3600
Prerequisite: SPAN 1800 OR SPAN 1900
1 Course Unit

CIMS 3602 Cyborgs, Robots, Gadgets: Technologies in Contemporary Hispanic Cinema
Contemporary Latin American and Spanish Cinema offer a great reflection on the role that new technologies have in the film industry, and in our lives, in the digital era. Often, we find that technologies are used in an original way to overcome financial shortages in times of crisis, or when resources are limited. In this context, sometimes it is actually thanks to the new technologies that the work of new directors can be produced or distributed. Some recent Latin American and Spanish sci-fi movies find genuine ways to bring about social and political commentary through the use of technological narratives. Reflections on technology are often found in many other film genres too. Our aim in this course will be to explore the use of technology in film in the present and in the past, as well as to study narratives that place technology at the center. We will focus our study on films where technology is a key factor and will reflect on the impact of technologies in our experience as spectators as well.
Fall or Spring
Also Offered As: LALS 3602, SPAN 3602
1 Course Unit
CIMS 3620 Contemporary Spanish Cinema
A survey of Spanish cinema from the 1940’s to the present. Special attention will be paid to the political, cultural, and social discourses that the films reproduce, adapt or question. This will allow an understanding of the implicit or explicit social dialogues that shaped cinematographic production in Spain from the post-civil war years, through Franco’s dictatorship, the advent of the democratic state in the 1970’s, and the economic and political crisis of the 21st century. At the same time films will be analyzed from the standpoint of their rhetorical construction, examining the specificity of cinematic language and its particular case.
Fall or Spring
Also Offered As: SPAN 3620
1 Course Unit

CIMS 3652 Crossing Borders in Latin American Cinema
Through the lens of border crossing this course will explore various current topics in Contemporary Latin American Cinema such as immigration, exile and travel narratives, gender crossing, social and political transgressions, transnationalism, and co-productions. The concept of the border will be fluid and central to the course, and through it we will reflect upon what separates and unites people at an individual, sexual, social, cultural, political, national, and geographical level. This focus will help us explore a wide variety of “movements”, negotiations, and transgressions taking place in the Latin American Cinema of the last three decades.
Fall or Spring
Also Offered As: LALS 3652, SPAN 3652
1 Course Unit

CIMS 3622 Spanish Non-Fictional Film
This course will explore the flourishing of the genre of documentary and non-fiction film in the last decades in Spain. We will study poetic, experimental, and social documentaries in their socio-historical context. For this we will need to engage not only films and film theory texts, but also historical recounts of contemporary Spain. We will also analyze the limits between non-fiction and fiction film, focusing on some recent works that have critically blurred the distinction between both genres.
Fall or Spring
Also Offered As: SPAN 3622
1 Course Unit

CIMS 3624 Crossing Borders in Spanish Cinema
Through the lens of border crossing, we will explore various current topics in Contemporary Spanish Cinema, such as immigration and emigration narratives in times of globalization and economic crisis, cinematic transgressions, and the emergence of global vs. national films. A fluid conceptualization of the border will guide our exploration on how Contemporary Spanish Cinema talks about gender, race, nationalisms, migration, history, and psychology.
Fall or Spring
Also Offered As: SPAN 3624
1 Course Unit

CIMS 3626 The Films of Pedro Almodóvar
One of the most acclaimed filmmakers of the world, Almodóvar is unquestionably the most international of today’s Spanish filmmakers. The aim of the course is to familiarize students with Pedro Almodóvar’s films and to shed some light to the intricacies of its themes, cultural background, and visual style. Together with primary and secondary texts, we will offer an overview of Almodóvar’s career from his early iconoclastic Post Franco films of the late 1970’s and early 1980’s to his most recent work that has gained him a reputation as an international auteur. Some of the topics covered will include questions of national identity, gender, sexuality, as well as Almodóvar’s original use of genre, visual style, and the director’s relationship to the postmodern concepts of performance and parody.
Fall or Spring
Also Offered As: SPAN 3626
1 Course Unit

CIMS 3650 Latin American Cinema
This course aims to familiarize students with the major achievements and cultural moments of Latin American cinematography. We will cover a broad set of themes, nations and time periods employing multiple theoretical positions.
Fall or Spring
Also Offered As: LALS 3650, SPAN 3650
1 Course Unit

CIMS 3656 Documentary Ethnography for Museum of Exhibition practices
This course will investigate research modalities that center around documentary storytelling in the museum context. During the semester, we will examine research strategies that collaborate with curatorial experts. The class will utilize cinematic techniques that investigate cultural narratives revolving around cultural heritage sites, rituals and ceremonies, artifacts, materials and living traditions. Students will engage Solomor’s process of her creation of the new digital and in-gallery content that will reframe the Metropolitan Museum’s African art galleries. Each semester will culminate in students creating their own short film content that will screen publicly in the gallery at the end of the semester.
Not Offered Every Year
Also Offered As: ANTH 3664, FNAR 3664
1 Course Unit

CIMS 3781 Global TV
This course explores a broad media landscape through new critical and conceptual approaches. It is designated as a Benjamin Franklin Seminar. This course maps the footprints of television at a global scale. Adopting comparative approaches, we will be studying TV’s formation of national and global discourses, and thereby recognizing not only television’s impact on processes of globalization, but also the ability of television to matter globally. Working through concepts of “broadcasting,” “flow,” “circulation,” and “circumvention,” the course examines the movement of (and blocks encountered by) television programs and signals across national borders and cultures. The course particularly focuses on how global television cultures have been transformed due to shifts from broadcasting technologies to (Internet) streaming services? Navigating from United States and Cuba to India and Egypt, the readings in the course illuminate how particular televisual genres, institutions, and reception practices emerged in various countries during specific historical periods. We shall be addressing a range of questions: what kind of global phenomenon is television? Can we study television in countries where we do not know the existing local languages? In what different ways (through what platforms, interfaces, and screens) do people in different continents access televisual content? What explains the growing transnational exports of Turkish and Korean TV dramas? What is the need to historically trace the infrastructural systems like satellites (and optical fiber cables) that made (and continue to make) transmission of television programming possible across the world? How do fans circumvent geo-blocking to watch live sporting events? Assignments include submitting weekly discussion questions and a final paper. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Fall or Spring
Also Offered As: ENGL 0595
1 Course Unit
CIMS 3806 Representations of Dictatorship in Latin America
This course explores the phenomenon of Latin American dictatorship through literature, film, graphic novels, and visual and public art, asking how these different media and genres depict and respond to state violence, censorship, and trauma.
Not Offered Every Year
Also Offered As: LALS 3806, SPAN 3806
1 Course Unit

CIMS 3810 Film Exhibition and Moviegoing
Cinema has always had an audience. From its first appearances in cafes, tea houses, and variety shows to today's fragmented, digital consumption, cinema continues to exist in relation to different ways of looking and experiencing. This course examines how films have been shown and how audiences have watched films in diverse historical and cultural contexts. We will explore how the ways in which film screenings were organized shape both the films being shown and audiences' moviegoing experiences. Based on historical and site-specific investigations, we will also reflect on how our modes of engaging with cinema impact conceptions of what cinema is, what it will be, and what it can be. Unlike most film courses, this course does not focus on analyzing films, but look into the operations of cinema as an institution. There will be field trips to local movie theaters and a final collective project that asks students to curate a special film screening (in-person or online) using innovative formats.
Also Offered As: ARTH 3820
1 Course Unit

CIMS 3820 Horror Cinema
The purpose of this course is to provide an introduction to the history and main themes of the supernatural/horror film from a comparative perspective. Films considered will include: the German expressionist masterworks of the silent era, the Universal classics of the 30’s and the low-budget horror films produced by Val Lewton in the 40’s for RKO in the US, the 1950’s color films of sex and violence by Hammer studios in England, Italian Gothic horror or giallo (Mario Brava) and French lyrical macabre (Georges Franju) in the 60’s, and on to contemporary gore. In an effort to better understand how the horror film makes us confront our worst fears and our most secret desires alike, we will look at the genre's main iconic figures (Frankenstein, Dracula, Dr. Jekyll and Mr. Hyde, etc.) as well as issues of ethics, gender, sexuality, violence, spectatorship through a variety of critical lenses (psychoanalysis, socio-historical and cultural context, aesthetics...).
Not Offered Every Year
Also Offered As: FREN 3820
1 Course Unit

CIMS 3830 French & Italian Modern Horror
This course will consider the horror genre within the specific context of two national cinemas: France and Italy. For France, the focus will be almost exclusively on the contemporary period which has been witnessing an unprecedented revival in horror. For Italy, there will be a marked emphasis on the 1960s-1970s, i.e. the Golden Age of Gothic horror and the giallo craze initiated by the likes of Mario Bava and Dario Argento. Various subgenres will be examined: supernatural horror, ghost story, slasher, zombie film, body horror, cannibalism, etc. Issues of ethics, gender, sexuality, violence, spectatorship will be examined through a variety of critical lenses (psychoanalysis, socio-historical and cultural context, aesthetics, politics, gender, etc.).
Fall or Spring
Also Offered As: COML 3830, FREN 3830, ITAL 3830
1 Course Unit

CIMS 3860 Paris in Film
Latter-day examples like Christophe Honore’s Dans Paris, Cedric Klapisch’s Paris or the international omnibus Paris, je t’aime (with each director paying homage to a distinctive “arrondissement” of the capital), not to mention American blockbusters like The Da Vinci Code and Inception or Woody Allen’s Midnight in Paris, are there to remind us that there is something special – indeed, a special kind of magic – about Paris in and on film. Despite the extreme polarization between Paris and provincial France in both cultural and socio-economic terms, cultural historians have argued that Paris is a symbol of France (as a centralized nation), more than Rome is of Italy and much more than Madrid is of Spain or Berlin of Germany, for example. The prevalence of the City of Lights on our screens, Gallic and otherwise, should therefore come as no surprise, be it as a mere backdrop or as a character in its own right. But how exactly are the French capital and its variegated people captured on celluloid? Can we find significant differences between French and non-French approaches, or between films shot on location that have the ring of "authenticity" and studio-bound productions using reconstructed sets? Do these representations vary through time and perhaps reflect specific historical periods or zeitgeists? Do they conform to genre-based formulas and perpetuate age-old stereotypes, or do they provide new, original insights while revisiting cinematic conventions? Do some (sub)urban areas and/or segments of the Parisian population (in terms of gender, race, or class, for example) receive special attention or treatment? These are some of the many questions that we will seek to address…with a view to offering the next best thing to catching the next non-stop flight to Paris! For French credit: Please register for both FREN 3860-401 (lecture) and FREN 3860-402 (recitation). The FREN 3860-402 recitation is conducted in French. For Cinema and Media Studies credit: Please register for CIMS 3860-401 (lecture) and CIMS 3860-403 (recitation). Both lecture and recitation are taught in English.
Spring
Also Offered As: FREN 3860
1 Course Unit

CIMS 3912 Labor in Contemporary Latin American Literature and Film
This course studies different forms of cultural production (film, novel, short story, critical essay) as entry-points into new settings and conditions for work in Latin America, in four sectors that have become especially salient in the region: services, finance, agro-industry and the informal economy (particularly drug trafficking). We will pay particular attention to how cultural production allows us to envision the coordinates of the larger, indeed global, economy into which workers are inserted. We will examine how cultural production allows us to map shifting class structures; we will also track how gender and race shape national and international divisions of labor.
Not Offered Every Year
Also Offered As: LALS 3912, SPAN 3912
1 Course Unit
CIMS 3930 Cinema and Civil Rights
This undergraduate seminar will examine key moments in the history of civil rights through a cinematic lens. Over the course of the semester, we will explore how filmmakers have depicted the lives, aspirations, and struggles of those who have struggled for equal rights; how different strategies have intersected with each other; what aesthetic strategies have been adopted to represent freedom and the denial of it; and how effective cinematic efforts to contribute to increased freedom have been as well as what criteria we use to evaluate success or failure in the first place. Each week, we will watch a film and read a series of texts that will be drawn from a variety of arenas, including histories of civil rights; civil rights pamphlets and speeches; filmmaker interviews; film and media theory; memoirs; and theories of race, gender and sexuality. Course requirements: mutual respect; completion of all readings and screenings; participation in class discussion; weekly online responses; a final project that can be a research paper, film, art project, or community-based initiative.
Not Offered Every Year
Also Offered As: AFRC 3930, ARTH 3930, ENGL 0599, GSWS 3930
1 Course Unit

CIMS 3931 Participatory Community Media, 1970-Present
What would it mean to understand the history of American cinema through the lens of participatory community media, collectively-made films made by and for specific communities to address personal, social and political needs using a range of affordable technologies and platforms, including 16mm film, Portapak, video, cable access television, satellite, digital video, mobile phones, social media, and drones? What methodologies do participatory community media makers employ, and how might those methods challenge and transform the methods used for cinema and media scholarship? How would such an approach to filmmaking challenge our understanding of terms like “authorship,” “amateur,” “exhibition,” “distribution,” “venue,” “completion,” “criticism,” “documentary,” “performance,” “narrative,” “community,” and “success”? How might we understand these U.S.-based works within a more expansive set of transnational conversations about the transformational capacities of collective media practices? This course will address these and other questions through a deep engagement with the films that make up the national traveling exhibition curated by Louis Massiah and Patricia R. Zimmerman, We Tell: Fifty Years of Participatory Community Media, which foregrounds six major themes: Body Publics (public health and sexualities); Collaborative Knowledges (intergenerational dialogue); Environments of Race and Place (immigration, migration, and racial identities unique to specific environments); States of Violence (war and the American criminal justice system); Turf (gentrification, homelessness, housing, and urban space); and Wages of Work (job opportunities, occupations, wages, unemployment, and underemployment). As part of that engagement, we will study the history of a series of Community Media Centers from around the U.S., including Philadelphia’s own Scribe Video Center, founded in 1982 by Louis Massiah, this course’s co-instructor. This is an undergraduate seminar, but it also available to graduate students in the form of group-guided independent studies. The course requirements include: weekly screenings, readings, and seminar discussions with class members and visiting practitioners, and completing both short assignments and a longer research paper.
Also Offered As: AFRC 3932, ARTH 3931, COML 3931, ENGL 2970, GSWS 3931
Mutually Exclusive: ARTH 6931
1 Course Unit

CIMS 3940 Chinese and Sinophone Cinemas
This course is a survey of Chinese and Sinophone cinemas from the silent era to the present. The Sinophone refers to Sinitic film cultures both inside and outside the People’s Republic of China that have been in relatively marginalized positions against the Han-Chinese mainstream, such as Taiwanese, Hong Kong, Tibetan, and transpacific cinemas. One major goal of the course is to interrogate the national cinema framework and to show how the meaning of “Chineseness” has been problematized by filmmakers and critics throughout modern history. Students will learn about important film movements and trends such as leftist cinema from the 1930s, socialist cinema, Taiwanese and Hong Kong New Waves, the Fifth and Sixth Generation filmmakers, and contemporary transnational productions. Attention will be paid to both films known for awards and artistic achievements and popular genres including thrillers, horror, and wuxia (martial art).
Also Offered As: ARTH 3940, EALC 1331
1 Course Unit

CIMS 3999 Independent Study
Independent Study provide a way for well-motivated students to pursue a topic of interest that is not listed into our CIMS academic curriculum. In an independent study, students essentially create their own course on a topic of theirs choice, working in concert with our CIMS faculty advisor.
Fall or Spring
1 Course Unit

CIMS 4000 Blacks in American Film and Television
This course is an examination and analysis of the changing images and achievements of African Americans in motion pictures and television. The first half of the course focuses on African-American film images from the early years of D.W. Griffith’s “renegade bucks” in The Birth of a Nation (1915); to the comic servants played by Stepfin Fetchit, Hattie McDaniel, and others during the Depression era; to the post-World War II New Negro heroes and heroines of Pinky (1949) and The Defiant Ones (1958); to the rise of the new movement of African American directors such as Spike Lee (Do the Right Thing), Julie Dash (Daughters of the Dust), Charles Burnett, (To Sleep With Anger) and John Singleton (Boyz N the Hood). The second half explores television images from the early sitcoms “Amos ‘n Andy” and “Beulah” to the "Cosby Show," "Fresh Prince of Bel Air," and "Martin." Foremost this course will examine Black stereotypes in American films and television—and the manner in which those stereotypes have reflected national attitudes and outlooks during various historical periods. The in-class screenings and discussions will include such films as Show Boat (1936), the independently produced "race movies" of the 1930s and 1940s, Cabin in the Sky (1943), The Defiant Ones (1958), Imitation of Life (the 1959 remake) & Super Fly (1972).

CIMS 5000 Food and Film
Are you intrigued by the role food plays in our lives and our world? Have you noticed that the food film has become one of cinema’s most durable subgenres not only in the US but in global cinema as well? Are you willing to test the proposition that the food film is more than entertainment? That the food film, in fact, provides us unique access to a range of fundamental questions about passion and desire, family, survival, art, gender, race, and ethnicity? This seminar explores numerous aspects of the food/film nexus, starting with the classics (Babette’s Feast and Tampopo), and grazing across a menu of Hollywood, independent, and international documentaries and feature films that throw light on food production and global warming; chefs and the restaurant business; the eroticism of food; and cinematic representations of food and film alike, this course will introduce you to the art of film analysis and the pleasures of cuisine.
Not Offered Every Year
1 Course Unit

CIMS 5001 Cinema and Globalization
In this course, we will study a number of films (mainly feature films, but also a few documentaries) that deal with a complicated nexus of issues that have come to be discussed under the rubric of "globalization." Among these are the increasingly extensive networks of money and power, the transnational flow of commodities and cultural forms, and the accelerated global movement of people, whether as tourists or migrants. At stake, throughout, will be the ways in which our present geographical, economic, social, and political order can be understood and represented. What new narrative forms have arisen to make sense of contemporary conditions? Films will include: The Year of Living Dangerously, Perfumed Nightmare, Dirty Pretty Things, Monsoon Wedding, Babel, Y Tu Mama Tambien, Maria Full of Grace, In This Word, Darwin’s Nightmare, Black Gold, Life and Debt, The Constant Gardener, Syriana, and Children of Men. In addition to studying the assigned films carefully, students will also be expected to read a selection of theoretical works on globalization (including Zygmunt Baumann’s Globalization: The Human Consequences) and, where appropriate, the novels on which the assigned films are based. Advance viewing of the films is required. (It is best to place films on reserve for students’ use, or to ask that students get their own DVDs from Amazon or Netflix, but screenings can certainly be arranged.) Writing requirements: either a mid-term and final paper, or an in-class power point presentation and final paper.

Also Offered As: ENGL 5001
1 Course Unit

CIMS 5002 Hollywood Film Industry
This is a course on the history of Hollywood. It seeks to unravel Hollywood’s complex workings and explains how the business and politics of the film industry translate into the art of film. We will trace the American film industry from Edison to the internet, asking questions such as: What is the relationship between Hollywood and independent film? How has the global spread of Hollywood since the 1920s changed the film industry? How has Hollywood responded to crises in American politics (e.g., world wars, the cold war, terrorism)? And how have new technologies such as synchronized sound, color cinematography, television, home video, computer graphics, and other digital technologies changed film and Hollywood? We will look closely at representative studios (Paramount, Disney, and others), representative filmmakers (Mary Pickford, Frank Capra, and George Lucas, among many others), and we will examine the impact of industrial changes on the screen.
Not Offered Every Year
Also Offered As: ENGL 5002
1 Course Unit

CIMS 5003 Copyright and Culture
In this course, we will look at the history of copyright law and explore the ways that copyright has both responded to new media and driven art and entertainment. How, for example, is a new medium (photography, film, the Internet, etc.) defined in relation to existing media? What constitutes originality in collage painting, hip hop music, or computer software? What are the limits of fair use? And how have artists, engineers and creative industries responded to various changes in copyright law? A major focus of the course will be the lessons of history for the current copyright debates over such issues as file sharing, online video, and remix culture. In this course, we will look at the history of copyright law and explore the ways that copyright has both responded to new media and driven art and entertainment. How, for example, is a new medium (photography, film, the Internet, etc.) defined in relation to existing media? What constitutes originality in collage painting, hip hop music, or computer software? What are the limits of fair use? And how have artists, engineers and creative industries responded to various changes in copyright law? A major focus of the course will be the lessons of history for the current copyright debates over such issues as file sharing, online video, and remix culture.

CIMS 5004 Horror Cinema
The course will explore European Horror Cinema from the 1970s to the present time, focusing on a number of cult films that have helped rejuvenate and redefine the genre in a radically modern sense by pushing the envelope in terms of subversive representation of gore, violence and sex. We will look at various national cinemas (primarily Western Europe – Italy, France, Spain, Germany, Belgium, The Netherlands – with the occasional foray into Eastern Europe and Scandinavia) and at a range of subgenres (giallo, mondo, slasher, survival, snuff, ...) or iconic figures (ghosts, vampires, cannibals, serial killers, ...) Issues of ethics, ideology, genre, sexuality, violence, spectatorship will be discussed through a variety of critical lenses (psychoanalysis, socio-historical and cultural context, aesthetics, politics...). The class will be conducted entirely in English. Be prepared for provocative, graphic, transgressive film viewing experiences. Not for the faint of heart!

CIMS 5005 Sex/Love/Desire In Art Cinema
This topic course explores multiple and different aspects of Cinema Studies. Specific course topics vary from year to year. See the Cinema Studies website at cinemastudies.sas.upenn.edu/courses for a description of the current offerings.
Not Offered Every Year
Also Offered As: ENGL 5005
1 Course Unit

CIMS 5030 Transnational TV
How are television and nation historically related, and how has television been part of new kinds of nationalization and globalization projects? Television content like telenovelas or BBC news have often transnationally moved and television infrastructures like satellites and optical fiber cables have had a global footprint. We will discuss both the local situatedness of televisual production and reception cultures as well as their ability to impact global issues and discourses. The course is interested in how television schedules historically have been part of everyday lives of people and how more recently, on-demand TV content shapes and is shaped by quotidian rhythms of people’s lives in different countries with specific socio-cultural contexts. The course particularly focuses on how global television cultures have been transformed due to shifts from broadcasting technologies to (Internet) streaming services: In what ways has the television landscape changed and remained the same with the emergence of global subscription TV platforms like Netflix and Prime Video as they commission and develop content in collaboration with local and national artists and practitioners? How are regional streamers competing with and resisting the expansion of Netflix? What explains the growing transnational exports of Turkish dizi and Korean TV dramas? We will attend to both emerging genres of content and trace the new distribution circuits of transnational television.

Also Offered As: ENGL 5030
1 Course Unit

CIMS 5050 Religion & Cinema
This course looks at religion in film. As we will see, this is not just a question of how religion is represented onscreen, but how cinematic objects make religious subjects. We’ll explore the ways films are crafted through technique, performance, and distribution, then consider how these components shape religious bodies and religious traditions in turn.

1 Course Unit

CIMS 50501 Digital Humanities Studies
This course is designed to introduce advanced undergraduate and graduate students to the range of new opportunities for literary research afforded by Digital Humanities and recent technological innovation. Digital Humanities: you’ve heard of it. Maybe you’re excited about it, maybe you’re skeptical. Regardless of your primary area of study, this course will give you the critical vocabularies and hands-on experience necessary to understand the changing landscape of the humanities today. Topics will include quantitative analysis, digital editing and bibliography, network visualization, public humanities, and the future of scholarly publishing. Although we will spend a good portion of our time together working directly with new tools and methods, our goal will not be technological proficiency so much as critical competence and facility with digital theories and concepts. We will engage deeply with media archaeology, feminist technology studies, critical algorithm studies, and the history of material texts; and we will attend carefully to the politics of race, gender, and sexuality in the field. Students will have the opportunity to pursue their own scalable digital project. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.

CIMS 5250 Queer Francophone Cinema
Taught in English. This course will survey queer cinema in French from around the world, examining cult classics beside established masterpieces and avant-garde aesthetics alongside more mainstream productions in order to probe how film participates in both the representation and the formation of LBGT epistemologies and identities. Tracing the lineage of queer French cinema from Jean Genet’s and Jean Cocteau’s A Song of Love (Un Chant d’amour, 1950) to Christophe Honore’s Love Songs (Les Chansons d’amour, 2007), the course will cover a variety of films from France (by Francois Ozon, for example), Belgium (Chantal Akerman), Morocco (Abdellah Taia), Quebec (Xavier Dolan and Lea Pool) and elsewhere. Theoretical and critical perspectives will be provided by Judith Butler, Eve Kosofsky Sedgwick, Jose Esteban Munoz, Jack Halberstam and others. No previous knowledge of cinema studies, queer studies or Francophone cultures is assumed. The course will meet for two and a half hours weekly by Zoom, complemented by asynchronous discussion of assigned film excerpts, which students will annotate online.
Also Offered As: GSWS 5150
1 Course Unit
CIMS 5272 Nationalism and Ethnic Conflict in Film
This course studies political violence, terrorism, civil wars, ethnic conflicts, and genocidal policies as represented in the social media, cable news, documentaries, feature films. We discuss various techniques and strategies of the propaganda wars, post-truth media environment, etc. The regions of interest are Former Soviet Union, Russia, the Caucasus, and the Balkans, US homegrown political violence, and the Middle East. The students are expected to develop and demonstrate a critical approach to different aspects of the cinematic, news, and social media representation of ethnic conflict. We focus on the violent developments that took place in Russia and the Balkans after the collapse of the Soviet Bloc, conditioned by the geopolitical dynamics that the fall of communism had created. We study media broadcasts, documentaries, feature films representing both, the Eastern and the Western perspective. Not Offered Every Year
Also Offered As: REES 5272

CIMS 5296 Contemporary Russia Through Film
This course continues developing students’ advanced skills in Russian and offers intensive study of Russian film, arguably the most powerful medium for reflecting changes in modern society. This course will examine Russia’s transition to democracy and market economy through the eyes of its most creative and controversial cinematographers. The course will focus on the often agonizing process of changing values and attitudes as the country moves from Soviet to Post-Soviet society. Russian films with English subtitles will be supplemented by readings from contemporary Russian media sources. The course provides an excellent visual introduction to the problems of contemporary Russia society. Not Offered Every Year

Summer Term
1 Course Unit

CIMS 5550 Terrorism
This course studies the emergence of organized terrorism in nineteenth-century Russia and its impact on public life in the West, the Balkans, and America. We investigate the political and cultural origins of terrorism, its conspiratorial routine, structures, methods, manuals, and manifestoes. Historical and cultural approaches converge in the discussion of intellectual movements that forged the formula of terrorism and influenced the professionalization of the underground, such as nihilism, anarchism, and populism. We discuss the stern terrorist personality, self-denial, revolutionary martyrdom, and conspiratorial militancy. The theatricals of terrorism are of particular interest, its bombastic acts, mystification, and techniques of spreading disorganizing fear in the global media environment. We trace the creation of counterterrorism police in late imperial Russia and its methods to infiltrate, demoralize, and dismantle the terrorist networks, and reengineer their social base. First Red Scare and the formation of the FBI constitutes a unique case of managing rampant political violence and countering the asymmetrical threat of terrorism.

CIMS 5750 Russian History in Film
The course draws on the cinematic/fictional representation of the Russian/Soviet history based on Russian as well as non-Russian sources. The analysis targets major modes of imagining, staging and reenacting history, construction of images that satisfy dominant political, cultural and ideological stereotypes, and help create national identities. Bias, eye-witness accounts, propaganda uses and abuses of history, forgeries and the production of alt-facts become topics of particular interest. The discussions involve nation builders, iconic heroes and charismatic antiheroes, great commanders and revolutionaries such as Alexander Nevsky, Ivan the Terrible, Rasputin and the Fall of the Romanovs, Lenin and the October Revolution, Stalin and the construction of the Soviet Colossus, the Storming of the Winter Palace, the Civil War, the Great Purge, the Red Scare in the US, etc.

1 Course Unit

CIMS 5792 Biography and Art History
Beginning with the ancient Greeks, people have created specific biographical structures as a way to understand and explain the artistic process. Artists have often been labeled as natural prodigies possessing creative powers on par with the divine. This seminar will examine the role that biography plays in the assessment of visual art and the creative process over time and across European and American culture. During the semester we will read art historical texts, watch biographical films, and debate the historical and post-structuralist critical theory that has helped to shape the current cultural construction of the artist. Throughout the seminar we will discuss the underlying debates around these various approaches to biography. This course is open to graduate students and undergraduate students with permission of the instructor.

CIMS 5821 Fantastic Literature 19th/20th Centuries
This course will explore fantasy and the fantastic in short tales of 19th- and 20th-century French literature. A variety of approaches – thematic, psychoanalytic, cultural, narratological – will be used in an attempt to test their viability and define the subversive force of a literary mode that contributes to shedding light on the dark side of the human psyche by interrogating the "real," making visible the unseen and articulating the unsaid. Such broad categories as distortions of space and time, reason and madness, order and disorder, sexual transgressions, self and other will be considered. Readings will include "recits fantastiques" by Merimee, Gautier, Nerval, Maupassant, Breton, Pieyre de Mandiargues, Jean Ray and others.
Not Offered Every Year
Also Offered As: COML 5840, FREN 5820
1 Course Unit

CIMS 5830 Art, Sex and the Sixties
With a distinct emphasis on performance, film, installation art, video and painting, this course explores the explosion of body-based, nude and erotic work from the 1950 to the 1970s, with particular focus on the 1960s. And it seeks to explore this dynamic not only within the familiar confines of North America and Europe but within Latin America and Asia, too, in what was a nearly simultaneous international emergence of the erotic as a political force in the art world. Reading a range of key voices from Frankfurt School philosopher Herbert Marcuse, to performance artists Carolee Schneemann and Yoko Ono, Neo-Freudian theorist Norman O. Brown and Brazilian theorist and poet Oswald de Andrade, we will examine how and why sexuality became a privileged form of politics at this historical juncture in a range of different contexts across the globe. We will pay particular attention to how and why an art about sex became a camouflaged form of political dissidence in the confines of repressive political dictatorships, as were then rising in Brazil, Argentina, and ultimately Chile. Students interested in feminist, gender or queer theory, Latin American Studies, social revolution, performance studies, post war art and Frankfurt School thought should find the course particularly appealing, but it assumes no background in any of these fields.

CIMS 5910 Cinema and the Museum
Cinema and the museum are both important modern cultural institutions that have global relevance. How do cinema and the museum interact with each other conceptually, artistically, and spatially? In this graduate seminar, we will cross the disciplinary boundaries between film and media studies, museum studies, visual studies, and art history. A wide range of phenomena at the intersection of cinema and the museum will be considered, including the museum in films, the museum as an institution of cinema, video arts and moving images in museums, museum exhibitions that interrogate the cinematic medium, and film museums. Examples will be drawn from diverse historical periods and cultural contexts. This course is supported by Spiegel-Wilks funding and will include at least one class field trip.
Also Offered As: ARTH 5910
1 Course Unit

CIMS 5930 Classical Film Theory
At a moment when contemporary film and media theory has become increasingly interested in how earlier film theories can help us understand our moment of transition, this course will give students the opportunity to read closely some of those key early texts that are preoccupied with questions and problems that include: the ontology of film, the psychology of perception, the transition to sound, the politics of mass culture, realism, and ethnography. Course requirements: completion of all readings and screenings; participation in class discussion; weekly online responses; 20-25 page paper.

CIMS 5932 The Place of Film and Media Theory
Taking its title from a recent special issue in the journal Framework, this seminar will engage the where of film and media theory. At a moment when this discourse, often presumed to have roots in Anglo and Western European traditions, is purportedly undergoing a global turn, we will consider how some of film and media theory's key terms and preoccupations including realism, documentary, genre, identity, sound, spectatorship, nation, auteur, and screens are being inflected by expanded geographic, linguistic, aesthetic and cultural frames. We will grapple with some of the logistical challenges, motivations, resistances, and questions that scholars encounter as they attempt to shift film and media theory's borders; compare contemporary efforts to broaden the discourse's geographic horizon with earlier efforts to do the same; and consider what happens to the viewer's sense of space and place in different media environments. Course requirements: full participation in readings, screenings, discussion, and class presentations; 20-25 page research paper + annotated bibliography.
Not Offered Every Year
Also Offered As: ARTH 5932, ENGL 5932, GSWS 5932
1 Course Unit
CIMS 5933 Cinema and Media Studies Methods
This proseminar will introduce a range of methodological approaches (and some debates about them) informing the somewhat sprawling interdisciplinary field of Cinema and Media Studies. It aims to equip students with a diverse—though not comprehensive—toolbox with which to begin conducting research in this field; an historical framework for understanding current methods in context; and a space for reflecting on both how to develop rigorous methodologies for emerging questions and how methods interact with disciplines, ideologies, and theories. Students in this class will also engage scholars participating in the Cinema and Media Studies colloquium series in practical discussions about their methodological choices. The course’s assignments will provide students with opportunities to explore a particular methodology in some depth through a variety of lenses that might include pedagogy, the conference presentation, grant applications, the written essay, or an essay in an alternative format, such as the graphic or video essay. Throughout, we will be trying to develop practical skills for the academic profession. Although our readings engage a variety of cinema and media objects, this course will be textually based. No prior experience needed. The course is open to upper-level undergraduates with relevant coursework in the field by permission of instructor only. Course Requirements: Complete assigned readings and actively participate in class discussion: 20%; Reading responses: 10%; Annotated bibliography or course syllabus on a particular methodology: 20%; SCMS methodology-focused conference paper proposal according to SCMS format: 10%; Research paper, grant proposal, or essay in an alternative format using the methodology explored in the syllabus or bibliography: 40%.

CIMS 5940 Media, Platform, Experience
This graduate seminar explores processes and sites of production, distribution, and consumption of audio-visual contents in the contemporary media environment with a focus on both platform logics and user interaction experiences. While "new" media, such as social media, cellphone apps, streaming platforms, video games, and drones increasingly dominate everyday life, "old" media including film, television, and books do not disappear but continue to be consumed and transformed in a new media ecology. Crossing the old/new divide, this course seeks to delineate a fuller picture of the choices, constraints, and experiences available for contemporary media users situated in both the Global North and South. We will attend to both the infrastructures and platforms shaping the circulatory dynamics of the current global media landscape as well as the phenomenological dimensions of media consumption by combining broad discussions of interface, algorithms, temporality, screen, and post-cinema, etc., with case studies that examine specific platforms (e.g. Netflix, Bilibili) and media forms (e.g. GIFs, reaction videos, etc.).

1 Course Unit

CIMS 6371 New Korean Cinema
In 2019, Bong Joon-ho’s Parasite won the Palme d’Or at the 72nd Cannes Film Festival. This event marked the apex of South Korean cinematic renaissance, having steadily become a tour de force in the international film festival scene since 1997 onwards. This course explores the major auteurs, styles, themes, and currents of the so-called “New Korean Cinema” that emerged in the mid-to-late 1990s to continue to this day. Drawing from texts on critical film and Korean studies, we will pay particular attention to how the selected works re-present, resist, and interweave the sociopolitical climate they concern and are born out of. Using cinema as a lens with which to see the society, we will touch upon major events of the twentieth century including national division, military dictatorship and democratization movements, IMF economic crisis, youth culture, hallyu (the Korean wave), and damunhwa (multiculturalism initiative). In so doing, we will closely examine how each cinematic medium addresses the societal power structure and the role of the “Other” it represents in terms of class, race, gender, and sexuality in the construction of contemporary Korean society. We will also briefly survey the history of South Korean cinema that has evolved hand-in-hand with the history of modern Korea itself, walking through its five different phases (1945-Korean War era; 1955-1972 "Golden Age"; 1973-1979 censorship era; 1980-1996 democratization era; and 1997 onwards). No prior experience of Korean studies courses necessary; all films will be screened with English subtitles.

1 Course Unit
CIMS 6942 Impossible Innocence: the Films of Luis Buñuel
This seminar provides an overview and introduction to the cinema of Luis Buñuel with a particular focus on the Spanish filmmaker's engagement with Surrealism. Drawing on the expertise of Professors Ignacio Javier López and Michael Solomon, each seminar session will unfold in two parts: first, Solomon will offer a general introductory lecture and discussion covering various aspects of Buñuel's filmography including technical and formal analyses that touch on cinematic form, montage, and adaptation, and a contextualization of Buñuel's cinema within the Spanish, Mexican, Latin American, and European (inter) national cinemas and cinematic movements; second, López will offer a close examination of individual films focusing on Buñuel's longstanding ties with the ideas of Surrealism from the movement's initial moment of scandal and provocation—understood by its participants as a new philosophy, a new way of seeing in an endless process of discovery—to a second moment in which Surrealism admits its failure to enact its revolutionary goals. Films covered in the seminar include Buñuel's Un Chien Andalou (1929), L'Age d'or (1930) Menjant garotes, Las Hurdes/Terre sans pain (1933/36) Los Olvidados (1950) Susana (1951) Ensayo de un crimen (1955), Death in the Garden (1956), Nazarin (1959), Viridiana (1961) The Exterminating Angel (1962), Belle de jour (1967), Tristana (1970), and Obscure Object of Desire (1977). Students will start working early on a final project (seminar paper), reworking the draft several times during the semester.

CIMS 7920 Reading Against Racism
This course takes as its starting point Audre Lorde's 1981 Keynote presentation at the National Women's Studies Association Conference, "The Uses of Anger: Women Responding to Racism." Lorde, critiquing white feminists, states, "I cannot hide my anger to spare you guilt, nor hurt feelings, nor answering anger; for to do so insults and trivializes all our efforts. Guilt is not a response to anger; it is a response to one's own actions or lack of action. If it leads to change then it can be useful, since it is then no longer guilt but the beginning of knowledge. Yet all too often, guilt is just another name for impotence, for defensiveness destructive of communication; it becomes a device to protect ignorance and the continuation of things the way they are, the ultimate protection for changelessness." Eschewing defensiveness, ignorance, and innocence, and opening to meaningful change by engaging the writings of anti-racist and anti-imperialist thinkers, including those focused on the transformation of higher education, this course examines the responsibilities scholars take on when we affirm that "Black Lives Matter," and acknowledges that higher education, including the humanities, is actively implicated in the structures and operations of white privilege. Eschewing defensiveness, ignorance, and innocence, and opening to meaningful change by engaging the writings of anti-racist and anti-imperialist thinkers, including those focused on the transformation of higher education, this course examines the responsibilities scholars take on when we affirm that "Black Lives Matter," and acknowledges that higher education, including the humanities, is actively implicated in the structures and operations of white privilege and anti-black racism as well as in other intersectional modes of exclusion, including all forms of discrimination based on race, ethnicity, national original, ability, class, sexuality, gender, and beliefs. The course aims to approach these urgent but longstanding issues in ways that help us to understand some of the complexities, practicalities, and temporalities of the work of change; to grapple with what Rosalyn Deutsche in Hiroshima After Iraq (2011) describes as "the inseparability of the social and the psychic"; and to seek out effective alternatives to the tendency of politicized academic writing in time of conflict to regress to what Deutsche calls "heroic masculinism." "Reading Against Racism" is imagined as a way of catalyzing active, collective, and long-term anti-racist, anti-imperialist intellectual work. It seeks to participate in the development of more just and inclusive academic modes and spaces by fostering time and structure for thought and self-reflection, by generating ideas for implementation, and by learning from our readings as well as from each other. All students, white and BIPOC, are welcome to participate, but we will begin this course by working together to establish a community agreement that takes account of the different ways in which such a course is likely to be experienced by white and BIPOC people. For example, recognizing that discussions about race and racism require immense emotional labor from BIPOC people in particular, BIPOC students should not be asked to use their personal experiences to frame questions under discussion or to represent any group. We will establish together other guidelines to create as safe and supportive a space (or spaces) for reading, thinking, and acting against racism as we can muster, including deciding how we would like to include in our process tools like trigger warnings, opt-out mechanisms, smaller subgroups, etc. Requirements: Weekly reading; weekly journal for self-reflection (required, but not for submission); participation in discussion; design a syllabus for an introductory course in your field. Thanks to all the students who have generously participated in developing this course and to the scholars who have written the materials we will read.

City and Regional Planning (CPLN)

CPLN 5000 Introduction to City Planning: History, Theory and Practice
This course introduces students to the history, theories, and contemporary practice of city and regional planning. Readings, lectures, class discussion, and walking tours focus on: - The evolution of planning ideas, strategies, institutions, and powers, and of planning's influence on cities and regions around the world; - The structure and dynamics of urban change; - The ways planners and social and environmental scientists have understood, theorized, and responded to social, economic, political, and environmental conditions and change over time; and - The development of the planning profession and its relationships with allied fields, examining various types of planning, urban development, and design.
Fall
1 Course Unit

CPLN 5010 Quantitative Planning Analysis Methods
Introduction of methods in analyzing demographic conditions, population and housing trends, employment and business changes, community and neighborhood development. Focus on using spreadsheet models, data analysis, and basic statistical analysis for local and neighborhood planning.
Fall or Spring
1 Course Unit

CPLN 5020 Urban Economics and Public Finance
This core course first covers the basic concepts of urban economics: central place theory, gravity models, agglomeration economies, bid rent curves, and regional settlement patterns. The course takes the theory and applies it to metropolitan outcomes: central business districts, edge cities, edgeless cities, the favored suburban quarter, and megaregions. And the impact of the COVID-19 pandemic. The second half of the course connects the community facilities section and the future land use map of the comprehensive plan with a city's capital improvements program to focus on how to pay for public infrastructure. Financing techniques include: bonds, pay-as-you-go, user fees, tax increment financing, impact fees, adequate public facilities ordinances, sales taxes, property taxes, and land value taxation. Cost-benefit analysis and other infrastructure finance practices are discussed. Applications of public finance include: (a) Financing affordable housing projects; (b) Financing economic development and redevelopment projects; (c) Financing transportation projects; (d) Structuring public-private partnership deals; (e) Financing environmental and green infrastructure projects; and (f) Issues in school finance.

CPLN 5040 Site Planning
This course introduces students to the practice of site planning. Skills and methods examined in the course include observation of the physical environment; site analysis; development of alternative site programming and uses; site design processes and strategy; and the creation of site plans and development standards. Methods of community participation and collaboration with other disciplines will be explored. There are two sections of this class- one for urban designers and/or those with prior design backgrounds and skills, one for those who do not. Note: Non-designers should enroll in CPLN 504-002 section
Spring
1 Course Unit

CPLN 5050 Planning by Numbers
This course will use planning and policy data and applications to introduce you to a variety of useful techniques of inferential statistics and unstructured data learning techniques. Each of the techniques will be introduced and developed through the use of commonly available planning and urban policy data in order to address a planning problem or question. Applications and examples may include: (i) analyzing population, economic, and settlement patterns across MSAs; (ii) understanding the determinants of housing and real estate prices; (iii) understanding infrastructure investment needs in the US; (iv) identifying the characteristics that explain travel behavior and mode choice; and (v) explaining land use change. Class sessions will involve a mixture of lecture and in-class statistical modeling. Students will make extensive use of R, a free, open source statistical programming language. This course is especially appropriate for students whose future professional and academic work will involve the design and testing of planning and policy analysis models using quantitative data.
Spring
Mutually Exclusive: MUSA 5000
1 Course Unit

CPLN 5060 Negotiation and Conflict Resolution
This course is designed to introduce graduate students to the theory and practice of negotiation, conflict resolution and community engagement. We will start by looking at basic approaches to interpersonal negotiation and then move to considering contemporary approaches to understanding and addressing public disputes using negotiation, facilitation and public involvement. Design professionals - architects, construction managers, planners and others - face a variety of kinds of problems and challenges in their work. Some problems and challenges, whether simple or complex, are amenable to technical solutions based solely on the expertise of planners, managers, architects and others. There are, however, other problems and challenges that require adaptive work, primarily because technical expertise alone is insufficient to address the problems or challenges being faced. In this course, we’ll focus on perspectives and methods for working through those later sorts of problems and challenges.
Spring
1 Course Unit
CPLN 5080 Urban Research Methods
This course is designed for graduate students completing original urban research. For students in Penn's Master of City Planning (MCP) program, it is the first class in a two-semester sequence in which students research and write their thesis. In the fall semester, this course takes students from the point of scoping and refining research questions through producing an in-depth literature review, research design, and initial fieldwork. In the spring, students completing an MCP thesis will complete the research and writing of the thesis. This fall class involves regular readings, orientation to research design, and a variety of methods exercises that students will help lead (for the methods they are employing in their own research). Students outside of the MCP program are welcome to take this class as long as they have a substantial urban research project to pursue. * To take this course, each student must submit a research proposal – either for an MCP thesis or a similarly substantial, original research project – and receive permission from the instructors of the MCP thesis classes (fall and spring). The Department of City and Regional Planning will hold a proposal-writing workshop later this spring for students who express interest in pursuing an MCP thesis.
1 Course Unit

CPLN 5090 Law of Planning and Urban Development
The central focus will be on selected aspects of the field of the law of planning and development, a field that embraces a range of legal doctrines that are particularly relevant to cities and suburbs. We will study the principles that govern the regulation of land use and management of urban growth (through land use controls and other techniques for regulating new development) and, to a limited extent, environmental planning laws.
Fall
1 Course Unit

CPLN 5200 Introduction to Housing, Community and Economic Development
Introduction to the theories, institutions, and practices of housing, community and economic development with a focus on improving opportunity and building wealth in disadvantaged communities. Provides foundation for advanced courses in housing policy, downtown and neighborhood revitalization, real estate and economic development finance, and local and international community development.
Spring
1 Course Unit

CPLN 5280 Research Seminar 21st Century Urbanism
A seminar run in conjunction with the Institute for Urban Research at Penn, students will learn about the range of cutting-edge topics in urbanism that Penn faculty are working on and work closely with a faculty member on current research. Students will learn about new topics and methods in interdisciplinary urban research, and get first hand experience collecting urban data under the close supervision of an experienced researcher. Students and faculty jointly will present their findings for discussion. This course is a good introduction for how to frame and conduct an urban research project. For more information, visit https://penniur.upenn.edu/instruction/uurc
Spring
1 Course Unit

CPLN 5300 Introduction to Land Use Planning
Exploration of the methods and tools for managing land use and shaping the built environment. Presents how to create a successful Comprehensive Plan, Zoning Ordinance, Subdivision Regulations, Capital Improvements Program, and design guidelines. Also, presents functional area, regional, and state-level plans.
Fall
1 Course Unit

CPLN 5310 Sustainability and Environmental Planning
This course will identify and evaluate the application of planning tools and strategies to enhance sustainability and environmental conditions, and to promote the wise use of natural resources. Students will understand the causes and effects of air, water, and land pollution, and how to evaluate and implement responses to pollution through regulations, financial incentives, infrastructure, and design techniques. Emphasis is on planning to create sustainable communities. The course provides an overview of federal programs for protecting air quality, water quality, and endangered species along with managing climate change, solid waste, toxics, energy, transportation, and remediating brownfields in an overall sustainability framework. State-level, local government, and NGO efforts to protect the environment are also explored as are green infrastructure and green cities.
Fall
1 Course Unit

CPLN 5350 Topics in Energy Policy
This seminar will explore a collection of ideas influencing energy policy development in the U.S. and around the world. Our platform for this exploration will be seven recent books to be discussed during the semester. These books each contribute important insights to seven ideas that influence energy policy: Narrative, Transition, Measurement, Systems, Subsidiarity, Disruption, Attachment. Books for 2018 will be chosen over the summer; the 2017 books are listed here as examples: Policy Paradox (2011) by Stone, Climate Shock (2015) by Wagner and Weitzman, Power Density (2015) by Smil, Connectography (2016) by Khanna, Climate of Hope (2017) by Bloomberg and Pope, Utility of the Future (2016) by MIT Energy Initiative, Retreat from a Rising Sea (2016) by Pilkey, Pilkey-Jarvis, Pilkey.

1 Course Unit

CPLN 5400 Introduction to Property Development
This course is designed to acquaint students with the fundamental skills and techniques of real estate property development. It is designed as a first course for anyone interested in how to be a developer, and as a foundation for further courses in urban development and real estate.
Fall
1 Course Unit

CPLN 5500 Introduction to Transportation Planning
This course provides an overview and introduction to urban transportation planning and policy. Although the focus is on US transportation, the course also puts an emphasis on transportation issues in the fast-growing cities of the developing world. The course is organized around: (1) histories and theories of transportation and travel behavior; (2) transportation policy and project evaluation; (3) transportation demand modeling; and (4) multimodal transportation planning and policy. Particular attention is given to interactions between transportation and land use systems.
Fall
1 Course Unit
CPLN 5510 Transport Justice
This course will explore the concept of transport justice and how this idea can inform changes to public transit infrastructure. The first half of the course will set theoretical foundations through close reading and discussion of spatial and social justice theories, emphasizing questions of transportation and mobility. The second half of the course will feature a project-based application of these theories. Students will develop analyses to inform a planning at the intersection of Broad/Germantown/Erie in North Philadelphia. Students will be encouraged to explore multiple analytic approaches including: interviews and qualitative data collection; GIS and spatial analysis; quantitative analysis and predictive modeling, and more. The course will culminate in written and oral presentations given to partners from SEPTA, OTIS, and other planning agencies in Philadelphia.
Fall
1 Course Unit

CPLN 5600 Introduction to Graphics for Urban Design
The purpose of this class is to give urban design students basic visual skills and proficiency, including the ability to: 1. Understand and critique drawings and drawing types 2. Work in: Adobe Illustrator, Photoshop, and InDesign, and McNeel Rhino3D. 3. Understand workflow between software packages This is an introductory skills class that operates on three levels: software proficiency, design proficiency, and critical visual analysis. The class requires regular weekly effort and completion of assignments as skills are cumulative. Students with a design background are discouraged from taking this class.
Spring
1 Course Unit

CPLN 5710 Sensing the City
This course will teach you to design and build sensing installations that engage with real-time urban environmental stimuli. Using the Arduino microcontroller as a prototyping platform, you will write code and wire circuits, learn to select and implement available sensors, and generate raw environmental data. You will populate databases and interpret data streams, and then create responsive urban interventions. Following the model of hackerspaces around the globe, we will collaboratively pose problems and find solutions, teaching and learning from one another. No background in coding or electronics is required, but a desire to learn is absolutely necessary. Also, this course is hands-on. You are a maker! Be prepared to build, design, and create.
Fall
1 Course Unit

CPLN 5720 Modern Architectural Theory Seminar
A survey of architectural theory from the mid-eighteenth century to the present. The discussion of original writings will be emphasized. Open to undergraduate and graduate students.
Not Offered Every Year
Also Offered As: ARTH 5710

Course examines current trends and topics pertaining to international development.
1 Course Unit

CPLN 5800 The Penn Experience: Racism, Reconciliation, and Engagement
This new non-credit asynchronous course, consisting of six Modules, aims to establish common basic language and concepts for incoming graduate and professional students to facilitate subsequent difficult conversations about race, racism and difference in the classroom and beyond. Using video interviews, presentations, short readings and podcasts, the course highlights the significance of Penn and Philadelphia’s history of racism and other forms of oppression, Penn’s evolving relationship to West Philadelphia, and Penn’s efforts toward greater engagement and inclusion. Modules also focus on implicit bias, intercultural communication, gender identity, and disparities in healthcare. A final module was designed primarily to address the antiracist work that must be done to dismantle white supremacy. All incoming SP2 master’s students are expected to spend 20 or more hours reviewing the six modules and completing short assessments prior to starting the fall semester. Other graduate and professional schools will assign modules to be completed based on their schools requirements.
0 Course Units

CPLN 5820 Place, Taste and Neighborhood Change: Frameworks for Integrating Aesthetics, Equity and Creativity
Places provide a sense of identity and orientation to the world for its users in ways that go beyond the traditional practice areas that urbanists are trained to understand (i.e. housing, economic development, transportation). The popularization of artistic, cultural, and “creative interventions” in redevelopment has added to that complexity in hybrid ways require new tools, languages, and frameworks to meaningfully participate in the development process. By taking a humanistic and scientific views of the longstanding arts-based community development field now known as “creative placemaking”, the class will help learners formulate critical, evaluative answers pressing, emergent questions for urban practitioners. In particular, learners will explore the various state-sponsored meanings of creative placemaking, artistic excellence, and artistic merit. During the course we will interrogate, compare, and articulate the power dynamics embedded in those definitions with new, alternate, and stakeholder-centric definitions. The course aims to invite conversation, reflection, and sharing of best practices alongside community-based leaders with the promise that learners will be able to apply equity-based frameworks to these debates. Learners will emerge from this guided journey with a sharpened ability to identify, generate, and extend authentic, inclusive arts-based neighborhood change.
Spring
1 Course Unit
CPLN 5830 Coloring Climates: Race, Stories, Environments
Why is the Green New Deal not talked about as a "Black Agenda"? Why are Black people not employed in 90% of the leadership positions in environmental organizations? Do Black folks resist environmentalism as a "white" issue? Why are cannabis farmers, once arrested by cities for growing hemp, now being priced out of the regulated industry in legalized states? These questions may also be asked for people of color broadly. Since the "Manifest Destiny" days of John Muir, white spatial imaginaries have shaped how environmentalism is branded; planning has been in lock-step. These persistent myths motivate the basis of historical reflection and contemporary re-constitution of what it means to be "green" while Black in place. This seminar that proposes to "Blacklight" urban space: bare visible the oft-hidden Black Geographies in urban and environmental history on the margins. By drawing on texts in critical ecology, we will elucidate how primarily Black people imagine attachment to rural, pastoral, and urban spaces. This decentering of the colonial history of environmentalism is especially urgent in environmental and land use planning. Readings will include popular literature from Camille T. Dungy's Black Nature: Four Centuries of African American Nature Poetry, The Green Collar Economy by Van Jones, The Good Food Revolution by Will Allen; sociology from Dorceta Taylor's The Rise of the American Conservation Movement: Power, Privilege, and Environmental Protection, . Ron Finley's "Ganstga Gardening" videos, environmental planning from Mabel O. Wilson's "Black & Green" in Begin with the Past: Building the National Museum of African American History & Culture, and Richard Westmacott's African-American Gardens and Yards in the Rural South, Majora Carter's Sustainable South Bronx: A Model For Environmental Justice; memoirs by The Cooking Gene by chef Michael Twitty, Unbowed by Wangari Maathai. Articles will also include voices from BIPOC geographers, psychologists, and planners with relevant views. While being primed with these histories, students will identify a mode of environmental action and land use engagement for a "Blacklight" case study in either their hometown or current place of residence. Students will contribute to a Wikipedia page on eco-poetics or ecocitizenship to build public consciousness around Black, indigenous, and people of color (BIPOC) sensibilities in these places.
1 Course Unit

CPLN 5910 Introduction to Smart Cities
This course reviews the infrastructure, data, algorithms, and implementation of emerging digital technologies in cities. We ask: what makes a city smart? We discuss challenges and opportunities, critically evaluating what technology has and has not been able to offer cities. We contrast utopian visions of technology with the possible buggy and brittle realities. Finally, we consider projects that could be implemented in Philadelphia to make the city smarter. What are the qualities of a good smart city project?
Fall or Spring
1 Course Unit

CPLN 5920 Public Policy Analytics
This course teaches advanced spatial analysis and an introduction to data science/machine learning in the urban planning and public policy realm. The class focuses on real-world spatial analysis applications and, in combination with introductory machine learning, provides students a modern framework for efficiently allocate limited resources across space. Unlike its private sector counterpart, data science in the public or non-profit sector isn't strictly about optimization - it requires understanding of public goods, governance, and issues of equity. We explore use cases in transportation, housing, public health, land use, criminal justice, and other domains. We will learn novel approaches for understanding and avoiding risks of "algorithmic bias" against communities/people of color as well as communities of different income levels. The format of the class includes weekly lectures/in-class demos and labs. There are seven required assignments, including two projects. Prerequisites include either CPLN 503, the summer GIS course or prior experience with GIS in a formal setting. The class is conducted entirely in R. Having experience in R and the 'tidyverse' is helpful but not strictly required.
Fall
Also Offered As: MUSA 5080
1 Course Unit

CPLN 6000 Studio I
Planning Workshop builds on the background knowledge and skills learned in the fall semester to produce team-based neighborhood/ corridor plans. Workshop is where you learn to make plans—a skill that is foundational to being an urban planner, which is why we are all here! This course walks through each step of the typical plan-making process, each step building on the previous. This generally includes:
- Assembling and summarizing existing conditions
- Identifying issues and opportunities
- Developing plan goals
- Creating alternatives or strategic directions
- Setting a course for plan implementation
In addition to completing the steps of the plan, this course also helps students learn skills for working in groups, graphic design and presentation, verbal presentation, project and workflow management, understanding community dynamics, and overall professionalism. These are skills that every planner needs, and will rely on heavily in their professions, so Workshop is also helpful in preparing each student for work readiness, regardless of concentration.
Spring
0-2 Course Units

CPLN 6200 Techniques of Urban Economic Development
This course is an introduction to the theory and practice of economic development planning. We will explore theories of economic growth and development as well as explore pressing questions regarding income and wealth inequality and labor markets. Economic development practice in the US is the result of decades of work from local and state governments and hybrid entities (community development institutions, hospitals, redevelopment authorities, commerce departments) attempting to make their respective places more "sticky" with respect to economic activity. While economic development may seem secondary, or worse, actively harmful in addressing some of the many pressing problems facing planners today, this course is designed to highlight why economic development remains central to questions about how regions can and should grow. The economic organization of our regions is a central actor in debates concerning global warming, displacement through gentrification or decline and social inequality.
Spring
1 Course Unit
CPLN 6210 Metropolitan Food System
This course introduces students to the planning and development of metropolitan food systems. Major topics include regional planning and policy; sustainable agriculture; food access and distribution; and markets. The class includes a mix of lectures, discussion, and field trips; and students will work on real-world projects in Philadelphia. Ultimately, the course aims to develop students' broad knowledge of food systems planning in the global North and South, with an emphasis on community and economic development strategies for sustainable food systems and food security.
Spring, even numbered years only
1 Course Unit

CPLN 6220 Healthy People/Healthy Places
In Healthy People/Healthy Places we will explore the role of space and place in the social construction of health. Pulling from the urban planning, geography and public health literatures, we will explore the role of the built environment in shaping individual and community health. We will explore questions behind why, and how, some groups of people die, or are injured, at greater rates than others and the role that planning and broader spatial policy play in these outcomes.
1 Course Unit

CPLN 6230 The Carceral State
This course examines the period of mass incarceration that began in the US in the 1970s, its impact on communities and its connection to economic development. We'll look specifically at policies that fostered mass incarceration, the financialization of the criminal justice system, the militarization of policing, and grassroots organizing movements that challenge the carceral state. We will examine the ways in which policies and practices have had disparate impacts on people of color and women, and we will also pay attention to space and place, endeavoring to understand differences at the local, county and state levels. Students will read books and articles from a range of disciplines including sociology, law, political science, and planning. We will also read poetry and memoir, and study places that have instituted policies and practices that go against the grain. This is a heavy reading course that relies on student engagement and discussion. We will also take a couple of field trips to local reentry organizations, and students will be required to do courtroom observations.
Spring, even numbered years only
1 Course Unit

CPLN 6240 Race, Poverty and Place
In recent years, long-disinvested cities have become the site of renewed investment, population growth, and economic development in a phenomenon often described as gentrification. Nonetheless, socioeconomic inequality between races, ethnicities, genders, and places within the larger metropolitan area continue to persist, suggesting that a rising tide does not raise all boats. Planners must grapple with these issues of inequality and inequity, particularly the implementation of plans and policies that may in theory provide benefits to all, but in practice continue to accumulate benefits for a select few. This course examines the construction of race, the making of a place, and the persistence of poverty in racialized places in the city. This course will engage in a critical discussion of the aforementioned themes, such that the normative notions of race, capitalism, urbanism, gender, power, and space are upended to privilege more marginalized perspectives of these processes.
Spring
1 Course Unit

CPLN 6270 Social Impact in Practice
The course will be an opportunity for students across PennDesign (and other schools) to meaningfully engage with community partners and practitioners working in Philadelphia and the surrounding region, and to grapple with the complex issues necessary for understanding community perspective, thereby influencing the approach when planning and designing as professionals. The course intends to reverse common perceptions and practices of community engagement ("beyond the theater of engagement") and discuss how to productively and sensitively work with communities of all types, on projects of all scales, to work towards common goals and high aspirations. The organization of the course, will be a combination of readings and discussions, guest lecturers, and tours in the immediate community. The primary assignments will be reflection pieces, case studies, a collaborative group project, and a implementation project proposal. The group project(s) would partner students with a current, ongoing, or new community project that is funded and actionable. Students will work together, with the partner, and with community members to complete a project (could be built, a printed deliverable, evaluation, or other). The final assignment would ask students to brainstorm and present a potential "Phase II" implementation project, thinking through the mechanics of funding partnerships, academic research, etc, that could carry forward the work.
Fall
1 Course Unit

CPLN 6280 Migration and Development
International migration is one of the most important phenomena driving urban, community, economic, and human development. This course focuses on the ways that migrants and community, government, and private institutions work to influence development around the world. We explore a range of large- and small-scale economic development, human and community development. After a brief introduction to histories and theories of migration and development, our major themes include: 1) the work of institutions, governments, and private sector firms in sending and receiving nations that influence migration and development; 2) diaspora-led transnational development, including remittances, hometown and country associations, and transnational advocacy and community organizing; and 3) local revitalization, labor and housing markets, workforce and enterprise development in migrant-receiving settings. Readings are drawn from a variety of social sciences, planning and development studies, including from academia and practice. Guests from local and transnational development organizations will visit the class. Assignments include short papers on the readings and a research paper or project designed by each student in consultation with the instructor. Ultimately, the course aims to help students develop: 1) a broad knowledge of migration and development in geographic and institutional settings around the world; 2) an in-depth understanding of community and economic development practices in migrant sending and receiving communities; and 3) familiarity with social science approaches to evaluating the dynamics and impacts of migration and development.

CPLN 6290 Housing, Community & Economic Development Topics Class
Elective classes for the Housing, Community and Economic Development concentration.
Not Offered Every Year
1 Course Unit
CPLN 6300 Innovations in Growth Management
The US population is expected to grow by more than 85 million from now to 2050. This course evaluates the tools and techniques for managing growth in America, especially to control sprawl in metropolitan regions. The course analyzes the form and functions of the central cities, suburbs, edge cities, ex-urbs, and megaregions. Federal, state, and local programs that influence metro change are evaluated. Regional planning approaches are analyzed in case studies.
Spring
Prerequisite: CPLN 5300 OR CPLN 5310
1 Course Unit

CPLN 6310 Planning for Land Conservation
Land preservation is one of the most powerful, yet least understood planning tools for managing growth and protecting the environment. This course provides an introduction to the tools and methods for preserving private lands by government agencies and private non-profit organizations (e.g., land trusts). Topics include purchase and donation of development rights (also known as conservation easements), transfer of development rights, land acquisition, limited development, and the preservation of urban greenways, trails, and parks. Preservation examples analyzed: open space and scenic areas, farmland, forestland, battlefields, and natural areas.
Spring
1 Course Unit

CPLN 6320 Modeling Geographic Space
This course explores the nature and use of raster-oriented geographic information systems (GIS) for the analysis and synthesis of spatial patterns and processes. Students will learn about the principles of raster data, image processing, and spatial analysis using ArcGIS Pro. By the end of the course, students will have a strong understanding of how to work with raster data and will have the skills and knowledge to apply these techniques to their own research or professional projects.
Also Offered As: LARP 7410
1 Course Unit

CPLN 6330 Topics in Land Use & Environmental Planning
Various topics in Land Use & Environmental Planning will be examined
Fall
1 Course Unit

CPLN 6340 Climate Change: Planning for Mitigation and Adaptation
This course will present the science of climate change, the impacts of climate change, and the opportunities and obstacles for avoiding climate disasters. We will identify and evaluate the application of planning tools and strategies to achieve the mitigation of climate change and adaptations to climate change. Students will understand the causes and effects of climate change and how to implement and evaluate mitigation and adaptation responses through regulations, financial incentives, infrastructure investment, design techniques, and technology. Emphasis is on climate action planning to create resilient communities.
Not Offered Every Year
1 Course Unit

CPLN 6350 Water Policy
Aging infrastructure, urbanization, climate change, and limited public funds are contributing to urban water management crises in cities around the globe. This course examines the systems and policies that comprise urban water. We begin with the infrastructures that underlie drinking water, wastewater, and stormwater services. Then, we review innovative management technologies and strategies, focusing on case studies of infrastructure shifts in Philadelphia and Melbourne. Finally, we undertake a global investigation of water management challenges and opportunities.
Spring
1 Course Unit

CPLN 6410 Progressive Development
This course will examine approaches to real estate development as a policy tool, and specifically a tool to achieve traditional progressive policy objectives linked to social welfare and environmental sustainability—reducing poverty, improving health and education outcomes, lowering greenhouse gas emissions etc. The course will focus on the practice of this work, examining financial, regulatory, and land use tools that are regularly utilized to achieve policy objectives via real estate development. The course will utilize Philadelphia as a primary case study, drawing on the work of guest speakers working as practitioners in the field to illustrate how these tools are implemented. The goal will be to give students a working knowledge of the field. Prerequisite: CPLN 5400: Introduction to Property Development
Spring
Prerequisite: CPLN 5400 OR REAL 8210
1 Course Unit

CPLN 6420 Downtown Development
The course will provide an overview of the changing role of downtowns and commercial centers, how and why they have evolved, diversified and been redeveloped and who are the various public and private actors that are helping them reposition themselves in a new regional and global context. There will be a strong focus on implementation, on how things get done, on the role of business improvement districts, not-for-profit development corporations and local government in the United States, Canada and a few international cities.
Fall
1 Course Unit
CPLN 6430 Design and Development
This course provides an overview of the real estate development business looked at in relationship to urban design, city planning, and architectural design. It provides exposure to the many real-world considerations of private sector development as well as an introduction to the language of real estate. The class focuses on various commercial building types and product offerings with examples of how planning, architectural and other design professions fit into creation of real estate value and the development process. This will cover the practical considerations and typical trade-offs of commercial business practices and real estate investment parameters and how these influence the ways developers and designers work. Industry sectors may include housing (single, multifamily and affordable), office, retail, hospitality, and industrial, with project types ranging from greenfield, adaptive reuse, downtown development, mixed-use projects, and planned communities. Through exercises, lectures and case studies, we'll address what drives the decisions designers and non-designers make in the development process, and provide insight to help designers understand what makes developers tick. Visiting lecturers (typically architects and developers) will provide real-world examples. Weekly written exercises, case studies and presentation assignments stress critical thinking, evaluating projects by how well they do their job and analyzing how that job is defined.
Spring
Also Offered As: ARCH 7620
1 Course Unit

CPLN 6440 Housing Policy
The government intervenes in housing markets in different ways and for different reasons. This course is designed to explore why the federal and local government in the U.S. intervene in housing markets and what forms these interventions take. Specifically, students will learn about: the mechanisms that drive both the supply and demand for housing; how U.S. housing policy has changed over time; factors that affect the production, distribution, and location of housing; the social and economic impact of housing on households and neighborhoods; the equity implications of housing policies. This course will place particular emphasis on low-income rental housing. By the end of this class students will have a firm understanding of U.S. housing policy and be able to engage in a meaningful debate about future challenges and opportunities in the U.S. housing market and the implications of different policy interventions. Ultimately, this course will provide students the conceptual tools necessary to evaluate, formulate, and implement housing policy.
Fall
1 Course Unit

CPLN 6500 Transportation Planning Methods
This course introduces students to the development and uses of the 4-step urban transportation model (trip generation-trip distribution-mode choice-traffic assignment) for community and metropolitan mobility planning. Using the VISUM transportation desktop planning package, students will learn how to build and test their own models, apply them to real projects, and critique the results. Prerequisite: CPLN 5050 or other planning statistics course.

Fall
1 Course Unit

CPLN 6540 The Practice of Trans.Plng:Crafting Policies & Bldg. Infrastructure
As the first woman and planner to serve as Secretary of the Pennsylvania Department of Transportation (PennDOT), Leslie Richards has over 20 years of leadership experience working on the planning and delivery of transportation projects, including overseeing one of the largest and most innovative transportation agencies in the U.S. She is recognized for her ability to find common ground among bi-partisan boards, as well as her commitment to engage local communities before the implementation of transportation projects to incorporate quality of life issues in all decisions. Her experience gives her a unique perspective on understanding operational, financial and stakeholder issues of transportation planning. In this seminar-style course, Leslie Richards will explore the planning, development and delivery of multimodal projects and policies at the state and regional level, including national influences and an awareness of the many actors and processes involved. Topics to be discussed include: funding and implementation processes through the levels of government (municipal, county, region, state, national); challenges and opportunities working with different sectors, politics, and contexts; current issues and emerging technologies (e.g. Pennsylvania’s policies and advocacy related to Automated Vehicles); and best practices for individuals pursuing careers in planning or public administration. Presentations and lectures will be supplemented by guest presentations from transportation leaders, policymakers, and planning consultants offering local, regional, and state perspectives. Students will have the opportunity to learn directly from leaders in the field and develop the skills and knowledge to work effectively with federal, state, and local entities.
Spring
1 Course Unit

CPLN 6550 Multimodal Transport
The purpose of this course is to explore contemporary multimodal transportation systems, policy, planning, and practice through a series of comparative international case studies. Topics include innovative parking management in San Francisco, congestion charging in London, Metro investments in Mexico City, informal transportation in Indonesia, Bus Rapid Transit in Bogota, and bicycle infrastructure investments in Copenhagen. The course will also include one or more site visits to innovative multimodal transportation projects in the Philadelphia or New York City regions. By analyzing contemporary planning challenges and best practices, students will develop a better understanding of how the transportation system works and how to design and employ specific multimodal interventions and policies effectively.

1 Course Unit

CPLN 6600 Fundamentals of Urban Design
CPLN6600 is a two-course unit studio. It is intended as the first comprehensive exposure to the principles and processes of urban design for MCP students, and it is a required course for students in Urban Design concentration. This studio uses an incremental approach to explore contemporary practice of urban design. The semester consists of three sections: a site survey, an individual design project, and a group design project. The projects are organized around several themes associated with different scales and different dimensions of urban design: 1) street/block; 2) open space; 3) mobility and walkability; 4) urban form and ecology. This cross-scale method draws on essential theories of urbanism to investigate the interrelation between built environment and community development, and to address the issues of environmental and social sustainability of a postindustrial metropolis.

2 Course Units
CPLN 6620 Topics in Urban Design & Development
Topics in Urban Design & Development will be examined
Fall, odd numbered years only
1 Course Unit

CPLN 6650 Case Studies and Urban Design Explorations
Participants in this course will become familiarized with a diversity of iconic urban references from all continents, while acquiring skills that will facilitate planning and design processes, appreciating the value of interdisciplinary, multi-scalar initiatives, and the transformative contributions of city planning and urban design/placemaking. It is a dynamic class in which each session is centered on a particular topic (see list below), combining class discussions on case studies presented by the instructor, guest lecturers, and teams of students. Interdisciplinary groups also are asked to deliver short planning/design exercises - without the pressure of the studios-, allowing to rapidly identify existing site conditions, design opportunities, delivering their proposals with compelling narratives, strategic moves, graphics, models, and verbal communication. Course topics include: From territory to site-specific; On the public realm; The rehabilitation of historic districts; Mobility/infrastructure and public space; The self-constructed city; Community and urban design; Contending forces of nature; Ecological urbanism; New town planning; Urban art. The class also organizes walking tours in Philadelphia. A final exhibit of the work delivered by the students will be held in Meyerson's Lower Gallery.
1 Course Unit

CPLN 6710 Statistical and Data Mining Methods for Urban Data Analysis
This hands-on course will cover a wide range of methods frequently used for analyzing urban and spatial data. These methods are drawn from a variety of fields, including traditional statistics, spatial econometrics, and machine learning, and include 1) regression analysis (OLS, ridge/lasso, logistic, multinomial logit); 2) measures of spatial autocorrelation; 3) spatial regression (spatial lag, spatial error, geographically weighted regression); 4) point pattern analysis; 5) an introduction to clustering methods (k-means, hierarchical clustering, DBSCAN); and 6) big data and GIS. Students will learn the assumptions and limitations of each method, and assignments will focus on the implementation, presentation and interpretation of the analyses. Students will use R and GeoDa in this course.

1 Course Unit

CPLN 6720 Geospatial Data Science in Python
This course will provide students with the knowledge and tools to turn data into meaningful insights, with a focus on real-world case studies in the urban planning and policy realm. Focusing on the latest Python software tools, the course will outline the "pipeline" approach to data science. It will teach students the tools to gather, visualize, and analyze datasets, providing the skills to effectively explore large datasets and transform results into understandable and compelling narratives. The course is organized into five main sections: Exploratory Data Science; Introduction to Geospatial Data Science; Data Ingestion & Big Data; Geospatial Machine Learning; Data Visualization & Storytelling.

CPLN 6741 Curricular Practical Training: Academic Year
This course provides international Master of City Planning students the opportunity for practical training in architecture in the United States (CPT). The course develops critical thinking about the organization, operation, and ethics of professional practice in city planning. This course will allow international MCP students to work in an internship in the United States during the academic year without shortening their limited OPT time. The course is offered for .20 course units. The employment must relate to the major and the experience must be part of the program of study. Course enrollment is by permit only.
0.2 Course Units

CPLN 6750 Land Use and Environmental Modeling
Planners at every scale and of every type are increasingly using spatial data and models to analyze existing patterns, identify and parameterize key trends and urban processes, visualize alternative futures, and evaluate development impacts. In the first half of the course, students will gain experience using various GIS-based environmental planning models, including McHargian Overlay; landscape fragmentation (FRAGSTATS), ArcHydro, Air pollution monitoring, flood inundation prediction, among others. The second half of the course focuses on land-use applications including gentrification simulation and urban growth modeling. A basic familiarity with ArcGIS is required.
Spring
1 Course Unit

CPLN 6800 Capstone Project/Advanced Topics in GIS
This course offers students an opportunity to work closely with faculty, staff, local practitioners, and each other on a capstone project that involves the development of a GIS and/or urban data management application.
Spring
Also Offered As: LARP 7450
1 Course Unit

CPLN 6830 Material Histories and Ethnographic Methods
What does it mean for students in the spatial disciplines (outside of anthropology, sociology, and history) to engage human subjects as primary sources of evidence? How can students in design, planning, and preservation both learn from the social sciences and transform classic ethnographic and historical methods to address the unique contexts of buildings, landscapes, and cities? This class focuses on how to conduct built environment research that views human subjects as repositories of knowledge and critical sources of primary evidence. We will explore research on the history of the built environment (dependent on maps, plans, documentation of sites) and human centered research as we design—collectively—best practices and spatially oriented interview and observation techniques. We will address multiple scales (sidewalks, commercial store fronts, post offices, neighborhoods) as we problematize human experience, perception, and knowledge of the built world.
Fall
Also Offered As: HSPV 6500
1 Course Unit
CPLN 6850 Environmental Readings
In this seminar, we will explore this green thread and analyze its influence on how we shape our environments through design and planning. The course has three parts. Throughout, the influence of literature on design and planning theory will be explored. The first part will focus on three most important theorists in environmental planning and landscape architecture: Frederick Law Olmstead Sr., Charles Eliot and Ian McHarg. The second part of the course will critically explore current theories in environmental planning and landscape architecture. The topics include: frameworks for cultural landscape studies, the future of the vernacular, ecological design and planning, sustainable and regenerative design, the languages of landscapes, and evolving views of landscape aesthetics and ethics. In the third part of the course, students will build on the readings to develop their own theory for ecological planning or, alternatively, landscape architecture. While literacy and critical inquiry are addressed throughout the course, critical thinking is especially important for this final section.

CPLN 7200 Housing, Community and Economic Development Practicum
This reading and writing-intensive discussion seminar reviews and debates what it means to develop sustainably, primarily focusing on cities in the United States. We examine the theory behind the sustainable cities movement from healthy cities, to green cities, to smart growth, to just cities, low-carbon cities, and resilient cities. We critically evaluate examples of sustainability planning. We discuss regulation, incentives, technological advances, and social norms. Finally, we evaluate contemporary urban sustainability plans. The class meetings leave room for students to raise and debate their own ideas of sustainability—in past semesters, students have driven conversation everywhere from cricket-based foods, to battery technology, to building community trust. By the end of the course, you will have a more nuanced and comprehensive view on how to create sustainable cities and you be able to article those ideas clearly through writing.

1 Course Unit
CPLN 7500 Advance Transportation Seminar
Air transportation is a fascinating multi-disciplinary area of transportation bringing together business, planning, engineering, and policy. In this course, we explore the air transportation system from multiple perspectives through a series of lessons and case studies. Topics will include airport and intercity multimodal environmental planning, network design and reliability, air traffic management and recovery from irregular operations, airline operations, economics, and fuel, air transportation sustainability, and land use issues related to air transportation systems. This course will introduce concepts in economics and behavioral modeling, operations research, statistics, environmental planning, and human factors that are used in aviation and are applicable to other transportation systems. The course will emphasize learning through lessons, guest lectures, case studies of airport development and an individual group and research project.
Spring
Also Offered As: ESE 5500
Prerequisite: CPLN 5500
1 Course Unit

CPLN 7600 Public Realm Studio
This intensive foundation studio focuses on the physical planning and design skills necessary in shaping the public realm. Students will undertake a series of targeted exercises that introduce them to project conceptualization, context analysis, programming, site planning, technical issues, and detailed design of public space in cities. Focusing on issues pertinent to local municipalities, students will work collaboratively and individually over the semester on design elements that cover a range of scales. Intellectual objectives within the studio include: the links between theory and practice, the development of principles to guide design, understanding associations between design and stakeholder-user interests, and exploring larger issues of sustainability and participation in design practice. Emphasis on the pragmatics of problem solving and implementation will be balanced with essential skills in visioning, critical thinking and design leadership.
Fall
2 Course Units

CPLN 7700 MUSA/Smart Cities Practicum
The purpose of this course is for students to work with city and non-profit clients on data science that convert government data into actionable public policy intelligence. Groups of 2-3 students will work with the client to understand the business process, wrangle data, develop spatial and aspatial analytics and serve these outputs to non-technical decision makers through the medium of data visualization. Students will be mentored by MUSA Faculty and advised by someone from the partnering agency. Prerequisites: students must have a working knowledge of R and experience building both spatial and statistical models including machine-learning models. Prerequisites include MUSA-5080/CPLN-5920 and either CPLN-5050 or MUSA-5000. Students without these specific prerequisites are asked to contact the instructor. Interested students are asked to contact the instructor to learn about specific projects and how to apply for the course.

Classical Studies (CLST)

CLST 0010 Archaeology & Technology
This seminar explores how humans apply and modify technologies in contexts as diverse as everyday life, major politico-economic undertakings, or scholarly research. We investigate this through a comparison of technologies of the past with technologies of the present used to study the past. We will dig into the details of topics like building pyramids and tombs, the function of ancient astronomical devices, pre-telegraph long-distance communication, tools for cutting and carving stone, and kilns for firing pottery. Archaeologists study these issues by examining the material remains of past societies: the cut-marks on stone blocks, extant tomb structures, the debris of manufacturing activities, and much more. Today's technologies enable the detailed scientific examination of the evidence, improving our understanding of the past. Thus, in parallel with our investigation of past technologies, we will also study the history of the application of present technologies to research on the archaeological record. We will dig into topics like the first uses of computers and databases, the development of statistical methods, early digital 3D modeling of objects and architecture, the adoption of geophysical prospection and geographic information systems, and the emerging uses of machine learning. In some cases, we can even compare old and new technologies directly, such as with land measurement and surveying techniques. Throughout the class we will engage in readings and discussions on the theory of humans and technology, to gain a better understanding of how processes such as innovation function in all time periods.
1 Course Unit
CLST 0014 Rome & America
This course explores a range of social structures and contexts, cultural understandings and intellectual practices where the influence of Roman exemplars is discernible in both historical and present-day America. It presents students with Roman and American materials placed in explicit or implicit dialog with one another: e.g., descriptions and discussions of political processes and structures; attitudes towards games, public entertainments, and communal cohesion; rhetorics and vocabularies of public space. Among other tasks and projects, students will stage a 'reimagination' of the Constitutional (Philadelphia) Convention of 1787, which resulted in the United States Constitution. They will also emulate ancient moralists and satirists, who attacked Rome's 'Bread and Circuses' culture, by focusing their attention upon comparable practices in modern America.
Not Offered Every Year
1 Course Unit

CLST 0015 First Year Seminar--Emotions
The field known as "History of the Emotions" has gained tremendous prominence in literary and cultural studies. But do emotions have a history? If so, what methods do we use for discovering and recounting that history? To what extent does history of the emotions borrow from other fields? These include all the fields that relate to what we call "emotions studies": psychology, sociology, political theory, philosophy, and neuroscience. In this seminar we will explore some key methodologies and subject matters for history of the emotions. We'll look at some philosophical reflections on emotion (including Plato, Aristotle, and the Stoics, as well as more recent moral philosophers); we'll also look at political theorists, including Thomas Hobbes; we'll explore psychoanalytic perspectives, historical research, and some of the work of neuroscientists; and we will take these ideas into explorations of art, literature, and music. See the English Department's website at www.english.upenn.edu for a description of the current offerings

1 Course Unit

CLST 0016 The Iliad and its Afterlife
As the first work in the western tradition, Homer's Trojan War epic, the Iliad, has been a constant point of reference for thinking about heroism, friendship, the search for meaning in the face of mortality, and the effects of war on individuals and societies. We will begin with a close reading of the Iliad in English translation, paying attention both to the story of its hero Achilles as he experiences disillusionment, frustration, anger, triumph, revenge, and reconciliation and to the poem's broader portrait of a society at war; this portrait incorporates the diverse perspectives of invaders and defenders, men and women, old and young, gods and mortals, along with tantalizing glimpses of peacetime life. We will then consider how later writers and artists have drawn on the Iliad to present a range of perspectives of their own -- whether patriotic, mock heroic, romantic, or pacifist -- with particular attention to 20th and 21st century responses by such figures as W.H. Auden, Simone Weil, Jonathan Shay, C. Y. Twombly, David Malouf, Alice Oswald, and Adrienne Rich. No previous knowledge of the Iliad is required. The course is intended for anyone who is interested in how cultures use their shared myths both to affirm and to question their central values.
1 Course Unit

CLST 0017 Private Life in Ancient Rome
What was it like to live in the Roman world? What did that world look, taste and smell like? How did Romans raise their families, entertain themselves, understand death, and interact with their government? What were Roman values and how did they differ from our own? This course takes as its subject the everyday lives of individuals and explores those lives using the combined tools of archaeology, art and written sources. In doing so, it seeks to integrate the well-known monuments of Roman civilization into a world of real people. Some of the topics explored will include Roman houses, diet, leisure, gender and sexuality, slavery, and poverty.

1 Course Unit

CLST 0018 Classical Antiquity and the Modern World
The ancient Greek and Roman civilizations, whether individually, together, or in relation to other ancient civilizations, have frequently been seen as ancestors of the modern world. This ancestry has been seen both as a common and unifying heritage and as one that divides. This course will consider the relationship between Classical Antiquity and the modern world in the light of different themes, including those of Civilization, Empire, Race, Ethnicity, Simplicity and Complexity, Morality, Religion, and Universality. Classes will focus on discussion of readings with an emphasis on coming to grips with multiple and conflicting points of view. Students will write a research paper related to one of the themes mentioned above or to another one of similar importance.
1 Course Unit

CLST 0019 Town and Country in Ancient Greece
The ancient city of Athens, Greece, is renowned as the birthplace of democracy; Sparta is famous for its warlike society; Olympia for the Olympic Games; and Delphi for its famed oracle. But the Greek landscape was dotted with hundreds of other cities, towns, villages, sanctuaries, and hamlets. This seminar is a journey through town and country in ancient Greece, from dense urban spaces to vast forests and agro-pastoral countrysides. We will examine many lines of evidence: (1) ancient texts (e.g., Homeric epics, Hesiod's depiction of rural life, the histories of Herodotus and Thucydides, the tragedies and comedies of the great playwrights, the geography of Strabo, the travel writing of Pausanias); (2) inscriptions that record details of life and death; and (3) archaeology (site discovery and excavation, recovery of the material remains of everyday life). These sources will reveal much information about how urban and rural life were organized. A central aim of this seminar is to address this question: is the past a foreign country, or is there nothing new under the sun?
1 Course Unit

CLST 0020 Travel and Ethnography
In this class we will read a broad selection of travel narratives, from Herodotus to Ibn Battuta and from the Jesuit Relations describing New France up to the 20th century writers such as Lawrence Durrell, Robyn Davidson and Rory Stewart. Our focus will be on exploring how travel and travel writing create exotic cultures. The journey also becomes a discovery of self by an encounter with the Other. In the process, entire worlds of wonder open up for the viewer. How material is selected for recording reflects the priorities, anxieties and worldview of the writer, reflecting travel's ability to focus our attention and stimulate thoughtful reflection.

CLST 0021 Percy Jackson and Friends: Ancient Greece and Rome in Children's and Young Adult Culture
Most modern people first encounter the ancient world, not in the classroom, but in early pleasure reading and other forms of play, whether in myth collections like D'Aulaires' Book of Greek Myths or fantasies like the Percy Jackson series or video games like Apotheon. This seminar will examine the presence of classical myth and ancient history in young people's culture from the nineteenth century, when classical myth was turned into children's literature by Nathaniel Hawthorne and Charles Kingsley, to the present day, both in traditional literary forms and in newer media such as cartoons, video games, and fan fiction. Topics to be considered include: how stories not originally intended for children have been made suitable for child audiences; the construction of ancient counterparts for modern children; what kinds of children - in terms of class, race, and gender - adult authors envision as the natural audience for classical material and what they hope those children will get out of it; the ways in which young people have claimed that same material and made it their own; and the role of mythical figures in the development of modern identities. Along with the material that we read and discuss together, each student will have the opportunity to present and write about a classically-inspired work for children or young adults that is of particular interest to them.

1 Course Unit

CLST 0101 Ancient Greece
The Greeks enjoy a special place in the construction of western culture and identity, and yet many of us have only the vaguest notion of what their culture was like. A few Greek myths at bedtime when we are kids, maybe a Greek tragedy like Sophokles' Oidipous when we are at school: these are often the only contact we have with the world of the ancient Mediterranean. The story of the Greeks, however, deserves a wider audience, because so much of what we esteem in our own culture derives from them: democracy, epic poetry, lyric poetry, tragedy, history writing, philosophy, aesthetic taste, all of these and many other features of cultural life enter the West from Greece. The oracle of Apollo at Delphi had inscribed over the temple, "Know Thyself." For us, that also means knowing the Greeks. We will cover the period from the Late Bronze Age, c. 1500 BC, down to the time of Alexander the Great, concentrating on the two hundred year interval from 600-400 BC.

1 Course Unit

CLST 0102 Ancient Rome
At its furthest extent during the second century CE, the Roman Empire was truly a "world empire", stretching from northern Britain to North Africa and Egypt, encompassing the whole of Asia Minor, and bordering the Danube in its route from the Black Forest region of Germany to the Black Sea. But in its earliest history it comprised a few small hamlets on a collection of hills adjacent to the Tiber river in central Italy. Over a period of nearly 1500 years, the Roman state transformed from a mythical Kingdom to a Republic dominated by a heterogeneous, competitive aristocracy to an Empire ruled, at least notionally, by one man. It developed complex legal and administrative structures, supported a sophisticated and highly successful military machine, and sustained elaborate systems of economic production and exchange. It was, above all, a society characterized both by a willingness to include newly conquered peoples in the project of empire, and by fundamental, deep-seated practices of social exclusion and domination. This course focuses in particular upon the history of the Roman state between the fifth century BCE and the third century CE, exploring its religious and cultural practices, political, social and economic structures. It also scrutinizes the fundamental tensions and enduring conflicts that characterized this society throughout this 800-year period.

CLST 1100 Ancient Mediterranean Empires
What constituted an empire in antiquity and how was imperialism legitimized? Which measures were used to maintain and organize imperial power? How did foreign rule affect the daily life of people all over the Mediterranean? In this course we will discuss and compare ancient empires from Achaemenid Persia to Alexander the Great and the Hellenistic kingdoms of his successors to the emergence of Rome as one of the most influential empires in world history. Topics that will be discussed include ancient ideas and concepts of imperial rule, patterns of political, economic and cultural power and their interrelations as well as imperial crises and local resistance. All texts will be discussed in translation. There are no prerequisites.

CLST 1102 The Decline and Fall of the Roman Empire?
The Roman Empire, teetering under the weight of its bureaucracy, oppressed by the demands of its soldiers, weakened by wave after wave of barbarian invasions, and, with the rise of Christianity, confronted by its own immorality, finally fell when the last Roman emperor, Romulus Augustulus, was sent into exile in 476 CE. That, at least, is one version of the story. In truth, there are many stories that can be told of the period between the apogee of the Roman empire in the 2nd c. AD and the rise of Christianity and Islam and origins of the so-called Barbarian Kingdoms in the 7th and 8th centuries AD. This course will explore this period of 600 years, using methodologies from history, archaeology, social science and the sciences to understand the complex problem of empire and its evolutions. No previous knowledge of ancient or medieval history required.

1 Course Unit
CLST 1200 Sex and Gender in Ancient Greece and Rome
What is being a man, being a woman, being masculine, being feminine, being neither, being both? Is sex about pleasure, domination, identity, reproduction, or something else? Are sexual orientation and gender identity innate? How can words, myths and stories inform cultural assumptions about sex and gender? Did people in ancient times have a concept of sexuality? How do gendered English terms (like "girlie", "effeminate", or "feisty") compare to gendered ancient Greek and Latin terms, like virtus, which connotes both "virtue" and "masculinity"? Why did the Roman and English speaking worlds have to borrow the word "clitoris" from the ancient Greeks? How did people in antiquity understand consent? Can we ever get access to the perspectives of ancient women? In this introductory undergraduate course, we will learn about sex and gender in ancient Greece and Rome. We will discuss similarities and differences between ancient and modern attitudes, and we will consider how ancient texts, ancient art, ancient ideas and ancient history have informed modern western discussions, assumptions and legislation. Our main readings will be of ancient texts, all in English translation; authors studied will include Ovid, Aristophanes, Plato, Euripides, and Sappho. Class requirements will include participation in discussion as well as quizzes, reading responses, and a final exam.

CLST 1201 The Ancient Economy
This class presents an introduction to economies before economics, a study of economic activity in the Greco-Roman world. Ancient Greece and Rome have been called some of the first "global" economies - they engaged in long-distance trade, introduced the first coinage systems, and built and manufactured at large scales. At the same time, they remained agrarian societies, with majority peasant populations, high levels of inequality and social systems that often placed social capital ahead of profit. Using textual sources, archaeology and techniques from the natural and social sciences, this class will not only look at basic elements of economic activity in the ancient world - demographics, trade, monetization, industry - but also ask critical questions about how - or if -modern economic methods can be applied to the distant past. No previous knowledge of the ancient world or economics is necessary.

CLST 1205 Race and Ethnicity in the Ancient World
Modern political and artistic movements often appeal to an ancient past in order to construct their own social and racial identities. But how did ancient peoples understand themselves and others? How should we understand race and ethnicity in the ancient past? And how are perceptions of the past used today to construct or dismantle structures of power? This course explores both ancient and modern representations of race and ethnicity in antiquity. We will investigate both how ancient peoples around or near the Mediterranean (e.g. Greeks, Romans, Egyptians, Persians, and Nubians) understood difference and also how modern eras have appropriated ancient identities. Our dialogues will include ancient ethnographies, literature, and visual arts as well as modern theories and media, with an emphasis on active learning and collaboration. Students will be encouraged to produce both analytical and creative responses to our materials.

CLST 1206 Citizenship, Belonging and Exclusion in the Roman World
What did it mean to be a citizen in the Roman world? What did citizens do in order to support their claims to belong in the civic community? Conversely, what about those members of the community who were judged not to belong? What limitations acted upon them, and what were the terms of their exclusion? This course will begin by exploring practices of citizenship in the Roman Republic and Empire: voting, serving in the military, running for office, and so on. It will then examine the experiences of those who, for some reason, were excluded from one or more of these roles. Fundamentally, our question is: "To what extent was Roman society diverse and inclusive?" No prior knowledge of Roman History is required. Texts will be discussed in translation.

1 Course Unit

CLST 1207 Greek Parties, Speech, and Identity
The ancient Greek symposium existed as a stylized elite drinking party from the Archaic period until the end of the Roman Empire a millennium later, inspiring many works of literature and philosophical debates. Conversation and correct behavior were key at these parties to form social bonds and indicate one's belonging to Greek elite society while simultaneously excluding certain demographics from the group. In this course we will learn about the ancient Greek world through the institution of the symposium and will complicate our understanding of the ancient world by putting it in dialog with our modern cultural expectations. We will read from a selection of authors in translation including Plato, Plutarch, and Athenaeus, focusing on the conversational and presentational aspects of the texts. Students will also develop personalized techniques for public speaking and will practice several varieties of public speaking inspired by the symposium. This course is a CWIC Critical Speaking Seminar, in which most of the course grade will be based on oral assignments. No prior experience with the ancient world or with public speaking is required.

CLST 1300 Introduction to Mediterranean Archaeology
The cultures of Greece and Rome, what we call classical antiquity, span over a thousand years of multicultural achievement in the Mediterranean. This course tells the story of what it was like to live in the complex societies of ancient Greece and Rome. This story is told principally using the art, architecture, pottery and coins produced by these societies. We will examine both the bold and sexy, and the small and humble, from the Parthenon to wooden huts, from the Aphrodite of Knidos to the bones of a fisherman named Peter.
Fall
Also Offered As: ANTH 1300
1 Course Unit

CLST 1301 Great Discoveries in Archaeology
In this course, we examine famous (Pompeii, Troy, Machu Picchu) and not-so-famous (Uluburun, Kalamianos) archaeological sites, mainly in the Old World of the Mediterranean, Near East, and Asia, but also in the New World of North and South America. We adopt a thematic and comparative approach to delve deeper to explore these societies and examine cultural similarities and differences across the ancient world. A typical sequence of meetings will begin with lecture on a particular theme, such as Writing Systems or Sacred Spaces and Places, followed by the presentation of relevant monuments, sites, or regions from different parts of the world, with discussion and assessment of the cross-cultural similarities and differences. In this way, both the great diversity of culture in our world, as well as our underlying similarities, can be revealed. How different are we from our ancestors who lived hundreds or thousands of years ago? Museum visits and exercises will allow students to engage with the material creations of these civilizations. CLST 123 is a non-technical introduction for students interested in archaeology, history, art history, anthropology, or related subjects. There are no prerequisites. The course fulfills the Cross Cultural Analysis foundational requirement.
1 Course Unit

CLST 1302 Food and Fire: Archaeology in the Laboratory
This course will let students explore the essential heritage of human technology through archaeology. People have been transforming their environment from the first use of fire for cooking. Since then, humans have adapted to the world they created using the resources around them. We use artifacts to understand how the archaeological record can be used to trace breakthroughs such as breaking stone and bone, baking bread, weaving cloth and firing pottery and metals. The seminar will meet in the Penn Museum’s Center for the Analysis of Archaeological Materials. Students will become familiar with the Museum’s collections and the scientific methods used to study different materials. Class sessions will include discussions, guest presentations, museum field trips, and hands-on experience in the laboratory.
Fall or Spring

1 Course Unit

CLST 1303 The Material Past in a Digital World
The material remains of the human past - objects and spaces - provide tangible evidence of past people's lives. Today's information technologies improve our ability to document, study, and present these materials. But what does it mean to deal with material evidence in a virtual context? In this class, students will learn basic digital methods for studying the past while working with objects, including those in the collections of the Penn Museum. This class will teach relational database design and 3D object modeling. As we learn about acquiring and managing data, we will gain valuable experience in the evaluation and use of digital tools. The digital humanities are a platform both for learning the basic digital literacy students need to succeed in today's world and for discussing the human consequences of these new technologies and data. We will discuss information technology's impact on the study and presentation of the past, including topics such as public participation in archaeological projects, educational technologies in museum galleries, and the issues raised by digitizing and disseminating historic texts and objects. Finally, we will touch on technology's role in the preservation of the past in today's turbulent world. No prior technical experience is required, but we hope students will share an enthusiasm for the past.

1 Course Unit

CLST 1500 Greek & Roman Mythology
Myths are traditional stories that have endured many years. Some of them have to do with events of great importance, such as the founding of a nation. Others tell the stories of great heroes and heroines and their exploits and courage in the face of adversity. Still others are simple tales about otherwise unremarkable people who get into trouble or do some great deed. What are we to make of all these tales, and why do people seem to like to hear them? This course will focus on the myths of ancient Greece and Rome, as well as a few contemporary American ones, as a way of exploring the nature of myth and the function it plays for individuals, societies, and nations. We will also pay some attention to the way the Greeks and Romans themselves understood their own myths. Are myths subtle codes that contain some universal truth? Are they a window on the deep recesses of a particular culture? Are they entertaining stories that people like to tell over and over? Are they a set of blinders that all of us wear, though we do not realize it? We investigate these questions through a variety of topics creation of the universe between gods and mortals, religion and family, sex, love, madness, and death.

CLST 1501 Ancient Greek Philosophy

What is philosophy? How does it differ from science, religion, literature, and other modes of human discourse? This course traces the origins of philosophy as a discipline in the Western tradition, looking to thinkers of Ancient Greece and Rome. We will examine how natural philosophers such as Thales, Anaximander, and Heraclitus distinguished their inquiries from the teachings of poets such as Homer and Hesiod; how ancient atomism had its origins in a response to Parmenides’ challenge to the assumption that things change in the world; how Socrates reoriented the focus of philosophy away from the natural world and toward the fundamental ethical question, how shall I live? We will also examine how his pupil, Plato, and subsequently Aristotle, developed elaborate philosophical systems that address the nature of reality, knowledge, and human happiness. Finally, we will examine the ways in which later thinkers such as the Epicureans and Stoics transformed and extended the earlier tradition.

CLST 1600 Dangerous Books of Antiquity

All books, even those regarded by some as “classics”, are potentially dangerous. This course will survey a selection of ancient books that got their authors in trouble, were censored, inspired rebellion, or enabled social (and antisocial) movements, down to the present moment. Most of the books read will come from ancient Greece or Rome, but some will come from other ancient cultures, such as Egypt, the Near East, and China. Issues involved will include atheism, race and ethnicity, sex and gender, nationalism, magic, and mysticism. The course will make use of brief lectures and presentations but leave as much time as possible for seminar-style discussion.

Not Offered Every Year
1 Course Unit

CLST 1601 Ancient Drama

This course will introduce students to some of the greatest works of dramatic literature in the western canon. We will consider the social, political, religious and artistic functions of drama in ancient Greece and Rome, and discuss both differences and similarities between ancient drama and modern art forms. The course will also pursue some broader goals: to improve students skills as readers and scholarly critics of literature, both ancient and modern; to observe the implications of form for meaning, in considering, especially, the differences between dramatic and non-dramatic kinds of cultural production: to help students understand the relationship of ancient Greek and Roman culture to the modern world; and to encourage thought about some big issues, in life as well as in literature: death, heroism, society, action and meaning.

CLST 1602 World Literature

How do we think ‘the world’ as such? Globalizing economic paradigms encourage one model that, while it connects distant regions with the ease of a finger-tap, also homogenizes the world, manufacturing patterns of sameness behind simulations of diversity. Our current world-political situation encourages another model, in which fundamental differences are held to warrant the consolidation of borders between Us and Them, “our world” and “theirs.” This course begins with the proposal that there are other ways to encounter the world, that are politically compelling, ethically important, and personally enriching—and that the study of literature can help tease out these new paths. Through the idea of World Literature, this course introduces students to the appreciation and critical analysis of literary texts, with the aim of navigating calls for universality or particularity (and perhaps both) in fiction and film. “World literature” here refers not merely to the usual definition of “books written in places other than the US and Europe, ”but any form of cultural production that explores and pushes at the limits of a particular world, that steps between and beyond worlds, or that heralds the coming of new worlds still within us, waiting to be born. And though, as we read and discuss our texts, we will glide about in space and time from the inner landscape of a private mind to the reaches of the farthest galaxies, knowledge of languages other than English will not be required, and neither will any prior familiarity with the literary humanities. In the company of drunken kings, botanical witches, ambisexual alien lifeforms, and storytellers who’ve lost their voice, we will reflect on, and collectively navigate, our encounters with the faraway and the familiar—and thus train to think through the challenges of concepts such as translation, narrative, and ideology. Texts include Kazuo Ishiguro, Ursula K. LeGuin, Salman Rushdie, Werner Herzog, Jamaica Kincaid, Russell Hoban, Hiroshi Teshigahara, Arundhati Roy, and Abbas Kiarostami.

CLST 1603 Hercules Ancient & Modern
The mythical hero Hercules, one of the most well-known figures to emerge from the ancient Mediterranean, has remained popular around the world in one form or another to the present day, from Asia to America. What explains the enduring fascination? Hercules is a figure of multiples: myriad labors, multiple wives, multiple fathers, and multiple identities. In this course, like ancient writers and artists, we will use Hercules to explore questions of mortality, divinity, masculinity, madness, and contradiction. To that end, we will read Hercules in different ancient genres—Tragedy, Comedy, and Philosophy—and also in modern poetry, comics, television, and film. How do works erase or problematize the contradictory nature of our hero? How do other American “heroes” embody Herculean contradictions?
Not Offered Every Year
1 Course Unit

CLST 1700 Classical Traditions
A broad consideration of the ways in which writers and artists from the early modern era to the present day have responded to the classical tradition, borrowing from, imitating, questioning, and challenging their classical predecessors. Through modern reworkings of ancient epic, tragedy, biography, and lyric by authors ranging from Shakespeare and Racine to contemporary poets, painters, and filmmakers, we will ask what the terms “classical” and “tradition” might mean and will track the continuities and differences between antiquity and the modern world. Should we see ancient Greek and Roman culture as an inheritance, a valuable source of wealth bequeathed to the modern age? Or is there something wrong with that picture? How do ancient texts have to be adapted and transformed if they are to speak to modern conditions and concerns? This is an introductory-level course open to anyone who cares about the relationship between the present and the past.

CLST 1701 Scandalous Arts in Ancient and Modern Communities
What do the ancient Greek comedian Aristophanes, the Roman satirist Juvenal, have in common with rappers Snoop Dogg and Eminem? Many things, in fact, but perhaps most fundamental is their delight in shocking audiences and upending social norms. This course will examine the various arts (including literary, visual and musical media) that transgress the boundaries of taste and convention in ancient Greco-Roman culture and our own era. We will consider, among other topics, why communities feel compelled to repudiate some forms of scandalous art, while turning others - especially those that have come down to us from remote historical periods - into so-called classics.

1 Course Unit

CLST 3101 Periclean Athens
Athens in the 5th Century BCE is often viewed as a high point of human civilization. We will assess this claim by looking at the period’s cultural achievements (in such areas as drama, architecture, and oratory) within their social and political contexts. Topics for discussion include: the structure and workings of the Athenian democracy; the interplay between pro-democratic and anti-democratic positions in Athenian political life; the connections between democracy and imperialism; conceptions of citizenship and relations between citizens and non-citizens (women, slaves, and resident foreigners); the role of the law courts in both dispute resolution and elite competition; sexual politics; and the civic significance of religious ritual.

CLST 3102 The Rise and Decline of Macedonia
In this course, we will study the rise and development of Macedonia from a tiny kingdom on the northern fringes of the Greek world to one of the major powers of the region and beyond. Regarded by the Greeks as an at least semi-barbarian culture on the periphery, Macedonia became the dominant power in the Greek world during the fourth century BC and its king Alexander the Great set out to conquer the world. After his death, Macedonia was one of the Hellenistic kingdoms competing for power and influence in the Mediterranean until it finally came under Roman control. Topics that will be discussed include questions of ethnicity and identity, Macedonian kingship, culture and society (including the role of women) and the role of Macedonian traditions in the Hellenistic era in general. Special emphasis will therefore be laid on critical reading and interpretation of ancient literary texts, documentary evidence and archaeological material. that will be discussed include questions of ethnicity and identity, Macedonian kingship, culture and society (including the role of women) and the role of Macedonian traditions in the Hellenistic era in general.

CLST 3103 The Hellenistic and Roman Near East
In this course we will study the history of the Hellenistic and Roman period from a Near Eastern perspective. From the conquests of Alexander the Great to the end of Roman rule in late antiquity, this region was the scene of conflicts, but also of peaceful and fruitful interactions between Greeks, Romans, Egyptians, Jews, Syrians, Arabs and many other societies. What was the impact of Greek and Roman rule and how did the peoples of the region react to these fundamental changes? On the other hand, how did they influence the culture and worldview of their conquerors? We will use historical texts, documents and archaeological evidence to discuss these political, cultural and religious encounters that made the Near East to a key region of Greco-Roman history. All texts will be discussed in translation. No prerequisites, although it would be useful to have some background in Hellenistic and/or Roman history.
Also Offered As: ANCH 3103, NELC 3060
1 Course Unit
CLST 3104 Greek World After Alexander the Great
This class is designed as a detailed investigation of the world created by Alexander the Great. We will cover the three hundred year period known as the Hellenistic Age from the career of Alexander the Great (354-323 BC) until the defeat of Antony and Cleopatra at the Battle of Actium (31 BC). This was a period during which the world of the Greeks underwent extraordinary and far-reaching changes, as Greek culture was established as far afield as northwestern India, central Asia and Egypt. In the same period kingdoms controlled by Alexander’s Successors used Greek culture to define their rule, establishing a Greek culture of the elite in regions which previously had been dominated by the Persians. As Greek and non-Greek worlds collided, a new interpretation of Greek culture emerged, giving rise, among other things, to universities and professional schools, state subsidized health care, triumphantist architecture, the heroization of the noble savage, coinage with royal portraits, the deification of men and a multitude of other social, artistic and political forms familiar to us. It was an age of radical change, dislocation, as Greek populations colonized regions previously unknown to them.

1 Course Unit

CLST 3110 The Age of St. Augustine
Augustine of Hippo lived from 354 until 430 CE. This was a period of enormous political and social change, and also a period of profound intellectual discovery. Growing up in the Roman provinces of North Africa, Augustine was formed by late Roman culture and education, and absorbed and loved the greatest examples of classical Latin poetry and prose. In his youth he was a professional rhetorician, a teacher as well as a successful orator. Yet after his conversion to Christianity at the age of 31, he renounced much of his early formation, at least in name. He became a preacher and a priest, a bishop, an expositor of Christian thought, and a fierce polemicist. But he was never able to leave behind his early classical formation; as an adult he looks back on his childhood, poignantly remembering how he “wept for Dido” when he read the Aeneid at school. His life embodies the contradictions of the age. Augustine’s life and his writings give us a keen perspective on that tumultuous, fractured period of late Roman antiquity, when the empire was disintegrating through internal divisions and external threats. Central readings of our course will be Augustine’s Confessions and his City of God. We will also read works by his contemporaries, including philosophers, rhetoricians, and religious adversaries. We will explore his views on such issues as empire, slavery, childhood, sex and sexuality, Jews and Judaism, pedagogy, and free will. Assignments will involve regular posting of questions and ideas for discussion, one oral research presentation, and one final longer paper.

1 Course Unit
CLST 3201 Disasters in the Ancient Mediterranean World
Natural disasters occupy a powerful place in our imagination. Stories of floods, plagues, earthquakes, and storms excite and horrify us, and communities mobilize their resources quickly in response to these events. In the ancient Mediterranean world, natural disasters could take on potent meaning, indicating the anger or disfavor of the gods, acting as warnings against certain courses of action, or confirmations of individuals’ fears or suspicions about the world in which they lived. In this course, we explore the evidence for some disasters in the ancient Mediterranean world, the ways in which contemporaries reacted to those disasters and interpreted their causes. This project is, of necessity, multidisciplinary, involving textual, archaeological, geological, and comparative materials and drawing on methodologies from history, political and archaeological science, and the emerging field of disaster studies. In the process, we will gain an appreciation of the social structures of communities in the period, the thought-world in which they operated, and the challenges and opportunities that attend a project of this sort. No prior knowledge of Ancient History is required, although it would be useful to have taken ANCH 0100, ANCH 0101, or ANCH 0102. Texts will be discussed in translation.

CLST 3203 Power and Peril: The Paradox of Monarchy among Ancient Greeks, Romans, and Jews
We imagine ancient Greece and Rome as the cradles of democracy and republicanism, early Judea as a pious theocracy, but monarchy was the most common and prevalent form of government in antiquity (and the premodern world in general). In this class, we will take a special look at kinship among the Jews, Greeks, and Romans to assess and discuss similarities, differences, and mutual influences. In all these cultures, the king was a polarizing figure in reality and in conception. On the one hand, some revered the monarch as ideal leader, and monarchy provided the language with which to describe and even imagine the very gods. On the other, monarchs were widely reviled in both theory and practice, from the Greek tyrants to biblical Saul. The Emperor Augustus loudly denied his own affinity to the office of king, even as he ruled alone and was revered as a god. In other words, kings stood both for the ideal and the worst form of government. This class confronts the paradox of monarchical rule and will, through the lens of the king, explore ideas of god, government, human frailty, and utopianism.

CLST 3204 Lies My Ancient History Teacher Told Me
The neat, comforting narratives that we construct of the histories of ancient Greece and Rome cover up a collection of controversies and debates that continue to rage in contemporary scholarship. Can we use the Homeric epics as sources of early Greek history? Who was responsible for the Peloponnesian War? How can we best explain Rome’s acquisition of empire? How new was the political revolution of Augustus? What were the main reasons for the rise of Christianity? In this course, we explore these and other controversies, focusing on both modern scholarship and the ancient sources. All texts will be discussed in translation. No prior knowledge of Ancient History is required, although it would be useful to have taken ANCH 0101 and/or ANCH 0102.

CLST 3206 Jewish Diaspora in the Roman Empire
Under the Roman Empire, Jewish communities developed and flourished especially in the cities of the Eastern Mediterranean, in Egypt, Syria, Asia Minor, Greece, Northern Africa, and Italy proper. In many of these cities, the Jews formed a considerable part of the population; they influenced the cultural, social, and political communal life and developed an identity that was distinctively different from that in Judea. In this seminar, we will trace Jewish life in the Diaspora under Roman rule. How did Jews and non-Jews interact? What was the legal status of Jewish communities under the Roman Empire? What caused conflicts and how were they solved? What can the history of Jewish Diaspora communities tell us about minorities in the Roman Empire in general? We will use literary texts, inscriptions, papyri, and archaeological material to answer these questions and many more.
Also Offered As: ANCH 3206, JWST 3206
1 Course Unit

CLST 3209 Foreigners in Rome
According to the stories the Romans told about the origins of their city, Rome began as a community of immigrants. As a growing metropolis and, eventually, the center of an empire, the city remained a magnet for people from other parts of the Empire and beyond. Foreigners came to the city as merchants and travelers, they settled here seeking a different and better life, pursuing a career, or escaping hardships in their home communities. Others were brought to Rome against their will, as prisoners or slaves. In this seminar, we will explore the different communities of foreigners and immigrants that shaped Rome. How and why did they move to the city? How did they experience their new home? How did they adapt to life in Rome and how, in turn, did they influence what we define as “Roman” today? Finally, what can the legal, social, political, and social status of immigrants tell us about Roman society in general? To answer these questions (and more), we will look at a wide array of primary sources, including literary texts, inscriptions, and material culture.

1 Course Unit
CLST 3301 Excavating Ancient Cities: Troy & Gordion
The instructor has spent the last 30 years excavating the Turkish sites of Troy and Gordion, the latter of which has been explored under Penn sponsorship. The former was famous in antiquity as the site of the Trojan War; the latter served as the capital of the Phrygian Kingdom, ruled by Midas. Both of these are multi-period sites, with nine settlements built above each other during more than four millennia, and determining the chronology and appearance of each settlement has consistently been controversial. In this course we will examine the history of both sites, focusing on the problems of archaeological interpretation. Students will be placed in the position of the archaeologist and charged with re-interpreting the existing archaeological evidence.
1 Course Unit

CLST 3302 Material World in Archaeological Science
By focusing on the scientific analysis of inorganic archaeological materials, this course will explore processes of creation in the past. Class will take place in the Center for the Analysis of Archaeological Materials (CAAM) and will be team taught in three modules: analysis of lithics, analysis of ceramics and analysis of metals. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how the transformation of materials into objects provides key information about past human behaviors and the socio-economic contexts of production, distribution, exchange and use. Discussion topics will include invention and adoption of new technologies, change and innovation, use of fire, and craft specialization.

CLST 3306 Archaeology of Anatolia
This class is devoted to the archaeology and history of Anatolia (ancient Turkey) from the beginning of the Bronze Age (3000 BC) to the end of the Byzantine period (1453 AD). Emphasis will be placed on the great empires in Anatolia (Hittite, Phrygian, Lydian, Urartian, Persian, Roman, and Byzantine), and on the great cities (Troy, Sardis, Ephesus, Constantinople). The course is intended to complement the major exhibit on Gordion, the Phrygians, and Anatolian archaeology that will open at the Penn Museum in February of 2016 and run for 10 months. Not Offered Every Year
1 Course Unit

CLST 3307 Intro to Digital Archaeology
Students in this course will be exposed to the broad spectrum of digital approaches in archaeology with an emphasis on fieldwork, through a survey of current literature and applied learning opportunities that focus on African American mortuary landscapes of greater Philadelphia. As an Academically Based Community Service (ABCS) course, we will work with stakeholders from cemetery companies, historic preservation advocacy groups, and members of the African Methodist Episcopal Church to collect data from three field sites. We will then use these data to reconstruct the original plans, untangle site taphonomy, and assess our results for each site. Our results will be examined within the broader constellation of threatened and lost African American burial grounds and our interpretations will be shared with community stakeholders using digital storytelling techniques. This course can count toward the minor in Digital Humanities, minor in Archaeological Science and the Graduate Certificate in Archaeological Science.

1 Course Unit

CLST 3309 Introduction to Museums
This course introduces students to the history, theory and modern practices of museums. Using the resources of the Penn Museum and other Philadelphia museums, students will study curatorial practice, education, exhibition design and conservation, while exploring the theoretical and ethical issues confronted by museums. Particularly relevant for those interested in archaeology, anthropology, art history, cultural heritage and public education.
Fall or Spring
Also Offered As: ARTH 3030
1 Course Unit

CLST 3310 Kinship and Connectivity in the Roman World
An individual’s life course is often reflected, enhanced, and defined by their relations to other individuals. This course will investigate the concept of kinship in the Roman world through textual, visual, and archaeological evidence. We will explore relationships at all levels of society from the imperial family to the slaves and freedmen who were part of larger households, in order to understand how different relationships shaped and structured interactions in Roman society. Together, we will explore the following questions: how were relationships and bonds represented in the ancient world? What structures were in place for families to perpetuate themselves through biological or adoptive means? How could non-Roman citizens create family connections through formal and informal channels? How could relationships be celebrated in life and commemorated in death? We will use written evidence from ancient historians, visual evidence like the Altar of Peace, and archaeological evidence from cemeteries to examine how Roman notions of kinship shaped life and death in different social milieus.
1 Course Unit
CLST 3311 Penn Museum Curatorial Seminar: Reconfiguring the Classical World Galleries
The Greek galleries in the Penn Museum were opened in 1994, and the Etruscan and Roman galleries in 2003. The world was very different then, and many of the themes used to frame the artifacts in the galleries are not especially relevant to contemporary students, scholars, and visitors. In this course we will completely reorganize and reinstall the galleries digitally, creating a series of websites that will highlight the new layout and themes. We will work extensively with the Greek Etruscan, and Roman artifacts themselves to reconfigure the galleries, which will highlight the connections between antiquity and the contemporary world, focusing on themes such as armed conflict, trauma, migration, xenophobia, and wealth and poverty.
1 Course Unit

CLST 3312 Ages of Homer: An Archaeological Introduction to the Greek Bronze and Iron Ages
This illustrated lecture course surveys the prehistory and early history of the Greek world through texts and material remains, with the aim of bringing to life the society, economy, and politics of this ancient era. Among the topics are the rise and fall of the great Bronze Age civilizations of the Aegean area, the Minoans of Crete and the Mycenaean Greeks of the mainland; the cataclysmic volcanic eruption on the island of Thera and its long-term consequences; the possibly historical Trojan War; the Homeric world of the Dark Age that followed the collapse of the Mycenaean palaces; and the Greek renaissance of the eighth century B.C., including the adoption of the alphabet, the great colonizing movement, and the Panhellenic sanctuaries that laid the foundation for the Classical world to come. Ages of Homer is part of a sequence of introductory courses on the archaeology of the Greco-Roman world, which also includes Introduction to Greek Archaeology (CLS 275) and Introduction to Roman Archaeology (CLST 274). There are no prerequisites, and these courses need not be taken in a particular order.
Not Offered Every Year
1 Course Unit

CLST 3314 Mining Archaeology
In ancient times, materials such as stone and metals were used to produce artifacts including pigments, jewelry, tools, and weapons. This course is designed to introduce students to research on the early exploitation of mineral resources. Which techniques were used to access and process raw materials in antiquity? Which archaeological methods can be used to investigate these features and artifacts? The course will provide worldwide examples through time, ranging from Stone Age flint mining, Iron Age rock salt mining to Medieval silver mining. Ethnographic studies and hands-on activities will contribute to our understanding of mining in archaeology, and artifacts from the Museum’s collections will undergo scientific analysis in the Center for the Analysis of Archaeological Materials.

Also Offered As: ANTH 3219, NELC 4950
Mutually Exclusive: ANTH 5219
1 Course Unit

CLST 3315 The Past Preserved: Conservation In Archaeology
This course explores the scientific conservation of cultural materials from archaeological contexts. It is intended to familiarize students with the basics of artifact conservation but is not intended to train them as conservators. The course will cover how various materials interact with their deposit environments; general techniques for on-site conservation triage and retrieval of delicate materials; what factors need to be considered in planning for artifact conservation; and related topics. Students should expect to gain a thorough understanding of the role of conservation in archaeology and how the two fields interact.
Also Offered As: ANTH 3235, ARTH 0143, NELC 4955
Mutually Exclusive: ANTH 5235
1 Course Unit

CLST 3316 Plants and Society
Interactions between humans and the living landscape around us have played - and continue to play - a fundamental role in shaping our worldview. This course is designed to introduce students to the diverse ways in which humans interact with plants. We will focus on the integration of ethnographic information and archaeological case studies in order to understand the range of interactions between humans and plants, as well as how plants and people have profoundly changed one another. Topics will include the origins of agriculture; cooking and plant processing; human health and the world of ethnomedicine; and poisonous and psychoactive plants. We will examine ancient plant material firsthand at the Center for the Analysis of Archaeological Materials (CAAM) and will handle botanical ecofacts from the Penn Museum’s collections. Students will also carry out a substantial research project focused on an archaeological culture and plant species of their own interest.

Also Offered As: ANTH 3240
Mutually Exclusive: ANTH 5240
1 Course Unit

CLST 3317 Archaeologies of Subalternity
This course addresses the various areas and approaches to “otherness” in ancient Mediterranean archaeology, and the power dynamics of oppression. We’ll not only examine disempowerment around cultural identity, class, gender and sexuality, and race/ethnicity, but we’ll spend equal time pondering how those subjects have been studied - or ignored - by classical archaeologists. The power relationships both inherent in the subjugation of various kinds of people in the ancient world, and in the academic discourses around them, are the themes of the course. While this course will be focused on the Bronze Age through late antique Mediterranean, those with other period/interests are most welcome. Students will be asked to bring their own interests to the course, which help shape the course.
Not Offered Every Year
1 Course Unit
CLST 3319 World Heritage in Global Conflict
Heritage is always political. Such a statement might refer to the everyday politics of local stakeholder interests on one end of the spectrum, or the volatile politics of destruction and erasure of heritage during conflict, on the other. If heritage is always political then one might expect that the workings of World Heritage might be especially fraught given the international dimension. In particular, the intergovernmental system of UNESCO World Heritage must navigate the inherent tension between state sovereignty and nationalist interests and the wider concerns of a universal regime. The World Heritage List has almost 1200 properties has many such contentious examples, including sites in Iraq, Mali, Syria, Crimea, Palestine, Armenia and Cambodia. As an organization UNESCO was born of war with an explicit mission to end global conflict and help the world rebuild materially and morally yet has found its own history increasingly entwined with that of international politics and violence.

Also Offered As: ANTH 2840, NELC 2920
1 Course Unit

CLST 3320 Mycenae, Pylos and Troy
The Iliad of Homer recounts the tale of a great war fought by Greek and Trojan armies before the walls of Troy's lofty citadel. This epic tells of gods, heroes, and magical places already part of a deep past when Homer's work was set to writing, ca. 700 B.C. Does the Homeric story of the Trojan War have a basis in real events? Scholars have long pointed to the Mycenaean civilization, which flourished on the mainland of Greece in the Late Bronze Age (ca. 1600–1200 B.C.), as the inspiration for the Homeric stories. In this course, we will examine the archaeology of the great centers of the Late Bronze Age in Greece and Anatolia, particularly Mycenae, Pylos, and Troy. Our main aim will be to better understand the social, political, and economic context of this Late Bronze Age world, which may shed light on the possibility that a “Trojan War” of some kind actually occurred. The primary focus on archaeology is supplemented by readings from Homer's Iliad and Odyssey.

Not Offered Every Year
1 Course Unit

CLST 3318 Landscapes and Seascapes of the Ancient Mediterranean
The Mediterranean environment is both diverse and unique, and nurtured numerous complex societies along its shores in antiquity. This seminar offers a primer on theoretical and methodological approaches to studying landscapes and seascapes of the Mediterranean from the Bronze Age to the early modern era, at scales from local to international and on land and underwater. Concepts from processual, post-processual, and current archaeologies will be considered, and field techniques including excavation and surface survey, remote sensing and geophysics, GIS modeling, and ethnography/ethnoarchaeology are examined. Course content and discussion focus on case studies that illustrate how these tools are used to reconstruct the appearance and resources of the natural environment; overland and maritime routes; settlement location, size, function, and demography; social and economic networks; and agricultural, pastoral, and nomadic lifeways. Seminar participants will develop case studies of their own geographical and chronological interest.

Not Offered Every Year
Mutually Exclusive: AAMW 6130, CLST 5318
1 Course Unit

CLST 3321 Surface Archaeology
Non-invasive and non-destructive methods make up an ever-greater proportion of archaeological investigations, for both intellectual and practical reasons. These methods comprise collection of data from the surface (pedestrian surface survey, geophysical prospection, geoaarchaeology) and from above-ground platforms (drones, aircraft, balloons, kites, satellites), using a variety of sensors from human perception to multispectral scanning devices. The data acquired from these methods complement the contextual information drawn from traditional excavation, but also allow the archaeologist to address diverse research questions at a scale much greater than the excavated site. Aspiring archaeologists should have a good working knowledge of surface archaeological methods. In this course, we will delve deeply into these methods, and read and analyze case studies to expose strengths and weaknesses and to identify best practices. Students will have the opportunity for hands-on training in the Philadelphia area or elsewhere.

CLST 3401 Greek Art and Artifact
This lecture course surveys Greek art and artifacts from Sicily to the Black Sea from the 10th century BCE to the 2nd century BCE, including the age of Alexander and the Hellenistic Kingdoms. Public sculpture and painting on and around grand buildings and gardens, domestic luxury arts of jewelry, cups and vases, mosaic floors, and cult artefacts are discussed. Also considered are the ways in which heroic epic, religious and political themes are used to engaged viewers' emotions and served both domestic and the public aims. We discuss the relationships of images and things to space and structure, along with ideas of invention and progress, and the role of monuments, makers and patrons in Greek society.

Not Offered Every Year
Also Offered As: ARTH 2250
1 Course Unit

CLST 3402 Hellenistic and Roman Art and Artifact
This lecture course surveys the political, religious and domestic arts, patronage and display in Rome's Mediterranean, from the 2nd c. BCE to Constantine's 4th-c. Christianized empire. Our subjects are images and decorated objects in their cultural, political and socio-economic contexts (painting, mosaic, sculpture, luxury and mass-produced arts in many media). We start with the Hellenistic cosmopolitan culture of the Greek kingdoms and their neighbors, and late Etruscan and Republican Italy; next we map Imperial Roman art as developed around the capital city Rome, as well as in the provinces of the vast empire.

Not Offered Every Year
Also Offered As: ARTH 2260
1 Course Unit

CLST 3405 Roman Sculpture
Survey of the Republican origins and Imperial development of Roman sculpture - free-standing, relief, and architectural - from ca. 150 BC to 350 AD. We concentrate on sculpture in the capital city and on court and state arts, emphasizing commemorative public sculpture and Roman habits of decorative display; genres examined include relief, portraits, sarcophagi, luxury and minor arts(gems, metalwork, coinage). We evaluate the choice and evolution of styles with reference to the functions of sculptural representation in Roman culture and society.

Also Offered As: ARTH 4270
1 Course Unit
CLST 3406 Late Antique Arts
What is ‘Late Antiquity’? In 312 when Roman emperor Constantine inaugurated a Christian empire, ‘Roman’ culture was centuries old. The period ca. 200-650 CE saw profound transformations that launched Medieval, Byzantine and Islamic traditions. In this epoch of upheaval destruction was frequent but partial: Rome long survived, Constantine’s ‘new Rome’, Constantinople flourished, and around the Empire both proto-global visual culture and local forms prospered. Roman cultural models authorized both innovation and passion for tradition: we critique art-historical models for Late Antique ‘decline’, analyse habits of material reuse and curation, and look at new Christian and Jewish roles for Roman things as well as polytheist visual survival. Foreign allies and enemies interacted with Greco-Roman Late Antiquity; we visit them too, as in the early Islamic palaces. Media discussed include not just ‘monumental’ painting, mosaic, sculpture, but also silver, ceramic, ivory, figural textile, glass, painted books, jewelry, coins and more. We look too at Late Antique texts on art, objects, space and viewership. This is an advanced undergraduate lecture course.

1 Course Unit

CLST 3410 Arts of the Roman House, Villa, and Palace Seminar
Private and public met in the elite Roman dwelling; this undergraduate seminar looks at the rich record of things and images, in multiple media, and in their spatial contexts, among which Romans chose to live.
Not Offered Every Year
Also Offered As: ARTH 3251
1 Course Unit

CLST 3411 Violence in Ancient Mediterranean Art Seminar
Violence, physical and emotional, pervades the images of the ancient Mediterranean. This undergraduate seminar asks why, how and to what end that occurred; in these and any cultures, why do people look at such images?
Not Offered Every Year
Also Offered As: ARTH 3252
1 Course Unit

CLST 3412 Narrative in Ancient Art
Cultures of the ancient Middle East and Mediterranean world were fascinated to make images and things tell stories and engage with time. Sometimes that implied a text - and sometimes, not. With case studies from the deep past, this interdisciplinary advanced undergraduate lecture course explores the capacity of visual language to narrate.
Not Offered Every Year
Also Offered As: ARTH 4260, NELC 4055
1 Course Unit

CLST 3413 Hellenistic Art and Spectacle
Hellenistic usually names art in the age of Mediterranean culture from the 4th century BCE and the rise of Alexander the Great’s Macedon, and the Greco-Macedonian conquest of the Persian Empire, to Cleopatra of Egypt’s defeat by Rome at the end of the Republic. Our course looks also at the age of Augustus and his successors, 1st century CE. While Greek and Macedonian practice in city-states and kingdoms is our launching point, this course also looks at international culture and cultural interaction among peoples from North Africa and Etrusco-Roman Italy, Egypt, Anatolia, the Mideast and Central Asia. We probe art, artifacts, and visual display from a range of settings, from sanctuary to house, palace and parade, and in all media, from marble monuments to pottery and jewelry. Our archaeology of Hellenistic visual culture also looks at the rich body of Hellenistic and Roman texts of art history, art criticism, and the description of objects and image, to better understand the Hellenistic maker, patron, and viewer. No prerequisites.

Also Offered As: ARTH 4280
1 Course Unit

CLST 3415 Roman Architecture and Urbanism
Architecture is the most striking legacy of Rome and the well-preserved remains of Roman buildings dominate our vision of the empire. Although Roman architecture has been studied since the Renaissance, it is only since the middle of the 20th century that it has come to be appreciated for the developments in concrete construction, which led to a revolution in the treatment of interior space and landscape architecture. Indeed, Rome’s architectural revolution radically changed both cities and countryside. Romans developed a wide range of new architectural forms and technological innovations in order to meet the increasingly sophisticated and diverse needs of their society. The purpose of the course is to shed light on Roman architectural and urban projects within their social, political, religious, and physical contexts. Throughout, the emphasis will be on concepts of organizing space, issues of structure, materials, decoration and proportion, the role of architecture in Roman society, and on the varied ways that architecture was employed by individuals and communities to express and enhance their status.

CLST 3416 Classical Myth and the Image
The peoples of the ancient Greek and Roman worlds shared a vast body of stories about human and not-human beings set in a legendary deep past or supernatural present - "Classical myth." Even their neighbor cultures took up those stories (or, sometimes, gave them). The stories as spoken, read, or performed turn up in surviving ancient literature. But from the very point when Greek myth began to be written down, those stories were told with images also. Many arts of the Mediterranean world explored myth at temples and sanctuaries, in civic spaces, theaters, parks, houses and palaces, for tombs and trophies - and even on the body upon weapons, clothes and jewelry. Love and desire and hate, hope and fear and consolation, war and peace, pleasure and excitement, power and salvation, the nature of this world and the cosmos, justice and duty and heroism, fate and free will, suffering and crime: mythological images probed the many domains of being human in order to move the emotions and minds of people (and of gods). Our class samples this story art to ask about its makers and viewers and contexts. What, also, were relations between images and texts and language? What about religious belief vs invention, truth vs fiction? What might it mean to look at this ancient art today, and to represent the old stories in post-ancient cultures? The class introduces ways of thinking about what images and things do; we will read in some relevant literature (drama, epic, novels, etc); and our Penn Museum will be a resource. No prerequisites--no prior knowledge of art history, archaeology, myth or Mediterranean antiquity is assumed. Also Offered As: ARTH 2269
Mutually Exclusive: AAMW 6269, ARTH 6269, CLST 5416
1 Course Unit

CLST 3502 Greek and Roman Universe
This course covers the history of Greek and Roman exploration and mapping of the earth and the cosmos from the Bronze Age to Late Antiquity, together with advances in timekeeping and the measurement of time. Readings include poetic, historical, and scientific texts. Not Offered Every Year
1 Course Unit

CLST 3503 Greek & Roman Medicine
The history of Western medicine is remarkably recent; until the nineteenth century prevailing theories of the body and mind, and many therapeutic methods to combat disease, were largely informed by an elaborate system developed centuries earlier in ancient Greece, at a period when the lines between philosophy, medicine, and what we might consider magic, were much less clearly defined than they are today. This course will examine the ways in which the Greeks, and then the Romans, conceptualized the body, disease, and healing, and will compare these to medical culture of our time. We will consider sources from Hippocrates, Plato, and Aristotle to Galen and Soranus, and will juxtapose these writings with modern discourse about similar topics. We will also pay some attention to ancient pharmacology and religious healing, and will visit the Penn Museum to see their collection of ancient medical instruments. All readings will be in English and no previous background in Classical Studies is required. This course will be especially appealing (and useful) to Pre-med and Nursing students, and to students interested in the History of Science, Ancient Philosophy, and Classics. Not Offered Every Year
1 Course Unit

CLST 3508 Benjamin Franklin Seminar: History of Literary Criticism
This is a course on the history of literary theory, a survey of major debates about literature, poetics, and ideas about what literary texts should do, from ancient Greece to examples of modern European thought. See the English Department's website at www.english.upenn.edu for a description of the current offerings. Not Offered Every Year
Also Offered As: COML 0540, ENGL 0540
1 Course Unit

CLST 3509 Freud's Objects
How do we look at objects? And which stories can objects tell? These are questions that have been asked quite regularly by Art Historians or Museum Curators, but they take a central place within the context of psychoanalytic studies as well. The seminar "Freud's Objects" will offer an introduction to Sigmund Freud's life and times, as well as to psychoanalytic studies. We will focus on objects owned by Freud that he imbued with special significance, and on Freud's writings that focus on specific objects. Finally, we will deal with a re-interpretation of the "object" in psychoanalytic theory, via a discussion of texts by British psychoanalysts such as Melanie Klein and Donald Winnicott. Not Offered Every Year
Also Offered As: ARTH 3560, COML 2052, ENGL 1425, GRMN 1015
1 Course Unit

CLST 3602 Writing History in Greece and Rome
What constituted history in ancient Greece and Rome? What claims to knowledge did history make, and how did these differ from other forms of knowledge? How did historians envision their task, and how did they go about performing it? We will read the works of the major Greek and Roman historians in translation in an attempt to answer those questions. Other issues to consider include the origins and development of historical writing, the place of history within the ancient literary tradition, and the similarities and differences between the ancient and modern practice of history. Fall or Spring
Also Offered As: ANCH 3602
1 Course Unit

CLST 3603 Reading the Iliad
Homer's Iliad presents a dark and difficult vision of the world, but one that nonetheless inspires. Casual cruelty, divine caprice, and savage violence test heroes and lesser folk and provoke a reckoning with the stark realities of both human vulnerability and capability. It inspires kind of terror, but still also somehow provides a kind of comfort, albeit one whose character seems almost beyond comprehension. By a close and careful reading of Homer's text, along with some reflections and readings drawn from more contemporary wars, including the current ones, we will try to examine these issues with one eye on the past and one on the present. Our goal will be to achieve some further understanding of war and human experience. This course will be offered online. Summer Term
1 Course Unit
CLST 3604 Ancient Epic Poetry
Admission to this course is by application only. It is a collaboration between Penn and Yale-NUS in Singapore. It will require travel to study in Singapore during Penn's Spring Break 2019. Seminars on both campuses will focus on five complete epics, Gilgamesh, the Iliad, Odyssey, Ramayana, and Aeneid. In addition to regular class times, it will also require additional evening meetings for plenary sessions via teleconference with Singapore. We will work with a mix of lectures, discussions, and group work with teams drawn from both campuses. Yale-NUS will travel to Philadelphia to join Penn students in face-to-face class sessions, and in additional cultural of events, at Penn and in Philadelphia, including work in the Penn Museum. Penn students will also fly over to meet Yale-NUS students for a week that mirrors the Philadelphia experience, with attendance in classes, as cultural events, including the Asian Civilizations Museum. Part of the expectation for the class is that each group will help host the others as they visit. Course grades will consist in a combination of sole-authored papers and collaborative projects. There will be a limited amount of grant money available to subvene travel for students. We will work with financial aid to determine need. Up-to-date passports are required for the course.
1 Course Unit

CLST 3605 The Ancient Novel
The ancient Greek and Roman novels include some of the most enjoyable and interesting literary works from antiquity. Ignored by ancient critics, they were until fairly recently dismissed by classical scholars as mere popular entertainment. But these narratives had an enormous influence on the later development of the novel, and their sophistication and playfulness, they often seem peculiarly modern—or even postmodern. They are also an important source for any understanding of ancient culture or society. In this course, we will discuss the social, religious and philosophical contexts for the ancient novel, and we will think about the relationship of the novel to other ancient genres, such as history and epic. Texts to be read will include Lucian's parodic science fiction story about a journey to the moon; Longus' touching pastoral romance about young love and sexual awakening; Heliodorus' gripping and exotic thriller about pirates and long-lost children; Apuleius' Golden Ass, which contains the story of Cupid and Psyche; and Petronius' Satyricon, a hilarious evocation of an orgiastic Roman banquet.
Not Offered Every Year
1 Course Unit

CLST 3606 Africa and Roman Literature
In this course, we will explore race and ethnicity in the Roman world by focusing on the life and works of Roman Africans and the ways in which non-African Romans engaged with and presented the peoples of Africa. The course covers Roman literature in translation from the comedies of Plautus produced in the late 3rd - 2nd centuries BCE, to African Christian writing of the 5th century CE. It also covers a wide range of genres: we will examine how Roman writers articulate questions of race in comedy and satire, epic, history, biography, and elegy among others. We will read African writers (Apuleius, Augustine) and ask how their Africanness influences their works. We will read Roman accounts of journeys to Africa, wars with Africa, and encounters with Africans to ask how the Romans saw themselves as different from or similar to Africans. The course will also explore in more general terms how Romans talk about race: did racism exist? What aspects of different cultures and peoples did Romans choose to emphasize when they talked of non-Romans?
1 Course Unit

CLST 3607 Classics & American Government
Before the universities established public-service programs in the twentieth century, many Americans prepared themselves for public life by studying Greek and Latin authors in school and college. In this course, using English translations, students survey an eighteenth-century classical curriculum and trace its influence in the political activity of Madison and others who guided the development of American governmental institutions.
Fall
1 Course Unit
CLST 3708 Topics In Classicism and Literature: Epic Tradition
This advanced seminar will examine the classical backgrounds of western medieval literature, in particular the reception of classical myth and epic in the literature of the Middle Ages. Different versions of the course will have different emphases on Greek or Latin backgrounds and on medieval literary genres. Major authors to be covered include Virgil, Ovid, Chaucer, and the Gawain-poet.

1 Course Unit

CLST 3710 Imagining Ancient Egypt: A History of Popular Fascination from Antiquity to the Present
Thousands of years after the pyramids were built and the last hieroglyphs were written, ancient Egypt remains a source of mystery and intense interest. Why are we so fascinated with ancient Egypt, and what does that fascination reveal about us? This course explores the reception history of ancient Egypt: how people in various periods and areas of the world have thought about ancient Egypt, what it has meant to them, why they were interested in it, and how they brought the ancient Egyptian past into the present. We will focus not on ancient Egypt itself, but on the history of perceptions of, ideas about, and interactions with ancient Egyptian culture. Our investigation will include how Egyptians of later periods thought about their ancient past, as well as European and American representations (and appropriations) of ancient Egypt. A major focus of the course will be the impact of political and cultural relations between Egypt and the West on perceptions and uses of ancient Egyptian culture. This interdisciplinary course will combine multiple areas of history—intellectual, cultural, and political—and multiple types of sources, including historical writing, literature, film, and opera. Beginning with ancient Greek and Roman visitors to Egypt, we will investigate changing modes of understanding, constructing, and representing ancient Egypt, from the medieval sultans of Egypt to Mozart to W. E. B. DuBois to protesters in Egypt’s 2011 revolution. Over the course of the semester, we will explore questions such as: - What does it mean to think of Egypt as African vs. Middle Eastern vs. Mediterranean? Is Egypt Western, Eastern, both, or neither? - To whom does ancient Egyptian heritage belong? How do colonialism and conceptions of race and ethnicity factor into this question? - How do the past and the present shape each other? What is the impact of modern politics and culture on perceptions of the past? What role does the past play in the formation of modern political, social, and cultural identities? - How can we learn about modern problems and concerns from representations of the past?

CLST 3702 Literary Translation
This course is for graduate students and undergraduates with permission of the instructor. All students enrolled must have knowledge of at least one language other than English. We will study the history, theory and practice of literary translation, and participate in it. Readings will include theoretical works in translation studies, using selections from Lawrence Venuti’s Translation Studies Reader and Schulte/Biguenet’s Translation Theory Reader, with some supplemental readings; we will also look at comparative cases of multiple translations of the same original, and analyze how different translators make different interpretative/formal/aesthetic choices. Course assignments will include both a research paper, on the history and/or theory of translation, and an extended practical translation exercise, to be worked over the course of the semester, consisting of a literary translation of a text of the student’s choice.
Also Offered As: COML 3802
1 Course Unit

CLST 3803 Curiosity: Ancient and Modern Thinking about Thinking
This course will examine two approaches to the still unanswered question of what happens when we humans come up with new knowledge. How should we describe the impulse, or set of impulses, that leads us to seek it? What is happening when we achieve it? And how do we describe the new state in which we find ourselves after we have it? We will study the work of contemporary physicists and cognitive scientists on these questions along side the approaches developed by the two most powerful thinkers from antiquity on the topic, Plato and Aristotle.
Not Offered Every Year
Also Offered As: EAS 2440, INTG 3440
1 Course Unit

CLST 3804 Ancient Dialogue Workshop
This course will focus on the history of dialogue as a method of creative social communication in ancient Greek and Roman cities. We will study ancient dialogue-forms of different kinds, surveying key moments in poetry, drama, philosophy, from Homer onward, as well as imagined dialogues between moderns and ancients. The course will operate as a research workshop, proceeding through a series of case-studies in which participants analyze and critique ancient dialogues and also develop their own dialogue models. The capstone assignment for each participant will be to propose a way to present an ancient dialogue in an innovative form that facilitates productive dialogue in modern culture, and to test it out. In addition to the main instructor, the course will host a series of three visiting speakers - experts in and/or practitioners of the main models of dialogue explored in the course. This course has no pre-requisites and is open to all undergraduates. It fulfills requirements for the major in Classical Studies and for the SNF Paideia program.
Not Offered Every Year
1 Course Unit
CLST 3805 Classical Studies in Philadelphia Schools
This course will focus on classical studies as a school resource, with a focus on present-day schools in the Philadelphia area. Our readings and discussions will focus on historical investigation, educational theory, and project-design. The course invites Penn undergraduates and graduate students to rethink how the field traditionally known as “classics” or “classical studies” (both in general and in specific sub-areas such as Latin language, ancient history, mythology, literature, etc.) is presented to school audiences and how classical studies itself must change to meet present social-justice concerns, with special attention given to diversity, equity, and inclusion. This is an Academically Based Community-Service Course (ABCS), in which students will be required to consult with one or more local school personnel (teachers and/or students) as part of the coursework. The main assignments will be several short papers and presentations and a longer paper or curriculum-development project. Undergraduates should register for CLST 204, graduate students for CLST 504.
Not Offered Every Year

Fall or Spring
1 Course Unit

CLST 5105 Etruscan Art & Archaeology in the Penn Museum
The Etruscans, who spoke a language unlike any others known, were cast by their Greek and Roman rivals as outsiders and enemies: pirates, lovers of luxury, loose women. Today we must rely on the archaeological evidence of painted tombs, decorated Tuscan temples and massive engineering works to correct the picture. The course will survey a millennium (1st millennium BCE) of Etruscan culture through archaeological sites, works of art and everyday material culture, especially illustrated with objects in the collection of the Penn Museum. An additional insight into Italic culture comes from tomb groups excavated for the Museum at the Faliscan settlement of Narce. Students will gain familiarity with the societies of pre-Roman Italy through close study of their vases, jewels, arms, armor, textiles and tools, and even their very bones, and discover a surprising amount of Etruscan heritage surviving today.

CLST 5240 Penn Museum Curatorial Seminar: Reconfiguring the Classical World Galleries
The Greek galleries in the Penn Museum were opened in 1994, and the Etruscan and Roman galleries in 2003. The world was very different then, and many of the themes used to frame the artifacts in the galleries are not especially relevant to contemporary students, scholars, and visitors. In this course we will completely reorganize and reinstall the galleries digitally, creating a series of websites that will highlight the new layout and themes. We will work extensively with the Greek Etruscan, and Roman artifacts themselves to reconfigure the galleries, which will highlight the connections between antiquity and the contemporary world, focusing on themes such as armed conflict, trauma, migration, xenophobia, and wealth and poverty.
1 Course Unit

CLST 5303 Living World in Archaeological Science
By focusing on the scientific analysis of archaeological remains, this course will explore life and death in the past. It takes place in the Center for the Analysis of Archaeological Materials (CAAM) and is team taught in three modules: human skeletal analysis, analysis of animal remains, and analysis of plant remains. Each module will combine laboratory and classroom exercises to give students hands-on experience with archaeological materials. We will examine how organic materials provide key information about past environments, human behavior, and cultural change through discussions of topics such as health and disease, inequality, and food.

CLST 5305 Topography and Monuments of Ancient Rome
An individual’s life course is often reflected, enhanced, and defined by their relations to other individuals. This course will investigate the concept of kinship in the Roman world through textual, visual, and archaeological evidence. We will explore relationships at all levels of society from the imperial family to the slaves and freedmen who were part of larger households, in order to understand how different relationships shaped and structured interactions in Roman society. Together, we will explore the following questions: how were relationships and bonds represented in the ancient world? What structures were in place for families to perpetuate themselves through biological or adoptive means? How could non-Roman citizens create family connections through formal and informal channels? How could relationships be celebrated in life and commemorated in death? We will use written evidence from ancient historians, visual evidence like the Altar of Peace, and archaeological evidence from cemeteries to examine how Roman notions of kinship shaped life and death in different social milieus.
1 Course Unit

CLST 5310 Kinship and Connectivity in the Roman World
An individual’s life course is often reflected, enhanced, and defined by their relations to other individuals. This course will investigate the concept of kinship in the Roman world through textual, visual, and archaeological evidence. We will explore relationships at all levels of society from the imperial family to the slaves and freedmen who were part of larger households, in order to understand how different relationships shaped and structured interactions in Roman society. Together, we will explore the following questions: how were relationships and bonds represented in the ancient world? What structures were in place for families to perpetuate themselves through biological or adoptive means? How could non-Roman citizens create family connections through formal and informal channels? CLST 5314 Mining Archaeology
In ancient times, materials such as stone and metals were used to produce artifacts including pigments, jewelry, tools, and weapons. This course is designed to introduce students to research on the early exploitation of mineral resources. Which techniques were used to access and process raw materials in antiquity? Which archaeological methods can be used to investigate these features and artifacts? The course will provide worldwide examples through time, ranging from Stone Age flint mining, Iron Age rock salt mining to Medieval silver mining. Ethnographic studies and hands-on activities will contribute to our understanding of mining in archaeology, and artifacts from the Museum’s collections will undergo scientific analysis in the Center for the Analysis of Archaeological Materials.

CLST 5315 The Past Preserved: Conservation In Archaeology
This course explores the scientific conservation of cultural materials from archaeological contexts. It is intended to familiarize students with the basics of artifact conservation but is not intended to train them as conservators. The course will cover how various materials interact with their deposit environments; general techniques for on-site conservation triage and retrieval of delicate materials; what factors need to be considered in planning for artifact conservation; and related topics. Students should expect to gain a thorough understanding of the role of conservation in archaeology and how the two fields interact.
Also Offered As: ANTH 5235
Mutually Exclusive: ANTH 3235
1 Course Unit

CLST 5316 Plants and Society
Interactions between humans and the living landscape around us have played - and continue to play - a fundamental role in shaping our worldview. This course is designed to introduce students to the diverse ways in which humans interact with plants. We will focus on the integration of ethnographic information and archaeological case studies in order to understand the range of interactions between humans and plants, as well as how plants and people have profoundly changed one another. Topics will include the origins of agriculture; cooking and plant processing; human health and the world of ethnomedicine, and poisonous and psychoactive plants. We will examine ancient plant material firsthand at the Center for the Analysis of Archaeological Materials (CAAM) and will handle botanical ecofacts from the Penn Museum’s collections. Students will also carry out a substantial research project focused on an archaeological culture and plant species of their own interest.

Also Offered As: ANTH 5240
Mutually Exclusive: ANTH 3240
1 Course Unit

CLST 5317 Archaeologies of Subalternity
This course addresses the various areas and approaches to “otherness” in ancient Mediterranean archaeology, and the power dynamics of oppression. We’ll not only examine disempowerment around cultural identity, class, gender and sexuality, and race/ethnicity, but we’ll spend equal time pondering how those subjects have been studied - or ignored - by classical archaeologists. The power relationships both inherent in the subjugation of various kinds of people in the ancient world, and in the academic discourses around them, are the themes of the course. While this course will be focused on the Bronze Age through late antique Mediterranean, those with other period/interests are most welcome. Students will be asked to bring their own interests to the course, which help shape the course. Upper-level courses in archaeology, anthropology, or ancient history are recommended prior to enrollment.

1 Course Unit

CLST 5318 Landscapes and Seascapes of the Ancient Mediterranean
The Mediterranean environment is both diverse and unique, and nurtured numerous complex societies along its shores in antiquity. This seminar offers a primer on theoretical and methodological approaches to studying landscapes and seascapes of the Mediterranean from the Bronze Age to the early modern era, at scales from local to international and on land and underwater. Concepts from processual, post-processual, and current archaeologies will be considered, and field techniques including excavation and surface survey, remote sensing and geophysics, GIS modeling, and ethnography/ethnoarchaeology are examined. Course content and discussion focus on case studies that illustrate how these tools are used to reconstruct the appearance and resources of the natural environment; overland and maritime routes; settlement location, size, function, and demography; social and economic networks; and agricultural, pastoral, and nomadic lifeways. Seminar participants will develop case studies of their own geographical and chronological interest.

Mutually Exclusive: CLST 3318
1 Course Unit

CLST 5321 Surface Archaeology
Non-invasive and non-destructive methods make up an ever-greater proportion of archaeological investigations, for both intellectual and practical reasons. These methods comprise collection of data from the surface (pedestrian surface survey; geophysical prospection, geoarchaeology) and from above-ground platforms (drones, aircraft, balloons, kites, satellites), using a variety of sensors from human perception to multispectral scanning devices. The data acquired from these methods complement the contextual information drawn from traditional excavation, but also allow the archaeologist to address diverse research questions at a scale much greater than the excavated site. Aspiring archaeologists should have a good working knowledge of surface archaeological methods. In this course, we will delve deeply into these methods, and read and analyze case studies to expose strengths and weaknesses and to identify best practices. Students will have the opportunity for hands-on training in the Philadelphia area or elsewhere.

1 Course Unit
CLST 5401 Greek Art and Artifact
This lecture course surveys Greek art and artifacts from Sicily to the Black Sea from the 10th century BCE to the 2nd century BCE, including the age of Alexander and the Hellenistic Kingdoms. Public sculpture and painting on and around grand buildings and gardens, domestic luxury arts of jewelry, cups and vases, mosaic floors, and cult artefacts are discussed. Also considered are the ways in which heroic epic, religious and political themes are used to engaged viewers’ emotions and served both domestic and the public aims. We discuss the relationships of images and things to space and structure, along with ideas of invention and progress, and the role of monuments, makers and patrons in Greek society.

1 Course Unit

CLST 5402 Hellenistic and Roman Art and Artifact
This lecture course surveys the political, religious and domestic arts, patronage and display in Rome's Mediterranean, from the 2nd c. BCE to Constantine's 4th-c. Christianized empire. Our subjects are images and decorated objects in their cultural, political and socio-economic contexts (painting, mosaic, sculpture, luxury and mass-produced arts in many media). We start with the Hellenistic cosmopolitan culture of the Greek kingdoms and their neighbors, and late Etruscan and Republican Italy; next we map Imperial Roman art as developed around the capital city Rome, as well as in the provinces of the vast empire.

1 Course Unit

CLST 5405 Roman Sculpture
Survey of the Republican origins and Imperial development of Roman sculpture - free-standing, relief, and architectural - from ca. 150 BC to 350 AD. We concentrate on sculpture in the capital city and on court and state arts, emphasizing commemorative public sculpture and Roman habits of decorative display; genres examined include relief, portraits, sarcophagi, luxury and minor arts(gems, metalwork, coinage). We evaluate the choice and evolution of styles with reference to the functions of sculptural representation in Roman culture and society.

1 Course Unit

CLST 5406 Late Antique Arts
What is 'Late Antiquity'? In 312 when Roman emperor Constantine inaugurated a Christian empire, 'Roman' culture was centuries old. The period ca. 200-650 CE saw profound transformations that launched Medieval, Byzantine and Islamic traditions. In this epoch of upheaval destruction was frequent but partial. Rome long survived, Constantine's 'new Rome,' Constantinople flourished, and around the Empire both proto-global visual culture and local forms prospered. Roman cultural models authorized both innovation and passion for tradition: we critique art-historical models for Late Antique 'decline', analyse habits of material reuse and curation, and look at new Christian and Jewish roles for Roman things as well as polytheist visual survival. Foreign allies and enemies interacted with Greco-Roman Late Antiquity; we visit them too, as in the early Islamic palaces. Media discussed include not just 'monumental' painting, mosaic, sculpture, but also silver, ceramic, ivory, figural textile, glass, painted books, jewelry, coins and more. We look too at Late Antique texts on art, objects, space and viewership. This is an advanced undergraduate lecture course.

CLST 5412 Narrative in Ancient Art
Art history, and its cousins in religious, social, political and literary studies, have long been fascinated with the question of narrative: how do images engage time, tell stories? These are fundamental questions for ancient Near Eastern, Egyptian and Mediterranean art history and archaeology, whose rich corpus of narrative images is rarely considered in the context of "Western" art. Relations between words and things, texts and images, were as fundamental to the ancient cultures we examine as they are to modern studies. As we weigh classic modern descriptions of narrative and narratology, we will bring to bear recent debates about how (ancient) images, things, monuments, and designed spaces engage with time, space, and event, and interact with cultural memory. We will ask "who is the story for, and why?" for public and private narratives ranging from political histories to mythological encounters. Our case studies will be drawn from the instructors’ expertise in Mesopotamian visual culture, and in the visual cultures of the larger Mediterranean world from early Greek antiquity to the Hellenistic, Roman, and Late Antique periods. One central and comparative question, for instance, is the nature of recording history in pictures and texts in the imperial projects of Assyria, Achaemenid Persia, the Hellenistic kingdoms, and Rome.
Also Offered As: AAMW 5230, ARTH 5230
1 Course Unit
CLST 5413 Hellenistic Art and Spectacle
Hellenistic usually names art in the age of Mediterranean culture from the 4th century BCE and the rise of Alexander the Great’s Macedon, and the Greco-Macedonian conquest of the Persian Empire, to Cleopatra of Egypt’s defeat by Rome at the end of the Republic. Our course looks also at the age of Augustus and his successors, 1st century CE. While Greek and Macedonian practice in city-states and kingdoms is our launching point, this course also looks at international culture and cultural interaction among peoples from North Africa and Etrusco-Roman Italy, Egypt, Anatolia, the Mideast and Central Asia. We probe art, artifacts, and visual display from a range of settings, from sanctuary to house, palace and parade, and in all media, from marble monuments to pottery and jewelry. Our archaeology of Hellenistic visual culture also looks at the rich body of Hellenistic and Roman texts of art history, art criticism, and the description of objects and image, to better understand the Hellenistic maker, patron, and viewer. No prerequisites.

1 Course Unit

CLST 5416 Classical Myth and the Image
The peoples of the ancient Greek and Roman worlds shared a vast body of stories about human and not-human beings set in a legendary deep past or supernatural present - "Classical myth." Even their neighbor cultures took up those stories (or, sometimes, gave them). The stories as spoken, read, or performed turn up in surviving ancient literature. But from the very point when Greek myth began to be written down, those stories were told with images also. Many arts of the Mediterranean world explored myth at temples and sanctuaries, in civic spaces, theaters, parks, houses and palaces, for tombs and trophies - and even on the body upon weapons, clothes and jewelry. Love and desire and hate, hope and fear and consolation, war and peace, pleasure and excitement, power and salvation, the nature of this world and the cosmos, justice and duty and heroism, fate and free will, suffering and crime: mythological images probed the many domains of being human in order to move the emotions and minds of people (and of gods). Our class samples this story art to ask about its makers and viewers and contexts. What, also, were relations between images and texts and language? What about religious belief vs invention, truth vs fiction? What might it mean to look at this ancient art today, and to represent the old stories in post-anthropocene? The class introduces ways of thinking about what images and things do; we will read in some relevant literature (drama, epic, novels, etc); and our Penn Museum will be a resource. No prerequisites—no prior knowledge of art history, archaeology, myth or Mediterranean antiquity is assumed.

CLST 5620 Intro to Digital Archaeology
Students in this course will be exposed to the broad spectrum of digital approaches in archaeology with an emphasis on fieldwork, through a survey of current literature and applied learning opportunities that focus on African American mortuary landscapes of greater Philadelphia. As an Academically Based Community Service (ABCS) course, we will work with stakeholders from cemetery companies, historic preservation advocacy groups, and members of the African Methodist Episcopal Church to collect data from three field sites. We will then use these data to reconstruct the original plans, untangle site taphonomy, and assess our results for each site. Our results will be examined within the broader constellation of threatened and lost African American burial grounds and our interpretations will be shared with community stakeholders using digital storytelling techniques. This course can count toward the minor in Digital Humanities, minor in Archaeological Science and the Graduate Certificate in Archaeological Science.

CLST 5710 Imagining Ancient Egypt: A History of Popular Fascination from Antiquity to the Present
Thousands of years after the pyramids were built and the last hieroglyphs were written, ancient Egypt remains a source of mystery and intense interest. Why are we so fascinated with ancient Egypt, and what does that fascination reveal about us? This course explores the reception history of ancient Egypt: how people in various periods and areas of the world have thought about ancient Egypt, what it has meant to them, why they were interested in it, and how they brought the ancient Egyptian past into the present. We will focus not on ancient Egypt itself, but on the history of perceptions of, ideas about, and interactions with ancient Egyptian culture. Our investigation will include how Egyptians of later periods thought about their ancient past, as well as European and American representations (and appropriations) of ancient Egypt. A major focus of the course will be the impact of political and cultural relations between Egypt and the West on perceptions and uses of ancient Egyptian culture. This interdisciplinary course will combine multiple areas of history—intellectual, cultural, and political—and multiple types of sources, including historical writing, literature, film, and opera. Beginning with ancient Greek and Roman visitors to Egypt, we will investigate changing modes of understanding, constructing, and representing ancient Egypt, from the medieval sultans of Egypt to Mozart to W. E. B. DuBois to protesters in Egypt’s 2011 revolution. Over the course of the semester, we will explore questions such as: - What does it mean to think of Egypt as African vs. Middle Eastern vs. Mediterranean? Is Egypt Western, Eastern, both, or neither? - To whom does ancient Egyptian heritage belong? How do colonialism and conceptions of race and ethnicity factor into this question? - How do the past and the present shape each other? What is the impact of modern politics and culture on perceptions of the past? What role does the past play in the formation of modern political, social, and cultural identities? - How can we learn about modern problems and concerns from representations of the past?

CLST 5800 MLA Proseminar: Reading the Iliad in an Age of War
Homer's Iliad presents a dark and difficult vision of the world, but one that nonetheless inspires. Casual cruelty, divine caprice, and savage violence test heroes and lesser folk and provoke a reckoning with the stark realities of both human vulnerability and capability. It inspires kind of terror, but still also somehow provides a kind of comfort, albeit one whose character seems almost beyond comprehension. By a close and careful reading of Homer's text, along with some reflections and readings drawn from more contemporary wars, including the current ones, we will try to examine these issues with one eye on the past and one on the present. Our goal will be to achieve some further understanding of war and human experience. This course will be offered online.
Summer Term
1 Course Unit

CLST 5805 Classical Studies in Philadelphia Schools
This course will focus on classical studies as a school resource, with a focus on present-day schools in the Philadelphia area. Our readings and discussions will focus on historical investigation, educational theory, and project-design. The course invites Penn undergraduates and graduate students to rethink how the field traditionally known as "classics" or "classical studies" (both in general and in specific sub-areas such as Latin language, ancient history, mythology, literature, etc.) is presented to school audiences and how classical studies itself must change to meet present social-justice concerns, with special attention given to diversity, equity, and inclusion. This is an Academically Based Community-Service Course (ABCS), in which students will be required to consult with one or more local school personnel (teachers and/or students) as part of the coursework. The main assignments will be several short papers and presentations and a longer paper or curriculum-development project.
Undergraduates should register for CLST 204, graduate students for CLST 504.

1 Course Unit

CLST 5901 Post-Baccalaureate Studies in Greek
Intensive Greek reading course for students in the Post-Baccalaureate Program in Classical Studies. Readings are chosen to expose students to a variety of prose and poetry texts during their program experience. The Fall course includes some grammar review and analysis as well as translation. Permission of instructor required for non-Post-Baccalaureate students.
Two Term Class, Student may enter either term; credit given for either 1 Course Unit

CLST 5902 Post-Baccalaureate Studies in Latin
Intensive Latin reading course for students in the Post-Baccalaureate Program in Classical Studies. Readings are chosen to expose students to a variety of prose and poetry texts during their program experience. The Fall course includes some grammar review and analysis as well as translation. Permission of instructor required for non-Post-Baccalaureate students.
Two Term Class, Student may enter either term; credit given for either 1 Course Unit

CLST 6000 Materials and Methods: Proseminar in Classical Studies and Ancient History
This is the required proseminar for first-year graduate students in Classical Studies and Ancient History. It offers an up-to-date orientation to the professional academic fields conventionally known as classical studies and ancient history. The course is responsive to present debates within, and about, these fields.
Fall
1 Course Unit

CLST 6230 The (Mostly) Latin Epigram
In this seminar we will explore the themes and aesthetics of the Latin epigram, a genre (or is it?) best known for its brevity and wit but one whose precise nature is tantalizingly elusive. After orienting ourselves in the epigrams of Hellenistic Greek epigrammatists and late Republican authors like the so-called Neoterics (Catullus, Cinna, Calvus, Caesar), we will turn our attention to the poetry of Martial, whose accounts of Rome, its inhabitants, and their foibles exerted a profound influence on subsequent epigrammatists. Among the themes we will engage are: epigram as a genre; persona in tessellated textual collections; the interaction of refined and obscene language; and the artistic and intellectual implications of replication, anthology, and remix.
1 Course Unit

CLST 6300 Material & Methods in Mediterranean Archaeology
This course is intended to provide an introduction to archaeological methods and theory in a Mediterranean context, focusing on the contemporary landscape. The class will cover work with museum collections (focusing on the holdings of the Penn Museum), field work and laboratory analysis in order to give students a diverse toolkit that they can later employ in their own original research. Each week, invited lecturers will address the class on different aspects of archaeological methodology in their own research, emphasizing specific themes that will be highlighted in readings and subsequent discussion. The course is divided into three sections: Method and Theory in Mediterranean Archaeology; Museum collections; and Decolonizing Mediterranean Archaeology. The course is designed for new AAMW graduate students, though other graduate students or advanced undergraduate students may participate with the permission of the instructor.

CLST 7000 Graduate Seminar
Topics will vary
Fall or Spring
1 Course Unit

CLST 7102 The Flavian Era
The time of the Flavians (69-96 BCE) holds a special place in Roman history and culture as it marks the transition from the Julio-Claudian period to the High Empire. Historically, the rule of Rome's second dynasty saw a stabilization of the imperial power system, the consolidation of social and political hierarchies, and an increasing integration of the empire. Major construction projects reshaped the city of Rome, topographically and ideologically. The literary production in various genres reached a new peak, developed new forms, and explored new topics. The unusually high number of Greek and Latin texts and documents preserved allow us to analyze such changes closely; our focus will be on the interrelation and conjunction of these developments. Final projects will take the form of papers suitable for presentation at the SCS Annual Meeting.
1 Course Unit
CLST 7200 Roman Humor and Invective
This seminar will explore Roman humor in epigram, iambic, oratory, and satire as a method of constructing and policing norms of sexuality, the body, and social identity. We will read from a wide range of authors including Catullus, Martial, Cicero, Quintilian, Petronius, and Juvenal, as well as texts that discuss or depict laughter and ridicule. Beyond focused analysis of the works at hand, we will evaluate modern theories of humor and laughter according to the ancient evidence and develop models for understanding Roman humor. In addition to weekly readings, students will be responsible for class presentations, contributing to works-in-progress workshops, and a final research paper. Not Offered Every Year
Also Offered As: LATN 7203
1 Course Unit

CLST 7203 Ancient Economies
Scholars have long debated the nature of the ancient economy, the terms in which it can best be approached, and the decision-making processes that underpinned economic behavior in antiquity. In particular, controversy has surrounded the extent to which the economies of Greco-Roman antiquity can be modeled using contemporary tools of analysis. In recent scholarship, many of the tenets laid down by Moses Finley in his The Ancient Economy have been re-evaluated, with the result that the field is currently in a state of intellectual ferment. It is the purpose of this course to explore the terms in which contemporary debates over ancient economic systems are formulated, with reference to a variety of societies and periods, from the palace economies of the Mycenaean period to the system of taxation introduced in the early fourth century by the emperor Diocletian and his colleagues in the Tetrarchy. Fall or Spring
Also Offered As: ANCH 7203
1 Course Unit

CLST 7208 Biographical Approaches to Antiquity
Biographical approaches, long used and despised as a genre reducing history to the actions of a few protagonists, have gained prominence again in recent scholarship. Instead of focusing the historical analysis on the usual suspects (from emperors to canonical authors), more recent applications of biographical approaches have deliberately decentered the narrative, employed the perspective of those whose position has been marginalized, and revealed influences and patterns that otherwise would remain unnoticed. This course will explore the potential, variations, and pitfalls of approaches that focus on individuals, from biographies that follow a traditional format yet have shaped the field of ancient studies to microhistory and prosopographical studies. Using examples from the late Hellenistic to the High Imperial Period, we will discuss methodologies to reconstruct an individual life despite the general scarcity of sources, how such an approach can transform our understanding of the respective cultural, political, and social circumstances, and what insights into the broader historical processes such a focus offers or obscures. Graduate-level Latin and Greek required as pre-requisite for course. Not Offered Every Year
Also Offered As: ANCH 7208
1 Course Unit

CLST 7303 Archaeology of Troy
An introduction to the archaeology of Troy, in northwestern Turkey. The course will focus on the results of excavations at the site in 1988, although the earlier excavations of Schliemann, Dorpfeld, and Blegen will also be considered. The course will cover a broad chronological span--from the early Bronze age through the late Roman period, and will include Greek, Roman, and Medieval attitudes toward Troy and the Trojan legend. Not Offered Every Year
1 Course Unit

CLST 7304 The Archaeology of Greece and Asia Minor in the Archaic and Classical Periods
An examination of new discoveries and conflicting interpretations in the archaeology of Greece and Asia Minor between the seventh and fourth centuries B.C.E. Both sides of the Aegean will receive equal attention, and emphasis will be placed on sanctuaries, settlements, and cemeteries. Also Offered As: AAMW 7260
1 Course Unit

CLST 7305 Topics in Aegean Archaeology
Topics vary. This course explores current topics in Aegean archaeology. It is designed to inform and prompt debate and discussion on substantive, methodological, and theoretical matters of current interest, within a geographical and/or chronological framework. Spring 2017 topic TBA.
1 Course Unit

CLST 7306 Archaeology of the Hellenistic Period in Italy, Greece, and Asia Minor
A survey of the archaeology of the Hellenistic period (331-31 BCE) across the Mediterranean, with a focus on Rome, Magna Graecia, Greece, and western Asia Minor. The course will stress the interactions among cities and kingdoms during the Roman Republic and Greek Hellenistic periods, especially the second century B.C. Students will work with relevant objects in the Penn Museums Mediterranean Section.
1 Course Unit

CLST 7307 Ethnoarchaeology Greece
Ethnoarchaeology involves distinctive theoretical and methodological approaches to the study of living societies for the explicit purpose of shedding light on archaeological questions. In this seminar, we will review the intellectual history of ethnoarchaeology in North America and Europe, and explore case studies from Greece, the wider Mediterranean, and beyond. Among the topics will be analog, cross-cultural comparison, experimental archaeology, oral history research, and archaeologically oriented ethnographic fieldwork. Students will create a proposal for ethnoarchaeological fieldwork in their area of interest in NSF or Wenner-Gren format, to be critiqued by the instructor and their peers. Not Offered Every Year
Also Offered As: AAMW 7050
1 Course Unit

CLST 7308 Geoarchaeology
In this course, students will learn the basic concepts of earth systems and explore the ways that archaeologists use various environmental sciences (e.g., geomorphology, limnology, palynology, and dendroclimatology) and paleoecological modeling in their research. The course will include lectures and laboratory activities on the basics of geology, including surficial geology, rock and mineral identification, geomorphology and soils, sedimentation and stratigraphy, as well as a systematic review of depositional environments and their archaeological potential. A series of archaeological case studies will illustrate the application of these concepts in real-world field archaeology.
1 Course Unit
CLST 7310 Ancient Greek Colonies
This seminar examines the archaeology of Greek colonization from the Late Bronze Age to ca. 500 B.C. These colonies were highly diverse in their motivations, physical settings, and political and social structures, as well as in their relationships with mother cities and the new worlds they inhabited. Emphasis is placed on the colonial experience as a cross-cultural and negotiated process; several streams of the changing theoretical and conceptual approaches to Greek colonization are explored. In addition to archaeological and epigraphic evidence, literary and historical traditions are examined. Colonies from the southern Balkan peninsula, Black Sea, Ionia, northern Africa, and Magna Graecia will be the focus of reading and reports. Seminar meetings will consist of oral reports and discussion of these reports and other topics. Depending on the number of participants, each person will be responsible for two or three reports of approximately 30-45 minutes length. Accompanying the oral report will be a PowerPoint document (in most cases), a synopsis/summary of one to two pages, and a bibliography. These will all be posted on the course Canvas site. No later than one week before an oral presentation, the presenter will identify one or two key readings for all to read, in consultation with the instructor. These will be posted, in PDF format, on the Canvas site. One or more visits to the Penn Museum may be built into the course.

1 Course Unit

CLST 7311 Petrography of Cultural Materials
Introduction to thin-section petrography of stone and ceramic archaeological materials. Using polarized light microscopy, the first half of this course will cover the basics of mineralogy and the petrography of igneous, metamorphic and sedimentary rocks. The second half will focus on the petrographic description of ceramic materials, mainly pottery, with emphasis on the interpretation of provenance and technology. As part of this course, students will characterize and analyze archaeological samples from various collections. Prior knowledge of geology is not required.

Also Offered As: AAMW 5120, ANTH 5211
1 Course Unit

CLST 7313 Archaeobotany Seminar
In this course we will approach the relationship between plants and people from archaeological and anthropological perspectives in order to investigate diverse plant consumption, use, and management strategies. Topics will include: archaeological formation processes, archaeobotanical sampling and recovery, lab sorting and identification, quantification methods, and archaeobotany as a means of preserving cultural heritage. Students will learn both field procedures and laboratory methods of archaeobotany through a series of hands-on activities and lab-based experiments. The final research project will involve an original in-depth analysis and interpretation of archaeobotanical specimens. By the end of the course, students will feel comfortable reading and evaluating archaeobotanical literature and will have a solid understanding of how archaeobotanists interpret human activities of the past.

1 Course Unit

CLST 7315 Geophysical Prospection for Archaeology
Near-surface geophysical prospection methods are now widely used in archaeology as they allow archaeologists to rapidly map broad areas, minimize or avoid destructive excavation, and perceive physical dimensions of archaeological features that are outside of the range of human perception. This course will cover the theory of geophysical sensors commonly used in archaeological investigations and the methods for collecting, processing, and interpreting geophysical data from archaeological contexts. We will review the physical properties of common archaeological and paleoenvironmental targets, the processes that led to their deposition and formation, and how human activity is reflected in anomalies recorded through geophysical survey through lectures, readings, and discussion. Students will gain experience collecting data in the field with various sensors at archaeological sites in the region. A large proportion of the course will be computer-based as students work with data from geophysical sensors, focusing on the fundamentals of data processing, data fusion, and interpretation. Some familiarity with GIS is recommended.
Spring, odd numbered years only

1 Course Unit

CLST 7317 Ruins and Reconstruction
This class examines our enduring fascination with ruins coupled with our commitments to reconstruction from theoretical, ethical, socio-political and practical perspectives. This includes analyzing international conventions and principles, to the work of heritage agencies and NGOs, to the implications for specific local communities and development trajectories. We will explore global case studies featuring archaeological and monumental sites with an attention to context and communities, as well as the construction of expertise and implications of international intervention. Issues of conservation from the material to the digital will also be examined. Throughout the course we will be asking what a future in ruins holds for a variety of fields and disciplines, as well as those who have most to win or lose in the preservation of the past.
Also Offered As: ANTH 5805, HSPV 5850, NELC 5950
1 Course Unit

CLST 7400 Myth Through Time and In Time
The textual and physical remains of Greek and Roman culture and belief as ‘myth’ entrenched the post-antique European world and its neighbors. Makers, patrons and viewers manipulated those survivals to challenge and speak to a contemporary world. This course focuses on how and why artists and their patrons engaged the mythic and examines the various areas of political and religious life that sought animation through an evocation of narratives from the past. Readings and case studies will engage with very late antique, medieval, and early modern art, turning to the modern and contemporary as well. Moving to the modern lets us examine, among other things, how artists address the exclusionary histories of the past, to enable critiques of myths of supremacy by one gender, race, or culture over others.

CLST 7403 Borderlines: Art and Artifact in the Roman Empire
What made art and artifacts 'Roman', or not, in a Roman world? 'Roman
provincial art' is an active scholarly category. This seminar reframes
it, to test productive models to understand visual culture outside the
domestic world was not just a document of history: it was history. Open to
environment so often spoke to political and sociological realities. The
This seminar looks at how Roman things, images and the designed
architectural, urbanism, and landscapes can all concern us, as we try out disciplinary approaches that take in eg cultural
appropriation, translation and hybridity, creolization, discrepant experience, object agency, and communities of taste and style. 'Ethnicity' is a loaded
cultural politics. A traditional topic for that has been Roman interaction
with Greek culture. This seminar extends that range, while tackling
'Hellenization', as we reflect on models of 'Romanization', globalism and
identity formation within the imperium's boundaries in its provinces and
client kingdoms, and also at its frontier zones. Various disciplines apply:
art history, archaeology, history, and more. Case studies, evolved with
students, may range from Britain to Iran, northern Africa to the Black
Sea in space and, in time, from interactions with the Hellenistic East
and West and with Iron Age Europe, to the age of Germanic, Sasanian
and Ummayad conquests of Roman terrain, ca 3rd c. BCE-7th c. CE. The
market in art and artifact, the nature and status of makers, and conditions of
patronage and viewing are key considerations. Private and public
objects, images, architecture and urbanism, and landscapes can all
concern us, as we try out disciplinary approaches that take in eg cultural
appropriation, translation and hybridity, creolization, discrepant experience, object agency, and communities of taste and style. 'Ethnicity' is a loaded
concept in ancient Mediterranean studies, as is 'race'; our course must
engage those, and the ways in which things and styles have been made
to serve those terms. And who owns, is heir to, the cultural legacies we
look at, and how to name them, are problems that tangle with current
national identity formation, and academic and museum practice. Our own
Museum's holdings can make topics. Students are welcome to bring in
interests in language and text cultures, in disciplines outside art history and
archaeology, and in other world cultures and epochs.

CLST 7405 Late Antique Art and Artifact Seminar
What is 'Late Antiquity'? In 312 when Roman emperor Constantine
inaugurated a Christian empire, 'Roman' culture was centuries old. The
period ca. 200-650 CE saw profound transformations that launched
Medieval, Byzantine and Islamic traditions. In this epoch of upheaval
destruction was frequent but partial: Rome long survived, Constantine's
'new Rome', Constantinople flourished, and around the Empire both proto-
global visual culture and local forms prospered. Roman cultural models
authorized both innovation and passion for tradition: we critique art-
historical models for Late Antique 'decline', analyse habits of material
reuse and curation, and look at new Christian and Jewish roles for Roman
things as well as polytheist visual survival. Foreign allies and enemies
interacted with Greco-Roman Late Antiquity; we visit them too, as in the early
Islamic palaces. Media discussed include not just 'monumental'
painting, mosaic, sculpture, but also silver, ceramic, ivory, figural textile,
glass, painted books, jewelry, coins and more. We look too at Late Antique
texts on art, objects, space and viewership. This seminar is open to
graduate and undergraduate students.

CLST 7601 Approaches to Literary Texts
Most seminars focus on literary texts composed during a single historical period; this course is unusual in inviting students to consider the challenges of approaching texts from a range of different historical eras. Taught by a team of literary specialists representing diverse periods and linguistic traditions and conducted as a hands-on workshop, this seminar is designed to help students of literature and related disciplines gain expertise in analysis and interpretation of literary works across the boundaries of time, geography, and language, from classic to modern. Students will approach literature as a historical discipline and learn about key methodological issues and questions that specialists in each period and field ask about texts that their disciplines study. The diachronic and cross-cultural perspectives inform discussions of language and style, text types and genres, notions of alterity, fictionality, literariness, symbolism, intertextuality, materiality, and interfaces with other disciplines. This is a unique opportunity to learn in one course about diverse literary approaches from specialists in different fields.

CLST 7708 Black Classicisms
This course will explore heterogeneous responses to ancient Greek and Roman Classics in the literature, art, and political thought of Africa and the Black Diaspora, ranging from the late eighteenth century to the present day and encompassing Africa, the Caribbean, and North America. We will analyze how African and black diasporic writers, artists, and thinkers have engaged with and re-imagined Greco-Roman Classics, both to expose and critique discourses of racism, imperialism, and colonialism, and as a source of radical self-expression. Throughout, we will consider the reciprocal dynamic by which dialogues with ancient Greek and Roman classics contribute to the polyphony of black texts and these same texts write back to and signify on the Greek and Roman Classics, diversifying the horizon of expectation for their future interpretation.
Writers and artists whose work we will examine include Romare Bearden; Dionne Brand; Gwendolyn Brooks; Aimé Césaire; Austin Clarke; Anna Julia Cooper; Rita Dove; W.E.B. Du Bois; Ralph Ellison; Athol Fugard; John Kani, and Winston Ntshona; C.L.R. James; June Jordan; Toni Morrison; Harryette Mullen; Marlene Nourbese Philip; Ola Rotimi; William Sanders Scarborough; Wole Soyinka; Mary Church Terrell; Derek Walcott; Booker T. Washington; Phillis Wheatley; and Richard Wright. We will study these writers in the context of national and transnational histories and networks and in dialogue with relevant theoretical debates. Work for assessment will include a 15-page research paper and the preparation of a teaching syllabus for a course on an aspect of Black Classical Receptions.

1 Course Unit

CLST 7709 Introduction to Paleography & Book History
Writing and reading are common actions we do every day. Nonetheless they have changed over the centuries, and a fourteenth century manuscript appears to us very different from a Penguin book. The impact of cultural movements such as Humanism, and of historical events, such as the Reformation, reshaped the making of books, and therefore the way of reading them. The course will provide students with an introduction to the history of the book, including elements of paleography, and through direct contact with the subjects of the class: manuscripts and books. Furthermore, a section of the course will focus on digital resources, in order to make students familiar with ongoing projects related to the history of book collections (including the "Philosophical Libraries" and the "Provenance" projects, based at the Scuola Normale Superiore in Pisa and at Penn). The course will be conducted in English; a basic knowledge of Latin is desirable but not required.

CLST 7710 Topics in Medieval Studies: Premodern Animals (c.500-c.1500)
From St. Cuthbert, whose freezing feet were warmed by otters, to St. Guinefort, a miracle-performing greyhound in 13th-century France, to Melusine, the half-fish, half-woman ancestress of the house of Luxembourg (now the Starbucks logo), medieval narratives are deeply inventive in their portrayal of human-animal interactions. This course introduces students to critical animals studies via medieval literature and culture. We will read a range of genres, from philosophical commentaries on Aristotle and theological commentaries on Noah’s ark to werewolf poems, beast fables, political satires, saints’ lives, chivalric romances, bestiaries, natural encyclopaedias, dietary treatises and travel narratives. Among the many topics we will explore are the following: animals in premodern law; comfort and companion animals; vegetarianism across religious cultures; animal symbolism and human virtue; taxonomies of species in relation to race, gender, and class; literary animals and political subversion; menageries and collecting across medieval Europe, the Near East, and Asia; medieval notions of hybridity, compositeness, trans-species identity, and interspecies relationships; art and the global traffic in animals (e.g., ivory, parchment); European encounters with New World animals; and the legacy of medieval animals in contemporary philosophy and media. No prior knowledge of medieval literature is required. Students from all disciplines are welcome.

1 Course Unit

CLST 7711 People Out of Place Then and Now
Encounters between hosts and strangers are at the core of some of our oldest surviving narratives through time. The actions and decisions taken over the threshold, whether in welcome or repulsion, serve to position society within a moral framework, and simultaneously re/define the framework itself. Asylum negotiations, by their nature, constitute the ‘host’ through pointing to the existence of bodies positioned external to it. Yet, the appeals for refuge also expose the ambiguity of who the host is. In this course we will seek to understand how value is drawn from persons, whose condition is reduced to being bodies out of place. That is whose physical position means removal from – a place of rights, protection and belonging – whether through expulsion or by being relegated to spaces of constrained mobility – asylum seekers, refugees, exiles, captives and those without effective citizenship. We will draw on ancient, on modern and on imaginary liminal settings to investigate the unique role of people in such states for articulating intra-community relations and the space between civil rights and human rights. Individuals and groups in such positions of liminality – whose state is considered one of exception and characterised by precarity, unsettledness and threat of violence have a significant role in articulating the parameters of the non-exceptional – the so called ‘norm’. Here the perplexities of sovereignty are revealed, not only for the host, but for those citizen-strangers, the stateless or people with non-effective citizenship, whose existence lies seemingly beyond the possibilities of sovereign action, and yet there is the power to invoke it.
1 Course Unit

CLST 7801 Historical Grammar of Greek
Investigation of the grammar of Classical Greek from the viewpoint of historical linguistics. The course will offer historical explanations for numerous structural peculiarities of the Greek language and anomalies of Greek grammar, touch on the relationship of Greek with other languages, and incidentally introduce the student to some basic concepts of language analysis likely to be useful in teaching Greek and learning other languages.
Not Offered Every Year
1 Course Unit

CLST 8000 Language Pedagogy Workshop
The Workshop is intended to serve as a forum for first-time teachers of Latin or Greek. This will include discussing course-plans and pedagogical theories and strategies, collaborating on course materials, and addressing any concerns in the language courses presently being taught.

Classics (CLSC)
The courses listed on this page are exclusive to the LPS BAAS degree ([https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/](https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/)) and LPS Online certificates ([https://lpsonline.sas.upenn.edu/academics/certificates/](https://lpsonline.sas.upenn.edu/academics/certificates/)).
CLSC 1000 Greek and Roman Mythology
Myths are traditional stories that have endured many years. Some of them have to do with events of great importance, such as the founding of a nation. Others tell the stories of great heroes and heroines and their exploits and courage in the face of adversity. Still others are simple tales about otherwise unremarkable people who get into trouble or do some great deed. What are we to make of all these tales, and why do people seem to like to hear them? This course will focus on the myths of ancient Greece and Rome, as well as a few contemporary American ones, as a way of exploring the nature of myth and the function it plays for individuals, societies, and nations. We will also pay some attention to the way the Greeks and Romans themselves understood their own myths. Are myths subtle codes that contain some universal truth? Are they a window on the deep recesses of a particular culture? Are they entertaining stories that people like to tell over and over? Are they a set of blinders that all of us wear, though we do not realize it? We investigate these questions through a variety of topics creation of the universe between gods and mortals, religion and family, sex, love, madness, and death.
1 Course Unit

CLSC 1200 Archaeology of Greece and Rome
The monuments and material remains of ancient Mediterranean civilizations have shaped a discourse about western civilization for centuries. From the so-called Tomb of Atreus at Mycenae to the colosseum in Romel, the physical remains of the past have been seen as signs of social sophistication, of overweening hubris, of imperial exploitation, of lost greatness. This course introduces you to the material remains of the ancient Mediterranean and their contested significance today. Chronologically organized, it will explore both great monuments and humble dwellings, using material remains to examine the religions, economies and social structure of the Bronze Age through the late Roman empire. In doing so, it will challenge the notion of "western" civilization by probing the constant connections between the Mediterranean and the east, and the myriad of ways that ancient social practices, as evident through archaeology, challenge our own values and assumptions. The course will also ask how archaeology has been itself shaped by national politics and national identity, and how these monuments continue to exert a powerful impact today - as economic drivers, as contested symbols, and as part of a fragile heritage increasingly under threat.
1 Course Unit

CLSC 2500 Ancient Cities
The Greco-Roman world was a world of cities. From the ancient Greek city-states (or poleis), to the cosmopolitan cities that appeared in the era of Alexander the Great and his successors, and to the modern city-projects of the Roman Empire. This course examines the architectural and urban developments of Greek and Roman cities together with central political institutions and religious and social practices that were associated with them. In studying a diversity of visual, material and textual evidence–such as urban form, architectural and sculptural monuments, as well as literary sources and epigraphic evidence–the course addresses both the structure of the urban fabric and the socio-political situation of ancient Greek and Roman cities.
1 Course Unit

Climate Change (CLCH)
The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).
CLCH 2300 Climate Change
Climate change is happening right now! Climate change is a hoax this is normal variation! Climate change is something we can worry about in 50 to 100 years, no need to worry about it now. On an almost daily basis we are bombarded by mixed messages about climate in the media. Who is right? What is the truth? This course will examine the cryosphere and build on the previous Climate Certificate courses CLCH 160 Oceanography and CLCH 220 Atmospheric Science to better understand Earth's climate system. We will explore past climate, how we know what that climate was like, and how and why we believe it has changed. We will then examine current evidence for climate change (sea level rise, loss of glacier mass, changes in weather systems) and critique various climate models. Once the class has a good understanding of the science behind climate change we will examine potential impacts in various parts of the world. Finally we will examine climate policy in the US at the federal, state and local level and in various parts of the world.
1 Course Unit

CLCH 3000 Communicating Science
Even the most brilliant scientists must be able to communicate clearly to effectively share their enthusiasm for their fields. Relating scientific concepts and quantitative data to colleagues is very different than sharing it with the general public. This course will show students how to refine their communication skills in crafting messages to address different audiences and genres. There are no required prerequisites for this course, although students pursuing the Certificate in Climate Change are strongly encouraged to already have completed CLCH 160: Oceanography, CLCH 220: Atmospheric Science, and CLCH 230: Climate Change prior to enrolling in this course.
1 Course Unit

CLCH 3100 Global Environmental Issues
Wildfires, deforestation, air pollution, plastics in the ocean, lead in water, and increasingly destructive natural disasters have all been in the news lately. What are the underlying causes? What can be done? In this course students will examine eight environmental issues. They will become familiar with the current knowledge, debates, human impacts, economic consequences, policies, and potential solutions for each issue. Lectures will introduce each of the disciplines that contribute to the dialogue on these environmental issues, while a final project will allow students to dive deeper into one major environmental issue within the context of each of these disciplines. In addition to lectures, readings, and discussion there is a semester-long group project culminating in a final paper.
1 Course Unit

Cognitive Science (COGS)

COGS 1001 Introduction to Cognitive Science
How does mind work? This course surveys a wide range of answers to this question from disciplines ranging from philosophy to neuroscience. The course devotes special attention to the use of simple computational and mathematical models. Topics include perception, learning, memory, decision making, emotion and consciousness. The course shows how the different views from the parent disciplines interact and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of computation in such theories and provides an introduction to some of the main directions of current research in the field. It is a requirement for the BA in Cognitive Science, the BAS in Computer and Cognitive Science, and the minor in Cognitive Science, and it is recommended for students taking the dual degree in Computer and Cognitive Science.

COGS 4290 Big Data, Memory and the Human Brain
This course fulfills the research experience requirement in the psychology major. Advances in brain recording methods over the last decade have generated vastly more brain data than had been collected by neuroscientists during the previous century. To understand the human brain, scientists must now use computational methods that exploit the power of these huge data sets. This course will introduce you to the use of big data analytics in the study of human memory. Through hands-on Python-based programming projects, we will analyze very large data sets both to replicate existing phenomena and to make new discoveries. Programming experience in python is required for this course.
Fall, even numbered years only

1 Course Unit
**College (COLL)**

**COLL 0010 Pre-First Year Program in WRIT/MATH/BIOL**

In this course, students will participate in a month-long academic program that covers Writing, Math, and Biology. The Writing course focuses mainly on writing about literature, students will learn general principles and strategies for good writing in various disciplines and genres. “Place and Belonging” will introduce students to a range of writing about the ways our social and geographical locations shape our sense of self and our personal feelings of connection or alienation. Students will read a short novel, stories, essays, and poems by authors from the U.S. and abroad. All these works are attempts to give written form to the relationships between people and the places they inhabit. The Math course will be based on a diagnostic exam and will either: cover Sets, Logic, Number Theory for students with little math experience or interest; Intense Algebra and Pre-Calc Review, Introduction to Limits for students who are may or may not be confident in their math preparation and could benefit from a review of Algebra and PreCalculus; Covers a quick Pre-Calc review, Limits, Derivatives for students who have taken AB Calculus and are confident in their performance; or Derivatives, Applications, Integrals for students who have taken BC Calculus and are confident in their performance. The Biology course will include cellular respiration, genetics, and molecular biology. This course will use lectures, class discussion of current topics, group work, practice questions, quizzes, and lab to help students understand important concepts and develop skills needed to succeed in college-level biology courses.

Summer Term
0-1 Course Unit

---

**COLL 0020 Pre-First Year Program in WRIT/MATH/PSYC**

In this course, students will participate in a month-long academic program that covers Writing, Math, and Psychology. The Writing course focuses mainly on writing about literature, students will learn general principles and strategies for good writing in various disciplines and genres. “Place and Belonging” will introduce students to a range of writing about the ways our social and geographical locations shape our sense of self and our personal feelings of connection or alienation. Students will read a short novel, stories, essays, and poems by authors from the U.S. and abroad. All these works are attempts to give written form to the relationships between people and the places they inhabit. The Math course will be based on a diagnostic exam and will either: cover Sets, Logic, Number Theory for students with little math experience or interest; Intense Algebra and Pre-Calc Review, Introduction to Limits for students who are may or may not be confident in their math preparation and could benefit from a review of Algebra and PreCalculus; Covers a quick Pre-Calc review, Limits, Derivatives for students who have taken AB Calculus and are confident in their performance; or Derivatives, Applications, Integrals for students who have taken BC Calculus and are confident in their performance. The Psychology course introduces students to the scientific study of human moral psychology. It will cover several topics central to our understanding of humans as moral beings, including: What is morality? What role does morality play in social life? How do people make moral judgments? Is there such a thing as true altruism? Why do people sometimes behave immorally? What is the nature of human evil (and is there such a thing)? What role does morality play in political disagreement? Lectures will provide an introductory overview of research in these and other topics, and will be accompanied by readings that will enhance students’ understanding. Beyond the topics covered above, this course will also help students better understand the nature of hypothesis testing in psychological research, the strengths and weaknesses of different experimental designs, how to detect confounds in experimental designs, how to draw accurate inferences from data, and how to communicate scientific findings.

0-1 Course Unit

---

**COLL 0135 The Art of Speaking**

This course is designed to equip students with the major tenets of rhetorical studies and peer education necessary to work as a CWiC speaking advisor. The course is a practicum that aims to develop students’ abilities as speakers, as critical listeners and as advisors able to help others develop those abilities. In addition to creating and presenting individual presentations, students present workshops and practice advising. During this ABCS course, students will practice their advising skills by coaching and mentoring students at a public school in Philadelphia.

Communications (COMM)

COMM 0025 Fellows Proseminar I (SNF Paideia Program Course)
The SNF Paideia Fellows Proseminar I introduces sophomore SNF Paideia Fellows to academic research and practice related to the civic engagement mission of the SNF Paideia program. We engage diverse perspectives on the purpose of higher education, the nature of citizenship, the value of civility, and the relationship between individual and community wellness. Students will develop their personal civic identity and wellness goals through intentional course exercises and assignments. The goal of the course is to equip students with the knowledge, skills, experiences, and ethical frameworks for healthy, sustainable and robust civic leadership at Penn and in their local, national, and global communities. This course is open only to SNF Paideia Fellows, who are required to take it during the fall of their sophomore year.
Fall
0.5 Course Units

COMM 0026 Fellows Proseminar II (SNF Paideia Program Course)
In the SNF Paideia Fellows Proseminar II, Fellows engage in deeper exploration of the themes of dialogue, citizenship, wellness, and service, especially considering potential connections with their chosen major. In this course, junior Fellows investigate engaged scholarship in their home discipline and reflect on the ways their designated SNF Paideia courses influence their research, career, and service trajectories. Building on the course materials from Proseminar I, Fellows will delve deeper into the scholarship that evaluates dialogue strategies for the ways they contribute to service, citizenship and wellness. Moving beyond Penn, the course invites several researchers or practitioners at the national or international level to share how they put theory into direct practice addressing real world problems. The culminating assignment is to develop a draft proposal for a capstone project that in some way incorporates SNF Paideia themes. Fellows in this course also develop their leadership skills by mentoring students in the sophomore Fellows course. The goal of the course is to equip students with the knowledge, skills, experiences, and ethical frameworks for healthy, sustainable and robust civic leadership at Penn and in their local, national, and global communities. This course is open only to SNF Paideia Fellows, who are required to take it during the fall of their junior year.
Fall
0.5 Course Units

COMM 1230 Critical Approaches to Popular Culture
Popular culture has been alternately condemned as too trivial to warrant attention and too powerful to resist. Its consumers have been dubbed fashion victims, couch potatoes, and victims of propaganda. This course considers these critiques, as well as those that suggest that popular culture can be emancipatory, allowing for the creation and renegotiation of meaning. Over the course of the semester, we consider the impacts of various forms of popular culture, and discuss their effects on how we see ourselves and others. We explore the ever-shifting distinctions between high, middlebrow, and low culture and analyze how power and resistance structure the production and consumption of popular texts.
Fall
1 Course Unit

COMM 1250 Introduction to Communication Behavior
This course introduces students to social science research regarding the influence of mediated communication on individual and collective attitudes, beliefs, and behaviors. Throughout the semester we explore the impacts of various types of mediated content (e.g., violence, gender and sexuality, race and ethnicity, politics and activism, health and wellbeing); genres (e.g., news, entertainment, educational, marketing); and mediums (e.g., television, film, social media) on what we think and how we act. The aim of the course is to provide students with (1) a general understanding of both the positive and negative effects of mediated communication on people's personal, professional, social, and civic lives; and (2) the basic conceptual tools needed to evaluate the assumptions, theories, methods, and empirical evidence supporting these presumed effects. Class meets twice a week as a lecture and once a week in smaller discussion groups led by graduate teaching fellows. In addition to a midterm exam and occasional short assignments, students have the option of producing a multi-media capstone project or a final term paper on a media-effects topic of their choice. Group projects or final papers are permitted, with approval of the instructor.
Spring
1 Course Unit

COMM 1300 Media Industries and Society
The aim of this course is to prepare you to work in the media business as well as to be an informed citizen by acquainting you with the work and language of media practitioners. The class also investigates the exciting, (and to some employed there) scary changes taking place in the news industry, internet industry, advertising industry, television industry, movie industry, magazine industry, and several other areas of the media system. In doing that, the course ranges over economic, political, legal, historical, and cultural considerations that shape what we see when we go online, use social media, watch TV, read books, play video games, and more.
Spring
1 Course Unit

COMM 1330 Data Science for Beginners
This course serves as an introduction to the world of data science and is aimed at students who have little to no background in data science, statistics, or programming. The core content of the course focuses on data acquisition and wrangling, exploratory data analysis, data visualization, inference, modelling, and effective communication of results. This course, which will rely on R, the statistical programming language, will prepare students for more advanced data science and computational social science courses.
Not Offered Every Year
1 Course Unit
COMM 2010 Power and Misconduct in Popular Music: An Archival Study
This course asks students to interrogate power and identity in America's popular music industries through a close examination of sexism and sexual misconduct. Designed as a research practicum that teaches interdisciplinary methods of archival research, this course explores the challenges individuals face within the cultural and professional landscapes of popular music. We will spend the first half of the semester exploring theories and practices of archives and archiving, developing critical analytical approaches to archival research in media and popular music. In the second half of the semester, students will apply this methodological and theoretical foundation to a focused examination of select case studies. Students will engage with a range of primary sources and archival texts, including memoirs, artist biographies, music histories, documentaries, and traditional and social media to consider how dynamics of power intersect in popular music. This course will provide students with the opportunity to contribute important insight and archival research to a new digital archive on sexual misconduct in America's popular music industries. Students will gain hands-on experience conducting in-depth media analyses and archival research, which will culminate in the development of a comprehensive research portfolio.

1 Course Unit

COMM 2011 The Art and Science of Story-Centered Research
Stories are a powerful communication tool that can be used to entertain, connect, inform, and inspire. Stories also play varied and vital roles in communication research. This course explores the relationship between storytelling, inquiry, and knowledge production. Engaging with interdisciplinary and multi-modal scholarship, students will learn how stories can be used to formulate and answer research questions, shape and share knowledge, and create meaningful change. Students will develop foundational knowledge in a variety of qualitative methods (e.g., interviewing, observation, textual analysis), and foster their skills producing accessible, ethical, critical, and creative research.
1 Course Unit

COMM 2012 Journalism, Crime, and Justice
This class explores the politics of crime reporting in an age of mass incarceration, police expansionism, and endemic racial and gender injustice and economic inequality. Students will be introduced to the various institutional, legal, economic, symbolic, and material entanglements between news agencies and journalists, on the one hand, and criminal justice institutions, on the other. Adopting a critical cultural approach, we will consider issues such as: accuracy, bias, and distortion in crime reporting; the newsworthiness of crime; stereotyping and criminalization; access and gatekeeping; moral panics and electoral politics; ‘copaganda’ and the professionalization of police public relations; the rise of citizen journalism and ‘cop watching’; and emerging practices of self-mediation and storytelling. The class will also introduce students to important critical perspectives on how practices of journalistic storytelling and representation are implicated in the politics of crime control and broader struggles for safety and justice.
1 Course Unit

COMM 2100 Quantitative Research Methods in Communication
This course is a general overview of the important components of social research. The goal of the course is to understand the logic behind social science research, be able to view research with a critical eye and to engage in the production of research. It will cover defining research problems, research design, assessing research quality, sampling, measurement, and causal inference. The statistical methods covered will include descriptive and inferential statistics, measures of association for categorical and continuous variables, inferences about means, and the basic language of data analysis. Course activities will include lectures, class exercises, reading published scientific articles, using statistical software, and discussing research featured in the news.
Fall or Spring
1 Course Unit

COMM 2130 Social Media and Social Life
The irruption of social media as a means of communication has been said to transform many dimensions of social life, from how we interact with significant others to how we engage in public life - but has it, really? Regardless of the specific technology (blogs, micro-blogs, social networking sites, peer-to-peer networks), social media make interdependence more prevalent, and exposure to information more pervasive. But social networks, and the ties that bring us together, have long mediated the way in which we obtain information, engage in public discussion, and are recruited or mobilized for a public cause. So what has social media brought to the table that is new? This course will evaluate the evidence that can help us answer this question, as well as challenge conventional views and discuss questions that remain open. The effects of social media on ideological polarization, social influence and peer pressure, agenda-setting dynamics, and the formation and effects of social capital are examples of the substantive topics and theoretical debates that will be considered.
Not Offered Every Year
1 Course Unit

COMM 2140 Media and South Asia
This course examines the historical development of media institutions across the Indian subcontinent, and how media texts have helped to shape post-colonial national/cultural/religious/social identities, nationalism, and geopolitical relations. The course looks at how the post-colonial State in South Asia (India, Pakistan, Bangladesh, Nepal, Bhutan, and Sri Lanka) has interacted with media industries, and the implications of this interaction.

Also Offered As: SAST 1110
1 Course Unit

COMM 2150 Children and Media
This course examines children's relationships to media in their historic, economic, political, and social contexts. The class explores the ways in which "childhood" is created and understood as a time of life that is qualitatively unique and socially constructed over time. It continues with a review of various theories of child development as they inform children's relationships with and understanding of media. It reviews public policies designed to empower parents and limit children's exposure to potentially problematic media content and simultaneously considers the economic forces that shape what children see and buy. The course also provides a critical examination of research on the impact of media on children's physical, cognitive, social, and emotional development. Students in this course produce a proposal for an educational children's media product as their final project.
Fall
1 Course Unit
COMM 2260 Introduction to Political Communication
This course is an introduction to the field of political communication and conceptual approaches to analyzing communication in various forms, including advertising, speech making, campaign debates, and candidates' and office-holders' uses of social media and efforts to frame news. The focus of this course is on the interplay in the U.S. between media and politics. The course includes a history of campaign practices from the 1952 presidential contest through the election of 2020.
Fall
Also Offered As: PSCI 1210
1 Course Unit

COMM 2300 Advertising and Society
This course explores the historical and contemporary role of the advertising industry in the U.S. media system. The course will cover the social history of advertising; the structure of today's advertising industry; the workings of advertising in digital media; and critical analyses of advertising's role in society. In addition to academic writings, the class will read industry reports to understand contemporary strategies and processes.
Not Offered Every Year
1 Course Unit

COMM 2310 Gender and Sexuality in Global Media
Media play a powerful role in both constructing and challenging local and global understandings of gender and sexuality. This course focuses on how practices and norms of gender and sexuality are represented, complicated, and resisted across different forms of global media. We draw on insights from media/communication, anthropology, and queer and feminist theory to examine historical and contemporary media production, consumption, and circulation across nations, with a special emphasis on the Global South. Via a series of case studies (including TV melodrama, the global #metoo movement, and gay dating apps), we will explore the "top down" power of media industries and nation-states, the "bottom up" power of media users, and the dynamic cross-cultural encounters in which they interact.
1 Course Unit

COMM 2320 Gender and Media
This course examines various images and performances of gender in media focusing on the late 20th century to the present. Using theories from cultural and media studies, film and gender studies, and communication studies, we will explore different processes and practices of gender, specifically in terms of media representations of femininity, masculinity, and other genders. The purpose of the course is to gain insight into the ways in which gender, and its intersections with race, ethnicity, and class, is enacted, represented, and has an impact on cultural formations and communication. We will explore the socio-cultural mechanisms that shape our individual and collective notions of identity and essentially teach us what it means to be gendered masculine or feminine or align with other identifications. The media plays a major role in "constructing" gender, and popular views of what "appropriate" gendering is, in turn, shape how we communicate with each other. In examining cultural myths about gender as well as ongoing debates on gender construction, we will consider how gender is tied in with notions of power, identity, voice, and other defining identity categories (race, socio-economic status, sexuality, etc.). Throughout the course, we will examine a variety of media forms, from film to television to streaming platforms, as well as social media such as Twitter, Instagram, and TikTok.
Not Offered Every Year
1 Course Unit

COMM 2410 Introduction to Network Dynamics and Collective Behavior
How do new ideas spread online? Why do some take off and others fail? What determines when people will cooperate and when they will be selfish? Where do our social norms come from, and what happens when they are disrupted – as they were during the first year of the pandemic? How did 'wearing a face mask' and 'getting vaccinated' become political issues and what role did social media play in this? Why is communicating about climate change so challenging? The last several decades in social science have seen remarkable breakthroughs in our answers to these and other profound questions about societal communication and evolution. One of the most powerful and influential tools behind these breakthroughs is computational modeling. Models are used to simulate the spread COVID, and to test strategies for halting the pandemic. They are used to test strategies for international relations, and to predict the emergence of new terrorist cells. Models are also used to predict voting outcomes and create better forms of political representation. This class does not involve coding and no programming experience is necessary. Instead, students will be introduced to a range of computation models and learn how they work to guide our governments and businesses. You will learn about the big ideas and simple formulas that are used to predict the future of our economy, our society, and our ecology.
1 Course Unit

COMM 2445 Civil Dialogue Seminar: Civic Engagement In A Divided Nation
The goal of this course is to help students develop concepts, tools, dispositions, and skills that will help them engage productively in the ongoing experiment of American democracy. This nation's founders created a governmental structure that sets up an ongoing and expansive conversation about how to manage the tensions and tradeoffs between competing values and notions of the public good. These tensions can never be fully resolved or eliminated; they are intrinsic to the American experiment. Every generation must struggle to find its own balance, in no small part because in every era people who previously had been unjustly excluded from the conversation find a way to be heard. That inevitably introduces new values and changes how enduring ones get interpreted. The challenge of each generation is to develop that capacity to its fullest. The goal of this course is to equip you to engage fully in your generation's renewal of the conversation. Class sessions will use a variety of modalities: lecture, discussion, case studies, opportunities to experiment with the tools and techniques of civil dialogue and writing. Each session will include some theory or historical context, a case study, exploration of a key concept of civic dialogue with a related tool or technique, and an interactive exercise. This course is part of a larger effort by the university (called the Paideia program) to help Penn students build these skills.
Fall or Spring
Also Offered As: EDUC 2445, URBS 2445
1 Course Unit
COMM 2530 Divine Mediation: Media and the Shaping of Religious Identity and Practice
This course surveys how religious groups interact with media, and how media texts and institutions have played a role in defining religions. The intersections between media and religion are numerous, from the mediated growth of national identities, the rise of online religious extremism, the ingroup/outgroup dynamics within and among religious groups, and the ways in which media is used to legitimize/delegitimize theological positions. We examine how media institutions have played a role in propping up religious norms (both explicitly and implicitly) and the shaping of religious identities. This course looks at media as both enforcer and disruptor, as well as the ways in which religions have been challenged by those with media literacy and access. The evolution of religious practice and social norms can also be linked with technological innovations such as the mass distribution of Bibles in the 15th and 16th century thanks to the printing press, the rise of radio and television messiahs in the 20th century, and the individualization of religious practices through new apps.

1 Course Unit

COMM 2550 Foundations in Data Science for Communication
Acquiring and demonstrating data literacy, namely, the ability to find, appropriately handle, analyze, and communicate insights from the rapidly growing spectrum of data in all aspects of modern life, is now a vital skill for virtually all workers and researchers. This course provides a foundation in the concepts, methods, and applications of data science (including network science) to questions in Communication. The course will build data literacy and help you start to develop skills working with large and complex datasets of relevance to communication behaviors in the digital world. Students will become familiar with basic programming skills for data analysis using the R and Python programming languages, along with some of the common tools used for network and data analysis and visualization. It will provide an introduction and overview of the key elements of applied data science, including the analysis of networks and machine learning (ML). The practical and ethical challenges of 'big data' and the increasing use of algorithmic (ML) decision systems will also be explored. No prior programming or data analysis experience is required.
1 Course Unit

COMM 2600 Media Activism Studies
This seminar provides an introduction to the politics and tactics underlying various types of media activism. The class will examine interventions aimed at media representations, labor relations in media production, media policy reform, activists’ strategic communications, and “alternative” media making. The course will draw from an overview of the existing scholarship on media activism, as well as close analyses of actual activist practices within both old and new media at local, national, and global levels. We will study how various political groups, past and present, use media to advance their interests and effect social change. Each member of the class will choose one case study of an activist group or campaign to explore throughout the semester.
Not Offered Every Year
1 Course Unit

COMM 2620 Social Movements
This course examines the main sociological theories and concepts in the analysis of revolutions, popular protest, and social movements. Special attention will be given to three theoretical traditions: resource mobilization, political process, and cultural analysis. We will study narratives, symbols, performances, and old and new media forms in the construction of identities and solidarities and the mobilization of publics. Historical and contemporary cases from the U.S. and around the world will be examined.
Also Offered As: SOCI 2620
1 Course Unit

COMM 2640 Media Culture & Society in Contemporary China
This course covers Chinese media, culture, and society from the 1970s to the present. It examines the causes and consequences of social and institutional transformation, with an emphasis on civic engagement, cultural change, and the impact of digital media. In analyzing these developments, the course pays special attention to historical contexts and draws on concepts and theories from sociology, communication, and related fields. The course helps students develop nuanced and sophisticated approaches to the understanding of contemporary Chinese media, culture, and society and cross-cultural phenomena more broadly.
Also Offered As: SOCI 2640
1 Course Unit

COMM 2750 Communication and Persuasion
This course examines theory, research, and application in the persuasive effects of communication in social and mass contexts. The primary focus will be on the effects of messages on attitudes, opinions, values, and behaviors. Applications include political, commercial, and public service advertising, propaganda, and communication campaigns (e.g., anti-smoking). Students will develop their own communication campaign over the semester. The campaign will include identifying and analyzing the persuasion problem, the target audience's characteristics and media habits, and then creating a persuasive message consistent with research and practice targeted to the problem and its solution.
Not Offered Every Year
1 Course Unit

COMM 2760 How We Change: Social-Psychological and Communication Dynamics (SNF Paideia Program Course)
Have you wondered why people undergo religious conversion, change their political affiliation, suddenly endorse conspiracy theories, alter their taste in music, or seek hypnosis to quit smoking? What is common to these processes of change, and how does resistance to change play out across these seemingly different contexts? In “Why We Change,” we will ask unique questions such as how religious change might highlight methods of transforming public health communications or how the study of attitude change might yield new theories about the impact of life experiences on personality. Broadly speaking, the class will provide an opportunity for students to learn theories of belief formation, attitudes and persuasion, normative influence, and behavioral change. For example, we will work to understand how specific beliefs, such as group stereotypes, or specific attitudes, such as trust and values, change in response to variations in the environment and communication with other people. We will cover culturally based and professional approaches to change, from fear appeals to motivational interviewing, to hypnosis. Students will read empirical studies and conduct observational projects about potential sources of social, cultural, or psychological change and resistance to change in Philadelphia.
Also Offered As: NURS 2760, PSYC 2760
1 Course Unit
COMM 2820 Sick and Satiried - The Insanity of Humor and How it Keeps Us Sane
This course will examine how and why humor, as both an instigator and peacemaker, might be considered one of the most influential and profoundly useful forms of communication devised by human beings. The unique ability of jokes and satire to transcend familiar literary and journalistic forms for the purpose of deepening (or cheapening) socio-philosophical arguments and to inspire (or discourage) debate and participation in public conversations about innumerable political and social issues will be explored. The fearless analytical nature of both high and lowbrow comedy will be examined, as well as its defective qualities. The course will enable students to consider, through analysis of both contemporary and historical examples, the political and cultural satirist's unique role in society as a witness, a predictor and, in some circumstances, an instigator of public and private debate. We will examine the role of satire in revealing and mediating differences between disparate social groups based not solely on language differences, but also on political affiliation, cultural identity, ethnicity, gender, religious fellowship, sexual orientation, and socio-economic caste.
Fall
1 Course Unit

COMM 2860 Masculinity and the Media
This course examines the construction of masculinity in American and global media, highlighting how masculinity developed in parallel to social, cultural, economic, and political norms. Using case studies and multiple theoretical approaches, we will seek to understand how constructions of masculinity across the world have served to uphold - or challenge - the status quo. Analysis of individual texts across time periods and different cultural contexts will also help us better come to terms with the idea of masculinity - and its proliferation across media platforms.

COMM 3010 Global Media and Society: Perspectives on Africa
This course offers an introduction to media, culture, and society in postcolonial Africa. It takes into account diverse media forms and cultures across the continent, to examine ways in which media interconnect with globalization, colonialism and imperialism, development, and social change. The course is designed to train students to do critical comparative analyses of media across nations. Suggested readings, activities, and assignments are designed to help students situate media technologies, forms, and artifacts in relation to broader political, economic, social, and cultural contexts. At the end of the course, students will be able to contextualize media across national borders paying attention to the ways in which media both shape and are shaped by social, political, religious, and economic factors.
1 Course Unit

COMM 3011 Media, Medicine, and the Art of Mortality
This seminar explores how death has shaped and been shaped by modern communication, healthcare, and the arts. We'll examine the politics, ethics, and aesthetics of mortality in film, television, journalism, digital media, and literature. Our methodological approach will build on insights from media studies and medical humanities. Topics may include the emergence of the "end-of-life" as a life stage in popular culture and medical care; protest, activism, and other political movements against death and injustice; and the creation of knowledge, media, and art in the wake of mourning and loss.
1 Course Unit

COMM 3091 Communication Internship Seminar
This seminar provides a scholarly counterpart for students' internships in various communication-related organizations. Through individually selected readings, class discussion, and individual conferences, students develop their own independent research agendas which investigate aspects of their internship experience or industry. In written field notes and a final paper, students combine communication theory and practice in pursuit of their individual questions. This course is restricted to Comm majors.
Two Term Class, Student may enter either term; credit given for either 1 Course Unit

COMM 3100 The Communication Research Experience
In this hands-on course students will work with active researchers in the Communication Neuroscience lab at Penn to gain experience in how research works. Students will have the opportunity to interact closely with a mentor and will gain experience conceptualizing research questions, designing experiments, and collecting and analyzing data.
Not Offered Every Year

COMM 3120 Studying Digital Worlds: Qualitative Social Science for Research
This course will prepare students to design and conduct qualitative research projects that seek to understand the social life of digital technologies and digital media. Students will learn about inductive research design and key qualitative methods such as interviewing, ethnography, and content analysis. We will also explore the ethical challenges of research in digital worlds. This qualitative methods course will equip students to analyze interaction in digital media environments, with apps, and elsewhere in everyday life.
Not Offered Every Year
1 Course Unit
COMM 3130 Computational Text Analysis for Communication Research
In this 'big data' era, presidents and popes tweet daily. Anyone can broadcast their thoughts and experiences through social media. Speeches, debates, and events are recorded in online text archives. The resulting explosion of available textual data means that journalists and marketers summarize ideas and events by visualizing the results of textual analysis (the ubiquitous 'word cloud' just scratches the surface of what is possible). Automated text analysis reveals similarities and differences between groups of people and ideological positions. In this hands-on course students will learn how to manage large textual datasets (e.g. Twitter, YouTube, news stories) to investigate research questions. They will work through a series of steps to collect, organize, analyze, and present textual data by using automated tools toward a final project of relevant interest. The course will cover linguistic theory and techniques that can be applied to textual data (particularly from the fields of corpus linguistics and natural language processing). No prior programming experience is required. Through this course students will gain skills writing Python programs to handle large amounts of textual data and become familiar with one of the key techniques used by data scientists, which is currently one of the most in-demand jobs.

Fall 1 Course Unit

COMM 3180 Stories From Data: Introduction to Programming for Data Journalism
Today masses of data are available everywhere, capturing information on just about everything and anything. Related but distinct data streams about newsworthy events and issues – including activity from social media and open data sources (e.g., The Open Government Initiative) – have given rise to a new source for and style of reporting sometimes called Data Journalism. Increasingly, news sites and information portals present visually engaging, dynamic, and interactive stories linked to the underlying data (e.g., The Guardian DataBlog). This course offers an introduction to Python programming for data analysis and visualization. Students will learn how to collect, analyze, and present various forms of data. Because numbers and their visualizations do not speak for themselves but require context, interpretation, and narrative, students will practice making effective stories from data and presenting them in blogs and other formats. No programming experience is required for this class.

Fall 1 Course Unit

COMM 3220 History and Theory of Freedom of Expression (SNF Paideia Program Course)
If we were to fashion new laws for speech from scratch in our media-saturated, fake news world, would they be different laws from those we have? The rootedness of free speech in our civic DNA springs from enduring philosophical arguments over what truth and knowledge are, what human nature is like, and what we think society owes to and requires from its members. We explore foundational debates at the core of the First Amendment, the evolving interpretation of the amendment by the Supreme Court, its determined historical challengers, and struggles over its applicability to contemporary controversies. We address strong claims that unfettered speech is central to democratic societies and strong claims that society can be made more democratic by removing discriminatory speech from social media and public discourse more generally. Every society limits speech in significant ways. What are these limits in the United States, why are these the limits, and are they the ones we want? This reading and discussion seminar meets for lively, informed dialogue and debate.

Spring 1 Course Unit

COMM 3230 Contemporary Politics, Policy, and Journalism
This course focuses on how modern media intersect with politics and government in the 21st century. Case studies will include examining media coverage of the Gore v. Bush 2000 presidential election recount, 9/11, Barack Obama's election and presidency, the Trump administration, and the 2020 election. The course will include several guest speakers, all of them prominent press/political figures. In addition, students will participate in a DC field trip where they will get to hear from, and interact with, Washington leaders in the fields of politics, policy, and journalism. Course materials, in addition to a number of books, will include the New York Times, Washington Post, Wall Street Journal, left- and right-wing social media sites, cable broadcasts, and network news shows. There will be three written assignments: an analysis of the first two weeks of the next Administration; a column or op-ed; and a final research paper. In this discussion-based seminar there will be a premium on class participation.

Spring 1 Course Unit

COMM 3280 Drawing the Blue Line: Police and Power in American Popular Culture (SNF Paideia Program Course)
The police are one of the most heavily imagined institutions in American popular culture. From Cagney and Lacey to Colors, Law & Order, The Wire and The Watchmen, evolving depictions of law enforcement help us to understand larger socio-cultural shifts that have occurred from the post-1968 riots to the dawn of the Black Lives Matter movement in the mid-2010s and police abolition in the early 2020s. Using case study and textual analysis approaches, students will examine how specific police procedural, movies, and other cultural texts showcase police authority in relation to certain communities, and consider how these texts reflect, uphold, and/or challenge prevailing views on law and order and criminal justice. Our explorations of how media and cultural industries have framed policing will pay particular attention to questions of power, race, gender, sexuality, class, and geography. These explorations will also include learning about and learning to dialogue, given the diverse – and often contentious – views about policing in America. Students will have an opportunity to interact with speakers representing different positions that relate to mediated perceptions – as well as lived experiences of – policing. Class assignments and activities will enhance students' abilities to productively discuss complex issues that are frequently sanitized or homogenized within U.S. popular culture.

Not Offered Every Year

1 Course Unit

COMM 3300 The Hidden World of Privacy Policies
The US Federal Trade Commission considers privacy policies essential for internet sites and apps. Lawyers for firms with internet sites and/or apps spend much time writing privacy policies. Yet surveys show that most Americans don’t read the policies, and in fact cannot understand them because of their legal jargon. Moreover, surveys indicate, most Americans don’t even correctly understand what the label privacy policy means. The aim of this course will be to examine this crucial but misunderstood aspect of modern life. You will learn how to read privacy policies, how to understand their strategic business purposes within the internet industry, and how to think about the implications for society when the key rules of surveillance and privacy are hidden from all but a relative few. You will also work with others in the class to create and carry out a survey of college students' understanding of privacy policies. There will be one exam and a paper related to the survey.

Not Offered Every Year

1 Course Unit
COMM 3360 Feminism and the Internet
From the earliest message boards and email chains, the internet has given people a way to connect, not just digitally but sexually. Porn, online dating, sex education, digital technology have made it easier for people to find each other and explore sexuality, but these same tools have also been used in relationships that are exploitative and criminal. In this course, we look at the different connections between sex, gender, queerness and the internet: changing policies regulating sex (like FOSTA and SESTA), the platforms that have created controversies around sex (for example, craigslist, tumblr and Grindr) and shifting norms around how sex and sexuality manifest online. This is an interdisciplinary course that brings together internet studies, queer theory, and cultural studies in order to understand the social and historical dimensions of sex, sexuality and digital technologies.

Also Offered As: GSWS 3360
1 Course Unit

COMM 3370 Public Health Communication in the Digital Age
This course is designed to explore the role of public health communication in the digital age to influence health behavior change in several areas: infectious disease pandemics, tobacco and substance use, mental health, cancer, nutrition and physical activity and others. Throughout the course, we will discuss a number of important considerations when designing and implementing public health communication interventions. Students will be introduced to theories of health behavior change, models of persuasive communication, practical issues in the design of effective health communication programs, countering misinformation, community engagement, audience segmentation, cultural tailoring to specific audiences, evaluation approaches, ethics, and communication inequalities. We will also explore the use of digital technologies and social media platforms, entertainment education, popular media, and social marketing in delivery of public health communication interventions.

1 Course Unit

COMM 3390 Critical Perspectives in Journalism
This course aims to provide students with a critical understanding of journalism. It combines theoretical perspectives on the making of news with primary source material produced by and about journalists. Students will analyze theoretical material on journalism -- about how news is made, shaped, and performed -- alongside articles and broadcasts appearing in the media, interviews with journalists in the trade press, and professional reviews. Topics include models of journalistic practice, journalistic values and norms, gatekeeping and sourcing practices, storytelling formats in news, and ethical problems related to misrepresentation, plagiarism, and celebrity.
Spring
1 Course Unit

COMM 3400 Peace Communication: The Use and Abuse of Comm in Intergroup Conflict (SNF Paideia Program Course)
Why are conflicts between groups of humans so tragically predictable? What drives us to exclude, demean and fight with members of other groups? And what can we do about it? In this class, we will examine the biological roots of intergroup conflict between religious, ethnic and political groups, and take a critical view of the ways in which psychology and communication have been employed to help foment or transcend conflict. In the first part of the course, we will examine the theoretical work from intergroup psychology. In the second part of the course, we will examine the specific biases that drive conflict (e.g., stereotypes, prejudices, dehumanization) and how they are measured using both explicit self-report and implicit measures (e.g., physiology, neuroimaging); in the third part, we will explore the interventions that have been demonstrated to work (and fail) to decrease intergroup conflict. No prior experience in psychology or neuroscience is required.
The course is lecture-based, but will include class discussions and in-class activities.
Not Offered Every Year
1 Course Unit

COMM 3450 Adolescence and Media
How are adolescents represented in media and what effects do these portrayals have on developing teens? What makes adolescents a “jackpot market” to be targeted by advertising and how can they be swayed by mediated public health efforts to encourage health-promoting behaviors? Finally, what does the increasingly mediated nature of everyday life mean for adolescents, their friends, and their families during their journey into adulthood? We will explore these questions by reading key empirical studies and by critically analyzing film, music, and public service announcements portraying and/or targeting adolescents from the 1950s to the present day.
Not Offered Every Year
1 Course Unit

COMM 3510 Media and Migration in the 21st Century
This seminar examines how media represent the lives and journeys of people who migrate from the Global South. We explore how migrant stories are framed and circulated across different media networks and we address how public perceptions of migrants shift based on factors such as gender, race, class, and disability. We also consider the affordances and pitfalls of heightened visibility when migrants turn to new media to represent themselves and advocate for rights and recognition. Course materials will include different types of non-fiction media (documentaries, news reports, online content, social media posts) created by a variety of stakeholders (e.g., corporate newsrooms, governments, NGOs, migration activists).
1 Course Unit

COMM 3600 Understanding the Political Economy of Media
This course has two aims. First, assuming that communications are central to any society, it situates media systems within larger national and international social relationships and political structures. Second, this course critically examines the structures of the communication systems themselves, including ownership, profit imperatives, support mechanisms such as advertising and public relations, and the ideologies and government policies that sustain these arrangements. Considering case studies ranging from traditional news and entertainment media to new digital and social media, the course provides a comprehensive survey of the major texts in this vibrant sub-field of media studies.
Not Offered Every Year
1 Course Unit
COMM 3650 Media, the Apocalypse, and the Undead
Global media industries have long been fascinated with the idea of the apocalypse, particularly humanity's attempts at survival against (seemingly) mindless hordes. Whether in the form of zombies or infected masses, cultural industries' preoccupation with humankind's collapse - and potential resilience - has led to lucrative film, comic, and television franchise universes. Using texts from around the world, including - but not limited to - The Night of the Living Dead, The Walking Dead, Black Mirror, Reality Z, Dead Set, KL Zombie, The Road, Ravenous, Bird Box, Train to Busan, Kingdom, Adventure Time, and The Girl with all the Gifts, this course invites students to explore the ways in which media and cultural industries seek to define human existence through the Otherness of the undead/infected. Central to the course will be an examination of the ways in which post-apocalyptic portrayals of human survival amidst rampaging hordes include important commentaries and subtexts about race, gender, power, and class, as well as the connections to a political moment or era.
Not Offered Every Year
1 Course Unit

COMM 3670 Communication in the Networked Age
Communication technologies, including the internet, social media, and countless online applications create the infrastructure and interface through which many of our interactions take place today. This form of networked communication opens new questions about how we establish relationships, engage in public, build a sense of identity, promote social change, or delimit the private domain. The ubiquitous adoption of new technologies has also produced, as a byproduct, new ways of observing the world: many of our interactions now leave a digital trail that, if followed, can help us unravel the determinants and outcomes of human communication in unprecedented ways. This course will give you the theoretical tools to critically analyze the impact that networked technologies have on social life and inform your assessment of current controversies surrounding those technologies.
Not Offered Every Year
1 Course Unit

COMM 3670 Comparative Journalism
This course explores the relationship between journalism and philosophy by examining particular issues in epistemology, political philosophy, ethics, and aesthetics. Topics will include: the concept of a "fact"; the role of the press in the state; whether journalists (like doctors and lawyers) operate according to specialized "professional" ethics; and the limits of journalism as a literary or visual genre. Course readings will include philosophical texts, breaking print journalism, and blogs that specialize in media issues.
Spring
1 Course Unit

COMM 3750 Black Geographies: Race and Visual Culture
What is the relationship between the Flint water crisis, the hyper-policing of racialized people, and the increased surveillance of neighborhoods deemed "poverty-stricken" or "at risk"? How do regimes of security, surveillance, policing, and forms of violence depend upon the concept of "risk" as central to their operation? How is risk informed by systemic racism and forms of anti-Blackness? How does visual culture (e.g., media coverage, documentary photographs, etc.) inform how we come to see and define certain people, communities, and ways of life as "risky"? How have those living in racialized geographies of "risk" found ways to live in, make do, and challenge the faulty narratives of risk? This interdisciplinary course will examine critical debates and key moments—historical (e.g., MOVE bombing in Philadelphia) and contemporary (e.g., Ferguson riots)—that have informed the concept of risk. Over the course of the semester, we will read scholarly texts and engage with objects such as archival documents, photographs, conceptual art, performance art and installations, journalistic texts, and films. This communications course will be approached from a cultural studies perspective, with particular attention to race, gender, and sexuality.
1 Course Unit

COMM 3770 Philosophical Problems of Journalism
This course explores the relationship between journalism and philosophy by examining particular issues in epistemology, political philosophy, ethics, and aesthetics. Topics will include: the concept of a "fact"; the role of the press in the state; whether journalists (like doctors and lawyers) operate according to specialized "professional" ethics; and the limits of journalism as a literary or visual genre. Course readings will include philosophical texts, breaking print journalism, and blogs that specialize in media issues.
Spring
1 Course Unit

COMM 3780 Comparative Journalism
Is journalism the same all over the world? Do press systems and practices differ in fundamental ways that affect how we evaluate them politically, morally, aesthetically, epistemologically, and economically? Where does U.S. journalism fit among the models? This undergraduate seminar will introduce students to concrete differences in journalism around the world, but it won't only be an empirical look at how various press systems operate. We will also examine and argue about which journalistic practices and systems work best for which purposes, and explore the distinctive journalistic and philosophical assumptions and histories that undergird diverse practices and systems. Asian, European, African, and Mideast journalism will all be attended to.
Not Offered Every Year
1 Course Unit
COMM 3880 Ritual Communication
This course explores the power of ritual in contemporary culture. We examine how rituals help forge and strengthen social groups, be they generational, ethnic, religious, familial, regional, professional and/or institutional. We also consider how rituals create and communicate boundaries between “us” and “them” and between “desirable” and “deviant” behaviors. Students will have the opportunity to examine a diverse range of case-studies, from quinceañeras to rodeos, from weddings to reunions. We will explore rituals that unfold at the local level (proms, Thanksgiving dinners), as well as those that most of us experience only in mediated form (Oscars, Super Bowls, Presidential Inaugurations). We will also consider the profoundly disruptive impact of Covid-19 on ritual and explore the creative ways in which people hastily improvised online versions of vital rites of passage. From Gathertown graduations to Zoom memorials, the rapid rise of virtual rituals during the pandemic confirms their fundamental importance to our everyday lives and identities. Students in this interactive course will get to select their own ritual foci, will gain hands-on experience conducting original fieldwork, and will learn how to develop and present compelling research proposals.
1 Course Unit

COMM 3890 Black Visual Culture and Its Archives
This undergraduate seminar examines the intersections of visual culture and race in the United States. It aims to provide a historical, cultural, and visual foundation for understanding the representation of and by Black people from the 19th to the 21st centuries, including texts such as, but not limited to, photography, film, television, conceptual art, and performance. Students will be introduced to critical concepts in the field of visual studies, black studies, communication, cultural studies, and rhetorical studies. The course will pay special attention to concepts such as Blackness, visibility, visibility and invisibility, surveillance, photographic theory, the gaze, and spectatorship. We will consider questions such as: What is “black visual culture”? What are its archives? How is Blackness produced, represented, and negotiated through visual modes? In what ways does Blackness and Black people challenge, refract, and rewrite the various visual modes that have sought to represent it? The course will explore various theoretical and methodological approaches to answering the aforementioned questions and enable students develop their own questions for understanding the complex ways in which race and the visual have been, and continue to be, entangled.
1 Course Unit

COMM 3940 India on Screen: How Global Media Industries Shape Culture and Politics
This course offers an overview of media, culture, and society in contemporary South Asia and the South Asian diaspora worldwide. Engaging with a diversity of media forms and cultures across the subcontinent – Hindi and regional-language cinemas, television, podcasts, social media platforms, and streaming video – we will explore what the histories of media technologies and the production, circulation, and consumption of media reveal about cultural and political developments in South Asia and the South Asian diaspora worldwide. Readings and assignments are designed to help students situate media technologies, forms, and artifacts in relation to broader political-economic, social, and cultural issues involving nationalism, religion, caste, gender, and sexuality.
1 Course Unit

COMM 3950 Communication and the Presidency
This course examines the vital aspect of communication as a tool of the modern Presidency. Reading and class discussions focus on case studies drawn from modern Presidential administrations (beginning with FDR) that demonstrate the elements of successful and unsuccessful Presidential initiatives and the critical factor of communication common to both. This course is also an introduction to primary research methods and to the use of primary research materials in the Presidential Library system.
Two Term Class, Student may enter either term; credit given for either 1 Course Unit

COMM 3970 New Media and Politics
This course examines the evolving media landscape and the political process from three perspectives: 1) the voter, 2) political campaigns and candidates, and 3) the evolving and expanding media environment. The course opens with a broad overview of the main theories of political communication and a historical review of the role played by new media technologies in U.S. political campaigns leading up to 1996, the year the internet debuted in presidential campaigns. The course then follows this evolution from the 1996 presidential campaign to the present. We will take a deep dive into the landmark changes brought on by new media technologies to mobilize, persuade, inform, and fundraise around modern presidential campaigns. Students will gain an understanding of the shifting role of social media and Big Tech as it relates to political content moderation, misinformation, campaign speech/ads, laws governing voting, measuring public opinion, media coverage and participation.
Not Offered Every Year
1 Course Unit

COMM 3991 Special Topics in Communication
Special topics course covering a variety of topics in communication. A detailed course description can be found in the Section Details area of the term offering, or by visiting the Annenberg School for Communication website: https://www.asc.upenn.edu/undergraduate/courses.
Not Offered Every Year
1 Course Unit

COMM 3999 Independent Study
The independent study offers the self-motivated student an opportunity for a tailored, academically rigorous, semester-long investigation into a topic of the student’s choice with faculty supervision. Students must complete and file a designated form, approved and signed by the supervising faculty member and the Associate Dean for Undergraduate Studies. This form must be received by the Undergraduate Office before the end of the first week of classes in the semester in which the independent study will be conducted.
1 Course Unit

COMM 4040 Media and Politics
Media and Politics will examine multiple issues specific to the past and present political media environment in the United States. Focus will be primarily, though not exclusively, on the contemporary news media. Topics covered will include political primaries, how elections have been influenced by the rise of partisan media, selective exposure, freedom of political speech as it relates to elections, the theoretical purpose of elections, money and media, political targeting, etc. We will also explore the quantitative and qualitative methods underlying what is and is not known about how elections work. Under the supervision of the professor, students will write an original research paper examining a specific topic in greater depth.
Not Offered Every Year
Also Offered As: PSCI 2208, PSCI 4208
1 Course Unit
COMM 4050 Media, Public Opinion, and Globalization
This seminar will examine American attitudes toward globalization and the role of the media in shaping public opinion toward events and people beyond our borders. Students will participate in original research on attitudes toward issues tied to globalization such as immigration, international trade, support for international organizations, isolationism, and so forth. Students will also spend time systematically studying the implications of American media coverage of these issues.
Not Offered Every Year
Also Offered As: PSCI 4209
1 Course Unit

COMM 4070 Understanding Social Networks
Digital technologies have made communication networks ubiquitous: even when we can’t really notice them, they mediate most aspects of our daily activities. Networks, however, have always been the backbone of social life: long before Facebook, Twitter, Snapchat, or other similar platforms, communication created channels for information diffusion that linked people in myriad other ways. Through letters, commerce, or simply face to face interactions, people have always been exposed to the behavior of others. These communicative ties embed us into an invisible web of influence that we can make tangible and analyze. This course will teach you how to map those connections in the form of networks, and how to study those networks so that we can improve our understanding of social life. The goal is to help you grasp the consequences of connectivity, and how small changes in the structure of our ties can lead to big differences in how networks behave.
Not Offered Every Year
1 Course Unit

COMM 4110 Communication, Activism, and Social Change
This course examines the communication strategies of 20th and 21st-century social movements, both U.S. and global. We analyze the communication social movements create (including rhetorical persuasion, art activism, bodily argumentation, protest music, media campaigns, public protest, and grassroots organizing), and the role of communication in the identity formation, circulation, and efficacy of social movements. We also consider the communication created by forces seeking to undermine social change, define the study of social movements from a communication perspective, identify major historical and contemporary movements, and apply theories of communication and social change to “real world” activism. Students are required to research and design their own social movement campaign.
Not Offered Every Year
1 Course Unit

COMM 4230 Communication and Social Influence Laboratory
Considerable resources are devoted to constructing mass media campaigns that persuade individuals to change their behavior. In addition, individuals powerfully influence one another without even knowing it. Still, our ability to design and select optimal messages and interventions is far from perfect. This course will review investigations in social and cognitive psychology and communication sciences that attempt to circumvent the limits of introspection by using biological and implicit measures, with particular focus on neuroimaging studies of social influence and media effects.
Not Offered Every Year
Prerequisite: COMM 2750
1 Course Unit

COMM 4280 Conventions, Debates, and Campaigns
Offered every four years to coincide with the U.S. presidential election cycle, this course focuses broadly on the Democratic and Republican national conventions and the post-conventions campaign lasting until election day. Seminar members will attend either one or both conventions in order to make a close study of the convention process as well as the role of the convention in launching the two major party nominees. Students will explore how political appeals are fashioned and presented; how campaign themes develop; how efforts are split between persuading the electorate versus mobilizing the party faithful; the role of political parties, non-governmental organizations (NGOs), and political action committees (PACs); how the campaigns forecast governance and serve American democracy. Students will produce comprehensive group reports on the conventions, debates, or major aspects of the unfolding campaigns.
Not Offered Every Year
1 Course Unit

COMM 4320 Digital Inequalities
Digital information and communication technologies are intertwined with our everyday lives, from banking, to working, and dating. They’re also increasingly crucial parts of our most powerful institutions, from policing, to the welfare state, and education. This course examines the ways that these technologies combine with traditional axes of inequality like race, gender, and class in ways that may deepen social inequality. We’ll consider major approaches to understanding digital inequalities and apply them to case studies of both problems and solutions. Students will learn to critically analyze policies and programs from a variety of perspectives, and to evaluate the promise of digital technologies against their potential perils.
Fall
1 Course Unit

COMM 4360 Data Literacy in the Algorithmic Society
Algorithms regulate many areas of social life: they shape the information you see online, how resources are allocated, or how hiring and matching happen in private and public settings. In these and many other examples, algorithms rely on data informing the automated decisions they encode. Our ability to think critically about that data is, thus, paramount to understanding how the algorithms operate. In this course, we will discuss how data is transformed into information and actionable knowledge. You will learn how to question data to ensure their validity, reliability, and representativeness. Understanding how data are collected, analyzed, and used is key to being able to demand transparency in automated decision-making, and to exercising our democratic role of demanding accountability when decisions are made based on questionable data.
1 Course Unit
COMM 4460 Media Industries and Nationalism (SNF Paideia Program Course)
Media institutions have long played a central role in constructing national identity, particularly in the era of nation-states. As globalization increases, media industries have also helped countries project their national identities – and nationalism – for both domestic and international audiences. With contemporary nationalist movements in the spotlight, this course examines how media institutions and cultural industries help to shape nationalism while framing in-group/out-group dynamics for audiences. This course examines case studies in mediated nationalism, paying particularly close attention to – but not limited to - countries such as the United States, the United Kingdom, Brazil, China, Hungary, Israel, India, Russia, Sri Lanka, Turkey, and Ukraine. Using Benedict Anderson's idea of imagined communities as a theoretical basis, this course seeks to investigate how media industries affirm – and occasionally challenge – nationalistic sentiment, and how much of a role state intervention has played in the production of media texts. This course provides students with an understanding of the deep connection between media institutions and state-sponsored/populist nationalist movements, as well as the dynamics that shape nationalism in both wartime and peacetime eras. This course will also help students engage in constructive dialogue on the impact of nationalism domestically and internationally, while interacting with scholarship and speakers representing a wide range of viewpoints. Students will have an opportunity to learn more nuanced understandings about the ways in which nationalism and media intersect, reflecting the ideological, social, geographic diversity of what it means to be a part of community and nation.
Not Offered Every Year
1 Course Unit

COMM 4590 Social Networks and the Spread of Behavior
This course explores the nature of diffusion through social networks, the ways networks are formed and shaped by social structures, and the role they play in health behavior, public policy, and innovation adoption. Topics include: the theory of social networks; the small world model of network structure; constructing models to represent society; the social bases of the adoption of innovations and the spread of new ideas; the role of social networks in controlling changes in public opinion; the emergence of unexpected fashions, fads, and social movements; and the connection between social network models and the design of public policy interventions. Students will learn how to use the agent-based computational modeling tool "NetLogo", and they will work directly with the models to understand how to test scientific theories. We will examine the basic theory of social networks in offline, face-to-face, networks, as well as the role of online networks in spreading new ideas and behaviors through social media. Long standing debates on the effects of social networks on changing beliefs and behaviors, their impact on social change, and ethical concerns regarding their potential manipulation will be given careful consideration throughout. Students will be taught new skills that will enable them to use and develop their own agent-based models.
Not Offered Every Year
Prerequisite: (COMM 2100 OR HSOC 2002 OR INTR 3500 OR MKTG 2120 OR SOCI 2000 OR URBS 2000)
1 Course Unit

COMM 4630 Surveillance Capitalism
Surveillance capitalism is a term academics and policymakers increasingly use to describe the world in which we live: where businesses track and classify individuals in order to decide how to sell to them, or whether to sell to them at all. Companies that millions of people turn to every hour such as Google, Facebook, Amazon, Target, Walmart, and Pandora use the technologies of surveillance capitalism to drive their revenues. Critics point out that these activities are intimately bound with issues of discrimination and reputation. The "big data" analyses (often powered by artificial intelligence) may affect the ads people see, the discounts they receive, the jobs they may get offered, and far more. This course surveys the history of surveillance capitalism, how it works, and the key issues swirling around it. Students will write short (350 word) essays about each reading that will be key contributors toward their grades. Students will also a conduct research and write a paper that explores a contemporary or historical topic related to surveillance capitalism.
Not Offered Every Year
1 Course Unit

COMM 4640 The Industrial Construction of Audiences
This course will explore the ways in which media companies, advertisers, and the ratings and/or analytics firms they hire (Nielsen, ComScore, Liveramp, 84.51*, Experian etc.) count, track, estimate, and label the people who make up their audiences. The descriptions they present are industrial constructions in the sense that they are portrayals of population segments and individuals that are based on data; they may or may not reflect the views that the populations or individuals have of themselves. The class will explore how internet giants such as Google, smaller internet firms such as The New York Times, multimedia companies such as NBC-Universal, connected TV manufacturers such as Vizio, and supermarkets such as Kroger construct their audiences. We will discuss the controversies such activities engender, and the possible implications the industrial constructions of audiences have for society as well as media industries.
1 Course Unit

COMM 4797 Honors & Capstone Thesis
The senior thesis provides a capstone intellectual experience for Honors students and Communication and Public Service Program (ComPS) participants. Students conduct a primary research study on a communication-related issue over the course of two semesters. Students should consult with and arrange for a faculty supervisor no later than the summer before senior year. Students must also file a designated form and topic statement, approved and signed by the supervising faculty member, no later than the first day of class. Required of all students planning to enroll in COMM 4897 or COMM 4997 in the Spring. All Honors students must have a 3.5 cumulative GPA at the end of junior year for eligibility. See the Annenberg website for complete eligibility requirements.
Fall
1 Course Unit
COMM 4897 COMPS Capstone Thesis
Second semester of two semester thesis course. Successful completion of COMM 4797 is required for enrollment. The capstone thesis is a requirement for all Communication and Public Service Program participants. Students complete the primary research project started during COMM 4797. For students graduating with a 3.5 cumulative GPA after completing COMM 4897 with a grade of 3.7 or higher, the capstone thesis may be designated as a senior honors thesis in communication and public service.
Spring
Prerequisite: COMM 4797
1 Course Unit

COMM 4991 Special Topics in Communication
Special topics course covering a variety of topics in communication. A detailed course description can be found in the Section Details area of the term offering, or by visiting the Annenberg School for Communication website: https://www.asc.upenn.edu/undergraduate/courses.
Not Offered Every Year
1 Course Unit

COMM 4997 Senior Honors Thesis
Second semester of two semester thesis course. Completion of COMM 4797 with a grade of 3.3 or higher and a 3.5 cumulative GPA at the end of the Fall semester of senior year are required for enrollment. The Senior Honors Thesis provides a capstone intellectual experience for students who have demonstrated academic achievement of a superior level. Students complete the primary research project started during COMM 4797.
Spring
Prerequisite: COMM 4797
1 Course Unit

COMM 5000 Proseminar
Introduction to the field of communications study and to the graduate program in communications. Required of all degree candidates. Open only to graduate students in communication.
Fall
0 Course Units

COMM 5220 Introduction to Communication Research
The logic of scientific inquiry and the nature of research. Hypothesis development, research design, field and laboratory observation and experimentation, measurement, interviewing and content analysis, sampling, and basic statistical analysis. Required of all degree candidates. Open only to graduate communication students.
Fall
1 Course Unit

COMM 5230 Qualitative Ways of Knowing
How do social scientists create new knowledge? What are the qualitative processes and philosophies of knowing for communication scholars? This course provides students with a range of theories and frameworks for gathering data and developing claims, as well as understanding the limits of social science inquiry. Key areas of focus are identifying research questions, research ethics, understanding evidence, making causal claims and scholarly writing. COMM 5230 is required of all degree candidates and open only to graduate communication students.
Not Offered Every Year
1 Course Unit

COMM 5250 Introduction to Political Communication
This course is designed as a PH.D.-level introduction to the study of political communication, and is recommended as a foundational course to be taken early in ones course of study for students interested in political communication as a primary or secondary area of research and teaching. As an introduction to the field it is structured to cover a wide-range of topics and approaches, including media institutions and the effects of both mass mediated and deliberative communications. While no single course can provide comprehensive coverage of a subfield with as long and diverse a history as political communication, our hope is that you will leave this course with a strong grasp of the major theories, trends, methods, findings and debates in this area of study, as well as the gaps in our knowledge and promising directions for future research.
Not Offered Every Year
1 Course Unit

COMM 5300 Advertising and the Digital Age
It is impossible to understand the development of the contemporary digital era without understanding the role played by the advertising industry, broadly the understood. From the launch of first popular web browsers in the mid-1990s, various forms of marketing communication have shaped the most popular activities-from search to social to apps-and redefined the ways companies think about individuals in society. The aim of this course is to study these developments historically and contemporaneously. First we will range across the history of advertising and its related social force, consumerism, through the late 20th century. We will next investigate the forces that guided the rise of the internet as a commercial medium in the face of an earlier ethic that decried that very idea. Then we will dive into the ways marketers attempt to guide the internet and other digital media to their benefit by exploring a range of key contemporary activities: the rise of the smartphone as a marketing device, programmatic advertising, personalization strategies, location and cross-platform targeting and attribution, online retailing, the responses of brick and mortar retailers, advertisers’ roles in the cratering of print media, native advertising/branded content, the rise of “influencers,” and the transformation of “television” as a product, an activity, and an industry. We will read industry documents and other materials to assess how all these activities actually “work” and what drives them. Then we will consider their societal implications through a variety of lenses, including surveillance, privacy, pluralism, and democracy.
Not Offered Every Year
1 Course Unit

COMM 5400 Discourse Analysis
Discourse Analysis examines both verbal and non-verbal communication to explore the making of claims of meaning, truthfulness, and authority, in everything from political speech to advertising to scientific reports. The course presents a range of methods and theoretical frameworks for analyzing discourse in a wide variety of social contexts (journalistic, legal, political, medical, familial). Readings and exercises draw from theories of signs, symbols, gestures, and language to analyze communicative acts and events. The goal of the course is to provide a solid grounding in the theories of speech, writing, symbols, and images, and to survey a broad array of empirical studies that have grown out of these theoretical frameworks. The course is appropriate for graduate students and advanced undergraduates.
Also Offered As: SOCI 5400
1 Course Unit
COMM 5530 Research Seminar on Computational Social Science
This is a graduate research seminar in which top researchers in the field of Computational Social Science will present cutting-edge research. Our focus will be on carefully reading the speaker’s work, and discussing in detail their theoretical models, empirical methods, and overall scientific contribution. Participants will also present in the seminar, which will help to prepare them for professional presentations of their work at conferences and job talks.
Fall or Spring
1 Course Unit

COMM 5610 Cultural Sociology
Studies culture as values, scripts, practice, performance, and style in the contexts of everyday life, social class, and status groups, social movements, and changes of communication technologies. Approaches politics, society, institutions, identities, and social change as dynamic processes and complex interactions at both micro/meso and meso/macro levels. Examines the production, reception, circulation and effects of signs, symbols, and stories. Readings include both classic authors (Elias, Simmel,Bakhtin, Goffman, Foucault, Bourdieu, Raymond Williams, etc.) and contemporary works from sociology and communication studies.
Not Offered Every Year
Also Offered As: SOCI 5610
1 Course Unit

COMM 5630 Doing Media Studies: Theories, Frameworks, and Methods
This seminar provides an introduction to theoretical and methodological developments in media and critical-cultural studies from the 1960s until the present. We will examine how a range of theoretical frameworks and methods that are central to media and communication research – textual and discourse analysis, ethnographic techniques, archival and historical research, memory studies, science and technology studies, postcolonial studies, and so on – emerged in conversation with broader philosophical and theoretical debates across the humanities and the social sciences. Taking a comparative approach – reading scholarship that addresses a range of media forms and technologies, cultural contexts, and historical periods – we will map the development of the field by exploring four distinct but overlapping terrains: ‘texts’ and discourses; audiences, users, and publics; industries and institutions; and media history and historiography. Throughout, we will pay close attention to research design, the promises and limits of various qualitative and interpretive research methods (in-depth interviews, participant observation, close reading, etc.), and most importantly, connections and disjunctures across theoretical frameworks, types of evidence, and narrative style and argumentation.
1 Course Unit

COMM 5750 Social Psychology of Communication
Contributions of social psychology to understanding communication behavior; message systems; social cognition; persuasive communications; attitude formation and change; face-to-face interactions and small group situations; strategies of attributional and communicative interpretation; mass communication effects; social influence and networks.
Fall or Spring
1 Course Unit

COMM 5770 Attitude & Behavior Prediction
This course surveys classic and contemporary theory and research in the area of attitude formation and change and examines the principles of social information processing that underlie attitudes. We cover some of the basic concepts of the psychology of attitudes, including attitude structure and measurement at both conscious and unconscious levels. After this introduction, we will review persuasion approaches, the role of affect and fear in communication, influences of past behavior, to finally turn to models that explain behavioral change and allow researchers and practitioners to design ways of modifying recipients’ actions.
Not Offered Every Year
1 Course Unit

COMM 5800 Global Digital Cultures
What do histories of media technologies and the production, circulation and consumption of media artifacts reveal about cultural and political developments across the postcolonial world? What happens when media and communication technologies become the site of intelligibility instead of serving as a conduit for investigating some other question(s) (globalization, nationalism, secularism, etc.)? What new life-worlds come to the fore when we think the postcolonial world with digital media? With these broad questions in mind, this seminar offers a critical introduction to the unfolding impact of digitalization across the postcolonial world. Situating digital infrastructures and platforms in relation to diverse media forms and cultures across print, national and regional cinemas, television, and pirate and other non-formal media circuits, readings and assignments are designed to help students locate the digital turn in relation to broader political-economic, social, and cultural forces that transformed the ‘rest of the world’ beginning in the 1980s. Drawing on scholarship from global media and communication studies, cultural studies, postcolonial studies, cultural anthropology, and science and technology studies, we will adopt a trans-regional and connected histories approach to examine how digital media are positioned in relation to existing media infrastructures, changing urban environments, the ongoing transformation of established sound and screen industries, and emergent forms of everyday media practice and use that are reconfiguring socio-cultural, political, and economic terrains. From massive state-driven digital identity projects to YouTube influencer cultures, from Twitter and primetime television to WhatsApp and political rumors, readings and discussions will reflect on enduring concerns of representation, identity, and power while grappling with logics of algorithmic curation, datafication, and user-participation.
1 Course Unit

COMM 5940 Introduction to Networks
Much of what we think and do is shaped by social interactions, by the behavior we see in other people, or the information we receive from them: we pay attention to what our friends or we monitor news through the feeds of social media, and we are more likely to use technologies already embraced by other users. Networks are behind those (and, by extension, most) dimensions of social life. They offer the language to capture the invisible structure of interdependence that links us together, and the means to analyze dynamics like diffusion, influence, or the effects of media in an increasingly diverse information environment. The aim of this course is to introduce networks and the relational way of thinking. Students will gain the necessary literacy to read, interpret, and design network-based research; learn how to go from concepts to metrics; and draw and interpret networks through the lens of substantive research questions. We will pay equal attention to the theory and the empirics of network science, and set the foundations for more advanced work on networks.
Fall or Spring
1 Course Unit
COMM 5980 Special Topics in Communication
Special topics course covering a variety of topics in communication. A detailed course description can be found in the Section Details area of the term offering, or by visiting the Annenberg School for Communication website: https://www.asc.upenn.edu/graduate/courses
Spring
1 Course Unit

COMM 6000 Advocacy in Emergent Technology, Digital Media and Society
This course is designed to build a critical foundation for understanding the interplay of digital technologies and society and the important role of advocates in this space. Providing an overview of the history, students will investigate and critique contemporary emergent technologies in a social context, and explore their use in advocacy efforts. The course uses interactive lecture, discussion, readings, and guest speakers from technologists in the field.
Fall
Also Offered As: SSPP 6000
1 Course Unit

COMM 6010 Contemporary Sociological Theory
This is a graduate-level course that will explore contemporary social theory with an emphasis on theories and theoretical orientations related to social interaction, identity, culture, and inequality. For example, we will discuss sociological theories from the last half century about race and racism, gender, social class, education, emotion, and violence. Importantly, we will consider theory in the context of its application to empirical social science research and real world concerns.
Not Offered Every Year
Also Offered As: SOCI 6010
Mutually Exclusive: SOCI 3010
1 Course Unit

COMM 6030 Journey to Joy: Designing a Happier Life for Social Work, Social Policy and Non-Profit Leadership Pr
What does joy really mean? Could joy be an intervention for complex trauma, pain, grief, and loss? How does joy show up in policy making and leadership? This innovative new course combines cutting-edge research, practical techniques, and real-world examples to help you understand the power of joy and develop community-informed, anti-racist strategies for promoting it. From exploring the latest in clinical intervention, popular ideas around manifestation, self-care, and #Blackjoy, to examining the role of technology and cultural differences, you will gain a culturally humble and comprehensive understanding of what it takes to design a happier life. This course includes a blend of immersive, hands-on activities, short lectures, and engaging reflexive discussions that will leave you feeling inspired and empowered. Whether you are social work, non-profit leader or social policy student, or someone who wants to increase their own experiences of joy and happiness, this course is a perfect way to jump start your journey to joy.
Fall
Also Offered As: SSPP 6030
1 Course Unit

COMM 6110 Neurobiology of Social Influence
Required prior experience: A graduate level statistics course and ability to read primary research articles in cognitive neuroscience. (No course prereqs, but students with less background may need to do supplemental work at the front end.) Description: Considerable resources are devoted to constructing mass media campaigns that persuade individuals to change their behavior and individuals exert powerful influence on one another without even knowing it. Still, our ability to design and select optimal messages and interventions is far from perfect. This course will review investigations in social and cognitive psychology and communication sciences that attempt to circumvent the limits of introspection by using biological and implicit measures, with particular focus on neuroimaging studies of social influence and media effects.
1 Course Unit

COMM 6120 Meaningful Measures in a Data-Driven World
Knowledge cannot proceed without observing and measuring. And knowledge is necessary to transform society. Today we can observe a larger share of behaviors, from the individual to the collective, but extracting scientific meaning from that data, and connecting that meaning with insights and applications, is still a challenge. New approaches to the management, use, and analysis of social data are required to transform new forms of quantification into meaningful understanding of human and social behavior. This seminar will discuss and evaluate new forms of data representation and the conceptual, computational, and ethical challenges they create. We will discuss how our theories can keep up with rapidly changing realities and our capacity to analyze those realities, focusing on the central principles of measurement and questions of access and ethics.
1 Course Unit

COMM 6150 Experimental Design and Issues in Causality
The main goal of this course is to familiarize students with experiments, quasi-experiments, survey experiments and field experiments as they are widely used in the social sciences. Some introductory level statistics background will be assumed, though this is a research design course, not a statistics course. By the end of the course, students will be expected to develop their own original experimental design that makes some original contribution to knowledge. Throughout the course of the semester, we will also consider how to deal with the issue of causality as it occurs in observational studies, and draw parallels to experimental research.
Fall or Spring
Also Offered As: PSCI 6350
1 Course Unit

COMM 6230 Health Psychology Seminar
Seminar members will critically review theory and research on communication, behavior, and health, with the goal of suggesting new directions that research might take. Theories of health behavior, methodological issues in health behavior research, and strategies to improve health-related behaviors, including sexual risk behaviors, physical activity, diet, and medication adherence, using a variety of approaches will be studied.
Not Offered Every Year
1 Course Unit

COMM 6300 Historical Trends of Mass Communication Research
An introduction into the field of mass communication research covering classic studies from the late 19th century through 1970s. Emphasis is on the societal, organizational, political, and other considerations that shaped the field.
Fall or Spring
1 Course Unit
COMM 6310 Social Cohesion in the Age of Social Media
Social media platforms have created an information infrastructure that decentralizes the curation of content, reinforces selective exposure to like-minded sources, and offers very loose moderation policies to govern interactions. As a result, social media platforms have created an environment prone to conflict, polarization, incivility, and information disorders. But how much do we actually know about the role social media play in undermining social cohesion? Do social media reflect larger societal trends or is there something specific to these platforms that creates or aggravates conflict? Do the effects of social media vary by platform or by affordances within platforms? The goal of this seminar is to evaluate existing empirical evidence about the role social media plays in eroding social cohesion, and to connect this evidence with ongoing policy discussions on how to regulate social media companies.

1 Course Unit

COMM 6370 Public Health Communication
Theories of health behavior change and the potential role for public health communication; international experience with programs addressing behaviors related to cancer, AIDS, obesity, cardiovascular disease, child mortality, drug use and other problems, including evidence about their influence on health behavior; the design of public health communication programs; approaches to research and evaluation for these programs.

Spring
1 Course Unit

COMM 6372 Public Health Communication Research and Evaluation in the Digital Age
This research seminar focuses on formative and evaluation research methods used to design and examine the effectiveness of public health communication interventions in the digital age. Students will learn about behavioral change theories and program planning frameworks used to inform communication intervention design; mechanisms of how communication interventions influence health behaviors; formative research used in determining targeted beliefs, message themes, and message effectiveness; research designs to measure campaign exposure and effects. The course will emphasize unique affordances, ethical considerations, and limitations of communication interventions using digital technologies. We will explore these research topics across different settings, health issues, and populations including public health communication to promote vaccinations, tobacco cessation, mental health care utilization, cancer screening, healthy nutrition and physical activity among others.

1 Course Unit

COMM 6390 Communication and Cultural Studies
This course tracks the different theoretical appropriations of "culture" and examines how the meanings we attach to it depend on the perspectives through which we define it. The course first addresses perspectives on culture suggested by anthropology, sociology, communication, and aesthetics, and then considers the tensions across academic disciplines that have produced what is commonly known as "cultural studies." The course is predicated on the importance of becoming cultural critics versed in alternative ways of naming cultural problems, issues, and texts. The course aims not to lend closure to competing notions of culture but to illustrate the diversity suggested by different approaches.

Not Offered Every Year
1 Course Unit

COMM 6750 Message Effects
Current research, theory and statistical methods for assessing the effects of messages. Specific focus on messages designed to have a persuasive effect on attitudes, beliefs, opinions, or behaviors. Experimental and non-experimental research from mass and interpersonal communication, health, social psychology, advertising, political science and journalism will be considered. Unintended effects—such as the consequences of violent pornography—are not considered.

Not Offered Every Year
Prerequisite: COMM 5750
1 Course Unit

COMM 6840 Data Visualization for Research
Empirical research employs data to gain insights and build a theoretical understanding of the world. An appropriate visualization of data is key to illuminating hidden patterns and effectively communicate the main findings of research. This course will discuss the visualization strategies of published research, give recommendations of best practice, and discuss tips and techniques for specific research purposes (i.e. hypothesis testing, group comparison) and data structures, including temporal, geographic, and network data. The course will equip students with tools they can use to learn through visualization and to communicate more effectively their own research.

Not Offered Every Year
1 Course Unit

COMM 6990 Advanced Project in a Medium
Proposal written in specified form and approved by both the student's project supervisor and academic advisor must be submitted with registration. Open only to graduate degree candidates in communication.

Fall or Spring
1 Course Unit

COMM 7010 Introduction to the Political Economy of Media
This course has two aims. First, assuming that communications are central to any society, it situates media systems within larger national and international social relationships and political structures. Second, this course critically examines the structures of the communication systems themselves, including ownership, profit imperatives, support mechanisms such as advertising and public relations, and the ideologies and government policies that sustain these arrangements. Considering case studies ranging from traditional news and entertainment media to new digital and social media, the course provides a comprehensive survey of the major texts in this vibrant sub-field of media studies.

Not Offered Every Year
1 Course Unit

COMM 7020 Media, Capitalism, and Democracy
In this course we critically examine the complex and often-invisible relationships between political-economic structures and information/communication systems. Drawing from various schools of economic and democratic theory, we will explore historical and international case studies of how capitalism shapes media systems, infrastructures, and institutions. In doing so, we will interrogate how commercial logics affect media organizations' ability to provide for democratic society's communication and information needs. As we unpack and denaturalize the ideologies, imaginaries, and unexamined assumptions that undergird these relationships, we also will consider structural alternatives, always asking the utopian but necessary question: Is another media system possible?

COMM 7020 Media, Capitalism, and Democracy
In this course we critically examine the complex and often-invisible relationships between political-economic structures and information/communication systems. Drawing from various schools of economic and democratic theory, we will explore historical and international case studies of how capitalism shapes media systems, infrastructures, and institutions. In doing so, we will interrogate how commercial logics affect media organizations' ability to provide for democratic society's communication and information needs. As we unpack and denaturalize the ideologies, imaginaries, and unexamined assumptions that undergird these relationships, we also will consider structural alternatives, always asking the utopian but necessary question: Is another media system possible?

1 Course Unit
COMM 7060 Analysis of Election Data
This course is intended to serve as a workshop for students interested in the empirical analysis of elections, public opinion and political communication more generally. The centerpiece of the course will be an original research paper produced by each student on a topic of his or her own choosing. The requirements for these papers are fairly open, but demanding: the research papers must a) involve empirical analysis of a major election data set, b) be oriented toward answering an original research question selected with the guidance of the instructor, and c) aim to be of publishable quality. There are no formal prerequisites for the course. However, if you have less than two semesters of statistical training, and/or no formal background in the study of elections, public opinion or political communication, then this is probably not the right course for you. In order to be able to formulate an original research question, you need some background in the literature, which is provided by other courses, but is not a formal part of this course.
Fall or Spring
Also Offered As: PSCI 8050
1 Course Unit

COMM 7100 Rhetorical Criticism
Drawing on the 2008 election for materials, the course will focus on two themes: the relationship between the rhetoric of presidential campaigns and the rhetoric of governance and the rhetorical role of biography, age, race, and gender in the construction of a candidate’s political identity. 1 Course Unit

COMM 7150 Political Communication
This course examines the role of political communication in influencing political attitudes and behaviors. Because of the broad prerequisites of the topic, course readings and lectures will be interdisciplinary, drawing on research in sociology, history, psychology, political science and communication research. There are two primary goals for the course. One goal is to acquaint graduate students with the wide-ranging literature on political communication. A second major goal is to stimulate ideas for original research in the field of political communication. Toward this end, by the end of the semester students will be expected to be sufficiently familiar with the field to propose original studies on topics of their choosing. The formulation of an original research question and research design will be an important component of the final examination.
Not Offered Every Year
Also Offered As: PSCI 7150
1 Course Unit

COMM 7220 Theories and Methods in Qualitative Research
The objective of this course is to ensure that students have a grasp of the fundamental theories and methods of qualitative research. After spending time immersing ourselves in the metatheories that shape social science research, we will address ethical issues that emerge in all human subjects research (qualitative and otherwise), focusing primarily on responsible treatment of participants and their data. Then we will work through a series of research techniques, including semi-structured interviews, focus groups, ethnography, discourse analysis and participatory mapping. With the goal of providing practical instruction on qualitative methods and a grounding in theoretical issues, this course is meant to prepare studies for conducting a broad range of qualitative research projects in communication and media studies.
Not Offered Every Year
1 Course Unit

COMM 7270 Evaluation of Communication Campaigns
The various roles of research in campaign work: foundational research, formative research, monitoring research, summative evaluation research, policy research. The place for a theory of campaign effects. The ethics of evaluation research. Alternative designs, measurement, statistical, and analytic approaches.
Fall or Spring
1 Course Unit

COMM 7390 Collective Memory and Journalism
How do understandings of the past impact what academics know? Collective memory has emerged as one of the most widespread, yet least understood, manifestations of contemporary culture. This course uses the study of collective memory to better explain the charting of disciplinary knowledge about journalism. Students will consider major theories and histories of collective memory and explore the ways in which they have taken shape as disciplinary approaches to journalism’s study. Considering disciplines as communities of memory, whose participants gravitate toward codified ways of approaching problems, issues and events, the course uses the idea of shared memory as a way to explain and evaluate how the academy develops and legitimates knowledge, how the past is strategically used to drive engagements with the present, and how simplified notions from the past stand in for complicated phenomena of the present. The course aims to develop student familiarity with the vagaries of collective memory, the workings of the academy, and the frames for understanding the study of journalism, all with an eye to improving students’ skills as cultural critics on a variety of topics.
1 Course Unit

COMM 7410 Media Effects Research Design
This course will include three components. Part one will focus on readings and lectures about media effects research design, with some emphasis on exposure measurement, and on constructing out-of-laboratory designs including natural and quasi experiments, longitudinal and time series designs and designs appropriate for evaluating persuasive campaigns. Part two will be case focused, asking for design critiques of current published research studies. Part three will provide an opportunity for development of designs relevant to students’ own interests.
Fall or Spring
1 Course Unit

COMM 7470 Media Effects Research Design
This graduate course will introduce students to key approaches to understanding digital inequalities across communication, media studies, and sociology. From divides in access and skills, to institutional and intersectional approaches, this emerging research area utilizes different types of theories about social inequalities and social scientific methods to understand novel issues arising in our increasingly digitally mediated society. Over the course of the semester, students will develop a research proposal that will prepare them to utilize and contribute to theory and methods discussed in the course.
1 Course Unit

COMM 7650 Digital Inequalities
This course examines the role of political communication in influencing political attitudes and behaviors. Because of the broad nature of the topic, course readings and lectures will be interdisciplinary, drawing on research in sociology, history, psychology, political science and communication research. There are two primary goals for the course. One goal is to acquaint graduate students with the wide-ranging literature on political communication. A second major goal is to stimulate ideas for original research in the field of political communication. Toward this end, by the end of the semester students will be expected to be sufficiently familiar with the field to propose original studies on topics of their choosing. The formulation of an original research question and research design will be an important component of the final examination.

With the goal of providing practical instruction on qualitative methods and a grounding in theoretical issues, this course is meant to prepare studies for conducting a broad range of qualitative research projects in communication and media studies.
Not Offered Every Year
1 Course Unit
COMM 7830 Describing Your Data
This course is for students who have collected empirical data and will explore ways of describing data for scholarly and translational purposes. For example, students will explore different ways to explore and visualize their data (e.g., a conference abstract vs. a blog post), present their data (e.g., a conference talk vs. a pop talk) and make their findings more reproducible. Students will also read scholarly work (oversampling, though not limited to work on media effects and the science of science communication) and critique their work in relation to what is known about effective communication and reproducibility. Students should come prepared to engage with art, science, and computer programming. Not Offered Every Year 1 Course Unit

COMM 7880 Research Seminar on Internet Experiments
In the last decade, new studies have used Web-based experimentation to identify previously unobservable features of communication networks - from processes of cumulative advantage, to the spread of innovations, to the emergence of cooperation. This course offers a deep-dive into the design, creation and execution of Web-based experiments. Students will learn the core principles of Web-based experimental design, which will prepare them to design their own Web-based studies. Students will learn the relationship between theory and methods through a careful analysis of the theoretical implications of past Web-based experiments (both in terms of their value for some scientific problems, and their limitations for others). To this end, students will explore Web-based experiments through the lens of the theories that motivate them. Discussions and assignments will focus on eliciting both the strengths and limitations of this approach with specific emphasis on identifying the scientific potential for new studies. Longstanding debates concerning the value of identification and replication in social science, alongside the relationship between theoretical models, observational data and experimental data, are given careful consideration throughout. Students will be exposed to new ways of conducting empirical research that will prepare them to design their own Web-based experimental studies. Not Offered Every Year 1 Course Unit

COMM 7999 Independent Research
Proposal written in specified form and approved by both the student's project supervisor and academic advisor or another member of the faculty must be submitted with registration. Fall or Spring 1 Course Unit

COMM 8010 Filter Bubbles, Long Tails, & Information Cascades: Methodology for a Fragmented Media Environment
Scholars and pundits have made many claims in recent years about the impact that digital technologies, and social media in particular, play in shaping access to political information and the formation of beliefs. However, all these claims rely on specific measurement instruments and research designs that are not always appropriately scrutinized or evaluated. This course will discuss the different analytical approaches that can be used to measure media consumption, selective exposure, bias, opinion formation, and the diffusion of information in the online media environment. Our goal is to assess the strength and weaknesses of different research designs with an eye on how to best triangulate available evidence and advance in a cumulative fashion in this important research domain. Not Offered Every Year 1 Course Unit

COMM 8140 Doing Internet Studies
This is a project-based seminar with two key objectives: introducing students to core theories and methods in internet studies and completing a research project that uses digital media, broadly construed. Comprising many methods and research approaches, Internet studies is inherently interdisciplinary, and this course is designed to provide a practical set of guidelines for doing work in this diverse and growing field. Students will have a lot of independence in developing a final research project for the course they may work individually, in pairs or in small groups, and the final project can take the form of a research paper, an art project or a piece of long-form journalism, as long as these projects use both digital media and critical theory from internet studies. Not Offered Every Year 1 Course Unit

COMM 8150 Labor, Communication, and Technology
 Debates about the “future of work,” automation, and the working conditions of “on-demand” work have opened up new questions rooted in long intellectual lineages. This course introduces students to key theoretical perspectives and concepts in the study of labor, communication, and technology from the 19th and 20th centuries and examines their relevance to 21st century issues. We will examine the meaning of labor from Marxist, post-industrial, cultural, and sociological perspectives as well as the place of labor in communication scholarship. We will also examine the relationship between digital transformations of the workplace and new forms of surveillance, social stratification, and inequality. Not Offered Every Year 1 Course Unit

COMM 8370 The Meaning of Measures: Quantification, Culture, & Digital Technologies
It's been said that what's counted counts. Numbers and other measurements communicate meaning and create hierarchies of value. As such, measurement is a political act. From prices to ratings, risk scores to the 2020 Census, quantification projects surround our daily lives. This class will ask, how do numbers and other metrics communicate meaning throughout the social world? Specifically, we'll focus on the role of technologies and data in the process of quantification and the construction of cultural meaning and conflict about knowledge and truth. How do our ideas about data shape what we know about ourselves? How we seek to know others? This course will engage in an interdisciplinary conversation about the past and present of culture and quantification, from the cultural pre-history of "big data" technologies' appeals to objectivity and efficiency, to current conflicts over privacy and platforms. Not Offered Every Year 1 Course Unit

COMM 8370 The Meaning of Measures: Quantification, Culture, & Digital Technologies

How do our ideas about data shape what we know about ourselves? How we seek to know others? This course will engage in an interdisciplinary conversation about the past and present of culture and quantification, from the cultural pre-history of "big data" technologies' appeals to objectivity and efficiency, to current conflicts over privacy and platforms. Not Offered Every Year 1 Course Unit

COMM 8410 The Ethics of Forgetting: Media at Risk of Deletion
Digital information is continually being created and circulated, but it is also forgotten, deleted, and otherwise lost. Whether from the perspective of journalists, activists, artists, or academics, how do we deal with the deletion or loss of media? Where is information archived and what politics guide its organization, curation, and erasure? Where do our media live and die? This course begins with theories of institutional and individual archiving. It then moves to concepts of remediation and machine learning to complicate how information travels, data is stored, and archives are 'retrieved'. Finally, using case studies of arts-based digital archiving projects, the course focuses on the politics of forgetting media. Not Offered Every Year 1 Course Unit
COMM 8490 Labor in the Digital Economy
Long before the rise of platforms, scholars connected the role of media and communication technologies in the re-organization of labor. This course introduces students to key concepts and theories in the study of labor, communication, and technology from the 19th and 20th centuries and examines their relevance to 21st century issues. We will examine the ways that technological transformations have prompted scholars to reconsider the meaning and value of work, from Marxist, cultural, and feminist perspectives, as well as the place of labor in communication scholarship. Key areas of focus will include the relationship between digital transformations of the workplace and precarity, control, resistance, and inequality.
1 Course Unit

COMM 8510 Social Media and Political Information
Is social media good or bad for democracy? This seminar will unpack this question through the lens of empirical research casting light on how different actors create and consume content on social media - and the broader consequences of that content for political behavior. The discussion will center on current controversies, including the political impact of bots, the role of algorithms in radicalization dynamics, the susceptibility of different groups to misinformation, the consequences of incivility and hate speech, or the predominance of clickbait over factual news.
Not Offered Every Year
1 Course Unit

COMM 8520 It's About Time: Problematizing Time in Social Science Research
Human experience is characterized by a complex interplay of processes that play out across multiple timescales: from second to second, from week to week, and from generation to generation. We will critically examine an expansive literature touching on emotions, personality, media engagement, health communication, political communication, and more, all in the service of identifying notions of time that are often implicit in theories of human experience. In doing so, students will become accustomed to identifying and evaluating notions of change, accumulation, speed, timing, tempo, sequences, and applying the following questions to the topics they encounter in their everyday readings and their own research: What timescale(s) are addressed by a theory, either implicitly or explicitly? Is the timing of measurement matched to the timescale(s) over which phenomena are unfolding? Seminars will be accompanied by a data science laboratory in which students will gain hands-on experience in describing, visualizing, and analyzing intensive longitudinal data, data consisting of 5 or more repeated measures over relatively short (seconds, minutes, hours, days) timescales. Intensive longitudinal data are increasingly feasible to collect due to the widespread availability of smartphones and come with both data wrangling and analytic challenges as well as opportunities to operationalize complex, time-related concepts. Some familiarity with linear regression is recommended but not required.
Not Offered Every Year
1 Course Unit

COMM 8530 Gender, Media, and Culture
This course focuses on contemporary feminist theory as a site for the restructuring of knowledge, exploring the theoretical, methodological, and intersectional questions that arise when gender and race are placed at the center of study. This course is designed to historicize and conceptualize past and current developments, as well as recurrent themes and movements, in feminist methodology and theory, as well as to gain insight into the ways in which gender, and its intersections with race, ethnicity and class, is enacted, represented and mediated, and has an impact on cultural formations and communication. The course material provides an overview of feminist theories as they have developed in the West, especially the United States, with a particular emphasis on the period since the 1960s. It also suggests that we must consider feminism beyond the West in terms of global and transnational perspectives. It places works and scholars in conversation with others, both contemporaries who act and speak from other standpoints and predecessors who belong to the same tradition or trajectory.
1 Course Unit

COMM 8540 A Sociopolitical and Intellectual History of the Communication Field
This course combines close readings of canonized works as well as lesser-known scholarship with a critical sociology of knowledge. A key theme of the course is that to understand how our field evolved, we must understand the historical context and the power relationships that shaped its intellectual and ideological contours. Although we will include some contemporary criticism of the field's historical lacunae—especially along racial, gender, sexuality, and class lines—much of the course's emphasis will be placed on the field's development during the twentieth century. As a class, we will consider the relevance of research paradigms that emerged during the print and broadcast eras for today's digital age.
Not Offered Every Year
1 Course Unit

COMM 8550 Polarization and Partisan Discord
In this course we examine the nature, causes, and consequences of polarization and incivility. We pay special attention to the role that the media and information plays in exacerbating these problems, as well as ways in which technology can be redesigned to ameliorate incivility and polarization.
Not Offered Every Year
1 Course Unit

COMM 8580 CHANGE: Networks and Policy
This course explores the policy applications of current network theories of social influence and behavior propagation. The course is developed around the book CHANGE focusing on the specific shortcomings of existing policies and the development of new policy strategies for collective behavior change. Students will engage with current thinking on topics including: influencers, virality, stickiness, social norms, motivated reasoning, organizational change, partisan bias, group problem-solving, and political change. This course focuses on implementation and evaluation strategies for applying the theory of network diffusion to current policy problem such as: COVID-19 vaccination, sustainable technology adoption, political campaign mobilization, justice system reform, implicit bias in medicine, the spread of political and health-related misinformation, #MeToo and changing gender norms in organizations, and other important topics. Students will engage in "translational social science" by developing theoretically motivated solutions to concrete policy problems.
Not Offered Every Year
1 Course Unit
COMM 8590 Diversity and the End of Average
There are persistent inequities in academic experiences and careers between individuals from different demographic backgrounds. There are also differences in the extent to which certain groups of people are represented in our scholarship, preventing these groups from experiencing the benefits of our research innovations and, in turn, perpetuating inequity. The aim of this class is twofold. Seminar readings will provide insight into the long history of inequity, discrimination against, and lack of representation of groups marginalized because of their sex, gender, race/ethnicity, sexual orientation, socioeconomic status, intersectional identities, and more, that persists in our communities and our scholarship. A data science laboratory run in parallel with the seminar will introduce students to person-specific approaches to data collection, analysis, and intervention to provide students with a toolkit that allows them to circumvent approaches that rely on the presumption that empirical studies recruiting diverse samples produce an average result that is appropriately reflective of the individuals themselves.
1 Course Unit

COMM 8610 Surveillance Capitalism
This course explores the history, technologies, political economy, and regulatory tensions relating to the monitoring of populations and individuals in the contemporary digital media environment.
1 Course Unit

COMM 8620 Gendered Media Economies
This seminar introduces and traces feminist media studies over the past several decades, with a particular emphasis on media and cultural economies, which includes financial economies but also expands it to the production and circulation of reproducing inequalities, constituting norms, regulating and disciplining individuals and populations, commodifying difference and critique, and (potentially) enabling resistance, oppositional practices and cultural activism. Through this frame, we approach the power dynamics of gender alongside the power dynamics of race, class, sexuality, geopolitics and other social experiences. Along the way, we will examine a variety of gendered media economies from feminist media production to reality television to social media influencers and more.

1 Course Unit

COMM 8630 Utilizing Mixed Methods in Communication Research
This course will focus on applying principles and best practices in designing and conducting mixed methods research to address communication research questions and develop communication interventions. Through this course, students will 1) learn how rigorous qualitative and quantitative methods can be integrated to answer complex research questions, 2) appreciate the relative strengths and limitations of qualitative and quantitative data, 3) understand the rationale, benefits, and tradeoffs of commonly utilized mixed methods study designs, and 4) practice designing a mixed methods investigation. We will learn different aspects developing, conducting, reporting, and evaluating mixed methods studies, and read examples of communication research studies that utilized mixed methods. We will review the best practices, strengths, and challenges of utilizing mixed methods to answer communication research questions drawing from these examples. This course requires prior completion of introductory coursework in quantitative and qualitative research methods.
Not Offered Every Year
Prerequisite: COMM 5220 OR COMM 5230
1 Course Unit

COMM 8690 Ethnography & the Internet
This course covers qualitative and interpretive methods for investigations of socio-technical phenomena related to digital culture and online life. Concentrating on ethnographic methods, the course will cover methodological issues common to research on digital technologies, drawing on theorists from communication, media studies, information studies, sociology, anthropology and internet studies. In addition to developing a sophisticated understanding of ethical and methodological issues surrounding ethnography and online life, students will complete a research proposal for a qualitative or interpretive study of online phenomena.
1 Course Unit

COMM 8700 Advanced Qualitative Research
An important milestone in every doctoral program is the successful defense of a dissertation proposal. But what does a good dissertation proposal look like? How can students craft a proposal that sets them up for success as they advance towards writing a dissertation? This course has one objective: to provide students with the tools they need to write a convincing, well-written and well-reasoned dissertation proposal. This means having a clear problem statement, a convincing answer to the "So what?" question, and a coherent plan for moving forward with writing a dissertation. Structured more as a workshop rather than a seminar, students will provide feedback on each other's work throughout the semester, collectively addressing common issues around writing, argumentation, reviewing literature, research ethics and outlining chapters. Because qualitative and interpretive work comes with specific expectations and challenges, this course is geared towards students who draw from these research techniques; students who are conducting mixed-methods dissertations may also be allowed to join.
Not Offered Every Year
1 Course Unit

COMM 8760 The Black Public Sphere, from Freedoms Journal to Black Lives Matter
The field of communication projects and encourages particular visions of deliberation and the public that have been critiqued for failing to represent publics that experience identity-based exclusion and misrepresentation. In this course we correct this practice by centering work on the black public sphere, recognizing it as central to political and media theory on publics and counterpublics. We will connected "classical" works on publics (Habermas and Fraser), fields (Bourdieu), and mediascapes (Appadurai) to more contemporary critical, cultural, and institutional analysis (Squires, Gray, Brock, and more) of African American media-making, protest and deliberation.
Not Offered Every Year
1 Course Unit

COMM 8800 The Social Neuroscience of Communication
This interdisciplinary course focuses on understanding the mechanisms of social thinking, media effects and interpersonal communication across multiple levels of analysis. We use the brain as one powerful window to understand and predict outcomes that are challenging to predict otherwise. The course will cover foundational readings and involve weekly, seminar style discussions of recent papers in social neuroscience, neuroeconomics, and communication science.
Not Offered Every Year
1 Course Unit
COMM 8810 The Performance Society: Readings in Social and Media Theories
Social action has a performative character - people act as if on a stage in response to audience expectations, whether offline or online. This seminar traces the history of this line of critical thought from Weber and Bakhtin through Goffman and Victor Turner to contemporary authors such as Judith Butler, Byung-Chul Han, Jon McKenzie, and Charles Tilly. Special attention will be devoted to the relationship between media and performance, examined through recent work by media scholars and sociologists such as Ben Agger, Jeffrey Alexander, Jeffrey Berry, Danah Boyd, Alice Marwick, and Sarah Sobieraj. A central issue concerns the will to perform. Why are individuals in modern society compelled to perform? What are the manifestations and forms of performance in institutional and non-institutional politics (such as revolutions and social movements)? How are performances related to emotion? How do the internet and digital media shape the forms and meanings of performance? What are the consequences of the performance imperative? A term paper is required.

COMM 8850 Summer Culture
Special topics course covering a variety of topics in communication. A detailed course description can be found in the Section Details area of the term offering, or by visiting the Annenberg School for Communication website: https://www.asc.upenn.edu/graduate/courses
1 Course Unit

COMM 8910 Special Topics in Media at Risk
The Center for Media at Risk hosts a visiting scholar each semester who teaches a course related to the risks associated with engagement in journalism, documentary, entertainment or digital spaces, with particular attention paid to practitioners under threat from political intimidation. For more information about the course, please see: https://www.asc.upenn.edu/graduate/courses
1 Course Unit

COMM 8980 Explaining Explanation
In the social sciences we often use the word "explanation" as if (a) we know what we mean by it, and (b) we mean the same thing that other people do. In this course we will critically examine these assumptions and their consequences for scientific progress. In part 1 of the course we will examine how, in practice, researchers invoke at least three logically and conceptually distinct meanings of "explanation": identification of causal mechanisms; ability to predict (account for variance in) some outcome; and ability to make subjective sense of something. In part 2 we will examine how and when these different meanings are invoked across a variety of domains, focusing on social science, history, business, and machine learning, and will explore how conflation of these distinct concepts may have created confusion about the goals of science and how we evaluate its progress. Finally, in part 3 we will discuss some related topics such as null hypothesis testing and the replication crisis. We will also discuss specific practices that could help researchers clarify exactly what they mean when they claim to have "explained" something, and how adoption of such practices may help social science be more useful and relevant to society.

Comparative Literature (COML)

COML 0004 India's Literature: Love, War, Wisdom and Humor
This course introduces students to the extraordinary quality of literary production during the past four millennia of South Asian civilization. We will read texts in translation from all parts of South Asia up to the sixteenth century. We will read selections from hymns, lyric poems, epics, wisdom literature, plays, political works, and religious texts.
Fall or Spring
Also Offered As: SAST 0004
1 Course Unit

COML 0006 Hindu Mythology
Premodern India produced some of the world's greatest myths and stories: tales of gods, goddesses, heroes, princesses, kings and lovers that continue to capture the imaginations of millions of readers and hearers. In this course, we will look closely at some of these stories especially as found in Purana-s, great compendia composed in Sanskrit, including the chief stories of the central gods of Hinduism: Visnu, Siva, and the Goddess. We will also consider the relationship between these texts and the earlier myths of the Vedas and the Indian Epics, the diversity of the narrative and mythic materials within and across different texts, and the re-imagining of these stories in the modern world.
Fall or Spring
Also Offered As: RELS 0006, SAST 0006
1 Course Unit

COML 0007 Introduction to Modern South Asian Literatures
This course will provide a wide-ranging introduction to the literatures of South Asia from roughly 1500 to the present, as well as an exploration of their histories and impact on South Asian society today. How are literary movements and individual works - along with the attitudes towards religion, society, and culture associated with them - still influential in literature, film, and popular culture? How have writers across time and language engaged with questions of caste, gender, and identity? We will read from the rich archive of South Asian writing in translation - from languages that include Braj, Urdu, Bangla, and Tamil - to consider how these literatures depict their own society while continuing to resonate across time and space. Topics of discussion will include the Bhakti poetries of personal devotion, the literature of Dalits - formerly referred to as the Untouchables - and the ways in which literature addresses contemporary political and social problems. Students will leave this course with a sense of the contours of the literatures of South Asia as well as ways of exploring the role of these literatures in the larger world. No prior knowledge of South Asia is required; this course fulfills the cross-cultural analysis requirement, and the Arts and Letters sector requirement.
Fall or Spring

Also Offered As: GRMN 0011
1 Course Unit
COML 0015 Writing the Self: Life-Writing, Fiction, Representation
This course investigates how people try to understand who they are by writing about their lives. It will cover a broad range of forms, including memoirs, novels, essay films, and even celebrity autobiographies. The course will be international and in focus and will ask how the notion of self may shift, not only according to the demands of different genres, but in different literary, linguistic, and social contexts. Questions probed will include the following: How does a writer’s language—or languages—shape how they think of themselves? To what extent is a sense of self and identity shaped by exclusion and othering? Is self-writing a form of translation and performance, especially in multilingual contexts? What can memoir teach us about the ways writers navigate global literary institutions that shape our knowledge of World Literature? How do various forms of life-writing enable people on the margins, whether sexual, gendered, or racial, to craft narratives that encapsulate their experience? Can telling one’s own story bring joy, affirmation, and greater transcultural or even global understanding? In sum, this course proposes to illuminate the many ways in which writing becomes meaningful for those who take it up. The format of the seminar will require students to offer oral presentations on the readings and invite them to craft their own experiences and memories in inventive narrative forms.
Spring, even numbered years only
Also Offered As: ENGL 1745, GSWS 0051
1 Course Unit

COML 0017 Hipster Philosophy from Marx to Zizek
From Wes Anderson to Williamsburg, hipster culture is everywhere. And yet the very notion of the hipster remains notoriously difficult to define—whether we perceive this cultural phenomenon as the waste product of the postmodern, as a new form of consumerism, as a peculiar attitude toward irony and authenticity, as scenester posturing or as just plain cool. This course addresses such tensions through an examination of the intellectual history of the nineteenth and twentieth centuries. Each week pairs philosophical and theoretical readings with an artifact of hipster culture: reading Instagram beside Walter Benjamin, ironic facial hair with Friedrich Nietzsche, Facebook through the lens of Georg Lukacs and indie music alongside Theodor Adorno. No previous knowledge of skinny jeans required.

COML 0030 Introduction to Sexuality Studies and Queer Theory
This course will introduce students to the historical and intellectual forces that led to the emergence of queer theory as a distinct field, as well as to recent and ongoing debates about gender, sexuality, embodiment, race, privacy, global power, and social norms. We will begin by tracing queer theory’s conceptual heritage and prehistory in psychoanalysis, deconstruction and poststructuralism, the history of sexuality, gay and lesbian studies, woman-of-color feminism, the feminist sex wars, and the AIDS crisis. We will then study the key terms and concepts of the foundational queer work of the 1990s and early 2000s. Finally, we will turn to the new questions and issues that queer theory has addressed in roughly the past decade. Students will write several short papers.

COML 0052 Literature and Society: Introduction to Psychoanalysis
The course will introduce students to the broad and ever-expanding spectrum of psychoanalytic ideas and techniques, through reading and discussion of major works by some of its most influential figures. We will also read some literary, historical, philosophical, and anthropological works that have special relevance to the psychoanalytic exploration of the human condition. In addition to the other requirements it satisfies, this course may also be counted toward completion of the Psychoanalytic Studies minor (http://web.sas.upenn.edu/pays/). See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ENGL 0052
1 Course Unit
COML 0080 Laughter and Tricky Topics
This course takes a comparative approach to studying the philosophy and praxis of laughter in a variety of artistic media — texts, films, performances and memes. We will seek to develop a critical apparatus to answer the following questions: How does laughter unite us? How does it divide us? How does it contribute to identity and community formation? We will focus on humoristic expression produced in contexts considered too serious for lightheartedness, such as death, race and gender-related oppression, and disenfranchisement. Together, we will wonder whether everything can be a laughing matter, if irony is even funny (and what does it mean anyway?), and whether humor has the potential to effect meaningful sociopolitical change. Our theoretical corpus will include works by Bakhtin, Baudelaire, Bergson, and Freud, who conceptualized laughter in wildly different ways — respectively as carnivalesque, satanic, social, and as a coping mechanism. In the 1940s, René Ménil, a Franco-Caribbean philosopher, synthesized these early theories and further developed them into a means of resistance for colonial subjects. To see these concepts in action, we will engage with materials spanning three centuries, from a short story written by Jonathan Swift to contemporary French comedies (subtitled in English). Should laughter occur throughout the semester, its causes will be dutifully analyzed and presented in diverse oral and written assignments.

COML 0081 Decolonizing French Food
Wine and cheese, baguettes and croissants, multiple courses and fresh ingredients straight from the market—these are the internationally recognized hallmarks of French food. Yet, even as the practices surrounding the mythical French table have been deemed worthy of a place on UNESCO's World Heritage List since 2010, culinary traditions in France remain persistently rooted in legacies of colonialism that are invisible to many. In order to "decolonize" French food, this seminar turns to art, literature, and film, as well as archival documents such as advertisements, maps, and cookbooks. In what ways do writers and filmmakers use food to interrogate the human, environmental, and cultural toll that French colonialism has taken on the world? How do their references to food demonstrate the complex cultural creations, exchanges, and asymmetries that have arisen from legacies of colonialism? We will interpret artworks, read literature (in English or in translation), and watch films (subtitled in English) that span the twentieth and twenty-first centuries by authors and directors from across the Francosphere—from Haiti, Guadeloupe, and Martinique in the Caribbean; to Mauritius in the Indian Ocean; from the Vietnamese diaspora in France, Canada, and the United States; to North, Central, and West Africa. Just as food can be examined from many angles, our discussions will focus on art, literature, and film, but also take into account perspectives from the fields of history, anthropology, and environmental studies. Moreover, we will employ the theoretical tools supplied by food studies, feminist and gender studies, critical race studies, and postcolonial studies.

COML 0087 Desire and Deception in Medieval Erotic Literature
In this course, we will investigate the ideology, content, and material forms of love literature from Dante Alighieri to Francesco Petrarca. Through close readings of such texts as Dante's Vita nova (ca. 1295), Giovanni Boccaccio's Decameron (ca. 1353), and Petrarca's Rerum vulgariump fragmenta (often referred to as the poetry book par excellence: il canzoniere, ca. 1374), we will unveil the literary and fictitious nature of medieval erotic literature. We will explore the origins of love poetry in medieval France and its subsequent interpretation and rewriting in Italian courts and comuni. We will inquire into the cultural constructions of the medieval notion of lyrical self and how it still has an impact on our own notion of consciousness. We will study the forms, themes, and characters that populate ‘love stories’ in the Middle Ages. We will analyze the dynamics of composition, circulation, and reception in manuscript culture. Our close analysis of the texts as they have been preserved in manuscript form will help us gauge the differences between medieval and contemporary ways of writing, reading, and loving.

COML 0095 Universal Language: From the Tower of Babel to Artificial Intelligence
This is a course in European intellectual history. It explores the historical trajectory, from antiquity to the present day, of the idea that there once was, and again could be, a universal and perfect language among the human race. If recovered, it can explain the origins and meaning of human experience, and can enable universal understanding and world peace. The tantalizing question of the possibility of a universal language have been vital and thought-provoking throughout the history of humanity. The idea that the language spoken by Adam and Eve was a language which perfectly expressed the nature of all earthly objects and concepts has occupied the minds of intellectuals for almost two millennia. In defiance of the Christian biblical myth of the confusion of languages and nations at the Tower of Babel, they have over and over tried to overcome divine punishment and discover the path back to harmonious existence. By recovering or recreating a universal language, theologians hoped to be able to experience the divine; philosophers believed that it would enable apprehension of the laws of nature, while mystic cabbalists saw in it direct access to hidden knowledge. In reconstructing a proto-language, 19th-century Indo-Europeanist philologists saw the means to study the early stages of human development. Even in the 20th century, romantic idealists, such as the inventor of Esperanto Ludwik Zamenhof, strived to construct languages to enable understanding among estranged nations. For writers and poets of all times, from Cyrano de Bergerac to Velimir Khlebnikov, the idea of a universal and perfect language has been an inexhaustible source of inspiration. Today, this idea echoes in theories of universal and generative grammars, in approaching English as a global tongue, and in various attempts to create artificial languages, even a language for cosmic communication. Each week we address a particular period and set of theories to learn about universal language projects, but above all, the course examines fundamental questions of what language is and how it functions in human society.

COML 0103 Doctors' Notes
Internist. Surgeon. Essayist. Poet. When we go to the doctor, we hope to meet someone whose medical expertise will allow them to remain objective as they assess our symptoms, and, like a good detective, get to the bottom of things quickly and efficiently. What we may not expect is that the person wearing the white coat is also a staff writer for The New Yorker. In this course students will explore critical and creative writing by physicians deeply interested in reflecting on the medical encounter alongside intersectional and multi-ethnic narratives of illness and disability. Together, we will ask: what role does the "literary" play in medicine? How do representations of health and healing differ or change as we consider genres such as fiction writing, film, graphic novels, and autobiography from U.S., Caribbean, and Latin American perspectives? Reading these unconventional "doctors' notes" alongside patients' writing about their lived experiences of health and healing, we will reflect on how the turn to narrative reveals new facets of the doctor-patient relationship not contained by the traditional genres of medicine.
1 Course Unit

COML 0104 On the Stage and in the Streets: An Introduction to Performance Studies
What do Hamilton, RuPaul's Drag Race, political protest, TikTok Ratatouille, and Queen Elizabeth's funeral have in common? They all compose repertoires of performance. From artistic performances in theatres, galleries, and concert halls to an individual's comportment in everyday life, to sporting events, celebrations, courtroom proceedings, performance studies explores what happens when embodied activities are repeatable and given to be seen. In this course we ask: what is performance? How do we describe, analyze, and interpret it? What do theatre and everyday life have in common? How does performance legitimate or challenge the exercise of power? How has social media shifted our understanding of the relationship of our daily lives to performance? How does culture shape what is considered to be performance and how it functions? What isn't performance? Throughout the semester students will apply key readings in performance theory to case studies drawn from global repertoires of contemporary and historical performance. In addition to analyzing artistic performances, we will also consider sporting events, celebrations, political events, and the performance of everyday life. We will attend to the challenges provoked by performance's embodied, ephemeral, affective, effective, relational, and contingent aspects. Coursework will include discussion posts, class facilitation, and the opportunity to choose between a research paper or creative project for the final assessment.
Also Offered As: ANTH 1104, ENGL 1890, THAR 0104
1 Course Unit

COML 0303 First Year Seminar: National Epics
In this course we will consider texts that become "national epics," texts that in some sense come to "represent" a nation. How and when might such imaginative texts emerge? Nations change, and old poems may no longer serve. Can the Song of Roland, once compulsory study for all schoolchildren in France, still be required reading today—especially if I am French Muslim? What about El Cid in Spain? How do some texts—such as the Mahabharata in India, or Journey to the West in China—seem more adaptable than others? The course begins in western Europe, but then pivots across Eurasian space to become gradually more global. Most all of us have complex family histories: Chinese-American, French Canadian, Latino/a/x, Jewish American, Pennsylvania Dutch, Lenni Lenape. Some students may choose to investigate, for their final project, family histories (and hence their own, personal connection to "national epics").

1 Course Unit
COML 0510 Benjamin Franklin Seminar: National Epics (Med/Ren)
A course that traces how particular literary texts, very often medieval, are adopted to become foundational for national literatures. Key moments of emphasis will be the early nineteenth century, the 1930s, and (to some extent) the unfolding present. Some texts immediately suggest themselves for analysis. The Song of Roland, for example, has long been fought over between France and Germany; each new war inspires new editions on both sides. The French colonial education system, highly centralized, long made the Chanson de Roland a key text, with the theme of Islamic attack on the European mainland especially timely, it was thought, during the Algerian war of independence. Germany also sees the Niebelungenlied as a key text, aligning it with the Rhine as an impeccably Germanic: but the Danube, especially as envisioned by Stefan Zweig, offers an alternative, hybridized, highly hyphenated cultural vision in running its Germanic-Judaic-Slavic-Roman course to the Black Sea. The course will not be devoted exclusively to western Europe. Delicate issues arise as nations determine what their national epic needs to be. Russia, for example, needs the text known as The Song of Igor to be genuine, since it is the only Russian epic to predate the Mongol invasion. The text was discovered in 1797 and then promptly lost in Moscow's great fire of 1812; suggestions that it might have been a fake have to be handled with care in Putin's Russia. Similarly, discussing putative Mughal (Islamic) elements in so-called "Hindu epics" can also be a delicate matter. Some "uses of the medieval" have been exercised for reactionary and revisionist causes in the USA, but such use is much more extravagant east of Prague. And what, exactly, is the national epic of the USA?

COML 0615 Modern Arabic Literature
This course is a study of modern Arabic literary forms in the context of the major political and social changes which shaped Arab history in the first half of the twentieth century. The aim of the course is to introduce students to key samples of modern Arabic literature which trace major social and political developments in Arab society. Each time the class will be offered with a focus on one of the literary genres which emerged or flourished in the twentieth century: the free verse poem, the prose poem, drama, the novel, and the short story. We will study each of these emergent genres against the socio-political backdrop which informed it. All readings will be in English translations. The class will also draw attention to the politics of translation as a reading and representational lens.

COML 0700 Iranian Cinema: Gender, Politics and Religion
This seminar explores Iranian culture, society, history and politics through the medium of film. We will examine a variety of cinematic works that represent the social, political, economic and cultural circumstances of contemporary Iran, as well as the diaspora. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the role of cinema in Iranian society and beyond. Discussions topics will also include the place of the Iranian diaspora in cinema, as well as the transnational production, distribution, and consumption of Iranian cinema. Films will include those by internationally acclaimed filmmakers, such as Rakhshan Bani-Etemad, Asghar Farhadi, Bahman Gharbadi, Abbas Kiarostami, Mohsen Makhmalbaf, Dariush Mehrjui, Tahmineh Milani, Jafar Panahi, Marjane Satrapi and others. All films will be subtitled in English. No prior knowledge is required.

1 Course Unit

COML 1000 Introduction to Literary Study
This course has three broad aims: first, it will introduce students to a selection of compelling contemporary narratives; second, it will provide prospective students of literature and film, as well as interested students headed for other majors, with fundamental skills in literary, visual, and cultural analysis; and, third, it will encourage a meditation on the function of literature and culture in our world, where commodities, people, and ideas have been constantly in motion. Questions for discussion will therefore include: the meaning of terms like "globalization," "translation," and "world literature"; the transnational reach and circulation of texts; migration and engagement with "others": violence, trauma, and memory; terrorism and the state; and the ethic of cosmopolitanism. Our collective endeavor will be to think about narrative forms as modes of mediating and engaging with the vast and complex world we inhabit today. See COML website for current semester's description at https://complit.sas.upenn.edu/course-list/2019A
Fall or Spring
Also Offered As: ENGL 1409
1 Course Unit
COML 1003 Cinema and Revolution
Can cinema be revolutionary? From Sergei Eisenstein’s Battleship Potemkin to Boots Riley’s Sorry to Bother You, filmmakers have long grappled with political revolution. In this course we’ll study films that take moments of revolutionary upheaval as their subject, and cinema made during times of revolution. Can cinematic techniques challenge the status quo? How have filmmakers navigated the complex politics of cinematic production and distribution in moments of censorship and repression? Are art and propaganda always different? Students will give two oral presentations: one will be a detailed analysis of a single scene, and another will consider the politics of a film of their choosing. Open to all, including those with no prior background in cinema studies.
Fall

1 Course Unit

COML 1010 Freud: The Invention of Psychoanalysis
No other person of the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This course will study his work, its cultural background, and its impact on us today. In the first part of the course, we will learn about Freud’s life and the Viennese culture of his time. We will then move to a discussion of seminal texts, such as excerpts from his Interpretation of Dreams, case studies, as well as essays on psychoanalytic practice, human development, definitions of gender and sex, neuroses, and culture in general. In the final part of the course, we will discuss the impact of Freud’s work. Guest lectureres from the medical field, history of science, psychology, and the humanities will offer insights into the reception of Freud’s work, and its consequences for various fields of study and therapy.

1 Course Unit

COML 1011 World Film History to 1945
This course surveys the history of world film from cinema’s precursors to 1945. We will develop methods for analyzing film while examining the growth of film as an art, an industry, a technology, and a political instrument. Topics include the emergence of film technology and early film audiences, the rise of narrative film and birth of Hollywood, national film industries and movements, African-American independent film, the emergence of the genre film (the western, film noir, and romantic comedies), ethnographic and documentary film, animated films, censorship, the MPPDA and Hays Code, and the introduction of sound. We will conclude with the transformation of several film industries into propaganda tools during World War II (including the Nazi, Soviet, and US film industries). In addition to contemporary theories that investigate the development of cinema and visual culture during the first half of the 20th century, we will read key texts that contributed to the emergence of film theory. There are no prerequisites. Students are required to attend screenings or watch films on their own.
Fall or Spring
Also Offered As: ARTH 1080, CIMS 1010, ENGL 1900

COML 1013 Chaucer: Poetry, Voice, and Interpretation
Watching Chaucer at work, modern poet Lavinia Greenlaw says, is like meeting English “before the paint has dried.” Before rules (even of spelling) have hardened. Before live oral performance is subordinated to written record. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
Also Offered As: ENGL 1013
1 Course Unit

COML 1014 King Arthur: Medieval to Modern
In this course, we will study nearly 1000 years of literature about King Arthur from around the world. We will think about what Arthurian legends mean to the way we write history and the ways in which we view our collective pasts (and futures). See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ENGL 1014
1 Course Unit

COML 1015 Sagas and Skalds: Old Norse Literature in Translation
This course introduces students to the powerful and influential corpus of Old Norse literature and to the cultural and historical landscape of Viking and medieval Scandinavia. Students will explore mythological and heroic verse, court poetry, law codes, runic inscriptions, and the famed Icelandic sagas to develop a deeper understanding of one of the most significant literary traditions in high medieval Europe, and to myth-bust popular misconceptions about who ‘the Vikings’ were and how they lived. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Fall or Spring
Also Offered As: ENGL 1015
1 Course Unit

COML 1018 Poetics of Screenplay: The Art of Plotting
This course studies screenwriting in a historical, theoretical and artistic perspective. We discuss the rules of drama and dialogue, character development, stage vs. screen-writing, adaptation of nondramatic works, remaking of plots, auteur vs. genre theory of cinema, storytelling in silent and sound films, the evolvement of a script in the production process, script doctoring, as well as screenwriting techniques and tools.

COML 1020 Marx, Marxism, and the Culture of Revolution
Capitalist society is the object of Karl Marx’s analysis and critique—a society that is the product of history and may one day vanish. This course will trace Marx’s critique by moving between the fields of philosophy, economics, and politics. We will locate key interventions of Marx’s thought that transform modern conceptions of history, the relation between economics and politics, and the limits of struggle and emancipation in capitalist society. We will consider the historical conditions of Marx’s writing and the development of his thought to discover many sides of Marx and many divergent Marxisms (humanist, post-structuralist, feminist, and others) that follow, often at odds with each other. Further, we will ask about what kind of horizons Marx’s and Marxist interventions open up for critique and analysis of capitalist society with respect to gender, race, class, and nation. “Theory becomes a material force when it has seized the masses,” argues the young Marx; indeed, his theories have fueled emancipatory movements and propped up tyrannical regimes, substantiated scientific theories and transformed philosophical debates. In examining Marx’s legacy, we will focus on the elaborations and historical limitations of his ideas by examining the challenges of fascism, the communist experiment in the Soviet Union and its collapse, as well as the climate and other crises currently taking place. In conclusion, we will turn to the question of whether and to what extent Marx’s ideas remain relevant today, and whether it is possible to be a Marxist in the contemporary world dominated by global capital.

Also Offered As: ENGL 1021
1 Course Unit

COML 1022 World Film History 1945-Present
Focusing on movies made after 1945, this course allows students to learn and to sharpen methods, terminologies, and tools needed for the critical analysis of film. Beginning with the cinematic revolution signaled by the Italian Neo-Realism (of Rossellini and De Sica), we will follow the evolution of postwar cinema through the French New Wave (of Godard, Resnais, and Varda), American movies of the 1950s and 1960s (including the New Hollywood cinema of Coppola and Scorsese), and the various other new wave movements of the 1960s, 1970s and 1980s (such as the New German Cinema). We will then selectively examine some of the most important films of the last two decades, including those of U.S. independent film movement and movies from Iran, China, and elsewhere in an expanding global cinema culture. There will be precise attention paid to formal and stylistic techniques in editing, mise-en-scene, and sound, as well as to the narrative, non-narrative, and generic organizations of film. At the same time, those formal features will be closely linked to historical and cultural distinctions and changes, ranging from the Paramount Decision of 1948 to the digital convergences that are defining screen culture today. There are no prerequisites. Requirements will include readings in film history and film analysis, an analytical essay, a research paper, a final exam, and active participation.

1 Course Unit

COML 1025 Narrative Across Cultures
The purpose of this course is to present a variety of narrative genres and to discuss and illustrate the modes whereby they can be analyzed. We will be looking at shorter types of narrative: short stories, novellas, and fables, and also some extracts from longer works such as autobiographies. While some works will come from the Anglo-American tradition, a larger number will be selected from European and non-Western cultural traditions and from earlier time-periods. The course will thus offer ample opportunity for the exploration of the translation of cultural values in a comparative perspective.

Also Offered As: ENGL 0039, NELC 1960, SAST 1124, THAR 1025
1 Course Unit

COML 1027 Sex and Representation
This course explores literature that resists normative categories of gender and sexuality. By focusing on figures writing from the margins, we will explore how radical approaches to narrative form and subject-matter invite us to think in new ways about desire and identity. We will read texts that blur the boundaries between fact and fiction, hybridizing the genres of poetry, drama, and autobiography to produce new forms of expression, such as the graphic novel, auto-fiction, and prose poetry. From Virginia Woolf’s gender-bending epic, Orlando, to Tony Kushner’s Angels in America, this course traces how non-normative desire is produced and policed by social and literary contexts - and how those contexts can be re-imagined and transformed.

1 Course Unit

COML 1030 Nietzsche’s Modernity and the Death of God
"God is dead." This famous, all too famous death sentence, issued by the 19th-century German philosopher Friedrich Nietzsche, also signaled the genesis of a radical challenge to traditional notions of morality, cultural life, and the structure of society as a whole. In this course we will examine both the “modernity” of Nietzsche’s thought and the ways in which his ideas have helped to define the very concept of Modernity (and, arguably, Postmodernity) itself. In exploring the origin and evolution of Nietzsche’s key concepts, we will trace the ways in which his work has been variously revered or refuted, championed or co-opted, for more than a century. We will survey his broad influence on everything from philosophy and literature to music and art, theater and psychology, history and cultural theory, politics and popular culture. Further, we will ask how his ideas continue to challenge us today, though perhaps in unexpected ways. As we will see, Nietzsche wanted to teach us “how to philosophize with a hammer.”
Not Offered Every Year

1 Course Unit
COML 1031 Television and New Media
How and when do media become digital? What does digitization afford and what is lost as television and cinema become digitized? As lots of things around us turn digital, have we started telling stories, sharing experiences, and replaying memories differently? What has happened to television and life after New Media? How have television audiences been transformed by algorithmic cultures of Netflix and Hulu? How have (social) media transformed socialities as ephemeral snaps and swiped intimacies become part of the "new" digital/phone cultures? This is an introductory survey course and we discuss a wide variety of media technologies and phenomena that include: cloud computing, Internet of Things, trolls, distribution platforms, optical fiber cables, surveillance tactics, social media, and race in cyberspace. We also examine emerging mobile phone cultures in the Global South and the environmental impact of digitization. Course activities include Tumblr blog posts and Instagram curations. The final project could take the form of either a critical essay (of 2000 words) or a media project.
Spring

1 Course Unit

COML 1040 Berlin: History, Politics, Culture
What do you know about Berlin's history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and Koeln to establish a new capital for this country. It will tell the story of Berlin's rising political prominence in the eighteenth century, and its position as a center of the German and Jewish Enlightenment. It will follow Berlin's transformation into an industrial city in the nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will conclude its historical survey with a consideration of Berlin's position as a capital in reunified Germany. The historical survey will be supplemented by a study of Berlin's urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker's housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin, and focus on Berlin's Jewish history. The course will be interdisciplinary with the fields of German Studies, history, history of art, urban studies, and German-Jewish studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin.

1 Course Unit

COML 1050 War and Representation
This class will explore complications of representing war in the 20th and 21st centuries. War poses problems of perception, knowledge, and language. The notional "fog of war" describes a disturbing discrepancy between agents and actions of war; the extreme nature of the violence of warfare tests the limits of cognition, emotion, and memory; war's traditional dependence on declaration is often warped by language games--"police action," "military intervention," "nation-building," or palpably unnamed and unacknowledged state violence. Faced with the radical uncertainty that forms of war bring, modern and contemporary authors have experimented in historically, geographically, experientially and artistically particular ways, forcing us to reconsider even seemingly basic definitions of what a war story can be. Where does a war narrative happen? On the battlefield, in the internment camp, in the suburbs, in the ocean, in the ruins of cities, in the bloodstream? Who narrates war? Soldiers, refugees, gossips, economists, witnesses, bureaucrats, survivors, children, journalists, descendants and inheritors of trauma, historians, those who were never there? How does literature respond to the rise of terrorist or ideology war, the philosophical and material consequences of biological and cyber wars, the role of the nuclear state? How does the problem of war and representation disturb the difference between fiction and non-fiction? How do utilitarian practices of representation--propaganda, nationalist messaging, memorialization, xenophobic depiction--affect the approaches we use to study art? Finally, is it possible to read a narrative barely touched or merely contextualized by war and attend to the question of war's shaping influence? The class will concentrate on literary objects--short stories, and graphic novels--as well as film and television. Students of every level and major are welcome in and encouraged to join this class, regardless of literary experience.

COML 1054 Forest Worlds: Mapping the Arboreal Imaginary in Literature and Film
The destruction of the world's forests through wild fires, deforestation, and global heating threatens planetary bio-diversity and may even, as a 2020 shows, trigger civilizational collapse. Can the humanities help us think differently about the forest? At the same time that forests of the world are in crisis, the "rights of nature" movement is making progress in forcing courts to acknowledge the legal "personhood" of forests and other ecosystems. The stories that humans have told and continue to tell about forests are a source for the imaginative and cultural content of that claim. At a time when humans seem unable to curb the destructive practices that place themselves, biodiversity, and forests at risk, the humanities give us access to a record of the complex inter-relationship between forests and humanity. Forest Worlds serves as an introduction to the environmental humanities. The environmental humanities offer a perspective on the climate emergency and the human dimension of climate change that are typically not part of the study of climate science or climate policy. Students receive instruction in the methods of the humanities - cultural analysis and interpretation of literature and film - in relation to texts that illuminate patterns of human behavior, thought, and affect with regard to living in and with nature.

COML 1060 The Fantastic and Uncanny in Literature: Ghosts, Spirits & Machines
Do we still believe in spirits and ghosts? Do they have any place in an age of science of technology? Can they perhaps help us to define what a human being is and what it can do? We will venture on a journey through literary texts from the late eighteenth century to the present to explore the uncanny and fantastic in literature and life. Our discussions will be based on a reading of Sigmund Freud's essay on the uncanny, and extraordinary Romantic narratives by Ludwig Tieck, E.T.A. Hoffmann, Edgar Allan Poe, Nathaniel Hawthorne, Prosper Mérimée, Villiers de l'Isle-Adam, and others.

1 Course Unit

COML 1070 Modernisms and Modernities
This class explores the international emergence of modernism, typically from the middle of the 19th century to the middle of the 20th century. We will examine the links between modernity, the avant-garde, and various national modernisms that emerged alongside them. Resolutely transatlantic and open to French, Spanish, Italian, German, or Russian influences, this course assumes the very concept of Modernism to necessitate an international perspective focusing on the new in literature and the arts -- including film, the theatre, music, and the visual arts. The philosophies of modernism will also be surveyed and concise introductions provided to important thinkers like Marx, Nietzsche, Sorel, Bergson, Freud, and Benjamin. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year  
Also Offered As: ENGL 1070

COML 1071 Fascist Cinemas
Cinema played a crucial role in the cultural life of Nazi Germany and other fascist states. As cinema enthusiasts, Goebbels and Hitler were among the first to realize the important ideological potential of film as a mass medium and saw to it that Germany remained a cinema powerhouse producing more than 1000 films during the Nazi era. In Italy, Mussolini, too, declared cinema "the strongest weapon." This course explores the world of "fascist" cinemas ranging from infamous propaganda pieces such as The Triumph of the Will to popular entertainments such as musicals and melodramas. It examines the strange and mutually defining kinship between fascism more broadly and film. We will consider what elements mobilize and connect the film industries of the Axis Powers: style, genre, the aestheticization of politics, the creation of racialized others. More than seventy years later, fascist cinemas challenge us to grapple with issues of more subtle ideological insinuation than we might think. Weekly screenings with subtitles.
Not Offered Every Year 
Also Offered As: CIMS 1070, GRMN 1070, ITAL 1930 
1 Course Unit

COML 1072 Fashion and Modernity
In this class we will study the emergence of the Modernist concept of the "new" as a term also understood as "new fashion." We will move back and forth in time so as to analyze today's changing scene with a view to identify contemporary accounts of the "new" in the context of the fashion industry. Our texts will include poetry, novels, and films. See the English Department's website at www.english.upenn.edu for a description of the current offerings. 
Also Offered As: ARTH 2889, ENGL 1071, FREN 1071, GRMN 1065 
1 Course Unit

COML 1080 German Cinema
An introduction to the momentous history of German film, from its beginnings before World War One to developments following the fall of the Berlin Wall in 1989 and German reunification in 1990. With an eye to film's place in its historical and political context, the course will explore the "Golden Age" of German cinema in the Weimar Republic, when Berlin vied with Hollywood; the complex relationship between Nazi ideology and entertainment during the Third Reich; the fate of German film-makers in exile during the Hitler years; post-war film production in both West and East Germany; the call for an alternative to "Papa's Kino" and the rise of New German Cinema in the 1960s.

COML 1090 Jewish Films and Literature
From the 1922 silent film "Hungry Hearts" through the first "talkie,""The Jazz Singer," produced in 1927, and beyond "Schindler's List" Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare's "King Lear" to Sholom Aleichem's "Teyve the Dairyman," primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we "read" literature and film, b) the various ways that the media of fiction, drama, and film "translate" Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience.

**COML 1095 Fate and Chance in Literature and Culture**

In Fate and Chance in Literature and Culture, we will explore these two interrelated concepts in comparative perspective over a broad historical range. As a result, the students will learn how the philosophy of fate and chance has been reflected in works of different Russian authors and in different cultural and political environments. In Russian as well as western systems of belief fate and chance represent two extreme visions of the universal order, or, perhaps, two diametrically opposed cosmic forces: complete determinism, on the one hand, and complete chaos or unpredictability, on the other. These visions have been greatly reflected by various mythopoetic systems. In this course, we will investigate religious and folkloric sources from a series of Russian traditions compared to other Indo-European traditions (Greek, East-European). Readings will include The Song of Prince Igor's Campaign, The Gambler by Dostoevsky, The Queen of Spades by Pushkin, Vîj by Gogol, The Black Monk by Chekhov, The Fatal Eggs by Bulgakov, and more.

Also Offered As: REES 1471
1 Course Unit

**COML 1097 Madness and Madmen in Russian Culture**

Is “insanity” today the same thing as “madness” of old? Who gets to define what it means to be “sane,” and why? Are the causes of madness biological or social? In this course, we will grapple with these and similar questions while exploring Russia’s fascinating history of madness as a means to maintain, critique, or subvert the status quo. We will consider the concept of madness in Russian culture beginning with its earliest folkloric roots and trace its depiction and function in the figure of the Russian “holy fool,” in classical literature, and in contemporary film. Readings will include works by many Russian greats, such as Pushkin, Gogol, Dostoevsky, Chekhov, Bulgakov and Nabokov.

1 Course Unit

**COML 1110 Jewish American Literature**

What makes Jewish American literature Jewish? What makes it American? This course will address these questions about ethnic literature through fiction, poetry, drama, and other writings by Jews in America, from their arrival in 1654 to the present. We will discuss how Jewish identity and ethnicity shape literature and will consider how form and language develop as Jewish writers “immigrate” from Yiddish, Hebrew, and other languages to American English. Our readings, from Jewish American Literature: A Norton Anthology, will include a variety of stellar authors, both famous and less-known, including Isaac Mayer Wise, Emma Lazarus, Isaac Bashevis Singer, Celia Dropkin, Abraham Cahan, Anzia Yezierska, Saul Bellow, Philip Roth, Cynthia Ozick, and Allegra Goodman. Students will come away from this course having explored the ways that Jewish culture intertwines with American culture in literature.

1 Course Unit

**COML 1120 Translating Cultures: Literature on and in Translation**

“Languages are not strangers to one another,” writes the great critic and translator Walter Benjamin. Yet two people who speak different languages have a difficult time talking to one another, unless they both know a third, common language or can find someone who knows both their languages to translate what they want to say. Without translation, most of us would not be able to read the Bible or Homer, the foundations of Western culture. Americans wouldn’t know much about the cultures of Europe, China, Africa, South America, and the Middle East. And people who live in or come from these places would not know much about American culture. Without translation, Americans would not know much about the diversity of cultures within America. The very fabric of our world depend upon translation between people, between cultures, between texts. With a diverse group of readings—autobiography, fiction, poetry, anthology, and literary theory—this course will address some fundamental questions about translating language and culture. What does it mean to translate? How do we read a text in translation? What does it mean to live between two languages? Who is a translator? What are different kinds of literary and cultural translation? what are their principles and theories? Their assumptions and practices? Their effects on and implications for the individual and the society?

1 Course Unit

**COML 1121 Community, Freedom, Violence: Writing the South Asian City**

The South Asian city—as space, symbol, and memory—is the subject of this course. Through a range of readings in English and in translation, we will gain a sense for the history of the city and the ways in which it is a setting for protest and nostalgia, social transformation and solitary wandering. We will see reflections of the city in the detective novels sold in its train stations, the stories scribbled in its cafes, and films produced in its backlots. Readings will attempt to address urban spaces across South Asia through a range of works, which we will examine in the context of secondary readings, including histories and ethnological works that take up life in the modern city. Students will finish this course prepared to pursue projects dealing with the urban from multiple disciplinary perspectives. This course is suitable for anyone interested in the culture, society, or literature of South Asia, and assumes no background in South Asian languages.

Fall or Spring

1 Course Unit
COML 1130 Water Worlds: Cultural Responses to Sea Level Rise & Catastrophic Flooding
As a result of climate change, the world that will take shape in the course of this century will be decidedly more inundated with water than we're accustomed to. The polar ice caps are melting, glaciers are retreating, ocean levels are rising, polar bear habitat is disappearing, countries are jockeying for control over a new Arctic passage, while low-lying cities and small island nations are confronting the possibility of their own demise. Catastrophic flooding events are increasing in frequency, as are extreme droughts. Hurricane-related storm surges, tsunamis, and raging rivers have devastated regions on a local and global scale. In this seminar we will turn to the narratives and images that the human imagination has produced in response to the experience of overwhelming watery invasion, from Noah to New Orleans. Objects of analysis will include mythology, ancient and early modern diluvialism, literature, art, film, and commemorative practice. The basic question we'll be asking is: What can we learn from the humanities that will be helpful for confronting the problems and challenges caused by climate change and sea level rise? COML 1131 Crime and Criminality in Early America
This seminar examines the complex cultural history of crime and criminality in early America. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ENGL 1131, GSWS 1131
1 Course Unit

COML 1140 Liquid Histories and Floating Archives
Climate change transforms the natural and built environments, and it is re-shaping how we understand, make sense, and care for our past. Climate changes history. This course explores the Anthropocene, the age when humans are remaking earth's systems, from an on-water perspective. In on-line dialogue and video conferences with research teams in port cities on four continents, this undergraduate course focuses on Philadelphia as one case study of how rising waters are transfiguring urban history, as well as its present and future. Students projects take them into the archives at the Independence Seaport Museum and at Bartram's Garden. Field trips by boat on the Schuylkill and Delaware Rivers and on land to the Port of Philadelphia and to the John Heinz National Wildlife Refuge invite transhistorical dialogues about how colonial and then industrial-era energy and port infrastructure transformed the region's vast tidal marshlands wetlands. Excursions also help document how extreme rain events, storms, and rising waters are re-making the built environment, redrawing lines that had demarcated land from water. In dialogue with one another and invited guest artists, writers, and landscape architects, students final projects consider how our waters might themselves be read and investigated as archives. What do rising seas subsume and hold? Whose stories do they tell? What floats to the surface?

COML 1160 Sustainability & Utopianism
This seminar explores how the humanities can contribute to discussions of sustainability. We begin by investigating the contested term itself, paying close attention to critics and activists who deplore the very idea that we should try to sustain our, in their eyes, dystopian present, one marked by environmental catastrophe as well as by an assault on the educational ideals long embodied in the humanities. We then turn to classic humanist texts on utopia, beginning with More's fictive island of 1517. The "origins of environmentalism" lie in such depictions of island edens (Richard Grove), and our course proceeds to analyze classic utopian tests from American, English, and German literatures. Readings extend to utopian visions from Europe and America of the nineteenth and twentieth centuries, as well as literary and visual texts that deal with contemporary nuclear and flood catastrophes. Authors include: Bill McKibben, Jill Kerr Conway, Christopher Newfield, Thomas More, Francis Bacon, Karl Marx, Henry David Thoreau, Robert Owens, William Morris, Charlotte Perkins Gilman, Ayn Rand, Christa Wolf, and others.

Also Offered As: ENGL 1579, ENVS 1050, GRMN 1160, STSC 1160
1 Course Unit

COML 1170 Global Sustainabilities
This research-oriented seminar focuses on the ways in which "sustainability" and "sustainable development" are linguistically and culturally translated into the world's languages. We may take the terms for granted, but they have only really been on the global stage since they were widely introduced in the 1987 United Nations report, Our Common Future. Seminar participants will first become acquainted with the cultural and conceptual history of the terms and the UN framework within which sustainability efforts directly or indirectly operate. Having established the significance of cultural and linguistic difference in conceiving and implementing sustainability, participants will collaboratively develop a research methodology in order to begin collecting and analyzing data. We will draw heavily on Penn's diverse language communities and international units. Seminar members will work together and individually to build an increasingly comprehensive website that provides information about the world's languages of sustainability.

COML 1190 Introduction to Postcolonial Literature
English is a global language with a distinctly imperial history, and this course serves as an essential introduction to literary works produced in or about the former European colonies. The focus will be poetry, film, fiction and non fiction and at least two geographic areas spanning the Americas, South Asia, the Caribbean and Africa as they reflect the impact of colonial rule on the cultural representations of identity, nationalism, race, class and gender. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

1 Course Unit
COML 1191 World Literature
How do we think 'the world' as such? Globalizing economic paradigms encourage one model that, while it connects distant regions with the ease of a finger-tap, also homogenizes the world, manufacturing patterns of sameness behind simulations of diversity. Our current world-political situation encourages another model, in which fundamental differences are held to warrant the consolidation of borders between Us and Them, "our world" and "theirs." This course begins with the proposal that there are other ways to encounter the world, that are politically compelling, ethically important, and personally enriching—and that the study of literature can help tease out these new paths. Through the idea of World Literature, this course introduces students to the appreciation and critical analysis of literary texts, with the aim of navigating calls for universality or particularity (and perhaps both) in fiction and film. "World literature" here refers not merely to the usual definition of "books written in places other than the US and Europe, "*but any form of cultural production that explores and pushes at the limits of a particular world, that steps between and beyond worlds, or that heralds the coming of new worlds still within us, waiting to be born. And though, as we read and discuss our texts, we will glide about in space and time from the inner landscape of a private mind to the reaches of the farthest galaxies, knowledge of languages other than English will not be required, and neither will any prior familiarity with the literary humanities. In the company of drunken kings, botanical witches, bisexual alien lifeforms, and storytellers who've lost their voice, we will reflect on, and collectively navigate, our encounters with the faraway and the familiar—and thus train to think through the challenges of concepts such as translation, narrative, and ideology. Texts include Kazuo Ishiguro, Ursula K. LeGuin, Salman Rushdie, Werner Herzog, Jamaica Kincaid, Russell Hoban, Hiroshi Teshigahara, Arundhati Roy, and Abbas Kiarostami.

1 Course Unit

COML 1200 Sex and Gender in Ancient Greece and Rome
What is being a man, being a woman, being masculine, being feminine, being neither, being both? Is sex about pleasure, domination, identity, reproduction, or something else? Are sexual orientation and gender identity innate? How can words, myths and stories inform cultural assumptions about sex and gender? Did people in ancient times have a concept of sexuality? How do gendered English terms (like "girly", "effeminate", or "feisty") compare to gendered ancient Greek and Latin terms, like virtus, which connotes both "virtue" and "masculinity"? Why did the Roman and English speaking worlds have to borrow the word "clitoris" from the ancient Greeks? How did people in antiquity understand consent? Can we ever get access to the perspectives of ancient women? In this introductory undergraduate course, we will learn about sex and gender in ancient Greece and Rome. We will discuss similarities and differences between ancient and modern attitudes, and we will consider how ancient texts, ancient art, ancient ideas and ancient history have informed modern western discussions, assumptions and legislation. Our main readings will be of ancient texts, all in English translation; authors studied will include Ovid, Aristophanes, Plato, Euripides, and Sappho.

Class requirements will include participation in discussion as well as quizzes, reading responses, and a final exam.

COML 1215 Love, Lust and Violence in the Middle Ages
Medieval Europe was undoubtedly gruff and violent but it also gave birth to courtly culture - raw worries transformed into knights who performed heroic deeds, troubadours wrote epics in their honor and love songs about their ladies, women of the elite carved out a place in public discourse as patrons of the arts, and princely courts were increasingly defined by pageantry from jousting tournaments to royal coronations. This course will trace the development of this courtly culture from the eleventh to the sixteenth century, from its roots in Southern France to its spread to Northern France and then to various kingdoms in Europe. Central themes will include the transformation of the warrior into the knight, the relationship between violence and courtliness, courtly love, cultural production and the patronage, and the development of court pageantry and ceremonial. This is a class cultural history and, as such, will rely on the interpretation of objects of art and material culture, literature as well as historical accounts.

COML 1235 Autobiographical Writing
How does one write about oneself? Who is the “author” writing? What does one write about? And is it fiction or truth? Our course on autobiographical writing will pursue these questions, researching confessions, autobiographies, memoirs, and other forms of life-writing both in their historical development and theoretical articulations. Examples will include selections from St. Augustine’s confessions, Rousseau’s Confessions, Benjamin Franklin’s Autobiography, as well as many examples from contemporary English, German, French, and American literature.
Not Offered Every Year
Also Offered As: GRMN 1235
1 Course Unit

COML 1250 Belief and Unbelief in Modern Thought
“God is dead,” declared Friedrich Nietzsche, “and we have killed him.” Nietzsche’s words came as a climax of a longer history of criticism of, and dissent toward, the religious foundations of European society and politics. The critique of religion had vast implications for the meaning of human life, the nature of the person, and the conception of political and social existence. The course will explore the intensifying debate over religion in the intellectual history of Europe, reaching from the Renaissance, through the Scientific Revolution and the Enlightenment, to the twentieth century. Rousseau, Voltaire, Marx, Nietzsche, and Freud. These thinkers allow us to trace the varieties of irreligious experience that have emerged in modern European thought and their implications for both historical and philosophical understanding. Rather than drawing a straight line from belief to non-belief, however, we will also consider whether religion lingers even in secular thought and culture.

1 Course Unit

COML 1260 Latinx Literature and Culture
This course offers a broad introduction to the study of Latinx culture. We will examine literature, theater, visual art, and popular cultural forms, including murals, poster art, graffiti, guerrilla urban interventions, novels, poetry, short stories, and film. In each instance, we will study this work within its historical context and with close attention to the ways it illuminates class formation, racialization, and ideologies of gender and sexuality as they shape Latinx experience in the U.S. Topics addressed in the course will include immigration and border policy, revolutionary nationalism and its critique, anti-imperialist thought, Latinx feminisms, queer Latinidades, ideology, identity formation, and social movements. While we will address key texts, historical events, and intellectual currents from the late 19th century and early 20th century, the course will focus primarily on literature and art from the 1960s to the present. All texts will be in English.

COML 1262 Tolstoy’s War and Peace and the Age of Napoleon
In this course we will read what many consider to be the greatest book in world literature. This work, Tolstoy’s War and Peace, is devoted to one of the most momentous periods in world history, the Napoleonic Era (1789-1815). We will study both the book and the era of the Napoleonic Wars: the military campaigns of Napoleon and his opponents, the grand strategies of the age, political intrigues and diplomatic betrayals, the ideologies and human dramas, the relationship between art and history. How does literature help us to understand this era? How does history help us to understand this great book? Because we will read War and Peace over the course of the entire semester, readings will be manageable and very enjoyable.

COML 1351 Contemporary Fiction & Film in Japan
This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan's war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, manga, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujiro, Naruse Mikio, Kurosawa Akira, Imamura Shohei, Koreeda Hirokazu, and Beat Takeshi.

COML 1500 Greek & Roman Mythology
Myths are traditional stories that have endured many years. Some of them have to do with events of great importance, such as the founding of a nation. Others tell the stories of great heroes and heroines and their exploits and courage in the face of adversity. Still others are simple tales about otherwise unremarkable people who get into trouble or do some great deed. What are we to make of all these tales, and why do people seem to like to hear them? This course will focus on the myths of ancient Greece and Rome, as well as a few contemporary American ones, as a way of exploring the nature of myth and the function it plays for individuals, societies, and nations. We will also pay some attention to the way the Greeks and Romans themselves understood their own myths. Are myths subtle codes that contain some universal truth? Are they a window on the deep recesses of a particular culture? Are they entertaining stories that people like to tell over and over? Are they a set of blinders that all of us wear, though we do not realize it? We investigate these questions through a variety of topics creation of the universe between gods and mortals, religion and family, sex, love, madness, and death.
Spring
Also Offered As: CLST 1500

1 Course Unit

COML 1701 Scandalous Arts in Ancient and Modern Communities
What do the ancient Greek comedian Aristophanes, the Roman satirist Juvenal, have in common with rappers Snoop Dogg and Eminem? Many things, in fact, but perhaps most fundamental is their delight in shocking audiences and upending social norms. This course will examine the various arts (including literary, visual and musical media) that transgress the boundaries of taste and convention in ancient Greco-Roman culture and our own era. We will consider, among other topics, why communities feel compelled to repudiate some forms of scandalous art, while turning others - especially those that have come down to us from remote historical periods - into so-called classics.

COML 1840 20th-Century Poetry
From abstraction to beat, from socialism to negritude, from expressionism to ecopoetry, from surrealism to visual poetry, from collage to digital poetry, the poetry of the twentieth century has been characterized by both the varieties of its forms and the range of its practitioners. This course will offer a broad overview of many of the major trends and a few minor eddies in the immensely rich, wonderfully varied, ideologically and aesthetically charged field. The course will cover many of the radical poetry movements and individual innovations, along with the more conventional and idiosyncratic work, and will provide examples of political, social, ethnic, and national poetries, both in the Americas and Europe, and beyond to the rest of the world. While most of the poetry covered will be in English, works in translation, and indeed the art of translation, will be an essential component the course. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Not Offered Every Year
Also Offered As: ENGL 1840

COML 1859 The Play: Structure, Style, Meaning
How does one read a play? Theatre, as a discipline, focuses on the traditions of live performance. In those traditions, a play text must be read not only as a piece of literature, but as a kind of "blueprint" from which productions are built. This course will introduce students to a variety of approaches to reading plays and performance pieces. Drawing on a wide range of dramatic texts from different periods and places, we will examine how plays are made, considering issues such as structure, genre, style, character, and language, as well as the use of time, space, and theatrical effects. Although the course is devoted to the reading and analysis of plays, we will also view selected live and/or filmed versions of several of the scripts we study, assessing their translation from page to stage.
Fall or Spring
Also Offered As: ENGL 1859, THAR 0103

COML 2000 Topics In Classicism and Literature: Epic Tradition
This advanced seminar will examine the classical backgrounds of western medieval literature, in particular the reception of classical myth and epic in the literature of the Middle Ages. Different versions of the course will have different emphases on Greek or Latin backgrounds and on medieval literary genres. Major authors to be covered include Virgil, Ovid, Chaucer, and the Gawain-poet.
Not Offered Every Year
Also Offered As: CLST 3708, ENGL 2000, GSWS 2000
1 Course Unit

COML 2004 Tolstoy
Leo Tolstoy is a figure who arguably needs little introduction, if only as an effigy for the kind of author who writes books like "War and Peace" — prime examples of what Henry James called the "large, loose, baggy monsters" of nineteenth-century Russian literature, the sprawling novels with several parallel plot lines and hundreds of characters who inhabit page numbers in the quadruple digits. In this seminar, we will grapple together with the intricacies of "War and Peace," learn about the social, cultural, and historical contexts not only of its depiction and genesis, but also of its wide-ranging reception, and consider the big questions that preoccupied Tolstoy throughout his lifetime. Working with a range of his texts including a wide spread of his shorter fiction and also a number of Tolstoy's non-literary writings on topics such as aesthetics, religion, education, and social and political problems, we will work toward understanding Tolstoy's work, how he became who he was, and the reverberations of his thought throughout the rest of the world.
Also Offered As: REES 0481
1 Course Unit

COML 2007 Dostoevsky
This seminar is a survey of the life and works of Fyodor Dostoevsky (1821-1881). Focal texts include a selection of his major novels and a range of shorter works that span Dostoevsky's early career, his return from exile in Siberia, and the last years of his life. We will work together to understand Dostoevsky's career and self-conception as a writer, the wide-ranging philosophical implications of his work, and how his activity can be interpreted in the historical, ideological, and literary contexts of nineteenth-century Russia and Europe.
Also Offered As: REES 0480
1 Course Unit

COML 2011 Literature of Dissent: Art as Protest in 20th-Century Poland and Czechoslovakia
Eastern and Central Europe was the site of monumental political changes in the twentieth century, including the disillusion of monarchical empires in the First World War and the expansion of Soviet-style communism. At every point, artists have taken part in political debates, sometimes advancing radical agendas, sometimes galvanizing movements, sometimes simply shouting into the void to register their own dissatisfaction. In this course, we will consider texts including literature, political philosophy and film that pushed back against the dominant political norms. In so doing, we will investigate Aesopian language, the mechanics of censorship, the repercussions of dissent, performativity, samizdat and the rise of an alternative culture. We will contextualize our readings of literature with the sociological and historical work of Benedict Anderson, Tony Judt, Jonathan Bolton, Shana Penn, Alexei Yurchak and the series Discourses of Collective Identity in Central and Southeast Europe. As well as becoming familiar with major thinkers and movements in Eastern and Central Europe, students will develop a sense of art as a tool of political protest.

COML 2013 Saints and Devils in Russian Literature and Tradition
This course is about Russian cultural imagination, which is populated with "saints" and "devils": believers and outcasts, the righteous and the sinners, virtuous women and fallen angels, holy men and their most bitter adversary - the devil. In Russia, where people's frame of mind has been formed by a mix of Eastern Orthodox Christianity and earlier pagan beliefs, the quest for faith, spirituality, and the meaning of life has invariably been connected with religious matters. How can one find the right path in life? Can a sinner be redeemed? Should one live for God or for the people? Does God even exist? In "Saints and Devils," we read works of the great masters of Russian literature and learn about the historic trends that have filled Russia's literature and art with religious and mystical spirit. Among our readings are old cautionary tales of crafty demons and all-forgiving saints, about virtuous harlots and holy fools, as well as fantastic stories by Nikolai Gogol about pacts with the devil, and a romantic vision of a fallen angel by Yury Lermontov. We will be in awe of the righteous portrayed by Nikolai Leskov and follow the characters of Fedor Dostoevsky, Leo Tolstoy and Anton Chekhov, as they ponder life and death and search for truth, faith, and love. In sum, over the course of this semester we will talk about ancient cultural traditions, remarkable works of art, and the great artists who created them. In addition to providing a basic introduction to Russian literature, religion, and culture, the course introduces students to literary works of various genres and teaches basic techniques of literary analysis. (No previous knowledge of Russian literature necessary. All readings are in English).

**COML 2083 Faking it: Liars, Imitators and Cheats in Literature and Film**
Deception and lies are a constant theme and a mechanism of narrative art. For a genre literally synonymous with falsehood, fiction has always been touchy about its relationship to truth: Does the novel neutrally represent reality or does it recreate it? Are characters like living, breathing real people, or are they mere simulations? And if they’re just words on a page (or images on a screen), why are we so moved by their adventures, loves and misfortunes? In this class, we will explore and expand on these questions by focusing on novels and films that deal explicitly and exclusively with fakers, shapeshifters and doppelgangers, lies of necessity and of opportunity, as well as with works that revel in exposing their own manipulative artificiality. We will read psychoanalysts, sociologists, philosophers, and postcolonial thinkers and ask, What does it mean to be authentic? How malleable are our individual identity, race, gender and sexuality? What forces shape it, and how constant is this shape? Are we the same selves when we have a conversation as when we give a presentation? Do we remain ourselves when we talk to customers at our service jobs, to teachers, to students? When we “pass” as a different race? When we speak in a different accent? How do we reconcile the conflicting demands of “be yourself” and “fake it till you make it”? What is the relation between our presentation of ourselves and our selves? Novels and short stories for discussion might include classics like Nella Larsen’s Passing, Vladimir Nabokov’s Despair and Patricia Highsmith’s The Talented Mr. Ripley, as well as movies like Gaslight, The Battle of Algiers, The Yes Men, and American Psycho. While much of the weekly work in this class will be reading-and-discussion based, oral presentations – keenly aware of their own artifice – will count toward half of the final grade. A final oral presentation will be based on a creative project in conversation with class materials. The course would satisfy those interested in fulfilling the Advanced Film and Literature and Global Literature and Film requirements. This is a CWiC course, Communication Within the Curriculum.
Spring, even numbered years only
Also Offered As: CIMS 2083, ENGL 2083

COML 2084 Black Italy: Transnational Identities and Narratives in Afro-Italian Literature
This course focuses on how the migration movements to Italy, mainly from the Maghreb and the Horn of Africa in the '80s and '90s contributed to change Italy's status and image. From a country of emigration to other parts of the world, Italy became - as many historians, geographers, and scholars have observed - an immigration site, playing a pivotal role in the African diaspora. In the shadow of Italy's colonialist heritage (a past that Italy still has not fully confronted), these phenomena of mass migration challenge, complicate, and develop the notion of Italian-ness and undermine the fixity of an Italian identity in favor of multicultural and transnational identities. This course focuses on several Black Italian artists, writers, filmmakers, and activists of Somali, Eritrean, Tunisian, Ethiopian, and Egyptian origins (e.g. migrants or children of immigrants who were born or raised in Italy and children of mixed-race unions) who contribute to broaden the definition of Italian-ness and to challenge its racial, social, and cultural boundaries. Students will analyze short stories, novels, documentaries, songs, blogs, journal articles by Igiaba Scego, Cristina Ali Farah, Gabriella Ghermandi, Medhin Paolos, Fred Kudjo Kuwornu, Amir Issaa, Amara Lakhous, Pap Khouma, and Kaha Mohamed Aden, among others. They describe their multicultural identities, their senses of belonging, their feelings for the place that is depriving them of foundational rights (such as citizenship or a legal status), their nostalgia for their homeland or the countries where their parents were born, their fights to find or create a social and literal space where being recognized not as foreigners or worse as "clandestini." Their works offer an original, complex, and multilayered depiction of contemporary Italy and its social and cultural changes, where the African community is becoming larger and better represented. Some questions this course will ask include: what are the historical and geographical components of blackness in Italy? How, if at all, have these phenomena of migration changed Italian identity? How do black Italians live within the context of anti-blackness? How do these Italian writers and artists relate to African American histories and experiences of diaspora? How can African Italian literature contribute to a deeper understanding of the Black diaspora in Europe and elsewhere? The course will pursue answers to these questions by exploring issues of race, color, gender, class, nationality, identity, citizenship, social justice in post-colonial Italy while drawing on related disciplines such as Geography, Mediterranean Studies, Diaspora Studies, Post-Colonialism, and Media and Cultural Studies. Course taught in English. Course Material in English.
Not Offered Every Year
Also Offered As: ENGL 1296, ITAL 2510
1 Course Unit

COML 2086 Latin American and Latinx Theatre and Performance
This course will examine contemporary Latin American and Latinx theatre and performance from a hemispheric perspective. In particular, we will study how Latin American and Latinx artists engage with notions of identity, nation, and geo-political and geo-cultural borders, asking how we might study "national" theatres in an age of transnational globalization. Our consideration of plays, performances, and theoretical texts will situate Latin American and Latinx theatre and performance within the context of its politics, culture, and history.
Also Offered As: ENGL 0490, LALS 2860, THAR 2860

COML 2191 The Dictator Novel as Global Form
In this seminar, we will explore the ways in which twentieth- and twenty-first-century writers across the globe have responded to tyrants and tyrannical regimes. Our focus will be a set of outstanding contemporary novels from Latin America, Europe, the Caribbean, Africa, and Asia.
See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ENGL 2191
1 Course Unit

COML 2192 Narrating Survival
This course critically examines the way in which "survival" has been/continues to be defined as individual triumph in the 20th and 21st century. The intent here is to dig deeper into current buzzwords like "resilience," "wellness," "grit," and "care" to ask how such concepts have been constructed in different socio-historical moments, by and for whom, and towards what (social, cultural, political, economic) ends. We will pay special attention to the central role that the child plays in these discourses as an icon of both ultimate vulnerability and idealized resilience, and we'll consider the burdens and privileges that such centering might confer upon real-life children. We engage with a generically diverse body of contemporary multiethnic and transnational literature featuring children and young people in crisis, including texts from Black, Latine, Native, Asian and White U.S. writers as well as Dutch, Argentinian, Iranian, Malaysian, and Afghan authors. All non-English texts will be read in English translation, with the option for students to read in the original language if they wish and are able. Learning to dialogue across cultures and learning from such interactions with these texts and one other will be an essential part of our approach to exploring these complex questions.
Also Offered As: ASAM 1211, ENGL 2192
1 Course Unit
COML 2200 Creating New Worlds: The Modern Indian Novel
Lonely bureaucrats and love-struck students, Bollywood stars and wayward revolutionaries: this course introduces students to the worlds of the Indian novel. From the moment of its emergence in the 19th century, the novel in India grappled with issues of class and caste, colonialism and its aftermath, gender, and the family. Although the novel has a historical origin in early modern Europe, it developed as a unique form in colonial and post-colonial India, influenced by local literary and folk genres. How did the novel in India—and in its successor states after 1947—transform and shift in order to depict its world? How are novels shaped by the many languages in which they are written, including English? And how do we, as readers, engage with the Indian novel in its diversity? This course surveys works major and minor from the past 200 years of novels-writing in India—with surveys both into predecessors of the Indian novel and parallel forms such as the short story. Readings will include works in translation from languages such as Hindi, Bangla, Urdu, Telugu, and Malayalam, as well as works written originally in English.
Students will leave this course with an understanding of the Indian novel, along with the social conditions underlaying it, especially those relating to caste and gender.

COML 2201 Modern East Asian Texts
This course is an introduction to and exploration of modern East Asian literatures and cultures through close readings and discussion of selected literary works from the early 20th century to the start of the 21st century. Focusing on China, Japan, and Korea, we will explore the shared and interconnected experiences of modernity in East Asia as well as broaden our perspective by considering the location of East Asian cultural production within a global modernity. Major issues we will encounter include: nation-building and the modern novel; cultural translation; media and technology; representations of gender, race, and class; history and memory; colonialism; war; body and sexuality; globalization. No knowledge of the original language is required.

COML 2231 The Sanskrit Epics
Ancient India’s two epic poems, originally composed in Sanskrit and received in dozens of languages over the span of two thousand years, continue to shape the psychic, social, religious, and emotional worlds of millions of people around the world. The epic Mahabharata, which roughly translates to The Great Story of the Descendants of the Legendary King Bharata, is the longest single poem in the world (approximately 200,000 lines of Sanskrit verse in the 1966 Critical Edition) and tells the mythic history of dynastic power struggles in ancient India. An apocalyptic meditation on time, death, and the utter devastation brought upon the individual and the family unit through social disintegration, the epic also serves as sourcebook for social and political mores and contains one of the great religious works of the world, The Bhagavad Gita (translation: The Song of God), in the middle of its sprawling narrative. The other great epic, The Ramayana (Rama’s Journey), though essentially tragic and about the struggles for power in ancient India, offers a relatively brighter narrative in foregrounding King Rama, an avatar of the supreme divinity Viṣṇu, who serves as an ideal for how human beings might successfully negotiate the challenges of worldly life. Perhaps the most important work of ancient Asia, the Rāma’s journey also provides a model of human social order that contrasts with dystopic polities governed by animals and demons. Our course will engage in close reading of selections from both of these epic poems (in English translation) and scholarship on the epic from the past century. We will explore the Sanskrit epic genre, its oral and textual forms in South Asia, and the numerous modes for interpreting it over the centuries. We will also look at the reception of these ancient works in modern forms of media, such as the novel, television, theater, cinema and the comic book/ anime.

COML 2251 Machiavelli and Modern Political Thought
Niccolò Machiavelli, the Renaissance author best known for The Prince, is frequently regarded as a consummate cynic. Yet he has been not only a provocation but an inspiration throughout the subsequent history of political thought. This was true for the entire twentieth century, which witnessed an ever-growing interest in the Florentine thinker among historians and philosophers alike. One of the most surprising dimensions of this modern engagement with Machiavelli is surely his recurring presence as figure and motif within left-wing philosophical discourse. In light of the failure of the twentieth-century’s revolutionary experiments, as well as its own entanglements with those experiments, how could radical theory understand its past and imagine its future? What vision could supplant the dimming of utopia? Such questions have frequently led recent theorists into melancholic resignation, but they have also provoked innovative and rigorous attempts to rethink the project of radical politics as radical democracy. How is it that Machiavelli, a thinker indelibly associated with the cynical and amoral manipulation of politics, could become an inspiration for theorists of a robust democratic life? This course will examine this curious history of influence and transformation. Starting with an examination of key texts by Machiavelli himself, we will then trace his reception in European intellectual history, focusing upon the twentieth century. Among authors we will consider will be Jean-Jacques Rousseau, Hannah Arendt, Leo Strauss, John Pocock, Quentin Skinner, Antonio Gramsci, Louis Althusser, John McCormick, and Antonio Negri.

COML 2258 Existentialism, Structuralism, Poststructuralism: French Thought Since 1945
In no other period, with the possible exception of the European Enlightenment, did French thought enjoy greater international influence than in the decades after the Second World War. From Existentialism, through Structuralism, Poststructuralism, and Postmodernism, French thinkers played a crucial role in shaping the intellectual history of the second half of the twentieth century. This seminar surveys the intellectual movements and some of the key figures of this period. While our discussion will touch on many themes, the core of our inquiry will be the status of the human subject. If late nineteenth and early twentieth-century thinkers were preoccupied by the question of the "death of God," French philosophical discourse in the late twentieth century was famously obsessed by the death of "Man". Jean-Paul Sartre opened the post-war era by declaring that the death of God heralded an unprecedented age of Man; soon that proclamation came under attack as rival thinkers of the post-war period subjected the idea of the human "subject" -- the "self" or "ego" -- to unprecedented criticism. With the waning of Sartrean Existentialism, the unfolding dynamics of that critique came to drive the most creative and influential figures in French intellectual life.

COML 2400 Faces of Love: Gender, Sexuality and the Erotic in Persian Literature
Beloved, Lover and Love are three concepts that dominate the semantic field of eroticism in Persian literature and mysticism. The interrelation among these concepts makes it almost impossible to treat any one of the concepts separately. Moreover, there exists various faces and shades of love in the works of classical and modern Persian literature that challenges the conventional heteronormative assumptions about the sexual and romantic relationships between the lover and the beloved.
A sharp contrast exists between the treatment of homosexuality and 'queerness' in Islamic law, on the one hand and its reflection in Persian literature, particularly poetry (the chief vehicle of Persian literary expression), on the other. This course introduces and explores different faces of love, eroticism and homoeroticism in the Persian literary tradition from the dawn of dawn of the Persian poetry in the ninth century all through to the twenty-first century. It offers a comprehensive study of representations and productions of heteronormativity, sexual orientation and gender roles with particular reference to the notion of love, lover and beloved in Persian literature.
Fall

COML 2520 Contemporary Italy: Pop Culture, Politics, and Peninsular Identity
Is the land of good food, beautiful landscapes, and la bella vita really how it looks in the movies? Where do our ideas about Italy come from and how do they compare to the realities of its cultural production and its contemporary day-to-day life? This cultural survey course on contemporary Italy will investigate the similarities and divergences of these perceptions by researching current social, political, and media trends and putting them face to face with our preconceived notions. The course will cover major cultural trends from fashion and food trends, to eco-Italy, criminality and the Anthropocene, to immigration, to Black and LGBTQ+ Italia, to contemporary transfeminism, to Berlusconismo and Populism, to Netflix Italia and Social media culture. Through written assignments both in and outside the classroom, oral presentations, and multimedia projects we will critically reflect on these contemporary issues and gain a stronger understanding of the socio-cultural specificity of the Italian cultural landscape and its relationship to contemporary global socio-political trends and identities.

COML 2820 Theatre and Politics
This course will examine the relationship between theatre and politics in the twentieth and twenty-first centuries. How do theatre artists navigate their artistic and political aims? How do we distinguish between art and propaganda? Throughout the semester we will ask how the unique components of theatre—its poetic structure, engagement with spectators, aesthetics of representation, relationship to reality, and rehearsal process—contribute to its political capacity. Students will read a variety of plays drawn from late twentieth century and contemporary global theatre practice alongside political and aesthetic theory to interrogate the relationship between artistic production, power, and resistance. We will conclude with a consideration of the ways politics is itself a performance, considering how power is supported by theatrical means and how performance functions in resistance movements.

COML 3097 Psychoanalysis and Autobiography
Both psychoanalysis and autobiography are ways of re-telling a life. Psychoanalysis is often called “the talking cure” because, as patients tell the analyst more and more about their lives (their thoughts, dreams, memories, hopes, fears, relationships, jobs, and fantasies), they start to recognize themselves in new ways, and this can help them overcome conflicts, impasses, bad feelings, and even psychiatric illnesses that have kept them from flourishing. Autobiographers do something similar as they remember, re-examine, and re-tell their lives - though one very important difference is that they do so, not privately in a psychoanalyst’s office, but publicly in books that anyone may read. This seminar is a comparative exploration of these different ways of a re-telling a life. This seminar is usually team-taught by a humanities scholar and a practicing psychoanalyst.
Fall
Also Offered As: ENGL 0541, GSWS 3890
1 Course Unit

COML 3110 French Thought After 1968
In American academia, French thought after May ’68 is often referred to as “French Theory,” a heterogeneous corpus of philosophical and critical texts compacted into a set of poststructuralist premises, first introduced by and grew within humanities departments, then identified as a luxury by-product of the “literary” people. This course proposes to unpack the notion of “French Theory” and re-anchor it into its original social/historical background. We will read some of the most influential texts of its key figures, study how a post May 68 revolutionary energy is transformed into various innovative but also destabilizing ways of rethinking power relations, gender, language and subjectivity, and finally, consider in what capacities and limits these diverse critical approaches go beyond the simple label of “post-structuralism” and relate to our own epoch and personal experiences. The readings and discussions will be divided into four axes: 1. Philosophy of Desire (Lacan, Deleuze/Guattari); 2. Sexual Revolt and Body Politics (Foucault, Hocquenghem, Barthes); 3. Deconstruction and Its Impact on Feminism (Derrida, Cixous, Irigaray); 4. Consumer Society and Society of the Spectacle (Lipovetsky, Baudrillard, Debord). Several documentaries and feature films will be shown outside class time. Taught in English. Reading knowledge of French is welcome but not required.
Fall or Spring
Also Offered As: FREN 3110
1 Course Unit

COML 3120 The Translation of Poetry/The Poetry of Translation
Through poems, essays, and our own ongoing writing experiments, this course will celebrate the ways in which great poetry written different languages underscores the fact that language itself is a translation. Alternating between creative writing workshops and critical discussion, the course will be tailored to the backgrounds of students who enroll, and all are welcome. To learn more about this course, visit the Creative Writing Program at https://creative.writing.upenn.edu.

COML 3211 Modern Chinese Poetry in a Global Context
The tumultuous political and economic history of modern China has been mirrored in and shaped by equally fundamental revolutions in language and poetic expression. In this course, we will take Chinese poetry as a crucible in which we can observe the interacting forces of literary history and social change. From diplomats who saw poetry as a medium for cultural translation between China and the world, to revolutionaries who enlisted poetry in the project of social transformation, we will examine the lives and works of some of China's most prominent poets and ask, what can we learn about modern China from reading their poetry? In asking this question, we will also reckon with the strengths and limitations of using poetry as an historical source. In addition to poems, the course will include fiction, essays, photographs, and films by both Chinese and non-Chinese artists that place our poets in a broader context. We will pay close attention to how these poets represent China's place in the world, as well as the role of language in social change. Topics of discussion include: national identity, revolution, translation, gender, the body, ethnicity, and technology. Familiarity with Chinese or related cultural context is beneficial, but not required. This course introduces students to Chinese poetry in English translation. Students will leave the course with an in-depth understanding of the main figures, themes, and techniques of Chinese poetry, and will be introduced to some of the major developments in the history of China. Through a focus on primary texts, students will develop the vocabulary and analytical skills to appreciate and analyze poetry in translation and will gain confidence as writers thinking about literary texts.

COML 3252 Marx, Nietzsche, Freud: Masters of Suspicion
In his influential book Freud & Philosophy, the French philosopher Paul Ricoeur identified three master thinkers whose influence on the twentieth century was inestimable. What these figures shared was what Ricoeur called a "hermeneutics of suspicion," that is, in their different ways, each developed a style of interpretation aimed at unmasking, demystifying, and exposing the real from the apparent. "Three masters, seemingly mutually exclusive, dominate the school of suspicion: Marx, Nietzsche, and Freud." Taking its inspiration from Ricoeur, this seminar will explore some of the key writings of Marx, Nietzsche, and Freud. We will encounter the hermeneutics of suspicion above all in these authors’ attempts to unmask religion and reveal its true origin and function. And we shall also pursue the hermeneutics of suspicion in the specific concerns that form the core of each thinker’s work: Marx’s critique of capitalism, Nietzsche’s genealogy of Judaeo-Christian morality, skepticism about ‘truth’, and proto-deconstruction of the human self, and Freud’s theory of the unconscious. The final weeks of the course will be devoted to independent research and writing of an original essay in intellectual history.

COML 3330 Dante's Divine Comedy
In this course we will read the Inferno, the Purgatorio and the Paradiso, focusing on a series of interrelated problems raised by the poem: authority, fiction, history, politics and language. Particular attention will be given to how the Commedia presents itself as Dante’s autobiography, and to how the autobiographical narrative serves as a unifying thread for this supremely rich literary text. Supplementary readings will include Virgil’s Aeneid and selections from Ovid’s Metamorphoses. All readings and written work will be in English. Italian or Italian Studies credit will require reading Italian texts in their original language and writing about their themes in Italian. This course may be taken for graduate credit, but additional work and meetings with the instructor will be required.

COML 3501 Writing and Witnessing
This course will explore one of the fundamental questions we face as humans: how do we bear witness to ourselves and to the world? How do we live and write with a sense of response-ability to one another? How does our writing grapple with traumatic histories that continue to shape our world and who we are in it? The very word “witnessing” contains a conundrum within it: it means both to give testimony, such as in a court of law, and to bear witness to something beyond understanding. In this class, we will explore both senses of the term “witness” as we study work by writers such as Harriet Jacobs, Paul Celan, M. NourbeSe Philip, Bhanu Kapil, Layli Long Soldier, Claudia Rankine, Julianna Spahr, and others that wrestles with how to be a witness to oneself and others during a time of ongoing war, colonialism, racism, climate change, and other disasters. Students are welcome in this class no matter what stage you are at with writing, and whether you write poetry or prose or plays or make other kinds of art. Regardless of your experience, in this class you'll be considered an “author,” which in its definition also means a “witness.” We will examine and question what authorship can do in the world, and we will analyze and explore the fine lines among being a witness, a bystander, a participant, a spectator, and an ally. In this class you will critically analyze and write responses to class readings; you’ll do writing exercises related to the work we read; and you’ll complete (and be workshopped on) a portfolio of creative writing (and/or art) that bears witness to events that matter to you.

COML 3508 Queer Forms
Queer and trans writers have always queered form, constantly inventing new ways to express new forms of becoming. And yet, much of the attention paid to LGBTQ+ writing has focused on identity and content rather than looking at the many innovations in form that queer and trans writers are always producing. This multi-genre creative/critical workshop will examine some of the methods contemporary LGBTQ+ writers have used to queer genre and form in their writing, whether they are working through fiction, poetry, essay, play/performance, or some combination thereof. Queer theorist José Esteban Muñoz’s notions of disidentification and queer futurity will help guide our thinking in this course. Students will read and write creative/critical responses each week to a wide range of writing that queers form. The class will include weekly workshopping and students will work towards a final project that incorporates all they have learned over the term, generating ever new queer forms of making.
Also Offered As: ENGL 3508, GSWS 3508

COML 3603 Writing, Publishing, and Reading in Early Modern Europe and the Americas
In this course we will consider the writing, publication, and reading of texts created on both sides of the Atlantic in early modern times, from the era of Gutenberg to that of Franklin, and in many languages. The seminar will be held in the Kislak Center for Special Collections, Rare Books and Manuscripts in Van Pelt Library and make substantial use of its exceptional, multilingual collections, including early manuscripts, illustrated books, plays marked for performance, and censored books. Any written or printed object can be said to have a double nature: both textual and material. We will introduce this approach and related methodologies: the history of the book, the history of reading; connected history; bibliography; and textual criticism. We will focus on particular case studies and also think broadly about the global history of written culture, and about relations between scribal and print culture, between writing and reading, between national traditions, and between what is and what is not "literature." We encourage students with diverse linguistic backgrounds to enroll. As part of the seminar, students will engage in a research project which can be based in the primary source collections of the Kislak Center. History Majors or Minors may use this course to fulfill the US, Europe, or Latin America geographic requirement if that region is the focus of their research paper.
Also Offered As: ENGL 2603, HIST 3603
1 Course Unit

COML 3704 The Iliad and its Afterlife
As the earliest work in the western tradition, the Iliad has been a constant point of reference for later considerations of heroism, friendship, the search for meaning in the face of mortality, and the effects of war on individuals and societies. We will begin with a close reading of the Iliad in translation, with attention both to the story of its hero Achilles as he experiences disillusionment, frustration, anger, triumph, revenge, and reconciliation and to the poems broader portrait of a society at war, which incorporates the diverse perspectives of invaders and defenders, men and women, old and young, gods and mortals, along with tantalizing glimpses of peacetime life. We will then consider how later writers and artists have drawn on the Iliad to present a range of perspectives of their own -- whether patriotic, mock heroic, romantic, or pacifist -- with particular attention to 20th and 21st century responses by such figures as W.H. Auden, Simone Weil, Cy Twombly, David Malouf, Alice Oswald, and Adrienne Rich. There are no specific prerequisites, but the course can serve as a complement to CLST 302, The Odyssey and its Afterlife or CLST 331 Reading the Iliad in a Time of War.
Also Offered As: CLST 3704

COML 3712 From Tablets to Tablets: A Long History of Technology and Communication
The invention of new communications technologies is often accompanied by a swell of hope. Enthusiasts expect people to become more connected, new ideas to become more accessible, and information to be shared more rapidly and in more fixed forms than ever before. While there are always nay-sayers, who warn against the effects of such inventions, the narrative linking new communications technologies and progress is so strong that these detractors are most commonly painted as luddites, and the narrative itself is used to justify and promote yet newer media as well as new configurations of state and media relations. In this class, we will examine some of the most significant transformations in the history of communications technology—from orality to writing, from tablet to scroll to codex, manuscript to print, hand-press to steam-press, print to radio, radio to tv, and tv to streaming and other forms of new media. We will ask some basic questions: How were these technologies made? How and by whom were these technologies used? How did contemporaries perceive them and the transformations they did or did not work? We will also ask some bigger questions: why do certain communications technologies emerge and get adopted when and where they do? Conversely, why are some communications technologies resisted at some times and in some places? What impacts do communications technologies have on the societies in which the appear? Do they alter the course of events? Do they change the way in which we think? If so, then how? Is the history of communication substitutive or additive? How is the digital age in which we live similar to or different from those that came before? History Majors may use this course to fulfill the pre-1800 requirement depending on the topic of their research paper.

COML 3802 Literary Translation
This course is for graduate students and undergraduates with permission of the instructor. All students enrolled must have knowledge of at least one language other than English. We will study the history, theory and practice of literary translation, and participate in it. Readings will include theoretical works in translation studies, using selections from Lawrence Venuti’s Translation Studies Reader and Schulte/Biguenet’s Translation Theory Reader, with some supplemental readings; we will also look at comparative cases of multiple translations of the same original, and analyze how different translators make different interpretative/formal/aesthetic choices. Course assignments will include both a research paper, on the history and/or theory of translation, and an extended practical translation exercise, to be workshopped over the course of the semester, consisting of a literary translation of a text of the student’s choice.
Also Offered As: CLST 3802
1 Course Unit
COML 3830 French & Italian Modern Horror
This course will consider the horror genre within the specific context of two national cinemas: France and Italy. For France, the focus will be almost exclusively on the contemporary period which has been witnessing an unprecedented revival in horror. For Italy, there will be a marked emphasis on the 1960s-1970s, i.e. the Golden Age of Gothic horror and the giallo craze initiated by the likes of Mario Bava and Dario Argento. Various subgenres will be examined: supernatural horror, ghost story, slasher, zombie film, body horror, cannibalism, etc. Issues of ethics, gender, sexuality, violence, spectatorship will be examined through a variety of critical lenses (psychoanalysis, socio-historical and cultural context, aesthetics, politics, gender, etc.).

COML 3931 Participatory Community Media, 1970-Present
What would it mean to understand the history of American cinema through the lens of participatory community media, collectively-made films made by and for specific communities to address personal, social and political needs using a range of affordable technologies and platforms, including 16mm film, Portapak, video, cable access television, satellite, digital video, mobile phones, social media, and drones? What methodologies do participatory community media makers employ, and how might those methods challenge and transform the methods used for cinema and media scholarship? How would such an approach to filmmaking challenge our understanding of terms like "authorship," "amateur," "exhibition," "distribution," "venue," "completion," "criticism," "documentary," "performance," "narrative," "community," and "success"? How might we understand these U.S.-based works within a more expansive set of transnational conversations about the transformational capacities of collective media practices? This course will address these and other questions through a deep engagement with the films that make up the national traveling exhibition curated by Louis Massiah and Patricia R. Zimmerman, We Tell: Fifty Years of Participatory Community Media, which foregrounds six major themes: Body Publics (public health and sexualities); Collaborative Knowledges (intergenerational dialogue); Environments of Race and Place (immigration, migration, and racial identities unique to specific environments); States of Violence (war and the American criminal justice system); Turf (gentrification, homelessness, housing, and urban space); and Wages of Work (job opportunities, occupations, wages, unemployment, and underemployment). As part of that engagement, we will study the history of a series of Community Media Centers from around the U.S., including Philadelphia's own Scribe Video Center, founded in 1982 by Louis Massiah, this course's co-instructor. This is an undergraduate seminar, but it also available to graduate students in the form of group-guided independent studies. The course requirements include: weekly screenings, readings, and seminar discussions with class members and visiting practitioners, and completing both short assignments and a longer research paper.

COML 4300 Seminar in Modern Hebrew Literature
This course introduces students to selections from the best literary works written in Hebrew over the last hundred years in a relaxed seminar environment. The goal of the course is to develop skills in critical reading of literature in general, and to examine how Hebrew authors grapple with crucial questions of human existence and national identity. Topics include: Hebrew classics and their modern "descendents," autobiography in poetry and fiction, the conflict between literary generations, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students' literary understanding.

COML 5010 Comparative Literature Proseminar
This course will survey what has come to be known in literary and cultural studies as "theory" by tracking the genealogies of a select range of contemporary practices of interpretation. We will address the following questions. What are some of the historical and rhetorical conditions of emergence for contemporary critical theories of interpretation? What does it mean to interpret literature and culture in the wake of the grand theoretical enterprises of the modern period? How do conceptions of power and authority in literature and culture change as symbolic accounts of language give way to allegorical and performative accounts? How might we bring frameworks of globality and translation to bear on literary and cultural criticism? Half of the course sessions will involve the instructor and the students reading texts that represent a range of hermeneutic approaches, in classical and contemporary forms. For the other half of the class, we will welcome one visiting instructor per week from the Comparative Literature faculty, who will assign readings and lead discussion on their own area(s) of specialization. The central, practical goals of the class will be to help first year PhD candidates in Comparative Literature prepare for their MA exam, to introduce students to a range of faculty in the Program, and to forge an intellectual community among the first year cohort.
Fall

1 Course Unit

COML 5041 18th-century Visual Cultures of Race & Empire
This course approaches the Western history of race and racial classification (1600-1800) with a focus on visual and material culture, natural history, and science that connected Atlantic and Pacific worlds. Across the long eighteenth century, new knowledges about human diversity and species distinctions emerged alongside intensifications of global trade with Asia. The course will include case studies of chinoiserie textiles, portraits of consuming individuals, natural history prints and maps, Chinese export porcelain and furnishings, and "blackamoor" sculpture. Objects of visual and material culture will be studied alongside readings on regional and world histories that asserted universal freedoms as well as hierarchies of human, animal, and plant-kind. Keeping in mind that the idea of race continues to be a distributed phenomenon - across color, gender, class, religion, speech, culture - we will explore changing vocabularies of difference, particularly concerning skin color, across a range of texts and images. Knowledge often does not take written or literary form, and for this reason, we will study examples of visual and material culture as well as forms of technology that were critical to defining human varieties, to use the eighteenth-century term. Although we will be reading texts in English, some in translation, we will also account for European and non-European knowledge traditions - vernacular, indigenous - that informed scientific and imaginative writings about the globe. Topics may include cultural and species distinction, global circulations of commodities between the East and West Indies, the transatlantic slave trade, the casta system of racial classification in the Americas, religious and scientific explanations of blackness and whiteness, and visual representations of non-European people.
Spring
Also Offered As: ARTH 5680, ENGL 5440

COML 5050 Digital Humanities Studies
This course is designed to introduce advanced undergraduate and graduate students to the range of new opportunities for literary research afforded by Digital Humanities and recent technological innovation. Digital Humanities: you've heard of it. Maybe you're excited about it, maybe you're skeptical. Regardless of your primary area of study, this course will give you the critical vocabularies and hands-on experience necessary to understand the changing landscape of the humanities today. Topics will include quantitative analysis, digital editing and bibliography, network visualization, public humanities, and the future of scholarly publishing. Although we will spend a good portion of our time together working directly with new tools and methods, our goal will not be technological proficiency so much as critical competence and facility with digital theories and concepts. We will engage deeply with media archaeology, feminist technology studies, critical algorithm studies, and the history of material texts; and we will attend carefully to the politics of race, gender, and sexuality in the field. Students will have the opportunity to pursue their own scalable digital project. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

COML 5090 Topics in Yiddish Literature: Modernist Jewish Poetry
One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define "Jewish writing," in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation's process and products. Another version of this seminar presents Jewish modernism as an international phenomenon of the early 20th century. The course will attempt to define "Jewish modernism" through the prism of poetry, which inevitably, given the historical events in Europe and America during this time, grapples with aesthetic, religious, and national ideologies and methods. The syllabus will focus mainly on poetry written in Yiddish and English, and will also include German, Russian, and Hebrew verse. All poetry, critical, and theoretical materials will be taught in English translation, although students who know the languages will work on the original texts and will bring to the table a comparative perspective. Because we will be discussing translated poems, a secondary focus of the course will, in fact, be on literary translation's process and products.

COML 5110 Life Writing: Autobiography, Memoir, and the Diary
This course introduces three genres of life writing: Autobiography, Memoir and the Diary. While the Memoir and the diary are older forms of first persons writing the Autobiography developed later. We will first study the literary-historical shifts that occurred in Autobiographies from religious confession through the secular Eurocentric Enlightenment men, expanded to women writers and to members of marginal oppressed groups as well as to non-European autobiographies in the twentieth century. Subsequently we shall study the rise of the modern memoir, asking how it is different from this form of writing that existed already in the middle ages. In the memoirs we see a shift from a self and identity centered on a private individual autobiographer to ones that comes from connections to a community, a country or a nation; a self of a memoirist that represents selves of others. Students will attain theoretical background related to the basic issues and concepts in life writing: genre, truth claims and what they mean, the limits of memory, autobiographical subject, agency or self, the autonomous vs. the relational self. The concepts will be discussed as they apply to several texts. Some examples are: parts of Jan Jacques Rousseau's Confessions; the autobiography of Benjamin Franklin; selected East European autobiographies between the two world wars; the memoirs of Lady Ann Clifford, Sally Morgan, Mary Jamison and Saul Friedlander. The third genre, the diary, is a person account, organized around the passage of time, and its subject is in the present. We will study diary theories, diary's generic conventions and the canonical text, trauma diaries and the testimonial aspect, the diary's time, decoding emotions, the relation of the diary to an audience and the process of transition from archival manuscript to a published book. The reading will include travel diaries (for relocation and pleasure), personal diaries in different historical periods and countries, diaries in political conflict (as American Civil War women's diaries, Holocaust diaries, Middle East political conflicts diaries). We will conclude with diaries online, and students will have a chance to experience and report about differences between writing a personal diary on paper and diaries and blogs on line. Each new subject in this online course will be preceded by an introduction. Specific reading and written assignments, some via links to texts will be posted weekly ahead of time. We will have weekly videos and discussions of texts and assigned material and students will post responses during these sessions and class presentations in the forums.

COML 5111 Introduction to Paleography & Book History
Writing and reading are common actions we do every day. Nonetheless they have changed over the centuries, and a fourteenth century manuscript appears to us very different from a Penguin book. The impact of cultural movements such as Humanism, and of historical events, such as the Reformation, reshaped the making of books, and therefore the way of reading them. The course will provide students with an introduction to the history of the book, including elements of paleography, and through direct contact with the subjects of the class: manuscripts and books. Furthermore, a section of the course will focus on digital resources, in order to make students familiar with ongoing projects related to the history of book collections (including the "Philosophical Libraries" and the "Provenance" projects, based at the Scuola Normale Superiore in Pisa and at Penn). The course will be conducted in English; a basic knowledge of Latin is desirable but not required.

COML 5180 Old Church Slavonic: History, Language, Manuscripts
The language that we know today as Old Church Slavonic was invented, along with the Slavic alphabet(s), in the 9th century by two Greek scholars, Sts. Cyril and Methodius. They had been tasked by the Byzantine Emperor with bringing the Christian faith to the Slavic-speaking people of Great Moravia, a powerful medieval state in central Europe. From there, literacy, along with the Christian faith, spread to other Slavs, and even non-Slavic speakers, such as Lithuanians and Romanians. Church Slavonic and its regional variants were used to compose the oldest texts of the Slavic-speaking world, which today is comprised of Belarus, Bosnia, Bulgaria, Croatia, Czechia, Macedonia, Montenegro, Russia, Poland, Slovakia, Serbia, Slovenia, and Ukraine. Knowledge of this language and tradition aids in understanding the cultural, literary, and linguistic history of any modern Slavic language. For learners of Russian and other Slavic languages, Church Slavonic provides a layer of elevated stylistic vocabulary and conceptual terminology, similar to, and even greater than, the role of Latin and Greek roots in the English language. For historical linguists, Church Slavonic provides unique material for comparison with other ancient Indo-European languages, such as Latin, Greek, and Sanskrit. For medievalists and cultural historians, it opens the door into the Slavic Orthodox tradition that developed in the orbit of the Byzantine Commonwealth.

COML 5245 Topics in Medieval Studies: Premodern Animals (c.500-c.1500)
From St. Cuthbert, whose freezing feet were warmed by otters, to St. Guinefort, a miracle-performing greyhound in 13th-century France, to Melusine, the half-fish, half-woman ancestress of the house of Luxembourg (now the Starbucks logo), medieval narratives are deeply inventive in their portrayal of human-animal interactions. This course introduces students to critical animals studies via medieval literature and culture. We will read a range of genres, from philosophical commentaries on Aristotle and theological commentaries on Noah's ark to werewolf poems, beast fables, political satires, saints' lives, chivalric romances, bestiaries, natural encyclopaedias, dietary treatises and travel narratives. Among the many topics we will explore are the following: animals in premodern law; comfort and companion animals; vegetarianism across religious cultures; animal symbolism and human virtue; taxonomies of species in relation to race, gender, and class; literary animals and political subversion; menageries and collecting across medieval Europe, the Near East, and Asia; medieval notions of hybridity, compositeness, trans-species identity, and interspecies relationships; art and the global traffic in animals (e.g., ivory, parchment); European encounters with New World animals; and the legacy of medieval animals in contemporary philosophy and media. No prior knowledge of medieval literature is required. Students from all disciplines are welcome.

1 Course Unit

Although the starting point for the Anthropocene is still under discussion, there is broad agreement that the industrial revolution and the turn to fossil fuels mark an intensification of humanity's impact on the Earth. It may not be a coincidence that Kant's proclamation of the Copernican revolution in philosophy, according to which human reason replaces the natural light of traditional metaphysics, falls roughly in the same period. Human finite cognition became the measure for God and his creation. The dawn of the era of human freedom and the ramped up exploitation of resources coincide. It is against this background that the Naturphilosophie of F. W. J. Schelling can become particularly interesting. The genesis of German idealism is closely related with the opposition between freedom and necessity that lies at the heart of Kant's critical project. Kant associated the former with man and the latter with nature. In trying to bridge the gap between them, Schelling reinstates nature as an autonomous actor in its own right. Schelling's thinking about nature chimed with the literary and empirical-scientific work of his contemporary Johann Wolfgang von Goethe. In the productive interplay of poetry, science, religion, and philosophical thought, Goethe and Schelling offer a critical alternative to philosophy in the aftermath of the Copernican revolution that may be viable or useful today as humanity tries to come to terms with anthropogenically induced climate change. This co-taught interdisciplinary seminar will focus on works by Schelling (Ideas for a Philosophy of Nature, First Outline of a System of the Philosophy of Nature, On the World Soul) and Goethe (scientific writings, Faust I & II), in addition to engaging recent scholarship of Schelling and Goethe in relation to environmental humanities.

COML 5260 The Trouble with Freud: Psychoanalysis, Literature, Culture

For professionals in the field of mental care, Freud's work is often regarded as outmoded, if not problematic. Psychologists view his work as non-scientific, dependent on theses that cannot be confirmed by experiments. In the realm of literary and cultural theory, however, Freud's work seems to have relevance still, and is cited often. How do we understand the gap between a medical/scientific reading of Freud's work, and a humanist one? Where do we locate Freud's relevance today? The graduate course will concentrate on Freud's descriptions of psychoanalytic theory and practice, as well as his writings on literature and culture.

COML 5350 The Elemental Turn

The unfolding effects of climate change—rising sea level, melting ice sheets, subsiding land masses, drought-stricken regions, wildfires, air laden with greenhouse gases, and inundated cities—heighten our awareness of the elements: air, earth, fire and water. Within the context of the new materialism, philosophers, eco-critics, and writers are re-turning to the elements and encountering, at the same time, predecessor texts that assume new relevance. This seminar will place current thinking and culture within the Commedia itself, through images, metaphors, descriptions, and even more concrete examples. The seminar will place current thinking toward (ideal) metaphysics, as a poetic practice, or as a central concern of Marxist and Spinozist traditions. We will also survey the attempts to recuperate materialism as a positive category in recent materialist poetics?

COML 5370 Translating Literature: Theory and Practice

The greats all have something to say about translation. The Hebrew poet H. N. Bialik is attributed with saying that “he who reads the Bible in translation is like a man who kisses his bride through a veil.” That, however, is a mistranslation: What Bialik really wrote was, “Whoever knows Judaism through translation is like a person who kisses his mother through a handkerchief.” (http://benyehuda.org/bialik/dvarim02.html), a saying that he probably translated and adapted from Russian or German. (https://networks.h-net.org/node/28655/discussions/116448/query-bialik-kissing-bride) Robert Frost wrote, “I could define poetry this way: it is that which is lost out of both prose and verse in translation.” Walter Benjamin defines it: “Translation is a form. To comprehend it as a form, one must go back to the original, for the laws governing the translation lie within the original, contained in the issue of its translatability.” Lawrence Venuti rails against translation that domesticates, rather than foreignizes, thus betraying the foreign text through a contrived familiarity that makes the translator invisible. Emily Wilson wants her translation “to bring out the way I think the original text handles it. [The original text] allows you to see the perspective of the people who are being killed.” https://bookriot.com/2017/12/04/emily-wilson-translation-the-odyssey/ Is translation erotic? A form of filial love? Incestuous? A mode of communion, or idol worship? Is translation a magician’s vanishing trick? Is translation traitorous, transcendent? Maybe translation is impossible. But let’s try it anyways! In this graduate seminar, we will read key texts on the history and theory of translating literature, and we sample translations from across the centuries of the “classics,” such as the Bible and Homer. We will consider competing translations into English of significant modern literary works from a variety of languages, possibly including, but not limited to German, Yiddish, French, Hebrew, and Russian. These readings will serve to frame each student’s own semester-long translation of a literary work from a language of her or his choice. The seminar offers graduate students with their skills in various language an opportunity to take on a significant translation project within a circle of peers.

COML 5380 Materialism

How do we recognize materialism? This seminar poses this question by acknowledging "materialism" as a contested category with disparate and contradictory historical meanings: as a synonym for dogmatism, as the arch-enemy of reason and morality, as the scientific philosophy of the revolutionary workers’ movement, as an alternative to (ideal) metaphysics, as a poetic practice, or as a central concern for material nature and environment, among others. Less concerned with enumerating philosophical systems, we will search out “family resemblances” and materialist tendencies among a wide range of texts. To this end, we will not only read the major historical texts of the so-called materialists (from Lucretius to Spinoza, from La Mettrie to Lenin), but also engage with materialism’s supposed critics and antagonists (from Plato to Kant and Hegel). A special emphasis will be placed on the attempts to recuperate materialism as a positive category in recent critical theory and continental philosophy, for example, in the reinventions of Marxist and Spinozist traditions. We will also survey the attempts that found new traditions, such as aleatory materialism or various new materialisms. By reading exemplary literary texts that engage with the problem of materialism the seminar will also ask: can one speak of materialist poetics?

COML 5400 Franz Kafka and J. M. Coetzee
This seminar will listen attentively to the echoes of Franz Kafka in the novels of J.M. Coetzee. Building on Gilles Deleuze and Felix Guattari’s concept of a minor literature, elaborated on the example of Kafka’s oeuvre, we will situate Kafka against the backdrop of the German-speaking Jewish community of Habsburg-era Prague and read Coetzee within the context of apartheid and his native South Africa. Beyond an investigation of empire and its aftermath, this course will consider the arguably posthuman ethics of these authors, examining them through the lens of animal studies and the environmental humanities in order to reveal how they anticipate and participate in current thinking on the Anthropocene. Reading Kafka’s fables beside Coetzee’s allegorical narratives, the seminar will follow the twisted course taken by literary justice from the Josef K. of Kafka’s Trial to Coetzee’s Life and Times of Michael K. Alongside these two towering figures, the influence of and affinities with other German-language authors (Heinrich von Kleist, Hugo von Hofmannsthal, Robert Walser) and Anglophone contemporaries (Samuel Beckett, Nadine Gordimer, Cormac McCarthy) will also be considered. Other works to be read will include Kafka’s Castle, In the Penal Colony, Metamorphosis and late animal stories as well as Coetzee’s In the Heart of the Country, Waiting for the Barbarians and Elizabeth Costello. Advanced undergraduates may enroll with the permission of the instructor. Readings and discussions in English.

COML 5411 Transalpine Tensions: Franco-Italian Rivalries in the Renaissance
In the Middle Ages and Early Modern period, France and the Italian States were bound together by linguistic, economic, political, and religious ties, and intellectual developments never flowed unilaterally from one country to the other. On the contrary, they were transnational phenomena, and French and Italian thinkers and writers conceived of themselves and their work both in relation to and in opposition to one another. This course will consider the most fundamental aspects of Franco-Italian cultural exchange in the medieval and early modern period, with an emphasis on humanism, philosophical and religious debates, political struggles, and the rise of vernacular languages in literary and learned discourse. Authors to be studied include Dante, Petrarch, Boccaccio, Picino, Pico della Mirandola, Castiglione, Bembo, Rabelais, Marguerite de Navarre, Du Bellay, Machiavelli, and Montaigne. In addition to learning the material covered in the course, students will gain expertise in producing professional presentations and research papers, and will also have the opportunity to consult original material from the Kislak Center. This course is open to undergraduates with permission of the instructor. It counts toward the undergraduate minor in Global Medieval Studies and the graduate certificate in Global and Medieval Renaissance Studies.

COML 5430 Environmental Humanities: Theory, Method, Practice
Environmental Humanities: Theory, Methods, Practice is a seminar-style course designed to introduce students to the trans- and interdisciplinary field of environmental humanities. Weekly readings and discussions will be complemented by guest speakers from a range of disciplines including ecology, atmospheric science, computing, history of science, medicine, anthropology, literature, and the visual arts. Participants will develop their own research questions and a final project, with special consideration given to building the multi-disciplinary collaborative teams research in the environmental humanities often requires.

COML 5440 Public Environmental Humanities
This broadly interdisciplinary course is designed for Graduate and Undergraduate Fellows in the Penn Program in Environmental Humanities (PPEH) who hail from departments across Arts and Sciences as well as other schools at the university. The course is also open to others with permission of the instructors. Work in environmental humanities by necessity spans academic disciplines. By design, it can also address and engage publics beyond traditional academic settings. This seminar, with limited enrollment, explores best practices in public environmental humanities. Students receive close mentoring to develop and execute cross-disciplinary, public engagement projects on the environment. In spring 2018, participants have the opportunity to participate in PPEH’s public engagement projects on urban waters and environmental data. These ongoing projects document the variety of uses that Philadelphians make of federal climate and environmental data, and beyond city government; they also shine light on climate and environmental challenges our city faces and the kinds of data we need to address them. Working with five community partners across Philadelphia, including the City’s Office of Sustainability, students in this course will develop data use stories and surface the specific environmental questions neighborhoods have and the kinds of data they find useful. The course hosts guest speakers and research partners from related public engagement projects across the planet; community, neighborhood, open data, and open science advocates; and project partners in government in the City of Philadelphia and Commonwealth of Pennsylvania. Course assignments include: * 2 short-form essays (course blog posts); * a 12-hour research stay (conducted over multiple visits) with a community course partner to canvas data uses and desires; * authorship of 3 multi-media data stories; * co-organization and participation in a city-wide data storytelling event on May 2, 2018.

COML 5460 Women's Writing in French, 1160–1823
In this course, we will examine a representative sample of premodern women's writing in French, beginning in the Middle Ages and concluding in the Revolutionary Era. The authors studied come from differing walks of life, social classes, and religious and political identifications, and they express themselves in a wide variety of genres, including short stories, fairy tales, lyric poetry, letters, plays, and novels. Despite their many differences, these authors are united by a common tendency to question a centuries-old tradition of misogynistic discourse, patriarchal social order, and gender normativity. Authors to be studied include: - Marie de France (ca. 1160), a brilliant storyteller and poet attached to the court of Henry II of England whose fabulous tales, arguably an early form of speculative fiction, imagine alternatives to the rigidity of arranged marriages and the heterosexual couple. - Christine de Pizan (1364–ca. 1430), a court writer for Charles VI of France and several other powerful patrons who is often considered France's first professional female writer. Her Livre de la Cité des Dames (Book of the City of Ladies) systematically refutes the misogynistic pronouncements of learned male authors and holds up devotion and religious life as alternatives to accepting the assigned role of wife and mother. - Marguerite de Navarre (1492–1549), the sister of Francis I of France and a prolific author of devotional poetry, plays, and the Heptaméron, a collection of tales modeled on Boccaccio's Decameron and known for its often shocking subject matter. Throughout her oeuvre, she calls into question the social perception of women rooted in misogynistic discourse, as well as the tendency to blame sexual violence on women, while at the same time revealing the potential danger of masculinity for men and women alike and envisioning Pauline Christianity as a means of radical equality. - Perrine du Guillet (1520–1545), Louise Labé (c. 1524–1566), and Anne de Marquets (1533–1588), three poets who respond to and write against the male-centered tradition of Petrarchan love poetry. Guillet and Labé stand out for their frank and often sensual depictions of female desire and sexuality in spite of taboos against their public expression, while Marquets, a Dominican nun at the convent of Poissy, combines Petrarchan, devotional, and mystic tropes to envision religious life as an alternative to the heteronormativity of lay French society and the Protestant Reformation. - Madame de Lafayette (1634–1693) and Madame de Sévigné (1626–1696), whose writings are of monumental importance in the history of literature in French as well as invaluable testimonies to the role played by women in the intellectual developments of the early modern period, including salons, Jansenism, and free-thinking (libertinism). - Gabrielle-Suzanne de Villeneuve (1685–1755), author of the first known version of La belle et la bête (Beauty and the Beast), who, along with other female authors of fairy tales, used the conventions of the genre to challenge social conventions and criticize the treatment of women. - Claire de Duras (1777–1828), whose novel Ourika, much like Villeneuve's La belle et la bête, shows how feminist concerns might intersect with colonialism and race; a bestseller in its day, it is one of the first works in French to feature a complex and articulate black narrator and what many scholars consider to be a modern outlook on race and identity. To provide historical and theoretical context, these readings will be supplemented with relevant primary and secondary sources, as well as with modern and contemporary adaptations, such as illustrations and films. The course is open to graduate students and to advanced undergraduates with permission of the instructor. Discussions will be in English. Readings will be made available both in the original French and in English translation, and final papers may be written in English or in French. Also Offered As: FREN 5460, GSWS 5460

COML 5590 Myth Through Time and In Time
The textual and physical remains of Greek and Roman culture and belief as 'myth' enframed the post-antique European world and its neighbors. Makers, patrons and viewers manipulated those survivals to challenge and speak to a contemporary world. This course focuses on how and why artists and their patrons engaged the mythic and examines the various areas of political and religious life that sought animation through an evocation of narratives from the past. Readings and case studies will engage with very late antique, medieval, and early modern art, turning to affect theory, an approach which centralizes the non-rational, emotive force of power. No previous knowledge of theory is required. Also Offered As: AAMW 5590, ARTH 5590, CLST 7400, GRMN 5590

COML 5650 Reading Benjamin Reading Kafka
Readings and discussions in English. Walter Benjamin’s study of the works of Franz Kafka is as enlightening as it can be bewildering. Moving from philology to Marxism, metaphysics to messianism, Daoism to Talmud, this densely argued piece elliptically touches on almost all of Kafka’s published works in just four short sections. This seminar proposes a line-by-line reading Benjamin’s 1934 “Franz Kafka on the Tenth Anniversary of His Death” with an eye to its literary, philosophical and religious contexts as well as to the rich history of its intellectual reception. Reading Kafka’s works as the essay evokes them, we will situate this piece with regard to Benjamin’s other writings, the essay’s interlocutors (Brod, Scholem, Lukacs, Brecht) and its most illustrious interpreters (Adorno, Arendt, Lukacs, Brecht). Not Offered Every Year Also Offered As: GRMN 5450, JWST 5650 1 Course Unit

COML 5660 The Long Nineteenth Century: Literature, Philosophy, Culture
The present course will discuss German literature and thought from the period of the French Revolution to the turn of the twentieth century, and put it into a European context. In regard to German literature, this is the period that leads from the Storm and Stress and Romanticism to the political period of the Vormärz, Realism, and finally Expressionism; in philosophy, it moves from German Idealism to the philosophy of Schopenhauer, Nietzsche, and neo-Kantian thought. It is also the period that saw the rise of the novel, and new forms of dramatic works. Painting moved out of the studio into plein air; the invention of photography made an imprint on all arts, and the rise of the newspaper led to new literary genres such as the feuilleton. Economically, Germany experienced the industrial revolution; politically, it was striving for a unification that was finally achieved in 1871. The nineteenth century saw the establishment of the bourgeoisie, the emergence of the German working class, and the idea of the nation state; it also saw Jewish emancipation, and the call for women’s rights. Readings will focus on a variety of literary, political, and philosophical texts; and consider a selection of art works. Not Offered Every Year Also Offered As: ARTH 7770, GRMN 5580 1 Course Unit

COML 5700 Topics in Afro-Diasporic Literature and Culture
This course treats some important aspect of African American and Afro-Diasporic literature and culture. Some recent versions of the course have focused on the emergence of African-American women writers, on the relation between African-American literary and cultural studies, and on the Harlem Renaissance. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings. Not Offered Every Year Also Offered As: AFRC 5701, ENGL 5700 1 Course Unit

COML 5710 Literature and Multilingualism
Since several years, the societal and cultural reality of multilingualism has become an important research field in linguistics and literary studies, as in cultural studies more generally. This graduate course will investigate how multilingual poetics challenge and resist paradigms and ideologies of innate monolingualism, linguistic mastery, absolute translatability and monocultural nationalism. To begin with, the course will introduce central aspects of scholarship on literature and multilingualism, covering concepts such as heteroglossia, code switching, translanguaging and macaronic language, and debates such as those on world literature, global English, foreignization, (un)translatability and non-translation, including their political and ethical importance. After a brief historical overview, glancing at western literary multilingualism in the Middle Ages, Romanticism and the avantgarde, the course will mainly focus on literature of the late 20th and 21st centuries taken from Germanic and Romance linguistic contexts. Using an exemplary selection, the course will cover prose, poetry and drama, and include excerpts of texts by authors such as Andrea Camilleri, Gino Cielliino, Fikry El Azzouzzi, Ernst Jandl, Jackie Kay, Çağlar Köseoğlu, Monique Mojica, Melinda Nadj Abonji, Emine Sevgi Özdamar, Olivier Rolin, Yoko Tawada, Nicole van Harskamp, and others. Reading these texts, we will try to determine how multilingualism manifests itself (linguistically, discursively, rhetorically, thematically, contextually etc.) and how the texts engage with linguistic, cultural and social pluralities. The course will conclude with a focus on the translator as a central character in fictional prose and movies. Classes will take place in an interactive format that stimulates discussion and exchange. Students will get the respective excerpts – both in the original version and in English translation – one week at a time so that they can prepare themselves each week for the discussion. Theoretical and contextual information will be provided via Power Point presentations. Not Offered Every Year Also Offered As: DTCH 5710, FREN 5710, GRMN 5710, ITAL 5710 1 Course Unit

COML 5730 Topics in Criticism & Theory: Object Theory
Topics vary annually Not Offered Every Year Also Offered As: ARTH 5730, CIMS 5730, ENGL 5730, GRMN 5730, REES 6683 1 Course Unit

COML 5735 Topics in Criticism: What is Poetics?
What is poetics? How does it differ from other forms of criticism in terms of both attitude or posture and method? In terms of practices of art and politics, What is its relationship to poiesis and ethics – what is poetics? – as articulated by such varied thinkers as Joan Retallack, Denise Ferreira Da Silva and R.A. Judy? What’s to be observed about the current turn of black studies toward poetics? For the seminar, let’s think about the above as matters of a) critical inquiry b) art practice and c) professional discipline. It may be possible to triangulate by way of “critique” and “aesthetics.” Proposing the inseparability of critical inquiry and writing practice, the final assignment will be deemed experimental since the monograph-ish essay won’t be presumed. Consequently, we will discuss the institutional state/status of what participants will have made. Possible readings incoude Michel Foucault, What is Critique?; Gilles Deleuze and Felix Guattari, What is Philosophy?: Hortense Spillers, Black, White & in Color (selections); Joan Retallack, The Poethical Wagner; Denise Ferreira Da Silva, Unpayable Debt; Boris Groys, Going Public; Rachel Zolf, No One’s Witness; Leslie Scalapino, Objects in the Terrifying Tense/Longing from Taking Place. Also Offered As: ENGL 5735 1 Course Unit
COML 5790 Spinoza After Marx
This seminar will focus on the thought of Baruch Spinoza and Karl Marx, tracing the effects of their encounter, not only in philosophy and critical theory, but in fields ranging from literary studies to environmental humanities. The second half of the twentieth century saw a revival of interest in Spinoza across the humanities and social sciences as a means of rethinking the very terms of philosophical and political debates of modernity. Mobilized for political purposes and contemporary demands, especially among Marxist theoreticians, Spinoza's philosophy became virtually unrecognizable from its earlier forms of reception. This seminar departs from the following observation: on the one hand, this revival of Spinoza proved especially fruitful among Marxist theoreticians; on the other hand, the modes of interpretation of Spinoza and the adaptations of Spinoza and Marxism are highly heterogeneous and often conflictual. The seminar will ask: what is it about Spinoza's thought that lends itself to a revival of Marxism? To what extent is Marx's thought necessary for a reevaluation of Spinoza? Why Spinoza today? To address these questions, we will trace the multiple traditions that think Marx and Spinoza together: the deployment of Spinoza against Hegel to rejuvenate Marxism in France (Louis Althusser, Etienne Balibar, Gilles Deleuze, Chantal Jaquet); the development of theories of the multitude in the tradition of Autonomism in Italy (Antonio Negri, Paolo Virno); the vicissitudes of Spinozism among the Soviet Marxists (Lyubov Axelrod, Abram Deborin, Evald Ilyenkov). Likewise, we will investigate the most recent turn to the Marx-Spinoza tradition in psychoanalysis (A. Kiariana Kordela), rethinking finance capitalism (Frederic Lordon), feminist theory (Moira Gatens), literary studies (Pierre Macherey, Anthony Uhlmann), and environmental humanities (Hasana Sharp, Beth Lord).

COML 5800 Topics In Aesthetics
Topic title for Spring 2018: Walter Benjamin. Walter Benjamin (1892-1940) is a philosopher whose writings on art, literature, and politics have had tremendous influence on many disciplines in the Humanities and Social Studies. He has been variously described as one of the leading German-Jewish thinkers, and a secular Marxist theorist. With the publication of a four-volume collection of this work in English, many more of his writings have been made accessible to a wider public. Our seminar will undertake a survey of his work that begins with his studies on language and allegory, and continues with his autobiographical work, his writings on art and literature, and on the imaginary urban spaces of the nineteenth-century.

COML 5840 Fantastic Literature 19th/20th Centuries
This course will explore fantasy and the fantastic in short tales of 19th- and 20th-century French literature. A variety of approaches – thematic, psychoanalytic, cultural, narratological – will be used in an attempt to test their viability and define the subversive force of a literary mode that contributes to shedding light on the dark side of the human psyche by interrogating the “real,” making visible the unseen and articulating the unsaid. Such broad categories as distortions of space and time, reason and madness, order and disorder, sexual transgressions, self and other will be considered. Readings will include "recits fantastiques" by Merimee, Gautier, Nerval, Maupassant, Breton, Peyre de Mandiargues, Jean Ray and others.
Not Offered Every Year
Also Offered As: CIMS 5821, FREN 5820

COML 5904 Theories of Nationalism
You cannot build a wall to stop the free flow of literary and creative ideas. But in constructing narratives of national identity, states have long adopted particular texts as "foundational." Very often these texts have been epics or romances designated "medieval," that is, associated with the period in which specific vernaculars or "mother tongues" first emerged. France and Germany, for example, have long fought over who "owns" the Strasbourg oaths, or the Chanson de Roland; new editions of this epic poem, written in French but telling of Frankish (Germanic) warriors, have been produced (on both sides) every time these two countries go to war. In this course we will thus study both a range of "medieval" texts and the ways in which they have been claimed, edited, and disseminated to serve particular nationalist agendas. Particular attention will be paid to the early nineteenth century, and to the 1930s. Delicate issues arise as nations determine what their national epic needs to be. Russia, for example, needs the text known as The Song of Igor to be genuine, since it is the only Russian epic to predate the Mongol invasion. The text was discovered in 1797 and then promptly lost in Moscow's great fire of 1812; suggestions that it might have been a fake have to be handled with care in Putin's Russia. Similarly, discussing putative Mughal (Islamic) elements in so-called "Hindu epics" can also be a delicate matter. Some "uses of the medieval" have been exercised for reactionary and revisionist causes in the USA, but such use is much more extravagant east of Prague. And what, exactly, is the national epic of the USA? What, for that matter, of England? Beowulf has long been celebrated as an English Ur-text, but is set in Denmark, is full of Danes (and has been claimed for Ulster by Seamus Heaney). Malory's Morte Darthur was chosen to provide scenes for the queen's new robing room (following the fire that largely destroyed the Palace of Westminster in 1834), but Queen Victoria found the designs unacceptable: too much popery and adultery. Foundations of literary history still in force today are rooted in nineteenth-century historiography: thus we have The Cambridge History of Italian Literature and The Cambridge History of German Literature, each covering a millennium, even though political entities by the name of Italy and Germany did not exist until the later nineteenth century. What alternative ways of narrating literary history might be found? Itinerary models, which do not observe national boundaries, might be explored, and also the cultural history of watercourses, such as the Rhine, Danube, or Nile. The exact choice of texts to be studied will depend in part on the interests of those who choose to enroll. Faculty with particular regional expertise will be invited to visit specific classes.

COML 5920 Life, Death, and Revolution in Haiti
In the last few decades, Haiti has been known on the global stage for its repeated calamities: earthquakes, hurricanes, droughts followed by floods and vice versa, dictatorships, cholera, civil unrest, etc. These media representations, which foreground trauma and failure, tend to overshadow a momentous revolutionary past as well as a long tradition of thriving avant-garde literary and artistic movements. These negative representations are part and parcel of a centuries-long practice of epistemic violence against Haiti that began well before it declared its independence from France in 1804, at the end of a bloody revolution. In this course, we will seek a more nuanced understanding of Haiti by exploring the concepts of life, death, and revolution in a selection of literary texts, essays, articles, documents, and films. Our interdisciplinary approach will allow us to discuss voodoo, the figure of the zombi, gender, the environment, modernity, and the relationship between politics and poetics. This course is taught in French and is open to advanced undergraduates and graduate students.

COML 5940 Cinema and Media Studies Methods
This proseminar will introduce a range of methodological approaches (and some debates about them) informing the somewhat sprawling interdisciplinary field of Cinema and Media Studies. It aims to equip students with a diverse—though not comprehensive—toolbox with which to begin conducting research in this field; an historical framework for understanding current methods in context; and a space for reflecting on both how to develop rigorous methodologies for emerging questions and how methods interact with disciplines, ideologies, and theories. Students in this class will also engage scholars participating in the Cinema and Media Studies colloquium series in practical discussions about their methodological choices. The course's assignments will provide students with opportunities to explore a particular methodology in some depth through a variety of lenses that might include pedagogy, the conference presentation, grant applications, the written essay, or an essay in an alternative format, such as the graphic or video essay. Throughout, we will be trying to develop practical skills for the academic profession. Although our readings engage a variety of cinema and media objects, this course will be textually based. No prior experience needed. The course is open to upper-level undergraduates with relevant coursework in the field by permission of instructor only. Course Requirements: Complete assigned readings and actively participate in class discussion: 20%; Reading responses: 10%; Annotated bibliography or course syllabus on a particular methodology: 20%; SCMS methodology-focused conference paper proposal according to SCMS format: 10%; Research paper or grant proposal, or essay in an alternative format using the methodology explored in the syllabus or bibliography: 40%.

1 Course Unit

COML 5950 Travel Literature
Within the context of the ill-defined, heterogeneous genre of the travelogue and of today's age of globalization, CNN and the Internet, this seminar will examine the poetics of travel writing based largely albeit not exclusively on travel notebooks, or journaux/carnets de voyage, spanning the 20th century from beginning to end. One of the principal specificities of the texts studied is that they all evince to a lesser or greater degree a paradoxical resistance both to the very idea of travel(ing) as such and to the mimetic rhetoric of traditional travel narratives. We will therefore look at how modern or postmodern texts question, revisit, subvert or reject such key notions of travel literature as exoticism, nostalgia, exile, nomadism, otherness or foreignness vs. selfhood, ethnology and autobiography, etc. Authors considered will include Segalen, Morand, Michaux, Leiris, Levi-Strauss, Butor, Le Clezio, Baudrillard, Bouvier, Jouanard, Leuwers.

COML 6050 Modern Literary Theory and Criticism
This course will provide an overview of major European thinkers in critical theory of the 20th and 21st centuries. We will pay particular attention to critical currents that originated in Eastern European avant-garde and early socialist contexts and their legacies and successors. Topics covered will include: Russian Formalism and its successors in Structuralism and Deconstruction (Shklovsky, Levi-Strauss, Jakobson, Derrida); Bakhtin and his circle, dialogism and its later western reception; debates over aesthetics and politics of the 1930s (Lukacs, Brecht, Adorno, Benjamin, Radek, Clement Greenberg); the October group; Marxism, new Left criticism, and later lefts (Althusser, Williams, Eagleton, Jameson, Zizek).

1 Course Unit

COML 6090 Global France
The purpose of this course is to examine the various modalities of interaction between anthropology and literature in modern French culture. Our guiding thesis is that the turn toward other cultures has functioned as a revitalizing element in the production of cultural artifacts while providing an alternative vantage point from which to examine the development of French culture and society in the contemporary period. The extraordinary innovations of “ethnosurrealism” in the twenties and thirties by such key figures of the avant-garde as Breton, Artaud, Bataille, Caillois, and Leiris, have become acknowledged models for the postwar critical thought of Barthes, Derrida, and Foucault, as well as inspiring a renewal of “anthropology as cultural critique in the United States.”
Besides the authors just indicated, key texts by Durkheim, Mauss and Levi-Strauss will be considered both on their own terms and in relation to their obvious influence. The institutional fate of these intellectual crossovers and their correlative disciplinary conflicts will provide the overarching historical frame for the course, from the turn of the century to the most recent debates.

COML 6100 Ancient and Medieval Theories and Therapies of the Soul
This seminar focuses on premodern conceptions of the 'soul', the force felt to animate and energize a human body for as long as it was considered alive, and to activate virtually all aspects of its behavior through time. Premodern concepts of the soul attempted to account for a person's emotions and desires, perceptions, thoughts, memory, intellect, moral behavior, and sometimes physical condition. The course will trace the various ancient theories of the soul from the Presocratics, Plato, Aristotle, Stoic thought in Greek and Latin, medical writers (Hippocrates, Hellenistic doctors, Galen), and Neoplatonists, to the medieval receptions and transformations of ancient thought, including Augustine and Boethius, Avicenna's interpretation of Aristotle and its medieval influence, and Aquinas and other later medieval ethicists. These premodern conceptions of the soul have a surprisingly long afterlife, reaching into the literary cultures and psychological movements of early modernity and beyond. Knowledge of Greek or Latin is not required, but see the following: The seminar will meet for one two-hour session per week, and a separate one-hour 'breakout' session during which students who have registered for GREK 7203 will meet to study a selection texts in Greek, and students who have registered for COML/ENGL will meet to discuss medieval or early modern texts relevant to their fields of study. Not Offered Every Year
Also Offered As: ENGL 7060, GREK 7203

COML 6120 Hannah Arendt: Literature, Philosophy, Politics
The seminar will focus on Arendt's major work, The Origins of Totalitarianism (and its three parts, Anti-Semitism, Imperialism, Totalitarianism). We will also discuss the reception of this work and consider its relevance today. Not Offered Every Year
Also Offered As: ENGL 6120, GRMN 6120, JWST 6120, PHIL 5439
1 Course Unit

COML 6149 Socialist and Post-Socialist Worlds
In 1989-1991, a whole world, perhaps many worlds, vanished: the worlds of socialism. In this graduate seminar we will investigate key cultural works, theoretical constructs and contexts spanning the socialist world(s), focused around the USSR, which was for many the (not uncontested) center of the socialist cosmos. Further, we will study the cultural and political interrelationships between the socialist world(s) and anticolonial and left movements in the developing and the capitalist developed nations alike. Finally, we will investigate the aftermaths left behind as these world(s) crumbled or were transformed beyond recognition at the end of the twentieth century. Our work will be ramified by consideration of a number of critical and methodological tools for the study of these many histories and geographies. The purview of the course is dauntingly large - global in scale - and therefore "coverage" will of necessity be incomplete. In addition to the lead instructor, a number of guest instructors from Penn and from other institutions will join us to lead our investigations into specific geographies, moments and areas. Additionally, four weeks have been left without content, to be filled in via consensus decision by the members of the seminar. Not Offered Every Year
Also Offered As: ENGL 6490, REES 6149
1 Course Unit

COML 6160 Approaches to Literary Texts
Most seminars focus on literary texts composed during a single historical period; this course is unusual in inviting students to consider the challenges of approaching texts from a range of different historical eras. Taught by a team of literary specialists representing diverse periods and linguistic traditions and conducted as a hands-on workshop, this seminar is designed to help students of literature and related disciplines gain expertise in analysis and interpretation of literary works across the boundaries of time, geography, and language, from classic to modern. Students will approach literature as a historical discipline and learn about key methodological issues and questions that specialists in each period and field ask about texts that their disciplines study. The diachronic and cross-cultural perspectives inform discussions of language and style, text types and genres, notions of alterity, fictionality, literariness, symbolism, intertextuality, materiality, and interfaces with other disciplines. This is a unique opportunity to learn in one course about diverse literary approaches from specialists in different fields. Not Offered Every Year

COML 6170 Cultural History of Medieval Rus (800-1700)
This course offers an overview of the literary, cultural, and political history of Medieval Rus from its origins in the 9th century up to the reign of Peter the Great (early 18th century), the period that laid the foundation for the Russian Empire. The focus of the course is on the Kievan and Moscovite traditions but we also look at the cultural space of the Grand Duchy of Lithuania and Poland (i.e., the territory of today's Belarus and Ukraine). The course takes a comparative and interdisciplinary approach to the evolution of the main cultural paradigms of Russian Orthodoxy viewed in a broader European context (vis-à-vis Byzantium and the Latin West). We learn about the worldview of Orthodox Slavs by examining their religion, ritual, spirituality, art, music, literature, education, and popular culture. Classes are conducted in English. Readings are in Russian and English. English translations of some primary sources are available for those with limited Russian competence. Fall

COML 6200 Paris and Philadelphia: Landscapes and Literature of the 19th Century
This course explores the literal and literary landscapes of 19th-century Paris and Philadelphia, paying particular attention to the ways in which the built environment is shaped by and shapes shifting ideologies in the modern age. Although today the luxury and excesses of the "City of Light" may seem worlds apart from the Quaker simplicity of the "City of Brotherly Love," Paris and Philadelphia saw themselves as partners and mutual referents during the 1800s in many areas, from urban planning to politics, prisons to paleontology. This interdisciplinary seminar will include readings from the realms of literature, historical geography, architectural history, and cultural studies as well as site visits to Philadelphia landmarks, with a view to uncovering overlaps and resonances among different ways of reading the City. We will facilitate in-depth research by students on topics relating to both French and American architectural history, literature, and cultural thought. Fall

COML 6201 Modern East Asian Texts
This course is an introduction to and exploration of modern East Asian literatures and cultures through close readings and discussion of selected literary works from the early twentieth century to the start of the 21st century. Focusing on China, Japan, and Korea, we will explore the shared and interconnected experiences of modernity in East Asia as well as broaden our perspective by considering the location of East Asian cultural production within a global modernity. Major issues we will encounter include: nation-building and the modern novel; cultural translation; media and technology; representations of gender, race, and class; history and memory; colonialism; war; body and sexuality; globalization. No knowledge of the original language is required.

COML 6210 Reading Marx’s Capital: Divergent Traditions in Europe, the Soviet Union, and the Global South
Karl Marx’s masterpiece Capital received little attention at the time of its publication, but gained new life in the twentieth and twenty-first centuries. The afterlives of Capital, however, took disparate forms across different regions and traditions globally. While working on the same text, these traditions gave rise to conflicting and contradictory interpretations, antagonistic dialogues, and cross-disciplinary encounters. This seminar will examine a series of exemplary interpretations of Capital with attention to detail in order to clarify the stakes of different readings and pose the question of relevance of Marx’s masterpiece for the contemporary moment. We will investigate how political conjunctures, regional specificities, and ideological concerns shape disparate modes and cultures of reading. We will also examine how Capital is transfigured through the lens of disciplines such as literary studies and comparative literature, philosophy, political science, postcolonial studies, and economics. We will also pose the question of philosophical genealogies of Capital, tracing how divergent philosophical backgrounds inflect the reconfigurations of Marx’s thought, e.g., in examining “Hegelian,” “Spinozist,” and “Epicurian” readings. The topics may include, but are not limited to, the following regions and traditions: France (Louis Althusser group), Italy (Mario Tronti and autonomia tradition), and Germany (Neue Marx Lektüre); Soviet Union (Isaak Rubin, Evald Ilyenkov); Bolivia (Alvaro Garcia Linera), and Argentina (Ernesto Laclau). Finally, we will engage with the most recent readings of Capital in the twenty-first century in the works of thinkers such as Sylvia Federici, Michael Heinrich, and A. Kiara Kordela, among others.

COML 6381 Troubadours at the Center
‘Troubadour’ is a term whose meaning has evolved from the eleventh century to our day. In the Middle Ages, a troubadour was a singer-songwriter (male or female) who composed in a language called Occitan, the language spoken in northern Italy, across southern France, and into today’s Catalonia. Medieval works in this language include epic poetry, didactic texts, lengthy romances, and love poetry. Renowned and imitated throughout medieval Europe — by authors from today’s Italy, Austria, Germany, France, Spain, and Portugal — the Occitan literary heritage cannot be ignored. Though sometimes presented as a dead language, Occitan is very much alive, and one purpose of this course is to introduce students to it and to its broad importance in European literary history. This course will present the literary and cultural history of the Occitan region, write large, from the Middle Ages to the modern day. By the end of the course, students will be able to read Occitan with the aid of a dictionary; they will understand the culture of the French Midi as distinct from that of France; they will know something of the distinctive cultural elements of Occitania. They will also have a profound knowledge of at least one Occitan author, medieval, modern, or contemporary. The course will be taught in English. In addition to learning the material covered in the course, students will gain expertise in producing professional presentations and research papers.

COML 6530 Russian and Soviet Cultural Institutions
In this seminar, we will study Russian and Soviet culture through the history of its institutions, in the broader social-institutional context of land-based European empire and state socialism. The course will include material from the eighteenth to the twenty-first centuries, but attention will be focused disproportionately on the twentieth century. Each unit will focus on a specific social institution of culture, yet will also require the reading/viewing of canonical texts and films. Topics will include: reading publics and education; authorship and professionalization; cultural management of social, ethnic, gender and national diversity (including via institutions of translation); journals and publishing houses; genres; the Union of Soviet Writers; censorship and unofficial dissemination; the film industry; cultural history and memory (jubilee celebrations); the culture industry.

COML 6570 Becoming Modern: The German-Jewish Experience
Yuri Slezkine described the twentieth century as a "Jewish Age"—to be modern would essentially mean to be a Jew. In German historical and cultural studies, this linkage has long been made—only in reference to the last years of the German monarchy and the time of the Weimar Republic. Indeed, what has become known as "modern" German culture—reflected in literature, music, and the visual arts and in a multitude of public media—has been more often than not assigned to Jewish authorship or Jewish subjects. But what do authorship and subject mean in this case? Do we locate the German-Jewish experience as the driving force of this new "modernity," or is our understanding of this experience the result of this new "modern" world?

COML 6600 Studies in the Eighteenth Century
Topics of discussion will vary from semester to semester. One possible topic is "Masterpieces of the Enlightenment." We will read the most influential texts of the Enlightenment, texts that shaped the social and political consciousness characteristic of the Enlightenment—for example, the meditations on freedom of religious expression that Voltaire contributed to "affaires" such as the "affaire Calas." We will also discuss different monuments of the spirit of the age—its corruption (Les Liaisons dangereuses), its libertine excesses and philosophy (La Philosophie dans le boudoir). We will define the specificity of 18th-century prose (fiction), guided by a central question: What was the Enlightenment?

COML 6623 Literary History and Aesthetics in South Asia
This seminar surveys the multiple components of literary culture in South Asia. Students will engage critically with selected studies of literary history and aesthetics from the past two millennia. In order to introduce students to specific literary cultures (classical, regional, contemporary) and to the scholarly practices that situate literature in broader contexts of culture and society, the course will focus both on the literary theories—especially from the nineteenth and twentieth centuries—that position South Asia's literary cultures within broader disciplinary frameworks that use literary documents to inform social, historical and cultural research projects. The aim is to open up contexts whereby students can develop their own research projects using literary sources.

Also Offered As: SAST 6623
1 Course Unit

COML 6627 South Asia Literature as Comparative Literature
This course takes up the question of reading South Asian Literature both as a collection of diverse literary cultures, as well as the basis for a methodology of reading that takes language, region, and history into account. It takes as a starting point recent work that foregrounds the importance of South Asian language literatures, and their complex interactions, to an understanding of South Asian literary history, as well as critiques of the concept of world literature that question its underlying assumptions and frequent reliance on cosmopolitan languages such as English. In what ways can we describe the many complex interactions between literary cultures in South Asia, rooted in specific historical contexts, reading practices, and cultural expectations, while maintaining attention to language and literary form? How, in turn, can we begin to think of these literatures in interaction with larger conversations in the world? With these considerations in mind, we will examine works of criticism dealing with both modern and pre-modern literatures, primarily but not exclusively focused on South Asia. Topics will include the concept of the cosmopolis in literary and cultural history, the role of translation, the transformations of literature under colonialism, and twentieth century literary movements such as realism and Dalit literature. Readings may include works by Erich Auerbach, Frederic Jameson, Aijaz Ahmad, Gayatri Spivak, Aamir Mufti, Sheldon Pollack, David Shulman, Yigal Bronner, Shamshur Rahman Faruqi, Francesca Orsini, Subramanian Shankar, Sharankumar Kimbale, and Torlae Jatin Gajarawala. We will also examine selected works, in English and in translation, as case studies for discussion. This course is intended both for students who intend to specialize in the study of South Asia, as well as for those who focus on questions of comparative literature more broadly.

COML 6631 The Sanskrit Epics
Ancient India's two epic poems, originally composed in Sanskrit and received in dozens of languages over the span of two thousand years, continue to shape the psychic, social, religious, and emotional worlds of millions of people around the world. The epic Mahabharata, which roughly translates to The Great Story of the Descendants of the Legendary King Bharata, is the longest single poem in the world (approximately 200,000 lines of Sanskrit verse in the 1966 Critical Edition) and tells the mythic history of dynastic power struggles in ancient India. An apocalyptic meditation on time, death, and the utter devastation brought upon the individual and the family unit through social disintegration, the epic also serves as sourcebook for social and political mores and contains one of the great religious works of the world, The Bhagavad Gita (translation: The Song of God), in the middle of its sprawling narrative. The other great epic, The Ramayana (Rama's Journey), though essentially tragic and about the struggles for power in ancient India, offers a relatively brighter narrative in foregrounding King Rāma, an avatar of the supreme divinity Vi##u, who serves as an ideal for how human beings might successfully negotiate the challenges of worldly life. Perhaps the most important work of ancient Asia, the Rā#āya#a also provides a model of human social order that contrasts with dystopic polities governed by animals and demons. Our course will engage in close reading of selections from both of these epic poems (in English translation) and scholarship on the epic from the past century. We will explore the Sanskrit epic genre, its oral and textual forms in South Asia, and the numerous modes for interpreting it over the centuries. We will also look at the reception of these ancient works in modern forms of media, such as the novel, television, theater, cinema and the comic book/ anime.

COML 6770 The Life of Forms: Ontogenesis, Morphology, Literature
In recent years, the notions of form, formalism, and morphology have reentered contemporary debates across the humanities. This seminar considers the current resurgence of interest in form by tracing form's evolving concepts throughout modernity. It departs from the observation that experimentation with and debates on form in art and literature are inextricably linked to various notions of life and the living. These debates-this is the provisional thesis of the seminar—are the battlefield where literary and art criticism undermine the major presuppositions of the western metaphysical tradition (e.g., determinations of inside-outside, form-content, living-inorganic). On the one hand, the seminar will explore a selective genealogy of various attempts to dynamize the concept of form through theories of 1) ontogenesis (e.g., Spinoza, Simondon, Malabou), 2) morphology (e.g., Goethe, Propp, Goldstein), and 3) aesthetics (e.g., Baumgarten, Schlegel brothers, Adorno). On the other hand, in order to investigate the political, ideological, and methodological implications of differing concepts of form, the seminar will bring together texts from different disciplines, including literary studies (literary morphology, Russian Formalism), art history (Focillon, Kubler), philosophy (Wittgenstein, Macherey). On the other hand, in order to investigate the political, ideological, and methodological implications of differing concepts of form, the seminar will bring together texts from different disciplines ranging from literary studies (e.g., Jolles, Russian Formalism, Jauss), art history (e.g., Panofsky, Focillon, Kubler), philosophy (e.g., Wittgenstein, Blumenberg, Macherey), history of science (e.g., Vygotsky, Varela), and sociology (e.g., Tarde, DeLanda). Finally, the seminar will engage in close reading of exemplary literary and art works, and situate the findings on the conjunction of form and life in current debates on New Formalisms (e.g., Levine, Levinson, Kornbluh) and New Materialisms (e.g., Bennett, Grosz).

1 Course Unit

COML 6860 Form, Figure, Metaphor
This course will explore the tensions and overlaps between three concepts in literary studies: form, figure, and metaphor. Through readings of works in literary theory, literature, and literary criticism, we will ask what it means to pay attention to the form of a literary text, whether at the micro scale of its literary figures or the macro scale of its overarching structure. We will historicize the shifting relations between our three key terms by exploring their role in ancient rhetoric, Victorian aesthetic theory, Russian formalism, the New Criticism, and deconstruction, among other literary-critical schools. Special attention will be paid to the notion of metaphor as it operates across genres and disciplines. While our focus will be on modern European and American literary theory, students will come away with interpretive tools beneficial to the study of literature of any period or genre.
Also Offered As: ENGL 7052
1 Course Unit

COML 6910 Transatlantic Black Feminisms in Francophone Literatures
This course explores the evolution of representations of the Black femme body in French and francophone imaginaries, tracing a chronological arc that begins with early colonial imagery and ends with the rise of a 2018 movement spearheaded by a collective of Black comediennes, denouncing exclusionary practices in the French entertainment industry. We will first focus on the male gaze — European, Caribbean and African — and the way it constructed the Black femme body, to better understand how Black female authors undermine, resist, parody, or continue to bear the weight of these early images when they take control of their own representation. While our primary readings will be authored by French-writing women, including Mayotte Capecia (Martinique), Marie Vieux-Chauvet (Haiti), Maryse Condé (Guadeloupe), Mariama Bâ (Senegal) and Marie Ndiaye (France), our theoretical foundation will include anglophone thinkers, such as bell hooks, Audre Lorde, Saidiya Hartman, and others. Readings and discussions will be in English.

COML 6942 Impossible Innocence: the Films of Luis Buñuel
This seminar provides an overview and introduction to the cinema of Luis Buñuel with a particular focus on the Spanish filmmaker's engagement with Surrealism. Drawing on the expertise of Professors Ignacio Javier López and Michael Solomon, each seminar session will unfold in two parts: first, Solomon will offer a general introductory lecture and discussion covering various aspects of Buñuel's filmography including technical and formal analyses that touch on cinematic form, montage, and adaptation, and a contextualization of Buñuel's cinema within the Spanish, Mexican, Latin American, and European (inter) national cinemas and cinematic movements; second, López will offer a close examination of individual films focusing on Buñuel's longstanding ties with (the ideas of) Surrealism from the movement's initial moment of scandal and provocation — understood by its participants as a new philosophy, a new way of seeing in an endless process of discovery — to a second moment in which Surrealism admits its failure to enact its revolutionary goals. Films covered in the seminar include Buñuel's Un Chien Andalou (1929), L'Age d'or (1930), Menjant garotes, Las Hurdes/Terre sans pain (1933/36), Los Olvidados (1950), Susana (1951), Ensayo de un crimen (1955), Death in the Garden (1956), Nazarin (1959), Viridiana (1961), The Exterminating Angel (1962), Belle de jour (1967), Tristana (1970), and Obscure Object of Desire (1977). Students will start working early on a final project (seminar paper), reworking the draft several times during the semester.

COML 7211 Modern Chinese Poetry in a Global Context
The tumultuous political and economic history of modern China has been mirrored in and shaped by equally fundamental revolutions in language and poetic expression. In this course, we will take Chinese poetry as a crucible in which we can observe the interacting forces of literary history and social change. From diplomats who saw poetry as a medium for cultural translation between China and the world, to revolutionaries who enlisted poetry in the project of social transformation, we will examine the lives and works of some of China’s most prominent poets and ask, what can we learn about modern China from reading their poetry? In asking this question, we will also reckon with the strengths and limitations of using poetry as an historical source. In addition to poems, the course will include fiction, essays, photographs, and films by both Chinese and non-Chinese artists that place our poets in a broader context. We will pay close attention to how these poets represent China’s place in the world, as well as the role of language in social change. Topics of discussion include: national identity, revolution, translation, gender, the body, ethnicity, and technology. Familiarity with Chinese or related cultural context is beneficial, but not required. This course introduces students to Chinese poetry in English translation. Students will leave the course with an in-depth understanding of the main figures, themes, and techniques of Chinese poetry, and will be introduced to some of the major developments in the history of China. Through a focus on primary texts, students will develop the vocabulary and analytical skills to appreciate and analyze poetry in translation and will gain confidence as writers thinking about literary texts.

Also Offered As: EALC 7211
Mutually Exclusive: EALC 3211
1 Course Unit

COML 7255 Literary Criticism and Theory in Japanese Literature
While the focus of this seminar will shift from year to year, the aim is to enable students to gain 1) a basic understanding of various theoretical approaches to literature, 2) familiarity with the histories and conventions of criticism, literary and otherwise, in Japan; 3) a few theoretical tools to think in complex ways about some of the most interesting and controversial issues of today, such as nationalism, imperialism, colonialism, postmodernism, and feminism, with particular focus on Japan’s position in the world. The course is primarily intended for graduate students but is also open to advanced undergraduates with permission of the instructor. The course is taught in English, and all of the readings will be available in English translation. An optional discussion section may be arranged for those students who are able and willing to read and discuss materials in Japanese.
Not Offered Every Year
Also Offered As: EALC 7255
1 Course Unit

COML 7600 Realisms Seminar--19th Century to Contemporary
An advanced graduate seminar focused on Realism and spanning several centuries. This two-part course will consider the literary history of realism and will take on some fundamental epistemological questions entailed by the novel’s attempts to represent the real. We will read major theories of realism alongside canonical and marginal realist fiction. Emily Steinlight will address the variously formal, aesthetic, political, and epistemological status of realism in nineteenth-century novels and in theories old and new; some discussion will focus on the concept of totality and on the uneven histories and revitalized uses of realism across contexts. Heather Love will address the relation between classical realism, hyperrealism, and modernist/avant-garde departures in the 20th and 21st centuries, with special attention paid to the role of observation and description in literature and the social sciences. The range of readings may include novels by Honoré de Balzac, George Eliot, Leo Tolstoy, George Gissing, Mariano Azuela, Virginia Woolf, Patricia Highsmith, Nicholson Baker, Georges Perec, Karl Ove Knausgaard, and Rachel Cusk, as well as critical and theoretical work by Viktor Schklovsky, Georg Lukács, Ian Watt, Roland Barthes, Catherine Gallagher, Fredric Jameson, Elaine Freedgood, Anna Kornbluh, Colleen Lye, the Warwick Research Collective, and others.
Also Offered As: ENGL 7600
1 Course Unit

COML 7670 Modernism
An interdisciplinary and international examination of modernism, usually treating European as well as British and American modernists.
Not Offered Every Year
Also Offered As: ENGL 7730
1 Course Unit

COML 7707 The Iliad and its Receptions
We will read selections from the Greek poem together, alongside some modern scholarship on it. We will also read Plato’s Ion and the Battle of the Mice and Frogs, as evidence for Homer’s ancient philosophical, rhetorical and poetic receptions. We will discuss the history of the poem’s translation into English, focusing on earlier translations (Chapman, Hobbes, Pope) and discussing the instructor’s goals and challenges in producing a new re-translation. We will also talk about two recent novelizations of the poem, Pat Barker’s Silence of the Girls and Madeline Miller’s Song of Achilles. The course is primarily intended for graduate students in Classical Studies and Ancient History, but it is also open to students in other programs, including those whose Greek might be less advanced. Prerequisite: Students should have a working knowledge of Greek.
Not Offered Every Year
Also Offered As: GREK 7707
1 Course Unit
COML 7708 Black Classicisms
This course will explore heterogeneous responses to ancient Greek and Roman Classicism in the literature, art, and political thought of Africa and the Black Diaspora, ranging from the late eighteenth century to the present day and encompassing Africa, the Caribbean, and North America. We will analyze how African and black diasporic writers, artists, and thinkers have engaged with and re-imagined Greco-Roman Classicism, both to expose and critique discourses of racism, imperialism, and colonialism, and as a source of radical self-expression. Throughout, we will consider the reciprocal dynamic by which dialogues with ancient Greek and Roman classics contribute to the polyphony of black texts and these same texts write back to and signify on the Greek and Roman Classics, diversifying the horizon of expectation for their future interpretation. Writers and artists whose work we will examine include Romare Bearden; Dionne Brand; Gwendolyn Brooks; Aimé Césaire; Austin Clarke; Anna Julia Cooper; Rita Dove; W.E.B. Du Bois; Ralph Ellison; Athol Fugard, John Kani, and Winston Ntshona; C.L.R. James; June Jordan; Toni Morrison; Harriette Mullen; Marlene Nourbese Philip; Ola Rotimi; William Sanders Scarborough; Wole Soyinka; Mary Church Terrell; Derek Walcott; Booker T. Washington; Phelps Wheatley; and Richard Wright. We will study these writers in the context of national and transnational histories and networks and in dialogue with relevant theoretical debates. Work for assessment will include a 15-page research paper and the preparation of a teaching syllabus for a course on an aspect of Black Classical Receptions.
Not Offered Every Year
Also Offered As: AFRC 7708, CLST 7708
1 Course Unit

COML 7901 Recent Issues in Critical Theory Related to Gender & Sexuality
This course will provide an overview of critical theory related to the study of gender and/or sexuality. Different instructors will emphasize different topics within these fields. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Not Offered Every Year
Also Offered As: ENGL 7901, GSWS 7901
1 Course Unit

COML 7920 Study of a Genre: The Manifesto
If ubiquity confers significance, the manifesto is a major literary form, and yet it has been relatively marginalized in genre studies, where attention to the manifesto has been largely devoted to anthologies. In this seminar we will focus on the manifesto as a genre by exploring its histories, rhetorics, definitions and reception from a Black Studies framework. Associated with politics, art, literature, pedagogy, film, and new technologies, the manifesto involves the taking of an engaged position that is tied to the moment of its enunciation. The manifestos individual or collective authors seek to provoke radical change through critique and the modeling of new ways of being through language and images. Included on the syllabus will be anticolonial, anti-racist, feminist, LGBTQ manifestos of the 18th through 21st centuries from throughout the Black world. In addition to leading class discussion, students will be responsible for a seminar paper or a final project to be developed in consultation with the instructor.
Also Offered As: AFRC 7920, ENGL 7920
1 Course Unit

COML 9810 M.A. Exam Prep
Course open to first-year Comparative Literature graduate students in preparation for required M.A. exam taken in spring of first year.
Not Offered Every Year
1 Course Unit

COML 9990 Independent Reading and Research
May be taken for multiple course credit to a maximum of two for the M.A. and four for the Ph.D. Designed to allow students to broaden and deepen their knowledge of literary theory, a national literature, and/or an area of special interest.
Fall or Spring
1-3 Course Units

COML 9999 Independent Study and Research
Designed to allow students to pursue a particular research topic under the close supervision of an instructor.
Fall or Spring
1 Course Unit

Computer and Information Science (CIS)

CIS 0099 Undergraduate Research/Independent Study
An opportunity for the student to become closely associated with a professor (1) in a research effort to develop research skills and techniques and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student’s academic level. To register for this course, the student must submit a detailed proposal, signed by the independent study supervisor, to the SEAS Office of Academic Programs (111 Towne) no later than the end of the “add” period. Prerequisite: A maximum of 2 c.u. of CIS 0099 may be applied toward the B.A.S. or B.S.E. degree requirements.
Fall or Spring
1 Course Unit

CIS 1050 Computational Data Exploration
The primary goal of this course is to introduce computational methods of interacting with data. In this course, students will be introduced to the IPython programming environment. They will learn how to gather data, store it in appropriate data structures and then either write their own functions or use libraries to analyze and then display the salient information in that data. Data will be drawn from a variety of domains, including but not limited to travel, entertainment, politics, economics, biology etc.
Fall or Spring
Mutually Exclusive: PHYS 1100
1 Course Unit
CIS 1070 Visual Culture through the Computer’s Eye
Visual studies and the humanities more generally have thought about and modeled seeing of artworks for many centuries. What useful tools can machine learning develop from databases of art historical images or other datasets of visual culture? Can tools from machine learning help visual studies ask new questions? When put together, what can these fields teach us about visual learning, its pathways, its underlying assumptions, and the effects of its archives/datasets? Class project teams will ideally be composed of both humanities majors and engineering majors who will develop datasets and/or ask important questions of datasets, in addition to thinking and writing more generally about how computer vision could help in teaching and analyzing visual art. We are looking for a variety of students from different majors and schools to bring their diverse skill sets to the course. No programming knowledge is required. The course offers an example-based introduction to machine learning, so no prior knowledge of machine learning is required.
Fall or Spring
Also Offered As: VLST 2090
1 Course Unit

CIS 1100 Introduction to Computer Programming
Introduction to Computer Programming is the first course in our series introducing students to computer science. In this class you will learn the fundamentals of computer programming in Java, with emphasis on applications in science and engineering. You will also learn about the broader field of computer science and algorithmic thinking, the fundamental approach that computer scientists take to solving problems.
Fall or Spring
1 Course Unit

CIS 1200 Programming Languages and Techniques I
A fast-paced introduction to the fundamental concepts of programming and software design. This course assumes some previous programming experience, at the level of a high school computer science class or CIS 1100. (If you got at least 4 in the AP Computer Science A or AB exam, you will do great.) No specific programming language background is assumed: basic experience with any language (for instance Java, C, C++, VB, Python, Perl, or Scheme) is fine. If you have never programmed before, you should take CIS 1100 first.
Fall or Spring
1 Course Unit

CIS 1210 Programming Languages and Techniques II
This is a course about Algorithms and Data Structures using the JAVA programming language. We introduce the basic concepts about complexity of an algorithm and methods on how to compute the running time of algorithms. Then, we describe data structures like stacks, queues, maps, trees, and graphs, and we construct efficient algorithms based on these representations. The course builds upon existing implementations of basic data structures in JAVA and extends them for the structures like trees, studying the performance of operations on such structures, and the efficiency when used in real-world applications. A large project introducing students to the challenges of software engineering concludes the course.
Spring
Prerequisite: CIS 1200 AND CIS 1600
1 Course Unit

CIS 1250 Technology and Policy
Have you ever wondered why sharing music and video generates such political and legal controversies? Is information on your PC safe and should law enforcement be able to access information you enter on the Web? Will new devices allow tracking of your every move and every purchase? CIS 1250 is focused on developing an understanding of existing and emerging technologies, along with the political, societal and economic impacts of those technologies. The technologies are spread across a number of engineering areas and each of them raise issues that are of current concern or are likely to be a future issue.
1 Course Unit

CIS 1400 Introduction to Cognitive Science
How do minds work? This course surveys a wide range of answers to this question from disciplines ranging from philosophy to neuroscience. The course devotes special attention to the use of simple computational and mathematical models. Topics include perception, learning, memory, decision making, emotion and consciousness. The course shows how the different views from the parent disciplines interact and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of computation in such theories and provides an introduction to some of the main directions of current research in the field. It is a requirement for the BA in Cognitive Science, the BAS in Computer and Cognitive Science, and the minor in Cognitive Science, and it is recommended for students taking the dual degree in Computer and Cognitive Science.
Fall
Also Offered As: COGS 1001, LING 1005, PHIL 1840, PSYC 1333
1 Course Unit

CIS 1600 Mathematical Foundations of Computer Science
What are the basic mathematical concepts and techniques needed in computer science? This course provides an introduction to proof principles and logics, functions and relations, induction principles, combinatorics and graph theory, as well as a rigorous grounding in writing and reading mathematical proofs.
Spring
1 Course Unit

CIS 1810 The Quantum and the Computer
This Freshman Seminar is designed to be a very introductory exposition about Quantum Computation and Quantum Information Science. There are no formal physics, mathematics, or computer science prerequisites. It is meant primarily for freshmen in SAS and Wharton, who have an itch to learn about a beautiful subject that intrinsically unites quantum physics, computation, and information science. The structure of the course will be lecture-based using small-team based exercises for evaluation. The enrollment will be limited to 20 students. Freshmen standing.
Fall or Spring
1 Course Unit

CIS 1901 C++ Programming
This course will provide an introduction to programming in C++ and is intended for students who are already experienced with programming in C and in object-oriented languages such as Java. C++ provides programmers with a greater level of control over machine resources and is commonly used in situations where low level access or performance are important. This course will cover the features and abstractions that C++ provides to write code that is both safe and performant. This course recommends students to have completed CIS 1200 and CIS 2400.
Not Offered Every Year
0-0.5 Course Units
CIS 1902 Python Programming
Python is an elegant, concise, and powerful language that is useful for tasks large and small. Python has quickly become a popular language for getting things done efficiently in many in all domains: scripting, systems programming, research tools, and web development. This course will provide an introduction to this modern high-level language using hands-on experience through programming assignments and a collaborative final application development project.
Not Offered Every Year
Prerequisite: CIS 1200
0-0.5 Course Units

CIS 1903 Go Programming
Go is an open source programming language created by Google designed for speed, efficiency and infrastructure. While Go is particularly proficient at concurrent systems programming, it has a variety of uses and has been gaining popularity in a variety of fields, including graphics, mobile applications and machine learning. Go is simple, fast and is continuing to rapidly grow in industry. In this course, we will cover what makes Go so unique and apply it to practical, real world situations. Topics covered will include concurrency and parallelism, goroutines and channels, web scraping, and other popular industry Go applications.
Not Offered Every Year
Prerequisite: CIS 1100
0-0.5 Course Units

CIS 1904 Introduction to Haskell Programming
Haskell is a high-level, purely functional programming language with a strong static type system and elegant mathematical underpinnings. It is being increasingly used in industry by organizations such as Facebook, AT&T, and NASA, along with several financial firms. We will explore the joys of functional programming, using Haskell as a vehicle. The aim of the course will be to allow you to use Haskell to easily and conveniently write practical programs. Evaluation will be based on regular homework assignments and class participation.
Not Offered Every Year
Prerequisite: CIS 1200
0-0.5 Course Units

CIS 1905 Rust Programming
Rust is a new, practical, community-developed systems programming language that "runs blazingly fast, prevents almost all crashes, and eliminates data ra (rust-lang.org). Rust derives from a rich history of languages to create a multi-paradigm (imperative/functional), low-level language that focuses on high-performance, zero-cost safety guarantee in concurrent programs. It has begun to gain traction in industry, showing a recognized need for a new low-level systems language. In this course, we will cover what makes Rust so unique and apply it to practical systems programming problems. Topics covered will include traits and generics, memory safety (move semantics, borrowing, and lifetimes); Rust's rich macro system; closures; and concurrency. Evaluation is based on regular homework assignments as well as a final project and class participation. Prerequisite: CIS 1200 Recommended additional prerequisite: CIS 2400 or exposure to C or C++
Not Offered Every Year
Prerequisite: CIS 1200
0-0.5 Course Units

CIS 1911 Using and Understanding Unix and Linux
Unix, in its many forms, runs much of the world's computer infrastructure, from cable modems and cell phones to the giant clusters that power Google and Amazon. This half-credit course provides a thorough introduction to Unix and Linux. Topics will range from critical basic skills such as examining and editing files, compiling programs and writing shell scripts, to higher level topics such as the architecture of Unix and its programming model. The material learned is applicable to many classes, including CIS 2400, CIS 3310, CIS 3410, CIS 3710, and CIS 3800. Not Offered Every Year
Prerequisite: CIS 1100
0-0.5 Course Units

CIS 1912 DevOps
DevOps is the breaking down of the wall between Developers and Operations to allow more frequent and reliable feature deployments. Through a variety of automation-focused techniques, DevOps has the power to radically improve and streamline processes that in the past were manual and susceptible to human error. In this course we will take a practical, hands-on look at DevOps and dive into some of the main tools of DevOps: automated testing, containerization, reproducibility, continuous integration, and continuous deployment. Throughout the semester we build toward an end-to-end pipeline that takes a webserver, packages it, and then deploys it to the cloud in a reliable and quickly-reproducible manner utilizing industry-leading technologies like Kubernetes and Docker. Evaluation is based on homework assignments and a final group project.
Not Offered Every Year
0-0.5 Course Units

CIS 1921 Solving Hard Problems in Practice
What does Sudoku have in common with debugging, scheduling exams, and routing shipments? All of these problems are provably hard – no one has a fast algorithm to solve them. But in reality, people are quickly solving these problems on a huge scale with clever systems and heuristics! In this course, we'll explore how researchers and organizations like Microsoft, Google, and NASA are solving these hard problems, and we'll get to use some of the tools they've built!
Not Offered Every Year
Prerequisite: CIS 1210
0-0.5 Course Units

CIS 1951 iOS Programming
This project-oriented course is centered around application development on current iOS mobile platforms. The first half of the course will involve fundamentals of mobile app development, where students learn about mobile app lifecycles, event-based programming, efficient resource management, and how to interact with the range of sensors available on modern mobile devices. In the second half of the course, students work in teams to conceptualize and develop a significant mobile application. Creativity and originality are highly encouraged! Prerequisite: CIS 1200 or previous programming experience.
Not Offered Every Year
Prerequisite: CIS 1200
0-0.5 Course Units
CIS 1990 Special Topics
This course will be used for 'pilot versions' of new CIS courses of this type that the department is planning to offer. A given course will be offered as CIS 1990 at most twice; after this, it will be assigned a permanent course number.
0-0.5 Course Units

CIS 2330 Introduction to Blockchain
Blockchain or Distributed Ledger Technology (DLT) provides a decentralized method of information sharing between parties that do not trust each other. Instead the trust is in the underlying cryptographic algorithms. This practical introductory course provides experience with the fundamentals of cryptography (codes and ciphers, symmetric and asymmetric encryption, public and private keys, hashes, and zero knowledge proofs) - as it is applied to implementing a blockchain solution. This course covers the basics of a distributed ledger, how it is built, used, and secured. Methods of ensuring consensus - from proof-of-work to proof-of-stake will be explored and analyzed. Students will have both written and practical assignments to build and deploy components of a blockchain solution.
Spring
Prerequisite: CIS 1200
1 Course Unit

CIS 2400 Introduction to Computer Systems
You know how to program, but do you know how computers really work? How do millions of transistors come together to form a complete computing system? This bottom-up course begins with transistors and simple computer hardware structures, continues with low-level programming using primitive machine instructions, and finishes with an introduction to the C programming language. This course is a broad introduction to all aspects of computer systems architecture and serves as the foundation for subsequent computer systems courses, such as Computer Organization and Design (CIS 4710), Computer Operating Systems (CIS 3800), and Compilers and Interpreters (CIS 3410).
Fall or Spring
Prerequisite: CIS 1200
1 Course Unit

CIS 2610 Discrete Probability, Stochastic Processes, and Statistical Inference
The purpose of this course is to provide a 1 CU educational experience which tightly integrates the theory and applications of discrete probability, discrete stochastic processes, and discrete statistical inference in the study of computer science. The intended audience for this class is both those students who are CS majors as well as those intending to be CS majors. Specifically, it will be assumed that the students will know: Set Theory, Mathematical Induction, Number Theory, Functions, Equivalence Relations, Partial-Order Relations, Combinatorics, and Graph Theory at the level currently covered in CIS 1600. This course could be taken immediately following CIS 1600. Computation and Programming will play an essential role in this course. The students will be expected to use the Maple programming environment in homework exercises which will include: numerical and symbolic computations, simulations, and graphical displays.
Fall
Prerequisite: CIS 1600
1 Course Unit
CIS 2620 Automata, Computability, and Complexity
This course explores questions fundamental to computer science such as which problems cannot be solved by computers, can we formalize computing as a mathematical concept without relying upon the specifics of programming languages and computing platforms, and which problems can be solved efficiently. The topics include finite automata and regular languages, context-free grammars and pushdown automata, Turing machines and undecidability, tractability and NP-completeness. The course emphasizes rigorous mathematical reasoning as well as connections to practical computing problems such as test processing, parsing, XML query languages, and program verification.
Fall
Prerequisite: CIS 1600
1 Course Unit

CIS 3200 Introduction to Algorithms
How do you optimally encode a text file? How do you find shortest paths in a map? How do you design a communication network? How do you route data in a network? What are the limits of efficient computation? This course gives a comprehensive introduction to design and analysis of algorithms, and answers along the way to these and many other interesting computational questions. You will learn about problem-solving; advanced data structures such as universal hashing and red-black trees; advanced design and analysis techniques such as dynamic programming and amortized analysis; graph algorithms such as minimum spanning trees and network flows; NP-completeness theory; and approximation algorithms.
Spring
Prerequisite: CIS 1200 AND CIS 1210 AND CIS 1600 AND CIS 2620
1 Course Unit

CIS 3310 Introduction to Networks and Security
This course introduces principles and practices of computer and network security. We will cover basic concepts, threat models, and the security mindset; an introduction to cryptography and cryptographic protocols including encryption, authentication, message authentication codes, hash functions, public-key cryptography, and secure channels; an introduction to networks and network security including IP; TCP; routing, network protocols, web architecture, attacks, firewalls, and intrusion detection systems; an introduction to software security including defensive programming, memory protection, buffer overflows, and malware; and discuss broader issues and case studies such as privacy, security and the law, digital rights management, denial of service, and ethics.
Fall
Prerequisite: CIS 1600 AND CIS 2400
1 Course Unit

CIS 3340 Advanced Topics in Algorithms
Can you check if two large documents are identical by examining a small number of bits? Can you verify that a program has correctly computed a function without ever computing the function? Can students compute the average score on an exam without ever revealing their scores to each other? Can you be convinced of the correctness of an assertion without ever seeing the proof? The answer to all these questions is in the affirmative provided we allow the use of randomization. Over the past few decades, randomization has emerged as a powerful resource in algorithm design. This course would focus on powerful general techniques for designing randomized algorithms as well as specific representative applications in various domains, including approximation algorithms, cryptography and number theory, data structure design, online algorithms, and parallel and distributed computation.
Not Offered Every Year
Prerequisite: CIS 3200
1 Course Unit

CIS 3410 Compilers and Interpreters
You know how to program, but do you know how to implement a programming language? In CIS 3410 you'll learn how to build a compiler. Topics covered include: lexical analysis, grammars and parsing, intermediate representations, syntax-directed translation, code generation, type checking, simple dataflow and control-flow analyses, and optimizations. Along the way, we study objects and inheritance, first-class functions (closures), data representation and runtime-support issues such as garbage collection. This is a challenging, implementation-oriented course in which students build a full compiler from a simple, typed object-oriented language to fully operational x86 assembly. The course projects are implemented using OCaml, but no knowledge of OCaml is assumed. Prerequisite: Two semesters of programming courses, e.g., CIS 1200, CIS 1210, CIS 2400.
Not Offered Every Year
1 Course Unit

CIS 3500 Software Design/Engineering
You know how to write a "program". But how do you create a software "product" as part of a team, with customers that have expectations of functionality and quality? This course introduces students to various tools (source control, automated build systems, programming environments, test automation, etc.) and processes (design, implementation, testing, and maintenance) that are used by professionals in the field of software engineering. Topics will include: software development lifecycle; agile and test-driven development; source control and continuous integration; requirements analysis; object-oriented design and testability; mobile and/or web application development; software testing; refactoring; and software quality metrics.
Not Offered Every Year
Prerequisite: CIS 1210
1 Course Unit

CIS 3800 Computer Operating Systems
This course surveys methods and algorithms used in modern operating systems. Concurrent distributed operation is emphasized. The main topics covered are as follows: process synchronization; interprocess communication; concurrent/distributed programming languages; resource allocation and deadlock; virtual memory; protection and security; distributed operation; distributed data; performance evaluation.
Fall
Prerequisite: CIS 2400
1 Course Unit
CIS 3900 Robotics: Planning Perception
This introductory course will present basic principles of robotics with an emphasis to computer science aspects. Algorithms for planning and perception will be studied and implemented on actual robots. While planning is a fundamental problem in artificial intelligence and decision making, robot planning refers to finding a path from A to B in the presence of obstacles and by complying with the kinematic constraints of the robot. Perception involves the estimation of the robots motion and path as well as the shape of the environment from sensors. In this course, algorithms will be implemented in Python on mobile platforms on ground and in the air. No prior experience with Python is needed but we require knowledge of data structures, linear algebra, and basic probability.
Not Offered Every Year
Prerequisite: CIS 1210 AND MATH 2400
1 Course Unit

CIS 3980 Quantum Computer and Information Science
The purpose of this course is to introduce undergraduate students in computer computer science and engineering to quantum computers (QC) and quantum information science (QIS). This course is meant primarily for juniors and seniors in Computer Science. No prior knowledge of quantum mechanics (QM) is assumed. Enrollment is by permission of the instructor.
Fall or Spring
Prerequisite: (PHYS 0151 OR PHYS 0171) AND MATH 2400 AND MATH 3120 AND MATH 3140 AND CIS 1600 AND CIS 2620
1 Course Unit

CIS 3990 Special Topics
Visit the CIS department website for descriptions of available Special Topics classes.
Not Offered Every Year
0.5-1 Course Unit

CIS 4000 Senior Project
Design and implementation of a significant piece of work: software, hardware or theory. In addition, emphasis on technical writing and oral communication skills. Students must have an abstract of their Senior Project, which is approved and signed by a Project Adviser, at the end of the second week of Fall classes. The project continues during two semesters; students must enroll in CIS 401 during the second semester. At the end of the first semester, students are required to submit an intermediate report and give a class presentation describing their project and progress. Grades are based on technical writing skills (as per submitted report), oral presentation skills (as per class presentation) and progress on the project. These are evaluated by the Project Adviser and the Course Instructor. Senior standing or permission of instructor.
Fall
1 Course Unit

CIS 4100 CIS Senior Thesis
The goal of a Senior Thesis project is to complete a major research project under the supervision of a faculty member. The duration of the project is two semesters. To enroll in CIS 4100, students must develop an abstract of the proposed work, and a member of the CIS graduate group must certify that the work is suitable and agree to supervise the project; a second member must agree to serve as a reader. At the end of the first semester, students must submit an intermediate report; if the supervisor and reader accept it, they can enroll in CIS 4110. At the end of the second semester, students must describe their results in a written thesis and must present them publicly, either in a talk at Penn or in a presentation at a conference or workshop. Grades are based on the quality of the research itself (which should ideally be published or at least of publishable quality), as well as on the quality of the thesis and the oral presentation. The latter are evaluated jointly by the supervisor and the reader. The Senior Thesis program is selective, and students are generally expected to have a GPA is in the top 10-20% to qualify. Senior Theses are expected to integrate the knowledge and skills from earlier coursework; because of this, students are not allowed to enroll in CIS 4100 before their sixth semester.
1 Course Unit

CIS 4110 CIS Senior Thesis
The goal of a Senior Thesis project is to complete a major research project under the supervision of a faculty member. The duration of the project is two semesters. To enroll in CIS 4100, students must develop an abstract of the proposed work, and a member of the CIS graduate group must certify that the work is suitable and agree to supervise the project; a second member must agree to serve as a reader. At the end of the first semester, students must submit an intermediate report; if the supervisor and reader accept it, they can enroll in CIS 4110. At the end of the second semester, students must describe their results in a written thesis and must present them publicly, either in a talk at Penn or in a presentation at a conference or workshop. Grades are based on the quality of the research itself (which should ideally be published or at least of publishable quality), as well as on the quality of the thesis and the oral presentation. The latter are evaluated jointly by the supervisor and the reader. The Senior Thesis program is selective, and students are generally expected to have a GPA is in the top 10-20% to qualify.
1 Course Unit

CIS 4120 Introduction to Human Computer Interaction
In this course, you will learn the essentials of human-computer interaction (HCI). Over the course of a semester, you will learn how to design interactive systems that satisfy and delight users by undertaking the human-centered design process, from ideation to prototyping, implementation, and assessment with human users. You will learn key tools in the HCI toolkit, including need-finding, user studies, visual design, cognitive models, demo’ing, ethical considerations, and writing about your designs. This course also provides a primer on several areas of emerging technology in HCI, such as human-AI interaction and education technology. We will also cover ethics in HCI, including topics like inclusive design and dark patterns. To hone your craft as an HCI practitioner, during this course you will undertake a group project to design an innovative user interface. The final submission will include a working interactive prototype, demonstrations of the interface at a public departmental design showcase, and a written reflection on your design findings. Prerequisite: prior programming experience.
Fall
Prerequisite: Prior programming experience
1 Course Unit
**CIS 4190 Applied Machine Learning**

Machine learning has been essential to the success of many recent technologies, including autonomous vehicles, search engines, genomics, automated medical diagnosis, image recognition, and social network analysis, among many others. This course will introduce the fundamental concepts and algorithms that enable computers to learn from experience, with an emphasis on their practical application to real problems. This course will introduce supervised learning (decision trees, logistic regression, support vector machines, Bayesian methods, neural networks and deep learning), unsupervised learning (clustering, dimensionality reduction), and reinforcement learning. Additionally, the course will discuss evaluation methodology and recent applications of machine learning, including large scale learning for big data and network analysis.

Fall or Spring
Mutually Exclusive: CIS 5190
Prerequisite: CIS 1210
1 Course Unit

**CIS 4210 Artificial Intelligence**

This course investigates algorithms to implement resource-limited knowledge-based agents which sense and act in the world. Topics include, search, machine learning, probabilistic reasoning, natural language processing, knowledge representation and logic. After a brief introduction to the language, programming assignments will be in Python.

Fall
Mutually Exclusive: CIS 5210
Prerequisite: CIS 1210 AND (ESE 3010 OR STAT 4300)
1 Course Unit

**CIS 4230 Ethical Algorithm Design**

This class introduces aspiring data science technologists to the spectrum of ethical concerns, focusing on social norms like fairness, transparency and privacy. It introduces technical approaches to a number of these problems, including by hands-on examination of the tradeoffs in fairness and accuracy in predictive technology, introduction to differential privacy, and overview of evaluation conventions for predictive technology. It also provides guidelines for examining system training data for bias, representation (of race, gender and other characteristics) and ecological validity. Equipped with this knowledge, students will learn how to conduct informed analysis of the usefulness of predictive systems; they will audit for ethical concerns papers from the contemporary top artificial intelligence venues and the ongoing senior design projects.

Fall or Spring
Mutually Exclusive: CIS 5230
Prerequisite: CIS 1210
1 Course Unit

**CIS 4360 Introduction to Computational Biology & Biological Modeling**

The goal of this course is to develop a deeper understanding of techniques and concepts used in Computational Biology. The course will strive to focus on a small set of approaches to gain both theoretical and practical understanding of the methods. We will aim to cover practical issues such as programming and the use of programs, as well as theoretical issues such as algorithm design, statistical data analysis, theory of algorithms and statistics. This course WILL NOT provide a broad survey of the field nor teach specific tools but focus on a deep understanding of a small set of topics. We will discuss string algorithms, hidden markov models, dimension reduction, and machine learning (or phylogeny estimation) for biomedical problems.

Fall
Also Offered As: BIOL 4536
Mutually Exclusive: BIOL 5535
Prerequisite: MATH 1400 AND (BIOL 2510 OR BIOL 5510)
1 Course Unit

**CIS 4410 Embedded Software for Life-Critical Applications**

The goal of this course is to give students greater design and implementation experience in embedded software development and to teach them how to model, design, verify, and validate safety critical systems in a principled manner. Students will learn the principles, methods, and techniques for building life-critical embedded systems, ranging from requirements and models to design, analysis, optimization, implementation, and validation. Topics will include modeling and analysis methods and tools, real-time programming paradigms and languages, distributed real-time systems, global time, time-triggered communications, assurance case, software architecture, evidence-based certification, testing, verification, and validation. The course will include a series of projects that implements life-critical embedded systems (e.g., pacemaker, infusion pumps, closed-loop medical devices).

Fall or Spring
Prerequisite: CIS 2400
1 Course Unit

**CIS 4500 Database and Information Systems**

This course provides an introduction to the broad field of database and information systems, covering a variety of topics relating to structured data, ranging from data modeling to logical foundations and popular languages, to system implementations. We will study the theory of relational and XML data design; the basics of query languages; efficient storage of data, execution of queries and query optimization; transactions and updates; web-database development; and "big data" and NoSQL systems. The course assumes mathematical and programming experience equivalent to CIS 1600 and CIS 1210.

Fall
Mutually Exclusive: CIS 5500
Prerequisite: CIS 1210 AND CIS 1600
1 Course Unit
CIS 4550 Internet and Web Systems
This course focuses on the challenges encountered in building Internet and web systems: scalability, interoperability (of data and code), security and fault tolerance, consistency models, and location of resources, services, and data. We will examine how XML standards enable information exchange; how web services support cross-platform interoperability (and what their limitations are); how to build high-performance application servers; how "cloud computing" services work; how to perform Akamai-like content distribution; and how to provide transaction support in distributed environments. We will study techniques for locating machines, resources, and data (including directory systems, information retrieval indexing, ranking, and web search); and we will investigate how different architectures support scalability (and the issues they face). We will also examine ideas that have been proposed for tomorrow’s Web, and we will see some of the challenges, research directions, and potential pitfalls. An important goal of the course is not simply to discuss issues and solutions, but to provide hands-on experience with a substantial implementation project. This semester’s project will be a peer-to-peer implementation of a Googe-style search engine, including distributed, scalable crawling; indexing with ranking; and even PageRank. As a side-effect of the material of this course you will learn about some aspects of large-scale software development assimilating large APIs. Prerequisite: Familiarity with threads and concurrency, strong Java programming skills.
Fall or Spring
Mutually Exclusive: CIS 5550
1 Course Unit

CIS 4600 Interactive Computer Graphics
This course focuses on programming the essential mathematical and geometric concepts underlying modern computer graphics. Using 3D interactive implementations, it covers fundamental topics such as mesh data structures, transformation sequences, rendering algorithms, and curve interpolation for animation. Students are also introduced to two programming languages widely used in the computer graphics industry: C++ and GLSL. The curriculum is heavily project-based, and culminates in a group project focused on building an interactive first-person world exploration application using the various real-time interaction and rendering algorithms learned throughout the semester.
Fall
Prerequisite: CIS 1200 AND CIS 1210 AND CIS 2400
1 Course Unit

CIS 4610 Advanced Rendering
This course is designed to provide a comprehensive overview to computer graphics techniques in 3D modeling, image synthesis, and rendering. Topics cover: geometric transformations, geometric algorithms, software systems, 3D object models (surface, volume and implicit), visible surface algorithms, image synthesis, shading, mapping, ray tracing, radiosity, global illumination, sampling, anti-aliasing, Monte Carlo path tracing, and photon mapping. Prerequisite: A working knowledge of C++ programming is required (one year programming experience in general). Knowledge of vector geometry is useful.
Fall or Spring
Mutually Exclusive: CIS 5610
1 Course Unit

CIS 4620 Computer Animation
This course covers core subject matter common to the fields of robotics, character animation and embodied intelligent agents. The intent of the course is to provide the student with a solid technical foundation for developing, animating and controlling articulated systems used in interactive computer game virtual reality simulations and high-end animation applications. The course balances theory with practice by "looking under the hood" of current animation systems and authoring tools and examines the technologies and techniques used from both a computer science and engineering perspective. Topics covered include: geometric coordinate systems and transformations; quaternions; parametric curves and surfaces; forward and inverse kinematics; dynamic systems and control; computer simulation; keyframe, motion capture and procedural animation; behavior-based animation and control; facial animation; smart characters and intelligent agents. Prerequisite: Previous exposure to major concepts in linear algebra (i.e. vector matrix math), curves and surfaces, dynamical systems (e.g. 2nd order mass-spring-damper systems) and 3D computer graphics has also been assumed in the preparation of the course materials.
Fall or Spring
Mutually Exclusive: CIS 5620
1 Course Unit

CIS 4670 Scientific Computing
This course will focus on numerical algorithms and scientific computing techniques that are practical and efficient for a number of canonical science and engineering applications. Built on top of classical theories in multi-variable calculus and linear algebra (as a prerequisite), the lectures in this course will strongly focus on explaining numerical methods for applying these mathematical theories to practical engineering problems. Students will be expected to implement solutions and software tools using MATLAB/C++, practice state-of-the-art parallel computing paradigms, and learn scientific visualization techniques using modern software packages. Prerequisites: MATH 240; knowledge of C++, Python or MATLAB
Mutually Exclusive: CIS 5670
Prerequisite: MATH 2400
1 Course Unit

CIS 4710 Computer Organization and Design
This is the second computer organization course and focuses on computer hardware design. Topics covered are: (1) basic digital system design including finite state machines, (2) instruction set design and simple RISC assembly programming, (3) quantitative evaluation of computer performance, (4) circuits for integer and floating-point arithmetic, (5) datapath and control, (6) micro-programming, (7) pipelining, (8) storage hierarchy and virtual memory, (9) input/output, (10) different forms of parallelism including instruction level parallelism, data-level parallelism using both vectors and message-passing multi-processors, and thread-level parallelism using shared memory multiprocessors. Basic cache coherence and synchronization. Prerequisite: Knowledge of at least one programming language.
Spring
Mutually Exclusive: CIS 5710
Prerequisite: CIS 2400
1 Course Unit
CIS 4970 DMD Senior Project
The goal of this course is to provide an opportunity for seniors to define, design, and execute a project of your own choosing that demonstrates the technical skills and abilities that you have acquired during your 4 years as undergraduates. Evaluation is based on selecting an interesting topic, completing appropriate research on the state of the art in that area, communicating your objectives and writing and in presentations, accurately estimating what resources will be required to complete your chosen task, coding necessary functionality, and executing your plan. Senior Standing or Permission of the instructor.
Fall or Spring
1 Course Unit

CIS 4980 Senior Capstone Project
The Senior Capstone Project is required for all BAS degree students, in lieu of the senior design course. The Capstone Project provides an opportunity for the student to apply the theoretical ideas and tools learned from other courses. The project is usually applied, rather than theoretical, exercise, and should focus on a real-world problem related to the career goals of the student. The one-semester project may be completed in either the fall or spring term of the senior year, and must be done under the supervision of a sponsoring faculty member. To register for this course, the student must submit a detailed proposal, signed by the supervising professor and the student’s faculty advisor, two weeks prior to the start of the term.
Fall or Spring
1 Course Unit

CIS 5000 Software Foundations
This course introduces basic concepts and techniques in the foundational study of programming languages. The central theme is the view of programs and programming languages as mathematical objects for which precise claims may be made and proved. Particular topics include operational techniques for formal definition of language features, type systems and type safety properties, polymorphism, constructive logic, and the Coq proof assistant. This course is appropriate as an upper-level undergraduate CIS elective. Undergraduates who have satisfied the prerequisites are welcome to enroll. No permission from the instructor is needed. Prerequisite: In addition to course prerequisites, at least two additional undergraduate courses in math or theoretical CS.
Fall or Spring
Prerequisite: CIS 1210 AND CIS 1600 AND CIS 2620
1 Course Unit

CIS 5010 Computer Architecture
This course is an introductory graduate course on computer architecture with an emphasis on a quantitative approach to cost/performance design tradeoffs. The course covers the fundamentals of classical and modern uniprocessor design: performance and cost issues, instruction sets, pipelining, superscalar, out-of-order, and speculative execution mechanisms, caches, physical memory, virtual memory, and I/O. Other topics include: static scheduling, VLIW and EPIC, software speculation, long (SIMD) and short (multimedia) vector execution, multithreading, and an introduction to shared memory multiprocessors. Knowledge of computer organization and basic programming skills.
Fall or Spring
1 Course Unit

CIS 5020 Analysis of Algorithms
An investigation of paradigms for design and analysis of algorithms. The course will include dynamic programming, flows and combinatorial optimization algorithms, linear programming, randomization and a brief introduction to intractability and approximation algorithms. The course will include other advanced topics, time permitting. Prerequisite: Data Structures and Algorithms at the undergraduate level.
Fall or Spring
1 Course Unit

CIS 5050 Software Systems
This course provides an introduction to fundamental concepts of distributed systems, and the design principles for building large scale computational systems. Topics covered include communication, concurrency, programming paradigms, naming, managing shared state, caching, synchronization, reaching agreement, fault tolerance, security, middleware, and distributed applications. This course is appropriate as an upper-level undergraduate CIS elective. Prerequisite: Undergraduate-level knowledge of Operating Systems and Networking, programming experience. Prerequisite: Undergraduate-level knowledge of Operating Systems and Networking.
Fall or Spring
Prerequisite: CIT 5940
1 Course Unit

CIS 5110 Theory of Computation
Review of regular and context-free languages and machine models. Turing machines and RAM models, Decidability, Halting problem, Reductions, Recursively enumerable sets, Universal TMs, Church/Turing thesis. Time and space complexity, hierarchy theorems, the complexity classes P, NP, PSPACE, L, NL, and co-NL. Reductions revisited, Cook-Levin Theorem, completeness, NL = co-NL. Advanced topics as time permits: Circuit complexity and parallel computation, randomized complexity, approximability, interaction and cryptography. Discrete Mathematics, Automata theory or Algorithms at the undergraduate level.
Fall or Spring
1 Course Unit

CIS 5120 Introduction to Human Computer Interaction
In this course, you will learn the essentials of human-computer interaction (HCI). Over the course of a semester, you will learn how to design interactive systems that satisfy and delight users by undertaking the human-centered design process, from ideation to prototyping, implementation, and assessment with human users. You will learn key tools in the HCI toolkit, including need-finding, user studies, visual design, cognitive models, demo’ing, ethical considerations, and writing about your designs. This course also provides a primer on several areas of emerging technology in HCI, such as human-AI interaction and education technology. To hone your craft as an HCI practitioner, during this course you will undertake a group project to design an innovative user interface. The final submission will include a working interactive prototype, demonstrations of the interface at a public departmental design showcase, and a written reflection on your design findings. Prerequisite: prior programming experience
Fall
Mutually Exclusive: CIS 4120
Prerequisite: Prior programming experience
1 Course Unit
CIS 5150 Fundamentals of Linear Algebra and Optimization
This course provides firm foundations in linear algebra and basic optimization techniques. Emphasis is placed on teaching methods and tools that are widely used in various areas of computer science. Both theoretical and algorithmic aspects will be discussed.
Fall or Spring
1 Course Unit

CIS 5180 Topics in Logic: Finite Model Theory and Descriptive Complexity
This course will examine the expressive power of various logical languages over the class of finite structures. The course begins with an exposition of some of the fundamental theorems about the behavior of first-order logic in the context of finite structures, in particular, the Ehrenfeucht-Fraisse Theorem and the Trakhtenbrot Theorem. The first of these results is used to show limitations on the expressive power of first-order logic over finite structures while the second result demonstrates that the problem of reasoning about finite structures using first-order logic is surprisingly complex. The course then proceeds to consider various extensions of first-order logic including fixed-point operators, generalized quantifiers, infinitary languages, and higher-order languages. The expressive power of these extensions will be studied in detail and will be connected to various problems in the theory of computational complexity. This last motif, namely the relation between descriptive and computational complexity, will be one of the main themes of the course.
Fall or Spring
1 Course Unit

CIS 5190 Applied Machine Learning
Machine learning has been essential to the success of many recent technologies, including autonomous vehicles, search engines, genomics, automated medical diagnosis, image recognition, and social network analysis, among many others. This course will introduce the fundamental concepts and algorithms that enable computers to learn from experience, with an emphasis on their practical application to real problems. This course will introduce supervised learning (decision trees, logistic regression, support vector machines, Bayesian methods, neural networks and deep learning), unsupervised learning (clustering, dimensionality reduction), and reinforcement learning. Additionally, the course will discuss evaluation methodology and recent applications of machine learning, including large scale learning for big data and network analysis.
Fall or Spring
Mutually Exclusive: CIS 4190
Prerequisite: CIS 1210
1 Course Unit

CIS 5200 Machine Learning
This course covers the foundations of statistical machine learning. The focus is on probabilistic and statistical methods for prediction and clustering in high dimensions. Topics covered include linear and logistic regression, SVMs, PCA and dimensionality reduction, EM and HMMs, and deep learning. Elementary probability, calculus, and linear algebra. Basic programming experience.
Fall
1 Course Unit

CIS 5210 Artificial Intelligence
This course investigates algorithms to implement resource-limited knowledge-based agents which sense and act in the world. Topics include, search, machine learning, probabilistic reasoning, natural language processing, knowledge representation and logic. After a brief introduction to the language, programming assignments will be in Python.
Fall or Spring
Mutually Exclusive: CIS 4210
1 Course Unit

CIS 5220 Deep Learning for Data Science
Deep learning techniques now touch on data systems of all varieties. Sometimes, deep learning is a product; sometimes, deep learning optimizes a pipeline; sometimes, deep learning provides critical insights; sometimes, deep learning sheds light on neuroscience or vice versa. The purpose of this course is to deconstruct the hype by teaching deep learning theories, models, skills, and applications that are useful for applications.
Fall
1 Course Unit

CIS 5230 Ethical Algorithm Design
This class introduces aspiring data science technologists to the spectrum of ethical concerns, focusing on social norms like fairness, transparency and privacy. It introduces technical approaches to a number of these problems, including by hands-on examination of the tradeoffs in fairness and accuracy in predictive technology, introduction to differential privacy, and overview of evaluation conventions for predictive technology. It also provides guidelines for examining system training data for bias, representation (of race, gender and other characteristics) and ecological validity. Equipped with this knowledge, students will learn how to conduct informed analysis of the usefulness of predictive systems; they will audit for ethical concerns papers from the contemporary top artificial intelligence venues and the ongoing senior design projects.
Fall or Spring
Mutually Exclusive: CIS 4230
Prerequisite: CIS 1210
1 Course Unit

CIS 5260 Machine Translation
Google translate can instantly translate between any pair of over fifty human languages (for instance, from French to English). How does it do that? Why does it make the errors that it does? And how can you build something better? Modern translation systems like Google Translate and Bing Translator learn how to translate by reading millions of words of already translated text, and this course will show you how they work. The course covers a diverse set of fundamental building blocks from linguistics, machine learning, algorithms, data structures, and formal language theory, along with their application to a real and difficult problem in artificial intelligence.
Fall or Spring
1 Course Unit

CIS 5300 Natural Language Processing
This course provides an overview of the field of natural language processing. The goal of the field is to build technologies that will allow machines to understand human languages. Applications include machine translation, automatic summarization, question answering systems, and dialog systems. NLP is used in technologies like Amazon Alexa and Google Translate.
Fall
1 Course Unit
CIS 5350 Introduction to Bioinformatics
This course provides overview of bioinformatics and computational biology as applied to biomedical research. A primary objective of the course is to enable students to integrate modern bioinformatics tools into their research activities. Course material is aimed to address biological questions using computational approaches and the analysis of data. A basic primer in programming and operating in a UNIX environment will be presented, and students will also be introduced to Python R, and tools for reproducible research. This course emphasizes direct, hands-on experience with applications to current biological research problems. Areas include DNA sequence alignment, genetic variation and analysis, motif discovery, study design for high-throughput sequencing RNA, and gene expression, single gene and whole-genome analysis, machine learning, and topics in systems biology. The relevant principles underlying methods used for analysis in these areas will be introduced and discussed at a level appropriate for biologists without a background in computer science. The course is not intended for computer science students who want to learn about biologically motivated algorithmic problems; BIOL 4536/BIOI 5536 and BE 5370/CIS 5370/MPHY 6090 are more appropriate. Prerequisites: An advanced undergraduate course such as BIOL 4210 or a graduate course in biology such as BIOL 5210, BIOL 5240, or equivalent, is a prerequisite.
Fall
Also Offered As: GCB 5350, MTR 5350
Prerequisite: BIOL 4210 OR BIOL 5210 OR BIOL 5240
1 Course Unit

CIS 5360 Fundamentals of Computational Biology
Introductory computational biology course designed for both biology students and computer science students. The course will cover fundamentals of algorithms, statistics, and mathematics as applied to biological problems. In particular, emphasis will be given to biological problem modeling and understanding the algorithms and mathematical procedures at the "pencil and paper" level. That is, practical implementation of the algorithms is not taught but principles of the algorithms are covered using small sized examples. Topics to be covered are: genome annotation and string algorithms, pattern search and statistical learning, molecular evolution and phylogenetics, functional genomics and systems level analysis.
Fall
Also Offered As: BIOL 5536, GCB 5360
Prerequisite: ((BIOL 1101 AND BIOL 1102) OR BIOL 1121) AND STAT 111 AND STAT 112
1 Course Unit

CIS 5370 Biomedical Image Analysis
This course covers the fundamentals of advanced quantitative image analysis that apply to all of the major and emerging modalities in biological/biomaterials imaging and in vivo biomedical imaging. While traditional image processing techniques will be discussed to provide context, the emphasis will be on cutting edge aspects of all areas of image analysis (including registration, segmentation, and high-dimensional statistical analysis). Significant coverage of state-of-the-art biomedical research and clinical applications will be incorporated to reinforce the theoretical basis of the analysis methods. Prerequisite: Mathematics through multivariate calculus (MATH 2410), programming experience, as well as some familiarity with linear algebra, basic physics, and statistics.
Fall or Spring
Also Offered As: BE 5370, MPHY 6090
1 Course Unit

CIS 5400 Principles of Embedded Computation
This course is focused on principles underlying design and analysis of computational elements that interact with the physical environment. Increasingly, such embedded computers are everywhere, from smart cameras to medical devices to automobiles. While the classical theory of computation focuses on the function that a program computes, to understand embedded computation, we need to focus on the reactive nature of the interaction of a component with its environment via inputs and outputs, the continuous dynamics of the physical world, different ways of communication among components, and requirements concerning safety, timeliness, stability, and performance. Developing tools for approaching design, analysis, and implementation of embedded systems in a principled manner is an active research area. This course will attempt to give students a coherent introduction to this emerging area. This course is appropriate as an upper-level undergraduate CIS elective. This course assumes mathematical maturity, commensurate with either ESE 2100 (Introduction to Dynamical Systems), or CIS 2620 (Introduction to Theory of Computation). It is suitable for students who have an undergraduate degree in computer science, or computer engineering, or electrical engineering. It is also suitable for Penn undergraduates in CIS or CE as an upper-level elective.
Fall
1 Course Unit

CIS 5410 Embedded Software for Life-Critical Applications
This course explores techniques for writing correct and efficient embedded code. Topics include C/C++ idioms, data abstraction, elementary data structures and algorithms, environment modeling, concurrency, hard real time, and modular program reasoning. C fluency.
Fall or Spring
1 Course Unit

CIS 5420 Embedded Systems Programming
This course explores techniques for writing correct and efficient embedded code. Topics include C/C++ idioms, data abstraction, elementary data structures and algorithms, environment modeling, concurrency, hard real time, and modular program reasoning. C fluency.
Fall or Spring
1 Course Unit
CIS 5450 Big Data Analytics
In the new era of big data, we are increasingly faced with the challenges of processing vast volumes of data. Given the limits of individual machines (compute power, memory, bandwidth), increasingly the solution is to process the data in parallel on many machines. This course focuses on the fundamentals of scaling computation to handle common data analytics tasks. You will learn about basic tasks in collecting, wrangling, and structuring data; programming models for performing certain kinds of computation in a scalable way across many compute nodes; common approaches to converting algorithms to such programming models; standard toolkits for data analysis consisting of a wide variety of primitives; and popular distributed frameworks for analytics tasks such as filtering, graph analysis, clustering, and classification. Recommended: broad familiarity with probability and statistics, as well as programming in Python. Additional background in statistics, data analysis (e.g., in Matlab or R), and machine learning is helpful (example: ESE 5420).
Fall, Spring, and Summer Terms
1 Course Unit

CIS 5470 Software Analysis
This course covers the theory and practice of software analysis - a body of algorithms and techniques to reason about program behavior with applications to effectively test, debug, and secure large, complex codebases. The course surveys a wide range of applications of software analysis including proving the absence of common programming errors, discovering and preventing security vulnerabilities, systematically testing intricate data structures and libraries, and localizing root causes in complex software failures. Familiarity with programming (CIS 1200), algorithms (CIS 1210), and mathematical foundations (CIS 1600). Specifically: - Assignments involve programming in C/C++ in the LLVM compiler infrastructure. - Lectures and exams presume knowledge of search and graph algorithms, and background in logic and probability.
Fall or Spring
1 Course Unit

CIS 5480 Operating Systems Design and Implementation
The purpose of this masters-level course is to teach the design and implementation of operating systems and operating systems concepts that appear in other advanced systems. The course divides into three major sections. The first part of the course discusses concurrency: how to manage multiple tasks that execute at the same time and share resources. Topics in this section include processes and threads, context switching, synchronization, scheduling, and deadlock. The second part of the course addresses the problem of common management; it will cover topics such as linking, dynamic memory allocation, dynamic address translation, virtual memory, and demand paging. The third major part of the course concerns file systems, including topics such as storage devices, disk management and scheduling, directories, protection, and crash recovery. After these three major topics, the class will conclude with specialized topics such as virtual machines and case studies of different operating systems (e.g., Android, Windows, Linux, etc.).
Fall or Spring
1 Course Unit

CIS 5490 Wireless Communications for Mobile Networks and Internet of Things
This course covers generations of wireless mobile network standards and systems, basic differences and their evolution, charting the development of mobile telecommunications systems from 3G, to today's state-of-the-art wireless technology 4G LTE, and the next generation wireless technology 5G. The course projects require knowledge of C/C++ and Android. Any undergraduate networking courses are suggested but not required as this course covers necessary networking topics.
Fall or Spring
1 Course Unit

CIS 5500 Database and Information Systems
This course provides an introduction to the broad field of database and information systems, covering a variety of topics relating to structured data, ranging from data modeling to logical foundations and popular languages, to system implementations. We will study the theory of relational and XML data design; the basics of query languages; efficient storage of data, execution of queries and query optimization; transactions and updates; web-database development, and "big data" and NoSQL systems. The course assumes mathematical and programming experience equivalent to CIS 1600 and CIS 1210.
Fall
Mutually Exclusive: CIS 4500
1 Course Unit

CIS 5510 Computer and Network Security
This is an introduction to topics in the security of computer systems and communication on networks of computers. The course covers four major areas: fundamentals of cryptography, security for communication protocols, security for operating systems and mobile programs, and security for electronic commerce. Sample specific topics include: passwords and offline attacks, DES, RSA, DSA, SHA, SSL, CBC, IPSec, SET, DDoS attacks, biometric authentication, PKI, smart cards, S/MIME, privacy on the Web, viruses, security models, wireless security, and sandboxing. Students will be expected to display knowledge of both theory and practice through written examinations and programming assignments.
Fall or Spring
Prerequisite: CIS 1600 AND CIS 2400
1 Course Unit

CIS 5520 Advanced Programming
The goals of this course are twofold: (1) to take good programmers and turn them into excellent ones, and (2) to introduce them to a range of modern software engineering practices, in particular those embodied in advanced functional programming languages. Four courses involving significant programming and a discrete mathematics or modern algebra course. Enrollment by permission of the instructor only.
Fall or Spring
1 Course Unit

CIS 5530 Networked Systems
This course provides an introduction to fundamental concepts in the design and implementation of networked systems, their protocols, and applications. Topics to be covered include: Internet architecture, network applications, addressing, routing, transport protocols, network security, and peer-to-peer networks. The course will involve written assignments, examinations, and programming assignments. Students will work in teams to design and implement networked systems in layers, from routing protocols, transport protocols, to peer-to-peer networks.
Fall or Spring
Prerequisite: CIS 1210
1 Course Unit
CIS 5540 Programming Paradigms
Achieving mastery in a new programming language requires more than just learning a new syntax; rather, different languages support different ways to think about solving problems. Not all programming languages are inherently procedural or object-oriented. The intent of this course is to provide a basic understanding of a wide variety of programming paradigms, such as logic programming, functional programming, concurrent programming, rule-based programming, and others.
Fall or Spring
Prerequisite: CIS 1210 OR CIT 5940
1 Course Unit

CIS 5550 Internet and Web Systems
This course focuses on the challenges encountered in building Internet and web systems: scalability, interoperability (of data and code), security and fault tolerance, consistency models, and location of resources, services, and data. We will examine how XML standards enable information exchange; how web services support cross-platform interoperability (and what their limitations are); how to build high-performance application servers; how “cloud computing” services work; how to perform Akamai-like content distribution; and how to provide transaction support in distributed environments. We will study techniques for locating machines, resources, and data (including directory systems, information retrieval indexing, ranking, and web search); and we will investigate how different architectures support scalability (and the issues they face). We will also examine ideas that have been proposed for tomorrow’s Web, and we will see some of the challenges, research directions, and potential pitfalls. An important goal of the course is not simply to discuss issues and solutions, but to provide hands-on experience with a substantial implementation project. This semester’s project will be a peer-to-peer implementation of a Google-style search engine, including distributed, scalable crawling; indexing with ranking; and even PageRank. As a side-effect of the material of this course you will learn about some aspects of large-scale software development assimilating large APIs, thinking about modularity, reading other people’s code, managing versions, debugging, etc. Prerequisite: Familiarity with threads and concurrency, strong Java programming skills.
Fall or Spring
Mutually Exclusive: CIS 4550
1 Course Unit

CIS 5560 Cryptography
This course is an introduction to cryptography, both theory and applications, intended for advanced undergraduates and graduate students. Topics covered include symmetric cryptography, message authentication, public-key cryptography, digital signatures, cryptanalysis, cryptographic security, and secure channels, as well as a selection of more advanced topics such as zero-knowledge proofs, secure multiparty computation, privacy-enhancing technologies, or lattice-based cryptography.
Fall or Spring
1 Course Unit

CIS 5570 Programming for the Web
This course will focus on web programming. The first half will focus on the basics of the internet and the Web, HTML and CSS, and basic and advanced Ruby. The second half will focus on Rails. Teams (of size 2-3) will build a web application in the second half of the semester as the class project. Through Rails, we'll explore the "culture" of web programming such as agile methodology, testing, key aspects of software engineering, using web services and APIs, and deploying to the cloud.
1 Course Unit

CIS 5590 Programming and Problem Solving
This course develops students problem solving skills using techniques that they have learned during their CS training. Over the course of the semester, students work on group projects in which they use programming techniques to solve open-ended problems, e.g. optimization, simulation, etc. There are no "correct" answers to these problems; rather, the focus is on the four steps of the problem solving process: algorithmic thinking; programming; analysis; and communication. Prerequisite: Proficiency in Java.
Fall or Spring
1 Course Unit

CIS 5600 Interactive Computer Graphics
This course is designed to provide a comprehensive overview to computer graphics techniques in 3D modeling, image synthesis, and rendering. Topics cover: geometric transformations, geometric algorithms, software systems, 3D object models (surface, volume and implicit), visible surface algorithms, image synthesis, shading, mapping, ray tracing, radiosity, global illumination, sampling, anti-aliasing, Monte Carlo path tracing, and photon mapping. Prerequisite: A working knowledge of C++ programming is required (one year programming experience in general). Knowledge of vector geometry is useful.
Fall or Spring
Mutually Exclusive: CIS 4610
1 Course Unit

CIS 5610 Advanced Computer Graphics
This course covers core subject matter common to the fields of robotics, character animation and embodied intelligent agents. The intent of the course is to provide the student with a solid technical foundation for developing, animating and controlling articulated systems used in interactive computer games, virtual reality simulations and high-end animation applications. The course balances theory with practice by "looking under the hood" of current animation systems and authoring tools and exams the technologies and techniques used from both a computer science and engineering perspective. Topics covered include: geometric coordinate systems and transformations; quaternions; parametric curves and surfaces; forward and inverse kinematics; dynamic systems and control; computer simulation; keyframe, motion capture and procedural animation; behavior-based animation and control; facial animation; smart characters and intelligent agents. Prerequisite: Previous exposure to major concepts in linear algebra (i.e. vector matrix math), curves and surfaces, dynamical systems (e.g. 2nd order mass-spring-damper systems) and 3D computer graphics has also been assumed in the preparation of the course materials.
Fall or Spring
Mutually Exclusive: CIS 4620
1 Course Unit
CIS 5630 Physically Based Animation
This course introduces students to common physically based simulation techniques for animation of fluids and gases, rigid and deformable solids, cloth, explosions, fire, smoke, virtual characters, and other systems. Physically based simulation techniques allow for creation of extremely realistic special effects for movies, video games and surgical simulation systems. We will learn state-of-the-art techniques that are commonly used in current special effects and animation studios and in video games community. To gain hands-on experience, students will implement basic simulators for several systems. The topics will include: Particle Systems, Mass spring systems, Deformable Solids & Fracture, Cloth, Explosions & Fire, Smoke, Fluids, Deformable active characters, Simulation and control of rigid bodies, Rigid body dynamics, Collision detection and handling, Simulation of articulated characters, Simulated characters in games. The course is appropriate for both upper level undergraduate and graduate students. Prerequisite: Students should have a good knowledge of object-oriented programming (C++) and basic familiarity with linear algebra and physics. Background in computer graphics is required (CIS 461 and 561).
Fall or Spring
1 Course Unit

CIS 5640 Game Design and Development
The intent of the course is to provide students with a solid theoretical understanding of the core creative principles, concepts, and game play structures/schemas underlying most game designs. The course will also examine game development from an engineering point of view, including: game play mechanics, game engine software and hardware architectures, user interfaces, design documents, playtesting and production methods. Basic understanding of 3D graphics and animation principles, prior exposure to scripting and programming languages such as Python, C and C++. Prerequisite: MATH 2400
Fall or Spring
1 Course Unit

CIS 5650 GPU Programming and Architecture
This course examines the architecture and capabilities of modern GPUs. The graphics processing unit (GPU) has grown in power over recent years, to the point where many computations can be performed faster on the GPU than on a traditional CPU. GPUs have also become programmable, allowing them to be used for a diverse set of applications far removed from traditional graphics settings. Topics covered include architectural aspects of modern GPUs, with a special focus on their streaming parallel nature, writing programs on the GPU using high level languages like Cg and BrookGPU, and using the GPU for graphics and general purpose applications in the area of geometry modeling, physical simulation, scientific computing and games. Students are expected to have a basic understanding of computer architecture and graphics, and should be proficient in OpenGL and C/C++. This course is appropriate as an upper-level undergraduate CIS elective. CIS 4600 or CIS 5600, and familiarity with computer hardware/systems. The hardware/systems requirement may be met by CIS 4710/CIS 5710; or CIT 5930 and CIT 5950; or CIS 2400 (with CIS 4710/CIS 5710 recommended); or equivalent coursework.
Fall or Spring
1 Course Unit

CIS 5660 Procedural Computer Graphics
Sprawling cities, dense vegetation, infinite worlds - procedural graphics empower technical artists to quickly create complex digital assets that would otherwise be unfeasible. This course is intended to introduce the mathematical and algorithmic foundations of procedural modeling and animation techniques, and to offer hands-on experience designing and implementing visual recipes in original graphics projects by applying these methods. Students should have a strong interest in both the creative and technical aspects of computer graphics, as well as a solid programming background.
Fall or Spring
Prerequisite: CIS 4600 OR CIS 5600
1 Course Unit

CIS 5670 Scientific Computing
This course will focus on numerical algorithms and scientific computing techniques that are practical and efficient for a number of canonical science and engineering applications. Built on top of classical theories in multi-variable calculus and linear algebra (as a prerequisite), the lectures in this course will strongly focus on explaining numerical methods for applying these mathematical theories to practical engineering problems. Students will be expected to implement solutions and software tools using MATLAB/C++, practice state-of-the-art parallel computing paradigms, and learn scientific visualization techniques using modern software packages. Prerequisites: MATH 2400; knowledge of C++, Python or MATLAB
Fall or Spring
Mutually Exclusive: CIS 4670
Prerequisite: MATH 2400
1 Course Unit

CIS 5680 Game Design Practicum
The objective of the game design practicum is to provide students with hands on experience designing and developing 3D games as well as Virtual Reality (VR) and Augmented Reality (AR) applications. Working in teams of three, students will gain experience brainstorming original game concepts, writing formal design documents and developing a fully functional prototype of their game/application. Technical features to be designed and implemented include novel game mechanics and/or user interaction models, game physics, character animation, game AI (i.e. movement control, path planning, decision making, etc.), sound effects and background music, 2D graphical user interface (GUI) design and multiplayer networking capabilities. State-of-the-art game engine middleware such as the Unity3D and Unreal engine games will be used to expose student to commercial-grade software, production methodologies and art asset pipelines. As a result of their game development efforts, students will learn first-hand about the creative process, design documentation, object-oriented software design and engineering, project management (including effective team collaboration and communication techniques), design iteration through user feedback and play-testing, and most importantly, what makes a game or virtual reality experience interesting and fun to play.
Fall, Spring, and Summer Terms
Prerequisite: (CIS 4600 OR CIS 4620 OR CIS 5600 OR CIS 5620)
CIS 5710 Computer Organization and Design
This is the second computer organization course and focuses on computer hardware design. Topics covered are: (1) basic digital system design including finite state machines, (2) instruction set design and simple RISC assembly programming, (3) quantitative evaluation of computer performance, (4) circuits for integer and floating-point arithmetic, (5) datapath and control, (6) micro-programming, (7) pipelining, (8) storage hierarchy and virtual memory, (9) input/output, (10) different forms of parallelism including instruction level parallelism, data-level parallelism using both vectors and message-passing multi-processors, and thread-level parallelism using shared memory multiprocessors. Basic cache coherence and synchronization. Prerequisite: Knowledge of at least one programming language.
Spring
Mutually Exclusive: CIS 4710
Prerequisite: CIS 2400
1 Course Unit

CIS 5730 Software Engineering
Writing a "program" is easy. Developing a "software product", however, introduces numerous challenges that make it a much more difficult task. This course will look at how professional software engineers address those challenges, by investigating best practices from industry and emerging trends in software engineering research. Topics will focus on software maintenance issues, including: test case generation and test suite adequacy; code analysis; verification and model checking; debugging and fault localization; refactoring and regression testing; and software design and quality. Prerequisite: Proficiency in Java.
Fall
Prerequisite: CIT 5940 OR CIS 3500
1 Course Unit

CIS 5800 Machine Perception
An introduction to the problems of computer vision and other forms of machine perception that can be solved using geometrical approaches rather than statistical methods. Emphasis will be placed on both analytical and computational techniques. This course is designed to provide students with an exposure to the fundamental mathematical and algorithmic techniques that are used to tackle challenging image based modeling problems. The subject matter of this course finds application in the fields of Computer Vision, Computer Graphics and Robotics. Some of the topics to be covered include: Projective Geometry, Camera Calibration, Image Formation, Projective, Affine and Euclidean Transformations, Computational Stereopsis, and the recovery of 3D structure from multiple 2D images. This course will also explore various approaches to object recognition that make use of geometric techniques, these would include alignment based methods and techniques that exploit geometric invariants. In the assignments for this course, students will be able to apply the techniques to actual computer vision problems. This course is appropriate as an upper-level undergraduate CIS elective. A solid grasp of the fundamentals of linear algebra. Some knowledge of programming in C and/or Matlab
Fall
1 Course Unit

CIS 5810 Computer Vision & Computational Photography
This is an introductory course to Computer Vision and Computational Photography. This course will explore three topics: 1) image morphing, 2) image matching and stitching, and 3) image recognition. This course is intended to provide a hands-on experience with interesting things to do on images/videos. The world is becoming image-centric. Cameras are now found everywhere, in our cell phones, automobiles, even in medical surgery tools. Computer vision technology has led to latest innovations in areas such as Hollywood movie production, medical diagnosis, biometrics, and digital library. This course is suited for students from all Engineering backgrounds, who have the basic knowledge of linear algebra and programming, and a lot of imagination.
Not Offered Every Year
1 Course Unit

CIS 5970 Master's Thesis Research
For students working on an advanced research leading to the completion of a Master's thesis.
Fall or Spring
1-2 Course Units

CIS 5990 Independent Study for Masters Students
For master's students studying a specific advanced subject area in computer and information science. Involves coursework and class presentations. A CIS 5990 course unit will invariably include formally gradable work comparable to that in a CIS 500-level course. Students should discuss with the faculty supervisor the scope of the Independent Study, expectations, work involved, etc.
Fall or Spring
1-4 Course Units

CIS 6010 Advanced Topics in Computer Architecture
This course will focus on research topics in computer architecture, and include reading and presenting research papers and an optional project. The content will differ with each offering, covering topics such as multicore programmability, datacenter and warehouse-scale computing, security, energy-efficient architectures, etc.
Fall or Spring
Prerequisite: CIS 5010 OR CIS 3710
1 Course Unit

CIS 6100 Advanced Geometric Methods in Computer Science
The purpose of this course is to present some of the advanced geometric methods used in geometric modeling, computer graphics, computer vision, etc. The topics may vary from year to year, and will be selected among the following subjects (nonexhaustive list): Introduction to projective geometry with applications to rational curves and surfaces, control points for rational curves, rectangular and triangular rational patches, drawing closed rational curves and surfaces; Differential geometry of curves (curvature, torsion, osculating planes, the Frenet frame, osculating circles, osculating spheres); Differential geometry of surfaces (first fundamental form, normal curvature, second fundamental form, geodesic curvature, Christoffel symbols, principal curvatures, Gaussian curvature, mean curvature, the Gauss map and its derivative dN, the Dupin indicatrix, the Theorema Egregium equations of Codazzi-Mainardi, Bonnet's theorem, lines of curvatures, geodesic torsion, asymptotic lines, geodesic lines, local Gauss-Bonnet theorem).
Spring
Prerequisite: CIS 5010
1 Course Unit
CIS 6200 Advanced Topics in Machine Learning
This course covers a variety of advanced topics in machine learning, such as the following: statistical learning theory (statistical consistency properties of surrogate loss minimizing algorithms); approximate inference in probabilistic graphical models (variational inference methods and sampling-based inference methods); structured prediction (algorithms and theory for supervised learning problems involving complex/structured labels); and online learning in complex/structured domains. The precise topics covered may vary from year to year based on student interest and developments in the field.
Spring
Prerequisite: CIS 5200
1 Course Unit

CIS 6250 Theory of Machine Learning
This course is an introduction to the theory of Machine Learning, a field which attempts to provide algorithmic, complexity-theoretic and statistical foundations to modern machine learning. The focus is on topics in machine learning theory for researchers and students in artificial intelligence, neural networks, theoretical computer science, and statistics.
Fall or Spring
1 Course Unit

CIS 6300 Advanced Topics in Natural Language Processing
Different topics selected each offering; e.g., NL generation, question-answering, information extraction, machine translation, restricted grammar formalisms, computational lexical semantics, etc.
Fall or Spring
Prerequisite: CIS 5300
1 Course Unit

CIS 6400 Advanced Topics in Software Systems: Data Driven IoT/Edge Computing
This course is to explore selected topics in data driven IoT/Edge Computing. We are currently witnessing a technological paradigm shift, in which the IoT systems are increasingly deployed in society. This course is to study emerging paradigms in IoT/Edge Computing and to learn how to develop data driven applications that can harness the power of the IoT/Edge computing. For application domains, the course will target connected medical devices, smart home for aging, and connected automotive systems. Topics to be covered include IoT/Edge computing architectures, the Internet of medical things, connected vehicles, anomaly detection, mixed initiative systems, closed-loop systems, resource allocation, and security and privacy. The course will require a significant term project in connected health or connected automotive domains.
Spring
Prerequisite: (CIS 5450 OR CIS 5190) AND (CIS 5050 or CIS 5410)
1 Course Unit

CIS 6500 Advanced Topics in Databases
Advanced topics in databases: distributed databases, integrity constraints, failure, concurrency control, relevant relational theory, semantics of data models, the interface between programming of languages and databases. Object-oriented databases. New topics are discussed each year.
Spring
Prerequisite: CIS 5500
1 Course Unit

CIS 6600 Advanced Topics in Computer Graphics and Animation
The goal of the course is to review state-of-the-art research in the fields of computer graphics and animation as well as provide students with working knowledge of how to convert theory to practice by developing an associated graphicsanimation authoring tool. The course is comprised of primers, lectures, student presentations and the authoring tool group project. Each student will be responsible for presenting one primer and at least two SIGGRAPH papers to the class. Working in teams of two, students will design and develop an authoring tool that that facilitates the creation of a new type of user interaction, animation/simulation capability or 3D graphics special effects. Research papers published in the SigGraph Conference proceedings will provide the basis for the features/functionality/special effects that can be selected for implementation in the authoring tool. Each group will analyze the need and user requirements for the tool they plan to develop, prepare a formal software design document, construct a project work plan, develop the authoring tool functionality and user interface, test the design and demonstrate the authoring of associated content. A plug-in to standard authoring tools such as Maya or Houdini must also be developed to enable importing of appropriate assets and/or exporting of results.
Spring
Prerequisite: CIS 5600
1 Course Unit

CIS 6700 Advanced Topics in Programming Languages
The details of this course change from year to year, but its purpose is to cover theoretical topics related to programming languages. Some central topics include: denotational vs operational semantics, domain theory and category theory, the lambda calculus, type theory (including recursive types, generics, type inference and modules), logics of programs and associated completeness and decidability problems, specification languages, and models of concurrency. The course requires a degree of mathematical sophistication.
Fall or Spring
Prerequisite: CIS 5000
1 Course Unit

CIS 6730 Computer-Aided Verification
This course introduces the theory and practice of formal methods for the design and analysis of concurrent and embedded systems. The emphasis is on the underlying logical and automata-theoretic concepts, the algorithmic solutions, and heuristics to cope with the high computational complexity. Topics: Models and semantics of reactive systems; Verification algorithms; Verification techniques. Topics may vary depending on instructor. Basic knowledge of algorithms, data structures, automata theory, propositional logic, operating systems, communication protocols, and hardware (CIS 2620, CIS 3800, or permission of the instructor).
Fall or Spring
1 Course Unit

CIS 6770 Advanced Topics in Algorithms and Complexity
This course covers various aspects of discrete algorithms. Graph-theoretic algorithms in computational biology, and randomization and computation; literature in dynamic graph algorithms, approximation algorithms, and other areas according to student interests. Consent of the instructor.
Fall
1 Course Unit
CIS 6800 Advanced Topics in Machine Perception
Graduate seminar in advanced work on machine perception as it applies to robots as well as to the modeling of human perception. Topics vary with each offering. A previous course in machine perception or knowledge of image processing, experience with an operating system and language such as Unix and C, and aptitude for mathematics. Spring
1 Course Unit

CIS 6820 Friendly Logics
The use of logical formalisms in Computer Science is dominated by a fundamental conflict: expressiveness vs. algorithmic tractability. Database constraint logics, temporal logics and description logics are successful compromises in this conflict: (1) they are expressive enough for practical specifications in certain areas, and (2) there exist interesting algorithms for the automated use of these specifications. Interesting connections can be made between these logics because temporal and description logics are modal logics, which in turn can be seen, as can database constraint logics, as certain fragments of first-order logic. These connections might benefit research in databases, computer-aided verification and AI. Discussion includes other interesting connections, eg., with SLD-resolution, with constraint satisfaction problems, with finite model theory and with automata theory. Fall or Spring
1 Course Unit

CIS 7000 Special Topics
One time course offerings of special interest. Equivalent to a CIS 5XX level course. Not Offered Every Year
1 Course Unit

CIS 7980 Explaining Explanation
In the social sciences we often use the word "explanation" as if (a) we know what we mean by it, and (b) we mean the same thing that other people do. In this course we will critically examine these assumptions and their consequences for scientific progress. In part 1 of the course we will examine how, in practice, researchers invoke at least three logically and conceptually distinct meanings of "explanation:" identification of causal mechanisms; ability to predict (account for variance in) some outcome; and ability to make subjective sense of something. In part 2 we will examine how and when these different meanings are invoked across a variety of domains, focusing on social science, history, business, and machine learning, and will explore how conflation of these distinct concepts may have created confusion about the goals of science and how we evaluate its progress. Finally, in part 3 we will discuss some related topics such as null hypothesis testing and the replication crisis. We will also discuss specific practices that could help researchers clarify exactly what they mean when they claim to have "explained" something, and how adoption of such practices may help social science be more useful and relevant to society. Also Offered As: COMM 8980, OIDD 9530
Fall or Spring
1 Course Unit

CIS 8000 PhD Special Topics
One-time course offerings of special interest. Equivalent to CIS seminar course. Offerings to be determined. Fall or Spring
1 Course Unit

CIS 8100 Writing and Speaking with Style
This course is aimed at training CIS PhD students to excel in writing and presenting research results. Fall or Spring
1 Course Unit

CIS 8950 Teaching Practicum
Enrollment for students participating in Teaching Practicum. Fall or Spring
1 Course Unit

CIS 8990 Doctoral Independent Study
For doctoral students studying a specific advanced subject area in computer and information science. The Independent Study may involve coursework, presentations, and formally gradable work comparable to that in a CIS 5000 or 6000 level course. The Independent Study may also be used by doctoral students to explore research options with faculty, prior to determining a thesis topic. Students should discuss with the faculty supervisor the scope of the Independent Study, expectations, work involved, etc. The Independent Study should not be used for ongoing research towards a thesis, for which the CIS 9990 designation should be used. Fall or Spring
1-4 Course Units

CIS 9950 Dissertation
For Ph.D. candidates working exclusively on their dissertation research, having completed enrollment for a total of ten semesters (fall and spring). There is no credit or grade for CIS 9950.
0 Course Units

CIS 9990 Thesis/Dissertation Research
For students pursuing advanced research to fulfill PhD dissertation requirements. Fall or Spring
1-4 Course Units

Computer and Information Technology (CIT)

CIT 5200 Introduction to Robotics
This course introduces the fundamental geometric, kinematic, dynamic, and computational principles underlying modern robotic systems. The main topics of the course include: rotation matrices, homogeneous transformations, manipulator forward and inverse kinematics, mobile robot kinematics, Jacobians, and trajectory planning. The purpose of the course is to provide you with a mathematical, computational and practical foundation for future explorations into the robotics field. Students should have knowledge of simple geometry and trigonometry (triangle inequalities, sine, cosine), previous exposure to linear algebra (matrices and vectors), and previous programming experience. Although MEAM 2110 is often listed as a prerequisite for the on-campus version of this course, it is not strictly required. Previous experience in simple rigid body kinematics will be useful. Fall or Spring
1 Course Unit
CIT 5820 Blockchains and Cryptography
Blockchains or Distributed Ledger Technology (DLT) provide a novel method for decentralizing databases in the presence of mutually distrustful or malicious agents. The promise of DLTs has attracted billions of dollars in investments, yet the true potential of these systems remains unclear. This course introduces students to the fundamentals of cryptography and distributed systems that underpin modern blockchain platforms – including collision-resistant hash functions, digital signatures and classical consensus algorithms. From there, we will examine the architecture of modern blockchain platforms, and develop tools to analyze and interact with them in Python. At the end of this course, students should understand the power and limitations of blockchain technology, and be able to develop software that interacts with current blockchain platforms.
Fall or Spring
1 Course Unit

CIT 5900 Programming Languages and Techniques
This course is an introduction to fundamental concepts of programming and computer science for students who have little or no experience in these areas. Includes an introduction to programming using Python, where students are introduced to core programming concepts like data structures, conditionals, loops, variables, and functions. Also provides an introduction to basic data science techniques using Python. The second half of this course is an introduction to object-oriented programming using Java, where students are introduced to polymorphism, inheritance, abstract classes, interfaces, and advanced data structures. Students will also learn how to read and write to files, connect to databases, and use regular expressions to parse text. This course includes substantial programming assignments in both Python and Java, and teaches techniques for test-driven development and debugging code.
Fall or Spring
1 Course Unit

CIT 5910 Introduction to Software Development
Introduction to fundamental concepts of programming and computer science. Principles of modern object-oriented programming languages: abstraction, types, polymorphism, encapsulation, inheritance, and interfaces. This course will also focus on best practices and aspects of software development such as software design, software testing, pair programming, version control, and using IDEs. Substantial programming assignments.
Fall or Spring
1 Course Unit

CIT 5920 Mathematical Foundations of Computer Science
This course introduces you to math concepts that form the backbone of the majority of computer science. Topics covered include sets, functions, permutations and combinations, discrete probability, expectation, mathematical Induction and graph theory. The goal of the course is to ensure that students are comfortable enough with the math required for most of the CIS electives. CIS 5020 and CIT 5960 heavily rely on concepts taught in this course.
Fall or Spring
1 Course Unit

CIT 5930 Introduction to Computer Systems
This course provides an introduction to fundamental concepts of computer systems and computer architecture. You will learn the C programming language and an instruction set (machine language) as a basis for understanding how computers represent data, process information, and execute programs. The course also focuses on the Unix environment and includes a weekly hands-on lab session.
Fall or Spring
1 Course Unit

CIT 5940 Data Structures and Software Design
This course will focus on data structures, software design, and advanced Java. The course starts off with an introduction to data structures and basics of the analysis of algorithms. Important data structures covered will include arrays, lists, stacks, queues, trees, hash maps, and graphs. The course will also focus on software design and advanced Java topics such as software architectures, design patterns, networking, multithreading, and graphics. We will use Java for the entire course.
Fall or Spring
Prerequisite: CIT 5910
1 Course Unit

CIT 5950 Computer Systems Programming
This course builds on your knowledge of C and focuses on systems programming for Linux, specifically the libraries that programmers use for threading and concurrency, synchronization, inter-process communication, and networking. The course also introduces the C++ programming language, and covers important concepts in modern operating systems, including processes, scheduling, caching, and virtual memory. After completing this course, you will have the requisite knowledge and experience for systems-focused CIS graduate-level electives.
Fall or Spring
Prerequisite: CIT 5930
1 Course Unit

CIT 5960 Algorithms and Computation
This course focuses primarily on the design and analysis of algorithms. We will begin with sorting and searching algorithms and then spend most of the course on graph algorithms. In order to study graph algorithms, general algorithm design patterns like dynamic programming and greedy algorithms will be introduced. A section of this course is also devoted to understanding NP-Completeness.
Fall or Spring
Prerequisite: CIT 5920
1 Course Unit

Creative Writing (CRWR)
The courses listed on this page are exclusive to the LPS BAAS degree (https://lpsonline.sas.upenn.edu/features/what-bachelor-applied-arts-and-sciences-degree/) and LPS Online certificates (https://lpsonline.sas.upenn.edu/academics/certificates/).
CRWR 1010 The Craft of Creative Writing

The Craft of Creative Writing is designed for students who are new to creative writing or who would like to return to the fundamentals of craft. Through frequent writing assignments, assigned readings and collaborative discussions, students familiarize themselves with a variety of styles and approaches, exploring a range of literary genres including poetry, fiction, creative nonfiction, memoir and journalistic prose. Students are expected to hone their skills in creative practice, to revise and take risks with their work and to cultivate their habits of close reading and peer feedback.
1 Course Unit

CRWR 1600 Modern and Contemporary US Poetry

In this fast-paced introductory course, students read and discuss a wide range of modern and contemporary American poets, beginning with Emily Dickinson and Walt Whitman and ending with 21st-century avant-garde poets like Tracie Morris. Questions central to this course include "How does experimental poetry help us understand the transition between modernism and postmodernism?" and "What is the relationship between experimental poetry and experimental teaching?" The poems and poets we study challenge students to read critically and think differently about what a poem is, about what art can be and about what poetry can teach us about reading, writing and learning. Students do not need to have any prior knowledge of poetry or poetics. The course operates primarily as a discussion. Rather than attending lectures, students participate in web-based discussions of the poems, accessible in text, audio and video formats. Requirements include active participation in the online discussion forums, in addition to five short papers, quizzes, creative exercises and a comprehensive final examination.
Also Offered As: ENLT 1600
1 Course Unit

CRWR 2010 Poetry Workshop

Poetry Workshop is a course for students who are new to poetry or who would like to return to the fundamentals of poetry. This workshop uses frequent writing assignments, assigned readings and collaborative workshop discussions to explore various elements of poetic craft, including imagery, metaphor, line, stanza, music, rhythm, diction, and tone.
1 Course Unit

CRWR 2400 The Art of Editing

This course takes a critical and practical approach to the art of editing. Is the editor simply a "failed writer," as T. S. Eliot claimed, or is good editing the key to a writer's clarity and integrity? In addition to exploring theories and histories of the red pen—including Marianne Moore's five-decade quest to revise a single poem and the editor who was discovered to have invented Raymond Carver's distinctive narrative style—we immerse ourselves in the technical aspects of editing, covering such topics as the difference between developmental and line editing, the merits of MLA and Chicago style, proofreading in hard copy and digital environments, and when to wield an em dash. Students gain practical editing experience, learn about a range of different levels of editorial interventions, and investigate the politics of language usage and standards. This course is suitable for aspiring copyeditors or any writer who wants to polish up their grammar and punctuation skills.
1 Course Unit

CRWR 2500 Writing and Meditation

Writing and Meditation is a course for students interested in intersections between creativity and contemplative practice. No previous experience is necessary. Curiosity and openness to multiple traditions of mindfulness is encouraged. In each module we'll explore a different approach to present awareness and writing. Readings will explore many routes, including attention, movement, stillness, gazing, listening, and dreaming. We'll read sacred and secular texts spanning time and place from the Spanish mystic Téresa of Avila, to contemporary poets such as Zen priest Norman Fischer and luminaries such as Tenzin Wangyal Rinpoche and Pema Chodron. We'll also explore visionary visual artists such as Hilma af Klimt and musicians including Alice Coltrane and Laraaji. Students will write in response to written and audio prompts, receive peer and instructor feedback on their work, and compile a portfolio of writing created throughout the course.
1 Course Unit

CRWR 2600 Fiction Workshop

Fiction Workshop is a course for students who are new to fiction writing or who are new to fiction writing or who would like to return to the fundamentals of fiction. This collaborative workshop uses frequent writing assignments, assigned readings and workshop discussions to explore various elements of the craft of fiction, including character, form, description, dialogue, setting, genre, and plot.
1 Course Unit

CRWR 2800 Narrative Collage

Narrative Collage is designed for students interested in experimenting with different kinds of prose, including memoir and fiction, and is appropriate for any level of experience, from curious beginners to accomplished writers. This course will explore fiction and creative nonfiction using nontraditional techniques including nonlinear segments, multiple voices, found texts, and more. Students will dig into readings from a wide range of sources, from Sei Shônagon's 10th-century Pillow Book through contemporary works such as Jenny Offill's Weather, and will write weekly responses to those readings. Every week, students will produce their own original creative work using a number of narrative collage techniques discussed in class, and will have the opportunity to revise and polish their own writing. Lively peer feedback is required in the form of discussion boards. Additionally, there will be optional live sessions for discussion and sharing creative work.
1 Course Unit

CRWR 3000 Writing About Place

This multi-genre, collaborative course is devoted to writing of and about place. Students consider place both literally—writing about the city or the landscape, for example—and figuratively—writing that engages thematically and formally with location, with displacement, and with the writing process itself as a form of mapping and belonging.
1 Course Unit

CRWR 3200 Screenwriting

Students are required to complete and revise the first 30 pages of a feature-length screenplay. In place of introductory lectures on story and cinema, an interactive presentation provides multimedia lectures that include sample text, images, and audio and video clips. In addition to two rounds of individual student feedback sessions, students have one-on-one meetings with the instructor conducted through video, audio, or text chat. The final grade is a cumulative assessment of student performance over the course of the term, factoring in all assignments, participation in discussion threads and progress made in the revision of 30 screenplay pages.
1 Course Unit
CRIM 3600 Advanced Nonfiction
Students in this course study a range of genres in creative nonfiction, including memoir, personal essay, and journalistic prose. Students use frequent writing assignments, assigned readings, and collaborative peer feedback to explore various elements of prose writing, with an emphasis on voice, description, narrative structure, and approaches to time.
1 Course Unit

CRWR 3700 Journalism Workshop
This is a course dedicated to the practice of journalistic writing. Students will learn about a range of journalistic genres, which may include interviews, profiles, reportage, features, storytelling, and criticism, as well as a range of journalistic writing tools, which may include exposition, quotation, research methodology, and fact-checking.
1 Course Unit

Criminology (CRIM)

CRIM 1000 Criminology
This introductory course examines the multi-disciplinary science of law-making, law-breaking, and law-enforcing. It reviews theories and data predicting where, when, by whom and against whom crimes happen. It also addresses the prevention of different offense types by different kinds of offenders against different kinds of people. Police, courts, prisons, and other institutions are critically examined as both preventing and causing crime. This course meets the general distribution requirement.
Fall
Also Offered As: SOCI 2920
1 Course Unit

CRIM 1100 Criminal Justice
This course examines how the criminal justice system responds to crime in society. The course reviews the historical development of criminal justice agencies in the United States and Europe and the available scientific evidence on the effect these agencies have on controlling crime. The course places an emphasis on the functional creation of criminal justice agencies and the discretionary role decision makers in these agencies have in deciding how to enforce criminal laws and whom to punish. Evidence on how society measures crime and the role that each major criminal justice agency plays in controlling crime is examined from the perspective of crime victims, police, prosecutors, jurors, judges, prison officials, probation officers and parole board members. Using the model of social policy evaluation, the course asks students to consider how the results of criminal justice could be more effectively delivered to reduce the social and economic costs of crime.
Fall
Also Offered As: SOCI 2921
1 Course Unit

CRIM 1200 Statistics for the Social Sciences I
Statistical techniques and quantitative reasoning are essential tools for properly examining questions in the social sciences. This course introduces students to the concepts of probability, estimation, confidence intervals, and how to use the statistical concepts and methods to answer social science questions. The course will require the use of R, a free, open source statistical analysis program. This course has been approved for the quantitative data analysis requirement (QDA).
Fall
1 Course Unit

CRIM 1201 Statistics for the Social Sciences II
In this course, students learn to conduct quantitative data analyses for social sciences, with an emphasis on identifying causal relationships in data. Many social science analyses aim to answer causal questions: Do longer prison sentences reduce crime? Do tougher gun laws reduce homicides and suicides? Can summer jobs help keep youth safe?
Students will learn about research designs and data analysis methods to answer these kinds of questions, and especially to learn to implement them in practice. The goal of this course is to help students conduct their own analyses, and to become critical readers of statistical analyses, both in social science publications and in public discourse. The focus will be on what to compute and how to interpret the results. The emphasis is on the intelligent use of statistics. We will be using R, an open-source programming language.
Spring
Prerequisite: CRIM 1200
1 Course Unit

CRIM 2010 American Death Penalty in Theory and Practice
Over the past forty years, in response to controversy over the American death penalty, the Supreme Court has created a framework of rules designed to make the death penalty conform to current societal standards. In this course, we will identify the critical issues identified by the courts (and the critics) in light of the practical realities of capital litigation, and we will ask whether the efforts to address these issues have been successful. The class will use specific case examples to identify the critical points in a death penalty case- for example, the decision to designate a prosecution as "capital", the performance of defense counsel, the penalty decision, and the method of execution. These critical stages will provide a platform for discussing critical issues like the proper limits of discretion; bias; cruelty; and the decision to disqualify certain groups of people from capital punishment (the mentally disabled, minors). Students will be assigned readings from different kinds of sources. Cases from the Supreme Court will identify key issues and the efforts to address them under the law. More general death penalty history will provide some context. We will also read pieces by advocates (pro and con). Finally, we will focus on a few specific prosecutions and discuss how abstract theories work in a particular case.

CRIM 2020 Criminal Justice Reform: A Systems Approach
America's criminal justice system, which affects every community in the United States, is often criticized for being biased, overly punitive, ineffective at reducing crime, and resistant to change. This course will review the various components of the criminal justice system, identify the structural challenges to the widespread implementation of reforms or improvements to the system, and provide students with a conceptual framework for dialogue and structural/cultural change that can improve the legitimacy and effectiveness of our criminal justice agencies and enhance the delivery of justice for all.
Not Offered Every Year
1 Course Unit

CRIM 2030 Law and Criminal Justice
This course explores constitutional criminal procedure or the law of the Fourth, Fifth, and Sixth Amendments to the United States Constitution. Topics included the laws and rules associated with search and seizure, arrest, interrogation, the exclusionary rule, and deprivation of counsel. Social science evidence that supports or raises questions about legal doctrine will be examined. No prerequisites are required.
Fall or Spring
1 Course Unit
CRIM 2040 Forensic Analysis
This course discusses the need for stronger scientific foundations in the analysis of forensic evidence from a scientific and a policy perspective. Forensic evidence, such as fingerprints, firearms, and hair, has been analyzed for hundreds of years to inform crime investigations and prosecutions. However, recent advances, especially the use of DNA technology, have revealed that a faulty forensic analyses may have contributed to wrongful convictions. These advances have demonstrated the potential danger of information and testimony derived from imperfect analysis, which can result not just in wrongful convictions but also in errors of impunity. In this course, students learn about the history of forensics, as well as about the recent advances that aim to improve current practices. It is an interdisciplinary course, but it focuses mostly on the statistical and scientific aspects of testing in forensics. Students discuss recent solutions that quantify the uncertainty, limitations, and errors associated with human factors, pattern evidence, and digital evidence. No prior statistical or forensic knowledge is expected. The course will be useful for students who wish to become forensic practitioners, law enforcement officers, lawyers, judges, researchers, or simply informed citizens.
Fall

CRIM 2060 Crime and Human Development
One of the central research problems in criminology is the relationship between human development and the likelihood of committing crime. This course will examine the tools for measuring the onset of crime, its persistence, intermittency, and desistence. These tools include the study of birth cohorts of everyone born in a certain time and place, life course studies of juvenile delinquents and non-delinquents, trajectory analysis of people studied from pre-school through middle age, and interviews with 70 year old former delinquents who reflect on how their life-course affected the crimes they committed. This course will also examine the research findings that have been produced using these tools. Students will be asked to consider what these findings imply for major theories of crime causation as well as policies for crime prevention.
Spring
1 Course Unit

CRIM 2070 Biopsychosocial Criminology
Is there a "natural-born killer"? Why don't psychopaths have a conscience? And is it morally wrong for us to punish those who are biologically-wired for a life of crime? This interdisciplinary biosocial course argues that answers to these inscrutable questions can be found in the fledging field of "neurocriminology". This new sub-discipline brings together the social, clinical, and neurosciences to help us better understand, predict, and prevent future crime. We will explore the biosocial bases to crime and violence, analyze controversial neuroethical, legal and philosophical issues surrounding neurocriminology, and take a field trip to prison. This interdisciplinary course presents perspectives from the fields of psychology, neuroscience, criminology, sociology, law, business, public health, psychiatry, anthropology, neuroimaging, neuroendocrinology, forensics, nutrition, and pediatrics. It is suitable for those without a background in biology or criminology. It is particularly relevant for majors in Criminology, Psychology, Nursing, and Biological Basis of Behavior.
Fall
1 Course Unit

CRIM 2080 Neighborhood Dynamics of Crime
Crime varies in time, space and populations as it reflects ecological structures and the routine social interactions that occur in daily life. Concentrations of crime can be found among locations, with antisocial activities like assaults and theft occurring at higher rates because of the demographic make-up of people (e.g. adolescents) or conflicts (e.g. competing gangs), for reasons examined by ecological criminology. Variation in socio-demographic structures (age, education ratios, and the concentration of poverty) and the physical environment (housing segregation, density of bars, street lighting) predicts variations between neighborhoods in the level of crime and disorder. Both ethnographic and quantitative research methods are used to explore the connections between the social and physical environment of areas and antisocial behavior.
Spring
Also Offered As: URBS 2090
1 Course Unit

CRIM 2090 Wrongful Convictions
This course explores wrongful convictions from an interdisciplinary perspective. Using research from the disciplines of law, criminology, psychology and sociology, this course explores how legal errors occur and how they might be prevented in the future. Connections to quality control research and practice in other industries will also be examined.
No prerequisites are required.
1 Course Unit

CRIM 2230 Forensic Anthropology
This course will investigate and discuss the various techniques of analysis that biological anthropologists can apply to forensic cases. Topics include human osteology, the recovery of bodies, the analysis of life history, the reconstruction of causes of death, and various case studies where anthropologists have contributed significantly to solving forensic cases. Discussions will include the limitations of forensic anthropology and the application of DNA recovery to skeletal/mummified materials.
Not Offered Every Year
Also Offered As: ANTH 3230
1 Course Unit

CRIM 4000 Research Seminar in Experiments in Crime and Justice
This seminar focuses on examining data from experiments in criminology including: randomized controlled trials of criminal justice policies, "natural" experiments in crime, and other quasi-experimental studies. A series of experiments conducted by Penn scholars and elsewhere will be examined. This seminar also guides criminology majors in writing a research proposal for their thesis. Students will learn about how to formulate a research question, develop a review of the literature, and how to apply necessary empirical methods. The final paper for this course will be a research proposal that can serve as the basis for the student's senior thesis and to satisfy the senior capstone requirement. Readings will come from the disciplines of criminology, sociology, psychology, economics, and urban planning.
Fall
1 Course Unit

CRIM 4001 Senior Research Thesis
Senior Research Thesis is for senior Criminology majors only. Students are assigned advisors with assistance from the Undergraduate Chair.
Spring
Prerequisite: CRIM 4000
1 Course Unit
CRIM 4002 Criminal Justice Data Analytics
This course covers the tools and techniques to acquire, organize, link and visualize complex data in order to answer questions about crime and the criminal justice system. The course is taught in an advanced course in statistics and presumes minimal mathematical or statistical background. We'll begin with a brief introduction to the research process. We'll then cover the computation, interpretation and understanding of basic descriptive statistics, distributions, hypothesis testing, measures of association and finally regression analysis. Depending on how much time we have, I will cover several more advanced topics in regression analysis at the end of the semester.
Fall
1 Course Unit

CRIM 4740 Modern Regression for the Social, Behavioral and Biological Sciences
Function estimation and data exploration using extensions of regression analysis: smoothers, semiparametric and nonparametric regression, and supervised machine learning. Conceptual foundations are addressed as well as hands-on use for data analysis. This course may be taken concurrently with the prerequisite with instructor permission.
Spring
Also Offered As: STAT 4740
Prerequisite: STAT 1020 OR STAT 1120
1 Course Unit

CRIM 5350 Quantitative Methods for Public Policy
This course provides an introduction to applied statistical techniques in the social sciences and is tailored, in particular, to students pursuing the master of science degree in the Department of Criminology. It is taught as a basic course in statistics and presumes minimal mathematical or statistical background. We'll begin with a brief introduction to the research process. We'll then cover the computation, interpretation and understanding of basic descriptive statistics, distributions, hypothesis testing, measures of association and finally regression analysis. Depending on how much time we have, I will cover several more advanced topics in regression analysis at the end of the semester.
Fall

CRIM 6000 Pro-Seminar in Criminology
This course provides an overview of the leading criminological theories of crime. The central focus is on the major theories of crime developed over the past century from the disciplines of economics, psychology, and sociology. The course will focus on the application of social science research as a way to evaluate theories of crime. Special attention is devoted to the issues of measurement of crime and what is known from the available empirical data. In addition, the course will focus on how these theoretical perspectives relate to public policy responses to crime.
