This course explores an aspect of contemporary American literature intensively; specific course topics will vary from year to year but have included "The Literary History of The Cold War, 1947-1957" and the "Kelly House Fellows Seminar." See the English Department's website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: CIMS 271, GSWS 285, THAR 271
Activity: Seminar
1 Course Unit
Notes: ?Formerly ENGL 285?. Spaces will be reserved for English majors

ENGL 276 Topics In Theatre History
The purpose of this course is to introduce students to the basic materials and methods of theatre history and historiography, as applied to a particular topic, organized around a specific period, national group, or aesthetic issue. This course is concerned with methodological questions: how the history of theatre can be documented; how primary documents, secondary accounts, and historical and critical analyses can be synthesized; how the various components of the theatrical event--acting, scenography, playhouse architecture, audience composition, the financial and structural organization of the theatre industry, etc.--relate to one another; and how the theatre is socially and culturally constructed as an art form in relation to the politics and culture of a society in a particular time and place. See the English Department's website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: CIMS 225, THAR 240, THAR 250, THAR 275
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English Majors

ENGL 278 Topics In Digital and New Media
This course explores a particular topic in the study of digital and new media in an intensive and in-depth manner. See the English Department's website at: www/english.upenn.edu for a description of the current offerings.
Also Offered As: ARTH 292, CIMS 278, COML 066
Activity: Seminar
1 Course Unit

ENGL 279 Topics In Jewish and Jewish-American Literature
This course explores an aspect of Jewish and/or Jewish-American literature intensively; specific course topics will vary from year to year. See the English Department's website at www/english.upenn.edu for a description of the current offerings.
For BA Students: Arts and Letters Sector
Course not offered every year
Also Offered As: GRMN 261
Activity: Lecture
1 Course Unit
Notes: ?Formerly ENGL 287? Spaces will be reserved for English Majors

ENGL 281 Topics In African-American Literature
In this advanced seminar, students will be introduced to a variety of approaches to African American literatures, and to a wide spectrum of methodologies and ideological postures (for example, The Black Arts Movement). The course will present an assortment of emphases, some of them focused on geography (for example, the Harlem Renaissance), others focused on genre (autobiography, poetry or drama), the politics of gender and class, or a particular grouping of authors. Previous versions of this course have included "African American Autobiography," "Backgrounds of African American Literature," "The Black Narrative" (beginning with eighteenth century slave narratives and working toward contemporary literature), as well as seminars on urban spaces, jazz, migration, oral narratives, black Christianity, and African-American music. See the English Department's website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: AFRC 281
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English Majors

ENGL 282 A History of Films by and about Indigenous Cultures
This course will examine films by and about Native Americans. From the very beginnings of film history, Native Americans have been a centrally important subject. While much of the writing about Native American film tends to focus on the perpetuation of stereotypes, this class will concentrate on four primary themes: 1) the role that film plays in helping the audience to understand the exceedingly complex place of indigenous people in "American" identity; (with "American" signifying, in this instance, a hemispheric sense of identity); 2) the myriad of ways that indigenous people have been involved in the history of film as extras, actors, directors, producers; 3) how representations changed when Native Americans took control of production; 4) the ways in which films by and about Native Americans have helped to heal the historical trauma resulting from teh "Indian Wars" that have gone on for 500+ years on the North American continent. See the English Department's website at www/english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: ANTH 282, CIMS 282, RELS 208
Activity: Seminar
1 Course Unit
Notes: RELS 208 is primary.
ENGL 284 Topics In Race and Ethnicity
This course explores an aspect of race and ethnicity intensively; specific course topics will vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: AFRC 286
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English Majors

ENGL 286 Topics In American Literature
This course explores an aspect of American literature intensively; specific course topics will vary, and have included "American Authors and the Imagined Past" and "American Gothic." See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: GSWS 286
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English Majors

ENGL 288 Topics In American Poetry
Sometimes limiting itself to the works of one or two authors, sometimes focusing on a particular theme such as "American Poetry and Democratic Culture," this course devotes itself to the study of twentieth-century American poetry. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: COML 288
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English Majors

ENGL 290 Topics In Gender, Sexuality, and Literature
The advanced women's studies course in the department, focusing on a particular aspect of literature by and about women. Topics might include: "Victorian Literary Women"; "Women, Politics, and Literature"; "Feminist Literary Theory"; and similar foci. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: AFRC 290, COML 290, GSWS 290
Activity: Seminar
1 Course Unit
Notes: Spaces will be reserved for English Majors

ENGL 291 Topics In Film History
This course explores an aspect of Film History intensively; specific course topics vary from year to year. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

Also Offered As: COML 522, GSWS 524, ITAL 537
Activity: Seminar
1 Course Unit

ENGL 537  Renaissance Epic
An introduction to the practice and theory of epic in the early modern period. Specific texts vary with instructor. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 549, FREN 550, GSWS 550
Activity: Seminar
1 Course Unit

ENGL 538  Major Renaissance Writers
This is a monographic course, which may be on Spenser, Milton, or other major figures of the period. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 558
Activity: Seminar
1 Course Unit

ENGL 540  Topics in 18th Century British Literature
This course covers topics in 18th Century British literature. Its emphasis varies with instructor. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: ITAL 540
Activity: Seminar
1 Course Unit

ENGL 545  Eighteenth-Century Novel
A survey of the major novelists of the period, often beginning with Defoe and a few of the writers of amatory fiction in the early decades of the century and then moving on to representative examples of the celebrated novels by Richardson, Fielding, and others of the mid-century and after. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: FREN 560
Activity: Seminar
1 Course Unit

ENGL 546  The Novel and Marriage
A survey of the significant subgenres of English prose fiction from the late Renaissance to Defoe. We will study such manifestations of prose fiction as the picaresque (with a glance at the tradition in Spain, Germany, and France), the romance (from Sidney to Lyly to Congreve and Behn, with consideration of French influence in the later seventeenth century), the fictions of travel (Hakluyt, Defoe, Swift), religious fiction (Bunyan and his successors), and the achievement of England’s first major novelist, Defoe. See the English Department’s website at www.english.upenn.edu for a description of current offerings.
Course not offered every year
Also Offered As: COML 546, FREN 537, GSWS 536
Activity: Seminar
1 Course Unit

ENGL 548  English Literature and Culture, 1650-1725
English 548, with its companion, English 549, studies the literature of this period in the context of the artistic and cultural milieu of the later seventeenth and early eighteenth centuries. Texts usually include works by Dryden, Rochester, Swift, Pope, and Defoe. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1 Course Unit

ENGL 550  Topics in Romanticism
This class explores the cultural context in which the so-called Romantic Movement prospered, paying special attention to the relationship between the most notorious popular genres of the period (gothic fiction and drama) and the poetic production of both canonical and emerging poets. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1 Course Unit
ENGL 553 British Women Writers
A study of British women writers, often focusing on the women authors who came into prominence between 1775 and 1825. See the English Department's website at www/english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 554, GSWS 553
Activity: Seminar
1 Course Unit

ENGL 556 Topics in 19th-Century British Literature
This course covers topics in nineteenth-century British Literature, its specific emphasis varying with the instructor. See the English Department's website at www/english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: GSWS 556
Activity: Seminar
1 Course Unit

ENGL 560 The Novel
This course will provide an intensive introduction to the study of the novel, approaching the genre from a range of theoretical, critical, and historical perspectives. It may examine conflicting versions of the novel's history (including debates about its relationship to the making of the individual, the nation-state, empire, capital, racial and class formations, secularism, the history of sexuality, democracy, print and other media, etc.), or it may focus on theories of the novel, narratology, or a particular problem in novel criticism. It may attend to a specific form or subgenre of fiction, or it may comprise a survey of genres and texts. See the English Department's website at www/english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 563
Activity: Seminar
1 Course Unit

ENGL 563 Topics in 20th-Century British Literature
This course focuses on British modernism and/or postmodernism, with specific emphases determined by the instructor. See the English Department's website at www/english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: GRMN 541
Activity: Seminar
1 Course Unit

ENGL 564 British Modernism
An introduction to British Literary Modernism. Specific emphasis will depend on instructor. See the English Department's website at www/english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 564
Activity: Seminar
1 Course Unit

ENGL 569 Topics in 20th-Century American Literature
This course covers topics in 20th-century literature, its emphasis varying with instructor. See the English Department's website at www/english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 569
Activity: Seminar
1 Course Unit

ENGL 570 African-American Literature
This course treats some important aspect of African-American literature and culture. Some recent versions of the course have focused on the emergence of African-American women writers, on the relation between African-American literature and cultural studies, and on the Harlem Renaissance. See the English Department's website at www/english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 570, GSWS 570
Activity: Seminar
1 Course Unit

ENGL 572 Topics in African Literature
This course is based on a selection of representative texts written in English, as well as a few texts in English translation. It involves, a study of themes relating to social change and the persistence of cultural traditions, followed by an attempt at sketching the emergence of literary tradition by identifying some of the formal conventions of established writers in their use of old forms and experiments with new. See the English Department's website at www/english.upenn.edu for a complete description of the current offerings.
Course not offered every year

1 Course Unit

ENGL 597 Modern Drama
This course will survey several basic approaches to analyzing dramatic literature and the theatre. The dramatic event will be broken into each of its Aristotelian components for separate attention and analysis: Action (plot), Character, Language, Thought, Music and Spectacle. Several approaches to analysing the dramatic text will be studied: phenomenological, social-psychological, semiotic, and others. See the English Department’s website at www/english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1 Course Unit

ENGL 600 Proseminar
Course not offered every year
Activity: Seminar
1 Course Unit

ENGL 705 Interdisciplinary Approaches to Literature
This course will explore one or more interdisciplinary approaches to literature. Literary relationships to science, art, or music may provide the focus. See the English Department’s website at www/english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 606, GREK 602
Activity: Seminar
1 Course Unit
ENGL 707 Orality and Literacy
Major lines of study of the subject of literacy are traceable in at least three disciplines: history of Western literature (especially classical and medieval studies), anthropology, and ethnography of education, including education development in the Third World and psychological and developmental education theory and practice. The linkages between oral and literary communicative modes in different cultures are studied, from a folklorist's viewpoint. The overall task of the course is not to isolate topics of narrowly defined folkloric interest in the broad field of literacy, but to integrate and critique the diverse approaches to literacy as a communicative mode or modes, from the point of view of folklore as a discipline. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: CLST 530, COML 530
Activity: Seminar
1 Course Unit

ENGL 715 Middle English Literature
This seminar will study a number of selected Middle English texts in depth. Attention will be paid to the textual transmission, sources, language, genre, and structure of the works. Larger issues, such as the influence of literary conventions (for example, "courtly love"), medieval rhetoric, or medieval allegory will be explored as the chosen texts may require. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: CLST 610, COML 714
Activity: Seminar
1 Course Unit

ENGL 721 Medieval Poetics
This course may include some of the following fields: studies of medieval stylistic practices, formal innovations, and theories of form; medieval ideas of genre and form; medieval thought about the social, moral, and epistemological roles of poetry; interpretive theory and practice; technologies of interpretation; theories of fiction (fabula) and allegory; sacred and secular hermeneutics; theories of language and the histories of the language arts; vernacular(s) and Latinity; material texts. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: CLST 628, COML 618
Activity: Seminar
1 Course Unit

ENGL 730 Topics in 16th-Century History and Culture
This is an advanced course treating topics in 16th Century history and culture particular emphasis varying with instructor. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 730
Activity: Seminar
1 Course Unit

ENGL 731 Renaissance Poetry
An advanced seminar in English poetry of the early modern period. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1 Course Unit

ENGL 734 Renaissance Drama
This is an advanced course in Renaissance drama which will include plays by non-Shakespearian dramatists such as Marlowe, Jonson, and Middleton. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 734
Activity: Seminar
1 Course Unit

ENGL 736 Renaissance Studies
This is an advanced topics course treating some important issue in contemporary Renaissance studies. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 736
Activity: Seminar
1 Course Unit

ENGL 739 Milton
An examination of Milton's major poetry and prose with some emphasis on the social and political context of his work. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1 Course Unit

ENGL 745 Restoration and 18th-Century Fiction
This is an advanced course in the fiction of the Restoration and the 18th-Century, the period of "The rise of the novel". See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1 Course Unit

ENGL 748 Semester in 18th Century Literature
This course varies in its emphases, but in recent years has explored the theory of narrative both from the point of view of eighteenth-century novelists and thinkers as well as from the perspective of contemporary theory. Specific attention is paid to issues of class, gender, and ideology. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 620, FREN 660, SAST 648
Activity: Seminar
1 Course Unit

ENGL 753 Victorian British Literature
An advanced seminar treating some topics in Victorian British Literature, usually focusing on non-fiction or on poetry. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 753
Activity: Seminar
1 Course Unit
ENGL 760 Topics in the Novel
A study of the literary and cultural self-presentations of a decade obsessed by its own momentousness as the end of a century and even, perhaps, the end of Time. The class examines writers' new pride in decadence, the primacy of termination and death, and the impact of the women's movement on fictions, art, poetry, and theater of the 1890's. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: CIMS 600, FREN 684
Activity: Seminar
1 Course Unit

ENGL 761 British Modernism
This course treats one or more of the strains of British modernism in fiction, poetry, or the arts. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 761
Activity: Seminar
1 Course Unit

ENGL 765 Topics in 20th-Century Literature
An advanced seminar treating a specific topic or issue in 20th-Century Literature and Culture. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: FREN 680
Activity: Seminar
1 Course Unit

ENGL 769 Feminist Theory
Specific topic varies. The seminar will bring together the study of early modern English literature and culture with histories and theories of gender, sexuality, and race. Contact with 'the East' (Turkey, the Moluccas, North Africa and India) and the West (the Americas and the Caribbean) reshaped attitudes to identity and desire. How does this history allow us to understand, and often interrogate, modern theories of desire and difference? Conversely, how do postcolonial and other contemporary perspectives allow us to re-read this past? See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 769, GSWS 769, NELC 783, SAST 769
Activity: Seminar
1 Course Unit

ENGL 770 Afro-American Literature
An advanced seminar in African-American literature and culture. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 770
Activity: Seminar
1 Course Unit

ENGL 771 Textual Production
This course is based on library work and is intended as a practical introduction to graduate research. It addresses questions of the history of the book, of print culture, and of such categories as "work," "character," and "author" as well as of gender and sexuality, through a detailed study of the (re)production of Shakespearean texts from the seventeenth to the twentieth century. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: LAW 913
Activity: Seminar
1 Course Unit

ENGL 773 Modernism
An interdisciplinary and international examination of modernism, usually treating European as well as British and American modernists. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 622
Activity: Seminar
1 Course Unit

ENGL 774 Postmodernism
An advanced seminar on postmodernist culture. Recently offered as a study of relationship between poetry and theory in contemporary culture, with readings in poststructuralist, feminist, Marxist, and postcolonial theory and in poets of the Black Mountain and Language groups. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 701, AFRC 708, COML 700
Activity: Seminar
1 Course Unit

ENGL 775 African Literature
An advanced seminar in anglophone African literature, possibly including a few works in translation. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 701, AFRC 708, COML 700
Activity: Seminar
1 Course Unit

ENGL 778 20th-Century Aesthetics
This course explores notions that have conditioned 20th century attitudes toward beauty among them ornament, form, fetish, the artifact "women", the moves to 20th century fiction, art manifestos, theory, and such phenomena as beauty contests and art adjudications. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: ARTH 797
Activity: Seminar
1 Course Unit

ENGL 783 Major American Author
A seminar treating any one of the major American Writers. Past versions have focused on Melville, Whitman, Twain, James, Pound, Eliot, and others. See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Activity: Seminar
1 Course Unit
ENGL 790 Recent Issues in Critical Theory
See the English Department's website at www/english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 790, GSWS 790
Activity: Seminar
1 Course Unit

ENGL 794 Postcolonial Literature
An advanced seminar treating a specific topic or issue in Postcolonial Literature. See the English Department's website at www/english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 794
Activity: Seminar
1 Course Unit

ENGL 795 Topics in Poetics
Topics in poetics will vary in its emphasis depending on the instructor. See the English Department's website at www/english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 795
Activity: Seminar
1 Course Unit

ENGL 797 Topics in 20th-Century Culture
Usually focusing on non-fictional texts, this course varies in its emphasis depending on the instructor. See the English Department's website at www/english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: ARTH 594, COML 594
Activity: Seminar
1 Course Unit

ENGL 799 Topics in American Literature
An advanced topics course in American literature, with the curriculum fixed by the instructor. Recently offered with a focus on American Literature of Social Action and Social Vision. See the English Department's website at www/english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 799
Activity: Seminar
1 Course Unit

ENGL 800 Teaching of Literature and Composition
A course combining literary study with training in teaching. These courses will normally be taken by students in their first semester of teaching.
Course usually offered in fall term
Activity: Seminar
1 Course Unit

ENGL 850 Field List
Students work with an adviser to focus the area of their dissertation research. They take an examination on the field in the Spring and develop a dissertation proposal.
One-term course offered either term
Activity: Seminar
1 Course Unit

ENGL 851 Dissertation Proposal
A continuation of ENGL 850.
One-term course offered either term
Activity: Seminar
1 Course Unit

ENGL 998 Independent Study
Open to students who apply to the graduate chair with a written study proposal approved by the advisor. The minimum requirement is a long paper. Limited to 1 CU.
Course offered summer, fall and spring terms
Activity: Independent Study
1 Course Unit
Notes: Limited to 1 CU

ENGL 999 Independent Reading
Open only to candidates who have completed two semesters of graduate work.
One-term course offered either term
Activity: Independent Study
1 Course Unit

Environmental Studies (ENVS)

ENVS 073 Topics in Ethics
Topics vary each semester.
Taught by: Meyec M.
Course not offered every year
Also Offered As: PHIL 073
Activity: Seminar
1 Course Unit

ENVS 100 Introduction to Environmental Science
This course will explore the physical science of the Earth's environment and human interactions with it. Coverage will include the Earth's various environmental systems, various environmental problems, and the direct and indirect causes of these environmental problems.
For BA Students: Physical World Sector
Taught by: Plante
Course usually offered in spring term
Activity: Lecture
1 Course Unit
ENVS 150 Water Worlds
As a result of climate change, the world that will take shape in the course of this century will be decidedly more inundated with water than we're accustomed to. The polar ice caps are melting, glaciers are retreating, ocean levels are rising, polar bear habitat is disappearing, countries are jockeying for control over a near Arctic passage, while low-lying cities and small island nations are confronting the possibility of their own demise. Catastrophic flooding events are increasing in frequency, as are extreme droughts. Hurricane-related storm surges, tsunamis, and raging rivers have devastated regions on a local and global scale. In this seminar we will turn to the narratives and images that the human imagination has produced in response to the experience of overwhelming watery invasion, from Noah to New Orleans. Objects of analysis will include mythology, ancient and early modern divinism, literature, art, film, and commemorative practice. The basic question we will be asking is: What can we learn from the humanities that will be helpful for confronting the problems and challenges caused by climate change and sea level rise?
For BA Students: Arts and Letters Sector
Taught by: Richter, Simon
Also Offered As: COML 151, GRMN 150
Activity: Lecture
1 Course Unit

ENVS 152 Liquid Histories and Floating Archives
Also Offered As: ANTH 154, COML 152, ENGL 052, GRMN 152, HIST 152
Activity: Lecture
1 Course Unit

ENVS 181 Comparative Cultures of Sustainability
Sustainability is more than science, engineering, policy, and design. Surveying the world, we see that the politics and practice of sustainability play out in different ways depending on cultural factors. Some cultures are more prone to pursue ecological goals than others. Why? Do the environmental history and experience of a nation affect policy? Do nature and the environment play a crucial role in the cultural memory of a nation? Can cultural components be effectively leveraged in order to win approval for a politics of sustainability? And what can we, as residents of a country where climate change and global warming are flashpoints in an enduring culture war, learn from other cultures? This course is designed to equip undergraduate students with the historical and cultural tools necessary to understand the cultural aspects of sustainability in two countries noted for their ecological leadership and cultural innovation, Germany and the Netherlands.
Taught by: Simon Richter
Course usually offered summer term only
Also Offered As: GRMN 181
Activity: Lecture
1 Course Unit

ENVS 211 Religion & Ecology
Also Offered As: ANTH 211, RELS 211
Activity: Lecture
1 Course Unit

ENVS 246 Spirituality in the Age of Global Warming: How Can Science & the Humanities Work Together?
We are living in the midst of one of the most severe crises in the Earth's history. Science confirms the glaciers are melting, hurricanes are growing more intense, and the oceans are rising. But there is also a deeply spiritual dimension to global warming that does not factor into the scientific explanations. This part of the problem has been more powerfully expressed in film, literature, and art. We will be looking at films like Lee's "When the Levees Broke," about how the people of New Orleans turned to music and storytelling to rebuild their communities in the wake of Hurricane Katrina and Linda Hogan's novel, "Solar Storm" which explores how Native American women draw upon spirituality to heal their community after a dam flooded their ancestral homeland.
The class will also work on an ongoing research project in partnership with the Canadian government and Ojibwe First Nations who submitted a successful UNESCO World Heritage Site application to preserve the boreal forest and the Native people's traditional knowledge about their land. The class will be working on an interactive map to document how photographs, oral histories, and artwork helped convince UNESCO to preserve the land and the Traditional Ecological Knowledge (TEK) of the people who have lived on that land for thousands of years.
Taught by: Timothy Powell
Also Offered As: RELS 246
Activity: Seminar
1 Course Unit

ENVS 279 Nature's Nation: Americans and Their Environment
The United States has been described as "nature's nation. The presence of enormous, resource-rich and sparsely settled continent has been a component of American identity, prosperity and pride—it has even been described as the source of the democratic political system. From the beginning, Americans transformed their natural environment, even as, over time, they grew to value environmental preservation and protection. This course traces the interaction of Americans and the natural world in, studying how Americans changes the natural environment over time, in order to understand why environmental change occurred and occurred in the manner it did. What have Americans believed about the nature of the nation's nature, and what attitudes and policies have followed from these ideas? After surveying American environmental history from the 17th to the 20th century, we will examine specific topics and problems in the long relationship between Americans and their environment. (Possible topics: national parks and wilderness preservation, environmental politics, chemical pollution, invasive species). This seminar fulfills the research requirement for the History major because students will complete a 20-page paper of original research.
Taught by: Greene
Course not offered every year
Also Offered As: STSC 279
Activity: Seminar
1 Course Unit
ENVS 295 Maritime Science and Technology: Woods Hole Sea Semester
A rigorous semester-length academic and practical experience leading to an understanding of the oceans. The Sea Semester is composed of two intensive six-week components taken off-campus. The Shore Component is six weeks at Woods Hole, Massachusetts, with formal study in: Oceanography, Maritime Studies, and Nautical Science. This is followed by six weeks aboard a sailing research vessel, during which students conduct oceanographic research projects as part of the courses, Practical Oceanography I and II. Maritime Studies. A multidisciplinary study of the history, literature, and art of our maritime heritage, and the political and economic problems of contemporary maritime affairs. Taught by: Andrews
One term course offered either term
Prerequisites: Laboratory course in physical or biological science or its equivalent; college algebra or its equivalent.
Activity: Independent Study
1 Course Unit
Notes: This set of courses requires special application procedures.
Contact Maria Andrews for information and an application. Only the "SEA semester: Ocean Exploration" and "SEA Semester: Oceans and Climates" can be taken for Penn credit without taking a leave, and all students must have permission from Maria Andrews before registering at SEA.

ENVS 299 Independent Study
Directed study for individuals or small groups under supervision of a faculty member.
One term course offered either term
Prerequisite: Permission of department
Activity: Independent Study
1 Course Unit
Notes: May be repeated for credit

ENVS 301 Environmental Case Studies
A detailed, comprehensive investigation of selected environmental problems. Guest speakers from the government and industry will give their accounts of various environmental cases. Students will then present information on a case study of their choosing. Taught by: Dmochowski
Course usually offered in fall term
Prerequisite: ENVS 200
Activity: Lecture
1 Course Unit

ENVS 312 Ocean-Atmosphere Dynamics and Implications for Future Climate Change
This course covers the fundamentals of atmosphere and ocean dynamics, and aims to put these in the context of climate change in the 21st century. Large-scale atmospheric and oceanic circulation, the global energy balance, and the global energy balance, and the global hydrological cycle. We will introduce concepts of fluid dynamics and we will apply these to the vertical and horizontal motions in the atmosphere and ocean. Concepts covered include: hydrostatic law, buoyancy and convection, basic equations of fluid motions, Hadley and Ferrel cells in the atmosphere, thermohaline circulation, Sverdrup ocean flow, modes of climate variability (El-Nino, North Atlantic Oscillation, Southern Annular Mode). The course will incorporate student led discussions based on readings of the 2007 Intergovernmental Panel on Climate Change (IPCC) report and recent literature on climate change. Aimed at undergraduate or graduate students who have no prior knowledge of meteorology or oceanography or training in fluid mechanics. Previous background in calculus and/or introductory physics is helpful. This is a general course which spans many subdisciplines (fluid mechanics, atmospheric science, oceanography, hydrology).
Taught by: Marinov
Course usually offered in spring term
Also Offered As: ENVS 640, PHYS 314
Prerequisites: MATH 114 or permission of the instructor.
Activity: Lecture
1 Course Unit

ENVS 325 Sustainable Goods
The study of sustainability-the long term viability of humans in harmony with the environment-has been identified as a critical issue for society and industry and is evolving to examine how society should conduct itself in order to survive. This issue impacts the consumer goods that we use in our lives, the processes that are designed to make these goods, and the raw materials that we obtain to create these goods. The questions that we will examine will be: can these goods be obtained, made, and consumed in a fashion that allows the current quality of life to be maintained (or enhanced) for future generations? Can these processes be sustainable? A review of consumer goods is necessary as the starting point in order to understand the basic needs of people in society and why people consume goods as they do. Subsequently, each student will choose a product to examine in detail and will research the product for its impact with respect to natural resource selection, production, use, and disposal/reuse.
Taught by: Hagan
Activity: Lecture
1 Course Unit

ENVS 326 GIS: Mapping Places & Analyzing Spaces
This course is a hands-on introduction to the concepts and capabilities of geographic information systems (GIS). Students will develop the skills necessary for carrying out basic GIS projects and for advanced GIS coursework. The class will focus on a broad range of functional and practical applications, ranging from environmental science and planning to land use history, social demography, and public health. By the end of the course, students will be able to find, organize, map, and analyze data using both vector (i.e. drawing-based) and raster (i.e. image-based) GIS tools, while developing an appreciation for basic cartographic principles relating to map presentation. This course fulfills the spatial analysis requirement for ENVS and EASC Majors. Previous experience in the use of GIS is not required.
Taught by: Heinlen
Activity: Lecture
1 Course Unit
ENVS 327 Principles of Sustainability
What is sustainability? Can any fundamental concepts, principles or framework be constructed that adequately describes the search for sustainability? Is there a meaningful methodology? Sustainability science is a trans-disciplinary approach in which the quantitative and qualitative, natural and social, and theory and practice are reconciled and creatively combined. The objective of this course is to provide an in-depth analysis of the foundational concepts, principles, processes and practices of sustainability science. The course will explore three foundational laws governing sustainability: the law of limits to growth, the second law of thermodynamics, and the law of self-organization. Students will examine how these laws operate in biological, ecological, and physical systems, and then apply them to social, economic and political systems.
Taught by: Alain Plante
Activity: Lecture
1 Course Unit

ENVS 399 Environmental Studies Research Seminar for Juniors
This seminar is designed to help Juniors prepare for the Senior Thesis research. Topic selection, advisor identification, funding options, and basic research methods will be discussed.
Taught by: Andrews
Course usually offered in spring term
Also Offered As: GEOL 399
Prerequisite: ENVS 100
Activity: Seminar
1 Course Unit

ENVS 400 Environmental Studies Seminar
Application of student and faculty expertise to a specific environmental problem, chosen expressly for the seminar.
Taught by: Plante, Jerolmack, Kulik
Course usually offered in spring term
Activity: Seminar
1 Course Unit
Notes: May be repeated for credit

ENVS 404 Urban Environments: Speaking About Lead in West Philadelphia
Lead poisoning can cause learning disabilities, impaired hearing, behavioral problems, and at very high levels, seizures, coma and even death. Children up to the age of six are especially at risk because of their developing systems; they often ingest lead chips and dust while playing in their home and yards. In ENVS 404, Penn undergraduates learn about the epidemiology of lead poisoning, the pathways of exposure, and methods for community outreach and education. Penn students collaborate with middle school and high school teachers in West Philadelphia to engage middle school children in exercises that apply environmental research relating to lead poisoning to their homes and neighborhoods.
For BA Students: Natural Science and Math Sector
Taught by: Pepino
Course usually offered in spring term
Activity: Seminar
1 Course Unit
Notes: ABCS Course. Requires community service in addition to class time.

ENVS 406 Community Based Environmental Health
From the fall of the Roman Empire to love Canal to the epidemics of asthma, childhood obesity and lead poisoning in West Philadelphia, the impact of the environment on health has been a continuous challenge to society. The environment can affect people's health more strongly than biological factors, medical care and lifestyle. The water we drink, the food we eat, the air we breathe, and the neighborhood we live in are all components of the environment that impact our health. Some estimates, based on morbidity and mortality statistics, indicate that the impact of the environment on health is as high as 80%. These impacts are particularly significant in urban areas like West Philadelphia. Over the last 20 years, the field of environmental health has matured and expanded to become one of the most comprehensive and humanly relevant disciplines in science. This course will examine not only the toxicity of physical agents, but also the effects on human health of lifestyle, social and economic factors, and the built environment. Topics include cancer clusters, waterborne diseases, radon and lung cancer, lead poisoning, environmental tobacco smoke, respiratory diseases and obesity. Students will research the health impacts of classic industrial pollution case studies in the US. Class discussions will also include risk communication, community outreach and education, access to health care and impact on vulnerable populations. Each student will have the opportunity to focus on Public Health, Environmental Protection, Public Policy, and Environmental Education issues as they discuss approaches to mitigating environmental health risks.
Taught by: Kulik
Course usually offered in fall term
Activity: Seminar
1 Course Unit
Notes: ABCS Course. Requires community service in addition to class time.

ENVS 407 Urban Environments: Prevention of Tobacco Smoking in Adolescents
Cigarette smoking is a major public health problem. The Centers for Disease Control and Prevention Control reports that more than 80% of current adult tobacco users started smoking before age 18. The National Youth Tobacco Survey indicated that 12.8% of middle school students and 34.8% of high school students in their study used some form of tobacco products. In ENVS 407, Penn undergraduates learn about the short and long term physiological consequences of smoking, social influences and peer norms regarding tobacco use, the effectiveness of cessation programs, tobacco advocacy and the impact of the tobacco settlement. Penn students will collaborate with teachers in West Philadelphia to prepare and deliver lessons to middle school students. The undergraduates will survey and evaluate middle school and Penn student smoking. One of the course goals is to raise awareness of the middle school children to prevent addiction to tobacco smoke during adolescence. Collaboration with the middle schools gives Penn students the opportunity to apply their study of the prevention of tobacco smoking to real world situations.
Taught by: Pepino
Course usually offered in spring term
Activity: Seminar
1 Course Unit
Notes: ABCS Course. Requires community service in addition to class time.
ENVS 408 Urban Environments: The Urban Asthma Epidemic
Asthma as a pediatric chronic disease is undergoing a dramatic and unexplained increase. It has become the number one cause of public school absenteeism and now accounts for a significant number of childhood deaths each year in the USA. The Surgeon General of the United States has characterized childhood asthma as an epidemic. In ENVS 408, Penn undergraduates learn about the epidemiology of urban asthma, the debate about the probable causes of the current asthma crisis, and the nature and distribution of environmental factors that modern medicine describes as potential triggers of asthma episodes. Penn students will co-teach asthma classes offered in public schools in West Philadelphia and survey asthma caregivers, providing them with the opportunity to apply theoretical knowledge to real-world situations, promote community education and awareness about asthma, and use problem-solving learning to enhance student education in environmental health.
Taught by: Kulik
Course usually offered in spring term
Activity: Seminar
1 Course Unit
Notes: ABCS Course. Requires community service in addition to class time.

ENVS 410 The Role of Water in Urban Sustainability and Resiliency
This course will provide an overview of the cross-disciplinary fields of civil engineering, environmental sciences, urban hydrology, landscape architecture, green building, public outreach and politics. Students will be expected to conduct field investigations, review scientific data and create indicator reports, working with stakeholders and presenting the results at an annual symposium. There is no metaphor like water itself to describe the cumulative effects of our practices, with every upstream action having an impact downstream. In our urban environment, too often we find degraded streams filled with trash, silt, weeds and dilapidated structures. The water may look clean, but is it? We blame others, but the condition of the creeks is directly related to how we manage our water resources and our land. In cities, these resources are often our homes, our streets and our communities. This course will define the current issues of the urban ecosystem and how we move toward managing this system in a sustainable manner. We will gain an understanding of the dynamic, reciprocal relationship between practices in a watershed and its waterfront. Topics discussed include: drinking water quality and protection, green infrastructure, urban impacts of climate change, watershed monitoring, public education, creating strategies and more.
Taught by: Neukrug
Course not offered every year
Prerequisites: ENVS 100, GEOL 100 or equivalent
Activity: Seminar
1 Course Unit
Notes: An academically-based curriculum service learning approach to using water, science and politics to create a sustainable Philadelphia.

ENVS 411 Air Pollution: Sources & Effects in Urban Environments
This is an ABCS course designed to provide the student with an understanding of air pollution at the local, regional and global levels. The nature, composition, and properties of air pollutants in the atmosphere will also be studied. The course will focus on Philadelphia’s air quality and how air pollutants have an adverse effect on the health of the residents. The recent designation by IARC of Air Pollution as a known carcinogen will be explored. How the community is exposed to air pollutants with consideration of vulnerable populations will be considered. Through a partnership with Philadelphia Air Management Service (AMS) agency the science of air monitoring and trends over time will be explored. Philadelphia’s current non-attainment status for PM2.5 and ozone will be studied. Philadelphia’s current initiatives to improve the air quality of the city will be discussed. Students will learn to measure PM2.5 in outdoor and indoor settings and develop community-based outreach tools to effectively inform the community of Philadelphia regarding air pollution. The outreach tools developed by students may be presentations, written materials, apps, websites or other strategies for enhancing environmental health literacy of the community. A project based approach will be used to include student monitoring of area schools, school bus routes, and the community at large. The data collected will be presented to students in the partner elementary school in West Philadelphia. Upon completion of this course, students should expect to have attained a broad understanding of and familiarity with the sources, fate, and the environmental impacts and health effects of air pollutants.
For BA Students: Natural Science and Math Sector
Taught by: Andrews and Howarth
Course usually offered in fall term
Activity: Seminar
1 Course Unit

ENVS 416 Freshwater Ecology
Survey of the physical, chemical and biological properties of freshwater ecosystems, both riverine and lentic, natural and polluted.
Taught by: Bott
Course not offered every year
Also Offered As: BIOL 415
Prerequisites: BIOL 101 or 121 and one semester of college chemistry
Activity: Lecture
1 Course Unit

ENVS 417 The anthropocene: Human-dominated Earth
How much have humans altered the planet they live on? Beyond climate change, humans have altered the Earth’s land, oceans and biosphere to such an extent that the concept of a new geologic epoch defined by the action of humans is seriously debated. This seminar will examine the origins of the Anthropocene, the ways in which humans have altered Earth systems, whether or not these alterations warrant a new geologic designation, and what the future potentially holds for both humans and the planet.
Taught by: Alain Plante
Activity: Seminar
1 Course Unit
ENVS 421 Science in Elementary & Middle School
A intensive approach to current methods, curricula, and trends in teaching science as basic learning, K-8. "hands-on" activities based on cogent, current philosophical and psychological theories including: S/T/S and gender issues. Focus on skill development in critical thinking. Content areas: living things, the physical universe, and interacting ecosystems.
Taught by: Bergey
Course usually offered in spring term
Also Offered As: EDUC 421
Activity: Lecture
1 Course Unit

ENVS 498 Senior Thesis
The culmination of the Environmental Studies major. Students, while working with an advisor in their concentration, conduct research and write a thesis.
Taught by: Dmochowski
Two terms, student may enter either term.
Also Offered As: GEOL 498
Prerequisites: ENVS 400-level course and declaration of the ENVS major
Activity: Senior Thesis
0.5 Course Units
Notes: The Environmental Studies major, as of the fall of 2008, requires 1 semester of ENVS399 and two semesters of ENVS498.

ENVS 507 Wetlands
The course focuses on the natural history of different wetland types including climate, geology, and hydrology factors that influence wetland development. Associated soil, vegetation, and wildlife characteristics and key ecological processes will be covered as well. Lectures will be supplemented with weekend wetland types, ranging from tidal salt marshes to non-tidal marshes, swamps, and glacial bogs in order to provide field experience in wetland identification, characterization, and functional assessment. Outside speakers will discuss issues in wetland seed bank ecology, federal regulation, and mitigation. Students will present a short paper on the ecology of a wetland animal and a longer term paper on a selected wetland topic. Readings from the text, assorted journal papers, government technical documents, and book excerpts will provide a broad overview of the multifaceted field of wetland study.
Taught by: Willig
Course usually offered in fall term
Activity: Lecture
1 Course Unit

ENVS 541 Modeling Geographical Objects
This course offers a broad and practical introduction to the acquisition, storage, retrieval, maintenance, use, and presentation of digital cartographic data with both image and drawing based geographic information systems (GIS) for a variety of environmental science, planning, and management applications. Its major objectives are to provide the training necessary to make productive use of at least two well known software packages, and to establish the conceptual foundation on which to build further skills and knowledge in late practice.
Taught by: Tomlin
Course usually offered in fall term
Activity: Lecture
1 Course Unit

ENVS 601 Proseminar: Contemporary Issues in Environmental Studies
A detailed, comprehensive investigation of selected environmental problems. This is the first course taken by students entering the Master of Environmental Studies Program.
Taught by: Bordeaux/Colin
One-term course offered either term
Activity: Seminar
1 Course Unit

ENVS 604 Conservation and Land Management
Using protected lands in the Delaware Valley, this field-based course will explore various strategies for open-space conservation and protection. In addition, students will be introduced to land management techniques used on such sites to restore or preserve land trust properties in accordance with goals set for their use or protection. Sustainable land uses such as community supported agriculture, ecovillages, and permaculture design will be covered. Emphasis will be placed on developing skills in "Reading the Landscape" to determine conservation and restoration priorities. Students will produce a site assessment report on sites that they visit.
Taught by: Brightman
Course usually offered summer term only
Activity: Lecture
1 Course Unit
Notes: Some Saturday field trips will be required.

ENVS 605 Bioremediation
This course is an introduction to current and developing techniques for analyzing environmental contamination and for remediation of damaged environments. Knowledge of these options is important for students interested in public/law applications and environmental/landscape design and as a starting point for those pursuing a more science-oriented understanding. The first portion of this course will address indicators of the use of living systems to assess environmental contamination. These include systems ranging from biochemical assays to monitoring of whole organisms or ecosystems, as well as techniques ranging from laboratory to field and satellite surveys. The second portion of the course will introduce technologies for bioremediation—the use of living systems to restore contaminated environments. The technologies scale from single-species systems to complex ecosystems such as constructed wetlands; case studies will be examined. Students will be expected to participate in field trips, as well as prepare a final paper examining a particular technology in detail.
Taught by: Vann
Course not offered every year
Also Offered As: ENVS 305
Activity: Lecture
1 Course Unit
ENVS 606 Avifaunal Ecology: Studying ornithological principles & behaviors to indicate ecosystem health
This class will explore the foundations of avifaunal biology and ecology using a combination of hands-on classroom and in-the-field experiences. Classroom content includes physiology, anatomy, and morphology of birds. The fall migration of birds in North America is an epic and often tragic event. Sampling birds in migration has resulted in foundational understandings about stopover habitats, species-specific energy budgets and has helped realize the complete life cycle of hundreds of species. We will enter the field and participate in actual ornithological research, explore avifaunal ecology through birdwatching, and meet with regional leaders in the ornithological field.
Taught by: McGraw
Course usually offered in spring term
Activity: Seminar
1 Course Unit

ENVS 610 Regional Field Ecology
Over the course of six Sunday field trips, we will travel from the barrier islands along the Atlantic Ocean in southern New Jersey to the Pocono Mountains in northeastern Pennsylvania, visiting representative sites of the diverse landscapes in the region along the way. At each site we will study and consider interactions between geography, topography, hydrology, soils, vegetation, wildlife, and disturbance. Students will summarize field trip data in a weekly site report. Evening class meetings will provide the opportunity to review field trips and reports and preview upcoming trips. Six all-day Sunday field trips are required.
Taught by: Willig
Course usually offered summer term only
Also Offered As: ENVS 420
Activity: Lecture
1 Course Unit
Notes: Some Sunday field trips required.

ENVS 615 Climate Change & Health
Main causes of climate change and direct consequences on air temperature, weather patterns, glacial melting, sea level, air and water quality, water and food supply, natural disasters, and ecosystems; how climate change can affect health in different ways, and how certain groups of people are more vulnerable to health impacts.
Course not offered every year
Activity: Seminar
1 Course Unit

ENVS 616 Risk Assessment: Science & Policy Challenges
How do government policy makers make decisions about potential threats to human health and the environment in the face of scientific uncertainty? The course develops the concept of Risk Assessment from the publication of the 1983 National Research Council (NRC) report commonly known as the "Red Book" which was used to rank the initial hazardous waste sites under the Superfund program. Using a variety of teaching tools, including lectures, panel discussions, and case studies, the course examines how public policy decisions regarding environmental risk are made and how effective those decisions are at reducing risks to affected populations. The course focuses on the complex interaction of science, economics, politics, laws, and regulations in dealing with environmental and public health risks. The course will begin with a review of the policy process and methods used in evaluating human health and environmental risks, including the traditional steps in the risk assessment process, including quantitative and qualitative aspects of hazard identification, dose-response assessment, exposure assessment, and risk characterization. The course will then focus on how scientific uncertainty, risk perceptions, socio-economic disparities, risk communication, and politics influence environmental risk-based decision-making. Issues such as special populations (e.g., children, elderly, immune-compromised, woman of pregnancy age, etc.) must be considered when developing risk reduction strategies. The use of the "precautionary principle" will be discussed in the context of different types of environmental stressors (e.g., pesticides, chemicals, climate change, air pollution, water quality, and land use) and how this important controversial principle is applied differently in contrasting national and European risk management policies.
Taught by: Pepino
Course usually offered summer term only
Activity: Seminar
1 Course Unit
ENVS 617 Sustainable Estuaries: An Investigation of Resources & Recovery
This course will evaluate the multiple factors that must function to ensure the sustainability of estuaries of national significance. Since the beginning of the environmental movement in the 1960s, we have attempted to protect and improve our watersheds and estuaries through a series of environmental laws, but we learned over the last three decades that regulatory-based "command & control" approaches may have achieved their limits of success, and we now need to think more holistically in order to achieve the Clean Water Act goal of "fishable and swimmable" waters. In this course we will explore the new collaborative strategies and partnerships, which are available, and how social, economic and cultural factors are equally important as regulation to achieve estuary restoration. The National Estuary Program (NEP) was established in 1987 by amendments to the Clean Water Act (Section 320) to identify, restore and protect estuaries along the coasts of the U.S. Unlike traditional regulatory approaches to environmental protection, the NEP targets a broad range of issues and engages local communities in the process. The program focuses not just on improving water quality in an estuary, but on maintaining the integrity of the whole system - its chemical, physical, and biological properties, as well as its economic, recreational, and aesthetic. This course will examine the twenty estuaries of national significance, including the Chesapeake and the Delaware Bays, in an effort to define the condition of estuaries in the U.S. and what strategies can be utilized to attain water quality and habitat goals while achieving important socioeconomic needs of the estuary's diverse stakeholders. You will examine the history of estuary management, the factors that stress water quality and habitat, and what strategies are commonly used to reduce risks while safeguarding the environment and public health.

Taught by: Pepino
Course usually offered summer term only
Activity: Seminar
1 Course Unit

ENVS 620 Developing Environmental Policy
When we think of environmental policies in the USA, we may think of one or more laws geared to improve our nation’s air, water, ecosystems, and biodiversity. However, environmental policies and policy-making comprise more than just specific laws and regulations. Making and implementing environmental policy is a process influenced by multiple political, cultural, and economic factors in addition to scientific factors, all of which impact the ability of policies to be effective, that is, to actually improve the environment. In this course, we develop a framework to analyze the effectiveness of the social actors, process and outcomes of environmental policy-making. We ask questions such as: How do policy makers define environmental problems and solutions? Who are the social actors involved in the process? How are policies created and negotiated? What underlying assumptions and realities about the roles of government and society shape policy instruments and design? Are science and risk accurate or distorted? How are social and environmental justice intertwined? To answer these complex questions, we contextualize and critically analyze policies to determine how both government and society impact on regulatory approaches. We study the institutions involved and examine social and ecological outcomes of environmental policies. We also discuss contemporary issues and policy situations that arise throughout the course of the semester, and comment on them in a class blog. Finally, students will select an environmental issue and formulate a policy proposal to recommend to decisionmakers.

Taught by: Kulik
Course usually offered in spring term
Activity: Seminar
1 Course Unit

ENVS 622 Environmental Enforcement
The goal of the course is to provide students with an introduction to the role of enforcement in federal, state and local environmental regulatory programs. Emphasis will be placed on federal enforcement actions initiated by the U.S. Environmental Protection Agency and U.S. Department of Justice. The course will provide students with an introduction to the American Legal System and legal concepts, like standing, jurisdiction, and burden of proof. A number of case studies and classroom exercises will be utilized as part of the discussion of civil and criminal enforcement actions. For example, a detailed case study will be presented concerning a successful prosecution by the federal government of a wastewater treatment plant operator (from the receipt of the initial tip through the sentencing of the defendant). A theme of all classes, presentations and assignments will be the role of the environmental professional in the enforcement context (e.g., the environmental professional who testifies as an expert in a judicial proceeding, or performs an audit that becomes the subject of a self-disclosure to EPA).

Taught by: Lisa
Course usually offered in fall term
Activity: Seminar
1 Course Unit

ENVS 627 Politics of Water
Course usually offered in spring term
Activity: Seminar
1 Course Unit
ENVS 629 The US Water Industry in the 21st Century
The course will explore all 4 sectors of the water business in the United States: The Drinking Water Industry, The Stormwater Utility, Water Resources (rivers, streams, reservoirs) Management and the Water Pollution Control Industry. The course will have 2 primary foci: 1. The influences on the industry from new technologies and infrastructure, acceptable levels of risk, public and private sector competition, climate change, the bottled water industry, resource recovery, rates and affordability and other influences will be investigated. 2. The management of a 21st century utility will be explored, including topics of organization and leadership, the role of environmentalism, infrastructure financing, water / wastewater treatment facility operations, public affairs and media, and designing a capital improvement program are examples of topic areas.
Taught by: Neukrug
Course usually offered in fall term
Activity: Seminar
1 Course Unit

ENVS 634 Topics in Water Policy
This course will explore various themes such as the UN Millennium Development Goals, EPA regulatory practices, and global water policy and governance.
Taught by: Laskowski
One-term course offered either term
Activity: Seminar
1 Course Unit

ENVS 642 Global Water Conference in Stockholm, Sweden
The global water and sanitation crisis kills over 4,000 children each day and represents one of the biggest health problems in the world. At the University of Pennsylvania school year 2010-2011 was declared the "Year of Water" in recognition of the many challenges that lie ahead as global increases in population and affluence and the influences of climate change will stress limited water resources. Each year the Stockholm International Water Institute convenes a Conference with experts from around the globe to exchange the latest water research findings and develop new networks. Students will attend the Conference, present research by presentations/posters, document a key issue, interview experts, and meet colleagues with common interests. They will also help other organizations at the Conference.
Taught by: Laskowski
Course usually offered summer term only
Activity: Seminar
1 Course Unit

ENVS 643 The Historical, Scientific, & Policy Dimensions of "Brownfields"
This course is intended to give students an overview of the genesis of the so-called "Brownfield" problem and of the various efforts our society is taking to solve or, at least, ameliorate it. The course will place the "Brownfield" problem in the broader context of the growth and decline of the industrial base of cities like Philadelphia. Students will study the general constitutional and statutory framework within which we approach the problems of orphan, polluted sites and the disposal of contemporary solid wastes. They will also analyze the principal actions that have been taken by Federal and state government to address remediation and redevelopment of abandoned industrial sites. The course will also explore environmental equity issues. The students will collaborate with high school students at the West Philadelphia High School to identify sites in their neighborhoods and to learn how to determine the sites ownership and land use history. The students will study ways of determining environmental risk and the various options that are available for remediation in light of community ideas about re-use. Students will be expected to participate actively in the seminar and the sessions with high school students. Students in the course are required to prepare and present a term paper on a topic in the general area of "Brownfield" analysis and remediation.
Taught by: Keene
Course not offered every year
Activity: Seminar
1 Course Unit

ENVS 644 Energy, Waste and the Environment
The aim of this course is to provide an incentive to use geochemical and mineralogical principles to address and solve major environmental problems. The students identify the problems that are associated with different types of waste. This course covers a wide range of problems associated with the waste arising from the generation of electricity. The main topics will be the uranium cycle, characterization of nuclear waste, and the containment and disposal of nuclear waste. Based on insights from the nuclear fuel cycle, solutions are presented that diminish the environmental impacts of coal and biomass combustion products, incineration of municipal solid waste, toxic waste due to refuse incineration, and landfills and landfill gases.
Taught by: Giere
Course usually offered in spring term
Activity: Seminar
1 Course Unit

ENVS 645 Energy Geopolitics in Eurasia
Russia is one of the major players in the international energy market: the largest oil producer (including lease condensate) and second-largest (after the U.S.) natural gas producers (2016 data). It is also a top coal and nuclear power producer. But the geopolitical might that the country holds with respect to energy markets stems not as much from how much energy it produces as from how much energy it exports. Today Russia leads global natural gas exports and trails only the Kingdom of Saudi Arabia in oil exports. Russia is also reliably one of the top coal-exporting countries. This class will explore the geopolitics of energy from the perspective of Russia and its interests. In doing so, it will provide a slightly different understanding of global energy geopolitics, which is usually taught from either the U.S. or OPEC angle.
Taught by: Mikulska
Course usually offered in fall term
Activity: Hybrid Course
1 Course Unit
ENVS 674 Life Cycle Assessment
In order to make sensible decisions on products or projects, people need to understand the environmental impacts of these actions. Life cycle assessment (LCA) is a process to assess environmental impacts throughout the different stages of a product or project’s life. This seminar is intended to be comprehensive and covers material extraction, processing, manufacture, distribution, use and end of life reuse, recovery or disposal. The objective of conducting an LCA is to compare the full range of environmental impacts that emanate from the provision of these products or services and then use that information to improve the situation to minimize or eliminate harm. The focus of this class will be to understand the phases of an LCA as well as conduct LCAs that compare the impacts of two related options. This course will enable the student to conduct LCAs and examine the use of software that could be used in this regard. The classic examples are cloth vs. disposable diapers, paper vs. ceramic cups, and so on. This course will enable the student to conduct LCAs and examine the use of software that could be used in this regard.
Taught by: Hagan/English
Course usually offered in fall term
Prerequisites: ENVS 667 Introduction to Sustainability or the approval of the instructors.
Activity: Seminar
1 Course Unit

ENVS 681 Modeling Geographical Space
This course explores the nature and use of raster-based geographic information systems (GIS) for the analysis and synthesis of spatial patterns and processes through "cartographic modeling." Cartographic modeling is a general but well defined methodology that can be used to address a wide variety of analytical mapping applications in a clear and consistent manner. It does so by decomposing both data and data-processing tasks into elemental components that can then be recomposed with relative ease and with great flexibility.
Taught by: Tomlin
Course usually offered in spring term
Activity: Lecture
1 Course Unit

ENVS 699 Masters of Environmental Studies Capstone Seminar
This course is designed to help students successfully complete their MES Capstone. A set of milestones will be set and regular meetings will be held in groups and individually to aid the student as they complete the research portion of their degree. We will be working together to complete a series of steps towards the final project. These steps fall into five major areas: 1) Reviewing the literature; 2) Finding a model; 3) Framing your research; 4) managing data; and 5) Writing your results. Throughout the semester, we will also discuss career goals and the job search.
Taught by: Bordeaux
Course usually offered in spring term
Also Offered As: GEOL 699
Activity: Seminar
1 Course Unit
Notes: Project proposal and Online Application required for course registration. See MES Office and "Guide to the Capstone" for more information.

ENVS 999 Independent Study
Directed study for individuals or small groups under supervision of a faculty member.
One-term course offered either term
Activity: Independent Study
1 Course Unit
Notes: Permission of instructor required

Epidemiology (EPID)

EPID 510 Introductory Epidemiology
This course provides an introduction to the fundamentals of research in clinical epidemiology. It covers definitions of epidemiology; measures of disease frequency; measures of effect and association; epidemiologic study designs, including randomized clinical trials, cohort and case-control studies, cross-sectional surveys, meta-analysis and decision analysis; and an overview of the conduct and analysis of epidemiologic studies. The course is composed of a series of lectures and discussion sessions designed to reinforce concepts introduced in the preceding lecture.
Taught by: Bewtra
Course usually offered summer term only
Prerequisite: Permission of Instructor
Activity: Lecture
1 Course Unit

EPID 516 Disease Ecology
The transmission of infectious diseases is a complex and ever-changing process, and the measure we have to protect ourselves against pathogens—vaccines, antibiotics, bed nets—can have equally complex and unpredictable outcomes. The aim of disease ecology is to understand pathogens and their hosts, as well as the populations and to use such understanding to design rational strategies to curb or eliminate disease transmission. A disproportionate number of emerging infectious diseases and recent disease outbreaks in the United States and elsewhere have shared a common characteristic—they affect veterinary as well as human populations. Many are also vector-borne, passing between different species of hosts through insects and other invertebrates. In some cases, humans are only "spillover hosts" whose infection is incidental to the transmission cycle. Interdisciplinary approaches are especially important to control such diseases. As a particular focus of the course, students will learn the tools needed for successful collaborations to address the growing problem of zoonotic and vector-borne diseases.
Taught by: LevySmith
Prerequisite: Permission of Instructor
Activity: Lecture
1 Course Unit

EPID 518 Geography & Public Health
Taught by: Wiebe
Course usually offered in spring term
Also Offered As: PUBH 517
Activity: Lecture
1 Course Unit
**EPID 526 Biostatistics for Epidemiologic Methods I**
The first half of this will cover graphical methods, probability, discrete and continuous distributions, estimation, confidence intervals, and one sample hypothesis testing. Emphasis is placed on understanding the proper application and interpretation of the methods. The second half of this course will cover two sample hypothesis testing, nonparametric techniques, sample size determination, correlation, regression, analysis of variance, and analysis of covariance. Emphasis is placed on understanding the proper application and underlying assumptions of the methods presented. Laboratory sessions focus on the use of the STATA statistical package and applications to clinical data.
Taught by: Cucchiara, Li
Prerequisite: Permission of Instructor
Activity: Lecture
1 Course Unit
Notes: This course runs from mid Summer to mid Fall term. There is a corresponding lab.

**EPID 527 Biostatistics for Epidemiologic Methods II**
The first half of this course covers concepts in biostatistics as applied to epidemiology, primarily categorical data analysis, analysis of case-control, cross-sectional, cohort studies, and clinical trials. Topics include simple analysis of epidemiologic measures of effect; stratified analysis; confounding; interaction, the use of matching, and sample size determination. The second half of this course covers concepts in biostatistics as applied to epidemiology, primarily multivariable models in epidemiology for analyzing case-control, cross-sectional, cohort studies, and clinical trials. Topics include logistic, conditional logistic, and Poisson regression methods; simple survival analyses including Cox regression. Emphasis is placed on understanding the proper application and underlying assumptions of the methods presented. Laboratory sessions focus on the use of the STATA statistical package and applications to clinical data.
Taught by: Landis, Hwang
Prerequisite: EPID 526 or equivalent
Activity: Lecture
1 Course Unit
Notes: This course runs from mid fall to mid spring term. There is a corresponding lab.

**EPID 532 Database Management for Clinical Epidemiology**
This course provides students with an introduction to the techniques of database management as they apply to clinical research. Students learn how to design and implement computerized databases, perform basic query and reporting operations, migrate data between various file formats, prepare databases for statistical analysis, and perform quality assurance procedures. This course focuses on the practical issues of database management and is intended to support each student’s planned research enterprise. Each class session will be preceded by a one-hour online lecture and brief self-assessment quiz to be completed prior to attending class. This lecture is intended to prepare students for the class for the week, which will be dedicated to practical experience in a laboratory setting.
Taught by: Holmes
Course usually offered in spring term
Prerequisite: Permission of Instructor
Activity: Lecture
0.5 Course Units
Notes: Restricted to MSCE degree students

**EPID 534 Qualitative Methods in the Study of Health, Disease and Medical Systems**
This course combines informal lecture and discussion with practical exercises to build specific skills for conducting qualitative research in healthcare, broadly defined. Readings include books and papers about research methodology and articles that provide exemplars and pitfalls of qualitative research. Specific topics covered include: the role of theory in qualitative research, method-research question fit, collecting different types of qualitative data (observation, interview, focus group, text, video), ethical issues in qualitative research, establishing rigor in qualitative research, introduction to qualitative data analysis using software, mixing methods, approaches for obtaining grant funding for qualitative research and writing up qualitative research studies for publication. The objectives of this course are: To introduce the student to the epistemological underpinning of qualitative methodology; To review how to select the best qualitative approach for different research questions; To introduce the student to different qualitative data collection techniques; To review standards of methodological rigor in qualitative research; To introduce the basic principles of qualitative data analysis using NVivo software; To provide practical advice about planning, getting funding for and and implementing a qualitative study.
Taught by: Szymczak
Course usually offered in spring term
Prerequisite: Previous course work in research methods or permission of course director
Activity: Lecture
1 Course Unit

**EPID 542 Measurement of Health in Epidemiology**
Epidemiologic analyses involve three types of procedures: measuring variables (e.g., risk factors), estimating population parameters (e.g., risk ratios), and testing statistical hypotheses. This course addresses the first of these procedures: measurement, which broadly encompasses the tasks involved in obtaining data, without which analyses cannot proceed. Course topics include: defining concepts of exposure, disease, and health; approaches to measuring exposure, which may be personal or environmental; approaches to measuring disease and health status; assessing the validity and reliability of measurement instruments; problems of misclassification of exposure status and disease status and problems of missing data; instrument (e.g., questionnaire) development; and qualitative methods.
Course usually offered in fall term
Prerequisites: Permission of course director, Introductory Epidemiology (EPID 510) and Biostatistics for Epidemiologic Methods I (EPID 526) previously or concurrently.
Activity: Lecture
1 Course Unit
EPID 549 Methods in Epidemiology
The application of epidemiology to clinical medicine involves the use of
a number of different methods that encompasses measuring variables,
estimating population parameters and testing statistical hypotheses.
This course is designed to broaden students' understanding of a number
of important procedures including: measuring and obtaining data about
exposure, disease, and health; assessing the validity and reliability
of measurement instruments; problems of data quality including
misclassification of exposure status and disease status and problems of
missing data; qualitative data methods; and the application of data for
decision making and health economics. The primary goal is to expose
students to a variety of commonly used epidemiologic methods to
prepare them to explore these in more depth if they are applicable to the
students' research interests.
Course usually offered in fall term
Prerequisites: Permission of course director, Introductory Epidemiology
(EPID 510) and Biostatistics for Epidemiologic Methods I (EPID 526)
previously or concurrently.
Activity: Lecture
1 Course Unit

EPID 550 Clinical Economics and Clinical Decision Making
This course focuses on the application of decision analysis and
economic analysis to clinical and policy research. The course begins
with material about the selection, use, and analysis of diagnostic tests
using two by two tables, likelihood ratios, and ROC curves. The course
continues with the introduction of more general tools for decision
analysis, including decision trees and other mathematical models.
Special emphasis is placed on the assessment and use of utilities in
these models. A major focus of the course is the application of economic
principles to the evaluation of health outcomes. During seminars,
students will carry out practical exercises that include problem solving,
critically analyzing published articles, and learning to use computer
software that facilitates decision and economic analyses.
Taught by: Glick, Williams
Course usually offered in spring term
Also Offered As: HPR 550
Prerequisite: Permission of instructor
Activity: Lecture
1 Course Unit

EPID 560 Issues in Research Protocol Development
This course focuses on major issues in research protocol development,
including methodological issues regarding different research designs,
development of research questions, and plans for analysis. Each student
will present his or her research proposal for open discussion during one
of the sessions.
Course usually offered in spring term
Activity: Seminar
0.25 Course Units
Notes: Restricted to MSCE degree students

EPID 570 Critical Appraisal of the Medical Literature
This course focuses on techniques for critical appraisal of the medical
literature. Each student will be responsible for at least one critical
appraisal session covering different epidemiologic topics.
Course usually offered in spring term
Activity: Lecture
0.25 Course Units
Notes: Restricted to MSCE degree students

EPID 575 Introduction to Genetic Epidemiology
There is an increasing need for researchers to understand the genetic
basis of incorporate the collection and analysis of genetic information
into studies of The objectives of this course are to provide students with
an understanding of used by molecular and genetic epidemiologists.
This course consists of a series of discussions focused on the critical
appraisal of genetic/molecular epidemiology. After completing this course,
students will be able to read and interpret the genetic epidemiology literature,
and understand data collection and analysis approaches for
molecular and genetic epidemiological studies.
Taught by: Devoto, Saleheen
Course usually offered in spring term
Prerequisites: Permission of course director. Students enrolling in
this class are expected to have a working knowledge of epidemiology,
biostatistics, and human genetics. Students who do not meet these
requirements may be allowed to enroll in the class, but may be required to
undertake supplemental readings and/or tutorials to obtain the necessary
background.
Activity: Lecture
1 Course Unit

EPID 580 Outcomes Research
This course is divided into two main parts. The first part addresses
issues related to the measurement of quality in health care. Included is a
review of the classical structure-process-outcome quality paradigm. The
paradigm's strengths and limitations are addressed. This part especially
focuses on outcome measures of quality and examines the validity of
alternative measures. The second part deals with observational, or
quasi-experimental, research studies. It addresses the advantages and
limitations of alternative designs, and covers the role of clinical risk
adjustment in observational studies of medical interventions. It focuses
on the problem of selection bias, and reviews recent methods for dealing
with this bias, such as instrumental variables.
Taught by: Silver
Course usually offered in fall term
Also Offered As: HPR 580
Prerequisites: Introductory course in statistics including regression
methods. Permission of instructor.
Activity: Lecture
1 Course Unit

EPID 582 Systematic Review and Meta-Analysis
This course will provide an introduction to the fundamentals of
systematic reviews and meta-analysis. It will cover introductory principles
of meta-analysis; protocol development; search strategies; data
abstraction methods; quality assessment; meta-analytic methods; and
applications of meta-analysis.
Taught by: Umscheid, Chen
Course offered odd-numbered years
Prerequisites: EPID 510, EPID 526 (may be taken concurrently)
Activity: Lecture
1 Course Unit
EPID 584 Health Disparities Research
This course will provide an overview of research in health disparities. It will cover the historical aspects, concepts, policy, economic, genomic and social perspectives of health disparities. It will provide students with methodological tools for health disparities research and introduce students to ongoing health disparities research by current Penn and affiliated faculty members. The course is composed of a series of weekly small group lectures and discussion, including critical appraisal of published papers, guest faculty presentations, and student presentations. Students will be expected to attend weekly meetings and participate in class discussions, prepare and lead discussions of assigned papers, review assigned readings, and draft and present a scientific protocol of their choosing related to health disparities.
Taught by: Guevara
Course usually offered in spring term
Prerequisite: EPID 510 or equivalent course; EPID 526 or equivalent course
Activity: Lecture
1 Course Unit

EPID 600 Data Science for Biomedical Informatics
Data science refers broadly to using statistics and informatics techniques to gain insights from large datasets. Biomedical informatics refers to a range of disciplines that use computational approaches to analyze biomedical data to answer pre-specified questions as well as to discover novel hypotheses. In this course, we will use R and other freely available software to learn fundamental data science applied to a range of biomedical informatics topics, including those making use of health and genomic data. After completing this course, students will be able to retrieve and clean data, perform exploratory analyses, build models to answer scientific questions, and present visually appealing results to accompany data analyses; be familiar with various biomedical data types and resources related to them; and know how to create reproducible and easily shareable results with R and github.
Taught by: Himes
Course usually offered in fall term
Also Offered As: BMIN 503
Prerequisites: Familiarity with basic statistical (e.g., EPID 526/7 or other first-year graduate level stats course) concepts is expected, as this course will not cover basic concepts in depth. Background in biology and computing would be helpful, but no formal requirements will be enforced.
Activity: Lecture
1 Course Unit

EPID 602 Topics in Biom/Hlth Info
Also Offered As: BMIN 504
Activity: Lecture
1 Course Unit

EPID 621 Longitudinal and Clustered Data in Epidemiologic Research
An introduction to the principles of and methods for longitudinal and clustered data analysis with special emphasis on clinical, epidemiologic, and public health applications. Designed for advanced MS and PhD-level students in epidemiology and related fields. Marginal and conditional methods for continuous and binary outcomes. Mixed effects and hierarchical models. Simulations for power calculations. Each student will be required to participate in 4 labs and complete associated problem sets. They may also use their own data to fulfill these requirements in part. Software will include Stata and R.
Taught by: Shults
Course usually offered in fall term
Prerequisites: Completion of EPID 526, 527 or equivalent preparation in biostatistics, including generalized linear models. Completion of semester course in principles of epidemiology or equivalent. Good working knowledge of Stata and SAS and familiarity with principles of first-year calculus and matrix algebra. Permission of course director.
Activity: Lecture
1 Course Unit

EPID 622 Applied Regression Models for Categorical Data
This course will provide in-depth treatment of several topics in categorical data analysis. After a brief review of methods for contingency tables, we will introduce the idea of generalized linear models, and focus on two special cases: multiple logistic regression and loglinear models. Each topic will be presented in detail by stating the model and covering parameter estimation and interpretation, inference, model building, regression diagnostics and assessment of model fit. Finally, we will cover extensions to both models, including models for multinomial data, analysis of matched-pair data, and random effects models. Topics will be illustrated in class with examples, and we will discuss the use of STATA to conduct the analyses.
Taught by: Xiao
Course usually offered in fall term
Prerequisites: EPID 510, EPID 526, EPID 527
Activity: Lecture
0.5 Course Units
Notes: Offered first half of fall term

EPID 623 Applied Survival Analysis
This course will focus on statistical methods for survival or time-to-event data. Topics covered will include: the concepts of survival data and censoring, estimation of survival functions, comparison of groups, regression analysis, sample size and power considerations, and methods for competing risks. All methods will be illustrated by in class examples and homework sets.
Taught by: Li
Course usually offered in fall term
Prerequisites: EPID 510, EPID 526, EPID 527. Additionally, students should be comfortable with basic calculus concepts (e.g., derivatives, integrals, etc).
Activity: Lecture
0.5 Course Units
Notes: Offered second half of fall term
EPID 624 Methods in PCOR
The goal of this course is to provide a broad overview of methods used in patient centered outcomes research (PCOR). Expert faculty will lecture on topics such as standards for research questions, patient centeredness, systematic reviews, causal inference, heterogeneity of treatment effect handling missing data, data networks, Bayesian designs, data registries, and diagnostic tests. Topics may also include advanced observational study design, statistical methods for observational studies, health status/quality of life as applied to PCOR and case studies of patient engagement.
Taught by: Gelfand
Course usually offered in spring term
Prerequisite: Permission of instructor
Activity: Lecture
1 Course Unit

EPID 625 Advanced Biostatistical Methods for Multivariable Prediction Models
This course is an introduction to statistical methods that can be used to evaluate biomarker prognostic studies and multivariate prediction models. It is designed for advanced MS and PhD-level students in epidemiology and related fields (nursing, health policy, social work, demography). Topics will include biostatistical evaluation of biomarkers, predictive models based on various regression modeling strategies and classification trees, assessing the predictive ability of a model; internal and external validation of models; and updating prognostic models with new variables or for use in different populations. Students will learn about the statistical methods that are required by current and future guidelines for biomarker prognostic studies or the reporting guidelines for multivariable prediction models.
Taught by: Giotto
Course usually offered in spring term
Prerequisites: Completion of EPID 526, EPID 527 and either EPID 622 or 623 or equivalent preparation in either categorical analysis or survival analysis. Working knowledge of either Stata, SAS or R to fit regression, logistic regression and/or Cox regression models. Permission of course director for students outside of School of Medicine graduate programs.
Activity: Lecture
0.5 Course Units

EPID 630 Clinical Trials
This course is to serve as a general introduction to clinical trials, with emphasis on trial design issues. This is not a course on the biostatistics of clinical trials. It is expected that at the conclusion of the course, a student will be able to plan a clinical trial. Each class will consist of a two-hour lecture followed by a one-hour discussion.
Taught by: Farrar
Course usually offered in spring term
Also Offered As: REG 630
Prerequisite: EPID 510 or equivalent; EPID 526 or equivalent; permission of instructor
Activity: Lecture
1 Course Unit

EPID 632 Intro Biomed Informatics: Introduction To Biomedical and Health Informatics
This course is designed to provide an overview of the major topic areas in biomedical informatics, especially as they apply to clinical research, and more specifically to clinical epidemiology. Through a series of lectures and demonstrations, students will learn about topics such as databases, natural language, clinical information systems, networks, artificial intelligence and machine learning applications, decision support, imaging and graphics, and the use of computers in medical education.
Taught by: Holmes
Course not offered every year
Also Offered As: BMIN 501
Prerequisite: Permission of Instructor
Activity: Lecture
1 Course Unit

EPID 634 Clinical Trial Outcomes: Measurement, Analysis and Interpretation
This course is intended to teach students the skills necessary to select and/or design appropriate outcomes for a clinical trial. Students will focus on recent changes in our understanding of clinical trial outcome measurements, analyses, and interpretation for both subjective and objective phenomenon, such as adherence, use of multiple outcomes, and clinical importance. While design issues for clinical trials are the main focus, other types of clinical studies will be considered as appropriate. Students will be expected to learn about the problems inherent in the design of outcome measures of health and how to apply different epidemiologic and biostatistical concepts toward a solution. It is expected that at the conclusion of the course, students will be able to plan a clinical trial with a valid, responsive, and interpretable outcome.
Taught by: Farrar
Course usually offered in fall term
Prerequisite: EPID 510 or equivalent; permission of instructor
Activity: Lecture
1 Course Unit

EPID 635 Database Theory and Applications for Biomedical Research
This course is intended to provide in-depth, practical exposure to the design, implementation, and use of databases in biomedical research. This course is intended to provide students with the skills needed to design and conduct a research project using primary and secondary data. Topics to be covered include: database architectures, data modeling approaches, data normalization, database implementation, client-server databases, concurrency, validation, Structured Query Language (SQL) programming, reporting, maintenance, and security. All examples will use problems or data from biomedical domains. MySQL will be used as the database platform for the course, although the principles apply generally to biomedical research and other relational databases.
Taught by: Holmes
Course usually offered in spring term
Also Offered As: BMIN 502
Prerequisites: There are no prerequisites for this course. However, we will be working exclusively with biomedical data and research problems. It is expected that all students will have some knowledge and/or experience in working in biomedical research.
Activity: Lecture
1 Course Unit
**EPID 536 Epidemiological Methods in Acute Care**
This is an advanced seminar that will cover nuanced methodological considerations and logistical challenges of research in acute care settings (e.g., prehospital emergency department, hospital, and intensive care units). Topics to be covered with regards to primary data collection include: recruitment and consent, outcomes measurement, survey and qualitative research, clinical trials, quality improvement, decision making and cognitive biases, end-of-life issues, and acute care research networks. Topics to be covered with regards to secondary data analysis include: data sources, risk adjustment, missing data, causal inference, predictive modeling, decision rules, variability in care, organizational factors, and economic analysis. The course will finish with a discussion of the landscape for obtaining funding for acute care research. Weekly sessions will include expert guest lectures, review of landmark papers, and round-table discussion of the students’ ongoing research projects as they pertain to issues covered in the course.
Taught by: Delgado, Helena
Course not offered every year
Prerequisites: EPID 510, EPID 526; Permission of Instructor
Activity: Lecture
1 Course Unit

**EPID 538 Topics in Clinical Trial Design and Analysis**
This course is intended to follow, and be complementary to EPID 630: Clinical Trials. It will build on the basic principles of design, conduct, and analysis introduced in that course and will go into more detail on particular approaches. Topics covered will include noninferiority trials, phase 1 designs, multi-stage and other adaptive designs, graphical data presentations and current ethical controversies in clinical trials.
Taught by: Ellenberg
Course usually offered in fall term
Prerequisite: EPID 630 or equivalent
Activity: Lecture
1 Course Unit

**EPID 640 Advanced Topics in Epidemiology**
This course is designed to introduce students to advanced epidemiologic methods through a series of readings and discussions. The course aims to deepen the students’ understanding of important concepts and controversies in contemporary epidemiology and to enhance their ability to think critically about empirical epidemiologic research. The course is intended for students who are already familiar with the fundamentals of epidemiology and biostatistics, and who wish to gain an understanding of the complex issues underlying epidemiologic study design and interpretation.
Taught by: Naj
Course usually offered in spring term
Prerequisites: EPID 510 or equivalent, EPID 526 or equivalent, EPID 527 or equivalent; permission of instructor
Activity: Lecture
1 Course Unit

**EPID 644 Cardiopulmonary Epidemiology**
This is an advanced course that addresses epidemiological research issues as they apply to important clinical topics in cardiovascular and pulmonary medicine. Lectures and workshops are designed to acquaint students with the classic literature in the fields of cardiovascular and pulmonary epidemiology, to use a body of literature to demonstrate the strengths and weaknesses of epidemiological research designs as they have been applied to cardiovascular and pulmonary medicine to expose students to the range of topics studied to teach advanced epidemiological principles using a problem-based approach, and to stimulate students to develop independent research questions.
Taught by: Kimmel
Course usually offered summer term only
Prerequisites: EPID 510 or equivalent, EPID 526 or equivalent, EPID 527 or equivalent, and permission of instructor
Activity: Lecture
1 Course Unit

**EPID 645 Research Methods in Cancer Epidemiology**
Research in cancer etiology, prevention, treatment, and control includes a wide range of subject matter science, from the initial molecular changes which precede the development of cancer to issues of primary guidelines for cancer survivors. The course reviews the possible study designs applied to cancer etiology, prevention, treatment, and control. These include randomized controlled trials and multiple types of observational studies (cohort, case-control, cross-sectional). Other topics will include causal inference, bias, and effect modification.
Taught by: Aplenc, Getz
Course usually offered summer term only
Prerequisites: EPID 510 or equivalent, EPID 526 or equivalent, EPID 527 or equivalent, and permission of instructor
Activity: Lecture
1 Course Unit

**EPID 646 Reproductive Epidemiology**
This is an advanced course that addresses epidemiological research issues as they apply to important clinical topics in obstetrics and gynecology and related clinical disciplines. Lectures and workshops are designed to acquaint students with seminal issues in the field of reproductive epidemiology, to use a body of literature to demonstrate the strengths and weaknesses of epidemiological research designs as they have been applied to obstetrics and gynecology and related clinical disciplines, to expose students to the range of topics studied, to teach advanced epidemiologic principles using a problem-based approach, and to stimulate students interested in reproductive epidemiology to develop independent research questions.
Taught by: Bamhart
Course offered spring; even-numbered years
Activity: Lecture
1 Course Unit
EPID 652 Renal and Urologic Epidemiology
The objective of this course is to prepare students to function as effective, independent researchers in the fields of renal and urologic epidemiology by providing the students an understanding of how epidemiologic research can and has advance(d) the knowledge of diseases in treatments of renal and urologic medicine. The structure of the course consists of a lecture series, workshops, and student presentations.
Taught by: Feldman
Prerequisites: EPID 510 or equivalent, EPID 526 or equivalent, EPID 527 or equivalent, and permission of instructor
Activity: Lecture
1 Course Unit

EPID 655 Research Methods in Infectious Diseases Epidemiology
This is an advanced course addressing epidemiological issues as they apply to important clinical topics in infectious diseases. Lectures and discussions will serve two primary goals: 1) to explore epidemiologic methods specific to infectious diseases (e.g. adherence to therapy) or which have important applications to infectious diseases (e.g. molecular epidemiology); and 2) to explore the epidemiology of particular infectious diseases or syndromes (e.g. HIV). This course will acquaint students with the classic literature in the field of infectious diseases epidemiology, teach advanced epidemiological principles using a problem-based approach, and demonstrate the strengths and weaknesses of research methodologies as they have been applied to infectious diseases.
Taught by: Gross, Han
Course usually offered summer term only
Prerequisites: EPID 510 or equivalent, EPID 526 or equivalent, a course that covers logistical regression such as EPID 527 or equivalent, and permission of instructor(s)
Activity: Lecture
1 Course Unit

EPID 658 Gastroenterology Epidemiology
This course provides an in-depth presentation of advanced methodological issues in conducting clinical epidemiological research in the field of gastroenterology.
Taught by: Yang
Course offered spring; odd-numbered years
Prerequisites: EPID 510 or equivalent, EPID 526 or equivalent, EPID 527 or equivalent, and permission of instructor
Activity: Lecture
1 Course Unit

EPID 664 Methods in Neurologic Clinical Epidemiology
This course will introduce students to methods and study design principles that are specific or unique to clinical research and trials in neurology, child neurology, neuro-ophthalmology, neurosurgery, and related fields.
Taught by: Farrar, Waldman
Course offered spring; even-numbered years
Prerequisite: Permission of Instructor
Activity: Lecture
0.5 Course Units

EPID 666 Pharmacoepidemiology Research Methods
The purpose of this course is to explore and integrate concepts and considerations that are key to the conduct of pharmacoepidemiologic research. The format will be a mixture of seminar, instructor-led discussion, student-led discussion, and student presentations. Papers from the applied and methods literature will be used to illustrate concepts and as springboards for discussion. Topics covered include use of automated databases, pharmacogenomics, and approaches to addressing confounding.
Taught by: Hennessy
Course usually offered in spring term
Prerequisites: EPID 510 or equivalent, EPID 526 or equivalent, a course that covers logistical regression such as EPID 527 or equivalent, and permission of instructor(s)
Activity: Lecture
1 Course Unit

EPID 672 Biostatistical Methods for Addressing Confounding
This course is designed to teach epidemiology students the statistical principles of analysis specific to pharmacoepidemiology study designs including the use of propensity scores, inverse probability weighting, time varying confounding analyses, disease risk scores, and instrumental variables. Each session includes both a lecture component and laboratory component. Students will learn the statistical principles and then apply them to example study datasets. Laboratory sessions will be conducted on the students laptops using STATA software.
Taught by: Ogdie-Beatty, Stephens-Sheilids
Course usually offered summer term only
Prerequisites: EPID 526 and EPID 527, permission of the instructor(s)
Activity: Lecture
1 Course Unit

EPID 674 Measuring the Microbiome: Methods and Tools
This is an advanced course addressing the methods and tools used to analyze microbiome data as well as their implications for clinical study design. The course will include: (1) lectures focused on how the microbiome is measured, approaches to the analysis of highly multivariate microbiome data, and the bioinformatic tools used to execute these analyses; (2) hands-on R and command-line coding to build familiarity with commonly used tools and analytic methods; and (3) short, practical assignments to reinforce the lectures and classwork.
The course will acquaint students with classic literature in the field of microbiome research and prepare students to integrate microbiome data collection and analysis with epidemiologic research methodologies.
Taught by: Kelly, Bittinger
Prerequisites: EPID 510, EPID 526, EPID 527, EPID 549 and permission of instructors
Activity: Lecture
1 Course Unit
EPID 675 Advanced Methods for Analysis of Complex Genetic Traits
The advent of high throughput genotyping has created unprecedented opportunities to characterize in detail information related to genome, epigenome and transcriptome. Such technological advancements have offered exciting opportunities for biological discovery as well as translation of biological data for targeted therapies. However, investigation of genetic polymorphisms, epigenetic signatures, gene transcription, biomarkers and their relationship with environmental factors and disease outcomes requires a thorough understanding of a wide range of experimental methods and statistical approaches.
Through critical review of the current literature, this course will provide understanding on various "OMICS" approaches for the study of complex disorders and traits. Students will also understand and present advanced statistical methods and how such concepts can be applied.
Taught by: Saleheen
Course not offered every year
Prerequisites: Introduction to Genetic Epidemiology or equivalent; training in study design and statistical analysis related to statistical genetics and molecular epidemiology, and permission of course directors.
Activity: Lecture
1 Course Unit

EPID 699 Lab Rotation
Activity: Laboratory
0.33 Course Units

EPID 700 Doctoral Seminar in Epidemiology
The course is intended to meet the needs of PhD students over the entire program from the coursework phase through the dissertation defense, and is intended to optimize cross-fertilization between the students at all phases of their program.
Taught by: Levy
Prerequisite: Permission of Instructor
Activity: Seminar
1 Course Unit
Notes: Restricted to Epidemiology Doctoral Students

EPID 701 Introduction to Epidemiologic Research
This course is intended to provide in-depth, exposure to the theory and methods of epidemiologic research. Topics to be covered include causal inference, measures of disease frequency and association, study design, bias and confounding, validity, and epidemiologic analysis.
Prerequisites: Quantitative proficiency. Knowledge and/or experience in working in biomedical research. Permission of instructor.
Activity: Lecture
1 Course Unit

EPID 703 Spatial Epidemiology
This course motivates the need for, and describes methods for the analysis of spatially indexed epidemiological data. Major topics to be covered: clustering and cluster detection, disease mapping, spatial regression, methods for infectious disease data, small area estimation and an introduction to geographical information systems. Both point-references and spatially aggregated data will be considered. The use of R packages for analysis will be described.
Prerequisites: EPID 527 and 621 or equivalent preparation in biostatistics, R programming experience. Permission of instructor.
Activity: Lecture
1 Course Unit

EPID 714 Grant Writing/Review
This course will assist students in the design of an NIH grant (R-35, K, R21 or R01) for submission by enhancing their appreciation of the specifics of the grant writing process and in understanding the grant review process. This course is designed to provide background, training, and practice with the writing and submitting of NIH style grants. As a minimum all students who enroll will be expected to write and submit a reasonable draft of a full NIH style grant proposal by the end of the term. During the process, the portions of each proposal will be reviewed as a group by the other students in the course. In response to each review, students are expected to revise their grant sections.
Taught by: Farrar, Gerber
Course usually offered summer term only
Prerequisites: EPID 510, EPID 526, EPID 560, and EPID 570 or permission of Instructor
Activity: Seminar
0.5 Course Units

EPID 899 Pre-dissertation Research
Activity: Laboratory
0.5 Course Units

EPID 995 Dissertation
Activity: Dissertation
0.5 Course Units

Finance (FNCE)

FNCE 100 Corporate Finance
This course provides an introduction to the theory, the methods, and the concerns of corporate finance. The concepts developed in FNCE 100 form the foundation for all elective finance courses. The main topics include: 1) the time value of money and capital budgeting techniques; 2) uncertainty and the trade-off between risk and return; 3) security market efficiency; 4) optimal capital structure, and 5) dividend policy decisions. During the fall semester there are honors sections of FNCE 100 offered. The seats in the honors sections are awarded through an application process. Please go to: https://fnce.wharton.upenn.edu/programs/course-applications for additional information.
Also Offered As: FNCE 611
Prerequisites: ECON 010 or ECON 001 or ECON 002, MATH 104, or MATH 110, ACCT 101 and STAT 101. Acct 101 and Stat 101 may be taken concurrently.
Activity: Lecture
1 Course Unit
FNCE 101 Monetary Economics and the Global Economy
FNCE 101 is an intermediate-level course in macroeconomics and the global economy, including topics in monetary and international economics. The goal is to provide a unified framework for understanding macroeconomic events and policy, which govern the global economic environment of business. The course analyzes the determinants and behavior of employment, production, demand and profits; inflation, interest rates, asset prices, and wages; exchange rates and international flows of goods and assets; including the interaction of the real economy with monetary policy and the financial system. The analysis is applied to current events, both in the US and abroad. HONORS FNCE 101 is only offered in the Fall semester. Registration for this class is through an application process. Please go to: https://fnce.wharton.upenn.edu/programs-course-applications. This course presents the analysis of macroeconomic theory with a current events perspective. The material in the class concentrates on lecture notes, which are the primary learning source, and readings from a course packet of articles drawn from journals, magazines, newspapers, and other economic publications. The material covered will include: (1) Economic Statistics, GDP, Price Indices, Productivity and the nature of the business cycle, (2) The government budget and Social Security, (3) Monetary policy. The Fed and other Central Banks, (4) Interest rates - indexed bonds and term structure (5) Aggregate Demand and the determination of income and interest rate, (6) Money and Inflation - the Velocity Approach, (7) Reaction of Financial Markets to economic data, (8) Inflation, inflationary expectations and the Phillips Curve, (9) Supply-side shocks and market-dynamics, (10) International Balance of Payments, the current account and capital flows, (11) Determination of Exchange Rates, exchange rate systems, purchasing power and interest rate parity.
One term course offered either term
Prerequisites: ECON 010 or ECON 001 and ECON 002 and MATH 104 or MATH 110. Students cannot receive credit for both FNCE 101 and ECON 102. WHARTON STUDENTS ARE REQUIRED TO TAKE FNCE 101
Activity: Lecture
1 Course Unit

FNCE 203 Advanced Corporate Finance
The objective of this course is to study the major decision-making areas of managerial finance and some selected topics in financial theory. The course reviews the theory and empirical evidence related to the investment and financing policies of the firm and attempts to develop decision-making ability in these areas. This course serves as an extension of FNCE 100 (FNCE 611). Some are as of financial management not covered in FNCE 100 are covered in FNCE 203. These may include leasing, mergers and acquisitions, corporate reorganizations, financial planning and working capital management, and some other selected topics. Other areas that are covered in FNCE 100 are covered more in depth and more rigorously in FNCE 203. These include investment decision making under uncertainty, cost of capital, capital structure, pricing of selected financial instruments and corporate liabilities, and dividend policy. During the Spring semester, Professor Opp does not allow students to take this course pass fail.
One term course offered either term
Also Offered As: FNCE 726
Prerequisites: FNCE 100, (FNCE 611), STAT 101, and STAT 102.
Activity: Lecture
1 Course Unit
Notes: Professor Opp’s sections may not be taken Pass/Fail.

FNCE 205 Investment Management
This course studies the concepts and evidence relevant to the management of investment portfolios. Topics include diversification, asset allocation, portfolio optimization, factor models, the relation between risk and return, trading, passive (e.g., index fund) and active (e.g., hedge-fund, long-short) strategies, mutual funds, performance evaluation, long-horizon investing and simulation. The course deals very little with individual security valuation and discretionary investing (i.e., "equity research" or "stock picking").
One term course offered either term
Prerequisites: The prequisites for Undergraduates are FNCE 100, and STAT 101, 102 (STAT 102 may be taken concurrently with this course. Given that investment management requires one to analyze and deal effectively with uncertainty, a good grounding in statistics is essential, and familiarity with statistics should extend through multiple regression, covariance, and correlation.
Activity: Lecture
1 Course Unit

FNCE 206 Financial Derivatives
This course covers one of the most exciting yet fundamental areas in finance: derivative securities. In the modern financial architecture, financial derivatives can be the most challenging and exotic securities traded by institutional specialists, while at the same time, they can also be the basic securities commonly traded by retail investors such as S&P Index Options, Beyond trading, the basic ideas of financial derivatives serve as building blocks to understand a much broader class of financial problems, such as complex asset portfolios, strategic corporate decisions, and stages in venture capital investing. The global derivatives market is one of the most fast-growing markets, with over $600 trillion notional value in total. It is important as ever to understand both the strategic opportunities offered by these derivative instruments and risks they imply. The main objective of this course is to help students gain the intuition and skills on (1) pricing and hedging of derivative securities, and (2) using them for investment and risk management. In terms of methodologies, we apply the non-arbitrage principle and the law of one price to dynamic models through three different approaches: the binomial tree model, the Black–Scholes–Merton option pricing model, and the simulation-based risk neutral pricing approach. We discuss a wide range of applications, including the use of derivatives in asset management, the valuation of corporate securities such as stocks and corporate bonds with embedded options, interest rate derivatives, credit derivatives, as well as crude oil derivatives. In addition to theoretical discussions, we also emphasize practical considerations of implementing strategies using derivatives as tools, especially when no-arbitrage conditions do not hold.
One term course offered either term
Also Offered As: FNCE 717
Prerequisites: The following introductory Finance and Statistics courses are recommended but not required. FNCE 101 and STAT 102 are recommended and can be taken concurrently.
Activity: Lecture
1 Course Unit
**FNCE 207 Corporate Valuation**

The focus of this course is on the valuation of companies. The course covers current conceptual and theoretical valuation frameworks and translates those frameworks into practical approaches for valuing companies. The relevant accounting topics and the appropriate finance theory are integrated to show how to implement the valuation frameworks discussed on a step-by-step basis. The course teaches how to develop the required information for valuing companies from financial statements and other information sources in a real-world setting. Topics covered in depth include discounted cash flow techniques and price multiples. In addition, the course covers other valuation techniques such as leveraged buyout analysis. During the spring semester students cannot take Professor Glode’s FNCE 207 course pass fail, this class must be taken for a grade.

Taught by: Professor Holthausen in the fall and Professor Glode in the spring. Professor Glode course may not be taken Pass/Fail, it must be taken for a grade.

One term course offered either term

Prerequisites: FNCE 100, (FNCE 611) ACCT 101, AND STAT 101, 111 OR EQUIVALENT ACCT 201 RECOMMENDED

Activity: Lecture
1 Course Unit

Notes: Professor Glode’s sections may not be taken Pass/Fail.

**FNCE 208 International Corporate Finance**

Analyzes financial problems corporations face that result from operating in an international environment. Major topics include managing exchange risk through hedging and financing, measuring exchange rate exposure, calculating the cost of capital for foreign operations, assessment of sovereign risks, capital budgeting from a project and parent perspective, and international taxation.

Also Offered As: FNCE 731

Prerequisites: A thorough knowledge of FNCE 100 (FNCE 611) is assumed.

Activity: Lecture
1 Course Unit

**FNCE 209 Real Estate Investment: Analysis and Financing**

This course provides a broad introduction to real estate with a focus on investment and financing issues. Project evaluation, financing strategies, investment decision making and real estate capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format with discussion required. The course contains cases that help students evaluate the impact of more complex financing and capital market tools used in real estate. There are case studies and two midterms, depending on instructor.

Taught by: Ferreira, Handbury, Harari, Keys, Sinai, Wong

One term course offered either term

Also Offered As: REAL 209

Prerequisite: FNCE 100

Activity: Lecture
1 Course Unit

**FNCE 219 International Financial Markets**

FNCE 219 is a course on international financial markets. Major topics include foreign exchange rates, international money markets, currency and interest rate derivatives (forwards, options, and swaps), international stock and bond portfolios, and cryptocurrencies. Students learn about the features of financial instruments and the motivations of market participants. The class focuses on risk management, investing, and arbitrage relations in these markets.

One term course offered either term

Prerequisites: The following introductory courses are recommended but not required. FNCE 100, FNCE 101, STAT 101.

Activity: Lecture
1 Course Unit

**FNCE 220 International Banking**

This course focuses on international financial institutions, especially the activities of global, systemically important banks. We will examine how current and historical events are reshaping the industry and highlight the basic analytics of managing a bank’s exposure to liquidity, credit, market and reputational risk. Most classes will begin with discussion of a current event related to course topics. Three team projects will be assigned that will give you deeper exposure to analytic techniques related to the course. Throughout the semester, we will discuss public policy issues facing the international financial system.

Taught by: Professor Richard Herring

Course usually offered in spring term

Prerequisites: FNCE 100, FNCE 101, one of which may be taken concurrently.

Activity: Lecture
1 Course Unit

**FNCE 230 Urban Fiscal Policy**

The purpose of this course is to examine the financing of governments in the urban economy. Topics to be covered include the causes and consequences of the urban fiscal crisis, the design of optimal tax and spending policies for local governments, funding of public infrastructures and the workings of the municipal bond market, privatization of government services, and public financial systems for emerging economies. Applications include analyses of recent fiscal crises, local services and taxes as important determinants of real estate prices, the infrastructure crisis, financing and the provision of public education, and fiscal constitutions for new democracies using South Africa as an example.

Taught by: Robert Inman

Course usually offered in fall term

Also Offered As: BEPP 230, BEPP 899, REAL 230

Prerequisites: FNCE 101 and ECON 001

Activity: Lecture
1 Course Unit
FNCE 235 Fixed Income Securities
This course covers fixed income securities (including fixed income derivatives) and provides an introduction to the markets in which they are traded, as well as to the tools that are used to value these securities and to assess and manage their risk. Quantitative models play a key role in the valuation and risk management of these securities. As a result, although every effort will be made to introduce the various pricing models and techniques as intuitively as possible and the technical requirements are limited to basic calculus and statistics, the class is by its nature quantitative and will require a steady amount of work. In addition, some computer proficiency will be required for the assignments, although familiarity with a spreadsheet program (such as Microsoft Excel) will suffice.
One term course offered either term
Prerequisites: FNCE 100 and STAT 101 or STAT 102 or STAT 111
Activity: Lecture
1 Course Unit

FNCE 238 Capital Markets
The objective of this course is to give you a broad understanding of the framework and evolution of U.S. capital markets, the instruments that are traded, the mechanisms that facilitate their trading and issuance, and the motivations of issuers and investors across different asset classes. The course will highlight the problems that capital market participants are seeking to solve, which you can use in your post-Wharton careers to evaluate future market innovations. We will consider design, issuance, and pricing of financial instruments, the arbitrage strategies which keep their prices in-line with one another, and the associated economic and financial stability issues. We will draw from events in the aftermath of the recent financial crisis, which illustrate financing innovations and associated risks, as well as policy responses that can change the nature of these markets.
One term course offered either term
Prerequisites: FNCE 100, (FNCE 611)
Activity: Lecture
1 Course Unit

FNCE 239 Behavioral Finance
There is an abundance of evidence suggesting that the standard economic paradigm - rational agents in an efficient market - does not adequately describe behavior in financial markets. In this course, we will survey the evidence and use psychology to guide alternative theories of financial markets. Along the way, we will address the standard argument that smart, profit-seeking agents can correct any distortions caused by irrational investors. Further, we will examine more closely the preferences and trading decisions of individual investors. We will argue that their systematic biases can aggregate into observed market inefficiencies. The second half of the course extends the analysis to corporate decision making. We then explore the evidence for both views in the context of capital structure, investment, dividend, and merger decisions.
Course usually offered in spring term
Also Offered As: FNCE 739
Prerequisites: FNCE 100, FNCE 101. Recommended: FNCE 205 and FNCE 203
Activity: Lecture
1 Course Unit

FNCE 250 Venture Capital and the Finance of Innovation
This course covers the finance of technological innovation, with a focus on the valuation tools useful in the venture capital industry. These tools include the "venture capital method" comparables analysis, discounted cash flow analysis, contingent-claims analysis. The primary audience for this course is finance majors interested in careers in venture capital or in R&D-intensive companies in health care or information technology. Course usually offered in fall term
Prerequisites: FNCE 100 (FNCE 611) and FNCE 101 (FNCE 613);
(FNCE 101 and FNCE 613 may be taken concurrently)
Activity: Lecture
1 Course Unit

FNCE 251 The Finance of Buyouts and Acquisitions
The course focuses on financial tools, techniques, and best practices used in buyouts (financial buyers) and acquisitions (strategic buyers). While it will touch upon various strategic, organizational, and general management issues, the main lens for studying these transactions will be a financial one. It will explore how different buyers approach the process of finding, evaluating, and analyzing opportunities in the corporate-control market; how they structure deals and how deal structure affects both value creation and value division; how they add value after transaction completion; and how they realize their ultimate objectives (such as enhanced market position or a profitable exit). The course is divided into two broad modules. The first module covers mergers and acquisitions, and the second one studies buyouts by private equity partnerships. During the spring semester this course cannot be taken pass/fail.
Prerequisites: FNCE 100 (FNCE 611), FNCE 101 (FNCE 613), Co-Requisite FNCE 203 (FNCE 726) Advanced Corporate Finance or FNCE 207 (FNCE 728) Corporate Valuation.
Activity: Lecture
1 Course Unit
Notes: Lectures, cases, and guest speakers. Grading: Class participation, two students projects, two exams.

FNCE 254 Impact Investing
This course explores Impact Investing, a discipline that seeks to generate social benefits as well as financial returns. From tiny beginnings, the Impact Investment space has expanded and now commands significant attention from policymakers, wealthy and public spirited individuals, academia and, not least, the world's largest asset managers and philanthropic foundations. Evangelists believe it may be the key to freeing the world from poverty. Skeptics think it will remain confined to the boutique. Regardless, Impact Investing is becoming a distinct career specialization for finance professionals despite the diverse skillset each must have and the uncertainty of the new field's growth.
Prerequisites: Prerequisites: This course has no specific prerequisites, but given its wide-ranging subject matter, students will benefit from completion of any of the following Wharton courses: FNCE 101 Monetary Economics and the Global Economy; FNCE 205 Investment Management; FNCE 238 Capital Markets; and FNCE 395 Private Equity. Coursework or practical experience in microeconomics, development economics, international philanthropy, Non-Governmental Organizations, financial risk management and political risk analysis will also be useful.
Activity: Lecture
1 Course Unit
FNCE 256 Finance Energy
The objective of this course is to provide students with detailed knowledge of corporate structures, valuation methods, project finance, risk management practices, corporate governance issues, and geopolitical risks in the energy industry. In general, this course seeks to provide students with an overall context for understanding energy issues and risks, and how these might affect financing and investment decisions for both providers of energy and end-users of energy.
Taught by: Professor Erik Gilje
Course usually offered in spring term
Prerequisites: FNCE 203, Advanced Corporate Finance or FNCE 207, Corporate Valuation. Students that receive permission to enroll without the prerequisites are expected to review the relevant topics as necessary to meet the requirements of the class.
Activity: Lecture
1 Course Unit

FNCE 311 Infrastructure Investing
The world economy runs on the infrastructure which has been built over the past 10,000 years. Each year, this infrastructure requires updating and new additions, from roads and bridges (the original infrastructure), to railroads, airports (the more recent infrastructure), to telecommunications and solar and wind power installations (modern infrastructure). There is a vast amount of public (i.e., taxpayer money directed by government officials) and private (i.e., individuals’ money typically managed on their behalf and directed by private equity or banks into infrastructure investments). In this course, we will cover Infrastructure Financing and investing from various angles. We will provide descriptions of types of infrastructure, examine the financing needs of infrastructure projects, consider the historic role of government and non-government funding, and assess the changing needs of consumers and role of technology and the increasing demands posed by a globalizing economy. As private equity firms continue to build infrastructure funds, the need for, and role for, private money continues to evolve, so we will also examine infrastructure investing as a alternative asset class from the investors’ perspective.
Taught by: Professor Kevin Kaiser
Prerequisites: FNCE 100 Corporate Finance; FNCE 207 Corporate Valuation is recommended but not required.
Activity: Lecture
0.5 Course Units

FNCE 383 Strategic Equity Finance
This course combines lectures and cases, and will go through actual situations where companies need to make strategic decisions on raising equity capital. We will address different phases of a company’s life cycle. Through these cases, from the decision-makers perspective, we will explore the different paths that can be taken and consider issues such as investor activism, governance and regulatory and valuation impact. FNCE 383 is a half semester course offered in Q3 during the spring semester.
Taught by: Professor David Musto and Professor David Erickson
Course usually offered in spring term
Prerequisite: FNCE 100 - Corporate Finance
Activity: Seminar
0.5 Course Units

FNCE 384 Advanced Topics in Private Equity
This course will address a variety of applied topics in private equity (PE), with a focus on growth and later-stage buyout transactions (venture capital is not explicitly addressed in this course), and a primarily U.S.-centric view that should be largely applicable in other markets. In addition, the course will focus on the transaction stage of PE investing i.e., the art of the deal and mostly leave aside deal sourcing, portfolio management and investor relations. The goal of this course is to educate students about the substance, process and mechanics of PE investing, through the lens of the investment professionals, counterparties and advisors that drive transactions to completion. Course topics will address the entire deal process, and will include the following: Commercial Diligence (incl. financial modeling); Debt Financing; Accounting Diligence; Sales & Purchase Agreements; Comps Analysis; and Other Advisory Work. Throughout the course, students will learn about each element of the deal process through in-class lectures, while concurrently apply those learnings to a real-time mock deal, and preparing dealmaterials that mirror a real private equity transaction. The in-class lectures will cover both conceptual frameworks and real-world examples.
Taught by: Bilge Yilmaz and Burcu Esmer
Prerequisites: Successful completion of core finance requirements, FNCE 100 and FNCE 101 as well as FNCE 203 or FNCE 251. Special permission can also be requested based on relevant professional experience.
Activity: Lecture
1 Course Unit

FNCE 385 ASP - Fin-Tech
The course exposes students to this fast-growing and exciting intersection between finance (Fin) and technology (Tech) while emphasizing the role data and analytics play. The course is structured around three main FinTech areas: (i) Lending/Banking services, (ii) Clearing (iii) Trading. It provides specific coverage and examples of developments from (1) peer-to-peer lending, (2) blockchain and distributed ledgers, (3) networks and their use in trading, and (4) algo trading and its use of non-standard inputs. In each of these areas, we start by analyzing the marketplace, and the incumbents, and the business case and strategies of the incoming technology-based players, while understanding the role data and analytics play in driving the technology-based services. The course is built around a large number of examples and cases, guest lectures, student presentations, and group projects. Student are thus expected to work in teams and demonstrate a high level of independent learning and initiative.
Also Offered As: FNCE 885
Prerequisites: A thorough knowledge of FNCE 100 is assumed.
Activity: Lecture
0.5 Course Units
FNCE 386 ASP - Hedge Funds
This course will cover critical aspects and characteristics of hedge funds and the hedge fund industry. It will look at the legal foundations and structures of hedge funds including the primary regulations in the U.S. and abroad that are most relevant for hedge funds. It will also present the major hedge fund strategies, describe operation, control, administration, due diligence and valuation issues. Performance evaluation and investing in hedge funds from the investor’s perspective will be discussed as will be issues of potential changes in regulation, risk management, and the use of leverage. The format of the course will mix lectures with presentations from industry participants, hedge fund managers, those who invest in hedge funds, those who advise them and provide services to them, and those who regulate them. Those who want to launch a hedge fund, join an existing one, invest in one, or provide services to one will want to register for this course.
Taught by: Professor Scott Richard
Course usually offered in fall term
Prerequisite: FNCE 100
Activity: Lecture
0.5 Course Units

FNCE 387 ASP - Shareholder Activism
The aim of the course is to provide an introduction to shareholder activism. The course makes use of lectures and case studies. The lectures expose the students to the institutional and empirical facts as well as approaches followed by leading shareholder activists. The case studies are designed to provide students an experience on identifying potential opportunity for value creation through active engagement. Assignments require students to develop/practice skills on fundamental analysis.
Taught by: Professor Bilge Yılmaz and Kevin Kaiser
Course usually offered in spring term
Activity: Lecture
1 Course Unit

FNCE 391 Corporate Restructuring
This course familiarizes students with financial, strategic and legal issues associated with the restructuring of financially distressed firms. The objective is to give students tools necessary to deal with the often-complex situation facing a failing firm. The participants will gain a basic understanding of the various options available for distressed firms, such as out-of-court workouts, exchange offers, prepackaged and pre-negotiated bankruptcies, distressed asset sales, 363 auctions, and Chapter 11 reorganization. We will explore the difference between economic and financial distress, and the implications for the restructuring process. Since bankruptcy provides a threat point for any distressed restructuring, the course reviews key issues of the legal framework governing bankruptcy and reorganization in the U.S. and internationally. Finally, we will consider distressed debt as an asset class and develop techniques for investing in distressed securities. The course is case based, providing ample opportunity to practice valuation of distressed companies, and hosts several guest speakers from the restructuring industry. It should be of interest for a range of careers, including private equity, investment banking, and turnaround management.
Also Offered As: FNCE 891, LAW 908
Prerequisites: The prerequisites for this course are FNCE 203 or 726 Advanced Corporate Finance or FNCE 207 or 728 Corporate Valuation.
The purpose of the prerequisites is to ensure that students have a basic understanding of capital structure, and valuation methods, so that we spend more time on the nuances of distressed situations and less time on reviewing background material.
Activity: Lecture
1 Course Unit

FNCE 393 Policy Decisions by Central Banks: The Fed, the ECB and the BOI
Understanding and predicting central banking decision making and behavior is crucial for all market participants from asset managers and traders to private consumers. This course aims to provide the methods and knowledge on how central banks and governments think and implement policies to reach the goals of price and financial stability as well as support of growth and employment. The core of the course connects between the legal and actual goals that central banks follow and the related economic analysis on which these goals and policies are set. We explain the economic rationale for the policy prescriptions to reach the goals and how these policies are actually implemented by the Federal Reserve Bank (Fed) in the US, the European Central Bank (ECB), Bank of Israel (BOI) and some remarks on other countries. We use data, current events of the 2007-2018 period as the basis for discussion and assignments. All of these are aimed understanding how and why the Fed, the ECB and the BOI set their policies. For each we shall simulate in class current decisions based on assignment related to past policies and the theory presented in class.
Taught by: Professor Zvi Eckstein; Dean of Arison School of Business and Tiomkin School of Economics. Herzliya, Israel
Prerequisites: FNCE100, FNCE 101 and STAT101 or STAT 102
Activity: Lecture
0.5 Course Units
Notes: Requirements; Final examinations (55%-passing grade is required); two out of three assignments (cases) done by teams of 3-4 students (20%); one group participation (10%); active participation in class discussion (15%)
FNCE 395 Private Equity
The course will be a survey of the private equity asset class. Its objective is to provide an understanding of the concepts, agents, and institutions involved in the late stage corporate private equity market in the U.S. and around the globe. It will examine the buyout market and the activities of buyout funds from the differing perspectives of private equity investors, private equity fund sponsors, and managers of the portfolio companies. The course will be taught almost entirely with cases. Distinguished Wharton alumni in the private equity industry will be our guest speakers for many of the cases based on transactions they concluded. PLEASE NOTE: While this course is primarily intended for graduate students, admission may be granted to a limited number of interested undergraduate students. Be aware that this course may be recorded for live or subsequent distribution, display, broadcast, or commercialization in any media, including video, audio, or electronic media. For additional information, see the course syllabus or contact the department. This is a Pass/Fail course and will not count towards your concentration.
Also Offered As: FNCE 895
Prerequisites: FNCE 203-Advanced Corporate Finance and FNCE 251-Finance of Buyouts and Acquisitions or permission from the professor
Activity: Lecture
0.5 Course Units

FNCE 397 Finance In The Middle East & North Africa
This is a Wharton Global Modular Course on finance in the Middle East and North Africa. Its objective is to bring students, academics and industry experts together to study financial markets, practice, and institutions in this region.
Taught by: Professor Bulent Gultekin, Finance Department and Professor Michael J.T. McMillen, Penn Law School
Also Offered As: FNCE 897, WH 214
Activity: Lecture
0.5 Course Units
Notes: Course Format - This course will be taught through cases and lectures. Guest Lecturers - Distinguished practitioners will lecture and conduct case discussions. Our guest lecturers will bring their experience and insights to the classroom.

FNCE 399 Supervised Study in Finance
Integrates the work of the various courses and familiarizes the student with the tools and techniques of research.
Prerequisites: Senior standing, 3.4 grade point average. Must be supervised by a Standing Faculty member in the Finance Department.
Activity: Independent Study
1 Course Unit

FNCE 611 Corporate Finance
This course serves as an introduction to business finance (corporate financial management and investments) for both non-majors and majors preparing for upper-level course work. The primary objective is to provide the framework, concepts, and tools for analyzing financial decisions based on fundamental principles of modern financial theory. The approach is rigorous and analytical. Topics covered include discounted cash flow techniques; corporate capital budgeting and valuation; investment decisions under uncertainty; capital asset pricing; options; and market efficiency. The course will also analyze corporate financial policy, including capital structure, cost of capital, dividend policy, and related issues. Additional topics will differ according to individual instructors.
Also Offered As: FNCE 100
Prerequisites: ACCT 611, 612, 613; MGEC 612, 611; STAT 613, 621 prerequisite or concurrent.
Activity: Lecture
1 Course Unit

FNCE 612 Accelerated Corp Finance
This course is intended for students with prior knowledge of finance or with strong analytical backgrounds. Together with the pre-term preparation course (FNCE604) the foundation for subsequent courses in corporate finance, corporate valuation, investments, and financial derivatives. Its purpose is to develop a framework for analyzing a firm's investment and financial decisions. This course will start where FNCE604 ends. More precisely, it will provide an introduction to capital budgeting techniques under uncertainty, asset valuation, the operation and efficiency of capital markets, the optimal capital structure and dividend policy of the firm and options. In short, it will cover all the topics of a typical semester-long finance introductory class in six weeks. This course assumes that students are familiar with the material covered in FNCE 604. As a result, it is only available to those students who successfully passed the Finance Placement Exam at the end of the pre-term. This course is not suitable for students new to finance and with limited analytical backgrounds. This course is hard. The pace is fast and it requires a major investment of time and effort outside class.
Activity: Lecture
0.5 Course Units
Notes: Q-1 Half Semester course

FNCE 613 Macroeconomics and the Global Economic Environment
This course is required for all students except those who, having prior training in macroeconomics, money and banking, and stabilization policy at an intermediate or advanced level, can obtain a waiver by passing an examination. The purpose of FNCE 613 is to train the student to think systematically about the current state of the economy and macroeconomic policy, and to be able to evaluate the economic environment within which business and financial decisions are made. The course emphasizes the use of economic theory to understand the workings of financial markets and the operation and impact of government policies. Specifically, the course studies the determinants of the level of national income, employment, investment, interest rates, the supply of money, inflation, exchange rates, and the formulation and operation of stabilization policies.
Activity: Lecture
1 Course Unit
FNCE 614 Corporate Finance (Half CU)
This course serves as an introduction to corporate investments for non-majors. The primary objective is to provide a framework, concepts, and tools for analyzing financial decisions based on fundamental principles of modern financial theory. The approach is rigorous and analytical. Topics covered include discounted cash flow techniques, corporate capital budgeting and valuation, investment decisions under uncertainty, and capital asset pricing. This course will not cover the following topics included in FNCE 611, the full semester Corporate Finance course: market efficiency, corporate financial policy (including capital structure, cost of capital, dividend policy, and related issues), and options. Please Note: This course will not count towards the Finance Major. Format: Primarily lecture. Grading based on problem sets, one or two cases, and a final exam. Prerequisites: ACCT 611, 612, 613; MGEC 612, 611; STAT 613, 621; prerequisite or concurrent. Activity: Lecture 0.5 Course Units

FNCE 615 Macroeconomics and The Global Economic Environment (Half CU)
FNCE 615 Introduction To Macroeconomics and The Global Economic Environment (Half Cu) is intended for non-finance majors. It is a half-semester course in macroeconomics, with an emphasis on current events and policy applications. The goal of this course is to provide the foundation needed to recognize and understand broad economic and financial movements in the global economy. Key topics include national income accounting, production and economic growth, employment, business cycles, monetary and fiscal policy, and international finance. By the end of this course, students will be able to evaluate and discuss the global economic environment in which business and financial decisions are made. PLEASE NOTE: This course will not count towards a Finance Major. Prerequisite: FNCE 611 or FNCE 612 Activity: Lecture 0.5 Course Units

FNCE 717 Financial Derivatives
This course covers one of the most exciting yet fundamental areas in finance: derivative securities. In the modern financial architecture, financial derivatives can be the most challenging and exotic securities traded by institutional specialists, while at the same time, they can also be the basic securities commonly traded by retail investors such as S&P Index Options. Beyond trading, the basic ideas of financial derivatives serve as building blocks to understand a much broader class of financial problems, such as complex asset portfolios, strategic corporate decisions, and stages in venture capital investing. The global derivatives market is one of the most fast-growing markets, with over $600 trillion notional value in total. It is important as ever to understand both the strategic opportunities offered by these derivative instruments and risks they imply. The main objective of this course is to help students gain the intuition and skills on (1) pricing and hedging of derivative securities, and (2) using them for investment and risk management. In terms of methodologies, we apply the non-arbitrage principle and the law of one price to dynamic models through three different approaches: the binomial tree model, the Black-Scholes-Merton option pricing model, and the simulation-based risk neutral pricing approach. We discuss a wide range of applications, including the use of derivatives in asset management, the valuation of corporate securities such as stocks and corporate bonds with embedded options, interest rate derivatives, credit derivatives, as well as crude oil derivatives. In addition to theoretical discussions, we also emphasize practical considerations of implementing strategies using derivatives as tools, especially when no-arbitrage conditions do not hold. One term course offered either term Also Offered As: FNCE 206 Prerequisites: The following introductory Finance and Statistics courses are recommended but not required. FNCE 611 or FNCE 612, STAT 613, FNCE 613 may be taken concurrently. Activity: Lecture 1 Course Unit

FNCE 719 International Financial Markets
FNCE 719 is a course on international financial markets. Major topics include foreign exchange rates, international money markets, currency and interest rate derivatives (forwards, options, and swaps), international stock and bond portfolios, and cryptocurrencies. Students learn about the features of financial instruments and the motivations of market participants. The class focuses on risk management, investing, and arbitrage relations in these markets. One term course offered either term Prerequisites: The following introductory courses are recommended but not required. FNCE 611 (or FNCE 612), FNCE 613. Activity: Lecture 1 Course Unit
FNCE 720 Investment Management
This course studies the concepts and evidence relevant to the management of investment portfolios. Topics include diversification, asset allocation, portfolio optimization, factor models, the relation between risk and return, trading, passive (e.g., index-fund) and active (e.g., hedge-fund, long-short) strategies, mutual funds, performance evaluation, long-horizon investing and simulation. The course deals very little with individual security valuation and discretionary investing (i.e., “equity research” or “stock picking”).
One term course offered either term
Prerequisites: The prerequisites for MBA students are FNCE 611 or FNCE 612; and STAT 613 or STAT 621. Given that investment management requires one to analyze and deal effectively with uncertainty, a good grounding in statistics is essential, and familiarity with statistics should extend through multiple regression, covariance, and correlation.
Activity: Lecture 1 Course Unit

FNCE 721 Real Estate Investment: Analysis and Financing
This course provides an introduction to real estate with a focus on investment and financing issues. Project evaluation, financing strategies, investment decision making and real estate capital markets are covered. No prior knowledge of the industry is required, but students are expected to rapidly acquire a working knowledge of real estate markets. Classes are conducted in a standard lecture format with discussion required. The course contains cases that help students evaluate the impact of more complex financing and capital markets tools used in real estate. There are case studies and two mid-terms, (depending on instructor). Cross-listed with REAL 721.
Taught by: Ferreira, Handbury, Harari, Keys, Sinai, Wong
One term course offered either term
Also Offered As: REAL 721
Prerequisites: FNCE 611 or FNCE 612.
Activity: Lecture 1 Course Unit
Notes: Lecture with discussion required

FNCE 725 Fixed Income Securities
This course covers fixed income securities (including fixed income derivatives) and provides an introduction to the markets in which they are traded, as well as to the tools that are used to value these securities and to assess and manage their risk. Quantitative models play a key role in the valuation and risk management of these securities. As a result, although every effort will be made to introduce the various pricing models and techniques as intuitively as possible and the technical requirements are limited to basic calculus and statistics, the class is by its nature quantitative and will require a steady amount of work. In addition, some computer proficiency will be required for the assignments, although familiarity with a spreadsheet program (such as Microsoft Excel) will suffice.
Course usually offered in fall term
Prerequisites: FNCE 611 or FNCE 612 and STAT 613 or STAT 621
Activity: Lecture 1 Course Unit

FNCE 726 Advanced Corporate Finance
The objective of this course is to study the major decision-making areas of managerial finance and some selected topics in financial theory. The course reviews the theory and empirical evidence related to the investment and financing policies of the firm and attempts to develop decision-making ability in these areas. This course serves as an extension of FNCE 611. Some areas of financial management not covered in FNCE 611 are covered in FNCE 726. These may include leasing, mergers and acquisitions, corporate reorganizations, financial planning, and working capital management, and some other selected topics. Other areas that are covered in FNCE 611 are covered more in depth and more rigorously in FNCE 726. These include investment decision making under uncertainty, cost of capital, capital structure, pricing of selected financial instruments and corporate liabilities, and dividend policy.
One term course offered either term
Also Offered As: FNCE 203
Prerequisites: FNCE 611 or FNCE 612; and FNCE 613.
Activity: Lecture 1 Course Unit
Notes: Professor Opp’s sections cannot be taken Pass/Fail

FNCE 728 Corporate Valuation
The focus of this course is on the valuation of companies. The course covers current conceptual and theoretical valuation frameworks and translates those frameworks into practical approaches for valuing companies. The relevant accounting topics and the appropriate finance theory are integrated to show how to implement the valuation frameworks discussed on a step-by-step basis. The course teaches how to develop the required information for valuing companies from financial statements and other information sources in a real-world setting. Topics covered in depth include discounted cash flow techniques and price multiples. In addition, the course covers other valuation techniques such as leveraged buyout analysis.
Taught by: Professor Glode in the spring semester
One term course offered either term
Prerequisites: Minimum of normal first-year courses in accounting, economics, statistics, and FNCE 611 or 612; FNCE 613 (further coursework in financial accounting such as ACCT 742 is very useful).
Activity: Lecture 1 Course Unit
Notes: Professor Glode’s sections may not be taken Pass/Fail

FNCE 730 Urban Fiscal Policy
The purpose of this course is to examine the financing of governments in the urban economy. Topics to be covered include the causes and consequences of the urban fiscal crisis, the design of optimal tax and spending policies for local governments, funding of public infrastructures and the workings of the municipal bond market, privatization of government services, and public financial systems for emerging economies. Applications include analyses of recent fiscal crises, local services and taxes as important determinants of real estate prices, the infrastructure crisis, financing and the provision of public education, and fiscal constitutions for new democracies using South Africa as an example.
Taught by: Dr. Robert Inman
Course usually offered in fall term
Also Offered As: BEPP 773, REAL 730
Prerequisites: MGEC 621, FNCE 611
Activity: Lecture 1 Course Unit
Notes: Lectures. There is a mid-term and final exam.
FNCE 731 International Corporate Finance
This course analyzes financial problems corporations face that result from operating in an international environment. Major topics covered are corporate strategy and the decision to invest abroad, international portfolio diversification, managing exchange risk, taxation issues, cost of capital and financial structure in the multinational firm, and sources of financing. Departmental Website: https://fnce.wharton.upenn.edu/ Registration: Registration for MBA electives is handled through the MBA Course Auction. For questions about core courses or MBA electives that don’t appear in the course auction please contact the MBA Program Office. Non-MBAs interested in graduate classes must work through the academic department and the MBA Program Office.
Also Offered As: FNCE 208
Prerequisite: FNCE 611 or 612 - A thorough knowledge of Corporate Finance is assumed
Activity: Lecture
1 Course Unit

FNCE 732 International Banking
This course focuses on international financial institutions, especially the activities of global, systemically important banks. We will examine how current and historical events are reshaping the industry and highlight the basic analytics of managing a bank’s exposure to liquidity, credit, market and reputational risk. Most classes will begin with discussion of a current event related to course topics. Three team projects will be assigned that will give you deeper exposure to analytic techniques related to the course. Throughout the semester, we will discuss public policy issues facing the international financial system.
Taught by: Professor Richard Herring
Course usually offered in spring term
Prerequisites: FNCE 611 or 612; FNCE 613. One, but not both, can be taken concurrently.
Activity: Lecture
1 Course Unit

FNCE 738 Capital Markets
The objective of this course is to give you a broad understanding of the instruments traded in modern financial markets, the mechanisms that facilitate their trading and issuance, as well as, the motivations of issuers and investors across different asset classes. The course will balance functional and institutional perspectives by highlighting the problems capital markets participants are seeking to solve, as well as, the existing assets and markets which have arisen to accomplish these goals. We will consider design, issuance, and pricing of financial instruments, the arbitrage strategies which keep their prices in line with one another and the associated economic and financial stability issues. The course is taught in lecture format, and illustrates key concepts by drawing on a collection of case studies and visits from industry experts.
One-term course offered either term
Prerequisites: FNCE 611 or 612; and FNCE 613
Activity: Lecture
1 Course Unit

FNCE 739 Behavioral Finance
There is an abundance of evidence suggesting that the standard economic paradigm - rational agents in an efficient market - does not adequately describe behavior in financial markets. In this course, we will survey the evidence and use psychology to guide alternative theories of financial markets. Along the way, we will address the standard argument that smart, profit-seeking agents can correct any distortions caused by irrational investors. Further, we will examine more closely the preferences and trading decisions of individual investors. We will argue that their systematic biases can aggregate into observed market inefficiencies. The second half of the course extends the analysis to corporate decision making. We then explore the evidence for both views in the context of capital structure, investment, dividend, and merger decisions.
Course usually offered in spring term
Also Offered As: FNCE 239
Prerequisites: FNCE 611 or 612; and FNCE 613. Recommended:
FNCE 720 and FNCE 726.
Activity: Lecture
1 Course Unit

FNCE 750 Venture Capital and the Finance of Innovation
This course covers the finance of technological innovation, with a focus on the valuation tools useful in the venture capital industry. These tools include the "venture capital method" comparables analysis, discounted cash flow analysis, contingent-claims analysis. The primary audience for this course is finance majors interested in careers in venture capital or in R&D-intensive companies in health care or information technology.
Course usually offered in spring term
Prerequisites: FNCE 611 and FNCE 613 - FNCE 613 may be taken concurrently.
Activity: Lecture
1 Course Unit

FNCE 751 The Finance of Buyouts and Acquisitions
The focus of this course is on buying (or acquiring controlling stakes in) firms. The main topics to be covered are mergers and friendly acquisitions, hostile takeovers and buyouts. Using case studies, the course surveys the drivers of success in the transactions. While issues regarding motive and strategy will be discussed, financial theory would be the main lens used to view these control acquiring transactions. This will allow students to (1) evaluate transactions through valuation approaches and (2) structure deals employing financial innovation as a response to legal framework and economic frictions. This course should be of interest to students interested in pursuing careers as private equity investors, advisors in investment banking and corporate managers that deal with these issues. This course assumes familiarity with valuation analysis. During the spring semester students are not permitted to take this course pass fail.
Prerequisites: Pre-Requisites FNCE 611 and FNCE 613 (Or 612) - C0-Prerequisites FNCE 726 or FNCE 728 may be taken concurrently.
Activity: Lecture
1 Course Unit
FNCE 754 Impact Investing
This course explores Impact Investing, a discipline that seeks to generate social benefits as well as financial returns. From tiny beginnings, the Impact Investment space has expanded and now commands significant attention from policymakers, wealthy and public-spirited individuals, academia and, not least, the world’s largest asset managers and philanthropic foundations. Evangelists believe it may be the key to freeing the world from poverty. Skeptics think it will remain confined to the boutique. Regardless, Impact Investing is becoming a distinct career specialization for finance professionals despite the diverse skillset each must have and the uncertainty of the new field’s growth.
Taught by: Christopher Geczy, Ph.D.
Prerequisites: Prerequisites This course has no specific prerequisites, but given its wide-ranging subject matter, students will benefit from completion of any of the following Wharton courses:
FNCE 613 Macroeconomics and the Global Economic Environment;
FNCE 720 Investment Management; FNCE 738 Capital Markets;
and FNCE 895 Private Equity. Coursework or practical experience in microeconomics, development economics, international philanthropy, Non-Governmental Organizations, financial risk management and political risk analysis will also be useful.
Activity: Lecture 1 Course Unit

FNCE 756 Finance Energy
The objective of this course is to provide students with detailed knowledge of corporate structures, valuation methods, project finance, risk management practices, corporate governance issues, and geopolitical risks in the energy industry. In general, this course seeks to provide students with an overall context for understanding energy issues and risks, and how these might affect financing and investment decisions for both providers of energy and end-users of energy.
Taught by: Professor Erik Gilje
One-term course offered either term
Prerequisites: The prerequisites for the course are FNCE 726 Advanced Corporate Finance or FNCE 728 Corporate Valuation. Students who receive permission to enroll without the prerequisites are expected to review the relevant topics as necessary to meet the requirements of the class.
Activity: Lecture 1 Course Unit

FNCE 785 Business Strategy, Private Equity and Corporate Law
This course explores strategic, business and legal decision making in a fluid real world corporate context. Classes will cover a series of timely financial and legal subjects as well as case studies that deal with topical problems in corporate governance, investment strategy, executive compensation and potential corporate and criminal behavior. Press, public market reaction and governmental/political considerations will be integrated into the discussion. All students will be required to participate in one major team project. An equal number of graduate law and business students will participate. The instructor, a 26 year veteran and retired partner of the private equity firm KKR, is also an attorney and CPA.
Taught by: Perry Golkin
Also Offered As: LAW 542
Prerequisite: No Pre-Requisites
Activity: Lecture 1 Course Unit

FNCE 810 Structural Estimation in Corporate Finance
The main goal of the course is to teach students the tools needed to write a structural estimation research paper. Additional goals include the following: 1. Strengthen students’ ability to dissect, digest, and critique academic research. 2. Expose students to both classic and cutting-edge papers in the structural corporate finance literature. 3. Help students develop new research ideas in this area. We will take a practical, hands-on approach that focuses on tools. Topics will include simulation estimators, identification challenges, and a review of the literature. The class format will include lectures and discussions of recent papers. Assignments may include (but limited to) estimating a dynamic investment model, presenting and discussing papers, and writing a research proposal.
Taught by: Professor Luke Taylor
Prerequisites: I will assume that students know how to solve dynamic optimization problems, for example, by value function iteration. We will not review this topic in class, yet I will expect you to understand it. You probably learned this topic in an introductory macro PhD class, in John Zhu’s finance PhD class, or in Joao Gomes’s finance PhD class.
Activity: Lecture 0.5 Course Units

FNCE 811 Infrastructure Investing
The world economy runs on the infrastructure which has been built over the past 10,000 years. Each year, this infrastructure requires updating and new additions, from roads and bridges (the original infrastructure), to railroads, airports (the more recent infrastructure), to telecommunications and solar and wind power installations (modern infrastructure). There is a vast amount of public (i.e., taxpayer money directed by government officials) and private (i.e., individuals’ money typically managed on behalf and directed by private equity or banks into infrastructure investments). In this course, we will cover Infrastructure Financing and investing from various angles. We will provide descriptions of types of infrastructure, examine the financing needs of infrastructure projects, consider the historic role of government and non-government funding, and assess the changing needs of consumers and role of technology and the increasing demands posed by a globalizing economy. As private equity firms continue to build infrastructure funds, the need for, and role for private money continues to evolve, so we will also examine infrastructure investing as an alternative asset class from the investors’ perspective.
Taught by: Professor Kevin Kaiser
Prerequisites: FNCE 613 Corporate Finance; FNCE 728 is recommended but not required.
Activity: Lecture 0.5 Course Units

FNCE 883 Strategic Equity Finance
This course combines lectures and cases, and will go through actual situations where companies need to make strategic decisions on raising equity capital. We will address different phases of a company’s life cycle. Through these cases, from the decision-makers perspective, we will explore the different paths that can be taken and consider issues such as investor activism, governance and regulatory and valuation impact. FNCE 883 is a half semester course offered in Q3 of the spring semester.
Taught by: Professor David Musto and Professor David Erickson
Course usually offered in spring term
Prerequisite: FNCE 611 Corporate Finance
Activity: Lecture 0.5 Course Units
FNCE 884 ASP - Advanced Topics in Private Equity
This course will address a variety of applied topics in private equity (PE), with a focus on growth and later-stage buyout transactions (venture capital is not explicitly addressed in this course), and a primarily U.S.-centric view that should be largely applicable in other markets. In addition, the course will focus on the transaction stage of PE investing i.e., the art of the deal and mostly leave aside deal sourcing, portfolio management and investor relations. The goal of this course is to educate students about the substance, process and mechanics of PE investing, through the lens of the investment professionals, counterparties and advisors that drive transactions to completion. Course topics will address the entire deal process, and will include the following: Commercial Diligence (incl. financial modeling); Debt Financing; Accounting Diligence; Sales & Purchase Agreements; Comps Analysis; and Other Advisory Work. Throughout the course, students will learn about each element of the deal process through in-class lectures, while concurrently apply those learnings to a real-time mock deal, and preparing deal materials that mirror a real private equity transaction. The in-class lectures will cover both conceptual frameworks and real-world examples. FNCE 884-001 will be taught by Professor Bilge Yilmaz, Section 001 will contain six hours of material on how to execute the value creation plan post acquisition through an operational partner’s perspective. In balance, section 002 will be taught by Professor Bilge Yilmaz and David Bard, Senior Fellow and Lecture will spend more time on all other topics.
Taught by: Professor Bilge Yilmaz (yilmaz@wharton.upenn.edu) and David Bard
Prerequisites: Successful completion of core finance requirements, FNCE 611 and FNCE 613, as well as FNCE 726 or FNCE 751; special permission can also be requested based on relevant professional experience.
Activity: Lecture
1 Course Unit

FNCE 885 Fin-Tech
The course exposes students to this fast-growing and exciting intersection between finance (Fin) and technology (Tech) while emphasizing the role data and analytics play. The course is structured around three main FinTech areas: (i) Lending/Banking services, (ii) Clearing (iii) Trading. It provides specific coverage and examples of developments from(1) peer-to-peer lending, (2) blockchain and distributed ledgers, (3) networks and their use in trading, and (4) algo trading and its use of non-standard inputs. In each of these areas, we start by analyzing the marketplace, and the incumbents, and the business case and strategies of the incoming technology-based players, while understanding the role data and analytics play in driving the technology-based services. The course is built around a large number of examples and cases, guest lectures, student presentations, and group projects. Student are thus expected to work in teams and demonstrate a high level of independent learning and initiative.
Also Offered As: FNCE 385
Prerequisite: A thorough knowledge of FNCE 611 is assumed
Activity: Lecture
0.5 Course Units

FNCE 886 ASP - Hedge Funds
This course will cover critical aspects and characteristics of hedge funds and the hedge fund industry. It will look at the legal foundations and structures of hedge funds including the primary regulations in the U.S. and abroad that are most relevant for hedge funds. It will also present the major hedge fund strategies, describe operation, control, administration, due diligence and valuation issues. Performance evaluation and investing in hedge funds from the investor’s perspective will be discussed as will be issues of potential changes in regulation, risk management, and the use of leverage. The format of the course will mix lectures with presentations from industry participants, hedge fund managers, those who invest in hedge funds, those who advise them and provide services to them, and those who regulate them. Those who want to launch a hedge fund, join an existing one, invest in one, or provide services to one will want to register for this course.
Taught by: Professor Scott Richard
Prerequisite: FNCE 611 or FNCE 612
Activity: Lecture
0.5 Course Units

FNCE 887 ASP - Shareholder Activism
The aim of the course is to provide an introduction to shareholder activism. The course makes use of lectures and case studies. The lectures expose the students to the institutional and empirical facts as well as approaches followed by leading shareholder activists. The case studies are designed to provide students an experience on identifying potential opportunity for value creation through active engagement.
Assignments require students to develop/practice skills on fundamental analysis.
Taught by: Professor Bilge Yilmaz and Kevin Kaiser
Activity: Lecture
1 Course Unit

FNCE 891 ASP - Corporate Restructuring
This course familiarizes students with financial, strategic and legal issues associated with the restructuring of financially distressed firms. The objective is to give students tools necessary to deal with the often-complex situation facing a failing firm. The participants will gain a basic understanding of the various options available for distressed firms, such as out-of-court workouts, exchange offers, prepackaged and pre-negotiated bankruptcies, distressed asset sales, 363 auctions, and Chapter 11 reorganization. We will explore the difference between economic and financial distress, and the implications for the restructuring process. Since bankruptcy provides a threat point for any distressed restructuring, the course reviews key issues of the legal framework governing bankruptcy and reorganization in the U.S. and internationally. Finally, we will consider distressed debt as an asset class and develop techniques for investing in distressed securities. The course is case based, providing ample opportunity to practice valuation of distressed companies, and hosts several guest speakers from the restructuring industry. It should be of interest for a range of careers, including private equity, investment banking, and turnaround management.
Also Offered As: FNCE 391, LAW 908
Prerequisites: FNCE 611 or 612; FNCE 613; FNCE 726 and FNCE 728 or permission of the professor.
Activity: Lecture
0.5 Course Units
Notes: The course’s content will be presented using a mixture of lectures, case studies, and guest speakers. The speakers will be Wharton alumni with leadership roles in the restructuring industry as managers, advisors, and investors.
FNCE 893 Policy Decisions by Central Banks: The Fed, the ECB and the BOI
This course aims to provide the future global manager and financial analyst with the knowledge on policies set by central banks, regulators and governments to reach the goals of price and financial stability as well as support of growth and employment. The core of the course connects between the formal and actual goals that central banks follow and the related economic analysis on which the goals and the policies are set. We will explain the economic rationale for the policy prescriptions to reach the goals and how these are implemented using institutional framework in the US, the European Central Bank (ECB), Israel and remarks on other countries. We use data, current events and events of the 2007-2013 financial crisis as a basis for discussion and assignments. All these are aimed at understanding how and why the Federal Reserve of the US (the Fed), The bank of Israel (BOI) and the European Central Bank (ECB) set their policies and how that is related to academic research on these issues.
Taught by: Professor Zvi Eckstein; Dean and Professor, Th Arison School of Business And the Tiomkin School of Economics. Herzliya, Israel
Prerequisites: FNCE 611 or 612; FNCE 613; STAT 613.
Activity: Lecture
0.5 Course Units
Notes: Requirements; Final examinations (55% passing grade is required); two out of three assignments (cases) done by teams of 3-4 students (20%); one group participation (10%); active participation in class discussion (15%)

FNCE 895 Advanced Seminar in Private Equity
This course will be a survey of the private equity asset class. Its objective is to provide an understanding of the concepts, agents, and institutions involved in the late stage corporate private equity market in the U.S. and around the globe. It will examine the buyout market and the activities of buyout funds from the differing perspectives of private equity investors, private equity fund sponsors, and managers of the portfolio companies. The course will be taught almost entirely with cases. Distinguished Wharton alumni in the private equity industry will be our guest speakers for many of the cases based on transactions they concluded. While this course is primarily intended for graduate students, admission may be granted to a limited number of interested undergraduate students.
PLEASE NOTE: this course may be recorded for live or subsequent distribution, display, broadcast, or commercialization in any media, including video, audio, or electronic media. For additional information, see the course syllabus or contact the department. This is a Pass/Fail course and will not count towards your concentration.
Also Offered As: FNCE 395
Prerequisites: FNCE 726 and FNCE 751 or permission from the instructor.
Activity: Lecture
0.5 Course Units

FNCE 896 Finance in Europe
Also Offered As: WH 215
Activity: Lecture
0.5 Course Units

FNCE 897 Finance In The Middle East & North Africa
This is a Wharton Global Modular Course on finance in the Middle East and North Africa. Its objective is to bring students, academics and industry experts together to study financial markets, practice, and institutions in this region.
Taught by: Professor Bulent Gultekin, Finance Department and Professor Michael J.T. McMillen, Penn Law School
Also Offered As: FNCE 397, WH 214
Activity: Lecture
0.5 Course Units
Notes: Course Format - This course will be taught through cases and lectures. Guest Lecturers - Distinguished practitioners will lecture and conduct case discussions. Our guest lecturers will bring their experience and insights to the classroom.

FNCE 899 Independent Study Project in Finance
Independent Study Projects require extensive independent work and a considerable amount of writing. ISP in Finance are intended to give students the opportunity to study a particular topic in Finance in greater depth than is covered in the curriculum. The application for ISP’s should outline a plan of study that requires at least as much work as a typical course in the Finance Department that meets twice a week. At a minimum, we need a description of the methodology you intend to employ, a bibliography and description of the data that you will use as well as a list of interim deliverables and dates to ensure that you complete the project within the semester. Applications for FNCE 899 ISP’s will not be accepted after the THIRD WEEK OF THE SEMESTER. You must submit your Finance ISP request using the Finance Department’s ISP form located at https://fnce.wharton.upenn.edu under the Course ISP section
Prerequisites: FNCE 899, ISP’s must be supervised by a Standing Faculty member of the Finance Department.
Activity: Independent Study
1 Course Unit

FNCE 911 Financial Economics
The objective of this course is to undertake a rigorous study of the theoretical foundations of modern financial economics. The course will cover the central themes of modern finance including individual investment decisions under uncertainty, stochastic dominance, mean variance theory, capital market equilibrium and asset valuation, arbitrage pricing theory, option pricing, and incomplete markets, and the potential application of these themes. Upon completion of this course, students should acquire a clear understanding of the major theoretical results considering individuals’ consumption and portfolio decisions under uncertainty and their implications for the valuation of securities.
Course usually offered in fall term
Prerequisites: ECON 681 or ECON 701, Matrix Algebra, and Calculus
Activity: Lecture
1 Course Unit
FNCE 912 Corporate Finance and Financial Institutions
This course provides students with an overview of the basic contributions in the modern theory of corporate finance and financial institutions. The course is methodology oriented in that students are required to master necessary technical tools for each topic. The topics covered may include capital structure, distribution policy, financial intermediation, incomplete financial contracting, initial and seasoned public offerings, market for corporate control, product market corporate finance interactions, corporate reorganization and bankruptcy, financing in imperfect markets, security design under adverse selection and moral hazard, and some selected topics.
Course usually offered in spring term
Prerequisite: ECON 681 or ECON 701
Activity: Lecture
1 Course Unit

FNCE 921 Introduction to Empirical Methods in Finance
This course is an introduction to empirical methods commonly employed in finance. It provides the background for FNCE 934, Empirical Research in Finance. The course is organized around empirical papers with an emphasis on econometric methods. A heavy reliance will be placed on analysis of financial data.
Course usually offered in spring term
Prerequisites: FNCE 911 (can be taken concurrently), STAT 510 and 511 or equivalent.
Activity: Lecture
1 Course Unit

FNCE 922 Continuous-Time Financial Economics
This course covers some advanced material on the theory of financial markets developed over the last two decades. The emphasis is on dynamic asset pricing and consumption choices in a continuous time setting. The articles discussed include many classical papers in the field as well as some of the most recent developments. The lectures will emphasize the concepts and technical tools needed to understand the articles.
Course usually offered in fall term
Prerequisites: FNCE 911, ECON 701, ECON 703. (Graduate level knowledge of analysis and statistics is highly recommended but not required)
Activity: Lecture
1 Course Unit

FNCE 923 Financial Economics Under Imperfect Information
This course covers General equilibrium and rational expectations, foundations of the theory of information; learning from prices in rational expectations equilibrium models, moral hazard, adverse selection, and signalling Bidding theories.
Course not offered every year
Prerequisite: FNCE 922
Activity: Lecture
1 Course Unit

FNCE 924 Intertemporal Macroeconomics and Finance
This is a doctoral level course on macroeconomics, with special emphasis on intertemporal choice under uncertainty and topics related to finance. Topics include: optimal consumption and saving, the stochastic growth model, q theory of investment, (incomplete) risk sharing and asset pricing. The course will cover and apply techniques, including dynamic programming, to solve dynamic optimization problems under uncertainty. Numerical solution methods are also discussed.
Course usually offered in spring term
Prerequisite: FNCE 911
Activity: Lecture
1 Course Unit

FNCE 925 Topics In Asset Pricing
This course exposes student to recent development in the asset pricing literature. The starting point for the course is the standard neo-classical rational expectations framework. We will then investigate where this framework has succeeded and where it has not. Recently documented deviations from the framework in the literature are discussed and placed in context. The course will also focus on hypothesis development, recent research methods, and research writing. The ultimate objective is for students to develop their own hypotheses and research ideas, resulting in a paper.
Course not offered every year
Prerequisites: ECON 681 or ECON 701 and Calculus. FNCE 911 is recommended.
Activity: Lecture
1 Course Unit

FNCE 926 Empirical Methods in Corporate Finance
The course will cover a variety of microeconomic models and methods including panel data models, program evaluation methods, e.g. difference in differences, matching techniques, regression discontinuity design? instrumental variables, duration models, structural estimation? e.g. simulated methods of moments?. The structure of the course consists of lectures, student presentations, and empirical exercises. I will utilize published studies in a variety of fields such as corporate finance, labor economics, and industrial organization to illustrate the various techniques. The goal of the course is to provide students with a working knowledge of various econometric techniques that they can apply in their own research. As such, the emphasis of the course is on applications, not theory.
Course usually offered in fall term
Prerequisites: STAT 521 - Students are required to have taken a graduate sequence in Econometrics, you should be comfortable with econometrics at the level of William Greene's "Econometric Analysis of Cross-Section and Panel Data".
Activity: Lecture
1 Course Unit
FNCE 928 Methods In Finance Theory
This doctoral level course introduces students to game theory and continuous-time methods. Both techniques represent fundamental approaches to organizing, modeling and understanding complex financial phenomena. The game theory half will cover equilibrium concepts, moral hazard, signaling and screening. Highlights include rigorous formulations and analyses of the perfect Bayesian equilibrium concept and the principal-agent relationship. Both ideas are central to theories of corporate finance and financial markets - subjects that the students will be exposed to in the spring. The continuous-time methods half will cover basic stochastic calculus and applications to capital structure, Merton’s consumption portfolio, and problem and optimal contracts.
Taught by: PROFESSOR YIRAN JOHN ZHU
Course usually offered in spring term
Prerequisites: Some mathematical sophistication. A familiarity with the basic principles of microeconomics is useful but not required.
Activity: Lecture
1 Course Unit

FNCE 932 Topics In Corporate Finance
This course covers Advanced theory and empirical investigations; financial decisions of the firm, dividends, capital structure, mergers, and takeovers.
Course not offered every year
Prerequisites: FNCE 911, FNCE 921, or permission of instructor.
Activity: Lecture
1 Course Unit

FNCE 934 Empirical Methods In Asset Pricing
This course has three main objectives: The first object is to introduce students to the fundamental works and the frontier of research in dynamic asset pricing. We will cover recent models that have been proposed to shed light on intriguing and important empirical patterns in the cross section and in the time series. Topics include non-separable utilities, market incompleteness, learning, uncertainty, differences of opinions, ex-ante and ex-post asymmetric information, ambiguity and Knightian uncertainty. The second objective is to teach students how to think of asset pricing research under a bigger or richer framework. We shall focus on the interactions between asset pricing and other fields such as macroeconomics, corporate finance, financial institutions, and international finance. The goal of investigating the joint dynamics is not only to better understand how asset prices are determined, but also (maybe more importantly) how would asset pricing dynamics affect other important economic questions such as investment, corporate payout and financing, unemployment, risk sharing, and international capital flows. Students will learn production-based asset pricing models, particularly the asset pricing models with investment-specific technology shocks, risk shocks, financial friction, searching frictions and information frictions. Of course, the advanced solution methods will focus too. The third objective is to introduce advanced empirical methods to analyze the data and the quantitative dynamic models. It includes how to estimate structural dynamic models, how evaluate structural models beyond goodness-of-fit tests, how confront the models predictions with empirical data by simulation and re-sampling techniques, and how to efficiently test models and explore new patterns using asset pricing and macro data.
Course usually offered in fall term
Prerequisites: FNCE 911 and FNCE 921
Activity: Lecture
1 Course Unit

FNCE 937 Topics in Macro Finance
This is an advanced course in quantitative theory applied to macro and finance models. It is intended for doctoral students in finance, economics and related fields. The course focuses on four broad theoretical literatures: (i) firm investment and growth; (ii) corporate, household and sovereign debt; (iii) asset pricing in general equilibrium; and (iv) equilibrium macro models with a financial sector. My approach is to develop and discuss in detail a unified framework that is suited to address most topics, usually covering a few central topics and the core papers. We then discuss the more recent literature, highlighting how authors combine and expand upon the core ideas. This part of the course usually relies on regular student presentations.
Course usually offered in fall term
Prerequisite: FNCE 911
Activity: Lecture
1 Course Unit

Fine Arts (FNAR)

FNAR 061 Video I
In this studio based course, students are introduced to video production and postproduction as well as to selected historical and theoretical texts addressing the medium of video. Students will be taught basic camera operation, sound recording and lighting, as well as basic video and sound editing and exporting using various screening and installation formats. In addition to a range of short assignment-based exercises, students will be expected to complete three short projects over the course of the semester. Critiques of these projects are crucial to the course as students are expected to speak at length about the formal, technical, critical and historical dimensions of their works. Weekly readings in philosophy, critical theory, artist statements and literature are assigned. The course will also include weekly screenings of films and videos, introducing students to the history of video art as well as to other contemporary practices. If you need assistance registering for a closed section, please email the department at fnar@design.upenn.edu
For BA Students: Humanities and Social Science S
One term course offered either term
Also Offered As: CIMS 061, FNAR 661, VLST 261
Activity: Seminar
1 Course Unit

FNAR 062 Video II
Video II offers opportunities to further explore the role of cinematic narrative technique, non-narrative forms, digital video cinematography, editing, and screen aesthetics. Through a series of several video projects and a variety of technical exercises, students will refine their ability to articulate technically and conceptually complex creative projects in digital cinema. In addition, one presentation on a contemporary issue related to the application of cinematic storytelling and/or the cultural context of digital video is required.
One term course offered either term
Also Offered As: CIMS 062, FNAR 662
Prerequisite: FNAR 061
Activity: Seminar
1 Course Unit
FNAR 063 Documentary Video
Documentary Video is an intensive production course involving the exploration of concepts, techniques, concerns, and aesthetics of the short form documentary. Building on camera, sound, and editing skills acquired in Video I, students will produce a portfolio of short videos and one longer project over the course of the semester using advanced level camera and sound equipment. One short presentation on a genre, technique, maker, or contemporary concern selected by the student is required.

Course usually offered in fall term
Also Offered As: CIMS 063, FNAR 663
Prerequisite: FNAR 061
Activity: Seminar
1 Course Unit

FNAR 065 Cinema Production
This course focuses on the practices and theory of producing narrative based cinema. Members of the course will become the film crew and produce a short digital film. Workshops on producing, directing, lighting, camera, sound and editing will build skills necessary for the hands-on production shoots. Visiting lecturers will critically discuss the individual roles of production in the context of the history of film.

Course usually offered in fall term
Also Offered As: CIMS 065, FNAR 665
Prerequisite: FNAR 061
Activity: Seminar
1 Course Unit

FNAR 067 Advanced Video Projects
This course is structured to create a focused environment and support for individual inquiries and projects. Students will present and discuss their work in one to one meetings with the instructor and in group critiques. Readings, screenings, and technical demonstrations will vary depending on students’ past history as well as technical, theoretical, and aesthetic interests.

Course not offered every year
Also Offered As: FNAR 667
Prerequisite: FNAR 061
Activity: Seminar
1 Course Unit

FNAR 070 Film Sound: History, Aesthetics and Subversion
Sound and Image as experienced in the cinema, are not divisible. One perception influences the other, and transforms it. While a preexisting harmony between these two senses may exist, its conventions are subject to manipulation and the whims of subversion. Film Sound tracks the technological and aesthetic history of sound for film including psychoacoustics, dialogue, music, sound fx and audio’s gradual and triumphant march towards fidelity, stereo and surround sound. This lecture course, through an historical and pedagogical romp loaded with examples throughout film history and visits by lauded audio professionals from the film world, seeks to instruct students to engage in the process of sound perception, gaining an appreciation for the art of sound as it relates to the varied phenomenological dimensions of that unique audio-visual encounter we call movies.

Taught by: Novack
One-term course offered either term
Also Offered As: CIMS 070, FNAR 671
Activity: Seminar
1 Course Unit

FNAR 073 Machine for Seeing: Architecture and the Moving Image
Architecture’s relationship with cinema was established with the very first motion picture. In Sortie de l’usine Lumière de Lyon by Auguste and Louis Lumière we see a didactic presentation of film titles as workers from the Lumière brother’s factory stream forth from its interior at days end. In many ways the context of the film is its subject as well. The title of the class plays on Le Corbusier’s maxim that architecture is machine for living and perhaps cinema is simply a machine for helping us understand the vast construct of our built environment. A device, which allows us to imagine even greater follies or more importantly to think critically about architecture’s relationship with and impact on society. Readings, screenings, discussions and critiques make up the curriculum along with studio time. Students will produce their own film and we will look at films produced by a range of practitioners: From architects speculating on the nature of and use of public space and urban development to documentarians researching the pathologies of neo-liberalism and its effect on the privatization of space. We will also look at the work of artists who engage with the poetics of space and who unpack the conflicted legacies of the built environment.

Taught by: Hartt
Course usually offered in spring term
Also Offered As: FNAR 673
Prerequisite: FNAR 061
Activity: Studio
1 Course Unit

FNAR 074 A Virus in the Culture: Social Critique in Media Arts
In order to change the world, we must first learn how to infect it. A Virus in the Culture is a studio class that examines and generates various forms of media resistance to dominant hegemonic systems of power and control. Using filmmaking, publication design and interactive media we’ll think through and develop responses to some of the most pressing issues facing us today. We’ll look at historical models from the agitprop design work of Gee Vaucher for Anarcho-punk band Crass to Chris Marker’s film Le Fond de L’Air Est Rouge, a radical analysis of global social and political turmoil in the late 60s and early 70s. We’ll also look at experimental contemporary design firms like Metahaven who question the role of designers and filmmakers today - By-passing the power dynamics of clients and briefs they took it upon themselves to create a graphic identity for WikiLeaks. Each example broadens the definition and possibilities of practice to create a more porous engagement with audiences and users while informing the practice of social critique today. Considering a diverse range of topics from education policy, to the rights of environmental refugees, we’ll use the class to workshop a singular comprehensive project that targets researches and responds to a specific contested position. The outcome of which will be a class produced short film, publication and website that unpacks the social, cultural, and economic complexities of our subject. This class is co-taught by David Hartt, an artist and filmmaker along with graphic designer, Mark Owens. Reading, screenings, discussions and critiques make up the curriculum along with studio time. While the focus of this course is not technical, prior knowledge of design programs, camera functions, and post-production techniques is expected.

Taught by: David Hartt and Marks Owens
Course usually offered in fall term
Also Offered As: FNAR 674
Prerequisite: FNAR 061 or permission from instructor
Activity: Studio
1 Course Unit
FNAR 075 Image and Sound Editing
This course presents an in-depth look at the storytelling power of image and sound in both narrative and documentary motion pictures. Students apply a theoretical framework in ongoing workshops, exploring practical approaches to picture editing and sound design. Students edit scenes with a variety of aesthetic approaches, and create story-driven soundtracks with the use of sound FX, dialogue replacement, Foley, music and mixing. Students not only learn critical skills that expand creative possibilities, but also broaden their understanding of the critical relationship between image and sound.
Course usually offered in spring term
Also Offered As: CIMS 075, FNAR 675
Prerequisite: FNAR 061
Activity: Seminar
1 Course Unit

FNAR 083 Performance/Camera: Performance and-with-through-for Cameras
This intermediate course will explore the wide and expansive territories of art-making that exist between live performance and mediated image making—both still and moving. For much of the 21st century, the mediums of performance, video and photography have been weaving in and out of contact. Performance is known and understood largely through its documentation: sometimes voluminous and sometimes little more than a single photograph. On the other side, video, film and photography each developed through widespread explorations that were deeply entwined with the “capturing” of bodies on film. Using photography, video and performance in equal parts, the course is a hands-on exploration of this capacious terrain. The course will be structured by a series of biweekly assignments that allow for individual and collective production. The course will also include a regular schedule of short readings and presentations/screenings of existing works.
Taught by: Hayes, Sharon
Course usually offered in fall term
Also Offered As: FNAR 583
Prerequisites: FNAR 061, FNAR 340 or Permission of Instructor
Activity: Studio
1 Course Unit

FNAR 085 Performance Studio
This course supports the individual and collaborative production of performance works. As the medium of performance consists of diverse forms, actions, activities, practices and methodologies, the course allows for an open exploration in terms of material and form. Students are invited to utilize technologies, materials and methodologies from other mediums and/or disciplines such as video, photography, writing and sound. In addition to the production component, the course will examine multiple histories of performance through readings, screenings and directed research.
Taught by: Hayes
Course usually offered in spring term
Also Offered As: FNAR 585
Prerequisites: One previous studio course (such as FNAR 123, FNAR 145, FNAR 150, or FNAR 061) or permission from instructor.
Activity: Studio
1 Course Unit

FNAR 100 Knowing the Contemporary Art World
This course introduces the student to the world of contemporary art, as it is comprised by a global community of leading artists, curators, writers, art historians and collectors within a network of galleries, museums and other institutional contexts. Contemporary art has become an increasingly important marker of a city (and nation's) economic development. According to economist and social scientist Richard Florida, contemporary art activity is an expression of a city's Creative Class, the generators of cultural and economic innovation. But what exactly is this world of contemporary art? The course begins by distinguishing between modern and contemporary art. There will be a teasing out of the issues from modern art that remain unresolved for contemporary art. Students will study the key pre-occupations that are spurring much contemporary art production, including issues relating to identity in the age of globalization. A question that will be studied in this course relates to the ways in which artists have responded to dominant narratives of globalization. Additionally, another important question would look into how the artist's role has changed in the new globalized context of art production and circulation (including the rise of the art biennale.) Taking this course, students gain understanding into the constitution and of the contemporary art world and the key issues at play within it. There will be several trips to exhibitions to be announced.
One-term course offered either term
Activity: Seminar
1 Course Unit

FNAR 123 Drawing I
This course is designed to develop visual awareness and perceptual acuity through the process of drawing. Students learn to sharpen perceptual skills through observational drawing and to explore the expressive potential of drawing. A variety of problems and media will be presented in order to familiarize students with various methods of working and ways of communicating ideas visually. Subject matter will include object study, still life, interior and exterior space, self-portrait and the figure. Different techniques and materials (charcoal, graphite, ink, collage) are explored in order to understand the relationship between means, material and concept. Critical thinking skills are developed through frequent class critiques and through the presentation of and research into historical and contemporary precedent in drawing. If you need assistance registering for a closed section, please email the department at fnrug@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 523, VLST 253
Activity: Studio
1 Course Unit
FNAR 124 Drawing Investigations
Drawing is a fundamental means of visualization and a hub for thinking, constructing, and engaging in a wide variety of creative activities and problem solving. This studio class explores drawing in both its traditional and contemporary forms. The projects are designed to help students in all disciplines find ways express and clarify their ideas through the process of drawing. The semester begins with the refinement of perceptual skills acquired in Drawing 1, while encouraging experimentation through the introduction of color, abstract agendas, conceptual problem solving, and collaborative exercises, as well as new materials, techniques and large format drawings. Particular attention is given to ways to conduct visual research in the development of personal imagery. Assignments are thematic or conceptually based with ample opportunity for individual approaches to media, subject, scale and process. The goal is to strengthen facility, develop clarity in intent and expand expression. Attention is paid to the development of perceptual sensitivity, methods of image construction, and the processes of synthesis and transformation in order to communicate ideas through visual means. Recommended for students in all areas.
One-term course offered either term
Also Offered As: FNAR 524
Prerequisite: FNAR 123
Activity: Studio
1 Course Unit

FNAR 126 Sequential Drawing
Sequential drawing instructs in the visualization of story telling through the exploration of visual narrative components (visual iconography, panel-to-panel transition types, picture/word relations) and their application to a narrative through the use of formal drawing techniques (composition, color, perspective, line, form). The class begins with various exercises in paneling, pacing and style development, and concludes with the student applying the concepts and techniques they’ve acquired to the creation of a graphic novel.
Course usually offered in spring term
Also Offered As: FNAR 526
Prerequisite: FNAR 123
Activity: Studio
1 Course Unit

FNAR 130 Writing on the City: Letterforms, Technology and Philadelphia Culture
This seminar explores the rich history of writing and typography from colonial to contemporary Philadelphia through primary source research at the city’s many libraries and collections and through direct engagement with professional designers, crafts workers, and manufacturers. The course will be divided into two parts. The first phase will be devoted to information gathering: lectures, readings, and visits, including presentations, demonstrations, and hands-on research. Students will keep a journal of their inquiries and regularly share their insights during class sessions, developing a plan for final documentation. In the second phase students will synthesize and distill their research, developing theories, defining individual and group projects, and collectively writing, designing, and publishing a public framework (web/print/exhibition, etc.) to chronicle their scholarship.
Taught by: Comberg
Course usually offered in fall term
Activity: Seminar
1 Course Unit

FNAR 142 3-D Design
Students will make work that draws from and interacts with the three-dimensional world we live in. Formal strategies will explore principles of organization. Planar construction, modeling and assemblage methods will be used for investigations spanning from bas-relief to environmental art. This is a "team by doing" process with no prerequisites.
One-term course offered either term
Also Offered As: FNAR 542
Activity: Studio
1 Course Unit

FNAR 145 Sculpture Practices
As an introduction to traditional and contemporary three-dimensional practice, this course is concerned with the concepts and methodologies surrounding three-dimensional art making in our time. Students experiment with a variety of modes of production, and develop some of the fundamental techniques used in sculpture. In addition to these investigations, assignments relative to the history and social impact of these practices are reinforced through readings and group discussion. Processes covered include use of the Fab Lab, wood construction, clay, paper, mixed media, and more. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 545, VLST 252
Activity: Studio
1 Course Unit

FNAR 147 Advanced Sculpture: Installation & Interventions
In this course students will create sculptural installations and spatial interventions that explore site specificity and architectural environments. A range of traditional sculptural materials and techniques will be investigated along with more ephemeral interventions in space such as sound, light, and projection. Through lectures, readings, and critiques, students will explore the history of installation and interactive sculptural work and develop self-directed projects that interrogate historical, social, and psychological conditions of the built environment.
Also Offered As: FNAR 607
Prerequisite: FNAR 145 Sculpture Practices
Activity: Studio
1 Course Unit

FNAR 148 Clay Practices
This course introduces clay as a sculptural medium through fundamental clay-building techniques, mold making, model making, and casting. Through experimentation with these methods, this course promotes an understanding of materials, processes, visual concepts and techniques for creating three-dimensional forms in space. In addition to using different water-based clays and plaster, other materials such as wax, plastilene, paper pulp, and cardboard will be explored. Students will explore the full range of clay’s capabilities and its role in contemporary art through lectures, readings, demonstrations, and assignments that incorporate conceptual and technical issues.
Also Offered As: FNAR 508
Activity: Studio
1 Course Unit
FNAR 150 Photography Practices
This course is an introduction to the basic principles, strategies and processes of photographic practice. It is designed to broaden the student's aesthetic explorations and help the student develop a visual language based on cross-disciplinary artistic practice. Through a series of projects and exercises, students will be exposed to a range of camera formats, techniques and encouraged to experiment with the multiple modes and roles of photography—both analogue and digital. Attention will also be given to developing an understanding of critical aesthetic and historical issues in photography. Students will examine a range of historical and contemporary photography as an essential part of understanding the possibilities of image making. This course is primarily for freshmen and sophomores. If you need assistance in registering for a closed section, please email the department at fnarug@design.upenn.edu.

FNAR 177 On Thoughts Occasioned By
The Essay Film is an important tradition within the various genres that constitute the field of Film and Video Art. Through the element of time it differentiates itself from its literary and photographic antecedents. It borrows selectively from both narrative fiction and documentary—highly subjective and occasionally poetic but without perhaps the burden of truth. The Essay Film is an attempt to dimensionalize our experience of the world and our place in it. It represents an argument, a meditation, a critical engagement with a place, a time or a subject. This is a combination seminar/studio course. Through readings, screenings and discussions, students will gain an historical perspective on the genre. The core assignment is for each student to complete a short film (20 minutes max.) in the tradition of the Essay Film.

Taught by: Hart/Corrigan

Also Offered As: ENGL 257, FNAR 677
Activity: Seminar
1 Course Unit

FNAR 220 Producing Ephemera: Letterpress, Risograph, Inkjet, Xerox
This studio course introduces students to the world of printmaking and circulation through techniques in letterpress and Risograph (a high-speed digital printing system developed in Japan in the 1980s), in addition to Xerox, laser, inkjet, and off-set printing, focusing particularly on the format of prints, artists' ephemera, and the role of ephemera in understanding culture. Students will create their own broadsides, flyers, announcement cards, and independent publications throughout the course, exploring ways in which artists, designers, musicians, and activists make or have made use of the print to disseminate information; initiate happenings; advertise events; or format change. Students will learn about some of the most significant producers working within this realm—from Conceptualists to punk bands—and develop skills in page layout, typography, and design; mechanized and hand-pulled press operations; and digital to analog pre-press and post-print production methods.

This course is designed for highly motivated students and requires out-of-class time commitment. However, no prior coursework is required. Students from all levels and backgrounds are encouraged to register. The course employs collaborative and self-directed approaches to learning to enhance students' understandings of ways in which print media and multiples serve as vital conduits for disseminating ideas involving visual art, popular culture, literature, politics, performance and many other topics students wish to explore.

Taught by: Romberger

Course usually offered in fall term
Also Offered As: FNAR 620
Activity: Studio
1 Course Unit

FNAR 221 Histories of Print: Reimagining the Archive
What can history tell us about the present? How do archives teach us about the future? Printing has long been at the center of political, social, and economic shifts, as well as a form used by artists, writers, designers, and cultural producers. Utilizing readings, films, field trips, independent research, and discussions, students will learn about the history of letterpress printing and its historically complex relationship with power and technological innovation. This studio/seminar examines the act of printing as a way to expand the boundaries of language and image-making, questioning both historic and contemporary approaches. Class readings spanning multiple perspectives on the history of print, access to rare archives, and the use of historic printing equipment will inform studio-based projects and writing assignments throughout the semester.

This course will meet in the Fisher Fine Arts Library. The Common Press is an interdisciplinary initiative between the Kelly Writers House, the Kislak Center for Special Collections, Rare Books and Manuscripts, and the Fine Arts program within PennDesign; it encourages collaboration with an emphasis on letterpress, and cross-disciplinary approaches to writing and image-making.

Taught by: Neff

Course usually offered in spring term
Also Offered As: FNAR 521
Activity: Studio
1 Course Unit
FNAR 222 The Big Picture: Mural Arts in Philadelphia
The history and practice of the contemporary mural movement couples step by step analysis of the process of designing with painting a mural. In addition students will learn to see mural art as a tool for social change. This course combines theory with practice. Students will design and paint a large outdoor mural in West Philadelphia in collaboration with Philadelphia high school students and community groups. The class is co-taught by Jane Golden, director of the Mural Arts Program in Philadelphia, and Shira Walinsky, a mural arts painter and founder of Southeast by Southeast project, a community center for Burmese refugees in South Philadelphia.

Also Offered As: FNAR 622, URBS 322
Activity: Seminar
1 Course Unit

FNAR 227 Writing with Pictures: Children's Picture Books
A children's picture book is a unique book form in that it is written with pictures. Words, if used at all, serve to illustrate what the picture cannot say. In this course students will learn the complexities of designing what looks to be, a simple picture book for children. Visualizing the story begins with both writing and drawing prompts, image collecting, and exposure to a range of children's literature. Students will learn to sequence a main character and an environment into a storyboard through stages of changes towards a resolution. By the end of the semester students will have a good understanding of how a picture book works, with a personal "dummy" book well on its way. This course will include two guest artists.
Taught by: Edgerton
One term course offered either term
Activity: Studio
1 Course Unit

FNAR 231 Painting Practices
Painting practices is an introduction to the methods and materials of oil painting. This course begins with an investigation of color and color relationships. The beginning of the semester will cover technical issues and develop the student's ability to create a convincing sense of form in space using mass, color, light and composition. The majority of work is from direct observation including object study, still life, landscape, interior and exterior space and the self portrait. Class problems advance sequentially with attention paid to perceptual clarity, the selection and development of imagery, the process of synthesis and translation, color, structure and composition, content and personal expression. Students will become familiar with contemporary and art historical precedent in order to familiarize them with the history of visual ideas and find appropriate solutions to their painting problems.
One term course offered either term
Also Offered As: FNAR 531
Prerequisite: FNAR 123
Activity: Studio
1 Course Unit

FNAR 232 Painting Studio
Painting Studio presents an ongoing exploration of the techniques, problems and poetics of painting, the nuances of the painting language, and the development of a personal direction. A wide variety of problems will address such issues as color, composition, and the development of imagery, process, and content. Students are expected to improve in technical handling of paints and move towards developing personal modes of seeing, interpreting, and thinking for themselves. This course introduces different topics, strategies and individual challenges each semester, so it may be repeated with advanced course numbers.
One term course offered either term
Also Offered As: FNAR 532
Prerequisite: FNAR 231
Activity: Studio
1 Course Unit
Notes: This course can be continued by registering for FNAR 333 Painting Studio (II), and FNAR 334 Painting Studio (IV).

FNAR 233 Digital Illustration
Digital illustration is a course designed to expose students to the diverse techniques and approaches used in creating digital illustration for print publication. Course assignments will include two-dimensional animation, storyboarding, figure illustration, technical diagram illustration, photographic retouching and enhancing. Digital applications will include morphing with layers, surface cloning, three-dimensional modeling and spatial transformation of scenes and objects. Students completing this course will possess the capability to design and plan creatively and skillfully execute finished artwork.
One term course offered either term
Also Offered As: FNAR 633
Prerequisites: FNAR 264 and FNAR 123
Activity: Studio
1 Course Unit

FNAR 234 Art of the Web: Interactive Concepts for Art & Design
Art of the Web: Interactive concepts for art and design is a first step in learning how to create, analyze and discuss interactive content, as a visual creator. It is an exploration of the culture of the internet, the ideas behind its quirks, the dreams and freedoms it encapsulates, and the creative power it gives to us. Students will be assigned projects that will challenge their current understanding of the web, and the ways it shapes human connectivity and interaction. Upon completion of this course, students will possess a working knowledge how to organize and design websites and learn to critique web-content including navigation, UX design and information architecture. The course will require analytical and conceptual skills and foster creative thinking.
One term course offered either term
Also Offered As: FNAR 634
Prerequisite: FNAR 264
Activity: Studio
1 Course Unit
FNAR 235 3-D Computer Modeling
Students will develop a comprehensive knowledge of how virtual worlds are constructed using contemporary computer graphics technique with a fine arts perspective. The course will offer the opportunity to explore the construction, texturing, and rendering of forms, environments, and mechanisms while conforming to modeling specifications required for animation, real-time simulations or gaming environments, and rapid prototyping.
One term course offered either term
Also Offered As: FNAR 635
Prerequisites: FNAR 123 and FNAR 264
Activity: Studio
1 Course Unit

FNAR 236 Digital Figure Modeling
This course introduces methods of modeling, texturing, and rendering human and animal figures. Students will study anatomical bone and muscle structures, and then employ this knowledge as they develop polygonal models for real-time 3D simulations or gaming environments, high-resolution renderings, and rapid prototyping.
Course usually offered in spring term
Also Offered As: FNAR 536
Prerequisite: FNAR 235
Activity: Studio
1 Course Unit

FNAR 238 Open Book
"Open Book" will focus on visual communication of information. It will address two methods of inquiry and the corresponding means of visual representation: the objective, well structured research of facts and images, and the creative process of their subjective evaluation and restatement. Students will propose a topic based on their area of interest and engage in a focused, semester-long exploration, which they will present in the form of a designed and printed book.
Course usually offered in fall term
Also Offered As: FNAR 538
Activity: Seminar
1 Course Unit

FNAR 239 Photographic Thinking
This course will explore the vitality and range of photography as a discursive practice by analyzing the way images are structured and deployed in contemporary art and wider media culture. Students will be introduced to the key issues surrounding photography now- led through these questions by lectures, readings, group discussion and project-based work. A series of photo-assignments challenge the students to integrate critical thought with practice, exploring a range of formal strategies and thematic frameworks that affect the meaning of their images. Students should have a strong interest in philosophy and art histories (especially the history of photography.) They should be motivated to work independently & experiment creatively. There are no prerequisites for this course. It is intended for all different levels of technical experience, but the minimum requirements are a digital camera, a basic familiarity with Photoshop and access to a computer with imaging software.
Activity: Seminar
1 Course Unit

FNAR 240 Mystics & Visionaries: Arts and Other Ways of Knowing
As a pioneer of abstraction in the early 1900’s, Hilma Af Klint channeled a complex and highly original body of abstract symbolic work in secrecy. Using the upcoming Hilma Af Klint exhibition at the Guggenheim as a focus and departure point, this course will explore the ways in which artists have accessed alternative ways of seeing, knowing, and embodying non-visible realities as a source for their work. Accessing spiritual realms has been the subject of early European Modernisms investigations into Theosophy and Anthroposophy, as well as the primary intention of Tibetan Thangkas and Indian Tantra paintings. Postmodernism’s crisis of belief and skepticism generated a cultural situation wherein the subject of spirituality was marginalized, ridiculed as anti-intellectual, and in disgrace. The Hilma Af Klint exhibition and surge of interest in her work signifies a new moment, where questions about consciousness and the nature of reality are being addressed with renewed vigor. How do we create space in a technology driven world for experiences that attempt to align the viewer/maker with the contemplative realm, heightened states of consciousness, or transcendence? We will examine a wide field of artists in an attempt to understand the possibilities of the "spiritual" in art and contemporary culture. This seminar will engage in readings, lectures, discussions, projects, and field trips. This course is appropriate for both grad and undergrad, art majors and non-majors alike.
Taught by Jackie Tileston
Course usually offered in fall term
Also Offered As: FNAR 540
Activity: Seminar
1 Course Unit

FNAR 241 Hand-Drawn Computer Animation
Using software tools designed for hand-drawn animation, students will develop animation skills applicable to all forms of animation. In this course students will learn to draw with a sense of urgency and purpose as they represent motion and drama in a series of frames. Through careful study of natural movements, precedents in the history of animation, and through the completion of a series of animation projects students will develop strategies for representing naturalistic movement, inventing meaningful transformations of form, and storytelling.
Course not offered every year
Also Offered As: FNAR 541
Prerequisite: FNAR 264
Activity: Studio
1 Course Unit

FNAR 243 Figure Sculpture I
An introduction of modeling the human figure in clay. Students will work from the live model, acquainting themselves with issues of basic anatomy, form and function, and clay modeling. No previous experience is required; drawing experience a plus.
Course usually offered in spring term
Also Offered As: FNAR 543
Activity: Studio
1 Course Unit
FNAR 245 Book and Publication Design
Book and Publication Design will focus on the theory and professional practice of designing multi-page publications. Students will analyze formal structures of different types of books—literature and poetry, fiction and non-fiction compilations, illustrated volumes such as art catalogues, monographs and textbooks, and serial editions—discussing both traditional and experimental approaches. The format of the course will be split between theoretical and historical evaluations of book formats by drawing on the Van Pelt Rare Book Collection and studio time where students will design books with attention to the format’s conceptual relationship to the material at hand on a focus on typography and page layout, as well as on understanding production methods of printing and binding. In addition to the conventions of page layout, students will examine paratextual elements (title page, practices of pagination and other internal structuring, content lists and indexes, colophons, notes and marginalia, end-leaves, binding, etc.).
Taught by: Hyland
Course usually offered in fall term
Also Offered As: FNAR 645
Prerequisites: FNAR 264 or permission from the instructor.
Activity: Studio
1 Course Unit

FNAR 247 Environmental Animation
This studio-based course examines the disciplinary spaces of landscape, art, and architecture through the medium of 3D animation and storytelling. We immerse ourselves in environments that may be as small as a cell or as large as a planet. From the refuging of images, models, graphic design, or video to visualization or coding the genesis of whole environments, this course will allow for a variety of entry point for students of different disciplines and skill levels. Projects will range in scope from animated GIFs to animated shorts. This course embraces a spirit of invention, collaborative learning, and interdisciplinarity cross-pollination. Experience in landscape architecture, architecture, animation, programming, film, GIS, and/or graphic design is encouraged. We will examine and discuss some standard typologies such as the walk-through, data-visualization, as well as filmic and avant garde strategies as starting points for creative reinterpretation of space. We will primarily use 3D Studio Max and After Effects with support from Next Engine 3D Scanner, Rhino, and Grasshopper. Scripting will be included in most assignments to enhance artistic control of the software.
Taught by: Landau
Course usually offered in spring term
Also Offered As: FNAR 547
Prerequisites: Experience in landscape architecture, architecture, animation, programming, film, Photoshop, or graphic design is strongly encouraged but not required.
Activity: Studio
1 Course Unit

FNAR 250 Introduction to Printmaking
The course offers an introduction to several forms of printmaking including: intaglio, screen printing, relief, and monoprinting. Through in-class demonstrations students are introduced to various approaches to making and printing in each medium. The course enhances a student’s capacity for developing images through two-dimensional design and conceptual processes. Technical and conceptual skills are developed through discussions and critiques. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
Course usually offered in spring term
Also Offered As: FNAR 550, VLST 250
Activity: Studio
1 Course Unit

FNAR 251 Printmaking: Etching
The class will challenge the possibilities of experimental drawing and ways of creating incisions and textures using copper plates as the matrix, which then will be printed on paper and other materials. The class offers full technical and historical description of each individual process: Dry Point, Etching, Hard ground, Soft Ground, Aquatint, Shine Cole’, Split-Biting, Sugar Lift, Color Printing and Viscosity printing.
One-term course offered either term
Also Offered As: FNAR 551
Activity: Studio
1 Course Unit

FNAR 252 Printmaking: Screen Printing
This course is an introduction to technical skills and investigative processes in screen printing and relief and examines methods for combining digital technology with traditional print media. The course introduces students to several contemporary applications of silkscreen and relief printmaking including techniques in multi-color printing, photo-based silkscreening, digital printing, woodcut, linocut, and letterpress. Demonstrations include photo and image manipulation, color separating and output techniques, hand carving and printing, as well as drawing and collage. Both traditional and experimental approaches are explored and encouraged and technical and conceptual skills are developed through discussions and critiques.
One-term course offered either term
Also Offered As: FNAR 552
Activity: Studio
1 Course Unit

FNAR 253 Advanced Projects in Printmaking
This course will concentrate on expanding imagery in print media. The course requires the proposal of a directed final project to be developed during the semester. Three initial exploratory projects will culminate in the final. Projects are open to all print media, but there will be an emphasis on screen printing. Techniques will be addressed as they serve the needs of ideas rather than a set technical procedure. Through individual consultation, scheduled class critiques, and field trips, attention will be given to studio work in and out of printmaking so that the technical and conceptual strengths of print media can serve as a worthwhile adjunct to an overall studio practice.
Course usually offered in spring term
Also Offered As: FNAR 553
Prerequisites: FNAR 252 or FNAR 257 and FNAR 251
Activity: Studio
1 Course Unit
FNAR 254 Printmaking & Publications: Intro to Independent Publishing and Artists' Publications
This course introduces students to independent publishing and artists’ publications through print methods in letterpress, Risograph, and Xerox. The class will focus on the self-published artists’ zine/book as an affordable, accessible, and easily reproducible format for exploring ideas, disseminating artists’ work, and collaborating across disciplines. Students will learn a range of skills, including techniques in both mechanized and hand-pulled forms of printed media (Risograph, copy machine, Vandercook letterpress); short-run editions and binding; design and layout; pre-press and print production; and the web as it relates to and supports independent and democratic modes of distribution. Students will learn about and become acquainted with some of the most significant independent publishers working today and throughout history. Students will leave class having completed three individual projects: a 16-page booklet/zine; a carefully considered online publication, and a final collaborative book designed, developed and published as a class. The course commences with a field trip to New York City's Printed Matter, one of the oldest and most important nonprofit facilities dedicated to the promotion of artists’ books, where students will be encouraged to submit a publication by semester’s end.
Taught by: Romberger
Course usually offered in spring term
Also Offered As: FNAR 654
Activity: Studio
1 Course Unit

FNAR 258 Introduction to Clay: The Potter’s Wheel and Beyond
In this introductory clay class, students will learn all the fundamental skills needed to create three-dimensional forms in clay using a variety of methods: wheel throwing, handbuilding (such as coil building and slab construction), and press molding. Whether creating utilitarian forms or creating sculpture, projects are designed to strengthen both craftsmanship and individual creativity. In addition to developing a working knowledge of the ceramic process, including surface treatments and glazing, students will also be introduced to design issues as well as contemporary art/ceramics topics that influence our aesthetic sensibilities. No prerequisites.
Taught by: FNAR Faculty
One term course offered either term
Also Offered As: FNAR 558
Activity: Studio
1 Course Unit

FNAR 259 Beginning Clay: Handbuilding and Casting Techniques
Modeling and casting are fundamental methods of object-making. Students will learn basic handbuilding techniques such as coil building, slab construction, and mold making through assignments that incorporate conceptual and technical issues. Through experimentation with these methods, this course promotes an understanding of materials, processes, visual concepts, and techniques for creating three-dimensional forms in space. In addition to using different water-based clays and plaster, other materials such as wax, plastilene, paper pulp, cardboard, and tar paper will be explored. No prerequisites.
Taught by: FNAR Faculty
One term course offered either term
Also Offered As: FNAR 559
Activity: Studio
1 Course Unit

FNAR 263 Advanced Wheel Studio
This course teaches students more advanced wheel throwing techniques while helping to develop their critical skills in other areas of ceramic work. Students will learn to throw, employing larger masses of clay, and to increase the complexity of their work by combining and altering thrown parts. There will be an emphasis on experimentation in surface treatment and design, the goal of which is to expand a student’s ability to create more complicated and personalized clay works. In addition to learning the technical knowledge, there will be critical discussions of contemporary ceramics issues through image presentations, reading materials and field trips.
One term course offered either term
Also Offered As: FNAR 563
Prerequisite: FNAR 258
Activity: Studio
1 Course Unit

FNAR 264 Art, Design and Digital Culture
This course is an introduction to the fundamental perception, representation, aesthetics, and design that shape today’s visual culture. It addresses the way artists and designers create images; design with analog and digital tools; communicate, exchange, and express meaning over broad range of media; and find their voices within the fabric of contemporary art, design, and visual culture. Emphasis is placed on building an extended form of visual literacy by studying and making images using a variety of representation techniques; learning to organize and structure two-dimensional and three-dimensional space, and designing with time-based and procedural media. Students learn to develop an individual style of idea-generation, experimentation, iteration, and critique as part of their creative and critical responses to visual culture. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu

FNAR 256 Graphic Design with Creative Technologies
The aim of this course is to introduce students creative ways to use color, typography, and layout across new materials and media, ranging from print to physical objects. Students will explore visual design through a set of assignments and projects that are geared towards exploring the role of design in visual arts, interaction design, media design and architecture. The course introduces a number of design concepts such as content organization, navigation, interaction and data-driven design and show ways to develop new design metaphors, presentation techniques, and imagery using old and new technologies. Course is structured as a combination of lectures and hands on workshops where students will have the chance to work both individually and collaboratively to realize their projects.

Activity: Studio
1 Course Unit

FNAR 268 Integrative Design Studio: Biological Design
This course is a research-based design studio that introduces new materials, fabrication, and prototyping techniques to develop a series of design proposals in response to the theme: Biological Design. The studio introduces life sciences and biotechnologies to designers, artists, and non-specialists to develop creative and critical propositions that address the social, cultural, and environmental needs of the 21st century. The course will be a pilot study of the first bioscience challenge organized by CUT/PASTE/GROW. The final projects will be submitted to a competition and the winning entry will be featured at Biofabricate in Summer 2019.
One term course offered either term
Also Offered As: FNAR 568, IPD 568
Prerequisite: FNAR 264
Activity: Studio
1 Course Unit

FNAR 269 Typography
The study and practice of typography spans the history of individual letterforms through the typesetting of full texts. It is a complete immersion into type as an integral part of visual communication. Typesetting conventions and variables including legibility, readability, texture, color and hierarchy will be stressed, as well as a form for organizing information and expressing visual ideas. Studio work will include collecting and analyzing type, designing an original typeface, researching type history and experimenting with typographic forms.
One term course offered either term
Also Offered As: FNAR 569
Prerequisite: FNAR 264
Activity: Studio
1 Course Unit

FNAR 270 Graphic Design Practicum
Practicum provides a real world experience for students interested in solving design problems for non-profit and community organizations. The studio works with two clients each semester, and previous projects have included print design, web design, interpretive signage and exhibit interactives. All projects are real and will result in a portfolio-ready finished product. Students will participate in a full design experience including design, client interaction, presentations, production, and project management. In addition, students will take field trips, meet professionals and go on studio visits.
One term course offered either term
Also Offered As: FNAR 570
Prerequisite: FNAR 266 or FNAR 269
Activity: Studio
1 Course Unit

FNAR 271 Introduction to Photography
This course is an introduction to the basic processes and techniques of black & white photography. Students will learn how to expose and process 35mm film, SLR camera operation, darkroom procedures & printing, basic lighting and controlled applications. It begins with an emphasis on understanding and mastering technical procedures and evolves into an investigation of the creative and expressive possibilities of making images. This is a project-based course, where students will begin to develop their personal vision, their understanding of aesthetic issues and photographic history. Assignments, ideas and important examples of contemporary art will be presented via a series of slide lectures, critiques and discussion. No previous experience necessary. 35mm SLR cameras will be available throughout the semester for reservation and checkout from the photography equipment room. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One term course offered either term
Also Offered As: FNAR 571, VLST 251
Prerequisite: None
Activity: Studio
1 Course Unit

FNAR 272 Advanced Photography: Integrated Techniques and Strategies
This studio course seeks to broaden each student's skills by experimenting with a wide range of photographic media. Advanced analog, digital and experimental lens-based techniques will be covered, as well as larger camera formats to expand their vocabulary as image-makers. Emphasis will be on an integrated experience of the photographic medium and the development of a body of work that is both theoretically and historically informed. The course will be a means to view and discuss various strategies of important contemporary photographers. Focused assignments, readings, slide lectures and gallery visits will supplement each student's artistic practice and research.
One term course offered either term
Also Offered As: FNAR 572
Prerequisite: FNAR 271 or Permission From Instructor
Activity: Seminar
1 Course Unit

FNAR 274 Reconfiguring Portraiture
As methods of representation are constantly shifting, one thing is clear - the photographic portrait is not what is used to be. Exploring both traditional and contemporary methods of portraiture, this class will uncover and discuss the ways in which we perceive each other in imagery, both as individuals and as groups. Throughout the semester we will consider how portraits deal with truth, physical absence, the gaze, cultural embodiment, voyeurism and the digital persona. This course will build on the combination of perception, technology, and practice. Throughout the semester, students will advance by learning lighting techniques and strategies of presentation - as these core skills will become tools in the execution of project concepts. In tandem with each project, students will encounter and discuss a wide array of photography and writings from the past to the present, in an effort to understand the meanings and psychological effects of freezing the human image in time. Course usually offered in spring term
Also Offered As: FNAR 574
Prerequisite: FNAR 271 or FNAR 340 or Permission of Instructor
Activity: Seminar
1 Course Unit
FNAR 278 Documentary Strategies
This course offers a context for photographers to develop a documentary project - either within a traditional photojournalistic framework or one that challenges these traditions. The aim is to understand documentary as an evolving practice and to develop an artistic response when depicting our social reality - from everyday experience to the events that shape the world. An important aspect of the class will be examining the diversity of ways that journalists and artists have used the camera to extend and question the power of photography as document. The class will address key questions of media and mediation, the nature and status of documentary in the context of globalizing media and how traditional documentary work has been affected by video, performance, conceptual art and activism.
One term course offered either term
Also Offered As: FNAR 578
Prerequisite: FNAR 271 or FNAR 340 or Permission from Instructor
Activity: Seminar
1 Course Unit

FNAR 279 Studio Lighting
The necessity of light and how light is rendered in relationship to what is seen and understood, is often a key ingredient in the portrayal of a subject. The origin of the still life can be found in images as far back as antiquity and has dealt with notions of death, science, class, social customs and even sex. Photography picked up on the tradition in 1827 and has not only made use of the form, but has expanded the topic into very unique territories. Contemporary artists have re-invented and re-invigorated the still life, formalism & abstract photography. As a framework for exploring 'hands-on' lighting techniques, students will creatively grapple with the photography of objects in the studio. Working with the physical, symbolic, and conceptual ramifications of depicting specific forms in an image, teamed with the discussion of key texts, critiques, and studio lighting seminars, each student will create a considered and unique portfolio of images.
Taught by: Wahl
Course usually offered in spring term
Also Offered As: FNAR 679
Prerequisite: FNAR 271 or Permission of Instructor
Activity: Studio
1 Course Unit

FNAR 280 Figure Drawing I
Students work directly from the nude model and focus on its articulation through an understanding of anatomical structure and function. Students will investigate a broad variety of drawing techniques and materials. The model will be used as the sole element in a composition and as a contextualized element.
One term course offered either term
Also Offered As: FNAR 580
Prerequisite: FNAR 123
Activity: Studio
1 Course Unit

FNAR 281 Figure Drawing II
Figure Drawing II is an advanced class designed to further develop the student's skill and facility in capturing the human form. Content and conceptual issues will be explored through individualized projects concentrating on the figure. Students will also expand on their knowledge of drawing media and application.
One term course offered either term
Also Offered As: FNAR 581
Prerequisite: FNAR 280
Activity: Studio
1 Course Unit

FNAR 284 Photography and Fashion
Since the invention of photography, the fashion industry has been one of the cornerstones of creative expression, innovation and visionary provocation. Contemporary fashion photography has continued to attract a leading group of image-makers that continue the tradition of creating artwork that not only is being published in cutting edge magazines such as V, Another Magazine and Citizen K, but also are exhibiting their work in various galleries and museums around the world. This course is designed for students who are interested in creating contemporary fashion images through specific assignments that define the process: lighting in studio or location, working with fashion designers, stylists, models, hair/ make up artists, and the application of a variety of post production techniques, via Photoshop. The class will explore modern constructs that define the importance of branding, marketing, advertising and the relationship of fashion photography in contemporary art and culture today.
Also Offered As: FNAR 684
Prerequisite: FNAR 271 or FNAR 340 or Permission from Instructor
Activity: Studio
1 Course Unit

FNAR 285 Photography and Fiction
In spite of photography’s traditional relationship with fact, the medium has been a vehicle for fiction since the very beginning. Fiction and photography encompass a broad range of meanings, from elaborately staging and performing for the camera, to manipulations using digital technology such as Photoshop to construct the work. This class will examine and trace the history of manipulated photography while paying special attention to the complex negotiations between the decisive moment, the constructed tableau, and the digitally manipulated image. There will be a combination of class lectures, studio projects, assigned readings, visiting artists, film screenings, field trips, and class critiques.

University of Pennsylvania
**FNAR 286 Visual Narrative**

Visual Narrative is an introduction to the practice of storytelling with images. From news and information to art, law, and science, visual storytelling is a critical aspect of creating and navigating contemporary culture. This course is situated at the intersection of design, art, and visual culture, focusing on relevant forms and topics including the photo essay, information design and visual explanation, the photographic sequence in contemporary art, scenario design and concept visualization. Visual Narrative focuses on traditional as well as emerging modes of production and distribution for documentary, visual storytelling, and photojournalism, exploring new aesthetics and the social impact of visual narratives.

Course usually offered in fall term  
Also Offered As: FNAR 686  
Activity: Studio  
1 Course Unit

**FNAR 289 Mixed Media Animation**

Mixed Media Animation is a contemporary survey of stop-motion animation concepts and techniques. Students use digital SLR cameras, scanners and digital compositing software to produce works in hand-drawn animation, puppet and clay animation, sand animation, and multiplane collage animation. Screenings and discussions in the course introduce key historical examples of animation demonstrating how these techniques have been used in meaningful ways. Students then learn how to compose two or more of these methods with matte painting, computer animation or video.

**FNAR 305 Monument Lab: Public Art & Civic Research Praxis**

What is an appropriate monument for the current city of Philadelphia? This question is the central prompt for Fall 2017 citywide public art and history project, as well as a specifically designed community-based and engaged research course in Fine Arts. Students in Monument Lab: Public Art & Civic Research Praxis will participate as members of specialized research teams, in partnership with local high school research fellows, embedded in iconic public squares, West Philadelphia sites, and neighborhood parks around the city; serve as trained art guides to facilitate learning around over twenty temporary monument installations by internationally and locally-based artists; collect research proposals as a form of creative datasets managed by Penn’s PriceLab and Library; and engage civic partners and public audiences around key issues of the project, including issues of race, gender sexuality, class, social justice, and civic belonging. The class is structured as a socially-engaged art praxis experience: students will meet weekly for group facilitations, civic dialogues, and special guest lectures by participating artists. In lieu of midterms and a final exam, students will work at research “labs” throughout the city for a set amount of hours per week, write reflection papers, and produce final site specific research portfolio. The course is ideal for students invested in issues of socially-engaged public art, history, and civic engagement.

**FNAR 306 Design 21: Design After the Digital**

Last century, the digital revolution transformed every aspect of our lives. It shaped every design discipline and defined the ways we imagine and fabricate anything from images to everyday products to clothing, cars, buildings and megacities. Today, design is going through other technical and conceptual revolutions. We design with biotechnologies, fall in love in Virtual Reality with AI bots, rent our cognitive labor through cryptocurrencies. Our creative capabilities, on the other hand, are bounded by a polluted, over-crowded, and resource-constrained planet that is suffering major income and educational inequality. Design After the Digital interrogates the role of design for this century. The seminar surveys the conceptual and technical developments in the past decade to develop an interdisciplinary understanding of design, science and technology. We will study how new design and fabrication methods shape what eat, what we wear, how we form opinions and express ourselves. The goal will be to develop new literacies of design that will help us acclimate to the realities of the century as creative and critical citizens who can shape its products and values.

Activity: Seminar  
1 Course Unit

**FNAR 307 Converging Landscapes: Art, Ecology and History**

Studies of landscape are at the core of multiple fields of fine art making, historical inquiry, and environmental research. Christopher Tilley defines "landscape" as "a holistic term" that frames relationships between living beings and locales, "forming both the medium for, and outcome of, movement and memory." For interdisciplinary arts practitioners in Philadelphia, the landscape may conjure such relationships at points of convergence: when the physical and symbolic layers of the city lay bare social dynamics and truths. Such a range of landmarks - including rivers, neighborhoods, the vewshed, the skyline - are impacted by the deep histories of the region itself, as well as the human-activity that traffics upon it. To produce work about and from Philadelphia is to inherit long-standing questions of civic belonging, make sense of shifting demographics and ecological conditions, and to balance aims for innovation and coexistence. Converging Landscapes - Art, Ecology, and History is a civic studio and structured as a socially-engaged art praxis experience: students will meet weekly for group facilitations, civic dialogues, and special guest lectures. In lieu of midterms and a final exam, students in the course will participate as members of specialized research teams, working a set number of hours per week, write reflection papers, and produce a final site-specific research portfolio. Together, they will explore and produce work at and about sites of convergence. Students will pursue group projects and cross-disciplinary independent work, around selected arts and municipal contribute toward a class wide exhibition, as well as collaborations with artists, archives, and organizations. The course is ideal for students invested in issues of socially-engaged public art, environmental humanities, history, and civic engagement.

FNAR 310 Critical Issues in Art
Perspectives on Critical Issues aims to engage students in an ongoing and informed study of both historical and contemporary issues in a spirit of curiosity and critique. We will investigate how these concepts can clarify and complicate our creative practice and our understanding of the contemporary art world. This seminar will explore the shifts in artistic production, theory and criticism and topics will range from traditional investigations of aesthetics, Modernism, Post-Modernism and contemporary themes. Through discussions of assigned readings, class presentations, films, lectures, and field trips, this seminar will help establish a critical and theoretical foundation where your own beliefs and doubts about art and culture will be called into question and will provoke an ongoing inquiry into how you understand art, your own creative process, and the relationship of art and artists to society and creative culture.

FNAR 313 The Chinese Body and Spatial Consumption in Chinatown
This is a primarily an art and planning course that centers on the representation of the oriental, specifically the Chinese, in both its historical and present contexts. The localization of the Chinese throughout the Americas within Chinatown precincts were also subject to representational imaginings that were negotiated through the lens of civic planning. This course will study the often fraught negotiation between representation and planning. The hyper-urbanization of China over the past several decades has radically altered traditional conceptions of public space in China. Mass migration from rural to urban areas has meant very high population densities in Chinese cities. Traditional courtyards surrounded by housing and other modestly scaled buildings are rapidly disappearing, incongruent with the demands of heated property development. Moreover, Chinese cities have comparatively little public green space per resident compared to equivalents in the West. Zoning in Chinese cities is also much more varied for any given area than what one would find in cities such as New York, Paris, and London. Intensifying density of urban areas precludes the construction of large public squares. Furthermore, large public squares tend to be either intensively congested and overcrowded or underused due to their oversight by government that render such spaces somewhat opprobrious in terms of use. Historically, the urban courtyards of temples, native place associations, and provincial guilds served as public spaces of gathering. They were also sites of festivals and the conducting of neighbour and civic business. These spaces have become increasingly privatized or commodified with entrance fees. The air-conditioned concourses of enclosed shopping malls or busy outdoor market streets have become de facto public spaces in China where collective window shopping or promenading is the primary activity rather than bodily reposes as one might find in a public space in a large Western city. The seminar/studio will investigate the meaning of the term public in the constitution of Chinese space, audience and critical voice through firstly the enclave of Chinatown and secondly through examples from China. The course will look into the changing conceptualization of public space in Chinatown as it has declined in its traditional form and become reinvented in the form of high-end shopping centered districts. This flux has its roots in post 1979 China as well as the post 1987 reversion of Hong Kong to China.

FNAR 314 Tiananmen Square: A Case Study for Fine Arts and Landscape Architecture
This course takes as its subject the systems of representation and design that have historically and presently operate in Tiananmen Square in Beijing. There have been several incarnations of Tiananmen Square since its original form in 1651. During imperial times and through the period of foreign legations, the square was once surrounded by walls and gates, creating a city within a city. With the advent of the Republic of China established on January 1, 1912, much of the enclosures were removed, opening up for public use previously restricted imperial areas. After the Communist Revolution in 1949, planning was afoot to enlarge the square. With its enlargement completed in 1958, the square expanded its footprint by four-fold, making it one of the largest public squares in the world. The enlarged and remodeled square coincided with the completion of the massive Monument to the People's Heroes. In 1976, a large mausoleum containing the preserved body of Mao Zedong was built near the site of the former Gate of China, further increasing the size of the square. In the 1990s, the building of the National Grand Theatre and expansion of the National Museum on grounds contiguous to the square necessitated further alterations to both the Eastern and Western skirts of the square. In recent years, there have been a widening debate regarding the transformation of the concrete heavy and by and large featureless square into a green space. Today, Tiananmen Square holds sacrosanct status to the Communist revolution of 1949, designed more for military parades and massive public rallies than public space repos. In a city that has few green spaces, such a verdant transformation in the heart of the Chinese capital would signal a radical symbolic deviation to China's development-first guiding principles. The square fronts Tiananmen Gate and the Forbidden City and is situated at the intersection of the historical east-west and north-south axes. Chang'An Avenue, important for military processions, separates the square from Tiananmen Gate and is considered the most important thoroughfare in the Capital and the path of the east west number one subway line. The entirety of the Tiananmen Square area is marked by ideology and political prominence, often confusingly. Tiananmen Tower, functions as a conflation of monumental facade with political embodiment. This course will focus on imagined interventions through public art and landscape design within Tiananmen Square and its contiguous areas. It is a studio practice course with a significant seminar component that will include lectures and readings relating to issues.

Course usually offered in spring term
Also Offered As: FNAR 614
Activity: Seminar
1 Course Unit
FNAR 315 Across Forms: Art and Writing
What if a poem spoke from inside a photograph? What if a sculpture unfurled a political manifesto? What if a story wasn’t just like a dance, but was a dance or a key component of a video, drawing, performance, or painting? In this course, artists and writers will develop new works that integrate the forms, materials, and concerns of both art and writing. Many artists employ writing in their practices, but may not look at the texts they create as writing. And many writers have practices that go beyond the page and deserve attention as art. This course will employ critique and workshop, pedagogic methodologies from art and writing respectively, to support and interrogate cross-pollination between writing and art practices. Additionally, the course will examine a field of artists and writers who are working with intersections between art and writing to create dynamic new ways of seeing, reading, and experiencing.
Taught by: Hayes and Zolf
Course usually offered in fall term
Also Offered As: ENGL 129, FNAR 615
Activity: Seminar
1 Course Unit

FNAR 316 Art and Social Work: Art and the Ecology of Justice
How can the arts help us build a more just society? How can the arts transform social structures and systems? Public health crises involving clean water (Flint), police violence (Baltimore), and a lack of economic and educational opportunity following reentry (Philadelphia) make legible the need for a new visual language that critiques these conditions and challenges entrenched structural inequalities. We will engage the work of creative practitioners who are mapping new relationships between art and social justice and directly impacting individual and communal well-being. In so doing, the course seeks to challenge traditional constrictions of public health, which often isolate individual histories from their social life and their relation to families, communities, and geographies. Readings will build upon disciplinary perspectives in the arts, humanities, and social policy. Requirements include weekly readings, class participation, and a collaborative final project. The course will meet in the Health Ecologies Lab at Slought Foundation, an arts organization on campus.

FNAR 318 Paris Modern: Spiral City
Paris has been shaped by a mixture of organic development, which is still today perceptible in the “snail” pattern of its arrondissements whose numbers, from 1 to 20, coil around a central island several times so as to exemplify a “spiral city” and of the violent cuts, interruptions and sudden transformations that again and again forced it to catch up with modern times, the most visible of which was Baron Haussmann’s destruction of medieval sections of the city to make room for huge boulevards. Thus Parisian modernism has always consisted in a negotiation between the old and the new, and a specific meaning of modernity allegorized for Louis Aragon, the Surrealists and Walter Benjamin consisted in old-fashioned arcades built in the middle of the 19th century and obsolete by the time they turned into icons of Paris. The aim of the class will be to provide conceptual and pragmatic (visual, experiential) links between a number of texts, theories and films deploying various concepts of the modern in Paris, with a guided tour of the main places discussed. The course that Professors Jean Michel Rabate (English) and Ken Lum (Fine Arts) will lead studies Paris as a work of science-fiction where its many futures are embedded in its many pasts, where discontinuity is a continuous process and where the curving line of the snail’s shell is a line of ceaseless curling resulting in a perennial oscillation where an outside converts into an inside and an inside then converts to an outside. The course will travel to Paris over spring break to get an in-depth look at the topics discussed in class.
Taught by: Ken Lum and Jean-Michel Rabate
One-term course offered either term
Also Offered As: ENGL 211, FNAR 518
Activity: Seminar

FNAR 320 Topics in Animation
This course will look at animation as an art form, a technology and an industry. We will explore the way in which artistic, technical, historical, and cultural conditions shape the development of animation and in turn, how animation impacts viewers. Topics will include trends in animation and their relationship to contemporary popular culture, issues of art versus commerce in the creation of cartoons, the intersection of animation and politics, and shifts in style and technique throughout the years. We will look at the figures who have shaped the art forms and continue to influence it, the rise in animation’s popularity, and current day applications of animate imagery.

Activity: Seminar
1 Course Unit
FNAR 330 Making Space and Public Art
The French social philosopher Michel de Certeau upset the common understanding of the relationship between space and place by elevating space as practice place. By this, he meant that place is but a set of geo-physical particularities that has no dynamic meaning unless activated through social engagement so that space is produced. Spatial practice is a key concept in the modern understanding of the city as a society of abstract space, one in which the problem of human alienation is riven with the logic of spatial spectacularization. Public Art is often employed to address or mollify such urban problems through concepts of historical reconstruction or institutional critique, including possibly testing the limits of public expression. Historical markers play a somewhat different role by calling attention to lost or negative histories, albeit-most often vetted through the language of tourism factoids. This course will examine the discursive issues at play in respect to art and markers, particularly for Philadelphia. Additionally, important public art works from around the world will be examined. The course will also include the occasional visit of several key works downtown in which the question of what can and cannot said will be pondered.

1 Course Unit

FNAR 331 Interdisciplinary Studio: Sites of Convergence and Hybridity
This course takes an experimental multimedia approach to investigating some of the boundaries in contemporary art making practices. Painting, photography, video, design and sculpture intersect, overlap, and converge in complicated ways. Projects will be designed to explore hybrid forms, collage, space/ installation, and color through a variety of strategic and conceptual proposals as students work towards unique ways of expanding their own work. Weekly readings, critiques, and presentations will be integrated with studio projects. This studio/seminar is appropriate for students at all levels and from all areas of Fine Arts and Design.
Taught by: Tileston
Course usually offered in spring term
Also Offered As: FNAR 631
Prerequisites: One previous studio course (such as FNAR 123, FNAR 145, FNAR 150, FNAR 231 or FNAR 264) or permission from the instructor.
Activity: Studio
1 Course Unit

FNAR 334 Painting Studio
Painting Studio IV focuses on continuing the student’s exploration of techniques, problems, and poetics of painting, the nuances of the painting language, and the development of a personal direction. While students may choose to work on assigned projects (either in consultation with the instructor or following the projects that the Painting II/III students may be involved in), the emphasis is on the investigation of the student’s own sensibility. Students will be expected to engage in ongoing critical analysis of their own practices and assumptions.
One-term course offered either term
Also Offered As: FNAR 534
Prerequisites: FNAR 123 and FNAR 333
Activity: Studio
1 Course Unit

FNAR 337 Information Design and Visualization
Information Design and Visualization is an introductory course that explores the structures of information (text, numbers, images, sounds, video, etc.) and presents strategies for designing effective visual communication appropriate for various users and audiences. The course seeks to articulate a vocabulary of information visualization and find new design forms for an increasingly complex culture.
One-term course offered either term

Prerequisite: FNAR 264
Activity: Studio
1 Course Unit

FNAR 340 Digital Photography
This class offers an in-depth technical and conceptual foundation in digital imagery and the opportunity to explore the creative, expressive possibilities of photography. Students will become proficient with the basic use of the camera, techniques of digital capture, color management and color correction. They will also develop competency in scanning, retouching, printing and a variety of manipulation techniques in Photoshop. Through weekly lectures and critiques, students will become familiar with some of the most critical issues of representation, consider examples from photo history, analyze the impact of new technologies and social media. With an emphasis on structured shooting assignments, students are encouraged to experiment, expand their visual vocabulary while refining their technical skills. No previous experience is necessary. Although it is beneficial for students to have their own Digital SLR camera, registered students may reserve and checkout Digital SLR cameras and other high-end equipment from the department. If you need assistance registering for a closed section, please email the department at fnaruq@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 640, VLST 265
Activity: Studio
1 Course Unit

FNAR 342 Digital Photography II
In this course students will continue to develop conceptual, technical, aesthetic and formal strategies in digital photography, expanding their artistic process while refining their critical approach to researched subject matter. The class will be driven initially by a series of assignments formulated to further expose students to broad possibilities related to the medium and then they will be guided towards the evolution of a personalized body of work that is culturally, theoretically and historically informed. We will be examining key issues surrounding the digital image in contemporary society, led through a combination of class lectures, readings, group discussions, film screenings, gallery visits and class critiques. Students will further their knowledge of image control and manipulation, retouching and collage, advanced color management; become familiar with high-end camera and lighting equipment and develop professional printing skills. In addition to learning these advanced imaging practices, this course will also emphasize an investigation of critical thought surrounding contemporary visual culture and the role of digital media in the creation of art.
Taught by: Jamie Diamond
Course usually offered in fall term
Also Offered As: FNAR 642
Prerequisite: FNAR 340 Digital Photography I
Activity: Studio
1 Course Unit
FNAR 343 Language of Design
The course will explore the changing relationship during the modern era between design (structure, model, plan of a work of art) and language (metaphor for a system of communication; speech, writing, literature). Our readings and visual presentations will focus on topics in the decorative arts, painting, architecture, typography and visual communication. We will focus on primary sources in order to investigate our inquiry in a larger historical context. The discussion will center on claims about the inherent meaning of form, discuss different roles for design - as an ideological statement, as an agent of social change, and as an idiosyncratic expression. Topics will also include the search for a universal visual language, attempts at bridging the perceived gap between spoken and written language, and the impact of visual form on the meaning of literary texts (particularly when the author has been involved in the publication process). Students can suggest additional topics related to their field of study.
Course usually offered in spring term
Also Offered As: FNAR 643
Activity: Seminar
1 Course Unit

FNAR 347 Expanded Documentary
The sites and situations of documentary in our culture have exploded exponentially - from standardized formulas (like reality tv), to social media and cross-platform journalism. In contemporary art, documentary practice has also significantly expanded and diversified. Since the early 2000’s, with several influential exhibitions following Documenta XI, a new generation of artists have taken up the ambition of depicting our social reality, and have done so by re-engaging and re-inventing the documentary mode. This intermediate course will examine this vital contemporary field and will also offer students a comprehensive introduction to the history of documentary practice. We will investigate a series of key questions regarding the relation between politics and aesthetics, mediums and mobility, how documents function to both approximate and deny a sense of ‘reality’ and perhaps most importantly - what kinds of social, political or personal realities you want to propose in your artwork. The class will be driven by a series of studio assignments and practical experimentation. Although there will be an emphasis on photography and video, students will also explore a multiplicity of strategies and forms (including archival display, essayistic installation, image-text relationships, and the documentation of performance.)
Taught by: Davenport
Course usually offered in spring term
Also Offered As: FNAR 647
Prerequisite: FNAR-061 or FNAR-271 or FNAR-340 or permission from instructor
Activity: Studio
1 Course Unit

FNAR 348 Counter the Land: Photography and the Landscape
Starting with the representation of landscape in painting in the early 1800s, the course will then move through Pictorialism and the Modernist movement in photography. Revisiting the later half of the 20th century, we will begin to consider the shifting practices of landscape and the ways it has been photographically depicted up to the present. Collaborating with the Brandywine River Museum of Art in Chadds Ford, students will begin their photographic exploration with the work of Andrea Wyeth and the landscape of the Brandywine Valley. As we consider Wyeth, the images of James Welling will also be introduced. Credited for pioneering new forms of representation in photography in the 1970’s, Welling also revisited the work of Wyeth from 2010-2015, and committed to a fresh (and challenging) look at tradition. Working with imagery and text, this class will also touch on conceptual art, the New Topographics, and postmodernism. Through these various concentrations, students will consider and counter the traditions that they are already familiar with, while creating work based on issues of the landscape today. Questions about meaning, politics, social critique, land rights, technology and methods of presentation will be encouraged and explored throughout the course.
Taught by: Wahl
Course usually offered in fall term
Also Offered As: FNAR 648
Prerequisites: FNAR 271 or FNAR 340 or with permission from the instructor.
Activity: Studio
1 Course Unit

FNAR 349 Advanced Digital Photography
In this studio course, students will become proficient in advanced techniques of image production while expanding their artistic process and refining their photographic work. With an emphasis on self-directed projects and research, students will further their knowledge of image control and manipulation, retouching and collage, advanced color management; become familiar with high-end equipment and develop professional printing skills. Class discussion, lectures and assigned readings will address the critical issues in contemporary art, media and photographic culture. Emphasis will be on integrating practice and critical dialogue.
One term course offered either term
Also Offered As: FNAR 649
Prerequisite: FNAR 340
Activity: Studio
1 Course Unit
FNAR 350 Shared Culture: New Strategies for Artists in the Digital Age
Our digital world has forced us to entirely rethink what it means to be an artist in the digital age, socially, economically, and politically. Ideas that have long been stable - including originality, creativity, and genius - are ripe for reexamination and redefinition in the twenty-first century. When the entire internet is copy-and-pasteable - and distribution moves swiftly - is anything off limits for the artist? Can we imagine our artistic production mimicking the meme, rippling through the networks for a day, then disappearing forever? Are we doomed to make works that are supposed to live for eternity or, in the face of environmental meltdown and collapsing financial markets, can we instead move our production toward the ephemeral? What would this look like? Can our output be steered toward the political? Can we frame these ideas as acts of resistance? Or compliance? Is there an inside? Is there an outside?
Taught by: Goldsmith
Course usually offered in spring term
Also Offered As: FNAR 650
Activity: Studio
1 Course Unit
Notes: Fine Arts Majors or MFA students ONLY or permission of instructor.

FNAR 352 Dispersive Lends
This studio course will explore the nexus between photography, sculpture, installation, drawing, painting, and the moving image. The course is informed by the printed image, as students will explore how photography can encourage thinking in other mediums, in addition to how other mediums can influence the making of photography. When does an abstract painting appear more like a photograph? How can a photograph suggest ways to make a video? Can a sculpture exist as a photograph? A variety of assignments will expose students to interdisciplinary approaches addressing these questions and more. Class projects will be supported by regular slide lectures, group critiques, and readings examining modern and contemporary artists and practices.
Taught by: Oliver
Course usually offered in spring term
Also Offered As: FNAR 652
Prerequisite: FNAR 271 or FNAR 340 or FNAR 061 or permission of instructor
Activity: Studio
1 Course Unit

FNAR 353 Advanced Projects in Animation
Students will explore facial animation at great depth. Investigating both skeletal and muscular anatomy, students will implement their knowledge in the creation of facial rigs and realistic animation of 3D computer characters. Strong emphasis will be placed on drawing and acting skills to achieve a successful working knowledge of both form and function. As an advanced seminar course, students are expected and encouraged to work and explore topics outside of the classroom.
Course usually offered in spring term
Also Offered As: FNAR 653
Prerequisites: FNAR 235 and FNAR 267, or Instructor Permission
Activity: Studio
1 Course Unit

FNAR 366 Advanced 3-D Modeling
Advanced 3-D Modeling will give students the opportunity to refine skills in modeling, texturing, lighting and rendering with an emphasis on the evolution of ideas through constant revision based on class critique. Students will use a variety of industry standard software packages, including, but not limited to Maya and Mudbox to compose complex environments. Projects are designed to give students the opportunity to work with original content within a simulated production environment.
One-term course offered either term
Also Offered As: FNAR 646
Prerequisite: FNAR 235/365 or FNAR 236/536
Activity: Studio
1 Course Unit

FNAR 370 Advanced Graphic Design and Typography
This course will explore advanced commercial, public and personal forms of visual communication. Emphasis will be placed on creative problem solving with consideration for audience. Discussion of design history, current ideology and future design applications will inform individual student projects. Work generated in this studio can be used to build a portfolio.
Course usually offered in fall term
Also Offered As: FNAR 670
Prerequisites: FNAR 266 and FNAR 269 or Permission of Instructor
Activity: Studio
1 Course Unit

FNAR 378 Interfacing Cultures: Designing for Mobile, Web and Public Media
This course introduces advanced topics related to contemporary media technologies, ranging from social media to mobile phones applications and urban interfaces. Students learn how to use new methods from interaction design, service design, and social media and work toward prototyping their ideas using new platforms and media. The class will cover a range of topics such as online gaming, viral communication, interface culture, networked environments, internet of things and discuss their artistic, social, and cultural implications to the public domain.
Course usually offered in spring term
Also Offered As: FNAR 678
Prerequisite: FNAR 224
Activity: Studio
1 Course Unit

FNAR 399 Independent Study
One-term course offered either term
Prerequisite: See Department for section number
Activity: Independent Study
1 Course Unit
Notes: A minimum three-page proposal must be submitted and approved by both the Instructor and the Undergraduate Director.
FNAR 488 Senior Seminar and Project (Fall Semester)
This rigorous pair of courses, one offered in the Fall and one offered in the Spring semester, are designed as the capstone of the Fine Arts major and are required for all graduating fine arts seniors. They can only be taken in the senior year. Students work in individual studio spaces provided by the department and then meet with faculty for seminar, critique, and professional practice exercises. Through individual and group critiques, students begin to conceptualize their final thesis exhibition or project. The senior seminar allows students to create lasting professional relationships with the fine arts faculty and visiting lecturers. The fall semester culminates in a group exhibition of senior student work paired with final semester critiques.

Course usually offered in fall term
Prerequisites: Fine Arts Majors in Senior Year only.
Activity: Seminar
1 Course Unit

FNAR 489 Senior Seminar Project
The Spring semester seminar culminates in a senior thesis exhibition for each graduating student. These exhibitions have traditionally been held as a small group exhibition featuring a few students in one group, or as a larger end of semester exhibition with each student installing a series of works. The format of the exhibition will be determined during the fall semester by the senior faculty. The process of preparing, installing, and promoting the thesis exhibition is covered in detail throughout the semester. Students will work in their on-campus studio spaces to produce dynamic, thoughtful and well-crafted work that will serve as their final portfolio. They will present their portfolio of work during a final critique before graduation.

Course usually offered in spring term
Prerequisites: FNAR 488; Fine Arts Majors in Senior Year only.
Activity: Seminar
1 Course Unit

FNAR 501 Graduate Studio I
First year studio for MFA students' core pursuit of self-directed interdisciplinary problems that contribute to one or more of the visual arts disciplines.

Taught by: Lum/Freedman/Mosley/Telhan/Tileston/Hartt/Lopez/Hayes/Davenport
Course usually offered in fall term
Also offered as: FNAR 601
Activity: Studio
2 Course Units

FNAR 502 Graduate Studio II
Second year studio for MFA students' core pursuit of self-directed interdisciplinary problems that contribute to one or more of the visual art disciplines.

Taught by: Adkins/Davenport/Freedman/Mosley/Telhan/Tileston
Course usually offered in spring term
Also offered as: FNAR 602
Activity: Studio
2 Course Units

FNAR 503 Sachs Research: Imaginary Modernisms
Over the course of the 2017-2018 school year, but officially as Spring 2018, credited course, I am inviting a group of 6-8 MFA students to participate as a group in a project focused on research, dialogue and the essential "possibilities" available to any artist to participate in the constant rewriting and redefining of art history. Students will participate in a body of research and readings leading to my upcoming participation in Rice University’s Campbell Lecture Series in March 2018 and an associated publication with the University of Chicago Press. The lectures are divided into three distinct parts over three nights, all of which focus on alternate approaches to modernism. Part I investigates the "literary" theory of architecture by Bruno Taut and Paul Scheerbart. Part II is concerned with the painting practices of Hilma af Klint and Blinky Palermo. And Part III discusses the music of Sun Ra and Pauline Oliveros. Students participating in Imaginary Modernisms will meet and work with me in a series of scheduled and structured activities, beginning with a visit to Philadelphia in November for personal studio visits with each of the 6-8 students, not as a critique but to get to know you and your work a bit. Participation includes three trips to New York, each for two days. These 2-day trips will each involve one day at my studio in Brooklyn, to discuss the readings and research, as well as to observe the development of ongoing sculptural artworks being created in my studio, and a second day of self-guided visits to exhibitions and performances that I will suggest, with an optional meeting together for lunch or dinner. Readings for these meetings will be sent to you in advance of trip. Participating students should be prepared to read various texts along with me for the 5 month project duration. This is an essential part of the project and this should be a pleasurable process, so those do not have time to add a medium amount of reading to their schedules, followed by group discussion, should probably not apply. The only other requirement will be preparing for an exchange with undergraduate students at Rice University in March. For our trip to Houston in March, there will be three nights of lectures, one participatory performance, one exhibition opening reception, plus visits and interaction with curators at the Menil Collection, the Museum of Fine Arts Houston, the Contemporary Arts Museum Houston and the Core Program (an important option for MFA students post graduation.)

Taught by: Josiah McEheny
Course usually offered in spring term
Activity: Seminar
1 Course Unit
FNAR 506 Design 21: Design After the Digital
Last century, the digital revolution transformed every aspect of our lives. It shaped every design discipline and defined the ways we imagine and fabricate anything from images to everyday products to clothing, cars, buildings and megacities. Today, design is going through other technical and conceptual revolutions. We design with biotechnologies, fall in love with Virtual Reality with AI bots, rent our cognitive labor through cryptocurrencies. Our creative capabilities, on the other hand, are bound by a polluted, over-crowded, and resource-constrained planet that is suffering major income and educational inequality. Design After the Digital interrogates the role of design for this century. The seminar surveys the conceptual and technical developments in the past decade to develop an interdisciplinary understanding of design, science and technology. We will study how new design and fabrication methods shape what we eat, how we wear, how we form opinions and express ourselves. The goal will be to develop new literacies of design that will help us acclimate better to the realities of the century as creative and critical citizens who can shape its products and values.
Taught by: Telhan
Course usually offered in fall term
Also Offered As: FNAR 306
Activity: Seminar
1 Course Unit

FNAR 507 Converging Landscapes: Art, Ecology and History
Studies of landscape are at the core of multiple fields of fine art making, historical inquiry, and environmental research. Christopher Tilley defines "landscape" as "a holistic term" that frames relationships between living beings and locales, "forming both the medium for, and outcome of, movement and memory." For interdisciplinary arts practitioners in Philadelphia, the landscape may conjure such relationships at points of convergence: when the physical and symbolic layers of the city lay bare social dynamics and truths. Such a range of landmarks - including rivers, neighborhoods, the viewer, the skyline - are impacted by the deep histories of the region itself, as well as the human-activity that traffics upon it. To produce work about and from Philadelphia is to inherit long-standing questions of civic belonging, make sense of shifting demographics and ecological conditions, and to balance aims for innovation and coexistence. Converging Landscapes - Art, Ecology, and History is a studio and structured as a socially-engaged art praxis experience: students will meet weekly for group facilitations, civic dialogues, and special guest lectures. In lieu of midterms and a final exam, students in the course will participate as members of specialized research teams, working a set number of hours per week, write reflection papers, and produce a final site-specific research portfolio. Together, they will explore and produce work at and about sites of convergence. Students will pursue group projects and cross-disciplinary independent work, around selected arts and municipal contribute toward a class-wide exhibition, as well as collaborations with artists, archives, and organizations. The course is ideal for students invested in issues of socially-engaged public art, environmental humanities, history, and civic engagement.
Taught by: Paul Farber
Course usually offered in fall term
Also Offered As: FNAR 307
Activity: Seminar
1 Course Unit

FNAR 508 Clay Practices
This course introduces clay as a sculptural medium through fundamental clay-building techniques, mold making, model making, and casting. Through experimentation with these methods, this course promotes an understanding of materials, processes, visual concepts and techniques for creating three-dimensional forms in space. In addition to using different water-based clays and plaster, other materials such as wax, plastiline, paper pulp, and cardboard will be explored. Students will explore the full range of clay's capabilities and its role in contemporary art through lectures, readings, demonstrations, and assignments that incorporate conceptual and technical issues.
Also Offered As: FNAR 148
Activity: Studio
1 Course Unit

FNAR 515 Photography Studio Abroad
This Traveling Studio is offered every other spring term to upper level photography & related media students. It is a cross-cultural visual investigation, exploring the contradictions and significance of the chosen city. This course incorporates multi-disciplinary research in preparation for the trip; exploring various fields of knowledge production such as art, history, social sciences, markets and governance. Class discussion, readings and individual research will be focused towards the development of each student's photo/media project, which will be realized while abroad. After returning to Philadelphia, students will develop and refine their work; the remaining classes will emphasize critique, editing, printing and presentation options. The final projects will be included in a group exhibition at the end of the semester. Admission to the course is on a competitive basis.
Course offered spring; odd-numbered years
Prerequisite: Permission of Instructor Required - Competitive Application Process Only
Activity: Studio
1 Course Unit

FNAR 518 Paris Modern: Spiral City
Paris has been shaped by a mixture of organic development, which is still today perceptible in the "snail" pattern of its arrondissements whose numbers, from 1 to 20, coil around a central island several times so as to exemplify a "spiral city," and of the violent cuts, interruptions and sudden transformations that again and again forced it to catch up with modern times, the most visible of which was Baron Haussmann's destruction of medieval sections of the city to make room for huge boulevards. Thus Parisian modernism has always consisted in a negotiation between the old and the new, and a specific meaning of modernity allegorized for Louis Aragon, the Surrealists and Walter Benjamin consisted in old-fashioned arcades built in the middle of the 19th century and obsolete by the time they turned into icons of Paris. The aim of the class will be to provide conceptual and pragmatic (visual, experiential) links between a number of texts, theories and films deploying various concepts of the modern in Paris, with a guided tour of the main places discussed. The course that Professors Jean Michel Rabate (English) and Ken Lum (Fine Arts) will lead studies Paris as a work of science-fiction where its many futures are embedded in its many pasts, where discontinuity is a continuous process and where the curving line of the snail's shell is a line of ceaseless curling resulting in a perennial oscillation where an outside converts into an inside and an inside then converts to an outside. The course will travel to Paris over spring break to get an in-depth look at the topics discussed in class.
Taught by: Ken Lum and Jean-Michel Rabate
Also Offered As: ENGL 211, FNAR 318
Activity: Seminar
1 Course Unit
FNAR 521 Histories of Print: Reimagining the Archive
What can history tell us about the present? How do archives teach us about the future? Printing has long been at the center of political, social, and economic shifts, as well as a form used by artists, writers, designers, and cultural producers. Utilizing readings, films, field trips, independent research, and discussions, students will learn about the history of letterpress printing and its historically complex relationship with power and technological innovation. This studio/seminar examines the act of printing as a way to expand the boundaries of language and image-making, questioning both historic and contemporaneous approaches. Class readings spanning multiple perspectives on the history of print, access to rare archives, and the use of historic printing equipment will inform studio-based projects and writing assignments throughout the semester. This course will meet in the Common Press located in the Fisher Fine Arts Library. The Common Press is an interdisciplinary initiative between the Kelly Writers House, the Kislak Center for Special Collections, Rare Books and Manuscripts, and the Fine Arts program within PennDesign; it encourages collaboration with an emphasis on letterpress, and cross-disciplinary approaches to writing and image-making.
Taught by: Neff
Course usually offered in spring term
Also Offered As: FNAR 221
Activity: Studio
1 Course Unit

FNAR 523 Drawing I
This course is designed to develop visual awareness and perceptual acuity through the process of drawing. Students learn to sharpen perceptual skills through observational drawing, and to explore the expressive potential of drawing. A variety of problems and media will be presented in order to familiarize students with various methods of working and ways of communicating ideas visually. Subject matter will include object study, still life, interior and exterior space, self-portrait and the figure. Different techniques and materials (charcoal, graphite, ink, collage) are explored in order to understand the relationship between means, material and concept. Critical thinking skills are developed through frequent class critiques and through the presentation of research into historical and contemporary precedent in drawing. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One term course offered either term
Also Offered As: FNAR 123, VLST 253
Activity: Studio
1 Course Unit

FNAR 524 Drawing Investigations
Drawing is a fundamental means of visualization and a hub for thinking, constructing, and engaging in a wide variety of creative activities and problem-solving. This studio class explores drawing in both its traditional and contemporary forms. The projects are designed to help students in all disciplines find ways express and clarify their ideas through the process of drawing. The semester begins with the refinement of perceptual skills acquired in Drawing I, while encouraging experimentation through the introduction of color, abstract agendas, conceptual problem solving, and collaborative exercises, as well as new materials, techniques and large format drawings. Particular attention is given to ways to conduct visual research in the development of personal imagery. Assignments are thematic or conceptually based with ample opportunity for individual approaches to media, subject, scale and process. The goal is to strengthen facility, develop clarity in intent and expand expression. Attention is paid to the development of perceptual sensitivity, methods of image construction, and the processes of synthesis and transformation in order to communicate ideas through visual means. Recommended for students in all areas.
One term course offered either term
Also Offered As: FNAR 124
Prerequisite: FNAR 523
Activity: Studio
1 Course Unit

FNAR 525 Figure Painting: Then and Now
Beyond the introduction to technique and materials this course will emphasize the figure in historical & contemporary painting. This course will be based in perception, working from the model and move through modernism and toward varying approaches to the figure. Further investigation about the language of color through color theory will be covered. Drawing I pre-requisite, Painting I pre-requisite recommended but not mandatory.
Taught by: MURPHY
Course usually offered summer term only
Also Offered As: FNAR 225
Prerequisite: FNAR 523
Activity: Studio
1 Course Unit

FNAR 526 Sequential Drawing
Sequential drawing instructs in the visualization of story telling through the exploration of visual narrative components (visual iconography, panel-to-panel transition types, picture/word relations) and their application to a narrative through the use of formal drawing techniques (composition, color, perspective, line, form). The class begins with various exercises in paneling, pacing and style development, and concludes with the student applying the concepts and techniques they’ve acquired to the creation of a graphic novel.
Course usually offered in spring term
Also Offered As: FNAR 126
Prerequisite: FNAR 523
Activity: Studio
1 Course Unit
FNAR 530 Making Space and Public Art
The French social philosopher Michel de Certeau upset the common understanding of the relationship between space and place by elevating space as practice place. By this, he meant that place is but a set of geo-physical particularities that has no dynamic meaning unless activated through social engagement so that space is produced. Spatial practice is a key concept in the modern understanding of the city as a society of abstract space, one in which the problem of human alienation is risen with the logic of spatial spectacularization. Public Art is often employed to address or mollify such urban problems through concepts of historical reconstruction or institutional critique, including possibly testing the limits of public expression. Historical markers play a somewhat different role by calling attention to lost or negative histories, albeit most often vetted through the language of tourism factoids. This course will examine the discursive issues at play in respect to art and markers, particularly for Philadelphia. Additionally, important public art works from around the world will be examined. The course will also include the occasional visit of several key works downtown in which the question of what can and cannot said will be pondered.
Taught by: Lum
Course usually offered in fall term
Also Offered As: FNAR 330
Activity: Seminar
1 Course Unit

FNAR 531 Painting Practices
Painting practices is an introduction to the methods and materials of oil painting. This course begins with an investigation of color and color relationships. The beginning of the semester will cover technical issues and develop the student’s ability to create a convincing sense of form in space using mass, color, light and composition. The majority of work is from direct observation including object study, still life, landscape, interior and exterior space and the self portrait. Class problems advance sequentially with attention paid to perceptual clarity, the selection and development of imagery, the process of synthesis and translation, color, structure and composition, content and personal expression. Students will become familiar with contemporary and art historical precedent in order to familiarize them with the history of visual ideas and find appropriate solutions to their painting problems.
One term course offered either term
Also Offered As: FNAR 231
Prerequisite: FNAR 523
Activity: Studio
1 Course Unit

FNAR 532 Painting Studio
Painting Studio presents an ongoing exploration of the techniques, problems and poetics of painting, the nuances of the painting language, and the development of a personal direction. A wide variety of problems will address such issues as color, composition, and the development of imagery, process, and content. Students are expected to improve in technical handling of paints and move towards developing personal modes of seeing, interpreting, and thinking for themselves. This course introduces different topics, strategies and individual challenges each semester, so it may be repeated with advanced course numbers.
One term course offered either term
Also Offered As: FNAR 232
Prerequisite: FNAR 531
Activity: Studio
1 Course Unit
Notes: This course can be continued by registering for FNAR 533 Painting Studio (II), and FNAR 534 Painting Studio (IV).

FNAR 534 Painting Studio
Painting Studio IV focuses on continuing the student’s exploration of techniques, problems, and poetics of painting, the nuances of the painting language, and the development of a personal direction. While students may choose to work on assigned projects (either in consultation with the instructor or following the projects that the Painting II/III students may be involved in), emphasis is on the investigation of the student’s own sensibility. Students will be expected to engage in ongoing critical analysis of their own practices and assumptions.
One term course offered either term
Also Offered As: FNAR 334
Prerequisites: FNAR 523 and FNAR 533
Activity: Studio
1 Course Unit

FNAR 536 Digital Figure Modelling
This course introduces methods of modeling, texturing, and rendering human and animal figures. Students will study anatomical bone and muscle structures, and then employ this knowledge as they develop polygonal models for real-time 3D simulations or gaming environments, high-resolution renderings, and rapid prototyping.
Course usually offered in spring term
Also Offered As: FNAR 236
Prerequisite: FNAR 635; Recommended FNAR 543 or FNAR 580
Activity: Studio
1 Course Unit

FNAR 538 Open Book
"Open Book" will focus on visual communication of information. It will address two methods of inquiry and the corresponding means of visual representation: the objective, well structured research of facts and images, and the creative process of their subjective evaluation and restatement. Students will propose a topic based on their area of interest and engage in a focused, semester-long exploration, which they will present in the form of a designed and printed book.
Course usually offered in fall term
Also Offered As: FNAR 238
Activity: Seminar
1 Course Unit
FNAR 540 Mystics & Visionaries: Arts and Other Ways of Knowing
As a pioneer of abstraction in the early 1900's, Hilma Af Klint channeled a complex and highly original body of abstract symbolic work in secrecy. Using the upcoming Hilma Af Klint exhibition at the Guggenheim as a focus and departure point, this course will explore the ways in which artists have accessed alternative ways of seeing, knowing, and embodying non-visible realities as a source for their work. Accessing spiritual realms has been the subject of early European Modernisms investigations into Theosophy and Anthroposophy, as well as the primary intention of Tibetan Thangkas and Indian Tantra paintings. Postmodernism's crisis of belief and skepticism generated a cultural situation wherein the subject of spirituality was marginalized, ridiculed as anti-intellectual, and in disgrace. The Hilma Af Klint exhibition and surge of interest in her work signifies a new moment, where questions about consciousness and the nature of reality are being addressed with renewed vigor. How do we create space in a technology driven world for experiences that attempt to align the viewer/maker with the contemplative realm, heightened states of consciousness, or transcendence? We will examine a wide field of artists in an attempt to understand the possibilities of the "spiritual" in art and contemporary culture. This seminar will engage in readings, lectures, discussions, projects, and field trips. This course is appropriate for both grad and undergrad, art majors and non-majors alike.
Taught by Jackie Tileston
Course usually offered in fall term
Also Offered As: FNAR 240
Activity: Seminar
1 Course Unit

FNAR 541 Hand-Drawn Computer Animation
Using software tools designed for hand-drawn animation, students will develop animation skills applicable to all forms of animation. In this course students will learn to draw with a sense of urgency and purpose as they represent motion and drama in a series of frames. Through careful study of natural movements, precedents in the history of animation, and through the completion of a series of animation projects, students will develop strategies for representing naturalistic movement, inventing meaningful transformations of form, and storytelling.
Course not offered every year
Also Offered As: FNAR 241
Prerequisite: FNAR 636
Activity: Studio
1 Course Unit

FNAR 542 3-D Design
Students will make work that draws from and interacts with the three-dimensional world we live in. Formal strategies will explore principles of organization. Planar construction, modeling and assemblage methods will be used for investigations spanning from bas-relief to environmental art. This is a "learn by doing" process with no prerequisites.
One-term course offered either term
Also Offered As: FNAR 142
Activity: Studio
1 Course Unit

FNAR 543 Figure Sculpture I
An introduction of modeling the human figure in clay. Students will work from the live model, acquainting themselves with issues of basic anatomy, form and function, and clay modeling. No previous experience is required; drawing experience a plus.
One-term course offered either term
Also Offered As: FNAR 243
Activity: Studio
1 Course Unit

FNAR 545 Sculpture Practices
As an introduction to traditional and contemporary three-dimensional practice, this course is concerned with the concepts and methodologies surrounding three-dimensional art making in our time. Students experiment with a variety of modes of production, and develop some of the fundamental techniques used in sculpture. In addition to these investigations, assignments relative to the history and social impact of these practices are reinforced through readings and group discussion. Processes covered include use of the Fab Lab, wood construction, clay, paper, mixed media, and more. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 145, VLST 252
Activity: Studio
1 Course Unit

FNAR 547 Environmental Animation
This studio-based course examines the disciplinary spaces of landscape, art, and architecture through the medium of 3D animation and storytelling. We immerse ourselves in environments that may be as small as a cell or as large as a planet. From the reframing of images, models, graphic design, or video to visualization or coding the genesis of whole environments, this course will allow for a variety of entry point for students of different disciplines and skill levels. Projects will range in scope from animated GIFs to animated shorts. This course embraces a spirit of invention, collaborative learning, and interdisciplinary cross-pollination. Experience in landscape architecture, architecture, animation, programming, film, GIS, and/or graphic design is encouraged. We will examine and discuss some standard typologies such as the walkthrough, data-visualization, as well as filmic and avant garde strategies as starting points for creative reinterpretation of space. We will primarily be using 3D Studio Max and After Effects with support from Next Engine 3D Scanner, Rhino, and Grasshopper. Scripting will be included in most assignments to enhance artistic control of the software.
Taught by: Landau
Course usually offered in spring term
Also Offered As: FNAR 247
Prerequisites: Experience in landscape architecture, architecture, animation, programming, film, Photoshop, or graphic design is strongly encouraged but not required.
Activity: Studio
1 Course Unit
FNAR 550 Introduction to Printmaking
The course offers an introduction to several forms of printmaking including: intaglio, screen printing, relief, and monoprinting. Through in-class demonstrations students are introduced to various approaches to making and printing in each medium. The course enhances a student's capacity for developing images through two-dimensional design and conceptual processes. Technical and conceptual skills are developed through discussions and critiques.
Course usually offered in spring term
Also Offered As: FNAR 250, VLST 250
Activity: Studio
1 Course Unit

FNAR 551 Printmaking: Etching
The class will challenge the possibilities of experimental drawing and ways of creating incisions and textures using copper plates as the matrix, which then will be printed on paper and other materials. The class offers full technical and historical description of each individual process: Dry Point, Etching. Hard ground, Soft Ground, Aquatint, Shine Cole. Spit-Biting, Sugar Lift, Color Printing and Viscosity printing.
One-term course offered either term
Also Offered As: FNAR 251
Activity: Studio
1 Course Unit

FNAR 552 Printmaking: Screen Printing
This course is an introduction to technical skills and investigative processes in screen printing and relief and examines methods for combining digital technology with traditional print media. The course introduces students to several contemporary applications of silk screen and relief printmaking including techniques in multi-color printing, photo-based silk screening, digital printing, woodcut, linocut, and letterpress. Demonstrations include photo and image manipulation, color separating and output techniques, hand carving and printing, as well as drawing and collage. Both traditional and experimental approaches are explored and encouraged and technical and conceptual skills are developed through discussions and critiques.
One-term course offered either term
Also Offered As: FNAR 252
Activity: Studio
1 Course Unit

FNAR 553 Advanced Projects in Printmaking
This course will concentrate on expanding imagery in print media. The course requires the proposal of a directed final project to be developed during the semester. Three initial exploratory projects will culminate in the final. Projects are open to all print media, but there will be an emphasis on screen printing. Techniques will be addressed as they serve the needs of ideas rather than a set technical procedure. Through individual consultation, scheduled class critiques, and field trips, attention will be given to studio work in and out of printmaking so that the technical and conceptual strengths of print media can serve as a worthwhile adjunct to an overall studio practice.
Course usually offered in spring term
Also Offered As: FNAR 253
Prerequisites: FNAR 551 and FNAR 552 or FNAR 557
Activity: Studio
1 Course Unit

FNAR 558 Introduction to Clay: the Potter's Wheel and Beyond
In this introductory clay class, students will learn all the fundamental skills needed to create three-dimensional forms in clay using a variety of methods: wheel throwing, handbuilding (such as coil building and slab construction), and press molding. Whether creating utilitarian forms or creating sculpture, projects are designed to strengthen both craftsmanship and individual creativity. In addition to developing a working knowledge of the ceramic process, including surface treatments and glazing, students will also be introduced to design issues as well as contemporary art/ceramics topics that influence our aesthetic sensibilities. No prerequisites.
Taught by: FNAR Faculty
One-term course offered either term
Also Offered As: FNAR 258
Activity: Studio
1 Course Unit

FNAR 559 Beginning Clay: Handbuilding and Casting Techniques
Modeling and casting are fundamental methods of object-making. Students will learn basic handbuilding techniques such as coil building, slab construction, and mold making through assignments that incorporate conceptual and technical issues. Through experimentation with these methods, this course promotes an understanding of materials, processes, visual concepts, and techniques for creating three-dimensional forms in space. In addition to using different water-based clays and plastic, other materials such as wax, plastilene, paper pulp, cardboard, and tar paper will be explored. No prerequisites.
Taught by: FNAR Faculty
One-term course offered either term
Also Offered As: FNAR 259
Activity: Studio
1 Course Unit

FNAR 563 Advanced Wheel Studio
This course teaches students more advanced wheel throwing techniques while helping to develop their critical skills in other areas of ceramic work. Students will learn to throw, employing larger masses of clay, and to increase the complexity of their work by combining and altering thrown parts. There will be an emphasis on experimentation in surface treatment and design, the goal of which is to expand a student's ability to create more complicated and personalized clay works. In addition to learning the technical knowledge, there will be critical discussions of contemporary ceramics issues through image presentations, reading materials and field trips.
One-term course offered either term
Also Offered As: FNAR 263
Prerequisite: FNAR 561
Activity: Studio
1 Course Unit
FNAR 566 Graphic Design with Creative Technologies
The aim of this course is to introduce students creative ways to use color, typography, and layout across new materials and media, ranging from print to physical objects. Students will explore visual design through a set of assignments and projects that are geared towards exploring the role of design in visual arts, interaction design, media design and architecture. The course introduces a number of design concepts such as content organization, navigation, interaction and data-driven design and show ways to develop new design metaphors, presentation techniques, and imagery using old and new technologies. course is structured as a combination of lectures and hands on workshops where students will have the chance to work both individually and collaboratively to realize their projects.
One term course offered either term
Also Offered As: FNAR 266
Prerequisite: FNAR 636
Activity: Studio
1 Course Unit

FNAR 567 Computer Animation
Through a series of studio projects this course introduces techniques of 2D and 3D computer animation. Emphasis is placed on time-based design and storytelling through animation performance and montage. Students will develop new sensitivities to movement, composition, cinematography, editing, sound, color and lighting.
One term course offered either term
Also Offered As: FNAR 267
Activity: Studio
1 Course Unit

FNAR 568 Interactive Design Studio: Biological Design
This course is a research-based design studio that introduces new materials, fabrication, and prototyping techniques to develop a series of design proposals in response to the theme: Biological Design. The studio introduces life sciences and biotechnologies to designers, artists, and non-specialists to develop creative and critical propositions that address the social, cultural, and environmental needs of the 21st century. The course will be a pilot study of the first biodesign challenge organized by CUT/PASTE/GROW. The final projects will be submitted to a competition and the winning entry will be featured at Biofabricate in Summer 2019.
One term course offered either term
Also Offered As: FNAR 268, IPD 568
Activity: Studio
1 Course Unit

FNAR 569 Typography
The study and practice of typography spans the history of individual letterforms through the typesetting of full texts. It is a complete immersion into type as an integral part of visual communication. Typesetting conventions and variables including legibility, readability, texture, color and hierarchy will be stressed, as well as a form for organizing information and expressing visual ideas. Studio work will include collecting and analyzing type, designing an original typeface, researching type history and experimenting with typographic forms.
Course usually offered in spring term
Also Offered As: FNAR 269
Prerequisite: FNAR 636
Activity: Studio
1 Course Unit

FNAR 570 Graphic Design Practicum
Practicum provides a real world experience for students interested in solving design problems for non-profit and community organizations. The studio works with two clients each semester, and previous projects have included print design, web design, interpretive signage and exhibit interactives. All projects are real and will result in a portfolio-ready finished product. Students will participate in a full design experience including design, client interaction, presentations, production, and project management. In addition, students will take field trips, meet professionals and go on studio visits.
One term course offered either term
Also Offered As: FNAR 270
Prerequisite: FNAR 566 or FNAR 569
Activity: Studio
1 Course Unit

FNAR 571 Introduction to Photography
This course is an introduction to the basic processes and techniques of black & white photography. Students will learn how to expose and process 35mm film, SLR camera operation, darkroom procedures & printing, basic lighting and controlled applications. It begins with an emphasis on understanding and mastering technical procedures and evolves into an investigation of the creative and expressive possibilities of making images. This is a project-based course, where students will begin to develop their personal vision, their understanding of aesthetic issues and photographic history. Assignments, ideas and important examples of contemporary art will be presented via a series of slide lectures, critiques and discussion. No previous experience necessary. 35mm SLR cameras will be available throughout the semester for reservation and checkout from the photography equipment room. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One term course offered either term
Also Offered As: FNAR 271, VLST 251
Activity: Studio
1 Course Unit

FNAR 572 Advanced Photography: Integrated Techniques and Strategies
This studio course seeks to broaden each student's skills by experimenting with a wide range of photographic media. Advanced analog, digital and experimental lens-based techniques will be covered, as well as larger camera formats to expand their vocabulary as image-makers. Emphasis will be on an integrated experience of the photographic medium and the development of a body of work that is both theoretically and historically informed. The course will be a means to view and discuss various strategies of important contemporary photographers. Focused assignments, readings, slide lectures and gallery visits will supplement each student's artistic practice and research.
One term course offered either term
Also Offered As: FNAR 272
Prerequisite: FNAR 571 or Permission of Instructor
Activity: Seminar
1 Course Unit
FNAR 574 Reconfiguring Portraiture
As methods of representation are constantly shifting, one thing is clear - the photographic portrait is not what is used to be. Exploring both traditional and contemporary methods of portraiture, this class will uncover and discuss the ways in which we perceive each other in imagery, both as individuals and as groups. Throughout the semester, we will consider how portraits deal with truth, physical absence, the gaze, cultural embodiment, voyeurism and the digital persona. This course will build on the combination of perception, technology, and practice. Throughout the semester, students will advance by learning lighting techniques and strategies of presentation - as these core skills will become tools in the execution of project concepts. In tandem with each project, students will encounter and discuss a wide array of photography and writings from the past to the present, in an effort to understand the meanings and psychological effects of freezing the human image in time.
Course usually offered in spring term
Also Offered As: FNAR 274
Prerequisite: FNAR 571 or FNAR 640 or Instructor Permission
Activity: Seminar
1 Course Unit

FNAR 575 Graduate Drawing Seminar
This seminar examines the essential nature drawing has in an artist's process. Direct visual perception, self-referential mark making, the viability of space and understanding it, and drawing from one's own work are some of the drawing experiences encountered in the course. There are regular critiques and discussions based on the work and readings.
Taught by: Tileston/Freedman
Course usually offered in spring term
Activity: Seminar
1 Course Unit

FNAR 576 Critical Issues Seminar
This seminar investigates issues concerning visual artists. Part one begins with Plato and Kant and progresses through a history of ideas in art, exploring the questions which concern artists today, including Modernism, post-modernism, abstraction and representation, appropriation, context and politics, identity, and the artist's relationship to these subjects. Part two of the course will focus on current texts in contemporary art, the current dialogue(s), and issues specific to our time and place as artists. The seminar engages contemporary issues in a spirit of curiosity and critique, and relates them to our studio practice.
Taught by: Tileston
One-term course offered either term
Activity: Seminar
1 Course Unit

FNAR 578 Documentary Strategies
This course offers a context for photographers to develop a documentary project - either within a traditional photojournalistic framework or one that challenges these traditions. The aim is to understand documentary as an evolving practice and to develop an artistic response when depicting our social reality - from everyday experience to the events that shape the world. An important aspect of the class will be examining the diversity of ways that journalists and artists have used the camera to extend and question the power of photography as document. The class will address key questions of media and mediation, the nature and status of documentary in the context of globalizing media and how traditional documentary work has been affected by video, performance, conceptual art and activism.
One-term course offered either term
Also Offered As: FNAR 278
Prerequisite: FNAR 571 or FNAR 640 or Permission from Instructor
Activity: Seminar
1 Course Unit

FNAR 580 Figure Drawing I
Students work directly from the nude model and focus on its articulation through an understanding of anatomical structure and function. Students will investigate a broad variety of drawing techniques and materials. The model will be used as the sole element in a composition and as a contextualized element.
One-term course offered either term
Also Offered As: FNAR 280
Prerequisite: FNAR 523
Activity: Studio
1 Course Unit

FNAR 581 Figure Drawing II
Figure Drawing II is an advanced class designed to further develop the student's skill and facility in capturing the human form. Content and conceptual issues will be explored through individualized projects concentrating on the figure. Students will also expand on their knowledge of drawing media and application.
One-term course offered either term
Also Offered As: FNAR 281
Prerequisite: FNAR 580
Activity: Studio
1 Course Unit
FNAR 583 Performance/Camera: Performance and with-through-for Cameras
This intermediate course will explore the wide and expansive territories of art-making that exist between live performance and mediated image making—both still and moving. For much of the 21st century, the mediums of performance, video and photography have been weaving in and out of contact. Performance is known and understood largely through its documentation; sometimes voluminous and sometimes little more than a single photograph. On the other side, video, film and photography each developed through widespread explorations that were deeply entwined with the “capturing” of bodies on film. Using photography, video and performance in equal parts, the course is a hands-on exploration of this capacious terrain. The course will be structured by a series of bi-weekly assignments that allow for individual and collective production. The course will also include a regular schedule of short readings and presentations/screenings of existing works.
Taught by: Hayes, Sharon
Course usually offered in fall term
Also Offered As: FNAR 083
Prerequisites: FNAR 661, FNAR 640 or Permission of Instructor
Activity: Studio
1 Course Unit

FNAR 585 Performance Studio
This course supports the individual and collaborative production of performance works. As the medium of performance consists of diverse forms, actions, activities and methodologies, the course allows for an open exploration in terms of material and form. Students are invited to utilize technologies, materials and methodologies from other mediums and/or disciplines such as video, photography, writing and sound. In addition to the production component, the course will examine multiple histories of performance through readings, screenings and directed research.
Taught by: Hayes
Course usually offered in spring term
Also Offered As: FNAR 085
Prerequisites: One previous studio course (such as FNAR523, FNAR545, FNAR640, OR FNAR661) or permission from the instructor.
Activity: Studio
1 Course Unit

FNAR 589 Mixed Media Animation
Mixed Media Animation is a contemporary survey of stop-motion animation concepts and techniques. Students use digital SLR cameras, scanners and digital compositing software to produce works in hand-drawn animation, puppet and clay animation, sand animation, and multiplane collage animation. Screenings and discussions in the course introduce key historical examples of animation demonstrating how these techniques have been used in meaningful ways. Students then learn how to composite two or more of these methods with matte painting, computer animation or video.
Course usually offered in spring term
Also Offered As: CIMS 289, FNAR 289
Prerequisites: FNAR 523 and FNAR 636
Activity: Studio
1 Course Unit

FNAR 591 The Body and Photography
The last few decades have introduced dramatic changes in the way we interact with each other, the way we communicate, the way we date, watch porn, etc. Ethical concerns have arisen with scientific advances such as stem cell research, fertility drugs, Botox, cloning and erectile dysfunction. This studio course will investigate the myriad ways in which the corporeal is addressed and manipulated in contemporary art, science, religion, pop culture and media. Students will develop photographic projects related to updated questions concerning gender, sexuality and social issues. Lectures, readings and class discussion will focus and inform their individual work.
Course usually offered in spring term
Prerequisites: FNAR 271 or FNAR 340 and Instructor Permission Required
Activity: Seminar
1 Course Unit

FNAR 594 Graduate Photography Seminar
This seminar will examine contemporary issues in photography from the point of view of the practicing artist. Students will meet with visiting critics during the semester, the course will also include student presentations, weekly discussions and group critiques, visits to artists’ studios and gallery and museum exhibitions. Texts for the seminar will be drawn from contemporary critical theory in art, philosophy, history and popular culture. Required for all graduate photographers.
Taught by: Davenport
Activity: Seminar
1 Course Unit

FNAR 598 Grad Sculpture Seminar
Sculpture instructor (to be announced) will lead this studio course based on improvisational approaches to developing individually made sculptural works, as well as works that are made in collaboration with others. As in Music or Theater, these works involve the collaboration of others, yet they are equally initiated by small thoughts, and carry those thoughts into a more public and interactive format of installation.
Course usually offered in spring term
Activity: Seminar
1 Course Unit

FNAR 601 Graduate Studio III
First year studio for MFA students’ core pursuit of self-directed interdisciplinary problems that contribute to one or more of the visual art disciplines.
Taught by: Lum/Freedman/Mosley/Telhan/Tileston/Hartt/Hayes/Lopez
Course usually offered in fall term
Also Offered As: FNAR 501
Activity: Studio
2 Course Units

FNAR 602 Graduate Studio IV
Second year studio for MFA students’ core pursuit of self-directed interdisciplinary problems that contribute to one or more of the visual art disciplines.
Taught by: Adkins/Davenport/Freedman/Mosley/Telhan/Tileston
Course usually offered in spring term
Also Offered As: FNAR 502
Activity: Studio
2 Course Units
FNAR 604 Graduate Sculpture Studio
Second-year studio for MFA students exploring advanced discipline in sculpture.
Taught by: Adkins
One term course offered either term
Also Offered As: FNAR 305
Activity: Studio
1 Course Unit

FNAR 605 Topics in Contemporary Art: Art & Resistance
An experimental class for artists and scholars. Organized around a series of case studies of artists, collectives, infrastructures, and curatorial projects, the course includes: in-class discussion and viewing; workshops with class visitors; site visits; participation in small reading groups. In the first half of the class, students will complete some short assignments. In addition, students will complete a final project that is intentionally open in terms of form. The project, which can be collective or individual in nature, will enable an in-depth material investigation of one of the threads of the class.
Taught by: Hayes and Redrobe
Activity: Seminar
1 Course Unit

FNAR 607 Advanced Sculpture: Installation & Intervention
In this course students will create sculptural installations and spatial interventions that explore site specificity and architectural environments. A range of traditional sculptural materials and techniques will be investigated along with more ephemeral interventions in space such as sound, light, and projection. Through lectures, readings, and critiques, students will explore the history of installation and interactive sculptural work and develop self-directed projects that interrogate historical, social, and psychological conditions of the built environment.
Also Offered As: FNAR 147
Activity: Studio
1 Course Unit

FNAR 613 The Chinese Body and Spatial Consumption in Chinatown
This is a primarily an art and planning course that centers on the representation of the oriental, specifically the Chinese, in both its historical and present contexts. The localization of the Chinese throughout the Americas within Chinatown precincts were also subject to representational imaginations that were negotiated through the lens of civic planning. This course will study the often fraught negotiation between representation and planning. The hyper-urbanization of China over the past several decades has radically altered traditional conceptions of public space in China. Mass migration from rural to urban areas has meant very high population densities in Chinese cities. Traditional courtyards surrounded by housing and other modestly scaled buildings are rapidly disappearing, incongruent with the demands of heated property development. Moreover, Chinese cities have comparatively little public green space per resident compared to equivalents in the West. Zoning in Chinese cities is also much more varied for any given area than what one would find in cities such as New York, Paris, and London. Intensifying density of urban areas precludes the construction of large public squares. Furthermore, large public squares tend to be either intensively congested and overcrowded or underused due to their oversight by government that render such spaces somewhat opprobrious in terms of use. Historically, the urban courtyards of temples, native place associations, and provincial guilds served as public spaces of gathering. They were also sites of festivals and the conducting of neighborhood and civic business. These spaces have become increasingly privatized or commodified with entrance fees. The air-conditioned concourses of enclosed shopping malls or busy outdoor market streets have become de facto public spaces in China where collective window shopping or promenading is the primary activity rather than bodily repose as one might find in a public space in a large Western city. The seminar/studio will investigate the meaning of the term public in the constitution of Chinese space, audience and critical voice through firstly the enclave of Chinatown and secondly through examples from China. The course will look into the changing conceptualization of public space in Chinatown as it has declined in its traditional form and become reinvented in the form of high-end shopping centered districts. This flux has its roots in post 1979 China as well as the post 1997 reversion of Hong Kong to China.
Also Offered As: FNAR 313
Activity: Seminar
1 Course Unit
FNAR 614 Tiananmen Square: A Case Study for Fine Arts and Landscape Architecture
This course takes as its subject the systems of representation and design that have historically and presently operate in Tiananmen Square in Beijing. There have been several incarnations of Tiananmen Square since its original form in 1651. During Imperial times and through the period of foreign legations, the square was once surrounded by walls and gates, creating a city within a city. With the advent of the Republic of China established on January 1, 1912, much of the enclosures were removed, opening up for public use previously restricted imperial areas. After the Communist Revolution in 1949, planning was afoot to enlarge the square. With its enlargement completed in 1958, the square expanded its footprint by four-fold, making it one of the largest public squares in the world. The enlarged and remodeled square coincided with the completion of the massive Monument to the People's Heroes. In 1976, a large mausoleum containing the preserved body of Mao Zedong was built near the site of the former Gate of China, further increasing the size of the square. In the 1990s, the building of the National Grand Theatre and expansion of the National Museum on grounds contiguous to the square necessitated further alterations to both the Eastern and Western skirts of the square. In recent years, there have been a widening debate regarding the transformation of the concrete heavy and by and large featureless square into a green space. Today, Tiananmen Square holds sacrosanct status to the Communist revolution of 1949, designed more for military parades and massive public rallies than public space respose. In a city that has few green spaces, such a verdant transformation in the heart of the Chinese capital would signal a radical symbolic deviation to China's development-first guiding principles. The square fronts Tiananmen Gate and the Forbidden City and is situated at the intersection of the historical east-west and north-south axes. Chang'An Avenue, important for military processions, separates the square from Tiananmen Gate and is considered the most important thoroughfare in the Capital and the path of the east west number one subway line. The entirety of the Tiananmen Square area is marked by ideology and political prominence, often confusingly. Tiananmen Tower, functions as a conflation of monumental facade with political embodiment. This course will focus on imagined interventions through public art and landscape design within Tiananmen Square and its contiguous areas. It is a studio practice course with a significant seminar component that will include lectures and readings relating to issues.
Taught by: Ken Lum
Course usually offered in spring term
Also Offered As: FNAR 314
Activity: Seminar
1 Course Unit

FNAR 615 Across Forms: Art and Writing
What if a poem spoke from inside a photograph? What if a sculpture unfurled a political manifesto? What if a story wasn't just like a dance, but was a dance or a key component of a video, drawing, performance, or painting? In this course, artists and writers will develop new works that integrate the forms, materials, and concerns of both art and writing. Many artists employ writing in their practices, but may not look at the texts they create as writing. And many writers have practices that go beyond the page and deserve attention as art. This course will employ critique and workshop, pedagogic methodologies from art and writing respectively, to support and interrogate cross-pollination between writing and art practices. Additionally, the course will will examine a field of artists and writers who are working with intersections between art and writing to create dynamic new ways of seeing, reading, and experiencing.
Taught by: Hayes and Zolf
Course usually offered in fall term
Also Offered As: ENGL 119, FNAR 315
Activity: Seminar
1 Course Unit

FNAR 616 Art and Social Work: Art and the Ecology of Justice
How can the arts help us build more just society? How can the arts transform social structures and systems? Public health crises involving clean water (Flint), police violence (Baltimore), and a lack of economic and educational opportunity following reentry (Philadelphia) make legible the need for a new visual language that critiques these conditions and challenges entrenched structural inequalities. We will engage the work of creative practitioners who are mapping new relationships between art and social justice and directly impacting individual and communal well-being. In so doing, the course seeks to challenge traditional constructions of public health, which often isolate individual histories from their social life and their relation to families, communities, and geographies. Readings will build upon disciplinary perspectives in the arts, humanities, and social policy. Requirements include weekly readings, class participation, and a collaborative final project. The course will meet in the Health Ecologies Lab at Slought Foundation, an arts organization on campus.
Taught by: Neff, Levy and Ghose
Course usually offered in spring term
Also Offered As: FNAR 316, SWRK 717
Activity: Seminar
1 Course Unit
FNAR 620 Producing Ephemera: Letterpress, Risograph, Inkjet, Xerox
This studio course introduces students to the world of printmaking and circulation through techniques in letterpress and Risograph (a high-speed digital printing system developed in Japan in the 1980s), in addition to Xerox, laser, inkjet, and off-set printing, focusing particularly on the format of prints, artists’ ephemera, and the role of ephemera in understanding culture. Students will create their own broadsides, flyers, announcement cards, and independent publications throughout the course, exploring ways in which artists, designers, musicians, and activists make or have made use of the print to disseminate information; initiate happenings; advertise events; or format change. Students will learn about some of the most significant producers working within this realm - from Conceptualists to punk bands - and develop skills in page layout, typography, and design; mechanized and hand-pulled press operations; and digital to analog pre-press and post-print production methods. This course is designed for highly motivated students and requires out-of-class time commitment. However, no prior coursework is required. Students from all levels and backgrounds are encouraged to register. The course employs combined collaborative / self-directed approaches to learning to enhance students’ understandings of ways in which print media and multiples serve as vital conduits for disseminating ideas involving visual art, popular culture, literature, politics, performance and many other topics students will wish to explore.

Taught by: Romberger
Course usually offered in fall term
Also Offered As: FNAR 220
Activity: Studio
1 Course Unit

FNAR 622 The Big Picture: Mural Arts in Philadelphia
The history and practice of the contemporary mural movement couples step by step analysis of the process of designing with painting a mural. In addition students will learn to see mural art as a tool for social change. This course combines theory with practice. Students will design and paint a large outdoor mural in West Philadelphia in collaboration with Philadelphia high school students and community groups. The class is co-taught by Jane Golden, director of the Mural Arts Program in Philadelphia, and Shira Walinsky, a mural arts painter and founder of Southeast by Southeast project, a community center for Burmese refugees in South Philadelphia.
One term course offered either term
Also Offered As: FNAR 222, URBS 322
Activity: Seminar
1 Course Unit

FNAR 631 Interdisciplinary Studio: Sites of Convergence and Hybridity
This course takes an experimental multimedia approach to investigating some of the boundaries in contemporary art making practices. Painting, photography, video, design and sculpture intersect, overlap, and converge in complicated ways. Projects will be designed to explore hybrid forms, collage, space/ installation, and color through a variety of strategic and conceptual proposals as students work towards unique ways of expanding their own work. Weekly readings, critiques, and presentations will be integrated with studio projects. This studio/seminar is appropriate for students at all levels and from all areas of Fine Arts and Design.

Taught by: Tileston
Course usually offered in spring term
Also Offered As: FNAR 331
Prerequisites: One previous studio course (such as FNAR 523, FNAR545, FNAR640, FNAR 531 or FNAR 636 or Penn Design course) or permission from the instructor.
Activity: Studio
1 Course Unit

FNAR 633 Digital Illustration
Digital Illustration is a course designed to expose students to the diverse techniques and approaches used in creating digital illustration for print publication. Course assignments will include two-dimensional animation storyboard rendering, figure illustration, technical diagram illustration, photographic retouching and enhancing. Digital applications will include morphing with layers, surface cloning, three-dimensional modeling and spatial transformation of scenes and objects. Students completing this course will possess the capability to design and plan creatively and skillfully execute finished artwork.

Also Offered As: FNAR 233
Prerequisites: FNAR 636 and FNAR 523
Activity: Studio
1 Course Unit

FNAR 634 Art of the Web: Interactive Concepts for Art & Design
Art of the Web: Interactive concepts for art and design is a first step in learning how to create, analyze and discuss interactive content, as a visual creator. It is an exploration of the culture of the internet, the ideas behind its quirks, the dreams and freedoms it encapsulates, and the creative power it gives to us. Students will be assigned projects that will challenge their current understanding of the web, and the ways it shapes human connectivity and interaction. Upon completion of this course, students will possess a working knowledge how to organize and design websites and learn to critique web-content including navigation, UX design and information architecture. The course will require analytical and conceptual skills and foster creative thinking.

One term course offered either term
Also Offered As: FNAR 234
Prerequisite: FNAR 636
Activity: Studio
1 Course Unit

FNAR 635 3-D Computer Modeling
Students will develop a comprehensive knowledge of how virtual worlds are constructed using contemporary computer graphics technique with a fine arts perspective. The course will offer the opportunity to explore the construction, texturing, and rendering of forms, environments, and mechanisms while conforming to modeling specifications required for animation, real-time simulations or gaming environments, and rapid prototyping.

Activity: Studio
1 Course Unit
FNAR 636 Art, Design and Digital Culture
This course is an introduction to the fundamental perception, representation, aesthetics, and design that shape today's visual culture. It addresses the way artists and designers create images; design with analog and digital tools; communicate, exchange, and express meaning over broad range of media; and find their voices within the fabric of contemporary art, design, and visual culture. Emphasis is placed on building an extended form of visual literacy by studying and making images using a variety of representation techniques; learning to organize and structure two-dimensional and three-dimensional space, and designing with time-based and procedural media. Students learn to develop an individual style of idea-generation, experimentation, iteration, and critique as part of their creative and critical responses to visual culture. If you need assistance registering for a closed section, please email the department at fnaruq@design.upenn.edu
One-term course offered either term
Also Offered As: FNAR 264, VLST 264

1 Course Unit

FNAR 637 Information Design and Visualization
Information design and visualization is an introductory course that explores the structure of information (text, numbers, images, sounds, video, etc.) and presents strategies for designing effective visual communication appropriate for various users and audiences. The course seeks to articulate a vocabulary of information visualization and find new design forms for an increasingly complex culture.
One-term course offered either term
Also Offered As: FNAR 337
Prerequisite: FNAR 636
Activity: Studio
1 Course Unit

FNAR 638 Creative Research
This seminar explores what it means to do research in creative and critical practices. Students learn about different research methods from design, engineering, humanities and sciences; utilize them for developing and evaluating their individual creative work as cultural producers. This is an interdisciplinary course that encourages students to observe, measure, analyze, test, study, experiment, diagram, prototype, speculate, generate and criticize; apply multiple modes of inquiry; be conceptual, analytical, propositional and critical at the same time to develop their work from different perspectives.
Taught by: Telhan
Course usually offered in fall term
Also Offered As: FNAR 338
Activity: Seminar
1 Course Unit

FNAR 640 Digital Photography
This class offers an in-depth technical and conceptual foundation in digital imagery and the opportunity to explore the creative, expressive possibilities of photography. Students will become proficient with the basic use of the camera, techniques of digital capture, color management and color correction. They will also develop competency in scanning, retouching, printing and a variety of manipulation techniques in Photoshop. Through weekly lectures and critiques, students will become familiar with some of the most critical issues of representation, consider examples from photo history, analyze the impact of new technologies and social media. With an emphasis on structured shooting assignments, students are encouraged to experiment, expand their visual vocabulary while refining their technical skills. No previous experience is necessary. Although it is beneficial for students to have their own Digital SLR camera, registered students may reserve and checkout Digital SLR cameras and other high-end equipment from the department. If you need assistance registering for a closed section, please email the department at fnaruq@design.upenn.edu
One-term course offered either term

1 Course Unit

FNAR 642 Digital Photography II
In this course students will continue to develop conceptual, technical, aesthetic and formal strategies in digital photography, expanding their artistic process while refining their critical approach to researched subject matter. The class will be driven initially by a series of assignments formulated to further expose students to broad possibilities related to the medium and then they will be guided towards the evolution of a personalized body of work that is culturally, theoretically and historically informed. We will be examining key issues surrounding the digital image in contemporary society, led through a combination of class lectures, readings, group discussions, film screenings, gallery visits and class critiques. Students will further their knowledge of image control and manipulation, retouching and collage, advanced color management; become familiar with high-end camera and lighting equipment and develop professional printing skills. In addition to learning these advanced imaging practices, this course will also emphasize an investigation of critical thought surrounding contemporary visual culture and the role of digital media in the creation of art.
Taught by: Jamie Diamond
Course usually offered in fall term
Also Offered As: FNAR 342
Prerequisite: FNAR 640 Digital Photography I
Activity: Studio
1 Course Unit
FNAR 643 Language of Design
The course will explore the changing relationship during the modern era between design (structure, model, plan of a work of art) and language (metaphor for a system of communication; speech, writing, literature). Our readings and visual presentations will focus on topics in the decorative arts, painting, architecture, typography and visual communication. We will focus on primary sources in order to situate our inquiry in a larger historical context. The discussion will center on claims about the inherent meaning of form, discuss different roles for design - as an ideological statement, as an agent of social change, and as an idiosyncratic expression. Topics will also include the search for a universal visual language, attempts at bridging the perceived gap between spoken and written language, and the impact of visual form on the meaning of literary texts (particularly when the author has been involved in the publication process). Students can suggest additional topics related to their field of study.
Course usually offered in spring term
Also Offered As: FNAR 343
Activity: Seminar
1 Course Unit

FNAR 645 Book and Publication Design
Book and Publication Design will focus on the theory and professional practice of designing multi-page publications. Students will analyze formal structures of different types of books-literature and poetry, fiction and non-fiction compilations, illustrated volumes such as art catalogues, monographs and textbooks, and serial editions discussing both traditional and experimental approaches. The format of the course will be split between theoretical and historical evaluations of book formats by drawing on the Van Pelt Rare Book Collection and studio time where students will design books with attention to the format's conceptual relationship to the material at hand with a focus on typography and page layout, as well as on understanding production methods of printing and binding. In addition to the conventions of page layout students will examine paratextual elements (title page, practices of pagination and other internal structuring, content lists and indexes, colophons, notes and marginalia, end-leaves, binding, etc.).
Taught by: Hyland
Course usually offered in fall term
Also Offered As: FNAR 245
Prerequisite: FNAR 636 is strongly suggested but not required.
Activity: Studio
1 Course Unit

FNAR 646 ADVANCED 3D MODELING
Advanced 3D Modeling will give students the opportunity to refine skills in modeling, texturing, lighting, and rendering with an emphasis on the evolution of ideas through constant revision based on critical critique. Students will use a variety of industry standard software packages, including, but not limited to Maya and Mudbox to compose complex environments. Projects are designed to give students the opportunity to work with original content within a simulated production environment.
One-term course offered either term
Also Offered As: FNAR 366
Prerequisite: FNAR 235/635 or FNAR 236/536
Activity: Studio
1 Course Unit

FNAR 647 Expanded Documentary
The sites and situations of documentary in our culture have exploded exponentially—from standardized formulas (like reality TV), to social media and cross-platform journalism. In contemporary art, documentary practice has also significantly expanded and diversified. Since the early 2000s, with several influential exhibitions following Documenta XI, a new generation of artists have taken up the ambition of depicting our social reality, and have done so by re-engaging and re-inventing the documentary mode. This intermediate course will examine this vital contemporary field and will also offer students a comprehensive introduction to the history of documentary practice. We will investigate a series of key questions regarding the relation between politics and aesthetics, mediums and mobility, how documents function to both approximate and deny a sense of 'reality' and perhaps most importantly—what kinds of social, political or personal realities you want to propose in your artwork. The class will be driven by a series of studio assignments and practical experimentation. Although there will be an emphasis on photography and video, students will also explore a multiplicity of strategies and forms (including archival display, essayistic installation, image-text relationships, and the documentation of performance).
Taught by: Davenport
Course usually offered in spring term
Also Offered As: FNAR 347
Prerequisite: FNAR 571 or FNAR 640 or FNAR 661 or permission from instructor
Activity: Studio
1 Course Unit

FNAR 648 Counter the Land: Photography and the Landscape
Starting with the representation of landscape in painting in the early 1800s, the course will then move through Pictorialism and the Modernist movement in photography. Revisiting the later half of the 20th century, we will begin to consider the shifting practices of landscape and the ways it has been photographically depicted up to the present. Collaborating with the Brandywine River Museum of Art in Chadds Ford, students will begin their photographic exploration with the work of Andrea Wyeth and the landscape of the Brandywine Valley. As we consider Wyeth, the images of James Welling will also be introduced. Credited for pioneering new forms of representation in photography in the 1970s, Welling also revisited the work of Wyeth from 2010-2015, and committed to a fresh (and challenging) look at tradition. Working with imagery and text, this class will also touch on conceptual art, the New Topographics, and postmodernity. Through these various concentrations, students will consider and counter the traditions that they are already familiar with, while creating work based on issues of the landscape today. Questions about meaning, politics, social critique, land rights, technology and methods of presentation will be encouraged and explored throughout the course.
Taught by: Wahl
Course usually offered in fall term
Also Offered As: FNAR 348
Prerequisite: FNAR 571 or FNAR 640 or with permission of the instructor
Activity: Studio
1 Course Unit
FNAR 649 Advanced Digital Photography
In this studio course, students will become proficient in advanced techniques of image production while expanding their artistic process and refining their photographic work. With an emphasis on self-directed projects and research, students will further their knowledge of image control and manipulation, retouching and collage, advanced color management; become familiar with high-end equipment and develop professional printing skills. Class discussion, lectures and assigned readings will address the critical issues in contemporary art, media and photographic culture. Emphasis will be on integrating practice and critical dialogue.

1 Course Unit

FNAR 650 Shared Culture: New Strategies for Artists in the Digital Age
Our digital world has forced us to entirely rethink what it means to be an artist in the digital age, socially, economically, and politically. Ideas that have long been stable - including originality, creativity, and genius - are ripe for reexamination and redefinition in the twenty-first century. When the entire internet is copy-and-pasteable - and distribution moves swiftly - is anything off limits for the artist? Can we imagine our artistic production mimicking the meme, ripping through the networks for a day, then disappearing forever? Are we doomed to make works that are supposed to live for eternity or, in the face of environmental meltdown and collapsing financial markets, can we instead move our production toward the ephemeral? What would this look like? Can our output be steered toward the political? Can we frame these ideas as acts of resistance? Or compliance? Is there an inside? Is there an outside?
Taught by: Goldsmith
Course usually offered in spring term
Also Offered As: FNAR 350
Activity: Studio
1 Course Unit
Notes: Fine Arts Majors or MFA students ONLY or permission of instructor.

FNAR 652 Dispersive Lens
This studio course will explore the nexus between photography, sculpture, installation, drawing, painting, and the moving image. The course is informed by the printed image, as students will explore how photography can encourage thinking in other mediums, in addition to how other mediums can influence the making of photography. When does an abstract painting appear more like a photograph? How can a photograph suggest ways to make a video? Can a sculpture exist as a photograph? A variety of assignments will expose students to interdisciplinary approaches addressing these questions and more. Class projects will be supported by regular slide lectures, group critiques, and readings examining modern and contemporary artists and practices.

1 Course Unit

FNAR 654 Printmaking & Publications: Intro to Independent Publishing and Artists' Publications
This course introduces students to independent publishing and artists’ publications through print methods in letterpress, Risograph, and Xerox. The class will focus on the self-published artists’ zine/book as an affordable, accessible, and easily reproducible format for exploring ideas, disseminating artists’ work, and collaborating across disciplines. Students will learn a range of skills, including techniques in both mechanized and hand-pulled forms of printed media (Risograph, copy machine, Vandercook letterpress); short-run editions and binding; design and layout; pre-press and print production; and the web as it relates to and supports independent and democratic modes of distribution. Students will learn about and become acquainted with some of the most significant independent publishers working today and throughout history.
Students will leave class having completed three individual projects: a 16-page booklet/zine; a carefully considered online publication, and a final collaborative book designed, developed and published as a class.
The course commences with a field trip to New York City's Printed Matter, one of the oldest and most important nonprofit facilities dedicated to the promotion of artists’ books, where students will be encouraged to submit a publication by semester’s end.

1 Course Unit

FNAR 661 Video I
In this studio based course, students are introduced to video production and postproduction as well as to selected historical and theoretical texts addressing the medium of video. Students will be taught basic camera operation, sound recording and lighting, as well as basic video and sound editing and exporting using various screening and installation formats. In addition to a range of short assignment-based exercises, students will be expected to complete three short projects over the course of the semester. Critiques of these projects are crucial to the course as students are expected to speak in-depth about the formal, technical, critical and historical dimensions of their works. Weekly readings in philosophy, critical theory, artist statements and literature are assigned. The course will also include weekly screenings of films and videos, introducing students to the history of video art as well as to other contemporary practices. If you need assistance registering for a closed section, please email the department at fnarug@design.upenn.edu
One term course offered either term
Also Offered As: CIMS 061, FNAR 061, VLST 261
Activity: Seminar
1 Course Unit

FNAR 662 Video II
Video II offers opportunities to further explore the role of cinematic narrative technique, non-narrative forms, digital video cinematography, editing, and screen aesthetics. Through a series of several video projects and a variety of technical exercises, students will refine their ability to articulate technically and conceptually complex creative projects in digital cinema. In addition, one presentation on a contemporary issue related to the application of cinematic storytelling and/or the cultural context of digital video is required.
One term course offered either term
Also Offered As: CIMS 062, FNAR 062
Prerequisite: FNAR 661
Activity: Seminar
1 Course Unit
FNAR 663 Documentary Video

Documentary Video is an intensive production course involving the exploration of concepts, techniques, concerns, and aesthetics of the short form documentary. Building on camera, sound, and editing skills acquired in Video I, students will produce a portfolio of short videos and one longer project over the course of the semester using advanced level camera and sound equipment. One short presentation on a genre, technique, maker, or contemporary concern selected by the student is required.

Course usually offered in fall term
Also Offered As: FNAR 063
Prerequisite: FNAR 661
Activity: Seminar
1 Course Unit

FNAR 665 Cinema Production

This course focuses on the practices and theory of producing narrative based cinema. Members of the course will become the film crew and produce a short digital film. Workshops on producing, directing, lighting, camera, sound and editing will build skills necessary for the hands-on production shoots. Visiting lecturers will critically discuss the individual roles of production in the context of the history of film.

Course usually offered in fall term
Also Offered As: FNAR 065
Prerequisite: FNAR 661
Activity: Seminar
1 Course Unit

FNAR 667 Advanced Video Projects

This course is structured to create a focused environment and support for individual inquiries and projects. Students will present and discuss their work in one on one meetings with the instructor and in group critiques. Readings, screenings, and technical demonstrations will vary depending on students' past history as well as technical, theoretical, and aesthetic interests.

Course not offered every year
Also Offered As: FNAR 667
Prerequisite: FNAR 662
Activity: Seminar
1 Course Unit

FNAR 669 Graduate Video Studio

Through a series of studio projects, this course focuses on the conceptualization and production of time-based works of art. A seminar component of the course reviews contemporary examples of media based art and film. A studio component of the course introduces production techniques including lighting, cinematography, audio, editing, mastering projects, and installing audio-visual works in site specific locations or gallery spaces.

1 Course Unit

FNAR 670 Advanced Graphic Design and Typography

This course will explore advanced commercial, public and personal forms of visual communication. Emphasis will be placed on creative problem solving with consideration for audience. Discussion of design history, current ideology and future design applications will inform individual student projects. Work generated in this studio can be used to build a portfolio.

Course usually offered in fall term
Also Offered As: FNAR 370
Prerequisites: FNAR 566 AND FNAR 569 or Permission of Instructor.
Activity: Studio
1 Course Unit

FNAR 671 Film Sound: History, Aesthetics and Subversion

Sound and Image as experienced in the cinema, are not divisible. One perception influences the other, and transforms it. While a preexisting harmony between these two senses may exist, its conventions are subject to manipulation and the whims of subversion. Film Sound tracks the technological and aesthetic history of sound for film including psychoacoustics, dialogue, music, sound fx and audio's gradual and triumphant march towards fidelity, stereo and surround sound. This lecture course, through an historical and pedagogical romp loaded with examples throughout film history and visits by lauded audio professionals from the film world, seeks to instruct students to engage in the process of sound perception, gaining an appreciation for the art of sound as it relates to the varied phenomenological dimensions of that unique audio-visual encounter we call movies.

Course usually offered in fall term
Also Offered As: FNAR 070
Activity: Seminar
1 Course Unit

FNAR 673 Machine for Seeing: Architecture and the Moving Image

Architecture's relationship with cinema was established with the very first motion picture. In Sortie de l'usine Lumière de Lyon by Auguste and Louis Lumière we see a didactic presentation of film titles as workers from the Lumière brother's factory stream forth from its interior at days end. In many ways the context of the film is its subject as well. The title of the class plays on Le Corbusier's maxim that architecture is machine for living and perhaps cinema is simply a machine for helping us understand the vast construct of our built environment. A device, which allows us to imagine even greater follies or more importantly to think critically about architecture's relationship with and impact on society. Readings, screenings, discussions and critiques make up the curriculum along with studio time. Students will produce their own film and we will look at films produced by a range of practitioners: From architects speculating on the nature of and use of public space and urban development to documentarians researching the pathologies of neo-liberalism and its effect on the privatization of space. We will also look at the work of artists who engage with the poetics of space and who unpack the conflicted legacies of the built environment.

FNAR 674 A Virus in the Culture: Social Critique in Media Arts
In order to change the world, we must first learn how to infect it. A Virus in the Culture is a studio class that examines and generates various forms of media resistance to dominant hegemonic systems of power and control. Using filmmaking, publication design and interactive media, we’ll think through and develop responses to some of the most pressing issues facing us today. We’ll look at historical models from the agitprop design work of Gee Vacher for Anarchopunk band Crass to Chris Marker’s film Le Fond de L’Air Est Rouge, a radical analysis of global social and political turmoil in the late 60s and early 70s. We’ll also look at experimental contemporary design firms like Metahaven who question the role of designers and filmmakers today - Bypassing the power dynamics of clients and briefs they took it upon themselves to create a graphic identity for WikiLeaks. Each example broadens the definition and possibilities of practice to create a more porous engagement with audiences and users while informing the practice of social critique today. Considering a diverse range of topics from education policy, to the rights of environmental refugees, we’ll use the class to workshop a singular comprehensive project that targets researches and responds to a specific contested position. The outcome of which will be a class produced short film, publication and website that unpacks the social, cultural, and economic complexities of our subject. This class is co-taught by David Hartt, an artist and filmmaker along with graphic designer, Mark Owens. Reading, screenings, discussions and critiques make up the curriculum along with studio time. While the focus of this course is not technical, prior knowledge of design programs, camera functions, and post-production techniques is expected.
Taught by: David Hartt and Mark Owens

FNAR 675 Image and Sound Editing
This course presents an in-depth look at the storytelling power of image and sound in both narrative and documentary motion pictures. Students apply a theoretical framework in ongoing workshops, exploring practical approaches to picture editing and sound design. Students edit scenes with a variety of aesthetic approaches, and create story-driven soundtracks with the use of sound FX, dialogue replacement, Foley, music and mixing. Students not only learn critical skills that expand creative possibilities, but also broaden their understanding of the critical relationship between image and sound.

FNAR 678 Interfacing Culture: Designing for Mobile, Web and Public Media
This course introduces advanced topics related to contemporary media technologies, ranging from social media to mobile phones applications and urban interfaces. Students learn how to use new methods from interaction design, service design, and social media and work towards prototyping their ideas using new platforms and media. The class will cover a range of topics such as such as online-gaming, viral communication, interface culture, networked environments, internet of things and discuss their artistic, social, and cultural implications to the public domain.
Course usually offered in spring term
Also Offered As: FNAR 378
Prerequisite: FNAR 634
Activity: Studio
1 Course Unit

FNAR 679 Studio Lighting
The necessity of light and how light is rendered in relationship to what is seen and understood, is often a key ingredient in the portrayal of a subject. The origin of the still life can be found in images in the back as antiquity and has dealt with notions of death, science, class, social customs and even sex. Photography picked up on the tradition in 1827 and has not only made use of the form, but has expanded the topic into very unique territories. Contemporary artists have re-invented and re-invigorated the still life, formalism & abstract photography. As a framework for exploring “hands-on” lighting techniques, students will creatively grapple with the photography of objects in the studio. Working with the physical, symbolic, and conceptual ramifications of depicting specific forms in an image, teamed with the discussion of key texts, critiques, and studio lighting seminars, each student will create a considered and unique portfolio of images.
Taught by: Wahl
Course usually offered in spring term
Also Offered As: FNAR 279
Prerequisite: FNAR 571 or Permission of Instructor
Activity: Studio
1 Course Unit

FNAR 684 Photography & Fashion
Since the invention of photography, the fashion industry has been one of the cornerstones of creative expression, innovation and visionary provocation. Contemporary fashion photography has continued to attract a leading group of image-makers that continue the tradition of creating artwork that not only is being published in cutting edge magazines such as V, Another Magazine and Citizen K, but also are exhibiting their work in various galleries and museums around the world. This course is designed for students who are interested in creating contemporary fashion images through specific assignments that define the process: lighting in studio or location, working with fashion designers, stylists, models, hair/ make up artists, and the application of a variety of post production techniques, via Photoshop. The class will explore modern constructs that define the importance of branding, marketing, advertising and the relationship of fashion photography in contemporary art and culture today.
Also Offered As: FNAR 284
Prerequisite: FNAR 571 or FNAR 640 or Permission from Instructor
Activity: Studio
1 Course Unit
FNAR 685 Photography and Fiction
In spite of photography's traditional relationship with fact, the medium has been a vehicle for fiction since the very beginning. Fiction and photography encompass a broad range of meanings, from elaborately staging and performing for the camera, to manipulations using digital technology such as Photoshop to construct the work. This class will examine and trace the history of manipulated photography while paying special attention to the complex negotiations between the decisive moment, the constructed tableau, and the digitally manipulated image. There will be a combination of class lectures, studio projects, assigned readings, visiting artists, film screenings, field trips, and class critiques.

Course usually offered in spring term
Also Offered As: FNAR 285
Prerequisite: FNAR 271 or FNAR 640 or Permission of the Instructor
Activity: Studio
1 Course Unit

FNAR 686 Visual Narrative
Visual Narrative is an introduction to the practice of storytelling with images. From news and information to art, law, and science, visual storytelling is a critical aspect of creating and navigating contemporary culture. This course is situated at the intersection of design, art, and visual culture, focusing on relevant forms and topics including the photo essay, information design and visual explanation, the photographic sequence in contemporary art, scenario design and concept visualization. It proposes that studying and making sequential images and visual essays in a wide range of media—comics and graphic novels, propaganda, environments and installations, social media, animation, video, and digital media—are critical to understanding culture. The course immerses students in the study of narrative craft and creation of visual stories covering topics relevant to designers and photographers. Beginning with the photo series and the photo documentary tradition, the course evolves through multimedia narrative and non-narrative forms. Students will explore principles of narrative construction in design and photography through lecture, studio projects, and with presentations by visiting artists, designers, and photographers.

FNAR 712 Visual Epistemologies for Creative Practices
In this joint seminar between Architecture and Fine Arts, we investigate the alternative modes of diagrammatic thinking that are influencing art and design disciplines. The course provides a historical perspective on the evolution of visual epistemologies from late 1950s and reviews its current state from the lens of contemporary representation theory, computation, fabrication and information technologies. The goal is to gain both theoretical and hands-on experience with the contemporary diagramming techniques in order to advance both designs and the thinking behind them.

Folklore (FOLK)

FOLK 022 World Music and Cultures
This course examines how we as consumers in the "Western" world engage with musical difference largely through the products of the global entertainment industry. We examine music cultures in contact in a variety of ways—particularly as traditions in transformation. Students gain an understanding of traditional music as live, meaningful person-to-person music making, by examining the music in its original site of production, and then considering its transformation once it is removed, and recontextualized in a variety of ways. The purpose of the course is to enable students to become informed and critical consumers of "World Music" by telling a series of stories about particular recordings made with, or using the music of, peoples culturally and geographically distant from the US. Students come to understand that not all music downloads containing music from unfamiliar places are the same, and that particular recordings may be embedded in intriguing and controversial narratives of production and consumption. At the very least, students should emerge from the class with a clear understanding that the production, distribution, and consumption of world music is rarely a neutral process.

Activity: Lecture
1 Course Unit

FOLK 029 Gender, Sexuality, & Religion
What does it mean to be a Muslim, Hindu, Jewish, Christian, or spiritual woman or man? How important are the gender differences in deciding social roles, ritual activities, and spiritual vocations? How does gender intersect with nationality, language, and politics? This course tackles all of these questions, showing how gender—its definition and the way it is taught and performed—is central to understanding religion. In this course we will learn about women’s and men’s rituals, social roles, and mythologies in specific religious traditions. We will also look at the central significance of gender to the field of religious studies generally, with particular attention to non-binary genders. The first part of the course will be focused on building a foundation of knowledge about a range of religious traditions and the role of women in those traditions. This course emphasizes religious traditions outside the West. Although it is beyond the scope of this class to offer comprehensive discussions of any one religious tradition, the aim is to provide entry points into the study of religious traditions through the lens of gender. This course will emphasize both historical perspectives and contemporary contexts. We will read religion through a variety of feminist and queer theory lenses—exploring the key characteristics of diverse feminist analyses of religion, as well as limits of specific feminist approaches.

1 Course Unit

FOLK 101 Introduction to Folklore
The purpose of the course is to introduce you to the subjects of the discipline of Folklore, their occurrence in social life and the scholarly analysis of their use in culture. As a discipline folklore explores the manifestations of expressive forms in both traditional and modern societies, in small-scale groups where people interface with each face-to-face, and in large-scale, often industrial societies, in which the themes, symbols, and forms that permeate traditional life, occupy new positions, or occur in different occasions in everyday life. For some of you the distinction between low and high culture, or artistic and popular art will be helpful in placing folklore forms in modern societies. For others, these distinction will not be helpful. In traditional societies, and within social groups that define themselves ethnically, professionally, or culturally, within modern heterogeneous societies, and traditional societies in the Americas, Africa, Asia, Europe and Australia, folklore plays a more prominent role in society, than it appears to plan in literate cultures on the same continents. Consequently the study of folklore and the analysis of its forms are appropriate in traditional as well as modern societies and any society that is in a transitional phase.

1 Course Unit
FOLK 201 American Folklore
This course will examine American expressive culture, including everyday speech, narrative, music, foodways, religion, public celebrations, and material culture through an exploration of the multiple and changing avenues of diversity in the United States. Folklore can be considered the unofficial culture that exists beneath and between the institutions of power that we read about in our history books, and that is what we will be studying—the 99% of American life that goes unseen and unnoticed in other college courses. Some of the topics we will examine are: campus folklore; body art and adornment; contemporary (urban) legends and beliefs; public celebrations and rituals; and the adaptation and commodification of folk culture in popular media.
One-term course offered either term
Also Offered As: ANTH 205

FOLK 241 Great Story Collections
This course is intended for those with no prior background in folklore or knowledge of various cultures. Texts range in age from the first century to the twentieth, and geographically from the Middle East to Europe to the United States. Each collection displays various techniques of collecting folk materials and making them concrete. Each in its own way also raises different issues of genre, legitimacy, canon formation, cultural values and context.

FOLK 252 Themes in Jewish Tradition
Course topics will vary; they have included The Binding of Isaac, Responses to Catastrophes in Jewish History, Holy Men & Women (Ben-Amos); Rewriting the Bible (Dohrmann); Performing Judaism (Fishman); Jewish Political Thought (Fishman); Jewish Esotericism (Lorberbaum) Democratic culture assumes the democracy of knowledge - the accessibility of of knowledge and its transparency. Should this always be the case? What of harmful knowledge? When are secrets necessary? In traditional Jewish thought, approaching the divine has often assumed an aura of danger. Theological knowledge was thought of as restricted. This seminar will explore the "open" and "closed" in theological knowledge, as presented in central texts of the rabbinic tradition: the Mishnah, Maimonides and the Kabbalah. Primary sources will be available in both Hebrew and English.

FOLK 270 Folklore and Sexuality
Sexuality is usually thought of as being biological or social, divided into categories of natural and unnatural. Often misused are its creative and communicative aspects. Examining the constructed social elements of sexuality requires attention be paid to folklore in groups, between individuals and on the larger platform of popular technological media. The most interesting locations for exploration are those places where borderlands or margins, occur between genders, orientations and other cultural categories. A field-based paper will be required that must include documentary research.

Course not offered every year
Also Offered As: GSWS 270
Activity: Lecture
1 Course Unit

FOLK 280 Jewish Folklore
The Jews are among the few nations and ethnic groups whose oral tradition occurs in literary and religious texts dating back more than two thousand years. This tradition changed and diversified over the years in terms of the migrations of Jews into different countries and the historical, social, and cultural changes that these countries underwent. The course attempts to capture the historical and ethnic diversity of Jewish folklore in a variety of oral literary forms. A basic book of Hasidic legends from the 18th century will serve as a key text to explore problems in Jewish folklore relating to both earlier and later periods.
Taught by: Ben-Amos
One-term course offered either term
Also Offered As: COML 283, JWST 260, NELC 258

FOLK 406 Folklore and the Supernatural
Beliefs in the supernatural have not diminished appreciably in modern cultures, despite many predictions that they would. Recent public opinion surveys indicate many Americans hold supernatural beliefs or have had experiences they believe to be supernatural. This course will introduce key concepts in the study of culture and the supernatural. We will examine traditional beliefs about supernatural beings, supernatural realms, and humans who interact with these, as well as the historical development of Western ideas of the supernatural itself. Students will enhance their understanding of human diversity through cross-cultural examples of supernatural folklore, consider the relationship between the supernatural and place, and examine how various folklore genres have expressed human relationships to the supernatural. Topics may include witchcraft, ghosts, vampires, fairies, UFOs, supernatural assault, voodoo, Neopaganism, saints, healing, legend tripping, and dark tourism. There will also be opportunity for students to explore related topics of interest to them.
Course not offered every year
Activity: Lecture
1 Course Unit

FOLK 436 Urban Folklore
This course examines the emergent aesthetic and expressive traditions of urban environments. Cities are unique places with a wide range of folkloric traditions, including neighborhood stories, ethnic festivals, and folk art. We will examine the material, customary, and verbal traditions that emerge in everyday life, including contemporary legends, urban agriculture and foodways, public displays and celebrations, body art, children’s play, and Philadelphia’s ethnic arts. We will consider how these contemporary practices may be understood within a traditional folklore framework, as well as what these practices reveal about contemporary values, anxieties, and concerns. Course work will involve local field observations and will be of use to anyone studying human interaction, creative processes, or urban ethnography.
Course not offered every year
Also Offered As: URBS 436
Activity: Lecture
1 Course Unit

FOLK 485 Japanese Theatre
Japan has one of the richest and most varied theatrical traditions in the world. In this course, we will examine Japanese theater in historical and comparative contexts. The readings and discussions will cover all areas of the theatrical experience (script, acting, stage design, costumes, music, audience). Audio-visual material will be used whenever appropriate and possible. The class will be conducted in English, with all English materials.

FOLK 499 Independent Study
Directed study at the senior level.
One term course offered either term
Activity: Independent Study
1 Course Unit

FOLK 531 Prose Narrative
Historical, literary, comparative, and ethnographic methods contribute to study of prose narratives which were told in oral societies in antiquity and in modern times and were documented in literary societies for different purposes. Oral storytellers, both professional and amateurs, performed them in private and public spaces. Their recording from antiquity to modern times became an integral element of modern life in general and in education and arts in particular. The storytellers, their performances in oral and literary cultures, their genres, and their symbolic meanings are the subjects of the course, together with the analytical methods that help mapping their distribution worldwide.

French (FREN)

FREN 110 Elementary French I
French 110 is the first semester of the elementary-level sequence designed to develop functional proficiency in the four skills and gain familiarity with French and Francophone culture. The primary emphasis is on the development of the oral aural skills, speaking and listening. Readings on topics in French culture as well as frequent writing practice are also included in the course. As in other French courses, class will be conducted entirely in French. You will be guided through a variety of communicative activities in class which will expose you to a rich input of spoken French and lead you from structured practice to free expression. You will be given frequent opportunity to practice your newly acquired vocabulary and grammatical structures in small group and pair work which simulate real-life situations. The course will introduce you to French and Francophone culture through authentic materials including written documents, simple articles, songs, films, videos and taped conversations between native speakers. Out-of-class homework will require practice with the online component of the textbook (MyFrenchLab) as well as regular writing practice. The course will also invite you to explore the Francophone world on the Internet.
For BA Students: Language Course
One term course offered either term
Activity: Seminar
1 Course Unit
FREN 112 Accelerated Elementary French
French 112 is an intensive elementary language course for students who have not studied French, but who have met the language requirement in another foreign language. This course will provide an introduction of the basic structures of French, with intensive work on speaking and listening designed to prepare students to take Intermediate French. Due to the nature of the course, the first half will progress rapidly with the more difficult material presented after the midterm period. As in other French courses, class will be conducted entirely in French. You will be guided through a variety of communicative activities in class that will expose you to a rich input of spoken French and lead you from structured practice to free expression. You will have frequent opportunities to practice your newly acquired vocabularies and grammatical structures in small group and pair work that simulate real-life situations, so please prepare each day’s lesson attentively. See “Preparation for each class” below for additional details. The course will introduce you to French and Francophone culture through authentic materials including written documents, simple articles, songs, films, videos, and conversations between native speakers. Homework will consist of aural comprehension exercises in the online SAM as well as regular writing practice. The course will also invite you to explore the Francophone world by completing an engaging, interactive project in the final stage of the semester.

Activity: Seminar
1 Course Unit

FREN 121 Accelerated Elementary French for "False Beginners"
French 121 is an intensive one-semester language course for students who have had some French before but who can benefit from a complete review of elementary French. This course will provide a re-introduction of the basic structures of French, with intensive work on speaking and listening designed to prepare students to take Intermediate French. Due to the nature of the course, the first half of the semester will progress rapidly, with much more difficult material being presented after the midterm period. As in other French courses, class will be conducted entirely in French. You will be guided through a variety of communicative activities in class that will expose you to a rich input of spoken French and lead you from structured practice to free expression. You will be given frequent opportunity to practice your newly acquired vocabulary and grammatical structures in small group and pair work activities that simulate real-life situations, so please prepare each day’s lesson attentively. See “Preparation for each class” below for additional details. FREN 130 Intermediate French I
French 130 is the first half of a two-semester intermediate sequence designed to help you attain a level of proficiency that should allow you to function comfortably in a French-speaking environment. You are expected to have already learned the most basic grammatical structures in elementary French and you will review these on your own in the course workbook. This course will build on your existing skills in French, increase your confidence and ability to read, write, speak and understand French, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. As in other French courses at Penn, class will be conducted entirely in French. In addition to structured oral practice, work in class will include frequent communicative activities such as role-plays, problem-solving tasks, discussions, and debates, often carried out in pairs or small groups. Through the study of authentic materials such as articles, poems, songs, films, videos, you will deepen your knowledge of the French-speaking world. Daily homework will require listening practice with audio and video material, in addition to regular written exercises in the workbook and frequent composition practice.
For BA Students: Language Course
One-term course offered either term
Prerequisites: Completion of FREN 120 or 121, or placement into third-semester French.
Activity: Seminar
1 Course Unit

FREN 134 Accelerated Intermediate French
An intensive two-credit course covering the first and second semester of the intermediate year. See descriptions of French 130 and 140. Students must have a departmental permit to register. Also offered in the summer Penn-in-Tours program in France.
For BA Students: Last Language Course
Course usually offered in spring term
Activity: Seminar
2 Course Units
FREN 140 Intermediate French II
French 140 is the second half of a two-semester intermediate sequence designed to help you attain a level of proficiency that should allow you to function comfortably in a French-speaking environment. You are expected to have already learned the most basic grammatical structures in elementary French and you will review these on your own in the course workbook. This course will build on your existing skills in French, increase your confidence and ability to read, write, speak and understand French, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. This course focuses on the culture of French-speaking countries beyond the borders of France. Along with your classmates, you will explore the cities of Dakar, Fort-de-France and Marrakesh, investigating the diversity of the Francophone world through film, literature and music. As in other French courses at Penn, class is conducted entirely in French. In addition to structured oral practice, work in class will include frequent communicative activities such as problem-solving tasks, discussions, and debates, often carried out in pairs or small groups. Daily homework will require researching in the library and on the Internet, listening practice with video clips, in addition to regular written exercises in the workbook.
For BA Students: Last Language Course
One term course offered either term
Prerequisites: Completion of French 130 or placement into fourth-semester French.
Activity: Seminar
1 Course Unit

FREN 180 Advanced French in Residence
Open only to residents in La Maison Francaise. Participants earn 1/2 c.u. per semester.
Two terms. Student may enter either term.
Corequisite: Residence in Modern Language House
Activity: Seminar
0.5 Course Units

FREN 202 Advanced French
French 202 is a third-year level course aimed at better understanding contemporary French society, language and culture, with a special focus on today’s young generation. What defines a generation in the first place, and how do the lives of young people in France compare to those of their American counterparts? To answer these questions, students in 202 will delve into numerous aspects of French youth experience from the school system to family life, and from the workplace to the political arena, with the aid of resources including contemporary films, news articles, songs, literary texts, and the recent sociological project "Generation Quoi." In addition, they will forge connections with the French community on Penn’s campus, as they embark on a journey of cultural exploration and reflexive self-discovery. While 202 is not a grammar-focused course, particular attention will be given to recognizing and employing the different registers of spoken and written French. The course constitutes excellent preparation for study abroad in a French-speaking region.
For BA Students: Advanced Language Course
One term course offered either term
Prerequisites: Open to students who have completed the language requirement. Students who are continuing from French 134 or 140 should take French 202 before moving on to more advanced French courses.
Activity: Seminar
1 Course Unit

FREN 211 French for Business I
This content-based language course, taught in French, introduces economic, business and professional terminology through the study of the following topics: financial institutions (banking, stock market and insurance); business practices (business letters and resumes); trade and advertising; the internal structure and legal forms of French companies. The course also emphasizes verbal communication through three components: 1) In-class activities such as problem-solving tasks, discussions and debates. 2) The study of authentic materials such as newspapers and magazines’ articles, video clips, and radio shows. 3) A series of students’ presentations. Finally, in order to use and practice the new economic and business terminology studied in this course, and to also further explore the structure, the management, and the operations of the French companies, students will work in pairs on a research project about a major French company of their choice.
One term course offered either term
Prerequisites: Advanced level of French (French 202 highly recommended). No business background necessary.
Activity: Seminar
1 Course Unit

FREN 212 Advanced French Grammar and Composition
Intensive review of grammar integrated into writing practice. A good knowledge of basic French grammar is a prerequisite (French 202 or equivalent is recommended). Conducted entirely in French, the course will study selected grammatical difficulties of the French verbal and nominal systems including colloquial usage. Frequent oral and written assignments with opportunity for rewrites. Articles from French newspapers and magazines, literary excerpts, and a novel or short stories will be used as supplementary materials in order to prepare students to take content courses in French in disciplines other than French.
For BA Students: Advanced Language Course
One term course offered either term
Prerequisites: Advanced level of French (French 202 or equivalent highly recommended).
Activity: Seminar
1 Course Unit
FREN 214 Advanced French Composition and Conversation
Entitled "Contemporary French Society through its Media," this course is intended to improve communicative skills through extensive practice in a variety of styles and forms. It aims to enhance student understanding of contemporary French culture, thought and modes of expression by promoting both cross-cultural understanding and critical thinking and developing students' communicative abilities (in the presentational, interpretive, and interpersonal modes). The specific language functions we will focus on are: narration; description; offering and soliciting advice and opinions; expressing feelings; critique and analysis; argumentation. It is organized around the themes of current events, identity and art. Activities include the study, analysis and emulatation of model texts as well as discussion and debates about events and social issues as covered by the French news media (television, print, Internet sources). The oral work include video blogs and group presentations on selected topics and current events. Written practice will comprise reflective journals, essays and collaborative work on Web projects. On completing this course, students will feel more confident and be able to speak and write effectively on a range of contemporary issues. Recommended for students who are planning to study abroad in France.
For BA Students: Advanced Language Course
One-term course offered either term
Prerequisites: Advanced level of French (French 202 or equivalent highly recommended).
Activity: Seminar
1 Course Unit

FREN 217 French Phonetics
This course is designed to provide students with a solid foundation in French phonetics and phonology. Part of the course will be devoted to learning how to produce discourse with native-like pronunciation and intonation. The course will also focus on improving aural comprehension by examining stylistic and regional differences in spoken French.
For BA Students: Advanced Language Course
One-term course offered either term
Prerequisites: Advanced level of French (French 202 or equivalent highly recommended).
Activity: Seminar
1 Course Unit

FREN 225 History, Memory, Culture
This course explores the history of the dark years of the French collaboration with Nazi Germany during WWII. In the first part, it examines the rise of the myths of an "eternal France" and the "true French" promoted by Marechal Petain's National Revolution, as well as the myth of the resistance fighters that arose after the Liberation. The Holocaust adn the holes left in national memory will hold a pivotal place in our reading of the national narrative. The second part of the course is dedicated to the study of literary works written by post-memory writers or survivors of the Holocaust who tried to fill in the blanks and confronted the linguistic challenge posed by Auschwitz. Paris will play a connecting role, as both witness to history and as tangible trace of the forgotten. This study of French history, its silences and (non-) memory will shed light on the legacy of the Occupation for contemporary France. Assessment consists of a semester-long creative writing project and a final oral exam. Reading assignments include works by Pierre Assouline, Marcel Cohen, Georges Didi-Huberman, David Foenkinos, Sarah Kofman, Marceline Loridan-Ivens, Patrick Modiano, Georges Perec.
Course not offered every year
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1 Course Unit

FREN 226 French History and Culture until 1789
This civilization course presents the fabric/fabrication of the so-called national memory through its places of memory (lieux de mémoire), as well as its places of non-memory (lieux de non-mémoire), going from the Gauls to the Enlightenment. As the course tells the story of the rise and fall of the French monarchy, one is encouraged to envision it as a palimpsest and to become aware of the roles played by myths and legends. It helps see how French history has been manipulated by the collective memory, how retrospection often redefines, fabricates events and people depending on the needs of the moment. This course is taught in French.
For BA Students: History and Tradition Sector
Course usually offered in fall term
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1 Course Unit

FREN 227 French History and Culture 1789-1945
This civilization course presents the creation of modern France from 1789 to 1945 through the omnipresence of the myth of Perseus and Medusa in the historical narrative. The objective of the course is to introduce students to a period in France's history that begins with the French Revolution and ends with Marechal Petain's National Revolution. It also helps them discover the intricacies of the slow construction of modern France. In this course, students are led to reflect on the contemporary French culture and society that are the result and the remnants of the Revolution, and to make connections with the American history. This course is taught in French.
For BA Students: Humanities and Social Science Sector
Course usually offered in spring term
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1 Course Unit

FREN 228 Contemporary France
In this course we will be exploring the transformations of French society since the Second World War and into the Millennium. From the legacy of decolonization to the multicultural fervor of the 1998 Soccer World Cup, from the May 1968 civil protests to the Republican marches of 2015, we'll be delving into the major historical and cultural movements that have marked the contemporary period. How did France recover from German occupation and cope with further wars in its colonial territories? How did unprecedented rates of urbanization and immigration change the face of the country over the ensuing decades? Who have been the major players on the historical stage? And what are the political, cultural, and socioeconomic challenges facing France at the outset of the 21st century? These are some of the questions that will guide our investigation into the past 70 years of French history, a period as turbulent as it is rich in cultural production, and as complex as it is fascinating. Throughout the semester we will be especially attentive to images, in every sense of the word: the images of national identity that France projects to the world and to itself, but also pictorial representations of the country, its people and its territory. These images, and the stories they tell, will help us envision the kaleidoscopic portrait of a nation. The course will be conducted entirely in French.
Course usually offered in fall term
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1 Course Unit
FREN 229 French in the World  
Where and how is French spoken in the world? Which variety (or varieties) of French represents “good” or standard language use? What does it mean to have an accent or to experience linguistic insecurity? To what extent have political forces and movements historically affected the evolution of French? How do language attitudes differ among French and English-speaking regions of the world and what is the status of French in an era of globalization? In what ways does language shape our identities? Le Francais dans le monde/French in the World examines these questions by providing a survey of the sociolinguistics of the French language in the contemporary world. We will explore how societal changes influence the manner and the contexts in which the French language is spoken. Case studies focus on various parts of the Francophone world, including Europe (Belgium, Switzerland), New World (Quebec, Caribbean, Louisiana), Africa (North Africa, Sub-Saharan Africa), etc. Readings and class discussions are in French.
Course usually offered in spring term  
Also Offered As: LING 229  
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1 Course Unit

FREN 230 Masterpieces of French Cinema  
This course will introduce students to key films of the French film canon, selected over a period ranging from the origins of French cinema to the present. Students will also be introduced to the key critical concepts (such as the notion of the “auteur” film genre) informing the discussion of films in France. The films will be studied in both a historical and theoretical context, related to their period styles (e.g., “le realisme poetique,” “la Nouvelle Vague,” etc.), their “auteurs,” the nature of the French star system, the role of the other arts, as well to the critical debates they have sparked among critics and historians. Students will acquire the analytical tools in French to discuss films as artistic and as cultural texts. Please note: This course follows a Lecture/Recitation format. The Lecture (FREN 230-401/CVIS 245-401) is taught in English. For French credit: please register for both FREN 230-401 (lecture) and FREN 230-402 (recitation); the FREN 230-401 lecture is conducted in French. For Cinema Studies credit: please register for CIMS 245-401 (lecture) and CIMS 245-403 (recitation); both are taught in English.
Course usually offered in fall term  
Also Offered As: CIMS 245  
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Lecture
1 Course Unit

FREN 231 Perspectives in French Literature: Love and Passion  
This basic course in literature provides an overview of French literature and acquaints students with major literary trends through the study of representative works from each period. Students are expected to take an active part in class discussion in French. FREN 231 has as its theme the presentation of love and passion in French literature. This course was previously offered as French 221.
For BA Students: Arts and Letters Sector  
Course usually offered in fall term  
Also Offered As: COML 218  
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1 Course Unit

FREN 232 Perspectives in French Literature: The Individual and Society  
This basic course in literature provides an overview of French literature and acquaints students with major literary trends through the study of representative works from each period. Special emphasis is placed on close reading of texts in order to familiarize students with major authors and their characteristics and with methods of interpretation. Students are expected to take an active part in class discussion in French. FREN 232 has as its theme the Individual and Society.
For BA Students: Arts and Letters Sector  
Course usually offered in spring term  
Also Offered As: COML 219  
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1 Course Unit

FREN 233 Francophone Literature and Film  
French 233 is designed to give students a basic historical and theoretical groundwork in Francophone and postcolonial studies, and to help them develop their skills in literary and filmic analysis. It will provide an introductory survey of the richly diverse literature and film of the French-speaking world, from the 1950s through to the 21st century. Beginning with the gradual breakup of the French colonial empire, we will investigate the construction of individual and collective Francophone identities in such regions as the Caribbean, Africa, and the Maghreb, while exploring an equally wide range of literary and cinematic genres. Other histories and regions such as Quebec and Lebanon will also be discussed. Throughout the course we will remain especially attentive to questions of space—public and private spheres, urban and rural topographies, borders and migrations, as well as the complex dynamics between the Francophone regions and France itself—and to the ways in which these tensions are mapped onto the textual and visual surfaces of the works studied.
For BA Students: Arts and Letters Sector  
Course usually offered in spring term  
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1 Course Unit

FREN 250 French Literature in Translation  
The content of the course will vary from semester to semester. All works read in English. Please check the department's website for a description.

FREN 300 The Making of Modern Paris
Paris, Ville-Lumière, has long been renowned for its urbanity, architecture, and city design. This course will trace the people, ideas, and projects that contributed to this reputation, through an exploration of the city's built environment as expressed in literature and urban planning projects of the 19th and 20th centuries. The class will analyze literary readings, including texts by Hugo, Baudelaire, Zola, and Breton, in conjunction with historical and visual materials covering works from Viollet-le-Duc to Napoleon III and Haussmann to Mitterand and Sarkozy. This seminar has four goals:

FREN 311 French Thought After 1968
In American academia, French thought after May '68 is often referred to as "French Theory," a heterogeneous corpus of philosophical and critical texts compacted into a set of poststructuralist premises, first introduced by and grew within humanities departments, then identified as a luxury by-product of the "literary" people. This course proposes to unpack the notion of "French Theory" and re-anchor it into its original social/historical background. We will read some of the most influential texts of its key figures, study how a post May 68 revolutionary energy is transformed into various innovative but also destabilizing ways of rethinking power relations, gender, language and subjectivity, and finally, consider in what capacities and limits these diverse critical approaches go beyond the simple label of "post-structuralism" and relate to our own epoch and personal experiences. The readings and discussions will be divided into four axes: 1. Philosophy of Desire (Lacan, Deleuze/Guattari); 2. Sexual Revolt and Body Politics (Foucault, Hocquenghem, Barthes); 3. Deconstruction and its Impact on Feminism (Derrida, Cixous, Iligaray); 4. Consumer Society and Society of the Spectacle (Lipovetsky, Baudrillard, Debor). Several documentaries and feature films will be shown outside class time. Taught in English. Reading knowledge of French is welcome but not required.
One term course offered either term
Also Offered As: COML 309
Activity: Seminar
1 Course Unit

FREN 313 French for Business II
The course, conducted entirely in French, emphasizes verbal communication in business professional situations through three components. First, a series of student's presentations, in-class activities (using newspapers' articles, technical readings, radio shows and films), and debates on the following topics (list not exhaustive) related to France's economy and society. The role of the State in France's economy; the French fiscal system; Labor (impact of the 35-hour work week, "conges," women in the workplace, etc.); Regions of France (production); major French industries/companies/brands; France's major imports/exports; "Green business". Second, as effective communication is based not only on linguistic proficiency but also on cultural proficiency, cultural differences mostly between Americans and French will be explored.
Course usually offered in spring term
Prerequisites: Advanced level of French. French for Business I (211) highly advisable.
Activity: Seminar
1 Course Unit

FREN 322 France and the European Union
This course aims to provide an understanding of the European Union as a complex entity: its history, institutions, challenges and future. After reviewing the history of European integration and learning about the Community's institutions, common programs and markets, we will consider a wide variety of themes important to Europe: economics, education, immigration, the environment, social issues, national and European identities, the debate over a Federal Europe vs. a Europe of nations, European social/cultural models vs. American liberalism, relations between the EU and the rest of the world. Considering the acute and ongoing challenges facing the European community, we will focus on current events and discuss issues that are critical to the EU in general and to France in particular. Students will be responsible for pursuing substantive research on these and other topics and participating actively in debates. This class will be conducted entirely in French and is designed to improve cross-cultural understanding and communicative skills in the presentational, interpretive and interpersonal modes.
Course usually offered in spring term
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1 Course Unit

FREN 325 Advanced French Translation
This course provides an introduction to the theory and practice of translation and is designed to help foster a critical understanding of differences between French and English syntactical and lexical patterns. It will introduce students to theoretical concepts and problems of translation, with the ultimate goal being to improve their ability to communicate in more authentic-sounding French. Students will have the opportunity to practice translation individually and to work with their peers on a variety of projects (advertising, journalistic and literary texts, movie and broadcast news subtitling) and to engage in critique and discussion of others' translations. This course will help students refine their language skills and navigate more proficiently between these cultures and language systems. (Designed for students who already have a solid foundation in French and English grammar)
For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
French 212 or equivalent highly recommended.
Activity: Seminar
1 Course Unit
FREN 330 Medieval Literature
An introductory course to the literature of the French Middle Ages. French literature began in the 11th and 12th centuries. This course examines the extraordinary period during which the French literary tradition was first established by looking at a number of key generative themes: Identity, Heroism, Love, Gender. All readings and discussions in French.
Course not offered every year
Also Offered As: GSWS 330
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1 Course Unit

FREN 341 Boys Will Be Boys: Masculinity in French Literature
Why was a portrait depicting the Renaissance king François I as half-man, half-woman made with royal approval, and moreover intended to represent the king as the perfect embodiment of the ideal qualities of a male sovereign? And why, in what is now regarded as the official portrait of Louis XIV, does the king prominently display his silk stockings and high heels with diamond-encrusted buckles? These are just two examples of the questions that lead us to the point of departure for this course: the idea that masculinity is not a fixed essence that has existed since time immemorial, but rather a flexible concept that changes across and even within historical periods. We will examine how masculinity has evolved from the Middle Ages and the chivalric ideal to the present day, how it has been defined, and its implications for gender relations, politics, and religion in different eras. In addition to literary works, we will study how masculinity is represented across a range of media, including visual arts, music, and film. Discussions will be in English, and assignments will be available in translation, but students who wish to receive credit in French will be able to do coursework in French.
One term course offered either term
Also Offered As: COML 341, GSWS 343
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar

Course not offered every year
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1 Course Unit

FREN 371 Poe's French Legacies
Edgar Allan Poe was considered a vulgur hack by many of his fellow Americans, but in 19th-century France, he was touted as a misunderstood poetic genius, the original poète maudit. Through the translations of Charles Baudelaire, who found in Poe a kindred spirit in the "gout de l'Infini," French intellectuals came to know the American writer as a fount of aesthetic wisdom, diabolical sensibility, and mystic mastery. In this course, we will study Baudelaire's poetry as well as the many literary and artistic movements in France that were directly inspired by Poe's uncanny mix of the macabre and the methodical. Symbolist poetry (Valéry, Mallarme), the Scientific Fantastic (Maupassant, Villiers de l'Isle-Adam), fin-de-siècle Decadence (Huysmans, Odilon Redon), Science Fiction (Verne), the detective novel (Gaboriau), and 20th-century Surrealism (Breton, Max Ernst).
Course not offered every year
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1 Course Unit

FREN 380 Literature of the Twentieth Century
This course, the theme of which changes from semester to semester, provides an introduction to important trends in twentieth-century literature. Please check the department's website for the course description: https://www.sas.upenn.edu/french/pc
Course not offered every year
Also Offered As: COML 381
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1 Course Unit

FREN 382 Horror Cinema
The purpose of this course is to provide an introduction to the history and main themes of the supernatural/horror film from a comparative perspective. Films considered will include: the German expressionists' masterworks of the silent era, the Universal classics of the 30's and the low-budget horror films produced by Val Lewton in the 40's for RKO in the US, the 1950's color films of sex and violence by Hammer studios in England, Italian Gothic horror or giallo (Mario Brava) and French lyrical macabre (Georges Franju) in the 60's, and on to contemporary gore. In an effort to better understand how the horror film makes us confront our worst fears and our most secret desires alike, we will look at the genre's main iconic figures (Frankenstein, Dracula, Dr. Jekyll and Mr. Hyde, etc.) as well as issues of ethics, gender, sexuality, violence, spectatorship through a variety of critical lenses (psychoanalysis, socio-historical and cultural context, aesthetics...).
Taught by: Professor Met
Course not offered every year
Also Offered As: CIMS 382, COML 372
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Lecture
1 Course Unit
Notes: The course will be taught in English. French credit by arrangement with instructor.

FREN 384 The French Novel of the Twentieth Century

FREN 385 Modern French Theater
A study of major movements and major dramatists from Giraudoux and Sartre to the theater of the absurd and its aftermath.
Course not offered every year
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1 Course Unit

FREN 386 Paris in Film
Latter-day examples like Christophe Honore's Dans Paris, Cedric Klapisch's Paris or the international omnibus Paris, je t'aime (with each director paying homage to a distinctive "arrondissement" of the capital), not to mention American blockbusters like The Da Vinci Code and Inception or Woody Allen's Midnight in Paris, are there to remind us that there is something special — indeed, a special kind of magic — about Paris in and on film. Despite the extreme polarization between Paris and provincial France in both cultural and socio-economic terms, cultural historians have argued that Paris is a symbol of France (as a centralized nation), more than Rome is of Italy and much more than Madrid is of Spain or Berlin of Germany, for example. The prevalence of the City of Lights on our screens, Gallic and otherwise, should therefore come as no surprise, be it as a mere backdrop or as a character in its own right. But how exactly are the French capital and its variegated people captured on celluloid? Can we find significant differences between French and non-French approaches, or between films shot on location that have the ring of "authenticity" and studio-bound productions using reconstructed sets? Do these representations vary through time and perhaps reflect specific historical periods or zeitgeists? Do they conform to genre-based formulas and perpetuate age-old stereotypes, or do they provide new, original insights while revisiting cinematic conventions? Do some (sub)urban areas and/or segments of the Parisian population (in terms of gender, race, or class, for example) receive special attention or treatment? These are some of the many questions that we will seek to address...with a view to offering the next best thing to catching the next non-stop flight to Paris!
Taught by: Professor Philippe Met
Course usually offered in spring term
Also Offered As: CIMS 386
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Lecture
1 Course Unit

FREN 389 France and Its Others
A historical appreciation of the impact of the exploration, colonization, and immigration of other peoples on French national consciousness, from the 16th century to the present. Emphasis is on the role of the Other in fostering critiques of French culture and society. Readings include travel literature, anthropological treatises, novels, and historical documents. Oral presentations and several short papers are included in the course.
Course not offered every year
Prerequisites: Two 200-level French courses taken at Penn or equivalent.
Activity: Seminar
1 Course Unit

FREN 390 Francophone Postcolonial Cultures
A brief introduction about the stages of French colonialism and its continuing political and cultural consequences, and then reading in various major works – novels, plays, poems – in French by authors from Quebec, the Caribbean, Africa (including the Maghreb), etc. Of interest to majors in International Relations, Anthropology and African Studies, as well as majors in French. Taught in French.

1 Course Unit

FREN 582 Fantastic Literature 19th/20th Centuries
This course will explore fantasy and the fantastic in short tales of 19th- and 20th-century French literature. A variety of approaches – thematic, psychoanalytic, cultural, narratological – will be used in an attempt to test their viability and define the subversive force of a literary mode that contributes to shedding light on the dark side of the human psyche by interrogating the “real” making visible the unseen and articulating the unsaid. Such broad categories as distortions of space and time, reason and madness, order and disorder, sexual transgressions, self and other will be considered. Readings will include “recits fantastiques” by Mérimée, Gautier, Nerval, Maupassant, Breton, Pierre de Mandiargues, Jean Ray and others.
Course not offered every year
Also Offered As: COML 589
Activity: Seminar
1 Course Unit

FREN 590 Introduction to Francophone Studies
An introduction to major literary movements and authors from five areas of Francophonie: the Maghreb, West Africa, Central Africa, the Caribbean and Quebec.

Activity: Seminar
1 Course Unit

FREN 595 Travel Literature
Within the context of the ill-defined, heterogeneous genre of the travelogue and of today's age of globalization, CNN and the Internet, this seminar will examine the poetics of travel writing based largely albeit not exclusively on travel notebooks, or journaux/carnets de voyage, spanning the 20th century from beginning to end. One of the principal specificities of the texts studied is that they all evince to a lesser or greater degree a paradoxical resistance both to the very idea of travel(ing) as such and to the mimetic rhetoric of traditional travel narratives. We will therefore look at how modern or postmodern texts question, revisit, subvert or reject such key notions of travel literature as exoticism, nostalgia, exile, nomadism, otherness or foreignness vs. selfhood, ethnology and autobiography, etc. Authors considered will include Segalen, Morand, Michaux, Leiris, Levi-Strauss, Butor, Le Clezio, Baudrillard, Bouver, Jouanard, Leuwers.
Course not offered every year

FREN 609 Global France
The purpose of this course is to examine the various modalities of interaction between anthropology and literature in modern French culture. Our guiding thesis is that the turn toward other cultures has functioned as a revitalizing element in the production of cultural artifacts while providing an alternative vantage point from which to examine the development of French culture and society in the contemporary period. The extraordinary innovations of "ethnosurrealism" in the twenties and thirties by such key figures of the avant-garde as Breton, Artaud, Bataille, Caillois, and Leiris, have become acknowledged models for the postwar critical thought of Barthes, Derrida, and Foucault, as well as inspiring a renewal of "anthropology as cultural critique in the United States." Besides the authors just indicated, key texts by Durkheim, Mauss and Levi-Strauss will be considered both on their own terms and in relation to their obvious influence. The institutional fate of these intellectual crossovers and their correlative disciplinary conflicts will provide the overarching historical frame for the course, from the turn of the century to the most recent debates.

FREN 620 Paris and Philadelphia: Landscapes and Literature of the 19th Century
This course explores the literal and literary landscapes of 19th-century Paris and Philadelphia, paying particular attention to the ways in which the built environment is shaped by and shapes shifting ideologies in the modern age. Although today the luxury and excesses of the "City of Light" may seem worlds apart from the Quaker simplicity of the "City of Brotherly Love," Paris and Philadelphia saw themselves as partners and mutual referents during the 1800s in many areas, from urban planning to politics, prisons to paleontology. This interdisciplinary seminar will include readings from the realms of literature, historical geography, architectural history, and cultural studies as well as site visits to Philadelphia landmarks, with a view to uncovering overlaps and resonances among different ways of reading the City. We will facilitate in-depth research by students on topics relating to both French and American architectural history, literature, and cultural thought.
Taught by: Professors Andrea Goulet and Aaron Wunsch (Design)
Course usually offered in fall term
Also Offered As: COML 625, HSPV 620
Activity: Seminar

Activity: Seminar
1 Course Unit
FREN 650 Studies in the 17th Century
Topics of discussion will vary from semester to semester. One possible topic is "The Royal Machine: Louis XIV and the Versailles Era." We will examine certain key texts of what is known as the Golden Age of French literature in tandem with a number of recent theoretical texts that could be described as historical. Our goal will be to explore the basis of "the new historicism," a term that is designed to cover a variety of critical systems that try to account for the historical specificity and referentiality of literary texts. Please see department’s website for current course description: https://www.sas.upenn.edu/french/pc
Course not offered every year
Also Offered As: GRMN 651
Activity: Seminar
1 Course Unit

FREN 660 Studies in the Eighteenth Century
Topics of discussion will vary from semester to semester. One possible topic is "Masterpieces of the Enlightenment." We will read the most influential texts of the Enlightenment, texts that shaped the social and political consciousness characteristic of the Enlightenment-for example, the meditations on freedom of religious expression that Voltaire contributed to "affaires" such as the "affaire Calas." We will also discuss different monments of the spirit of the age—its corruption (Les Liaisons dangereuses), its libertine excesses and philosophy (La Philosophie dan le boudoir). We will define the specificity of 18th-century prose (fiction), guided by a central question: What was the Enlightenment? Please see department’s website for current course description: https://www.sas.upenn.edu/french/pc
Course not offered every year

Gender, Sexuality & Women's Studies (GSWS)

GSWS 002 Gender and Society
This course will introduce students to the ways in which sex, gender, and sexuality mark our bodies, influence our perceptions of self and others, organize families and work life, delimit opportunities for individuals and groups of people, as well as impact the terms of local and transnational economic exchange. We will explore the ways in which sex, gender, and sexuality work with other markers of difference and social status such as race, age, nationality, and ability to further demarcate possibilities, freedoms, choices, and opportunities available to people.
For BA Students: Society Sector
One term course offered either term
Activity: Lecture
1 Course Unit
Notes: Requirement for Gender, Sexuality and Women's Studies major

GSWS 003 Introduction to Sexuality Studies and Queer Theory
This course will introduce students to the historical and intellectual forces that led to the emergence of queer theory as a distinct field, as well as to recent and ongoing debates about gender, sexuality, embodiment, race, privacy, global power, and social norms. We will begin by tracing queer theory’s conceptual heritage and prehistory in psychoanalysis, deconstruction and poststructuralism, the history of sexuality, gay and lesbian studies, woman-of-color feminism, the feminist sex wars, and the AIDS crisis. We will then study the key terms and concepts of the foundational queer work of the 1990s and early 2000s. Finally, we will turn to the new questions and issues that queer theory has addressed in roughly the past decade. Students will write several short papers.
Course usually offered in fall term
Also Offered As: ENGL 003
Activity: Lecture
1 Course Unit

GSWS 004 The Family
Historical and cultural development of the family, analysis of sexual codes; discussion of role difference between men and women; factors involved in mate selection and marital adjustment; analysis of family disorganization with both individual and societal implications.
For BA Students: Society Sector
Taught by: Harknett
One term course offered either term
Also Offered As: SOCI 004
Activity: Lecture
1 Course Unit
**GSWS 007 Population and Society**
The course serves as an introduction to the study of population and demography, including issues pertaining to fertility, mortality, migration, and family formation and structure. Within these broad areas we consider the social, economic, and political implications of current trends, including: population explosion, baby bust, the impact of international migration on receiving societies, population aging, racial classification, growing diversity in household composition and family structure, population and environmental degradation, and the link between population and development/poverty.
For BA Students: Society Sector
Taught by: Flippin, Harknett, Kohler, Zuberi
One term course offered either term
Also Offered As: SOCI 007
Activity: Lecture
1 Course Unit

**GSWS 008 Critical Speaking Seminar**
American political discourse, especially since September 11th, has often depicted Islam as an oppressive force from which both Muslims and non-Muslims, particularly women and gender/sexual minorities, must be saved. In this CWIC critical speaking seminar, we will investigate how oral and written narratives such as political rhetoric, apologetics and historical sources - claim to establish unassailable "facts" about Islam, Muslims and the Middle East. We will also investigate how the notion of empire—both in its traditionally understood form in Islamic and European history, as well as in its iterations as US Military and soft power—privileges certain voices over others, and how we can reclaim the voices of the marginalized in both contemporary discourse as well as historical oral traditions.
Taught by: Rafii
One term course offered either term
Also Offered As: COML 014, NELC 008
Activity: Seminar
1 Course Unit

**GSWS 010 Freshman Seminars**
Freshman seminars are small, substantive courses taught by members of the faculty and open only to freshmen. These seminars offer an excellent opportunity to explore areas not represented in high school curricula and to establish relationships with faculty members around areas of mutual interest. See www.college.upenn.edu/admissions/freshmen.php
Also Offered As: LALS 107, PSCI 010
Activity: Seminar
1 Course Unit

**GSWS 017 Topics in Literature**
An introduction to Writing about Literature, with emphasis on a particular theme, genre, or period. See the English Department's website at www.english.upenn.edu for a description of current offerings.
For BA Students: Humanities and Social Science S
One term course offered either term

**GSWS 028 Introduction to Feminist Philosophy**
This course is an introduction to feminist thought, both in theory and in practice. We will consider how feminist thought emerged and evolved, as well as how feminist theories respond to various intellectual, social and political challenges. Questions we will address include: What exactly is feminism? How does one’s gender identity impact one’s lived experiences? How should we revise, reformulate, or rethink traditional answers to political and ethical issues in light of feminist theories? How can feminist analyses contribute to the development of better science, and our conceptions of knowledge?
Taught by: M. Meyer
Course not offered every year
Also Offered As: COML 028, PHIL 028
Activity: Seminar
1 Course Unit
Notes: Offered through the College of Liberal and Professional Studies

**GSWS 040 Womanism and Identity Politics in the Realm of Hip-Hop**
This course centers on the intersections of womanism, woman of color identity development, and agency within hip-hop culture. We will touch on several topics that uncover the condition of minoritized women in hip-hop media, including creating/owning space, lyrical assault, defining womanhood, sexuality, and fetishes. In exploring music, literature, advertisements, film, and television, we will discuss the ways women of color construct understandings of self, while navigating and reimagining reality within hip-hop contexts.
Taught by: Patterson
Also Offered As: URBS 050
Activity: Seminar
1 Course Unit

**GSWS 048 Voicing Politics/Policizing Voices**
What does it mean to have a voice? To raise your voice? To have your voice heard? What do our voices say about us and what do they fail to communicate? How we speak and how our voices are perceived impact our interactions in daily life, our participation in the political sphere, and our capacity to effect change through activism. This CWIC course explores the parameters by which voice is defined in the context of music and sound studies, social justice, philosophy, and media and communication studies. We will consider how voice embodies our political constitution through an examination of the vocal practices of artists such as Tanya Tagaq, Anohni, Juliana Huxtable, Laurie Anderson, Srih Knowledge, and Lucas Silveira; the phenomena of voice-activated devices such as Apple’s Siri and Amazon’s Echo; and the collective voices of movements such as Black Lives Matter and the Standing Rock water protectors. Through individual and group presentations, discussions, and creative projects, this critical speaking seminar encourages students to develop their oral communication skills while examining what informs their individual and collective voices. No previous musical training required. Enrollment limited to 16.

Course not offered every year
Also Offered As: MUSC 048
Activity: Lecture
1 Course Unit
GSWS 050 The Romantic Period
This course offers an introduction to the literature of the Romantic period (ca. 1770-1830). Some versions of this course will incorporate European romantic writers, while others will focus exclusively on Anglo-American romanticism, and survey authors such as Austen, Blake, Brocken Brown, Byron, Coleridge, Emerson, Irving, Keats, Radcliffe, Scott, Shelley, and Wordsworth. The primary for this course is ENGL 050. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Also Offered As: ENGL 050
Activity: Lecture
1 Course Unit

GSWS 060 Latina/o Literature and Culture
A survey of cultural productions by Latinas/os (i.e. people of Latin American descent who have been raised in the U.S.) that usually will focus on the twentieth century, but might at times examine earlier periods instead. The course will take a culturally and historically informed approach to a wide range of novels, poems, plays, and films, and will sometimes include visual art and music. Writers and artists might include América Paredes, Piri Thomas, Cherie Moraga, Sandra Cisneros, Julia Alvarez, Junot Díaz, Cristina García, El Teatro Campesino, John Leguizamo, Carmen Lomas Garza, the Hernandez Brothers, and Los Tigres del Norte. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: ARTH 070, COML 070, ENGL 070, LALS 060
Activity: Lecture
1 Course Unit

GSWS 081 African-American Literature
An introduction to African-American literature, typically ranging across a wide spectrum of moments, methodologies, and ideological postures, from Reconstruction and the Harlem Renaissance to the Civil Rights Movement. Most versions of this course will begin in the 19th century; some versions of the course will concentrate only on the modern period.
ENGL 081 is the primary for this course. See the English Department’s website for a description of the current offerings.
Course not offered every year
Also Offered As: AFRC 081, ENGL 081, MUSC 082
Activity: Lecture
1 Course Unit

GSWS 090 Gender, Sexuality, and Literature
This course will focus on questions of gender difference and of sexual desire in a range of literary works, paying special attention to works by women and treatments of same-sex desire. More fundamentally, the course will introduce students to questions about the relation between identity and representation. We will attend in particular to intersections between gender, sexuality, race, class, and nation, and will choose from a rich vein of authors: Mary Wollstonecraft, Jane Austen, Mary Shelley, Lord Byron, the Brontes, Christina Rossetti, George Eliot, Oscar Wilde, Henry James, Gertrude Stein, Zora Neale Hurston, E. M. Forster, Virginia Woolf, Nella Larsen, Radclyffe Hall, Willa Cather, Elizabeth Bishop, Jean Rhys, James Baldwin, Sylvia Plath, Bessie Head, Audre Lorde, Adrienne Rich, Cherie Moraga, Toni Morrison, Michael Cunningham, Dorothy Allison, Jeanette Winterson, and Leslie Feinberg. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.

Activity: Lecture
1 Course Unit

GSWS 096 Theories of Gender and Sexuality
What makes men and women different? What is the nature of desire? This course introduces students to a long history of speculation about the meaning and nature of gender and sexuality—a history fundamental to literary representation and the business of making meaning. We will consider theories from Aristophanes speech in Platos Symposium to recent feminist and queer theory. Authors treated might include: Plato, Shakespeare, J. S. Mill, Mary Wollstonecraft, Sigmund Freud, Virginia Woolf, Simone de Beauvoir, Adrienne Rich, Audre Lorde, Michel Foucault, Gayle Rubin, Catherine MacKinnon, Eve Kosofsky Sedgwick, Judith Butler, bell hooks, Leo Bersani, Gloria Anzaldúa, David Halperin, Cherríe Moraga, Donna Haraway, Gayatri Spivak, Diana Fuss, Rosemary Hennessey, Chandra Tadpole Mohanty, and Susan Stryker. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.

GSWS 101 Study of an Author
This is an introduction to literary study through the works of a single author—often Shakespeare, but some versions of this course will feature other writers. (For offerings in a given semester, please see the on-line course descriptions on the English Department website.) We will read several works and approach them—both in discussion and in writing—from a range of critical perspectives. The author’s relation to his or her time, to literary history generally, and to the problems of performance, are likely to be emphasized. This course is designed for the General Requirement; it is also intended to serve as a first or second course for prospective English majors. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
For BA Students: Arts and Letters Sector
One term course offered either term
Also Offered As: AFRC 101, ENGL 101
Activity: Lecture
1 Course Unit
GSWS 102 Study of a Literary Theme
The primary for this course is the English Department. When the course content includes gender, sexuality and women's studies it will be cross-listed with GSWS. See additional information and description on the English Department's website: https://www.english.upenn.edu
For BA Students: Arts and Letters Sector
One term course offered either term
Also Offered As: CIMS 112, COML 245, ENGL 102
Activity: Lecture
1 Course Unit

GSWS 109 Gender, Sexuality, & Religion
What does it mean to be a Muslim, Hindu, Jewish, Christian, or spiritual woman or man? How important are the gender differences in deciding social roles, ritual activities, and spiritual vocations? How does gender intersect with nationality, language, and politics? This course tackles all of these questions, showing how gender is defined and the way it is taught and performed is central to understanding religion. In this course we will learn about women's and men's rituals, social roles, and mythologies in specific religious traditions. We will also look at the central significance of gender to the field of religious studies generally, with particular attention to non-binary genders. The first part of the course will be focused on building a foundation of knowledge about a range of religious traditions and the role of women in those traditions. This course emphasizes religious traditions outside the West. Although it is beyond the scope of this class to offer comprehensive discussions of any one religious tradition, the aim is to provide entry points into the study of religious traditions through the lens of gender. This course will emphasize both historical perspectives and contemporary contexts. We will read religion through a variety of feminist and queer theory lenses—exploring the key characteristics of diverse feminist analyses of religion, as well as limits of specific feminist approaches.

One term course offered either term
Also Offered As: FOLK 029, RELS 005
Activity: Lecture
1 Course Unit

GSWS 114 Discrimination: Sexual and Racial Conflict
This course is concerned with the structure, the causes and correlates, and the government policies to alleviate discrimination by race and gender in the United States. The central focus of the course is on employment differences by race and gender and the extent to which they arise from labor market discrimination versus other causes, although racial discrimination in housing is also considered. After a comprehensive overview of the structures of labor and housing markets and of nondiscriminatory reasons (that is, the cumulative effects of past discrimination and/or experiences) for the existence of group differentials in employment, wages and residential locations, various theories of the sources of current discrimination are reviewed and evaluated. Actual government policies and alternatives policies are evaluated in light of both the empirical evidence on group differences and the alternative theories of discrimination.

GSWS 115 Before Transgender: Hermaphrodites in 19th Century Literature
This course provides a literary and cultural prehistory to contemporary discourses on transgender identity by focusing on the figure of the hermaphrodite in 19th century literature. We will consider how the hermaphrodite and intersex characters played central roles in the novels of Balzac, Tolstoy, Dostoievsky, and many others whose work we will read in this course. Interdisciplinary in nature, this course draws on 19th century discourses in medicine, psychology, opera, religious philosophy, and political theory to understand why characters who exist outside of the male/female gender binary feature so prominently in 19th century literature and cultural texts across a wide range of traditions (Anglophone, French, and Russian, and others).

GSWS 118 Iranian Cinema: Gender, Politics and Religion
This seminar explores Iranian culture, society, history and politics through the medium of film. We will examine a variety of cinematic works that represent the social, political, economic and cultural circumstances of contemporary Iran, as well as the diaspora. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the role of cinema in Iranian society and beyond. Discussions topics will also include the place of the Iranian diaspora in cinema, as well as the transnational production, distribution, and consumption of Iranian cinema. Films will include those by internationally acclaimed filmmakers, such as Rakhshan Bani-Etemad, Asghar Farhadi, Bahman Ghobadi, Abbas Kiarostami, Mohsen Makhmalbaf, Dariush Mehrjui, Tahmineh Milani, Jafar Panahi, Marjane Satrapi and others. All films will be subtitled in English.
No prior knowledge is required.

1 Course Unit

GSWS 122 The Sociology of Gender
Gender is an organizing principle of society, shaping social structures, cultural understandings, processes of interaction, and identities in ways that have profound consequences. It affects every aspect of people's lives, from their intimate relationships to their participation in work, family, government, and other social institutions and their place in the stratification system. Yet gender is such a taken for granted basis for differences among people that it can be hard to see the underlying social structures and cultural forces that reinforce or weaken the social boundaries that define gender. Differences in behavior, power, and experience are often seen as the result of biological imperatives or of individual choice. A sociological view of gender, in contrast, emphasizes how gender is socially constructed and how structural constraints limit choice. This course examines how differences based on gender are created and sustained, with particular attention to how other important bases of personal identity and social inequality—race and class—interact with patterns of gender relations. We will also seek to understand how social change happens and how gender inequality might be reduced.

Activity: Lecture
1 Course Unit
GSWS 125 The Adultery Novel
The object of this course is to analyze narratives of adultery from Shakespeare to the present and to develop a vocabulary for thinking critically about the literary conventions and social values that inform them. Many of the themes (of desire, transgression, suspicion, discovery) at the heart of these stories also lie at the core of many modern narratives. Is there anything special, we will ask, about the case of adultery—once called "a crime which contains within itself all others"? What might these stories teach us about the way we read in general? By supplementing classic literary accounts by Shakespeare, Pushkin, Flaubert, Chekhov, and Proust with films and with critical analyses, we will analyze the possibilities and limitations of the different genres and forms under discussion, including novels, films, short stories, and theatre. What can these forms show us (or not show us) about desire, gender, family and social obligation? Through supplementary readings and class discussions, we will apply a range of critical approaches to place these narratives of adultery in a social and literary context, including formal analyses of narrative and style, feminist criticism, Marxist and sociological analyses of the family, and psychoanalytic understandings of desire and family.

Notes: All readings and lectures in English.

GSWS 128 The Diary
Diary writing is an intimate mode of expression in which individuals seek to find meaning in their personal lives and relations, responding to the external realities in which they live. Their coping is subjected to their historical, educational and social contexts, and to the generic conventions of diary writing. This course examines the diary as a genre, exploring its functions, meanings, forms and conventions, comparing it with fictive and non-fictive autobiographical writings such as the diary novel, autobiography and the memoir, as well as comparative gender diary-writing.

GSWS 135 Creative Non-Fiction Writing
A workshop course in the writing of expository prose. Assignments include informal as well as formal essays, covering such topics as autobiography, family history, review, interview, analysis of advertising and popular culture, travel, work, and satire. ENGL-135 is the primary course for this course, and will be cross-listed with GSWS when the course content includes gender, sexuality and women's studies. See the English Department's website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: AFRC 134, ENGL 135
Activity: Seminar
1 Course Unit
Notes: May be repeated for credit with a different instructor.

GSWS 145 Advanced Non-Fiction Writing
Writing with a view to publication in the freelance sections of newspapers such as THE PHILADELPHIA INQUIRER and THE NEW YORK TIMES, in magazines such as THE ATLANTIC and THE NEW YORKER, and in the literary quarterlies and the journals of opinion. Among the areas likely to be considered are writing as a public act, issues of taste and of privacy, questions of ethics and of policy, methods of research and of checking, excepting, marketing, and the realistic understanding of assignments and of the publishing world. Student papers will be the basis of weekly editorial sessions, with concentration on the language: how to render material literate, how to recognize and dispose of padding and self-indulgence, how to tighten structure and amplify substance. See the English Department's website at www.english.upenn.edu for a description of the current offerings.

GSWS 152 Love and Loss in Japanese Literary Traditions: In Translation
How do people make sense of the multiple experiences that the simple words "love" and "loss" imply? How do they express their thoughts and feelings to one another? In this course, we will explore some means Japanese culture has found to grapple with these events and sensations. We will also see how these culturally sanctioned frameworks have shaped the ways Japanese view love and loss. Our materials will sample the literary tradition of Japan from earliest times to the early modern and even modern periods. Close readings of a diverse group of texts, including poetry, narrative, theater, and the related arts of calligraphy, painting, and music will structure our inquiry. The class will take an expedition to nearby Woodlands Cemetery to experience poetry in nature. By the end of the course, you should be able to appreciate texts that differ slightly in their value systems, linguistic expressions, and aesthetic sensibilities from those that you may already know. Among the available project work that you may select, if you have basic Japanese, is learning to read a literary manga. All shared class material is in English translation.

GSWS 160 Sex and Socialism
This seminar examines classic and current scholarship and literature on gender and sexuality in contemporary Eastern Europe, and examines the dialogue and interchange of ideas between East and West. Although the scholarly and creative works will primarily examine the changing status of women during the last three decades, the course will also look at changing constructions of masculinity and LGBT movements and communities in the former communist bloc. Topics will include: the woman question before 1989; gender and emerging nationalisms; visual representations in television and film; social movements; work; romance and intimacy; spirituality; and investigations into the constructed concepts of freedom and human rights.
Course not offered every year
Also Offered As: EEUR 160, RUSS 160
Activity: Lecture
1 Course Unit

GSWS 162 Women in Jewish Literature
This course introduces students of literature, women’s studies, and Jewish studies to the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres—devotional literature, memoir, fiction, and poetry—we will study women’s roles and selves, the relation of women and men, and the interaction between Jewish texts and women’s lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction & poetry from the past century. The course is divided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are portrayed in the Hebrew Bible, in rabbinic commentary, in pre-modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah’s daughter. Next, we turn to the seventeenth century Edith of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction and a memoir written by women in Yiddish, Hebrew, and English.

1 Course Unit

GSWS 205 Identity
The content of the course may include the following, and related, themes:
what makes a human the same human over time? What constitutes our
identities? Are gender, race, sexual orientation, and the like essential
features of our identities, and if so, how do they become so? How do
ethics, politics and identity interact? After learning this philosophical
content, Penn students will develop lesson plans for introducing this
content to Philadelphia public high school students. Mid way through the
semester, Penn students will start to prepare the high school students
to present their own work on the philosophy of identity at a
conference to be held at Penn in May 2017. Penn students will be
assessed on their own written and other work for the course, and in no
way on the written or oral work of the high school students. Enrollment by
permit only. Please contact Professor Detlefsen detlefsen@sas.upenn.edu
to schedule an interview for admission to the course.

1 Course Unit

GSWS 216 Gender and Health
Women’s health is a constant refrain of modern life, prompting
impassioned debates that speak to the fundamental nature of our
society. Women’s bodies are the tableaux across which politicians,
physicians, healthcare professionals, activists, and women themselves
dispute issues as wide-ranging as individual versus collective rights,
the legitimacy of scientific and medical knowledge, the role of the
government in healthcare, inequalities of care, and the value of
experiential knowledge, among many others. Understanding the history
of these questions is crucial for informed engagement with contemporary
issues.

1 Course Unit
GSWS 222 African Women's Lives: Past and Present
Restoring women to African history is a worthy goal, but easier said than done. The course examines scholarship over the past forty years that brings to light previously overlooked contributions African women have made to political struggle, religious change, culture preservation, and economic development from pre-colonial times to present. The course addresses basic questions about changing women's roles and human rights controversies associated with African women within the wider cultural and historical contexts in which their lives are lived. It also raises fundamental questions about sources, methodology, and representation, including the value of African women's oral and written narrative and cinema production as avenues to insider perspectives on African women's lives.

GSWS 224 Family Feuds: Beyoncé, Jay-Z and Solange and the Meaning of American Music
Taking Beyoncé's "Lemonade," Solange's "A Seat At The Table," and Jay-z's "4:44" as a point of departure, this class will focus on the role of popular music as "politics" within contemporary American culture. While these albums are clearly neither the first nor the only musical expressions to delve into the matters of black lives, feminism, and sexuality today, they do mark a very significant political and personal evolution for these individual artists and their audiences as they relate to the defining issues of our time. By looking at how each artist engages their influences (Nina Simone is staple for all three) and discussing how these albums challenge musical forms and incorporate different visual mediums, this course will reflect on the conversations these artists are having with each other and examine their cultural impact in order to understand the limits and possibilities of black musical expressions as sites of social change.
Taught by: Tillet
One term course offered either term

Activity: Lecture
1 Course Unit

GSWS 227 Sex and Power
Gender has been a primary way of organizing power relations throughout history. This class asks how transformations in the global economy, technological change, new patterns of household formation, and social movements, have influenced women's access to economic and political positions over the past two centuries. We will examine how women's mobilization contributed to the abolition of slavery, reform of property and franchise laws, and to the formation of the welfare state. Next, we turn to thinking about how women's increasing labor force participation was hindered by institutions like marriage bars and union policy. Third, we look at cross national patterns of women's political participation and descriptive representation including whether and how the adoption of electoral quotas influences gender equality more generally. Finally we study how institutional norms and gender stereotypes affect political representation. This class will draw on examples from around the world, and will look a experiences of women from all economic, social, and aspirative backgrounds.

GSWS 229 This course explores the origins and the politics of reform movements in the United States between 1800 and the Civil War.
This course explores the origins and the politics of reform movements in the United States between 1800 and the Civil War. We will consider the politics of antislavery and abolitionism, temperance, women's rights, education, Indian removal, and poor relief. The course will explore how broader social, economic, political and religious transformations affected the ways in which ordinary Americans as well as elected politicians and professional reformers understood the need for and the methods of reform. We will consider how urbanization, industrialization, electoral democratization, the market revolution, religious revivalism, and the growing sophistication of print culture revolutionized the way Americans understood the problems of good and evil and their own various roles in effecting societal change.

Activity: Lecture
1 Course Unit

GSWS 236 Gender, Violence, and WWII: Europe, 1933-1950
This seminar explores World War II-era Europe through the lens of evolving gender norms and relations. This turbulent period in European history magnified the so-called “gender troubles” that emerged in the wake of the First World War. From the question of equality between the sexes to the liberalization of sexual mores and divergence from the proscribed roles of men and women, gender had a profound impact on the prewar, wartime, and immediate postwar European landscape. Drawing on primary and secondary sources, we will consider the following questions: How did gender and violence shape the course of World War II and the immediate postwar from Britain to the Soviet Union? How can gender and sexuality help us to understand militarization, violence, and war? How did war and occupation impact relations between and among men and women on the home- and war fronts? We will complicate these questions by probing topics such as women’s support for war, masculinity in combat, everyday racial discrimination, eugenics, sexual violence and genocide and the ways in which they infiltrated the every aspect of Europeans’ public and private lives. Finally, we will discuss scholarly debates and historiographies on gender during World War II that have emerged since the early 1970s.
Also Offered As: HIST 236

GSWS 249 Philosophy of Education
The philosophy of education asks questions about the foundational assumptions of our formal institutions for the reproduction of culture. It ranges therefore, from epistemology and philosophy of mind to ethics and political philosophy. For instance: What is the nature of learning and teaching? How is it possible to come to know something we did not know already—and how can we aid others in doing that? How, if at all, should formal institutions of education be concerned with shaping students’ moral and civic character? What is the proper relation between educational institutions and the state? We also ask questions more specific to our own time and context. For example: how, in a multicultural state, should we educate students of varied social identities, like race, gender, and religion? What is the relationship between education and justice.

GSWS 252 Freud: The Invention of Psychoanalysis
No other person of the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This course will study his work, its cultural background, and its impact on us today. In the first part of the course, we will learn about Freud’s life and the Viennese culture of his time. We will then move to a discussion of seminal texts, such as excerpts from his Interpretation of Dreams, case studies, as well as essays on psychoanalytic practice, human development, definitions of gender and sex, neuroses, and culture in general. In the final part of the course, we will discuss the impact of Freud’s work. Guest lecturers from the medical field, history of science, psychology, and the humanities will offer insights into the reception of Freud’s work, and its consequences for various fields of study and therapy.

Notes: All readings and lectures in English.
GSWS 255 Thinking about Capitalism
Throughout the world today, economists are influential policymakers and pub intellectuals, and non-economists understand many aspects of their lives in economic terms. But as recently as 1945 in some regions of the world and a distantly as 1776 in others, the concept of the economy, the field of economics, and economists as a professional community did not exist. This class explores non-economic ways of understanding material life that have preceded, challenged, or undergirded economic thinking; the emergence of the economy and economics as naturalized, globally recognized concepts; the formation of economists as an authoritative professional group; and the rise of economic reasoning in daily life. The class takes a global approach, exploring these developments in societies from eighteenth-century Britain to twentieth-century Egypt in order to understand the local variations, international relationships, and transnational processes at work. It simultaneously takes a social approach to intellectual history, considering how popular and professional ideas developed in relation to one another, and how knowledge related to lived experience.

GSWS 257 Contemporary Fiction & Film in Japan
This course will explore fiction and film in contemporary Japan, from 1945 to the present. Topics will include literary and cinematic representation of Japan's war experience and post-war reconstruction, negotiation with Japanese classics, confrontation with the state, and changing ideas of gender and sexuality. We will explore these and other questions by analyzing texts of various genres, including film and film scripts, novels, short stories, magazines, and academic essays. Class sessions will combine lectures, discussion, audio-visual materials, and creative as well as analytical writing exercises. The course is taught in English, although Japanese materials will be made available upon request. No prior coursework in Japanese literature, culture, or film is required or expected; additional secondary materials will be available for students taking the course at the 600 level. Writers and film directors examined may include: Kawabata Yasunari, Hayashi Fumiko, Abe Kobo, Mishima Yukio, Oe Kenzaburo, Yoshimoto Banana, Ozu Yasujiro, Naruse Mikio, Kurowsawa Akira, Imamura Shohei, Koreeda Hirokazu, and Beat Takeshi.

GSWS 279 Women in Theatre and Performance
Theatre began as a form that excluded women entirely. The plays of ancient Greece and Elizabethan England were written and performed only by men, beginning a long tradition of theatre that represented women only from male perspectives. Has that tradition been so dominant for so long that women's voices on stage are still a novelty? This course focuses on a wide range of plays and performances by and about women; the work we read (and view) will evidence artistic attempts to represent women's lives, experiences and perspectives on the stage. Among the issues encountered and examined in these works are the roles of love, sexuality, friendship, career, community, marriage, motherhood, family, and feminism in women's lives - as well as the economic and political position(s) of women in society. The course will also offer contextual background on feminist theatre history, theory, and literature, the diverse (and divergent) creative efforts of female artists to use live performance as a means of creating social and political change.

GSWS 285 Kelly Writers House Seminar
This is a topics course for Spring 2015. The description is: Anne Waldman has been an active member of the "Outrider" experimental poetry community for over four decades as a writer, editor, teacher, performer, and cultural/political activist. She is the author of more than forty books, including Fast Speaking Woman, Vow to Poetry, and The Iovis Trilogy: Colors in the Mechanism of Concealment. Dorothy Allison's works of fiction and memoir delve into issues of gender, sexuality, autobiography, trauma, and the South and include the short story collection Trash and the novels Bastard Out of Carolina and Cavedweller. Jessiwa Hagedom's novels include Toxicology, Dream Jungle, The Gangster of Love, and Dogeaters, set in the turbulent period of the Philippines' late dictator and exploring intersections between American pop culture and local Filipino tradition; her writing for the theater includes Fe in the Desert, Stainway to Heaven, and the stage adaptation of Dogeaters.

GSWS 294 Art Now
One of the most striking features of today's art world is the conspicuous place occupied in it by the photographic image. Large-scale color photographs and time-based installations in projections are everywhere. Looking back, we can see that much of the art making of the past 60 years has also been defined by this medium, regardless of the form it takes. Photographic images have inspired countless paintings, appeared in combines and installations, morphed into sculptures, drawings and performances, and served both as the object and the vehicle of institutional critique. They are also an increasingly important exhibition site: where most of us go to see earthworks, happenings and body-art. This course is a three-part exploration of our photographic present.

Course usually offered in spring term
Also Offered As: ARTH 294, ARTH 694, ENGL 059, VLST 236
Activity: Lecture
1 Course Unit

GSWS 295 Cinema and Media
This course will provide an introduction to some of the most important film theory debates, and allow us to explore how writers and filmmakers from different countries and historical periods have attempted to make sense of the changing phenomenon known as "cinema," to think cinematically. Topics under consideration may include: spectatorship, authorship, the apparatus, sound, editing, realism, race, gender and sexuality, stardom, the culture industry, the nation and decolonization, what counts as film theory and what counts as cinema, and the challenges of considering film theory in a global context, including the challenge of working across languages. There will be a weekly film screening for this course. No knowledge of film theory is presumed.
Course requirements: attendance at lecture and participation in lecture and section discussions; canvas postings; 1 in-class mid-term; 1 final project.

GSWS 302 Queer Cinema
Queerness has often been understood as a threat to society whether social institutions like marriage or monogamy or familial practices have been characterized by increasing acceptance of gays and lesbians into mainstream society, this process has no doubt reproduced new inequalities and asymmetries - in terms of race, class and access to institutional spaces. Does "queer" still pose a threat to the mainstream or is it now part of the "normal"? Should one welcome the progressive acceptance of queer lives within the mainstream or should one reject it in the name of an indissoluble difference? In this course we will range across movies and theories that engage with these questions, particularly focusing on negative reactions to processes of assimilation. Topics will include sex and death, queerness and neoliberalism, intersections of race and sexuality. Some of the films we will watch and discuss are Paolini's Pigsty, Fassbinder's In a Year of 13 Moons, Jennie Livingstone's Paris is Burning, Cheryl Dunye's Watermelon Woman, Kimberly Peirce's Boys Don't Cry.
Also Offered As: CIMS 303, COML 303
Activity: Seminar
1 Course Unit

GSWS 307 Love, Lust and Violence in the Middle Ages
Medieval Europe was undoubtedly gruff and violent but it also gave birth to courtly culture - raw worries transformed into knights who performed heroic deeds, troubadours wrote epics in their honor and love songs about their ladies, women of the elite carved out a place in public discourse as patrons of the arts, and princely courts were increasingly defined by pageantry from jousting tournaments to royal coronations. This course will trace the development of this courtly culture from the eleventh to the sixteenth century, from its roots in Southern France to its spread to Northern France and then to various kingdoms in Europe. Central themes will include the transformation of the warrior into the knight, the relationships between violence and courtliness, courtly love, cultural production and the patronage of art, and the development of court pageantry and ceremonial. This is a class in cultural history and, as such, will rely on the interpretation of objects of art and material culture, literature as well as historical accounts.

GSWS 318 Race, Gender, Class and the History of American Health Care
This multidisciplinary course surveys the history of American health care through the multiple perspectives of race, gender, and class, and grounds the discussions in contemporary health issues. It emphasizes the links between the past and present, using not only primary documents but materials from disciplines such as literature, art, sociology, and feminist studies that relate both closely and tangentially to the health professions and health care issues. Discussions will surround gender, class-based, ethnic, and racial ideas about the construction of disease, health and illness; the development of health care institutions; the interplay between religion and science; the experiences of patients and providers; and the response to disasters and epidemics.

GSWS 336 "Where My Girls At?": African American Women Performers in The 20th Century
African American women performers from blues woman Bessie Smith to Paris revue star Josephine Baker, from jazz darling Billie Holiday to rock legend Tina Turner, and from hip hop giant Lauryn Hill to millennial star Beyoncé, have constantly redefined and expanded American popular music. Using the long 20th century as our historical marker, this course will explore how African American women performers, across genres and time, have consciously and sometimes contradictory navigated the racial and sexual limits of American popular culture in order to assert their own particular narratives of artistic and political freedom.

Also Offered As: AFRC 335
Activity: Seminar
1 Course Unit

GSWS 343 Boys will be Boys: Masculinity in French Literature
Why was a portrait depicting the Renaissance king François I as half-man, half-woman made with royal approval, and moreover intended to represent the king as the perfect embodiment of the ideal qualities of a male sovereign? And why, in what is now regarded as the official portrait of Louis XIV, does the king prominently display his silk stockings and high heels with diamond-encrusted buckles? These are just two examples of the questions that lead us to the point of departure for this course: the idea that masculinity is not a fixed essence that has existed since time immemorial, but rather a flexible concept that changes across and even within historical periods. We will examine how masculinity has evolved from the Middle Ages and the chivalric ideal to the present day, how it has been defined, and its implications for gender relations, politics, and religion in different eras. In addition to literary works, we will study how masculinity is represented across a range of media, including visual arts, music, and film. Discussions will be in English, and assignments will be available in translation, but students who wish to receive credit in French will be able to do coursework in French.
Also Offered As: COML 341, FREN 341

GSWS 345 Sinners, Sex and Slaves: Race and Sex in Early America
This course explores the lost worlds of sinners, witches, sexual offenders, rebellious slaves, and Native American prophets from the seventeenth to nineteenth centuries. Using the life stories of unusual individuals from the past, we try to make sense of their contentious relationships with their societies. By following the careers of the trouble-makers, the criminals, and the rebels, we also learn about the foundations of social order and the impulse to reform that rocked American society during the nineteenth century.

Also Offered As: AFRC 345, HIST 345
Activity: Recitation
1 Course Unit

GSWS 346 Women in American History, 1865 to the Present
Picking up where History 345 leaves off, this course explores how immigration industrialization, racial segregation, and the growing authority of science transformed the fundamental conditions of women's lives in the late nineteenth and early twentieth centuries. Building on previous efforts by female reformers to perfect society, women at the turn of the century organized large social movements dedicated to improving the lives of women and children and gaining public access to political power. We will examine the fruits of this activism as well as the consequences of subsequent events for the rise of several important social movements in the latter half of the century — including civil rights, women's liberation, and gay rights — in which women played a vital role.
The course concludes with an assessment of feminism in the present day, with special emphasis on the responses of younger women to its legacy.
Course usually offered in spring term
Also Offered As: AFRC 346, HIST 346
Activity: Lecture
1 Course Unit

GSWS 349 History of Sexuality in the U.S.
This course introduces students to a relatively new field of inquiry, the history of sexuality in the U.S. It explores the past to consider why sexuality has been so central to American identities, culture, and politics. Primary documents and other readings focus on the history of sexual ideology and regulation; popular culture and changing sexual practices; the emergence of distinct sexual identity and communities; the politics of sexuality; and the relationship between sexual and other forms of social difference, such as gender, race, ethnicity, age, and class. Topics include many themes with continuing relevance to contemporary public debate: among them, sexual representation and censorship, sexual violence, adolescent sexuality, the politics of reproduction, gay and lesbian sexualities and sexually transmitted diseases.

GSWS 387 Topics in Africana Studies
Topics vary. Black Feminist Approaches to History & Memory - The term black feminism emerged in public discourse amid the social, political, and cultural turbulence of the 1960s. The roots of black feminism, however, are much older, easily reaching back to the work of black women abolitionists and social critics of the nineteenth century. The concept continued to grow and evolve in the work of twentieth century black women writers, journalists, activists, and educators as they sought to document black women's lives. Collectively, their work established black feminism as a political practice dedicated to the equality of all people. More recently, black feminism has been deployed as a tool for theoretical and scholarly analysis that is characterized by an understanding that race, class, gender, and sexuality are inextricably interconnected.

GSWS 394 Topics in Contemporary Art
Topic varies. Spring 2017: This course will examine key moments in the history of civil rights through a cinematic lens. Over the course of the semester, we will explore how filmmakers have depicted the lives, aspirations, and strategies of those who have struggled for equal rights; how different struggles have intersected with each other; what aesthetic strategies have been adopted to represent freedom and the denial of it; and how effective cinematic efforts to contribute to increased freedom have been as well as what criteria we use to evaluate success or failure in the first place. Each week, we will watch a film and read a series of texts that will be drawn from a variety of arenas, including histories of civil rights; civil rights pamphlets and speeches; filmmaker interviews; film and media theory; memoirs; and theories of race, gender and sexuality. Course requirements: mutual respect; completion of all readings and screenings; participation in class discussion; weekly online responses; a final project that can be a research paper, film, art project, or community-based initiative.

GSWS 420 Witchcraft and Gender in the Early Modern World
From the 16th century through the 18th century, social tensions erupted in Europe and the colonies in the witch craze, a period when intense cultural concern over witchcraft was expressed through religious treatises and sermons, popular literature like pamphlets and broadsides, legal accusations, trials, and, in some cases, executions. Although scholars argue vehemently about the total number of people executed during the witch hunts, their importance in understanding early modern beliefs and responses to social tensions is clear. In this class, we will explore historians’ understandings of the causes underlying this cultural phenomenon. With special attention to gender, social position, and religious belief, we will join academic debates about the causes of these persecutions. We will also read some primary sources from the medieval through the early modern periods, including trial transcripts, sermons, and pamphlets. Were women the main target of witchcraft accusations and executions, and if so, was misogyny their most important cause? What role did sexual norms and beliefs have in the way that accusations were framed? Were there different patterns of accusation and executions across time and region, and if so, what social and cultural factors might explain them?
Taught by: Rabberman
Course not offered every year
Activity: Online Course
1 Course Unit
Notes: Master in Liberal Arts course

GSWS 422 History of Sexuality
In this course, rather than simply debating changes in sexual practices over time, we will discuss the ways in which different societies in the past and present constructed sexual norms and understood normality and deviance in sexual terms. We will focus special attention on the following questions: To what extent are sexual identities constructed by different cultures, rather than simply being determined biologically? What influence do social, economic, and political conditions have on social constructions of sexuality? How have different societies used sexual norms to mark “natural” practices from “deviant” ones, and how are these norms connected to societies’ power structures? We will explore case studies from Classical Greece through the contemporary United States. Our readings will explore topics such as medieval and modern views of the body, gender, sexuality, and science; prostitutes in medieval and Victorian England; same-sex relationships from classical Greece to medieval Europe to the contemporary United States; expectations for sexuality within and outside marriage; hermaphrodites; and sexual deviants, among others. Students will be expected to participate actively in class discussions, and to complete short response papers and a longer research paper.
Taught by: Rabberman
Course usually offered in spring term
Activity: Lecture

Notes: Master in Liberal Arts course

GSWS 423 Gendered Constructions of Other Cultures in Western Travel Literature
Descriptions of peoples from foreign lands and faraway places have captured the imaginations of Europeans for centuries. Pilgrims and merchants, explorers and conquistadores, Victorians taking their Grand Tour and 21st century travelers have preserved their observations, both in written form, in ethnographies and diaries, novels and travel narratives, and in visual form, in maps, illuminated manuscripts, engravings, and photographs. Through these media, these travelers have not simply captured their memories, but have also helped to shape Western representations of the people they encountered. In the process, these travelers often have justified Western political, economic, cultural, and social dominance, although instead some travelers have critiqued the West. And in all these depictions, gender and sexuality have played central roles in the creation of these identities and relationships.
Taught by: Rabberman
Activity: Online Course
1 Course Unit

GSWS 434 The Politics of Ugly
Venus was the God of Beauty and Love yet she was married to Hephaestus, the mangled, grumpy and for all intents and purposes, ugly god. Why juxtapose such distinct figures? Are they doing the same job? The course discusses the interplay between ugliness and politics with a focus on a number of central concepts such as race, social conflict, nationalism, ideology, dictatorship, propaganda and autonomy. Emphasis is put on the double role of the deployment of ugliness, as reinforcement of ideological and political ideas and as a force of social criticism. How does the state justify its own existence by the use of aesthetic narratives? How does the State identify undesirables? This class highlights how groups who feel somatically alike behave, and how their boundaries form and change over time. The focus will be interdisciplinary and multi-national, with case studies from past and present. The class will have a digital media focus as we will delve into issues of representation particularly with respect to race. For example, we will delve into the aesthetic discussion of northern and southern Sudanese as well and Hitler’s Germany.

GSWS 436 Africana Studies Undergraduate Seminar
On the stage of modern world history, Haiti plays the unique role as both exceptionally victorious and tragic character. This course interrogates archival documents, oral histories, historical texts, and prose created within the nation and her diaspora in order to establish a nuanced image of the projection of Haiti’s modern history. Using two classic Haitian texts, Ma Vieux-Chauvet’s Love, Anger, Madness (1968) and Michel-Rolph Trouillot’s Silencing the Past: Power and the Production of History (1995), this course examines how, why, and to what end Haiti’s history and popular narratives of the country have served to construct and dismantle global movements, popular culture, and meanings of race, gender, and citizenship in the Americas. Our historical examination, we will question some of the iconic representations of Haiti through literature that deepen the affective historical profile of Haiti with interrogations of culture, sexuality, political, and media performance. Students will become familiar with the colonial history of Haiti and the region, meanings of race, and the production of history. The course is a research and historical methods seminar.

Activity: Independent Study
1 Course Unit

GSWS 509 Modernist Jewish Poetry
One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define "Jewish writing," in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation's process and products.
Course not offered every year
Also Offered As: COML 509, ENGL 591, GRMN 509, JWST 509, YD509
Activity: Seminar
1 Course Unit

GSWS 516 Public Interest Workshop
This is a Public Interest Ethnography workshop (originally created by Peggy Reeves Sandy - Department of Anthropology) that incorporates an interdisciplinary approach to exploring social issues. Open to graduate and advanced undergraduate students, the workshop is a response to Amy Gutmann’s call for interdisciplinary cooperation across the University and to the Department of Anthropology’s commitment to developing public interest research and practice as a disciplinary theme. Rooted in the rubric of public interest social science, the course focuses on: 1) merging problem solving with theory and analysis in the interest of change motivated by a commitment to social justice, racial harmony, equality, and human rights; and 2) engaging in public debate on human issues to make research results accessible to a broader audience. The workshop brings in guest speakers and will incorporate original ethnographic research to merge theory with action. Students are encouraged to apply the framing model to a public interest research and action topic of their choice. This is an academically-based-community-service (ABCS) course that partners directly with Penn’s Netter Center Community Partnerships.
Taught by: Sues
Course not offered every year
Also Offered As: ANTH 516, URBS 516
Activity: Seminar
1 Course Unit

GSWS 517 Sociology of Work
The thinkers whose work formed the foundations of sociological theory considered the nature of the relationship between work and identity key to understanding social solidarity, power, and historical change. In recent years, the division of labor, structures of work, and employment relations have all been undergoing rapid change, necessarily affecting the possibilities for constructing identity through work. This seminar examines how changes in the nature and organization of work have reshaped the relationship between work and identity.
Taught by: Jacobs, Leidner
Course not offered every year
Also Offered As: SOCI 517
Activity: Seminar
1 Course Unit
GSWS 518 Nursing and the Gendering of Health Care in the United States and Internationally, 1860-2000
This course examines changing ideas about the nature of health and illness; changing forms of health care delivery; changing experiences of women as providers and patients; changing role expectations and realities for nurses; changing midwifery practice; and changing segmentation of the health care labor market by gender, class and race. It takes a gender perspective on all topics considered in the course. A comparative approach is used as national and international literature is considered. This focus is presented as one way of understanding the complex interrelationships among gender, class, and race in health care systems of the United States and countries abroad.
Taught by: Wall
Course usually offered in spring term
Also Offered As: NURS 518
Activity: Lecture
1 Course Unit

GSWS 520 Art, Sex and the Sixties
Visiting Professor Jonathon Katz will be teaching for GSWS during the fall 2018. The course description is as follows: With a distinct emphasis on post World War II performance, film, sculpture and painting, this course explores the conjunction of the period’s systematic revamping of our social/sexual schema with the equally revolutionary ascendancy of an artistic postmodernity. And it seeks to explore this dynamic not only within the familiar confines of North America and Europe but towards Latin America and Asia, too, in what was a nearly simultaneous emergence of the erotic as a political force in the 60s. Reading a range of key voices from Brazilian theorist and poet Oswald de Andrade to Frankfurt School philosopher Herbert Marcuse, performance artists Carolee Schneemann, and Yoko Ono, Neo-Freudian theorist Norman O. Brown and lesbian feminist author Monique Wittig, we will examine how and why sex became a privileged form of politics at this historical juncture in a range of different contexts across the globe. Students interested in feminist, gender or queer theory, social revolution, performance studies, post war art and Frankfurt School thought should find the course particularly appealing, but it assumes no background in any of these fields.
Taught by: Katz
One-term course offered either term
Also Offered As: ARTH 583
Activity: Seminar
1 Course Unit

GSWS 524 Chaucer: Poetics and Performance
An advanced introduction to Chaucer’s poetry and Chaucer criticism. Reading and discussion of the dream visions, Troilus and Criseyde, and selections from Canterbury Tales, from the viewpoint of Chaucer’s development as a narrative artist.
Course not offered every year
Also Offered As: COML 522, ENGL 525
Activity: Seminar
1 Course Unit

GSWS 525 The Trouble with Freud: Psychoanalysis, Literature, Culture
For professionals in the field of mental care, Freud’s work is often regarded as outmoded, if not problematic psychologists view his work as non-scientific, dependent on theses that cannot be confirmed by experiments. In the realm of literary and cultural theory, however, Freud’s work seems to have relevance still, and is cited often. How do we understand the gap between a medical/scientific reading of Freud’s work, and a humanist one? Where do we locate Freud’s relevance today? The graduate course will concentrate on Freud’s descriptions of psychoanalytic theory and practice, as well as his writings on literature and culture.
Taught by: Weissberg
One-term course offered either term
Also Offered As: GRMN 526
Activity: Seminar
1 Course Unit

GSWS 527 Race, Gender and Auto/Biography
PRING 2017: Market Women, Madames, Mistresses & Mother Superior studies ender labor, sexuality, and race in the Caribbean. In our historical examination of primary source documents alongside literature, and popular edia, we will question some of the iconic representations of Caribbean and Latin American women in order to understand the meaning, purpose and usage of women’s bodies as objects of praise, possession, obsession and/or idicule by communities, governments and religions within and outside of the region. Beginning in the late-18th century and ending with contemporaryigration narratives, this course considers the relationship between slave society and colonial pasts on gender performance in the modern Caribbean, atin America, and their diasporas. In our interrogation of gender meanings, we will consider the ways Caribbean women and men define themselves and each other, while considering the intersections of color, class, religion and culture on the political and social realities of the Caribbean and the region.
The geographic scope of the course will extend to Haiti, the Dominican Republic, Jamaica, Cuba, Puerto Rico, Costa Rica and Trinidad & Tobago. The following interrelated questions will anchor our exploration of each text: How have representations of Caribbean and Latin American women informed historical constructions and rhetoric of the region and national identity? What political and social strategies have Caribbean women and men used to define themselves in their countries and throughout the region? How do the history and contemporary conditions of a post-colonial nation impact the gender construction of Caribbean identities? What is the relationship between modern Caribbean gender identities and the regional racial and economic politics?
Taught by: Sanders
One-term course offered either term
Also Offered As: AFRC 527, LALS 527
Activity: Seminar
1 Course Unit
GSWS 532 Gender, the Labor Force and Labor Markets
Drawing from sociology, economics and demography, this course examines the causes and effects of gender differences in labor force participation, earnings and occupation in the United States and in the rest of the developed developed and developing world. Differences by race and ethnicity are explored as explanations for the observed trends. Finally, the course reviews current labor market policies and uses the marriage, theories of labor supply, marriage, human capital and discrimination to men. evaluate their effects on women and men.
Taught by: Madden
Course not offered every year
Also Offered As: DEMG 541, SOCI 541
Activity: Seminar
1 Course Unit

GSWS 542 Work and Gender
This seminar examines the relevance of gender to the organization and experience of paid and unpaid work. Combining materialist and social constructionist approaches, we will consider occupational segregation, the relation of work and family, gender and class solidarity, and the construction of gender through work, race and class variation in work experiences, and related topics.
Taught by: Leidner
Course not offered every year
Also Offered As: SOCI 542
Activity: Seminar
1 Course Unit

GSWS 544 Science of Sex & Sexuality
The author of a New York Times article entitled “On Being Male, Female, Neither or Both” concluded her comments with the following statement: “The definition of sex was (and is) still up for grabs.” In our post-modern world, we have become accustomed to the malleability of gender identity and sexuality. We are also aware that individuals undergo sex reassignment surgeries but by and large we assume that transgender people are transitioning from one discrete category to another. Queer activists certainly challenge this assumption, preferring to envision sex, gender, and sexuality on a continuum, but these days even scientists don’t concur about a definitive definition of sex. Should sex be defined chiefly by anatomy? Chromosomes? The body’s ability to produce and respond to hormones? If the boundaries of biological categories can be contested, what are the implications for culturally constructed ideas about gender identity and sexuality.
Also Offered As: ENGL 544
Prerequisite: This is an advanced seminar for MLA students
Activity: Seminar
1 Course Unit

GSWS 550 Topics 17th Century
The specific topics of the seminar vary from semester to semester, depending on the instructor and his/her choice. When the topic includes gender, sexuality or women’s studies it will be cross-listed with GSWS. Please see the French Department website for a description: https://www.sas.upenn.edu/french/pc
Course not offered every year
Also Offered As: COML 549, ENGL 537, FREN 550
Activity: Seminar
1 Course Unit

GSWS 553 British Women Writers
A study of British women writers, often focusing on the women authors who came into prominence between 1775 and 1825. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Taught by: Bowers
Course not offered every year
Also Offered As: COML 554, ENGL 553, HIST 553
Activity: Seminar
1 Course Unit

GSWS 555 Women and Incarceration
This elective course will afford students the opportunity to develop and implement health education workshops for incarcerated women in the Philadelphia jail system. Students will explore the social and historical framework and trends in the incarceration of women, as well as the needs of this population, and will identify specific areas that need to be addressed by particular disciplines or professions. Students will have direct contact with the jail system, its staff, and female inmates.
Taught by: Brown, K.; Guidera, Durain
Course usually offered in fall term
Also Offered As: NURS 555
Activity: Lecture
1 Course Unit

GSWS 570 African-American Literature
This course traces some important aspect of African-American literature and culture. Some recent versions of the course have focused on the emergence of African-American women writers, on the relation between African-American literature and cultural studies, and on the Harlem Renaissance. This course is cross-listed with the English Department. See the English Department’s website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: AFRC 570, ENGL 570
Activity: Seminar
1 Course Unit

GSWS 572 Language and Gender
This course traces the development of research on language and gender, introducing key theoretical issues and methodological concerns in this area. Participants will consider how gender ideologies shape and are shaped by language use, with particular attention to how research findings can be applied to educational and other professional settings.
Taught by: Pomerantz
Course usually offered in spring term
Also Offered As: EDUC 572
Activity: Lecture
1 Course Unit

GSWS 574 Masters in Liberal Arts Proseminar
Topic varies.
Course not offered every year
Also Offered As: AFRC 573, ARTH 505
Activity: Lecture
1 Course Unit
GSWS 579 Provocative Performance
This course will examine a wide array of performance pieces by and about women, designed to provoke social, political, and personal change. Ranging from the serious to the hilarious (and sometimes outrageous), our readings will center on plays and performance art; we will also study live and filmed pieces, attend course-related productions in the city and on campus, and incorporate contextual material on feminist theatre theory and history.
Taught by: Malague
Course not offered every year
Also Offered As: ENGL 456, THAR 579
Activity: Seminar
1 Course Unit

GSWS 581 Advanced Psychology of Women
A critical analysis of psychological theories about women and sex differences, a thorough examination of "psychology of women" research articles, and class-initiated research. Among the issues to be covered are: sex role socialization; class, race and gender connections; women and work; employment discrimination, assertiveness training; women's responses to injustice; domestic violence, rape, discrimination; the family and the "new right"; perceptions of women; sexuality, disability and objectification; reproductive rights, sex roles, androgyny and new role prescriptions; mental health and aging.
Taught by: Stanley
Course usually offered summer term only
Also Offered As: EDUC 581
Prerequisite: A course in general psychology
Activity: Lecture
1 Course Unit

GSWS 583 19 Century American Lit: Kinship, Sexuality, Indigeneity
Course not offered every year
Also Offered As: ENGL 583
Activity: Seminar
1 Course Unit

GSWS 584 Political Philosophy
An examination of basic theoretical problems of political science divided into three parts. First, specific features of social sciences will be examined and three most important general orientations of social sciences (analytical, interpretative and critical) will be compared and analyzed. Second, basic concepts of social and political sciences will be studied: social determination, rationality, social change, politics, power, state, democracy. Third, the problem of value judgments will be considered: Is there a rational, objective method for the resolution of conflicts in value judgments? Is morality compatible with politics?
Taught by: Hirschmann
Course not offered every year
Also Offered As: PSCI 584
Activity: Seminar
1 Course Unit

GSWS 587 Race, Nation, Empire
This graduate seminar examines the dynamic relationships among empires, nations and states; colonial and post-colonial policies; and anticolonial strategies within a changing global context. Using the rubrics of anthropology, history, cultural studies, and social theory, we will explore the intimacies of subject formation within imperial contexts - past and present - especially in relation to ideas about race and belonging. We will focus on how belonging and participation have been defined in particular locales, as well as how these notions have been socialized through a variety of institutional contexts. Finally, we will consider the relationships between popular culture and state formation, examining these as dialectical struggles for hegemony.
Taught by: Thomas
Course not offered every year
Also Offered As: AFRC 587, ANTH 587, LALS 588
Activity: Seminar
1 Course Unit

GSWS 588 The Politics of Women's Health Care
This course will utilize a multidisciplinary approach to address the field of women's health care. The constructs of women's health care will be examined from a clinical, as well as sociological, anthropological and political point of view. Topics will reflect the historical movement of women's health care from an an obstetrical/gynecological view to one that encompasses the entire life span and life needs of women. The emphasis of the course will be to undertake a critical exploration of the diversity of women's health care needs and the past and current approaches to this care. Issues will be addressed from both a national and global perspective, with a particular focus on the relationship between women's equality/inequality status and state of health.
Taught by: Durain, McCool
Course usually offered in spring term
Also Offered As: NURS 588
Activity: Lecture
1 Course Unit

GSWS 589 Recent issues in Critical Theory
This course is a critical exploration of recent literary and cultural theory, usually focusing on one particular movement or school, such as phenomenology, psychoanalysis, the Frankfurt School, or deconstruction.
Course not offered every year
Also Offered As: CIMS 580, COML 590, ENGL 590, LALS 590
Activity: Seminar
1 Course Unit

GSWS 590 Gender and Education (ELD)
This course is designed to provide an overview of the major discussions and debates in the area of gender and education. While the intersections of gender, race, class, ethnicity, and sexuality are emphasized throughout this course, the focus of the research we will read is on gender and education in English-speaking countries. We will examine theoretical frameworks of gender and use these to read popular literature, examine teaching practices and teachers with respect to gender, using case studies to investigate the topics.
Taught by: Schultz; Kurilo
Course usually offered in spring term
Also Offered As: EDUC 590
Activity: Lecture
1 Course Unit
GSWS 594 Topics in Contemporary Art
Topics vary. The primary for this course is the Art History Department. For a course description please see their website: http://www.sas.upenn.edu/arthistory/courses
Course not offered every year
Also Offered As: ARTH 593, CIMS 590, COML 599
Activity: Seminar
1 Course Unit

GSWS 596 Topics in Contemporary Art
Also Offered As: ARTH 596, CIMS 596, ENGL 596, FNAR 605
Activity: Seminar
1 Course Unit

GSWS 599 Independent Study
One-term course offered either term
Activity: Independent Study
1 Course Unit

GSWS 608 Gender and Sexuality in Hinduism
Issues related to gender and sexuality occupy a complex, often contradictory place in Hinduism. Sexual desire, sexual activity, and the body are simultaneously celebrated, manipulated, controlled, and restricted. This fundamental ambiguity is at the core of this course, which concerns itself with religious perspectives on the body, gender and sexual activity in Hinduism. Topics include: dharma, morality and sexual practice; menstruation; pregnancy and childbirth; Bhakti and Tantra; same-sex relations; masculinities; hijras and the notion of the "third sex"; eroticism in the literary, visual, and performing arts; colonialism; and somatic nationalism.
Taught by: Soneji, D.
Also Offered As: SAST 607
Activity: Seminar
1 Course Unit

GSWS 610 Topics in American History
Reading and discussion course on selected topics in American history. See history's website for course description for the term: http://www.history.upenn.edu/courses
Course usually offered in fall term
Also Offered As: COML 610, HIST 610
Activity: Seminar
1 Course Unit

GSWS 612 Interactional Processes with LGBT Individuals
In the past quarter century, the awareness of the unique issues facing lesbian, gay, bisexual and transgender (LGBT) individuals has expanded and become essential knowledge in our work as educators, providers of psychological services, and other service provision fields. This course provides a contextual and applied understanding of the interactional processes facing LGBT individuals.
Course usually offered summer term only
Also Offered As: EDUC 612
Activity: Lecture
1 Course Unit

GSWS 630 Gender and Religion in China
This course examines gender in Chinese religious culture from ancient to contemporary times. We will explore topics including the Buddhist accommodation of Chinese family system, Chinese transformation of the bodhisattva Guanyin, female deities in Daoist and popular religious pantheons, writings about religious women, female ghosts and fox spirits in literary imagination and folk tales, and the significance of yin force in Chinese medicine and Daoist alchemy. Through the case of China, we will look at how gender plays critical and constitutive roles in religious traditions, and how religion can be used both to reinforce and to challenge gender norms.
Taught by: Cheng
Course usually offered in fall term
Also Offered As: EALC 230, EALC 630, GSWS 234, RELS 237
Activity: Seminar
1 Course Unit

GSWS 640 Studies in the Renaissance
Topics vary. This course will be cross-listed with GSWS when the topic includes, Gender, Sexuality and Women's Studies. Please see French department's website for current course description: https://www.sas.upenn.edu/french/pc
Course not offered every year
Also Offered As: COML 643, FREN 640
Activity: Seminar
1 Course Unit

GSWS 670 Topics in Trans Regional History
What do historians gain by approaching the past with an awareness of the body as a material and historically contingent entity? In this course we consider several different ways of imagining historical bodies and the body in history. Our readings will explore how events and new social, racial, economic and political formations influence how contemporaries imagined and described bodies and their capacities. We will also examine whether the body itself might be a dynamic source of historical change. Among the topics we will discuss are: medical theories about bodies, epidemics and their impact; sensory capacities; capacities for physical labor; cultures of violence; reproductive capacities and politics; coerced immigration; fashion, beauty, and grace; and the state's interest in mobilizing bodies to serve imperial, economic, and military agendas.
Taught by: Brown
One-term course offered either term
Also Offered As: AFRC 670, HIST 670
Activity: Seminar
1 Course Unit

GSWS 678 Gender and Sexuality in Education
This seminar gives an overview of the intersections and interplay among gender, sexuality, and education through theory, practice, current discussions, and analysis of varied contexts in English speaking countries (e.g. the United States, Canada, Great Britain, and Australia). After examining the theoretical foundations of genders and sexualities, we will look at their histories and effects in K12 schools and colleges and universities as well as explore special topics.
Also Offered As: EDUC 678
Activity: Seminar
1 Course Unit

GSWS 682 Topics: Literature and Film
Course not offered every year
Also Offered As: CIMS 682, COML 680, ITAL 682
Activity: Seminar
1 Course Unit
GSWS 705 Seminar in Ethnomusicology
This seminar in Ethnomusicology is cross-listed with GSWS when the topic includes gender, sexuality and women's studies.
Course usually offered in fall term
Also Offered As: ANTH 705, COML 715, MUSC 705
Activity: Seminar
1 Course Unit
Notes: Open to graduate students from all departments

GSWS 740 Research Seminar in Middle Eastern History
Research seminar on selected topics in Middle Eastern history. See the History's Department website for course description.
Course not offered every year
Also Offered As: AFRC 740, HIST 740
Activity: Seminar
1 Course Unit

GSWS 762 Women in South Asia
This course on women in South Asian history has several objectives.
To comprehend the genres of narratives in which South Asian women between the sixteenth and twentieth centuries have spoken and have been spoken about.
To gain an understanding of evolving institutions and practices shaping women's lives, such as the family, law and religious traditions.
To understand the impact of historical processes - the formation and breakdown of empire, colonialism, nationalism and decolonization - upon South Asian women between the sixteenth and twentieth centuries. We will read primary sources in addition to familiarizing ourselves with the historiography of women in South Asia.
Taught by: Sreenivasan
One-term course offered either term
Also Offered As: SAST 762
Activity: Seminar
1 Course Unit

GSWS 769 Feminist Theory
See the English Department's website at www/english.upenn.edu for a complete description of the current offerings.
Taught by: Loomba
Course not offered every year
Also Offered As: COML 769, ENGL 769, NELC 783, SAST 769
Activity: Seminar
1 Course Unit

GSWS 771 Current Japanology
Major trends in scholarship as reflected in important recent publications, especially formative books and periodical literatures. The trajectory within certain disciplines as well as the interaction among them will be critically evaluated in terms of gains and losses. Implications of these theses in the planning of graduate and postgraduate research.
Course not offered every year
Also Offered As: EALC 771
Activity: Lecture
1 Course Unit

GSWS 790 Recent Issues in Critical Theory
The primary for this course is the English Department. When the course content includes gender, sexuality and women's studies it will be cross-listed with GSWS. See additional information and description on the English Department's website: https://www/english.upenn.edu See the English Department's website at www.english.upenn.edu for a complete description of the current offerings.
Course not offered every year
Also Offered As: COML 790, ENGL 790
Activity: Seminar
1 Course Unit

GSWS 793 Topics in Cinema and Media
Topics vary. Please refer to the History of Art Department's website for the course description: http://www.sas.upenn.edu/arthistory.
Course not offered every year
Also Offered As: ARTH 793, CIMS 793
Activity: Seminar
1 Course Unit

GSWS 830 Conducting Research in Global Women's Health
The course focuses on critical examination of theoretical and methodological issues pertaining to research on women and girls conducted around the world across disciplines. A focused and intensive exploration of place as it pertains to women and girls in formal and informal structures of health care delivery as those working and/or seeking health care, and as those providing health care to others. We will examine multiple dimensions and qualities of these endeavors (e.g. activity, power, control, visibility, value, and remuneration) and the intersection of gender and health - locally, globally and across borders. We will focus our examination on the implications of seeking and providing health care for women's and girls' health and well-being. By examining issues in local and global contexts and across geographical boundaries, we will have the opportunity to challenge gendered, class, political, and cultural assumptions related to women's health. Invited guest speakers will highlight examples of research in global women's health representing multiple disciplinary perspectives.
Taught by: Teitelman
Course usually offered in fall term
Also Offered As: NURS 830
Activity: Seminar
1 Course Unit

Genomics & Comp. Biology (GCB)

GCB 493 Epigenetics of Human Health and Disease
Epigenetic alterations encompass heritable, non-genetic changes to chromatin (the polymer of DNA plus histone proteins) that influence cellular and organismal processes. This course will examine epigenetic mechanisms in directing development from the earliest stages of growth, and in maintaining normal cellular homeostasis during life. We will also explore how diverse epigenetic processes are at the heart of numerous human disease states. We will review topics ranging from a historical perspective of the discovery of epigenetic mechanisms to the use of modern technology and drug development to target epigenetic mechanisms to increase healthy lifespan and combat human disease. The course will involve a combination of didactic lectures, primary scientific literature and research lectures, and student-led presentations.
Taught by: S Berger
Also Offered As: BIOL 493
Activity: Seminar
1 Course Unit
GCB 534 Experimental Genome Science
This course will survey methods and questions in experimental genomics, including next generation sequencing methods, genomic sequencing in humans and model organisms, functional genomics, proteomics, and applications of genomics methods. Students will be expected to review and discuss current literature and to propose new experiments based on material learned in the course.
Taught by: C Brown, J Murray
Also Offered As: PHRM 534
Prerequisites: Undergraduates and Masters students need BIOL431 or equivalent
Activity: Lecture
1 Course Unit

GCB 535 Introduction to Bioinformatics
This course provides overview of bioinformatics and computational biology as applied to biomedical research. A primary objective of the course is to enable students to integrate modern bioinformatics tools into their research activities. Course material is aimed to address biological questions using computational approaches and the analysis of data. A basic primer in programming and operating in a UNIX environment will be presented, and students will also be introduced to Python, R, and tools for reproducible research. This course emphasizes direct, hands-on experience with applications to current biological research problems. Areas include DNA sequence alignment, genetic variation and analysis, motif discovery, study design for high-throughput sequencing, RNA, and gene expression, single gene and whole-genome analysis, machine learning, and topics in systems biology. The relevant principles underlying methods used for analysis in these areas will be introduced and discussed at a level appropriate for biologists without a background in computer science. The course is not intended for computer science students who want to learn about biologically motivated algorithmic problems; BIOL 437/GCB 536 and GCB/CIS/BIOL537 are more appropriate.
Taught by: B Voight, C Greene
Course usually offered in spring term
Also Offered As: CIS 535, MTR 535, PHRM 535
Prerequisites: The course will assume a solid knowledge of modern biology. An advanced undergraduate course such as BIOL 421 or a graduate course in biology such as BIOL 526 (Experimental Principles in Cell and Molecular Biology), BIOL527 (Advanced Molecular Biology and Genetics), BIOL 528 (Advanced Molecular Genetics), or equivalent, is a prerequisite.
Activity: Lecture
1 Course Unit
Notes: All students are required to bring a laptop to the lab sessions (Fridays). TAs will provide help with the material, but students should be computer-capable with their own laptop and should be willing/capable to download and install free software from the internet.

GCB 536 Computational Biology
An introductory computational biology course designed for computational scientists. The course will cover fundamentals of algorithms, statistics, and mathematics as applied to biological problems. In particular, emphasis will be given to biological problem modeling. Students will be expected to learn the basic algorithms underlying computational biology, basic mathematical/ statistical proofs and molecular biology. Topics to be covered are genome annotation and string algorithms, pattern search and statistical learning, molecular evolution and phylogenetics and small molecule folding.
Taught by: Kim
Course not offered every year
Also Offered As: BIOL 437
Activity: Lecture
1 Course Unit

GCB 537 Advanced Computational Biology
1. Learn important concepts/methods from statistical data analysis and machine learning as they are applied to computational biology. 2. Learn about current topics in genomics and computational biology through in-depth discussion of both classic and recent papers. 3. Gain hands on experience in data analysis, coding and evaluating tools/algorithms as they apply to topics covered in class. 4. Learn to evaluate, criticize, summarize, and present research papers in genomics and computational biology.
Taught by: Y Barash, R Fayab
Course usually offered in spring term
Also Offered As: BIOL 537
Prerequisite: GCB536 or equivalent
Activity: Seminar
1 Course Unit
Notes: This is not a bioinformatics lab. Non-GCB students need to be approved by instructors

GCB 537 Modeling Biol Systems
This course will cover topics in systems biology at the molecular/cellular scale. The emphasis will be on quantitative aspects of molecular biology, with possible subjects including probabilistic aspects of DNA replication, transcription, translation, as well as gene regulatory networks and signaling. The class will involve analyzing and simulating models of biological behavior using MATLAB.
Taught by: A Raj
Also Offered As: BE 567
Activity: Lecture
1 Course Unit

GCB 585 Wistat Inst Cancer Biol
This course is intended to provide foundational information about the molecular basis of cancer. When necessary the significance of this information for clinical aspects of cancer is also discussed. The main theme centers around cell cycle checkpoints with specific emphasis on the biochemistry and genetics of DNA damage signaling pathways, DNA damage checkpoints, mitotic checkpoints and their relevance to human cancer. The course is taught by the organizers and guest lecturers from universities and research institutions in the Northeast. Following every lecture, students present a research paper related to the topic of that lecture. The course is intended for first and second year graduate students, but all graduate students are welcome to attend.
Taught by: Skordalakes and Murphy
Also Offered As: BMB 585
Activity: Lecture
1 Course Unit
GCB 699 Lab Rotation
Activity: Laboratory
1 Course Unit

GCB 752 Genomics
Recent advances in molecular biology, computer science, and engineering have opened up new possibilities for studying the biology of organisms. Biologists now have access to the complete genomic sequence and set of cellular instructions encoded in the DNA of specific organisms, including homo sapiens, dozens of bacterial species, the yeast Saccharomyces cerevisiae, the nematode C. elegans, and the fruit fly Drosophila melanogaster. The goals of the course include the following:
1. Introduce the basic principles involved in sequencing genomes, 2. familiarize the students with new instrumentation, informative tools, and laboratory automation technologies related to genomics, 3. teach the students how to access the information and biological materials that are being developed in genomics and 4. examine how these new tools and resources are being applied to basic and translational research. This will be accomplished through in depth discussion of classic and recent papers.
Taught by: S Diskin
Course usually offered in spring term
Also offered As: CAMB 752
Prerequisites: GCB 534 or equivalent, or permission from instructor
Activity: Seminar
1 Course Unit

GCB 899 Pre-Dissertation Research
Activity: Laboratory
1 Course Unit

GCB 995 Dissertation
One-term course offered either term
Activity: Dissertation
1 Course Unit

Geology (GEOL)

GEOL 100 Introduction to Geology
An introduction to processes and forces that form the surface and the interior of the Earth. Topics include, changes in climate, the history of life, as well as earth resources and their uses.
For BA Students: Physical World Sector
Taught by: Omar
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Field trips required.

GEOL 103 Natural Disturbances and Human Disasters
Natural disturbances play a fundamental role in sculpturing landscapes and structuring natural and human-based ecosystems. This course explores the natural and social science of disturbances by analyzing their geologic causes, their ecological and social consequences, and the role of human behavior in disaster reduction and mitigation. Volcanoes, earthquakes, floods, droughts, fires, and extraterrestrial impacts are analyzed and compared.
For BA Students: Physical World Sector
Taught by: Phipps
Course usually offered in fall term
Activity: Lecture
1 Course Unit

GEOL 109 Introduction to Geotechnical Science
Open to architectural and engineering majors as well as Ben Franklin Scholars. Field trips. Relations of rocks, rock structures, soils, ground water, and geologic agents to architectural, engineering, and land-use problems.
For BA Students: Physical World Sector
Taught by: Omar
Course usually offered in fall term
Activity: Lecture
1.5 Course Unit

GEOL 111 Geology Laboratory
Taught by: Omar
One-term course offered either term
Prerequisite: GEOL 100 preferably taken concurrently
Activity: Laboratory
1 Course Unit
Notes: Field trips required.

GEOL 125 Earth and Life Through Time
Origin of Earth, continents, and life. Continental movements, changing climates, and evolving life.
For BA Students: Physical World Sector
Taught by: Perez-Rodriguez
One-term course offered either term
Activity: Lecture
1 Course Unit

GEOL 130 Oceanography
The oceans cover over 2/3 of the Earth's surface. This course introduces basic oceanographic concepts such as plate tectonics, marine sediments, physical and chemical properties of seawater, ocean circulation, air-sea interactions, waves, tides, nutrient cycles in the ocean, biology of the oceans, and environmental issues related to the marine environment.
For BA Students: Physical World Sector
Taught by: Dmochowski
Course usually offered in spring term
Activity: Lecture
1 Course Unit

GEOL 201 Mineralogy
Crystallography, representative minerals, their chemical and physical properties. Use of petrographic microscope in identifying common rock-forming minerals in thin section.
Taught by: Omar
Course usually offered in fall term
Also Offered As: GEOL 521, GEOL 531
Prerequisites: GEOL 100 and CHEM 001 or 101
Activity: Lecture
1 Course Unit
GEOL 204 Global Climate Change
Public perceptions and attitudes concerning the causes and importance of global warming have changed. Global Climate Change provides a sound theoretical understanding of global warming through an appreciation of the Earth’s climate system and how and why this has changed through time. We will describe progress in understanding of the human and natural drivers of climate change, climate processes and attribution, and estimates of projected future climate change. We will assess scientific, technical, and socio-economic information relevant for the understanding of climate change, its potential impacts and options for adaptation and mitigation.
For BA Students: Physical World Sector
Taught by: Marinov
Course usually offered in fall term
Prerequisite: Any of the following courses: ENVS 100 or GEOL 100 or GEOL 130 or GEOL 125 or GEOL 103 or Instructor Permission
Activity: Lecture
1 Course Unit

GEOL 205 Paleontology
Geologic history of invertebrates and their inferred life habits, paleoecology, and evolution. Introduction to paleobotany and vertebrate paleontology.
For BA Students: Living World Sector
Taught by: Sallan
Course usually offered in spring term
Also Offered As: GEOL 405
Activity: Lecture
1 Course Unit
Notes: Two field trips required.

GEOL 206 Stratigraphy
Introductory sedimentary concepts, stratigraphic principles, depositional environments, and interpretation of the rock record in a paleoecological setting.
Taught by: Jerolmack
Course usually offered in fall term
Also Offered As: GEOL 506
Prerequisite: GEOL 100 or permission of instructor
Activity: Lecture
1 Course Unit
Notes: Two field trips, field project

GEOL 208 Structural Geology
Introduction to deformation as a fundamental geologic process. Stress and strain; rock mechanics. Definition, measurement, geometrical and statistical analysis, and interpretation of structural features. Structural problems in the field. Maps, cross-sections, and three-dimensional visualization; regional structural geology.
Taught by: Phipps
Course usually offered in spring term
Prerequisites: GEOL 100 and 111; PHYS 150 strongly recommended
Activity: Lecture
1 Course Unit
Notes: Three field trips required

GEOL 299 Independent Study
Directed study for individuals or small groups under close supervision of a faculty member.
One-term course offered either term
Prerequisite: Permission of department
Activity: Independent Study
1 Course Unit
Notes: May be repeated for credit

GEOL 305 Earth Surface Processes
Patterns on the Earth’s surface arise due to the transport of sediment by water and wind, with energy that is supplied by climate and tectonic deformation of the solid Earth. This course presents a treatment of the processes of erosion and deposition that shape landscapes. Emphasis will be placed on using simple physical principles as a tool for (a) understanding landscape patterns including drainage networks, river channels and deltas, desert dunes, and submarine channels, (b) reconstructing past environmental conditions using the sedimentary record, and (c) the management of rivers and landscapes under present and future climate scenarios. The course will conclude with a critical assessment of landscape evolution on other planets, including Mars.
For BA Students: Physical World Sector
Taught by: Jerolmack
Course usually offered in spring term
Also Offered As: GEOL 545
Prerequisites: ENVS 200, GEOL 100, or permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: This course includes two required weekend field trips, and a hands-on laboratory.

GEOL 317 Petrology and Petrography
Occurrences and origins of igneous and metamorphic rocks; phase equilibria in heterogeneous systems. Laboratory study of rocks and thin sections as a tool in interpretation of petrogenesis.
Taught by: Omar
Course usually offered in spring term
Also Offered As: GEOL 417
Prerequisite: GEOL 201
Activity: Lecture
1 Course Unit
Notes: Two field trips

GEOL 318 Glaciers, Ice & Climate
All forms of frozen water at Earth’s surface define the cryosphere. These icy environments are an integral part of the global climate system, with important linkages and feedbacks resulting from their influences on surface energy and moisture fluxes, clouds, precipitation, hydrology, and circulation in the atmosphere and oceans. This course will survey the various components of the cryosphere and their interactions with climate, with a strong emphasis on the dynamics of glaciers and ice sheets. Broad topics to be covered are 1) the rudimentary mechanics of glacier and ice sheet flow, 2) fast-flowing ice streams and factors limiting their motion, 3) ice-creepers and their origins, 4) the nature of climate data recorded in natural ice bodies, 5) the influence of climate on the stability of ice sheets and glaciers, and 6) glacier-like flow on other planetary bodies. This will be a lecture-based course with written assignments and problems sets.
Taught by: Goldsby
Prerequisites: Students should have basic knowledge of Calculus. MATH 114 or equivalent.
Activity: Lecture
1 Course Unit

GEOL 399 Geology Research Seminar for Juniors
This seminar is designed to help Juniors prepare for the Senior Thesis research. Topic selection, advisor identification, funding options, and basic research methods will be discussed.
Taught by: Andrews
Course usually offered in spring term
Also Offered As: ENVS 399
Activity: Seminar
1 Course Unit
GEOL 405 Advanced Paleontology
Relationship of fossil assemblages to life assemblages; structure of ancient communities, and interaction of organisms with each other and with the physical environment; evolution of communities.
Taught by: Sallan
Course usually offered in fall term
Also Offered As: GEOL 205
Prerequisite: Permission of instructor
Activity: Lecture
1 Course Unit

GEOL 409 Intro to Remote Sensing
This course will introduce students to the principles of remote sensing, characteristics of remote sensors, and remote sensing applications. Image acquisition, data collection in the electromagnetic spectrum, and data set manipulations for earth and environmental science applications will be emphasized. We will cover fundamental knowledge of the physics of remote sensing; aerial photographic techniques; multispectral, hyperspectral, thermal, and other image analysis. Students will pursue an independent research project using remote sensing tools, and at the end of the semester should have a good understanding and the basic skills of remote sensing.
Taught by: Dmochowski
Also Offered As: GEOL 509
Prerequisites: PHYS151 and MATH114 or equivalent are preferable, but not required. See instructor.
Activity: Seminar
1 Course Unit

GEOL 411 Intro Soil Science
Soil is considered the "skin of the Earth", with interfaces between the lithosphere, hydrosphere, atmosphere, and biosphere. It is a mixture of minerals, organic matter, gases, liquids and a myriad of organisms that can support plant life. As such, soil is a natural body that exists as part of the environment. This course will examine the nature, properties, formation and environmental functions of soil.
Taught by: Plante
Prerequisite: GEOL 100 or equivalent
Activity: Lecture
1 Course Unit

GEOL 417 Advanced Petrology
Chemistry, physics, phase equilibria, microscope study in igneous and metamorphic petrology.
Taught by: Omar
Course usually offered in fall term
Also Offered As: GEOL 317
Prerequisite: GEOL 317
Activity: Lecture
1 Course Unit

GEOL 418 Geochemistry
This course provides a comprehensive introduction to theory and applications of chemistry in the earth and environmental sciences. Theory covered will include atomic structure, chemical bonding, cosmic abundances, nucleosynthesis, radioactive decay, dating of geological materials, stable isotopes, acid-base equilibria, salts and solutions, and oxidation-reduction reactions. Applications will emphasize oceanography, atmospheric sciences and environmental chemistry, as well as other topics depending on the interests of the class. Although we will cover the basics, this course is intended to supplement, rather than to replace, courses offered in the Department of Chemistry. It is appropriate for advanced undergraduate as well as graduate students in Geology, Environmental Science, Chemistry and other sciences, who wish to have a better understanding of these important chemical processes.
Taught by: Giere
Course not offered every year
Activity: Lecture
1 Course Unit

GEOL 420 Introduction to Geophysics
This course will cover the application of geophysical investigation techniques to problems of the earth's planetary structure, local subsurface structure and mineral prospecting. The topics will include principles of geophysical measurements and interpretation with emphasis on gravity measurement, isostasy, geomagnetism, seismic refraction and reflection, electrical prospecting, electromagnetics and ground radar.
Taught by: Goldsby
Course not offered every year
Prerequisites: GEOL 100 or 109, two semesters Math and Physics, and/or instructor's permission
Activity: Lecture
1 Course Unit

GEOL 421 Biogeochemistry
Humans have an enormous impact on the global movement of chemical materials. Biogeochemistry has grown to be the principal scientific discipline to examine the flow of elements through the global earth systems and to examine human impacts on the global environment. This course will introduce and investigate processes and factor controlling the biogeochemical cycles of elements with and between the hydrosphere, lithosphere, atmosphere and biosphere. Students will apply principles learned in lectures by building simple computer-based biogeochemical models.
Taught by: Plante
Course usually offered in spring term
Also Offered As: GEOL 541
Prerequisites: ENVS 200, GEOL 100, or permission of the instructor
Activity: Lecture
1 Course Unit
GEOL 424 Geomicrobiology
Taught by: Perez Rodriguez
Prerequisites: BIOL 101, or Chem 101 or permission by instructor
Activity: Lecture
1 Course Unit
Notes: Microorganisms inhabit almost every conceivable environment on the planet's surface, and extent the biosphere to depths of several kilometers into the crust. Significantly, the chemical reactivity and metabolic diversity displayed by microbial communities make them integral components of global elemental cycles, from mineral dissolution and precipitation reactions, to aqueous reduction-oxidation processes. In that regard, microorganisms have helped shape our planet over the past 4 billion years and made it habitable for higher forms of life. In this course we will evaluate the geological consequences of microbial activities, by taking an interdisciplinary and "global" view of microbe-environment interactions.

GEOL 477 Introduction to Vertebrate Paleontology
Taught by: Dodson
Course not offered every year
Prerequisites: GEOL 100, BIOL 101, GEOL 205 or similar course.
Activity: Lecture
1 Course Unit

GEOL 479 Macroevolution
Macroevolution, or evolution above the population level and on long timescales, as a field addresses fundamental questions about the origins of life, past and present. These include, but are not limited to: How are highly dissimilar species related? Why are animals on distant continents so similar? How and when did major groups, like birds or mammals, originate? What drives evolutionary arms races? Why are there so many more species of beetles than crocodiles? Why are there more species in the tropics than the arctic? Did dinosaurs prevent the diversification of mammals? Why do some animals survive mass extinctions? How can invasive species spread so rapidly? Students will learn important concepts underlying our understanding of modern biodiversity and the fossil record, as well as how to use different methods and lines of evidence, including evolutionary trees (phylogeny), fossil databases, past climate and global events, mathematical modeling, and even modern genomics, to answer fundamental questions about the evolution of life.

Taught by: Lauren Sallan
Activity: Lecture
1 Course Unit

GEOL 498 Senior Thesis
The culmination of the Earth Science major. Students, while working with an advisor in their concentration, conduct research and write a thesis.

Taught by: Dmochowski
Two terms, student may enter either term.

Also Offered As: ENVS 498
Prerequisites: GEOL 400 level and declaration of the EASC major
Activity: Senior Thesis
0.5 Course Units

Notes: The Earth Science major, as of the fall of 2008, requires 1 semester of GEOL 399 and two semesters of GEOL 498.

GEOL 508 The Geology and Geography of Energy Resources
This course will survey the way geology controls the formation and location of energy resources. Questions we will address include, "How are oil and gas fields formed?", "Why does the Middle East have so much oil?", "What are the best locations in the US for wind and solar energy generation, and why?". We will discuss hydrocarbon, nuclear, solar, wind, and tidal energy sources.

Taught by: Phipps
Course not offered every year
Prerequisite: GEOL 100 or equivalent is preferred
Activity: Seminar
1 Course Unit
Notes: Possible field trips.

GEOL 509 Intro to Remote Sensing
This course will introduce graduate students to the principles of remote sensing, characteristics of remote sensors, and remote sensing applications. Image acquisition, data collection in the electromagnetic spectrum, and data set manipulations for earth and environmental science applications will be emphasized. We will cover fundamental knowledge of the physics of remote sensing: aerial photographic techniques; multispectral, hyperspectral, thermal, and other image analysis. Students will pursue an independent research project using remote sensing tools, and at the end of the semester should have a good understanding and the basic skills of remote sensing. Expectations for the graduate student independent research projects will be at the graduate level and can relate to their capstone or Ph.D. thesis research topics.

Taught by: Dmochowski
Also Offered As: GEOL 409
Prerequisites: PHYS 151 and MATH 114 or equivalent are preferable, but not required. See instructor.
Activity: Seminar
1 Course Unit

GEOL 510 Geophysical Fluid Dynamics
This class will discuss physical principles fundamental to the theoretical, observational, and experimental study of geophysical fluids, the equations of motion for rotating fluids; hydrostatic and Boussinesq approximations; circulation theorem; conservation of potential vorticity; scale analysis, geostrophic wind, quasigeostrophic system; wave theory and applications, flow instabilities, geophysical boundary layers. Depending on student interest, the class will be adapted to include applications from Oceanography, Meteorology, Geophysics or Engineering.

Taught by: Nathan Paldor
Prerequisites: Math 114 or equivalent or permission by the instructor.
Activity: Lecture
1 Course Unit
GEOL 511 Soil Science w Lab
Soil is considered the "skin of the earth", with interfaces between the lithosphere, hydrosphere, atmosphere, and biosphere. It is the mixture of minerals, organic matter, gases, liquids and a myriad of organisms that can support plant life. As such, soil is a natural body that exists as part of the environment. This course will examine the nature, properties, formation and environmental functions of soil. In addition to lectures, the course includes biweekly labs or field trips, and a multi-day field trip to held during Spring Break.
Taught by: Plante
Course usually offered in fall term
Prerequisite: GEOL 100 or equivalent
Activity: Lecture
1 Course Unit
Notes: Field trips

GEOL 515 Evolution/Revolution of Land Ecosystems
Origin and diversification of land ecosystems. Interaction between plants and animals. Effects of past climatic change and other external factors. The importance of past changes in land ecosystems to our understanding of current global change.
Taught by: Sullan
Course not offered every year
Activity: Seminar
1 Course Unit

GEOL 516 Paleocology Discovering Lost Ecosystems
Paleocology, or ecology in the fossil record, is the study of how interactions between species have developed over time and how ecosystems and environmental change have shaped the evolution of life and biodiversity. It also involves rebuilding lost communities from fossil evidence to provide context for the origins of modern life and modern ecosystems. This seminar course will survey major topics in Paleocology, including of ecosystems, the long-term connections between habitat, life mode and biodiversity as well as the distribution of life (e.g. paleobiogeography), escalation between predators and prey, competition between invasive and resident species, and how we can infer the ecology and behavior of long-dead organisms. Students will lead discussions on select concepts and choose one topic to investigate in depth.
Course not offered every year
Activity: Seminar
1 Course Unit

GEOL 521 Mineralogy of Rock Preservation
Advanced crystallography, representative minerals, their chemical and physical properties, with emphasis on building stone preservation. Use of petrographic microscope in identifying common rock-forming minerals in thin section.
Taught by: Omar
Course usually offered in fall term
Also Offered As: GEOL 201, GEOL 531
Activity: Lecture
1 Course Unit
Notes: Graduate School of Fine Arts students only.

GEOL 528 Aqueous Geochemistry
This course is designed to provide the graduate student with an understanding of the fundamentals of aqueous geochemistry. The chemistry of water, air and soil will be studied from an environmental perspective. The nature, composition, structure, and properties of pollutants coupled with the major chemical mechanisms controlling the occurrence and mobility of chemicals in the environment will also be studied. Upon completion of this course, students should expect to have attained a broad understanding of and familiarity with aqueous geochemistry concepts applicable to the environmental field.
Environmental issues that will be covered include acid deposition, toxic metal contamination, deforestation, and anthropogenic perturbed aspects of the earth's hydrosphere.
Taught by: Andrews
Course not offered every year
Prerequisites: GEOL 100 Intro to Geology or permission of instructor.
Activity: Lecture
1 Course Unit

GEOL 531 Advanced Mineralogy
Advanced crystallography, representative minerals, their chemical and physical properties. Use of petrographic microscope in identifying common rock-forming minerals in thin section.
Taught by: Omar
Course usually offered in fall term
Also Offered As: GEOL 201, GEOL 521
Activity: Lecture
1 Course Unit

GEOL 540 Geotectonics
Bulk structure of the Earth. Plate tectonics and plate boundaries. Plumes, rifting, and intraplate tectonics. Geotectonics and seismicity.
Taught by: Phipps
Course not offered every year
Prerequisites: GEOL 205, 206, 208, 317 and 420, or permission of instructor
Activity: Lecture
1 Course Unit
Notes: Field trip

GEOL 541 Advanced Geochemistry
Taught by: Plante
Course usually offered in spring term
Also Offered As: GEOL 421
Activity: Lecture
1 Course Unit

GEOL 599 Independent Study
Directed study for individuals or small groups under supervision of a faculty member.
One-term course offered either term
Activity: Independent Study
1 Course Unit
GEOL 604 Geostatistical Analysis
Univariate and multivariate approaches to the analysis of spatial correlation and variability. Many disciplines, including geology, ecology and the environmental sciences regularly need to analyze and make predictions from data that is spatially autocorrelated. Mine reserve estimation, pollutant dispersal and the use of randomization tests in ecology are examples of where spatial statistics may be applied.
Taught by: Vann
Course usually offered in fall term
Prerequisites: STAT 101 or equivalent statistics course; BioL 556 suggested or other Inferential Statistics courses, covering uni- and multi-variate techniques
Activity: Lecture
1 Course Unit

GEOL 611 Field Study of Soils
Processes of soil development in a variety of temperate environments. Effects of lithology and climate on soil properties.
Taught by: Plante
Course usually offered in spring term
Prerequisite: GEOL 511 or permission of instructor
Activity: Seminar
1 Course Unit
Notes: All day field trips

GEOL 615 Advanced Vertebrate Paleontology Seminar
Topics in vertebrate paleontology and paleoecology.
Taught by: Dodson
One term course offered either term
Activity: Seminar
1 Course Unit
Notes: May be repeated for credit

GEOL 618 Fundamentals of Air Pollution
This course will cover various topics related to Air Quality. Initial lectures will cover the history of air pollution, discussions of the Clean Air Act and composition of the atmosphere. We will then progress to discussion of atmospheric pollutants and sources of those pollutants. Additional topics will include: fate of atmospheric pollutants (transport and dispersion mechanisms will include: fate of atmospheric pollutants (transport and mechanisms), effects of air pollution (health and environmental effects), urban smog, acid rain, climate change, ozone depletion in the stratosphere, air quality criteria, and engineering controls.
Taught by: Andrews
Course usually offered in spring term
Activity: Seminar
1 Course Unit

GEOL 619 Instrumentation for the Geosciences
An introduction to the theory, operation and application of modern analytical instrumentation used in geo- and environmental sciences. Primarily focused on laboratory instrumentation such as mass spectroscopy, elemental analyses and x-ray techniques. Some field instruments will be introduced as well. Students will be expected to develop projects utilizing the various instruments.
Taught by: Vann
Course usually offered in spring term
Activity: Lecture
1 Course Unit

GEOL 621 Field Methods in Biogeochemistry
This field- and lab-based course will examine a set of methods for the study and quantification of biochemical processes in terrestrial and aquatic systems. We will focus on field-based measurements, as well as sample collection and laboratory analyses of fluxes of carbon and nutrient elements, including photosynthesis, respiration, dissolved and suspended nutrient fluxes in streams.
Taught by: Plante
Course usually offered summer term only
Activity: Seminar
1 Course Unit

GEOL 650 Environmental Due Diligence
Evaluation of environmental contamination and liability is an important tool during acquisition of real estate property, and a standard work product in the environmental consulting field. This course will cover the purpose and history of the Superfund law, the various classifications of Superfund liable parties, and protections against Superfund liability, specifically with regard to bona fide prospective purchasers (BFPP). In the context of the BFPP liability defense the course will focus on the performance of “All Appropriate Inquiry” for the presence of environmental contamination (e.g. Phase 1 environmental site assessment). Our study of “All Appropriate Inquiry” will include evaluation of historical maps and other resources, aerial photography, chain-of-title documentation, and governmental database information pertaining to known contaminated sites in the area of select properties on or near campus. Site visits will be performed to gain experience and knowledge for the identification of recognized environmental conditions. Students will prepare environmental reports for select properties and will have opportunity to hone technical writing skills.
Taught by: Cron
Course usually offered in spring term
Activity: Seminar
1 Course Unit

GEOL 651 Geocomputations
Review and applications of selected methods from differential equations, advanced engineering mathematics and geostatistics to problems encountered in geology, engineering geology, geophysics and hydrology.
Taught by: Mastropaolo
Course usually offered in fall term
Activity: Lecture
1 Course Unit

GEOL 652 Physical Geology for Environmental Professionals
Study of the genesis and properties of earth materials (minerals, rocks, soil, water); consideration of volcanic, erosional, glacial, and earthquake processes along with the characterization of the earth’s deep interior crustal and near-surface structure. Classroom study of minerals, crystals, fossils, and rocks as time permits.
Taught by: Freed
Course usually offered in fall term
Activity: Lecture
1 Course Unit

GEOL 653 Introduction to Hydrology
Introduction to the basic principles of the hydrologic cycle and water budgets, precipitation and infiltration, evaporation and transpiration, stream flow, hydrograph analysis (floods), subsurface and groundwater flow, well hydraulics, water quality, and frequency analysis.
Taught by: Sauder
Course usually offered in fall term
Activity: Lecture
1 Course Unit
GEOL 654 Geomechanics: Solids
Mechanical properties of solid and fluid earth materials, stress and strain, earth pressures in soil and rock, tunnels, piles, and piers; flow through gates, weirs, spillways and culverts, hydraulics, seepage and Darcy’s law as applied to the hydrologic sciences.
Taught by: Duda
Course usually offered in fall term
Activity: Seminar
1 Course Unit

GEOL 656 Fate and Transport of Pollutants
This course covers basic groundwater flow and solute transport modeling in one, two- and three-dimensions. After first reviewing the principles of modeling, the student will gain hands-on experience by conducting simulations on the computer. The modeling programs used in the course are MODFLOW (USGS), MT3D, and the US Army Corps of Engineers GMS (Groundwater Modeling System).
Taught by: Mastropalo
Course usually offered in spring term
Activity: Lecture
1 Course Unit

GEOL 658 Environmental Statistical Analysis
Statistical analysis of data from geological, geotechnical, and geohydrologic sources.
Taught by: Mastropalo
One term course offered either term
Activity: Seminar
1 Course Unit

GEOL 661 Environmental Groundwater Hydrology
This course is designed to introduce the major definitions and concepts regarding groundwater flow and contaminant transport. The theory and underlying concepts, including mathematical derivations of governing equations used to model groundwater flow and contaminant transport, will be discussed and applications to environmental problems addressed. Upon completion of this course, students should expect to have acquired the skills necessary to pursue course work in flow and transport numerical and analytical modeling.
Taught by: Mastropalo
Course usually offered in spring term
Activity: Lecture
1 Course Unit

GEOL 663 Geochemical Modeling
This course is designed to introduce the major concepts regarding geochemistry and geochemical modeling. The course introduces two United States Geological Survey (USGS) computer models, PHREEQC, a geochemical speciation model, and PHAST, a transport module which is coupled with PHREEQC output. These are highly respected, world-renowned models that are free-ware via the USGS, complete with documentation. Once familiar with the models, the student can continue to work with them beyond the course experience. PHREEQC is designed to perform a wide variety of aqueous geochemical calculations and can be used to simulate chemical reactions and transport processes in natural or polluted waters. PHREEQC is capable of modeling both equilibrium and kinetic reactions. Some of the simulations pursued during the course include: Speciation of precipitation water; Iron speciation; Zinc sorption onto hydrous ferric oxide; Oxidation of organic carbon and the sequence of electron donors in natural water; Benzene advective transport in groundwater; TCE transport and degradation.
Taught by: Mastropalo
Course usually offered in spring term
Activity: Lecture
1 Course Unit

GEOL 666 Geology Field Work
Directed independent field work.
Taught by: Giegengack
One term course offered either term
Activity: Independent Study
1 Course Unit
Notes: 4-8 weeks during the summer.

GEOL 668 Geomechanics: Fluids
Static and Dynamic mechanical properties of fluid in earth materials, as applied to the Hydrologic Sciences; Principles of Fluid Mechanics and Hydraulics applied to open channel flow in earth materials; flow through gates, weirs, spillways, and culverts; Applications of Darcy’s Law to subsurface flow and seepage.
Taught by: Duda
Course usually offered in spring term
Activity: Lecture
1 Course Unit

GEOL 750 Topics in earth Science
This course will use the weekly EES seminar series to survey historic breakthrough papers or topics in the earth sciences, as well as modern papers - written by the seminar speakers - that often put the classics in perspective. Graduate students (Ph.D. only) in the Department of Earth and Environmental Science will engage in the material through reading, presentation, and discussion. The course has several goals. (1) To engender an understanding and appreciation of major breakthroughs in our field. (2) To develop skills in presenting and discussing scientific results. And (3) to refine students’ understanding of what constitutes great science.
Taught by: Sallon
Activity: Seminar
1 Course Unit
Notes: Open only to PhD students
GEOL 999 Independent Study and Research
Directed study for individuals or small groups under supervision of a faculty member.
One-term course offered either term
Prerequisite: Permission of departmental committee
Activity: Independent Study
1 Course Unit
Notes: Hours and credits to be arranged.

Germanic Languages (GRMN)

GRMN 011 Bad Taste
"Beauty is not a quality inherent to things: it only exists in the mind of the beholder." (David Hume) " Most of us can recognize bad taste as soon as we see it: Harlequin romances, Elvis on black velvet, lawn ornaments. But bad taste also has a history, and kitsch has been identified as a peculiarly modern invention related to capitalism and consumerism. Beginning with a discussion of taste in the eighteenth century, we will investigate under what conditions good taste can go bad, for example when it is the object of mass reproduction, and, on the other hand, why bad taste in recent times has increasingly been viewed in positive terms. Categories such as the cute, the sentimental, the popular, the miniature, kitsch, and camp will be explored. We will also ask what forms of ideological work have been done by this brand of aesthetics, for example in the connection between politics and kitsch, femininity and the low-brow, or camp and queer identity. Writers and film-makers to be discussed include: Hume, Kant, Goethe, Flaubert, Bourdieu, Sacher-Masoch, Thomas Mann, Nabokov, Benjamin, Greenberg, Sontag, John Waters.
Taught by: MacLeod
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Freshman seminar. All readings and lectures in English. No knowledge of German is required.

GRMN 023 In Praise of the Small in Literature and the Arts
We can memorize aphorisms and jokes, carry miniature portraits with us, and feel playful in handling small objects. This seminar will ask us to pay attention to smaller texts, art works, and objects that may easily be overlooked. In addition to reading brief texts and looking at images and objects, we will also read texts on the history and theory of short genres and the small.
Taught by: Weissberg
Course not offered every year
Also Offered As: COML 023
Activity: Seminar
1 Course Unit
Notes: Freshman seminar. All readings and lectures in English. No knowledge of German is required.

GRMN 026 Jews and China: Views from Two Perspectives
Jews in China?? Who knew?? The history of the Jews in China, both modern and medieval, is an unexpected and fascinating case of cultural exchange. Even earlier than the 10th century, Jewish trader from India or Persia on the Silk Road, settled in Kaifeng, the capital of the Northern Song Dynasty, and established a Jewish community that lasted through the nineteenth century. In the mid-nineteenth century, Jewish merchants, mainly from Iraq, often via India, arrived in China and played a major role in the building of modern Shanghai. After 1898, Jews from Poland and Russia visited China as tourists, drawn by a combination of curiosity about the cultural exoticism of a truly foreign culture and an affinity that Polish Jewish socialists and communists felt as these political movements began to emerge in China. During World War II, Shanghai served as a port of refuge for Jews from Central Europe. In this freshman seminar, we will explore how these Jewish traders, travelers, and refugees responded to and represented China in their writings. We will also read works by their Chinese contemporaries and others to see the responses to and perceptions of these Jews. We will ask questions about cultural translation: How do exchanges between languages, religions, and cultures affect the identities of individuals and communities? What commonalities and differences between these people emerge?

GRMN 027 Euro Zone Crisis - The EU in a Currency War for Survival?
"Let me put it simply...there may be a contradiction between the interests of the financial world and the interests of the political world...We cannot keep constantly explaining to our voters and our citizens why the taxpayer should bear the cost of certain risks and not those people who have earned a lot of money from taking those risks." Angela Merkel, Chancellor of Germany, at the G20 Summit, November 2010. In January 1999, a single monetary system united Germany, a core nation, with 10 other European states. Amidst the optimism of the euro's first 10 years, most observers forecast that Europe would progress toward an ever closer union. Indeed, in the ensuing decade, the European Union became the world's largest trading area, the euro area expanded to include 17 member states, and the Lisbon Treaty enhanced the efficiency and democratic legitimacy of the Union. In 2009, Greece's debt crisis exposed deep rifts within the European Union and developed into a euro zone crisis - arguably the most difficult test Europe has faced in the past 60 years. After two years of a more benign EURO debt situation, the risk of recession, EU sanctions against Russia, and a possible collision of a newly-elected Greek government with its creditors, the euro crisis returned with a vengeance in 2015. In addition, the pressure mounts for European leaders to find a solution to the refugee crisis which reached a peak in the fall of 2015. In 2016 the Brexit delivered the latest blow to the European Union, and the future of the European project without the UK looks bleak. The Economic and Monetary Union (EMU) is still fragile, and economic and political developments in 2017 could determine the future of the euro.

Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Freshman seminar. All readings and lectures in English. No knowledge of German is required.

GRMN 101 Elementary German I
Designed for the beginning student with no previous knowledge of German. German 101, as the first course in the first-year series, focuses on the development of language competence in listening, speaking, reading, and writing. By the end of the semester, students will be able to engage in simple conversations about familiar things, know greetings and everyday expressions, they will be able to count and tell time, and negate sentences in day-to-day contexts. Furthermore, students will be able to speak about events that happened in the immediate past and express plans for the future. In addition, students will have developed reading strategies that allow them to glean information from simple newspaper and magazine articles and short literary texts. Because cultural knowledge is one of the foci of German 101, students will learn much about practical life in Germany and will explore German-speaking cultures on the Internet.
For BA Students: Language Course
One term course offered either term
Also Offered As: GRMN 501
Activity: Lecture
1 Course Unit

GRMN 102 Elementary German II
This course is a continuation of GRMN 101 and is designed to strengthen and expand students’ listening, speaking, reading, and writing competence and to deepen an understanding of German-speaking cultures. By the end of the course, students will be able to handle a variety of day-to-day needs in a German-speaking setting and engage in simple conversations about personally significant topics. Students can expect to be able to order food and beverages, purchase things, and to be familiar with the German university system, the arts, and current social topics. Students will begin to be able to talk about the past and the future, make comparisons, describe people and things in increasing detail, make travel plans that include other European countries, and make reservations in hotels and youth hostels. By the end of the course students will be able to talk about their studies and about their dreams for the future. In addition, students will develop reading strategies that should allow them to understand the general meaning of articles, and short literary texts. Furthermore, students will feel more able to understand information when hearing German speakers talking about familiar topics. Cultural knowledge remains among one of the foci of German 102, and students will continue to be exposed to authentic materials.
For BA Students: Language Course
One term course offered either term
Also Offered As: GRMN 502
Prerequisites: GRMN 101 or equivalent.
Activity: Lecture
1 Course Unit

GRMN 103 Intermediate German I
This course is designed to improve students writing and speaking competence, to increase vocabulary, to develop grammar usage, and to help develop effective reading and listening strategies in German across literary genres and media as students interpret and analyze cultural, political, and historical moments in German-speaking countries and compare them with their own cultural practices. This course is organized around content-based modules and prepares students well for GRMN 104 and a minor or major in German.
For BA Students: Language Course
One term course offered either term
Also Offered As: GRMN 503
Prerequisites: GRMN 102 or equivalent.
Activity: Lecture
1 Course Unit

GRMN 104 Intermediate German II
A continuation of GRMN 103. Expands students' writing and speaking competence in German, increases vocabulary and helps students practice effective reading and listening strategies. Our in-class discussions are based on weekly readings of literary and non-literary texts to facilitate exchange of information, ideas, reactions, and opinions. In addition, the readings provide cultural and historical background information. The review of grammar will not be the primary focus of the course. Students will, however, expand and deepen their knowledge of grammar through specific grammar exercises. Students will conclude the basic-language program at PENN by reading an authentic literary text; offering the opportunity to practice and deepen reading knowledge and to sensitize cultural and historical awareness of German-speaking countries.
For BA Students: Last Language Course
One term course offered either term
Also Offered As: GRMN 504
Prerequisites: GRMN 103 or equivalent.
Activity: Lecture
1 Course Unit
GRMN 106 Accelerated Elementary German
This course is intensive and is intended for dedicated, highly self-motivated students who will take responsibility for their learning and creation of meaning with their peers. An intensive two credit course in which two semesters of elementary German (GRMN 101 & 102) are completed in one. Introduction to the basic elements of spoken and written German, with emphasis placed on the acquisition of communication skills. Readings and discussions focus on cultural differences. Expression and comprehension are then expanded through the study of literature and social themes.
For BA Students: Language Course
Course usually offered in fall term
Also Offered As: GRMN 505
Activity: Lecture
2 Course Units

GRMN 107 Accelerated Intermediate German
This course is intensive and is intended for dedicated, highly self-motivated students who will take responsibility for their learning and creation of meaning with their peers. This accelerated course is designed to improve students writing and speaking competencies, to increase vocabulary, to deepen grammar usage, and to help develop effective reading and listening strategies in German across literary genres and media as students interpret and analyze cultural, political, and historical moments in German-speaking countries and compare them with their own cultural practices. This course is organized around content-based modules. Students conclude the basic-language program at PENN by reading an authentic literary text; offering the opportunity to practice and deepen reading knowledge and to sensitize cultural and historical awareness of German-speaking countries.
For BA Students: Last Language Course
Course usually offered in spring term
Also Offered As: GRMN 514
Prerequisite: 102 or 106 or equivalent
Activity: Lecture
2 Course Units

GRMN 136 Nazi Germany & Holocaust
Course not offered every year
Also Offered As: HIST 136
Activity: Lecture
1 Course Unit

GRMN 150 Water Worlds: Cultural Responses to Sea Level Rise & Catastrophic Flooding
As a result of climate change, the world that will take shape in the course of this century will be decidedly more inundated with water than we’re accustomed to. The polar ice caps are melting, glaciers are retreating, ocean levels are rising, polar bear habitat is disappearing, countries are jockeying for control over a new Arctic passage, while low-lying cities and small island nations are confronting the possibility of their own demise. Catastrophic flooding events are increasing in frequency, as are extreme droughts. Hurricane-related storm surges, tsunamis, and raging rivers have devastated regions on a local and global scale. In this seminar we will turn to the narratives and images that the human imagination has produced in response to the experience of overwhelming watery invasion, from Noah to New Orleans. Objects of analysis will include mythology, ancient and early modern diluvialism, literature, art, film, and commemorative practice. The basic question we’ll be asking is: What can we learn from the humanities that will be helpful for confronting the problems and challenges caused by climate change and sea level rise?

1 Course Unit

GRMN 152 Liquid Histories and Floating Archives
Climate change transforms the natural and built environments, and it is re-shaping how we understand, make sense, and care for our past. Climate changes history. This course explores the Anthropocene, the age when humans are remaking earth’s systems, from an on-water perspective. In on-line dialogue and video conferences with research teams in port cities on four continents, this undergraduate course focuses on Philadelphia as one case study of how rising waters are transfiguring urban history, as well as its present and future. Students projects take them into the archives at the Independence Seaport Museum and at Bartram’s Garden. Field trips by boat on the Schuylkill and Delaware Rivers and on land to the Port of Philadelphia and to the John Heinz National Wildlife Refuge invite transhistorical dialogues about how colonial and then industrial-era energy and port infrastructure transformed the region’s vast tidal marshlands wetlands. Excursions also help document how extreme rain events, storms, and rising waters are remaking the built environment, redrawing lines that had demarcated land from water. In dialogue with one another and invited guest artists, writers, and landscape architects, students final projects consider how our waters might themselves be read and investigated as archives. What do rising seas subsume and hold? Whose stories do they tell? What floats to the surface?

GRMN 155 Fascist Cinemas
Cinema played a crucial role in the cultural life of Nazi Germany and other fascist states. As cinema enthusiasts, Goebbels and Hitler were among the first to realize the important ideological potential of film as a mass medium and saw to it that Germany remained a cinema powerhouse producing more than 1000 films during the Nazi era. Mussolini, too, declared cinema “the strongest weapon.” This course explores the world of Nazi cinema ranging from infamous propaganda pieces such as The Triumph of the Will and The Eternal Jew to entertainments by important directors as Douglas Sirk. While the main focus is Germany, the course explores the strange and mutually defining kinship between fascism more broadly and film. We will consider what elements mobilize and connect the film industries of the Axis Powers: style, genre, the aestheticization of politics, the creation of racialized others. More than seventy years later, fascist cinemas challenge us to grapple with issues of more subtle ideological insinuation than we might think. Weekly screenings with subtitles.
Taught by: MacLeod
Course not offered every year

GRMN 180 German in Residence
The German House is a half-credit course with concentrations in German conversation, film, and culture. Though many students enroll for credit, others often come to select events. All interested parties are invited, and you do not have to actually live in the house to enroll for credit. Students from all different levels of language proficiency are welcome. Beginners learn from more advanced students, and all enjoy a relaxed environment for maintaining or improving their German language skills.
One term course offered either term
Activity: Lecture
0.5 Course Units

GRMN 181 Comparative Cultures of Sustainability
Sustainability is more than science, engineering, policy, and design. Surveying the world, we see that the politics and practice of sustainability play out in different ways depending on cultural factors. Some cultures are more prone to pursue ecological goals than others. Why? Do the environmental history and experience of a nation affect policy? Do nature and the environment play a crucial role in the cultural memory of a nation? Can cultural components be effectively leveraged in order to win approval for a politics of sustainability? And what can we, as residents of a country where climate change and global warming are flashpoints in an enduring culture war, learn from other cultures? This course is designed to equip undergraduate students with the historical and cultural tools necessary to understand the cultural aspects of sustainability in two countries noted for their ecological leadership and cultural innovation, Germany and the Netherlands. This hybrid course combines online instruction with a short-term study abroad experience in Berlin and Rotterdam. During the pre-trip online portion of the course, students will become acquainted with the cultural histories of German and Dutch attitudes toward sustainability and the environment through a combination of recorded lectures by the instructor, reading assignments, viewing assignments (documentary and feature films), threaded discussions, and short written assignments. The goal of the pre-trip instruction is to help students develop tools for analyzing and interpreting cultural difference, construct working models of German and Dutch concepts of sustainability, and formulate hypotheses about the relation between culture and policy in Germany and the Netherlands.

Notes: Summer abroad course.

GRMN 203 Texts and Contexts
In this course, you will explore themes of cultural and historical significance in contemporary German-speaking countries through literature and nonfiction, through film and current event media coverage. Whether you wish to dive deeply into historical or political contexts, explore untranslatable cultural phenomena or the aesthetic rhythm and semantic complexity of the German language, GRMN 203 Texts and Contexts will inspire your imagination and deepen your understanding of German language, culture and literature. This is a required course for all courses taught in German at or above the 200 level.
For BA Students: Advanced Language Course
One term course offered either term
Also Offered As: GRMN 506
Prerequisites: GRMN 104 or the equivalent.
Activity: Lecture
1 Course Unit
GRMN 219 Business German: A Macro Perspective
This course offers you insights into the dynamics of Business German, while taking a macro approach. Examples of various course topics include: economic geography and its diversity, the changing role of the European Union, and the economic importance of national transportation and tourism. In addition, the course emphasizes the development of students’ discourse competencies, Business German vocabulary and grammar. Course assignments include oral presentations on current events, class discussions, role-play, and collaborative group work.
Class time will be utilized to practice speaking, answering questions, reviewing exercises and holding group discussions on various topics.
Class participation is a key component of this course.
For BA Students: Advanced Language Course

Activity: Lecture
1 Course Unit
Notes: Course taught in German.

GRMN 230 The Novel in Nineteenth Century Dutch and European Literature: Constructing National and Class Identities
This course explores how the novel as a genre functioned in 19th Century Europe, in a period when newborn nations (e.g. Belgium and the Netherlands) and newborn classes (bourgeoisie, hired labour classes) had to find or construct new identities in the wake of recent developments on the political plane and other recent revolutions (in particular the French and the Industrial one), which had led to large upheavals in traditional society.

GRMN 232 Topics in European History
The title for Fall 2017 is: The Nazi Revolution: Power and Ideology.
Taught by: Steinberg
Course not offered every year
Also Offered As: HIST 230
Activity: Seminar
1 Course Unit
Notes: Topics vary annually.

GRMN 237 Berlin: History, Politics, Culture
What do you know about Berlin’s history, architecture, culture, and political life? The present course will offer a survey of the history of Prussia, beginning with the seventeenth century, and the unification of the small towns of Berlin and Koelln to establish a new capital for this country. It will tell the story of Berlin’s rising political prominence in the eighteenth century, and its position as a center of the German and Jewish Enlightenment. It will follow Berlin’s transformation into an industrial city in the nineteenth century, its rise to metropolis in the early twentieth century, its history during the Third Reich, and the post-war cold war period. The course will conclude its historical survey with a consideration of Berlin’s position as a capital in reunited Germany. The historical survey will be supplemented by a study of Berlin’s urban structure, its significant architecture from the eighteenth century (i.e. Schinkel) to the nineteenth (new worker’s housing, garden suburbs) and twentieth centuries (Bauhaus, Speer designs, postwar rebuilding, GDR housing projects, post-unification building boom). In addition, we will read literary texts about the city, and consider the visual art and music created in and about Berlin, and focus on Berlin’s Jewish history. The course will be interdisciplinary with the fields of German Studies, history, history of art, urban studies, and German-Jewish studies. It is also designed as a preparation for undergraduate students who are considering spending a junior semester with the Penn Abroad Program in Berlin.

Activity: Lecture
1 Course Unit
Notes: All readings and lectures in English.

GRMN 239 Sustainability & Utopianism
This seminar explores how the humanities can contribute to discussions of sustainability. We begin by investigating the contested term itself, paying close attention to critics and activists who deplore the very idea that we should try to sustain our, in their eyes, dystopian present, one marked by environmental catastrophe as well as by an assault on the educational ideals long embodied in the humanities. We then turn to classic humanist texts on utopia, beginning with More’s fictive island of 1517. The “origins of environmentalism” lie in such depictions of island edens (Richard Grove), and our course proceeds to analyze classic utopian texts from American, English, and German literatures. Readings extend to utopian visions from Europe and America of the nineteenth and twentieth centuries, as well as literary and visual texts that deal with contemporary nuclear and flood catastrophes. Authors include: Bill McKibben, Jill Kerr Conway, Christopher Newfield, Thomas More, Francis Bacon, Karl Marx, Henry David Thoreau, Robert Owens, William Morris, Charlotte Perkins Gilman, Ayn Rand, Christa Wolf, and others.
For BA Students: Humanities and Social Science S

Activity: Seminar
1 Course Unit
Notes: Taught in English.
GRMN 240 Global Sustenabilities
This research-oriented seminar focuses on the ways in which “sustainability” and “sustainable development” are linguistically and culturally translated into the world’s languages. We may take the terms for granted, but they have only really been on the global stage since they were widely introduced in the 1987 United Nations report, Our Common Future. Seminar participants will first become acquainted with the cultural and conceptual history of the terms and the UN framework within which sustainability efforts directly or indirectly operate. Having established the significance of cultural and linguistic difference in conceiving and implementing sustainability, participants will collaboratively develop a research methodology in order to begin collecting and analyzing data. We will draw heavily on Penn’s diverse language communities and international units. Seminar members will work together and individually to build an increasingly comprehensive website that provides information about the world’s languages of sustainability.
Taught by: Richter

GRMN 242 The Fantastic and Uncanny in Literature: Ghosts, Spirits & Machines
Do we still believe in spirits and ghosts? Do they have any place in an age of science of technology? Can they perhaps help us to define what a human being is and what it can do? We will venture on a journey through literary texts from the late eighteenth century to the present to explore the uncanny and fantastic in literature and life. Our discussions will be based on a reading of Sigmund Freud’s essay on the uncanny, and extraordinary Romantic narratives by Ludwig Tieck, E.T.A. Hoffmann, Edgar Allan Poe, Nathaniel Hawthorne, Prosper Merimee, Villiers de l’Isle-Adam, and others.

Activity: Lecture
1 Course Unit
Notes: All lectures and readings in English.

GRMN 247 Free Radicals: Marx, Marxism, and the Culture of Revolution
“A spectre is haunting Europe—the spectre of Communism”: This, the famous opening line of The Communist Manifesto, will guide this course’s exploration of the history, legacy, and potential future of Karl Marx’s most important texts and ideas, even long after Communism has been pronounced dead. Contextualizing Marx within a tradition of radical thought regarding politics, religion, and sexuality, we will focus on the philosophical, political, and cultural origins and implications of his ideas. Our work will center on the question of how his writings seek to counter or exploit various tendencies of the time, how they align with the work of Nietzsche, Freud, and other radical thinkers to follow, and how they might continue to haunt us today. We will begin by discussing key works by Marx himself, examining ways in which he is both influenced by and appeals to many of the same fantasies, desires, and anxieties encoded in the literature, arts and intellectual currents of the time. In examining his legacy, we will focus on elaborations or challenges to his ideas, particularly within cultural criticism, postwar protest movements, and the cultural politics of the Cold War. In conclusion, we will turn to the question of Marxism or Post-Marxism today, asking what promise Marx’s ideas might still hold in a world vastly different from his own.

Activity: Lecture
1 Course Unit
Notes: All readings and lectures in English.

GRMN 248 Nietzsche’s Modernity and the Death of God
"God is dead." This famous, all too famous death sentence, issued by the 19th-century German philosopher Friedrich Nietzsche, also signaled the genesis of a radical challenge to traditional notions of morality, cultural life, and the structure of society as a whole. In this course we will examine both the "modernity" of Nietzsche's thought and the ways in which his ideas have helped to define the very concept of Modernity (and, arguably, Postmodernity) itself. In exploring the origin and evolution of Nietzsche's key concepts, we will trace the ways in which his work has been variously revered or refuted, championed or co-opted, for more than a century. We will survey his broad influence on everything from philosophy and literature to music and art, theater and psychology, history and cultural theory, politics and popular culture. Further, we will ask how his ideas continue to challenge us today, though perhaps in unexpected ways. As we will see, Nietzsche wanted to teach us "how to philosophize with a hammer."
Course not offered every year
Also Offered As: COML 268, PHIL 067, RELS 238
Activity: Lecture
1 Course Unit
Notes: All readings and lectures in English.
GRMN 249 Topics in Modemism
This course explores an aspect of literary modernism intensively; specific course topics will vary from year to year. Topic title for Spring 2018: Modemism and the Theory of Fashion. In this class we will study international modernism from 1860 to 1940 by focusing on the emergence of a concept of the "new" that was also understood as a "new fashion." What was the "fashion of the new," how was it linked with "fashion" itself? The rise of modernism was accompanied by a series of self-conscious discourses in fashion, the first of which were elaborated by Beaudelaire & Mallarme. We will follow the social uses of the "new" in the context of the fashion industry so as to map a cultural history of "fashion" as it was developed by Walter Benjamin and Georg Simmel. We will read through Beaudelaire and Mallarme's prose and poetry, then engage with Aragon's Surrealist novel Paris Peasant, after which we will survey selected sections of Benjamin's Arcades Project. All the while, the Fashion Theory: A Reader will serve as our theoretical guide.
Course not offered every year
Also Offered As: COML 140, ENGL 259
Activity: Seminar
1 Course Unit
Notes: Topics vary annually.

GRMN 253 Freud: The Invention of Psychoanalysis
No other person of the twentieth century has probably influenced scientific thought, humanistic scholarship, medical therapy, and popular culture as much as Sigmund Freud. This course will study his work, its cultural background, and its impact on us today. In the first part of the course, we will learn about Freud's life and the Viennese culture of his time. We will then move to a discussion of seminal texts, such as excerpts from his Interpretation of Dreams, case studies, as well as essays on psychoanalytic practice, human development, definitions of gender and sex, neuroses, and culture in general. In the final part of the course, we will discuss the impact of Freud's work. Guest lecturers from the medical field, history of science, psychology, and the humanities will offer insights into the reception of Freud's work, and its consequences for various fields of study and therapy.

GRMN 261 Jewish Films and Literature
From the 1922 silent film "Hungry Hearts" through the first "talkie," "The Jazz Singer" produced in 1927, and beyond "Schindler's List," Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare's "King Lear" to Sholom Aleichem's "Tvey the Dairyman," primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we "read" literature and film, b) the various ways that the media of fiction, drama, and film "translate" Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience.

GRMN 262 Women in Jewish Literature
This course introduces students of literature, women's studies, and Jewish studies to the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres-devotional literature, memoir, fiction, and poetry—we will study women's roles and selves, the relation of women and men, and the interaction between Jewish texts and women's lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction & poetry from the past century. The course is divided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are portrayed in the Hebrew Bible, in rabbinic commentary, in pre-modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah's daughter. Next we turn to the seventeenth century Glikh of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction and a memoir written by women in Yiddish, Hebrew, and English. "Jewish woman, who knows your life? In darkness you have come, in darkness do you go." J. L. Gordon (1890)

1 Course Unit
Notes: All readings and lectures in English.

GRMN 263 Jewish American Literature
What makes Jewish American literature Jewish? What makes it American? This course will address these questions about ethnic literature through fiction, poetry, drama, and other writings by Jews in America, from their arrival in 1654 to the present. We will discuss how Jewish identity and ethnicity shape literature and will consider how form and language develop as Jewish writers "immigrate" from Yiddish, Hebrew, and other languages to American English. Our readings, from Jewish American Literature: A Norton Anthology, will include a variety of stellar authors, both famous and less-known, including Isaac Mayer Wise, Emma Lazarus, Isaac Bashevis Singer, Celia Dropkin, Abraham Cahan, Anzia Yezierska, Saul Bellow, Philip Roth, Cynthia Ozick, and Allegro Goodman. Students will come away from this course having explored the ways that Jewish culture intertwines with American culture in literature.

Taught by: Hellerstein
Course not offered every year
Also Offered As: COML 277
Activity: Lecture
1 Course Unit
Notes: All readings and lectures in English.

GRMN 264 Translating Cultures: Literature on and in Translation
"Languages are not strangers to one another," writes the great critic and translator Walter Benjamin. Yet two people who speak different languages have a difficult time talking to one another, unless they both know a third, common language or can find someone who knows both their languages to translate what they want to say. Without translation, most of us would not be able to read the Bible or Homer, the foundations of Western culture. Americans wouldn't know much about the cultures of Europe, China, Africa, South America, and the Middle East. And people who live in or come from these places would not know much about American culture. Without translation, Americans would not know much about the diversity of cultures within America. The very fabric of our world depend upon translation between people, between cultures, between texts. With a diverse group of readings-autobiography, fiction, poetry, anthology, and literary theory—this course will address some fundamental questions about translating language and culture. What does it mean to translate? How do we read a text in translation? What does it mean to live between two languages? Who is a translator? What are different kinds of literary and cultural translation? What are their principles and theories? Their assumptions and practices? Their effects on and implications for the individual and the society?

GRMN 279 Introduction to Literary Theory
This course introduces students to major issues in the history of literary theory.
Course not offered every year
Also Offered As: COML 094, ENGL 094
Activity: Lecture
1 Course Unit
GRMN 280 Topics in Aesthetics
What is beauty? What is the relationship between beauty and goodness? What does aesthetic judgment tell us, if anything, about the world? This course addresses these and other questions by focusing predominantly on Kant's highly influential aesthetic theory. It situates this text in the context of other works on aesthetics. We begin with Plato's view expressed in The Symposium that beauty is a form to which humans gain (some) access through love. We then turn to essays by Shaftesbury and Hume that introduce key aesthetic notions that Kant will elaborate (and revise) including those of taste, common sense, harmony, and aesthetic disinterest. We also read selections from the work of Friedrich Schiller, John Dewey, and A. K. Coomaraswamy who offer alternative accounts of the relationship between beauty and ethical life—a relationship that Kant acknowledges but considers to be importantly limited. The question of the relationship between ethics and aesthetics will form the backdrop for this semester's reading overall.

Course not offered every year
Also Offered As: PHIL 280
Activity: Seminar
1 Course Unit

GRMN 301 Handschrift - Hypertext: Deutsche Medien
This course will provide an introduction to German-language literary studies through exemplary readings of short forms: fables, fairy tales, aphorisms, stories, novellas, feuilletons, poems, songs, radio plays, film clips, web projects and others. Paying particular attention to how emergent technology influences genre, we will trace an evolution from Minnesang to rock songs, from early print culture to the internet age and from Handschrift to hypertext. Students will have ample opportunity to improve their spoken and written German through class discussion and a series of internet-based assignments. Readings and discussions in German.
For BA Students: Arts and Letters Sector
Course usually offered in spring term
Also Offered As: COML 301
Prerequisites: GRMN 203 is a prerequisite.
Activity: Lecture
1 Course Unit
Notes: This course will be offered every spring semester. Taught in German.

GRMN 302 Places of Memory. Lieux de memoire. Erinnerungsorte.
What is culture? What is German? Where are the borders between German, Austrian and Swiss culture? What is part of the "cultural canon"? Who decides and what role does memory play? Relying on the theory of collective memory (Halbwachs) and the concept of "places of memory" (Erinnerungsorte: Nora, Francois/Schulze) and with reference to exemplary scholarly and literary texts, debates, songs, films, documents, and paintings from high and pop culture, this course will weave a mosaic of that which (also) constitutes German or German-language culture. Course usually offered in fall term
Prerequisites: GRMN 203 is a prerequisite.
Activity: Lecture
1 Course Unit
Notes: This course will be offered every fall semester. Taught in German.

GRMN 311 Krautrock und die Folgen
Taught by: Hahmann, Lewis
Course not offered every year
Prerequisites: GRMN 203 or equivalent.
Activity: Lecture
1 Course Unit
Notes: Taught in German.

GRMN 326 Kings and Kaisers: Prussian History in Literature and Film
Taught by: Richter
Course not offered every year
Prerequisite: GRMN 302 or equivalent
Activity: Lecture
1 Course Unit
Notes: Taught in German.

GRMN 356 Crime and Detection - Dark Deeds
The detective story and the crime drama are time-honored genres of literature and popular culture. We are drawn to morbid scenes of violence and crime, and satisfied by the apprehension of criminals and their punishment. At the same time, the process of detection, of deciphering clues, is much like the process of reading and interpretation. In this course we will read a variety of detective and crime stories, some by famous authors (e.g., Droust-Huelshoff, Fontane, Handke), others by contemporary authors that address interesting aspects of German culture (e.g., Turkish-Germans, gay and lesbian subcultures, DDR and Wende). We will also look at episodes from popular West, East, and post-unification German TV crime shows (e.g., Tatort).
Taught by: Frei
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: Taught in German.

GRMN 361 Staging the 20th Century
Course not offered every year
Prerequisites: GRMN 203 or equivalent.
Activity: Seminar
1 Course Unit
Notes: Topics vary annually. Course taught in German. Topic for Spring 2014: "Staging the Middle Ages".

GRMN 363 Kant's Critical Project
This seminar is dedicated to Kant's critical philosophy. In particular, the Critique of pure Reason, which is the first of three Critiques, ranks amongst the most important texts of modern philosophy. Even in contemporary debates, Kantian claims still play a crucial role and basic knowledge of Kant's critical philosophy is often assumed. In this seminar we will deal with central passages from different works which, taken together, give a good picture of Kant's critical revision of classical metaphysics. We shall discuss important conceptions and ideas of Kant's mature philosophy, such as the nature of transcendental aesthetics and the resulting distinction between a thing-in-itself and appearance, the meaning and application of the categories, the justification and determination of human freedom, and the role of the moral law for Kant's so-called practical metaphysics.
Taught by: Hahmann
Course not offered every year
Also Offered As: PHIL 362
Activity: Seminar
1 Course Unit
GRMN 364 Topics vary annually. The topic for Spring 2015 is: Unhuman Encounters
Topics vary annually. The course description for Spring 2015 is as follows: Typically "the Other" stands for a person or a group of people from another cultural background. But there have always been other encounters that forced people to distinguish themselves from an "other". Foremost, in order to define what is "human", the "unhuman" needed to be described. Initially, this meant distinguishing the human from the rest of nature. With the industrial revolution, the technological became a concern—machines as monsters. On a figurative level, we have the supernatural, ghosts, aliens, and cyborgs. In this course we will explore the ways in which real and imagined encounters with these "other Others" are depicted in German language literature and culture.
Taught by: Dayioglu-Yucel
Course not offered every year
Prerequisite: GRMN 203 or equivalent
Activity: Seminar
1 Course Unit
Notes: Taught in German.

GRMN 375 German Literature after 1945
Focus on the continuity of the literary tradition, innovation, and prominent themes related to coming-of-age in today's society, and specific stylistic experiments. Topics include: the changing literary perspective on German history and World War II; the representation of such prominent issues as individual responsibility, German reunification, and human relations in modern society.
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: Taught in German.

GRMN 379 Decadence
The period of the late nineteenth and turn to the twentieth century has often been described as a time of decadence—a decline in the "standards" of morals and virtue. While Freud explored the nature of sexual desire, writers like Schnitzler or Wedekind made this exploration central for their stories or plays. The course will focus on the literature and culture of fin-de-siècle Vienna and Berlin, and consider a variety of texts as well as their later reception and translation into film. Lectures and discussion in German.
Taught by: Weissberg
Course not offered every year
Prerequisites: GRMN 203 or equivalent.
Activity: Lecture
1 Course Unit
Notes: Lectures and discussions in German.

GRMN 380 Heimat
The concept of Heimat (homeland, home, roots) has been a focal point of German culture for at least the past two hundred years; but it has no precise translation into English. Heimat is deeply connected with German notions of modernity, nature, community, and gender; but the question of where one belongs has also been associated with escapism, exclusion and marginality. Beginning with a reading of Freud's essay "Das Unheimliche," we will explore literary representations of Heimat (including works by authors such as Eichendorff, Storm, Stifter, Raabe, and Sebald); nineteenth-century paintings by artists such as Leibl; and Edgar Reitz’s epic film Heimat (1984).
Taught by: MacLeod
Course not offered every year
Also Offered As: GRMN 584
Prerequisites: GRMN 203 or equivalent.
Activity: Lecture
1 Course Unit
Notes: Taught in German.

GRMN 381 Topics in German Culture. Topics vary annually. The topic for
Fall 2017 is: Contemporary Germany - Deutschland schafft sich ab...oder
findet sich neu?
Fall 2017 description: Deutschland steht aktuell vor einer Vielzahl von
Herausforderungen, die teils wesentlich gesellschaftliche Bereiche
betreffen. Man muss davon ausgehen, dass die heute getroffenen
Entscheidungen die deutsche, aber auch europäische Zukunft
fuer eine nicht absehbare Zeit massgeblich beeinflussen werden.
Viele der verhandelten Fragen und Probleme sind zum Teil eng
miteinander verwoben und erfordern zur Bewältigung gesamtpolitisch
übergreifende Loesungsstrategien. Diese verlangen gegebenenfalls
einen tiefgreifenden gesellschaftlichen, politischen und oekonomischen
Wandel der bestehenden Verhältnisse, da zum Teil grundlegende
Strukturen und Uberzeugungen weiter Teile der Bevoelkerung
betroffen sind. Aus diesem Grund werden Auffassungen, die lange
Zeit als gesicherter Bestand des gesellschaftlichen Diskurses galten,
infrage gestellt. Es ist daher nicht verwunderlich, dass die drohenden
Veranderungen reaktionäre Kraefte provozieren, die um die Erhaltung
bestehender Verhältnisse besorgt sind. Denn es ist zu vermuten, dass
der anstehende Wandel nicht alle betroffenen Gruppen besser stellen wird
und vielleicht groesere Opfer erfordert, als bislang eingestanden wurde.
Dieses Seminar wird einige der dringenden Fragestellungen thematisieren
und somit versuchen, ein aktuelles Bild der bestehenden deutschen
Verhaelttnisse zu vermitteln. Das eroffnet den Blick auf eine mogliche
Zukunft Deutschlands, aber auch Europas.
Taught by: Hahmann
Course not offered every year
Prerequisite: GRMN 203 or equivalent
Activity: Seminar
1 Course Unit
Notes: Taught in German.
GRMN 401 Translators
Drawing on Goethe's musings on "world literature", the course focuses on authors who have arrived at their German words via global, worldly itineraries. The course considers movements between languages, including those of the students themselves and encourages students to develop their own voice as authors via a series of critical and creative writing exercises. At the same time, students develop strategies to reflect on their own language learning. This course provides an important space for German-learners at Penn to draw on one another's experiences in the program and to build a sense of community. The course is required for all German majors in the Fall semester of their senior year.
Taught by: Wigg, MacLeod
Course usually offered in fall term
Prerequisites: GRMN 203.
Activity: Lecture
1 Course Unit
Notes: This course will be offered every fall semester.

GRMN 402 Independent Study - Senior.
One-term course offered either term
Activity: Independent Study
1 Course Unit

GRMN 403 Senior Colloquium.
Taught by: Wigg, MacLeod
Course usually offered in spring term
Activity: Seminar
0.5 Course Units

GRMN 507 Elementary Middle High German
Designed to familiarize the student with the principal elements of Middle High German grammar and to develop skills in reading and translating a major work of the twelfth century. Limited text interpretation.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Middle High German for Reading Knowledge will be taught in English.

GRMN 509 Topics in Yiddish Literature - Modernist Jewish Poetry
One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define "Jewish writing," in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation's process and products. Another version of this seminar presents Jewish modernism as an international phenomenon of the early 20th century. The course will attempt to define "Jewish modernism" through the prism of poetry, which inevitably, given the historical events in Europe and America during this time, grapples with aesthetic, religious, and national ideologies and methods. The syllabus will focus mainly on poetry written in Yiddish and English, and will also include German, Russian, and Hebrew verse. All poetry, critical, and theoretical materials will be taught in English translation, although students who know the languages will work on the original texts and will bring to the table a comparative perspective. Because we will be discussing translated poems, a secondary focus of the course will, in fact, be on literary translation's process and products.
Taught by: Hellerstein

Also Offered As: COML 509, JWST 509, YDSH 509
Activity: Seminar
1 Course Unit
Notes: Topics vary annually.
GRMN 510 Topics in Language and Literature
Topic for Fall 2015: Old English and its Afterlives. The first half or more of this course will be devoted to the study of 8th-12th-century language and literature, with attention to grammar, metrics, translation, and transmission. We will cover a wide range of texts, such as the life of Sai Lat, Andrew, a saint who saved his followers from cannibals. Aelfric's Preface to his landmark translation of the Bible. King Alfred the Great's Preface to Gregory's Pastoral Care, a brilliant meditation on the relationship between memory and culture; Wulfstan's thunderous Sermon to the English, which rebukes the Anglo-Saxon for stooping to fratricide, incest, and child slavery during the Viking invasions; the very strange collection of monstrosities and prodigies, which we call The Wonders of the East; "Caedmon's Hymn", what might just be the first recorded poem in English, supposedly composed by an illiterate cowherd; and the stunningly beautiful lyric poem "The Dream of Rood" in which the Cross recounts its heric during the Crucifixion. In the second half of the course we will turn to post-Conquest literature (and beyond), as we explore the ways that medieval and early modern writers documented and theorized the Anglo-Saxon past. This section of the course will be determined by student interests. Our questions will include the following: what constitutes a significant event? In what ways do different genres—chronicles, saints' lives, encyclopedias, sermons, romances, genealogies, geographies—offer competing or affirming views of the past? How do linguistic change and continuity matter? What impact did the Anglo-Saxons' pressing concerns with conquest, anonymity, decadence, and suffering have on late writers? And how did pre-Conquest England serve the needs of later English propaganda, antiquarianism, and reform? Students are not expected to know Old English, but we will need to get up to speed pretty quickly.
Taught by: Steiner
Course not offered every year
Also Offered As: ENGL 501, HIST 590
Activity: Seminar
1 Course Unit
Notes: Topics vary annually. Topic for Fall 2015: Old English and Its Afterlives

GRMN 511 Stylistics
Textual analysis based on communication theory. Texts selected from literature and other disciplines. Emphasis placed on the development of the student's own compositional and stylistic skills.
Course not offered every year
Prerequisite: GRMN 221 or the equivalent language preparation
Activity: Seminar
1 Course Unit
Notes: Graduate seminar

GRMN 516 Teaching Methods
This course examines major foreign language methodologies, introduces resources available to foreign language teachers, and addresses current issues and concerns of foreign language teaching and learning, such as second language acquisition theory and application of technology.
Taught by: Frei
One-term course offered either term
Also Offered As: EDUC 670
Activity: Lecture
1 Course Unit

Although the starting point for the Anthropocene is still under discussion, there is broad agreement that the industrial revolution and the turn to fossil fuels mark an intensification of humanity's impact on the Earth. It may not be a coincidence that Kant's proclamation of the Copernican revolution in philosophy, according to which human reason replaces the natural light of traditional metaphysics, falls roughly in the same period. Human finite cognition became the measure for God and his creation. The dawn of the era of human freedom and the ramped up exploitation of resources coincide. It is against this background that the Naturphilosophie of F. W. J. Schelling can become particularly interesting. The genesis of German idealism is closely related with the opposition between freedom and necessity that lies at the heart of Kant's critical project. Kant associated the former with man and the latter with nature. In trying to bridge the gap between them, Schelling reinstates nature as an autonomous actor in its own right. Schelling's thinking about nature chimeed with the literary and empirical-scientific work of his contemporary Johann Wolfgang von Goethe. In the productive interplay of poetry, science, religion, and philosophical thought, Goethe and Schelling offer a critical alternative to philosophy in the aftermath of the Copernican revolution that may be viable or useful today as humanity tries to come to terms with anthropogenically induced climate change. This co-taught interdisciplinary seminar will focus on works by Schelling (Ideas for a Philosophy of Nature, First Outline of a System of the Philosophy of Nature, On the World Soul) and Goethe (scientific writings, Faust I & II), in addition to engaging recent scholarship of Schelling and Goethe in relation to environmental humanities.
Taught by: Richter/Hahmann

Also Offered As: COML 547, PHIL 567
Activity: Seminar
1 Course Unit

GRMN 526 The Trouble with Freud: Psychoanalysis, Literature, Culture
For professionals in the field of mental care, Freud's work is often regarded as outmoded, if not problematic psychologists view his work as non-scientific, dependent on theses that cannot be confirmed by experiments. In the realm of literary and cultural theory, however, Freud's work seems to have relevance still, and is cited often. How do we understand the gap between a medical/scientific reading of Freud's work, and a humanist one? Where do we locate Freud's relevance today? The graduate course will concentrate on Freud's descriptions of psychoanalytic theory and practice, as well as his writings on literature and culture.
Taught by: Weissberg
Course not offered every year
Also Offered As: COML 523, GSWS 525
Activity: Seminar
1 Course Unit
Notes: Readings and discussions in English.
GRMN 527 Philosophy of Psychology
The seminar will consider selected episodes in the interaction between philosophy and psychology. It starts with an intensive study of Descartes’ machine psychology (in the Treatise on Man), which should complicate our picture of the history of such interactions. We then proceed, partly in response to student interest, to interactions involving Kant and nineteenth-century Kantians, Rylean "behaviorism", and recent work on the embodied mind (Wheeler, others).
Taught by: Hatfield

GRMN 529 Seminar in Theory: Aurality and Deconstruction
Taught by: Fleishman, Waltham-Smith
Course not offered every year
Also Offered As: COML 760, MUSC 780
Activity: Seminar
1 Course Unit
Notes: Graduate seminar.

GRMN 534 History of Literary Theory
Over the last three decades, the fields of literary and cultural studies have been reconfigured by a variety of theoretical and methodological developments. Bracing and often confrontational dialogues between theoretical and political positions as varied as Deconstruction, New Historicism, Cultural Materialism, Feminism, Queer Theory, Minority Discourse Theory, Colonial and Post-colonial Studies and Cultural Studies have, in particular, altered disciplinary agendas and intellectual priorities for students embarking on the professional study of literature. In this course, we will study key texts, statements and debates that define these issues, and will work towards a broad knowledge of the complex rewriting of the project of literary studies in process today. The reading list will keep in mind the Examination List in Comparative Literature. We will not work towards complete coverage but will ask how crucial contemporary theorists engage with the longer history and institutional practices of literary criticism. There will be no examinations. Students will make one class presentation, which will then be reworked into a paper (1200-1500 words) to be submitted one week after the presentation. A second paper will be an annotated bibliography on a theoretical issue or issues that a student wishes to explore further. The bibliography will be developed in consultation with the instructor; it will typically include three or four books and six to eight articles or their equivalent. The annotated bibliography will be prefaced by a five or six page introduction; the whole will add up to between 5000 and 6000 words of prose. Students will prepare "position notes" each week, which will either be posted on a weblog or circulated in class.
Course not offered every year

Activity: Seminar
1 Course Unit
Notes: Topics vary annually.

GRMN 535 The Elemental Turn
The unfolding effects of climate change—rising sea level, melting ice sheets, subsiding land masses, drought stricken regions, wild fires, air laden with greenhouse gases, and inundated cities—heighen our awareness of the elements: air, earth, fire and water. Within the context of the new materialism, philosophers, eco-critics, and writers are re-turning to the elements and encountering, at the same time, predecessor texts that assume new relevance. This seminar will place current thinking and writing about the elements into dialogue with older traditions ranging from the classical (Empedocles, Plato, Lucretius) to writers and thinkers of the eighteenth, nineteenth and twentieth centuries (e.g., Goethe, Novalis, Tieck, Stifter, Bachelard, Heidegger, Boehme).

Activity: Seminar
1 Course Unit

GRMN 541 Topics in Cultural History
Topic for Spring 2016: Making and Marking Time. What is time? In the late 19th century, the questions of how to define time, how to slow down time, and, above all, how to accelerate movement have become focus of the work by many European philosophers who have tried to come to terms with what is now termed as the Industrial Revolution, and the idea of "progress." And can time be understood as something continuous, or is it fragmented, proceeding in fits and bursts? Such contemplations on time have deeply influenced writers. Marcel Proust was a reader of Henri Bergson and translated his theories of time into a concept of memory. Thomas Mann has tried to navigate timelessness in a novel set on a "Magic Mountain." Virginia Woolf and James Joyce have pictured an entire universe in a single day (Mrs. Dalloway, Ulysses) while early 20th century Italian Futurists made the contemplation of time part of their manifestos. With them, and with expressionist writers in Germany or writers from the DADA movement there elsewhere in Europe, a reckoning with time would also influence their choice of genre and form, writerly practice, and technique. Parallel to these literary experimentation, pictures were set into motion in scholarly studies by Eadweard Muybridge and finally in the new medium film; Impressionist painters insisted on picturing fleeting moments, and composers experimented with temporal sequences. We may be able to understand a reconsideration of time as driving force for the modern movement, or simply "modernity." In this seminar, we will study a selection of literary texts of the late 19th century and the modernist movement, consider the philosophical background and changes in historiography, and integrate a consideration of the visual arts and music.

GRMN 543 Environmental Humanities: Theory, Method, Practice
Environmental Humanities: Theory, Methods, Practice is a seminar-style course designed to introduce students to the trans- and interdisciplinary field of environmental humanities. Weekly readings and discussions will be complemented by guest speakers from a range of disciplines including ecology, atmospheric science, computing, history of science, medicine, anthropology, literature, and the visual arts. Participants will develop their own research questions and a final project, with special consideration given to building the multi-disciplinary collaborative teams research in the environmental humanities often requires.

Activity: Seminar
1 Course Unit

GRMN 544 Public Environmental Humanities
This broadly interdisciplinary course is designed for Graduate and Undergraduate Fellows in the Penn Program in Environmental Humanities (PPEH) who hail from departments across Arts and Sciences as well as other schools at the university. The course is also open to others with permission of the instructors. Work in environmental humanities by necessity spans academic disciplines. By design, it can also address and engage publics beyond traditional academic settings. This seminar, with limited enrollment, explores best practices in public environmental humanities. Students receive close mentoring to develop and execute cross-disciplinary public engagement projects on the environment. In spring 2018, participants have the opportunity to participate in PPEH’s public engagement projects on urban waters and environmental data. These ongoing projects document the variety of uses that Philadelphians make of federal climate and environmental data, in and beyond the city government; they also shine light on climate and environmental challenges our city faces and the kinds of data we need to address them. Working with five community partners across Philadelphia, including the City’s Office of Sustainability, students in this course will develop data use stories and surface the specific environmental questions neighborhoods have and the kinds of data they find useful. The course hosts guest speakers and research partners from related public engagement projects across the planet; community, neighborhood, open data, and open science advocates; and project partners in government in the City of Philadelphia and Commonwealth of Pennsylvania. Course assignments include: * 2 short-form essays (course blog posts); * a 12-hour research stay (conducted over multiple visits) with a community course partner to canvas data uses and desires; * authorship of 3 multimedia data stories; * co-organization and participation in a city-wide data storytelling event on May 2, 2018.

1 Course Unit

GRMN 555 Topics in Dutch Studies
Course not offered every year
Also Offered As: COML 532, DTCH 530
Activity: Seminar
1 Course Unit
Notes: Topics vary annually.
GRMN 556 What is Enlightenment?
The question “What is the Enlightenment?” was posed for an essay competition in a journal, the Berlin Monatschrift in 1784. At that point, French and English philosophers had already considered new ways of thinking, inventing the modern individual and the modern citizen (in contrast to a state’s subject). German responses to this question were written by an established philosopher (Immanuel Kant), a Jewish resident of Berlin (Moses Mendelssohn), as well as concerned readers of recent philosophical treatises. In our course, we will consider this question by exploring this early discussion and the formation of Enlightenment thought in Europe and specifically Germany, including the German-Jewish Enlightenment (Haskalah), but also trace the historical transformation of this discussion, including Theodor W. Adorno’s and Max Horkheimer’s Dialectics of Enlightenment (1944/1947) and more recent criticism.

Notes: Graduate course. Topics vary annually.

GRMN 567 Topics in History of Philosophy. Topics change annually. Title for Spring 2016 is: Schiller’s Philosophical Writings
Topics change annually. Topic title for Spring 2016 is: Schiller’s Philosophical Writings. Today Friedrich Schiller is primarily known for his dramas and poems. However, during a period of several years (after he was appointed professor of History in Jena) he was also concerned with philosophical issues. The focus was mainly on questions of aesthetics and philosophy of history. With regard to both, it was Kant who was extremely influential for the development of Schiller’s philosophical position. But Schiller did not simply copy or rearrange Kantian ideas, in fact, he evolved Kantian philosophy significantly in numerous respects.
And even though Schiller later gave up with his philosophical ambitions—in a letter he even dismissed his philosophical efforts altogether as immature—his specific understanding of Kantian philosophy became extremely influential for the genesis of German idealism in general, but in particular shaped the reception of Kantian ideas by Hegel. In this seminar we will look at Schiller’s most important philosophical writings and address both his conception of aesthetics and his approach to philosophy of history.
Taught by: Hahmann
Course not offered every year
Also Offered As: PHIL 467
Activity: Seminar
1 Course Unit
Notes: Seminar taught in English.

GRMN 569 New German Fiction
Our seminar will deal with contemporary German culture. What do German readers read? We will read nine novels that were published recently. While considering newspaper accounts of these books and their authors, we will try to come to our own judgments regarding the quality of these works, and their lasting impact. Instead of term papers, we will write book reviews and all members of the seminar will be asked to review all the books in question.
Taught by: Weissberg
Course not offered every year
Prerequisite: GRMN 203 or equivalent
Activity: Seminar
1 Course Unit
Notes: Course taught in German.

GRMN 573 Topics in Criticism & Theory: Object Theory
Topic for Fall 2017: “Object Theory”. This seminar will investigate the rise of and ongoing scholarly concern with “objects” and “things,” which has emerged from fields such as anthropology and art history as a category of renewed interest for literary scholars, too. We will investigate key contributions to theories of the object by thinkers such as: Mauss, Barthes, Heidegger, Latour, Benjamin, Bill Brown, Jane Bennett, among others. Literary readings will accompany these theoretical texts.
Taught by: MacLeod

Also Offered As: ARTH 573, CIMS 515, COML 570, ENGL 573
Activity: Seminar
1 Course Unit
Notes: Topics change annually.
GRMN 578 Topics in Art History
Topics vary. Fall 2016: 16 C. North Paint/Graph. 16th Century Northern Paintings and Graphics. Focusing primarily on Germany and the Netherlands during the period of the nascent Reformation, this course will use both paintings and prints to investigate a host of social and cultural changes: the religious image and its use (including Iconoclasm), to political structures (the Holy Roman Empire and developing nation-states, such as Spain and England), and to innovative artistic themes, particularly the rise of specialized pictorial genres and secular subjects. Major artists will include Hieronymus Bosch, Albrecht Durer and his circle, Lucas Cranach, Hans Holbein (and England), Lucas van Leyden, and Pieter Bruegel. Students will be expected to write a research paper of their choosing after completing a shorter analysis paper on a single work. Open to qualified undergraduates as well as graduate students.
Taught by: Silver
Course not offered every year
Also Offered As: ARTH 561
Activity: Seminar
1 Course Unit

GRMN 580 Topics in Aesthetics
Topic title for Spring 2018: Walter Benjamin. Walter Benjamin (1892-1940) is a philosopher whose writings on art, literature, and politics have had tremendous influence on many disciplines in the Humanities and Social Studies. He has been variously described as one of the leading German-Jewish thinkers, and a secular Marxist theorist. With the publication of a four-volume collection of this works in English, many more of his writings have been made accessible to a wider public. Our seminar will undertake a survey of his work that begins with his studies on language and allegory, and continues with his autobiographical work, his writings on art and literature, and on the imaginary urban spaces of the nineteenth-century.
Taught by: Weissberg
Course not offered every year
Also Offered As: ARTH 560, COML 582, JWST 582, PHIL 480
Activity: Seminar

Notes: Topics vary annually.

GRMN 581 Topics in Jewish-German Culture
Reading and discussion course on selected topics in Jewish history. The instructors are visiting scholars at the Center for Advanced Judaic Studies. Topic and seminar title for Spring 2015: Topics in Jewish Studies: The Origins of Jewish Studies. Course description for Spring 2015: This is a reading course that grants seminar participants access to Katz Center fellows, some of the best scholars in Judaic studies from around the world. The aim of the course is to expose students to these scholars and their work, to get to know them as people, learn from them at high level, and understand their approach to the field. Over the course of the spring semester there will be four 3-session modules. Students will meet with 4 different fellows for 3 sessions each. The weekly 90-minute classes will be held at the Katz Center on Wednesdays from 10:30 am - 12 pm, and participants will be encouraged to then stay for lunch and the fellows’ seminar which runs from 12:30 - 2:30 pm.
Taught by: Spring 2015: Liliane Weissberg and Steven Weitzman

GRMN 603 Seminar in German Literature
Topics range from the study of individual authors to analyses of major texts.
Course not offered every year
Activity: Seminar
1 Course Unit

GRMN 614 Weimar Landscapes
This new course is designed for students of literature, landscape architecture and urban planning, and cultural history in general. It will explore the ideas of, and attitudes towards, landscape in selected works by Johann Wolfgang Goethe, and consider his own considerable practical involvement in reshaping the town and gardens of Weimar. The course will provide the larger context of German literature, aesthetics and landscape taste, and politics of the later 18th and early 19th centuries. We will consider the development of new gardens and parks in a "new" style (e.g. Wörlitz); they were regarded to be less formal and more "natural" than their French predecessors. We will study the English models for this movement, and offer a particular attention to the major German theorist, C.C.L. Hirschfeld, who would soon become famous outside Germany as well. Students will be expected (but not required) to read in German. Translations of key works by Goethe, as well as of commentaries on German gardening history, are available to ensure that non-German speakers can readily follow the course. In final papers there will be the freedom to select topics that focus upon literary or landscape architecture, though it is anticipated that a comparativist perspective will be adopted in either approach.
Taught by: Weissberg/Hunt
Course not offered every year
Also Offered As: ARTH 782, COML 615, ENGL 584, URBS 614
Activity: Seminar
1 Course Unit
Notes: Readings and Discussions in English.
GRMN 628 Topics 18th Century, vary annually.
Topic for Fall 2014 is: Wolfgang’s Lehrjahre (1765-1774) The decade before the publication of Goethe’s Die Leiden des jungen Werthers is full of literary ferment. The goal of this course is to gain a sense of the multiplicity of projects and perspectives in this crucial decade in order to break down any teleology that might see Werther as its crowning triumph. In other words, this is a course in the "politics" of literature and literary aesthetics. Works to be read, discussed, and reported on include: Kant, Beobachtungen über das Gefühl des Schönen und Erhabenen; Klopstock, Salomo, ein Trauerspiel; Gleim, Lieder nach dem Anakreon; Herder, Fragmente über di neuere deutsche Literatur; Lessing, Laokoon oder über die Grenzen der Mahlerery und Poesie; Wieland, Geschichte des Agathon; Lessing, Minna von Barnhelm; Mendelssohn, Phaedon oder über die Unsterblichkeit der Seele; von Gerstenberg, Ugolino; Wieland, Musarion; Klopstock, Oden und Elegien; La Roche, Geschichte des Frevels von Stemheim; Herder, Abhandlung über den Ursprung der Sprache; Lavater, Von der Physiognomik; Lessing, Emilia Galotti; Goethe, Goetz von Berlichingen mit der eigenen Hand; Herder, Von deutscher Art und Kunst; Nicolai, Sebalbus Nothanger; Wieland, Alceste; Zimmerman, Von der Einsamkeit; Blankenburg, Versuch über den Roman, and, of course, Werther.
Taught by: Richter
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Graduate seminar, taught in German.

GRMN 632 Romanticism
The course focuses both on the timely impact and the lasting contribution of Romanticism. Lectures cover the philosophical, intellectual, social, and political currents of the age. Authors: Schlegel, Wackenroder, Tieck, Brentano, Amim, Novalis, Hoffmann, Kleist, Eichendorff.
Taught by: MacLeod, Weisberg
Course not offered every year
Activity: Seminar
1 Course Unit

GRMN 642 Drama of the Twentieth Century
Based on a discussion of the relationship of drama (text) and theater (performance), the course examines the development of realistic and antirealistic currents in modern German drama. From Wedekind and Expressionism to Piscator’s political theater, Brecht’s epic theater and beyond (Horvath, Fleisser, Frisch, Duerenmatt, Handke).
Course not offered every year

1 Course Unit

GRMN 651 Studies in 17th Century
Course not offered every year
Also Offered As: FREN 650
Activity: Seminar
1 Course Unit
Notes: Topics vary

GRMN 678 Realism: Literature and Theory
What is "realism"? What does it mean to depict the world as a "realist" writer or artist? This seminar will consider these questions and concentrate on German literature and art of the second half of the nineteenth century. It will focus on writers such as Stifter, Storm, Raabe, and Fontane; but also on Stifter’s drawings and paintings, visual artists such as Menzel, and the vogue of historical painting. Finally, the seminar will consider the role of early photography in the development of the notion of "realism." Secondary literature will include studies by Michael Fried, Linda Nochlin, and others.

GRMN 683 Topics in Philosophy
Topics vary
Course not offered every year
Activity: Seminar
1 Course Unit

GRMN 684 Topics in Philosophy. Title for Spring 2015: After Idealism:
Political thought in Germany from Weber to Habermas.
This seminar explores political thought in Germany from the imperial state of the early 20th century through its fragmentation and division and into the reunification of east and west Germany in 1992. Much of this period was "after idealism" philosophically and politically, the preface to pessimism and the passing of political philosophy as articulated in the Enlightenment (Shklar), but fascinating period of thought and argument. Among our texts are Habermas (philosophy), Weber (sociology), Schmitt (law), Juenger (literature) & their contemporaries. Students are not expected to read texts in the original, although having German will greatly expand your range and the depth of your reading.

Government Administration (GAFL)

GAFL 500 Half-Term Electives
This is a hybrid course, meaning that class will meet on-campus one Friday/ Saturday each month and online each Monday evening. Fall 2018 on-campus meetings will be held on the following Fridays and Saturdays from 2:5:30pm: First session: September 7 & 8. October 12 & 13 Second session: November 9 & 10. December 7 & 8. Online classes will be held Mondays 8:15-9:15pm. The following sections will be offered the first half of the semester: GAFL500-028 Elements of Data Analytics; GAFL500-022 Project Management and the Public Sector. The following sections will be offered the second half of the semester: GAFL500-029 Communicating with Data: GAFL500-012 Organizational Leadership and Communication. Course descriptions for each section can be found here: https://www.fels.upenn.edu/academics/courses/all. Please direct any issues or inquiries to felsinstitute@sas.upenn.edu.

One-term course offered either term
Corequisites: Must be taken with corresponding GAFL 500 section in opposing session. E.g. GAFL 500 011 and 023. This completes the 1 CU. Activity: Hybrid Course
0.5 Course Units

GAFL 502 Public Communications
Successful leaders must be able to convey their integrity and their ideas, their vision and their values clearly and convincingly in public settings. By analyzing great political speeches and affording students the opportunity to prepare and deliver different types of speeches, this course teaches the fundamentals of persuasive public speaking while encouraging students to develop their own voice. This is a performance course. Students will gain skill and confidence in their speech writing and public speaking skills through practical, peer feedback, and extensive professional coaching. Class lectures and discussions will focus on persuasive strategies and techniques for handling community meetings, Q and A sessions, and interactions with the media. In Summer 2018, Public Communications will meet online weekly on Mondays from 6:30-7:30. It will meet on campus from 2:00-5:30pm on the following Fridays & Saturdays: May 18-19, June 22-23, July 27-28. In Fall 2018 this course has two sections in TWO DIFFERENT FORMATS. In Fall 18, GAFL502-002 is a traditional format with on-campus meetings Tuesdays, 6-9pm. GAFL502-001 is a hybrid format. Details for the hybrid format are: Fall 2018 on-campus meetings will be held on the following Fridays and Saturdays from 2:00-5:30pm: September 7 & 8. October 12 & 13, November 9 & 10. December 7 & 8. Class will meet online on Mondays 8:15-9:15pm.

Course offered summer, fall and spring terms
Activity: Hybrid Course
1 Course Unit

Notes: This course has seats reserved for Fels’ students and gives priority to grad students. Post-bacc students, contact Cameron Miller (cammill@upenn.edu) Undergraduate students, contact Cameron 2 weeks before the start of the pertinent term to request a seat. Seats are not guaranteed to post-bacc or undergraduate students.

GAFL 506 The Problem of Jobs: The Philadelphia Story
Once the “workshop of the world” with a diverse manufacturing economy, the City of Philadelphia has lost a huge proportion of its historical economic base in the past 50 years. Today, Philadelphia struggles to find its competitive advantage. Yet, it has tremendous assets that can be leveraged. This course will explore the rise and fall of Philadelphia's manufacturing economy, efforts to forestall its decline in the 1960s and 70s, the racial and gender dynamics of its employment ecosystem, and contemporary strategies to create a sustainable local economy.

We will focus on the emerging national recognition of place-based economic development strategies, including the revival of downtown residential living, tourism, and hospitality, and the role of institutions, such as universities and hospitals, in the revitalization of urban America. The course will combine readings in economic and social history and urban economics with case study analyses of local policies aimed at stimulating growth.

Taught by: Homstein
Course not offered every year
Activity: Seminar
1 Course Unit

GAFL 511 Reinventing Nonprofits
Three nonprofit leaders walk into a bar. What’s the conversation? cross fields, focus, size, and target audiences, nonprofits often face similar challenges: public policy changes, evolving stakeholder expectations, new modalities to service requiring investment, rising competition, fickle funders and demographic shifts, all in a world where culture eats strategy for breakfast. Against this backdrop, nonprofits need to re-assess their mission, approach, position, organizational structure and revenue model.

Why are some organizations able to pivot and reinvent themselves while others languish? Through readings to frame the issues, speakers offering firsthand accounts of successes and disappointments, projects with practitioners wrestling with real-time issues, and group discussions to tie it all together, this course is intended to provide students with an intellectual construct, ideas, and experience to be better prepared to enter and advance in the field, and be part of the conversation.

Course offered summer, fall and spring terms
Activity: Lecture
1 Course Unit

GAFL 514 Public Finance and Public Policy
This course deals with how governments tax and spend. Students become familiar with the theoretical, empirical, and practical tools and methods used to create and analyze government budgets, as well as the flow of public resources. The course examines public revenues and expenditures within the context of fiscal federalism, in addition to budgeting and resource management and the social, economic, and political forces that shape the fiscal environment within which governments (particularly state and local governments) operate.

Significant attention is paid to tax policy analysis and the fiscal crises confronting many large cities and states. Additional special topics covered include health care & social security, public education finance, public finance and the environment, bond markets & municipal finance, and public pensions.

Course usually offered in fall term
Activity: Lecture
1 Course Unit
GAFL 515 Public Finance Leadership in the New Fiscal Reality
Several factors are intersecting upon U.S. local governments including: muted economic growth, demographics, technological change, ineffective monetary & fiscal policy, and political shenanigans. These are having a profound impact on local government financial health. Many local governments are struggling to structurally balance their budgets, even now several years into one of the longest U.S. post-WWII economic recoveries. Expenditure demand, especially because of rising employee pension and OPEB benefits, is rising faster than expected. Revenues are not rising as quickly as they have historically. This New Fiscal Reality is redefining the concept of municipal distress. Further, the options local governments have to respond to distress may be changing. It might be necessary for local governments to move away from typical solutions like distressed municipality programs and other state level aid. If the current financial trajectory continues, some local governments will not be able to deliver the same service level they have in the past. New solutions are required. This class will 1) define the New Fiscal Reality; 2) review essential public finance concepts and relationships; 3) study past and recent examples of financial distress and prescribed solutions; 4) survey the current local government financial landscape; and 5) identify solutions public finance leaders can institute for the future. Several local government finance, political and policy experts will speak during the semester. A heavy amount of student engagement is expected to be completed in the form of research, group work, writing, and the critiquing of other students/ work.
Taught by: Kozlik
Course usually offered in spring term
Activity: Lecture
1 Course Unit

GAFL 517 Quantitative Tools for Consulting
The purpose of the course is to study the theory and application of certain, key quantitative methods utilized in financial and fiscal decision-making in state and local governments: defining and measuring efficiency and equity; statistical analysis, multivariate analysis, linear and multiple regression; inter-temporal decision-making; and cost-benefit analysis. Primary emphasis will be on understanding the context and quantitative basics of these methods to prepare students for effective careers in state and local governments. Each student should have a basic understanding of market economics, the roles of government in our market economy, accounting/budgeting basics, and the Philadelphia metro area economy and government.
Activity: Seminar
1 Course Unit

GAFL 520 Marketing & Fundraising for Non-Profit Organizations
Fundraising and marketing are complementary tools for building revenue streams and fulfilling the program objectives of nearly every nonprofit organization. This course develops students’ ability to market a nonprofit to mission recipients and prospective donors and to solicit funds from individuals and organizations. Through lectures, readings, discussions, and assignments, students are actively engaged in learning how to help an organization achieve its mission and objectives. This includes but is not limited to the assessing an organization’s marketing and fundraising capabilities; identifying, segmenting and creating relationships with target markets and donors; building infrastructure to properly seek and steward gifts; using technology to fulfill marketing and fundraising objectives; and focusing on fundraising and marketing methods such as social media, direct response, events, major gifts, planned giving, and others.
Taught by: Hugg
Course usually offered in fall term
Activity: Hybrid Course
1 Course Unit
Notes: This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings at the Fels Institute of Government in Philadelphia, PA. On-campus meetings vary by term. Please read the description for dates and times. Also, please note there is an additional $150 online course fee.

GAFL 521 Advanced Public Management
A wait list will be kept for this course. To be added to the wait list, please email Josh Power at joshuarp@upenn.edu. This is a "hybrid" course, with synchronous, online meetings and once-monthly on-campus meetings. Synchronous online meetings will be held on Mondays 6:30-7:30pm. On-campus meetings for Spring 2018 will be held on the following Friday afternoons (2:30pm-5:30pm) and Saturday mornings (9:30am-1pm): January 12, 13, February 9-10, March 16-17, April 20-21.
This course is designed to provide students with a scientific foundation of management and leadership theory to inform their actions as current and aspiring public leaders. We will draw from diverse disciplines within applied social science, including management science, positive psychology, organizational psychology, system thinking, and change management. Students will learn these theoretical frameworks and management strategies by applying these theoretical frameworks to their specific professional interests.
Taught by: Lim
Course usually offered in spring term
Activity: Hybrid Course
1 Course Unit

GAFL 526 Municipal Bonds
The course provides a comprehensive overview of the $3.7 trillion municipal bond market, with a focus on public finance investment banking; capital project financing for state and local governments including water, sewer, mass transit and road projects, and non-profit financing for educational and healthcare institutions; the legal and regulatory framework governing the municipal bonds market; rating agency analysis; quantitative modeling; and investor perspectives.
Taught by: Steven Genyk
Course usually offered in fall term
Activity: Lecture
1 Course Unit
GAFL 527 Community Development and Qualitative Methods
Urban planning and community development involve attempting to understand (and then propose methods for solving) complex problems arising from our shared experience of living together in communities. These wicked problems (Rittel & Weber, 1973) often arise from multiple co-occurring influences: economic, socio-cultural, political, geographic/geological, psychological, etc. The fluid and multi-dimensional nature of these problems, therefore, calls for a fluid and multi-dimensional approach to understanding them. Nonetheless, for the better part of the last half a century the majority of efforts to approach such dilemmas has relied largely on quantitative research methods. While quantitative approaches to understanding community dynamics certainly have a demonstrated value, an over-reliance on such methods can come at the expense of the more nuanced understanding available through qualitative research approaches. Quantitative methods are useful in exploring questions such as where, when, who and how many. They are less effective, however, in answering questions of why and how. For answers to these sorts of questions we must turn to qualitative research methods.

Taught by: Terence Milstead
Activity: Seminar
1 Course Unit

GAFL 528 Critical Issues in Public Finance
The Course, Critical Issues in Public Finance will consider contemporary issues affecting the fiscal state of local governments. Covered will be issues that have distressed municipalities; the policies/initiatives that seek to rectify such including privatization/public private partnerships; reformation of municipal pensions; sustainable education funding alternatives; and tax policies aimed at promoting economic growth. Students will be assigned to a team, which will identify and provide a solution for an issue or issues plaguing a fictional government. Each team will prepare a written report and make a presentation all of which will constitute the final project. Assignments will serve as the building blocks for the final written work product and presentation developed by each team. The class is divided into four modules. The first module will take a historical look at events behind fiscal distress in municipalities and then explore current day drivers that are causing the same today. Modules two, three and four will examine some of the tools that have been used successfully or otherwise to remediate the drivers of fiscal distress. In each module case studies will be used to further analyze the particular fiscal challenge of a municipality. Written assignments will be based on case studies. This course meets online on Mondays 7:45-8:45pm. the course meets in person from 9:30am-1pm on the following Fridays and Saturdays: May 18-19, June 22-23, July 27-28.

Taught by: Olanipekun Lewis
Course usually offered summer term only
Activity: Hybrid Course
1 Course Unit

Notes: This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. On-campus meetings vary by term. Please read the description for dates and times. Also, please note there is an additional $150 online course fee.

GAFL 529 Nonprofit Financial Management
The course is designed to provide the student with an understanding of the primary financial management issues and decisions that confront senior management in nonprofits and government. Students will examine financial analysis techniques from both a practical and strategic perspective as they examine operating and capital decisions. The objective of the course is to allow the student to understand how managers integrate the various discrete financial decisions within a broader framework that allows them to analyze, develop and execute a coherent overall financial strategy.

Taught by: Rosenzweig, Janet
Course usually offered in spring term
Activity: Lecture
1 Course Unit

GAFL 530 Evidence Based Policies of Economic and Political Development
This class provides a "hands-on" introduction to the promises and limitations of using Randomized Control Trials (RCTs) to inform policy makers, practitioners, and academics of the conditions under which policies likely would have a positive effect on economic and political outcomes, in the context of international development. This course has three parts: the first is devoted to understanding the "nuts and bolts" of running field experiments / RCTs in developing countries. In part, we will be reading Glenmester and Takavarasha’s Running Randomized Evaluations: A Practical Guide. In addition, we will discuss core behavioral concepts from both behavioral economics and social psychology (prospect theory). The second part of the course will be devoted to demonstrating how schools have used RCTs to inform core policy debates (e.g. What are some effective ways to reduce corruption? How can we improve the performance of frontline service providers? How can politicians be more responsive to their constituents?) In the third part, students will be presenting their own research proposals, explicitly designed to address either a core policy question in the developing world or--for those interested--in the USA. Here students will have an opportunity to partner with the Social and Behavioral Sciences Team (https://sbst.gov), which is under the National Science and Technology Council.

GAFL 532 Urban Government in Action
This class explores how city administrators and legislatures have addressed the critical issues facing urban America today, including fighting urban blight and transforming neighborhoods, public school funding, public financing of sports stadiums, reducing the tax burden, public health issues like smoking bans, legislative redistricting, crime and safety issues, campaign finance finance reform, economic development issues like tax increment financing, race relations, welfare reform, public transportation, and how to reverse job and population losses. The goal is to place in context the various ways that elected officials approach complex issues, towards a more realistic understanding of how to influence a proposal as it works its way through the process towards implementation.
Taught by: Kenney
Course usually offered in fall term
Also Offered As: CRIM 402, CRIM 602
Activity: Lecture

GAFL 534 Infrastructure Investment and Economic Growth: Why, How, and When
Infrastructure is widely acknowledged to be critical for economic success, and infrastructure investments are promoted as leading to economic growth, either at the local or national level. Yet, investments in telecommunications, transportation, energy, or other infrastructure do not always yield the hoped public benefit. This course will help answer the question: Under what circumstances does infrastructure investment contribute to economic growth, and how do we know? Because government resources are limited, advocates often must be creative to find sufficient funding to get desirable projects completed. This course will also help answer the question: How do we pay for the infrastructure projects we want to build? The course will illustrate approaches to answering these questions using case studies of past and proposed investments.
Taught by: Angelides
Course usually offered in spring term
Activity: Lecture
1 Course Unit

GAFL 538 Human Rights, Access To Justice, and Public Policy
Law is central to effective and legitimate governance at all levels (local, national, regional, global). Law not only serves as a basis and frames governance and policy-making processes; it also offers tools and opportunities for public policy, as well as accountability mechanisms. Familiarity and understanding of legal frameworks, mechanisms and dynamics is thus essential for public and private actors involved in policy-making. This course combines theoretical insights as well as practical components. During the first portion of each class students will examine a wide spectrum of international legal frameworks and instruments which set standards for good governance on a variety of themes: eg. Children, women, refugees. This comparative perspective lays the context for US policies. During the second major portion of each class, students will explore how statutes, regulations and case law serve as tools for social change. Students will gain familiarity with relevant US legal frameworks at the Federal, State and Municipal level and at all three branches of government: legislative, executive and judicial. The third portion of every class will explore the role of the non government sector in public policy. Students will learn about core competencies needed to non profits effective such as: Boards, management leadership, and program

GAFL 546 Social Enterprise Models and Social Impact Locally and Globally
If you believe in finding innovative ways to make a difference and solve social issues locally and globally, you will benefit from the Social Enterprise and Impact Locally and Globally Course (Social Enterprise). Social Enterprise is designed for those who have a practitioner’s interest in the development, leadership, and management of the evolving nonprofit sector and their intersection with the socially conscious private sector and government. The course takes the student through the process of developing a mock social enterprise including idea exploration, testing and plan execution and provides the student with essential strategies and tools to conduct in-depth analysis of a social enterprise leading to their application to a regional social enterprise. This course fulfills an elective for the MPA and the Certificate in Nonprofit Administration.

GAFL 549 Leading Nonprofits
Leading Nonprofit Organizations is designed for those interested in leading and managing a nonprofit organization. It takes a practitioner's perspective on strategic realities of modern practice. Each section will seek to rapidly orient a new manager to the complexities, strategic issues, & politics. The course is taught through a combination of theory and practice using selected readings, lectures, guest presentations, group activities (Mock senior staff discussions) and field assignments (pairing with area nonprofit leader and attendance at one of the organizations board meetings.)
Course usually offered summer term only
Activity: Lecture
1 Course Unit
GAFL 550 Organizational Diagnosis
This course will help participants learn the skills involved in conducting a systemic, organizational diagnosis. Applying organizational diagnosis skills can help organizations make more effective, evidence-based decisions; increase an organization’s ability to learn and to apply these learnings; increase organizational effectiveness; and, often, save organizations from flawed and detrimental actions. The course places an emphasis on systems thinking, psychodynamic organizational theory, and appreciative inquiry as ways into understanding organizational issues and problems. Frequently, when organizations find themselves in trouble, e.g., problems in the system about such things as lack of leadership, poor communication, diminished productivity, low morale, etc., there is a tendency to frame the problem(s) simplistically and/or locate blame on a few difficult individuals or groups. However, upon closer examination, problematic issues are often found to be symptomatic and/or symbolic of multiple issues within the organization. This course will help participants to understand how problems, which appear at one level of the system, e.g., at the personal or interpersonal level, can represent problems at other levels of the system (e.g., at the group and/or institutional level), or signify a range of inter-related issues. Emphasis will be placed on the diagnostic skills needed to examine government agencies, non-profits, and bureaucracies. It will provide participants with the theoretical constructs and application skills necessary for identifying and framing problem areas, collecting data, and organizing feedback to client systems. Real-time examples will inform our discussions as we consider the relationship between diagnosis, organizational reflection, and appropriate action.
Activity: Hybrid Course
1 Course Unit
Notes: This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings at the Fels Institute of Government in Philadelphia, PA. Weekends vary by term. There is a $150 online course fee.

GAFL 551 Government Relations
In a system of representative government, organizations and individuals with interests at stake often seek the support of a government relations professional. This course addresses government relations from the varying perspectives of the current or aspiring professional, the client, and the government official.
Course not offered every year
Also Offered As: WSTD 551
Activity: Lecture
1 Course Unit

GAFL 555 Using the Political Process to Effect Organizational Change
Course usually offered in spring term
Also Offered As: DYNM 655
Prerequisites: Course permits must be requested at https://www.sas.upenn.edu/lps/graduate/dynamics/course-permit
Activity: Seminar
1 Course Unit
Notes: For additional information, please see our website at: http://www.organizationaldynamics.upenn.edu

GAFL 561 Media Relations
This course is designed to help you better understand the role and practice of media relations and messaging in corporate, non-profit, and government organizations in this new media era. You will learn how to research media and reporters, develop messages, build strategic media plans, generate media coverage, serve as spokesperson, handle crisis situations, and use new media strategies. You will hear from public relations professionals on such topics as working with reporters, developing PR campaigns, and creating effective web outreach programs. Class discussions, reading assignments, research and writing projects, group projects, and case studies offer an engaging and interactive learning environment to expand and apply your knowledge of media relations and messaging. Summer 2017 On-Campus Meetings are:
- 9:30am-1:00pm on Fridays—May 19, June 23, and July 21
- May 20, June 24, and July 22

Taught by: Frank Igwe
Course usually offered summer term only
Activity: Hybrid Course
1 Course Unit
Notes: This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. On-campus meetings vary by term. Please read the description for dates and times. Also, please note there is an additional $150 online course fee.

GAFL 569 The Politics of Housing and Urban Development
This course offers an exploration of how legislative action, government policymaking, and citizen advocacy influence plans for the investment of public capital in distressed urban neighborhoods. Course topics this semester will include an evaluation of the results of City of Philadelphia development policies under the administration of former Mayor Michael A. Nutter, as well as consideration of plans being undertaken by the administration of Mayor James F. Kenney, who took office in January. The course will also include an assessment of a large-scale property acquisition and development strategy being implemented by the Philadelphia Housing Authority in North Philadelphia and a review of recent and current reinvestment proposals for Camden’s waterfront and downtown-area neighborhoods.

Taught by: Kromer
Course usually offered in fall term
Also Offered As: CPLN 625, URBS 451
Activity: Lecture
1 Course Unit

GAFL 599 Local Planning, Development, & Preservation in Pennsylvania
Activity: Independent Study
1 Course Unit
GAFL 612 Quantitative Methods for Policy Analysis
This course will help students learn how to make evidence-based decisions in a public sector context. The course will introduce important data analysis skills and help students evaluate the quality of studies undertaken to measure the impact of public policies and programs. The class will meet on campus on the following Fridays and Saturdays: September 7-8, October 12-13, November 9-10, December 7-8. Friday classes will meet 9:30am-1:00pm, and Saturday classes will meet 2:00-5:30pm. The class will meet online weekly on Mondays 6:30-7:30pm. Taught by: Robertson-Kraft, Claire
Course usually offered in spring term
Activity: Hybrid Course
1 Course Unit
Notes: This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings at the Fels Institute of Government in Philadelphia, PA. Weekends vary by term. Please read the course description for further information.

GAFL 621 Public Economics
This course provides students with the knowledge required to understand government operations in relation to the market economy. In theory of supply and demand, students explore the pricing mechanism, price elasticity, and the effects of price controls on markets. Efficiency is examined in connection with competition and again in connection with equity, and market failure is considered as a reason for government intervention. Cost-benefit analysis is examined in the context of selecting among public investment alternatives. The course also assists students in addressing issues connected with local public goods and economic development.
Taught by: Sieg, Holger Wolfgang
Course usually offered in fall term
Activity: Lecture
1 Course Unit

GAFL 623 Leading People
This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. On-campus meetings vary by term. Please read the description for dates and times. Also, please note there is an additional $150 online course fee. On-campus meetings for Spring 2018 will be on the following Friday afternoons (2-5:30pm) and Saturday mornings (9:30am-1pm): January 12-13, February 9-10, March 16-17, April 20-21. The class will meet online weekly Mondays 6:30-7:30pm. Leading People focuses on Strategic Human Resource Management (SHRM), the combination of human resource management (HRM) and the strategic direction of the organization, whether public or non-profit. This course will examine the theory and principles of SHRM as they relate to job analysis, recruitment and selection, compensation, benefits, training and career development, performance management, and labor-management relations. Learning to deal with the daily SHRM challenges makes leaders and managers more effective and more valuable to the organization.
Taught by: Jones
Course usually offered summer term only
Activity: Hybrid Course
1 Course Unit
Notes: This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Also, please note there is an additional $150 online course fee.

GAFL 631 Policy Making & Public Institutions
This course introduces students to the theories and practice of the policy-making process. There are four primary learning objectives. First, understanding how the structure of political institutions matter for the policies that they produce. Second, recognizing the constraints that policy makers face when making decisions on behalf of the public. Third, identifying the strategies that can be used to overcome these constraints. Fourth, knowing the toolbox that is available to participants in the policy-making process to help get their preferred strategies implemented. While our focus will primarily be on American political institutions, many of the ideas and topics discussed in the class apply broadly to other democratic systems of government. The class will be a mix of lecture and cases. Cases are on a diverse set of policy topics, with a goal of illustrating broad themes about the policy-making process rather than the specifics of certain policy areas.
Taught by: Meredith, Marc
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: This course is a core requirement for the full-time MPA program at the Fels Institute of Government. Permits will not be issued to non-Fels students.

GAFL 640 Program Evaluations and Data Analysis
One of the trademarks of the 21st century public management is the usage of data and analysis in the decision-making process. A successful public leader will use empirical evidence to guide her decisions. She knows what types of data and analysis she should ask her analysts to collect and conduct, how to consume the results they generate, and how to transform the analytical results into effective communication with stakeholders. This class will help you become that 21st century public leader. At the end of this course, you will understand key principals of performance measures and program evaluation. In addition, you will be able to process, manage, and analyze quantitative data using R, a modern programming language optimized for statistical analysis. I picked R for many reasons: it is free, has many open-source visualization techniques and statistical models, and many statistical and quantitative method courses on campus use it as the language of choice. More importantly, knowing how to use R can be a unique and attractive skill for your employer.
Taught by: Lim, Nelson
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: This course is a requirement for MPA full-time students who started in Fall 2015 or later. It is an elective for MPA full-time students who started Fall 2014 or earlier.
GAFL 641 Program Evaluations & Data Analysis--Hybrid Format
This is a "hybrid" course, with synchronous, online meetings and once-monthly on-campus meetings at the Fels Institute of Government in Philadelphia, PA. On-campus meetings vary by term. Please read the description for dates and times. Also, please note there is an additional $150 online course fee. On-campus meetings for Spring 2018 will be on the following Friday mornings (9:30am-1pm) and Saturday afternoons (2:530pm): January 12-13, February 9-10, March 16-17, April 20-21. The class will meet online weekly on Mondays 7:45-8:45pm. This course introduces program evaluation in the context of research methods. Students learn about design and the application of data collection skills to all phases of program/service delivery from needs assessment to analysis of findings to implementation of changes based on results. Students learn to appreciate how these skills can be used as practical tools for identifying problems to developing and implementing programs. This applied course provides students with practical experiences to ply guidelines of evaluation and research methods in actual program evaluation projects in Philadelphia. Taught by: Claire Robertson-Kraft
Course usually offered summer term only
Prerequisites: GAFL 612 Quantitative Methods for Policy Analysis with grade of B or higher. First-Year Exec MPA Students ONLY
Activity: Hybrid Course
1 Course Unit

GAFL 651 Public Financial Management
This course provides an introduction to the fundamentals of accounting and budgeting for government and nonprofit organizations. The course is designed for students with little or no background in financial reporting, budgeting, and financial management. "Accounting and budgeting must be recognized as separate systems that must interact in a complementary manner if managers are to exercise control of the financial resources of their organizations" (Gamer, 1991).
Taught by: Levine, Carolyn
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: This course satisfies a core requirement in the Master of Public Administration and the Certificate of Public Finance.

GAFL 652 Financial Management of Public and Nonprofit Organizations
This course provides an introduction to financial management principles for public and nonprofit organizations. The primary objective of this course is to demystify financial information and improve students' ability to effectively engage in financial discussions, regardless of their role in the organization. This course will be focused on the vocabulary and tools necessary to interpret, analyze, and properly communicate financial information in order to develop and execute an appropriate financial strategy. This course meets online on Monday's 6:30-7:30pm EST, the course meets in person from 2:530pm on the following Fridays and Saturdays: May 18-19, June 22-23, July 27-28. Taught by: Dingley, Julie
Course usually offered in spring term
Activity: Hybrid Course
1 Course Unit
Notes: This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings at the Fels Institute of Government in Philadelphia, PA. On-campus meetings vary by term. Please read the description for dates and times. Also, please note there is an additional $150 online course fee.

GAFL 710 Negotiations
To influence public policy you need analytical skills to discover optimal solutions to problems, and good negotiation skills to tailor implementable solutions that address the needs and priorities of multiple stakeholders. What resources you want to invest, whom you engage in discussions, and what you expect to receive in return are open to explicit and implicit negotiations. This course will provide a working understanding of key negotiations concepts, including: Strategic elements of negotiations - interests, goals, positions, rights, power, value creation, high stakes, disputes; Preparation for and the details of negotiation processes; Ethical encounters and conundrums; Leveraging your strengths/understanding your negotiating personality. You will learn cooperative and competitive strategies, have a solid grasp of the decision-making science of negotiation, and better understand cognitive processes and emotional dynamics that affect the ways people negotiate. This course will meet in-person from 9:30am-1:00pm on the following Fridays and Saturdays: September 7-8, October 12-13, November 9-10, December 7-8. The course will also meet online each week on Mondays 7-8pm.
One-term course offered either term
Activity: Hybrid Course
1 Course Unit
Notes: This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings at the Fels Institute of Government in Philadelphia, PA. Weekends vary by term. There is a $150 online course fee.

GAFL 719 Advanced Budgeting
The course will build on the fundamentals taught in the introductory budgeting unit to help build students’ competence in budgetary analysis. Using detailed data from a major city as a case-long case study, and incorporating excel skill-building exercises, students will develop hands-on understanding of budgeting by working through such factors as economic drivers of fiscal performance, revenue analysis and forecasting, including tax policy considerations; expenditure analysis and projection, with an emphasis on workforce costs; and capital budgeting and financing. Students will also be introduced to key fiscal policies, budget monitoring and performance measurement, and the development of effective budget communications for various audiences.
Taught by: Nadol and Westerman
Course usually offered in fall term
Activity: Seminar
1 Course Unit

GAFL 732 Public Management
This core MPA course is intended to help each student to learn more than he or she already knows about public management both as a profession and as a field of academic study and to enjoy the company of supportive peers, instructors, and special guests as he or she contemplates a post- MPA career in governance. This course satisfies a core requirement in the Master of Public Administration full-time program.
Taught by: Diulio/Mulhern
Two terms. student may enter either term.
Activity: Seminar
1 Course Unit
GAFL 733 Public Management (MPA Executive Section)  
Overview—Public managers must have technical expertise in planning, staffing, and budgeting; however, technical skills alone are not sufficient to become an effective public manager. You must understand the socio-political context of your organization and your success will be dependent on your ability to analyze policy options and persuade stakeholders and supervisors, through effective communications, to pursue the policy options you recommend. Public managers in the 21st century must also understand the ever increasing diversity of their constituents and stakeholders. Economic globalization and international migration continue to increase the racial and ethnic diversity of our workforce. Diversity begets complexity and tension. Effective public managers must learn to lead inclusive organizations that leverage diversity and defuse tensions among heterogeneous constituents and stakeholders.

Learning objectives: The goal for this class is to expand your knowledge about public management, both as a profession and as a field of study. At the end of this course, you will understand key competencies of an effective public manager, demonstrate your understanding through class discussions, weekly reading notes, a group case study analysis and presentation, and a policy memo that analyzes management dilemmas and proposes responses. To accomplish this goal, we will go beyond passive learning from classroom lectures. We will have a few guest speakers whose expertise will complement readings. We expect you to be prepared and to participate in classroom discussions, engage practicing public administrators and accomplished researchers in seminars/workshops, and learn to draft policy briefs and policy memos completing scenario-based assignments.

Taught by: Jones, Darrell D.
Course usually offered in spring term
Activity: Hybrid Course
1 Course Unit
Notes: This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. On-campus meetings vary by term. Please read the description for dates and times. Also, please note there is an additional $150 online course fee.

GAFL 735 The Performance Imperative  
The course will explore the critical role of performance measurement in improving management, particularly for public sector entities. This will include the examination of fundamental principles of performance measurement, the identification and application of different performance measurement techniques and strategies, and the evaluation of best practices within the field. Topics to be covered will include the evolution and adaptation of "StaTing" (e.g., CompStat, CitiStat, StateStat), the relationship between performance measurement and financial management, and how performance measurement can be used to inform different analytic techniques. On-campus meetings for Spring 2018 will be on the following Friday mornings (9:30am-1pm) and Saturday afternoons (2:50am-5:30pm): January 12-13, February 9-10, March 16-17, April 20-21. The class will meet online weekly on Mondays 7:45 to 8:45pm.

Taught by: Gallagher & Blauer
One term course offered either term

1 Course Unit
Notes: This is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings at the Fels Institute of Government in Philadelphia, PA. Weekends vary by term. Please read the course description for further information.

GAFL 797 Capstone Fieldwork  
Activity: Masters Thesis
0 Course Units

GAFL 799 MPA Capstone  
Successful completion of a Capstone project is one of the academic requirements for the Master of Public Administration (MPA) at the University of Pennsylvania’s Fels Institute of Government. The capstone project represents a way for graduate students to apply their multidisciplinary learning from the program to a specific public administration challenge(s) or issue(s). To successfully complete a capstone project, a student must receive a passing grade for their capstone paper and the associated briefing. The student’s capstone paper resembles a policy memo that an administrative staff writes to decision makers and stakeholders. The paper integrates and deepens the student’s learning from the program. More importantly, the capstone paper provides a way for a student to bring her/his learning and knowledge from the program back into her/his chosen career. The research focus should be one that is of great interest to the students as well as one a potential organization will benefit from.

Taught by: Nelson Lim—MPA Full-Time Form; Claire Robertson- Kraft—MPA Exec Form
One term course offered either term
Activity: Independent Study
0 Course Units
Notes: In Summer ONLY, this is a "hybrid" course, with synchronous, online meetings and once-monthly, on-campus meetings in Philadelphia, PA. Also, please note there is an additional $150 online course fee. This course meets online on Mondays 6:30 - 7:30pm. The course meets in person from 2:00 - 5:30pm on the following Fridays and Saturdays: May 18-19, June 22-23, July 27-28.

Graduate Arts & Sciences (GAS)  

GAS 600 English Language Skills  
For prospective International Teaching Assistants seeking English fluency certification, this course emphasizes the development of oral academic discourse skills and practices prominent features of spoken English that promote successful communication in academic settings, including intelligibility, active listening skills, grammar.

Taught by: Potter
Course usually offered in fall term
Activity: Lecture
1 Course Unit

Greek (GREK)  

GREK 015 Elementary Modern Greek I  
This course is designed for students with no prior knowledge of the modern Greek Language. Instructions are theme based and is supported by a Textbook as well as other written or audiovisual material. It provides the framework for development of all communicative skills (reading, writing, comprehension and speaking) at a basic level. The course also introduces students to aspects of Modern Greek culture that are close to students’ own horizon, while it exposes them to academic presentations of Greek history, arts, and current affairs. Quizzes, finals and short individual work with presentation are the testing tools. The completion of this unit does NOT satisfy the language requirement.

For BA Students: Language Course
Taught by: Tsoukoura
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: Offered through Penn Language Center.
GREEK 016 Elementary Modern Greek II
Continuation of Elementary Modern Greek I, with increased emphasis on reading and writing.
For BA Students: Language Course Taught by: Tsekoura
Course not offered every year
Prerequisites: GREEK 015 or equivalent.
Activity: Lecture 1 Course Unit
Notes: Offered through Penn Language Center. This section is reserved for heritage learners or by permission of instructor.

GREEK 017 Intermediate Modern Greek I
This course is designed for students with an elementary knowledge of Demotic Modern Greek, and aims mainly at developing oral expression, reading and writing skills.
For BA Students: Language Course Taught by: Tsekoura
Course not offered every year
Prerequisites: GREEK 015 and 016 or equivalent.
Activity: Lecture 1 Course Unit
Notes: Offered through Penn Language Center.

GREEK 018 Intermediate Modern Greek II
Further attention to developing oral expression, reading, and writing skills for students with knowledge of Demotic Modern Greek.
For BA Students: Last Language Course Taught by: Tsekoura
Course not offered every year
Prerequisites: GREEK 015, 016, and 017 or equivalent.
Activity: Lecture 1 Course Unit
Notes: Offered through Penn Language Center.

GREEK 101 Elementary Classical Greek I
Intensive introduction to Classical Greek morphology and syntax. This course includes exercises in grammar, Greek composition, and translation from Greek to English. Emphasis is placed upon developing the ability to read Greek with facility.
For BA Students: Language Course Taught by: Nishimura-Jensen
Course usually offered in fall term
Activity: Seminar 1 Course Unit

GREEK 102 Elementary Classical Greek II
Students complete their study of the morphology and syntax of Classical Greek. We begin the semester with continuing exercises in grammar and translation, then gradually shift emphasis to reading unadapted Greek texts.
For BA Students: Language Course Taught by: Nishimura-Jensen
Course usually offered in spring term
Prerequisites: GREEK 101 or equivalent.
Activity: Seminar 1 Course Unit

GREEK 105 Modern Greek
Activity: Lecture 1 Course Unit

GREEK 112 Intensive Elementary Classical Greek
An introduction to the ancient Greek language for beginners, with explanation of basic grammatical concepts and intensive exercises in reading and writing. Ideal for undergraduates or graduate students from Penn or elsewhere with some background in learning other languages, or who need to learn Greek rapidly. The course covers the first year of college-level Greek, equivalent to GREEK 101 + GREEK 102 at more than twice the normal pace. For further information on Penn's Greek curriculum, visit the Classical Studies department website.
Course usually offered summer term only
Activity: Seminar 2 Course Units

GREEK 115 Greek/Heritage Speakers I
This course is intended to help Heritage Speakers or student with prior knowledge of conversational modern Greek (or even Ancient Greek) to refresh or enrich their knowledge of modern Greek and who would not be a good fit for the elementary or intermediate classes. A theme-based textbook and instructions along with a comprehensive overview of grammar as a whole is presented while original text, songs, video and other media are used in order to augment vocabulary and increase fluency in modern Greek. Students are expected to properly use the language, do theme-based research on the themes examined and provide written work on various subjects and make conversation in class. Presentations on researched topics account for final exam.
For BA Students: Language Course Taught by: Tsekoura
One-term course offered either term
Activity: Lecture 1 Course Unit

GREEK 116 Greek/Heritage Speakers II
It is the continuation of GREEK 115 with completing Grammar (passive voice as well as unusual nouns and adjectives etc.) and adding more challenging reading and writing material. The completion of this course satisfies the language requirement. ALL students completing the HSI GREEK 115 are eligible to enroll. ALL OTHERS will have to take a placement test.
For BA Students: Last Language Course Taught by: Tsekoura
Course usually offered in spring term
Activity: Lecture 1 Course Unit

GREEK 203 Intermediate Classical Greek: Prose
This course is for those who have completed Ancient Greek 102, Greek 112 or equivalent. You are now ready to begin reading real Greek! We will read a selection of passages from Greek prose authors, focusing on language and style.
For BA Students: Language Course Course usually offered in fall term
Prerequisites: GREEK 102, GREEK 112 or equivalent
Activity: Seminar 1 Course Unit

GREEK 204 Intermediate Classical Greek: Poetry
We will read a selection of passages from Greek poetic authors, ranging from Homer to tragedy.
For BA Students: Last Language Course Course usually offered in spring term
Prerequisites: GREEK 203 or equivalent. Activity: Seminar 1 Course Unit
GREK 212 Intensive Intermediate Greek
An introduction to the basic history and conventions of Greek prose and poetry, with continuous readings from classical authors accompanied by grammar review and exercises. Ideal for undergraduates or graduate students from Penn or elsewhere who have completed the equivalent of one year Greek (e.g., GREK 112). The course covers the second year of college-level Greek, equivalent to GREK 203 + GREK 204 at more than twice the normal pace.
For BA Students: Last Language Course
Course usually offered summer term only
Activity: Seminar
2 Course Units

GREK 309 Topics in Greek Literature: Socrates
This course is for those who have completed Greek 204, Greek 212, or equivalent. Close reading and discussion of a Greek author or a particular genre of Greek literature. Topics will vary each semester, and the course may be repeated for credit. Socrates wrote nothing; and yet he had an unparalleled influence on classical Athenian culture and the whole later history of western thought. Who was he? Was he a truly wise person, or a smart alec self-promoter? What were his actual beliefs or teachings, if any? Can we reconcile the characterizations of Socrates in our very different contemporary sources? In this upper-level Greek course, we will read the three main ancient sources: Aristophanes Clouds, which offers a funny and contradictory portrait of an avaricious, self-important sophist; parts of Xenophon’s Memorabilia and his Apology of Socrates, which suggests a wise, fairly conventional thinker; and selections from Plato, which portray Socrates as a far more challenging and unusual kind of person.
Taught by: Wilson
One term course offered either term
Prerequisite: GREK 204
Activity: Seminar
1 Course Unit

GREK 401 Greek for Advanced Students
For graduate students in other departments needing individualized study in Greek literature.
For BA Students: Advanced Language Course
Course not offered every year
Also Offered As: CLST 371
Activity: Seminar
1 Course Unit

GREK 540 The Greek Text: Language and Style
What do we need to read texts in ancient Greek? In this course we read just one prose text and one poetic text, or a very limited number of texts and passages, with a focus on language and formal analysis (such as diction, grammar, stylistics, metrics, rhetoric, textual criticism). A range of exercises will be used to develop these skills, including composition, lexical studies, recitation, memorization, exegesis, written close-readings, and sight-translation.
Course not offered every year
Activity: Seminar
1 Course Unit

GREK 541 Greek Literary History
Through selected readings from both poetry and prose, we will survey the range and evolution of ancient Greek literary practice and will identify some of Greek literature might be constructed.
Taught by: Murtagh
Course not offered every year
Activity: Seminar
1 Course Unit

GREK 600 Graduate Greek Seminar: Aeschylus, Oresteia
A close reading of Aeschylus’ trilogy, with consideration of its role as an important touchstone for fifth century ideas about justice, political leadership, gender roles, Athenian institutions, and dramatic form.
Taught by: Murtagh
One term course offered either term
Activity: Seminar
1 Course Unit

GREK 602 Graduate Greek Poetry
This graduate seminar will explore the rich and varied intellectual debates of the Classical period, using early Hippocratic texts to introduce some of the major questions that occupied contemporary thinkers. Such topics include, among others, the nature of matter and the body, the interaction of humans and environment, ‘anthropology’, empiricism, inference from signs, health and disease. We will focus on selections from the Greek texts of the Hippocratic ‘Ar’s Waters Places’, ‘Nature of Man’, ‘Sacred Disease’, ‘On Ancient Medicine’, and Epidemics in their relation to other contemporary authors, such as Herodotus, Thucydides, assorted Presocratics and Sophists, and Plato.
Taught by: Ralph Rosen
Course not offered every year
Also Offered As: COML 606, ENGL 705
Activity: Seminar
1 Course Unit

GREK 609 GREEK AESTHETIC THEORY
This seminar will explore ancient Greek (and some Roman) approaches to the arts. Greek audiences and critics alike were deeply interested in both theoretical and practical questions about the arts, especially literature. We will consider not only the philosophical tradition, but also popular notions of aesthetic value, including the varieties of audience responses and fandom. Among the authors we will study are various early Greek philosophical and sophistic thinkers, Plato, Aristotle, Hellenistic literary theorists, including Philodemus, Horace, Longinus, and selected theorists of late antiquity.
Taught by: Rosen
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Graduate Students only

GREK 611 Greek Epigraphy
An introduction to the principles and practices of Greek Epigraphy. Study of selected Greek inscriptions.
Taught by: McInerney
Course not offered every year
Also Offered As: AAMW 611, ANCH 611, CLST 611
Activity: Seminar
1 Course Unit

GUJR 402 Beginning Gujarati Part I
During the first year of Gujarati, major emphasis is placed on acquiring phonetics, grammatical patterns, and basic vocabulary. These goals are accomplished through guided drills and conversations accompanied by formal instruction on Gujarati grammar. From the outset, students are also taught the Gujarati writing system, which is used for all materials. By the end of the first year of instruction, student should be able to carry on coherent conversations on selected topics, read simple texts and compose short pieces in Gujarati.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1 Course Unit

GUJR 403 Beginning Gujarati Part II
During the first year of Gujarati, major emphasis is placed on acquiring phonetics, grammatical patterns, and basic vocabulary. These goals are accomplished through guided drills and conversations accompanied by formal instruction on Gujarati grammar. From the outset, students are also taught the Gujarati writing system, which is used for all materials. By the end of the first year of instruction, student should be able to carry on coherent conversations on selected topics, read simple texts and compose short pieces in Gujarati.
For BA Students: Language Course
Course usually offered in spring term
Prerequisites: Beginning Gujarati Part I or equivalent ascertained through placement test or permission of instructor.
Activity: Seminar
1 Course Unit

GUJR 422 Intermediate Gujarati Part I
This course is designed as a continuation of beginning Gujarati. The course objectives are to expand the mastery of sentence patterns and augment vocabulary and its usage through intensive grammar and comprehension exercises. A special emphasis will be placed on greater cultural awareness. Upon completion of this course students should be able to interact socially with added confidence and greater expressiveness. Students should also experience a great improvement in their comprehension of spoken and written language. During the second year of Gujarati, students are introduced to progressively more difficult reading selections, along with additional instructions in the formal grammar of the language. To maintain and develop oral and aural command of the language, readings are discussed in Gujarati. To develop their writing abilities, students are also expected to compose short essays on their readings.
For BA Students: Language Course
Two terms, student must enter first term.
Activity: Lecture
1 Course Unit

GUJR 423 Intermediate Gujarati Part II
This course is designed as a continuation of intermediate Gujarati I. Course objectives are to expand the mastery of sentence patterns and augment vocabulary and its usage through intensive grammar and comprehension exercises. A special emphasis will be placed on greater cultural awareness. Upon completion of this course students should be able to interact socially with added confidence and greater expressiveness. Students should also experience a great improvement in their comprehension of spoken and written language. During the second year of Gujarati, students are introduced to progressively more difficult reading selections, along with additional instructions in the formal grammar of the language. To maintain and develop oral and aural command of the language, readings are discussed in Gujarati. To develop their writing abilities, students are also expected to compose short essays on their readings.
For BA Students: Last Language Course
Taught by: Desai, R
Course usually offered in spring term
Prerequisites: Intermediate Gujarati Part I or equivalent ascertained through placement test or permission of instructor.
Activity: Lecture
1 Course Unit

GUJR 442 Advanced Gujarati
A follow up semester to Advanced Gujarati I, focused on the comprehensive study in reading, writing, speaking, and comprehension to gain advanced knowledge of Gujarati. Instructor may use poetry and/or prose as tools to engage students while having them create their own written works. Contact instructor for details.
For BA Students: Advanced Language Course
Taught by: Suthar
Course usually offered in spring term
Prerequisites: Proficiency in Gujarati. Contact instructor if you have questions about your proficiency level.
Activity: Lecture
1 Course Unit

Health & Societies (HSOC)

HSOC 000 Study Abroad
Activity: Lecture
1 Course Unit

HSOC 001 Emergence of Modern Science
During the last 500 years, science has emerged as a central and transformative force that continues to reshape everyday life in countless ways. This introductory course will survey the emergence of the scientific world view from the Renaissance through the end of the 20th century. By focusing on the life, work, and cultural contexts of those who created modern science, we will explore their core ideas and techniques, where they came from, what problems they solved, what made them controversial and exciting and how they relate to contemporary religious beliefs, politics, art, literature, and music. The course is organized chronologically and thematically. In short, this is a "Western Civ" course with a difference, open to students at all levels.
For BA Students: Hum/Soc Sci or Nat Sci/Math Sector
Taught by: Kucuk
Course usually offered in fall term
Also Offered As: STSC 001
Activity: Lecture
1 Course Unit
HSOC 002 Medicine in History
This course surveys the history of medical knowledge and practice from antiquity to the present. No prior background in the history of science or medicine is required. The course has two principal goals: (1) to give students a practical introduction to the fundamental questions and methods of the history of medicine, and (2) to foster a nuanced, critical understanding of medicine's complex role in contemporary society. The course takes a broadly chronological approach, blending the perspectives of the patient, the physician, and society as a whole—recognizing that medicine has always aspired to "treat" healthy people as well as the sick and infirm. Rather than history "from the top down" or "from the bottom up," this course sets its sights on history from the inside out. This means, first, that medical knowledge and practice is understood through the personal experiences of patients and caregivers. It also means that lectures and discussions will take the long-discredited knowledge and treatments of the past seriously on their own terms, rather than judging them by today's standards. Required readings consist largely of primary sources, from elite medical texts to patient diaries. Short research assignments will encourage students to adopt the perspectives of a range of actors in various historical eras.

For BA Students: History and Tradition Sector
Taught by: Barnes
Course usually offered in fall term
Also Offered As: HIST 036, STSC 002
Activity: Lecture
1 Course Unit

HSOC 003 TECHNOLOGY & SOCIETY
Technology plays an increasing role in our understandings of ourselves, our communities, and our societies, in how we think about politics and war, science and religion, work and play. Humans have made and used technologies, though, for thousands if not millions of years. In this course, we will use this history as a resource to understand how technology affects social relations, and conversely how the culture of a society shapes the technologies it produces. Do different technologies produce or result from different economic systems like feudalism, capitalism or communism? Can specific technologies promote democratic or authoritarian politics? Do they suggest or enforce different patterns of race, class or gender relations? Among the technologies we'll consider will be large objects like cathedrals, bridges, and airplanes; small ones like guns, clocks and birth control pills; and networks like the electrical grid, the highway system and the internet.

For BA Students: Society Sector
Taught by: Benson
Course usually offered in spring term
Also Offered As: SOCI 033, STSC 003
Activity: Lecture
1 Course Unit

HSOC 010 Health and Societies
"Two fundamental questions structure this course: (1) What kinds of factors shape population health in various parts of the world in the twenty-first century? and (2) What kinds of intellectual tools are necessary in order to study global health? Grasping the deeper "socialness" of health and health care in a variety of cultures and time periods requires a sustained interdisciplinary approach. "Health and Societies: Global Perspectives" blends the methods of history, sociology, anthropology and related disciplines in order to expose the layers of causation and meaning beneath what we often see as straightforward, common-sense responses to biological phenomena. Assignments throughout the semester provide a hands-on introduction to research strategies in these core disciplines. The course culminates with pragmatic, student-led assessments of global health policies designed to identify creative and cost-effective solutions to the most persistent health problems in the world today."

For BA Students: Humanities and Social Science Sector
Taught by: McKay
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Also fulfills General Requirement in Science Studies for Class of 2009 and prior

HSOC 032 Risksy Business
This freshman seminar on medical decision making will focus on personal and public medical and health decisions -- how we make them and how they can be improved. While in theory, medical decisions are in large part both informed and constrained by scientific evidence, in reality they are much more complex. Drawing upon a range of information sources including original research and popular media, the seminar will introduce students to the challenges of making personal and public (i.e., policy) decisions under conditions of inherent uncertainty and resource constraint. We will examine how research and scholarship can inform and improve such decisions and decision making processes. Using a variety of approaches (class discussions, examination of primary research, popular media, simple experiments, expert guests) this highly interactive seminar will provide a strong introductory foundation to medical decision making specifically and, by extension, to decision making under conditions of uncertainty more generally.

Taught by: Schwartz
Course not offered every year
Activity: Seminar
1 Course Unit

HSOC 050 Mad, Bad and Sad: The Construction, Prevention and Treatment of Mental Illness
This freshman seminar is designed to introduce students to research and debates surrounding the concept of mental disorder and to help them think critically about these disorders' biological and social construction. In addition to learning about the presentation and treatment of mental illness, they will also be introduced to concepts in epidemiology, psychology, psychiatry and health services research, and learn about the history of the science surrounding psychiatry and how different beliefs at different times have influenced policy, systems, and services and treatment.

Taught by: Mandell
Course not offered every year
Activity: Seminar
1 Course Unit
HSOC 052 Autism Epidemic
The CDC estimates that 1 in 150 children have autism. Three decades ago, this number was 1 in 5,000. The communities in which these children are identified in ever increasing numbers are ill prepared to meet their needs. Scientists have struggled to understand the causes of this disorder, its treatment, and why it appears to be rapidly increasing. Families, policy makers, schools and the healthcare system have argued bitterly in the press and in the courts about the best way to care for these children and the best ways to pay for this care. In this class, we will use autism as a case study to understand how psychiatric and developmental disorders of childhood come to be defined over time, their biological and environmental causes identified, and treatments developed. We will also discuss the identification and care of these children in the broader context of the American education and healthcare systems.
Taught by: Mandell
Course not offered every year
Activity: Seminar
1 Course Unit

HSOC 059 Medical Missionaries and Partners
Global health is an increasingly popular goal for many modern leaders. Yet critics see evidence of a new imperialism in various aid programs. We will examine the evolution over time and place of programs designed to improve the health of underserved populations. Traditionally categorized as public health programs or efforts to achieve a just society, these programs often produce results that are inconsistent with these goals. We will examine the benefits and risks of past programs and conceptualize future partnerships on both a local and global stage.
Students should expect to question broadly held beliefs about the common good and service. Ultimately we will examine the concept of partnership and the notion of community health, in which ownership, control, and goals are shared between outside expert and inside community member.
Taught by: Bream
Course not offered every year
Activity: Seminar
1 Course Unit

HSOC 100 Introduction to Sociological Research
One of the defining characteristics of all the social sciences, including sociology, is a commitment to empirical research as the basis for knowledge. This course is designed to provide you with a basic understanding of research in the social sciences and to enable you to think like a social scientist. Through this course students will learn both the logic of sociological inquiry and the nuts and bolts of doing empirical research. We will focus on such issues as the relationship between theory and research, the logic of research design, issues of conceptualization and measurement, basic methods of data collection, and what social scientists do with data once they have collected them.
By the end of the course, students will have completed sociological research projects utilizing different empirical methods, be able to evaluate the strengths and weaknesses of various research strategies, and read (with understanding) published accounts of social science research.
Taught by: Armenta, Harlrott, Koppel, Park, Smith, Wilde
One term course offered either term
Also Offered As: SOCI 100
Activity: Lecture
1 Course Unit

HSOC 102 Bioethics
This course is intended to introduce students to the fundamental principles of bioethics and the many ethical issues that arise in the rapidly changing fields of biomedicine and the life sciences. The first half of the course will provide an overview of the standard philosophical principles of bioethics, using clinical case studies to help illustrate and work through these principles. In the second half of the course we will focus on recent biomedical topics that have engendered much public controversy including diagnostic genetics, reproductive technologies and prenatal screening, abortion, physician assisted suicide, human experiments, and end of life decision making. We will use the principles learned in the first half of the course to systematically think through these bioethical issues, many of which affect our everyday lives.
Taught by: Crnic, M
Course not offered every year
Also Offered As: SOCI 101
Activity: Lecture
1 Course Unit

HSOC 107 Science, Technology & Medicine in Colonial India
In this course we will explore the broad contours of the histories of Science, Medicine and Technology in Colonial India (c. 1757-1947). This broad overview will be developed each week through a case study based on any one particular scientific discipline, technological project or medical event. Overall the course will attempt to locate the development of science, technology and medicine within the social, political and cultural context of colonial India. It is also worth noting that 'Colonial India', will include discussions of regions which today make up the Republic of India, Pakistan and Bangladesh.
Taught by: P. Mukarji
One term course offered either term
Also Offered As: STSC 107
Activity: Seminar
1 Course Unit

HSOC 110 Science and Literature
This course will explore the emergence of modern science fiction as a genre, the ways it has reflected our evolving conceptions of ourselves and the universe, and its role as the mythology of modern technological civilization. We will discuss such characteristic themes as utopias, the exploitation of space and time, biological engineering, supermen, robots, aliens, and other worlds—and the differences between European and American treatment of these themes.
For BA Students: Arts and Letters Sector
Course usually offered in spring term
Also Offered As: COML 074, ENGL 075, HIST 117, STSC 110
Activity: Lecture
1 Course Unit

HSOC 111 Health of Populations
This course develops some of the major measures used to assess the health of populations and uses those measures to consider the major factors that determine levels of health in large aggregates. These factors include disease environment, medical technology, public health initiatives, and personal behaviors. The approach is comparative and historical and includes attention to differences in health levels among major social groups.
Taught by: Kohler
One term course offered either term
Also Offered As: SOCI 111

HSOC 134 Public Health: From Biology To Policy
Activity: Lecture
1 Course Unit

HSOC 135 The Politics of Food
In this ABCS and Fox Leadership Program course students will use course readings and their community service to analyze the institutions, ideas, interests, social movements, and leadership that shape "the politics of food" in different areas. Service sites include: the Agatston Urban Nutrition Initiative; the Greater Philadelphia Coalition Against Hunger; the West Philadelphia Recess Initiative; the Vetri Foundation’s Etiquette Program; and Bon Appetit at Penn. Academic course work will include weekly readings, Canvas blog posts, several papers, and group projects. Service work will include a group presentation (related to your placement) as well as reflective writing during the semester. Typically one half of each class will be devoted to a discussion of the readings and the other either to group work and discussion of service projects, or to a course speaker. This course is affiliated with the Communication within the Curriculum (CWIC) program, and student groups are required to meet twice with speaking advisors prior to giving presentation.
Taught by: Summers
Course not offered every year
Also Offered As: PSCI 135
Activity: Lecture
1 Course Unit

HSOC 140 History of Bioethics
This course is an introduction to the historical development of medical ethics and to the birth of bioethics in the twentieth-century United States. We will examine how and why medical ethical issues arose in American society at this time. Themes will include human experimentation, organ donation, the rise of medical technology and euthanasia. Finally, this course will examine the contention that the current discipline of bioethics is a purely American phenomenon that has been exported to Great Britain, Canada and Continental Europe.
Taught by: Linker
One term course offered either term
Activity: Seminar
1 Course Unit

HSOC 145 Comparative Medicine
This course explores the medical consequences of the interaction between Europe and the "non-West." It focuses on three parts of the world Europeans colonized: Africa, South Asia, and Latin America. Today's healing practices in these regions grew out of the interaction between the medical traditions of the colonized and those of the European colonizers. We therefore explore the nature of the interactions. What was the history of therapeutic practices that originated in Africa or South Asia? How did European medical practices change in the colonies? What were the effects of colonial racial and gender hierarchies on medical practice? How did practitioners of "non-Western" medicine carve out places for themselves? How did they redefine ancient traditions? How did patients find their way among multiple therapeutic traditions? How does biomedicine take a different shape when it is practiced under conditions of poverty, or of inequalities in power? How do today's medical problems grow out of this history? This is a fascinating history of race and gender, of pathogens and conquerors, of science and the body. It tells about the historical and regional roots of today's problems in international medicine.
For BA Students: History and Tradition Sector
Taught by: Mukharji
Course usually offered in fall term
Also Offered As: HIST 146, STSC 145
Activity: Lecture
1 Course Unit

HSOC 150 American Health Policy
"American Health Policy" places the success or failure of specific pieces of U.S. health care legislation into social and political context. The course covers the time period from the U.S. Civil War to the 2010 Affordable Care Act (ACA), addressing two central questions: 1) Why was the United States one of the only industrialized nations to, until recently, have a private, non-nationalized, non-federalized health care system? 2) Why has U.S. health insurance historically been a benefit given through places of employment? Some topics addressed include: private health insurance, industrial health and worker’s compensation, the welfare state (in Europe, Canada, and the U.S.), maternal and infant care programs, Medicare and Medicaid. One of the main take-home messages of the course is that 20th-century U.S. health care policies both reflected and shaped American social relations based on race, class, gender, and age. This course is a combination lecture and "SAIL" class. SAIL stands for "Structured, Active, In-Class Learning." During many class periods, students will work in small groups on a specific exercise, followed by a large group discussion and/or brief lecture. Students who choose to take this course, therefore, must be fully committed to adequately preparing for class and to working collaboratively in class. (Note: the 2015 format will be somewhat different from the 2014 format).
Taught by: Johnson
One term course offered either term
Also Offered As: SOCI 152
Activity: Lecture
1 Course Unit
HSOC 152 Technology and Medicine in Modern America
Medicine as it exists in contemporary America is profoundly technological; we regard it as perfectly normal to be examined with instruments, to expose our bodies to many different machines; and to have knowledge produced by those machines mechanically/electronically processed, interpreted and stored. We are billed technologically, prompted to attend appointments technologically, and often buy technologies to protect, diagnose, or improve our health: consider, for example, HEPA-filtering vacuum cleaners; air-purifiers; fat-reducing grills; bathroom scales; blood pressure cuffs; pregnancy testing kits; blood-sugar monitoring tests; and thermometers. Yet even at the beginning to the twentieth century, medical technologies were scarce and infrequently used by physicians and medical consumers alike. Over the course of this semester, we will examine how technology came to medicine’s center-stage, and what impact this change has had on medical practice, medical institutions and medical consumers - on all of us!
Taught by: Johnson
Course usually offered summer term only
Also Offered As: STSC 162
Activity: Seminar
1 Course Unit

HSOC 179 Environmental History
This course provides an introduction to environmental history—the history of the interrelationship between humans and the rest of nature. In the words of historian J.R. McNeill, “Human history has always and will always unfold within a larger biological and physical context, and that context evolves in its own right. Especially in recent millennia, that context has co-evolved with humankind.” In this course we will study this co-evolution between human actors and non-human actors in global history, analyzing political, social, cultural and economic factors that affect ideas about nature and material effects on nature. We will consider the concept of the Anthropocene and study current environmental changes and challenges.
Taught by: Greene, A
Course not offered every year
Also Offered As: STSC 179
Activity: Lecture
1 Course Unit

HSOC 202 Scientific Revolution
During the 16th and 17th centuries, something that resembled modern science emerged from something that did not. Though the nature and cause of that transition are contested, there were unquestionably many pivotal developments in the content and conduct of science, and it is in this period that many of the “Founding” figures of science, from Copernicus to Galileo to Newton, are identified. This course will examine the many elements that went into the transition, including the revolution in cosmology, the revolt against ancient natural philosophy, the rise of experimentalism, the new philosophies of inquiry, new social structures for natural inquiry and the conceptual foundations of classical physics.
Taught by: VOELKEL
Course not offered every year
Also Offered As: STSC 202
Activity: Lecture
1 Course Unit

HSOC 206 Doing Good?: Humanitarianism and Global Health
This course will explore the current context of health policy, health reform, and health service delivery in the developing world. After examining global economic and political context of health care, students will analyze the role that economic development plays in promoting or undermining health. Students will examine key disease challenges such as tuberculosis, malnutrition, and HIV/AIDS.
Taught by: McKay
Course not offered every year
Activity: Seminar
1 Course Unit

HSOC 209 Race and Gender in Global Science
This course critically examines the creation of scientific conceptions of ‘race’ and ‘sex’ in the modern era and their global impact. How did ‘race’ and ‘sex’ come to be the primary categories through which human variation has been classified in the modern West? What concepts of “race” and “sex” did colonial scientists, doctors, naturalists, and other experts invent, and how and why did they do this? How have scientific conceptions of ‘race’ and ‘sex’ been adapted to fit the sociopolitical projects of formerly colonized regions? And how have recent developments in genomic science sought to reinvent these categories? With these questions in mind, this course challenges us to think critically about the political contexts in which conceptions of ‘race’ and ‘sex’ have been crafted as well as how they have been contested and re-defined.
Taught by: Gil-Riano
Course usually offered in spring term
Also Offered As: STSC 209
Activity: Seminar
1 Course Unit

HSOC 212 Science Technology and War
In this survey we explore the relationships between technical knowledge and war in the nineteenth and twentieth centuries. We attend particularly to the centrality of bodily injury in the history of war. Topics include changing interpretations of the machine gun as inhumane or acceptable; the cult of the battlefront; banned weaponry; submarines and masculinity; industrialized war and total war; trench warfare and mental breakdown; the atomic bomb and Cold War; chemical warfare in Viet Nam; and “television war” in the 1990s.

Activity: Lecture
1 Course Unit
**HSOC 216 Gender and Health**

Women's health is a constant refrain of modern life, prompting impassioned debates that speak to the fundamental nature of our society. Women's bodies are the tableaux across which politicians, physicians, healthcare professionals, activists, and women themselves dispute issues as wide-ranging as individual versus collective rights, the legitimacy of scientific and medical knowledge, the role of the government in healthcare, inequalities of care, and the value of experiential knowledge, among many others. Understanding the history of these questions is crucial for informed engagement with contemporary issues.

Taught by: Linker
Course not offered every year
Also Offered As: GWS 216
Activity: Seminar
1 Course Unit

**HSOC 219 Race, Science, and Globalization**

This course examines how the practice of sorting humans into distinct races is connected to the rise of modern science and to the economic globalization sparked by Columbus' arrival in the Americas in 1492. By examining the trajectory of race in science from the Iberian conquest of the Americas until the present, we will examine the ways in which colonial logics and structures persist into the present and the ways they've been disrupted by various revolutionary, anti-colonial, and anti-racist movements. Along the way, we will observe how cultural ideas about race have been woven into the conceptual fabric of modern scientific disciplines such as anthropology, biology, psychology, and sociology and how these disciplines have sought to redeem themselves from their racist pasts.

Taught by: GIL-RIANO
One term course offered either term
Also Offered As: STSC 219
Activity: Seminar
1 Course Unit

**HSOC 230 Fundamentals of Epidemiology**

This course introduces students to the basic tenets of epidemiology and how to quantitatively study health at the population level. Students learn about measures used to describe populations with respect to health outcomes and the inherent limitations in these measures and their underlying sources of data. Analytic methods used to test scientific questions about health outcomes in populations then are covered, again paying particular attention to the strength and weaknesses of the various approaches. Multiple large epidemiologic research and field studies are used as in-class exemplars.

Course usually offered in spring term
Activity: Seminar
1 Course Unit

**HSOC 232 Social Epidemiology**

Illness, crime, and other instances of social dysfunction do not happen in a vacuum, nor are they distributed randomly throughout society. The field of social epidemiology examines the influence of workplace, neighborhood, social relationships, and other nontechnological factors on health outcomes. This course gives students the skills to explore and assess complex health challenges that are seen in popular media and public discourse by examining such factors as healthcare access, social inequality, racism and discrimination, and trust and social capital. Using readings, videos and interactive discussions with a focus on emergent health issues, this course equips students to diagnose and interpret underlying reasons for poor health using social epidemiological tools, and to consider practical interventions to address those fundamental causes of illness.

Course not offered every year
Activity: Seminar
1 Course Unit

**HSOC 238 Introduction to Medical Anthropology**

Introduction to medical anthropology takes central concepts in anthropology – culture, adaptation, human variation, belief, political economy, the body – and applies them to human health and illness. Students explore key elements of healing systems including healing technologies and healer-patient relationships. Modern day applications for medical anthropology are stressed.

For BA Students: Humanities and Social Science S

One term course offered either term
Also Offered As: ANTH 238
Activity: Lecture
1 Course Unit

**HSOC 239 Global Health: Anthropological Perspectives**

In some parts of the world spending on pharmaceuticals is astronomical. In others, people struggle for survival amid new and reemerging epidemics and have little or no access to basic or life-saving therapies. Treatments for infectious diseases that disproportionately affect the world’s poor remain under-researched and global health disparities are increasing. This interdisciplinary seminar integrates perspectives from the social sciences and the biomedical sciences to explore 1) the development and global flows of medical technologies; 2) how the health of individuals and groups is affected by medical technologies, public policy, and the forces of globalization as each of these impacts local worlds. The seminar is structured to allow us to examine specific case material from around the world (Haiti, South Africa, Brazil, Russia, China, India, for example), and to address the ways in which social, political-economic, and technological factors – which are increasingly global in nature – influence basic biological mechanisms and disease outcomes and distribution. As we analyze each case and gain familiarity with ethnographic methods, we will ask how more effective interventions can be formulated. The course draws from historical and ethnographic accounts, medical journals, ethical analyses, and films, and familiarizes students with critical debates on globalization and with local responses to globalizing processes.

Taught by: Petryna
Course not offered every year
Also Offered As: ANTH 273
Activity: Seminar
1 Course Unit
HSOC 251 Foundations of Public Health
Many factors have shaped, and continue to shape, population health and public health policy. This course will explore the concept, mission, and core functions of public health. Students will have a chance to learn about its key methodological (epidemiology, biostatistics) and content (environmental health, social and behavioral sciences, health policy) areas. In addition, we will focus on topics of particular relevance to the current health of the public; topics likely will include the basics of life (food, water, and shelter) and topics of current interest (e.g., motor vehicle crashes, mental health, violence).
Taught by: Sorenson
One term course offered either term
Activity: Lecture
1 Course Unit

HSOC 260 Social Determinants of Health
Over the last century, we have witnessed dramatic historical change in population health, e.g., rising numbers of obese Americans and dramatic declines in death from stomach cancer. There has also been highly visible social patterning of health and disease, such as socio-economic disparities in AIDS, substance abuse, and asthma in the U.S. to day or the association of breast cancer with affluence around the world. This course will explore the way researchers and others in past and present have tried to make sense of these patterns and do something about them.
The course is historical and sociological. We will examine evidence and theories about how poverty, affluence and other social factors influence health and we will examine how social and historical forces shape the ways in which health and disease are understood.
Taught by: Johnson, A
Course not offered every year
Also Offered As: SOCI 259
Activity: Seminar
1 Course Unit

HSOC 262 Environments and Public Health
This course explores the relationship between local environmental conditions and health. Using historical case studies, we will consider a variety of questions: What factors (employment, pollution, local flora and fauna, racism, etc.) influence citizens' environment and health? How have insects, landscapes, and diseases shaped cultures or events in history? Was eighteenth- and nineteenth-century Philadelphia actually a good place to live? What was going on with all those basements and cobblestone streets in Old City? Would you rather work in a coal mine or a uranium mine? You will examine these issues through a mixture of readings, lectures, class discussion, short essays and a research project.
Taught by: Womack, J
Course usually offered in spring term
Activity: Seminar
1 Course Unit

HSOC 271 Greek & Roman Medicine
The history of Western medicine is remarkably recent; until the nineteenth century prevailing theories of the body and mind, and many therapeutic methods to combat disease, were largely informed by an elaborate system developed centuries earlier in ancient Greece, at a period when the lines between philosophy, medicine, and what we might consider magic, were much less clearly defined than they are today. This course will examine the ways in which the Greeks, and then the Romans, conceptualized the body, disease, and healing, and will compare these to medical culture of our time. We will consider sources from Hippocrates, Plato, and Aristotle to Galen and Soranus, and will juxtapose these writings with modern discourse about similar topics. We will also pay some attention to ancient pharmacology and religious healing, and will visit the Penn Museum to see their collection of ancient medical instruments. All readings will be in English and no previous background in Classical Studies is required. This course will be especially appealing (and useful) to Pre-med and Nursing students, and to students interested in the History of Science, Ancient Philosophy, and Classics.
Taught by: Rosen
Course not offered every year
Also Offered As: CLST 271
Activity: Seminar
1 Course Unit
Notes: Fulfills History Tradition Distribution Requirement

HSOC 273 Law, Medicine, and Public Policy
First the course will develop a perspective for viewing social problems drawn largely on my own work as well as that of Gusfelds and Edelman. Next we will explore the domains to which a physician’s expertise is limited using Weber, Rosen and others. We will then develop a perspective from anthropological and sociological literature on the courts as public arenas for articulating Durkheimian collective conscience.
All of this theory building is in the first half of the seminar. The second half of the course will involve intensive case study of a few dilemmas which have wended their way through the courts. I intend to look at “Baby Doe Regulations” and the Intensive Care Nursery; the problem of the cessation of life-supporting treatment; the legitimacy of mass screen - be it for genetic defects or substance abuse; and the propriety of surrogate motherhood.
Taught by: Bosk
Course usually offered in spring term
Also Offered As: SOCI 273
Activity: Lecture
1 Course Unit
HSOC 275 Medical Sociology
This course is designed to give the student a general introduction to the sociological study of medicine. Medical sociology is a broad field, covering topics as diverse as the institution and profession of medicine, the practice of medical care, and the social factors that contribute to sickness and well-being. While we will not cover everything, we will attempt to cover as much of the field as possible through four central thematic units: (1) the organization of development of the profession of medicine, (2) the delivery of health-care, (3) social cultural factors in defining health, and (4) the social causes of illness. Throughout the course, our discussions will be designed to understand the sociological perspective and encourage the application of such a perspective to a variety of contemporary medical issues.

HSOC 279 Nature’s Nation: Americans and Their Environment
The United States is “nature’s nation.” Blessed with an enormous, resource-rich geographically diverse and sparsely settled territory, Americans have long seen “nature” as central to their identity, prosperity, politics and power, and have transformed their natural environment accordingly. But what does it mean to be “nature’s nation?” This course describes and explores how American “nature” has changed over time. And how why has American nature changed over the last four centuries? What have Americans believed about the nation’s nature, what have they known about the environment, how did they know it and how have they acted on beliefs and knowledge? What didn’t or don’t they know? How have political institutions, economic arrangements, social groups and cultural values shaped attitudes and policies? How have natural actors (such landscape features, weather events, plants, animals, microorganisms) played roles in national history? In addition to exploring the history of American nature, we will look for the nature in American history. Where is “nature” in some of the key events of American history that may not, on the surface, appear to be “environmental?”

HSOC 302 Stem Cell Science in Schools: History, Ethics, and Education
This course will provide University of Pennsylvania and a local Philadelphia High School students with the opportunity to learn fundamental biology concepts and apply them in a hands-on, inquiry-based approach that is also attentive to society, history and social context. Biological sciences have long been deeply engaged with social issues, and our topics for this course reflect their relevance to everyday life. Topics of this course will include, but are not limited to, cell development and stem cell biology, which form the basis of the emerging field of Regenerative Medicine. Penn students will reinforce their learning of these concepts by mentoring high school students, demonstrations by Penn scientists, and a co-teaching method involving Penn faculty and a partnering high school teacher. A primary goal of this course is to expose both Penn and high school students to cutting edge science and its societal impact. Through this course Penn students will learn critical skills that can help them bring scientific ideas to professionals, and important to any educated professional.
Taught by: Shuda
Course not offered every year
Also Offered As: STSC 302
Activity: Lecture
1 Course Unit

HSOC 312 Weapons of Mass Destruction
The course explores the historical development of traditional weapons of mass destruction such as chemical, nuclear and biological agents, in addition to newer and seemingly non-traditional weapons such as land mines and civilian aircraft that can also be employed to cause large numbers of injuries and deaths among civilian and military populations. Through case studies in technology and public health, students will evaluate the medical, scientific, environmental, and cultural ramifications of these weapons and their effect on human heal and society by analyzing the rise of the military-industrial-academic-complex in twentieth century America.

HSOC 334 Birth Culture and Medical Technology
How we are born and give birth can vary more than most people realize. Until the rise of medical technology, women gave birth at home surrounded by other women. Now, the majority of Americans are born in hospitals, and a large percentage of those birth are the result of surgical interventions. This course will explore the medicalization of birth, as well as the movements dedicated to promoting home birth, natural birth, and midwifery. Many of the readings will examine birth from an unapologetically feminist and/or holistic perspective, and we will discuss the psychological, political, cultural and spiritual dimensions of birth practices. We will also consider the impact of increasingly sophisticated medical technology on conception and pregnancy, including in vitro fertilization, surrogate mothers, and extending the childbearing years well into late life. An important theme throughout will be the concept of “appropriate technology” – which technologies are appropriate and who decides? Readings will be drawn from a number of sources, principally midwifery, nursing, and medical journals.

HSOC 335 Healthy Schools
This academically based community service research seminar will develop a pilot program to test the efficacy of using service-learning teams of undergraduates and graduate students to facilitate the development of School Health Councils (SHCs) and the Center for Disease Controls School Health Index (SHI) school self-assessment and planning tool in two elementary schools in West Philadelphia. This process is intended to result in a realistic and meaningful school health implementation plan and an ongoing action project to put this plan into practice. Penn students will involve member of the school administration, teachers, staff, parents and community member in the SHC and SHI process with a special focus on encouraging participation from the schools' students. In this model for the use of Penn service-learning teams is successful, it will form the basis of on-going partnership with the School District's Office of Health, Safety & Physical Education to expand such efforts to more schools.

HSOC 337 Race and Medicine in the Global South
Racialized medical provisions under Apartheid in South Africa, theories of racial immunity to malaria in the Philippines and contemporary investigations of caste-based disease risks in India are some of the topics to be covered in this course. From the more straightforward issues of racial discrimination in medicine, to more complex issues of racial immunity or racial susceptibility to disease, medicine and race have been entangled together in multiple ways. More importantly these issues are far from being matters of the past. Genomic medicine and risk society have combined to make race and medicine one of the most potent contemporary issues. Outside the Western World, in the Global South, these issues are further refracted through local cultural, historical and political concerns. This course will take a long-term view of these contemporary issues.

HSOC 338 Hybrid Science: Nature, health, and society in Latin America
What role did science and medicine play in the creation and growth of the Spanish and Portuguese empires? And why was the creation of science and health institutions crucial to the revolutionary movements for independence in Latin America? This course examines science and medicine in Latin America by attending to the ways that knowledge of nature and health has been central to the political struggles of the countries in this region. A crucial dynamic shaping the history and culture of this region is the interplay between the healing practices and cosmologies of European settlers, indigenous Americans, and the descendants of African slaves. Bearing this interplay in mind, this course explores how Latin America has been a fertile site of scientific creativity. It also examines the ways in which Latin American scientists and medical experts have refashioned concepts and practices from Europe and North America to fit local circumstances.

HSOC 339 Women in Medicine
Today in the US almost half of all medical students are women and female physicians comprise roughly one third of the workforce. However, some statistics are still troubling, including the number of African American women who pursue advanced medical degrees. This course will trace the evolution of women practicing medicine over several centuries, exploring how various cultural, societal, and intellectual norms differed over time while challenging the assumption of linear progress towards equality. While the focus will be on American medicine, including field trips to archives and historical landmarks within Philadelphia, the coursework also includes international case studies and cultural comparisons to help position local issues within a wider and more complicated narrative. Considering both the historical and contemporary contexts for interconnected issues such as bias, motherhood, and burnout, we will analyze challenges and strategize potential solutions for the next generation of women seeking careers in medicine.

HSOC 348 Current Issues in Global Health
This course examines current world events through the lens of public health. The course will focus on six key questions: 1) What does health infrastructure look like in different parts of the world, and how is it working or failing different groups of people? 2) What public health opportunities and challenges are created by the rise of megacities? 3) What unique public health challenges are created by modern-day proxy wars and refugee flows, and what is the role of health professionals in responding to human disasters? 4) How are fertility patterns and changes in life expectancy impacting different societies? 5) How is climate change altering the global health landscape? 6) What might the next global pandemic look like? We will discuss these questions in class using a mixture of scholarly and popular texts, and you will conduct and present your own secondary research into one of these topics.

HSOC 352 Medical Mestizaje: Health and Development in Contemporary Latin America
Latin American nations as we know them today emerged in the nineteenth century after violent independence struggles against the Spanish Empire. Since independence, mestizaje has been an influential ideology that seeks to portray the identity of Latin American nations as comprised of a unique cultural and racial fusion between Amerindian, European, and African peoples. Through historical, anthropological, and STS approaches this course examines how concerns with racial fusion and purity have shaped the design and implementation of public health programmes in Latin America after independence and into the 20th century. Topics include: tropical medicine and race; public health and urbanization; toxicity and exposure in industrialized settings; biomedicine and social control; indigenous health; genomics and health; food and nutrition.

HSOC 370 The Many Lives of Data: Population, Environment, and Planning in the United States, 1850 to the Present  
This is a class about the live(s) and afterlives of information from 1850 to the present. Not only can information be reproduced (in a variety of material conditions); it can be repurposed and funneled through a variety of different applications, some of them serving radically different purposes than the first purpose of gathering it. Thoreau’s journals of plant flowering, for instance, have become important indicators of climate change. More controversial is the sale of biomedical information by personal genomics services for drug discovery, or the construction of forensic databases consisting of the DNA of suspects arrested as a result of racial profiling. We will study the ways in which data has become a way for us to understand and define change, stability, place, and time, beginning in the mid-nineteenth century, a period of accelerated and increasingly systematic gathering of data, particularly medical, forensic, and environmental data. The class will proceed both chronologically and thematically in three units, from the gathering and use of biomedical data as a way to make patient populations “legible” (to borrow from James Scott), to data as a way to make the environment understandable, and finally to data as a tool for producing and reproducing social relations. As a final project, students will trace a particular data set from its original gathering to its latest usage. Students will also have an opportunity to create their own course content in the final three weeks of class.

HSOC 379 Animals in Science Medicine Technology  
This course explores human-animal relationships: the wide range of these relationships, why they originated and how they have changed over time. How have humans classified, valued, utilized, consumed, behaved toward and understood animals? Where is the boundary between humans and other animals, and how do we know, since humans are also animals? How is that boundary been maintained and redefined? Are humans part of the animal “natural” world- or apart from it? How are humans similar to and different from other kinds of animals? How do we know about animals and what is it we know? To what extent are questions about animals really questions about humans? How has the meaning of animal changed over time? The course focuses in particular to the roles and relationships of animals within science and medicine, and as biotechnologies.

Also Offered As: STSC 379  
Activity: Seminar  
1 Course Unit  

HSOC 382 Public Health & Violence  
This course will address two health concerns of long-standing controversy: the role of guns in population health and violence in relationships. We will adopt a healthy skepticism about the assumptions and ideologies that currently dominate formal and informal discourse about these topics. A life span perspective- guns from design through use, and abuse from childhood through late life- will be grounded in a public health injury prevention framework. As a function of this approach, we will examine key aspects of the social context in which guns and abuse exist and within which related policies are formulated. Students are encouraged to examine their perceptions about these issues so that they can become more effective members of a society that appears to maintain a deep ambivalence about guns and about violence in relationships.

HSOC 391 Bioethics and National Security  
At least since Augustine proposed a theory of “just war,” armed conflict has been recognized as raising ethical issues. These issues have intensified along with the power and sophistication of weapons of war, and especially with increasing engineering capabilities and basic knowledge of the physical world. The life sciences have had their place in these developments as well, perhaps most vividly with the revelations of horrific experiments conducted by the Nazi and Imperial Japanese militaries, but with much greater intensity due to developments in fields like genetics, neuroscience and information science, and the widely recognized convergence of physics, chemistry, biology and engineering. The fields of bioethics and national security studies both developed in the decades following World War II. During the cold war little thought was given to the fact that many national security issues entail bioethical questions, but this intersection has been increasingly evident over the past two decades. In spite of the overlapping domains of bioethics and national security, there has been remarkable little systematic, institutional response to the challenges presented by these kinds of questions: - What rules should govern the conduct of human experiments when national security is threatened? - Is it permissible to study ways that viruses may be genetically modified in order to defeat available vaccines, even for defensive purposes? - What role may physicians or other health care professionals play in interrogation of suspected terrorists? - Must warfighters accept any and all drugs or devices that are believed to render them more fit for combat, including those that may alter cognition or personality? - What responsibilities does the scientific community have to anticipate possible “dual purpose” uses or other unintended consequences of its work? Deploying the resources of ethics, philosophy, history, sociology and theory, this course will address these and other problems.

HSOC 411 Sports Science Medicine Technology
Why did Lance Armstrong get caught? Why do Kenyans win marathons? Does Gatorade really work? In this course, we won’t answer these questions ourselves but will rely upon the methods of history, sociology, and anthropology to explore the world of the sport scientists who do. Sport scientists produce knowledge about how human bodies work and the intricacies of human performance. They bring elite (world-class) athletes to their laboratories or their labs to the athletes. Through readings, discussions, and original research, we will find out how these scientists determine the boundary between “natural” and “performance-enhanced,” work to conquer the problem of fatigue, and establish the limits and potential of human beings. Course themes include: technology in science and sport, the lab vs. the field, genetics and race, the politics of the body, and doping. Course goals include: 1) reading scientific and medical texts critically, and assessing their social, cultural, and political origins and ramifications; 2) pursuing an in-depth The course fulfills the Capstone requirement for the HSOC/STSC majors. Semester-long research projects will focus on “un-black-boxing” the metrics sport scientists and physicians use to categorize athletes’ bodies as "normal" or "abnormal." For example, you may investigate the test(s) used to define whether an athlete is male or female, establish whether an athlete’s blood is "too" oxygenated, or assess whether an athlete is "too" fast (false start). Requirements therefore include: weekly readings and participation in online and in-class discussions; sequenced research assignments; peer review; and a final 20+page original research paper and presentation. HSOC 429 The Neurological Condition
Few aspects of our physical makeup are as closely linked to who we are as people as the nervous system. We define ourselves by our capacity to think, to react, by our memories. In large part, we believe we are our brains. Yet such perceptions have a history far deeper than our current neuro-obsessed moment. In this course we explore the neurological condition as the human condition: the growing sense since the nineteenth century that we are defined by our nervous systems, and the science that has fostered this vision. From theories of diminishing "nerve force" and the electric cures of the Victorian era, to fMRIs and Obama’s 2013 BRAIN Initiative, we explore how science, medicine, and technology have shaped our understanding of the brain and nervous system as the center of human identity. Course topics include the rise of professional neurology and neuroscience, cultural meanings of nerves and the brain, and the intimate role of patients and human subjects in formulating this science from the nineteenth century to the present. HSOC 432 Medical Activism and the Politics of Health
During the second half of the twentieth century, overlapping waves of social reform movements agitating for civil rights, women’s rights, peace, environmentalism, and gay rights reshaped the U.S. political and cultural landscape. Physicians, other health care professionals, and organized patient groups played important roles in all of these movements. This seminar investigates the history of this medical activism, making special use of the Walter Lear Collection in Penn Libraries’ Kislak Center. Readings, discussions, and student research projects analyze the relationships between this history and the political dimensions of individual and population health in the late twentieth century. Taught by: Barnes

HSOC 436 Biopiracy: Medicinal Plants and Global Power
Biopiracy has emerged as the name of conflict between multinational pharmaceutical companies attempting to get genetic patents on medicinal plants and indigenous communities in the Global South who have long known and used these plants for medicinal purposes. Today the story of Biopiracy is an unfolding story of plants, patents and power. The extraction and commercial exploitation of plants and knowledge about them from the Global South however is not new. It has been happening at increasing pace for at least the last two centuries. Both the anti-malarial drug quinine and the cancer drug vincristine for instance have their plant-origins in the Global South where local communities used them medicinally long before their discovery by biomedicine. This course will put the current debates around Biopiracy in context and explore how the entanglements of plants and power have changed or not changed.

HSOC 442 Hospital as Curing Machine
This course examines the technological, scientific, and spatial evolution of the modern hospital from the miasmatic, vermin-infested medieval European hospital-as-alms house, to the late twentieth-century ideal of the modern hospital as a condenser of sophisticated technologies, scientific expertise, and Taylorist efficiencies. In so doing we will see how designers of hospital space, consciously or not, have striven to realize the mechanized, technological vision of the hospital as curing machine a phrase first invoked by 18th century French surgeon and anatomist Jacques Tenon. While the early nineteenth-century hospital had been a locus for fears about contagion, death, and disease in a pre-germ theory world, through its eventual integration of antiseptic practices, spatially produced zones of medical expertise (the operating suite, the laboratory, pediatric and maternity wards), novel technologies (incubators, hyperbaric chambers, x-rays, ultrasounds) and factory-like efficiencies the hospital came into its own as the epitome of rational modernist space. But, over the course of its evolution, the modern hospital other change as well as an incubator for superbugs, as an engine for projects and renewal, and as a site for the cultural transformation of the meaning of birth, death, and health itself.

1 Course Unit

HSOC 448 Bodies, Gender, Science, and Medicine
Americans’ ideas about gender and sex have changed dramatically since the 19th century. But what roles have science and medicine played in these changes? How have shifting biological, psychological, cultural and political ideas about femininity and masculinity shaped our experiences of health, illness, sex and reproduction? How have these ideas about gender and sexuality influenced the creation of, participation in, institutions, technologies and experiences of our modern healthcare system? Drawing from the history of science, medicine and technology as well as gender studies, bioethics and disability studies, students in this class will examine a wide array of topics that address these questions, exploring how deeply rooted historical, political and social forces have shaped the relationship between gender and medicine.

HSOC 458 Environments and Health
Do classrooms’ fluorescent lights give you headaches? Have you ever felt invigorated by a mountain’s breeze? Have you ever sought to get a “healthy” tan at the beach? Throughout history people have attributed their health – good and bad – to their physical surroundings. In this class we will explore how medical professionals, scientists and the general population have historically understood the ways in which the environment impacts different people, in different places, in different ways. We will interrogate medical theories that underpinned popular practices, like health tourism, public health campaigns, and colonial medical programs. We will also consider how people constructed and understood the physical environment, including farms and factories, cemeteries and cities, to be healthy or not. This course is designed to foster a collaborative atmosphere in which students will complete an original research paper through critical reading and step-wise assignments that will culminate in a final project.
Taught by: Ornic
Course not offered every year
Activity: Seminar
1 Course Unit
HSOC 461 The Child in the City
This course examines the problem of the child in urban space in 19th and 20th century European and American discourses. This course does not propose to recover the subjective experience of the child but, rather, views the child as an object around which numerous adult anxieties connected to industrialization, urbanization, and modernity itself cohered. Discourses on public health, environmental pollution, sexuality, criminality, and racial degeneration all focused their attention, anxieties, and energies on how to deal with the unique vulnerability of the child in modern urban space. This interdisciplinary course focuses specifically on atmospheres, environments, and architectures in urban settings as diverse as Chicago, New York, Paris, and London. We will examine how the built environment was envisioned as part of a set of critical technologies for resolving the threat that urban space posed to the child. We will explore objects and envir as diverse as tenement baby cages, wartime floating hospitals, open-air schools, adventu playgrounds in post-WWII London, car-less communities in Radburn, NJ, and American chil books about urban blight and renewal.

HSOC 462 Seeking Health: Tourism, Medicine in America 1800-2000
Summer camps, spring break, and trips to the beach, mountains, and national parks: vacations are an integral part of American culture. Often we talk and think about traveling for its ability to rejuvenate our tired bodies and spirits. Although tourism only developed over the past 100 years, the tradition of traveling for health has a much deeper history. This course will examine how different people in different times have understood the connections between travel and health, and how technologies have and continue to mediate those experiences. Over the course of the semester students will complete an original research paper through critical reading and step-wise assignments that will culminate in a final project. By the end of the semester, students will have honed their skills in primary and secondary source research, the construction of an academic argument and paper, and will continue to develop skills in critical analysis through weekly reading assignments.

Health Care Innovation (HCIN)

HCIN 600 The American Health Care System
This course surveys the historical development of the American health care system from the turn of the Twentieth Century to the present. We examine the logic, economics, and implementation of the system’s basic structural components from insurance, to hospitals, to models for compensating physicians and nurses. We review many attempts at reform, and discuss why they failed. We analyze in detail the passage of the Affordable Care Act, the Supreme Court’s rulings, and its provisions on access, cost control, quality, workforce, and financing. And we begin to consider some of the directions in which the American health care system may evolve next.
Course usually offered in fall term
Activity: Online Course
1 Course Unit
HCIN 601 Health Care Operations
The word "operations" derives from the Latin "opus," and opus means work. So by definition, operations is about work. This course offers an introduction to operations management: after completing the course, you will be able to use a systematic approach for analyzing and improving your work in health care settings. This will benefit patients, teams of care providers, and staff. The course includes an examination of inefficiencies resulting from the three system inhibitors: waste, variability, and inflexibility. And it provides strategies for engaging in the ongoing process of reducing these negative impacts without sacrificing quality of care. This course offers an introduction to operations management, examining inefficiencies from waste, variability, and inflexibility and providing strategies for engaging in the ongoing process of reducing these negative impacts without sacrificing quality of care. After completing the course, learners will be able to use a systematic approach for analyzing and improving their work in health care settings.
Activity: Online Course
1 Course Unit

HCIN 602 Behavioral Economics and Decision Making
Behavioral economics is a relatively new field at the intersection of economics and psychology. This course offers an introduction to behavioral economics and its applications to health and health care. In it, we will examine the key conceptual underpinnings of the field. We will discuss in detail the structure of the choice environment and the ways that people are influenced by how choices are structured. We will consider the design of incentives and various approaches used to "supercharge" incentive programs using behavioral economics principles. We will consider the use of social incentives and social comparisons as a way of achieving better physician performance. We will conclude with a description of how behavioral economics is used in public policy, as well as the interesting question of when a "nudge" becomes a shove.
Activity: Online Course
1 Course Unit

HCIN 603 Evaluating Health Care Policy and Programs
This course serves as an overview of fundamental concepts and empirical methods in the analysis of health policies and programs. It offers a pragmatic, applied approach to the subject, focusing on how the learner can use evaluation methods in practice. This course surveys key concepts in evaluation, such as confounding, selection bias, non-random assignment, the counterfactual, and matching. It examines the notion of internal versus external validity, and their influence on methodological choice. It covers empirical methods including randomized controlled trials, regression discontinuity design, difference-in-differences or interrupted time series methods, matching, and instrumental variables. Real-world policies and evaluation examples illustrate concepts and applications of methods.
Activity: Online Course
1 Course Unit

HCIN 604 Health Economics
Health economics applies economic principles to the health care sector. By recognizing the importance of scarcity and incentives, it focuses on the critical economic issues in producing, delivering, and financing health care. It analyzes determinants of demand for medical care, the unique role of physicians in resource allocation, the role of health insurance, and competition in medical care markets.

HCIN 607 Translating Ideas into Outcomes
This course applies state-of-the-art innovation methodologies to improve health care delivery for providers, and outcomes and experience for patients. It begins with an extended discussion of how we might apply principles of analytical and scientific thinking including rhetorical analysis and behavioral economics to operational problems in health care. And it examines strategies for identifying and solving those problems; including ethnographic research to reveal what others have missed; problem reframing to enable high-impact solution directions; intentional diversions to unlock teams from initial, less productive concepts; rapid hypothesis validation to learn quickly at low cost whether and how best to invest in scaling; and designing delightful experiences, which drive word-of-mouth and catalyze the spread of desirable behaviors.
Activity: Online Course
1 Course Unit

HCIN 608 Analyzing Incentives and Health and Benefit Design
Recent efforts to increase the amount of health produced through health insurance benefits relative to the cost have utilized a number of strategies. These have included high deductible plans, price transparency, value-based insurance design, simplifying health plan designs, and providing incentives geared to encouraging utilization. In this course, we will discuss some of the main challenges facing health insurers, efforts to reduce growth in entitlement spending, and research that focuses on the effectiveness of different strategies to modify behavior through the use of incentives embedded within health insurance design. This course will emphasize both understanding and practical applications of this knowledge through a combination of lectures and interviews with expert practitioners. Following completion of this course, students will have a deeper understanding of some of the tradeoffs inherent in the approaches insurers are taking to provide greater value and health improvement for their beneficiaries.

HCIN 609 Becoming a More Persuasive Person
Learn to deal more effectively with the internal, external, business, work-life, political, and other issues facing medical professionals today. Being right often is not enough— one must deal with the emotional issues of patients, sited departments, lawyers, and myriad stakeholders. This highly interactive course teaches a process that one can master to meet goals in any situation, including kids, family, friends, hard-bargainers, and different cultures. Participants will negotiate throughout the class, including trying to solve their own real-life problems. This course has been used by Google, U.S. Special Operations, hospitals, doctors, nurses, pharmaceutical firms, and everything in between. The Wall Street Journal's career site called the book that outlines the model, Getting More, the " #1 book to read for your career."
Activity: Online Course
0.5 Course Units
HCIN 610 Case Studies in Clinical Innovation
To become future leaders of health care innovation, students must gain skills in diagnosing the roadblocks to an optimally functioning, high-value health care delivery system and designing actionable solutions that can chart the path forward. This course uses case studies in health care innovation to foster the development of skills that undergird clinical innovation: health systems analysis, strategic problem-solving, clinical care re-design, implementation assessment, and policy development. We will explore a complex network of factors influencing health systems performance, the key ingredients for change, and how to integrate these factors to solve real world problems. Upon completion, students will be able to deconstruct complex problems in clinical care to identify nodal points for change; recognize the complex array and interplay of factors that influence clinical care outcomes; diagnose pivotal points for innovative solutions; build models for change that target pivot points to reset care delivery; embrace complex solutions and develop sustainable plans to change course; and work nimbly in multi-disciplinary teams to potentiate problem solving and innovative solutions to enduring problems.
Activity: Online Course
0.5 Course Units

HCIN 611 Driving Value in the System
Engage in understanding the current goals of improving value—defined by quality over costs—in the health care system and drivers of improved value. Most policy experts agree that by focusing on value then we will be able to unite the different groups within the health care delivery system to help fix our current issues. Students who successfully complete this course will be able to discuss the payer drivers to increase value, measure quality, measure cost, deliver an elevator speech for resources to improve value, and select tools to implement a project to improve value.
Activity: Online Course
0.5 Course Units

HCIN 612 Ethics in Health Care Innovation and Research
This course explores a framework for conducting research, including process improvement experiments, in health care. We will review the history of research ethics and traditional guidelines and codes, and will describe federal regulations governing biomedical and behavioral research. We will then delineate a commonly accepted framework for evaluating the ethics of research and how this framework applies to several systems research projects. Upon completing this course, students will be able to critically evaluate the ethics of their specific research proposals, and will be prepared to justify their proposals to participants, funders, and institutional review boards or research ethics committees.
Course usually offered in fall term
Activity: Online Course
0.5 Course Units

HCIN 614 Health Law Fundamentals
Examine the legal and regulatory aspects of the United States health care delivery and financing systems. This course explores how statutes, regulations, common law, and market forces help or hinder three major goals of policy makers: increasing access, reducing cost, and improving quality. We will examine the Supreme Court’s rulings on the ACA and other legal aspects of modern health care reform. Casebook readings are supplemented by government publications, academic articles, and policy materials. The course also includes extensive additional readings on the Patient Protection and Affordable Care Act. Students who successfully complete this course will be able to describe the laws, regulations, common law, and market forces that shape our health care system and identify areas where ideas and innovation are needed; explain the malpractice system and how it influences medical practice; and analyze legal aspects of the ACA.
Activity: Online Course
0.5 Course Units

HCIN 615 Policy Making in Health Care
How is health policy developed, decided, and executed? We are cognizant of legislation in its final, enacted form—but what precedes it, and how is it shaped? This course will take students from the offices of policymakers to the floor of the House and Senate, to the offices of physicians and providers. The course will examine what foundational elements are necessary to pass any piece of legislation and the process through which a law comes to fruition. Key health care legislation—Medicare, “Clinton Care,” CHIP, and the ACA—will all be examined through the lens of policy development. Upon completing the course, students will be able to define the specific decisions, actions, and agendas in order to, ultimately, propel health care policymaking.
Activity: Online Course
0.5 Course Units

HCIN 616 Improving Global Health
This course will review major issues related to the delivery of health services in low- and middle-income countries. The course will examine trends in health-related foreign aid; assess the performance of major donor-funded health initiatives; and review efforts of countries such as Brazil, India, and South Africa to improve the health of their populations through initiatives such as expanded health insurance. In addition, this course will analyze the demand- and supply-side barriers to improving health in low-income countries while also reviewing innovative service delivery models and behavioral interventions. Upon completing the course, students will have a better understanding of prominent health initiatives in developing countries, the financing and delivery of health services, and innovative solutions that have the potential to be implemented at scale in the future.
Activity: Online Course
0.5 Course Units
HCIN 617 Transformation of Health Care in the Real World
A number of best practices show promise in improving care, including open access scheduling, care coordinators, physician extenders, medical homes, and connected technologies. But there are two forces that keep these best practices from spreading and from having the transformative results they are capable of delivering. First, health care is complex and a best practice that works well for hip replacement might not be right for the management of a chronic condition. Second, implementation in the real world is more than identifying a best practice and declaring it as the new standard for care delivery. An organization has to first understand the new practice and how it should be applied to a new setting, involving both technical solutions and changes to management systems. Finally, a successful transformation requires a change in providers' mindsets and behaviors. The purpose of this course is to teach participants about successful transformative practices in various parts of the health care system, enabling them to lead initiatives to transform their own medical organization. Students will hear from practitioners what works, learn from academics why the practice works and what are alternatives, and discuss with practitioners how the practice was rolled out. Topics will include scheduling and appointment management, welcoming the patient, care delivery in the process flow paradigm, care delivery with more complex patients, discharge and follow-up, and financial viability.
Activity: Online Course
1 Course Unit

HCIN 990 Master of Health Care Innovation Capstone Planning
In the planning phase of the Master of Health Care Innovation capstone project, students begin to prepare a project plan. They will meet with a faculty advisor, confirm the project topic, identify relevant source materials, and consider evaluation and obtaining buy-in. If relevant, students will conduct a literature or policy review, hold initial conversations with stakeholders, and begin the IRB approval process. Students will complete a deliverable, agreed upon with the faculty advisor, to be submitted at the end of the planning phase.
Course usually offered in spring term
Activity: Online Course
0.5 Course Units

HCIN 991 Master of Health Care Innovation Capstone Review
In the review phase of the Master of Health Care Innovation capstone project, students will develop a concrete project plan. The plan includes the project protocol, milestones, and metrics for success. Throughout this phase, students will meet with their faculty capstone advisor to discuss objectives, choose evaluation mechanisms, and troubleshoot foreseeable problems.
Course usually offered in fall term
Activity: Online Course
0.5 Course Units

HCIN 992 Capstone Implementation During this course, Master of Health Care Innovation students carry out their summative capstone projects, executing the plan they laid out in Phase 2: Capstone Review. At the end of the course, students will be required to submit a final report on the project, and to lead a presentation about the project to faculty and fellow classmates.
In the implementation phase of the Master of Health Care Innovation capstone project, students will execute the project plan they developed in the review phase. Throughout this phase, students will run their intervention, collect and analyze data, and submit a final report and presentation to faculty and fellow students.
Course usually offered in fall term
Activity: Online Course
1 Course Unit

Health Care Management (HCMG)

HCMG 101 Health Care Systems
This introductory course takes a policy and politics angle to health care's three persistent issues - access, cost and quality. The roles of patients, physicians, hospitals, insurers, and pharmaceutical companies will be established. The interaction between the government and these different groups will also be covered. Current national health care policy initiatives and the interests of class members will steer the specific topics covered in the course. The course aims to provide skills for critical and analytical thought about the U.S. health care system and the people in it.
Taught by: Harrington/Polsky
One-term course offered either term
Activity: Lecture
1 Course Unit

HCMG 202 The Economics and Financing of Health Care Delivery
The course provides an application of economic models to demand, supply, and their interaction in the medical economy. Influences on demand, especially health status, insurance coverage, and income will be analyzed. Physician decisions on the pricing and form of their own services, and on the advice they offer about other services, will be considered. Competition in medical care markets, especially for hospital services, will be studied. Special emphasis will be placed on government as demander of medical care services. Changes in Medicare and regulation of managed care are among the public policy issues to be addressed.
Taught by: Candon
One-term course offered either term
Also Offered As: ECON 039
Prerequisites: Economics 1 or consent of instructor. Students who take HCMG 202 may not also take HCMG 352 for further credit.
Activity: Lecture
1 Course Unit

HCMG 203 Clinical Issues in Health Care Management: Doctors, Patients and Managers in Modern Society
This course will explore the effects of the changing health care environment on the physician, patient and health care manager. It is intended for any undergraduate with an interest in how 1/6th of the American economy is organized as well as those planning careers as health care providers and managers. The course complements other health care courses (that take a societal perspective) by focusing on the individuals who participate in the health care enterprise. There are no prerequisites, as the course will stand on its own content. The course will be divided into modules that focus on the participants of the health care process and the process itself. We will analyze the patient, the doctor, and manager in light of the patient-doctor interaction, the turbulent health care marketplace, expensive new technologies, resource allocation, and ethics.
Taught by: Asch
Course usually offered in spring term
Activity: Lecture
1 Course Unit
HCMG 204 Comparative Health Care Systems
This course examines the structure of health care systems in different
countries, focusing on financing, reimbursement, delivery systems and
adoption of new technologies. We study the relative roles of private
sector and public sector insurance and providers, and the effect of
system design on cost, quality, efficiency and equity of medical services.
Some issues we address are normative: Which systems and which
public/private sector mixes are better at achieving efficiency and equity?
Other issues are positive: How do these different systems deal with tough
choices, such as decisions about new technologies? Our main focus
is on the systems in four large, prototypical OECD countries—Germany,
Canada, Japan, and the United Kingdom—and then look at other countries
with interesting systems— including Italy, Chile, Singapore, Brazil, China
and India. We draw lessons for the U.S. from foreign experience and vice
versa.
Taught by: TBA
Course usually offered in spring term
Also Offered As: HCMG 859
Activity: Lecture
1 Course Unit

HCMG 212 Health Care Quality and Outcomes: Measurement and
Management
This course will familiarize students with methods used to assess the
quality of hospital or provider health care using outcomes data, and
to understand and evaluate studies involving health care outcomes.
Students are exposed to the mechanics of hospital quality evaluation
and challenged to evaluate the medical and health services research
literature on health care evaluation, as well as to make inferences
regarding hospital quality and the comparison or rankings of hospitals
or providers. Topics will include the history of health care outcomes
analysis; the conceptual framework for outcome studies; consumer
demand for information; an overview of medical data and data collection
systems; a description of outcome statistics and severity adjustments
currently in use; the study of excess variation in outcomes; and the use
of guidelines to assess outcomes. By the end of the course, the students will
have developed a thorough appreciation of the current methods used by
policy makers, researchers, and health care providers to evaluate medical
outcomes, as well as those used by consumers to choose hospitals and
providers.
Taught by: Silber
Course usually offered in spring term
Prerequisite: Introductory Statistics or permission of instructor
Activity: Lecture
1 Course Unit

HCMG 213 Health Care Strategy and Management: the Business of
Health Care
This course presents an overview of the business of health and how
a variety of health care organizations have gained, sustained, and
lost competitive advantage amidst intense competition, widespread
regulation, high interdependence, and massive technological, economic,
social and political changes. Specifically, we evaluate the challenges
facing health care organizations using competitive analysis, identify
their past responses, and explore the current strategies they are using to
manage these challenges (and emerging ones) more effectively. Students
will develop generalized skills in competitive analysis and the ability to
apply those skills in the specialized analysis of opportunities in producer
(e.g. biopharmaceutical, medical product, information technology),
purchaser (e.g. insurance), and provider (e.g. hospitals, nursing homes,
physician) organizations and industry sectors. The course is organized
around a number of readings, cases, presentations, and a required
project.
Taught by: Kimberly Swanson
Course usually offered in fall term
Activity: Lecture
1 Course Unit

HCMG 215 Management and Economics of Pharmaceutical and Biotech
Industries
This course provides an overview of the management, economic and
policy issues facing the pharmaceutical and biotechnology industries.
The course perspective is global, but with emphasis on the U.S. as
the largest and most profitable market. Critical issues we will
examine include: R&D intensive cost structure and rapid technological
change; biotech startups and alliances with the pharma industry; pricing
and promotion in a complex global marketplace where customers
include governments and insurers, as well as physicians, pharmacists
and consumers. We use Wharton and industry experts from various
disciplines to address these issues.
Taught by: Alpert
Course usually offered in spring term
Prerequisite: One undergraduate Health Care Management course or
Economics course
Activity: Lecture
1 Course Unit

HCMG 216 Health Insurance and Health Care Strategy
This course combines the insights of health economics with a strategic
perspective on the business of health. The first section will consider the
costs and benefits of medical interventions, while the second considers
insurance theory and places special emphasis on the challenges
facing firms in the face of the rising costs of health benefits as well
as opportunities for private insurers operating in publically financed
markets. The third section will analyze strategies of vertical and
horizontal integration and their effect on the balance of power in local
healthcare markets. Finally, the course will cover the effects of reform
on firm incentives. The course will be taught using a mix of lectures and
cases.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
HCMG 250 Health Policy: Health Care Reform and the Future of the American Health System
This course will provide students a broad overview of the current U.S. healthcare system. The course will focus on the challenges facing the health care system, an in-depth understanding of the Affordable Care Act (ACA) and of its potential impact upon health care access, delivery, cost, and quality as well as its effect on firms within the health care sector. The course will examine potential reforms, including those offered by liberals and conservatives and information that can be extracted from health care systems in other developed countries. The course will also explore key facets of the ACA, including improving access to care and health insurance exchanges, improving quality and constraining costs through health care delivery system reforms, realigning capacity through changes in the health care workforce and in medical education, the potential impact on biomedical and other innovations, and the impact on economic outcomes such as employment, wage growth, and federal budget deficits. The course will also examine the political context and process of passing major legislation in general and health care legislation in particular, including constitutional arguments surrounding the Affordable Care Act. Throughout the course, the key lessons will integrate the disciplines of health economics, health and social policy, law and political science to elucidate key principles.
Taught by: Emanuel
Course usually offered in fall term
Also Offered As: B1OE 575, HCMG 850
Activity: Lecture
1 Course Unit

HCMG 302 Economics and Financing of Health Care Delivery
This course provides an application of economic principles to the health care sector. By recognizing the importance of scarcity and incentives, this course will focus on the critical economic issues in producing, delivering, and financing health care. In particular, the course will analyze determinants of demand for medical care, such as health status, insurance coverage, and income; the unique role of physicians in guiding and shaping the allocation of resources in medical care markets; and competition in medical care markets, especially among hospitals. Special emphasis will be placed on the evaluation of policy instruments such as government regulation, antitrust laws, 'sin taxes' on cigarettes and alcohol, and public health programs. This course is similar to HCMG 202, but uses more advanced quantitative methods and formal economic theory; knowledge of calculus and basic microeconomics is recommended. Students who take HCMG 302 may not also take HCMG 202 (ECON 039) for further credit.
Taught by: David
Course usually offered in fall term
Prerequisites: ECON 001 and ECON 002 OR BEPP 250
Activity: Lecture
1 Course Unit

HCMG 352 Health Services Delivery: A Managerial Economic Approach
The purpose of this course is to apply economics to an analysis of the health care industry, with special emphasis on the unique characteristics of the US healthcare markets, from pre-hospital to post-acute care. This course focuses on salient economic features of health care delivery, including: the role of nonprofit providers, the effects of regulation and antitrust activity on hospitals, the degree of input substitutability within hospitals, the nature of competition in home health care, public versus private provision of emergency medical services, the effect of specialty hospitals and ambulatory surgery centers, the economics of direct-to-consumer advertising and its effect on drug safety, defining and improving medical performance in hospitals, specialization and investment in physical and human capital, and shifting of services between inpatient and outpatient settings and its effect on health care costs and quality.
Taught by: David
Course usually offered in spring term
Also Offered As: HCMG 852
Prerequisite: Students who take HCMG 202 may not take 352 for further credit
Activity: Lecture
1 Course Unit

HCMG 391 Health Care Entrepreneurship
Delivering basic health care advances worldwide and continuing to increase lifespan and quality (in an affordable manner) represent some of the major societal challenges of our time. Addressing these challenges will require innovation in both medical technology and the ways in which health services are delivered. Through readings, cases, guest lectures, and your own entrepreneurial work outside of class, we will examine the environment facing prospective health care entrepreneurs: (1) sources of health care innovation; (2) the many “customers” in health care: patients, doctors, hospitals, insurers, and regulators; (3) the powerful established firms with developed clinical and sales expertise; (4) the investing community. Along the way we will develop a framework for thinking about what is different (and what is not) about the challenges of health care entrepreneurship.
Taught by: Grennan
Course usually offered in fall term
Activity: Lecture
1 Course Unit
HCMG 841 Health Services System
This course provides an overview of the evolution, structure and current issues in the health care system. It examines the unique features of health care as a product, and the changing relationships between patients, physicians, hospitals, insurers, employers, communities, and government. The course examines three broad segments of the health care industry: payors, providers and suppliers. Within the payor segment, the course examines the sources and destinations of spending, managed care (HMOs, PPOs), employer-based health insurance, technology assessment, payor strategy, and efforts to pay for the elderly, the poor & the medically indigent. Within the provider segment, the course examines the impact of cost containment and competition on hospitals and integrated delivery systems, long-term care and disease management, and the important role of epidemiology in assessing population health needs and risks. Within the supplier segment, the course will examine developments in the biotechnology, pharmaceutical, medical devices, genomics and IT industries. NOTE: This is a required course for Wharton Graduate Health Care Management majors; it counts as an elective course for all other Wharton Graduate students. It is also open to Law School and Nursing School students with a joint Wharton Program.
Taught by: Burns
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Lectures and cases. Weekly reading assignments.

HCMG 845 Managed Care and the Industrial Organization of Health Care
This course, co-taught with Brad Fluegel, former Senior Vice President and Chief Healthcare Marketing Development Officer at Walgreen Co, will focus on two interrelated topics: managed care and market structure. The section on managed care will cover strategic planning and marketing of managed care services, operational issues in developing a managed care network, actuarial issues, and the management of physician behavior. The section on health care market structure will analyze strategies of vertical integration and horizontal integration (M&As), and their attempts to alter the balance of power in local healthcare markets. The section will also analyze the operational issues in managing cost and quality in an integrated system, integration along the supply chain, and the performance of these systems, and the bargaining and negotiation between hospitals, physicians, and health plans.
Taught by: Gupta, Fluegel
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Lectures, cases, exam, and orally presented term project.

HCMG 849 Financial Management of Health Institutions
This course focuses on health care organizations' financial decisions in the changing health care landscape. Upon completion of the course, students will be able to utilize a range of financial tools and techniques for making value-added financial decisions in a variety of important contexts in the health care sector. The course involves case analyses and lectures, including presentations by practitioners with extensive real-world experience. The course is organized around cases dealing with publicly-traded health care company valuation, valuation and return on investment of biopharmaceutical and medical technology development projects, valuation and deal structure for startup and early stage health care organizations, health plan pricing and finance, and health care provider risk-sharing arrangements. Each case is accompanied by background on tools, methods, institutions, and markets. Students seeking careers in health care finance and financial decision making. Students with more background will extend and enhance their analytical skills in a variety of important areas.
Taught by: Harrington
Course usually offered in fall term
Prerequisite: Finance 611 or equivalent coursework or experience
Activity Lecture
1 Course Unit
Notes: Lecture and cases. Students work in teams to complete 4-5 case write-ups and an oral case presentation. There is also a written exam.

HCMG 850 Health Care Reform and the Future of the American Health System
The objective of this course is to provide students with a rigorous understanding of the health care system in the United States. The course will focus on the historical development of the current health care system; challenges of health care costs, quality, and access; the relationship between market failure and the passage of the Affordable Care Act (ACA); the impact to date of recent health reforms on the organization, structure, delivery and outcomes of the health care system, and future reforms and responses of the health care system. This class will consist of 4 interconnected segments. The first segment will provide an in-depth analysis of the U.S. health care system prior to the passage of the ACA and the factors underlying the failure of this market. The second segment of the course will review the history of attempts to reform the US health care system, the politics of reform, and the story of how the ACA ultimately passed through Congress. The third segment will focus on the effects of the ACA subsequent health reforms, such as the Medicare Access and CHIP Reauthorization Act, over the last 8 years on costs, access, and quality. This will include perspectives from a diverse set of stakeholders, including insurers, health care systems, physicians, private sector entrepreneurs, and others. The final segment of the course will consider the possible long-term outlook for health reform in the United States, including recent pushes for national single payer, or “Medicare for All.”
Taught by: Emanuel Schwartz
Course usually offered in fall term
Also Offered As: BIOE 575, HCMG 250
Activity Lecture
1 Course Unit
HCMG 852 Health Services Delivery: A Managerial Economic Approach
The purpose of this course is to apply economics to an analysis of the health care industry, with special emphasis on the unique characteristics of the US healthcare markets, from pre-hospital to post-acute care. This course focuses on salient economic features of health care delivery, including: the role of nonprofit providers, the effects of regulation and antitrust activity on hospitals, the degree of input substitutability within hospitals, the nature of competition in home health care, public versus private provision of emergency medical services, the effect of specialty hospitals and ambulatory surgery centers, defining and improving medical performance in hospitals, specialization and investment in physical and human capital, shifting of services between inpatient and outpatient settings and its effect on health care costs and quality, and innovation in primary care from retail clinics to patient-centered medical homes and retainer-based medicine.
Taught by: David
Course usually offered in spring term
Also Offered As: HCMG 352
Activity: Lecture
1 Course Unit
Notes: Written exam and student presentation.

HCMG 853 Management and Strategy in Medical Devices and Technology
Successful medical devices are an amalgamation of creative and innovative thinking, clinical expertise, and engineering know-how that endures intense regulatory and reimbursement scrutiny. This course will provide a foundation for understanding the nuances of the medical device industry. It will cover topics ranging from device design and discovery, regulatory issues, marketing, reimbursement, management, and strategy. Classroom activities will be supplemented with optional tours of hospitals, research and manufacturing facilities, and hands-on demonstrations of devices. Though the course is intended primarily for MBA students, it will be open to medical and engineering students as well as to hospital house staff.
Taught by: Grennan, Solomon
Course usually offered in fall term
Activity: Lecture
1 Course Unit

HCMG 855 Management of Health Care for the Elderly
This mini course is designed to provide students with an appreciation of the good, the bad and the ugly of how our current health care system cares for one of our nation’s most precious resources - our seniors! This course will review care provided to seniors within a variety of institutional settings (hospitals, nursing facilities, various senior housing levels) as well as outpatient and home care services. Special attention will be paid to nursing homes and senior housing options and their past, present and future role within the overall health care system in the United States. The course will start with an overview of the senior population with special attention to their health and social needs. Several classes will be held off campus at selected nursing facilities and senior housing complexes. In addition, a broad range of special programs and services will be reviewed such as sub-acute care, long term care insurance, Medicare Risk Programs, elderly housing, adult day care, managed care, Medicare Part D, case management, hospice and other recent developments. Throughout the course, emphasis will be placed on entrepreneurial opportunities to serve the senior market at all levels. Students are required to produce a paper for this course that focuses on a specific area impacting the senior market. This is a wonderful opportunity for students to select an area of personal interest and conduct an in depth review of that area including making direct contact with national experts within the topic selected. All student topics must be approved during the first two weeks of class and the depth of research required agreed upon by the by the student and the instructor. Interested students not in the HCMG major are urged to speak to the instructor before enrolling in the course.
Taught by: Whitman
Course usually offered in fall term
Activity: Lecture
0.5 Course Units

HCMG 857 Healthcare Data and Analytics
In healthcare or anywhere else across science, or business, or sports, the importance of data and analytics ("D&A") is virtually unquestioned. That, however, does not mean that it needs no elucidation. We posit that precisely because of its ubiquity, leaders have fallen into a pattern of both overuse and over dependency on D&A. In this course, we begin with a fundamental understanding of the state of D&A in healthcare and then move onto examples of its use in converging from business questions to implemented solutions. We "sidestep" into the world of algorithms/machine learning/AI and causal inference, but our focus is on business applications of these tools to the available data in the healthcare industry. As we discuss examples, we always seek to show how human creativity needs to be at the heart of the questions being probed. We highlight today's data universe in healthcare, the level of integration we have achieved, and the immensity of the remaining task, all with an eye to the business opportunities that exist now. We end with a showcasing of the art of the possible - in 2018 - and with (hopefully) a clear look ahead at what remains to be achieved. A curious mind, enthusiastic contribution to the class discussion (35% of your grade), a single team-based case write-up (15% of your grade), and a final project (50% of your grade) form the bulk of preparation needed for the course.
Taught by: Grennan, Mahadevan
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: Pursuit of MBA - we expect most students to be 2nd years. We assume no prior knowledge of statistical tools/concepts beyond the level of the MBA Core, though of course further training in data science is a plus, and we welcome those with more advanced preparation.
HCMG 859 Comparative Health Care Systems
This course examines the structure of health care systems in different countries, focusing on financing, reimbursement, delivery systems and adoption of new technologies. We study the relative roles of private sector and public sector insurance and providers, and the effect of system design on cost, quality, efficiency and equity of medical services. Some issues we address are normative: Which systems and which public/private sector mixes are better at achieving efficiency and equity? Other issues are positive. How do these different systems deal with the tough choices, such as decisions about new technologies? Our focus first on the systems in four large, prototypical OECD countries-Germany, Canada, Japan, and the United Kingdom - and then look at other developed and emerging countries with interesting systems - including Italy, Chile, Singapore, Brazil, China and India. We will draw lessons for the U.S. from foreign experience and vice versa.

HCMG 860 Managing Health Care Organizations
This course aims to improve enrollee’s ability to effectively manage and lead health care organizations (HCOs, including hospitals, medical groups, insurers, biopharmaceutical firms, etc.). The course is designed to integrate previous course work in general management, health care, and health policy to further participants’ understanding of organizational, managerial, and strategic issues facing HCOs and the health care workforce. The course will provide participants with a foundation for developing, implementing, and analyzing efforts to improve HCOs’ performance. A major objective of the course is to sharpen the leadership, problem-solving, and presentation skills of those who aim to hold operational and strategic positions in health care organizations. Another objective is to introduce enrollees to leading HCOs. Through case studies, readings, in-class exercises and class discussions, participants will learn analytic frameworks, concepts, tools and skills necessary for leading and managing organizational learning, quality improvement, innovation, and overall performance in HCOs.
Taught by: Nemhardt
Course usually offered in spring term
Activity: Lecture
1 Course Unit

HCMG 863 Management and Economics of Pharmaceutical and Biotech Industries
This course provides an overview of the management, economic and policy issues facing the pharmaceutical and biotechnology industries. The course perspective is global, but with emphasis on the U.S. as the largest and most profitable market. Critical issues we will examine include: R&D intensive cost structure with regulation and rapid technological change; strategic challenges of biotech startups; pricing and promotion in a complex global marketplace where customers include governments and insurers, as well as physicians and consumers; intense and evolving M&A, joint ventures, and complex alliances; government regulation of all aspects of business including market access, pricing, promotion, and manufacturing. We use Wharton and industry experts from various disciplines to address these issues.
Taught by: Alpert
Course usually offered in spring term
Activity: Lecture
1 Course Unit

HCMG 865 E-Health: Business Models and Impact
This course will introduce students to the main components of Health Information Technology (HIT) and how HIT currently effects, and in the future, may change health care operating models. Although it will not prepare students for primary technology management positions, it will help them understand the role of information technology in the success of the delivery system and other important healthcare processes. It will provide a foundation that will prepare them as managers, investors and consultants to rely upon or manage information technology to accomplish delivery system objectives. The course will give special attention to key health care processes, and topics such as the drive for provider quality and cost improvements, the potential ability to leverage clinical data for care improvement and product development, the growth of new information technologies for consumer directed healthcare and telemedicine, the strategies and economics of individual HIT companies and the role of government. The course relies heavily on industry leaders to share their ideas and experiences with students.
Taught by: Glaser/Patel
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

HCMG 867 Health Care Entrepreneurship
The course focuses on the creation, funding, and management of biotechnology and health services enterprises. The course is designed to supplement other offerings in the Health Care Systems and Management Departments for those students with entrepreneurial interest in such ventures, and will focus on special issues surrounding the conceptualization, planning, diligence and capitalization, launch, compensation and management of these ventures. In addition, course offers methods for self-assessment & development of business models and plans, techniques for technology assessment and strategy, develops foundation for capitalization and partnering strategies, and creates a basis for best practices in company launch and plan execution. Students must apply to take this course. Please see the Health Care Management Department for the application.
Taught by: Kurtzman/Libson, Heil
Course usually offered in spring term
Activity: Lecture
0.5 Course Units
HCMG 868 Private Sector Role in Global Health
Issues surrounding global health have captivated the attention of the public sector and foundations for many decades. Many of their initiatives are realizing progress on the health-related Millennium Development Goals. The private sector has been less engaged in global health, but has a significant role to play in providing resources and in building infrastructure, human resource capacity and sustainability. This course explores entrepreneurial and other private sector solutions for health services and access to medicines and technologies in the developing world and other underserved areas. The course also encompasses study of creative programs to engage the private sector in development of vaccines and medicines for tropical and neglected diseases. Furthermore, the course addresses novel care systems and therapeutic strategies for the rapidly growing burden of chronic, non-communicable diseases in the developing world. In short, the course builds on the content of conventional global health courses from a managerial and entrepreneurial perspective. Learning is driven through readings, class discussion and a series of guest speakers representing a wide range of global health issues. Evaluation is largely based on a student group project.
Taught by: Sammut
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

HCMG 890 Advanced Study Project: Management of Health Care Service Businesses
HCMG 890-001: This course examines issues related to the Services Sector of the health care industry. For those interested in management, investing, or banking to the health care industry, the services sector will likely be the largest and most dynamic sector within all of health care. We will study key management issues related to a number of different health care services businesses with a focus on common challenges related to reimbursement, regulatory, margin, growth, and competitive issues. We will look at a number of different businesses and subsectors that may have been unfamiliar to students prior to taking the course. We will make extensive use of outside speakers, many of whom will be true industry leaders within different sectors of the health care services industry. Speakers will address the current management issues they face in running their businesses as well as discuss the career decisions and leadership styles that enable them to reach the top of their profession. Students will be asked to develop a plan to both buyout and manage a specific health care services business of their choosing and will present their final plans to a panel of leading Health Care Private Equity investors who will evaluate their analysis. Prerequisites: HCMG 841. Health Care Management MBA majors only
Taught by: Present
Course usually offered in fall term
Also Offered As: WH 217
Prerequisite: HCMG 841
Activity: Seminar
1 Course Unit

HCMG 900 Proseminar in Health Economics
900-001 Proseminar in Health Econometrics: This course will cover empirical methods used in economics research with an emphasis on applications in health care and public economics. The methods covered include linear regression, matching, panel data models, instrumental variables, regression discontinuity, bunching, qualitative and limited dependent variable models, count data, quantile regressions, and duration models. The discussion will be a mix of theory and application, with emphasis on the latter. The readings consist of a blend of classic and recent methodological and empirical papers in economics. Course requirements include several problem sets, paper presentations, an econometric analysis project and a final exam. The course is open to doctoral students from departments other than Health Care Management with permission from the instructor. 900-002 Proseminar in Health Economics: Models and Methods: This course is intended to provide entering doctoral students with information on the variety of health economics models, methods, topics, and publication outlets valued and used by faculty in the HCMG doctoral program and outside of it. The course has two main parts: the first, to acquaint students with theoretical modeling tools used frequently by health economists. This part of the course involves a number of lectures coupled with students presentations of class projects in a workshop environment. The second part of the course will offer presentations from the health economics, management and operations research community at Penn on a research method or strategy they have found helpful and they think is important for all doctoral students to know.
Taught by: Gupta, David 002
One term course offered either term
Activity: Lecture
1 Course Unit

HCMG 901 Seminar in Health Care Cost Benefit and Cost Effectiveness Analysis
The purpose of this doctoral level course is to investigate the theory and practice of cost/benefit and cost-effectiveness analysis as applied to health care. The three techniques to be examined are cost-effectiveness analysis with single dimensional outcomes, cost effectiveness analysis with multiple attributes (especially in the form of Quality Adjusted Life Years), and economic cost-benefit analysis. Valuation of mortality and morbidity relative to other goods will be emphasized. Students will be expected to develop written critiques of articles in the literature, and to design a new application of one of the techniques as a term project.
Taught by: Polsky/Glick
Course usually offered in fall term
Activity: Seminar
1 Course Unit
HCMG 902 Special Topics in Health Economics: The Industrial Organization of Health Care
This advanced PhD seminar will explore topics in the industrial organization of health care and structural econometric approaches in health economics. The focus in this course is the development of advanced econometric tools. The (tentative) topics covered include health insurance and hospital demand estimation, the analysis of hospital competition, insurer competition, quality competition, technology adoption, models of entry and exit and dynamic oligopoly games. The readings will focus on recent advances in economics. Students are required to present recent research from the field and write an empirical research paper that broadly based on the topics covered in the course. With the permission of the instructor, the seminar is open to doctoral students from departments other than Health Care Management.
Taught by: Lucarelli
Course usually offered in fall term
Activity: Seminar
1 Course Unit

HCMG 903 Economics of Health Care and Policy
This course applies basic economic concepts to analyze the health care market and evaluate health policies. The course begins with a discussion of productivity in health care and of the theoretical and empirical effects of asymmetric information and market failure. The second part of the course explores several topic areas in the health care economics literature: health insurance and the labor market; health policy interventions; and health as human capital. The third part of the course examines competition and the behavior of health care providers, with emphasis on the impact of policy on competition, behavior, and finally, bringing us full circle, health care productivity.
Taught by: Swanson
Course usually offered in spring term
Activity: Lecture
1 Course Unit

HCMG 904 Doctoral Seminar in Organizational Behavior and Theory in Health Care
This course introduces students to organizational behavior and theory (OBT) by examining key issues in OBT, different perspectives on key issues, and how OBT informs health services research and practice. This course examines "micro" theories (i.e., social psychological theories of organizational behavior) and "macro" theories (i.e., theories focused on the structural and environmental aspects of organizations). We will examine the strengths and weaknesses of various theories, how they can be used as a foundation for research, methods used to study them, and the implications for health policy and management. Examples of published health services research grounded in OBT will be discussed so that students become familiar with the theories-in-use and various publication outlets for health care management (HCM) research.
Taught by: Nemhardt
Course usually offered in fall term
Activity: Lecture
1 Course Unit

Health Policy Research (HPR)

HPR 501 Economics of Health Care Delivery
How medical care is produced and financed in private and public sectors, economic models of consumer and producer behavior, applications of economic theory to health care.
Taught by: Dr. Mark Pauly
Course usually offered summer term only
Prerequisite: Course only open to Masters of Science in Health Policy Research students
Activity: Lecture
1 Course Unit

HPR 503 Qualitative Methods in Health Research
The purpose of this course is to expose students to a variety of qualitative approaches/methodologies that may be used in health services/policy research. In didactics we will discuss the pros and cons of a range of qualitative methods, how the method is actually implemented (with multiple experts presenting approaches), and pair the presentation with a broader discussion in which students compare and contrast health oriented articles in which the method was used. Students will have the opportunity to apply the theoretical approaches to their own research interests with direct input from the faculty and their peers.
Taught by: Drs. Frances Barg and Judy Shea
Course usually offered summer term only
Also Offered As: PUBH 538
Prerequisite: Permission needed from Instructor
Activity: Lecture
1 Course Unit

HPR 504 Principles and Practice of Healthcare Quality Improvement
Healthcare delivery is complex and constantly changing. A primary mission of leading healthcare organizations is to advance the quality of patient care by striving to deliver care that is safe, effective, efficient, timely, cost effective, and patient-centered. The goal of this interdisciplinary course is to provide students with a broad overview of the principles and tools of quality improvement and patient safety in health care while also guiding them through the steps of developing a quality improvement project. It will provide a foundation for students or practicing clinicians who are interested in quality improvement and patient safety research, administration, or clinical applications. As part of this course, students will design and plan for a real quality improvement project in their area of interest within healthcare using the methods and tools taught in the course.
Taught by: Jennifer S. Myers and Kathleen G. Burke
Course usually offered in fall term
Also Offered As: NURS 612
Prerequisite: Permission needed from Instructor
Activity: Lecture
1 Course Unit
HPR 550 Clinical Economics and Clinical Decision Making
This course focuses on the application of decision analysis and economic analysis of diagnostic tests using two by two tables, likelihood ratios, and ROC curves. The course continues with the introduction of more general tools for decision analysis, including decision trees and other mathematical models. A major focus of the course is the application of economic principles to the evaluation of health outcomes. During seminars, students will carry out practical exercises that include problem solving, critically analyzing published articles, and learning to use computer software that facilitates decision and economic analyses.
Taught by: Drs. Sankey Williams and Henry Glick
Course usually offered in spring term
Also Offered As: EPID 550
Prerequisite: Permission needed from Instructor
Activity: Lecture
1 Course Unit

HPR 580 Outcomes Research
This course is divided into two main parts. The first part addresses issues related to the measurement of quality in healthcare. Included is a review of the classical-structure-process-outcome quality paradigm. The paradigm’s strengths and limitations are addressed. This part especially focuses on outcome measures of quality and examines the validity of alternative measures. The second part deals with observational, quasi-experimental, or experimental, research studies. It addresses the advantages and limitations of alternative designs, and covers the role of clinical risk adjustment in observational studies of medical interventions. It focuses on the problem of selection bias, and reviews recent methods for dealing with this bias, such as instrumental variables.
Taught by: Dr. Jeffrey Silver
Course usually offered in fall term
Also Offered As: EPID 580
Prerequisite: Permission needed from Instructor
Activity: Lecture
1 Course Unit

HPR 588 Advanced Leadership Skills in Community Health
Grounded in a social justice perspective, this course aims to provide the student with a foundational overview of the field of community health and leadership skills in public health advocacy. The course encourages critical thinking about health outcomes framed by the broad context of the political and social environment. This course analyzes the range of roles and functions carried out by leaders in health care advocacy for marginalized communities; integrates knowledge of health policy and the key influence of government and financing on health outcomes; explores community-based participatory research and interventions as tools for change; and discusses ways to develop respectful partnerships with community organizations. An assets-based approach that draws upon the strengths of communities and their leaders provides a foundation for community-engagement skill building. The course emphasizes the development of skills and techniques to lead effective, collaborative, health-focused interventions for disenfranchised groups, including residents in urban neighborhoods.
Taught by: Heather Klusaritz, Terri Lipman, Walter Tsou
Course usually offered in spring term
Also Offered As: NURS 587, PUBH 588
Prerequisite: Enrollment in the National Clinician Scholars Program
Activity: Lecture
1 Course Unit

HPR 600 Introduction to Health Policy and Health Services Research
This course will provide students with an introduction to health services and health policy research. First, faculty representing various departments and and schools at the University of Pennsylvania will introduce students to a number of “hot topics,” including health disparities, medical decision making, neighborhoods and health, quality of care, access to care, behavioral incentives, and cost effectiveness research. Second, the course will offer an introduction to various career paths in the research and policy domains. Third, the course will provide a brief overview of practical issues such as grant opportunities, data options, publishing, and dissemination.
Taught by: Drs. Zachary Meisel and Raina Merchant
Course usually offered summer term only
Prerequisites: This course is only open to Masters of Science in Health Policy Research students.
Activity: Seminar
1 Course Unit

HPR 603 Health Services and Policy Research Methods I: Primary Data Design and Collection
This course will introduce students to commonly used primary data collection methods and provide multiple examples of how they have been used in health services research. Through the course students will define a primary data collection research project and develop the methods necessary to conduct the project. To get the full benefit of this course, students should use this course to develop the methods they plan to employ in their primary data collection project.
Taught by: Drs. Marilyn Schapira and Judy Shea
Course usually offered in fall term
Prerequisite: Permission needed from Instructor
Activity: Lecture
1 Course Unit

HPR 604 Introduction to Statistics for Health Policy
This is the first semester of a two-semester sequence. It is an introductory statistics course covering descriptive statistics, probability, random variables, estimation, hypothesis testing, and confidence intervals for normally distributed and binary data. The second semester stresses regression models.
Taught by: Dr. Andrew Spiker
Course usually offered in fall term
Prerequisite: Permission needed from Instructor
Activity: Lecture
1 Course Unit
HPR 606 Fundamentals of Health Policy
While academic researchers often think of health policy in terms of research evidence and outcomes, politics and political processes also play important roles. The purpose of this course is to provide those pursuing careers in health services research and health policy with an understanding of the political context from which U.S. health policy emerges. This understanding is important for researchers who hope to ask and answer questions relevant to health policy and position their findings for policy translation. This understanding is important as well to policy leaders seeking to use evidence to create change. The class provides an overview of the U.S. health care system and then moves on to more comprehensive understanding of politics and government, including the economics of the public sector, the nature of persuasion, and techniques and formats for communication. The course emphasizes reading, discussion and applied policy analysis skills in both written and oral forms. Concepts will be reinforced with case studies, written assignments and a final policy simulation exercise where students will be placed in the position of political advisors and policy researchers.

Taught by: Dr. David Grande
Course usually offered in fall term
Prerequisite: Permission needed from Instructor
Activity: Lecture
1 Course Unit

HPR 607 Health Services and Policy Research Methods II: Causal Inference Using Secondary Data
Empirical research for health care policy frequently involves the analysis of observational data—information that is not primarily collected for research purposes. With the rapid increase in U.S. health information technology capacity, future opportunities for research using these “secondary data” appear promising. The objective of this course is to teach the skills necessary to conduct quality health policy research using secondary data. These skills include formulating research aims and applying appropriate study designs for achieving these aims. The course will also include a survey of the content and structure of several commonly used administrative and public databases available to researchers and workshops to develop the skills to access and manipulate these valuable resources.

Taught by: Dr. Rachel M. Werner
Course usually offered in spring term
Prerequisite: Permission needed from Instructor
Activity: Lecture
1 Course Unit

HPR 608 Applied Regression Analysis for Health Policy Research
This course deals with the workhorse of quantitative research in health policy research—the single outcome, multiple predictor regression model. Students will learn how to 1) select an appropriate regression model for a given set of research questions/hypotheses, 2) assess how adequately a given model fits a particular set of observed data, and 3) how to correctly interpret the results from the model fitting procedure. After a brief review of fundamental statistical concepts, we will cover analysis of variance, ordinary least squares, and regression models for categorical outcomes, time to event data, longitudinal and clustered data. We will also introduce the concepts of mediation, interaction, confounding and causal inference.

Taught by: Dr. Nandita Mitra
Course usually offered in spring term
Prerequisite: Permission needed from Instructor
Activity: Lecture
1 Course Unit

HPR 611 Implementation Science in Health and Health Care
This course presents a survey of the field of implementation science in health. The structure of the course will include two parts. In the first part, we will introduce the field of implementation science, with an emphasis on theory, design and measurement. In the second part, we will focus on applied implementation science which will include examples of research programs in implementation science as well as applying insights of implementation science to practical implementation. An emphasis on qualitative and mixed methods approaches is included.

Taught by: Drs. Rinad Beidas and Meghan Lane-Fall
Course usually offered in spring term
Prerequisite: Permission needed from Instructor
Activity: Lecture
1 Course Unit

HPR 620 Community Based Participatory Research and Action
Community engagement is essential for interventional efforts, project development, as well as asking and answering health questions in a variety of settings. As in the use of any tool, community engagement requires both knowledge and skill. This class will focus on the use of community engagement to achieve community health goals through three integrated opportunities: collaboration/partnership, evidence-based principles and organizational development. The objectives of the course are to increase knowledge and skills in the following areas: delineating the types of methods used to establish and enhance collaboration/partnership with community stakeholders, learning the theories, principles, methods and best practices of collaborating with community stakeholders, developing and applying the skills needed to participate in community based collaborative activities and gaining an understanding of organizational development and infrastructure in the non-profit sector.

Taught by: Dr. Charmaine Smith-Wright
Course usually offered in fall term
Prerequisite: Permission needed from Instructor
Activity: Lecture
1 Course Unit

HPR 637 Advocacy & Public Health: Turning Knowledge Into Action
This course is designed to provide the foundational context and practical skills necessary to effectively advocate for evidence-based policy change in furtherance of public health objectives. The class will be interactive in nature and will require participation in public health advocacy exercises in order to hone advocacy skills. There will also be a focus on persuasive communication, both oral and written. We will explore the entire advocacy process from the identification of a problem and evaluation of possible policy solutions to utilizing the full range of advocacy tools to promote policy change.

Taught by: Drs. Ahavia Glaser and Jennifer Gable
Course usually offered in spring term
Also Offered As: PUBL 637
Prerequisite: Instructor Permission Required
Activity: Lecture
1 Course Unit
HPR 650 Systems Thinking and Patient Safety
This blended online/in-classroom graduate level course integrates principles of systems thinking with foundational concepts in patient safety. Utilizing complexity theories, students assess healthcare practices and identify factors that contribute to medical errors and impact patient safety. Using a clinical microsystem framework, learners assess a potential patient safety issue and create preventative systems. Lessons learned from the science of safety are utilized in developing strategies to enhance safe system redesign.
Taught by: Drs. Kathy N. Shaw, Susan Keim and Catherine Wildenberg
Course usually offered in spring term
Also Offered As: NURS 650
Activity: Lecture
1 Course Unit

HPR 660 Applied Predictive Modeling for Health Services Research
The course offers an introduction to the principles and applications of predictive modeling. It is geared toward health services researchers with an emphasis on clinical and policy scenarios and the use of electronic health record and administrative claims data. The primary goals of this course are to help each student understand (1) the fundamental concepts of predictive modeling and what distinguishes it from traditional causal inference approaches in statistics, (2) the different evaluation metrics for model performance and their appropriate use and (3) the role of domain knowledge in developing a statistical plan for model development with the end-user in mind. Students will be building their own predictive models by the end of the course and may elect to use R, STATA or Python for coding exercises. No prior programming experience is required. A background in basic statistical principles would be helpful.
Taught by: Dr. Gary Weismann
Course usually offered summer term only
Prerequisite: Permission needed from Instructor
Activity: Lecture
1 Course Unit

HPR 670 Health Care Strategic Leadership and Business Acumen
The weeklong intensive course aims at developing essential business acumen and leadership skills required to thrive in a constantly changing health care ecosystem. Taught by invited faculty who have experience working with health care leaders, this course will focus on actionable knowledge in financial acumen, strategic decision making, innovation and building high-performance teams. Through interactive mixed mode delivery methods, faculty will share tools and frameworks, always with a focus on how to apply them, both personally and within an organizational context.
Taught by: Drs. Guy David and David Grande
Course usually offered summer term only
Prerequisite: Instructor permission required
Activity: Lecture
1 Course Unit

HPR 799 Independent Study
This course is designed to provide the student with an opportunity to gain or enhance knowledge and to explore an area of interest related to health policy research under the guidance of a faculty member.
Taught by: Faculty
Course offered summer, fall and spring terms
Prerequisites: Permission of Program Director and Faculty Member
Activity: Independent Study
1 Course Unit

HPR 951 Health Policy Research Thesis I
Each student completes a mentored research project that includes a thesis proposal and a thesis committee and results in a publishable scholarly product.
Taught by: Faculty
Prerequisite: Course only open to Masters of Science in Health Policy Research students
Activity: Masters Thesis
1 Course Unit

HPR 952 Health Policy Research Thesis II
Each student completes a mentored research project that includes a thesis proposal and a thesis committee and results in a publishable scholarly product.
Taught by: Faculty
Prerequisite: Course only open to Masters of Science in Health Policy Research students
Activity: Independent Study
1 Course Unit

HPR 954 Quality Capstone Project
The purpose of the quality capstone project is to provide students with the opportunity to lead and experience each of the 5 phases of quality improvement work: Define - Measure - Analyze - Improve - Control (DMAIC). A quality improvement mentor will be assigned to each student completing this course. Preparation and submission of the quality capstone project as an abstract to a local, regional or national meeting is a requirement for completion of this course.
Taught by: Drs. Kathleen Burke and Jennifer S. Myers
Course offered summer, fall and spring terms
Prerequisite: This course is only open to CHPS Concentration fellows in the Masters of Science in Health Policy Research
Activity: Masters Thesis
1 Course Unit

Hebrew (HEBR)

HEBR 051 Elementary Modern Hebrew I
An introduction to the skills of reading, writing, and conversing in modern Hebrew. This course assumes no previous knowledge of Hebrew. A grade of B- or higher is needed to proceed to HEBR 052, Elementary Modern Hebrew II.
For BA Students: Language Course
One term course offered either term
Also Offered As: HEBR 651, JWST 051
Activity: Lecture
1 Course Unit

HEBR 052 Elementary Modern Hebrew II
A continuation of HEBR 051, First Year Modern Hebrew, which assumes basic skills of reading and speaking and the use of the present tense. Open to all students who have completed one semester of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Language Course
One term course offered either term
Also Offered As: HEBR 652, JWST 052
Prerequisite: HEBR 051 or permission of instructor
Activity: Lecture
1 Course Unit
HEBR 053 Intermediate Modern Hebrew III
Development of the skills of reading, writing, and conversing in modern Hebrew on an intermediate level. Open to all students who have completed two semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Language Course
One term course offered either term
Also Offered As: HEBR 653, JWST 053
Prerequisites: HEBR 052 or permission of the instructor.
Activity: Lecture
1 Course Unit

HEBR 054 Intermediate Modern Hebrew IV
This course constitutes the final semester of Intermediate Modern Hebrew. Hence, one of the main goals of the course is to prepare the students for the proficiency exam in Hebrew. Emphasis will be placed on grammar skills and ability to read literary texts. Open to all students who have completed three semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Last Language Course
One term course offered either term
Also Offered As: HEBR 654, JWST 054
Prerequisite: HEBR 053 or permission of instructor
Activity: Lecture
1 Course Unit

HEBR 059 Advanced Modern Hebrew: Conversation & Writing
After four semesters of language study, it’s time to enter the vibrant world of contemporary Israeli culture. In this course students read some of the best plays, poems, short stories, and journalism published in Israel today. They also watch and analyze some of Israel’s most popular films, TV programs, and videos. Themes include Jewish-Arab relations, the founding of the State, family ties and intergenerational conflict, war and society, and the recent dynamic changes in Israeli society. HEBR 054 or permission of instructor. Since the content of this course may change from year to year, students may take it more than once (but only once for credit).
For BA Students: Advanced Language Course
Taught by: Engel
One term course offered either term
Also Offered As: HEBR 552, JWST 059
Prerequisite: HEBR 054 or permission of instructor
Activity: Lecture
1 Course Unit

HEBR 151 Elementary Biblical Hebrew I
This course is an introduction to Biblical Hebrew. It assumes no prior knowledge, but students who can begin to acquire a reading knowledge of the Hebrew alphabet before class starts will find it extremely helpful.
The course is the 1st of a 4-semester sequence whose purpose is to prepare students to take courses in Bible that demand a familiarity with the original language of the text.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in fall term
Also Offered As: HEBR 451, JWST 171, JWST 471
Activity: Lecture
1 Course Unit

HEBR 152 Elementary Biblical Hebrew II
A continued introduction to the grammar of Biblical Hebrew, focusing on the verbal system, with an emphasis on developing language skills in handling Biblical texts. A suitable entry point for students who have had some Modern Hebrew.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in spring term
Also Offered As: HEBR 452, JWST 172, JWST 472
Prerequisites: Successful completion of HEBR 151 or permission of the instructor.
Activity: Lecture
1 Course Unit

HEBR 153 Intermediate Biblical Hebrew I
This course will focus on using the grammar and vocabulary learned at the introductory level to enable students to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the punctuation marks used in the Bible. This is a suitable entry point for students who already have strong Hebrew skills.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in fall term
Also Offered As: HEBR 453, JWST 173, JWST 473
Prerequisites: Successful completion of HEBR 152 or permission of the instructor. This course is the prerequisite for HEBR 154 (no one is "permitted" into that semester; you must take the previous semester course).
Activity: Lecture
1 Course Unit

HEBR 154 Intermediate Biblical Hebrew II
This course is a continuation of the fall semester’s Intermediate Biblical Hebrew I. No one will be admitted into the course who has not taken the fall semester. It will continue to focus on using the grammar and vocabulary learned at the introductory level to enable students to read biblical texts independently and take advanced Bible exegesis courses. We will concentrate this semester on various selections of Biblical poetry, including Exodus 15 and Job 28. We will also continue to translate English prose into Biblical Hebrew.
For BA Students: Last Language Course
Taught by: Carasik
Course usually offered in spring term
Also Offered As: HEBR 454, JWST 174, JWST 474
Prerequisites: Successful completion of HEBR 153.
Activity: Lecture
1 Course Unit
HEBR 359 Seminar in Modern Hebrew Literature
This course introduces students to selections from the best literary works written in Hebrew over the last hundred years in a relaxed seminar environment. The goal of the course is to develop skills in critical reading of literature in general, and to examine how Hebrew authors grapple with crucial questions of human existence and national identity. Topics include: Hebrew classics and their modern “descendents,” autobiography in poetry and fiction, the conflict between literary generations, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students’ literary understanding.
For BA Students: Arts and Letters Sector
Taught by: Gold
Course usually offered in spring term
Also Offered As: COML 359, HEBR 669, JWST 359, JWST 556
Prerequisites: Hebrew 059 or the equivalent, per instructor’s evaluation
Activity: Seminar
1 Course Unit

HEBR 451 Elementary Biblical Hebrew I
This course is an introduction to Biblical Hebrew. It assumes no prior knowledge, but students who can begin to acquire a reading knowledge of the Hebrew alphabet before class starts will find it extremely helpful. The course is the 1st of a 4-semester sequence whose purpose is to prepare students to take courses in Bible that demand a familiarity with the original language of the text.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in fall term
Also Offered As: HEBR 151, JWST 171, JWST 471
Activity: Lecture
1 Course Unit

HEBR 452 Elementary Biblical Hebrew II
A continued introduction to the grammar of Biblical Hebrew, focusing on the verbal system, with an emphasis on developing language skills in handling Biblical texts. A suitable entry point for students who have had some Modern Hebrew.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in spring term
Also Offered As: HEBR 152, JWST 172, JWST 472
Prerequisites: Successful completion of HEBR 451 or permission of the instructor.
Activity: Lecture
1 Course Unit

HEBR 453 Intermediate Biblical Hebrew I
This course will focus on using the grammar and vocabulary learned at the introductory level to enable students to read Biblical texts independently and take advanced Bible exegesis courses. We will also work on getting comfortable with the standard dictionaries, concordances, and grammars used by scholars of the Bible. We will concentrate on prose this semester, closely reading Ruth, Jonah, and other prose selections. We will begin to translate from English into Biblical Hebrew, and there will also be a unit on the punctuation marks used in the Bible. This is a suitable entry point for students who already have strong Hebrew skills.
For BA Students: Language Course
Taught by: Carasik
Course usually offered in fall term
Also Offered As: HEBR 153, JWST 173, JWST 473
Prerequisites: Successful completion of HEBR 452 or permission of the instructor. This course is the prerequisite for HEBR 454 (no one is “permitted” into that semester; you must take the previous semester course).
Activity: Lecture
1 Course Unit

HEBR 454 Intermediate Biblical Hebrew II
This course is a continuation of the fall semester’s Intermediate Biblical Hebrew I. No one will be admitted into the course who has not taken the fall semester. It will continue to focus on using the grammar and vocabulary learned at the introductory level to enable students to read biblical texts independently and take advanced Bible exegesis courses. We will concentrate this semester on various selections of Biblical poetry, including Exodus 15 and Job 28. We will also continue to translate English prose into Biblical Hebrew.
For BA Students: Last Language Course
Taught by: Carasik
Course usually offered in spring term
Also Offered As: HEBR 154, JWST 174, JWST 474
Prerequisites: Successful completion of HEBR 453.
Activity: Lecture
1 Course Unit

HEBR 486 Rabbinic Writers on Rabbinic Culture
This course traces reflections on rabbinic culture produced within Jewish legal literature of the classic rabbinic period -- Midrash, Mishna, and Talmud -- and in later juridical genres -- Talmudic commentary, codes and responses. Attention will be paid to the mechanics of different genres, the role of the underlying proof text, the inclusion or exclusion of variant opinions, the presence of non-legal information, the balance between precedent and innovation. Reading knowledge of Hebrew is required.
Taught by: Fishman
Course not offered every year
Also Offered As: RELS 426
Prerequisite: Reading knowledge of Hebrew
Activity: Seminar
1 Course Unit
HEBR 552 Advanced Modern Hebrew: Conversation & Writing
After four semesters of language study, it's time to enter the vibrant world of contemporary Israeli culture. In this course students read some of the best plays, poems, short stories, and journalism published in Israel today. They also watch and analyze some of Israel's most popular films, TV programs, and videos. Themes include Jewish-Arab relations, the founding of the State, family ties and intergenerational conflict, war and society, and the recent dynamic changes in Israeli society. HEBR 054 or permission of instructor. Since the content of this course may change from year to year, students may take it more than once (but only once for credit).
For BA Students: Advanced Language Course
Taught by: Engel
One term course offered either term
Also Offered As: HEBR 059, JWST 059
Prerequisites: HEBR 054 or permission of instructor
Activity: Lecture
1 Course Unit

HEBR 557 Studies in Rabbinic Literature: Law and Judaism
Two terms. student may enter either term.
Also Offered As: JWST 257, NELC 557
Prerequisites: Knowledge of Hebrew.
Activity: Seminar
1 Course Unit

HEBR 583 Studies in Medieval Jewish Culture
Course examines features of 9th-16th century Jewish culture within their broader historical, regional and cross-cultural contexts, whether Christian or Islamic. Emphasis is placed on primary sources in Hebrew. Topics vary and have included "Reconstructing Rabbinic Judaism prior to the First Millennium"; "Custom in Medieval Jewish Cultures"; "Jewish Culture in the Islamicate World"; "Nature in Medieval Jewish Culture". Students should be able to read unpointed Hebrew. May be repeated for credit.
Taught by: Fishman
Course usually offered in fall term
Also Offered As: JWST 523, RELS 523
Prerequisites: Reading knowledge of Hebrew.
Activity: Seminar
1 Course Unit

HEBR 651 Elementary Modern Hebrew I
An introduction to the skills of reading, writing, and conversing in Modern Hebrew. This course assumes no previous knowledge of Hebrew.
For BA Students: Language Course
One term course offered either term
Also Offered As: HEBR 051, JWST 051
Activity: Lecture
1 Course Unit

HEBR 652 Elementary Modern Hebrew II
A continuation of HEBR 051, First Year Modern Hebrew, which assumes basic skills of reading and speaking and the use of the present tense. Open to all students who have completed one semester of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Language Course
Also Offered As: HEBR 052, JWST 052
Prerequisite: HEBR 651 or permission of instructor
Activity: Lecture
1 Course Unit

HEBR 653 Intermediate Modern Hebrew III
Development of the skills of reading, writing, and conversing in Modern Hebrew on an intermediate level. Open to all students who have completed two semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Language Course
One term course offered either term
Also Offered As: HEBR 053, JWST 053
Prerequisites: HEBR 652 or permission of the instructor.
Activity: Lecture
1 Course Unit

HEBR 654 Intermediate Modern Hebrew IV
This course constitutes the final semester of Intermediate Modern Hebrew. Hence, one of the main goals of the course is to prepare the students for the proficiency exam in Hebrew. Emphasis will be placed on grammar skills and ability to read literary texts. Open to all students who have completed three semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Last Language Course
One term course offered either term
Also Offered As: HEBR 054, JWST 054
Prerequisite: HEBR 653 or permission of instructor
Activity: Lecture
1 Course Unit

HEBR 659 Seminar in Modern Hebrew Literature
This course introduces students to selections from the best literary works written in Hebrew over the last hundred years in a relaxed seminar environment. The goal of the course is to develop skills in critical reading of literature in general, and to examine how Hebrew authors grapple with crucial questions of human existence and national identity. Topics include: Hebrew classics and their modern "descendants," autobiography in poetry and fiction, the conflict between literary generations, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students' literary understanding.
Taught by: Gold
Course not offered every year
Also Offered As: COML 359, HEBR 359, JWST 359, JWST 556
Prerequisites: HEBR 059 or the equivalent, per instructor's evaluation
Activity: Seminar
1 Course Unit
Hindi (HIND)

HIND 401 Beginning Hindi-Urdu Part I
This introductory course core proficiency in Hindi-Urdu up to the intermediate level. It is designed for students with little or no prior exposure to Hindi or Urdu. The course covers all four language skills (speaking, listening, reading, and writing) and all three models of communication (interpersonal, presentational, interpretive). Students will develop literacy skills in the primary script of their choice (Hindi or Urdu script). All written materials will be provided in both scripts. All meetings are interactive and students acquire the language by using it in realistic contexts. Culture is embedded in the activities and is also introduced through various authentic materials.
For BA Students: Language Course Taught by: Pien
Course usually offered in fall term
Also Offered As: NELC 401, URDU 401
Activity: Lecture
1 Course Unit

HIND 402 Intermediate Hindi Part I
In Intermediate Hindi the student continues to develop the four language skills, with an emphasis on real-life situations—through hearing and practicing conversation on everyday topics, reading a variety of authentic texts ranging from advertisements to short stories, watching segments of current films, and carrying out short research projects using Hindi sources. There is a strong emphasis on vocabulary development and on using contextually appropriate styles of spoken and written Hindi.
For BA Students: Language Course Taught by: Pien
Course usually offered in fall term
Prerequisites: Beginning Hindi or Urdu or equivalent ascertained through placement test or permission of instructor.
Activity: Lecture
1 Course Unit

HIND 421 Intermediate Hindi Part II
In Intermediate Hindi the student continues to develop the four language skills, with an emphasis on real-life situations—through hearing and practicing conversation on everyday topics, reading a variety of authentic texts ranging from advertisements to short stories, watching segments of current films, and carrying out short research projects using Hindi sources. There is a strong emphasis on vocabulary development and on using contextually appropriate styles of spoken and written Hindi.
For BA Students: Last Language Course Taught by: Pien
Course usually offered in spring term
Prerequisites: Intermediate Hindi Part I or equivalent ascertained through placement test or permission of instructor.
Activity: Lecture
1 Course Unit

HIND 430 Advanced Hindi
Advanced Hindi aims at systematically developing higher level linguistic functions and cultural nuances. Students learn to describe, narrate and support opinions in informal and formal styles. The objective of the course is to promote a meaningful interaction with written literature and with native speakers in a socially acceptable manner in a variety of simple and complicated situations. A variety of authentic materials are used, such as short stories, plays, newspapers, magazines, videos, television and radio broadcasts, and interviews. Every semester the course materials and foci vary depending on the needs and interests of students in the class.
For BA Students: Advanced Language Course Taught by: Pien
Course usually offered in fall term
Prerequisites: Intermediate Hindi or Urdu or equivalent ascertained through placement test or permission of instructor.
Activity: Lecture
1 Course Unit

HIND 500 Beginning Hindi-Urdu, For Graduate Students ONLY
Beginning in the fall semester of 2014 Beginning Hindi and Beginning Urdu will be merged into a single course, Beginning Hindi-Urdu. At the beginning level spoken Urdu and Hindi are identical except for a few minor points. The broad outline of the course will thus remain the same as that of the current Beginning Hindi and Urdu courses. Students will learn to communicate with the language in a variety of everyday culturally authentic situations. Additional Urdu and Hindi culture will be integrated through authentic materials such as Bollywood film and music clips, and simple written texts. There will be equal emphasis on both scripts and cultures, and parallel written materials will be provided in both scripts. Students will be expected to develop first-year proficiency in one script of their choice, and will be encouraged to learn both. By merging the two courses students will be exposed to a broader range of linguistic and cultural styles, and students will thus have the opportunity to develop a deeper understanding that more closely resembles that of Hindi and Urdu native speakers. Please direct further inquiries to Josh Pien at jpien@sas.upenn.edu. See schedule and classroom for HIND400/401 Two terms, student must enter first term.
Activity: Lecture
1 Course Unit
HIND 520 Intermediate Hindi I for Graduate Students Only
In Intermediate Hindi the student continues to develop the four language skills, with an emphasis on real-life situations—through hearing and practicing conversation on everyday topics, reading a variety of authentic texts ranging from advertisements to short stories, watching segments of current films, and carrying out short research projects using Hindi sources. There is a strong emphasis on vocabulary development and on using contextually appropriate styles of spoken and written Hindi. Two terms. student must enter first term.
Prerequisites: Beginning Hindi or Urdu or equivalent ascertained through placement test or permission of instructor.
Activity: Lecture
1 Course Unit

HIND 530 Advanced Hindi for Graduate Students Only
Advanced Hindi aims at systematically developing higher level linguistic functions and cultural nuances. Students learn to describe, narrate and support opinions in informal and formal styles. The objective of the course is to promote a meaningful interaction with written literature and with native speakers in a socially acceptable manner in a variety of simple and complicated situations. A variety of authentic materials are used, such as short stories, plays, newspapers, magazines, videos, television and radio broadcasts, and interviews. Every semester the course materials and foci vary depending on the needs and interests of students in the class.
Two terms. student may enter either term.
Prerequisites: Intermediate Hindi or Urdu or equivalent ascertained through placement test or permission of instructor.
Activity: Lecture
1 Course Unit

Historic Preservation (HSPV)

HSPV 521 American Architecture
This course is a survey of architecture in the United States. The organization, while broadly chronological, emphasizes themes around which important scholarship has gathered. The central purpose is to acquaint you with major cultural, economic, technological, and environmental forces that have shaped buildings and settlements in North America for the last 400 years. To that end, we will study a mix of "high-style" and "vernacular" architectures while encouraging you to think critically about these categories. Throughout the semester, you will be asked to grapple with both the content of assigned readings (the subject) and the manner in which authors present their arguments (the method). Louis Sullivan, for instance, gives us the tall office building "artistically considered" while Carol Willis presents it as a financial and legal artifact. What do you make of the difference? Finally, you will learn how to describe buildings. While mastery of architectural vocabulary is a necessary part of that endeavor, it is only a starting point. Rich or "thick" description is more than accurate prose. It is integral to understanding the built environment - indeed, to seeing it at all.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

HSPV 528 American Vernacular Architecture
This course explores the form and development of America's built landscape: its houses, farm buildings, churches, factories, and fields—as a source of information on folk history, vernacular culture, and architectural practice.
Course not offered every year
Also Offered As: HIST 528
Activity: Seminar
1 Course Unit

HSPV 531 American Domestic Interiors
This course will examine the American domestic interior from the seventeenth century through the twentieth century with emphasis on the cultural, economic, and technological forces that determined the decoration and furnishing of the American home. Topics to be covered include the decorative arts; floor, wall and window treatments; and developments in lighting, heating, plumbing, food preparation and service, and communication technologies. In addition to the identification of period forms and materials, the course will give special emphasis to historical finishes. The final project will involve the creation of an interior based on in-depth household inventory analysis and study. Several class periods will be devoted to off-site field trips.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

HSPV 538 Cultural Landscapes and Landscape Preservation
The course introduces the history and understanding of common American landscapes and surveys the field of cultural landscape studies. Methods of landscape preservation are also surveyed. The cultural-landscape perspective is a unique lens for understanding the evolution of the built environment, the experience of landscapes, and the abstract economic, political and social processes that shape the places where most Americans spend most of their time. The course will focus on the forces and patterns (natural and cultural) behind the shaping of recognizable "American" landscapes, whether urban, suburban, or rural. Methods for documenting and preserving cultural landscapes will be surveyed. Class discussions, readings, and projects will draw on several disciplines—cultural geography, vernacular architecture, environmental history, historic preservation, ecology, art, and more.
Course not offered every year
Activity: Lecture
1 Course Unit

HSPV 540 Historic Building Technology I
Historic Building Technology is divided into two discrete six week modules conceived in succession and taught during the second half of the first semester and first half of the second semester respectively. Module 1: Building Anatomy will examine traditional construction methods through a typological analysis of construction systems. Module 2: Building Archaeology will address the morphological evolution of a structure and its physical setting, sometimes known as "above ground archaeology." The course is intended to introduce students in Historic Preservation to the physical realities of built form and its analysis through careful observation and description. Note: This course continues in the first half of the spring semester for another 0.5 CU.
Course usually offered in fall term
Activity Lecture
0.5 Course Units
HSPV 541 Historic Building Technology II: Building Archaeology
Built works—be they barns or bridges, gardens or corn fields, palaces or pit houses—all embody something of their makers and users, and the prevailing social and cultural norms of the day. As a form of material culture, things—buildings and landscapes—are made and modified consciously and unconsciously, reflecting individual and societal forces at play. Since the physical fabric and its alteration present one primary mode of evidence, their investigation provides a critical form of research, especially in association (and often in contest) with archival documentary sources and oral histories. This course will examine the theories and techniques used to investigate the morphological evolution of built works, sometimes known as “above ground archaeology.” Students will learn and apply methods relevant to the reading of architectural fabric. Methods of investigation will include absolute and relative dating techniques such as dendrochronology, finishes stratigraphy, mortar analysis, and various typological -seriation studies including framing, molding, fastener (nails and screws), and hardware analyses. Students are expected to use this knowledge in combination with the recording skills of HSPV 601 to record their assigned sites. 
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

HSPV 551 Building Pathology
This course addresses the subject of deterioration of buildings, their materials, assemblies and systems, with the emphasis on the technical aspects of the mechanisms of deterioration and their enabling factors, material durability and longevity of assemblies. Details of construction and assemblies are analyzed relative to functional and performance characteristics. Lectures cover: concepts in durability; climate; psychrometric, soils & hydrologic; conditions; physics of moisture in buildings; enclosure, wall and roof systems; structural systems; and building services systems with attention to performance, deterioration, and approaches to evaluation of remedial interventions.
Course usually offered in spring term
Prerequisites: HSPV 555 or one technical course in architecture.
Activity: Seminar
1 Course Unit

HSPV 552 Building Diagnostics and Monitoring
Building diagnostics pertain to the determination of the nature of a building’s condition or performance and the identification of the corresponding causative pathologies by a careful observation and investigation of its history, context and use, resulting in a formal opinion by the professional. Monitoring, a building diagnostic tool, is the consistent observation and recording of a selected condition or attribute, by qualitative and/or quantitative measures over a period of time in order to generate useful information or data for analysis and presentation. Building diagnostics and monitoring allow the building professional to identify the causes and enabling factors of past or potential pathologies in a building and building systems, thus informing the development appropriate interventions or corrective measures. In the case of heritage buildings, the process informs the selection of interventions that satisfy the stewardship goals for the cultural resource. In the case of recently constructed buildings, the process informs the identification of envelope and systems interventions for improved performance and energy efficiency.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

HSPV 555 Conservation Science
This course provides an introduction to architectural conservation and the technical study of traditional building materials. Lectures and accompanying laboratory sessions introduce the nature and composition of these materials, their properties, and mechanisms of deterioration, and the general laboratory skills necessary for field and laboratory characterization. Knowledge of basic college level chemistry is required.
Course usually offered in spring term
Activity: Seminar
1 Course Unit

HSPV 572 Preservation Through Public Policy
This course explores the intersection between historic preservation, design and public policy, as it exists and as it is evolving. That exploration is based on the recognition that a network of law and policy at the federal, state and local level has direct and profound impact on the ability to manage cultural resources, and that the pieces of that network, while interconnected, are not necessarily mutually supportive. The fundamental assumption of the course is that the preservation professional must understand the capabilities, deficiencies, and ongoing evolution of this network in order to be effective. The course will look at a range of relevant and exemplary laws and policies existing at all levels of government, examining them through case studies and in-depth analyses of pertinent programs and agencies at the local, state and federal level.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

HSPV 600 Documentation, Research, Recording I
The goal of this course is to help students learn to contextualize the history of buildings and sites. In order to gain first-hand exposure to the actual materials of building histories, we will visit a half-dozen key archival repositories. Students will work directly with historical evidence, including maps, deeds, the census, city directories, insurance surveys, photographs, and many other kinds of archival materials. After discussing each type of document in terms of its nature and the motives for its creation, students will complete a series of projects that develop their facility for putting these materials to effective use. Philadelphia is more our laboratory than a primary focus in terms of content, as the city is rich in institutions that hold over three centuries of such materials; students will find here both an exposure to primary documents of most of the types they might find elsewhere, as well as a sense of the culture of such institutions and of the kinds of research strategies that can be most effective. The final project is the completion of an historic register nomination.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

HSPV 601 Documentation, Research, Recording II
Documentation, Research, Recording II. This course provides an introduction to the survey and recording of historic buildings and sites. Techniques of recording include traditional as well as digitally-based methods including field survey, measured drawings, photography and rectified photography. Emphasis is placed on the use of appropriate recording tools in the context of a thorough understanding of the historical significance, form and function of sites. Required for first-year MSHP students; others by permission.
Course usually offered in spring term
Activity: Studio
1 Course Unit
HSPV 606 Historic Site Management
The course focuses on management, planning, and decision-making for all types of heritage sites from individual buildings to historic sites to whole landscapes. Course material will draw on model approaches to management, as well as a series of domestic and international case studies, with the goal of understanding the practicalities of site management. Particular topics to be examined in greater detail might include conservation policy, interpretation, tourism, or economic development strategies.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

HSPV 620 Seminar in American Architecture
An examination of a specific topic related to the history of American architecture and planning. Following introductory lectures, students participate through detailed reports and informal discussion. The topic under investigation varies each semester the seminar is offered.
Course usually offered in spring term
Also Offered As: HSSC 530
Activity: Seminar
1 Course Unit

HSPV 621 Social Justice Seminar
How do historic preservation and other design professionals contribute to more equitable and just societies? How can our work be organized to result in greater equity, access and social justice? This seminar will explore connections between historic preservation (and related design, planning and artistic practices) and the pursuit of social justice. Our investigations will focus on both conceptual and theoretical constructions (how we think about social justice) and practical examples of advancing social outcomes through preservation and design. We'll draw on work by geographers, anthropologists and other social scientists and theorists; historians; design practitioners; heritage organizations; artists; and more. Subjects will include public interest design, creative placemaking, public art, memorialization, and methods of practice and institutional organization. The course will progress through a series of weekly topics, often including guest practitioners and scholars. Students will bear significant responsibility for helping flesh out the topics and cases we study: final projects (individual and and group) will be envisioned as a statement (in the form of a book or exhibit) of how social justice concerns have reshaped practice and how they could reshape our fields in the future.
Course usually offered in spring term
Activity: Seminar
1 Course Unit

HSPV 624 Digital Media for Historic Preservation
Techniques will be discussed for preservation use including survey, documentation, relational databases, and digital imaging and modeling. Taught by: Hinchman
Course usually offered in fall term
Activity: Lecture
1 Course Unit

HSPV 625 Preservation Economics
The primary objective is to prepare the student, as a practicing preservationist, to understand the language of the development community, to make the case through feasibility analysis why a preservation project should be undertaken, and to be able to quantify the need for public/non-profit intervention in the development process. A second objective is to acquaint the student with the measurements of the economic impact of historic preservation and to critically evaluate "economic hardship" claims made to regulatory bodies by private owners.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

HSPV 625 Advanced Digital Media for Historic Preservation
Advanced Digital Media focuses on the visualization and dissemination of information for historic preservation. Through a combination of lectures, readings and the use of software, the course will explore integrative and engaging methods of generating and communicating data specifically developed by and for historic preservation. Mapping, graphics, video, apps and web-based platforms will be addressed in this course. Students will be expected to bring topics, ideas and discussion, and through a set of projects asked to find new and innovative ways to visualize and share the information using the communication tools of the modern age.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

HSPV 638 Topics in Historic Preservation
This seminar concentrates on a selected topic in the social and cultural history of the built environment. Past themes have included photography and the American city and the relationship between cities and sound.
Course usually offered in spring term
Activity: Seminar
1 Course Unit

HSPV 640 Contemporary Design in Historic Settings
Thoughtful contemporary design can add value and meaning to historic settings of any scale. Rigorous dialogue with history and context enriches contemporary design. This seminar immerses students in the rewarding yet challenging realm of design with landmarks and existing structures. It will encourage participants to create their own models for design and preservation planning through discussion of source materials that illustrate the political, cultural and aesthetic environments that have shaped regulation and design with heritage throughout the past century. Sketch problems set in Philadelphia and analysis of case studies from around the world will enable students to critique and communicate a range of responses to landmarks and historic contexts, and to explore the roles of significance, physical and intangible conditions in shaping appropriate responses.
Course usually offered in fall term
Activity: Seminar
1 Course Unit
HSPV 656 Advanced Conservation Science
A methodological approach to the examination and analysis of historic building materials is introduced. Experimental design for conducting conservation research plus statistical analysis and modeling of research data will further complete the discussion. Practical analytical techniques appropriate for conservation practice including: classical and advanced instrumental techniques for qualitative and quantitative analysis of organic and inorganic materials will be discussed. Theoretical and practical applications of advanced surface techniques for both elemental and molecular/composition analysis as well as applications of nanotechnology and nanomaterials in conservation will be covered. Students will also learn about deterioration processes and long term effects of conservation treatments through accelerated aging techniques. Course materials will be taught through lectures, invited speakers, lab visits and laboratory sessions by practicing learned techniques and procedures on related masonry samples, along with provided course readings and literature.

One term course offered either term
Activity: Lecture
1 Course Unit

HSPV 660 Theories of Historic Preservation
Theories of historic preservation serve as models for practice, integrating the humanistic, artistic, design, scientific and political understandings of the field. This course examines the historical evolution of historic preservation, reviews theoretical frameworks and issues, and explores current modes of practice. Emphasis is placed on literacy in the standard preservation works and critical assessment of common preservation concepts. In addition to readings and lectures, case studies from contemporary practice will form the basis for short assignments. Professional ethics are reviewed and debated. The instructor's permission is required for any student not registered in the Graduate Program in Historic Preservation. Note that the course is organized in two parts; the first half, on the basics of preservation theory, is taught in the fall semester while the second half takes place in the spring semester and engages advanced topics. Note: this course continues in the second half of the spring semester for another 0.5 CU.

Course usually offered in fall term
Prerequisites: Instructor's permission required for any student not registered in the Graduate Program in Historic Preservation.
Activity: Lecture
0.5 Course Units

HSPV 661 Theories of Historic Preservation II
Theories of historic preservation serve as models for practice, integrating the humanistic, artistic, design, scientific and political understandings of the field. HSPV 661 builds on HSPV 660, which examines the historical evolution of historic preservation, reviews theoretical frameworks and issues, and explores current modes of practice. HSPV 661 engages advanced topics such as cultural landscape theory, economics of preservation, sustainability and environmental conservation, social justice, and urban design. In addition to readings and lectures, case studies from contemporary practice will be used to examine theories in practice. The principal assignment will be a term research paper. The instructor's permission is required for any student not registered in the Graduate Program in Historic Preservation. (Note that the course is the second of two parts; the first half, on the basics of preservation theory is taught in the fall semester while the second half takes place in the spring semester.)

Course usually offered in spring term
Activity: Seminar
0.5 Course Units

HSPV 671 Historic Preservation Law
Introduction to the legal framework of urban planning and historic preservation, with special emphasis on key constitutional issues, zoning, historic districts, growth management, and state and local laws for conserving historic buildings.

Course usually offered in spring term
Activity: Lecture
1 Course Unit

HSPV 701 Historic Preservation Studio
The Preservation Studio is a practical course in planning architectural, urban and regional conservation interventions, bringing to bear the wide range of skills and ideas at play in the field of historic preservation. Studio teams undertake documentation and planning exercises for heritage sites and their communities, through research, consultation with stakeholders, analysis of comparables, and policies/project creation. Study sites are often in Philadelphia proper. Students work in teams as well as on individual projects. The preservation studio seeks to demonstrate preservation planning responses to common conflicts between historic preservation, social forces, economic interests, and politics. Recognizing that historical areas are complex entities where communities, cultural and socio-economic realities, land use, building types, and the legal and institutional settings are all closely interrelated, the main goals of the studio are (1) understanding and communicating the cultural significance of the built environment, (2) analyzing its relation to other economic, social, political and aesthetic values, and (3) exploring the creative possibilities for design, conservation and interpretation prompted by cultural significance.

Course usually offered in fall term
Activity: Studio
2 Course Units

HSPV 703 Urban Regeneration in the Americas
This hybrid seminar-studio course will explore advanced topics in urban conservation and landscape preservation through application to the challenges of international case studies. The seminar components of the course will delve into the literature on urban conservation; travel for fieldwork is planned. Permission of department required to enroll.

Course usually offered in spring term
Prerequisites: Permission of department required to enroll.
Activity: Seminar
1 Course Unit
HSPV 705 Topical Studio/Seminar: Interpretation in the Future Tense
The interpretation of heritage places is a core concern of historic preservation professionals, no matter what their area of specialization. Explicit and implicit interpretation is embedded deeply in the field’s theory, history and contemporary practice. In contemporary practice, site interpretation is challenged to draw on traditional preservationist modes of practice (based in historical scholarship and formal analysis) as well as new ideas about representation, communication, visitor experience, and information design shared by other fields (including museum studies, art, exhibit design, educational psychology, community development/social justice, and digital media design). This hybrid seminar-studio explores next-generation ideas and practices of heritage place interpretation: first, by building on a thorough program of research and analysis of contemporary best-practices in site interpretation; second, by experimenting along lines suggested by new audiences and innovative thinkers and designers inside and outside the preservation field. The course will include a series of guest presenters from design, public history, management and other fields; exercises to analyze the theoretical bases, best practices and issues facing contemporary practice; and prototyping of new/experimental approaches.
Course usually offered in spring term
Activity: Seminar
1 Course Unit

HSPV 710 Thesis I
Students are admitted to thesis after completion of two semesters or their equivalent in the graduate program. Theses should be based on original research and relate to each student’s elected concentration. Thesis guidelines, available in the Historic Preservation office, describe other details.
Course usually offered in fall term
Activity: Independent Study
1 Course Unit

HSPV 711 Thesis II
Students are admitted to thesis after completion of two semesters or their equivalent in the graduate program. Theses should be based on original research and relate to each student’s elected concentration. Thesis guidelines, available in the Historic Preservation office, describe other details.
Course usually offered in spring term
Activity: Independent Study
1 Course Unit

HSPV 713 Topical Studio/Seminar: Professional Practice & Architectural Conservation
This course is intended to introduce students to the professional practice of architectural conservation and illustrate how the technical knowledge gained through their academic studies is applied in the real world. It will include a discussion of the role of the architectural conservator within the larger preservation and restoration fields, as well as the concept of professional leadership. A significant portion of the course will be dedicated to project management—from writing a proposal to developing and implementing a work plan for a conservation project. The project management portion of the course will also review the typical progression of a project through design and construction phases, highlighting the role that the conservator plays in both. The course will include lectures; site visits to current or recently completed conservation projects; in-class discussions and assignments related to typical tasks and challenges faced by architectural conservators in their daily professional life; and guest lecturers. Permission of department required to enroll.
Course usually offered in spring term
Prerequisites: Permission of the department is required to enroll.
Activity: Seminar
1 Course Unit

HSPV 739 Conservation Seminar: Masonry
This seminar will offer an in-depth study of the conservation of masonry buildings and monuments with a particular focus on American building stone. Technical and aesthetic issues will be discussed as they pertain to the understanding required for conservation practice. Part 1 will address a broad range of building stone, masonry construction technologies, and deterioration phenomenon; Part 2 will concentrate on conservation methodology as well as past and current approaches for the treatment of stone masonry structures. The subject will be examined through published literature and case studies. Students will gain practical experience through lab and field exercises and demonstrations. The subject matter is relevant to interested students of conservation and preservation, architecture, landscape architecture, architectural history, and archaeology.
Course usually offered in fall term
Prerequisites: Pre-requisite: HSPV 555 Conservation Science and permission needed from department.
Activity: Seminar
1 Course Unit

HSPV 740 Conservation Seminar: Finishes
The course will address the technology, analysis, deterioration, and treatment of historic finishes. Students will gain an overview of the materials and technology of which architectural finishes have been most commonly made, the types and causes of deterioration and diagnostic approaches, and treatment. Two categories of treatment will be considered: the replication of paints based on sample analysis and in situ excavation; and the treatment of deteriorated or buried paint intended to be represented as part of the architecture or site. Guest lecturers will elaborate on finishes analysis. A case study site will provide the opportunity for developing skills.
Course usually offered in spring term
Prerequisite: HSPV 555 Conservation Science
Activity: Seminar
1 Course Unit
HSPV 743 Conservation Studio/Seminar
This seminar explores advanced topics in conservation practice and research through detailed examination of archives, literature, material collections, and sites. Specific topics rotate, and have included slate, marble, terra cotta.
One-term course offered either term
Prerequisite: HSPV 555 Conservation Science
Activity: Seminar
1 Course Unit

HSPV 747 Conservation of Archaeological Sites and Landscapes
This seminar will address the history, theories, principles, and practices of the preservation and interpretation of archaeological sites and landscapes. The course will draw from a wide range of published material and experiences representing both national and international contexts.
Topics will include site and landscape documentation and recording; site formation and degradation; intervention strategies including interpretation and display; legislation, policy, and contemporary issues of descendant community ownership and global heritage. Depending on the site, studies will study specific issues leading toward the critique or development of a conservation and management program in accordance with guidelines established by ICOMOS/ ICAHM and other official agencies.
One-term course offered either term
Also Offered As: ANTH 508
Activity: Seminar
1 Course Unit

HSPV 748 Preservation Case Studies
Preservation Case Studies will bring cutting-edge theoretical debates, current issues and the latest work of faculty and guests into the HSPV curriculum. Coordinated by the Chair, but populated with a number of other faculty, practitioners and guest scholars, the course will sample and explore current theoretical, conceptual, political and practical issues facing the historic preservation field.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

HSPV 750 Architectural Conservation Praxis: Traditional Buildings / Traditional Practice
Architectural Conservation Praxis is an intensive 3-week summer course designed for students pursuing studies in architectural conservation and builds on Penn Preservation’s core curriculum and the first-year conservation courses. The syllabus is organized around project fieldwork supplemented by lectures, demonstrations, exercises, and site visits that will allow students to experience firsthand the design and construction of vernacular buildings and the application of traditional craft-based methods to preserve them.
Course usually offered summer term only
Prerequisites: HSPV 540, 541 and 555.
Activity: Studio
1 Course Unit

HSPV 770 Conservation Praxis: Site Analysis, Interpretation, and Management
This course is designed to meet two broad learning outcomes: first, solidify graduate students’ basic knowledge of site management and interpretation issues and processes; second, document and interpret complex sites using historical research, landscape reading and architectural archaeology methods.
Course usually offered summer term only
Prerequisites: HSPV 540, 541, 660 and 601; 606 preferred; 551 and 555 for conservation-focused students.
Activity: Studio
1 Course Unit

HSPV 790 Historic Preservation Summer Institute
The Summer Institute is a required orientation course designed to prepare incoming, first-year graduate students for the intense coursework of their first semester. Generally, the Institute orient students to the issues and methods of the core MSHP curriculum, begins familiarizing students to the resources of Philadelphia, and begins skill-building exercises, especially in the area of digital media. This non-credit course employs lectures, exercises, and field trips to introduce some of the important skills, questions, and issues that will be at the center of first year’s work in the Program. The Summer Institute also constitutes an extended introduction to the Program’s faculty and the students in first-year and second-year cohorts. Course enrollment is by permit only.
Course usually offered summer term only
Activity: Lecture
0 Course Units
Notes: Course fee: $500

HSPV 999 Independent Study
An opportunity for a student to work on a special project under the guidance of a faculty member.
One-term course offered either term
Activity: Independent Study
2 Course Units

History & Sociology of Science (HSSC)

HSSC 502 Public History
Public history, long marginalized and stigmatized in the scholarly world, is undergoing rehabilitation. The continuing, prodigious public demand for history in various media and manifestations, together with many historians’ desire for greater relevance and the persistently disappointing academic job market for new Ph.D.s., has reawakened interest in public history within the academy. This seminar examines the many varieties of public history while giving students hands-on experience, focusing on museums and historic sites.
Taught by: Barnes
Course not offered every year
Activity: Seminar
1 Course Unit
HSSC 503 Current Issues in the History of Medicine
This seminar surveys a variety of popular and scholarly approaches to the study of medicine and its history, ranging from traditional physician-centered narratives to more recent cultural and epistemological methodologies. The potential values of journalistic, sociological, anthropological, geographical and other approaches to the historical study of health, disease, and health care will be explored.
Taught by: Barnes
Course not offered every year
Activity: Seminar
1 Course Unit

HSSC 504 Reading Seminar in History of Science
Survey of major themes and figures in the history of western science, technology, and medicine since the Renaissance, through reading and discussion of selected primary and secondary sources. Topics include: Kepler, Galileo, Bacon, Newtonianism, Pasteur, the Industrial Revolution, the rise of German science, etc. Concurrent attendance at STSC 1 lectures is recommended.
Course usually offered in fall term
Activity: Seminar
1 Course Unit

HSSC 505 Seminar in the History and Sociology of Science
Seminar for first-year graduate students, undergraduate majors, and advanced undergraduates. Reading will introduce the student to current work concerning the effect of social context on science, technology, and medicine.
Taught by: Linker/Benson
Course usually offered in fall term
Activity: Seminar
1 Course Unit

HSSC 506 Readings in Race and Science
What accounts for the persistence and resilience of racial conceptions in science? In this course we will look for answers to this and other questions by examining the historiography of race, colonialism, and science. The standard historiography has focused on the rise and fall of racial typologies in the north Atlantic and their contributions to troublesome political projects such as the Atlantic slave trade, Jim Crow policies, the eugenics movement, and the Holocaust. More recent histories have taken inspiration from postcolonial studies, standpoint theories, and indigenous studies to insist on a more global reckoning of race and science. If we focus on the southern hemisphere, for instance, we can see scientific racial conceptions enrolled for a different though not necessarily less innocent set of projects: the dispossession of indigenous lands and effacement of indigenous peoples, the glorification of race-mixing as a tool of nation building, and the cultivation of whiteness as a means to modernity. By examining classic and recent approaches to race and science we will grapple with the following questions: Is ‘race’ a product of 18th century French and English science? Or can we find earlier iterations in the idioms of conquest of Spanish America during the early modern period? Do the standard narratives concerning the history of racial conceptions in science change when looked at from the frame of the global south? Does race get ‘buried alive’ after WW II? And do recent developments in human genomics bring ‘race’ back from the dead, albeit in an anti-racist form?
Taught by: Gil-Riano, Sebastian
Course usually offered in fall term
Activity: Seminar
1 Course Unit

HSSC 508 Knowledge in Motion
This course provides a broad, interdisciplinary introduction to the movement of knowledge across space and time. In particular, we will be focusing on the economic models of knowledge movement, on comparative and trans-cultural views on science, on translation, and finally, on the global turn in the history of science. Since the movement of knowledge is inseparable from the production of knowledge, we will also start our discussion by looking back at some of the literature that constitutes the intellectual foundations of the history and sociology of science.
Taught by: Kucuk
Course not offered every year
Activity: Seminar
1 Course Unit

HSSC 517 Gender and Technical Knowledge
In this graduate reading seminar, we explore how technical knowledge systems have historically intersected with identity and social order. The materials emphasize gender, but our discussions and readings will also engage at times with disability, race, class and other social categories that have shaped participation in technical endeavors and been the focus of technical study. Our goal is to understand how embodiment and expertise intersect. We will explore why certain kinds of people have been understood to be unreliable knowers, pathologically embodied, untrustworthy, or dangerously linked to emotion, incompetence or confusion, while other kinds of people have been socially marked as embodying reliability, trustworthiness, or epistemological neutrality. These embodiments bear on the historical development of technical knowledge as a social system for the establishment of consensus about the nature of reliable truth. They are also relevant at many different levels to embodied social experiences of scientific information, personal health, reproduction and everyday technology. This course will give students the tools and insights needed to draw on feminist/gender/ queer theory when it is useful to their research. That is the purpose of all of our readings.
Taught by: Lindee/Linker
Course not offered every year
Activity: Seminar
1 Course Unit

HSSC 524 Histories of the Cosmos
This course examines histories of "cosmopolitics": the ways in which scientists, technologists, artists, politicians, artists, architects, and others have planned, labored, and negotiated to build a world or universe in common. Cosmopolitics can be seen as a central topic of all of Science and Technology Studies (STS), history of science, and anthropology—since these fields investigate the ways in which natural and social orders get elaborated, challenged, and defended through concrete material and intellectual practices. The course adds a new tool: the study of "cosmograms": concrete objects-books, buildings, poems, sculptures, symphonies, narratives, pictures, etc.-through which humans have, in specific times and places, sought to represent to each other the overall structure, content, meaning, order, essence, origin, and future of the universe as a whole. These objects both inscribe and overcome divisions between art, science, and religion. Studying cosmograms in action, as part of specific local histories in which the general and universal order of things are getting worked out, is a way of grasping the processes and implications of controversies over knowledge, in their political, aesthetic, ethical, as well epistemological dimensions.
Taught by: Tresch, J.
Course not offered every year
Activity: Seminar
1 Course Unit
HSSC 528 Gender and Science
With a special focus on methods, this course explores the rich literature on gender and technical knowledge.
Taught by: Lindee
Course not offered every year
Also Offered As: GSWS 528
Activity: Seminar
1 Course Unit

This seminar will challenge students to encounter and interpret the city around them in unconventional ways. At a time when public commemoration has vigorously and sometimes violently re-entered our country’s public discourse, we wish to re-examine how monuments, memory, politics, and our senses shape our understandings of Philadelphia’s past, present, and possible futures. Our focus is on two intertwined themes: How we remember and What we remember. Treating monuments, films, and historical texts as key forms of interpretation - the building blocks of an official if unstable “public past,” we will likewise attend to the “backdrop” of such written and built statements: everyday urban and domestic life as well as more public histories that have remained silent or risen to the surface at key moments.
Taught by: Barnes/Wunsch
Course usually offered in spring term
Also Offered As: HSPV 620
Activity: Seminar
1 Course Unit

HSSC 561 Disability: History and Theory
Disability is the “next academic frontier,” argues historian Douglas Baynton, “an analytic category with the transformative potential of race, class, sexuality, and gender.” The purpose of this course will be explore recent literature on the history and theory of disability, focusing primarily on the history of physical disability. Throughout the semester, we will approach this literature with an eye to how disability studies relates to the fields of the history of science, medicine, and technology. Topics will include: the sociology of deviance, the medical vs. social model of disability, chronic illness and disease, genetics and disability, the role of disability in health care policy, as well as the politics of design and assistive technologies.
Taught by: Linker
Course not offered every year
Activity: Seminar
1 Course Unit

HSSC 564 History of Technology
In this course we read influential classic and recent works in the history and the philosophy of technology, tackling the ways in which the fields are analytically structured as well as their relation to each other. We also discuss approaches and methodological questions in general history and general philosophy. We start with Karl Marx, arguably the most influential historian and philosopher of technology of the modern era, and discuss him in relation to what has been one of the most visible debates in the historiography of technology - the question of technological determinism. We then travel in a roughly chronological order through key periods and methodological issues in the fields. During our journey we encounter the Middle Ages and historical theoreticians of the Annales School, the early modern period and questions about gender and microhistory, and the so-called Industrial Revolution and the questions it raises about what’s modern about modern technology. Mid-way through the class, we discuss two classics in the philosophy of technology, Martin Heidegger and Jürgen Habermas, who grapple precisely with the question about the modern element in industrial technology. As we enter the nineteenth and twentieth centuries, we expand our methodological horizon to include examples from the cultural history of technology and applications of the social constructivism debate to the history of technology. We end the class with works on the recently emerging fields of biotechnology and nanotechnology and with a set of monographs written in the nascent sub-discipline in the history and philosophy of technology, engineering studies.
Taught by: VOSKUHLA
Course not offered every year
Activity: Seminar
1 Course Unit

HSSC 565 Environmental History
A survey of recent and influential works in environmental history, including works from both within and outside the American environmental history canon. The focus is on situating emerging historiographical trends within the long-term development of the field and in relation to other closely allied fields, including the history of science, technology, and medicine, social and cultural history, urban history, agricultural history, world history, historical ecology, environmental anthropology, and ecocriticism.
Course not offered every year
Activity: Seminar
1 Course Unit

HSSC 567 Industrial and Post Industrial Ages
In this course we are concerned with phenomena surrounding industrialization and de-industrialization, and with post-industrial types of technologies and labor. We start with recent reconceptualizations of the archetypal British “Industrial Revolution” and its close relations to Indian industry and economy, move to the US American South as an example of a global agricultural economy in the industrial age, take North American and Western Europe as lenses for transitions from industrial to post-industrial eras, and discuss the nuclear and computer age of the Cold War from a number of perspectives: the Global South and cybernetics, medicine and isotopes, the recent climate debate and underlying computing, an anthropology of post-industrial labor, and gene-patenting and biological manufacturing in the twenty-first century.
Taught by: Voskuhl
Course not offered every year
Activity: Seminar
1 Course Unit
HSSC 588 Humanities Beyond the Human
The humanities are once again in flux as scholars experiment with a variety of new techniques and conceptual frameworks. In recent years many of these experiments have involved turning away from longstanding questions of representation, language, epistemology, and human exceptionalism and toward questions of enactment, materiality, ontology, and the nonhuman. In this seminar we will examine a variety of manifestations of this turn as they have emerged in history, anthropology, literary studies, and philosophy under names such as new materialism, multi-naturalism, big/deep history, multispecies ethnography, and object-oriented ontology. We will try to situate these recent turns in longer intellectual genealogies, drawing especially on works in science studies and the history of science that seek to provide contingent, situated accounts of what exists and what we can know about it. Objects of inquiry will include dogs, mushrooms, cyborgs, seeds, mosquitoes, bacteria, stones, jugs, pictures, hormone disruptors, and the cosmos. Taught by: Benson
Course not offered every year
Activity: Seminar
1 Course Unit

HSSC 597 Other Reasons
This course seeks to destabilize a monolithic vision of science as a singular, homogenous body of knowledge by revisiting its plural, heterogeneous histories. This course is particularly interested in exploring the historical entanglements between the sciences and the enchanted world of intangible entities such as spirits, ghosts and gods. The course will look at the theoretical critiques of “Enlightenment Rationality” and “Science” in post colonial theory; at a detailed and loosely chronological examination of the multifaceted entanglements of science and technology with the paranormal in the 19th and 20th centuries; and at the performative aspects of scientific rationality in colonial and postcolonial contexts in a bid to understand the background that led to postcolonial theorization. Taught by: Mukharji,P
Course not offered every year
Activity: Seminar
1 Course Unit

HSSC 611 Reading Seminar History of Medicine
A survey of key issues in the development of Western medicine during the past two centuries. Histonomographically oriented, it will emphasize areas of recent historical concern such as the role of the patient, the institutionalization of medical care, and shifting conceptions of disease. The course will also include some lecture as well as discussion. A paper will be required.
Course not offered every year
Activity: Seminar
1 Course Unit

HSSC 626 Research Seminar in History of Technology
This graduate seminar provides a structured environment in which each student executes an independent research project. Early class meetings focus on the craft of researching and writing scholarly articles. Later meetings are devoted to discussion of students’ progress on their research projects. Each student defines their own research topic in the history of technology, subject to the Professor’s approval.
One term course offered either term
Activity: Seminar
1 Course Unit

HSSC 629 Genetics and Genomics
This course is called "Genetics and Genomics," but we are defining those terms broadly to potentially encompass historical studies of biomedicine, evolution, race theory, biological anthropology, reproduction, agriculture, animal breeding, psychiatry, social sciences, and so on. We are thinking about knowledge of embodiment and what they teach us about social and technical order—about systems, institutions, technologies, hierarchies, theories, practices, networks, and so on. The goal of the semester will be for each student to produce a draft of a publishable research paper. Many of our readings are calibrated to complement the available archival collections at the American Philosophical Library, the University of Pennsylvania archives, the Academy of Natural History collections, the Chemical Heritage Foundation, Wagner Free Institute of Science, College of Physicians of Philadelphia, Hagley Museum and Library, and collections held in striking distance of Philadelphia, in New York, Princeton, Baltimore, and Washington DC. While APS will be a special focus of attention, given the remarkable collections there, students should make a special effort to become familiar with the many other resources that are available in the region, some of which have not been the focus of significant historical attention. Taught by: Lindey,S
One term course offered either term
Activity: Seminar
1 Course Unit

HSSC 665 Research Seminar in the History of Medicine
This course is focused on comparing and contrasting ethnographic and historical approaches to health and medicine. We will engage ethnographic and historical approaches to health and medicine to explore the methodological, empirical, and theoretical stakes of thinking medicine, disease, and the body across and within disciplines. Taking a methodological and comparative approach, the course will explore ethnographic and historical approaches to such themes as the body, disease, pharmaceuticals, and biomedical knowledge-production in global and historical context. We aim to develop skills and knowledge for critically reading anthropological, historical, and sociological literatures on medicine, the body, and disease. As such, students will develop a research project, which may be in either the history or anthropology of medicine and/or science, or a project, which combines such approaches, utilizing the comparative and methodological frameworks of the course to develop an original analysis on a topic of their choosing. Taught by: Aronowitz,R ; McKay,R
Course not offered every year
Activity: Seminar
1 Course Unit
HSSC 667 Capitalism: Theorizing economy in sci & med
What are the relationships between capitalism and the practice and experience and experience of medicine? How have historians and anthropologists theorized capitalism and political economy in accounts of health and medicine? What do such theories account for and what is foreclosed? This research seminar examines theories of capitalism as they are taken up in historical and ethnographic accounts of science, health, healing, and medicine. Exploring how contemporary and classic accounts have sought to analyze and unpack the relationship between economy and health, we will examine how political economic approaches to health and medicine have informed historical and ethnographic accounts of health and illness — asking, for instance, how theories of neoliberalism have been used to explain health inequalities (and vice versa) — and will analyze how scholars have linked practices of financialization, speculation, and investment to changing dynamics of health, medicine, healing, and the generation of medical knowledge. Course time will also be devoted to independent research through which students will develop and write up a research paper on an area of interest related to the course theme.

History (HIST)

HIST 001 Making of the Modern World
How did the world we now live in come to be? Is globalization a recent development or does it have a history of its own? At what point can we say that a world economy emerged and what sort of relations of production and distribution linked it together? When did people start thinking and acting as citizens of nations rather than as subjects of rulers or members of religious or ethnic communities, and what were the consequences? How should we conceptualize the great revolutions (French, American, Russian, Chinese) that would determine the landscapes of modern global politics? This course is designed to help us think about the “making of the modern,” not by means of an exhaustive survey but by exploring a range of topics from unusual perspectives: piracy, patriotism, prophecy; global struggles for political and human rights; drivers of war and peace, capitalism, nationalism, socialism, fascism, fundamentalism; communication and culture.

HIST 011 Deciphering America
This course examines American history from the first contacts of the indigenous peoples of North America with European settlers to our own times by focusing on a few telling moments in this history. The course treats twelve of these moments. Each unit begins with a specific primary document, historical figure, image, location, year, or cultural artifact to commence the delving into the American past. Some of these icons are familiar, but the ensuing deciphering will render them as more complicated; some are unfamiliar, but they will emerge as absolutely telling. The course meets each week for two 50-minute team-taught lectures and once recitation session. Course requirements include: in-class midterm and final exams; three short paper assignments; and punctual attendance and participation in recitations.

HIST 030 The Emergence of Modern Europe
This course traces the formation of European society, politics and culture from its earliest days through the era of the Reformation, ca. 1000-1600 CE. Major themes will include: politics and power; law and the state; economics and trade; religion; learning and the rise of universities; social organization; everyday life. The reading and analysis of primary sources from each era will be important in understanding Europe’s key features and development.
For BA Students: History and Tradition Sector
Taught by: Moyer
One term course offered either term
Activity: Recitation
1 Course Unit
HIST 031 Making and Breaking European Hegemony
HIST 031 will trace the dramatic rise and fall of Europe’s global hegemony during the period roughly from 1450 to 1950. Among the major themes we will examine are: states and power, borders and resistance, race and genocide, economies and oppression, ideas and revolution, the building and change of hierarchies of gender and power. Truly, a dramatic story. The objectives of the course are: 1) To serve as an introduction to the study of history for majors and non-majors alike, and to teach the critical analysis of historical sources; 2) to teach substantive knowledge of European history; 3) to provide a framework for further study of the European past. No previous background in European or World history is required.
For BA Students: History and Tradition Sector
Taught by: Holquist/Nathans/Safley
One term course offered either term
Activity: Lecture
1 Course Unit

HIST 040 Early Modern Europe, 1450-1750
This course examines those European developments which contributed to the world we understand as modern. Special emphasis will be placed on the transformation of Europe through the advent of new technologies, the creation of a global economy, the consolidation of territorial states, the rise of effective, central governments, the dissolution of religious unity, and the dialect between modern and traditional world views.

HIST 048 The Rise and Fall of the Russian Empire, 1552-1917
How and why did Russia become the center of the world’s largest empire, a single state encompassing eleven time zones and over a hundred ethnic groups? To answer this question, we will explore the rise of a distinct political culture beginning in medieval Muscovy, its transformation under the impact of a prolonged encounter with European civilization, and the various attempts to re-form Russia from above and below prior to the Revolution of 1917. Main themes include the facade vs. the reality of central authority, the intersection of foreign and domestic issues, the development of a radical intelligentsia, and the tension between empire and nation.
For BA Students: History and Tradition Sector

Activity: Lecture
1 Course Unit

Out of an obscure, backward empire, the Soviet Union emerged to become the great political laboratory of the twentieth century. This course will trace the roots of the world’s first socialist society and its attempts to recast human relations and human nature itself. Topics include the origins of the Revolution of 1917, the role of ideology in state policy and everyday life, the Soviet Union as the center of world communism, the challenge of ethnic diversity, and the reasons for the USSR’s sudden implosion at the end of the century. Focusing on politics, society, culture, and their interaction, we will examine the rulers (from Lenin to Gorbachev) as well as the ruled (peasants, workers, and intellectuals; Russian and non-Russian). The course will feature discussions of selected texts, including primary sources in translation.

Activity: Recitation
1 Course Unit

HIST 050 England and the British Isles to 1707
The subject of this course is the history of the British Isles from the Roman conquest in 43AD to the creation of the United Kingdom in 1707. Between these two dates the various societies and cultures in the British Isles were brought into the orbit of the Roman Empire, converted to Latin Christianity, and developed distinctive cultures and strong ties with the Continent. From the twelfth century on, the kingdoms of England began to exert its power over Wales, Ireland, and Scotland, although English power waxed and waned in these areas between the twelfth and the seventeenth centuries. The Anglo-Norman continental empire of the Plantagenet dynasty also played a large part in shaping the English monarchy, as did the playing out of the Hundred Years War, the internal divisions in fifteenth-century English society, and the rise of the Tudor-Stuart dynasty.

Taught by: Todd
Course not offered every year
Activity: Lecture
1 Course Unit
HIST 051 Modern Britain, 1700-present: Empire, Industry and Democracy
In this course, we will investigate the extraordinary story of Britain’s rise to global predominance and the question of its “decline” in the twentieth century. Our readings and discussions will engage with dominant ideas, social processes, and popular beliefs; we will look at the structure of government and the texture of everyday lives. We will encounter Britons in all corners of the world even as we explore the complexities of metropolitan British history. Big ideas were born there: industrial capitalism, political liberalism, and scientific racism. Britain’s political system, with its early form of (limited) democracy, gave shape to party politics around the world. We begin in the early eighteenth century—focusing on the agricultural and social changes that accompanied the onset of the Industrial Revolution. We’ll examine the rise of the Hanoverian fiscal-military state, and its consolidation and transformation in the course of the Napoleonic Wars. We end in the present day, looking at Britain which may have lost an Empire, but which retains a strong welfare state, a global cultural presence, and a permanent seat on the UN Security Council. Should we understand its rise and subsequent retraction as a store of an ascent and a decline? We will interrogate that narrative throughout the semester. The course moves roughly chronologically, but by way of discrete units that provide different perspectives on British politics, economics, and culture.
For BA Students: History and Tradition Sector
Taught by: Chase Levenson
Course usually offered in spring term
Activity: Lecture
1 Course Unit

HIST 055 Reading the Classics
In this course we will study the early roots of Western culture—the Biblical, Greek and Roman traditions—as well as how sixteenth- and seventeenth-century European authors reproduced, rethought and reshaped these early traditions. Instead of reading and discussing the required texts according to the date when they were written (first the early traditions and ending with the Renaissance views), we will focus our attention on a few themes that were central concerns to those living in Classic and Renaissance times, and that continue to influence modern ways of thinking and acting in Western societies: conceptions of God and the place of religion in society; nature of power and authority, and individuals’ rights and duties; good, evil, and ethical philosophy; views on women, their nature and roles in society; ethnography and the perception of other cultures and societies. In addition to reading and discussing several of the biblical books—Genesis, Exodus, the Book on Revelation—we will study other seminal classical works—Sophocles’ Antigone, Aristotle’s Politics and Ethics, Herodotus’ The Histories; Plato’s Apology—and works by Michel de Montaigne, Maria de Zayas y Sotomayor, Marie de Gourmont, Christopher Marlowe, William Shakespeare, and several others. We will also work with books published in the last decades, analyzing the classics and and their reception in various periods of history, but also books that analyze what the classics tell us today—Dreyfus and Kelly’s All things shining, Reading the Western Classics to find meaning in a secular Age; Anthony Grafton's Bring Out Your Dead: the Past as Revelation; James Miller, Examined Lives, from Socrates to Nietzsche; and Sarah Bakewell, How to Live: Or a Life of Montaigne in One Question and Twenty Attempts at an Answer.
Taught by: Feros
Activity: Lecture

HIST 056 Universal Language: From the Tower of Babel To Artificial Intelligence
Also Offered As: RUSS 095
Activity: Seminar
1 Course Unit

HIST 070 Colonial Latin America
This course provides an introduction to the broad literature on Latin America’s rich colonial history. We will begin by tracing some of the early origins of - and points of contact between - the Indian, Iberian, and African men and women who formed the basis of colonial society. As the course progresses, we will explore the variety of ways in which colonial subjects lived, worked, ate, worshipped, and socialized. Lectures and reading assignments will draw upon a variety of sources, including court cases, artistic renderings, city maps and street plans, travel accounts of visits to the regions, and the material, cultural, and intellectual products made possible by the wealth and dynamism of the seventeenth and eighteenth centuries. The course will conclude with an analysis of the Age of Revolutions, a period of dramatic upheaval that remains at the center of lively scholarly debates. By the end of the semester, students will be able to engage the key questions driving these debates, the most important of which, perhaps, is: what is Latin America’s colonial legacy?
For BA Students: History and Tradition Sector
Taught by: Farnsworth-Alvar
Course usually offered in fall term
Also Offered As: AFRC 070, LALS 070
Activity: Recitation
1 Course Unit
Notes: Fulfills History Tradition Distribution Requirement

HIST 071 Latin American Survey 1782-Present
Surveys Latin American and Caribbean history from the Tupac Amaru Revolt to the present. We will examine the legacy of Spanish colonialism and slavery, movements for national and cultural independence, twentieth-century radicalism, and the politics of race in contemporary Latin America. Readings include fictional as well as analytical representations, and a film series will accompany the course.
For BA Students: History and Tradition Sector
Taught by: Farnsworth-Alvar

Also Offered As: AFRC 076
Activity: Recitation
1 Course Unit

HIST 081 History of the Middle East Since 1800
A survey of the modern Middle East with special emphasis on the experiences of ordinary men and women as articulated in biographies, novels, and regional case studies. Issues covered include the collapse of the Ottoman Empire and the rise of a new state system following WWI, and the roots and consequences of the Palestinian-Israeli conflict, the Iranian revolution and the U.S.-Iraq War. Themes include: the colonial encounter with Europe and the emergence of nationalist movements, the relationship between state and society, economic development and international relations, and religion and cultural identity.

HIST 084 Topics in 20th C. Middle East
If "the clash of civilizations" is the first image that jumps to mind when thinking about the modern Middle East, then this is the course for you. From the familiar narratives about the creation of modern nation-states to the oft-neglected accounts of cultural life, this course surveys the multi-faceted societies of the twentieth-century Middle East. Although inclusive of the military battles and conflicts that have affected the region, this course will move beyond the cliches of war and conflict in the Middle East to show the range of issues and ideas with which intellectuals and governments grappled throughout the century. The cultural politics and economic value of oil as well as the formation of a vibrant literary life will be among the topics covered in the course. By considering illustrative cultural moments that shed light on the political history of the period, this course will adopt a nuanced framework to approach the Arab/Israeli conflict, the history of the Gulf States, the Iran-Iraq War, and U.S. involvement in the region.

HIST 096 Late Imperial China
This lecture course – the first of a two-part sequence – examines the history of late imperial China through the early 19th century. We begin with the Song dynasty transformation; the rise of gentry society and imperial absolutism; the institution of Confucian orthodoxy, the shift of the population and the economic center of gravity to the south, the commercialization of the economy, and change in the relative status of women and men. We then trace China's subsequent political and social history, including the following themes: inner vs. outer court politics; law, government, and society; intellectuals and political dissent; gender, family, and kinship practices; patterns of peasant life and rebellion; traditional foreign relations and first contacts with the West; internal sources of the decline of imperial order.

HIST 097 History of Modern China
From an empire to a republic, from communism to socialist-style capitalism, few countries have ever witnessed so much change in a hundred year period as China during the twentieth century. How are we to make sense out of this seeming chaos? This course will offer an overview of the upheavals that China has experienced from the late Qing to the Post-Mao era, interspersed with personal perspectives revealed in primary source readings such as memoirs, novels, and oral accounts. We will start with an analysis of the painful transition from the last empire, the Qing Dynasty (1644-1911), to a modern nation state, followed by exploration of a century-long tale of incessant reform and revolution. The survey will focus on three main themes: 1) the repositioning of China in the new East Asian and world orders; 2) the emergence of a modern Chinese state and nationalistic identity shaped and reshaped by a series of cultural crises; and finally, 3) the development and transformation of Chinese modernity. Major historical developments include: the Opium War and drug trade in the age of imperialism, reform and revolution, the Nationalist regime, Mao’s China, the Cultural Revolution, and the ongoing efforts of post-Mao China to move beyond Communism. We will conclude with a critical review of the concept of “Greater China” that takes into account Taiwan, Hong Kong, and the Chinese diaspora in order to attain a more comprehensive understanding of modern China, however defined, at the end of the last century.

HIST 098 Introduction to Korean Civilization
This gateway course surveys the history of Korea from early times to the present. We will study the establishment of various sociopolitical orders and their characteristics alongside major cultural developments. Covered topics include: state formation and dissolution; the role of ideology and how it changes; religious beliefs and values; agriculture, commerce, and industry; changing family relations; responses to Western imperialism; and Korea’s increasing presence in the modern world as well as its future prospects. Students will also be introduced to various interpretive approaches in the historiography. No prior knowledge of Korea or Korean language is presumed.

HIST 107 Comparative Capitalist Systems
The course follows the evolution of industrial capitalism since the beginning of the English industrial revolution in the late 18th century. It ranges from the problems of the industrial revolution in England to problems of building a market economy in eastern Europe today. In particular, it examines industrialization and explores the sources of sustained economic growth from a comparative perspective. Most of the world, especially in so-called emerging economies, is still confronted with the challenge, and often pain, of creating a modern industrial capitalist society. The course attempts to build a conceptual apparatus for understanding models of industrialization and is built around issues such as law, anti-trust, corporate forms, banking institutions, industrial relations, etc. By definition, the course tends to concentrate on successful industrializers around the world, but questions regarding continuing underdevelopment will be addressed.

HIST 108 American Origins
The United States was not inevitable. With that assumption as its starting point, this course surveys North American history from about 1500 to about 1850, with the continent’s many peoples and cultures in view.
The unpredictable emergence of the U.S. as a nation is a focus, but always in the context of wider developments: global struggles among European empires; conflicts between indigenous peoples and settlers-colonists; exploitation of enslaved African labor; evolution of distinctive colonial societies; and, finally, independence movements inspired by a transatlantic revolutionary age.

HIST 118 Witchcraft and Possession
This course explores world witchcraft and possession from the persecutions of the early seventeenth century through the rise of Wicca in the twentieth century. The mere mention of these terms, or of such close cousins as demonology, sorcery, exorcism, magic, and the witches Sabbath, raises clear ethnographic and historical challenges. How can the analysis of witchcraft—including beliefs, patterns of accusation, the general social position of victims, the intensity and timing of witch hunts, and its relation to religious practice, law, language, gender, social marginalization, and property—lead us to a more humane understanding of belief and action? Films such as The Exorcist, The Blair Witch Project, The Crucible, and Three Sovereigns for Sarah will focus discussion.

HIST 119 History of the Modern Business Corporation
Over the last two centuries, the modern corporation has emerged as the dominant form of doing business throughout the world. As such, it not only affects people’s daily lives, but also influences government policies and larger trends in society. This course looks at the history of the international corporation from the industrial revolution to the present, to consider how corporations have evolved and the varying ways in which they have influenced the history of our times. We will consider the fundamental debates surrounding the responsibility between shareholders, managers, workers, customers, and most importantly, society as a whole. Much of the course will involve an examination of case studies of individual companies, industries or issues, to understand how corporations have functioned in specific instances.

HIST 123 Economic History of Europe I
This course concentrates on the economy of Europe in the Early Modern Period, 1450-1750. It was a time of great transition. Europe developed from an agriculturally-based to an industrially-based economy, with attendant changes in society and culture. From subsistence level productivity, the European economy expanded to create great surfeits of goods, with attendant changes in consumption and expectation. Europe grew from a regional economic system to become part–some would say the heart–of a global economy, with attendant changes in worldview and identity. Economic intensification, expansion, globalization, and industrialization are our topics, therefore. Beginning with economic organizations and practices, we will consider how these changed over time and influenced society and culture. The course takes as its point of departure the experience of individual, working men and women: peasants and artisans, merchants and landlords, entrepreneurs and financiers. Yet, it argues outward: from the particular to the general, from the individual to the social, from the local to the global. It will suggest ways in which the economy influenced developments or changes that were not in themselves economic, shaped, and delected economic life and practice.

HIST 124 Economic History, 1600 to present
Economic affairs dominate much of our daily lives and an appreciation of how our economic world evolved is essential for an intelligent understanding of today’s society. This course will survey the world’s economic history from 1600 to the present. It will consider the evolution of government policies, the growth of trade, business and industry, the economic inter-relationship between regions, governments and business, and, of course, their effect on ordinary people’s economic lives.

HIST 126 Modern Europe, 1789-1919
It’s old, it’s new. It’s unfamiliar, it’s recognizable. This course investigates the collapse of the “old regime” and the birth of something like the Europe we recognize. The long nineteenth century witnessed the development of political, economic, and cultural phenomena we often see as characteristic of modern society. Topics considered include political revolution, industrialization, liberalism, imperialism, and new ideologies of gender, race, and class. Our focus will be consistently transnational. Where did Europe begin and end? How did borders and boundaries operate at the edge of nations, but also within societies? We will investigate these questions as we follow European history from the violence and optimism of the French Revolution to the chaos of the First World War.

HIST 127 The Material Past in a Digital World
The material remains of the human past–objects and spaces provide tangible evidence of past people’s lives. Today’s information technologies improve our ability to document, study, and present these materials. But what does it mean to deal with material evidence in virtual contexts? In this class, students will learn basic digital methods for studying the past while working with the collections of the Penn Museum. As we learn about acquiring and managing data, we will gain valuable experience in the evaluation and use of digital tools. The digital humanities are a platform both for learning the basics of digital literacy students need to succeed in today’s world and for discussing the human consequences of these new technologies and data. We will discuss information technology’s impact on the study and presentation of the past, including topics such as public participation in archaeological projects, educational technologies in museum galleries, and the issues raised by digitizing and disseminating historic texts and objects. Finally, we will touch on technology’s role in the preservation of the past in today’s turbulent world. No prior technical experience is required, but we hope students will share an enthusiasm for the past.

HIST 128 From Complete Destruction to Superpower: Europe 1945-2013
This course offers a survey of European history, including both eastern and western Europe since World War II until the present. The course examines how Europe in all its complexity and cultures lived under the shadow of the Cold War. It examines the origins and nature of the cold war, not just in its diplomatic and political dimensions, but also its effects on the culture and people of Europe. It explores the reasons for the phenomenon of anti-Americanism and the series of revolts exploding throughout eastern Europe until the fall of the Berlin Wall. Finally, the course examines a number of thematic areas about European political culture, immigration, decolonization, the 1960s revolts and the 1970s terrorism, the resurgence of nationalism, but also the growth of the European community. The course explores the question: what does it mean to be European?

HIST 130 History of Globalization
Globalization seems the essence of modernity, but it is not a new phenomena. The world has already witnessed several eras of globalization, each of which transformed and changed the world in often similar but sometime unique fashions. This course will look at continuing trends towards globalization and consider its rich history and the contentious arguments that it has always provoked. Although the focus of the course will be on globalization during the 19th and 20th centuries, we will also consider earlier episodes of globalization, to fully appreciate its evolution and importance.

HIST 131 Financial Meltdown, Past and Present
Economic history is increasingly recognized as a crucial source of policy advice and is invoked with growing frequency in public debates. In particular, the subprime crisis in 2008 and after has generated a demand for "historical perspective" that would improve the understanding of the causes of financial turmoil and facilitate the prevention of comparable catastrophes. This course begins with a review of the principal features of the subprime crisis of 2008 and asks, so to speak, "how did we get there?" It answers by providing historical insights that shed light on crucial aspects of financial disasters. This is a history course, engaging with topics pertaining to economics, law and politics (national and international). Students with diverse backgrounds are expected to benefit from this course through acquiring a concrete knowledge of the historical evolution of fundamental institutions of financial capitalism. Ultimately, students enrolling in this course are expected to achieve proficiency in historically informed discussion of the mechanisms that were played out in the subprime crisis and beyond.

1 Course Unit

HIST 133 Free Speech and Censorship
This course will explore the idea of free speech - its justification, its relationship to various forms of censorship, and its proper limits - as a historical, philosophical, legal, and ultimately, political question. In the first half of the course, we will explore the long history across the West of the regulation of various kinds of ideas and their expression, from malicious gossip to heresies, and read classic arguments for and against censorship, copyright protections, and standards of taste and decency and of truth. In the second part of the seminar, after looking at how the idea of freedom of speech came to seem an existential prerequisite for democracy as well as individual liberty, we will take up the historical and philosophical questions posed by such recent dilemmas as whether or not hate speech deserves the protection of the First Amendment, the distinction between art and pornography from the perspective of freedom of expression, speech during wartime, and the transformative effects of the internet on the circulation and regulation of ideas. We will end the semester by thinking about the globalization of the idea of free speech as a human right and its implications, both positive and negative.
Readings will range from Robert Darnton's The Forbidden Best Sellers of Pre-Revolutionary France, to D. H. Lawrence's Lady Chatterley's Lover to documents concerning the cartoons of Charlie Hebdo and law review articles about Citizens United v. FEC. We will also make considerable use of local resources, from museums to the library.

HIST 135 Cold War: Global History
The cold War was more than simply a military confrontation between the United States and the Soviet Union; it was the frame within which the entire world developed (for better or worse) for nearly five decades. This course will examine the cold War as a global phenomenon, covering not only the military and diplomatic history of the period, but also examining the social and cultural impact of the superpower confrontation. We will cover the origins of the conflict, the interplay between periods of tension and detente, the relative significance of disagreements within the opposing blocs, and the relationship between the "center" of the conflict in the North Atlantic/European area and the global "periphery".

HIST 137 International Society in the Twentieth Century
Is the world evolving toward a global civil society, and perhaps toward
global government? The course explores this question across the
20th century, focusing on the origins and evolution of transnational
organizations and movements. We will analyze a variety of actors above
and below the level of the nation-state, from the League of Nations to
Amnesty International. At the same time we will pay careful attention
to the many countervailing forces that have resisted the process of
globalization: various forms of nationalism, local ethnic and religious
movements in places as far-flung as Central Africa and Northern
Ireland, and struggles over territories and border control from Arizona
to Kashmir. We will look at the long history of contention between these
opposing trajectories, exploring such topics as Wilsonianism and its
reception in Europe and beyond, transnational human rights norms, the
environmentalist movement, institutions designed to deal with global
threats such as the World Health Organization or the International Atomic
Energy Agency, European integration, political Islam, and the War on
Terror.

HIST 141 Jews in the Modern World
This course offers an intensive survey of the major currents in Jewish
culture and society from the late middle ages to the present. Focusing
upon the different societies in which Jews have lived, the course
explores Jewish responses to the political, socio-economic, and cultural
challenges of modernity. Topics to be covered include the political
emancipation of Jews, the creation of new religious movements within
Judaism, Jewish socialism, Zionism, the Holocaust, and the emergence
of new Jewish communities in Israel and the United States. No prior
background in Jewish history is expected.

One term course offered either term
Also Offered As: ECON 014
Activity: Recitation
1 Course Unit

HIST 162 The American West
This course explores the social and cultural history and current views of the many Wests we think we know. In 1872, President Grant established Yellowstone National Park, only the first of many national and state nature reserves in the west. Even while the Parks were widely celebrated, in 1876 Grant allowed miners and land speculators into the Black Hills, or Paha Sapa, land long considered sacred by the Lakota peoples and ‘protected’ for them as recently as 1868 Treaty of Laramie. From this pairing of events in the 1870s spring the many overlapping themes this course will address: Native peoples, their beliefs and material cultures, pressured by the arrival of scattered industries (gold rushes, silver and copper mining); irregular sources of industrial and banking capital from England, New York, Chicago, and elsewhere; the arrival of the US Army in 1851, then a break removing troops for the Civil War, then their renewed and constant appearance from 1866 on and the making and breaking of other treaties; the irregular scattering of land speculators and dirt farmers, even while the US government insisted the Sioux and Cheyennes, among other peoples, not disturb the passage of planters on the Oregon Trail, even as their hunting grounds were enclosed by the Union Pacific and North Pacific railroads by 1870. Naturalists, hikers, and artists arrived by rail to the western parks: Yellowstone, Yosemite (1890), and the Grand Canyon (1919). By 1900, American tourists went west to see wild West Indian Shows and wonder at the new parks. They ate at restaurants serving western food, wore western ware and cowboy boots, and listened to western music that finally reached its high point when folklorist Hal Cannon founded the National Cowboy Poetry Gathering in Elko, Nevada, in 1984, still active today with offshoots in Durango, Montana, and Texas.

Course usually offered in spring term
Activity: Recitation
1 Course Unit
HIST 163 Modern American Culture
Through the twentieth century, American culture took on new forms and meanings, spurred by technological innovation, commerce, and institutions, and shaped by an ever-changing population. In the process, American culture became self-consciously "modern"-embraced, contested, repudiated, and continually redefined. This course explores the history of American culture from the 1890s to the 1990s, with a focus on the following questions: Why did culture become such an important part of American economic, social, and political life in the twentieth century? How has culture been created, understood, and mobilized by different groups in American society at different times? What have been the politics of culture over the twentieth century? Topics include the rise of "culture industries" and mass entertainment, including amusement parks, film, radio, and television; the growth of consumer culture; the impact of gender in such arenas as sports and fashion; the role of working-class people, African Americans, and immigrants in American culture; the cultural response to the Depression and World War II; and popular activism. The course emphasizes the study of primary documents: journalism, fiction, letters and diaries, music, photographs, and film as a means of understanding the past.

HIST 166 Arab/Israeli Conflict in Literature and Film
This course will explore the origins, the history and, most importantly, the literary and cinematic art of the struggle that has endured for a century over the region that some call the Holy Land, some call Eretz Israel and others call Palestine. We will also consider religious motivations and interpretations that have inspired many involved in this conflict as well as the political consequences of world wars that contributed so greatly to the reconfiguration of the Middle East after the fall of the Ottoman Empire, and after the revelations of the Holocaust in Western Europe. While we will rely on a textbook for historical grounding, the most significant material we will use to learn this history will be films, novels, and short stories. Can the arts lead us to a different understanding of the lives lived through what seems like an unending crisis?

HIST 170 The American South
Southern culture and history from 1607-1860, from Jamestown to secession. Traces the rise of slavery and plantation society, the growth of Southern sectionalism and its explosion into Civil War.
For BA Students: History and Tradition Sector
Two terms. student may enter either term.
Also Offered As: AFRC 170
Activity: Recitation
1 Course Unit

HIST 171 The American South 1860-Present
This course will trace the history of the American South from the end of the Civil War to the present. It will investigate Reconstruction, the New South, Populism, racial disfranchisement and the rise of Jim Crow, the politics of the One-Party South, the South in the Progressive era and its role in the New Deal and World War II, the Civil Rights Movement of the 1950s and 1960s, and the rise of the Republican South. While following the narrative of politics and economic developments, we will pay particular attention to race relations and will be more than casually interested in gender roles. In addition, we will take frequent peeks at the evolving Southern identity as reflected in popular culture and literature as well as in other corners of the public sphere.
For BA Students: History and Tradition Sector
Two terms. student may enter either term.

HIST 172 Native People of Eastern North America
This course surveys Native American life east of the Mississippi River from earliest times to the present. The diverse histories of Native peoples will be examined both on their own terms and as continuing elements of the continent’s broader story. Topics to be addressed include 16th- and 17th-century demographic, economic, and social consequences of contact with European peoples, 18th century strategies of resistance and accommodation to colonial powers, 19th-century impacts of U.S. government removal and cultural assimilation policies, and 20th-century cultural and political developments among the region’s surviving Native American communities.

Course not offered every year
Activity: Lecture
1 Course Unit

HIST 174 Reform and Revolution in the Americas
The United States and Latin America produced a remarkable series of revolutions and reforms during the postwar period. This course examines efforts in the United States, Guatemala, Cuba, and Brazil to define and address problems around land, labor, and property; nation, empire, and autonomy; and racism, democracy, and citizenship. In studying the US and Latin America together, the class invites students to explore central themes of both regions’ histories as parts of global processes. We will explore exchanges between social movements in the US, Cuba and Africa, for instance, ask how ideas about poverty traversed national borders, and examine the global rise of human rights consciousness. The class, in other words, not only compares national histories but analyzes the relationships between national upheavals and the global significance of events in the hemisphere.

HIST 175 History of Brazil: Slavery, Inequality, Development
In the past decade, Brazil has emerged as a leading global power. As the world’s fifth-largest country, by size and population, and the ninth-largest by GDP, Brazil exerts tremendous influence on international politics and the global economy, seen in its position as an emerging BRIC nation and a regional heavyweight in South America. Brazil is often in the news for its strides in social welfare, leading investments in the Global South, as host of the World Cup and Olympics, and, most recently, for its political instability. It is also a nation of deep contradictions, in which myth of racial democracy — the longstanding creed that Brazilian society has escaped racial discrimination — functions alongside pervasive social inequality, state violence, political corruption, and an unforgiving penal system. This course examines six centuries of Brazilian history. It highlights the interplay between global events — colonialism, slavery and emancipation, capitalism, and democratization — and the local geographies, popular cultures, and social movements that have shaped this multi-ethnic and expansive nation. In particular, the readings will highlight Brazil’s place in Latin America and the Lusophone World, as well as the ways in which Brazil stands as a counterpoint to the United States, especially in terms of the legacy of slavery and race relation. In this lecture, we will also follow the current political and economic crises unfolding in Brazil, at a moment when it has become all the more important to evaluate just how South America’s largest nation has shaped and been shaped by global events.

HIST 176 Afro-American History 1550-1876
This course will study the history of Afro-Americans from their first encounter with Europeans in the 16th century to emancipation during the Civil War. The course will concentrate on the variety of black responses to capture, enslavement, and forced acculturation in the New World. The difference in the slave experience of various New World countries, and the methods of black resistance and rebellion to varied slave systems will be investigated. The nature and role of the free black communities in antebellum America will also be studied.
For BA Students: History and Tradition Sector
Two terms. student may enter either term.
Also Offered As: AFRC 176
Activity: Lecture

HIST 178 The Foundations of the Early Modern Atlantic World 1450-1800
The purpose of this course is to provide students with a solid knowledge of Atlantic history during the early modern period (XV-XVIII centuries). Through readings of primary and secondary texts we will discuss the cultural, religious, intellectual, and economic developments of Europe, Africa, and the Americas, as well as the connections, struggles, and mutual influences between the peoples of these three continents. Throughout the semester we will study several important topics: medieval precedents of early modern expansion; theories of empire; ideologies and systems of conquest and colonialization; the relevance of race and slavery to the understanding of the early modern Atlantic world; how different peoples perceived others and themselves; how European imperialism and colonialization affected the internal development of Africa and America; the role played by religion in the Atlantic world; persistence and continuity of Native cultures and beliefs during an age of expansion; the creation of new identities; the role played by African nations in the creation of the Atlantic world; and the creation of an Atlantic economy. HIST 179 The Rise and Fall of the Spanish Empire 1450-1700
This course will provide students with a solid knowledge of the history of early modern Spain (1450-1700). Through readings of primary and secondary texts that offer a complex vision of the cultural, religious, intellectual, and economic contexts and processes, students will be able to appreciate the intricacies of Spain’s historical evolution. The course focuses on the rise and decline of the Spanish monarchy, the conditions that enabled Spain to become the most powerful monarchy in early modern times, and the conditions that led to its decline. This course also touches upon other important aspects critical to understanding early modern Spain: relationships among Christians, Muslims, and Jews in the Iberian Peninsula; the conquest and colonization of the New World; and early modern debates about Spain’s rights to occupy America and the so-called “destruction of the Indies.”

HIST 188 Civilizations at odds? The United States and the Middle East
Foe or friend, Satan or saint - America has often been depicted in the Middle East either as a benevolent superpower or an ill-meaning enemy. In America, too, stereotypes of the Middle East abound as the home of terrorists, falafels, and fanatics. This undergraduate lecture course will explore the relationship between the United States and the Middle East by moving beyond such facile stereotypes. Our goal is to understand why a century of interaction has done little to foster greater understanding between these two societies. By reading novels, memoirs, and historical accounts, we will examine the origins of this cultural and diplomatic encounter in the twentieth century. The readings will shed light on America’s political and economic involvement in the Middle East after the Second World War. We will consider the impact of oil diplomacy on U.S.-Middle East relations, as well as the role of ideology and religion, in our effort to comprehend the current challenges that face these societies.

HIST 209 Industrial Metropolis
Although we no longer think of most U.S. cities as industrial cities, metropolitan areas today are all products of industrial economies, technologies, and social systems. This course explores the industrialization and deindustrialization of American cities within their evolving global context from the era of European colonization to the present. It includes weekly readings and discussion, regular response papers and walking tours, in-class exercises, and a research paper using primary sources. Themes include energy and ecology, labor and production, inner city and suburban development, globalization, and economic restructuring. Ultimately, the class aims to give students a broad knowledge of 1) the history of industrial capitalism, 2) its effects on cities and regions over the past three centuries, and 3) analytical tools for understanding the past, present, and future of metropolitan economies, geography, and society.

HIST 219 Medieval Russia: Origins of Russian Cultural Identity
This course offers an overview of the cultural history of Rus from its origins to the eighteenth century, a period which laid the foundation for the Russian Empire. The course takes an interdisciplinary approach to the evolution of the main cultural paradigms of Russian Orthodoxy viewed in a broader European context. Although this course is historical in content, it is also about modern Russia. The legacy of Medieval Rus is still referenced, often allegorically, in contemporary social and cultural discourse as the Russian, Ukrainian and Belarusian societies attempt to reconstruct and reinterpret their histories. In this course, students learn that the study of the medieval cultural and political history explains many aspects of modern Russian society, its culture and mentality.

HIST 248 The Haitian Revolution
In August 1791, enslaved Africans on the northern plain of Saint Domingue (colonial Haiti) rose up in a coordinated attack against their French colonial masters, launching the initial revolt in what would come to be known as the Haitian Revolution. In the years that followed, their actions forced the abolition of racial discrimination and slavery throughout the French Empire. When Napoleon Bonaparte threatened to return slavery to Saint Domingue, they waged a war for independence, declaring Haiti the world's first "Black Republic" in 1804. This seminar will examine some of the major themes and debates surrounding Haiti's colonial and revolutionary history. We will begin by considering the colonial paradox: France's leading role in the intellectual movement called the "Enlightenment" coincided with its ascent as a slaveholding colonial power. The seminar will also explore parallels and points of connection between the revolutionary movements in France and Saint Domingue: how did increasingly radical ideas in France shape events in the Caribbean? Likewise, how did west African traditions and political ideologies influence insurgents and their leaders? And how, in turn, did revolution in the Caribbean impact the revolution in France? Finally, we will ask how the Haitian Revolution influenced ideas about liberty, sovereignty, and freedom throughout the Atlantic World. We will read a combination of primary and secondary materials each week. A final research paper will be required of all students.

HIST 273 Penn Slavery Project Research Seminar
This research seminar provides students with instruction in basic historical methods and an opportunity to conduct collaborative primary source research into the University of Pennsylvania's historic connections to slavery. After an initial orientation to archival research, students will plunge into doing actual research at the Kislak Center, the University Archives, the Historical Society of Pennsylvania, the American Philosophical Society, the Library Company, and various online sources. During the final month of the semester, students will begin drafting research reports and preparing for a public presentation of the work. During the semester, there will be opportunities to collaborate with a certified genealogist, a data management and website expert, a consultant on public programming, and a Penn graduate whose research has been integral to the Penn Slavery Project.

Taught by: Brown

1 Course Unit

HIST 274 African American Life and Culture in Slavery
This course will examine the lives of enslaved African Americans in the United States, both in the North and the South. We will engage historiographical debates, and tackle questions that have long concerned historians. For example, if slaves were wrenched from families and traded, could they sustain family relationships? If slaves worked from sun-up until sun-down, how could they create music? We will engage with primary and secondary sources to expand our understanding of values, cultural practices, and daily life among enslaved people. Topics will include: literacy, family, labor, food, music and dance, hair and clothing, religion, material culture, resistance, and memories of slavery. Several disciplines including History, Archaeology, Literature, and Music, will help us in our explorations. Written, oral, and artistic texts for the course will provide us with rich sources for exploring the nuances of slave life, and students will have opportunities to delve deeply into topics that are of particular interest to them.

Also Offered As: AFRC 276, COML 273, ENGL 271
Activity: Lecture
1 Course Unit

HIST 275 Islam and Society in Africa
This course is designed to provide the students with a broad understanding of the history of Islam in Africa. The focus will be mostly on West Africa, but we will also look at developments in other regions of the continent. We will examine the process of islamization in Africa and the interplay between Islam and the African traditional religions and customs. Topics include conversion, Islamic education and literacy, the status of women, Muslim response to European colonial domination, Islamic mysticism, and the contemporary development of Sunni movements.

HIST 309 Age of Reformation
The Protestant Reformation of the 16th century was a watershed in European history. It marked the culmination of centuries of religious, political and social change and had profound institutional and intellectual consequences. We will examine the central teachings and activities of the Protestant reformers against this broad background. Topics will include: medieval traditions of religious protest and reform; social and political changes in the period of the Reformation; the changing role of the Papacy; and the impact of the new technology of printing. Readings will be both primary texts and secondary sources and discussions will be an integral part of the class.

HIST 310 Europe in the Age of Baroque
The baroque earns its name from a style of art and architecture, developed in Europe between 1550 and 1700 and typified by elaborate ornamentation and color. The term can be applied well to the history of the period, which was characterized by conflict and complexity.
Taught by: Saftley
One term course offered either term
Activity: Lecture
1 Course Unit

HIST 311 The Tudors
This course examines the history of England from the accession of Henry VII Tudor in 1485 to the death of Elizabeth I in 1603, with emphases on the political and personal history of this colorful dynasty, the religious revolution known as the protestant Reformation, the arts and literature known as the English Renaissance, imperial and trade ventures overseas, and aspects of popular culture including the witch craze. Unlike most English histories of the period, we will also look closely at the other realms of the British Isles, Scotland, Wales, and Ireland. Readings consist of a textbook with a British scope, and an array of primary sources, some in book form and others (marked with an asterisk on the syllabus) attached to Blackboard or distributed in class. Books are available at the Penn Book Center, except for biographies associated with film critiques. Most of the films noted in the syllabus will be available on PBN; otherwise, they can be viewed at the library or through Netflix. Assignments in square brackets are optional.
Taught by: Todd
Course usually offered in spring term
Activity: Lecture
1 Course Unit

HIST 312 Britain's Century of Revolution
England, Ireland, Wales and Scotland experienced revolutions in the first half of the seventeenth century that abolished monarchy and hereditary aristocracy, and carried out the first judicial execution of a monarch in European history. England was re-constructed as a republic; then with Scotland became the United Commonwealth of Great Britain, then declined into a military dictatorship, and finally invited the king back. In 1688, however, the Glorious Revolution deposed that king and declared Britain a strictly constitutional monarchy. This course will explore what motivated ordinarily obedient British subjects to take up arms against their rulers. The works of Milton and Marvell, Cromwell, Hobbes and Locke, and many lesser-known writers of diaries, autobiographies, sermons, statutes, and letters will illuminate the issues. The focus will be on how law, politics and religion interacted in the onset of war and defining of settlement, but with an eye to the larger social and cultural setting in which revolutions happened: this is also an era of both witchcraft and scientific revolution, puritanism and the slave trade, the near-destruction of London by fire and plague and its re-birth as the capital of a commercial empire.
Taught by: Todd
One term course offered either term
Activity: Lecture
1 Course Unit
HIST 314 Victorian Britain: Spaces, Places, and Pests
In this course, we will examine the nooks and crannies of Victorian society. It was a period of squalor, but also innovation, devastating diseases, and crucial advances in public health and medical science. Its cities featured depressing slums and lurid crimes, but also new kinds of spectacles, entertainments, and commodities. It was, in many ways, as one of its greatest authors wrote, "the best of times, and the worst of times." Units under study will include "The Docks," "The Germs," "The Empire," "The Church," and "the Museum." We'll investigate killer diseases like cholera and typhus, dazzling buildings like the Crystal Palace, imperial wars and crises, and new scientific movements like Darwinism and mesmerism. Along the way, we will encounter proper and eminent Victorians as well as scandalous and marginalized ones. The aim will be to understand Victorian mentalities and ideas by looking at a diverse array of institutions and inventions. Readings will include novels, stories, pamphlets, essays, and cartoons as well as secondary literature. Classes will be a mixture of lecture and discussion, and no previous experience in British history is necessary.
Taught by: Chase Levenson
Course not offered every year
Activity: Lecture
1 Course Unit

HIST 333 Napoleonic Era & Tolstoy
In this course we will read what many consider to be the greatest book in world literature. This work, Tolstoy's War and Peace, is devoted to one of the most momentous periods in world history, the Napoleonic Era (1789-1815). We will study both the novel and the era of the Napoleonic Wars: the military campaigns of Napoleon and his opponents, the grand strategies of the age, political intrigues and diplomatic betrayals, the ideologies and human dramas, the relationship between art and history. How does literature help us to understand this era? How does history help us to understand this great novel? This semester marks the 200th anniversary of Napoleon's attempt to conquer Russia and achieve world domination, the campaign of 1812. Come celebrate this Bicentennial with us! Because we will read War and Peace over the course of the entire semester, readings will be manageable and very enjoyable.

HIST 345 Sinners, Sex and Slaves: Race and Sex in Early America
This course explores the lost worlds of sinners, witches, sexual offenders, rebellious slaves, and Native American prophets from the seventeenth to nineteenth centuries. Using the life stories of unusual individuals from the past, we try to make sense of their contentious relationships with their societies. By following the careers of the trouble-makers, the criminals, and the rebels, we also learn about the foundations of social order and the impulse to reform that rocked American society during the nineteenth century.
Taught by: Brown
Course usually offered in fall term
Also Offered As: AFRC 345, GWS 345
Activity: Recitation
1 Course Unit

HIST 346 Gender in Modern American History
This course explores how immigration, industrialization, racial segregation, and the growing authority of science transformed the fundamental conditions of women's lives in the late nineteenth and early twentieth centuries. Building on previous efforts by female reformers to perfect society, women at the turn of the century organized large social movements dedicated to improving the lives of women and children and gaining public access to political power. We will examine the fruits of this activism as well as the consequences of subsequent events for the rise of several important social movements in the latter half of the century -- including civil rights, women's liberation, and gay rights -- in which women played a vital role. The course concludes with an assessment of feminism in the present day, with special emphasis on the responses of younger women to its legacy.
Taught by: Brown
Course usually offered in spring term
Also Offered As: AFRC 346, GWS 346
Activity: Recitation
1 Course Unit
HIST 349 History of Sexuality in the U.S.
This course introduces students to a relatively new field of inquiry, the history of sexuality in the U.S. It explores the past to consider why sexuality has been so central to American identities, culture, and politics. Primary documents and other readings focus on the history of sexual ideology and regulation; popular culture and changing sexual practices; the emergence of distinct sexual identities and communities; the politics of sexuality; and the relationship between sexual and other forms of social difference, such as gender, race, ethnicity, age, and class. Topics include many with continuing relevance to contemporary public debate: among them, sexual representation and censorship, sexual violence, adolescent sexuality, the politics of reproduction, gay and lesbian sexualities and sexually transmitted diseases.
Taught by: Peiss
One-term course offered either term
Also Offered As: GSWS 349

HIST 354 American Expansion in the Pacific
This class will focus on America’s expansion into the Pacific around the turn of the century with the acquisition of Hawaii and the Philippines. It can deal with various issues, including the meaning of “frontier,” colonialism, development of capitalist economies in the region, diplomacy, racism, migration, an American brand of Orientalism in encountering the “natives” and "heathens," and histories of the West and the Pacific Islands in general.
Taught by: Azuma
One-term course offered either term
Also Offered As: ASAM 354
Activity: Lecture
1 Course Unit

This course explores significant political and social developments that shaped the final decades of twentieth century U.S. history, an era notable for declining faith in political institutions, ideological and partisan polarization, and a variety of new rights claims by marginalized citizens. Until very recently, scholars have characterized this period as one of conservative political resurgence spurred by its most towering figure, Ronald Reagan, the nation’s 40th president. While Reagan is an essential actor in this class, the course will consider a variety of perspectives, developments, and movements across the political spectrum as well as others that defy easy ideological or partisan categorization. In addition to tracing the transformation of the major political parties and ideologies, topics may include the evolution of the post-1960s civil rights movement and the rise of the incarceration crisis; the rise and transformation of the religious right; the AIDS crisis and the LGBTQ movement; and the emergence of the concept of the “free market” as an idealized way of reordering not just social and political commitments but society itself.
Taught by: Cebul
Course not offered every year
Activity: Lecture
1 Course Unit

HIST 367 Philadelphia, 1700-2000
Using Philadelphia as a lens, this course will examine the transformation of American cities from the colonial period to the present. Through readings, lectures, and tours, we will consider urbanization and suburbanization, race, class, and ethnicity, economic development, poverty and inequality, housing and neighborhood change, urban institutions, and politics and public policy.
One-term course offered either term
Also Offered As: URBS 367
Activity: Lecture
1 Course Unit

HIST 370 North Africa: History, Culture, Society
This interdisciplinary seminar aims to introduce students to the countries of North Africa, with a focus on the Maghreb and Libya (1830-present). It does so while examining the region’s close economic and cultural connections to sub-Saharan Africa, Europe, and the Middle East. Readings will include histories, political analyses, anthropological studies, and novels, and will cover a wide range of topics such as colonial and postcolonial experiences, developments in Islamic thought and practice, and labor migration. This class is intended for juniors, seniors, and graduate students.

Activity: Seminar
1 Course Unit

HIST 371 Africa and the Mid-East
This seminar will explore the historical relationship between these two regions from the early modern age to the present. We will examine the history of trade, particularly the slave trade, and its cultural and political legacy. We will compare the experiences of European imperialism—how the scramble for Africa dovetailed with the last decades of the Ottoman Empire—with an eye to how this shaped nationalist movements in both regions. The course will also explore the decades of independence with a special eye towards pan-Africanism and pan-Arabism. We will also study the ramifications of the Arab-Israeli conflict on the relationship between African and Middle-Eastern countries, from Uganda to Ethiopia, from OPEC to Darfur. The course will pay close attention to migrations through the regions, whether forced or economic or religious. Whenever possible we will explore, through film and literature, how people in Africa and the Middle East see their connections, and their differences.
Taught by: Troutt-Powell
One-term course offered either term

Activity: Seminar
1 Course Unit
HIST 372 The History of Foreign Aid to Africa
This course examines the history, politics, and significance of foreign aid to Africa since the late 19th century. While we do not typically think about the European colonial period in Africa in terms of foreign aid that era introduced ideas and institutions which formed the foundations for modern aid policies and practices. So we start there and move forward into more contemporary times. In addition to examining the objectives behind foreign assistance and the intentions of donors and recipients, we will look at some of the consequences (intended or unintended) of various forms of foreign aid to Africa over the past century. While not designed to be a comprehensive history of development theory, of African economics, or of international aid organizations, the course will touch on all of these topics. Previous course work on Africa is strongly advised.
Taught by: Cassanelli

1 Course Unit

HIST 373 America in the 1960s
This course examines the political, cultural, and intellectual history of America between 1954 and 1974. It considers the civil rights movement, the New Frontier and Great Society, the Supreme Court and right politics, the rise of the New Right, the debate over Vietnam, student radicalism, sexual liberation movements, black power, the counterculture, the urban crisis, and white backlash. The course emphasizes the transformation of liberalism and the revitalization of conservatism, and the tensions between integration and separatism, between libertarianism and communitarianism that shaped the social movements of the sixties.
Course usually offered in fall term
Activity: Recitation
1 Course Unit

HIST 380 Modern Jewish Intellectual and Cultural History
An overview of Jewish intellectual and cultural history from the late 18th century until the present. The course considers the Jewish enlightenment Reform, Conservative and Neo-Orthodox Judaism, Zionist and Jewish Socialist thought, and Jewish thought in the 20th century, particularly in the context of the Holocaust. Readings of primary sources including Mendelsohn, Geiger, Hirsch, Herzl, Achad-ha-Am, Baeck, Buber, Kaplan, and others. No previous background is required.
Taught by: Ruderman
One-term course offered either term
Also Offered As: JWST 380, RELS 320
Activity: Lecture
1 Course Unit

HIST 390 China & USSR Compared
A comprehensive and multi-faceted survey of China and Russia, mostly in the twentieth century, through examining preludes and postludes, but focusing above all on their time as Communist states and sometimes quarreling Cold War allies. Of course we will cover the history, the geography, the economics, the leaders (Stalin, Mao), and the great events - not least the Second World War in each - always comparing, contrasting, and drawing linkages. We will also examine, however, daily life and work for ordinary people, developments in society, and not least their common attempts at revolution, at somehow creating new and unprecedented politics, having populations of radically transformed new people. This informative, fascinating quest will take us from folklore to literature and the arts to dissent and religion and ecology, among other topics. As far as possible we will let their people speak for themselves, by assigning mostly translations of original sources including novels and memoirs, even poetry. A comprehensive assessment of the strategically critical Asian heartland - which at over 14 million square miles is larger than Canada, the United States, and Western Europe combined. Lectures, readings, midterm, short paper, and in-class final.
Taught by: Waldron
Course usually offered in spring term
Also Offered As: RUSS 390
Activity: Lecture
1 Course Unit

HIST 391 The Vietnam War
A thorough historical, military, and social history of the Vietnam war, which lasted in one form or another from the end of WWII in 1945 to 1975, in which occurred the longest and most humiliating defeat in our history. Since that time the Vietnamese have published hundreds of documents, some in English, which provide an entirely new perspective on what we believed during the war. These, supplemented by other primary and secondary materials, as much as possible written by Vietnamese or by Americans having first-hand knowledge, will form the backbone of the course. The various American and Vietnamese strategies will be scrutinized carefully, and a good deal said about the home front in America. The actual fighting, that determined the outcome, will not be slighted. We expect at least some guest speakers having long diplomatic or military experience in Vietnam. The present will be our conclusion. Lectures TTH 12:1-30; midterm in class, short paper, an regular final. If you want to understand the world you now live in, this course a good place to start.
Taught by: Waldron
One-term course offered either term
Also Offered As: EALC 196
Activity: Lecture
1 Course Unit
HIST 394 China and the World: Modern Times
History 394 is a comprehensive introduction to the last hundred years of China's relations with the world, with emphasis on American-Chinese relations, but within the necessary context of China's relations with other countries from Asia to Europe to Africa and elsewhere (as well as Washington's changing relations with Beijing). China's role in the world can be understood only when the full background and international context is made clear. This course has no prerequisites: freshmen and others lacking background will find it manageable and interesting. Students who have successfully completed this course will be well positioned to understand some of the most important of current events, and if they like, pursue the topics as careers (there will be no shortage, I assure you). Although much will be said about diplomacy, and Chinese diplomatic strategy in particular, the mile-posts of the course will be a series of wars: World War I and its effects on China; the heroic Chinese war of resistance against Japan (1937-1945) in which, effectively without allies, the Chinese avoided defeat; the bitter Civil War that followed almost immediately (1946-1949) and brought Mao Zedong and his Communists to power while the predecessor Nationalist government fled to the island of Taiwan; then the Korean War (1950-1953) and the close Chinese-Soviet alliance that followed; the Taiwan Straits Crises (1954-1955, 1958, 1996); the Chinese-Indian war (1962) the origin of a situation now heating up; the Sino-Soviet border conflicts (1969); the Vietnam War (1955-1975) which changed the United States profoundly while reorientating China internationally; the (at the time) little noticed Chinese invasion of Vietnam (1979); and finally the increasingly tense situation today, between China and India, and China and her maritime neighbors from Japan to Indonesia, many U.S. allies.

Also Offered As: EALC 044
Activity: Lecture
1 Course Unit

HIST 395 East Asian Diplomacy
This course will survey the history of relations among the great powers in East Asia from 1600 to the present. Special emphasis will be placed upon the peculiarities of cross-national exchange in Asia (as compared to Europe), particularly the difficulties of relations among states possessing fundamentally different cultural traditions. We will explore the many informal, as well as formal, means of diplomacy in Asia over the past 400 years.

Activity: Seminar
1 Course Unit

HIST 414 Human Rights and History
The idea of universal, inalienable rights--once dismissed by the philosopher Jeremy Bentham as "nonsense upon stilts"--has become the dominant moral language of our time, the self-evident truth par excellence of our age. Human rights have become a source of inspiration to oppressed individuals and groups across the world, the rallying cry for a global civil society, and not least, a controversial source of legitimation for American foreign policy. This seminar asks: how did all this come to be? We will investigate human rights not only as theories embodied in texts, but as practices embedded in specific historical contexts.

Are human rights the product of a peculiarly European heritage, of the Enlightenment and protestantism? How did Americans reconcile inalienable rights with the reality of slavery? Did human rights serve as a "civilizing" mask for colonialism? Can universal rights be reconciled with genuine cultural diversity? Through case studies and close readings, the seminar will work toward a genealogy of human rights.

Taught by: Nathans
One term course offered either term
Activity: Seminar
1 Course Unit

HIST 415 European Intellectual History of the Seventeenth Century
A survey based solely on primary sources of the main currents of seventeenth-century European thought: the criticism of inherited systems and of the authority of the past; skepticism, rationalism; empiricism; and the rise of the new natural philosophy. We will study deep conceptual change as an historical phenomenon, examining works that were both profoundly influential in the seventeenth century and that are of enduring historical significance. There are no prerequisites, and one of the goals of the course is to make seventeenth-century thought accessible in its context to the twenty-first century student.
Course usually offered in fall term
Also Offered As: COML 419
Activity: Lecture
1 Course Unit

HIST 416 European Intellectual History in the 18th Century
A survey based solely on primary sources of the main currents of eighteenth-century European thought: the "Enlightenment," deism; natural religion; skepticism; evangelical revival; religious reform; Utilitarianism; rationalism; and materialism. The course will focus on works widely-read in the eighteenth century and of enduring historical significance. There are no prerequisites, and one of the goals of the course is to make eighteenth-century thought accessible in its context to the twenty-first century.
Course usually offered in spring term
Also Offered As: COML 416
Activity: Lecture
1 Course Unit
HIST 418 European Intellectual History since 1945
This course concentrates on French intellectual history after 1945, with some excursions into Germany. We will explore changing conceptions of the intellectual, from Sartre’s concept of the ‘engagement’ to Foucault’s idea of the ‘specific intellectual’; the rise and fall of existentialism; structuralism and poststructuralism; and the debate over ‘postmodernity.’ Taught by Breckman
Course usually offered in spring term
Also Offered As: COML 418
Activity: Seminar
1 Course Unit

HIST 420 European International Relations from the Age of Enlightenment to the Great War
This course will examine the international politics of Europe in the 18th and 19th centuries, up to the outbreak of World War I. During these centuries, the European great powers experienced significant internal transformations and also a revolution in their relations, both of which reinforced and accelerated each other. In the process, Europe asserted a dominant position in world politics, but also sowed the seed for the terrible catastrophes of the 20th Century. The course will address this transformation of European diplomacy with special attention to the rivalries between the great powers, the impact of nationalism and emerging mass politics, the interplay between military and economic power, and the relationship between the European powers and the rest of the world.
Taught by McDougall
Course usually offered in fall term
Activity: Lecture
1 Course Unit

HIST 421 Europe and the World since 1914
This course looks at Europe’s interactions with other world regions throughout the twentieth century. Over the course of roughly a hundred years, Europeans have shaped the fates of peoples living beyond the western world, for instance through the impact of two world wars, European colonialism, and the global Cold War. At the same time, European societies ‘at home’ were not left unaffected by these interactions. Even today, Europeans are facing the legacies of some of these histories in immigration and the politics of religion and secularism for example. The past century also saw a dramatic shift in Europe’s position in the world - from dominance to a loss of influence in the shadow of the United States and more recently, China. The course spends significant time covering the histories of world regions other than Europe. It furthermore considers some interactions and exchanges between world regions from a social and cultural point of view. Because the class spans roughly a century, the content has to remain introductory and general, although a very basic familiarity with 20th-century international history is helpful.
Taught by Ogle
Two terms. student may enter either term.
Activity: Lecture
1 Course Unit

HIST 425 World War I
This survey course examines the outbreak, conduct, and aftermath of the First World War. The First World War put an end to the world of the 19th century and laid the foundations of the 20th century, the age of destruction and devastation. This course will examine the war in three components: the long-term and immediate causes of the First World War; the war’s catastrophic conduct, on the battlefield and on the home front; and the war’s devastating aftermath. While we will discuss military operations and certain battles, this course is not a military history of the war; it covers the social, economic, political and diplomatic aspects that contributed to the war’s outbreak and made possible its execution over four devastating years. No preliminary knowledge or coursework is required.
Taught by: Holquist
Two terms. student may enter either term.
Activity: Recitation
1 Course Unit

HIST 430 Rise and Fall of the Third Reich
The meteoric rise of Hitler’s NSDAP in Germany, the nature of Nazi rule, and the final collapse of the Third Reich. The first half of the semester analyzes the appeal of the NSDAP- who joined the party, who voted for it, and why. Nazi mobilization tactics, campaign strategy, and grass-roots techniques, the content of the party’s social appeals. The second half of the course concentrates on the Nazis in power, their use of terror and propaganda, their ideological objective, everyday life in the Third Reich, the possibilities of resistance to the regime. Special attention will be devoted to Nazi Jewish policy and the step that led to the “Final Solution” and the Holocaust.
Course usually offered in fall term
Activity: Recitation
1 Course Unit

HIST 431 A World at War: World War II in Europe and Asia
This course will examine the diplomatic origins, military course and domestic implications of World War II.
Course usually offered in spring term
Activity: Recitation
1 Course Unit

HIST 441 North American Colonial History
A survey of the development of American colonial society, 1607-1750, with emphasis on the regional differences between life in early New England, the Mid-Atlantic, and the South, as well as the relationships between British colonists, Native Americans, and African Americans.
Taught by: Brown
Course usually offered in fall term
Activity: Lecture
1 Course Unit
HIST 442 America in the Era of the Revolution, 1763-1800
As a number of historians have observed, the American Revolution
now may seem to have been the inevitable culmination of political,
economic, and cultural changes underway in the eighteenth century.
But for many whose lives were altered by its disruptive contours, it
was more improbable than inevitable. How, then, are we to make sense
of the Revolution? What were its causes? Its progress? Its extended
"settlement," or period of resolution and questions during the course
of the semester, we will need to keep our eyes open to changes afoot
in many social fields: the ascendency of democratic and egalitarian
thought; the widespread development of consumerism and market
capitalism; the linked forms processes of rebellion and nation-building;
and the economic and strategic progress of the conflict itself.
Taught by: St. George
Course usually offered in spring term
Activity: Lecture
1 Course Unit

HIST 449 God and Nature: Readings on the Encounter between Jewish
Thought and Science
God and Nature examines the place of the natural world, medicine, and
science in Jewish thought from antiquity to the modern era. It looks
especially at a body of primary sources in Hebrew written during the
age of the so-called "scientific revolution" and during its aftermath.
The course is a seminar open to undergraduate and graduate students with
a reading knowledge of classical Hebrew. Students without Hebrew
with special interest in the subject might enroll with special permission from
the instructor.
Taught by: Ruderman

Also Offered As: JWST 449, RELS 422
Activity: Seminar
1 Course Unit

HIST 451 The U.S. and the World since 1898
This class examines the emergence of the U.S. as a world power since
1898, and considers both the international and domestic consequences
of U.S. foreign relations. In one respect, the twentieth century was a
strange time to become a global empire: it was the period when colonial
systems centered in Europe, Russia, Japan, and Turkey collapsed, and
new nations emerged throughout Africa and Asia. This class explores the
changing strategies of military, economic, and political intervention that
the U.S. pursued as colonization lost legitimacy. Within that framework,
the class invites students to think about several questions: How did the
idea and practice of empire change over the twentieth century? How
did the United States relate to new visions of independence emerging
in Africa, Asia, and Latin America? How did global interactions both
inform and reflect racial ideology in the United States? Finally, how did
international affairs transform U.S. politics and social movements?

One term course offered either term
Activity: Seminar
1 Course Unit

HIST 463 History of American Education
This course will examine the growth and development of American
schools, from the birth of the republic into the present. By 1850, the
United States sent a greater fraction of its children to school than any
other nation on earth. Why? What did young people learn there? And,
most of all, how did these institutions both reflect and shape our evolving
conceptions of "America" itself? In an irreducibly diverse society, the
answers were never simple. Americans have always defined their nation
in a myriad of contrasting and often contradictory ways. So they have
also clashed vehemently over their schools, which remain our central
public vehicle for deliberating and disseminating the values that we wish
to transmit to our young. Our course will pay close attention to these
education-related debates, especially in the realms of race, class, and
religion. When immigrants came here from other shores, would they have
to relinquish their old cultures and languages? When African-Americans
won their freedom from bondage, what status would they assume? And
as different religious denominations fanned out across the country,
how would they balance the uncompromising demands of faith with the
pluralistic imperatives of democracy? All of these questions came into
relief at school, where the answers changed dramatically over time. Early
American teachers blithely assumed that newcomers would abandon
their old-world habits and tongues; today, "multicultural education"
seeks to preserve or even to celebrate these distinctive patterns. Post-
emancipation white philanthropists designed vocational curricula for
freed African-Americans, imagining blacks as loyal serfs; but blacks
themselves demanded a more academc education, which

Immunology (IMUN)

IMUN 506 Immune Mechanisms
This is an introductory graduate course which surveys most areas of immunology. It is assumed that students have a background in biochemistry and molecular biology, and at least some familiarity with immunological concepts. Topics covered include the major histocompatibility complex, structure of antibodies and T cell receptors, antigen-antibody interactions, the generation of diversity of immunoglobulins and B cells, antigen presentation, and immunological tolerance.
Taught by: Michael May
Course usually offered in fall term
Prerequisite: Permission of instructor
Activity: Lecture
1 Course Unit
Notes: 4 h. 1 c.u. Monday/Wednesday/Friday

IMUN 507 Immunopathology
The relationship between basic immunology and clinical immunologic diseases is emphasized. Course lectures represent University faculty who are established investigators in immunological research and established clinical immunologists. Course topics include plasma protein systems; B cell, T cell, macrophage immunology; immunohematology; tumor immunology; benign and malignant, immunoproliferative disorders; neuro-immunology; pulmonary immunology; renal immunology; immune complex disease and immunoregulatory abnormalities.
Taught by: Michael May and Erica Stone
Course usually offered in fall term
Prerequisites: IMUN 506 and permission of instructor
Activity: Lecture
1 Course Unit
Notes: 2 h. 1 c.u. Tuesday/Thursday
IMUN 520 Tutorials in Immunology
This tutorial course is designed to provide students with an in-depth knowledge of a specific branch of Immunology. The tutorial can be used to enable students to become more deeply acquainted with the literature related to their thesis projects or to expand on a topic that the student found interesting in one of their basic courses. The course is currently the only immunology elective and is, therefore, required for all Immunology Graduate Group students. It is also open to all BS students who meet the prerequisite. The tutorial course will be examined by the program director and the tutorial leader and the grade will be based on a written paper on the subject studied (5 to 10 typewritten pages) and by an oral presentation of the paper (15 to 20 minutes).
Taught by: Randy Cron, M.D., Ph.D.
Course usually offered in fall term
Prerequisites: A senior undergraduate, graduate or professional school course in Immunology.
Activity: Seminar
1 Course Unit

IMUN 599 Immunology Faculty Research Seminar
Mandatory attendance at weekly research presentations by graduate group faculty.
Taught by: Laura Su and Gregory Beatty
One term course offered either term
Prerequisite: Permission of Graduate Group Chair
Activity: Seminar
0.5 Course Units

IMUN 601 Molecular Immunology
The purpose of this course is to provide examples in which the cell biology topics covered in BIOM 600 are studied in the context of immune cells or used to explain immune system function. This course will help students become proficient at reading and critically assessing the published literature and encourage students to actively participate in scientific discussion with their peers.
Taught by Drs. Paula Oliver and Jan Burkhardt
Course not offered every year
Activity: Lecture
0.5 Course Units

IMUN 607 Grant Writing
This course will introduce the student to basic principles of grant writing. In this regard a primary objective of the course is to teach you how to describe your ideas and experimental objectives in a clear and concise manner within the standard NIH grant format. To accomplish this, you will be required to write an NIH, "R01" type grant proposal based on your current laboratory project.
Taught by: Andrew Wells, Bruce Freedman, Michael Cancro
Course usually offered in spring term
Prerequisite: IMUN 506/507 and/or permission of instructor
Activity: Seminar
1 Course Unit

IMUN 609 Vaccines and Immune Therapeutics
The goal of the Vaccines course is to expand on student’s general understanding of the immune system and to focus this understanding towards the application of vaccination. Furthermore the course will give the student a sense of how these principles are applied to vaccine and immune therapeutic development. The course covers basic science as well as the Clinical, Ethical & Political implications of Modern Vaccines. Initial lectures will review immune mechanisms believed to be responsible for vaccine induced protection from disease. Subsequent lectures build on this background to explore the science of vaccines for diverse pathogens, including agents of bioterrorism as well as vaccines for cancer. An appreciation for the application of laboratory science to the clinical development of vaccines is provided in the next section of the course including titles that focus on the ethical implications of vaccines in different situations. The financial implications of specific vaccines and their impact on the global community, is a specific focus of the course.
Taught by: David Weiner, Ph.D., and Paul Offit, M.D.
Course usually offered in fall term
Also Offered As: CAMB 609
Prerequisites: The course is intended for graduate students or Medical Students in various MS, Ph.D. or MD/Ph.D. programs on the campus as well as local scientists and professionals in the community. As a prerequisite students should have taken biology, biochemistry or immunology courses at the advanced college level.
Activity: Lecture
1 Course Unit

IMUN 699 Laboratory Rotation
Laboratory research conducted under a faculty advisor. Three different rotations covering usually the fall semester of the first year through the fall semester of the second year are required of all Immunology Ph.D. students. Students will defend the rotation research in their Preliminary Exams
Taught by: Immunology Graduate Group Faculty

Integrated Product Design (IPD)

IPD 500 Product Engineering Basics
The course targets non-engineering majors interested in understanding engineering approaches to product fabrication. The course covers a broad variety of engineering topics including mechanical, electrical, computer and material science. Many of these topics would normally be full courses in themselves. This course intends to teach familiarity with a focus on hands-on practice as applied to products. Students will briefly use equipment such as MTS materials testing machines, mills, lathe, oscilloscopes, laser cutters, photodiodes, motors, servos, microcomputers as well as engineering software such as Solidworks, C compilers, Labview, Matlab, and Cambridge Engineering Selector. The class concludes with independent projects.
Activity: Lecture
1 Course Unit

IPD 501 Integrated Computer-Aided Design, Manufacturing and Analysis
The majority of today's engineered products move through an advanced computer-aided workflow which greatly speeds design and process time. This course will explore the fundamental components of this workflow through a combination of lectures, hands-on exercises, and a semester design project. General course topics include: fundamental design principles, project definition and needfinding, advanced computer-aided design, rapid prototyping techniques, computer-controlled machining, and an in-depth exploration of the modern analysis and simulation tools that have revolutionized the way in which products are designed. Enrollment is limited.
Course usually offered in spring term
Prerequisites: MEAM 101, MEAM 150, and MEAM 210, or graduate standing in the School of Engineering, Design, or Wharton with similar experience
Activity: Lecture
1 Course Unit

IPD 503 Ipd Fundamentals
The creation of a successful product requires the integration of design, engineering, and marketing. The purpose of this intensive studio course is to introduce basic concepts in the design of three-dimensional products. For purposes of the course, design is understood as a creative act of synthesis expressed through various modes of 2-dimensional and 3-dimensional representation. The course develops basic design skills ranging from hand sketching to the use of digital modeling software and rapid prototyping. Fulfills the requirement for a design background course in the interdisciplinary graduate program in Integrated Product Design (IPD).
Also Offered As: ARCH 303
Activity: Studio
1 Course Unit

IPD 504 Rehab Engineering and Design
Students will learn about problems faced by disabled persons and medical rehabilitation specialists, and how engineering design can be used to solve and ameliorate those problems. The course combines lectures, multiple design projects and exercises, and field trips to clinical rehabilitation facilities. Students will have substantial interaction with clinical faculty, as well as with patients.
One term course offered either term
Also Offered As: BE 514
Prerequisite: Graduate students or permission of the instructor
Activity: Lecture
1 Course Unit

IPD 509 Needfinding
Needfinding is an approach that puts people and their needs at the center of product development and business strategy creation. Over 90% of new products introduced into the marketplace fail. A good proportion of these failures are due to lack of understanding of end consumers and their needs. To develop truly successful new products, it's not enough just to ask people what they need or want. Designers and engineers need tools and techniques to get beyond what people can explicitly state and determine their implicit needs. Needfinding is an approach for developing deep insights that provide strategic direction for corporations and open up new possibilities for product development. In this class students will gain a toolset from which to develop their own approaches to conducting research for design: learning how to think about other people, about culture, and about new perspectives. They will also learn tactical skills: how to define research questions, how to conduct observations and interviews, how to interpret results, how to synthesize them into a design rationale, and how to communicate their findings in a way that is compelling and actionable for designers, marketers, and business strategists. This class is designed for graduate students and upper level undergrads with a specific interest in product design or design thinking.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

IPD 511 Creative Thinking and Design
This is a creative & iterative problem solving course that uses a wide variety of design thinking methods to move students into the broad realm of unpredictable often intractable real world problem solving. It explores a wide variety of problem definition, exploration, and solving tools, and a variety of surrounding "design thinking" topics, such as ethics and the design of experience. Drawing and prototyping are used in the projects for ideation, iteration, speculation and communication.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: It is recommended that undergraduates take MEAM 101 prior to this course.

IPD 514 Design for Manufacturability
This course is aimed at providing current and future product design/development engineers, manufacturing engineers, and product development managers with an applied understanding of Design for Manufacturability (DFM) concepts and methods. The course content includes materials from multiple disciplines including: engineering design, manufacturing, marketing, finance, project management, and quality systems.
Course usually offered in spring term
Also Offered As: MEAM 514
Prerequisites: MEAM 101 or equivalent, MEAM 210 or equivalent, Senior or Graduate standing in the School of Design, Engineering, or Business with completed product development and/or design engineering core coursework or related experience
Activity: Lecture
1 Course Unit
IPD 515 Product Design.
This course provides tools and methods for creating new products. The course is intended for students with a strong career interest in new product development, entrepreneurship, and/or technology development. The course follows an overall product design methodology, including the identification of customer needs, generation of product concepts, prototyping, and design-for-manufacturing. Weekly student assignments are focused on the design of a new product and culminate in the creation of a prototype, which is launched at an end-of-semester public Design Fair. The course project is a physical good - but most of the tools and methods apply to services and software products.
One-term course offered either term
Also Offered As: MEAM 415, OIDD 415
Activity: Lecture
1 Course Unit

IPD 516 Advanced Mechatronic Reactive Systems
This course combines performance art and advanced mechatronics concepts that include the design and implementation of large-scale actuation, advanced sensing, actuation and control. This course pairs design school and engineering students to form interdisciplinary teams that together design and build electro-mechanical reactive spaces and scenic/architectural elements in the context of the performing arts. The two disciplinary groups will be treated separately and receive credit for different courses (ARCH746 will be taught concurrently and in some cases co-located) as they will be learning different things. Engineering students gain design sensibilities and advanced mechatronics in the form of networked embedded processing and protocols for large scale actuation and sensing. Design students learn elementary mechatronics and design reactive architectures and work with engineering students to build them. The class will culminate in a some artistic performance (typically with professional artists) such as a Shakespeare play, robotic ballet, a mechatronic opera.
Course usually offered in spring term
Also Offered As: MEAM 516
Prerequisite: MEAM 510 (Mechatronics) or equivalent
Activity: Lecture
1 Course Unit

IPD 519 Real-Time Embedded Systems
The use of distributed wireless sensor networks has surged in popularity in recent years with applications ranging from environmental monitoring, to people- and object-tracking in both cooperative and hostile environments. This course is targeted at understanding and obtaining hands-on experience with the state-of-the-art in such wireless sensor networks which are often composed using relatively inexpensive sensor nodes that have low power consumption, low processing power and bandwidth. The course will span a variety of topics ranging from radio communications, network stack, systems infrastructure including QoS support and energy management, programming paradigms, distributed algorithms and example applications. Some guest lectures may be given.
One-term course offered either term
Also Offered As: ESE 519
Prerequisites: CIS 120, ESE 350 or equivalent, one course in computer networks and Senior or Graduate standing.
Activity: Lecture
1 Course Unit

IPD 521 Designing Smart Objects for Play and Learning
Today’s children enjoy a wide array of play experiences, with stories, learning, characters and games that exist as physical stand-alone objects or toys enhanced with electronics or software. In this course, students will explore the domain of play and learning in order to develop original proposals for new product experiences that are at once tangible, immersive and dynamic. They will conduct research into education and psychology while also gaining hands-on exposure to new product manifestations in a variety of forms, both physical and digital. Students will be challenged to work in teams to explore concepts, share research and build prototypes of their experiences in the form of static objects that may have accompanying electronic devices or software. Final design proposals will consider future distribution models for product experiences such as 3D printing, virtual reality and software-hardware integration. Instruction will be part seminar and part workshop, providing research guidance and encouraging connections will subject matter experts throughout the Penn campus.
Course usually offered in fall term
Also Offered As: ARCH 721
Activity: Seminar
1 Course Unit

IPD 525 Ergonomics/Human Factors Based Product Design
Human Factors and Ergonomics knowledge is a critical component of a product designer or design engineer’s toolbox. This course teaches the direct application of existing human factors/ergonomic data to the creation of new product designs. Applying human factors knowledge to problem solving for product design happens throughout the design process. It is a useful input as initial ideas begin to ut and as a way to verify completed concepts through directly documented user testing and design iteration. The course would be a mini-lecture/studio style course in which the students will work in class on assigned projects, finding, analyzing, extrapolating and applying data to design solutions and creating mockups, modell prototypes for user testing of their designs.
One-term course offered either term
Activity: Lecture
1 Course Unit

IPD 526 Contemporary Furniture Design
This course provides a platform, in the form of furniture, to execute and deploy architectural & engineering principles. It will be conducted as a seminar and workshop, and will introduce students to a variety of design methodologies that are unique to product design. The course will engage in many of the considerations that are affiliated with CAD/CAM production, the appropriate and innovative use of materials, and human factors. Students conduct case studies and research into industrial design processes, and will adapt these processes into techniques for designing a chair. Throughout the semester, students will experience first hand structural and material behavior and understand ergonomic constraints by testing their design at different scales. The process will include: the production of a final design, its detailing, prototype development, Color/Material/Finishes (CMF), design for Computer Aided Manufacturing (CAM), the possibility of mass customization, research of materials and fabrication methods, optimization studies, Computer Aided Design (CAD), model making, furniture case studies, and a site visit to a major furniture manufacturer.
Course usually offered in spring term
Also Offered As: ARCH 726
Activity: Seminar
1 Course Unit
IPD 527 Industrial Design I.
This course provides an introduction to the ideas and techniques of Industrial Design, which operates between Engineering and Marketing as the design component of Integrated Product Development. The course is intended for students from engineering, design, or business with an interest in multi-disciplinary, needs-based product design methods. It will follow a workshop model, combining weekly lectures on design manufacturing, with a progressive set of design exercises.
Course usually offered in fall term
Also Offered As: ARCH 727
Activity: Lecture
1 Course Unit

IPD 528 Design of Contemporary Products
This course was designed to explore intersections of functionality and performance using an experimental platform to uncover opportunities within the built environment to create domestic products. Provides practical insights into the material manipulation and aesthetic experimentation that are essential for the design and fabrication of products. Lectures and case studies help students to learn from examples and develop their own designs. Through a series of exercises, students design and fabricate a prototype using actual materials. The course addresses problems unique to product design, such as scale, weight, cost and production.
Course usually offered in spring term
Also Offered As: ARCH 728
Activity: Seminar
1 Course Unit

IPD 529 Designing Connected Objects and Experiences
The objective of this course is to introduce students to a more conceptual, creative, and meaningful approach to creating interactive functional objects utilizing analog, digital, and electronic skillsets acquired through the core engineering curriculum. This course will cover basics of design as an art form, wearables design, electronic sensors, and creating connected devices. Students will be challenged to create 3 pieces of work both individually and in teams culminating in a gallery show of the students’ work.
Activity: Lecture
1 Course Unit

IPD 530 Building Product Workshop: Transwall
As Craig Vogel notes in The Design of Things to Come, “we are in a new economic age that is in need of a new renaissance in product development, on that leverages multiple minds working in concert.” With this mindset, this interdisciplinary workshop guides students through the product design process from design brief to concept generation in one semester, working firsthand with Transwall, a leading manufacturer of demountable wall systems, to focus on a specific product need. The design opportunity looks for the next generation of pre-manufactured wall systems; getting away from field constructed walls and looking at critical issues of mass-produced wall systems; flexibility, mobility, structural stability, acoustics, transparency/opacity, and operability. During the workshop, students will explore the context that creates the unique need for a new product and have an opportunity to conceptualize their design ideas through sketches, scale model studies and partial prototypes.
One term course offered either term
Also Offered As: ARCH 733
Activity: Lecture
1 Course Unit

IPD 544 Digital Fabrication
A seminar and design workshop that explores associative and parametric CAD-CAM strategies, to enable an interactive continuity between conception and fabrication. Through parametric 3D constructions, students will explore how to link digital aspects of the architectural projects, such as: (1) design intention; (2) control of variation and adaptation; (3) construction constraints; (4) digital fabrication processes. The course emphasizes the cross-fertilization of formal, technical and performative aspects of the design activity.
Course usually offered in spring term
Also Offered As: ARCH 744
Activity: Seminar
1 Course Unit

IPD 545 Engineering Entrepreneurship I
Engineers and scientists create and lead great companies, hiring managers where and when needed to help execute their vision. Designed expressly for students having a keen interest in technological innovation, this course investigates the roles of inventors and founders in successful technology ventures. Through case studies and guest speakers, we introduce the knowledge and skills needed to recognize and seize a high-tech entrepreneurial opportunity - be it a product or service - and then successfully launch a startup or spin-off company. The course studies key areas of intellectual property, its protection and strategic value; opportunity analysis and concept testing; shaping technology driven inventions into customer-driven products; constructing defensible competitive strategies; acquiring resources in the form of capital, people and strategic partners; and the founder’s leadership role in an emerging high-tech company. Throughout the course emphasis is placed on decisions faced by founders, and on the sequential risks and determinants of success in the early growth phase of a technology venture. The course is designed for, but not restricted to, students of engineering and applied science and assumes no prior business education.
One term course offered either term
Also Offered As: EAS 545
Prerequisite: Third or Fourth year or Graduate standing
Activity: Lecture
1 Course Unit
IPD 549 Product Development in Entrepreneurial Ventures
A product is any artifact, service or experience for which a buyer is willing to pay. Product Design and Development is at the center of entrepreneurship. Though in the modern mythology it is a solitary effort by a passionate individual, entrepreneurship is frequently more successful when pursued in an interdisciplinary environment. Though it rarely requires the greatest time investment, concentration of personnel, the majority of the funding or even the greatest depth of expertise to accomplish, excellent product design can be the difference between a successful or failed venture. A poorly designed "product" can prevent a venture from being successful. An excellently designed product can make a competent business plan much more successful. A well-defined and designed product solution will create differentiation, and cannot only meet customer expectation, but can create desirability. Through the review and discussion of case studies, lecture subjects, guest lecturers, field trips, and a semester long interdisciplinary team project, this class will provide insight into the product identification and product design processes, user needs research, intellectual property research, experience design, Industrial Design, Interface Design, brand development and product centric fundraising processes.
Course usually offered in spring term
Also Offered As: EAS 449
Prerequisites: Seniors and Graduate students from the School of Design, Engineering or Business that have an interest in product design and/or integrated product development in an entrepreneurial environment.
Activity: Lecture
1 Course Unit

IPD 551 Design Processes
This studio is structured for IPD students as an intensive, interdisciplinary exploration of Design as purposeful for Integrated Product Design. The goal of the studio is to give students a firsthand experience of various processes involved in creating successful integrated product designs. This first semester of the four-semester studio sequence focuses on giving students experience developing designs based on a range of starting points: form, function, materiality and manufacturing process. Students will practice design through rigorous, consistent processes for thinking through the evolution of their ideas. In this course, they will go through an entire design process from conceptualization to design to producing prototypes. They will be taught to focus on the specifics of their designs, causing them to be conscious of what drives their choices as designers and providing them with a wider range of tools to design from in successive projects. Course work will involve readings, assignments, class participation, in-class exercises, a mid-term presentation and a final submission.
One-term course offered either term
Activity: Lecture
1 Course Unit

IPD 552 Problem Framing
In the second semester of the four-semester studio sequence, we ask students to take a step back from what and how they are designing and ask the question of why they are designing it. We will teach them a rigorous process for understanding stakeholder needs and for translating those needs into implications for product design. They will begin to develop greater awareness of the personal, social, competitive and technological contexts that their products fit into, and to learn how to design for those contexts. They will develop the ability to dive into a topic and frame a design problem, and to understand the implications of how they frame the problem on what they design. Ideally, they will use this process to identify a problem or opportunity to work on for their final project. Course work will involve readings, assignments, class participation, in-class exercises, and a final submission.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

IPD 568 Integration Design Studio: Biological Design
This course is a research-based design studio that introduces new materials, fabrication, and prototyping techniques to develop a series of design proposals in response to the theme: Biological Design. The studio introduces life sciences and biotechnologies to designers, artists, and non-specialists to develop creative and critical propositions that address the social, cultural, and environmental needs of the 21st century. The course will be a pilot study of the first biodesign challenge organized by CUT/PASTE/GROW. The final projects will be submitted to a competition and the winning entry will be featured at Biofabricate in Summer 2017.
One-term course offered either term
Also Offered As: FNAR 268, FNAR 568
Activity: Studio
1 Course Unit

IPD 572 Design Thinking and Making
Creating new product concepts was once a specialized pursuit exclusively performed by design professionals in isolation from the rest of an organization. Today’s products are developed in a holistic process involving a collaboration amount many disciplines. Design thinking - incorporating processes, approaches, and working methods from traditional designer’s toolkits - has become a way of generating innovative ideas to challenging problems and refining those ideas. Rapid prototyping techniques, affordable and accessible prototyping platforms, and an iterative mindset have enabled people to more reliably translate those ideas into implementable solutions. In this course, students will be exposed to these techniques and learn how to engage in a human-centered design process.

**International MPA (IMPA)**

**IMPA 601 Critical Issues in Public Administration and Global Leadership**  
Leaders in virtually every nation in the world are struggling to improve and reform their systems and enhance their capacities for creative, cost-effective, public-private problem-solving on issues ranging from economic development to elder care; energy production to water management; environmental protection to public health. In this course, you study readings and case studies from the US, the Peoples Republic of China and other nations. Specific topics include the theory and practice of what works in the quest for greater productivity; the increased reliance on private markets; enhanced street-level service delivery; devolution to sub-national governments; use of big data and new management and program evaluation technologies; and best practices in anti-corruption, transparency and accountability protocols. **For IMPA students only.**  
Activity: Lecture  
1 Course Unit

**IMPA 602 Concepts and Principles in Economics and Public Finance**  
Activity: Lecture  
1 Course Unit

**IMPA 603 Quantitative Data: Reasoning, Analysis, and Display**  
Many government, business and NPO/NGO leaders around the globe are drowning in numerical and statistical data. With this sometimes-overwhelming amount of data, their struggle may not just be how to analyze the data effectively but also how to utilize it effectively. This course is uniquely designed to enhance your ability to use data effectively for real-time problem identification, definition, decision-making and problem-solving. **For IMPA students only.**  
Activity: Lecture  
1 Course Unit

**IMPA 604 Collaboration Across Sectors: Boundary Spanning Leadership**  
Leaders across the world increasingly recognize the necessity of working across boundaries through various forms of collaboration. Collaboration across the government, nonprofit and business sectors has become more prevalent and important, but, at the same time, also more complicated. This course helps graduate students understand the theory, policy and practice of cross-sector collaboration. Students learn the purposes collaborations may serve, the forms they take, what skills and techniques are required and the steps involved in initiating, sustaining, and evolving them. Students also learn the characteristics of the three sectors, the roles and contributions each make to successful collaborations and the competitive forces that are often at work in the collaborative processes as well as their possible implications. **For IMPA students only.**  
Activity: Lecture  
1 Course Unit

**IMPA 605 Individual Capstone I: Public Leadership and Biographical Analysis**  
Biographical analysis has been increasingly used and accepted by social and behavioral scientists as a way to identify and illuminate the conditions under which a public leader influences others and affects significant, positive and sustainable innovations in organizations and public systems and policy. This course extends the use and application of biographical analysis in relation to a diverse set of past and present global leaders in different sectors. Along with completing and interpreting guided self-study and reflection about your own leadership style, you will independently use the consultation of an assigned academic/capstone advisor to identify a past or present global leader and develop a preliminary bibliography for the biographical analysis. **For IMPA students only.**  
Activity: Lecture  
1 Course Unit

**International Relations (INTR)**

**INTR 101 Transnational Issues in Global Politics**  
This course is designed to provide students with an introduction to transnational issues and world politics and to acquaint them with some of the leading issues, theories, concepts and processes, and history that shape and define world events. It is suitable for students embarking on a long-term study of international affairs as well as for students with other majors and intellectual interest who simply want to know more about how the world works and how the material covered in this class affects their lives. It is expected that students taking the course will gain an ability to analyze, understand objectively evaluate and appreciate the complex dynamics that affect "global politics" writ large, including issues relating to trade, diplomacy, people-to-people and business transactions, and shifts in demography, borders, international institutions and global governance. In addition to issues of diplomacy, statecraft, and security we will assess some of the major international issues of our time (i.e. climate change, proliferation of weapons of mass destruction, genocide and human trafficking) and debate the prospects for bringing peace and prosperity to a world that is rife with conflict and poverty.  
One term course offered either term  
Activity: Lecture  
1 Course Unit

**INTR 199 Independent Study**  
One term course offered either term  
Activity: Independent Study  
1 Course Unit
INTR 250 Political Risk Analysis
This course teaches students to apply social science theories and concepts together with futures methodologies (e.g. Delphi method; country risk assessments used by ratings agencies) to the challenges of addressing international political risks to the continuity, effectiveness and operations of business, government and other organizations in their international transactions.
Taught by: Frank Plantan
One term course offered either term
Activity: Lecture
1 Course Unit

INTR 290 Topics in International Relations
Topics in International Relations focuses on specialized issues, practical or applied approaches, policy and other topics of contemporary relevance in modern study of international relations. These are experimental or occasionally offered classes. Past topics of included US Foreign Policy and the Arab Spring, the Iraq Wars, Secret Intelligence & American Democracy, Counterintelligence, Homeland Security, the US & South Asia Cold War and New Alignments, and Think Tanks and Global Governance.
One term course offered either term
Activity: Lecture
1 Course Unit

INTR 350 Research Methods/Practice in IR
International Relations is concerned with both theory and practice so we employ a range of analytical tools to examine actors and events in world politics. The purpose of this course is to introduce students to the various research methods utilized by students and scholars in the field of IR including: case studies, historical - comparative and archival research, survey research, interviewing techniques, simulations, quantitative and statistical analysis.
One term course offered either term
Prerequisite: PSCI 150
Activity: Lecture
1 Course Unit
Notes: MAJORS ONLY

INTR 390 Senior Seminar for Thesis Research
Seminar in International Relations. A two semester sequence including review of advanced International Relations theory and research methods for the preparation of the senior thesis.
Course usually offered in fall term
Prerequisites: INTR 350 and PSCI 150
Activity: Seminar
1 Course Unit
Notes: MAJORS ONLY

INTR 391 Senior Seminar For Thesis Research
Seminar in international relations. Second semester of a two semester sequence including review of advanced international relations theory and research methods for the preparation of the senior thesis.
Course usually offered in spring term
Prerequisite: INTR 390
Activity: Seminar
1 Course Unit
Notes: MAJORS ONLY

INTR 395 Senior Project I
This seminar will prepare students to plan, implement, and present their senior research project. Students will draw on the experience and insight they have gained in the course of their fieldwork or internship to develop defensible policy recommendations for their target audience. As such, the seminar will introduce students to the policy formation process as they develop the practical skills needed to formulate and produce actionable policy recommendations. Students will produce a formal report and will present their findings to relevant stakeholders at the conclusion of the Seminar. This class will ensure that students develop the skills necessary to undertake a substantive research project.
Course usually offered in fall term
Prerequisites: INTR 350 and PSCI 150
Activity: Seminar
1 Course Unit
Notes: MAJORS ONLY

INTR 396 Senior Project II
This course is a continuation of INTR-395, culminating with the production of a policy research paper and presentation.
Course usually offered in spring term
Prerequisite: INTR 395
Activity: Seminar
1 Course Unit
Notes: MAJORS ONLY

INTR 399 Independent Study for Thesis Research
One term course offered either term
Activity: Independent Study
1 Course Unit

ITAL 101 Italian Survival Kit: The Language and Culture of getting around in Italy
The following course is delivered in a fully online format in order to allow more flexibility for LPS students. Class sessions are offered through a course website and include live lectures and interactive discussions through both direct messaging and voice-over internet. Between classes, the learning experience is extended through assignments, threaded discussions and office hours. For additional information, please visit http://www.sas.upenn.edu/lps/onlinelearning This online course provides the flexibility of distance-learning and content that is taught efficiently in order to be used practically. If you are going to Italy and questioning how you will survive your total immersion experience, this course will provide you with the linguistic and cultural survival skills you will need to effectively function in Italy and fully enjoy its wonders. In this course, you will learn and practice the language you need to talk about: yourself, others; travel; public transportation; housing; food; shopping; technology; health; money, etc. Class meetings combine original as well as online, authentic content. Adobe Connect allows students to engage in collaborative interaction under the instructor’s supervision. Students participate in conversations that replicate day-to-day life in Italy, thereby developing the skills needed for face-to-face and online situations.
Taught by Dr. Lillyrose Veneziano Broccia
Activity: Seminar
0.5 Course Units

ITAL 105 Sicilian Language and Culture
Occupied over the centuries by the Greeks, Romans, Arabs, Normans, French, and Spaniards, Sicily is a region of many histories and many traditions. Birthplace and crossroad of cultures and artistic movements, the Sicilian land has shaped the imagination of its inhabitants and has never ceased to fascinate its visitors. Its language and culture have also been exported abroad, through the many Sicilians who left the island and settled all over the world. This course is an introduction to Sicilian Language and Culture. We will study spoken Sicilian and cultural artifacts ranging from film to literature, to music and food, in order to learn to recognize and understand the unique sounds and features of "siciliano" and to converse in Sicilian with native speakers and with one another. This course is delivered in an online format, with occasional face-to-face meetings. Class sessions are offered through a course website and include live lectures and interactive discussions. Between classes, the learning experience is extended through assignments, lectures and discussions.
Prerequisites: There are no prerequisites for ITAL 105: Sicilian Language and Culture.
Activity: Seminar
0.5 Course Units

ITAL 110 Elementary Italian I
A first-semester elementary language course for students who have never studied Italian or who have had very little exposure to the language. Students who have previously studied Italian are required to take the placement test. This course emphasizes the development of spontaneous discourse and interactional competence. Out-of-class homework is required.
For BA Students: Language Course
One term course offered either term
Activity: Seminar
1 Course Unit

ITAL 112 Accelerated Elementary Italian
An intensive two-credit course covering the first and second semester of the elementary year for students who have never studied Italian before but have already fulfilled the language requirement in another modern language, preferably a romance language. Students who have fulfilled the language requirement in a language other than a romance language will be considered on an individual basis. All students must have departmental permission to register. Class work emphasizes the development of spontaneous discourse skills and interactional competence. Out-of-class homework is required.
For BA Students: Language Course
One term course offered either term
Prerequisites: Proficiency in another foreign language.
Activity: Seminar
2 Course Units

ITAL 120 Elementary Italian II
This course is the continuation of the elementary-level sequence designed to develop functional competence in the four skills. Class work emphasizes the further development of spontaneous discourse skills and interactional competence. Out-of-class homework is required.
For BA Students: Language Course
One term course offered either term
Prerequisites: Completion of Italian 110 or placement into second-semester Italian.
Activity: Seminar
1 Course Unit

ITAL 130 Intermediate Italian I
Italian 130 is the first half of a two-semester intermediate sequence designed to help you attain a level of proficiency that will allow you to function comfortably in an Italian-speaking environment. The course will build on your existing skills in Italian, increase your confidence and your ability to read, write, speak and understand the language, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. You are expected to have already learned the most basic grammatical structures in elementary Italian and to review these. The course materials will allow you to explore culturally relevant topics and to develop cross-cultural skills through the exploration of similarities and differences between your native culture and the Italian world.
For BA Students: Language Course
One term course offered either term
Prerequisites: Completion of Italian 120 at Penn or a placement score between 450 and 540 on the Achievement Exam (SAT II).
Activity: Seminar
1 Course Unit
ITAL 134 Accelerated Intermediate Italian
Italian 134 is the intensive and accelerated course that combines in one semester the intermediate sequence (130 and 140). It will build on your existing skills in Italian, increase your confidence and your ability to read, write, speak and understand the language, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. The course will allow you to explore culturally relevant topics and to develop cross-cultural skills through the exploration of similarities and differences between your native culture and the Italian world.
For BA Students: Last Language Course
One term course offered either term
Prerequisites: Italian 112 or departmental permit; proficiency in another foreign language.
Activity: Seminar
2 Course Units

ITAL 140 Intermediate Italian II
Italian 140 is the second half of a two-semester intermediate sequence designed to help you attain a level of proficiency that will allow you to function comfortably in an Italian-speaking environment. The course will build on your existing skills in Italian, increase your confidence and your ability to read, write, speak and understand the language, and introduce you to more refined lexical items, more complex grammatical structures, and more challenging cultural material. The course will allow you to explore culturally relevant topics and to develop cross-cultural skills through the exploration of analogies and differences between your native culture and the Italian world. The course will move beyond stereotypical presentations of Italy and its people to concentrate on specific social issues together with cultural topics.
For BA Students: Last Language Course
One term course offered either term
Prerequisites: Completion of Italian 130 at Penn or placement into Italian 140.
Activity: Seminar
1 Course Unit

ITAL 180 Italian Conversation in Residence
Please check the website for a current course description at: http://www.sas.upenn.edu/italians/courses All coursework will be in Italian. Currently and previously enrolled students of Italian will be given priority for registration. Please contact the instructor, Dr. Frank Pellicone, or the Undergraduate Chair, Dr. Lillyrose Veneziano-Broccia, for permission to register.
Two terms, student may enter either term.
Activity: Seminar
0.5 Course Units

ITAL 201 Advanced Italian I
Italian 201 will focus on contemporary Italian culture following its development since the 1960s. Pertinent films, literary texts, articles, as well as material in other media will complement the analysis of films and allow in-depth discussion. The cultural material explored in the course will be also used as a basis for a review of linguistic structures and vocabulary. Audiovisual materials develop students’ comprehension and production in Italian and enable them to function in an academic setting. Class work will center primarily on conversation to improve students’ fluency, vocabulary, and accuracy in speaking. Homework will consist of research and writing assignments in written Italian. Additionally, students will be required to prepare presentations. Students will write a final essay.
For BA Students: Advanced Language Course
One term course offered either term
Prerequisites: Open to students who have satisfied the language requirement in Italian. ITAL 201 or equivalent is a prerequisite for all other courses taught in Italian at the 200/300 level.
Activity: Seminar
1 Course Unit

ITAL 202 Advanced Italian II
In Italian 202, students will strengthen their communication skills, while continuing to explore significant aspects of contemporary Italian culture and history. Students will take further steps towards being able to understand in depth and to contextualize authentic Italian documents. Films, songs, and a variety of readings, will be used as windows on particular historical periods, cultural movements, political issues, and social customs. They will serve as a tool to investigate the many facets of Italian identity and, at the same time, as a way to prepare those students who will continue their study of Italian literature and culture in higher-level courses. Students are expected to participate in conversations and all other class activities in order to improve their oral and written ability to narrate, express opinion, hypothesize, and discuss a variety of topics, using rich, appropriate vocabulary and grammar, and organizing well-structured discourses, be they oral presentations, weekly compositions or the final essay. To reach these goals, speaking, listening, reading and writing activities – role plays, discussions, oral presentations, journals, grammar reviews – will be based on audio-visual material and written texts and/or proposed by the students themselves, based on their independent explorations and research.
For BA Students: Advanced Language Course
One term course offered either term
Prerequisites: Open to students who have completed ITAL 201. Please see the Undergraduate Chair if you have any questions.
Activity: Seminar
1 Course Unit
ITAL 203 Masterpieces-Italian Literature
This course surveys the history of Italian literature through its major masterpieces. Beginning with Dante's Divine Comedy, Petrarch's love poems, and Boccaccio's Decameron, we will follow the development of Italian literary tradition through the Renaissance (Machiavelli's political theory and Ariosto's epic poem), and then through Romanticism (Leopardi's lyric poetry and Manzoni's historical novel), up to the 20th century (from D'Annunzio's sensual poetry to Calvino's post-modern short stories). The course will provide students with the tools needed for analyzing the texts in terms of both form and content, and for framing them in their historical, cultural, and socio-political context. Classes and readings will be in Italian. ITAL 203 is mandatory for Minors in Italian Literature and Majors in Italian Literature. If necessary, ITAL 201 can be taken at the same time as ITAL 203.
For BA Students: Arts and Letters Sector
One-term course offered either term
Also Offered As: COML 203
Prerequisites: Open to students who have completed ITAL 201 or equivalent.
Activity: Seminar
1 Course Unit

ITAL 204 Italian History on Screen: How Movies Tell the Story of Italy
How has our image of Italy arrived to us? Where does the story begin and who has recounted, rewritten, and rearranged it over the centuries? In this course, we will study Italy's rich and complex past and present. We will carefully read literary and historical texts and thoughtfully watch films in order to attain an understanding of Italy that is as varied and multifaceted as the country itself. Group work, discussions and readings will allow us to examine the problems and trends in the political, cultural and social history from ancient Rome to today. We will focus on: the Roman Empire, Middle Ages, Renaissance, Unification, Turn of the Century, Fascist era, World War II, post-war and contemporary Italy. Lectures and readings are in English.
For BA Students: Arts and Letters Sector
One-term course offered either term

ITAL 208 Business Italian
The course is conducted entirely in Italian and should be taken after completion of Italian 201 or equivalent. It is designed to enable students to acquire language proficiency in the current Italian business and labor world. Business terminology will be used in specific business situations such as banking, trade, communications, etc. The course will examine Italian business practices, cultural differences such as the attitude towards money, work, leisure and consumerism through websites, newspaper and magazine articles and video clips. Students will learn to read business publications, write and compose business texts, and participate in business-related conversations. Additionally, guest lecturers from the local business world with ties to Italy will provide students with information about internship and job opportunities and the knowledge necessary to navigate international and Italian commercial routes. All reading and lectures in Italian.
Course not offered every year
Prerequisites: Open to students who have completed ITAL 201 or equivalent.

ITAL 333 Dante's Divine Comedy
In this course we will read the Inferno, the Purgatorio and the Paradiso, focusing on a series of interrelated problems raised by the poem: authority, fiction, history, politics and language. Particular attention will be given to how the Commedia presents itself as Dante's autobiography, and to how the autobiographical narrative serves as a unifying thread for this supremely rich literary text. Supplementary readings will include Virgil's Aeneid and selections from Ovid's Metamorphoses. All readings and written work will be in English. Italian or Italian Studies credit will require reading Italian texts in their original language and writing about their themes in Italian. This course may be taken for graduate credit, but additional work and meetings with the instructor will be required.
Course not offered every year
Also Offered As: COML 333, ENGL 323
Activity: Seminar

ITAL 512 A Black Seed (He) Sowed: An Introduction to Paleography & History of Books
Writing and reading are common actions we do every day. Nonetheless they have changed over the centuries, and a fourteenth century manuscript appears to us very different from a Penguin book. The impact of cultural movements such as Humanism, and of historical events, such as the Reformation, reshaped the making of books, and therefore the way of reading them. The course will provide students with an introduction to the history of the book, including elements of paleography, and through direct contact with the subjects of the class: manuscripts and books. Furthermore, a section of the course will focus on digital resources, in order to make students familiar with ongoing projects related to the history of book collections (including the "Philosophical Libraries" and the "Provenance" projects, based at the Scuola Normale Superiore in Pisa and at Penn). The course will be conducted in English; a basic knowledge of Latin is desirable but not required. The class will meet in Van Pelt.

1 Course Unit

ITAL 531 Dante's Commedia I
Please check the department's website for the course description at: http://www.sas.upenn.edu/italians/graduate/courses Dante Visualizing and Dante Visualized. Dante’s Commedia has inspired art, but at the same time art is present within the Comedy itself, through images, metaphors, descriptions and even more concrete examples. This course aims at discussing these aspects, taking into consideration also the philosophical, political and religious background of these motifs. While analyzing images in and from the Commedia, we will look at illustrations and artistic interpretations, spanning from medieval illuminations and Renaissance printed books (mainly from Van Pelt Library) to contemporary examples, and focusing on artists such as Giotto, Botticelli, Michelangelo, Blake, Dore, and Dali. The course will be taught in English.
Course not offered every year
Also Offered As: COML 533
Activity: Seminar
1 Course Unit
Notes: This course may sometimes be taught as the first part of a two-semester sequence.

ITAL 641 Topics in Southern Renaissance Art
Topic varies. Fall 2018: This innovative course will explore the cross-fertilization between manuscript illumination and other media such as wall-painting, panel painting, architecture, sculpture, and stained glass across the early modern world, 1300-1600. We will consider such topics as: intermediality, artistic transfer, miniature vs. monumental, workshop practice, patronage, and the nascent art market. Students will have the rare opportunity to see and handle manuscripts held in area collections such as the Kislak Center and the Free Library of Philadelphia. This course is open to all students who are interested in artistic practice, the historical dimensions of media, and the social function of art. Our seminar will be coordinated with the Annual Schoenberg Symposium on Manuscript Studies (November 15-17, 2018), which will bring together an international group of experts in the field.

Japanese (JPAN)

JPAN 001 Introduction to Spoken Japanese I
Intended for students who have no Japanese background. The major emphasis is on oral communication skills, although some reading and writing instructions are given. Japanese pop-culture will also be incorporated.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: See LPS Course Guide. **This course does not fulfill the language requirement in the College.

JPAN 002 Introduction to Spoken Japanese II
Although some reading/writing instruction is given, the major emphasis is on oral communication skill.
Course usually offered in spring term
Prerequisites: Completion of JPAN 001 or the equivalent.
Activity: Lecture
1 Course Unit
Notes: See LPS Course Guide. **This course does not fulfill the language requirement in the College.

JPAN 011 Beginning Japanese I
Intended for students who have no Japanese background. All four skills, speaking/listening/writing/reading, are equally emphasized. Hiragana/Katakana (Two sets of Japanese syllabic letters) and some Chinese characters (Kanji) are introduced. Textbooks: Genki I (Lesson 1- Lesson 7). Kanji: reproduction-approx.70/recognition-approx.110
For BA Students: Language Course
Course usually offered in fall term
Prerequisite: None
Activity: Lecture
1 Course Unit

JPAN 012 Beginning Japanese II
Textbooks: Genki I (Lesson 8- Lesson 12) and Genki II (Lesson 13- Lesson 14) Kanji: reproduction-approx.170/recognition-approx.250
For BA Students: Language Course
Course usually offered in spring term
Prerequisites: Completion of JPAN 011 or the equivalent.
Activity: Lecture
1 Course Unit

JPAN 021 Intensive Beginning Japanese I
Intended for students with little or no background in Japanese who wish to finish the language requirement in one year. (Equivalent to JPAN 011 + JPAN 012) Textbooks: Yookoso I and Basic Kanji Book I (L1-L10) Kanji: reproduction-approx.110/recognition-approx.200
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
2 Course Units

JPAN 022 Intensive Beginning Japanese II
This course is the equivalent to JPAN 111 + JPAN 112, and completes the College language requirement. Textbooks: Yookoso II and Basic kanji book I (L11- L.22) Kanji: reproduction-approx.250/recognition-approx 350
For BA Students: Last Language Course
Course usually offered in spring term
Prerequisites: completion of JPAN 021, 012 or the equivalent
Activity: Lecture
2 Course Units

JPAN 111 Beginning Japanese III
This course is a continuation of JPAN 012 and focuses on the development of the elementary grammatical structures of the Japanese language through aural-oral practices. The course also aims to develop the four basic skills: listening, speaking, reading, and writing. The course also introduces aspects of Japanese culture and customs, knowledge that is necessary for behaving in a socio-culturally appropriate manner. Students will learn and practice skills to communicate in situations they might face in real life. Example topics and functions are travel, part-time job, work, asking for favors, asking permission, stating your intention/opinion, reporting what you heard, and various speech styles including Keigo (respectful speech). Textbooks: Genki II (Lesson 15- Lesson 21) will be covered, and around 100 new Kanji will be introduced. Overall kanji knowledge will be 286.
For BA Students: Language Course
Course usually offered in fall term
Prerequisites: Completion of JPAN 012,021 or the equivalent.
Activity: Lecture
1 Course Unit

JPAN 112 Beginning Japanese IV
This course completes the College language requirement. Textbooks: Yookoso II (Chapt. 4 - Chapt. 7) & Basic Kanji Book I (L17-L.22) Kanji: reproduction-approx250/recognition approx.350
For BA Students: Last Language Course
Course usually offered in spring term
Prerequisites: Completion of JPAN 111 or the equivalent.
Activity: Lecture
1 Course Unit

JPAN 211 Intermediate Japanese I
A continuation of Japanese language beyond the language requirement.Textbooks: Tobira: Gateway to Advanced Japanese (Unit 1- Unit 5) Kanji:reproduction-approx.330/recognition-approx.450
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisites: Completion of JPAN 112 or JPAN 022 or the equivalent.
Activity: Lecture
1 Course Unit

JPAN 212 Intermediate Japanese II
PREREQUISITES Completion of JPAN 211 or the equivalent.A continuation of Japanese language at the intermediate level.Textbooks: Tobira: Gateway to Advanced Japanese (Unit 6-Unit 10) Kanji: reproduction-approx.400/recognition-approx.550
For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisites: Completion of JPAN 211 or the equivalent.
Activity: Lecture
1 Course Unit
JPAN 311 Intermediate Japanese III
This course is a continuation of Japanese language at the upper intermediate level, and authentic reading/listening materials are introduced besides the textbooks. Textbooks: Tobira: Gateway to Advanced Japanese (Unit 11-Unit 15) Kanji: reproduction-approx. 470/Recognitio-approx. 650
For BA Students: Advanced Language Course
Taught by: Takami
Course usually offered in fall term
Prerequisites: Completion of JPAN 212 or the equivalent.
Activity: Lecture
1 Course Unit

JPAN 312 Intermediate Japanese IV
Authentic materials and video clips will be used. The topics include culture and social issues in Japan, selected video materials.
Kanji: reproduction-approx.550/Recognitio-approx.750
For BA Students: Advanced Language Course
Taught by: Takami
Course usually offered in spring term
Prerequisites: Completion of JPAN 311 or the equivalent.
Activity: Lecture
1 Course Unit

JPAN 381 Japanese for the Professions
For BA Students: Advanced Language Course
Taught by: Takami
Course usually offered in fall term
Prerequisites: Completion of JPAN 212 or the equivalent.
Activity: Lecture
1 Course Unit
Notes: Offered through Penn Language Center.

JPAN 382 Japanese for the Professions II
For BA Students: Advanced Language Course
Taught by: Takami
Course usually offered in spring term
Prerequisites: Completion of JPAN 381 or the equivalent.
Activity: Lecture
1 Course Unit
Notes: Offered through Penn Language Center

JPAN 411 Advanced Japanese I
Minimum 600-700 kanji knowledge is expected. A continuation of Japanese language beyond the intermediate level.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisites: Completion of JPAN 312, 382 or the equivalent.
Activity: Lecture
1 Course Unit

JPAN 412 Advanced Japanese II
For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisites: Completion of JPAN 411 or the equivalent.
Activity: Lecture
1 Course Unit

JPAN 481 Advanced Japanese for Proficiency I
This course is for students with an advanced background in Japanese, who are interested in taking at least the Level 2 Japanese Proficiency Test. Solid grammar, an extensive vocabulary, and the knowledge of at least 800-900 Chinese characters is required. This course is not continuous with any existing 300-level Japanese course; therefore, your grade from a 300-level course does not qualify you to take this course. Eligibility will be determined through an interview and placement test taken in the first meeting. All students who take this course are required to take the Japanese Proficiency Test in December. Since the JLPT is administered in December every year, if you wish to fully prepare for the test, the instructor strongly recommends that you take JPAN 482 first in the spring of the same year. For example, if you plan to take the test in December 2010, start taking 482 in the spring 2010 and take 481 in the fall 2010. Different from other courses, this full year course begins in the spring and ends in the fall, because the test is given in December. However, participation in 482 is optional.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisites: Completion of the JPAN 312 or 382 or the equivalent.
Activity: Lecture
1 Course Unit
Notes: Offered through Penn Language Center.

JPAN 482 Advanced Japanese for Proficiency II
This course is for students with an advanced-low or advanced-mid background in Japanese, aiming to strengthen the four language skills (speaking, reading, writing, and listening) and to deepen their understanding of Japanese culture. The class will use authentic Japanese through media, such as newspapers, television, and articles, regarding Japanese culture and society as well as current news. Students will narrate, describe, and express their opinions with details, examples, and strong reasoning, using sophisticated terms and phrases related such topics.
For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisites: Japanese proficiency test and permission of instructor.
Offered through the Penn Language Center.
Activity: Lecture
1 Course Unit

JPAN 491 Readings in Classical Japanese I
Readings in classical texts drawn from the Heian, Kamakura, Muromachi, and Edo periods. Introduction to the different styles of classical Japanese, and to classical Japanese as a whole.
For BA Students: Advanced Language Course
Taught by: Chance, L.
Course usually offered in fall term
Also Offered As: EALC 251, EALC 651
Prerequisites: Completion of JPAN 212 or equivalent.
Activity: Lecture
1 Course Unit

JPAN 511 Readings in Advanced Japanese
Readings in advanced literary and journalistic texts written in modern Japanese.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisites: Completion of JPAN 412 or the equivalent.
Activity Lecture
1 Course Unit
JPAN 512 Readings Advanced Japanese II
Readings in advanced literary and journalistic texts written in modern Japanese.
For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisites: Completion of JPAN 511 or the equivalent.
Activity: Lecture
1 Course Unit

JPAN 515 Japanese-English Translation
In this course, students learn basic techniques and skills in translation through hands-on practices. Depending on the interests of enrolled students, both literary and non-literary texts are drawn from a wide range of fields, including popular culture (e.g., manga, animation, film, game, music, and short story), religion, law, and medicine. As students read papers pertinent to principles and problems of translation from Japanese to English, they acquire practical experience in translation tasks and approaches, learn cultural and communicative differences between Japanese and English, and familiarize themselves with ethics and resources.
Taught by: Nishimura
Course usually offered in fall term
Prerequisites: COMPLETION OF JPAN 412 or the equivalent.
Activity: Lecture
1 Course Unit

Jewish Studies Program (JWST)

JWST 026 Jews and China: Views from Two Perspectives
Jews in China?? Who knew?? The history of the Jews in China, both modern and medieval, is an unexpected and fascinating case of cultural exchange. Even earlier than the 10th century, Jewish traders from India or Persia on the Silk Road, settled in Kaifeng, the capital of the Northern Song Dynasty, and established a Jewish community that lasted through the nineteenth century. In the mid-nineteenth century, Jewish merchants, mainly from Iraq, often via India, arrived in China and played a major role in the building of modern Shanghai. After 1898, Jews from Russia settled in the northern Chinese city of Harbin, first as traders and later as refugees from the Bolshevik Revolution and Russian Civil War. In the first decades of the twentieth century, a few Jews from Poland and Russia visited China as tourists, drawn by a combination of curiosity about the cultural exotism of a truly foreign culture and an affinity that Polish Jewish socialists and communists felt as these political movements began to emerge in China. During World War II, Shanghai served as a port of refuge for Jews from Central Europe. In this freshman seminar, we will explore how these Jewish traders, travelers, and refugees responded to and represented China in their writings. We will also read works by their Chinese contemporaries and others to see the responses to and perceptions of these Jews. We will ask questions about cultural translation: How do exchanges between languages, religions, and cultures affect the identities of individuals and communities? What commonalities and differences between these people emerge?
Taught by: Hellerstein
Course not offered every year
Also Offered As: GRMN 025
Activity: Seminar
1 Course Unit
Notes: Benjamin Franklin Seminar

JWST 031 Beginning Yiddish
Yiddish is a 1000-year-old language with a rich cultural heritage. YDHS 101, the first in the Beginning Yiddish language series, introduces the student who has no previous knowledge of the language to the skills of reading, writing, and speaking Yiddish. Starting with the alphabet, students study grammar, enriched by cultural materials such as song, literature, folklore, and film, as well as the course s on-line Blackboard site, to acquire basic competency. By the end of the first semester, students will be able to engage in simple conversations in the present tense, know common greetings and expressions, and read simple texts, including literature, newspapers, songs, and letters. Students are encouraged to continue with YDHS 102/. JWST 032/ YDHS 501 in the Spring. Four semesters of Yiddish fulfill the Penn Language Requirement.
For BA Students: Language Course
Course usually offered in fall term
Also Offered As: YDHS 101, YDHS 501
Activity: Lecture
1 Course Unit

JWST 032 Beginning Yiddish II
In this course, you can continue to develop basic reading, writing and speaking skills. Discover treasures of Yiddish culture: songs, literature, folklore, and films.
For BA Students: Language Course
Course usually offered in spring term
Also Offered As: YDHS 102, YDHS 502
Prerequisites: JWST 031 or permission of the instructor.
Activity: Lecture
1 Course Unit

JWST 033 Intermediate Yiddish I
A continuation of JWST 032/ YDHS 102, Beginning Yiddish II, this course develops the skills of reading, writing, and speaking Yiddish on the intermediate level through the study of grammar and cultural materials, such as literature, newspapers, films, songs, radio programs.
For BA Students: Language Course
Taught by: Hellerstein
Course usually offered in fall term
Also Offered As: YDHS 103, YDHS 503
Prerequisite: GRMN 402 or equivalent
Activity: Lecture
1 Course Unit

JWST 034 Intermediate Yiddish II
Continuation of JWST 033; emphases in reading texts and conversatio.
For BA Students: Last Language Course
Taught by: Hellerstein
Course usually offered in spring term
Also Offered As: YDHS 104, YDHS 504
Prerequisite: GRMN 403 or permission of the instructor
Activity: Lecture
1 Course Unit

JWST 041 Israel in Middle East
Also Offered As: NELC 034
Activity: Seminar
1 Course Unit
JWST 051 Elementary Modern Hebrew I
An introduction to the skills of reading, writing, and conversing in modern Hebrew. This course assumes no previous knowledge of Hebrew.
For BA Students: Language Course
Two terms, student may enter either term.
Also Offered As: HEBR 051, HEBR 651
Activity: Lecture
1 Course Unit

JWST 052 Elementary Modern Hebrew II
A continuation of HEBR 051, First Year Modern Hebrew, which assumes basic skills of reading and speaking and the use of the present tense.
Open to all students who have completed one semester of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Language Course
Two terms, student may enter either term.
Also Offered As: HEBR 052, HEBR 652
Prerequisite: HEBR 051 or permission of instructor
Activity: Lecture
1 Course Unit

JWST 053 Intermediate Modern Hebrew III
Development of the skills of reading, writing, and conversing in modern Hebrew on an intermediate level. Open to all students who have completed two semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Language Course
One term course offered either term
Also Offered As: HEBR 053, HEBR 653
Prerequisites: HEBR 052 or permission of the instructor.
Activity: Lecture
1 Course Unit

JWST 054 Intermediate Modern Hebrew II
This course constitutes the final semester of Intermediate Modern Hebrew. Hence, one of the main goals of the course is to prepare the students for the proficiency exam in Hebrew. Emphasis will be placed on grammar skills and ability to read literary texts. Open to all students who have completed three semesters of Hebrew at Penn with a grade of B- or above and new students with equivalent competency.
For BA Students: Last Language Course
One term course offered either term
Also Offered As: HEBR 054, HEBR 654
Prerequisites: HEBR 053 or permission of instructor.
Activity: Lecture
1 Course Unit

JWST 059 Advanced Modern Hebrew: Conversation & Writing
After four semesters of language study, it's time to enter the vibrant world of contemporary Israel culture. In this course students read some of the best plays, poems, short stories, and journalism published in Israel today. They also watch and analyze some of Israel's most popular films, TV programs, and videos. Themes include Jewish-Arab relations, the founding of the State, family ties and intergenerational conflict, war and society, and the recent dynamic changes in Israeli society. HEBR 054 or permission of instructor. Since the content of this course may change from year to year, students may take it more than once (but only once for credit).
For BA Students: Advanced Language Course
Taught by: Engel
One term course offered either term
Also Offered As: HEBR 059, HEBR 552
Prerequisite: HEBR 054 or permission of instructor
Activity: Lecture
1 Course Unit

JWST 100 Themes Jewish Tradition: Iberian Conversos: Jew-Christian?
Course topics will vary; they have included The Binding of Isaac, Responses to Catastrophes in Jewish History, Holy Men & Women (Ben-Amos); Rewriting the Bible (Dohrmann); Performing Judaism (Fishman); Jewish Political Thought (Fishman); Jewish Esotericism (Lorberbaum) Democratic culture assumes the democracy of knowledge - the accessibility of of knowledge and its transparency. Should this always be the case? What of harmful knowledge? When are secrets necessary? In traditional Jewish thought, approaching the divine has often assumed an aura of danger. Theological knowledge was thought of as restricted. This seminar will explore the "open" and "closed" in theological knowledge, as presented in central texts of the rabbinic tradition: the Mishnah, Maimonides and the Kabbalah. Primary sources will be available in both Hebrew and English.
For BA Students: History and Tradition Sector
Taught by: Ben-Amos/Dohrmann/Fishman
Course not offered every year
Also Offered As: NELC 252, RELS 129
Activity: Seminar
1 Course Unit

JWST 102 Jewish Humor
In modern American popular culture Jewish humor is considered by Jews and non-Jews as a recognizable and distinct form of humor. Focusing upon folk-humor, in this course we will examine the history of this perception, and study different manifestation of Jewish humor as a particular case study of ethnic in general. Specific topics for analysis will be: humor in the Hebrew Bible, Jewish humor in Europe and in America, JAP and JAM jokes, Jewish tricksters and pranksters, Jewish humor in the Holocaust and Jewish humor in Israel. The term paper will be collecting project of Jewish jokes.

JWST 122 Religions of the West
This course surveys some of the core beliefs and practices within Judaism, Christianity, and Islam. To do so, we will focus on history and memory, exploring how key figures and formative events from the past have been made present, from generation to generation, through scripture, ritual, liturgy, and remembrance. Special attention will be given to points of interaction between Jews, Christians, and Muslims, as well as to the impact of their intertwined histories on the formation and development of Western cultures. Fulfills History & Tradition Sector.

Also Offered As: HIST 150, RELS 124
Activity: Lecture
1 Course Unit

JWST 131 How To Read the Bible
While the Bible may be the most read text in the world, it is not clear that anyone understands what it actually means. Secular scholars read the Bible as they would any other ancient document, trying to understand who wrote it and what it reveals about the past, but that is not how the Bible is understood by hundreds of millions of readers who embrace it as a message from God and read its contents not just to learn about the past but to understand what the meaning of life is, how to be a good person, and where the world is headed. How is it that the Bible is read in such different ways by the secular and the religious? Who is right in the struggle over its meaning, and how does one go about deciphering that meaning in the first place?

Also Offered As: NELC 153, RELS 130
Activity: Seminar
1 Course Unit

JWST 136 Death and the Afterlife in Ancient Judaism and Christianity
This course surveys the development of concepts about death and the afterlife in Judaism and Christianity, exploring the cultural and socio-historical contexts of the formation of beliefs about heaven and hell, the end of the world, martyrdom, immortality, resurrection, and the problem of evil. Readings cover a broad range of ancient sources, including selections from the Hebrew Bible and New Testament, as well as other Jewish and Christian writings (e.g., "apocrypha," "pseudepigrapha," Dead Sea Scrolls, classical rabbinic literature, Church Fathers, "gnostic" and "magical" materials). In the process, this course introduces students to formative eras and ideas in the history of Judaism, Christianity, and Western culture.

JWST 151 Great Books of Judaism (Fall 2018: Lifecycle in the Talmud)
The Babylonian Talmud, known simply as the Bavli, is the foundational legal and ethical document of rabbinic Judaism. It is one of the best read works of world literature, and it is the most widely disseminated and revered rabbinic work. It not only contains legal discussions and rulings but rather it also presents the worldview of the rabbis. This course will analyze and contextualize the perspectives of the Talmud towards the important phases of life. We will examine in-depth several Talmudic passages relating to the various stages of the human lifecycle: birth and naming of the child; circumcision; bar/bat mitzva and adulthood; earning a livelihood and choosing a career; marriage and divorce; procreation and raising children; death, burial, mourning and the belief in the resurrection of the dead among others. We will evaluate these teachings in light of other traditions and in their broader late antiquity and contemporary contexts. All texts will be read in their English translation but originals will also be provided.

JWST 154 Modern Hebrew Literature and Culture in Translation: Autobiography
This course follows and analyzes the transformations in Israeli literature and cinema. The lens through which we study this canon changes each semester. These "lenses" include: "Childhood," "Holocaust," "Cities," "Madness," and others. Israeli works constitute much of the course's material, but European and American film and fiction play comparative roles. For a description of the current theme, please see the websites of Cinema and Media Studies, Jewish Studies, NELC, COML, or ENGL. This course will follow and analyze the transformation of Israeli literature and cinema from instruments of suppression into a means of processing this national trauma. While Israeli works constitute much of the course's material, European and American film and fiction play comparative roles.
For BA Students: Arts and Letters Sector
Taught by: Gold
Course usually offered in spring term
Also Offered As: CIMS 159, COML 282, NELC 159

1 Course Unit

JWST 155 Jews and Judaism in Antiquity. History of Jewish Civilization I
The course is an overview of Jewish history, culture, and society from its biblical settings through the Hellenistic-Roman, and rabbinic periods. We will trace the political, social, and cultural-religious, and literary development of Judaism from its beginnings through the Second Temple period to the formation and evolution of Rabbinic Judaism. Topics to be covered include: the evolution of biblical thought and religious practice over time, Jewish writing and literary genres; varieties of Judaism; Judaism and Imperialism; the emergence of the rabbinic class and institutions.

JWST 158 Jews in the Modern World: History of Jewish Civilization III
This course offers an intensive survey of the major currents in Jewish culture and society from the late middle ages to the present. Focusing upon the different societies in which Jews have lived, the course explores Jewish responses to the political, socio-economic, and cultural challenges of modernity. Topics to be covered include the political emancipation of Jews, the creation of new religious movements within Judaism, Jewish socialism, Zionism, the Holocaust, and the emergence of new Jewish communities in Israel and the United States. No prior background in Jewish history is expected.

JWST 213 The Religious Other
Course explores attitudes toward monotheists of other faiths, and claims made about these “religious Others” in real and imagined encounters between Jews, Christians and Muslims from antiquity to the present. Strategies of “othering” will be analyzed through an exploration of claims about the Other’s body, habits and beliefs, as found in works of scripture, law, theology, polemics, art, literature and reportage. Attention will be paid to myths about the other, inter-group violence, converts, cases of cross-cultural influence, notions of toleration, and perceptions of Others in contemporary life. Primary sources will be provided in English.

JWST 225 Introduction to the Dead Sea Scrolls
Exploration of the issues relating to the identification and history of the people who produced and used these materials as well as the claims made about the inhabitants of the Qumran site near the caves in which the scrolls were discovered, with a focus on what can be known about the community depicted by some of the scrolls, its institutions and religious life, in relation to other known Jewish groups at that time (the beginning of the common era). This will involve detailed description and analysis of the writings found in the caves -- sectarian writings, "apocrypha" and "pseudepigrapha" biblical texts and interpretations.
Course not offered every year
Also Offered As: NELC 251, RELS 225
Activity: Seminar
1 Course Unit

JWST 244 Miracles to Mindfulness
In 1902, the most famous philosopher in America, William James, revolutionized the study of religion by analyzing religion as an experience rather than as a set of doctrines or scriptures. In this course, we will pick up the inquiry that James and scholars such as Sigmund Freud began by exploring new approaches to the science and philosophy of religious experience. We will invite a series of experts from a wide range of fields--neuroscience, psychoanalysis, phenomenology, psychology, anthropology, to name only a few--to present their cutting-edge research on the nature of religious experience. How can religious experience be studied? What does the research reveal about religious experience? And what can we learn from such experiences about the workings of the human mind and human society? The course has two components: 1) a discussion-centered mini-seminar from 3:30-5:00 will open consideration of the subject with help from relevant readings 2) a guest lecture series every Tuesday from 5:00-6:30, nary angles or in light featuring leading scholars who approach religious experience from different disciplinary angles or in light of different questions.

1 Course Unit
JWST 249 Ultimate Meanings
Does life have some ultimate meaning? In their search for an answer to this question, people tell stories—stories about the creation of the world, about great human beings confronted with the mysteries of existence, about what happens to people after death. To explore the role of stories in finding meaning in life, we will focus on some of the most meaningful stories ever composed: the biblical stories of Adam and Eve, Abraham and his family, the Exodus, Job and his friends, and the life and death of Jesus. One of our goals is to try to retrieve the original meaning of these narratives, what their authors intended, but we will also explore what they have come to mean for readers in our own day for believers and skeptics, scientists and artists, fundamentalists and feminists.

Taught by: Weitzman
Also Offered As: RELS 259
Activity: Seminar
1 Course Unit

JWST 255 The Bible in Translation
This course introduces undergraduates and graduate students to one specific Book of the Hebrew Bible. "The Bible in Translation" involves an in-depth reading of a biblical source against the background of contemporary scholarship. Depending on the book under discussion, this may also involve a contextual reading with other biblical books and the textual sources of the ancient Near East. Although no prerequisites are required, NECL 250 is a perfect follow-up course for NECL 150 "Intro to the Bible."

Activity: Seminar
1 Course Unit
Notes: May be repeated for credit.

JWST 258 Studies in Medieval Jewish Literature
Course introduces students to the academic study of different genres of medieval Jewish culture through exposure to themes, authors and genres: literature: poetry, narrative, biblical interpretation, polemic, liturgy, historiography, philosophy, law, custom, sermons, pietistic and mystical texts. Study of primary texts will be anchored in explorations of the historical, regional and cross-cultural settings in which they were produced and subsequently received. The specific topic of the course--whether a genre, e.g., polemics, a theme (e.g., prophecy), or an author (e.g., Maimonides)--varies. Students who will be reading primary sources in the original should have experience reading unpointed Hebrew texts. Students who do not read Hebrew may encounter the texts in English translation. When topics vary, may be repeated for credit.
Taught by: Fishman
Course usually offered in fall term
Also Offered As: FOLK 258, HEBR 258, NECL 285, RELS 228
Prerequisite: Reading knowledge of Hebrew
Activity: Seminar
1 Course Unit

JWST 259 Introduction to Modern Hebrew Literature
The objective of this course is to develop an artistic appreciation for literature through in-depth class discussions and text analysis. Readings are comprised of Israeli poetry and short stories. Students examine how literary language expresses psychological and cultural realms. The course covers topics such as: the short story reinvented, literature and identity, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students' literary understanding.
For BA Students: Arts and Letters Sector

Notes: Because the content of this course changes from year to year, students may take it more than once.

JWST 260 Jewish Folklore
The Jews are among the few nations and ethnic groups whose oral tradition occurs in literary and religious texts dating back more than two thousand years. This tradition changed and diversified over the years in terms of the migrations of Jews into different countries and the historical, social, and cultural changes that these countries underwent. The course attempts to capture the historical and ethnic diversity of Jewish folklore in a variety of oral literary forms.
Taught by: Ben-Amos
One-term course offered either term
Also Offered As: COML 283, FOLK 280, NECL 258
Activity: Lecture
1 Course Unit

JWST 261 Topics in Jewish-American Literature
From the 1922 silent film “Hungry Hearts” through the first “talkie,” “The Jazz Singer” produced in 1927, and beyond “Schindler’s List,” Jewish characters have confronted the problems of their Jewishness on the silver screen for a general American audience. Alongside this Hollywood tradition of Jewish film, Yiddish film blossomed from independent producers between 1911 and 1939, and interpreted literary masterpieces, from Shakespeare’s “King Lear” to Sholem Aleichem’s “Tevye the Dairyman,” primarily for an immigrant, urban Jewish audience. In this course, we will study a number of films and their literary sources (in fiction and drama), focusing on English language and Yiddish films within the framework of three dilemmas of interpretation: a) the different ways we "read" literature and film, b) the various ways that the media of fiction, drama, and film "translate" Jewish culture, and c) how these translations of Jewish culture affect and are affected by their implied audience.
For BA Students: Arts and Letters Sector

Course not offered every year
Also Offered As: COML 265, COML 277, GRMN 261
Activity: Seminar
1 Course Unit
JWST 262 Jewish Literature in Translation
The course explores an aspect of 20th-century literature intensively; specific course topics will vary from year to year. Fall 2016 - REPRESENTATION OF THE HOLOCAUST IN LITERATURE AND FILM: This discussion-centered course is about the enormous difficulties faced by those who felt the urgent need to describe their own or others’ experiences during the genocide of the European Jews, 1933-1945. We will explore the complex options they have faced as narrators, witnesses, allegors, memoirists, scholars, teachers, writers and image-makers. Some linguistically (or visually) face the difficulty head on; most evade, avoid, repress, stutter or go silent, and agonize. One purpose of the course is for us to learn how to sympathize with the struggle of those in the latter group. This is not a history course, although the vicissitudes of historiography will be a frequent topic of conversation. Students will write frequent short papers, called position papers, due before class, in order to provide a basis for discussion. Students need not know anything about the Holocaust, although enrollees should consider historical reading over the summer.

1 Course Unit

JWST 303 Power and Peril: The Paradox of Monarchy among Ancient Greeks, Romans, and Jews
We imagine Ancient Greece and Rome as the cradles of democracy and republicanism, the early Judea as pious theocracy, but the evidence tells us that monarchy was the most common and prevalent form of government in antiquity (and the premodern world in general). Despite their ubiquity, the King was a polarizing figure in reality and in conception. On the one hand, some idealized the monarchy as the ideal leader, and monarchy provided the language with which to describe and even imagine the very god but on the other, monarchs were widely reviled in both theory and practice, from the Greek tyrant to biblical Saul. The Emperor Augustus loudly denied his own affinity to the office of king, even as he ruled alone and was revered as a god. In other words, kings stood both for the ideal ruler and the worst form of government. This class confronts the paradox of the king. This class will take a special look at the idea and institution of kingship in the Near East, among the Jews, Greeks, and Romans to assess and discuss similarities, differences, and mutual influences among these cultures. Through the lens of the king we will explore the idea of god, government, human frailty, and utopianism. Why did the rule of one prevail, why was it so attractive to so many? How was royal rule legitimized? What role did religious beliefs play for keeping a monarchical system stable? What did people expect from their rulers and what happened if the ruler failed to fulfill these expectations? How was the concept of monarchical rule adopted and transferred into other spheres, such as religious belief systems or hopes for messianic kingship? While kingship is a rich field of scholarly inquiry, the question of its ubiquity, and the entanglement and divergences of these three cultures is rarely studied in context and in comparison.
Taught by: Julia Wilker, Natalie Dohmann
Also Offered As: ANCH 303, RELS 303
Activity: Seminar
1 Course Unit

JWST 305 Jewish Diaspora in the Roman Empire
Under the Roman Empire, Jewish communities developed and flourished especially in the cities of the Eastern Mediterranean, in Egypt, Syria, Asia Minor, Greece, Northern Africa, and Italy proper. In many of these cities, the Jews formed a considerable part of the population; they influenced the cultural, social, and political communal life and developed an identity that was distinctively different from that in Judea. In this seminar, we will trace Jewish life in the Diaspora under Roman rule. How did Jews and non-Jews interact? What was the legal status of Jewish communities under the Roman Empire? What caused conflicts and how were they solved? What can the history of Jewish Diaspora communities tell us about minorities in the Roman Empire in general? We will use literary texts, inscriptions, papyri, and archaeological material to answer these questions and many more.
Taught by: Wilker
Also Offered As: ANCH 305
Activity: Seminar
1 Course Unit
JWST 320 Spirit and Law
While accepting "the yoke of the commandments", Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from overtly polemical challenges to the law, such as those leveled by Paul, medieval Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law's meaning and purpose, by examining a range of primary sources within their intellectual and historical contexts. Texts (in English translation) include selections from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic homilies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.

JWST 399 Senior Honors Thesis
Jewish Studies Honors majors must take JWST 399 in which they will design, with the guidance of an advisor, an individualized directed reading program culminating in the writing of an honors thesis.
One term course offered either term
Activity: Independent Study
1 Course Unit

JWST 410 Topics in Medieval History
This seminar introduces students to the development of Jewish and Christian biblical interpretation by focusing on ancient, medieval, and modern interpretations of the Sermon on the Mount. The Sermon on the Mount is part of the Gospel of Matthew and is often considered to summarize the essential teachings of Jesus of Nazareth. Students will encounter a variety of important interpreters (including Origen, John Chrysostom, Augustine of Hippo, Thomas Aquinas, Martin Luther, Leo Tolstoy, Albert Schweitzer, Dietrich Bonhoeffer, Clarence Jordan, and Hans Dieter Betz), guided by appropriate secondary materials. The seminar will utilize a combination of lecture, discussion, student presentations, reports, close reading, and a research paper. Students will be encouraged to do original research in the primary sources. This course has no prerequisites. The readings will be made available in English. The class will utilize a combination of lecture, discussion, student presentations, reports, close reading, and a research paper.

1 Course Unit

JWST 509 Jewish Women Writers

One version of this seminar considers works by Jewish women who wrote in Yiddish, Hebrew, English, and other languages in the late 19th through the 20th century. The texts, poetry and prose, will include both belles lettres and popular writings, such as journalism, as well as private works (letters and diaries) and devotional works. The course will attempt to define "Jewish writing," in terms of language and gender, and will consider each writer in the context of the aesthetic, religious, and national ideologies that prevailed in this period. Because students will come with proficiency in various languages, all primary texts and critical and theoretical materials will be taught in English translation. However, those students who can, will work on the original texts and share with the class their expertise to foster a comparative perspective. Because we will be discussing translated works, a secondary focus of the course will, in fact, be on literary translation's process and products.

Also Offered As: COML 509, GRMN 509, YDHS 509
Activity: Seminar
1 Course Unit

JWST 520 Spirit and Law

While accepting "the yoke of the commandments", Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from overtly polemical challenges to the law, such as those leveled by Paul, medieval Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law's meaning and purpose, by examining a range of primary sources within their intellectual and historical contexts. Texts (in English translation) include selections from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic homilies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.

Taught by: Fishman
Course not offered every year
Also Offered As: JWST 320, RELC 454, RELS 321, RELS 520
Activity: Seminar
1 Course Unit

JWST 523 Studies in Medieval Jewish Culture

Course examines features of 9th-16th century Jewish culture within their broader historical, regional and cross-cultural contexts, whether Christian or Islamic. Emphasis is placed on primary sources in Hebrew. Topics vary and have included "Reconstructing Rabbinic Judaism prior to the First Millennium", "Custom in Medieval Jewish Cultures", "Jewish Culture in the Islamicate World", "Nature in Medieval Jewish Culture". Students should be able to read unpointed Hebrew. May be repeated for credit.

Taught by: Fishman
Course usually offered in fall term
Also Offered As: HEBR 583
Prerequisites: Reading knowledge of Hebrew.
Activity: Seminar
1 Course Unit

JWST 537 Translating Literature

Course not offered every year
Also Offered As: COML 519, GRMN 537
Activity: Seminar
1 Course Unit
JWST 553 Seminar in Rabbinic Literature
This seminar will investigate biblical and other precedents for the idea of the messiah and the messianic age, and their interpretation and extension into both ancient Judaism and ancient Christianity. To what degree are Second Temple Jewish and early Christian ideas about the messiah an extension of ancient Israelite concepts? To what degree might they reflect a response or reaction to Hellenistic and Roman imperial ideologies? How (and when) did beliefs surrounding Jesus depart meaningfully from Jewish ideas about the messiah? How do Rabbinic Jewish traditions about the messiah and messianic age differ from their Christian counterparts, and is there evidence of any "influence"? These questions will be explored with a focus on primary source readings.
Taught by: Stern
Course usually offered in spring term
Also Offered As: HEBR 557, NELC 557, RELS 557
Prerequisites: Proficiency in Hebrew and/or Greek recommended.
Undergraduates need permission to enroll.
Activity: Seminar
1 Course Unit
Notes: May be repeated for credit

JWST 556 Seminar Modern Hebrew Literature: LITERATURE & IDENTITY
This course is for students who are interested in taking a literature course in Hebrew and are proficient in it. Grading is based primarily on students' literary understanding. There will be four 2-page written assignments over the course of the semester. We will discuss literary works that reflect Israelis' struggle with their national identity, from the patriotic 1948 generation for whom self and country overlapped to contemporary writers who ask what it means to be Israeli. While Yehuda Amichai's 1955 poem "I want to die in my bed" was a manifesto for individualism, the seemingly interminable Arab-Israeli conflict returned writers to the national, social, and political arenas starting in the 1980's. Readings include poems by Natan Alterman, Amir Gilboa, Meir Wieseltier and Roni Somek as well as fiction by Amos Oz, David Grossman, Sayed Kashua, Alona Kimhi and Etgar Keret. Texts, discussions and papers in Hebrew. The content of This course changes from year to year so students may take it for credit more than once.
Taught by: Gold
Course not offered every year
Also Offered As: COML 359, HEBR 359, HEBR 659, JWST 359
Prerequisites: HEBR 059 or HEBR 259 or permission of the instructor.
This class is conducted in Hebrew and the texts are read in the original. The syllabus serves solely as an outline. The amount of material we cover depends on the pace of the class. Additionally, the packet contains significantly more material than will be discussed in class to compensate for the difficulty of obtaining Hebrew texts in America. The content of this course changes from year to year and therefore students may take it for credit more than once.
Activity: Seminar
1 Course Unit

JWST 582 Topics in Aesthetics
The course will study Arendt's political theory, as developed in The Origins of Totalitarianism, and her controversial book Eichmann in Jerusalem. It will also consider essays collected in Men in Dark Times. (Fall 2016 course)
Taught by: Weissberg
Also Offered As: GRMN 580
Activity: Seminar
1 Course Unit

JWST 620 Modern Jewish History
JWST 620 will be offered when the HIST 620 Colloquium subject matter is appropriate.
Course usually offered in fall term
Also Offered As: HIST 620
Activity: Seminar
1 Course Unit

JWST 699 Independent Study
One-term course offered either term
Activity: Independent Study
1 Course Unit

JWST 999 Independent Study
One-term course offered either term
Activity: Independent Study
1 Course Unit

Korean (KORN)

KORN 001 First-year Spoken Korean I
Offered through the Penn Language Center. KORN 001 is for those that have little to no knowledge of Korean. This course will mainly focus on the development of Korean communication skills by exploring a variety of everyday topics beyond school settings. Students will improve their Korean communication skills by engaging in a variety of interactive activities, role plays, and presentations. Class topics include, but are not limited to, introducing oneself, describing one's surroundings, discussing daily activities and past events, talking about common objects and people, etc. We will also introduce cultural topics in order to deepen students' understanding of Korea's culture and language. NOTE: This course does not count toward the language requirement or the EALC major or minor.
Taught by: Kim, Eunae
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: This course does not count toward the language requirement and major/minor requirements.

KORN 002 First-year Spoken Korean II
Offered through the Penn Language Center. A continuation of KORN 001, this course aims to further develop oral communication skills by exploring a variety of topics, such as shopping, hobbies, family, and future plans. Class activities include interactive tasks, role plays, and presentations. Cultural topics will also be incorporated in order to further deepen students' understanding of Korea's culture and language. Upon completion of the course, students will be able to comprehend and carry on basic conversations; exchange information on a variety of topics in the past, present, and future tenses; and achieve a proficiency level of Novice High based on the ACTFL (American Council on the Teaching of Foreign Languages) proficiency scale. NOTE: This course does not count toward the language requirement or the EALC major or minor. Course usually offered in spring term
Prerequisite: KORN 001 or equivalent proficiency
Activity: Lecture
1 Course Unit
Notes: This course does not count toward the language requirement and major/minor requirements.
KORN 011 Elementary Korean I
This course is designed for students who have little or no knowledge of Korean. This course aims to develop foundational reading, writing, listening, and speaking skills through meaningful communicative activities and tasks. Upon successful completion of this course, students should be able to comprehend and carry on simple daily conversations and create simple sentences in the past, present, and future tenses. Students will learn how to introduce themselves, describe their surroundings, talk about daily lives, friends and relatives, and talk about past and future events.
For BA Students: Language Course
Course usually offered in fall term
Activity: Lecture
1 Course Unit

KORN 012 Elementary Korean II
This is a continuation of KORN 011. This course aims to further develop the four language skills of students to the novice-high level by building on materials covered in KORN 011. Students will learn how to use three speech styles (polite formal, informal, and intimate) appropriately in a given context. Upon successful completion of this course, students should be able to handle simple and elementary needs of daily lives and talk (and write) about a variety of topics such as family, college life, birthday celebration, shopping, Korean food, etc.
For BA Students: Language Course
Course usually offered in spring term
Prerequisites: Completion of KORN 011 or equivalent knowledge and permission of the instructor.
Activity: Lecture
1 Course Unit

KORN 021 Intensive Elementary Korean I & II
KORN 021 is an intensive Korean course that covers the material from KORN 011 and KORN 012 in an intensive format, designed for novice learners who have little or no knowledge of Korean. This course aims to develop a solid foundation for reading, writing, listening, and speaking skills through meaningful communicative activities and tasks in cultural context. Upon completion of the course, students should be able to handle simple and elementary needs of daily lives and be able to talk and write about a variety of topics such as mood and personalities, clothing, weather, illness, Korean food, etc. Students will also learn how to use three speech styles (polite formal, informal, and intimate) appropriately in a given context. Students are also expected to obtain the Novice High level of proficiency based on the ACTFL (American Council on the Teaching of Foreign Languages) proficiency scale. During the summer, this course will be given in an online format that provides a communicative learning environment through Adobe Connect and Canvas. Students will be required to view PowerPoint slide shows and do homework questions in Canvas before each class, and class time will be mostly spent on communicative activities. After class, students will practice four language skills with the online exercises on Canvas, class blogs, and Voice Thread. This online course requires access to a reliable computer with high-speed internet and good quality headsets with a microphone. This course is offered through the Penn Language Center.
Course usually offered summer term only
Activity: Lecture
2 Course Units

KORN 111 Intermediate Korean I
This is a continuation of KORN 012. This course is designed to develop students' Korean language proficiency to the intermediate-low level of the ACTFL Proficiency Guidelines. Authentic materials, as well as various student-centered activities that are highly contextualized in everyday interactions will be used. Upon completion of the course, students will be able to present and exchange information on a variety of topics such as weather, fashion, travel, mailing, housing, public transportation, and shopping.
For BA Students: Language Course
Course usually offered in fall term
Prerequisites: Completion of KORN 012 or equivalent knowledge and permission of the instructor.
Activity: Lecture
1 Course Unit

KORN 112 Intermediate Korean II
This is a continuation of KORN 111. This course is designed to develop students' Korean language proficiency to the intermediate-mid level of the ACTFL Proficiency Guidelines. This course expands student's competence by dealing with more functions in various contexts that students can frequently encounter in everyday interactions. In order to prepare students for social contexts, students are encouraged to engage in conversations by personalizing the topics, functions, or contexts. Students will perform in an interpersonal way by providing and obtaining information, expressing feelings and emotions, and exchanging opinions on a variety of topics such as birthday parties, recreation and hobbies, Korean holidays, marriage, cultural differences, education and jobs. This course completes the College language requirement.
For BA Students: Last Language Course
Course usually offered in spring term
Prerequisites: Completion of KORN 111 or equivalent knowledge and permission of the instructor.
Activity: Lecture
1 Course Unit

KORN 131 Korean for Heritage Speakers I
This course is designed for heritage speakers who have a strong background in everyday Korean. This course focuses on enhancing linguistic accuracy (spelling, grammar, vocabulary, pronunciation) and fluency (idiomatic and figurative expressions, narrative structure, discursive practice) in both spoken and written Korean, as well as gaining a deeper understanding of Korean culture. Upon completion of the course, students will be able to express themselves more accurately and participate in Korea-related communities more meaningfully. This course and its subsequent course KORN 132 complete the College language requirement.
Taught by: Jung
Course usually offered in fall term
Prerequisites: Restricted to students who have previous knowledge in Korean. Students are required to take the Korean placement test.
Activity: Lecture
1 Course Unit
KORN 132 Korean for Heritage Speakers II
This course is a continuation of KORN 131 and aims to further develop
students' linguistic and cultural competence by building on materials
covered in KORN 131. In addition to gaining a deeper understanding
of Korean culture, the course focuses on enhancing linguistic accuracy and
fluency in both spoken and written Korean. Particular emphasis will be
placed on building a meaningful Korean-speaking community, as well as
consolidation of grammar structures, and expansion and enhancement of
vocabulary. Topics include preparing for a trip to Korea, finding housing,
college culture in Korea, entertainment and participating in various
social events. Upon completion of this course, students will be able to
express themselves more accurately and participate in Korea-related
communities more meaningfully. This course completes the College
language requirement.
For BA Students: Last Language Course
Taught by: Jung
Course usually offered in spring term
Prerequisites: Completion of KORN 131 or equivalent knowledge and
permission of the instructor.
Activity: Lecture
1 Course Unit

KORN 211 Advanced Korean I
This course aims to develop functional proficiency in Korean at the
intermediate-high level. Students will develop competence in fluency,
grammatical accuracy and socio-linguistic/cultural appropriateness
through a variety of activities and assignments. In addition, students will
learn to communicate using more sophisticated grammatical structures
and advanced vocabulary on various topics. The development of each
of the four language skills (speaking, listening, reading and writing) is
equally emphasized.
For BA Students: Advanced Language Course
Taught by: Cho
Course usually offered in fall term
Prerequisites: Completion of KORN 112, 132 or equivalent knowledge and
permission of the instructor.
Activity: Lecture
1 Course Unit

KORN 212 Advanced Korean II
This is a continuation of KORN 211. Students continue to develop
functional proficiency in Korean at the advanced-low level. The topics
include literature, culture, Korean customs, and social issues in
contemporary Korea.
For BA Students: Advanced Language Course
Taught by: Cho
Course usually offered in spring term
Prerequisites: Completion of KORN 211 or equivalent knowledge and
permission of the instructor.
Activity: Lecture
1 Course Unit

KORN 281 Business Comm in Korean
Offered through the Penn Language Center. This course is designed to
help students improve their Korean language proficiency by learning
essential communication skills necessary to engage in business in
Korea. Students will also develop their knowledge of and competence
in Korean business culture and practice. The course objectives include:
(1) to learn essential business terms, advanced grammar structures and
communication strategies in business transactions; (2) to learn Korean
business customs and culture, work norms, and business etiquette
that students need to successfully communicate in a Korean business
context. Topics include job application, business correspondence
and presentations in business meetings, communication styles and strategies in business contexts, current
business culture, etc.
Taught by: Cho
Course usually offered in fall term
Prerequisites: Completion of KORN 112, 132 or equivalent knowledge and
permission of the instructor.
Activity: Lecture
1 Course Unit

KORN 311 Topics in Advanced Korean
This course aims to develop an in-depth understanding of Korean culture
and society through the analysis of spoken and written Korean discourse.
Students will engage with key sociolinguistic concepts of politeness,
context, solidarity, power, age, and gender, and enhance their advanced
vocabulary and grammar. Students will also develop their abilities in
conversation management, self-presentation, socialization, and sense of
socio-cultural appropriateness, and gain a better understanding of how
native speakers' cultural practices are reflected in language use and how
interpersonal relationships are built and maintained through language.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: Completion of KORN 212
Activity: Lecture
1 Course Unit

KORN 331 Current Korean Media I
Offered through the Penn Language Center. This course aims to develop
a deeper understanding of the contemporary Korean society through
critical analysis of language use and viewpoints expressed in various
types of media including the internet, TV, films and newspapers. This
course will provide students with a rich opportunity to relate what they
have learned in previous Korean language courses to the larger context
of Korean culture and society. The course is conducted entirely in Korean
and utilizes both written and audiovisual materials to develop students' reading/listening comprehension and critical thinking. The course also
involves in-depth class discussion and writing short compositions to
enhance conversation and writing skills.
One term course offered either term
Prerequisites: Completion of KORN 212 or permission of the instructor.
Activity: Lecture
1 Course Unit
KORN 332 Current Korean Media II
Offered through the Penn Language Center. Current Korean Media II aims at a deeper understanding of the contemporary Korean society, through critical analysis of language use and viewpoints expressed in various types of media including the Internet, TV films, magazines and newspapers. This course will focus on cultural products and practices such as popular culture, media culture, and entertainment. By catering to the needs and interests of individual learners of Korean, the course will provide them with a rich opportunity to relate what they have learned in previous Korean language courses to the larger context of Korean culture and society. In addition, students will have an in-depth discussion on topics related to Korean society as well as Penn news. This course is conducted entirely in Korean.
Course usually offered in fall term
Prerequisites: KORN 331 or permission of the instructor.
Activity: Lecture
1 Course Unit

KORN 381 Business Korean I
Offered through the Penn Language Center. Business Korean I is designed for students who want to sharpen their Korean language skills to the advanced-high level by focusing their study on Korean business and economy. Students will learn business/economy-related terminologies and concepts. They will also take an in-depth look at the issues related to business practices and environment in Korea. Students will improve and refine their language skills through actively participating in discussions, research, and presentations.
For BA Students: Advanced Language Course
Taught by: Cho
Course not offered every year
Prerequisites: Completion of KORN 212 or equivalent knowledge and permission of the instructor
Activity: Lecture
1 Course Unit

KORN 382 Business Korean II
Offered through the Penn Language Center. A continuation of the material offered in KORN 381, Business Korean I. Students further develop their Korean language proficiency at the advanced-high level by studying case studies, participating in discussions, and doing research and giving presentations on the topic of current Korean business and economy.
For BA Students: Advanced Language Course
Taught by: Cho
Course not offered every year
Prerequisite: Completion of KORN 212 or equivalent knowledge
Activity: Lecture
1 Course Unit

KORN 431 Advanced Readings in Modern Korean I
This course is designed for advanced level students. Based on literary pieces in the form of short stories, essays, and novels, students are to gain an in-depth, multi-faceted and critical understanding of Korean people, society, and culture. These objectives are achieved primarily through 1) close reading and discussion of original literary texts by 20th-century Korean writers; and 2) regular writing exercises. Some Korean films that are related to the topics of the reading text will be used.
For BA Students: Advanced Language Course
Taught by: Jung
Course not offered every year
Prerequisite: Completion of KORN 311 or equivalent knowledge
Activity: Lecture
1 Course Unit

KORN 432 Advanced Readings in Modern Korean II
This course allows development of creative and analytical thinking through introduction of more organized thematic topics such as family, human relationships, and the reflection of self-images, and individual's mental status while the society changes in time.
For BA Students: Advanced Language Course
Taught by: Jung
Course not offered every year
Prerequisites: Completion of KORN 311 or equivalent knowledge and permission of the instructor
Activity: Lecture
1 Course Unit

KORN 481 Advanced Business Korean I
Offered through the Penn Language Center. This course aims to further develop students' advanced language proficiency and simultaneously deepen their knowledge and understanding of specific areas related to Korean business and economy such as an expansion of business into Asian markets and globalization strategies. Through research, discussion and presentation on various case studies and other business-related materials, students will enhance their critical thinking skills and gain an in-depth perspective on issues related to contemporary Korean business operations and practices.
For BA Students: Advanced Language Course
Course usually offered in fall term
Prerequisite: Completion of 311 or equivalent knowledge
Activity: Lecture
1 Course Unit

KORN 482 Advanced Business Korean II
Offered through the Penn Language Center. A continuation of the material offered in KORN 481: Advanced Business Korean I. Students continue to closely follow the current topics of business and financial markets of Korea by actively participating in discussions, research, and presentations.
For BA Students: Advanced Language Course
Course usually offered in spring term
Prerequisite: Completion of 311 or equivalent knowledge
Activity: Lecture
1 Course Unit

KORN 511 Advanced Academic Korean I
This course aims to assist students who wish to improve their knowledge of the advanced Korean language skills required to conduct academic research. Students will critically read, analyze, and discuss academic and other relevant texts, written in either Korean or mixed scripts. Readings include, but are not limited to, academic journal articles and book chapters are important in the field of each student's research, as well as major primary sources, such as periodicals, government documents, and other authentic texts from the late nineteenth century to the present. Students will develop familiarity with these texts and a deeper understanding of academic writing styles in Korean. In addition, students will expand their proficiency in Sino-Korean vocabulary and Hanja (Chinese characters), both essential to developing their academic language skills in Korean. This course will be conducted in Korean.
Taught by: Lee, Seok
Course offered fall; even-numbered years
Prerequisite: Completion of KORN 432 or equivalent proficiency
Activity: Lecture
1 Course Unit

KORN 512 Adv Academic Korean II
Activity: Lecture
1 Course Unit
Landscape Architecture & Regional Planning (LARP)

LARP 501 Studio I
The focus of this foundation studio is to explore ways of recording and representing landscape - with an emphasis on material, space, rhythm and measure - through a range of drawings and constructions. The studio attempts to create a sensibility toward landscape where the act of surveying a site is as much an imaginative endeavor as is the crafting of an artifact or the construction of a path in a landscape. Emphasis is placed on visual and manual skills in two-dimensional and three-dimensional constructions (drawing, fabrications, model-making, etc.), while developing ways to "see" landscape. The studio is structured around the themes of wetness/dryness and enclosure/disclosure, and works with one or more sites in the Philadelphia region. Recent sites have included Bartram's Gardens and East Fairmount Park in Philadelphia. In the past, the studio has focused on a territory around Martha's Furnace in the Pine Barrens, N.J.; a part of the Meadowlands in northern N.J.; an anthracite strip-mine in part of Pennsylvania's Appalachian Mountains; the Wissahickon Creek and, the Schuylkill River Trail in Philadelphia; and Great Falls in Paterson, N.J. Projects involve the making of pathways in these otherwise undesigned environments.

Taught by: Faculty
Course usually offered in fall term
Activity: Studio
2 Course Units

LARP 502 Studio II
This foundation design studio explores the relationship among sites, drawings, models and the making of landscape architectural projects. The studio site is typically located on vacant or abandoned land in North Philadelphia along the Delaware River. Such sites are fairly large in size and present a complex set of issues, including fragmentation, lack of access, and contamination. Through the design of a park, students test and refine the relationship among project concept, modes of visualization, and project formation (organizational and material).

As a precursor to site work, students experiment with methods and materials for making organization and form in two and three dimensions. In the early part of the semester, we explore techniques of imaging that generate multiples (scenarios), serial progressions (transformations of a sort), and iterations (transformations of another). Through various drafting techniques, we use the resultant drawings and models as analogous structures in order to imagine possible future organizations and uses for the site. These studies occur in conjunction with site interpretations ranging from photographs and sketches, to measured drawings and diagrams. The objective for the studio is to develop an informed and imaginative response to the site in order to create new relationships among the site, its immediate edges and the larger neighborhood or region.

Taught by: M'Clokey/Faculty
Course usually offered in spring term
Prerequisite: LARP 501: Studio I
Activity: Studio
2 Course Units

LARP 511 Workshop I: Ecology and Built Landscapes
This workshop explores a sequence of sites extending from the Atlantic Ocean to the Appalachian Mountains that illustrates the changing geology and topography of the regional physiographic provinces including the Atlantic Coastal Plain, Piedmont, and Valley and Ridge. In moving westward along the transect, field trips to natural areas and constructed sites will highlight the diversity of regional plant communities ranging from primary dune to salt marsh, serpentine Virginia pine-oak forest to seepage wetland, and more. Analysis of the inter-connections between the underlying geology, topography, hydrology, soils, vegetation, wildlife, and human interventions will reveal patterns reflecting process and demonstrate key ecological and cultural systems and processes through the production of field notebooks as well as large-scale measured drawings. Ultimately students will develop a vocabulary (recognition, identification and nomenclature) of the materials of landscape, its substance, its ecology, and its changing nature owing to place and time.

NOTE: COURSE MEETS IN ASSIGNED CLASSROOM FROM 9-1 PM. CLASS MEETING FROM 2-5 PM IS DEDICATED TO FIELD WORK.

Taught by: Willig and Popowsky
Course usually offered in fall term
Activity: Lecture
1 Course Unit

LARP 512 Workshop II: Landform and Planting Design
Workshop II combines two of the most elemental tools in the practice of landscape architecture: landform and planting design. Grading - the shaping and sculpting of the landform - is both art and science, and thus Workshop II aims to provide an appreciation of landform as an evocative component in the design vocabulary as well as a critical tool in solving difficult design problems. The basic techniques and strategies of grading design (slopes, terraces, water management, grade change devices) will be introduced, practiced and reinforced, so that grading design becomes an integral part of the students' design approach. Lecture, field trips, modeling, in-class exercises, and group projects will be used. The Planting component provides students with a working overview of the principles and processes of planting design. Plants will be considered both as individual elements and as part of larger dynamic systems. The natural distribution of plants, concepts of plant community and successional patterns, and the relationship of planting an topography will be used as the initial framework for planting design. Planting design typologies will be examined as an outgrowth of these "natural" patterns. The role of plants as a key element in the structural design of the landscape will be explored through a combination of modeling, plan and section drawing, temporal studies, writing, field trips and case studies.

Emphasis will be placed on process and evolution: the temporality of planting (daily, seasonal and annual changes), establishment and maintenance of plantings, and the process of planting design. During the first week of May, a five-day field ecology course focuses on techniques of urban revitalization, sustainable land use, reclamation, and restoration. The field trips offer insight into the diversity of approaches to using plants to promote positive environmental change.

Taught by: Olgyay
Course usually offered in spring term
Prerequisite: LARP 511: Workshop I
Corequisite: Summer Field Ecology Laboratory/Willig
Activity: Lecture
1 Course Unit
LARP 533 Media I: Drawing and Visualization
Drawing is the ability to experience deeply things we see and envision. It allows us, not only to represent things or images seen, but, to discover and construct space and depth on the two dimensions of drawing surface. Expanding the tools of drawing, this course presents inquiries into applied media providing a basis for envisioning the speculative and developing an economy of expression. Work will be closely related to work in Studio I. Students will be introduced to the formal syntax of drawing (line, contour, structure, texture, chiaroscuro), graphic grammar (orthographic, oblique, perspective projection drawings and freehand sketching) alongside exercises in material expression (collage, assemblage).
Taught by: Faculty
Course usually offered in fall term
Activity: Lecture
1 Course Unit

LARP 535 Theory I: The Culture of Nature
Landscape architecture, architecture and visual art are all mediations between nature and culture. This course is designed to help students form their own view regarding our relationship with the "natural" world around us in an age of ecological crisis. To achieve this, the course provides a stimulating historical and contemporary survey of ideas of nature. We explore ways "nature" has been understood mythically, thematically, ideologically, philosophically, scientifically, and artistically through the ages, with an emphasis on contemporary culture. We survey the way in which the polarity of culture and nature has been historically constructed and more recently, deconstructed. The pedagogical philosophy of this course is that an appreciation of the broad pattern of history and the ideas that have shaped it are foundational to living a critical and ethical life and central to the process of making contemporary art, architecture, and landscape architecture.
Taught by: Weller
Course usually offered in fall term
Also Offered As: LARP 780
Activity: Lecture
1 Course Unit

LARP 540 Theory II: History and Theory of Landscape Architecture
This course unfolds several contemporary issues that shape the profession, such as giving form to environmental values, balancing science and art, ecology and design, reconsidering the need for the beautiful vis-a-vis the many sites challenged by pollution and abuse. Among the topics discussed, this course will also take into account recent phenomena such as the late twentieth-century increase in world population, sprawl, and environmental pollution, and how these have changed the reality described by the very word "nature" and have contributed to expand the domain of landscape architecture. The discussion of topics will integrate contemporary ideas and their roots in earlier theoretical formulation. The past will be presented as a way to illuminate, receive, and critique the present. Course objectives are to become familiar with the social and cultural processes that inform the landscape architectural discourse and to be able to discuss in an informed manner the impact of the latter upon design trends; to be able to trace the roots of contemporary ideas in earlier theoretical formulations; and to be able to think critically and to enhance synthesis and augmentation skills.
Taught by: Fabiani Giannetto
Course usually offered in spring term
Activity: Lecture
1 Course Unit

LARP 542 Media II: Digital Visualization
Continuing the sequence of the Landscape Architecture media classes, this course will provide students with the techniques to explore and examine precision surface profiles and land forming strategies, in both physical and digital models. These models provide a basis to speculate on what processes and programs might be engaged or instigated. Rhino will be the primary modeling platform. Associated plug-ins of Grasshopper, Rhino Terrain, Sonic, and Bongo will help extend the toolset. GIS will facilitate the collection and analysis of data. The Adobe Creative Cloud will also be used for documenting and expressing modeling processes through static and time-based visualizations.
Taught by: VanDerSys
Course usually offered in spring term
Prerequisite: LARP 533: Media I
Activity: Lecture
1 Course Unit

LARP 543 Media III: Flows: Linear / Non-Linear
This course is the third in the media sequence and is required of all MLA students at the 600 level. This course engages the generative potential of the dynamic and temporal attributes of the landscape medium. Time-based visualizations are used to investigate landscape organizations shaped through the dynamic interplay of varying processes and their spatial consequences. Emphasis will parallel the LARP 601 on urban ecology and landscape systems.
Taught by: VanDerSys/Faculty
Course usually offered in fall term
Prerequisites: Students in the 3-yr MLA program must complete LARP 533: Media I and LARP 542 Media II prior to beginning LARP 543: Media III
Activity: Lecture
1 Course Unit

LARP 544 Media IV: Futures: Trends and Trajectories
This course is the fourth in the media sequence and is required of all MLA students at the 600 level. This course exposes students to parametric tools as mechanisms for analyzing and generating both predictable and emergent terrain dependent urban morphologies. Rather than inert lines of shapes, space infrastructure are visualized as products of force and flow. Emphasis will parallel the LARP 602 studio on forms of urbanization. This course is open to Landscape Architecture students only. Students outside of Landscape Architecture will need instructor permission to enroll in this course.
Taught by: Freese
Course usually offered in spring term
Prerequisites: Students in the 3-yr MLA program must complete LARP 533: Media I, LARP 542 Media II and LARP 543: Media III prior to beginning LARP 544: Media IV
Activity: Lecture
1 Course Unit
LARP 601 Studio III
This studio brings together both two-year and three-year MLA students for a landscape studio problem that works at a regional scale, as well as multiple design scales. LARP 601 - the Green Stimuli studio - emphasizes rigorous site analysis, the strategic organization of living material, and the potential of design to produce a wide range of effects. Studio problems are "live" - local leaders and experts are actively trying to solve them, there is an audience for student work outside the University, and projects have the potential to stimulate debate and new directions. The Green Stimuli studio takes on design problems where soil, terrain, geology, mineral resources, climate, water, plants, wildlife, and living systems interactions are major drivers. Studio projects explore one or more of these dimensions in depth to reach high levels of design exploration, strategic thinking, technical resolution and physical expression. The studio’s topics intersect with a broader universe of practical concerns, including land use, local and regional economies, real estate development and public policy, as well as philosophical and artistic questions about nature and ecology. The intent is that designed Green Stimuli make new connections between the material of landscape and the economic, infrastructural, scientific, social, cultural and creative attributes of a region.
Taught by: Faculty
Course usually offered in fall term
Prerequisites: Students in the 3 yr MLA program must complete
LARP 501: Studio I and LARP 502: Studio II prior to beginning LARP 601: Studio III
Activity: Studio
2 Course Units

LARP 602 Studio IV
This studio is the fourth and final studio in the core sequence and is designed to introduce students to essential competencies related to contemporary problems in urban design. The studio operates in what have been referred to as “global cities” - contexts in which there are significant pressures on the physical form of a metropolis from substantial population and economic growth (both ongoing and projected). These pressures induce considerable demands for the development of new contexts. The studio is focused on managing and negotiating these pressures through landscape-driven strategies capable of guiding and organizing this urbanization. Students develop individual design strategies through a process of mapping, modeling, scenario building and fieldwork that lead to both conceptual and physical proposals for the development of new urban districts and metropolitan agendas.
Taught by: Marcin Koski/Faculty
Course usually offered in spring term
Prerequisites: Students in the 3 yr MLA program must complete
LARP 501: Studio I, LARP 502: Studio II and LARP 601: Studio III prior to beginning LARP 602: Studio IV.
Activity: Studio
2 Course Units

LARP 611 Workshop III: Site Engineering and Water Management
Building upon the skills and concepts developed in Workshops I and II, this intermediate workshop focuses on technical aspects of site design, with an emphasis on landscape performance. Functional considerations related to landscapes and their associated systems - including circulation, drainage and stormwater management, site stabilization and remediation - will be explored as vital and integral components of landscape design, from concept to execution. Lectures, case studies, field trips, and focused design exercises will enable students to develop facility in the tools, processes and metrics by which landscape systems are designed, evaluated, built and maintained. In concert with the concurrent design studio, students will consider the means by which functional parameters can give rise to the conceptual, formal, and material characteristics of designed landscapes.
Taught by: Faculty
Course usually offered in fall term
Prerequisites: Students in the 3 yr MLA program must complete
LARP 511: Workshop I and LARP 512: Workshop II prior to beginning
LARP 611: Workshop III
Activity: Lecture
1 Course Unit

LARP 612 Workshop IV: Advanced Landscape Construction
Advanced Landscape Construction: The Art and Craft of Design Documentation and Detailing introduces students to the process of landscape documentation as means of strengthening design intent through careful material selection and articulation of form. The course builds upon Workshop III by expanding the concept of site systems to the full range of drawings, details, specifications, and contracts used by landscape designers in the creation of the man-made environment. The course features lectures, case studies and field walks, exploring documentation from initial concept through construction administration. Topics will include materials and their use in exterior environments, documentation phases and their role in a project’s evolution and the art of detailing to ensure beautiful, durable landscapes that define cohesive design.
Taught by: Burrell
Course usually offered in fall term
Prerequisite: LARP 611: Workshop III
Activity: Lecture
1 Course Unit

LARP 660 Fundamentals of Urban Design
This course is a requirement for students enrolled in Certificate in Urban Design and for Master of City Planning students enrolled in the Urban Design concentration. How should urban designers give shape to the city? What urban design methods could they apply? This course helps students acquire the principles that can inform urban design practice. It has three major pedagogical objectives. First, it helps students understand the contemporary city through a series urban design tools. Second, it covers both historical and modern urban design principles. Finally, it includes all the scales in which urban designers operate, ranging from the fundamentals of social interaction in public space, to the sustainability of the region.* This course is open to other interested PennDesign students if there is space and with permission of the instructor.
Taught by: AI
Course usually offered in fall term
Also Offered As: CPLN 660
Activity: Lecture
1 Course Unit
LARP 701 Studio V
These advanced elective studios provide opportunities for focused exploration of particular themes in contemporary landscape architecture. Important emerging and accomplished designers, often from divergent points-of-view, interests and backgrounds, are invited to run these studios. Collaborative options (between Landscape and the Departments of Architecture or City Planning) are sometimes offered across the School. In addition to our own faculty who offer some of these studios (Fabiani Giannetto, Gouveureur, Marcinkoski, Mathur, McCloskey, Neises, Olin, Pezner, Sanders, Tomlin), visitors have included Paolo Burgi (Switzerland), Peter Latz (Munich), Bernard Lassus (Paris), Margie Ruddick (Philadelphia), Chris Reed (Boston), Peter Beard (London), Nicholas Quennell (New York), Ken Smith (New York), Raymond Gastil (New York), Alessandro Tagliolini (Italy), IGNACIO Bunster (Philadelphia), Perry Kulper (Los Angeles), James Wines (New York), Lee Weintraub (New York), Charles Waldheim (Chicago), Stanislaus Fung (Australia), Dennis Wedlick (New York), Sandro Marpillero (New York), Peter Connolly (Australia), and former associate professor Anita Berrizbeitia. More recent visitors have been Claire Fellman (New York), Catherine Mosbach (Paris), Nanako Umemoto/Neil Cook (New York), Valerio Morabito (Italy), Carol and Colin Franklin (Philadelphia), Keith Kaseman (Philadelphia), Silvia Benedito (New York), Claudia Taborda (Lisbon), Mark Thomann (New York), Jerry Van Eyck (New York), and Martin Rein-Cano (Berlin).

LARP 704 Urban Design Research Studio
This course is a requirement for students enrolled in the Certificate of Urban Design. The Urban Design Research Studio (UDRS) is a capstone educational experience open to students of architecture, planning, landscape architecture and historic preservation in PennDesign. The studio's focus is how design intelligence can be applied to complex urban problems which are at once systemic and spatial. Reaching across scales and across disciplines the studio immerses students in the social, economic, political, ecological and aesthetic complexity of the contemporary city in a way that interweaves the speculative quality of the design process with the analytical and evidence-based empiricism of urban research. Interdisciplinary collaboration is the studio's modus operandi and its purpose is to develop techniques and strategies by which contemporary cities can become not only metabolically more efficient but also more edifying of the human spirit in the 21st century. Acceptance into the studio is based on interview and portfolio with priority placements given to students enrolled in the Urban Design Certificate Program.

Taught by: Gouveureur
Course usually offered in spring term
Activity: Studio
2 Course Units

LARP 710 Implementation of Urban Design
This course is a requirement for students enrolled in the Certificate of Urban Design. With a focus on contemporary major cities this subject charts the various ways in which urban design is typically conceived, procured, administered and ultimately delivered. From the very conception of a project to its completion, the various methods and avenues through which contemporary cities are planned, designed, and constructed are examined from multiple perspectives so that students become familiar with the myriad issues and main actors involved in urban development. Though exemplary case studies the subject offers a comprehensive understanding of the complexities and contingencies of contemporary city making, placing a particular emphasis on the role of the urban designer as a practical, ethical and visionary agent of change. This course may open to other interested PennDesign students if there is space and with permission of the instructor.

Course usually offered in spring term
Activity: Lecture
1 Course Unit

LARP 720 Topics in Representation
In these advanced representation courses the work extends to new ways of documenting and seeing landscape. These courses are open to all interested School of Design students who have previous drawing experience or have taken foundation studios. Recent topics have been: Traces and Inscriptions (spring 2013), instructors: Anuradha Mathur, Matthew Neff; Landscape Representation (fall annually), instructors: Valerio Morabito; Landscape Drawing (spring annually), instructor: Laurie Olin; Landscape Drawing (spring 2008), instructors: David Gouveureur, Trevor Lee; Shifting Landscapes: A Workshop in Representation (spring 2005, 2004), instructor: Anuradha Mathur; and The Agile Pencil and Its Constructs (spring 2004) instructor: Mei Wu.

Taught by: Faculty
One-term course offered either term
Also Offered As: FNAR 720
Prerequisites: LARP501, LARP533, LARP601, ARCH501, ARCH532 OR ARCH601
Activity: Seminar
1 Course Unit
LARP 730 Topics in Professional Practice
These seminar courses explore ideas and methods in current landscape architectural practice. They include instruction in professional procedures, office management, project development, contracts, and collaborative ventures. They include visits to construction sites, professional offices and archives. Recent topics have been: Transformational Leadership (fall 2015), instructor: Lucinda Sanders, Office Practice (spring 2003-2015) instructor: Lucinda Sanders.
Taught by: Sanders
One term course offered either term
Activity: Lecture
1 Course Unit
Notes: Fall 2016: course offering is limited to LARP majors or by permission of the instructor.

LARP 740 Topics in Digital Media
These courses offer advanced instruction in the uses and applications of various digital media, including Geographical Information Systems, 3-D modeling, video, animation, and web-design. These courses are open to all interested School of Design students who already have a working knowledge of basic digital graphic techniques and with permission of the instructor. Recent topics have been: Simulated Natures (fall 2015, 2014), instructors Keith VanDerSys, Joshua Freese; Digital Fabrication (spring 2009-2013), instructor Keith VanDerSys; Non-Static Representation: Video, Animation, and Interactive Media (fall 2013, 2012), instructor: Todd Montgomery; Interoperable Terrains (fall 2008-2013), instructor: Keith Kaseman; Kino-Eye: Intro to Spatial Filmmaking (fall 2011, 2010), instructor: Richie Gelles; Geometry Clouds, Fluid Landscapes (fall 2002-2006), instructor: David Ruy; Tactical Surfaces / Topographic Modeling (fall 2002), instructor: Charles McGoughlin.
Taught by: Faculty
One term course offered either term
Prerequisites: LARP 543, MEDIA III
Activity: Lecture
1 Course Unit

LARP 741 Modeling Geographic Space
This course explores the nature and use of raster-oriented (i.e. image-based) Geographic Information Systems (GIS) for the analysis and synthesis of spatial patterns and processes. Previous experience in GIS is not required.
Taught by: Tomlin
Course usually offered in spring term
Also Offered As: CPLN 632
Activity: Lecture
1 Course Unit

LARP 743 Geospatial Software Design
The purpose of this course is to equip students with a selected set of advanced tools and techniques for the development and customization of geospatial data-processing capabilities. It is open to any student with experience equivalent to that of an entry-level class on GIS.
Taught by: Tomlin
Course usually offered in fall term
Also Offered As: CPLN 670
Activity: Seminar
1 Course Unit

LARP 745 Advanced Topics in GIS
This course offers students an opportunity to work closely with faculty, staff, local practitioners, and each other in conducting independent projects that involve the development and/or application of Geographic Information System (GIS) technology. The course is open to all students who can demonstrate sufficient experience, expertise, or initiative to pursue a successful term project.
Taught by: Tomlin
Course usually offered in spring term
Also Offered As: CPLN 680
Activity: Seminar
1 Course Unit

LARP 750 Topics in Construction, Horticulture and Planting Design
These courses explore relevant topics in construction, horticulture and planting design as they relate to contemporary landscape architecture. The aim is to supplement fundamental skills and ideas explored in the core curriculum workshops with more advanced, cutting-edge research, technology and case studies. The teaching faculty are leading practitioners and researchers in the field. These courses are open to all interested School of Design students. Recent topics have been: Urban Horticulture and Planting Design (fall annually since 2009), instructor: David Ostrich; Detailing New Urban Landscapes (spring 2012, 2011), instructor: Tom Ryan; Building New Urban Landscapes, Construction, and Planting Design (fall 2009, 2008), instructor: Tom Ryan; Urban Horticulture: Designing and Managing Landscape Plantings in Stressful Environments (1998-2003), instructor: Paul Meyer; Advanced Planting Design, instructors: Rodney Robinson (2003-2009), Dennis McGilade (fall 2006), Sheila Brady; and Sustainable Large Scale Planting of Trees, Shrubs, Perennials and Grasses (fall 2001), instructor: Wolfgang Oehme.
Taught by: Faculty
One term course offered either term
Activity: Lecture
1 Course Unit

LARP 755 Arboretum Management I: Understanding Plants
In this course, students will learn about plants from an organismal perspective, an applied/practical perspective, an aesthetic perspective, an environmental perspective, and an evolutionary perspective. Utilizing the plant collection of the Morris Arboretum as a living laboratory and the expertise of arboretum staff, this course will bring students, novices and experts alike, to a better understanding of plants. Session topics integrate both theoretical and hands-on practical work. Course assessment will be based on weekly practical assignments and two exams. Please note that this course takes place at the Morris Arboretum in the Chestnut Hill section of Philadelphia and students are responsible for transporting themselves to and from the arboretum on their own for class each week. For further information about the course, students may contact Cynthia Skema (cskema@upenn.edu).
Taught by: Skema
Course usually offered in fall term
Activity: Laboratory
1 Course Unit
LARP 756 Arboretum Management II: Evaluating Public Gardens
This interdisciplinary course looks at public gardens as a whole, studying these public institutions and their performance in the four major services they undertake: research, horticultural display, conservation and education/outreach. Students, of any level or discipline, begin the course by learning what arboreta and botanic gardens are, how they function, and what role they fill in our society through a series of lecture sessions at the Morris Arboretum. For the remainder of the semester, the students take that knowledge into the field to apply what they have learned and evaluate some of the many public gardens in “America’s Garden Capital”, the Philadelphia region, with expert instructors from the Morris Arboretum as guides. Course assessment will be based on one exam, and a series of essays pertaining to their garden evaluations. Garden evaluations and the written work can be tailored to a particular subject of interest to a student, if pertinent within the public garden realm. Please note that this course takes place at the Morris Arboretum in the Chestnut Hill section of Philadelphia and students are responsible for transporting themselves to and from the arboretum on their own or to other Philadelphia area public gardens as required for class each week. For further information about the course, students may contact Cynthia Skema (cskema@upenn.edu).
Taught by: Skema
Course usually offered in fall term
Activity: Laboratory
1 Course Unit

LARP 760 Topics in Ecological Design
These elective courses explore relevant topics in ecological design and new technologies as they relate to contemporary landscape architecture. The courses explore topics such as ecology, sustainability, habitat restoration, hydrology, green roof and green architecture technology, soil technology, and other techniques pertinent to the construction of ecologically dynamic, functioning landscapes. The teaching faculty are leading practitioners and researchers in the field. These courses are open to all interested PennDesign students. Recent topics have been: Large-Scale Land Reclamation Projects (annually since 2005), instructor: William Young; Green Roof Systems (spring 2010-2014), instructor: Susan Weiler; Restoration Ecology (fall biennially since 2004), instructor: David Robertson; Sustainable Development: The Queen Elizabeth Olympic Park, London (fall 2012), instructor: John Hopkins; Ecological Economies and Infrastructure (spring 2012), instructor: John Hopkins; Contemporary Issues in Sustainability: The London 2012 Olympic Park and Other European Examples (fall 2011), instructor: John Hopkins; James Ludwig (spring 2004); Sustainable Landscape Design for Watershed Protection (fall 2008, 2006, 2005, 2004, 2003, 2002), instructor: Katrin Scholz-Barth; and Ecological Restoration in the Urban Context (spring 2002, 2001), instructor: Deborah Marton.
Taught by: Faculty
One term course offered either term
Activity: Lecture
1 Course Unit

LARP 761 Urban Ecology
This course introduces students to the core concepts, processes, and vocabulary of contemporary urban ecology. It aims to provide a conceptual framework and grounding in an understanding of ecological processes, in order to empower students to develop and critique the function and performance of landscape interventions. Urban ecology describes the interaction of the built and natural environment, looking at both ecology in the city, as well as ecology of the city. Lectures, case studies, critical reading and design exercises will enable students to increase their ability to analyze and interpret ecological systems and processes. By analyzing the application of ecological concepts in the design management of urban landscapes, urban ecology will be explored as a dynamic, human-influenced system. Registration is limited to MLA students in the LARP 601 studio.
Taught by: Carlisle/Pevzner
Course usually offered in fall term
Activity: Lecture
1 Course Unit

LARP 770 Topics in Landscape Architecture History and Theory
These advanced seminars explore central issues in the history and theory of landscape architecture from the Renaissance to the present day. The focus is upon the cultural context of built works, their relation to conceptual writings (contemporary with the designs as well as modern) and the dialogue between modern professional practice and historical example and method. Recent topics taught by Professor Hunt have been: Place & Peacefulness (fall 2012); Texts & Topics (fall 2011); The Role of History in Contemporary Landscape Architecture (fall 2010); Understanding Venice Research Seminar (spring 2009); Sculpture Parks and Sculpture in Parks (fall 2008); Six Landscape Architects & What We Say About Them (spring 2007); Open Spaces & Open Places: The Design and Use of American Landscapes (spring 2006), co-taught with Emily Cooperman; Reception, or the After Life of Landscapes (Spring 2005); Land Art and Jan Hamilton Finlay (fall 2004), Lawrence Halprin: Theory, Practice, Context & the Archival record (spring 2004) co-taught with Emily Cooperman; French Landscape Architecture: Case Studies (spring 2003); Picturesque as Modernism (spring 2002).
Taught by: Faculty
One term course offered either term
Activity: Seminar
1 Course Unit
LARP 780 Topics in Theory and Design
These advanced seminars explore advanced ideas in contemporary landscape architectural design and theory. A special link is made between the analysis of built work and text to design practice and the making of projects. Topics include the intersections of art, nature and creativity; practices of analysis and criticism; ideas of urbanism and infrastructure; collaborative ventures and cross-disciplinarity; vision and visuality; and representational structures, both verbal and visual. These courses fulfill the Landscape Architecture Theory III requirement and are open to all interested School of Design students. Spring 2017: Environmental Readings. In this seminar, we will explore this green thread and analyze its influence on how we shape our environments through design and planning. The course has three parts. Throughout, the influence of literature on design and planning theory will be explored. The first part will focus on three most important theorists in environmental planning and landscape architecture: Frederick Law Olmstead Sr., Charles Eliot and Ian McHarg. The second part of the course will critically explore current theories in environmental planning and landscape architecture. The topics include: frameworks for cultural landscape studies, the future of the vernacular, ecological design and planning, sustainable and regenerative design, the languages of landscapes, and evolving views of landscape aesthetics and ethics. In the third part of the course, students will build on the readings to develop their own theory for ecological planning or alternatively landscape architecture. While literacy and critical inquiry are addressed throughout the course, critical thinking is especially important for this final section.
Taught by: Faculty
One term course offered either term
Also Offered As: ARCH 492, CPLN 685
Activity: Seminar
1 Course Unit

LARP 781 Contemporary Urbanism
This course will expose students to a wide array of case studies in planning, urban design, and landscape architecture including notions of sustainable development, the interplay between open space and built form, the rehabilitation of existing areas as historic districts, commercial corridors, and the improvement of squatter settlements. Also, it will focus on city expansions and new towns, housing, mixed-use developments, and areas of new centrality. The program will also address territorial planning, the improvement of open space systems, and site specific interventions of parks, plazas, streetscape and gardens. Cases will provide the proper ground for analysis and interpretation of issues related to the design and implementation of "good" landscape and urban form. Class discussions will be complemented with short design exercises. We will also enjoy the presence of outstanding visiting lecturers who will share with us cutting-edge information, derived from their professional practice and research. Registration is limited to MLA students in the LARP 602 studio and to students in the Urban Design Certificate program. This course is cross-listed with CPLN 673.
Taught by: Weller/Gouverneur
Course usually offered in spring term
Also Offered As: CPLN 673
Activity: Lecture
1 Course Unit

LARP 789 LARP Summer Institute: Intro to Design Languages (3-year students)
This one-week course is for entering three-year MLA students who do not have a background in architectural, or landscape architectural design or related design fields. The workshop introduces students to architectural terminology, concepts and conventions, as well as to basic analog and digital drawing techniques, in order to bring all students to a minimum level of proficiency prior to the start of the more intensive Summer Institute coursework. Exemption from this requirement will be granted upon request, based on academic record, professional experience and admissions portfolio. Course enrollment is by permit only. Please contact Darcy Van Buskirk (LARP Dept.) at darcyv@design.upenn.edu.
Taught by: Faculty
Course usually offered summer term only
Activity: Studio
0 Course Units
Notes: Course fee: $500.00

LARP 790 LARP Summer Institute: Natural Systems (3-year Students)
This one-week session for entering three-year MLA students will provide an introduction to the varied physiographic provinces and associated plant communities of the greater Philadelphia region. Through a review of available mapping and on-site study we will characterize and consider the connections between climate, geology, topography, hydrology, soils, vegetation, wildlife, and disturbance, both natural and anthropogenic. With a focus on plants students will begin to develop a familiarity with the local flora (native and non-native) including plant species identification, preferred growing conditions, and potential for use. Field trips will include visits to the Inner Coastal Plain and Piedmont. Course enrollment is by permit only. Please contact Darcy Van Buskirk (LARP Dept.) at darcyv@design.upenn.edu.
Taught by: Willig
Course usually offered summer term only
Activity: Studio
0 Course Units
Notes: Course fee: $500.00

LARP 791 LARP Summer Institute: Landscape Operations (3-year Students)
This one-week course, for entering three-year MLA students, introduces concepts and techniques for analyzing, representing, and operating on landform, the fundamental medium of landscape architecture. Students will learn representational and model-making techniques for conveying topography, and will describe a series of landscape interventions on a topographic surface. Through models and drawings, students will develop an appreciation for the spatial implications of landform, for landscape narrative, for the movement of water and people across the landscape, and for the operation of reshaping the ground. An introduction to the Fine Arts Library will also be included. Course enrollment is by permit only. Please contact Darcy Van Buskirk (LARP Dept.) at darcyv@design.upenn.edu.
Taught by: Faculty
Course usually offered summer term only
Activity: Studio
0 Course Units
Notes: Course fee: $500.00
LARP 792 LARP Summer Institute: Introduction to Digital Media (3-year Students)
This four-day introductory course is intended to enable students to orient themselves to digital media facilities, programs, and workflows. The course is focused around daily projects building up to a final pinup. Each daily project illustrates a different set of work paths between digital programs, as well as teaches students how to use different software applications key to the practice of landscape architecture today. The focus of this course is to enable students to understand what each digital software application offers to the landscape process, and how to build change and iteration into digital workflows. Course enrollment is by permit only. Please contact Darcy Van Buskirk (LARP Dept.) at darcyv@design.upenn.edu.
Taught by: Faculty
Course usually offered summer term only
Activity: Studio
0 Course Units
Notes: Course fee: $500.00

LARP 793 LARP Summer Institute: Landform and Grading Workshop
The reading and shaping of landform is an elemental tool in the practice of landscape architecture. The act of grading design - the shaping and sculpting of landform - is both art and science. This four-day session for entering two-year MLA students aims to provide an appreciation of landform as both an evocative component in the design vocabulary and as a critical tool in resolving difficult design problems. Basic techniques and strategies of grading design are introduced and reinforced, so that grading design becomes an integral part of the student's design approach. This session is intended to provide a concise overview of the principles and process of landform and grading design, and is designed to prepare the entering two-year students for Workshop III. Course enrollment is by permit only. Please contact Darcy Van Buskirk at darcyv@design.upenn.edu.
Taught by: Olgyay
Course usually offered summer term only
Activity: Lecture
0 Course Units
Notes: Course fee: $500.00

LARP 794 LARP Summer Institute: Natural Systems (2-year students)
This five-day session for entering two-year MLA students will provide an introduction to the varied physiographic provinces and associated plant communities of the greater Philadelphia region. Through a review of available mapping and on-site study we will characterize and consider the connections between climate, geology, topography, hydrology, soils, vegetation, wildlife, and disturbance, both natural and anthropogenic. With a focus on plants students will begin to develop a familiarity with the local flora (native and non-native) including plant species identification, preferred growing conditions and potential for use. Field trips will include visits to the Coastal Plan and Piedmont of New Jersey and Pennsylvania. Course enrollment is by permit only. Please contact Darcy Van Buskirk (LARP Dept.) at darcyv@design.upenn.edu.
Taught by: Willig
Course usually offered summer term only
Activity: Lecture
0 Course Units
Notes: Course fee: $500.00

LARP 795 LARP Summer Institute: Computing Introduction (2-year Students)
The Intro to Computing session introduces students to the facilities of digital media as the primary mode of design visual communication. The course provides a short, yet intensive, hands-on inquiry into the production and expression of digital media that is essential for all designers. Through a series of working labs, students learn various software applications and associated techniques to execute precise two-dimensional representations of three-dimensional concepts. Students also learn the PennDesign systems, network basics and computer lab procedures. In the Academic Writing session, students will also receive a basic introduction to research methods, research resources, academic writing, citation formats and standards expected by the School of Design. Course enrollment is by permit only. Please contact Darcy Van Buskirk at darcyv@design.upenn.edu.
Taught by: VanDerSys/Fleming
Course usually offered summer term only
Activity: Lecture
0 Course Units
Notes: Course fee: $500.00

LARP 796 Independent Studio
An independent studio may be undertaken in the final semester but is not required. The independent studio is intended to provide highly motivated students who have demonstrated their ability to work independently with the opportunity to pursue topics that extend the boundaries of the profession. For permission, students must prepare a written proposal in the preceding semester and apply for approval from the faculty. Details available in Landscape Architecture department office.
Taught by: Faculty
Course offered summer, fall and spring terms
Activity: Independent Study
1 Course Unit

LARP 799 Independent Study
An independent study may be taken for elective credit at any point during the degree program for a letter grade. For permission, students must prepare a written proposal in the preceding semester and obtain a Landscape Architecture faculty advisor to oversee their work. Details are available in the Landscape Architecture department office.
Taught by: Faculty
Course offered summer, fall and spring terms
Activity: Independent Study
1 Course Unit

Latin (LATN)

LATN 101 Elementary Latin I
An introduction to the Latin language for beginners. Students begin learning grammar and vocabulary, with practical exercises in reading in writing. By the end of the course students will be able to read and analyze simple Latin texts, including selected Roman inscriptions in the Penn Museum.
For BA Students: Language Course
Course usually offered in fall term
Activity: Seminar
1 Course Unit
LATN 102 Elementary Latin II
Prerequisite(s): LATN 101 or equivalent. Completes the introduction to the Latin language begun in 101. By the end of the course students will have a complete working knowledge of Latin grammar, a growing vocabulary, and experience in reading simple continuous texts.
For BA Students: Language Course
Course usually offered in spring term
Prerequisites: LATN 101 or equivalent.
Activity: Seminar
1 Course Unit

LATN 112 Intensive Elementary Latin
An introduction to the Latin language for beginners, with explanation of basic grammatical concepts and intensive exercises in reading and writing. Ideal for undergraduates or graduate students from Penn or elsewhere with some background in learning other languages, or who need to learn Latin rapidly. The course covers the first year of college-level Latin, equivalent to LATN 101 + 102 at more than twice the normal pace. This is an online course. 2 c.u. Students are not required to be in Philadelphia. Course activities will involve a series of intensive online exercises completed each day according the students own schedule, plus one daily video-linked session 5:30-7:00pm EST (Monday thru Thursday). The textbook is Read Latin (Keller & Russell; textbook only, not workbook). The instructor for summer 2018 is Marcie Persyn, a Ph.D. student in Classical Studies. For further information about the course, please contact Prof. James Ker (jker@sas.upenn.edu).
For BA Students: Last Language Course
Course usually offered summer term only
Activity: Seminar
2 Course Units

LATN 203 Intermediate Latin Prose
Prerequisite(s): LATN 102 or equivalent (such as placement score of 550). Introduction to continuous reading of unadapted works by Latin authors in prose (e.g., Cornelius Nepos, Cicero, Pliny), in combination with a thorough review of Latin grammar. By the end of the course students will have thorough familiarity with the grammar, vocabulary, and style of the selected authors, will be able to tackle previously unseen passages by them, and will be able to discuss questions of language and interpretation.
For BA Students: Language Course
Course usually offered in fall term
Prerequisites: LATN 102 or equivalent.
Activity: Seminar
1 Course Unit

LATN 204 Intermediate Latin Poetry
Prerequisite(s): LATN 203 or equivalent (such as placement score of 600). Continuous reading of several Latin authors in poetry (e.g., Ovid, Virgil, Horace) as well as some more complex prose, in combination with ongoing review of Latin grammar. By the end of the course students will have thorough familiarity with the grammar, vocabulary, and style and style of the selected authors, will be able to tackle previously unseen passages by them, and will be able to discuss language and interpretation. Note: Completion of Latin 204 with C- or higher fulfills Penn’s Foreign Language Requirement. *Please note: the MW 3:30-5:00 section combines Latin reading with practical Latin-based tutoring in a West Philadelphia elementary school.*
For BA Students: Last Language Course
Course usually offered in spring term
Prerequisites: LATN 203 or equivalent.
Activity: Seminar
1 Course Unit

LATN 212 Intensive Intermediate Latin
An introduction to the basic history and conventions of Latin prose and poetry, with continuous readings from classical authors accompanied by grammar review and exercises. Ideal for undergraduates or graduate students from Penn or elsewhere who have completed the equivalent of one year Latin (e.g., LATN 112). The course covers the second year of college-level Latin, equivalent to LATN 203 + 204 at more than twice the normal pace. This is an online course. 2 c.u. Students are not required to be in Philadelphia. Course activities will involve a series of intensive online exercises completed each day according the students own schedule, plus one daily video-linked session 5:30-7:00pm EST (Monday thru Thursday). The focus of the course will be Romans and Carthaginians, combining readings on Hannibal and the second Punic war (mostly in prose, focusing on Cornelius Nepos Life of Hannibal) with readings from the story of Dido (mostly in poetry, focusing on Ovid’s Heroides). The instructor for summer 2018 is Brian Credo, a Ph.D. student in Classical Studies. For further information about the course, please contact Prof. James Ker (jker@sas.upenn.edu).
For BA Students: Last Language Course
Course usually offered summer term only
Activity: Seminar
2 Course Units

LATN 309 Roman Satire
This course is for those who have completed Latin 204, Latin 212, or equivalent (such as placement score of 650, or AP score of 4 or 5). Close reading and discussion of a Latin author or a particular genre of Latin literature. Topics will vary each semester, and the course may be repeated for credit. Assignments will include syntactic and literary analysis on a daily basis, a midterm, a paper, and a final exam. This advanced Latin class will explore the contrarian and comical poetry of the great Roman satirists, with special attention to Horace’s Sermones and Juvenals Satires. Such poetry was direct, aggressive and delightfully irreverent, but also complex and often inscrutable. By combining translation work with literary study, we will address the many aspects of Roman satire that continue to fascinate, such as the tension between the serious and the comic, the politics’ of Roman satirists, and the many connections we can find in this poetry with the satirical arts of our own time.
Taught by: Rosen
One-term course offered either term
Prerequisites: Reading knowledge of Latin or permission of instructor.
Activity: Seminar
1 Course Unit

LATN 399 Supervised Study in Latin Literature
This course is taken by students doing independent work with a faculty advisor, such as students approved to work on a senior research paper in pursuit of honors in the major.
Activity: Independent Study
1 Course Unit

LATN 401 Latin for Advanced Students
For graduate students in other departments needing individualized study in Latin literature.
For BA Students: Advanced Language Course
One-term course offered either term
Activity: Independent Study
1 Course Unit

2018-19 Catalog | Generated 02/28/19
LATN 540 The Latin Text: Language and Style
What do we need to read texts in Latin? In these courses we read just one prose text and one poetic text, or a very limited number of texts and passages, with a focus on language and formal analysis (such as diction, grammar, stylistics, metrics, rhetoric, textual criticism). A range of exercises will be used to develop this, including composition, lexical studies, recitation, memorization, exegesis, written close-readings, and sight translation.
Course not offered every year
Activity: Seminar
1 Course Unit

LATN 541 Latin Literary History
In this course we survey an extensive range of readings in a variety of authors in both prose and poetry, and consider the problems and opportunities involved in literary history.
Course not offered every year
Activity: Seminar
1 Course Unit

LATN 600 Tacitus’ Annals
In this seminar we will read Tacitus’ Annals, a work replete with stirring history presented in a style that eschews complacency. Through careful study of this work and selected passages of its predecessor, the Histories, we will develop a richly detailed understanding of Tacitus’ historiographical method, principles, and practice. Consideration of surviving epigraphic parallels will allow us to see a particularly important element of his historiographical practice, namely, his awareness of but deviation from the official record of events. Each class session will involve close reading of the text and student-led discussion of important features of Tacitus work. As a group project we will produce a variorum edition of the Annals for on-line publication. Final projects will take the form of papers suitable for presentation at the SCS Annual Meeting.
Taught by: Damon
One-term course offered either term
Activity: Seminar
1 Course Unit
Notes: Topics will vary

LATN 602 Graduate Latin Poetry: Ennius
Ennius writings, and particularly his epic poem Annales, proved to be foundational for many genres of Latin literature. Editions of his work by Jocelyn (tragedies) and Skutsch (Annales) have attracted more and more critical attention to these works in recent years. A spate of criticism over the past few years considers Ennius from a variety of points of view, including some that call for a radical reassessment of basic assumptions concerning the Annales in particular. The purpose of this seminar is to introduce students to Ennius, to acquaint them with the tools and methods they will need to study Ennius in depth, and to involve them in current debates surrounding the poet.
Taught by: Farrell
Course not offered every year
Activity: Seminar
1 Course Unit

LATN 609 Problems in Ancient History
A separate topic is offered in either the history of Ancient Near East, Greece or Rome.
Taught by: Grey
Course usually offered in fall term
Also Offered As: HIST 535
Activity: Seminar
1 Course Unit

LATN 999 Independent Study
For doctoral candidates.
One-term course offered either term
Activity: Independent Study
1 Course Unit

Latin American & Latino Studies (LALS)

LALS 016 Topics in Literature
Freshman Seminars under the title "Topics in Literature" will afford entering students who are considering literary study as their major the opportunity to explore a particular and limited subject with a professor whose current work lies in that area. Topics may range from the lyric poems of Shakespeare’s period to the ethnic fiction of contemporary America. Small class-size will insure all students the opportunity to participate in lively discussions. Students may expect frequent and extensive writing assignments, but these seminars are not writing courses; rather, they are intensive introductions to the serious study of literature. One of them may be counted toward the English major and may be offered at the end of the semester or the end of the quarter. The seminar will be instructed by two professors.
One-term course offered either term
Also Offered As: ENGL 015
Activity: Seminar
1 Course Unit
Notes: Freshman Seminar

LALS 070 Latina/o Literature and Culture
This course provides an introduction to the broad literature on Latin America’s rich colonial history. We will begin by tracing some of the early origins of - and points of contact between - the Indian, Iberian, and African men and women who formed the basis of colonial society. As the course progresses, we will explore the variety of ways in which colonial subjects lived, worked, ate, worshipped, and socialized. Lectures and reading assignments will draw upon a variety of sources, including court cases, artistic renderings, city maps and street plans, travel accounts of visits to the regions, and the material, cultural, and intellectual products made possible by the wealth and dynamism of the seventeenth and eighteenth centuries. The course will conclude with an analysis of the Age of Revolutions, a period of dramatic upheaval that remains at the center of lively scholarly debates. By the end of the semester, students will be able to engage the key questions driving these debates, the most important of which, perhaps, is: what is Latin America’s colonial legacy?
For BA Students: History and Tradition Sector
Taught by: Walker, T.
Course usually offered in fall term
Also Offered As: AFRC 070, HIST 070
Activity: Recitation
1 Course Unit
Notes: Fulfills History Tradition Distribution Requirement
LALS 071 Latin America 1782-Present
Surveys Latin American and Caribbean history from the Haitian Revolution of 1791 to the present. We will examine the legacy of Spanish colonialism and slavery, movements for national and cultural independence, twentieth-century radicalism, and the politics of race in contemporary Latin America. Readings include fictional as well as analytical representations, and a film series will accompany the course.
For BA Students: History and Tradition Sector
Taught by: Farnsworth-Alvear
Course usually offered in spring term
Also Offered As: HIST 071
Activity: Lecture
1 Course Unit

LALS 072 Introduction to Latin American and Latino Studies
Designed to introduce students to the interdisciplinary field of Latin American and Latino Studies, this is a seminar oriented toward first and second year students. Readings will range widely, from scholarly work on the colonial world that followed from and pushed back against the "conquests"; to literary and artistic explorations of Latin American identities; to social scientists' explorations of how Latinos are changing the United States in the current generation.
Taught by: Dr. Ann Farnsworth-Alvear
Course usually offered in spring term
Also Offered As: HIST 072
Activity: Lecture
1 Course Unit

LALS 107 Freshman Seminar: The World After 1800
Freshman seminars are small, substantive courses taught by members of the faculty and open only to freshmen. These seminars offer an excellent opportunity to explore areas not represented in high school curricula and to establish relationships with faculty members around areas of mutual interest. See www.college.upenn.edu/admissions/freshmen.php
One-term course offered either term
Also Offered As: HIST 106, PSCI 010
Activity: Seminar
1 Course Unit

LALS 116 Caribbean Culture and Politics
This course offers anthropological perspectives on the Caribbean as a geo-political and socio-cultural region, and on contemporary Caribbean diaspora cultures. We will examine how the region's long and diverse colonial history has structured relationships between race, ethnicity, class, gender and power, as well as how people have challenged these structures. As a region in which there have been massive transplantations of peoples and their cultures from Africa, Asia, and Europe, and upon which the United States has exerted considerable influence, we will question the processes by which the meeting and mixing of peoples and cultures has occurred. Course readings include material on the political economy of slavery and the plantation system, family and community life, religious beliefs and practices, gender roles and ideologies, popular culture, and the differing ways national, ethnic, and racial identities are expressed on the islands and throughout the Caribbean diaspora.
Taught by: Thomas, D.
Course not offered every year
Also Offered As: AFRC 116, AFRC 629, ANTH 116
Activity: Lecture
1 Course Unit

LALS 174 Reform and Revolution in the Americas
The United States and Latin America produced a remarkable series of revolutions and reforms during the twentieth century. This course examines efforts throughout the hemisphere to define and address problems around land, labor, and property; nation, empire, and autonomy; and racism, democracy, and citizenship. It considers the relationship between national upheavals, the global consequences of events in the hemisphere, and the relation between social and political history, on the one hand, and the development of economic ideas, on the other.
For BA Students: History and Tradition Sector
Taught by: Offner
One-term course offered either term
Also Offered As: HIST 174
Activity: Lecture
1 Course Unit

LALS 175 Society and Culture in Brazil
With its booming economy, the recent inauguration of its first female president, and its selection as host to the 2012 World Cup and Olympic games, Brazil is growing in global prestige. But amid all these exciting developments are devastating socioeconomic inequalities. Access to safe living conditions, livable wages, higher education, and overall social mobility remain painfully out of reach to many Brazilians, the majority of whom are the descendants of slaves. Why do these problems persist in a country that has had such an enduring and widespread reputation as a "racial democracy"? What are the possibilities of closing the equality gap in Brazil?
Taught by: Walker, T.
One-term course offered either term
Also Offered As: HIST 175
Activity: Lecture
1 Course Unit

LALS 208 International Organizations in Latin America
International Organizations play a powerful role in mitigating conflict at the global level. What role do they play in solving problems related to global politics, economic development, corruption, inequality and civil society in Latin America? How much power, influence and control do they possess in the region? This course examines the role and impact international organizations have had on Latin America since the mid-20th century. After a review of theoretical and methodological perspectives on the significance of IOs in international relations, students will examine the workings, issues and often controversies surrounding IOs in Latin America, including the IMF, World Bank, UN, OAS and ICC as well as regional organizations such as the Inter-American Court of Human Rights and area trade blocs and agreements of Mercosur, NAFTA and others. Students will also explore the regional impact of transnational civil society organizations, such as human rights organizations and the International Olympic Committee. Students will be invited to participate in the Washington Model OAS from April 10-17.
Taught by: Bacht
Course usually offered in spring term
Also Offered As: PSCI 208
Activity: Seminar
1 Course Unit
LALS 209 Latino/as and the Law
Based in concepts and principles of Constitutional law, this course explores the interpretation and impact of seminal court cases in U.S. history as applied to Latino/as in the United States and abroad. With a particular focus on the 20th century, students will examine how court decisions have affected civil rights, immigration policies, welfare, political incorporation and identity and other important issues affecting Latino/as. Students will also explore additional themes including the status and treatment of Latinos in the criminal justice system, representation of Latino/as in the judiciary, and how Supreme Court decisions have also affected U.S. foreign policy with Latin America. Students will be introduced to a number of guest speakers who are academic experts and practitioners in the field.
Taught by: Bachtch
Also Offered As: PSCI 202
Activity: Lecture
1 Course Unit

LALS 213 Latin American Politics
This course examines the dynamics of political and economic change in twentieth century Latin America, with the goal of achieving an understanding of contemporary politics in the region. We will analyze topics such as the incorporation of the region to the international economy and the consolidation of oligarchic states (1880s to 1930s), corporatism, populism, and leftist pacts (1930s and 1940s), social revolution, democratic breakdown, and military rule (1960s and 1970s), transitions to democracy and human rights advocacy (1980s) market-oriented reforms (1990s), and the turn to the left of current governments (2000s). The course will draw primarily from the experiences of Argentina, Brazil, Colombia, Chile and Mexico. No prior knowledge of the region is required.

LALS 227 Educating for Democracy in Latin America and the U.S.
What does it mean to educate for a democracy, and for what type of democracy should we educate for? This course will examine these central questions and others pertaining to citizenship, democracy, and education as it relates to Latin America and Latino/as in the U.S. The course will explore theories of education for democracy comparing and contrasting the works of persons including U.S. progressive era writer John Dewey, Brazilian scholar Paulo Freire, and Penn President and political scientist Amy Gutmann. The course will delve into a civic and political education curriculum and pedagogics that have been carried out in institutions, inequality, and culture in the region. The latter part of the course will examine civic education practices of Latino/as here in the U.S. from primary schools to higher education. This course offers a service-learning component where students will be encouraged to volunteer with educational organizations in the Philadelphia community.

Activity: Seminar
1 Course Unit

LALS 235 Latinos in United States
This course presents a broad overview of the Latino population in the United States that focuses on the economic and sociological aspects of Latino immigration and assimilation. Topics to be covered include: construction of Latino identity, the history of U.S. Latino immigration, Latino family patterns and household structure, Latino educational attainment, Latino incorporation into the U.S. labor force, earnings and economic well-being among Latino-origin groups, assimilation and the second generation. The course will stress the importance of understanding Latinos within the overall system of race and ethnic relations in the U.S., as well as in comparison with previous migration flows, particularly from Europe. We will pay particular attention to the economic impact of Latino immigration on both the U.S. receiving and Latin American sending communities, and the efficacy and future possibilities of U.S. immigration policy. Within all of these diverse topics, we will stress the heterogeneity of the Latino population according to national origin groups (i.e. Mexican, Puerto Rican, Cuban, and other Latinos), as well as generational differences between immigrants and the native born.
Taught by: Emilio Parrado

LALS 250 C.I.A. Assassinations and Coups in Latin America
Why has the United States government participated in political assassinations and coups d'état in Latin America? How have these interventions affected Latin American political and economic outcomes? How have they helped or hurt U.S. interests in the region? This lecture course provides an introduction to the history and politics of U.S.-led assassinations and coups in Latin America since 1949. For each event, the course will help students understand (1) the goals of the U.S. government; (2) the historical and political context of the intervention; and (3) the outcomes and consequences, both in Latin America and for the United States. Knowledge of the history of U.S. involvement in regime change is critical for understanding contemporary foreign policy.
Taught by: Kronick
Course offered spring; odd-numbered years
Also Offered As: PSCI 250
Activity: Lecture
1 Course Unit

LALS 254 Archaeology of the Inca
The Inca created a vast and powerful South American empire in the high Andes Mountains that was finally conquered by Spain. Using Penn's impressive Museum collections and other archaeological, linguistic, and historical sources, this course will examine Inca religion and worldview, architecture, sacred temples, the capital of Cuzco, ritual calendar, ceque system, textiles, metalworking, economic policies and expansionist politics from the dual perspectives of Inca rulers and their subjects. Our task is to explain the rise, dominance, and fall of the Incas as a major South American civilization.

Taught by: Erickson
Course not offered every year
Also Offered As: ANTH 254
Activity: Seminar
1 Course Unit

LALS 258 Caribbean Music & Diaspora
This survey course considers Caribbean musics within a broad and historical framework. Caribbean musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Caribbean contexts—concepts such as post-colonialism, migration, ethnicity, hybridity, syncretism, and globalization. Each of these concepts, moreover, will be explored with a view toward understanding its connections to the central analytical paradigm of the course—diaspora. Throughout the course, we will listen to many different styles and repertories of music, ranging from calypso to junkanoo, from rumba to merengue, and from dancehall to zouk. We will then work to understand them not only in relation to the readings that frame our discussions but also in relations to our own North-American contexts of music consumption and production.
Taught by: Rommen
Course not offered every year
Also Offered As: AFRC 258, ANTH 256, FOLK 259, MUSC 257
Activity: Lecture
1 Course Unit

LALS 273 The Immigrant City
Immigration is among the most important phenomena shaping neighborhoods, cities, and regions. Understanding migration is fundamental to understanding urbanization, community development, and urban society today. This course examines the development of immigrant communities in United States cities and suburbs. Class readings, discussions, and visits to a variety of Philadelphia immigrant neighborhoods explore themes including labor markets, commerce, housing, civil society, racial and ethnic relations, integration, and the public sphere. We study the diverse dynamics and impacts of immigration through foundational readings and close observation of various newcomer and receiving communities. The first part of the course surveys migration and community formation among a broad range of ethnic groups in different sorts of city and suburban neighborhoods, mainly through history, sociology, and geography. The second part focuses on public policy and community and economic development practices related to migration at the local, regional, national, and transnational scales.
Taught by: Vitello, Domenic
Course usually offered in spring term
Also Offered As: CPLN 676, SOCI 270, URBS 270
Activity: Seminar
1 Course Unit

LALS 274 Facing America
This course explores the visual history of race in the United States as both self-fashioning and cultural mythology by examining the ways that conceptions of Native American, Latino, and Asian identity, alongside ideas of Blackness and Whiteness, have combined to create the various cultural ideologies of class, gender, and sexuality that remain evident in historical visual and material culture. We also investigate the ways that these creations have subsequently helped to launch new visual entertainments, including museum spectacles, blackface minstrelsy, and early film, from the colonial period through the 1940s.

One-term course offered either term
Also Offered As: PSCI 314
Activity: Seminar
1 Course Unit
LALS 317 The Politics of Matter and the Matter of Politics
What is nature? What is culture? What kinds of practices and actors constitute what we call science? Who and what constitute the sphere we refer to as politics? A number of theoretical developments in cultural anthropology, political theory, critical geography, and feminist science studies have problematized the modernist ontological divide between Nature and Culture and a whole series of binary oppositions (such as objects/subjects, matter/form, bio/geo) that follow from it. Taking inspiration from this literature and placing it in conversation with Native and Indigenous scholarship and a series of contemporary socio-environmental struggles occurring in Latin America and beyond, this course will discuss the conceptual-methodological tools that a concern with politics of matter has generated. The epistemic and political implications of these tools go beyond their analytical usefulness as innovative devices to explore novel phenomena. They complicate well-established fields of inquiry such as political ecology and economy, environmental studies, ethics, social justice, and modern politics; and, indeed, the singular ontology that these fields may inadvertently and explicitly sustain. We will explore how it is that things, stuff, matter, 'nature' came to fall outside modern politics as such, and the kinds of ethico-political repercussions that problematizing this division may produce.
Taught by: Lyons
One-term course offered either term
Also Offered As: ANTH 317
Activity: Seminar
1 Course Unit

LALS 328 Democracy in Trouble: OAS to the Rescue?
Democracy in the Americas is in trouble. Entrenched political, economic, and social inequality, combined with environmental degradation, weak institutions, pervasive health epidemics, weapon proliferation, and other pressing issues pose formidable challenges for strengthening democratic ideals and institutions. The Organization of American States (OAS), is uniquely poised to confront and purposively focused to strengthen peace, security, democracy, and human rights. In this community based course, students will study the role and history of the OAS while working directly with area public high school students in preparation for the OAS annual high model OAS simulation in Washington, DC.

LALS 385 Religion and Politics in Latin America
Activity: Lecture
1 Course Unit

LALS 387 Topics in Africana Studies
Topics vary. Black Feminist Approaches to History & Memory - The term black feminism emerged in public discourse amid the social, political, and cultural turbulence of the 1960s. The roots of black feminism, however, are much older, easily reaching back to the work of black women abolitionists and social critics of the nineteenth century. The concept continued to grow and evolve in the work of twentieth century black women writers, journalists, activists, and educators as they sought to document black women’s lives. Collectively, their work established black feminism as a political practice dedicated to the equality of all people. More recently, black feminism has been deployed as a tool for theoretical and scholarly analysis that is characterized by an understanding that race, class, gender, and sexuality are inextricably interconnected.

Individual research to be taken under the direction of a faculty member. Students wishing to do an independent study should contact the Latin American and Latino Studies program. One-term course offered per term
Activity: Independent Study
1 Course Unit

LALS 401 Reflections on Latin America
Activity: Lecture
1 Course Unit

LALS 402 Why Latin America Matters: Examining U.S.-Latin American Foreign Relations
Activity: Lecture
1 Course Unit

LALS 417 Comparative Racial Politics
This course combines scholarship on race and racism in plural societies with qualitative approaches to the study of political institutions, phenomena and actors. Germany, Brazil, France and Cuba will be examined as individual country cases and in comparative perspective. Conceptual and theoretical readings on race, racism and politics provide students with the analytic tools to draw more abstract lessons and generalizable conclusions about how racial and ethno-national hierarchy involves the role of the state and political economy, culture, norms and institutions. Students will also examine the impact of civil rights movements for political equality in response to legacies of racial and ethno-national hierarchy and inequality. Finally, students will become familiar with scholarship on nationalism and social movements as they relate to racial politics.
Taught by: Hanchard
Also offered as: AFRC 417, HIST 467, PSCI 412, SOCI 417
Activity: Lecture

LALS 431 Modern Mexican Society
An introduction to social, political, and economic organization of modern Mexico. This course traces to evolution of Mexico’s fundamental societal institutions from their birth during the Mexican Revolution of 1910, through their flourishing during the 1950s and 1960s, to recent changes under neoliberal administrations. The course ends with a discussion of Mexico’s transition to democracy and the election of the first opposition President in 80 years.
Course not offered every year
Also offered as: HIST 412, SOCI 431
Activity: Seminar
1 Course Unit

LALS 433 Andean Archaeology
Consideration of the culture history of the native peoples of the Andean area, with emphasis on the pre-conquest archaeology of the Central Andean region.
Taught by: Erickson
Course not offered every year
Also offered as: ANTH 433
Activity: Lecture
1 Course Unit

LALS 436 Latina/Os and the Law
Activity: Lecture

Activity: Online Course
1 Course Unit

LALS 527 Spring 2015: Race, Gender & Auto/Biography
SPRING 2017: Market Women, Madames, Mistresses & Mother Superior
studies gender, labor, sexuality, and race in the Caribbean. In our historical
examination of primary source documents alongside literature, and
popular media, we will question some of the iconic representations
of Caribbean and Latin American women in order to understand the
meaning, purpose and usages of these women’s bodies as objects of
praise, possession, obsession and/or ridicule by communities,
governments and religions within and outside of the region. Beginning in
the late-18th century and ending with contemporary migration narratives,
this course considers the relationship between slave society and colonial
past on gender performance in the modern Caribbean, Latin America,
and their diasporas.

Taught by: Sanders
One-term course offered either term
Also Offered As: AFRIC 527, GSWS 527
Activity: Seminar
1 Course Unit

LALS 557 Seminar in Archaeological Theory and Method: Archaeology of
Landslapes
Advanced seminar for potential professional archaeologists. Course
will examine critically main past and present theoretical issues in
archaeological research and interpretation, and consider various
methodologies utilized towards these interpretive ends.

Taught by: Erickson, C.
Course not offered every year
Also Offered As: AAMW 557, ANTH 557
Prerequisites: ANTH 241 or ANTH 600 and one archaeology area course
or permission from instructor
Activity: Seminar
1 Course Unit

LALS 590 Introduction to Francophone Literature
An introduction to major literary movements and authors from five areas of
Francophonie: the Maghreb, West Africa, Central Africa, the Caribbean
and Quebec.

Course not offered every year
Also Offered As: CIMS 580, COML 590, ENGL 590, GSWS 589
Activity: Seminar
1 Course Unit

LALS 655 Democratization
This graduate class focuses on issues of democratization (and de-
democratization), as studied in the comparative politics literature.
The course is structured in four parts. In the first part, we scrutinize
conceptualizations and measurements of democracy. In the second part,
we study competing political theories about the origins of democracy.
The third part of the seminar is devoted to the study of democratic
transition and consolidation processes. To finish, we tackle specific
issues in democratization such as social capital and civic participation,
as well as the resilience of (subnational) authoritarianism.

Taught by: Falletti
Course not offered every year
Also Offered As: PSCI 655
Activity: Seminar
1 Course Unit

LALS 694 Spanish & Latin Am Cine
Topics vary. See the Romance Languages Department’s website at http://
ccat.sas.upenn.edu/rolm/ for a description of the current offerings.

Leadership and Communication (LEAD)

LEAD 101 Leadership Theory and Practice
Using an innovative combination of academic theory, empirical research
and self-reflection, this course is an intensive introduction to multiple and
competing concepts of leadership. Students will critically analyze
texts and research related to effective leadership and leaders and, at
the same time, develop their own, individualized leadership traits and skills
profile. A culminating biographical analysis paper requires students to
compare and contrast their own distinctive leadership traits and skills
those of an admired leader. The course concludes with each student
crafting a 5-year leadership and communication career plan.
Activity: Online Course
1 Course Unit

LEAD 102 Leadership Theory and Practice
Using an innovative combination of academic theory, empirical research,
and self-reflection, this course is an intensive introduction to multiple
and competing concepts of leadership. Students will critically analyze
texts and related to effective leadership and leaders and, at the same
time, develop their own, individualized leadership traits and skills profile.
A culminating biographical analysis paper requires students to compare
and contrast their own distinctive leadership traits and skills to those of
an admired leader. The course concludes with each student crafting a 5-
year leadership and communication career plan.
Activity: Online Course
1 Course Unit

LEAD 304 Communication
This writing-intensive course is designed to enhance each student’s
ability to communicate effectively in the workplace and other
professional settings. Students will learn how to edit their own writing,
give persuasive oral presentations to different audiences, communicate
effectively during conflicts or crises, and apply evidence-based lessons
from positive psychology to personal development and professional
success. Students who have taken LEAD 101 will complete the first draft
of a plan.
Activity: Online Course
1 Course Unit
LEAD 340 Professional Communication and Self-Development
This writing-intensive course is designed to enhance each student’s ability to communicate effectively in the workplace and in professional settings. Students will learn how to edit their own writing, give persuasive oral presentations to different audiences, communicate effectively during conflicts or crises, and apply evidence-based lessons from positive psychology to professional development and professional success. Students who have taken LEAD 101 will complete the first draft of a plan.
Activity: Online Course

Legal Studies & Business Ethics (LGST)

LGST 100 Ethics and Social Responsibility
This course explores business responsibility from a moral, ethical, and managerial perspectives. Its focus includes theories of ethics and their application to case studies in business. Topics include moral issues in advertising and sales; hiring and promotion; financial management; corporate pollution; product safety; and decision-making across borders and cultures.
1 term course offered either term
Activity: Lecture
1 Course Unit

LGST 101 Law and Social Values
This course presents law as an evolving social institution, with special emphasis on the legal regulation of business in the context of social values. It considers basic concepts of law and legal process, in the U.S. and other legal systems, and introduces the fundamentals of rigorous legal analysis. An in-depth examination of contract law is included.
1 term course offered either term
Activity: Lecture
1 Course Unit

LGST 202 Law of Corporate Management and Finance
This course provides an introduction to the law of corporate management and finance, focusing on large publicly held corporations. It is presented from the perspective that before too long virtually all students will serve on one or more corporate boards of directors and that each should, therefore, know about the duties owed by directors and officers to those toward whom they bear a fiduciary duty. The course covers the basic obligations of corporate directors and managers under state corporate law and the federal securities laws. It also considers the rights and responsibilities of other major stakeholders in the governance of public corporations, including shareholders, creditors/bondholders, employees (including corporate executives), investment bankers, corporate lawyers, and accountants. Particular attention is given to the law of mergers and acquisitions. Important issues of social policy concerning large business corporations are also discussed.
Taught by: Buccola, Orts
1 term course offered either term
Activity: Lecture
1 Course Unit

LGST 204 Real Estate Law
See Real Estate, REAL 204
1 term course offered either term
Activity: Lecture
1 Course Unit

LGST 205 Law of Marketing and Antitrust
The course explores the legal aspects of competition. The aim is to understand what legal obligations a business organization owes to its competitors and consumers. In particular, the course focuses on permissible and impermissible marketing tactics, pricing strategies, use of intellectual property (including patents, copyrights, and trademarks), and erosion of market dominance. The focus is primarily on U.S. law, but the challenges posed by diverse domestic, foreign, and international regimes will also be discussed. The course is useful to students interested in marketing strategy or competitive business strategy, and, more broadly, to anyone desiring to understand the legal and public policy issues relating to competitive business interaction.
1 term course offered either term
Activity: Lecture
1 Course Unit

LGST 206 Negotiations
This course examines the art and science of negotiation, with additional emphasis on conflict resolution. Students will engage in a number of simulated negotiations ranging from simple one-issue transactions to multi-party joint ventures. Through these exercises and associated readings, students explore the basic theoretical models of bargaining and have an opportunity to test and improve their negotiation skills.
1 term course offered either term
Activity: Lecture
1 Course Unit

LGST 207 The Sports Industry: Business and Legal Aspects
This course examines various business disciplines as they apply to the sports industry. The course provides the student with an overview of the business of the intercollegiate, Olympic, and professional sports enterprises. In addition, the course investigates the business-related issues encountered by managers of sports organizations and covers how business principles can be applied to effectively address these issues.
Taught by: DGisi
1 term course offered either term
Activity: Lecture
1 Course Unit
LGST 208 The Law at Work: Employment Law for Managers
This course is based on the principle that knowledge and understanding of employment law facilitate (1) promotion of a workforce with a high degree of commitment to reaching business goals, (2) the development of practical business solutions to problems arising in the workplace, (3) effective human resources policy and procedures that comply with applicable laws. It provides students with an introduction to the law of the workplace and examines the balance between business goals and employment law compliance. The course examines the various employment laws with which businesses must comply and the legal rights and responsibilities of employees and employers. The emphasis is on laws concerning equal employment opportunity with respect to discrimination and harassment because of sex, race, national origin, religion, sexual orientation, age, disability and other characteristics protected by workforce laws; work-related privacy including investigations, electronic communication and social media; employee misclassification; diversity and affirmative action; and the legal and regulatory environment regarding immigration, wage and hour, leaves of absence, hiring, termination and afterwards, the non-employee workforce, whistle blower concerns, labor/management relations and collective bargaining.
Taught by: Weinstein
One term course offered either term
Also Offered As: LGST 808, MGMT 247
Activity: Lecture
1 Course Unit

LGST 212 Economic Analysis of Law
The course is designed to teach students how to think as an economist about legal rules; to evaluate alternative legal rules against standards of economic efficiency and distributive justice; and to understand the nature of the legal process and several specific areas of the law. With the use of alternative texts, both deductive and inductive reasoning will be employed to study the formation and interpretation of legal rules.
Taught by: Buccola
One term course offered either term
Also Offered As: BEPP 212
Prerequisite: Econ 001
Activity: Lecture
1 Course Unit

LGST 213 Legal Aspect of Entrepreneurship
This practically oriented course examines the critical legal issues confronting start-ups with a focus on innovation and disruption. Cutting edge topics include the new drone law, which permits companies to benefit from the efficiency of aerial view techniques. Students will learn to use the law to manage risk, deploy resources and maximize value by analyzing cases, statutes, pleadings and contracts. The course covers the entire lifecycle of a business and deals with confidentiality, non-competition and invention assignment clauses, tax advantages of limited liability companies (LLC) v. corporations or partnerships, securities law strategy for raising venture capital, independent contractor v. employee concerns, discrimination laws, merger and acquisition exit plans, intellectual property (IP) including patent, trade secrets, copyrights and trademarks, as well as restructuring and bankruptcy. Students will emerge from the course with the skills and tools to draft term sheets tailored to their business models, as well as mitigate liability via risk-protective policies, insurance and management of litigation. The course fulfills elective requirements for 6 Concentrations, Majors, or Minors: * Wharton Legal Studies and Business Ethics; * Wharton Entrepreneurship and Innovation/Management; * Wharton Social Impact and Responsibility; * SAS Legal Studies Minor; * SAS STSC Major(Science, Technology and Society)--with permission; * Engineering Entrepreneurship Minor--with permission.
Taught by: Hochstadter
One term course offered either term
Activity: Lecture
1 Course Unit

LGST 215 Environmental Management: Law & Policy
This course provides an introduction to environmental management by focusing on foundational concepts of environmental law and policy and how they affect business decisions. The primary aim of the course is to give students a deeper practical sense of the important relationship between business and the natural environment, the existing legal and policy framework of environmental protection, and how business managers can think about managing their relationship with both the environment and the law.
Taught by: Light, Orts
One term course offered either term
Also Offered As: LGST 815
Activity: Lecture
1 Course Unit

LGST 216 Emerging Economies
This course explores important issues in conducting business internationally in and with emerging economies. Much of the course attempts to define emerging economies and to understand the changes occurring in these countries. The course also examines the position of emerging economies in the global context, and how broad social issues affect the development of emerging economies and the ability to establish relationships or conduct business in emerging economies.
Taught by: Nichols
One term course offered either term
Activity: Lecture
1 Course Unit
LGST 218 Diversity and the Law
The goal of this course is to study the role the law has played, and continues to play, in addressing the problems of racial discrimination in the United States. Contemporary issues such as racial profiling, affirmative action, and diversity will all be covered in their social and legal context. The basis for discussion will be assigned texts, articles, editorials, and cases. In addition, interactive videos will also be used to aid class discussion. Course requirements will include a term paper and class case presentations.
Taught by: Anderson
One-term course offered either term
Also Offered As: AFRC 218
Activity: Lecture
1 Course Unit

LGST 219 Law and Policy in International Business
This course introduces students to the legal frameworks for regulating international business - national, regional, and international. Topics include mechanisms for dispute resolution, different standards on assigning nationality, jurisdictional and choice of law problems, controversies regarding the treatment of incoming foreign direct investment and expropriation of foreign-owned businesses, patterns in extraterritoriality, problems of clashing legal standards affecting areas like labor and the environment, and projects for creating more uniform rules governing the conduct of international business. Throughout students will be encouraged to evaluate the policy dimensions of laws and to develop their own critical perspectives regarding these.
Taught by: Zaring
One-term course offered either term
Activity: Lecture
1 Course Unit

LGST 220 International Business Ethics
This course is a multidisciplinary, interactive study of business ethics within a global economy. A central aim of the course is to enable students to develop a framework to address ethical challenges as they arise within and across different countries. Alternative theories about acting ethically in global environments are presented, and critical current issues are introduced and analyzed. Examples include bribery, global sourcing, environmental sustainability, social reports, intellectual property, e-commerce, and dealing with conflicting standards and values across cultures. As part of this study, the course considers non-Western ethical traditions and practices as they relate to business.
Taught by: Berkey, Laufer
One-term course offered either term
Also Offered As: LGST 820
Activity: Lecture
1 Course Unit

LGST 221 Constitutional Law and Free Enterprise
The course explores the fundamentals of U.S. constitutional doctrine and adjudication, with an emphasis on commercial and business issues and implications of constitutional law. The course starts by considering the Constitution and the structure and relationship of the governmental entities it establishes and upon which it depends. Special attention is given to the role of the federal courts, especially the Supreme Court, in interpreting and applying constitutional principles. From this foundation, the course moves on to examine in detail the major economic and business implications of constitutional law in different eras of the nation's history. A core theme is how historical events and changing notions of public policy have affected and been affected by the evolution of constitutional doctrine.
Taught by: Sepinwall
One-term course offered either term
Activity: Lecture
1 Course Unit

LGST 222 Internet Law & Policy
The Internet has become central to business and daily life. This course looks at how courts, legislatures, and regulators confront the major legal issues that the Internet poses. The fundamental challenge is that law comes from governments and other institutions in specific places, but the Internet is global and virtual. Conflicts such as the shutdown of the Napster peer-to-peer file-sharing service and the debate over "network neutrality" regulations for broadband access illustrate the challenge. How does the legal system think about Google, Skype, Twitter, and Facebook? How should it? The material in the course ranges from the foundations of cyberlaw, developed during the e-commerce boom of the 1990s, to current leading-edge questions around social networks, user-generated content, location-based services, cloud computing, and broadband platforms. Major topics include: how legally-enforceable contracts are made online; how courts determine jurisdiction over online transactions; intellectual property rights around digital assets such as music, video, and online texts; control over Internet domain names; liability of intermediaries such as Internet Service Providers and search engines; and online privacy protections. No pre-existing legal or technical knowledge is required.
Taught by: Werbach
One-term course offered either term
Also Offered As: ODID 222
Activity: Lecture
1 Course Unit
LGST 223 Securities Regulation
The course examines the federal securities laws and the operation of the Securities Exchange Commission. The legal responsibilities of corporate managers, accountants, underwriters, and broker-dealers, occasioned by the securities regulatory scheme, will be investigated. Students will be encouraged to evaluate, from a managerial perspective, the various aspects of securities regulation studied. The course will discuss the recent financial crisis and ask the question whether enhanced securities regulation will prevent such a crisis in the future. The material covered in the course will provide familiarity with the basic legal structure of securities regulation and will assist in understanding the current policy issues in securities law. The course should help students to develop the ability to read and learn further in the field and to improve their effectiveness of communication with attorneys. It will also suggest ways of detecting instances in which an attorney should be consulted. The course is particularly useful for those students pursuing careers in corporate finance, investment banking, mergers and acquisitions, sales and trading, venture capital, private equity, entrepreneurship, accounting, corporate management, and real estate.
Taught by: Buccola, Conti-Brown
One-term course offered either term
Also Offered As: LGST 807
Activity: Lecture
1 Course Unit

LGST 224 Human Rights and Globalization
The 2000 UN Global Compact has confirmed the role of TNCs as central actors in the UN system of international human rights law, but whether their role should be voluntary or legally mandated remains in dispute. This course introduces students to how globalization has led to projects for expanding international human rights law to capture the operations of TNCs and why this development is opposed in many quarters. Competing perspectives on the pros and cons of imposing human rights responsibilities on TNCs and on the respective roles that businesses and governments should play will be examined. The positions of various governments, businesses, international institutions, academics, and NGOs will be considered, and a number of illustrative case studies will be analyzed.
Taught by: Bellace
One-term course offered either term
Also Offered As: LGST 524
Activity: Lecture
1 Course Unit

LGST 226 Markets, Morality & the Future of Capitalism
Markets play a central role in the life of a capitalist democracy. But is this a good thing? Should we let markets decide who is rich and who is poor? Who makes decisions and who follows them? Whose ideas get heard and whose ideas do not? The goal of this class will be to examine the market from the perspective of various social values to see whether we should want a market system and, if so, what kind of market system we should want. Among the issues we will examine are the following. Does the market contribute to the common good? If so, how? Does the market conflict with the idea that all human beings are of equal value? What is the relation between the market and freedom? Does the market liberate us or oppress us? Can we reconcile the market with our democratic ideals? What role should corporations play in a healthy democracy? What role should markets play in an increasingly globalized world? We will read several important philosophers, economists and political theorists writing on these issues, including Adam Smith, John Rawls, Amartya Sen, Friedrich Hayek, Karl Marx, Robert Nozick, Jurgen Habermas, and others. Grades will be based on three papers and class participation.
Taught by: Hughes
One-term course offered either term
Activity: Lecture
1 Course Unit

LGST 227 Literature of Success
This course explores the history, literature, and philosophy of two age-old questions: what does it mean to be successful and how does one achieve this elusive goal? It surveys some of the classics of the "success" genre - from Benjamin Franklin's Autobiography in the 18th century to Dale Carnegie's How to Win Friends and Influence People and Marcus Buckingham's Now, Discover Your Strengths in the 20th and 21st centuries. Case studies of remarkable achievements in business and society and Arthur Miller's play Death of a Salesman provide additional contexts within which to reflect on the questions at the center of the course. Students will keep a personal journal and use web-based tools to examine their own character strengths, talents, and achievement orientations. Grading is based on class attendance and participation, reading response papers, personal journals on assigned topics involving self reflection, a mid-term paper on an assigned research subject related to success, and a final, longer paper exploring, based on course readings and original research, each student's personal philosophy of success. No final exam.
Taught by: Shell

Activity: Lecture
1 Course Unit
**LGST 228 Sports Law**
This course focuses on the areas of association, contract, constitutional, labor, antitrust, and agency law as they apply to the sports industry. This course exposes the student to many of the legal issues facing stakeholders in sport organizations. Special attention is given to the regulation of professional sports leagues promoting competitive balance, as well as antitrust law and labor-management relations dealing with the organization structure of sports leagues. The course also takes an inside look at previous and newly formed collective bargaining agreements and the use of Salary Cap or lack thereof in professional sports leagues. The development of effective communication skills will be emphasized through class presentations, written assignments, and quizzes; leadership and interpersonal communications will be cultivated through small group projects and meetings, and critical thinking and problem solving skills will be fostered through the careful study of case law impacting the sports industry in a variety of facets.
Taught by: Ashe, McAfee
One term course offered either term
Activity: Lecture
1 Course Unit

**LGST 230 Social Impact and Responsibility: Foundations**
What role can business play in helping to meet global societal needs, whether it involves the environment, improving health, expanding education or eradicating poverty? Is there any responsibility on the part of business to help meet those needs? What are models of successful business engagement in this area? How should success be measured? Are there limits to what businesses can and should do, and what institutional changes will enable businesses and entrepreneurs to better succeed? This survey course provides students the opportunity to engage in the critical analysis of these and other questions that lie at the foundation of social impact and responsibility as an area of study. The course involves case studies, conceptual issues, and talks by practitioners. The course is designed to help students develop a framework to address the question: How should business enterprises and business thinking be engaged to improve society in areas not always associated with business? The course is required for the secondary concentration in Social Impact and Responsibility
Taught by: Gordon, Nichols
Activity: Lecture
1 Course Unit

**LGST 241 Theories of the Business Enterprise**
What is a business firm? How did various forms of business, including the corporation, arise historically? How do contemporary economic and financial theories explain how business firms evolve, grow, and die? What are the legal underpinnings of the forms of business enterprise, ranging from sole proprietorships to partnerships to family-owned enterprises to multinational corporate groups? How do business firms relate to politics and government, as well as religion? What about the environment? This interdisciplinary course offers an introduction to pursuing answers to these questions. Students will gain perspective on the nature of business enterprises from different points of view that will be useful in further research, as well as having practical application. Ubiquitous economic concepts such as agency costs, principal-agent relationships, transaction costs, and influence costs will be studied. Different legal structures of firms will also be introduced, including new hybrid organizations such as benefit corporations, which seek to meld non-profit and profit objectives.
In the course, we will read high-profile U.S. Supreme Court cases such as Citizens United and Hobby Lobby and debate appropriate boundaries (or not) between business and politics, as well as business and religion. Business ethics and the nature of any social responsibilities owed by business and business people will be topics too.

**LGST 242 Big Data, Big Responsibilities: The Law and Ethics of Business Analytics**
Significant technologies always have unintended consequences, and their effects are never neutral. A world of ubiquitous data, subject to ever more sophisticated collection, aggregation, and analysis, creates massive opportunities for both financial gain and social good. It also creates dangers in areas such as privacy, security, discrimination, exploitation, and inequality, as well as simple rubrics about the effectiveness of management by algorithm. Firms that anticipate the risks of these new practices will be best positioned to avoid missteps. This course introduces students to the legal, policy, and ethical dimensions of big data, predictive analytics, and related techniques. It then examines responses—both private and governmental—that may be employed to address these concerns.
Taught by: Werbach
Activity: Lecture
0.5 Course Units
LGST 243 Other People's Money: The Law, Politics, and History of Financial Institutions
We learn in introductory economics courses that money is fungible: that is, one dollar is as good as the next. Indeed, using money as a "medium of exchange" is one of its defining characteristics. But what happens when we take a big pile of money and put it in different buckets. On one bucket we might write "hedge fund," on another, "central bank;" on still another, "payday lender." Then money starts to change in ways defined by law, history, ethics, and politics. This course will take you on a tour of these different buckets—different kinds of financial institutions, broadly defined—throughout the modern financial system. We will look at hedge funds, insurance companies, investment banks, sovereign wealth funds, central banks, consumer banks, payday lenders, state-sponsored enterprises (like the Export-Import Bank in the United States and much of the financial system in China), and the cutting edge of fintech, including crowd-funded lending, digital currencies, and more. In each case, students will be exposed to a series of specialized questions: Where did this institution come from? What problem is it trying to solve that other alternatives could not resolve? What is the basic business (or, where relevant, regulatory) model for each institution? How is each institution regulated, and by whom? What are the ethical considerations in each context? What are the political considerations that each market participant faces?

LGST 292 Advanced Negotiations
This course is designed to teach negotiation principles and to enable students to develop their negotiation skills. This course assumes familiarity with the basic negotiation concepts covered in the prerequisite for this course: Negotiations. In this course, we extend the study and practice of negotiations and we develop a deeper understanding for how specific aspects of the negotiation process (e.g., emotions, deadlines, trust violations) impact outcomes. Through course lectures, readings, and case exercises, students will develop a rich framework for thinking about the negotiation process and acquire tools for guiding the negotiation process.

LGST 611 Responsibility in Global Management
This course uses the global business context to introduce students to important legal, ethical and cultural challenges they will face as business leaders. Cases and materials will address how business leaders, constrained by law and motivated to act responsibly in a global context, should analyze relevant variables to make wise decisions. Topics will include an introduction to the basic theoretical frameworks used in the analysis of ethical issues, such as right-based, consequentialist-based, and virtue-based reasoning, and conflicting interpretations of corporate responsibility. The course will include materials that introduce students to basic legal (common law vs. civil law) and normative (human rights) regimes at work in the global economy as well as sensitize them to the role of local cultural traditions in global business activity. Topics may also include such issues as comparative forms of corporate governance, bribery and corruption in global markets, human rights issues, diverse legal compliance systems, corporate responses to global poverty, global environmental responsibilities, and challenges arising when companies face conflicting ethical demands between home and local, host country mores. The pedagogy emphasizes globalized cases, exercises, and theoretical materials from the fields of legal studies, business ethics and social responsibility.

Also Offered As: LAW 517
Activity: Lecture
0.5 Course Units
LGST 612 Responsibility in Business
This course introduces students to important ethical and legal challenges they will face as leaders in business. The course materials will be useful to students preparing for managerial positions that are likely to place them in advisory and/or agency roles owing duties to employers, clients, suppliers, and customers. Although coverage will vary depending on instructor, the focus of the course will be on developing skills in ethical and legal analyses that can assist managers as they make both individual-level and firm-level decisions about the responsible courses of action when duties, loyalties, rules, norms, and interests are in conflict. For example, the rules of insider trading may form the basis for lessons in some sections. Group assignments, role-plays, and case studies may, at the instructor’s discretion, be used to help illustrate the basic theoretical frameworks. Course materials will highlight industry codes and professional norms, as well as the importance of personal and/or religious values.

LGST 643 Other People’s Money: The Law, Politics, and History of Financial Institutions
We learn in introductory economics courses that money is fungible: that is, one dollar is as good as the next. Indeed, using money as a “medium of exchange” is one of its defining characteristics. But what happens when we take a big pile of money and put it in different buckets? On one bucket we might write “hedge fund”; on another, “central bank”; on still another, “payday lender.” Then money starts to change in ways defined by law, history, ethics, and politics. This course will take you on a tour of these different buckets—different kinds of financial institutions, broadly defined—throughout the modern financial system. We will look at hedge funds, insurance companies, investment banks, sovereign wealth funds, central banks, consumer banks, payday lenders, state-sponsored enterprises (like the Export-Import Bank in the United States and much of the financial system in China), and the cutting edge of fintech, including crowd-funded lending, digital currencies, and more. In each case, students will be exposed to a series of specialized questions: Where did this institution come from? What problem is it trying to solve that other alternatives could not resolve? What is the basic business (or, where relevant, regulatory) model for each institution? How is each institution regulated, and by whom? What are the ethical considerations in each context? What are the political considerations that each market participant faces?
Taught by: Conti-Brown

LGST 692 Advanced Negotiations
This course is designed to teach negotiation principles and to enable students to develop their negotiation skills. This course assumes familiarity with the basic negotiation concepts covered in the prerequisite for this course: Negotiations. Cross-listed with MGMT 692/OPIM 692.
In this course, we extend the study and practice of negotiations and we develop a deeper understanding for how specific aspects of the negotiation process (e.g., emotions, deadlines, trust violations) impact outcomes. Through course lectures, readings, and case exercises, students will develop a rich framework for thinking about the negotiation process and acquire tools for guiding the negotiation process.
Taught by: Schweitzer, Staff
One term course offered either term
Also Offered As: MGMT 692, OID 692
Prerequisite: LGST 806 Negotiations
Activity: Lecture
1 Course Unit

LGST 693 Influence
Building, protecting and using influence is critical for achieving your goals. This requires good personal decision making as well as understanding others’ decision-making, proficiency at the negotiation table as well as with the tacit negotiations before and after sitting at the table. In this course we focus on building your facility with a wide range of influence tools to help with these efforts. Topics include persuasion, coalitional bargaining, social cognition, networks, and status, as well as their applications to analytics, organizational decision-making and policy.
Taught by: Massey
Also Offered As: OID 693
Activity: Lecture
1 Course Unit

LGST 729 Intellectual Property Strategy for the Innovation Driven Enterprise
See MGMT 729
Taught by: Weiner
Also Offered As: MGMT 229, MGMT 729
Activity: Lecture
0.5 Course Units

LGST 785 Business Strategy and Corporate Law
This course explores strategic, business and legal decision making in a fluid real world corporate context. Classes will cover a series of timely financial and legal subjects as well as case studies that deal with topical problems in corporate governance, investment strategy, executive compensation, and potential corporate and criminal behavior. Press, public market reaction, and governmental/political considerations will be integrated into the classroom.
Also Offered As: LAW 542
Activity: Lecture
1 Course Unit

LGST 799 Seminar in Law & Society
A study of the nature, functions, and limits of law as an agency of societal policy. Each semester an area of substantive law is studied for the purpose of examining the relationship between legal norms developed and developing in the area and societal problems and needs.
One term course offered either term
Also Offered As: LGST 299
Activity: Seminar
1 Course Unit

LGST 802 Corporate Law and Management in Global Perspective
This course provides an introduction to the law of corporate management and finance, focusing on large publicly held corporations. It is presented from the perspective that before too long virtually all students will serve on one or more corporate boards of directors and that each should, therefore, know about the duties owed by directors and officers to those toward whom they bear a fiduciary duty. The course covers the basic obligations of corporate directors and managers under state corporate law and the federal securities laws. It also considers the rights and responsibilities of other major stakeholders in the governance of public corporations, including shareholders, creditors/bondholders, employees (including corporate executives), investment bankers, corporate lawyers, and accountants. Particular attention is given to the law of mergers and acquisitions. Important issues of social policy concerning large business corporations are also discussed. Format: Lecture and legal case discussion. Materials: To be determined.
Taught by: Buccola, Orts
One term course offered either term
Also Offered As: LGST 202
Activity: Lecture

LGST 804 Real Estate Law
See Real Estate, REAL 804
One term course offered either term
Also Offered As: LGST 204, REAL 204, REAL 804
Activity: Lecture
1 Course Unit

LGST 805 Law of Marketing and Antitrust
The course explores the legal aspects of competition. The aim is to understand what legal obligations a business organization owes to its competitors and consumers. In particular, the course focuses on permissible and impermissible marketing tactics, pricing strategies, use of intellectual property (including patents, copyrights, and trademarks), and exertion of market dominance. The focus is primarily on U.S. law, but the challenges posed by diverse domestic, foreign, and international regimes will also be discussed. The course is useful to students interested in marketing strategy or competitive business strategy, and, more broadly, to anyone desiring to understand the legal and public policy issues relating to competitive business interaction.
One term course offered either term
Also Offered As: LGST 208, MKTG 260, MKTG 760
Activity: Lecture
1 Course Unit

LGST 806 Negotiations
This course examines the art and science of negotiation, with additional emphasis on conflict resolution. Students will engage in a number of simulated negotiations ranging from simple one-issue transactions to multi-party joint ventures. Through these exercises and associated readings, students explore the basic theoretical models of bargaining and have an opportunity to test and improve their negotiation skills. Cross-listed with MGMT 691/OPIM 691. Format: Lecture, class discussion, simulation/role play, and video demonstrations. Materials: Textbook and course pack.
One term course offered either term
Also Offered As: LAW 518, MGMT 691, OID 691
Activity: Lecture
1 Course Unit
LGST 807 Securities Regulations
The course examines the federal securities law and the operation of the Securities Exchange Commission. The legal responsibilities of corporate managers, accountants, underwriters, and broker-dealers, occasioned by the securities regulatory scheme, will be investigated. Students will be encouraged to evaluate, from a managerial perspective, the various aspects of securities regulation studied. The course will discuss the recent financial crisis and ask the question whether enhanced securities regulation will prevent such a crisis in the future. The material covered in the course will provide familiarity with the basic legal structure of securities regulation and will assist in understanding the current policy issues in securities law. The course should help students to develop the ability to read and learn further in the field and to improve their effectiveness of communication with attorneys. It will also suggest ways of detecting instances in which an attorney should be consulted. The course is particularly useful for those students pursuing careers in corporate finance, investment banking, mergers and acquisitions, sales and trading, venture capital, private equity, entrepreneurship, accounting, corporate management and real estate. Requirements: Midterm and final exam. Materials: Text, pamphlet of statutes and rules, and study guide.
Taught by: Buccola, Conti-Brown
One term course offered either term
Also Offered As: LGST 223
Activity: Lecture
1 Course Unit

LGST 809 Sports Business Management
This course examines various business disciplines as they apply to the sports industry. The course provides the student with an overview of the business of the intercollegiate, Olympic and professional sports enterprises. In addition, the course investigates the business related issues encountered by managers of sports organizations and covers how business principles can be applied to effectively address these issues. This course is crosslisted with MGMT 815.
One term course offered either term
Also Offered As: LGST 207, MGMT 815
Activity: Lecture
1 Course Unit

LGST 813 Legal and Transactional Aspects of Entrepreneurship
Legal and Transactional Aspects of Entrepreneurship is a practical and intensive course that examines the critical legal and transactional issues confronting start-up and emerging growth companies. Although the context of the course is early stage companies, many of the concepts studied are equally applicable to more mature, established companies. The course provides perspective on how to use the law strategically to manage risk, deploy resources and maximize shareholder value. Topics include the enforceability of confidentiality, non-competition and other restrictive covenants in employment agreements; choice of business form including the legal, financial and tax advantages and disadvantages of general partnerships, limited partnerships, corporations and limited liability companies; tax and securities law; legal aspects of raising capital including structuring venture capital and private equity financing; entrepreneurial acquisition structures, employment law, and intellectual property law including trade secrets, copyrights, patents, and trademarks. Format: Lecture and discussion with coverage of legal cases and materials. Requirements: Class participation, midterm and final exam. Materials: Course pack.
Taught by: Borghese
One term course offered either term
Prerequisites: None but generally recommended for second year students. Students who have taken certain legal studies courses may find limited overlap with this course.
Activity: Lecture
1 Course Unit

LGST 815 Environmental Management: Law and Policy
This course provides an introduction to environmental management with a focus on law and policy as a basic framework. The primary aim of the course is to give students a deeper practical sense of the important relationship between business and the natural environment and to think critically about how best to manage this relationship.
Taught by: Light, Orts
One term course offered either term
Also Offered As: LGST 215
Activity: Lecture
1 Course Unit

LGST 820 International Business Ethics
This course is a multidisciplinary, interactive study of business ethics within a global economy. A central aim of the course is to enable students to develop a framework to address ethical challenges as they arise within and across different countries. Alternative theories about acting ethically in global environments are presented, and critical current issues are introduced and analyzed. Examples include bribery, global sourcing, environmental sustainability, social reports, intellectual property, e-commerce, and dealing with conflicting standards and values across cultures. As part of this study, the course considers non-Western ethical traditions and practices as they relate to business.
Taught by: Berkey, Laufer
One term course offered either term
Also Offered As: LGST 220
Activity: Lecture
1 Course Unit
LGST 920 Ethics in Business and Economics
The seminar explores the growing academic literature in business ethics. It also provides participants an opportunity to investigate an ethical issue of their choosing in some depth, using their field of specialty as context. The seminar assumes no previous exposure to business ethics. Different business ethics theories and frameworks for investigating issues will be discussed, including corporate social responsibility, corporate moral agency, theories of values, and corporate governance. In turn, these theories will be applied to a range of issues, both domestic and international. Such issues include: corruption in host countries, the management of values in modern corporations, the ethical status of the corporation, ethics in sophisticated financial transactions (such as leveraged derivative transactions), and gender discrimination in the context of cultural differences. Literature not only from business ethics, but from professional and applied ethics, law, and organizational behavior will be discussed. Often, guest speakers will address the seminar. At the discretion of the class, special topics of interest to the class will be examined. Students will be expected to write and present a major paper dealing with a current issue within their major field. The course is open to students across fields, and provides integration of ideas across multiple business disciplines.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Ph.D Course

LGST 921 Foundations of Business Law
This course will introduce students to basic jurisprudential discussions and debates that relate to understanding business in society. Topics will include a general overview of the nature of law and its relationship to ethics; history of legal thought, business in society; theories of contract, torts, and property; criminal law as it applies to business situations; and theories of the business enterprise and its regulation. Selected topics will also be chosen in accordance with the interest of participants in the seminar.

Linguistics (LING)

LING 001 Introduction to Linguistics
A general introduction to the nature, history and use of human language, speech and writing. Topics include the biological basis of human language, and analogous systems in other creatures; relations to cognition, communication, and social organization; sounds, forms and meanings in the world’s languages; the reconstruction of linguistic history and the family tree of languages; dialect variation and language standardization; language and gender; language learning by children and adults; the neurology of language and language disorders; the nature and history of writing systems. Intended for any undergraduate interested in language or its use, this course is also recommended as an introduction for students who plan to major in linguistics.
For BA Students: Natural Science and Math Sector
One term course offered either term
Activity: Lecture
1 Course Unit

LING 051 Proto-Indo European Language and Society
Most of the languages now spoken in Europe, along with some languages of Iran, India and central Asia, are thought to be descended from a single language known as Proto-Indo-European, spoken at least six thousand years ago, probably in a region extending from north of the Black Sea in modern Ukraine east through southern Russia. Speakers of Proto-Indo-European eventually populated Europe in the Bronze Age, and their societies formed the basis of the classical civilizations of Greece and Rome, as well as of the Celtic, Germanic and Slavic speaking peoples. What were the Proto-Indo-Europeans like? What did they believe about the world and their gods? How do we know? Reconstruction of the Proto-Indo-European language, one of the triumphs of comparative and historical linguistics in the 19th and 20th centuries, allows us a glimpse into the society of this prehistoric people. In this seminar students will, through comparison of modern and ancient languages, learn the basis of this reconstruction -- the comparative method of historical linguistics -- as well as explore the culture and society of the Proto-Indo-Europeans and their immediate descendants. In addition, we will examine the pseudo-scientific basis of the myth of Aryan supremacy, and study the contributions of archaeological findings in determining the "homeland" of the Indo-Europeans. No prior knowledge of any particular language is necessary. This seminar should be of interest to students considering a major in linguistics, anthropology and archaeology, ancient history or comparative religion. (Also fulfills Cross-Cultural Analysis.)

Notes: Freshman Seminar

LING 054 Bilingualism in History
This course introduces the foundations of linguistics - the scientific study of language - through exploration of multilingualism in the USA and in different societies around the world. Contacts between groups of people speaking different languages are documented from earliest records, and around the world it remains the norm to find more than one language in regular use in a single community. In this course we will see that multilingualism is a catalyst for linguistic change: sometimes languages are lost; sometimes new languages are created; sometimes the structure of a language is radically altered. We will consider which parts of linguistic structure are most susceptible to change under conditions of bilingualism? Does language contact - whether a result of trade, education, migration, conquest, or intermarriage - influence language structure in predictable ways? How do individual speakers handle multiple languages? How do attitudes to speakers of multiple languages change through history? How have socio-historical events shaped the linguistic situation in the USA?
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Freshman Seminar
LING 071 American Sign Language I
Introduction to American Sign Language (ASL). Introduces ASL in a contextualized and conversational manner. Course includes receptive and expressive readiness activities, sign vocabulary and grammar, and an introduction to important topics and people within Deaf communities and Deaf culture.
For BA Students: Language Course
One term course offered either term
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

LING 072 American Sign Language II
Increased communication skill in American Sign Language (ASL). Expressive and receptive abilities are expanded upon via a contextualized and conversational manner. Important topics to Deaf communities and Deaf culture are continued within and in-class discussion.
For BA Students: Language Course
One term course offered either term
Prerequisite: LING 071 or Permission of the Instructor
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

LING 073 American Sign Language III
American Sign Language (ASL) at the Intermediate I level. Expressive and receptive abilities are expanded upon via a contextualized and conversational manner, including, but not limited to, narrative production. Important topics to Deaf communities and Deaf culture are continued within and in-class discussion.
For BA Students: Language Course
One term course offered either term
Prerequisite: LING 072 or permission of instructor
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

LING 074 American Sign Language IV
American Sign Language (ASL) at the Intermediate II level. Expressive and receptive abilities are expanded upon via a contextualized and conversational manner, including, but not limited to, narrative production. Important topics to Deaf communities and Deaf culture are continued within and in-class discussion.
For BA Students: Last Language Course
One term course offered either term
Prerequisite: LING 073 or permission of instructor
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

LING 075 American Sign Language V
This is an advanced ASL course in which students expand their conversational and narrative range. While receptive readiness activities continue to be an important part of the class, the emphasis moves toward honing expressive sign skills through narrative presentation and ASL-only class discussions. Various aspects of Deaf culture and cultural behavior rules will be incorporated into the course. A large component of the course is a unit on Deaf history in which students read and discuss major events and famous deaf people via readings, film, class lectures and discussions, and other outside resources.
For BA Students: Advanced Language Course
One term course offered either term
Prerequisite: LING 074 or permission of instructor
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

LING 076 Deaf Literature, Performance, Art, and Film
This course is an advanced/conversational ASL course that explores several key topics related to Deaf culture and the Deaf experience influence on literature (both written and signed), theatre, fine and visual arts, and film—both Deaf and hearing directed and acted. Using only ASL in class, students learn about various perspectives and approaches to each of the themes and topics of the course. Some questions to explore and answer in this course will be: What is Deaf Literature? The Deaf Lens: What is it? How is it different from a hearing perspective on film? How is Deafness explored differently in each of the arts discussed in this course? Analysis and discussion will come from readings as well as viewings of various types of Deaf arts.
For BA Students: Advanced Language Course
Taught by: Dragana-Hawk
Course usually offered in spring term
Prerequisites: LING 074 and prior language experience or permission from instructor.
Activity: Seminar
1 Course Unit

LING 077 ASL/Deaf Studies - ABCS
For this course, students will attend Pennsylvania School for the Deaf on a weekly basis where they will participate in and contribute to the school community via tutoring or other mutually agreeable activities. Students will also have formal class on a weekly basis with discussions and activities centering on reflection of community experiences through linguistic as well as cultural lenses. Additionally, drawing from the required Linguistics and other ASL/Deaf Studies coursework, students will develop an inquiry question and conduct preliminary community-based research to analyze sociolinguistic variations of ASL and Deaf cultural attitudes, behaviors, and norms. Ongoing reflections and discussions-formal and informal on Deaf cultural/theoretical topics drawing from readings as well as community experiences will be integral to the course experience. LING 078, Topics in Deaf Culture and permission from the instructor, are required for this course.
For BA Students: Advanced Language Course
Taught by: Fisher
Prerequisites: LING 078 and permission from instructor. Anyone considering taking this course should contact the ASL Program Coordinator early in the semester prior to enrollment (Spring) to ensure adequate time to obtain clearances and appropriate placement.
Activity: Lecture
1 Course Unit
LING 078 Deaf Culture
This course is an advanced/conversational ASL course that explores several key topics related to Deaf Culture. Using only ASL in class, students will read and discuss books, articles, and films related to the following topics: Deaf History, Deaf Identity, Deafness as Asset, Communication Issues and Pathological Perspectives on Deafness, Deafness and Education, Deaf/Hearing Family Dynamics. Language growth will stem from direct instruction as well as through the course of class conversation. Students will collaborate with the instructor and our Deaf community liaison to develop and host an event that is accessible to both Deaf and hearing people alike.
For BA Students: Advanced Language Course
Taught by: Fisher
One term course offered either term
Prerequisite: LING 074 or permission from coordinator
Activity: Seminar
1 Course Unit
Notes: Offered through Penn Language Center

LING 079 Disability Rights and Oppression: Experiences within Global Deaf Communities
This course explores the linguistic and social statuses of global Deaf communities with respect to language rights and efforts toward parity with spoken language communities. We will begin by providing some background and context for understanding Deaf communities and people as both linguistic and cultural minorities as well as members of a disability group. We then explore various examples of oppression borne by Deaf people throughout history and today, with an emphasis on the Milan Conference of 1880, from which several decrees mandated that sign languages be banned in all instruction of Deaf students worldwide. The impacts of said decrees were catastrophic for the linguistic and social rights of Deaf people; effects of these experiences are pernicious and long lasting. Since then, global Deaf communities have fought to gain the legal rights and social recognition that are typically afforded hearing members of their respective communities. There are some Deaf communities that have attained said rights, where others are still left far behind. We explore the lasting effects of the Milan Congress in global terms, using the United States and North American Deaf communities as a standard for comparative measurement. Do note that this course will include a module on Italian Sign Language (LIS) and will give opportunities to learn and use LIS in and amongst Italian Deaf community members while in Italy.
Taught by: Fisher
Course usually offered in spring term
Prerequisites: Application and Permission from Penn Global
Activity: Lecture
1 Course Unit

LING 081 Beginning Irish Gaelic I
Irish Gaelic, spoken primarily on the west coast of Ireland, is rich in oral traditions, song, poetry and literature. Knowledge of this language provides a foundation to understanding Celtic folklore and linguistics and also enhances the study of Anglo-Irish literature and history. The first-year course will include reading, conversation, listening and speaking.
Taught by: Blyn-LaDrew
Two terms. student may enter either term.
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

LING 082 Beginning Irish Gaelic II
Taught by: Blyn-LaDrew
One term course offered either term
Prerequisite: LING 081 or permission from instructor
Activity: Lecture
1 Course Unit
Notes: Offered through Penn Language Center

LING 083 Intermediate Irish Gaelic I
Taught by: Blyn-LaDrew
One term course offered either term
Prerequisite: LING 082 or equivalent
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

LING 085 Advanced Irish Gaelic I
Taught by: Blyn-LaDrew
One term course offered either term
Prerequisite: LING 084 or equivalent
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

LING 086 Advanced Irish Gaelic II
This course will emphasize reading of literary texts, and advanced aspects of grammar, composition, and conversation.
Taught by: Blyn-LaDrew
One term course offered either term
Prerequisite: LING 085 or equivalent
Activity: Lecture
1 Course Unit
Notes: Offered through the Penn Language Center

LING 091 American Sign Language III/IV
Expanded instruction of American Sign Language (ASL) on the Intermediate I and II levels. Includes receptive and expressive readiness activities, sign vocabulary and grammar growth, fingerspelling practice and narrative skills. Topics on Deaf cultural are also included in the course readings and discussions. Increases the emphasis on more abstract and challenging conversational and narrative range.
For BA Students: Last Language Course
Course not offered every year
Prerequisite: LING072 or by permission of instructor
Corequisites: Expanded instruction of ASL
Activity Lecture
2 Course Units
Notes: Offered by Penn Language Center; permit from Penn Language Center required for admission.
LING 102 Introduction to Sociolinguistics
Human language viewed from a social and historical perspective. Students will acquire the tools of linguistic analysis through interactive computer programs, covering phonetics, phonology and morphology, in English and other languages. These techniques will then be used to trace social differences in the use of language, and changing patterns of social stratification. The course will focus on linguistic changes in progress in American society, in both mainstream and minority communities, and the social problems associated with them. Students will engage in field projects to search for the social correlates of linguistic behavior, and use quantitative methods to analyze the results.
For BA Students: Society Sector
Taught by: Tamminga
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Satisfies Quantitative Data Analysis

LING 103 Introduction to Language: Language Structure and Verbal Art
The purpose of this course is to explore the relationship between linguistic structure and the use of language for artistic purposes. The syllabus is organized as a sequence of units, each built around a particular theme. These include the sound structure of poetry (meter, rhyme, and other linguistic patterns in Jabberwocky, the Odyssey, Shakespeare, the Troubadours, and others); how precise linguistic data can be used to solve an outstanding literary problem (determining the approximate date when Beowulf was composed); and the structure of folktales of various cultures and of narratives of everyday experience.
For BA Students: Arts and Letters Sector
Taught by: Ringe
Course usually offered in fall term
Activity: Lecture
1 Course Unit

LING 105 Introduction to Cognitive Science
Cognitive Science is founded on the realization that many problems in the analysis of human and artificial intelligence require an interdisciplinary approach. The course is intended to introduce students to the problems and characteristic concepts of Cognitive Science, drawing on formal and empirical approaches from the parent disciplines of computer science, linguistics, neuroscience, philosophy and psychology. The topics covered include Perception, Action, Learning, Language, Knowledge Representation, and Inference, and the relations and interactions between such modules. The course shows how the different views from the parent disciplines interact, and identifies some common themes among the theories that have been proposed. The course pays particular attention to the distinctive role of computation in such theories, and provides an introduction to some of the main directions of current research in the field.
Taught by: Brainard/Ungar
Course usually offered in fall term
Also Offered As: CIS 140, COGS 001, PHIL 044, PSYC 207
Activity: Lecture
1 Course Unit
Notes: This is a Formal Reasoning course.

LING 106 Introduction to Formal Linguistics
In this course, we study formal mathematical tools for the analysis of language that help us understand and classify the complex structures and rules that constitute language and grammar. These tools include set theory, formal language and automata theory, as well as aspects of logic, and will be applied to the syntax and semantics of natural language. In addition to learning something about formal tools for analyzing language, this will also enhance your general skills in analytical reasoning.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: This is a Formal Reasoning course.

LING 115 Writing Systems
The historical origin of writing in Sumeria, Egypt, China, and Mesoamerica; the transmission of writing across languages and cultures, including the route from Phoenician to Greek to Etruscan to Latin to English; the development of individual writing systems over time; the traditional classification of written symbols (ideographic, logographic, syllabic, alphabetic); methods of decipherment; differences between spoken and written language; how linguistic structure influences writing, and is reflected by it; social and political aspects of writing; literacy and the acquisition of writing.
For BA Students: History and Tradition Sector
Taught by: Buckley
Course usually offered in fall term
Activity: Lecture
1 Course Unit

LING 120 Introduction to Speech Analysis
This course focuses on experimental investigations of speech sounds. General contents include: the fundamentals of speech production and perception; speech analysis tools and techniques; and topics in phonetic studies. The course consists of integrated lectures and laboratory sessions in which students learn computer techniques for analyzing digital recordings.
Taught by: Kuang
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: Satisfies Quantitative Data Analysis

LING 151 Language and Thought
This course describes current theorizing on how the human mind achieves high-level cognitive processes such as using language, thinking, and reasoning. The course discusses issues such as whether the language ability is unique to humans, whether there is a critical period to the acquisition of a language, the nature of conceptual knowledge, how people perform deductive reasoning and induction, and how linguistic and conceptual knowledge interact.
Taught by: Trueswell
One-term course offered either term
Prerequisites: PSYC 001, COGS 001, LING 105, or PSYC 207
Activity: Lecture
1 Course Unit
LING 170 Experimental Methods for Linguists
Controlled experiments are a key element of empirical research, and they play an increasingly important role in the study of language and communication. This course will be divided into two halves. In the first half, students will be introduced to the fundamentals of how to conduct an experiment, along with a basic introduction to statistical methods. The emphasis will be on understanding the basic logic of experimental design, but special lectures will focus on the application of particular methods to the study of language. In the second half, classes will become more like lab meetings as students develop their own experimental projects from the ground up. At the end of the semester they will write up these projects as papers.
Taught by: Roberts
Course not offered every year
Activity: Seminar
1 Course Unit

LING 210 Introduction to Language Change
This course covers the principles of language change and the methods of historical linguistics on an elementary level. The systematic regularity of change, the reasons for that regularity, and the exploitation of regularity in linguistic reconstruction are especially emphasized. Examples are drawn from a wide variety of languages, both familiar and unfamiliar. The prerequisite for the course is any course in phonetics or phonology, or Ling 001, or permission of the instructor. Note that this course does NOT satisfy any sector requirement.
Taught by: Ringe
Course not offered every year
Prerequisites: One phonetics or phonology course, or Ling 001. Note that this course does NOT count towards sector II, History and Tradition.
Activity: Lecture
1 Course Unit

LING 230 Sound Structure of Language
An introduction to phonetics and phonology. Topics include articulatory phonetics (the anatomy of the vocal tract; how speech sounds are produced); transcription (conventions for representing the sounds of the world’s languages); classification (how speech sounds are classified and represented cognitively through distinctive features); phonology (the grammar of speech sounds in various languages: their patterning and interaction) and syllable structure and its role in phonology.
Taught by: Noyer
Course usually offered in spring term
Also Offered As: LING 503
Prerequisites: Prerequisite: A prior course in linguistics or permission of instructor.
Activity: Lecture
1 Course Unit

LING 235 Psychology of Language
This course describes the nature of human language, how it is used to speak and comprehend, and how it is learned. The course raises and discusses issues such as whether language ability is innate and unique to humans, whether there is a critical period for the acquisition of a language, and how linguistic and conceptual knowledge interact.
Taught by: Dahan
One-term course offered either term
Also Offered As: PSYC 235
Prerequisite: PSYC 151 or LING 001
Activity: Lecture
1 Course Unit

LING 240 Structure of a Language
Designed to apply linguistic principles to the grammatical analysis of a particular language, this course focuses on a different language each time it is given, according to the decision of the instructor. It may be taken by students with prior knowledge of the language in question who have not taken previous courses in linguistics, and by students of linguistics who wish to explore a new language. The selected language will be announced prior to pre-registration for any semester in which it is given.
Course not offered every year
Activity: Seminar
1 Course Unit

LING 241 Language in Native America
This course is an introduction to linguistic perspectives on the languages native to the Americas (their nature and distribution, typological similarities and differences), with an emphasis on North America. The diverse languages of this region will be examined from the point of view of particular linguistic phenomena, such as phonology, morphology, and syntax; and in addition we will study their historical development and their place in culture, society, and thought.
Taught by: Buckley
Course not offered every year
Activity: Lecture
1 Course Unit

LING 242 Construct a Language
In this course, students construct their own language, one that is compatible with what is known about possible human languages. To this end, the course investigates language typology through lectures and examination of grammars of unfamiliar languages. Topics include language universals, points of choice in a fixed decision space, and dependencies among choices.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Students who have taken Ling 140: Construct a Language are not eligible to enroll in Ling 242.

LING 247 Structure of American Sign Language
This course covers the linguistic structure of American Sign Language (ASL), including its phonology (articulatory features, phonological constraints, nonmanuals), morphology (morphological constraints, compounds, incorporation, borrowing), and syntax (syntactic categories, basic phrase structure, common sentence types). Also discussed are the topics of classifiers and deixis. In keeping with the comparative perspective of linguistic theory, parallels and differences between ASL and other (primarily spoken) languages are pointed out where appropriate. Historical and sociolinguistic issues are addressed where they are relevant to elucidating linguistic structure. Though the course focuses on ASL, it necessarily touches on issues concerning sign languages more generally, notably the possible effects of modality (sign vs. speech) on linguistic structure and the implications of the signed modality for general linguistics.
Taught by: Fisher/Santorini
Course not offered every year
Prerequisite: Ling 001 or permission of instructor(s)
Activity: Lecture
1 Course Unit
LING 250 Introduction to Syntax
This course is an introduction to current syntactic theory, covering the principles that govern phrase structure (the composition of phrases and sentences), movement (dependencies between syntactic constituents), and binding (the interpretation of different types of noun phrases). Although much of the evidence discussed in the class will come from English, evidence from other languages will also play an important role, in keeping with the comparative and universalist perspective of modern syntactic theory.
Taught by: Santorini
Course usually offered in fall term
Activity: Lecture
1 Course Unit

LING 270 Language Acquisition
An introduction to language acquisition in children and the development of related cognitive and perceptual systems. Topics include the nature of speech perception and the specialization to the native language; the structure and acquisition of words; children’s phonology; the development of grammar; bilingualism and second language acquisition; language learning impairments; the biological basis of language acquisition; the role in language learning in language change. Intended for any undergraduate interested in the psychology and development of language.
Taught by: Yang
Course not offered every year
Activity: Lecture
1 Course Unit

LING 300 Tutorial in Linguistics
This tutorial allows students to deal in a concentrated manner with selected major topics in linguistics by means of extensive readings and research. Two topics are studied during the semester, exposing students to a range of sophisticated linguistic questions.
Taught by: Legate
Course usually offered in fall term
Prerequisites: Senior status or permission of the instructor. Majors only.
Activity: Seminar
1 Course Unit

LING 301 Conference
An independent study for majors in linguistics.
One-term course offered either term
Activity: Independent Study
1 Course Unit

LING 302 Linguistic Field Methods
Instruction and practice in primary linguistic research, producing a grammatical sketch and a lexicon through work with a native-speaker consultant and some reference materials. Consultant work is shared with LING 502.
Taught by: Buckley/Legate
Course not offered every year
Also Offered As: LING 502
Prerequisites: Ling 230 and Ling 250
Activity: Seminar
1 Course Unit

LING 310 History of the English Language
This course traces the linguistic history of English from its earliest reconstructable ancestor, Proto-Indo-European, to the present. We focus especially on significant large-scale changes, such as the restructuring of the verb system in Proto-Germanic, the intricate interaction of sound changes in the immediate prehistory of Old English, syntactic change in Middle English, and the diversification of English dialects since 1750.
Taught by: Ringe/Kroch
Course not offered every year
Activity: Lecture
1 Course Unit

LING 335 Psycholinguistics
Taught by: Dahan
Prerequisites: PSYC 151, or PSYC 235, or LING 001, or permission of instructor.
Activity: Lecture
1 Course Unit

LING 354 Language and Game Theory
This course is an introduction to game-theoretic pragmatics. It focuses on aspects of meaning that follow from rational, strategic decision making. The course covers an introduction to the theory of games with an emphasis on coordination games and cooperation. We develop a game theoretic account of truth conditional semantics using zero-sum games. We then cover Gricean implicature; focal points and coordination; polysemy vs homophony; and a game account of reference tracking and pronoun interpretation.
Taught by: Clark
Course not offered every year
Activity: Lecture
1 Course Unit

LING 380 Introduction to Semantics
This course provides an introduction to formal semantics for natural language. The main aim is to develop a semantic system that provides a compositional interpretation of natural language sentences. We discuss various of the aspects central to meaning composition, including function application, modification, quantification, and binding, as well as issues in the syntax-semantics interface. The basic formal tools relevant for semantic analysis, including set theory, propositional logic, and predicate logic are also introduced.
Taught by: Schwarz
Course usually offered in fall term
Also Offered As: LING 580
Prerequisite: Ling 250
Activity: Lecture
1 Course Unit

LING 398 Senior Thesis
One-term course offered either term
Activity: Independent Study
1 Course Unit
LING 404 Morphological Theory
This course will explore some issues concerning the internal structure of words. After a brief introduction to some basic terms and concepts, we will discuss the interaction of morphology with phonology. We will look both at how morphology conditions phonological rules and how phonology conditions morphology. Then we will turn to the interaction of syntax and morphology. We will look at some problems raised by inflectional morphology, clitics and compounds. The main requirement for the class will be a series of homework exercises in morphological analysis and a short paper at the end of the semester.
Taught by: Embick
Course not offered every year
Activity: Lecture
1 Course Unit

LING 405 Morphology Theory II
This course takes a detailed look at a number of central topics in morphological theory. The material examined in the course consists of primary readings and reviews, covering a number of central topics in the field. These topics include (but are not restricted to) allomorphy, blocking, the interface of phonology and morphology, syncretism, affixation, the syntax-morphology interface, and compounding. The primary requirements for the class involve short assignments that are based on the readings, in the form of both problem sets and critical appraisals of core theoretical positions. In addition to this, students will write a short paper at the end of the semester.
Taught by: Embick
Course not offered every year
Prerequisites: Morphology Theory I or permission of the instructor.
Activity: Lecture
1 Course Unit

LING 411 Old English
The main purpose of this course is to teach students to read Old English ("Anglo-Saxon"), chiefly but not exclusively for research in linguistics. Grammar will be heavily emphasized; there will also be lectures on the immediate prehistory of the language, since the morphology of Old English was made unusually complex by interacting sound changes. In the first eight weeks we will work through Moore and Knott's "Elements of Grammar" and learn the grammar; the remainder of the term will be devoted to reading texts.
Taught by: Kroch
Course not offered every year
Activity: Seminar
1 Course Unit

LING 440 Pidgins and Creoles
The origins and development of pidgins (languages of intercommunication that have evolved for practical reasons in situations of trade, conquest, or colonization, and spoken as second or auxiliary languages) and creoles (languages with native speakers that have developed from previous pidgins); relations between creoles and other languages; implications of creole studies for general theories of language and language change.
Course offered fall, even-numbered years
Activity: Lecture
1 Course Unit

LING 449 Language and Computation
The computational study of natural language and its implications for linguistic theories. Topics include finite state tools, computational morphology and phonology, grammar and parsing, computational models of language learning in children and machines.
Taught by: Yang
Course not offered every year
Activity: Seminar
1 Course Unit

LING 455 Experiments in the Study of Meaning
This course provides an introduction to the experimental study of meaning in natural language. We begin by introducing some basic notions of formal semantics and pragmatics and review relevant technical background. Next we discuss recent developments in studying meaning-related phenomena experimentally, which, in addition to theoretical questions, involve issues in the acquisition and processing of semantic information. In the course of this, we will also introduce the basics of experimental design and relevant psycholinguistic methodology. In addition to readings and homework assignments, students will embark on a small research project (individually or jointly), which will be presented in class at the end of the semester and written up as a term paper.
Taught by: Schwarz
Course not offered every year
Prerequisites: Ling 106, 170, 250, 380/580, 550 or permission by instructor
Activity: Seminar
1 Course Unit

LING 470 Narrative Analysis
The course will develop our understanding of narrative structure on the basis of oral narratives of personal experience, told by speakers from a wide range of geographic backgrounds and social classes. It will link the principles governing oral narratives to the narratological examination of myth, literature and film by Propp, Greimas, Prince, Chatman, and others. The principles that emerge from the study of oral narrative will be re-examined in literary narrative, including Scandinavian, Greek and Hebrew epics, medieval romances, film, and modern novels, with attention to the differences between vernacular, literary and academic style. The class will then consider the work of psychologists on how narratives are remembered and understood, based on the causal network theory of Trabasso, and apply these principles to narratives written to teach children to read, particularly those designed to reflect the cultural and linguistic framework of African American children.
Course not offered every year
Also Offered As: FOLK 470
Activity: Seminar
1 Course Unit

LING 495 Games and Signals
Game Theory has provided a new way of looking at linguistic meaning, particularly pragmatics (the use of language). This course will survey the use of Game Theory in linguistics as well as develop the techniques for studying signaling behavior. We will look at the formal foundations of signaling with particular attention paid to games of incomplete information (games where even which game is being played is uncertain). This will allow us to extend pragmatics beyond Gricean conversational maxims to areas like deception and polite signaling.
Taught by: Robin Clark
Course not offered every year
Activity: Lecture
1 Course Unit
LING 496 Agents and Evolution
The course surveys Evolutionary Game Theory and Agent-Based Models with special reference to language. We will develop systems for modeling various types of language change as well as the dynamics of linguistic micro-variation. Topics include semantic/pragmatic cycles in signaling, the maintenance of conventional meaning, and testing for selection in language change.
Taught by: Clark
Course not offered every year
Activity: Lecture
1 Course Unit

LING 500 Research Workshop
This course is intended for advanced graduate students who are interested in developing a research paper. Each student will present his or her topic several times during the semester as the analysis develops, with feedback from the instructor and other students to improve the organization and content of the analysis. The goal is an end product appropriate for delivery at a national conference or submission to a journal.
Course usually offered in fall term
Activity: Seminar
1 Course Unit

LING 502 Linguistic Field Methods
Instruction and practice in primary linguistic research, producing a grammatical sketch and a lexicon through work with a native-speaker consultant and some reference materials. Consultant work is shared with LING 302. Each student will write a final paper on some aspect of the language.
Taught by: Buckley/Legate
Course not offered every year
Also Offered As: LING 302
Prerequisites: LING 530 and LING 550
Activity: Seminar
1 Course Unit

LING 503 Sound Structure of Language
An introduction to articulatory and acoustic phonetics; phonetic transcription; basic concepts and methods of phonological analysis.
Taught by: Noyer
Course usually offered in spring term
Also Offered As: LING 230
Activity: Lecture
1 Course Unit

LING 510 Historical and Comparative Linguistics
Taught by: Ringe
Course usually offered in fall term
Activity: Lecture
1 Course Unit

LING 511 Language Variation & Change
Speech communities as a focus for the understanding of language evolution and change: language variation in time and space. The relationship between language structure and language use; between language change and social change. Populations as differentiated by age, sex, social class, race, and ethnicity, and the relationship of these factors to linguistic differentiation.
Taught by: Tamminga
Course usually offered in spring term
Activity: Lecture
1 Course Unit

LING 515 Dynamics of Language
This course introduces the tools, techniques, as well as current research on the approach to language as a dynamical system, which seeks to fruitfully integrate linguistic theory, psycholinguistics, corpus linguistics, and historical linguistics through the means of mathematical modeling. Topics include: string processing, dynamical systems and stability, stochastic processes, mathematical models of population dynamics, and dynamical models of language learning, processing, and change.
Taught by: Yang
One-term course offered either term
Prerequisite: LING 510
Activity: Seminar
1 Course Unit

LING 520 Phonetics I
Speech: its linguistic transcription, its quantitative physical description, and its relationship to the categories and dimensions of language structure and use. The physical basis of speech: acoustics, vocal tract anatomy and physiology, hearing and speech perception, articulation and motor control. Phonetic variation and change. Prosody: stress, intonation, phrasing speech rate. Phonetic instrumentation, the design and interpretation of phonetic experiments, and the use of phonetic evidence in linguistic research, with emphasis on computer techniques. Introduction to speech signal processing. Speech technology: introduction to speech recognition, text-to-speech synthesis, speech coding. This course will emphasize the phonetics of natural speech, and its connections to issues in other areas of linguistics and cognitive science.
Taught by: Liberman/Kuang
Course usually offered in fall term
Prerequisites: An introductory course in linguistics, or consent of instructor
Activity: Lecture
1 Course Unit

LING 521 Phonetics II
This is a methodology course, which focuses on how to conduct phonetics research using very large speech corpora. Topics include scripting and statistical techniques, automatic phonetic analysis, integration of speech technology in phonetics studies, variation and invariability in large speech corpora, and revisiting classic phonetic and phonological problems from the perspective of corpus phonetics.
Taught by: Kuang/Liberman
Course usually offered in spring term
Prerequisite: LING 520
Activity: Lecture
1 Course Unit
LING 525 Computer Analysis and Modeling of Biological Signals and Systems
A hands-on signal and image processing course for non-EE graduate students needing these skills. We will go through all the fundamentals of signal and image processing using computer exercises developed in MATLAB. Examples will be drawn from speech analysis and synthesis, computer vision, and biological modeling.
Taught by: Liberman
Course usually offered in fall term
Also Offered As: CIS 558
Activity: Lecture
1 Course Unit

LING 530 Phonology I
First half of a year-long introduction to the formal study of phonology. Basic concepts in articulatory phonetics; the distribution of sounds (phonemes and allophones); underlying and surface forms, and how to relate them using both ordered-rule and surface constraint approaches. The survey of theoretical topics in this term includes distinctive features (context, organization, underspecification); the autosegmental representation of tone; and the theory of phonological domains and their interaction with morphological and syntactic constituency. Emphasizes hands-on analysis of a wide range of data.
Taught by: Noyer
Course usually offered in fall term
Prerequisite: LING 503 or equivalent
Activity: Lecture
1 Course Unit

LING 531 Phonology II
Second half of a year-long introduction; continues LING 530. Topics to be surveyed include syllable structure and moraic theory; the prosodic hierarchy; the properties and representation of geminates; templatic and prosodic morphology; reduplication and emergence of the unmarked; and metrical phonology (properties of stress, foot typology, and issues of constituency). Emphasizes hands-on analysis of a wide range of data.
Taught by: Buckley
Course usually offered in spring term
Prerequisite: LING 530
Activity: Lecture
1 Course Unit

LING 550 Syntax I
A general introduction at the graduate level to the analysis of sentence structure. The approach taken is that of contemporary generative-transformational grammar.
Taught by: Kroch
Course usually offered in fall term
Activity: Lecture
1 Course Unit

LING 551 Syntax II
The second half of a year-long introduction to the formal study of natural language syntax. Topics to be covered include grammatical architecture; derivational versus representational statement of syntactic principles; movement and locality; the interface of syntax and semantics; argument structure; and other topics. The emphasis is on reading primary literature and discussing theoretical approaches, along with detailed case-studies of specific syntactic phenomena in different languages.
Taught by: Legate
Course usually offered in spring term
Prerequisite: LING 550 or permission of instructor
Activity: Lecture
1 Course Unit

LING 556 Historical Syntax
Introduction to the study of the syntax of languages attested only in historical corpora. The course will cover methods and results in the grammatical description of such languages and in the diachronic study of syntactic change.
Taught by: Kroch
Course not offered every year
Prerequisite: LING 551 or the equivalent
Activity: Seminar
1 Course Unit

LING 558 Dialect Geography
This course traces the origins and characteristics of regional dialects. Beginning with a survey of the traditional dialectology literature beginning in the 19th century, we will discuss the influences of social, political, and physical geography on language change. We will then move on to examine the foundations of North American English dialect regions and the large-scale language changes that underlie their development. Students enrolled in 368 will complete a final project on American English accents; students enrolled in 558 will write an original research paper on a non-English dialect topic of their choosing.
Taught by: Tammenga
Course not offered every year
Also Offered As: LING 368
Activity: Lecture
1 Course Unit

LING 570 Developmental Psycholinguistics
The generative literature on language acquisition has produced many accurate and insightful descriptions of child language, but relatively few explicit accounts of learning that incorporate the role of individual experience into the knowledge of specific languages. Likewise, the experimental approach to language development has identified processes that could provide the bridge between the data and the grammar, but questions remain whether laboratory findings can sufficiently generalize to the full range of linguistic complexity. This course is an overview of research in language acquisition with particular focus on the important connection between what children know and how they come to know it.
Taught by: Yang
Course usually offered in spring term
Activity: Seminar
1 Course Unit

LING 575 Mental Lexicon
An investigation of the psychological representations and processing of words. Topics include: the extraction of words from speech; lexical access and production; the induction of morphological and phonological regularities in word learning; decomposition of morphologically complex words; frequency effects in morphological processing; storage vs. computation in the lexicon; the past tense debate; morphological change. This course makes extensive use of linguistic corpora. Students will also be familiarized with experimental design issues in the psycholinguistic study of the lexicon.
Taught by: Yang
Course not offered every year
Activity: Lecture
1 Course Unit
LING 580 Semantics I
This course provides an introduction to formal semantics for natural language. The main aim is to develop a semantic system that provides a compositional interpretation of natural language sentences. We discuss various of the aspects central to meaning composition, including function application, modification, quantification, and binding, as well as issues in the syntax-semantics interface. The basic formal tools relevant for semantic analysis, including set theory, propositional logic, and predicate logic are also introduced.
Taught by: Schwarz
Course usually offered in fall term
Also Offered As: LING 380
Prerequisite: Ling 550
Corequisite: Ling 550
Activity: Lecture
1 Course Unit

LING 581 Semantics II
The first part of the course expands the system from LING 580 to include intensional contexts. In particular, we discuss analyses of modals, attitude verbs, and conditionals, as well as the scope of noun phrases in modal environments. The second part of the course discusses a selection of topics from current work in semantics, such as the semantics of questions, tense and aspect, donkey anaphora, indefinites, genericity, degree constructions, events and situations, domain restriction, plurality and focus.
Taught by: Schwarz
Course usually offered in spring term
Prerequisite: Ling 551
Corequisite: Ling 551
Activity: Lecture
1 Course Unit

LING 595 Game Theoretic Pragmatics
A great deal of linguistic meaning can be explained if we conceive of language as being a signaling system used by rational agents. Game theory provides an explicit mathematical account of rational, strategic interaction. This course will lay out the fundamentals of game theory, evolutionary game theory and multi-agent systems necessary to develop a theory of “radical pragmatics.” We will discuss game theoretic models of implicature; presupposition and accommodation; reference tracking; scalar implicature as well as a number of other phenomena.
Taught by: Clark
Course not offered every year
Activity: Lecture
1 Course Unit

LING 596 Pragmatics Workshop
Pragmatics Workshop
Taught by: Clark
Course not offered every year
Activity: Seminar
1 Course Unit

LING 603 Topics in Phonology
Topics are chosen from such areas as featural representations; syllable theory; metrical structure; tonal phonology; prosodic morphology; interaction of phonology with syntax and morphology.
Taught by: Buckley/Noyer
Course not offered every year
Prerequisite: LING 530-531
Activity: Seminar
1 Course Unit

LING 607 Topics in Psycholinguistics
Topics in Psycholinguistics
Taught by: Schuler
Activity: Seminar
1 Course Unit

LING 608 Topics in Semantics and Pragmatics
Topics in Semantics & Pragmatics
Taught by: Clark/Schwarz
Course not offered every year
Activity: Seminar
1 Course Unit

LING 610 Seminar in Historical and Comparative Linguistics
Selected topics either in Indo-European comparative linguistics or in historical and comparative method.
Taught by: Ringe
One-term course offered either term
Activity: Seminar
1 Course Unit

LING 615 Comparative Indo-European Grammar
A survey of phonology and grammar of major ancient Indo-European languages and the reconstruction of Proto-Indo-European. A knowledge of at least one ancient Indo-European language is required.
Taught by: Ringe
Two terms; student must enter first term.
Activity: Seminar
1 Course Unit

LING 616 Comparative Indo-European Grammar II
A survey of phonology and grammar of major ancient Indo-European languages and the reconstruction of Proto-Indo-European. A knowledge of at least one ancient Indo-European language is required.
Taught by: Ringe
One-term course offered either term
Activity: Seminar
1 Course Unit

LING 620 Topics in Phonetics
Topics in Phonetics
Taught by: Liberman/Kuang
Course not offered every year
Activity: Seminar
1 Course Unit

LING 630 Seminar in Morphology
Readings in modern morphological theory and evaluation of hypotheses in the light of synchronic and diachronic evidence from various languages.
Taught by: Noyer/Embick
Course not offered every year
Prerequisite: LING 530
Activity: Seminar
1 Course Unit

LING 650 Topics in Natural-Language Syntax
Detailed study of topics in syntax and semantics, e.g., pronounization, negation, complementation. Topics vary from term to term.
Taught by: Kroch/Legate
One-term course offered either term
Prerequisite: LING 551 or permission of instructor
Activity: Seminar
1 Course Unit
LING 653 Topics in the Syntax-Semantics Interface
Topics in the Syntax-Semantics Interface
Taught by: Kroch
Course usually offered in fall term
Activity: Seminar
1 Course Unit

LING 660 Research Seminar in Sociolinguistics
Students approaching the dissertation level will explore with faculty frontier areas of research on linguistic change and variation. Topics addressed in recent years include: experimental investigation of the reliability of syntactic judgments; the development of TMA systems in creoles; transmission of linguistic change across generations. The course may be audited by those who have finished their course work or taken for credit in more than one year.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: This course will have different topics each term.

LING 662 Topics in Experimental Sociolinguistics
Topics in Experimental Sociolinguistics
Course not offered every year
Activity: Seminar
1 Course Unit

LING 670 Topics in the Cultural Evolution of Language
Readings in the cultural evolution of language. This encompasses research on the contribution of processes of cultural change to the emergence of language in the human species, the emergence of new languages, and language change viewed as a cultural-evolutionary process. There will be an emphasis on research employing empirical methods, particularly experimentation. Otherwise focus varies from term to term.
Course not offered every year
Activity: Seminar
1 Course Unit

LING 675 Language and Cognition
Activity: Seminar
1 Course Unit

LING 999 Independent Study and Research
One-term course offered either term
Activity: Independent Study
1 Course Unit
Notes: Student must submit brief proposal for approval. May be repeated for credit.

Logic, Information and Computation (LGIC)

LGIC 010 Ideas in Logic and Computation
This course provides an introduction to some of the fundamental ideas of logic and computation. Topics will include truth functional logic, quantificational logic, and logical decision problems.
Taught by: Weinstein
Course usually offered in spring term
Also Offered As: PHIL 005
Activity: Lecture
1 Course Unit
Notes: This is a Formal Reasoning course.

LGIC 210 Applied Mathematics of Information and Computation
The first semester of a two-semester course designed to introduce students to a range of mathematical subjects useful in the analysis of information and computation. This course will treat topics chosen from set theory, combinatorics, graph theory, and number theory.
Taught by: Scedrov, Townser
Course usually offered in fall term
Also Offered As: MATH 340
Prerequisite: MATH 114 or MATH 115 or permission of the instructor
Activity: Lecture
1 Course Unit

LGIC 220 Applied Mathematics of Information and Computation II
The second semester of a two-semester course devoted to mathematical subjects useful in the analysis of information and computation. Topics will be drawn from automata theory, formal languages, computability and complexity, and information theory.
Taught by: Scedrov, Townser
Course not offered every year
Also Offered As: MATH 341
Prerequisite: LGIC 210 or permission of the instructor
Activity: Lecture
1 Course Unit

LGIC 310 Logic I
Taught by: Scedrov, Townser, Weinstein
One-term course offered either term
Also Offered As: MATH 570, PHIL 410
Prerequisite: MATH 371 or MATH 503
Activity: Lecture
1 Course Unit

LGIC 320 Logic II
The second semester of a two-semester course on the fundamental results and techniques of mathematical logic. Topics will be drawn from model theory, proof theory, recursion theory, and set theory. Connections between logic and algebra, analysis, combinatorics, computer science, and the foundations of mathematics will be emphasized.
Taught by: Scedrov, Townser, Weinstein
One-term course offered either term
Also Offered As: MATH 571, PHIL 412
Prerequisite: LGIC 310 or permission of the instructor
Activity: Seminar
1 Course Unit

LGIC 499 Topics in Logic
This course will focus on the fundamental results and techniques of mathematical logic. Topics will be drawn from model theory, proof theory, recursion theory, and set theory. Connections between logic and algebra, analysis, combinatorics, computer science, and the foundations of mathematics will be emphasized.
Taught by: Weinstein
Course not offered every year
Activity: Seminar
1 Course Unit
Malayalam (MLYM)

MLYM 408 Beginning Malayalam Part I
This course is designed to develop skills in reading, writing, and speaking. It will focus on the alphabet, basic vocabulary, nouns (cases, gender and number), verbs and their basic tenses, numerals, rules of joining words, adjectives, adverbs, and sentence structure. Guided conversation will be a part of every class. Students will receive considerable training in speaking and writing their own sentences and paragraphs.
For BA Students: Language Course
Taught by: Kurichi
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MLYM 409 Beginning Malayalam Part II
This course is designed to develop skills in reading, writing, and speaking. It will focus on the alphabet, basic vocabulary, nouns (cases, gender and number), verbs and their basic tenses, numerals, rules of joining words, adjectives, adverbs, and sentence structure. Guided conversation will be a part of every class. Students will receive considerable training in speaking and writing their own sentences and paragraphs.
For BA Students: Language Course
Taught by: Kurichi
Course usually offered in spring term
Prerequisites: Beginning Malayalam Part I or equivalent ascertained through placement test or permission of instructor.
Activity: Seminar
1 Course Unit

MLYM 428 Intermediate Malayalam Part I
This course is designed to further the language skills learned in Beginning Malayalam. Direct and indirect speech, passive voice, postpositions, and rules of joining words, will be included. Reading and discussion of texts from current Malayalam literature (essays, narration, short stories, and poems) will be a major portion of the course.
For BA Students: Language Course
Taught by: Kurichi
Two terms, student must enter first term.
Activity: Lecture
1 Course Unit

MLYM 429 Intermediate Malayalam Part II
This course is designed to further the language skills learned in Beginning Malayalam. Direct and indirect speech, passive voice, postpositions, and rules of joining words, will be included. Reading and discussion of texts from current Malayalam literature (essays, narration, short stories, and poems) will be a major portion of the course.
For BA Students: Last Language Course
Taught by: Kurichi
Course usually offered in spring term
Prerequisites: Intermediate Malayalam Part I or equivalent ascertained through placement exam or permission of instructor.
Activity: Seminar
1 Course Unit

Management (MGMT)

MGMT 100 Leadership and Communication in Groups
Through the process of action, reflection, and experimentation, and application, MGMT 100 aims to develop your leadership, teamwork, and communication skills. The course provides many opportunities to strengthen your ability to exercise leadership through service, to speak and write persuasively, and to work collaboratively with a diverse group of individuals. Through the course of the term, you will have a heightened sense of your individual strengths and opportunities for growth. Eleven sections of approximately 60 students are scheduled each year (nine in the fall; two in the spring). Attached to each section are six recitations. Your recitation determines your project team. Whether you are in lecture participating in role plays or simulations, in recitation doing impromptu speeches, or out in the field working on your project, Management 100 is highly interactive and participative. The hallmark of the course is experiential learning.
Activity: Lecture
1 Course Unit
Notes: This course is exclusively reserved for Wharton undergraduate students.

MGMT 101 Introduction To Management
We all spend much of our lives in organizations. Most of us are born in organizations, educated in organizations, and work in organizations. Organizations emerge because individuals can’t (or don’t want to) accomplish their goals alone. Management is the art and science of helping individuals achieve their goals together. Managers in an organization determine where their organization is going and how it gets there. More formally, managers formulate strategies and implement those strategies. This course provides a framework for understanding the opportunities and challenges involved in formulating and implementing strategies by taking a “system” view of organizations, which means that we examine multiple aspects of how managers address their environments, strategy, structure, culture, tasks, people, and outputs, and how managerial decisions made in these various domains interrelate. The course will help you to understand and analyze how managers can formulate and implement strategies effectively. It will be particularly valuable if you are interested in management consulting, investment analysis, or entrepreneurship - but it will help you to better understand and be a more effective contributor to any organizations you join, whether they are large, established firms or startups.
One-term course offered either term
Prerequisite: NONE
Activity: Recitation
1 Course Unit

MGMT 104 Industrial Relations and Human Resource Management
This undergraduate core course introduces students to a combination of basic concepts and timely topics around work and employment. As such, it is divided into two main sections and two quarters within each of those. The first main section deals with micro-level work issues, while the second main section deals with macro-level work issues. Within each of those sections, the first quarter focuses on basic concepts, while the quarter section deals with more applied topics.
One-term course offered either term
Prerequisites: MGMT 100 and MGMT 101
Activity: Lecture
1 Course Unit
MGMT 111 Multinational Management
Multinational management is the study of the international corporation and the global political and economic environment. This course provides an introduction to the more advanced offerings. It covers the historical origins of the multinational corporation, the economics of trade, money and investment in the world economy, and the policies and behavior of governments and international organizations. We place considerable emphasis in understanding the national and historic origins of the international firm, as well as the current issues regarding emerging economies and shifts in the political economy of global markets.
Prerequisites: MGMT 100 and MGMT 101
Activity: Lecture
1 Course Unit

MGMT 205 Multinational Corporate Strategies
This course focuses on the creation of competitive advantage in the multinational firm. It examines the nature of global competition by exploring the characteristics of global versus non-global industries and firms. We also explore different types of international strategy and structure and examine the specific challenges of managing in multiple countries and markets. Finally, we consider the strategic allocation of resources along the value chain and the role of strategic alliances as a crucial element of an effective global strategy.
Course usually offered in spring term
Prerequisites: MGMT 100, MGMT 101, and MGMT 111
Activity: Lecture
1 Course Unit

MGMT 208 Globalization and International Political Economy
Globalization and International Political Economy is an upper level undergraduate course designed to provide the background necessary to understand globalization and the changes taking place in the international political economy. The course objective is to help students develop a conceptual framework that will provide an understanding of the current international political-economic environment, provide a basis for thinking about the fundamental changes which are now taking place, and to develop a solid foundation on which new material can be added throughout the students' careers. format: Class discussions will be interactive and structured to encourage maximum student participation.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

MGMT 209 The Political Environment of the Multinational Firm
Are you well prepared to manage or analyze business challenges and competitive threats in a variety of political and social environments? For example, what should you do to dissuade or counter an individual critic armed with a camera phone a YouTube account? Or a decentralized grassroots organization that seemingly pops up overnight, appears to have no single leader or headquarters, and yet is quite successful in capturing media attention? Or a government official who became of a tight reelection campaign or an internal challenge from a populist general turn on you? Lone individuals, small activist groups and unexpected political shifts have done extensive damage to the reputations - and value - of multinationals in recent years. And yet most companies don't plan for, or even think about, investing in building the kinds of solid relationships with community leaders, governments, NGOs, and other key players that can help them avoid such crises and, when necessary, draw upon their reservoir of stakeholder capital to respond quickly and decisively when a challenge or threat emerges. This semester-long class provides an integrative perspective towards the management of these risks and opportunities. It highlights that better assessment of stakeholder opinion, understanding of how stakeholders impact firm value and how to influence stakeholder relationships with trust to unlock that value are increasingly critical elements of a firm's long-term success, particularly in emerging markets. Firms must also focus on continual improvement in their stakeholder engagement, reinforcing their actions with strategic communications and via organizational culture. The course will give students a combination of practical tools and the latest academic thinking in the emerging field of corporate diplomacy.
Activity: Lecture
1 Course Unit

MGMT 211 Competitive Strategy
This is an advanced course in competitive strategy. The course will apply the tools of industrial organization economics and game theory to examine the strategic decisions that managers make. We will examine those decisions concerning pricing, capacity investment, advertising, new product introductions, and research and development. Emphasis will be placed on the strategic interaction among rival sellers. In particular, we will look at the various methods of entry deterrence and strategic commitment. The course will attempt to integrate traditional economic models with case study materials.
Course usually offered in fall term
Prerequisites: MGMT 100 and MGMT 101 and some knowledge of microeconomics is suggested. The course will be discussion oriented and based largely on case materials and mini-lectures.
Activity: Lecture
1 Course Unit
MGMT 212 Social Entrepreneurship
This is a course on creating a business to attack a social problem and thereby accomplish both social impact and financial sustainability. For this course, social entrepreneurship is defined as entrepreneurship used to profitably confront social problems. This definition therefore views social entrepreneurship as a distinct alternative to public sector initiatives. The basic thesis is that many social problems, if looked at through an entrepreneurial lens, create opportunity for someone to launch a venture that generates profits by alleviating that social problem. This sets in motion a virtuous cycle - the entrepreneur is incented to generate more profits and in so doing, the more the profits made, the more the problem is alleviated. Even if it is not possible to eventually create a profit-making enterprise, the process of striving to do so can lead to a resource-lean not-for-profit entity. Creating a profitable social entrepreneurship venture is by no means a simple challenge. It involves deeply understanding how to prioritize a multi-mission entity, how to analyze and engage traditional agencies, how to formulate political strategies to develop influence and social assets in target beneficiary markets, how to forge negotiating strategies for securing resources, how to capture publicity for the enterprise, and generally how to minimize resource requirements. Students in teams will develop a PowerPoint deck proposing a social enterprise start up using the tools and principles of the course. 
Also Offered As: MGMT 812
Prerequisite: MGMT 230 RECOMMENDED
Activity: Lecture
0.5 Course Units

MGMT 214 Market Dynamics and Technical Change
The course is designed to meet the needs of future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using information technology to improve business processes and offerings. We will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems. There is definitely an overlap in content with other courses in intermediate microeconomics, or managerial economics. Nevertheless, the treatment is sufficiently distinctive to make it complementary to those other treatments for a student who is particularly interested in economic change, or is otherwise interested in acquiring a broader view of economics. 
Prerequisites: Students need to have taken a first college course in economics. Multivariate calculus is generally useful in economic theory at this level, but does not carry significant weight in this course. Similarly, an understanding of basic linear algebra enhances the value of the linear programming analysis of the firm, but is not a prerequisite. The course is reserved for Wharton juniors and seniors.
Activity: Lecture
1 Course Unit

MGMT 223 Business Strategy
This course encourages students to analyze the problems of managing the total enterprise in the domestic and international setting. The focus is on the competitive strategy of the firm, examining issues central to its long- and short-term competitive position. Students act in the roles of key decision-makers or their advisors and solve problems related to the development or maintenance of the competitive advantage of the firm in a given market. The first module of the course develops an understanding of key strategic frameworks using theoretical readings and case-based discussions. Students will learn concepts and tools for analyzing the competitive environment, strategic position and firm-specific capabilities in order to understand the sources of a firm's competitive advantage. In addition, students will address corporate strategy issues such as the economic logic and administrative challenges associated with diversification choices about horizontal and vertical integration. The second module will be conducted as a multi-session, computer-based simulation in which students will have the opportunity to apply the concepts and tools from module 1 to make strategic decisions. The goal of the course is for students to develop an analytical tool kit for understanding strategic issues and to enrich their appreciation for the thought processes essential to incisive strategic analysis. This course offers students the opportunity to develop a general management perspective by combining their knowledge of specific functional areas with an appreciation for the requirements posed by the need to integrate all functions into a coherent whole. Students will develop skills in structuring and solving complex business problems. 
Prerequisites: MGMT 100 and MGMT 101; seniors and juniors that have completed introductory courses in finance, marketing, and accounting.
Activity: Lecture
1 Course Unit

MGMT 224 Leading Diversity in Org
People in the workplace are constantly interacting with peers, managers, and customers with very different backgrounds and experiences. When hampered effectively, these differences can be the catalyst for creative breakthroughs and the pathway to team and organizational learning and effectiveness; but when misunderstood, these differences can challenge employees’ values, performance, workplace relationships, and team effectiveness. This course is designed to help students navigate diverse organizational settings more effectively and improve their ability to work within and lead diverse teams and organizations. It also offers students the opportunity to develop their critical thinking on topics such as identity, relationships across difference, discrimination and bias, equality, and equity in organizations and society and how they relate to organizational issues of power, privilege, opportunity, inclusion, creativity and innovation and organizational effectiveness. Class sessions will be experiential and discussion-based. Readings, self-reflection, guest speakers from organizations, case studies and a final project will also be emphasized. By the end of this course, you should be able to: 1) Evaluate the aspects of your identity and personal experiences that shape how you interact and engage with others and how they interact and engage with you in organizations 2) Explain how issues of power, privilege, discrimination, bias, equality, and equity influence opportunity and effectiveness in organizations 3) Propose ways to make relationships across difference in organizations more effective 4) Describe current perspectives on the relationships among diversity, inclusion, creativity, and innovation in organizations 5) Analyze a company’s current approach to leading diversity and use content from this course to propose ways to enhance learning and effectiveness in that company.
One term course offered either term
Activity: Lecture
0.5 Course Units
MGMT 225 Value Creation and Value Capture in American Business History
This course concerns the history of capitalism in America viewed from the perspective of the people who operated (and in some cases owned) the firms. Its focus is on the activities of value creation and value capture and on how evolving opportunities and selection pressures have conditioned the historic development of competition, strategic analysis and initiatives, organizational structures, merger-and-acquisition activity, entrepreneurship, and the like. Accounting and control are also part of the story; the course in fact considers issues arising in a variety of different management disciplines and shows off their interrelationships. The maintenance (or otherwise) of value capture over the cycle and over time is a running theme. The course has a narrative element (running from Franklin's days through the early twenty-first century) but its deeper purpose is to give students some idea of how to think about the future evolution of firms and industries. It proceeds through a consideration of actual business decisions and performance in a series of challenging and otherwise interesting moments in the evolution of the American business environment. The materials are unusual for the Wharton School—they are often case-like and when possible draw on documents contemporary to the decisions such as correspondence, memoranda, minutes of meetings, old newspaper and magazine stories, and eyewitness accounts. They require thoughtful preparation. This course is much more focused on the students than many and a successful experience of its demands that the students both engage with the materials and take an active role in the class discussion. The largest single element in the grading is a substantial term paper on a topic agreeable to both the student and the instructor. For more information, please contact the instructor: raff@wharton.upenn.edu.
Also Offered As: MGMT 714
Activity: Lecture
1 Course Unit

MGMT 229 IP Strategy
Announcing the first iPhone at Macworld 2007, Apple CEO Steve Jobs famously boasted: "And boy, have we patented it!" How, and to what extent, do patents and intellectual property really provide competitive advantage for innovative technology companies? What makes an IP asset strategically powerful? How do patents impact, and even drive, major corporate decisions including M&A, venture funding and exits, and entry into new markets? In this course, students will learn to critically analyze and answer these questions, gaining insights they can leverage in their future roles as innovation industry executives, entrepreneurs, strategists and investors. The course includes three major units. In Unit 1, Patents and Innovation Value, we examine closely the relationship between competitive advantage, value proposition, and intellectual property (particularly patents). We will apply our understanding of that relationship to critique and sharpen patent strategy to protect examples of cutting-edge technologies. In Unit 2, Patent Leverage and the Corporate Playbook, we study theory and examples of how intellectual property leverage strategically informs corporate transactions and decisions, for established companies as well as for start-ups. In Unit 3, Limits and Alternatives to Patents, we confront the recent legal trend toward reigning in the power and scope of patents. We also consider the growing importance of data as a proprietary technology asset, and discuss options for adapting intellectual property strategy appropriately. Throughout, students will learn and practice applying the concepts we learn to decision-making in examples based on innovative real-world technologies and businesses.
Also Offered As: LGST 729, MGMT 729
Activity: Lecture
0.5 Course Units
Notes: See the description for MGMT 729. This is a cross-listed course.

MGMT 230 Entrepreneurship
MGMT 230 integrates the material introduced in business fundamental courses and applies it to the design and evaluation of new ventures. The purpose of this course is to explore the many dimensions of new venture creation and growth and to foster innovation and new business formations in independent and corporate settings. The course addresses both a theoretical perspective on venture initiation and the application of writing an actual business plan. In this course you are asked to get out of the habit of being a receiver of ideas, facts, concepts and techniques, and get into the habit of generating ideas, identifying problems, analyzing and evaluating alternatives, and formulating workable action plans, thus putting textbook knowledge into practice. Students will get this hands-on experience in the following ways: Through the formation and ongoing work of venture teams that will design a comprehensive business development plan for a particular start-up company. Teams are expected to utilize the tools and analytical approaches discussed in class to their venture, through simulations, labs, lectures and class discussions that are designed to familiarize students with the many dimensions of entrepreneurship and new venture initiation. Class format varies throughout the course. In some class sessions, there will be a lecture on specific topics. Other sessions will consist of live simulations, labs, in-class exercises, and discussions of a particular topic or venture ideas that students are developing. Guest speakers will also lead and participate in some class sessions.
Activity: Lecture
1 Course Unit
MGMT 231 Entrepreneurial Venture Initiation
This advanced course on entrepreneurship focuses on developing a validated opportunity into a venture that is ready for seed financing and/or launching the product or service. Participants in the workshop must previously have developed a validated opportunity, either in a previous course or through independent efforts. Students may participate as a team of up to three people. Ideally, participants are committed to pursuing their opportunity commercially, or at least to seriously explore that possibility. The workshop provides a practical guidance for developing the product or service, forming the entity, raising capital, building the team, establishing partnerships, and sourcing professional services. After completing the course, you will be "pitch ready" - whether submitting to campus venture competitions or to outside investors. Most coursework is focused on applying concepts and frameworks to project tasks in developing the venture. Format: Readings, discussion, and developing an implementation plan for a real venture.
Course usually offered in spring term
Also Offered As: MGMT 806
Prerequisites: MGMT 230 recommended.
Activity: Lecture
1 Course Unit

MGMT 233 Strategies and Practices of Family-Controlled Companies
This course is designed for those persons who desire to understand the distinct strategies and practices of family-controlled companies and family wealth creation. It will focus on stakeholder decision making, financial and resource driven options for long-run competitiveness, organizational structures, management team issues; strategic planning from a resource-based perspective; transition planning for the corporate entity, family dynamics and communication issues; and leadership empowerment. The course is intended for those who plan to consult or provide professional services to family-controlled companies and for those planning a career in a family firm. Format: The class is structured around topical lectures with frequent utilization of case studies. There will be in-class discussion, as well as on-site and off-site project work time.
Course usually offered in spring term
Also Offered As: MGMT 833
Prerequisite: NONE
Activity: Lecture
1 Course Unit

MGMT 237 Management of Technology
The course is designed to meet the needs of the future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using information technology to improve business processes and offerings. We will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems.
Course usually offered in spring term
Prerequisites: MGMT 100 and MGMT 101; this course is exclusively reserved for Management and Technology students.
Activity: Lecture
1 Course Unit

MGMT 238 Organizational Behavior
Management 238 is an organizational behavior course, examining individual, interpersonal, and group effectiveness at work. Topics range from decision-making, motivation, and personality to networks, influence, helping, leadership, teamwork, and organizational culture. The learning method is heavily experiential, with a focus on applying key principles to the human side of management in role-play exercises, simulations, a mini-TED talk, and group projects in local organizations. This course requires the instructor's permission. Registration is by application only; Penn InTouch requests will not be processed. The link to the application form will be available on the Management Department's website: https://mgmt.wharton.upenn.edu/programs/undergraduate, beginning March 12, 2018. The deadline for applications is March 16, 2018 at 5 PM. Students will be notified after March 30, 2018 regarding the status of their application.
Prerequisites: MGMT 100 and MGMT 101
Activity: Lecture
1 Course Unit
Notes: This course is open to juniors and seniors across Penn.

MGMT 240 Group Dynamics
Open to all sophomores, juniors, and seniors. This course develops your knowledge and skills for designing, leading, and consulting with teams in organizations. The goals are to provide both the conceptual understanding and the behavioral skills required to improve team effectiveness. This course makes use of analytic and reflective writing, peer feedback and coaching, simulations, and an intensive field project with a real team in the Philadelphia area. There are four kinds of teams that are the focus of your study; teams of which you've been a member in the past; your 240 Team, with three or four other classmates; a team outside of 240 that your 240 Team will observe, analyze, and report on -- your Host Team; and a team you expect to be on in the future. The primary case material for applying course concepts (learned from readings and lectures) will be these teams you know from direct observation and experience. Expect to leave this course with new knowledge of how to diagnose and intervene -- as leader, member, or consultant -- to improve the performance sustainability, and impact on the members of any team. Prerequisite: Sophomore standing or above.
Activity: Lecture
1 Course Unit

MGMT 241 Knowledge for Social Impact: Analyzing Current Issues & Approaches
Recent technological changes have raised awareness of the magnitude and devastating long-term effects of poverty, food insecurity, limited and unequal access to education, and other social issues. Coupled with growing awareness of these issues is the emerging sense that traditional government programs and charities may be unable to solve these problems - at least, not alone. What may be needed are new strategies - strategies borne of (a) a deep understanding of the issues; (b) interdisciplinary collaboration; and (c) access to business knowledge, frameworks, and resources. This course is designed to provide the information, strategies, examples, and analytical mindset to make students more rigorous, insightful, and effective in analyzing social ills and crafting potential solutions. Together, a cross-disciplinary group of undergraduate students, including students in Wharton, the College, and other Penn Schools, will examine the nature and extent of two pressing social problems - food insecurity and barriers to post-secondary education - and current approaches to solving these problems. Taught by: Klein, Katherine
Activity: Lecture
1 Course Unit
MGMT 242 Corporate Governance, Executive Compensation and the Board
This course examines the relationships between corporate managers, the boards of directors charged with overseeing them, and investors. We'll review the responsibilities of the board, including financial statement approval, CEO performance assessment, executive compensation, and succession planning. While boards are legally bound to represent the interests of equity investors, in the course of carrying out this role they are often called on to respond to the needs of numerous other stakeholders, including customers, employees, and society at large. With global brands at risk and mistakes instantly transmitted via Internet and social media, the reputational stakes are very high. The course is a combination of lecture, guest lecture, discussion, case analysis, and in-class research workshops. We will review some of the theory underlying modern governance practice, drawing from theories and evidence provided by research across diverse fields, including finance, sociology, and organization and management theory. We will study specific situations where boards and management teams faced governance challenges, and assess the strategies used to deal with them. Finally, we'll examine the ways in which governance arrangements and external stakeholder involvement in governance affect corporate social behavior and global citizenship.
Prerequisites: MGMT 200 and MGMT 101
Activity: Lecture
1 Course Unit
Notes: Classes will comprise of a combination of mini-lectures and case discussions. Students will be expected to participate fully in class discussions. Effective participation will require sufficient and informed preparation of cases and assigned readings in advance of each class. Requirements: Students will be expected to participate fully in class discussions. Effective participation will require sufficient and informed preparation of cases and assigned readings in advance of each class. In addition, there will be two course papers. See instructor regarding course materials.

MGMT 243 Work and Technology: Choices and Outcomes
This half-semester course is organized in two modules. The first module "Technology, Operations, and Strategy" takes an organizational-level look at the different ways human and social capital are deployed by firms under varying strategies and different production paradigms. In addition, we look at past and current approaches to automation and the diverse rationales, transactional modes, and consequences of outsourcing, particularly of technical labor. The second module "Technology and Managing People" examines how traditional practices of managing human and social capital are being transformed by new technologies that give managers new ways to enact control and new means to induce commitment, while also giving individuals with high levels of human capital ("talent") new sources of leverage in negotiating the employment contract (in both economic and psychological terms) and new opportunities for inter-firm mobility and skill acquisition.
Course not offered every year
Prerequisites: We anticipate that students will have taken the first-year required Wharton 101 (or its replacement course before taking this elective. Taking the core MGMT101 class, either before or together with this elective, will also be helpful in understanding how organizations either function in their environment and the context within which firms make strategic decisions.
Activity: Lecture
0.5 Course Units
Notes: Students will be evaluated on class participation, written work and group assignment.

MGMT 247 Employment Law
See LGST 208. This is a cross-listed course.
Also Offered As: LGST 208
Activity: Lecture
1 Course Unit

MGMT 249 Mergers and Acquisitions
This course explores the role of mergers and acquisitions and alternative methods of corporate development in advancing the strategies of operating business. Emphasis is on the way companies use acquisitions to alter business mixes; seize opportunities in new products, technologies and markets; enhance competitive positioning; adjust to changing economics, and promote value-creating growth. Although the course will emphasize strategic acquisitions, it will also explore leveraged buy-outs and hostile financial acquisitions as well as their influence on corporate buyers. Please note that you must fulfill the prerequisites in order to enroll in this class.
Prerequisites: MGMT 100 and MGMT 101
Activity: Lecture
1 Course Unit

MGMT 251 Consulting to Growth Companies
This course offers students a unique opportunity to develop consulting skills and entrepreneurial expertise by working as consultants to thriving entrepreneurial ventures in the Philadelphia area. This capstone course combines both fieldwork and class work and allows students to apply knowledge and skills acquired through other course work to real world issues that must be addressed by operating companies. An understanding of characteristics producing rapid entrepreneurial growth and skills related to effective communications and management of a business relationship are emphasized. Team term consulting assignment, lectures, case analysis, and small group discussions.
Course usually offered in fall term
Prerequisites: Junior or Senior Standing Recommended
Activity: Lecture
1 Course Unit

MGMT 264 Venture Capital and Entrepreneurial Management
This course focuses on venture capital management issues in the context of a high-growth potential start-up company. The course is motivated by rapid increases in both the supply of and demand for private equity over the past two decades. The topic is addressed from two distinct perspectives: issues that relate to the demand for private equity and venture capital (the entrepreneur’s perspective) on the one hand, and issues that relate to the supply of capital (the investor’s perspective) on the other. As well, we will address management issues that relate to how the VC and the entrepreneur work together once an investment has been made, compensation issues, and governance issues in the privately held venture capital backed company. Format: Case/discussion format, supplemented by lectures and guest speakers.
Course usually offered in fall term
Prerequisite: Junior or Senior Standing Recommended
Activity: Lecture
1 Course Unit
MGMT 267 Entrepreneurship and Technological Innovation
This course will give you an overview of entrepreneurial development, especially within the realm of technical innovation. We will be concerned with content and process questions as well as with formulation and implementation issues that relate to conceptualizing, developing and managing successful new ventures. The class serves as both a stand-alone one and as a preparatory course to a more in-depth venture implementation class (MGMT 231) as well as other classes in the domain of management and entrepreneurship. Management 267 will appeal to individuals who have a desire to become entrepreneurs at some stage of their career. Similarly, students who intend to work in the entrepreneurial ecosystem (such as in the venture capital industry) will benefit from the course.
Activity: Lecture
0.5 Course Units

MGMT 272 Power and Politics in Organizations
The purpose of this course is to introduce you to the power dynamics in organizations. The course is designed so that you will learn concepts that are useful for understanding, analyzing, and developing political skill. But beyond discovering ways to extend your own power in organizations, we will also uncover lessons about ways in which power and politics can blind you, and how to navigate situations in which you are up against powerful people. Using a range of scholarly articles, cases, exercises, assessments and simulations, we will explore these important lessons about power and politics in organizations. Topics include voice, issue selling, building coalitions and networks, coping with intolerable bosses and incivility, and downsizing. Students will be expected to engage in field research for their coursework and final paper, and the course requires that students submit assignments for almost every class session. Thematically, this course highlights how your relationships with organizational stakeholders and an understanding of the organizational context are crucial to successfully navigating the political terrain of organizations. Organizations are inherently political arenas that require social astuteness, and an understanding of the “rules of the game.”
This course is designed for students aiming to develop their leadership, general management and career skills through a better understanding of power and politics, and relates to other courses on these topics in the Management department.
Activity: Lecture
0.5 Course Units

MGMT 276 Cultivating Judgment Skills: Forecasting in Business Politics
This course will explore the diverse ways in which scholars and practitioners have defined “good judgment.” And it will introduce students to practical tools for assessing and improving judgment, with special emphasis on probabilistic reasoning. Students will have the opportunity both to fine-tune their personal judgment skills as well as to master and then weave together insights from several bodies of scientific knowledge, including frequentist and Bayesian statistics, psychological work on judgment and choice, group dynamics, organizational behavior and political science (key concepts discussed in Tetlock’s 2015 book “Superforecasting”). We will focus on bottom-line accuracy in sizing up real world problems. Class work will be primarily exercises, including working as an individual and in teams. You will have opportunities to forecast on a wide range of political, business, and macro-economic questions, which we will use as feedback tools to help you calibrate your judgment. Assessments include a weekly concept test and a final group presentation aimed to help you improve your judgment. The goal is to launch you on the lifelong process of learning how much trust you should place in your judgments of trustworthiness.
Activity: Lecture
1 Course Unit

MGMT 288 Managing and Competing in China
This course provides an examination of some of the largest businesses in the People’s Republic of China, acquainting students with the governance and management (both management structure and management teams) of some of the largest and best known Chinese firms. Students will also become acquainted with the capabilities and liabilities of Chinese firms and their strategic options. Tools needed to assess the investment potential of Chinese firms will be provided, and students will have an opportunity to do original research on issues of governance and management of Chinese firms.
Course usually offered in fall term
Also Offered As: MGMT 788
Activity: Lecture
1 Course Unit

MGMT 291 Negotiations
This course includes not only conflict resolution but techniques which help manage and even encourage the valuable aspects of conflict. The central issues of this course deal with understanding the behavior of individuals, groups, and organizations in conflict management situations. The purpose of this course is to understand the theory and processes of negotiations as it is practiced in a variety of settings. The course is designed to be relevant to the broad spectrum of problems that are faced by the manager and professional including management of multinationals, ethical issues, and alternative dispute resolutions. Cross listed w/ LGST 206 and OIDD 291.
Also Offered As: LGST 206, OIDD 291
Prerequisites: MGMT 100 and MGMT 101

Taught by: Weigelt and Staff
Activity: Lecture
1 Course Unit
MGMT 610 Foundations of Teamwork and Leadership
MGMT 610 is the first core course in the MBA Program and it cannot be waived. The first week of the fall term (in August) is dedicated to this formative and foundational experience. This course focuses on developing students’ knowledge and skill set for teamwork and leadership. It is meant to be an intense immersion experience that draws strongly on the pedagogy of the Wharton Teamwork and Leadership Simulation, a team-based, highly interactive simulation that was custom-designed specifically to allow students to experience the core concepts they learn in this class. The three goals of this course are for students to learn: 1. Leadership behaviors: how to enact the skills that contribute to a team’s effective performance. 2. Team dynamics: how to be an effective team member, as well as how to best design work teams. 3. Organizational awareness: understanding organizational culture. Format: A custom-designed Wharton-only simulation is paired with course sessions to deliver a unique learning experience. Classes will include experiential learning combined with debriefings, lectures, readings, class discussion and personal and group performance feedback. This course reflects the realities that informal leadership occurs in teams on an ongoing basis, that being a good team player is a part of leadership, and that many of one’s early experiences with leadership will occur while working on teams. Because of the team-based nature of this course, and time intensive nature of this experience, attendance is mandatory for ALL five sessions of this class.
Activity, Lecture

MGMT 611 Managing Established Enterprises
The management of large, established enterprises creates a range of multi-facet challenges for the general manager. A general manager needs to understand the internal workings of a firm, how to assess and create a strategy, and how to take into account increasing, globalization. While these issues are distinct, they are very much intertwined. As a result, this course will provide you with an integrated view of these challenges and show you that effective of an established enterprise requires a combination of insights drawn from economics, sociology, psychology and political economy.
Also Offered As: LAW 516
Activity, Lecture
1 Course Unit

MGMT 612 Management of Emerging Enterprises
Emerging enterprises, the focus in this course, are small, new, fast-growing organizations. Their founders and managers face multifaceted challenges: how to assess the competitive position of their business model and develop a strategy; how to develop the internal organizational structure, culture and policies for selecting and managing employees; and how to pursue global opportunities. We cover these challenges in separate modules on strategy, human and social capital, and global issues. The human and social capital module covers classic management challenges of aligning interests of the individual and the organization; managing individual psychological needs and social influences; and developing employee capabilities that provide competitive advantage. Also covered are unique challenges that young organizations face, i.e. building an effective culture; recruiting, selecting, and retaining talent; building systematic approaches to motivating employees; coping with the stresses of rapid growth; and leveraging the benefits (and avoiding the liabilities) of the founder’s powerful imprint. The strategy module covers fundamental issues central to the competitiveness of the enterprise. Because the strategy field is broad, MGMT 612 emphasizes topics and frameworks that are most relevant for younger firms, such as innovation, disruption, managing resource constraints, and building capabilities. However, a key insight of the module is the importance of seeing the playing field from the perspective of the competition. Thus, by the end of this section, students will have a robust grounding in strategy that will allow them to succeed, whether their career path leads to a Fortune 100 firm or a garage start up.

MGMT 624 Leading Diversity in Org
People in the workplace are constantly interacting with peers, managers, and customers with very different backgrounds and experiences. When hampered effectively, these differences can be the catalyst for creative breakthroughs and the pathway to team and organizational learning and effectiveness; but when misunderstood, these differences can challenge employees’ values, performance, workplace relationships, and team effectiveness. This course is designed to help students navigate diverse organizational settings more effectively and improve their ability to work within and lead diverse teams and organizations. It also offers students the opportunity to develop their critical thinking on topics such as identity, relationships across difference, discrimination and bias, equality, and equity in organizations and society and how they relate to organizational issues of power, privilege, opportunity, inclusion, creativity and innovation and organizational effectiveness. Class sessions will be experiential and discussion-based. Readings, self-reflection, guest speakers from organizations, case studies and a final project will also be emphasized. By the end of this course, you should be able to: 1) Evaluate the aspects of your identity and personal experiences that shape how you interact and engage with others and how they interact and engage with you in organizations 2) Explain how issues of power, privilege, discrimination, bias, equality, and equity influence opportunity and effectiveness in organizations 3) Propose ways to make relationships across difference in organizations more effective 4) Describe current perspectives on the relationships among diversity, inclusion, creativity, and innovation in organizations 5) Analyze a company’s current approach to leading diversity and use content from this course to propose ways to enhance learning and effectiveness in that company.

MGMT 625 Corporate Governance, Executive Compensation and the Board
This course examines the relationships between corporate managers, the boards of directors charged with overseeing them, and investors. We'll review the responsibilities of the board, including financial statement approval, CEO performance assessment, executive compensation, and succession planning. While boards are legally bound to represent the interests of equity investors, in the course of carrying out this role they are often called on to respond to the needs of numerous other stakeholders, including customers, employees, government and society at large. With global brands at risk and mistakes instantly transmitted via Internet and social media, the reputational stakes are very high.
The course is a combination of lecture, guest lecture, discussion, case analysis and in-class research workshops. We will review some of the theory underlying modern governance practice, drawing from theories and evidence provided by research across diverse fields, including finance, sociology, and organization and management theory. We'll study specific situations where boards and management teams faced governance challenges, and assess the strategies used to deal with them. Finally, we'll examine the ways in which governance arrangements and external stakeholder involvement in governance affects corporate social behavior and global citizenship.
Taught by: Mary-Hunter McDonnell
Activity: Lecture
0.5 Course Units

MGMT 671 Executive Leadership
Leaders mobilize resources toward valued goals. In this course, the focus is on growing the student's capacity as a leader in all parts of life. The purpose is to learn practical and customized lessons about how to improve performance and results at work, at home, in the community, and in the private self (mind, body, spirit) by finding mutual value among these four domains. The core idea is that leadership is about making a difference in all aspects of one's life. This course offers students the opportunity to practice the skills needed to do so, now and in the future. Students learn and apply key leadership principles and actively explore what it means for them to be real (to act with authenticity by clarifying what’s important), to be whole (to act with integrity by respecting the whole person), and to be innovative (to act with creativity by experimenting with how things get done). Please visit www.totalleadership.org to learn more. Special registration for MGMT 671: This course is only available to Wharton MBA students. The first step in the registration process for it is to apply for admission by writing a response to the email Professor Friedman sends in the Fall term to all Wharton MBA students. This course is not included in MBA Course Match.
Course usually offered in spring term

1 Course Unit

MGMT 690 Mang Decsn Making
See OIDD 690. This is a cross-listed course with OIDD 690.
Also Offered As: OIDD 690
Activity: Lecture
1 Course Unit

MGMT 691 Negotiations
This course examines the art and science of negotiation. This course develops managerial skills by combining lectures with practice, using exercises where students negotiate with each other. Over the course of the semester, students will engage in a number of simulated negotiations ranging from simple one issue transactions to multi-party joint ventures. Through these exercises and associated readings, students explore the basic theoretical models of bargaining and have an opportunity to test and improve their negotiation skills. Cross-listed with LGST 806 and OIDD 691.
Also Offered As: LGST 806, OIDD 691
Activity: Lecture
1 Course Unit

MGMT 701 Strategy and Competitive Advantage
This course is concerned with strategy issues at the business unit level. Its focus is on the question of how firms can create and sustain a competitive advantage. A central part of the course deals with concepts that have been developed around the notions of complementarities and fit. Other topics covered in the course include the creation of competitive advantage through commitment, competitor analysis, different organizational responses to environmental changes, modularity, and increasing returns. An important feature of the course is a term-length project in which groups of students work on firm analyses that require the application of the course concepts.
Prerequisite: MGMT 611 or MGMT 612
Activity: Lecture
1 Course Unit

MGMT 711 Competitive Strategy and Industrial Structure
This is a course in analyzing competitive interactions. The course emphasizes a vision of strategy in which each competitor simultaneously chooses its strategy, taking into account the strategies of its opponents. Crucial to this vision is the anticipation of the moves of your opponent and, in particular, the expectation that your opponent is (almost) as smart as you are. Equal attention will be given to the development of techniques for analyzing competitive interactions and to the application of those techniques. Game theory and the economics of industrial organization provide the basis for the theoretical constructs developed in the course. Topics that will be explored include: market failures and profitability, competitive bidding, signaling, entry deterrence, agenda setting, regulations, and price wars.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
MGMT 712 Managing strategic partnerships
This course explores the management of strategic partnerships between firms, which have surged in recent years in response to globalization, technological evolution, deregulation, shortened product life cycles, and intensified competition. Today’s alliances drive corporate growth and change, and vary greatly in terms of partner type, commitment, equity investment, degree of control, between scale, and scope. They range from bilateral arrangements to ecosystems to outsourcing, often blurring traditional organizational boundaries and leading to the creation of globally distributed enterprises. In view of these contemporary developments, the objectives of the course are two-fold: (1) to arm you with a set of tools to facilitate the selection of an appropriate alliance strategy in a given situation; and, (2) to provide you with frameworks to help the initiate and implement different kinds of partnerships.

The emphasis lies on strategic and organizational aspects in the formation and management of these transactions, rather than financial considerations. Alternative growth strategies to strategic alliances (e.g., acquisitions), the impact of these partnerships on competition within an industry, and regulatory constraints will also be discussed. In terms of its pedagogical approach, this is designed to be an interactive, applied, case-based course with accompanying conceptual readings to help structure your thinking. Given the nature of the course, we will also apply the lessons from the cases to understand the challenges and implications of relevant recent and on-going deals. In addition, guest speakers with experience in investment banking, consulting, and industry will be invited to share their perspectives. A group project is intended to give you the opportunity to apply your learning from the course to a context that is most interesting and relevant to you.

Course not offered every year
Prerequisite: MGMT 611 or MGMT 612
Activity: Lecture
0.5 Course Units

MGMT 714 Value Creation and Value Capture in American Business History
This course examines how the kind of firms in which most Wharton students will spend the next stage of their careers came to be as they are today. At a superficial level, the course’s objectives are descriptive and narrative. Its deeper purpose is to give students some idea of how to think about the future evolution of firms and industries. The course will discuss the historical development of the business enterprise as an institution. It will also cover the evolution of competition and strategy and of corporate finance. The focus will be on American developments, since many of the innovations took place here, but there is scope for comparison with institutions in Japan and the leading European economies if there is student interest. The course considers issues arising in a number of different management disciplines and shows off their interrelationships. In terms of the Wharton curriculum and of recent research, strategy issues, and in particular the set of issues concerning how value can be created and captured at the enterprise level, are a running theme. Format: There will be occasional lecturing but this is principally a discussion course. The readings are predominantly primary source documents, supplanted when helpful by background notes from the instructor, with occasional readings from secondary sources. Evaluation is based on class participation, weekly brief written responses to the readings, and a term paper, with the great bulk of the grade weight on the last of these.

Taught by: Raff.
Also Offered As: MGMT 225
Prerequisite: MGMT 611 or MGMT 612
Activity: Lecture
1 Course Unit

MGMT 715 Political Environment of the Multinational Firm
All successful firms go global. This course provides a broad introduction to international business. You will learn about who loses and who gains from trade, what are the effects of tariffs and non-tariff barriers, the World Trade Organization (WTO), regional trading blocs, and NAFTA. The course then turns to the international financial architecture, focusing on exchange rate risk. We then move to multinational firm strategies, including a discussion of the reasons for why firms choose to do business globally through trade or FDI, international tax strategy, joint ventures, technology transfer, different ways to be a multinational firm, and ethical dilemmas. The class is a mix of lectures and cases that allow students to synthesize the extensive materials on multinational management, international institutions, economic policies, and politics with a goal towards formulating multinational firm strategy.

Activity: Lecture
0.5 Course Units

MGMT 720 Corporate Diplomacy
Are you well prepared to manage or analyze business challenges and competitive threats in a variety of political and social environments? For example, what should you do to dissuade or counter an individual critic armed with a camera phone a YouTube account? Or a decentralized grassroots organization that seemingly pops up overnight, appears to have no single leader or headquarters, and yet is quite successful in capturing media attention? Or a government official who because of a tight reelection campaign or an internal challenge from a populist general turns on you? Lone individuals, small activist groups and unexpected political shifts have done extensive damage to the reputations - and value - of multinationals in recent years. And yet most companies don’t plan for, or even think about, investing in building the kinds of solid relationships with community leaders, governments, NGOs, and other key players that can help them avoid such crises and, when necessary, draw upon their reservoir of stakeholder capital to respond quickly and decisively when a challenge or threat emerges. This semester-long class provides an integrative perspective towards the management of these risks and opportunities. It highlights that better assessment of stakeholder opinion, understanding of how stakeholders impact firm value and of how to infuse stakeholder relationships with trust to unlock that value are increasingly critical elements of a firm’s long-term success, particularly in emerging markets. Firms must also focus on continual improvement in their stakeholder engagement, reinforcing their actions with strategic communications and via organizational culture. The course will give students a combination of practical tools and the latest academic thinking in the emerging field of corporate diplomacy.

Taught by: Witold Henisz
Prerequisites: There are no formal prerequisites but participants should be able to contribute some individual expertise from previous coursework, training, and work experience and will, at other times, rely heavily on their peers to summarize and introduce key concepts and perspectives from other disciplines, industries or countries with which they may be less familiar.

Activity: Lecture
1 Course Unit
MGMT 721 Corporate Development: Mergers and Acquisitions
This course explores the role of mergers and acquisitions and alternative methods of corporate development in advancing the strategies of operating business. Emphasis is on the way companies use acquisitions to alter business mixes; seize opportunities in new products, technologies and markets; enhance competitive positioning; adjust to changing economics, and promote value-creating growth. Although the course will emphasize strategic acquisitions, it also will explore leveraging buy-outs and hostile financial acquisitions as well as their influence on corporate buyers. Please note that you must fulfill the prerequisites in order to enroll in this class.
Prerequisite: MGMT 611 or MGMT 612
Activity: Lecture
1 Course Unit

MGMT 729 Intel Property Strategy
Announcing the first iPhone at Macworld 2007, Apple CEO Steve Jobs famously boasted: "And boy, have we patented it!" How, and to what extent, do patents and intellectual property really provide competitive advantage for innovative technology companies? What makes an IP asset strategically powerful? How do patents impact, and even drive, major corporate decisions including M&A, venture funding and exits, and entry into new markets? In this course, students will learn to critically analyze and answer these questions, gaining insights they can leverage in their future roles as innovation industry executives, entrepreneurs, strategist and investors. This course is cross-listed with LGST 729/MGMT 229. The course includes three major units. In Unit 1, Patents and Innovation Value, we examine closely the relationship between competitive advantage, value proposition, and intellectual property (particular patents). We will apply our understanding of that relationship to critique and sharpen patent strategy to protect examples of cutting-edge technologies. In Unit 2, Patent Leverage and the Corporate Playbook, we study theory and examples of how intellectual property leverage strategically informs corporate transactions and decisions, for established companies as well as for start-ups. In unit 3, Limits and Alternatives to Patents, we confront the recent legal trend toward reining in the power and scope of patents. We also consider the growing importance of data as a proprietary technology asset, and discuss options for adapting intellectual property strategy appropriately. Throughout, students will learn and practice applying the concepts we learn to decision-making in examples based on innovative real-world technologies and businesses.
Also Offered As: LGST 729, MGMT 229
Activity: Lecture
0.5 Course Units

MGMT 731 Technology Strategy
The course is designed to meet the needs of future managers, entrepreneurs, consultants and investors who must analyze and develop business strategies in technology-based industries. The emphasis is on learning conceptual models and frameworks to help navigate the complexity and dynamism in such industries. This is not a course in new product development or in using information technology to improve business processes and offerings. We will take a perspective of both established and emerging firms competing through technological innovations, and study the key strategic drivers of value creation and appropriation in the context of business ecosystems. The course uses a combination of cases, simulation and readings. The cases are drawn primarily from technology-based industries. Note, however, that the case discussions are mainly based on strategic (not technical) issues. Hence, a technical background is not required for fruitful participation.
Activity: Lecture
1 Course Unit

MGMT 740 Leading Effective Teams
This course develops your knowledge and skills for designing, leading, and consulting with teams in organizations. The goals are to provide both the conceptual understanding and the behavioral skills required to improve effectiveness. This course emphasizes class participation, readings, analytic and reflective writing, assessments, peer feedback and coaching, lectures simulations and an intensive field project. with a real team in the Philadelphia area. Four kinds of teams are the focus of study: teams of which you've been a member in the past; your 740 team, with three or four classmates; a team outside of 740 that your 740 Team will observe, analyze, and report on - your Host Team; and a team that you expect to be on in the future. The case material for learning and applying course concepts will be these teams that you know from direct observation and experience. Expect to leave this course with new knowledge of how to diagnose and intervene - as leader, member, or consultant - to improve the performance, sustainability, and impact on the members of any team in any setting. The text is by J. Richard Hackman, Leading Teams (Harvard Business).
Prerequisite: MGMT 610
Activity: Lecture
1 Course Unit

MGMT 765 Venture Capital and Entrepreneurial Management: Practices and Institutions of Silicon Valley
This elective half-semester course will highlight venture capital and entrepreneurship in general and will explore selected aspects of this industry, including: industry trends and dynamics in Silicon Valley and the South of Market area (SOMA) of San Francisco; the recent emergence of alternative sources of startup financing, including incubators/accelerators and crowdfunding platforms, angel groups and stage-agnostic institutional investors; business and operational aspects of early stage companies in transition to mezzanine level stages of growth; and company "exits," including both initial public offerings and merger/sale transactions. MGMT765 and MGMT804 cover separate issues within the same general industry and are not redundant. This course addresses issues faced by later stage VC backed firms, while MGMT804 centers on early stage, pre-revenue startups. The format of this course relies heavily on site visits and recognized leaders within the Bay Area to bring forth on-the-ground perspectives of a changing and important industry. While MGMT804 is not a prerequisite, the two courses are complementary.
Prerequisite: MGMT 801 recommended
Activity: Lecture
0.5 Course Units
Notes: Requirements: Individual participation in lectures, discussions, and company visits, student presentations, and final paper.
MGMT 772 Power and Politics in Organizations
The purpose of this course is to introduce you to the power dynamics in organizations. The course is designed so that you will learn concepts that are useful for understanding, analyzing, and harnessing power. But beyond discovering ways to extend your own power, influence and political skill in organizations, we will also uncover lessons about ways in which power and politics can blind you and how to navigate situations in which you are up against powerful people. Using a range of theoretical and business articles, cases, exercises, assessments, and simulations, we will extract a variety of lessons about power and politics in organizations. Topics include political skill, influence, issue selling, change management, networks, hierarchy, political conflict, corruption, coping with intolerable bosses, speaking up, redemption, and downsizing. Thematically, this course highlights how your relationships with organizational stakeholders and an understanding of the organizational context are crucial to successfully navigating the political terrain of organizations. Organizations are inherently political arenas that require social astuteness, and an understanding of the “rules of the game.” This course is designed for students aiming to develop their leadership, general management and career skills through a better understanding of power and politics, and relates to other courses on these topics in the Management department.
Activity: Lecture
0.5 Course Units

MGMT 776 Cultiv Judgment Skills
A world-class poker player defined the difference between serious players and amateurs this way: “serious players know the difference between 40-60 and 60-40 propositions.” In other words, serious players are well calibrated (skilled at distinguishing what they know from what they don’t). This course gives you choices to explore how well calibrated you are in a low-risk setting. The course should appeal to students with interests in strategy, international business, political risk analysis, and the managerial challenges of maximizing the judgmental accuracy of key personnel. The class will pit its wits against competitors in a global forecasting tournament sponsored by the Intelligence Advanced Research Projects Agency (IARPA) - as well as design forecasting exercises around your individual career and business plans. Key challenges include: (a) learning to translate “interesting questions” into “testable propositions,” (b) getting into the habit of translating vague hunches into probability metrics and making good use of feedback on how well calibrated you are, (c) applying tools for enhancing accuracy, (d) making solo forecasts and exploring methods of making team forecasts more than the sum of their individual-contribution parts.
Prerequisites: None (but an interest in links between business and politics is helpful).
Activity: Lecture
0.5 Course Units

MGMT 782 Strategic Implementation
This course is directed toward the attainment of five interdependent objectives 1) to develop an understanding of strategy implementation in complex organizations; 2) to understand how organizational planning, design, control and human resource decisions are interdependent and critical to successful implementation; 3) to develop a sensitivity to the “realities” of strategy implementation in “real world” organizations; 4) to obtain a deeper understanding of your personal management style and how it may help or hinder strategy implementation; and 5) to become a better communicator and implementer of strategy. To meet these course objectives, the emphasis will be on learning powerful ideas about how to be systematic in strategy implementation efforts, making use of research about case problems, class discussions, in-class exercises, and student presentations. Much of the learning will take place in group discussions outside the classroom in preparation for the time we meet in the classroom.
Activity: Lecture
1 Course Unit

MGMT 784 Managerial Economics and Game Theory
The purpose of this course is to develop students’ abilities to apply game theory to decision making. Development of the tools of game theory and the application of those tools is emphasized. Game theory has become an important tool for managers and consultants in analyzing and implementing tactical as well as strategic actions. This course will primarily focus on examples useful for developing competitive strategy in the private sector (pricing and product strategy, capacity choices, contracting and negotiating, signaling and bluffing, takeover strategy, etc.). Game theory can also be used to address problems relevant to a firm’s organizational strategy (e.g., internal incentives and information source within a firm) and to a firm’s non-market environment (e.g., strategic trade policies, litigation and regulation strategy).
Prerequisites: (Intermediate microeconomics) or equivalent. It is expected that the student has been introduced to some basic game theory. There will be a quick review of the basics and some recommended supplemental readings for those who have little or no background in game theory.
Activity: Lecture
0.5 Course Units

MGMT 794 Understanding Careers and Executive Labor Markets
This course examines the structure of executive careers in order to help understand how those careers can be managed most effectively. By drawing on extensive economic, sociological and psychological research on careers, we will examine such questions as when executives should move on to the next job or even change fields altogether, and what are effective means of finding jobs, achieving promotions, managing on career, and achieving work-life balance. The first few sessions of the course explore the basic building blocks of the career, outlining our knowledge on the different orientations that individuals take to their careers, how approaches to the career change as people get older, and how different kinds of job moves within and across firms advance careers. The second part of the course explores in more detail the social resources that attract careers, notably social networks and relationships with mentors. The third section of the course then examines a number of the most important and difficult issues affecting modern careers, including making successful transitions, the effects of gender on careers, work life balance, and international careers.
Prerequisites: There are no prerequisites for this course.
Activity: Lecture
0.5 Course Units
MGMT 801 Entrepreneurship
MGMT 801 is the foundation course in the Entrepreneurial Management program. The purpose of this course is to explore the many dimensions of new venture creation and growth. While most of the examples in class will be drawn from new venture formation, the principles also apply to entrepreneurship in corporate settings and to non-profit entrepreneurship. We will be concerned with content and process questions as well as with formulation and implementation issues that relate to conceptualizing, developing, and managing successful new ventures. The emphasis in this course is on applying and synthesizing concepts and techniques from functional areas of strategic management, finance, accounting, managerial economics, marketing, operations management, and organizational behavior in the context of new venture development. The class serves as both a stand-alone class and as a preparatory course to those interested in writing and venture implementation (the subject of the semester-long course, MGMT 806). Format: Lectures and case discussions
Prerequisites: Wharton MBA students only.
Activity: Lecture
0.5 Course Units

MGMT 802 Change, Innovation & Entrepreneurship
Designed for students with a serious interest in entrepreneurship, this course will provide you with an advanced theoretical foundation and a set of practical tools for the management of startups and entrepreneurial teams in fast-changing and innovative environments. Building on the skills of MGMT 801, every class session is built around an experience where you have to put learning into practice, including the award-winning Looking Glass entrepreneurial simulation, role-playing exercises, and a variety of other games and simulations. The goal is to constantly challenge you to deal with entrepreneurial or innovative experiences, as you learn to navigate complex and changing environments on the fly, applying what you learned to a variety of scenarios. MGMT 802 is built to be challenging and will require a desire to deal with ambiguous and shifting circumstances. Format: Lectures, discussion, interim reports, class participation, readings reports, and presentations, and an innovation assessment in PowerPoint format.
Prerequisites: MGMT 801 strongly recommended.
Activity: Lecture
0.5 Course Units

MGMT 804 Venture Capital and Entrepreneurial Management
This elective half-semester course focuses on venture capital management issues in the context of the typical high-growth potential early stage start-up company. The course is fundamentally pragmatic in its outlook. It will cover seven principal areas relevant to the privately held high-growth start-up which include: commentary on the venture capital industry generally, as well as a discussion of the typical venture fund structure and related venture capital objectives and investment strategies; common organizational issues encountered in the formation of a venture backed start-up, including issues relating to initial capitalization, intellectual property and early stage equity arrangements; valuation methodologies that form the basis of the negotiation between the entrepreneur and the venture capitalist in anticipation of a venture investment; the challenges of fundraising, financing strategies and the importance of the business plan and the typical dynamics that play out between VC and entrepreneur; typical investment terms found in the term sheet and the dynamics of negotiation between the entrepreneur and the venture capitalist; compensation practices in a venture capital backed company; and corporate governance in the context of a privately-held, venture capital-backed start-up company and the typical dynamics that play out between VC and entrepreneur in an insider-led, "down round" financing.
Prerequisite: MGMT 801 recommended
Activity: Lecture
0.5 Course Units

MGMT 806 Formation and Implementation of Entrepreneurial Ventures
This advanced course on entrepreneurship focuses on developing a validated opportunity or concept into a venture that is ready for seed financing and/or launching the product or service. Participants in this course must previously have developed a validated opportunity, either in a previous course or through independent efforts. Students may participate as a team of up to three people. Ideally, participants are committed to pursuing their opportunity commercially, or at least to seriously explore that possibility. The course provides a practical guidance for developing the product or service, forming the entity, raising capital building the team, establishing partnerships, and sourcing professional services. After completing the course, you will be "pitch ready" - whether submitting to campus venture competitions or to outside investors. Most coursework is focused on applying concepts and frameworks to project tasks in developing the venture. Students must have successfully completed MGMT 801 before enrolling in this course. Students must have successfully completed MGMT 801 before enrolling in this course. Format: Highly interactive
Also Offered As: MGMT 231
Prerequisites: MGMT 801 REQUIRED
Activity: Lecture
1 Course Unit
MGMT 809 Private Equity in Emerging Markets
The course investigates the private equity industry in emerging markets. The goal of the course is to give students a realistic understanding of the roles, responsibilities and analytical skills required of market practitioners, as well as the tensions that arise between various stakeholders, including government officials, investors, entrepreneurs, and the press. The underlying premise is that private equity in those countries has evolved as a distinctly different asset class from private equity in industrialized countries in areas such as valuations, governance, structure, contract enforcement and regulatory transparency. The course will require high level of preparation and class participation. Classes will be a mix of guest speakers from the industry and business cases, to provide students with a practical grasp of the private equity industry and the particular issues involved with how the business works in emerging markets. Cases will highlight the challenges and tasks at each stage of the investment cycle, such as structuring a new fund, originating new deals, conducting due diligence, creating value and monitoring performance of portfolio companies, and exiting.
Prerequisites: Completion or waiver of FNCE 601.
Activity: Lecture
0.5 Course Units

MGMT 811 Entrepreneurship Through Acquisition
MGMT 811 focuses on the theoretical, strategic, analytic, and practical issues of acquiring a business. Topics include: locating a business, due diligence, reviewing and analyzing data, raising capital, structuring the deal, financing the acquisition, acquisition of interests, contract/asset purchase agreements, and integrating the target. Format: The class consists of lectures, in-class discussions of case studies, assigned readings, homework problems, and a group or individual project.
Prerequisites: MGMT 801 recommended.
Activity: Lecture
0.5 Course Units

MGMT 812 Social Entrepreneurship
This is a course on creating a business to attack a social problem and thereby accomplish both social impact and financial sustainability. For this course, social entrepreneurship is defined as entrepreneurship used to profitably confront social problems. This definition therefore views social entrepreneurship as a distinct alternative to public sector initiatives. The basic thesis is that many social problems, if looked at through an entrepreneurial lens, create opportunity for someone to launch a venture that generates profits by alleviating that social problem. This sets in motion a virtuous cycle - the entrepreneur is incented to generate more profits and in so doing, the more the profits made, the more the problem is alleviated. Even if it is not possible to eventually create a profit-making enterprise, the process of striving to do so can lead to a resource-lean not-for-profit entity. Creating a profit able social entrepreneurship venture is by no means a simple challenge. Cross-listed with MGMT 212.
Also Offered As: MGMT 212
Activity: Lecture
0.5 Course Units

MGMT 815 Sports Business Management
See LGST 809.
Also Offered As: LGST 809
Activity: Lecture
1 Course Unit

MGMT 816 Building Human Assets in Entrepreneurial Ventures
The success of entrepreneurial endeavors depends, even more so than in larger more bureaucratic organizations, on the ability to locate and manage talent effectively. Specifically, on the need to find the right people and keep them engaged in working on the organization's goals. We focus in this course on leading, building, and maintaining human assets in start-up and small, growing operations. The course is designed with several key components, these are: conceptual and practical readings relevant to the topic; case studies illustrating key concepts and issues; lecture on practical application and examples; and every class will also feature a presentation by and conversation with an outside expert whose work is relevant to guiding or advising start-ups and fast-growing small firms. We will focus on the following objectives: identifying the talent needed to initiate and sustain an entrepreneurial endeavor; structuring human resource policies and corporate culture to prepare for and facilitate firm growth; analyzing the human aspects of valuing entrepreneurial companies; and responding to conflict and organizational threats within nascent firms. This course will apply recent research from strategic human resource management, personnel economics and organizational behavior to the practical issues of building and managing human assets in new ventures.
Prerequisites: MBA students only.
Activity: Lecture
0.5 Course Units

MGMT 833 Strategies and Practices of Family-controlled Companies
This course is designed for those persons who desire to understand the distinct strategies and practices of family-controlled companies and family wealth creation. It will focus on stakeholder decision making; financial and resource driven options for long-run competitiveness, organizational structures, management team issues; strategic planning from a resource-based perspective; transition planning for the corporate entity, family dynamics, communication issues; and leadership empowerment. The course is intended for those who plan to consult or provide professional services to family-controlled companies and for those planning a career in a family firm. The class is structured around topical lectures with frequent utilization of case studies requiring active class participation, as well as on-site and off-site project work time. Submission of several written case studies, and a term project are required.
Also Offered As: MGMT 233
Prerequisites: Open to Wharton MBA and Penn graduate students
Activity: Lecture
1 Course Unit

MGMT 896 Decision Making in the Leadership Chair
Contact the Management Department for additional information at: Courseinfo@wharton.upenn.edu. Decision making in the leadership chair is a complex task and one that is difficult to teach in a business school setting. To bridge this gap, Mr. William P. Lauder and invited executives will bring their experiences into the classroom, primarily addressing key decision they made, how they weighed their options, and what they learned from the outcomes. The framework for the class centers around two crucial aspects of decision making in the leadership chair: the need to manage many groups of stakeholders, and the need to play many roles when doing this. This course is by application only to second-year Wharton MBAs and a maximum of 48 students will be selected. A communication will be sent regarding the application details.

MGMT 900 Economic Foundations of Management
This course examines some of the central questions in management with economic approaches as a starting point, but with an eye to links to behavioral perspectives on these same questions. It is not a substitute for a traditional microeconomics course. Economics concerns itself with goal directed behavior of individuals interacting in a competitive context. We adopt that general orientation but recognize that goal directed action need not take the form of maximizing behavior and that competitive processes do not typically equilibrate instantaneously.

The substantive focus is on the firm as a productive entity. Among the sorts of questions we explore are the following: What underlies a firms capabilities? How does individual knowledge aggregate to form collective capabilities? What do these perspectives on firms say about the scope of a firms activities, both horizontally (diversification) and vertically (buy-supply relationships)? We also explore what our understanding of firms says about market dynamics and industry evolution, particularly in the context of technological change. A central property of firms, as with any organization, is the interdependent nature of activity within them. Thus, understanding firms as "systems" is quite important Among the issues we explore in this regard are the following. Organizational "systems" have internal structure, in particular elements of hierarchy and modularity.

Even putting aside the question of individual goals and objectives and how they may aggregate, the question of organizational goal is non-trivial. To say that a firms objective is to maximize profits is not terribly operational. How does such an overarching objective get decomposed to link to the actual operating activities of individual subunits, including individuals themselves. This issue of goals has links to some interesting recent work that links the valuation process of financial markets to firm behavior. Financial markets are not only a reflection of firm value, but may guide firms initiatives in systematic ways.

Course usually offered in fall term

1 Course Unit

MGMT 918 Personnel Economics A
This is a half-semester PhD course in the Management Department that is also open to any current PhD students at Wharton. The canonical model in economics views an agent as a fully rational, atomistic individual making optimal choices under scarcity. This approach has been very powerful theoretically and empirically to explain and to predict behavior in the workplace. This model has also been enriched to accommodate other phenomena arguably affecting behavior in the workplace like the social context (e.g. peer effects, altruism, or social comparison), non-standard time preferences, loss aversion, and cognitive costs. Incorporating these ideas into the standard model can be accomplished in various ways but the real stress test for these theories is whether they predict behavior more generally (i.e. we don't just use theory to explain one choice but choices more generally) and to generate empirical predictions that can be tested using experiments.

In this mini-course we start off with a tour de force of the fundamental principal-agent model and the various behavioral extensions. The core of the course is, however, not theoretical but a practical course on how to design field experiments to test these ideas.
Activity: Seminar
0.5 Course Units

MGMT 919 Personnel Economics B
This is a half-semester PhD course in the Management Department that is also open to any current PhD students at Wharton. It is a continuation and builds on MGMT 918 please see the course description for MGMT 918. As in MGMT 918 we expand on the canonical model in economics and introduce views from behavioral economics and introduce views from behavioral economics to derive novel theories with empirically testable implications on workplace behavior and individual performance in labor markets and health. In this mini-course the focus is on continuing our review of the literature but the primary aim is to work towards a project description and paper that can be developed into a PhD chapter or journal article.
Activity: Seminar
0.5 Course Units

MGMT 920 Seminar in Human Resources Research
This class is designed to give students an overview of the fundamental topics and arguments in the area of employment, how different social science paradigms consider employment topics, and some of the new and emerging approaches to this topic.
Activity: Seminar
0.5 Course Units

MGMT 925 Seminar in Corporate Strategy
This course explores current research on corporate strategy. Over the past two decades, research in the area of corporate strategy has evolved considerably. The fundamental focus of the field has been on sources of competitive advantage at the of the firm, and the process of building and maintaining competitive advantage. In this class, we explore current research articles that best represent the development of rent-generating resources at the level of the firm. Topics addressed include the concept of strategy, research on the evolution of firm capabilities, competitive interaction, top management teams and strategy formation, and changes in firm scope through acquisitions, divestitures and alliances.
Course usually offered in spring term
Activity: Seminar
0.5 Course Units

MGMT 926 Corporate Transactions & Strategy
This course explores current research on firm boundaries and scope. Issues of firm boundaries and scope have received much attention in the strategic management field over the past twenty years. Theoretical frameworks explaining firm boundaries have been proposed, and empirical research on key success factors within particular boundary choices has flourished. Firm scope is one of the long-standing domains of research in strategic management that is still drawing substantial attention. While certain core perspectives have academic and empirical support, there is much debate and many new research questions to examine, particularly in a global context. In this class, we explore current research articles that best represent the research. Topics addressed include corporate diversification, choices between modes of market entry, key success factors in acquisitions and alliances, and impact of diversification on innovation.
Activity: Seminar
0.5 Course Units
MGMT 932 Proseminar in Management
Innovation is currently a hot topic. The popular stereotype holds that firms that are not innovating, or that are not at least saying that they are innovating, are backward at best and at risk of extinction at worst. Behind the hype is more than half a century of theory and research on organizational and managerial innovation, and the seminar will focus on this domain. A useful overview of the domain is available in Fariborz Damanpour "Organizational Innovation" in Oxford Research Encyclopedia on Business and Management Oxford University Press 2018. We will examine a number of theoretical and empirical approaches to understanding the phenomenon that have emerged during this period and identify key questions explored, principal contributions to the literature, and remaining questions and areas for future research. At the same time, we will embark on a journey in the sociology of knowledge, to encourage you to understand how the evolution of these approaches is linked to changes in the larger world.
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Topics for pro-seminars vary. Please contact the instructor as course content may vary.

MGMT 933 Psychological and Sociological Foundations of Research in Management
This course is required of all first-year doctoral students in Management and open to other Penn students with permission, provides an introduction to the psychological and sociological roots of management theory and research. The course is predicated on the belief that to be effective as a contemporary management scholar one needs a background in "the classics." Therefore, we will be reading classics from the fields of psychology and sociology in their original form during this semester.
Course usually offered in fall term
Activity: Seminar
0.5 Course Units

MGMT 935 Network Theory and Applications
This course explores network models and their applications to organizational phenomena. By examining the structure of relations among actors, network approaches seek to explain variations in beliefs, behaviors, and outcomes. The beauty of network analysis is its underlying mathematical nature - network ideas and measures, in some cases, apply equally well at micro and macro levels of analysis. Therefore, we read and discuss articles both at the micro level (where the network actors are individuals within organizations) and at the macro level (where the network actors are organizations within larger communities) that utilize antecedents or consequences of network constructs such as small worlds, cohesion, structural equivalence, centrality, and autonomy. We begin by examining the classic problem of contagion of information and behaviors across networks, and follow by considering the various underlying models of network structure that might underlie contagion and other processes. The next two sessions address a variety of mechanisms by which an actor's position in a network affects its behavior or performance. Then, the following two sessions address antecedents of network ties via the topics of network evolution and network activation. We close with a "grab bag" session of articles chosen to match class interests.
Activity: Seminar
0.5 Course Units

MGMT 937 Entrepreneurship Research Seminar
The seminar seeks to expose students to theoretical and empirical perspectives on entrepreneurship research. We will focus on the main questions that define the field and attempt to critically examine how, using a range of methodologies, researchers have approached these questions. As we review the literature, we will seek to identify promising research areas, which may be of interest to you in the context of your dissertation research. In addition to addressing the content of the received literature, we will examine the process of crafting research papers and getting them published in top-tier journals. Towards that end, we will characterize the key elements of high-impact papers and review the development process of such studies. Students are expected to come fully prepared to discuss and critique the readings that are assigned to each class meeting (see details below). Each student will serve as the discussion leader for one or more of the class sessions. Discussion leaders are expected to critically review several articles, identify new insights in the research that is being reviewed and evaluate its contribution to the literature, position the articles within the literature on the subject matter, raise discussion questions, and act as the discussion moderator for the class session. Each discussion leader is asked to prepare a one or two-page summary of the assigned papers which includes a statement of the main research question(s), the methodology, data set if any, summary of findings, a commentary with your thoughts on the reading, and proposed discussion questions. Prior to each class, the discussion leader will meet the instructor to help plan the class meeting. Towards the end of each class meeting, each student will be asked to articulate a research question that emerged from the session and describe the research design used to investigate the issue.
Activity: Seminar
0.5 Course Units

University of Pennsylvania
MGMT 938 Family Business Research Seminar
Family firms differ in a number of ways from non-family firms. These differences may result in differential behavior by and performance of family firms versus non-family firms. Although family-controlled firms make up the vast majority of businesses around the world, academic research in this space is sparse. This seminar seeks to expose students to theoretical and empirical perspectives on family businesses. Throughout the course, we will focus on the ownership, control, and management issues that set family firms apart. We will focus on the main issues faced by family firms, and attempt to critically examine how, using a range of methodologies, researchers have approached these issues. As we review the literature, we will seek to identify promising research areas, which may be of interest to you in the context of your dissertation research. In addition to addressing the content of the received literature, we will examine the process of crafting research papers and getting them published in top tier journals. Towards that end, we will characterize the key elements of high-impact papers and review the development process of such studies. Students are expected to come fully prepared to discuss and critique the readings that are assigned to each class (see details below). Each class will center on discussing in depth 4-5 papers from the reading list assigned to that class. Before each class, I will let you know which papers to prepare. Each student will serve as the discussion leader for one of more of the class sessions. Discussion leaders are expected to critically review several articles, identify new insights in the research that is being reviewed and evaluate its contribution to the literature, position the articles within the literature on the subject matter, raise discussion questions, and act as the discussion moderator for the class session. Each discussion leader is asked to prepare a one or two page summary of the assigned papers which includes a statement of the main research question(s), the methodology, data set if any, summary of findings, a commentary with your thoughts on the reading, and proposed discussion questions. Prior to each class, the discussion leader will meet with the instructor to help plan the class meeting. Towards the end of each class, each student will be asked to articulate a research question that emerged from the session and describe the research design used to investigate the issue.

0.5 Course Units

MGMT 939 Seminar in Entrepreneurial Innovation
This quarter-length class explores topics in entrepreneurial innovation. While innovation management from the perspective of the industry incumbent is a relatively more established literature, our collective knowledge of entrepreneurial innovation is still emerging. This Ph.D. class draws primarily on the smaller literature focused on entrepreneurial innovation while placing the discussion within the context of the larger literature on incumbent innovation management.
Taught by: Professor David Hsu
Activity: Seminar
0.5 Course Units

MGMT 952 Seminar in Macro-Organizational Behavior
Organizations are ubiquitous, and so is organization. This half-semester course explores organization theory (OT) from the 1960s through the end of the 20th century. We will examine the proliferation of organizational theories during this time period (such as contingency theory, resource dependence theory, ecological theory, and institutional theory) and understand how each theory attempts to relate structure and action over varying levels of analysis. We will determine one or two additional schools to add once we discuss your exposure in other management classes to other potential topics such as behavioral decision theory, sense-making and cognition, organizational economics, corporate governance, social networks, and the like.
Activity: Seminar
0.5 Course Units

MGMT 953 Seminar on Research Methods
This is an introductory doctoral seminar on research methods in management. We examine basic issues involved in conducting empirical research for publication in scholarly management journals. We start by discussing the framing of research questions, theory development, the initial choices involved in research design, and basic concerns in empirical testing. We then consider these issues in the context of different modes of empirical research (including experimental, survey, qualitative, archival, and simulation). We discuss readings that address the underlying fundamentals of these modes as well studies that illustrate how management scholars have used them in their work, separately and in combination.
Activity: Seminar
1 Course Unit

MGMT 954 Seminar in International Management
The goal of the course is to provide you with a foundation in some of the major research areas that underpin the study of Multinational Management. International Business (and the study of MNCs) is an interdisciplinary field. As such, our survey of the seminal articles in the field will span a number of different theoretical and empirical approaches (i.e., economic, managerial, organizational and institutional). Much of our seminar discussions will focus on identifying and developing interesting research questions raised by this interdisciplinary literature, which offers many opportunities for systematic empirical study.
Taught by: Kogut
Activity: Seminar
0.5 Course Units

MGMT 955 Seminar in Micro-Organizational Behavior
The purpose of this course is to examine and understand theory and empirical research in the field of micro-organizational behavior. We will study a blend of classic and contemporary literature and examine theoretical propositions of individual and group behavior in organizations as well as discussing and critically evaluating empirical studies based on these theories. Sample topics include the What is Micro OB?, the person versus situation debate, motivation, job design, group dynamics, leadership and organizational culture and socialization. MGMT 951 is a companion class to MGMT 961, and you can take it in either order.
Activity: Lecture
0.5 Course Units
MGMT 960 Institutions and Multinational Management
This course builds on the foundational material presented in MGMT 955 with a deeper focus on current research examining institutional influences on multinational management. These include regulatory supports (e.g., laws, regulations, contracts and their enforcement through litigation, arbitration of incentive compatible self-regulation) but also normative (e.g., socially shared expectations of appropriate behavior and social exchange processes) and cognitive (e.g., creating shared identity to bridge differences in values, beliefs and framing) elements of the institutional environment. We will examine not only strategic responses in the market environment but also influence strategies of multinational and domestic firms that seek to alter the institutional environment in which they operate. We will draw not only upon the international business literature but also related literatures including political economy, law, finance, communications, institutional theory, strategic corporate social responsibility, tourism management, construction management, management of extractive industries, negotiations, social movements and network theory (really).
Activity: Seminar
0.5 Course Units

MGMT 961 Advanced Topics in Micro-organizational Behavior
The purpose of this quarter course is to continue to explore key concepts and research programs in the field of micro-organizational behavior that we began to study in MGMT 951. To do so, we will cover a blend of classic and contemporary literature so that we can appreciate the prevailing theories and findings in various areas of micro-organizational behavior. In addition, for each topic we will then try to go beyond the existing literature. We will work to increase our understanding by re-framing the research variables, altering the perspective, bringing in new theory, and comparing levels of analysis. Building on the topics we examined in MGMT 951, we will explore further organizational behavior topics including identity, fit, extra role behaviors, job design, creativity, status, power and influence.
Activity: Seminar
0.5 Course Units

MGMT 963 Multinational Firms Global Economy B
This is a graduate course focusing on the empirical aspects of multinational firms and international trade. We will focus on a variety of issues that are related to the multinational firm, beginning with trends in multinational activity then moving to both horizontal and vertical theories of the multinational firm. In the first half of the course (MGMT962) the topics will include patterns in the expansion of multinational firms, horizontal and vertical multinationals, the linkages between openness to trade and investment and growth, trade orientation and firm performance, and labor markets and multinational firms. We complete the first half of the course reviewing the evidence on offshoring and multinationals and the implications for the US labor market, as well as new evidence on corporate social responsibility and the multinational firm.
Activity: Seminar
0.5 Course Units

MGMT 970 Applied Methods for Management Research
Students taking the course will be introduced to the seminal readings on a given method, have a hands-on discussion regarding their application often using a paper and dataset of the faculty member leading the discussion. The goal of the course is to make participants more informed users and reviewers of a wide variety of methodological approaches to Management research including Ordinary Least Squares, Discrete Choice, Count Models, Panel Data, Dealing with Endogeneity, Survival/ failure/event history and event studies, experiments, factor analysis and structural equation modeling, hierarchical linear modeling, networks, comparative qualitative methods, coding of non-quantitative data, unstructured text and big data simulations.
Course usually offered in fall term
Activity: Seminar
1 Course Unit

Management of Economics (MGEC)

MGEC 611 Microeconomics for Managers: Foundations
This course establishes the micro-economic foundations for understanding business decision-making. The course will cover consumer theory and market demand under full information, market equilibrium and government intervention, production theory and cost optimization, producing in perfectly competitive and monopoly markets, vertical relations, and game theory, including simultaneous, sequential, and infinitely repeated games. Finally, we will wrap up game theory with an application to auctions. Students are expected to have mastered these materials before enrolling in the second quarter course: Microeconomics for Managers: Advanced Applications.
One-term course offered either term
Activity: Lecture
0.5 Course Units
MGEC 612 Microeconomics for Managers: Advanced Applications
This course will cover the economic foundations of business strategy and
decision-making in market environments with other strategic actors and
less than full information, as well as advanced pricing strategies. Topics
include oligopoly models of market competition, creation, and protection,
sophisticated pricing strategies for consumers with different valuations
or consumers who buy multiple units (e.g., price discrimination, bundling,
two-part tariffs), strategies for managing risk and making decisions under
uncertainty, asymmetric information and its consequences for markets,
and finally moral hazard and principle-agent theory with application to
incentive contacts.
Taught by: Staff.
One term course offered either term
Activity: Lecture
0.5 Course Units

Marketing (MKTG)

MKTG 101 Introduction to Marketing
The objective of this course is to introduce students to the concepts,
analyses, and activities that comprise marketing management, and
to provide practice in assessing and solving marketing problems. The
course is also a foundation for advanced electives in Marketing as well
as other business/social disciplines. Topics include marketing strategy,
customer behavior, segmentation, market research, product management,
pricing, promotion, sales force management and competitive analysis.
Taught by: Niedermeier
One term course offered either term
Activity: Recitation
1 Course Unit
Notes: For fall and spring semesters, you must be registered for one of
the 20 recitation sections (MKTG101 201 through MKTG101 220) AND a
lecture section (MKTG101 001 or MKTG101 002). Failure to sign up for
both a recitation and a lecture will result in you being dropped from
the course. PLEASE NOTE: Recitation Section MKTG101 220 is reserved only
for Joseph Wharton Scholars.

MKTG 211 Consumer Behavior
This course is concerned with how and why people behave as
consumers. Its goals are to: (1) provide conceptual understanding of
consumer behavior; (2) provide experience in the application of buyer
behavior concepts to marketing management decisions and social
policy decision-making; and (3) to develop analytical capability in using
behavioral research.
Taught by: Melamud, Sharif, Riis
One term course offered either term
Also Offered As: MKTG 711
Prerequisite: MKTG 101
Activity: Lecture
1 Course Unit

MKTG 212 Data and Analysis for Marketing Decisions
Firms have access to detailed data of customers and past marketing
actions. Such data may include in-store and online customer
transactions, customer surveys as well as prices and advertising. Using
real-world applications from various industries, the goal of the course
is to familiarize students with several types of managerial problems as
well as data sources and techniques, commonly employed in making
effective marketing decisions. The course would involve formulating
critical managerial problems, developing relevant hypotheses, analyzing
data, and most importantly, drawing inferences and telling convincing
narratives, with a view of yielding actionable results.
Taught by: Eliashberg, Nave
One term course offered either term
Also Offered As: MKTG 712
Prerequisites: MKTG 101, and STAT 101 or equivalent. CNPS minors may
take STAT 111 or STAT 430 instead of STAT 101.
Activity: Lecture
1 Course Unit
Notes: (Former course title Marketing Research.)

MKTG 221 New Product Management
Examination of the marketing aspects of products or services exclusive
of their promotion, pricing or distribution. Focuses on decisions regarding
product introduction, positioning, improvements, and deletion, and the
tools available for making these decisions.
One term course offered either term
Also Offered As: MKTG 721
Prerequisites: MKTG 101; NOTE: Students may not take this course and
MKTG 262 for credit.
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students must
register for this course before the end of the Course Selection period
(September for Fall, January for Spring) for sections offered in the
SECOND half of the term.

MKTG 224 Advertising Management
Immersion in the advertising development process and examination of
the practice of advertising. Focuses on decisions regarding advertising
objectives, copy selection, budget setting and media selection.
One term course offered either term
Also Offered As: MKTG 724
Prerequisites: MKTG 101 or permission of instructor; NOTE: Students
may not take this course and MKTG 265 (formerly MKTG 235) for credit.
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students must
register for this course before the end of the Course Selection period
(September for Fall, January for Spring) for sections offered in the
SECOND half of the term.
MKTG 225 Principles of Retailing
This course explores the domain of retailing; marketing to the final consumer. Emphasis is placed on marketing aspects of retailing not covered in other courses: retail strategy, merchandising, vendor relations and location.
Course usually offered in spring term
Also Offered As: MKTG 725
Prerequisite: MKTG 101
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for Fall, January for Spring) for sections offered in the SECOND half of the term.

MKTG 227 Digital Marketing and Electronic Commerce
The effect of the Internet and related technologies on business and social institutions is more profound than that of any prior invention, including the printing press and the internal combustion engine. Furthermore, marketing is critical to the success of firms that will shape the consumption-led economies that are fueled by these technologies. MKTG 227 provides a research-based and framework-driven approach to succeeding in this environment, through a rigorous approach to understanding digital marketing and electronic commerce. The course is organized into two sections and utilizes relevant theory, empirical analysis, and practical examples, to develop the key learning points. Guest speakers will participate as well, as appropriate.
Taught by: Bell, Goldstein
One term course offered either term
Also Offered As: MKTG 727
Prerequisite: MKTG 101
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students should register for this course before the end of the Course Selection period (September for Fall, January for Spring) for sections offered in the SECOND half of the term. Students may not take both MKTG 227 and the full semester version of this course, MKTG 270 (formerly MKTG 230x) for credit.

MKTG 234 Idea Generation & the Systematic Approach for Creativity
The ability to solve problems creatively and generate change is a recognized standard of success and plays an important role in gaining a competitive advantage in many areas of business management. This course is designed to teach students several creative problem solving methodologies that complement other managerial tools acquired in undergraduate and graduate studies. The course offers students the opportunity to learn how to solve problems, identify opportunities, and generate those elusive ideas that potentially generate enormous benefits to organizations. The objectives of this course are to enhance the students' (a) creativity, (b) ability to innovate and (c) ability to identify, recruit, develop, manage, retain, and collaborate with creative people. The course includes: 1. A review of the literature on creativity, creative people, innovation, and design as well as the leadership and management of creative people and innovation. 2. Hands on learning of approaches for generating creative ideas. Students will have the opportunity of implementing the techniques studied in class. 3. Applications of creativity to selected management domains - Approaches to the generation of creative options are not limited to the development of products and services or businesses, but can be applied to all areas of management, business, and life. The purpose of these sessions is to explore the applications of creative approaches to marketing, advertising, organizational design, negotiations, and other management challenges. 4. Integration - Both via individual assignments and a group project in which interdisciplinary teams of students generate a creative product/service/customer.
Taught by: Rom Schrift
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: Students may not take both MKTG 292 and MKTG 234 for credit. Students should check the course start date as this mini course may be held during the first or second half of the semester.
MKTG 237 Introduction to Brain Science for Business

Brain science offers the potential to unlock the future of business, by providing new insights that can enhance decision-making, improve precision in design and marketing, build team chemistry and cultivate leadership, fine-tune selection and human performance, drive creativity and innovation, create social value, and optimize digital interaction. New developments in biometrics, implantable and wearable devices, genomics, proteomics, metabolomics, nutrition, and the human microbiome, offer the opportunity for enhanced precision and impact in marketing, finance, management, analytics, and education. This course will provide an overview of contemporary brain science and its applications to business. Students first will be introduced to the basic anatomy and physiology of the brain and become familiar with important techniques for measuring and manipulating brain function. The course will then survey major findings in neuroscience with applications to business, including selective attention and advertising; valuation and marketing; decision making; learning, innovation and creativity; and social influence, team-building, and leadership. The course will end with a discussion of ethics, brain-machine interactions, and artificial intelligence. Applications to business, education, sports, law, and policy will be discussed throughout.

Taught by: Platt
Course usually offered in spring term
Also Offered As: MKTG 737
Prerequisite: None
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Students may not take both MKTG 351 (Special Topics version) and MKTG 237x for credit. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for Fall, January for Spring). The same deadline applies to all sections whether they are offered in the FIRST half and or SECOND half of the semester.

MKTG 241 Entrepreneurial Marketing

This course focuses on the real life marketing challenges involved in launching an entrepreneurial venture. The primary goal of the course will be to provide a roadmap for students seeking to actively engage as entrepreneurs, investors or managers in the startup culture. Many of the entrepreneurial marketing principles studied in this course will be equally applicable to mid-size and larger companies seeking new approaches to drive top-line growth. The course will address how start-ups, early growth stage and more mature companies have used entrepreneurial marketing as an essential competitive weapon to grow their businesses by gaining customers, driving revenue, acquiring funding and recruiting A-level employees, advisors and directors. Students will form teams and select an idea/concept for an entrepreneurial venture, and by the conclusion of the course the students will have developed a fully fleshed out and testable marketing plan. Preferably, the selected venture will be one that one or more members of the team would consider implementing, should their plan prove feasible.

Taught by: Lodish, Lautman
Course usually offered in fall term
Also Offered As: MKTG 741
Prerequisites: MKTG 101; MKTG 212 (can take concurrently); students are discouraged from taking this course and MKTG 221 without the permission of the marketing undergraduate faculty advisor.
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for Fall, January for Spring) for sections offered in the SECOND half of the term.

MKTG 242 Multinational Marketing

Global marketing is an extremely demanding discipline but, from a career standpoint, one which is both challenging and rewarding. Inherent to the success of any global marketing professional, yet many times overlooked and/or underappreciated, is the critical nature of human understanding and relationships in business planning and execution. This is especially relevant in today's business environment when you consider the dual multinational company imperative of continued revenue and profit growth in mature markets and successfully expanding into new growth and emerging markets. This course assumes an understanding of marketing principles and some exposure to and appreciation of the global environment. The objective of the course is to provide an understanding of how the global environment (particularly cultural diversity) affects the application of marketing principles and business practice on a global basis and the competencies necessary to be a successful global manager.

One-term course offered either term
Also Offered As: MKTG 742
Prerequisite: MKTG101
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term (Former MKTG 282)
MKTG 254 Pricing Policy
The pricing decision process including economic, marketing, and behavioral phenomena which constitute the environment for pricing decisions and the information and analytic tools useful to the decision maker.
One term course offered either term
Also Offered As: MKTG 754
Prerequisites: MKTG 101 and sophomore standing.
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Students can not take both MKTG 254 and the full semester version of this course, MKTG 288, for credit. Check meeting dates. Students must register for this course before the end of the course selection period (September for fall, January for spring) for sections offered in the second half of the term.

MKTG 260 Law of Marketing and Antitrust
See Legal Studies, LGST 205
Also Offered As: LGST 205, LGST 805, MKTG 760
Prerequisite: MKTG 101
Activity: Lecture
1 Course Unit
Notes: (Former MKTG 236)

MKTG 262 New Product Development
In this hands-on experiential course, students will partner with a local start-up to apply design thinking steps taught throughout the course. Students will learn how to uncover deep consumer needs, effectively ideate, and create rapid prototypes to test their ideas with real customers. This class is well suited for those interested in careers in innovation or management consulting, marketing, product management, technology, or entrepreneurship. No prior experience or requirements are needed for this course.
Course not offered every year
Prerequisite: MKTG 101 recommended but not required
Activity: Lecture
1 Course Unit
Notes: NOTE: Students may not take both MKTG 262 and MKTG 221 for credit

MKTG 265 Principles of Advertising
This course focuses on advertising via all media - print, digital, video, TV, Internet, etc. Emphasis is placed on understanding the communication development process and consumer behavior (psychology), the measurement and evaluation of advertising effects, and developing appropriate media plans.
One term course offered either term
Prerequisites: MKTG 101.
Activity: Lecture
1 Course Unit
Notes: Students should not take both MKTG 265 (full semester version) and MKTG 224 (mini course version), since credit will not be given for both courses.

MKTG 266 Marketing for Social Impact
Private and public sector firms increasingly use marketing strategies to engage their customers and stakeholders around social impact. To do so, managers need to understand how best to engage and influence customers to behave in ways that have positive social effects. This course focuses on the strategies for changing the behavior of a target segment of consumers on key issues in the public interest (e.g., health behaviors, energy efficiency, poverty reduction, fundraising for social causes). How managers partner with organizations (e.g., non-profits, government) to achieve social impact will also be explored.
Taught by: Deborah Small
Course usually offered in fall term
Prerequisite: MKTG 101 or instructor permission
Activity: Lecture
1 Course Unit
Notes: Students may not take both MKTG 266 and MKTG 233 for credit.

MKTG 270 Digital Marketing, Social Media and E-Commerce
MKTG 270 explores the digital marketing environment from both a consumer and business perspective. The course provides an overview of various online business models and delves into digital advertising and social media marketing techniques and technologies. A mixture of case studies, guest speakers and assignments, including one that uses the real advertising data, translates theory into practice. It is recommended that students enrolling in the course be comfortable using Excel and are knowledgeable in applying regression analysis techniques. Students who would prefer a less technical course may wish to take MKTG 227, Digital Marketing and Electronic Commerce, a half-credit course offered by the department.
Taught by: Bell
One term course offered either term
Also Offered As: MKTG 770
Prerequisite: MKTG 101
Activity: Lecture
1 Course Unit
Notes: Students may not take both MKTG 270 and the half-semester version of this course, MKTG 227 for credit. This course replaces experimental course MKTG 230x.
MKTG 271 Models for Marketing Strategy
In today’s business environment, marketing executives are involved in complex decision-making and they become responsible for return on their marketing investments. The first objective of this course is to help participants become better executives. By exposing students to various analytical and computer-based tools, developed for solving marketing problems, it will help to prepare them for careers in industries such as consumer packaged goods, hi-tech, financial services, media and entertainment, pharmaceutical, consulting, and venture capital.

The course’s main focus is on various existing models, such as models that predict the consumer’s dynamic adoption of an innovative product. However, at some point in their career, students may find themselves facing business problems for which a model can assist in making decisions, but no existing model is available. Hence, the second objective of the course is to provide participants with critical skills necessary to evaluate new models to which they may be exposed by attending presentations or reading the literature. The models to be discussed in the class have been implemented and proven useful in a wide range of industries (e.g., business-to-consumers and business-to-business).

Taught by: Eliashberg
Course usually offered in fall term
Also Offered As: MKTG 771
Prerequisites: MKTG 101, STAT 101 and some tolerance for expressing critical ideas in simple math
Activity: Lecture
1 Course Unit

MKTG 277 Marketing Strategy
This course views marketing as both a general management responsibility and an orientation of an organization that helps one to create, capture and sustain customer value. The focus is on the business unit and its network of channels, customer relationships, and alliances. Specifically, the course attempts to help develop knowledge and skills in the application of advanced marketing frameworks, concepts, and methods for making strategic choices at the business level.

Taught by: Robertson, Yıldırım
Course usually offered in fall term
Also Offered As: MKTG 777
Prerequisites: MKTG 101 or permission from instructor.
Activity: Lecture
1 Course Unit
Notes: Lectures, discussions, cases

MKTG 278 Strategic Brand Management
Which brands make you happy? Apple? Amazon? Starbucks? Everlane? SoulCycle? Sweetgreen? What draws you into these brands? How do companies create compelling brand experiences? How could you cultivate a well-loved brand? This course explores such questions with the goal of identifying the ingredients for building an inspired brand. The course is created for students interested in building a brand and/or immersing themselves in the enhancement of an existing brand, and it is comprised of lectures, cases, guest speakers, discussions, in and out of class exercises, and a final project. Broadly, the course will be divided into four parts: 1) Understanding Brand, 2) Crafting Brand, 3) Measuring Brand, and 4) Managing Brand. The course will provide students with an appreciation of the role of branding and (taking a consumer-centric approach) will augment students’ ability to think creatively and critically about the strategies and tactics involved in building, leveraging, defending, and sustaining inspired brands.

Taught by: Williams
Course usually offered in spring term
Also Offered As: MKTG 778
Prerequisite: MKTG 101
Activity Lecture
1 Course Unit

MKTG 288 Pricing Strategies
This course is designed to equip students with the concepts, techniques, and latest thinking on pricing issues, with an emphasis on ways in which to help a firm improve its pricing. The orientation of the course is about practice of pricing, not theory. We will focus on how firms can improve profitability through pricing, look at how firms set their prices and how to improve current practices to increase profitability. The first part of the course focuses on how to analyze costs, customers, and competitors in order to formulate proactive pricing strategies. The second part focuses on price promotions, price bundling, price discrimination, versioning, nonlinear pricing, pricing through a distribution channel, dynamic pricing, etc.

Taught by: Zhang
Course usually offered in spring term
Prerequisite: MKTG 101
Activity Lecture
1 Course Unit
Notes: Students may not take both MKTG 288 and MKTG 254 for credit.
MKTG 292 Creativity
The ability to solve problems creatively and generate change is a recognized standard of success and plays an important role in gaining a competitive advantage in many areas of business management. This course is designed to teach students several creative problem solving methodologies that complement other managerial tools acquired in undergraduate and graduate studies. The course offers students the opportunity to learn how to solve problems, identify opportunities, and generate those elusive ideas that potentially generate enormous benefits to organizations. The objectives of this course are to enhance the student’s (a) creativity (b) ability to innovate and (c) ability to identify, recruit, develop, manage, retain, and collaborate with creative people. The course includes: interaction with guest lecturers; a review of the literature on creativity, creative people, innovation, and design as well as the leadership and management of creative people and innovation; hands on learning of approaches for generating creative ideas; applications of creativity to selected management domains; and integration via individual assignments and a group project in which interdisciplinary teams of students generate a creative product, service, customer experience, business or strategy.
Taught by: Schrift
Course usually offered in fall term
Prerequisite: MKTG101
Activity: Lecture
1 Course Unit
Notes: Format: Lecture, class discussion, guest speakers.

MKTG 306 Special Topics: Retail Merchandising
RETAIL MERCHANDISING: This course introduces the role of merchandising at various retailers with an emphasis on apparel and soft-line businesses. Selected topics will include product development, line planning, sourcing, product lifecycle, forecasting, buying, planning and vendor relations. Special emphasis will be placed on current trends in retail merchandising through current articles and industry guest speakers. The objective of this course is to familiarize students with merchandising theory and strategies considered to be current best practices in retailing.
Course usually offered in fall term
Also Offered As: MKTG 806
Prerequisite: MKTG 101 or MKTG 225
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u., One-half term. Check meeting dates. Students must register for this course before the end of the Course Selection period (September for Fall, January for Spring) for sections offered in the SECOND half of the term.

MKTG 309 Special Topics: Experiments for Business Decision Making
EXPERIMENTS FOR BUSINESS DECISION MAKING: In the past decade, massive shifts in how companies interact with their customers have suddenly made field experiments an economically feasible way to learn about a variety of business questions such as what types of promotions are most effective, what products should be stocked at a store, how e-mail promotions should be designed, how sales staff should be compensated, etc. Many marketers engaged in online retailing, direct-marketing, online advertising, media management, etc. are rapidly embracing a “test and learn” philosophy and a number of platforms such as Google Website Optimizer, have been developed to facilitate rigorous field experiments in the online environment. Just as with the quality revolution in manufacturing during the 1980s and 1990s, the rapid rise of the “test and learn” philosophy in marketing has created a huge demand for those who can design, field, and analyze marketing experiments. Through this course, you will learn and practice a wide range of critical skills, from the statistical methods used to design and analyze experiments to the management and strategy required to execute an experiment and act on the results. Although the cases and examples will focus on marketing problems, the material covered can be applied in a number of other domains particularly operations management and product design.
Course offered fall; even-numbered years
Also Offered As: MKTG 809
Prerequisites: MKTG 101 or faculty permission is required; STAT 101, STAT 431, or equivalent is recommended.
Activity: Lecture
1 Course Unit
Notes: (Former MKTG 269)
MKTG 350 Special Topics - Consumer Neuroscience

CONSUMER NEUROSCIENCE: How can studying the brain improve our understanding of consumer behavior? While neuroscience made tremendous strides throughout the 20th century, rarely were meaningful applications developed outside of medicine. Recently, however, breakthroughs in measurement and computation have accelerated brain science and created a dizzying array of opportunities in business and technology. Currently, applications to marketing research and product development are experiencing explosive growth that has met with both excitement and skepticism. This mini-course provides an overview of the neuroscience behind and the potential for these developments. Topics will range from well-known and widely used applications, such as eye-tracking measures in the lab and field, to emerging methods and measures, such as mobile technologies, face-reading algorithms, and neural predictors of marketing response. The course will also discuss applications in branding and product development, including wearable physiological devices and apps, sensory branding for foods and fragrances, pharmaceuticals and medical devices, and neuroscience-based products designed to enhance cognitive functions. These applications stem from many subfields of cognitive neuroscience, including attention, emotion, memory, and decision making. This course is self-contained and has no prerequisites. However, students with some background in business, economics, psychology, and/or neuroscience are likely to find the material covered in this course complementary to their existing knowledge.

Taught by: John Clithero
Course usually offered in spring term
Also Offered As: MKTG 850
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. This course has been replaced by MKTG 237x.

MKTG 351 Special Topics: Introduction to Brain Science for Business

INTRODUCTION TO BRAIN SCIENCE FOR BUSINESS: Brain science offers the potential to unlock the future of business, by providing new insights that can enhance decision-making, improve precision in design and marketing team chemistry and cultivate leadership, find new directions and human performance, drive creativity and innovation, create social value, and optimize digital interactions. New developments in biometrics, implantable and wearable devices, genomics, proteomics, metabolomics, nutrition, and human microbiome, offer the opportunity for enhanced precision and impact in marketing, finance, management, analytics, and education. This course will provide an overview of contemporary brain science and its applications to business. Students first will be introduced to the basic anatomy and physiology of the brain and become familiar with important techniques for measuring and manipulating brain function. The course will then survey major findings in neuroscience with applications to business, including selective attention and advertising; valuation and marketing; decision making; learning, innovation and creativity; and social influence, team-building, and leadership. The course will end with a discussion of ethics, brain-machine interactions, and artificial intelligence. Applications to business, education, sports, law and policy will be discussed throughout.

Course usually offered in spring term
Also Offered As: MKTG 851
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. This course has been replaced by MKTG 237x.

MKTG 352 Special Topics - Marketing Analytics

MARKETING ANALYTICS: Companies are currently spending millions of dollars on data gathering initiatives - but few are successfully capitalizing on all this data to generate revenue and increase profit. Moving from collecting data to analysis to profitable results requires the ability to forecast and develop a business rationale based on identified data patterns. Marketing Analytics will cover the three pillars of analytics - descriptive, predictive and prescriptive. Descriptive Analytics examines different types of data and how they can be visualized, ultimately helping you leverage your findings and strengthen your decision making. Predictive Analytics explores the potential uses of data once collected and interpreted. You will learn to utilize different tools, such as regression analysis, and estimate relationships among variables to predict future behavior. Prescriptive Analytics takes you through the final step - formulating concrete recommendations. These recommendations can be directed toward a variety of efforts including pricing and social platform outreach.

Taught by: Jyengar
Course usually offered in fall term
Also Offered As: MKTG 852
Prerequisites: MKTG 101, and STAT 101 or equivalent
Activity: Lecture
0.5 Course Units
Notes: 0.5 cu credit course. Check course start date. You must register for sections that meet in the second half of the semester by the course selection deadline in September.

MKTG 353 Special Topics

Course usually offered in spring term
Prerequisite: MKTG101
Activity: Lecture
0.5 Course Units
MKTG 354 Special Topics: Visual Marketing
VISUAL MARKETING: As consumers, we are constantly exposed to advertisements and experience visual messages from product packages in stores, retail displays, and products already owned. In essence, visual marketing collateral is omnipresent and is an essential part of corporate visual identity, strategy, and communication. Some of this falls to creative graphic design, but advertising, design, and marketing can also be significantly enhanced by knowledge of how visual information and its presentation context can be optimized to deliver desirable and advantageous messages and experiences. This course will emphasize how to measure, interpret, and optimize visual marketing, and will provide an overview of visual perception and visual cognition, eye movements, and attention, and their role and influence on consumer memory, persuasion, choice, and other behaviors.
Taught by: Johnson
Course usually offered in spring term
Also Offered As: MKTG 854
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. In-class exercises, team-based learning, discussions, and lectures. Check meeting dates.

MKTG 399 Independent Study
One-term course offered either term
Also Offered As: MKTG 899
Prerequisites: MKTG 212 and written permission of instructor and the department undergraduate advisor
Activity: Independent Study
1 Course Unit
Notes: Content arranged by project supervisor, 1.0 c.u

MKTG 401 Marketing Analytics Capstone: Learning by Doing
In this class students will (1) Apply knowledge to practice for an actual client, with a focus on the synthesis of knowledge acquired across curriculum (2) Practice analytical thinking skills (analyzing and framing business problems and problem-solving techniques), including consideration of ethical issues. (3) Practice written and oral communication skills, as well as working in an (assigned) team environment, by leveraging the experience developed in earlier years of the leadership Journey. (4) Reflect on their own social and intellectual development over their time at Wharton and Penn.
Taught by: Iyengar
Course usually offered in spring term
Prerequisites: Permission from the Instructor is required. Senior Standing is required.
Activity: Lecture
0.5 Course Units
Notes: MKTG401X fulfills the Wharton Senior capstone requirement. Students should have proficient knowledge of R/Python and SQL. Online courses are available through WCAI (Wharton Customer Analytics Initiative) if needed.

MKTG 476 Applied Probability Models for Marketing
This course will expose students to the theoretical and empirical "building blocks" that will allow them to construct, estimate, and interpret powerful models of consumer behavior. Over the years, researchers and practitioners have used these models for a wide variety of applications, such as new product sales, forecasting, analyses of media usage, and targeted marketing programs. Other disciplines have seen equally broad utilization of these techniques. The course will be entirely lecture-based with a strong emphasis on real-time problem solving. Most sessions will feature sophisticated numerical investigations using Microsoft Excel.
Much of the material is highly technical.
Taught by: Fader
Course usually offered in spring term
Also Offered As: MKTG 776, STAT 476, STAT 776
Prerequisites: A high comfort level with basic integral calculus and recent exposure to a formal course in probability and statistics such as STAT 430 is strongly recommended.
Activity: Lecture
1 Course Unit

MKTG 611 Marketing Management
This course addresses how to design and implement the best combination of marketing efforts to carry out a firm's strategy in its target markets. Specifically, this course seeks to develop the student's (1) understanding of how the firm can benefit by creating and delivering value to its customers, and stakeholders, and (2) skills in applying the analytical concepts and tools of marketing to such decisions as segmentation and targeting, branding, pricing, distribution, and promotion. The course uses lectures and case discussions, case write-ups, student presentations, and a comprehensive final examination to achieve these objectives.
Taught by: Kahn, Berger, Meyer, Riss
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu

MKTG 612 Dynamic Marketing Strategy
Building upon Marketing 611, the goal of this course is to develop skills in formulating and implementing marketing strategies for brands and businesses. The course will focus on issues such as the selection of which businesses and segments to compete in, how to allocate resources across businesses, segments, and elements of the marketing mix, as well as other significant strategic issues facing today's managers in a dynamic competitive environment. A central theme of the course is that the answer to these strategic problems varies over time depending on the stage of the product life cycle at which marketing decisions are being made. As such, the PLC serves as the central organizing vehicle of the course. We will explore such issues as how to design optimal strategies for the launch of new products and services that arise during the introductory phase, how to maximize the acceleration of revenue during the growth phase, how to sustain and extend profitability during the mature phase, and how to manage a business during the inevitable decline phase.
Taught by: Van den Bulte, Bradlow
One-term course offered either term
Prerequisite: MKTG 611
Activity: Lecture
0.5 Course Units
Notes: One half term. 0.5 cu
MKTG 613 Strategic Marketing Simulation
Building upon Marketing 611, Marketing 613 is an intensive immersion course designed to develop skills in formulating and implementing marketing strategies for brands and businesses. The central activity will be participation in a realistic integrative product management simulation named SABRE. In SABRE, students will form management teams that oversee all critical aspects of modern product management: the design and marketing of new products, advertising budgeting and design, sales force sizing and allocation, and production planning. As in the real world, teams will compete for profitability, and the success that each team has in achieving this goal will be a major driver of the class assessment. The SABRE simulation is used to convey the two foci of learning in the course: the changing nature of strategic problems and their optimal solutions as industries progress through the product life cycle, and exposure to the latest analytic tools for solving these problems. Specifically, SABRE management teams will receive training in both how to make optimal use of marketing research information to reduce uncertainty in product design and positioning, as well as decision support models to guide resource allocation.
Taught by: Reibstein
Course usually offered in spring term
Prerequisite: MKTG 611
Activity: Lecture
0.5 Course Units
Notes: 0.5 cu

MKTG 711 Consumer Behavior
Marketing begins and ends with the customer, from determining customers' needs and wants to providing customer satisfaction and maintaining customer relationships. This course examines the basic concepts and principles in customer behavior with the goal of understanding how these ideas can be used in marketing decision making. The class will consist of a mix of lectures, discussions, cases, assignments, project work and exams. Topics covered include customer psychological processes (e.g., motivation, perception, attitudes, decision-making) and their impact on marketing (e.g., segmentation, branding, and customer satisfaction). The goal is to provide you with a set of approaches and concepts to consider when faced with a decision involving understanding customer responses to marketing actions.
Taught by: Reed
One-term course offered either term
Also Offered As: MKTG 211
Prerequisite: Completion of MKTG 611
Activity: Lecture
1 Course Unit
Notes: Format: Lectures and discussion, case analyses, presentations.

MKTG 712 Data and Analysis for Marketing Decisions
Firms have access to detailed data of customers and past marketing actions. Such data may include in-store and online customer transactions, customer surveys as well as prices and advertising. Using real-world applications from various industries, the goal of the course is to familiarize students with several types of managerial problems as well as data sources and techniques, commonly employed in making effective marketing decisions. The course would involve formulating critical managerial problems, developing relevant hypotheses, analyzing data and, most importantly, drawing inferences and telling convincing narratives, with a view of yielding actionable results.
Taught by: Ilengar, Eliasberg, Nave
One-term course offered either term
Also Offered As: MKTG 212
Prerequisite: MKTG 611; STAT 613
Activity: Lecture
1 Course Unit
Notes: Format: Lecture, discussion, and cases.

MKTG 721 New Product Management
This course provides a total immersion in the new product development process - from sourcing ideas and innovation, through new product sales forecasting. The focus is on collective learning, what works, what doesn't, and why. While the primary focus is the new product development process within a corporate structure, some coverage is given to key issues surrounding start-ups.
One-term course offered either term
Also Offered As: MKTG 221
Prerequisite: MKTG 611
Activity: Lecture
0.5 Course Units
Notes: Format: Lectures, cases, simulations, class discussions, and guest speakers.

MKTG 724 Advertising Management
The purpose of this course is to provide students with an opportunity to learn and apply the major frameworks, theories, current research findings, principles and practices of effective advertising management as part of an Integrated Marketing Communications (IMC) program. By the end of this course, students should not only be familiar with a large body of advertising knowledge, but should also be able to apply this information to create and evaluate effective advertising strategies and tactics. The emphasis will be on: 1) understanding the psychology of customer motivation and persuasion; 2) crafting effective and creative messages; 3) making efficient selections and use of media; and 4) understanding metrics, all within the broader Integrated Marketing Communications perspective.
One-term course offered either term
Also Offered As: MKTG 224
Prerequisites: Completion of MKTG 611; and MKTG 612 or MKTG 613.
(May be taken concurrently with MKTG 612 or 613)
Activity: Lecture
0.5 Course Units
Notes: Format: Case discussions, in-class exercises, lectures, group projects, guest lectures by marketing professionals.
MKTG 725 Principles of Retailing
This course provides an interdisciplinary overview of the retailing industry. Primary focus will be on the customer facing activities of retailers, including assortment planning, private label development and the management of in-store operations, and the back-door activities (forecasting and supply chain management) that support customer interaction. In addition, current issues facing retailers, such as customer relationship management, industry consolidation and supplier relations, will be explored. The course will also survey topics in finance, operations, information technology and real estate as they relate to retail.
Course usually offered in spring term
Also Offered As: MKTG 225
Prerequisites: MKTG 611; and MKTG 612 or MKTG 613; or permission of instructor
Activity: Lecture
0.5 Course Units
Notes: Format: Lecture and discussion, case analyses, and guest speakers.

MKTG 727 Digital Marketing and Electronic Commerce
The effect of the Internet and related technologies on business and social institutions is more profound than that of any prior invention, including the printing press and the internal combustion engine. Furthermore, marketing plays a key role in shaping the modern consumption-led economies fueled by these technologies. MKTG 727 provides a research-based and framework-driven approach to understanding digital marketing and electronic commerce. The course is organized into two sections and utilizes relevant theory, empirical analysis, and practical examples, to develop the key learning points. Guest speakers will participate as well, as appropriate.
Taught by: Bell, Goldstein
One term course offered either term
Also Offered As: MKTG 227
Prerequisites: Completion of MKTG 611; and MKTG 612 or MKTG 613.
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. Students may not take both MKTG 727 and the full semester version of this course, MKTG 730x or MKTG 770 for credit.

MKTG 733 Marketing for Social Impact
Private and public sector firms increasingly use marketing strategies to engage their customers and stakeholders around social impact. To do so, managers need to understand how best to engage and influence customers to behave in ways that have positive social effects. This course focuses on the strategies for changing the behavior of a target segment of consumers on key issues in the public interest (e.g., health behaviors, energy efficiency, poverty reduction, fund-raising for social causes). How managers partner with organizations (e.g., non-profits, government) to achieve social impact will also be explored.
Taught by: Deborah Small
Course usually offered in fall term
Prerequisite: MKTG 611 or permission of instructor
Activity: Lecture
0.5 Course Units
Notes: Format: Lecture, class discussion, simulations, cases and guest lecturers.

MKTG 734 Idea Generation and the Systematic Approach for Creativity
The ability to solve problems creatively and generate change is a recognized standard of success and plays an important role in gaining a competitive advantage in many areas of business management. This course is designed to teach students several creative problem solving methodologies that complement other managerial tools acquired in undergraduate and graduate studies. The course offers students the opportunity to learn how to solve problems, identify opportunities, and generate those elusive ideas that potentially generate enormous benefits to organizations. The objectives of this course are to enhance the students’ (a) creativity, (b) ability to innovate and (c) ability to identify, recruit, develop, manage, retain, and collaborate with creative people.
The course includes: 1. A review of the literature on creativity, creative people, innovation, and design as well as the leadership and management of creative people and innovation. 2. Hands on learning of approaches for generating creative ideas. Students will have the opportunity of implementing the techniques studied in class. 3. Applications of creativity to selected management domains - Approaches to the generation of creative options are not limited to the development of products and services or businesses, but can be applied to all areas of management, business, and life. The purpose of these sessions is to explore the applications of creative approaches to marketing, advertising, organizational design, negotiations, and other management challenges. 4. Integration - Both via individual assignments and a group project in which interdisciplinary teams of students generate a creative product/service/customer
Taught by: Rom Schiffrin
Course usually offered in fall term
Prerequisite: None
Activity: Lecture
0.5 Course Units
Notes: Students may not take both MKTG 792 and MKTG 734 for credit. Students should check the course start date as this mini course may be held during the first or second half of the semester.
MKTG 737 Introduction to Brain Science for Business
Brain science offers the potential to unlock the future of business, by providing new insights that can enhance decision-making, improve precision in design and marketing, build team chemistry and cultivate leadership, fine-tune selection and human performance, drive creativity and innovation, create social value, and optimize digital interaction. New developments in biometrics, implantable and wearable devices, genomics, proteomics, metabolomics, nutrition, and the human microbiome, offer the opportunity for enhanced precision and impact in marketing, finance, management, analytics, and education. This course will provide an overview of contemporary brain science and its applications to business. Students will be introduced to the basic anatomy and physiology of the brain and become familiar with important techniques for measuring and manipulating brain function. The course will then survey major findings in neuroscience with applications to business, including selective attention and advertising; valuation and marketing; decision making; learning, innovation and creativity; and social influence, team-building, and leadership. The course will end with a discussion of ethics, brain-machine interactions, and artificial intelligence. Applications to business, education, sports, law, and policy will be discussed throughout.
Taught by: Platt
Course usually offered in spring term
Also Offered As: MKTG 237
Prerequisite: None
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. (Half semester course) Check meeting dates. Students may not take both MKTG 851 (Special Topics version) and MKTG 737x for credit.

MKTG 741 Entrepreneurial Marketing
This course focuses on the real life marketing challenges involved in launching an entrepreneurial venture. The primary goal of the course will be to provide a roadmap for students seeking to actively engage as entrepreneurs, investors or managers in the startup culture. Many of the entrepreneurial marketing principles studied in this course will be equally applicable to mid-size and larger companies seeking new approaches to drive top-line growth. The course will address how start-ups, early growth stage and more mature companies have used entrepreneurial marketing as an essential competitive weapon to grow their businesses by gaining customers, driving revenue, acquiring funding and recruiting A-level employees, advisors and directors. Students will form teams and select an idea/concept for an entrepreneurial venture, and by the conclusion of the course will have developed a fully fleshed out and testable marketing plan. Preferably, the selected venture will be one that one or more members of the team would consider implementing, should their plan prove feasible.
Taught by: Lodish, Lautman
Course usually offered in fall term
Also Offered As: MKTG 241
Prerequisites: Completion of MKTG 611; and MKTG 612 or MKTG 613; and MKTG 712; (May take MKTG 612 or 613, and MKTG 712 concurrently); Students are discouraged from taking this course and MKTG 721 except with permission of an MBA adviser
Activity: Lecture
0.5 Course Units
Notes: Format: Guest speakers, lecture, class discussions, team project

MKTG 742 Multinational Marketing
Global marketing is an extremely demanding discipline but, from a career standpoint, one which is both challenging and rewarding. Inherent to the success of any global marketing professional, yet many times overlooked and/or underappreciated, is the critical nature of human understanding and relationships in business planning and execution. This is especially relevant in today’s business environment when you consider the dual multinational company imperative of continued revenue and profit growth in mature markets and successfully expanding into new growth and emerging markets. This course assumes an understanding of marketing principles and some exposure to and appreciation of the global environment. The objective of the course is to provide an understanding of how the global environment (particularly cultural diversity) affects the application of marketing principles and business practice on a global basis and the competencies necessary to be a successful global manager.
One-term course offered either term
Also Offered As: MKTG 242
Prerequisites: Completion of MKTG 611; and MKTG 612 or MKTG 613. MKTG 612 or 613 may be taken concurrently with MKTG 742. Activity Lecture
0.5 Course Units
Notes: Format: Cases, lectures, discussions. (Former MKTG 782)

MKTG 754 Pricing Policy
The course provides a systematic presentation of the factors to be considered when setting price, and shows how pricing alternatives are developed. Analytical methods are developed and new approaches are explored for solving pricing decisions.
Taught by: Raju, Zhang
One-term course offered either term
Also Offered As: MKTG 254
Prerequisites: Completion of MKTG 611; and MKTG 612 or MKTG 613. (May be taken concurrently with MKTG 612 or 613.) OIDD 612 and STAT 613 are recommended.
Activity: Lecture
0.5 Course Units
Notes: Format: Lecture and discussion

MKTG 760 Law of Marketing and Antitrust
See Legal Studies, LGST 205/805.

2018-19 Catalog | Generated 02/28/19
MKTG 768 Contagious: How Products, Ideas and Behaviors Catch On
Why do some products catch on and achieve huge popularity while others fail? Why do some behaviors spread like wildfire while others languish? How do certain ideas seem to stick in memory while others disappear the minute you hear them? More broadly, what factors lead to trends, social contagion, and social epidemics? Interactive media, word of mouth, and viral marketing are important issues for companies, brands, and organizations. This course looks at these and other topics as it examines how products, ideas, and behaviors catch on and become popular. Marketers want their product to be popular; organizations want their social change initiative to catch on and entrepreneurs want their ideas to stick. This course will touch on four main aspects: (1) Characteristics of products, ideas, and behaviors that lead them to be successful. (2) Aspects of individual psychology that influence what things are successful. (3) Interpersonal processes, or how interactions between individuals drive success. (4) Social networks, or how patterns of social ties influence success.
Taught by: Berger
One-term course offered either term
Prerequisites: MKTG 711 and MKTG 712 are recommended but not required.
Activity: Lecture
1 Course Unit
Notes: Lecture, class discussion, cases. (Former MKTG 728)

MKTG 770 Digital Marketing, Social Media and E-Commerce
MKTG 770 explores the digital marketing environment from both a consumer and business perspective. The course provides an overview of various online business models and delves into digital advertising and social media marketing techniques and technologies. A mixture of case studies, guest speakers and assignments, including one that uses real advertising data, translates theory into practice. It is recommended that students enrolling in the course be comfortable using Excel and are knowledgeable in applying regression analysis techniques. Students who would prefer a less technical course may wish to take MKTG 727, Digital Marketing and Electronic Commerce, a half cu course offered by the department.
Taught by: Berman, Bell
One-term course offered either term
Also Offered As: MKTG 270
Prerequisites: MKTG 611, and one of the following: MKTG 612 or MKTG 613
Activity: Lecture
1 Course Unit
Notes: Students may not take both MKTG 770 and the half semester version of this course, MKTG 727 for credit. This course replaces experimental course MKTG 730x.

MKTG 771 Models for Marketing Strategy
In today's business environment, marketing executives are involved in complex decision-making and they become responsible for return on their marketing investments. The first objective of this course is to help participants become better executives. By exposing students to various analytical and computer-based tools, developed for solving marketing problems, it will help to prepare them for careers in industries such as consumer packaged goods, hi-tech, financial services, media and entertainment, pharmaceutical, consulting, and venture capital.
The course's main focus is on various existing models, such as models that predict the consumer's dynamic adoption of an innovative product. However, at some point in their career, students may find themselves facing business problems for which a model can assist in making decisions, but no existing model is available. Hence, the second objective of the course is to provide participants with critical skills necessary to evaluate new models to which they may be exposed by attending presentations or reading the literature. The models to be discussed in the class have been implemented and proven useful in a wide range of industries (e.g., business-to-consumers and business-to-business). The course is not only about models, however. It also covers modeling needs. Some industries such as the media and entertainment or the pharmaceutical industries present unique problems and modeling needs. The third objective of the course is to expose participants to the nature and essence of such idiosyncratic problems as well as modeling needs in such industries. Overall, the course will make participants understand better critical marketing problems by analyzing them rigorously and will enhance their skills in either designing or evaluating models-based strategies.
Taught by: Eliashberg
Course usually offered in fall term
Also Offered As: MKTG 271
Prerequisites: Completion of: MKTG 611; and MKTG 612 or MKTG 613; basic calculus; exposure to basic statistical analysis, and some tolerance for expressing critical ideas in simple math.
Activity: Lecture
1 Course Unit
Notes: Format: Evaluating marketing models; practicing with computer-based models and software; discussing case studies that describe modeling applications; group presentations of model-based marketing analysis and strategy.
MKTG 775 Managing Customer Value
As the concept of CRM becomes common parlance for every marketing executive, it is useful to take a step back to better understand the various different behaviors that underlie the development of successful CRM systems. These "behaviors" include customer-level decisions, firm actions, and the delicate but complex interplay between the two. Accordingly this course is comprised of four main modules. We start with the discussion of customer profitability - focusing on the concepts of "customer lifetime value" and "customer equity". We will examine how to measure long-run customer profitability in both business-to-customer and business-to-business environments, and the uses of these measures as major components assessing overall firm valuation. Second, we move to the value that the firm provides to its customers - better understanding the true nature of customer satisfaction and its non-trivial relationship with firm profitability. Third, we examine each of the three main components of the firm's management of its customer base: customer acquisition, development, and retention - and the complex resource allocation task that must be balanced across them. Finally, we conclude with a discussion of various tactical and organizational aspects of customer relationship management.
Taught by: Fader
Course usually offered in spring term
Prerequisites: None.
Activity: Lecture
1 Course Unit
Notes: Format: Lecture and discussion

MKTG 776 Applied Probability Models in Marketing
This course will expose students to the theoretical and empirical "building blocks" that will allow them to develop and implement powerful models of customer behavior. Over the years, researchers and practitioners have used these methods for a wide variety of applications, such as new product sales forecasting, analyses of media usage, customer valuation, and targeted marketing programs. These same techniques are also very useful for other types of business (and non-business) problems. The course will be entirely lecture-based with a strong emphasis on real-time problem solving. Most sessions will feature sophisticated numerical investigations using Microsoft Excel. Much of the material is highly technical.
Taught by: Fader
Course usually offered in spring term
Also Offered As: MKTG 476, STAT 476, STAT 776
Prerequisites: Students must have a high comfort level with basic integral calculus, and recent exposure to a formal course in probability and statistics is strongly recommended.
Activity: Lecture
1 Course Unit
Notes: Format: Lecture, real-time problem solving

MKTG 777 Marketing Strategy
This course views marketing as both a general management responsibility and an orientation of an organization that helps one to create, capture and sustain customer value. The focus is on the business unit and its network of channels, customer relationships, and alliances. Specifically, the course attempts to help develop knowledge and skills in the application of advanced marketing frameworks, concepts, and methods for making strategic choices at the business level.
Taught by: Robertson, Yildirim
Course usually offered in fall term
Also Offered As: MKTG 277
Prerequisites: Completion of MKTG 611; and MKTG 612 or MKTG 613.
Activity: Lecture
1 Course Unit
Notes: Format varies by instructor. Typically, case, lecture, group projects and class discussion. See syllabus.

MKTG 778 Strategic Brand Management
Which brands make you happy? Apple? Amazon? Starbucks? Everlane? Soulcycle? Sweetgreen? What draws you into these brands? How do companies create compelling brand experiences? How could you cultivate a well-loved brand? This course explores such questions with the goal of identifying the ingredients for building an inspired brand. The course is created for students interested in building a brand and/or immersing themselves in the enhancement of an existing brand, and it is comprised of lectures, cases, guest speakers, discussions, in and out of class exercises, and a final project. Broadly, the course will be divided into four parts: 1) Understanding Brand, 2) Crafting Brand, 3) Measuring Brand, and 4) Managing Brand. The course will provide students with an appreciation of the role of branding and (taking a consumer-centric approach) will augment students' ability to think creatively and critically about the strategies and tactics involved in building, leveraging, defending, and sustaining inspired brands.
Taught by: Williams
Course usually offered in spring term
Also Offered As: MKTG 278
Prerequisites: MKTG 611; and MKTG 612 or MKTG 613.
Activity: Lecture
1 Course Unit
Notes: Format: Lectures, cases, discussions, exercises, and a group project.

MKTG 806 Special Topics: Retail Merchandising
RETAIL MERCHANDISING; This course introduces the role of merchandising at various retailers with an emphasis on apparel and soft-line businesses. Selected topics will include product development, line planning, sourcing, product lifecycle, forecasting, buying, planning and vendor relations. Special emphasis will be placed on current trends in retail merchandising through current articles and industry guest speakers. The objective of this course is to familiarize students with merchandising theory and strategies considered to be current best practices in retailing.
Course usually offered in fall term
Also Offered As: MKTG 306
Prerequisite: MKTG 611 or MKTG 725
Activity: Lecture
0.5 Course Units
Notes: 0.5 cu half credit course. Format: Lecture, discussion.
MKTG 809 Special Topics: Experiments for Business Decision Making

EXPERIMENTS FOR BUSINESS DECISION MAKING: In the past decade, massive shifts in how companies interact with their customers have suddenly made field experiments an economically feasible way to learn about a variety of business questions such as what types of promotions are most effective, what products should be stocked at a store, how e-mail promotions should be designed, how sales staff should be compensated, etc. Many marketers engaged in online retailing, direct-marketing, online advertising, media management, etc. are rapidly embracing a "test and learn" philosophy and a number of platforms such as Google Website Optimizer, have been developed to facilitate rigorous field experiments in the online environment. Just as with the quality revolution in manufacturing during the 1980s and 1990s, the rapid rise of the "test and learn" philosophy in marketing has created a huge demand for those who can design, field, and analyze marketing experiments. Through this course, you will learn and practice a wide range of critical skills, from the statistical methods used to design and analyze experiments to the management and strategy required to execute an experiment and act on the results. Although the cases and examples will focus on marketing problems, the material covered can be applied in a number of other domains particularly operations management and product design.

One-term course offered either term
Also Offered As: MKTG 309
Prerequisites: MKTG 611 required; STAT 431 or equivalent required; MKTG 850 recommended but not required.
Activity: Lecture 1 Course Unit

MKTG 850 Special Topics - Consumer Neuroscience

CONSUMER NEUROSCIENCE: How can studying the brain improve our understanding of consumer behavior? While neuroscience made tremendous strides throughout the 20th century, rarely were meaningful applications developed outside of medicine. Recently, however, breakthroughs in measurement and computation have accelerated brain science and created a dizzying array of opportunities in business and technology. Currently, applications to marketing research and product development are experiencing explosive growth that has been met with both excitement and skepticism. This mini-course provides an overview of the neuroscience behind and the potential for these developments. Topics will range from well-known and widely used applications, such as eye-tracking measures in the lab and field, to emerging methods and measures, such as mobile technologies, face-reading algorithms, and neural predictors of marketing response. The course will also discuss applications in branding and product development, including wearable physiological devices and apps, sensory branding for foods and fragrances, pharmaceuticals and medical devices, and neuroscience-based products designed to enhance cognitive functions. These applications stem from many subfields of cognitive neuroscience, including attention, emotion, memory, and decision making. This course is self-contained and has no prerequisites. However, students with some background in business, economics, psychology, and/or neuroscience are likely to find the material covered in this course complementary to their existing knowledge.

Taught by: John Gilheiro
Course usually offered in spring term
Also Offered As: MKTG 350
Prerequisite: None
Activity: Lecture 0.5 Course Units
Notes: 0.5 CU half credit course

MKTG 851 Special Topics: Introduction to Brain Science for Business

INTRODUCTION TO BRAIN SCIENCE FOR BUSINESS: Brain science offers the potential to unlock the future of business, by providing new insights that can enhance decision-making, improve precision in design and marketing team chemistry and cultivate leadership, fine-tune selection and human performance, drive creativity and innovation, create social value, and optimize digital interactions. New developments in biometrics, implantable and wearable devices, genomics, proteomics, metabolomics, nutrition, and human microbiome, offer the opportunity for enhanced precision and impact in marketing, finance, management, analytics, and education. This course will provide an overview of contemporary brain science and its applications to business. Students first will be introduced to the basic anatomy and physiology of the brain and become familiar with important techniques for measuring and manipulating brain function. The course will then survey major findings in neuroscience with applications to business, including selective attention and advertising; valuation and marketing; decision making; learning, innovation and creativity; and social influence, team-building, and leadership. The course will end with a discussion of ethics, brain-machine interactions, and artificial intelligence. Applications to business, education, sports, law and policy will be discussed throughout.

Taught by: Michael Platt
Course usually offered in spring term
Also Offered As: MKTG 351
Prerequisite: None
Activity: Lecture 0.5 Course Units
Notes: 0.5 cu. One-half term. This course is now offered as MKTG737X.

MKTG 852 Special Topics - Marketing Analytics

MARKETING ANALYTICS: Companies are currently spending millions of dollars on data-gathering initiatives - but few are successfully capitalizing on all this data to generate revenue and increase profit. Moving from collecting data to analysis to profitable results requires the ability to forecast and develop a business rationale based on identified data patterns. Marketing Analytics will cover the three pillars of analytics - descriptive, predictive and prescriptive. Descriptive Analytics examines different types of data and how they can be visualized, ultimately helping you leverage your findings and strengthen your decision making. Predictive Analytics explores the potential uses of data once collected and interpreted. You will learn to utilize different tools, such as regression analysis, and estimate relationships among variables to predict future behavior. Prescriptive Analytics takes you through the final step - formulating concrete recommendations. These recommendations can be directed toward a variety of efforts including pricing and social-platform outreach.

Taught by: Jayengar
Course usually offered in fall term
Also Offered As: MKTG 352
Prerequisites: MKTG 611 and STAT 613
Activity: Lecture 0.5 Course Units
Notes: 0.5 cu half credit course. Check course meeting dates. Students should register for this course before the end of the Course Selection period (September for fall, January for spring) for sections offered in the SECOND half of the term.
MKTG 853 Special Topics: Design Thinking - A Human-Centered Approach to Innovation

DESIGN THINKING - A HUMAN-CENTERED APPROACH TO INNOVATION: In this hands-on experiential course, students will partner with a local start-up to apply design thinking steps taught throughout the course. Students will learn how to uncover deep consumer needs, effectively ideate, and create rapid prototypes to test their ideas with real customers. This class is well suited for those interested in careers in innovation or management consulting, marketing, product management, technology, or entrepreneurship. No prior experience or requirements are needed for this course.

Taught by: Caputo
Course usually offered in spring term
Activity: Lecture
1 Course Unit

MKTG 854 Special Topics: Visual Marketing

VISUAL MARKETING: As consumers, we are constantly exposed to advertisements and experience visual messages from product packages in stores, retail displays, and products already owned. In essence, visual marketing collateral is omnipresent and is an essential part of corporate visual identity, strategy, and communication. Some of this falls to creative graphic design, but advertising, design, and marketing can also be significantly enhanced by knowledge of how visual information and its presentation context can be optimized to deliver desirable and advantageous messages and experiences. This course will emphasize how to measure, interpret, and optimize visual marketing, and will provide an overview of visual perception and visual cognition, eye movements, and attention, and their role and influence on consumer memory, persuasion, choice, and other behaviors.

Taught by: Johnson
Course usually offered in spring term
Also Offered As: MKTG 354
Activity: Lecture
0.5 Course Units
Notes: 0.5 c.u. One-half term. In-class exercises, team-based learning, discussions, and lectures.

MKTG 890 Advanced Study Project (ASP)

RETAIL ECOSYSTEM ACTION LEARNING PROJECTS: This course offers graduate students from Wharton and other Penn schools an opportunity to work on real-world projects for companies in the retail industry and in the wider retail ecosystem. It requires the exploration and analysis of actual business issues or opportunities identified by sponsoring/client companies, as well as the formulation of recommendations. It combines 1) academic principles, 2) application of prior business knowledge to the project at hand, and 3) a solutions-oriented mentality. In addition to supervised project work and regular updates to the corporate client/project sponsor, the course involves classroom meetings and discussions on topics pertaining to the projects. While this course focuses on “marketing” topics, projects might also incorporate topics from related disciplines such as operations, management of innovation & technology, data analytics, international management, design, and real estate. Indeed, the goal will be to constitute interdisciplinary teams from Wharton and other relevant Penn graduate schools.

ADVANCED STUDY PROJECT (GENERAL): The principal objectives of this course are to provide opportunities for undertaking an in-depth study of a marketing problem and to develop the students’ skills in evaluating research and designing marketing strategies for a variety of management situations. Selected projects can touch on any aspect of marketing as long as this entails the elements of problem structuring, data collection, data analysis, and report preparation. The course entails a considerable amount of independent work. (Strict library-type research is not appropriate) Class sessions are used to monitor progress on the project and provide suggestions for the research design and data analysis. The last portion of the course often includes an oral presentation by each group to the rest of the class and project sponsors. Along with marketing, the projects integrate other elements of management such as finance, production, research and development, and human resources.

Taught by: Tom Robertson
One-term course offered either term
Also Offered As: OIDD 890
Prerequisites: MKTG 611 and MKTG 725. Students who do not fulfill the prerequisites should contact the instructor to be admitted. Completion of MKTG 725 or a background in retailing is preferred.
Activity: Seminar
1 Course Unit
**MKTG 893 Advanced Study: Marketing in Emerging Economies: Understanding & Marketing to the Chinese and Indian Consumer**

This course is a two part series. The first part concentrates on the Indian Consumer and the second part concentrates on the Chinese Consumer. India and China add up to half of the world's population. Each presents its own challenges and opportunities. US and European MNCs have been in both countries for many years, but emerging market MNC's are becoming stronger and in many cases overtaking US and European companies despite their strong brands and know-how. Marketing to the Indian Consumer will provide a careful understanding of: The opportunity and challenges in the Indian consumer market 2) Various segments within the Indian consumer market. 3) Consumer psychology and decision making processes in each segment 4) Distribution channels in Indi Media in India: Mass, Local and non-traditional. 6) Bottom of the pyramid consumers and rural markets. 7) Product design and development decisions. The course will focus on the following industries: consumer packaged goods, mobile phones, financial services (insurance and banking), healthcare, sports and entertainment, and transportation. The course will involve case studies from local and international companies, guest lecturers, and visits to consumer homes to observe their tastes, habits, and preferences.

Taught by: Raju and Zhang
Course not offered every year
Also Offered As: MKTG 393, WH 216
Activity: Lecture
0.5 Course Units

Notes: Indian Consumer Section of the Course offered in Mubai, India The Chinese Consumer Section of the Course will be taught in Beijing, China.

**MKTG 895 Global Business Week**

GLOBAL BUSINESS WEEK: MKTG 895 is one in an array of Global Business Week (GBW) study tour courses offered by various departments across Wharton. Each of the GBW courses offered in a term, will entail travel to a different part of the world and address a different element of economic driver for a country or industry. A faculty member will drive the topic and curriculum associated with a study tour to a region of the world where the study of a topic will provide insights and clarity available only by being in country. In country lectures from the lead faculty and area experts in industry, academia and government will form much of the basis of class time. In addition, students will experience relevant company and cultural settings where they will again hear from industry experts. Each course will require an individual student paper, a participation component, and a pre-travel or in-country set of assignments. See course syllabus for details. CUSTOMER CENTRICITY AT THE LEADING EDGE OF ANALYTICS AND TECHNOLOGY: LEARNING FROM SCANDINAVIA. Instructor: Peter Fader. The concept of "customer centricity," i.e., that not all customers are created equal, is gaining credibility and traction. More and more firms are coming to the realization that understanding and leveraging the behavioral differences across customers can potentially be more sustainably profitable than more conventional product-centric thinking that continues to dominate today's business landscape. At the heart of this transformation are three critical ingredients: data, analytics, and technology. Using customer data at a granular level allows firms greater visibility into customer interactions, their use of social media, biometrics, and geolocation as tools to enhance business models and even create new ones. It allows a firm to be deliberate about which customers to go after and what kinds of services to provide them. For many, the key to profitable growth lies in successfully harnessing and developing the tools, organizational structures, and corporate cultures that create and enhance these capabilities.

Activity: Lecture
0.5 Course Units

Notes: Wharton Executive MBA Course. Course must be taken for a grade (no pass/fail option) and will be subject to the standard CMGPA and LT requirements for MBA courses.

**MKTG 897 Advanced Study: Luxury Branding and Retailing in Italy and Beyond**

New retail brands and opportunities for growth are emerging at an unprecedented rate, for online retailers and offline retailers alike. In this course we will: (1) articulate key principles for successful branding and for understanding consumer shopping behavior in retail environments, (2) demonstrate unique challenges and opportunities that luxury brands face, and (3) discuss concepts and empirical methods for analyzing consumer shopping behavior.

**MKTG 899 Independent Study**
A student contemplating an independent study project must first find a faculty member who agrees to supervise and approve the student's written proposal as an independent study (MKTG 899). If a student wishes the proposed work to be used to meet the ASP requirement, he/she should then submit the approved proposal to the MBA adviser who will determine if it is an appropriate substitute. Such substitutions will only be approved prior to the beginning of the semester.

**MKTG 940 Measurement and Data Analysis in Marketing - Part A**
In this course we consider models for binary, count, and continuous data including contingency table models, logistic and probit regression, ANOVA, ANCOVA, conjoint analysis, and OLS. In addition we cover multidiemnsional techniques such as MDS, cluster analysis, principal components analysis, factor analysis, and discriminant analysis. We utilize the statistics package SPlus 2000, and also BUGS for implementing many of the techniques described in a Bayesian manner.

**MKTG 942 Research Methods in Marketing - Part A**
This course provides an introduction to the fundamental methodological issues that arise in experimental and quasi-experimental research. Illustrative examples are drawn from the behavioral sciences with a focus on the behavior of consumers and managers. Topics that are covered include: the development of research ideas; data collection and reliable measurement procedures; threats to validity; control procedures and experimental designs; and data analysis. Emphasis is placed on attaining a working knowledge of the use of regression methods for non-experimental and quasi-experimental data and analysis of variance methods for experimental data. The primary deliverable for this course is a meta-analysis of a research problem of the students choosing that investigates the effects of research methods on empirical results.

**MKTG 950 Judgment and Decision Making Perspectives on Consumer Behavior - Part A**
The purpose of this course is to provide a solid foundation for critical thinking and research on the judgment, decision-making and choice aspects of consumer behavior. There is a focus on how people process information when making judgments and choices and how the processes of judgment and choice might be improved. Topics of discussion include rationality, judgment under uncertainty, judgment heuristics and biases, risk taking, dealing with conflicting values, framing effects, prospect theory, inter-temporal choice, preference formation, and the psychology of utility. The focus will be on the individual decision-maker, although the topics will also have some applicability to group and organizational decision-making and behavioral research methodologies.

MKTG 952 Information Processing Perspectives on Consumer Behavior - Part A
The purpose of this seminar is to provide graduate students with a solid foundation for critical thinking and research in psychology and marketing on information processing related topics. Topics of discussion include consumer knowledge (learning, memory and categorization), attitude theory, persuasion, affect and social influence. The course draws from the literature in marketing, psychology and economics. The course will enable students to conceptualize, operationalize, and develop research ideas. Therefore, the focus is on understanding theoretical and methodological approaches to various aspects of consumer behavior as well as advancing this knowledge by developing testable hypotheses and theoretical perspectives that build on the current knowledge base.

MKTG 954 Economic/OR Models of Marketing - Part A
This doctoral seminar reviews analytical models relevant to improving various aspects of marketing decisions such as new product launch, product line design, pricing strategy, advertising decisions, sales force organization and compensation, distribution channel design and promotion decisions. The primary focus will be on analytical models. The seminar will introduce the students to various types of analytical models used in research in marketing, including game theory models for competitive analysis, agency theory models for improving organization design and incentives within organizations, and optimization methods to improve decision making and resource allocation. The course will enable students to become familiar with applications of these techniques in the marketing literature and prepare the students to apply these and other analytical approaches to research problems that are of interest to the students.

MKTG 956 Empirical Models in Marketing - Part A
This course is designed to generate awareness and appreciation of the way several substantive topics in marketing have been studied empirically using quantitative models. This seminar reviews empirical models of marketing phenomena including consumer choice, adoption of new products, sales response to marketing mix elements, and competitive interaction. Applies methods and concepts developed in econometrics and statistics but focuses on substantive issues of model structure and interpretation, rather than on estimation techniques. Ultimately, the goals are a) to prepare students to read and understand the literature and b) to stimulate new research interests. By the end of the course, students should be familiar with the key issues and approaches in empirical marketing modeling.
Course usually offered in spring term
Activity: Seminar
0.5 Course Units

Master of Chemical Sciences (MCS)

MKTG 971 Advanced Topics in Marketing - Part A
Taught collectively by the faculty members from the Marketing Department, this course investigates advanced topics in marketing. It is organized in a way that allows students to 1) gain depth in important areas of research identified by faculty; 2) gain exposure to various faculty in marketing and their research values and styles; and 3) develop and advance their own research interests.
Course usually offered in fall term
Activity: Seminar
0.5 Course Units
Notes: 0.5 cu. Course meets entire semester.

MKTG 972 Advanced Topics in Marketing - Part B
Taught collectively by the faculty members from the Marketing Department, this course investigates advanced topics in marketing. It is organized in a way that allows students to 1) gain depth in important areas of research identified by faculty; 2) gain exposure to various faculty in marketing and their research values and styles; and 3) develop and advance their own research interests.
Course usually offered in spring term
Activity: Seminar
0.5 Course Units
Notes: 0.5 cu. Course meets entire semester.

MKTG 973 Research Seminar in Marketing - Part A
This course is taught collectively by the faculty members from the Marketing Department. It is designed to expose Doctoral students to the cutting-edge research in marketing models in order to help them to define and advance their research interests. This course will offer: in-depth discussions on some important topics in marketing by experts in respective areas; tools, and methodologies required for conducting research in those areas; broad exposure to our faculty members and their proven research styles.
Course usually offered in fall term
Activity: Seminar
0.5 Course Units
Notes: 0.5 cu. Course meets entire semester.

MKTG 974 Research Seminar in Marketing - Part B
This course is taught collectively by the faculty members from the Marketing Department. It is designed to expose Doctoral students to the cutting-edge research in marketing models in order to help them to define and advance their research interests. This course will offer: in-depth discussions on some important topics in marketing by experts in respective areas; tools, and methodologies required for conducting research in those areas; broad exposure to our faculty members and their proven research styles.
Course usually offered in spring term
Activity: Seminar
0.5 Course Units
Notes: 0.5 cu. Course meets entire semester.

MKTG 995 Dissertation
One-term course offered either term
Activity: Dissertation
1 Course Unit

MKTG 999 Supervised Independent Study
Requires written permission of instructor and the department graduate adviser.
One-term course offered either term
Activity: Independent Study
1 Course Unit

MCS 541 Proseminar II: Capstone Proposal Preparation
Highly recommended course during the semester prior to starting a capstone project. Students will review the scientific communication, research design, and prepare and submit an original proposal for the capstone project. Current opinions in the study of chemistry and presentations by guest lecturers will add content to areas of concentration.
Activity: Hybrid Course
0.5 Course Units

MCS 542 Proseminar III: Capstone Report Preparation
Highly recommended while taking MCS 699. Students will prepare and submit the report and poster for the capstone project.
Activity: Hybrid Course
0.5 Course Units

MCS 598 Independent Studies: Literature Review
Advanced study of literature and current research in various branches of chemistry with the goal of learning a new topic or research trend supervised by a faculty member. Students will be evaluated based on the work plan designed with the faculty mentor and director of the program. To obtain a grade, students will submit a report at the end of the semester.
Activity: Independent Study
1 Course Unit

MCS 599 MCS Independent Studies
May be taken for multiple course unit credit for (1) advanced study and research in various branches of chemistry, (2) seminar in current chemical research, (3) individual tutorial in advanced selected topics.
Taught by: Mayol-Cabassa, Ana-Rita
One-term course offered either term
Activity: Independent Study
1 Course Unit
Master of Science in Social Policy (MSSP)

MSSP 601 The Power of Partnerships between Government, Non-profits, and the Private Sector
Everything from the Affordable Care Act to the Mayor’s Rebuild Initiative could not be implemented by government without strong and vital partnerships with non-profits and the private sector. These collaborations provide an opportunity to help people, impact and change policy, improve outcomes, and multiply the impact that non-profit and private sector organizations can have. The course will help graduate (and advanced undergraduate) students not only understand the theory, policy, and practice of these collaborations but also learn how they actually happen. Students will also learn the characteristics of these three sectors, their roles and contributions, and competitive forces that are often at work in the collaborative process. Topics for discussion will include attitudes and expectations in the public sector, the ingredients of effective partnerships, and effective communication strategies with elected and appointed officials. The course will be conducted on a seminar basis. Graduate students are expected to take an active part in shaping the discussion. Students will be expected to rotate leadership for the class discussions and to supplement course materials with independent study of relevant magazine and newspaper articles. Course grades are assigned as follows: 20 percent for class participation, 15 percent for an in-class written exam, 30 percent for a group presentation and write up of a case study, and 35 percent for a final project. High quality written work and accurate citations is an expectation in all assignments.
Activity: Seminar
1 Course Unit

MSSP 606 Data for Equitable Justice Lab
Data for Equitable Justice Lab is a non-credit research group that gives SP2 Masters students an opportunity to analyze some of today’s most important social issues through data and, with faculty support, create a product for audiences well beyond our classrooms and campus. With guidance from the lab faculty, students develop a project - either individually or as part of a team - to examine a contemporary social policy or political issue through or on data or digital technology. Through these projects students will produce an op-ed, blog post, podcast, academic article, short film, or other product of their choosing that creates or contributes to contemporary discourse.
Activity: Laboratory
0 Course Units

MSSP 628 Policy: Analysis of Issues, Strategy and Process
Policy analysis requires an understanding of social problems/social issues and the processes by which policy is developed and implemented. Critical skills in many policy frameworks include: problem definition and analysis, review of relevant research, identification of possible actions, implementation and evaluation, and fiscal analysis. Competency in written and oral communication is also essential. To develop these and related skills, this course utilizes as a base a dynamic social problem analysis framework that addresses issues of equity, equality and adequacy. It also examines multiple theoretical and analytical perspectives. Through the review of contemporary and historical social policy debates and provisions, selected case examples and policy briefs, this course provides students with an understanding of the policy roles of the legislative and executive branches of government, including goal setting, policy rulemaking and enactment, allocation of resources, financing, regulation, and implementation. The policy process at state and local levels of government will also be addressed. The primary focus is on U.S. policy although global policies will be discussed when relevant.
Course usually offered in fall term
Prerequisite: Enrolled in MSSP program or permission of instructor
Activity: Lecture
1 Course Unit

MSSP 629 Research and Evaluation Design
Research and Evaluation Design introduces social research methods in the context of social policy and program evaluation. The course provides a conceptual and practical understanding in the design of experimental, quasi-experimental, and non-experimental research and in the application of quantitative and qualitative methods. Students learn about the application of the research process and skills in all phases of assessing a social policy and developing a social program, including needs assessment, implementation analysis, and evaluation of policy or program effectiveness. Students learn to be critical and informed consumers of research and to apply guidelines of research ethics in social policy settings.
Taught by: Summerville
One term course offered either term
Prerequisite: Enrolled in MSSP program or permission of instructor
Activity: Lecture
1 Course Unit

MSSP 630 Quantitative Reasoning/Social Statistics
The primary goals of this course are (1) to provide students with a solid understanding of the logic of social science research as well as (2) to provide students with an introduction to a broad range of statistical methods commonly used in social science research. The first portion of the semester concentrates on defining research problems, research design (including sampling, measurement, and causal inference), and assessing research quality. The latter portion of the semester focuses upon data analysis including descriptive statistics, measures of association for categorical and continuous variables, introduction to t-tests, ANOVA and regression, and the language of data analysis. Students will learn how to choose and apply statistical tools to data sources, how to interpret quantitative studies, and will gain experience using SPSS - a statistical software package.
Course usually offered in fall term
Prerequisite: Enrolled in MSSP program or permission of instructor
Activity: Lecture
1 Course Unit
MSSP 631 Law and Social Policy
This course introduces students to the basics of the American legal system, focusing on the interplay between litigation and social policy. Students will learn how law, and particularly case law, is made, how to read case law and evaluate precedent, legal reasoning and argument. This course will utilize various teaching methods including introduction to the "Socratic" lecturing method which is frequently utilized in the study of law. Students will also study the structure of court systems at both state and federal levels as well as the litigation process and the role of law and courts in shaping and addressing social policy issues. Students will also learn the basics of several areas of substantive law, with an eye toward consideration of how that law has been, and can be, used to effect social change.
Course usually offered in spring term
Prerequisite: Enrolled in MSSP program or permission of instructor
Activity: Lecture
1 Course Unit

MSSP 632 Capstone Seminar I: Policy Communications
The focus of the Capstone Seminar is three-fold: 1) to enhance student integration of the theory and practice of social policy analysis; 2) to enhance the student's competencies in the written and oral communication processes and procedures necessary for the policy world; and 3) to ensure basic knowledge about federal budget processes, stakeholder roles, and inter-organizational collaboration.
Course usually offered in spring term
Prerequisites: Enrolled in MSSP program.
Activity: Lecture
0.5 Course Units

MSSP 633 Capstone Seminar II: Policy Internship
Capstone II consists of an intensive, multi-week policy internship that is selected through a consultative process involving the student, MSSP advisors, internship coordinator/advisor, and mentors/supervisors at potential sites. The internship provides an opportunity for the student to expand horizons beyond the academic. It serves as a medium to integrate classroom learning with experiences in policy making activity.
Course usually offered summer term only
Prerequisite: Enrolled in MSSP program
Activity: Seminar
0.5 Course Units

MSSP 634 MSSP/DA Capstone I: Telling Stories with Data
The volume and complexity of data continues to increase in the world around us, including science, business, medicine, social media and everyday human activity. This course aims to expose students to visual representation methods and techniques that increase the understanding of complex data. Good visualizations not only present a visual interpretation of data, but do so by improving comprehension, communication, and decision making. In this course, students will learn about the fundamentals of perception, the theory of visualization, and good design practices for visualization. The course will also provide hands-on experience on the process of data communication, from initial data analysis, to identifying appropriate visualization techniques, to crafting informative visualizations.
Course usually offered in fall term
Activity: Seminar
0.5 Course Units

MSSP 635 MSSP/DA Capstone II: Internship
Capstone II consists of an intensive, multi-week internship that is selected through a consultative process involving the student, MSSP advisors, internship coordinator/advisor, and mentors/supervisors at potential sites. The internship provides an opportunity for the student to expand horizons beyond the academic. It serves as a medium to integrate classroom learning with experiences in policy making activity.
Prerequisite: Enrolled in Social Policy/Data Analytics program
Activity: Seminar
0.5 Course Units

MSSP 668 Economics for Social Policy
This course provides students with theory and tools from the field of economics that are useful for the field of social policy, such as: 1) critical macroeconomic and microeconomic concepts for social policy formation and analysis; 2) information about the Congressional budget process and federal budget, U.S. and global monetary policy, economic measurement indices, and tax policy in relation to social policy values of equity, equality and adequacy; 3) how to apply cost-benefit analysis and/or cost-effectiveness analysis to policy proposals; and 4) the role of nonprofit organizations in the provision of social services and programs that are mandated by federal legislation.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MSSP 710 Democratizing Data: Analytics for Social Change
With the advent of digital technologies and the increasing power of computational analytics, the proliferation and ubiquity of data production has increased at exponential rates enabling new possibilities for social analysis. This course will examine the emergence of democratizing data -- the movement to make government and other data more widely or publicly available and its potential enabling for democratic possibilities. The types of data being made available, through various analytic systems, and the ways in which their accessibility and inaccessibility is contributing to reconfigured power relations, will be described. The paradigmatic tensions and shifts that have emerged in the debates on "Big Data" such as deductive versus inductive reasoning and the challenges posed to statistical sampling theory will be interrogated. The appropriation of machine learning and predictive analytic algorithms for social analysis will be critically explored. Issues related to the ethical and legal use of administrative data, particularly data related to patient, client, student, and taxpayer information will be considered, as well as from internet-based sources including social media. Potential solutions to data security challenges will be additionally considered. Methods for web-scraping of data, analysis of web traffic data, and the use of social networking data in the modeling of social phenomena and public opinion will be examined. Students will learn how to make results accessible to non-technical audiences via data visualization tools, such as web-based data dashboards and web-based maps. These topics will be discussed for the analysis of health, education, and social policy as well as their implications for questions pertaining to race, gender, class, sexuality, disabilities, age and youth culture. This course will develop students' knowledge of computational and data analytics and its applications for social policy analysis.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
MSSP 741 Gender & Social Policy
Gender and Social Policy develops an advanced understanding of social policies through a focus on social issues and conditions through the lens of gender, economic and critical theory. The specialized focus on gender and social policy provides students with the opportunity to develop more specialized knowledge about how market dynamics and government policies respond to the needs and risks faced by women. Specific emphasis is placed on utilizing theoretical frameworks to evaluate the intersection between social policy, history and social science in relationship to gender issues. Students are also expected to conduct a policy analysis that includes an evaluation of how current and former social movements surrounding gender issues shaped their policy of interest.
Taught by: Baker
Course usually offered in spring term
Also Offered As: SWRK 741
Activity: Lecture
1 Course Unit

MSSP 780 Policy and "Difference" in Postmodernity
Social constructions of "difference" permeate the institutions, spaces, and assumptions of our society. These social constructions include but are not limited to the racialized, gendered, sexed, classed, and dis/abled constructions of the body. By leaning on postmodern thinkers such as Iris Marion Young, Pierre Bourdieu, Judith Butler, Jacques Derrida, Ernesto Laclau, and Michel Foucault, this seminar course will begin by engaging the questions of what is "difference" and how is "difference" discursively constructed and reproduced in society. Using a postmodern lens, the remainder of the course will engage various social science texts that deal with the varieties of "difference" (i.e. race, gender, class, sexuality) and the explicit and/or implicit policy implications of these works. Thus, we will critically engage policies such as welfare, affirmative action, economic policies of taxation, and same-gender marriage, among others. The underlying questions throughout the course will be to what extend does social policy enable the possibilities of freedom, justice, and democracy for the "Other", the deviant, the abject, the marginalized, those of assumed "difference"? And, to what extent does policy constrain those possibilities at the same time? This course does assume familiarity with social theory and is an introduction to postmodern thought on the law, the political, and policy.
Taught by: Dixon-Roman
Course usually offered in spring term
Also Offered As: SWRK 780
Activity: Seminar
1 Course Unit

MSSP 797 Social Policy in Revolutionary Cuba (1959-2017)
Cuba represents one of the world's long-standing institutionalized revolutions whose narrative and policies have changed from a strong nationalism yearning for independence, to an alignment with communism's ideology and modus operandi, to a nostalgic, post-Soviet Union "socialism" ruled by a binary, state-controlled capitalism. In addition to the myriad of social and political changes affecting the island, the transition of leadership from Fidel Castro to his brother, Raul, and the death of the former in 2016, has put into question the theoretical pillars of the Revolution, thus undermining its initial legitimacy. This course is designed to provide students with the critical and analytical tools to dissect Cuban revolutionary politics, policies, and identity mutations within the island's historical trajectory. We will begin by critically reviewing key points of diplomatic and historical relationships between the U.S and Cuba, followed by an analysis of the notion of independence - upon which Castro relied to gather massive support - in the context of the 60's debates on decolonization and underdevelopment. In addition, we will delve into the theoretical foundations of the Revolution focusing, among other texts, on the literature by Cuba's "founding father" Jose Marti, who deeply influenced the Spanish-American war (1898)'s outcomes as well as Fidel Castro's vision for Cuba. Throughout the course, students will also have the opportunity to critically read and discuss main Cuban social policies such as its famous Literacy Campaign, and other Education, Housing, Cultural, Health, and Immigration policies, as well as the island's complex relationship with technological development and communications. Finally, we will study identity and race dynamice, which are intricacably embedded in Cuba's political landscape.
Course usually offered in spring term
Also Offered As: SWRK 797
Activity: Lecture
1 Course Unit
Notes: Application deadline: 11/20/17 at 5pm; Class dates in Havana: May 17-May 31; Pre-departure sessions at Penn: April (TBA); Application available at: www.sp2.upenn.edu/global/courses

MSSP 799 Independent Study
Independent studies provide a flexible opportunity for standing faculty and students to work together in pursuing a topic of special interest that is not sufficiently covered by other courses in the curriculum. The content of independent studies is highly specialized and, as such, requires a plan of study developed jointly by the student(s) and the supervising standing faculty member. Part-time faculty members are not eligible to offer independent studies. Independent studies require the academic advisor's approval.
Activity: Independent Study
1 Course Unit
MSSP 897 Applied Linear Modeling
This course deals with the underlying assumptions and applications of the general linear model with social science, education, and social policy related questions/data. The first half of the course begins by covering simple linear regression and the assumptions of the general linear model, assumption diagnostics, consequences of violation, and how to correct for violated assumptions. This will also include methods of incomplete case analysis (i.e. missing data analysis). Then various aspects of regression analysis with multiple independent variables will be covered including categorical explanatory variables (e.g. to estimate group differences), interaction effects, mediating effects (e.g. to estimate the indirect effect of social processes), and non-linear effects. The course will then cover some of the applications of the generalized linear model including logistic regression, some elements of path modeling (structural equation modeling), multilevel analysis (hierarchical linear modeling), and longitudinal modeling (growth modeling). The course will be taught using SAS, but students are welcome to use any statistical package of comfort.
Pre-requisite: Introductory Graduate Statistics.
Taught by: Dixon-Roman
Course usually offered in spring term
Prerequisite: Introductory Graduate Statistics
Activity: Lecture
1 Course Unit

Master of Science in Translational Research (MTR)

MTR 510 Introduction to Clinical and Translational Research
This introductory course lays the foundation for understanding practical aspects of conducting clinical research in an academic environment.

The course is divided into two modules: Module 1: Research Methods & Protocol Development and Module 2: Regulatory Environment for Clinical Trials. The first module introduces clinical research, clinical protocols, study designs and biostatistics that underlie such studies. The second module covers ethical considerations in clinical research, study execution and oversight, and the regulatory environment for clinical research. Upon completion, students should have a strong foundation in the fundamentals of clinical research and should be able to apply contemporary research tools to clinically relevant areas of investigation.

Taught by: Emma Meagher, MD
Course usually offered in fall term
Also Offered As: REG 510
Activity: Lecture
1 Course Unit

MTR 620 Translational Therapeutics
To provide an in-depth view of the process by which scientific discoveries are commercialized. This course covers discovery in the laboratory, technology transfer, regulatory, financial, and managerial issues involved in moving a technology from the lab into the market place. The course contents fall into three broad categories: (1) examples of scientific discoveries that are candidates for commercialization, (2) fundamental elements of technology transfer, such as intellectual property protection and licensing, and (3) aspects of commercialization, such as regulatory approval, financing, and startup formation. In using this structure, the course provides parallel coverage of both the science and the commercialization process, in such a way that the elements of one contribute to the student's experience in learning the other.

Taught by: Nalaka Gooneratne, MD
Also Offered As: BE 608
Prerequisites: Undergraduates and graduate students in other departments are welcome. Please contact mmaxwell@upenn.edu to request permission to register.
Activity: Lecture
1 Course Unit

MTR 623 Writing An NIH Grant
This course will provide a comprehensive overview of the grant writing process. Audience: Faculty who have not written an NIH grant before or need guidance with
Activity: Lecture
1 Course Unit

Master of Urban Spatial Analytics (MUSA)

MUSA 500 Spatial Statistics and Data Analysis
This hands-on course will provide an introduction to statistical methods and will serve as a prequel to ESE502. Topics covered will include exploratory univariate analysis, correlation and Chi-square analysis, t-tests and ANOVA. Non-parametric alternatives to the standard tests will be discussed. OLS regression, including assumptions and diagnostics, will be covered in detail. Heavy emphasis will be placed on the application of each method covered. The course will conclude with an introduction to spatial statistical methods and a brief overview of linear algebra and matrix notation for OLS and spatial regression. Students will learn to use JMP-IN, ArcGIS and GeoDa for data analysis.

Taught by: Eugene Brusilovskiy
Course usually offered in fall term
Also Offered As: CPLN 671
Activity: Lecture
1 Course Unit
MUSA 501 Introduction to Applied Statistics
This hands-on course will provide an introduction to statistical methods and will serve as a prequel to ESE502. Topics covered will include exploratory univariate analysis, correlation and Chi-square analysis, t-tests and ANOVA. Non-parametric alternatives to the standard tests will be discussed. OLS regression, including assumptions and diagnostics, will be covered in detail. Heavy emphasis will be placed on the application of each method covered. The course will conclude with an introduction to spatial statistical methods and a brief overview of linear algebra and matrix notation for OLS and spatial regression. Students will learn to use JMP-IN, ArcGIS and GeoDa for data analysis.
Taught by: Brusilovsky
Course usually offered in spring term
Activity: Lecture
1 Course Unit

MUSA 503 Modeling Geographical Objects
This course offers a broad and practical introduction to the acquisition, storage, retrieval/maintenance, use, and presentation of digital cartographic data with vector-oriented (i.e. drawing based) geographic information systems (GIS) for a variety of environmental science, planning, and management applications. Previous experience in GIS is not required.
Taught by: Tomlin or Hillier
Course usually offered in fall term
Also Offered As: CPLN 503
Activity: Lecture
1 Course Unit

MUSA 504 Business and Crime Geographics
In this hands-on course, students will learn how to use ESRI Business Analyst software and data to undertake real estate and social service market studies, business location studies, and consumer expenditure profiles. New this year, the course will also explore techniques and software for tracking and forecasting crime; and deploying police resources.
Taught by: Amos
Course usually offered in spring term
Prerequisites: Prior experience with ArcGIS.
Activity: Seminar
1 Course Unit

MUSA 505 Web-based Mapping
This hands-on course will teach students how to develop and implement web-and internet-based mapping tools and applications using ESRI’s ArcGIS Server and ArcGIS Online products as well as the GoogleMaps Applications Programming Interface (API). Students will learn how to use web-based tools to build spatial databases, analyze and display spatial data at multiple scales, mix web-based vector and raster data with image data, conduct spatial analysis and develop urban and environmental planning applications.
Taught by: Landis and Dailey
Course usually offered in spring term
Prerequisite: CPLN 670 / LARP 743
Activity: Laboratory
1 Course Unit

MUSA 507 Spatial Analysis for Urban and Environmental Planning
This course builds on prior knowledge of GIS and basic statistics to help students to develop GIS and spatial analysis applications for use in urban and environmental planning and management. Each weekly session will focus on a particular analytical approach (e.g., buffering, geo-processing, map algebra, network analysis) as applied to a particular urban or environmental planning tasks (e.g., identification of development opportunities, prioritizing conservation lands, urban growth modeling, housing price modeling). The format of the class includes weekly lectures/in-class demos; and weekly homework assignments. The course will make extensive use of ArcGIS and associate Extensions, especially Spatial Analyst, Network Analyst, and Business Analyst. One-year student versions of ArcGIS and ArcGIS extensions will be available free of charge at the City Planning Office. ArcGIS runs best on Windows machines; those with Macs will need to install a Windows emulator.
Taught by: Steif
Course usually offered in fall term
Also Offered As: CPLN 590
Prerequisite: MUSA 501 or CPLN 503 or equivalent
Activity: Lecture
1 Course Unit

MUSA 610 Javascript Programming for Planning Applications
This course will introduce city planning, MUSA and design graduate students to Java and Javascript. Students will learn the logic and syntax of the Java programming language for use in simple web applications (Weeks 1 to 7); as well as how to program database and map-oriented web and desktop applications using Javascript (Weeks 8 to 14). The "hands-on" uses of Java and Javascript in urban planning applications will be emphasized. Students will hone their programming and applications development skills through a series of bi-weekly assignments.
Taught by: Faculty
Course usually offered in spring term
Also Offered As: CPLN 690
Activity: Laboratory
1 Course Unit

MUSA 611 Java Script Programming for Planners and Designers
This course will introduce City Planning, MUSA and design graduate students to Javascript. Students will learn the logic and syntax of the Java programming language for use in a simple web application (weeks 1 to 7); as well as how to program database and map-oriented web and desktop applications using Javascript (weeks 8 to 14). The "hands-on" uses of Javascript in urban planning applications will be emphasized. Students will hone their programming and applications development skills through a series of bi-weekly assignments.
Taught by: Faculty
Course usually offered in fall term
Also Offered As: CPLN 692
Activity: Lecture
1 Course Unit
MUSA 620 Data Wrangling and Visualization
The purpose of this course is to familiarize students with the "pipeline" approach to data science. This involves the process of gathering data; sorting the data; analyzing the data and visualizing the data such that non-technical managers can make use of it for decision making. The first part of the course teaches students how to gather data by way of scraping, APRs, Google Big Query, Twitter and other unstructured sources. The second part of this course, teaches students how to store and retrieve these data in a database. The third part of the class teaches some more esoteric machine driven analytics. The fourth and final component of the class is data visualization both in state and dynamic (web-based) form. The students will be expected to replicate this pipelines on a data set of their own choosing for their final project.
Course usually offered in spring term
Also Offered As: CPLN 691
Prerequisites: Prerequisites include a working knowledge of R and ArcGIS.
Activity: Seminar
1 Course Unit

MUSA 800 MUSA Capstone Project
One term course offered either term
Activity: Seminar
1 Course Unit

MUSA 801 MUSA Seminar
Course Description: the purpose of this course is to have students to work with city and non-profit clients on analytical projects that convert client data into actionable intelligence. Groups of 3-4 students will work with the client to understand the business process, wrangle data, develop spatial and spatial analytics and serve these outputs to non-technical decision makers through the medium of data visualization.
Students will be mentored by MUSA Faculty and advised by someone from the partnering agency. Prerequisites: students must have a working knowledge of R and experience building both spatial and statistical models including machine-learning models. In order to be eligible for this course, students must have taken the following courses - 1) MUSA-507/ CPLN-590 and either CPLN-505 or MUSA-500. Students must have taken or be enrolled concurrently in MUSA-601 or MUSA-800. Students without these specific prerequisites are asked to contact the instructor.
Admission into the course: for spring 2018, there are initially 16 open seats with the possibility of another 4 opening up. To be admitted into the course, students are asked to pick one of the practicum projects and write no more than 300 words about why the use case is of interest, how they might go about solving the problem, and its usefulness to the city. Please also discuss which data-drive skills are your sharpest. The essay should be turned into the City Planning Office in Meyerison Hall.
Projects (subject to change): Louisville, Kentucky-Traffic Flows and Smart Signal Modeling: students will have access to high-resolution traffic data from Waze and historical traffic signal information from the City. The goal is understand the traffic pattern that might result from a given traffic signal configuration. Can discover a configuration that is amenable to mode choice like walking or biking? Minneapolis, Minnesota-Code Enforcement: Minneapolis has a problem where too many construction projects are happening illegally. Unpermitted construction work may result in unsafe living conditions and worse. This project is to help the city predict where illegal work may be happening and how inspectors can better enforce existing permit regulations. Philadelphia, PA-Equitable Bike Share Planning: one of the policy goals of Philadelphia's bike share system is to expand into neighborhoods where bike share demand may not be profitable but where the subsidies might induce more sustainable mode choice in the future. Working with the Bicycle Coalition of Greater Philadelphia, the goal of this project is for students to build and algorithm, which can predict bike share demand for any location Citywide,
Taught by: Ken Steif

Materials Science and Engineering (MSE)

MSE 099 Undergraduate Research and/or Independent Study
An opportunity for the student to become closely associated with a professor (1) in a research effort to develop research skills and technique and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student's academic level. To register for this course, the student and professor jointly submit a detailed proposal to the undergraduate curriculum chairman no later than the end of the first week of the term. Note: a maximum of 2 c.u. of MSE 099 may be applied toward the B.A.S. or B.S.E. degree requirements.
One term course offered either term
Activity: Independent Study
1 Course Unit
Notes: Open to all students

MSE 215 Introduction to Functional Materials: From Macro to Nanoscale
The purpose of this course is: 1) to introduce key concepts underlying the design, properties and processing of functional materials and their applications, and 2) to apply these concepts in the rapidly growing field of nanomaterials and nanotechnology. Fundamental chemical and physical principles underlying electronic, dielectric, optical and magnetic properties will be developed in the context of metals, semiconductors, insulators, crystals, glasses, polymers and ceramics. Miniaturization and the nanotechnology revolution confronts materials science with challenges and opportunities. Examples in which nanoscale materials exhibit qualitatively different properties compared to bulk will be emphasized.
Course usually offered in spring term
Prerequisite: MSE 221
Activity: Lecture
1 Course Unit

MSE 220 Introduction to Materials Science and Engineering
The course is an introduction to the most important concepts in materials science and engineering with a goal of building the foundations for all other courses related to materials and how to think about materials in other areas of engineering and the physical sciences. It covers atomic bonding, crystal structure and symmetry, glasses, defects, diffusion, elasticity, plasticity, fracture, phase diagrams, phase transformations, and an introduction into thermal, electrical, magnetic and optical properties and materials processing. Material classes will include metals, ceramics, polymers, semiconductors, and composites.
Course usually offered in fall term
Also Offered As: MEAM 220
Prerequisite: PHYS 140 or MEAM 110
Corequisites: PHYS 141 and MATH 240
Activity: Lecture
1 Course Unit

MSE 221 Quantum Physics of Materials
This course develops the background in basic physics required to understand the behavior of electrons in atoms, molecules and solids. Beginning with experiments and ideas that led to the foundation and postulates of Quantum Mechanics, the behavior of an electron in simple potential wells is treated. The electron in a harmonic oscillator well and the Coulomb potential of a hydrogen atom are treated next. Pauli's exclusion principle and generalization to multi-particle systems are introduced. The Fermi energy, density of states and free electron band structure will be introduced. Many state-of-the-art materials analysis techniques will also be demonstrated throughout the course.
One term course offered either term
Prerequisites: PHYS 140, 141 concurrent and MATH 240
Activity: Lecture
1 Course Unit
Notes: Meets Natural Science Requirement

MSE 250 Nano-scale Materials Lab
In this class you will learn laboratory methods used to synthesize materials, to examine the structure of materials, to measure electrical, mechanical and thermal properties, and to investigate the relationships between processing, structure and properties. Emphasis is placed on laboratory skills, technical understanding, and technical communications (figures, writing). The laboratory exercises involve: 1) learning how to use state of the art equipment for studying the properties and internal structure of materials, 2) qualitative and quantitative interpretation of data and observations, and 3) the development of analytical skills necessary to form general and fundamental conclusions from observations and data. This course focuses on how materials' structure and chemistry can be controlled to tailor properties and how properties of nanoscale materials can differ significantly from their bulk counterparts.
Course usually offered in spring term
Prerequisite: MSE 220
Activity: Lecture
1 Course Unit

MSE 260 Energetics of Macro and Nano-scale Materials
Basic principles of chemical thermodynamics as applied to macro and nano-sized materials. This course will cover the fundamentals of classical thermodynamics as applied to the calculation and prediction of phase stability, chemical reactivity and synthesis of materials systems. The size-dependent properties of nano-sized systems will be explored through the incorporation of the thermodynamic properties of surfaces. The prediction of the phase stability of two and three component systems will be illustrated through the calculation and interpretation of phase diagrams for metallic, semiconductor, inorganic systems.
Course usually offered in spring term
Prerequisite: CHEM 102
Activity: Lecture
1 Course Unit

MSE 296 Introduction To Negotiation
Activity: Lecture
1 Course Unit
MSE 330 Self-Assembly of Soft Materials
Soft matter is found in diverse applications including sports (helmets & cloths); food (chocolate, egg); consumer products (e.g., lotions and shampoo); and devices (displays, electronics). Whereas solids and liquids are typically hard and crystalline or soft and fluid, respectively, soft matter can exhibit both solid and liquid-like behavior. In this class, we investigate the thermodynamic and dynamic principles common to soft matter as well as soft (weak) forces, self-assembly and phase behavior. Classes of matter include colloidal particles, polymers, liquid crystalline molecules, amphiphilic molecules, biomacromolecules/membranes, and food. Active learning activities will be included.
Course usually offered in fall term
Also Offered As: BE 330
Prerequisites: CHEM 102 or equivalent; MSE 220 or BE 220 or introductory physical chemistry course.
Activity: Lecture
1 Course Unit

MSE 360 Structure at the Nanoscale
To understand the atomic arrangements of crystalline matter, this class focuses on crystallography, symmetry, and diffraction techniques. The first half focuses on learning how to describe the structure of crystalline matter through the basics of crystallography and symmetry by introducing two-dimensional symmetry operations, point, and plane groups; this knowledge is then extended into three-dimensions to arrive at an understanding of space lattices and space groups. The second half is concerned with applying this information to understand structures through various diffraction and microscopy techniques.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MSE 393 Materials Selection
Throughout mankind's history, materials have played a critical role in civilization and technology. The selection of materials has been based on availability and functionality. The rapid advances of materials technologies in the last 150 years, however, have made nearly all classes and forms of materials available, at a cost. These costs include the dollars and cents costs that typically accompany the use of stronger, lighter materials, but environmental costs are also important and significant. Therefore, in theory at least, materials selection can now proceed on a rational basis as an optimization process involving performance and costs - both financial and environmental. In this course, we will focus on structural applications where mechanical design is central. By the end of the course, the students can expect to acquire a level of engineering familiarity with a broad range of materials, and be prepared to undertake responsible material design projects in the future.
Course usually offered in spring term
Prerequisites: MSE 220, Junior standing or approval of the instructor
Activity: Lecture
1 Course Unit

MSE 405 Mechanical Behavior of Macro/Nanoscale Materials
The application of continuum and micro structural concepts to elasticity and plasticity and the mechanisms of plastic flow and fracture in metals, polymers and ceramics. Topics covered include elasticity, viscoelasticity, plasticity, crystal defects, strengthening, crystallographic effects, twinning, creep and fatigue. Emphasis will be on mathematical and physical understanding rather than problem solving.
Course usually offered in spring term
Also Offered As: MEAM 405, MEAM 505, MSE 505
Prerequisites: MSE 220 and/or MEAM 210 or the equivalent background, MATH 240 or equivalent
Activity: Lecture
1 Course Unit

MSE 430 Polymers and Biomaterials
Polymer is one of the most widely used materials in our daily life, from the rubber tires to clothes, from photoresists in chip manufacturing to flexible electronics and smart sensors, from Scotch tapes to artificial tissues. This course teaches entry-level knowledge in polymer synthesis, characterization, thermodynamics, and structure-property relationship. Emphasis will be on understanding both chemical and physical aspects of polymers, polymer chain size and molecular interactions that drive the microscopic and macroscopic structures and the resulting physical properties. We will discuss how to apply polymer designs to advance nanotechnology, electronics, energy and biotechnology. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, shape memory polymers, hydrogels, and elastomeric deformation and applications.
Course usually offered in fall term
Also Offered As: CBE 430, CBE 510, MSE 580
Prerequisites: MSE 260 or equivalent course in Thermodynamics or Physical Chemistry (such as CBE 231, CHEM 221, MEAM 203)
Activity: Lecture
1 Course Unit

MSE 440 Phase Transformations
The state of matter is dependent upon temperature, thermal history, and other variables. In this course the science of structural transitions is treated, with the purpose in mind of utilizing them for producing materials with superior properties. The subjects covered include the methods of structural analysis, solidification, solid state transformation, and order-disorder transition.
Course usually offered in spring term
Prerequisites: MSE 220, MSE 260, or equivalent or permission of the instructor
Activity: Lecture
1 Course Unit
MSE 455 Electrochemical Engineering of Materials
After introducing electrochemical concepts (redox reactions, electrolytic versus galvanic cells, standard oxidation potentials), this course will cover the broad impact of electrochemical phenomena on materials. Topics that will be discussed include: (1) Materials extraction from their ores to finished products by electrowinning, (2) Chemical refining (Mond process) and electrefining of materials, (3) Materials degradation by destructive electrochemical corrosion, (4) Three-dimensional nanostructured materials by selective electrochemical corrosion, (5) Enhancing the electrochemical performance of materials via nanostructuring - e.g. lithium-ion battery electrodes; (6) Enhancing the electrochemical performance of materials via surface chemistry - e.g. oxygen evolution electrocatalysts; (7) Light-enhanced electrochemical performance of materials - e.g. solar water splitting photoelectrocatalysts. Students will be engaged in interactive classroom activities.
Course usually offered in fall term
Also Offered As: MSE 555
Activity: Lecture
1 Course Unit

MSE 460 Computational Materials Science
This course provides an introduction to modeling and simulation in materials science, covering continuum methods (e.g. finite element methods) and atomistic and molecular simulation (e.g. molecular dynamics). These tools play an increasingly important role in modern engineering. You will get hands-on training in both the fundamentals and applications of these methods to key engineering problems. The lectures will provide an exposure to areas of application, based on the scientific exploitation of the power of computation. We will use software packages (Comsol and LAMMPS) and thus extensive programming skills are not required. Matlab background needed for the course will be covered in a self-contained module.
One-term course offered either term
Prerequisites: Junior or Senior Standing. Ability to write simple computer codes would be an advantage.
Activity: Lecture
1 Course Unit

MSE 465 Fabrication and Characterization of Micro and Nanostructured Devices
This course surveys various processes that are used to produce materials structured at the micron and nanometer scales for electronic, optical and biological applications. Basic principles of materials chemistry, physics, thermodynamics and surface/interfacial science are applied to solid state, liquid, and colloidal approaches to making materials. A wide range of nano- and microfabrication techniques, including photolithography, soft lithography, nanoimprint lithography, 3D printing and self-assembly, are covered. The course is heavily lab based, with 30% of class time and 50% of the homework devoted to hands on experiences and lab report writing. Lab assignments are a series of structured individual/group projects. Evaluation is based on 3 lab reports, 4 problem sets with journal paper reading assignment, and a final project design.
Course usually offered in spring term
Also Offered As: MSE 565
Activity: Lecture
1 Course Unit

MSE 495 Senior Design
The senior design course is a two-semester capstone program that gives students the opportunity to design and execute an original experimental or theoretical project in materials science, engineering, or product/device development that is solving a real world problem. Students will work closely with a scientific advisor in their lab and meet once a week in the classroom to learn from an innovative curriculum that will build real-world skills in the context of their research and design project. These skills include project management, networking, teamwork, impactful written and verbal communications, upward management, self-reflection and feedback. Students will also learn how to design research in the context of having an impact on the world. This will be through weekly vignettes of innovative materials science solutions that solve problems in industries ranging from construction to healthcare to consumer products.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MSE 496 Senior Design
The senior design course is a two-semester capstone program that gives students the opportunity to design and execute an original experimental or theoretical project in materials science, engineering, or product/device development that is solving a real world problem. Students will work closely with a scientific advisor in their lab and meet once a week in the classroom to learn from an innovative curriculum that will build real-world skills in the context of their research and design project. These skills include project management, networking, teamwork, impactful written and verbal communications, upward management, self-reflection and feedback. Students will also learn how to design research in the context of having an impact on the world. This will be through weekly vignettes of innovative materials science solutions that solve problems in industries ranging from construction to healthcare to consumer products.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

MSE 500 Experimental Methods in Materials Science
This laboratory course introduces students to a variety of experimental methods used in materials science and engineering. Hands-on training will be provided for atomic force microscopy, X-ray diffraction, scattering, mechanical testing with image capture, and dynamic light scattering. Students will use numerous software packages for data collection and analysis, as well as being introduced to LabVIEW as a method for customizing experiments. In addition, students will see demonstrations of scanning electron microscopy, transmission electron microscopy, and electron diffraction and analyze data from these methods. The format for the course will include a weekly lecture (1.5 hours), a weekly lab session (4 hours) and six assignments.
Course usually offered in fall term
Prerequisites: Permission of the Undergraduate Curriculum Chair and Instructor
Activity: Lecture
1 Course Unit
MSE 505 Mechanical Properties of Macro/Nanoscale Materials
The application of continuum and microstructural concepts to elasticity and plasticity and the mechanisms of plastic flow and fracture in metals, polymers and ceramics. Topics include elasticity, viscoelasticity, plasticity, crystal defects, strengthening, crystallographic effects, twinning, creep and fatigue. Emphasis will be on mathematical and physical understanding rather than problem solving.
Course usually offered in spring term
Also Offered As: MEAM 405, MSE 405
Activity: Lecture
1 Course Unit

MSE 507 Fundamentals of Materials
This course will provide a graduate level introduction to the science and engineering of materials. It is designed specifically to meet the needs of students who will be doing research that involves materials but who do not have an extensive background in the field. The focus is on fundamental aspects of materials science and will emphasize phenomena and how to describe them.
One term course offered either term
Also Offered As: MEAM 507
Activity: Lecture
1 Course Unit

MSE 515 Mathematics for Materials Science
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MSE 520 Structure of Materials
Prerequisites: Permission of the Undergraduate Curriculum Chair and Instructor
Activity: Lecture
1 Course Unit

MSE 525 Nanoscale Science and Engineering
Overview of existing device and manufacturing technologies in microelectronics, optoelectronics, magnetic storage, Microsystems, and biotechnology. Overview of near- and long-term challenges facing those fields. Near- and long-term prospects of nanoscience and related technologies for the evolutionary sustenance of current approaches, and for the development of revolutionary designs and applications.
Course usually offered in fall term
Also Offered As: ESE 525
Prerequisites: ESE 218 or PHYS 240 or MSE 220 or equivalent, or by permission
Activity: Lecture
1 Course Unit

MSE 530 Thermodynamics and Phase Equilibria
Fundamental elements of engineering thermodynamics, statistical thermodynamics, chemical thermodynamics and defect thermodynamics. Thermodynamic functions, stability, phase transitions, mixtures (gases, condensed matter, polymer solution), defects and interfaces. Phase diagrams and predominance diagrams. Applications to energy problems (engines, efficiency, power, electrochemical cells) and properties (Curie’s law, rubber elasticity, specific heat, phonon/photon spectra, constitutive equations, equation of states).
Course usually offered in fall term
Prerequisites: Permission of the Undergraduate Curriculum Chair and Instructor
Activity: Lecture
1 Course Unit

MSE 536 Electronic Properties of Materials
This course will introduce the physical principles underlying broad spectrum of electronic properties in the solid state. Starting with the band structure of solids, the course will give an overview of electronic, dielectric, magnetic, thermal and optical properties of materials. The treatment will use quantum mechanical and statistical mechanical concepts familiar to students at the undergraduate level. Commonly used theories and models will be introduced and their predictions will be compared with observations. Students who have taken MSE 221/ MSE 260 and/or MSE 570/MSE 575 will benefit from this advanced introduction to material properties.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

MSE 537 Nanotribology
Engineering is progressing to ever smaller scales, enabling new technologies, materials, devices, and applications. This course will provide an introduction to nano-scale tribology and the critical role it plays in the developing areas of nanoscience and nanotechnology. We will discuss how contact, adhesion, friction, lubrication, and wear at interfaces originate, using an integrated approach that combines concepts of mechanics, materials science, chemistry, and physics. We will cover a range of concepts and applications, drawing connections to both established and new approaches. We will discuss the limits of continuum mechanics and present newly developed theories and experiments tailored to describe micro- and nano-scale phenomena. We will emphasize specific applications throughout the course. Reading of scientific literature, critical peer discussion, individual and team problem assignments, and a peer-reviewed literature research project will be assigned as part of the course.
Taught by: Faculty
One term course offered either term
Also Offered As: MEAM 537
Prerequisites: Freshman physics; MEAM 354 or equivalent, or consent of instructor.
Activity: Lecture
1 Course Unit
MSE 540 Phase Transformations
The phase of a material determines macroscopic properties such as strength, diffusion, and permeability. Whereas thermodynamics provides an idealistic understanding of phase behavior, the real phase (composition and morphology of a solid material depends on the rate of transformation from one state to another. Namely, kinetics is the study of the rates at which systems approach the ideal state predicted by thermodynamics. Thus, transport/diffusion underlies our understanding of phase transformations. Technology applications will include, polymer nanocomposites as kinetically arrested materials, rapid solidification to create new materials, purification methods for integrated circuits, and drug delivery.
Course usually offered in spring term
Prerequisites: Permission of the Undergraduate Curriculum Chair and Instructor
Activity: Lecture
1 Course Unit

MSE 545 Materials for Energy and Environmental Sustainability
This course will cover the fundamental materials science issues central to the design of sustainable energy technology. The goal of this course is to expose students to the emerging advances in materials science and materials chemistry that underpin technologies for energy conversion (fuel cells, thermoelectrics, photovoltaics, wind energy etc.), storage (biofuels, artificial photosynthesis, batteries etc) and distribution (smart grids and hydrogen and methane economy concepts etc.) and to place these in a real world context. This class will emphasize concepts in "green materials and green engineering practices" that are emerging with a global focus on "Sustainable Technology." "Sustainability is defined as meeting the needs of the present without compromising the ability of future generations to meet their needs." Engineering materials and processes at all scales; molecular/nanometer, micro, and the macro-scale are critical to developing the tools society required to meet the growing needs for energy and sustainable materials for the built environment. This course is appropriate for graduate students and advanced undergraduates in Penn's Material Science Programs. Core MSE curriculum components in thermodynamics, structure, electronic & ionic transport, mechanics, polymers and optical materials will be expected, and exposure to the preparation in basic Chemistry and Physics will be advantageous in this highly interdisciplinary course.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MSE 550 Elasticity and Micromechanics of Materials
This course is targeted to engineering students working in the areas on micro/nanomechanics of materials. The course will start with a quick review of the equations of linear elasticity and proceed to solutions of specific problems such as the Hertz contact problem, Esheby's problem, etc. Failure mechanisms such as fracture and the fundamentals of dislocations/plasticity will also be discussed.
Taught by: Vitek
Course usually offered in fall term
Also Offered As: MEAM 519
Prerequisites: Permission of the Undergraduate Curriculum Chair and Instructor
Activity: Lecture
1 Course Unit

MSE 555 Electrochemical Engineering of Materials
After introducing electrochemical concepts (redox reactions, electrolytic versus galvanic cells, standard oxidation potentials), this course will cover the broad impact of electrochemical phenomena on materials. Topics that will be discussed include: (1) Materials extraction from their ores to finished products by electrowinning, (2) Chemical refining (Mond process) and electorefining of materials, (3) Materials degradation by destructive electrochemical corrosion, (4) Three-dimensional nanostructured materials by selective electrochemical corrosion, (5) Enhancing the electrochemical performance of materials via nanostructuring - e.g. lithium-ion battery electrodes; (6) Enhancing the electrochemical performance of materials via surface chemistry - e.g. oxygen evolution electrocatalysts; (7) Light-enhanced electrochemical performance of materials - e.g. solar water splitting photoelectrocatalysts. Students will be engaged in interactive classroom activities.
Course usually offered in fall term
Also Offered As: MSE 455
Activity: Lecture
1 Course Unit

MSE 561 Atomic Modeling in Materials Science
This course covers two major aspects of atomic level computer modeling in materials. 1. Methods: Molecular statics, Molecular dynamics, Monte Carlo, Kinetic Monte Carlo as well as methods of analysis of the results such as radial distribution function, thermodynamics deduced from the molecular dynamics, fluctuations, correlations and autocorrelations.
Course usually offered in spring term
Also Offered As: MEAM 553
Prerequisites: Ability to write a basic code in a computer language such as fortran, C, C++
Activity: Lecture
1 Course Unit

MSE 565 Fabrication and Characterization of Nanostructured Devices
This course surveys various processes that are used to produce materials structured at the micron and nanometer scales for electronic, optical and biological applications. Basic principles of materials chemistry, physics, thermodynamics and surface/interfacial science are applied to solid state, liquid, and colloidal approaches to making materials. A wide range of nano- and microfabrication techniques, including photolithography, soft lithography, nanoimprint lithography, 3D printing and self-assembly, are covered. The course is heavily lab based, with 30% of class time and 50% of the homework devoted to hands on experiences and lab report writing. Lab assignments are a series of structured individual/group projects. Evaluation is based on 3 lab reports, 4 problem sets with journal paper reading assignment, and a final project design.
Course usually offered in spring term
Also Offered As: MSE 465
Prerequisite: MSE 360 or permission of the instructor
Activity: Lecture
1 Course Unit
MSE 570 Physics of Materials I
Failures of classical physics and the historical basis for quantum theory. Postulates of wave mechanics; uncertainty principle, wave packets and wave-particle duality. Schrodinger equation and operators; eigenvalue problems in 1 and 3 dimensions (barriers, wells, hydrogen, atom). Perturbation theory; scattering of particles and light. Use of computer-aided self-study will be made.
Course usually offered in fall term
Prerequisites: Undergraduate physics and math through modern physics and differential equations
Activity: Lecture
1 Course Unit

MSE 575 Statistical Mechanics
Statistical Mechanics is a unique branch of physics that permeates our understanding of matter at all length scales, from nanometers to stellar dimensions, and ranging in temperatures from pico-Kelvin (or lower) to billions of degrees Kelvin. This course will provide an overview of select topics in equilibrium and non-equilibrium statistical mechanics. The course will introduce the basic postulates of classical and quantum equilibrium statistical mechanics, explain the methodology of calculating observable properties, and discuss several applications in diverse fields. The second part of the course will introduce the methodology of non-equilibrium processes and discussing important theorems and results in the linear response regime. Finally, a brief discussion of systems far from equilibrium will be presented. Select applications from condensed matter physics, chemistry, materials science, biology, astrophysics, economics and meteorology will be used to illustrate the fundamental principles.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

MSE 580 Polymers and Biomaterials
Polymer is one of the most widely used materials in our daily life, from the rubber tires to clothes, from photoresists in chip manufacturing to flexible electronics and smart sensors, from Scotch tapes to artificial tissues. This course teaches entry-level knowledge in polymer synthesis, characterization, thermodynamics, and structure-property relationship. Emphasis will be on understanding both chemical and physical aspects of polymers, polymer chain size and molecular interactions that drive the microscopic and macroscopic structures and the resulting physical properties. We will discuss how to apply polymer designs to advance nanotechnology, electronics, energy and biotechnology. Case studies include thermodynamics of block copolymer thin films and their applications in nanolithography, shape memory polymers, hydrogels, and elastomeric deformation and applications.
Course usually offered in fall term
Also Offered As: MSE 430
Prerequisites: MSE 260 or equivalent course in thermodynamics or physical chemistry (such as CBE 231, MEAM 203)
Activity: Lecture
1 Course Unit

MSE 597 Master’s Thesis Research
One-term course offered either term
Activity: Masters Thesis
1 Course Unit

MSE 599 Master’s Indep Study
One-term course offered either term
Activity: Independent Study
1 Course Unit

MSE 610 Transmission Electron Microscopy and Crystalline Imperfections
Theory and application of transmission electron microscopy methods to problems in materials science and engineering, condensed matter physics, soft matter, polymeric materials, inorganic chemistry and chemical engineering. The principles of microscope operation, electron scattering, image formation and spectroscopy will be described, with an emphasis on both theory and experiment. With laboratory.
Course not offered every year
Activity: Lecture
1 Course Unit

MSE 640 Optical Materials
This course discusses the optical properties of modern materials engineered for specific functionality and cover exciting new developments being made in this rapidly evolving field. Emphasis is placed on how modern nanotechnology reshapes the light-matter interaction and delivers novel optical properties that are not available in nature.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

MSE 650 Mechanics of Soft and Biomaterials
This course is aimed to expose the students to a variety of topics in mechanic materials via discussion of “classic” problems that have had the widest impact long period of time and have been applied to analyze the mechanical behavior a variety of biological and engineering materials.
Course not offered every year
Also Offered As: MEAM 650
Activity: Lecture
1 Course Unit

MSE 790 Selected Topics in Materials Science and Engineering
Students should check department office for special topics.
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Both terms

MSE 895 Teaching Practicum.
One-term course offered either term
Activity: Lecture
1 Course Unit

Mathematics (MATH)

MATH 104 Calculus, Part I
Brief review of High School calculus, applications of integrals, transcendental functions, methods of integration, infinite series, Taylor's theorem, and first order ordinary differential equations. Use of symbolic manipulation and graphics software in calculus.
One-term course offered either term
Prerequisites: None. Engineering students are encouraged to register for the 906 lecture and group 6 recitations.
Activity: Recitation
1 Course Unit
Notes: This is a Formal Reasoning course.

MATH 110 Calculus for Wharton Students
Differential calculus, integral calculus, series, differential equations and elements of multivariable calculus, with an emphasis on applications.
One-term course offered either term
Activity: Lecture
1 Course Unit
MATH 114 Calculus, Part II
Functions of several variables, vector-valued functions, partial derivatives and applications, double and triple integrals, conic sections, polar coordinates, vectors and vector calculus, first order ordinary differential equations. Applications to physical sciences. Use of symbolic manipulation and graphics software in calculus.
One-term course offered either term
Prerequisite: Math 104
Activity: Recitation
1 Course Unit
Notes: This is a Formal Reasoning course.

MATH 115 Calculus, Part II with Probability and Matrices
Functions of several variables, partial derivatives, multiple integrals, differential equations; introduction to linear algebra and matrices with applications to linear programming and Markov processes. Elements of probability and statistics. Applications to social and biological sciences. Use of symbolic manipulation and graphics software in calculus.
One-term course offered either term
Prerequisite: Math 104
Activity: Recitation
1 Course Unit
Notes: This is a Formal Reasoning course.

MATH 116 Honors Calculus
Students who are interested in math or science might also want to consider a more challenging Honors version of Calculus II and III, Math 116 and Math 260 (the analogues of Math 114 and Math 240, respectively). These courses will cover essentially the same material as 114 and 240, but more in depth and involve discussion of the underlying theory as well as computations.
One-term course offered either term
Activity: Recitation
1 Course Unit
Notes: This is a Formal Reasoning course.

MATH 122 Community Algebra Initia
Community Algebra Initiative
One-term course offered either term
Activity: Lecture
1 Course Unit

MATH 123 Community Math Teaching Project
This course allows Penn students to teach a series of hands-on activities to students in math classes at University City High School. The semester starts with an introduction to successful approaches for teaching math in urban high schools. The rest of the semester will be devoted to a series of weekly hands-on activities designed to teach fundamental aspects of geometry. The first class meeting of each week, Penn faculty teach Penn students the relevant mathematical background and techniques for a hands-on activity. During the second session of each week, Penn students will teach the hands-on activity to a small group ofUCHS students. The Penn students will also have an opportunity to develop their own activity and to implement it with the UCHS students.
Course not offered every year
Activity: Lecture
1 Course Unit

MATH 170 Ideas in Mathematics
Topics from among the following: logic, sets, calculus, probability, history and philosophy of mathematics, game theory, geometry, and their relevance to contemporary science and society.
For BA Students: Natural Science and Math Sector
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: May also be counted toward the General Requirement in Natural Science Mathematics

MATH 180 Analytical Methods in Economics, Law, and Medicine
Elementary applications of decision analysis, game theory, probability and statistics to issues in accounting, contracting, finance, law, and medicine, amongst others.
Course not offered every year
Activity: Lecture
1 Course Unit

MATH 202 Proving Things: Analysis
This course focuses on the creative side of mathematics, with an emphasis on discovery, reasoning, proofs and effective communication, while at the same time studying real and complex numbers, sequences, series, continuity, differentiability and integrability. Small class sizes permit an informal, discussion-type atmosphere, and often the entire class works together on a given problem. Homework is intended to be thought-provoking, rather than skill-sharpening.
One-term course offered either term
Corequisites: Math 104, 114 or 240
Activity: Seminar
1 Course Unit

MATH 203 Proving things: Algebra
This course focuses on the creative side of mathematics, with an emphasis on discovery, reasoning, proofs and effective communication, while at the same time studying arithmetic, algebra, linear algebra, groups, rings and fields. Small class sizes permit an informal, discussion-type atmosphere, and often the entire class works together on a given problem. Homework is intended to be thought-provoking, rather than skill-sharpening.
One-term course offered either term
Corequisites: Math 104, 114 or 240
Activity: Lecture
1 Course Unit

MATH 210 Mathematics in the Age of Information
This course counts as a regular elective for both the Mathematics Major and Minor. This is a course about mathematical reasoning and the media. Embedded in many stories one finds in the media are mathematical questions as well as implicit mathematical models for how the world behaves. We will discuss ways to recognize such questions and models, and how to think about them from a mathematical perspective. A key part of the course will be about what constitutes a mathematical proof, and what passes for proof in various media contexts. The course will cover a variety of topics in logic, probability and statistics as well as how these subjects can be used and abused.
One-term course offered either term
Prerequisites: Math 114, Math 115 or equivalent
Activity: Lecture
1 Course Unit
MATH 240 Calculus, Part III
Linear algebra; vectors, matrices, systems of linear equations, vector spaces, subspaces, spans, bases, and dimension, eigenvalues, and eigenvectors, matrix exponentials. Ordinary differential equations: higher-order homogeneous and inhomogeneous ODEs and linear systems of ODEs, phase plane analysis, non-linear systems.
One term course offered either term
Prerequisite: Math 114
Activity: Recitation
1 Course Unit

MATH 241 Calculus, Part IV
Partial differential equations and their solutions, including solutions of the wave, heat and Laplace equations, and Sturm-Liouville problems. Introduction to Fourier series and Fourier transforms. Computation of solutions, modeling using PDE's, geometric intuition, and qualitative understanding of the evolution of systems according to the type of partial differential operator.
One term course offered either term
Prerequisite: Math 240
Activity: Recitation
1 Course Unit

MATH 260 Honors Calculus, Part II
This is an honors version of Math 240 which explores the same topics but with greater mathematical rigor.
Course not offered every year
Prerequisite: Math 114
Activity: Recitation
1 Course Unit

MATH 290 Undergraduate Mathematics Research Course
This is a project oriented mathematics research class that teaches students to solve real world problems by constructing and analyzing a mathematical model. Typically the problems that the projects solve can come from mathematics, chemistry, biology, and material science but sometimes we also have problems from economics, finance, and social sciences. The research problems in the course can vary from year to year.
Activity: Lecture
1 Course Unit

MATH 299 Undergraduate Research in Mathematics
Course usually offered in spring term
Activity: Lecture
1 Course Unit

MATH 312 Linear Algebra
Linear transformations, Gauss Jordan elimination, eigenvalues and eigenvectors, theory and applications. Mathematics majors are advised that MATH 312 cannot be taken to satisfy the major requirements.
Course not offered every year
Also Offered As: MATH 412
Prerequisite: Math 240
Activity: Lecture
1 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and Math 313/513.

MATH 313 Computational Linear Algebra
Many important problems in a wide range of disciplines within computer science and throughout science are solved using techniques from linear algebra. This course will introduce students to some of the most widely used algorithms and illustrate how they are actually used. Some specific topics: the solution of systems of linear equations by Gaussian elimination, dimension of a linear space, inner product, cross product, change of basis, affine and rigid motions, eigenvalues and eigenvectors, diagonalization of both symmetric and non-symmetric matrices, quadratic polynomials, and least squares optimization.
Also Offered As: Math 513
Prerequisites: Math 240, and some programming experience.
Activity: Lecture
1 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313. Students can receive credit for at most one of Math 312 and Math 313.

MATH 314 Advanced Linear Algebra
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Cononical forms; Scalar products: Euclidean, unitary and sympletic spaces; Orthogonal and Unitary operators; Tensor products and polynolymal maps; Symmetric and skew-symmetric tensors and exterior algebra.
Taught by: Staff.
Also Offered As: AMCS 514, MATH 514
Prerequisites: Math 114 or 115.
Activity: Lecture
1 Course Unit
Notes: Math 314/514 covers Linear Algebra at the advanced level with a theoretical approach. Students can receive credit for at most one of Math 312 or Math 314.

MATH 320 Computer Methods in Mathematical Science I
Students will use symbolic manipulation software and write programs to solve problems in numerical quadrature, equation-solving, linear algebra and differential equations. Theoretical and computational aspects of the methods will be discussed along with error analysis and a critical comparison of methods.
Course usually offered in fall term
Prerequisites: Math 240 or concurrent and ability to program a computer, or permission of instructor
Activity: Lecture
1 Course Unit

MATH 340 Discrete Mathematics I
Topics will be drawn from some subjects in combinatorial analysis with applications to many other branches of math and science: graphs and networks, generating functions, permutations, posets, asymptotics.
Course not offered every year
Also Offered As: LGIC 210
Prerequisites: Math 114 or Math 115 or permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 341 Discrete Mathematics II
Topics will be drawn from some subjects useful in the analysis of information and computation: logic, set theory, theory of computation, number theory, probability, and basic cryptography.
Also Offered As: LGIC 220
Prerequisites: Math 340/Logic 210 or permission of the instructor.
Activity: Lecture
1 Course Unit
MATH 350 Number Theory
Congruences, Diophantine equations, continued fractions, nonlinear congruences, and quadratic residues.
Course not offered every year
Activity: Lecture
1 Course Unit

MATH 360 Advanced Calculus
Syllabus for MATH 360-361: a study of the foundations of the differential and integral calculus, including the real numbers and elementary topology, continuous and differentiable functions, uniform convergence of series of functions, and inverse and implicit function theorems. MATH 508-509 is a master-level version of this course.
One-term course offered either term
Prerequisite: MATH 240
Activity: Lecture
1 Course Unit

MATH 361 Advanced Calculus
Continuation of MATH 360.
One-term course offered either term
Prerequisite: MATH 360
Activity: Lecture
1 Course Unit

MATH 370 Algebra
Syllabus for MATH 370-371: an introduction to the basic concepts of modern algebra. Linear algebra, eigenvalues and eigenvectors of matrices, groups, rings and fields. MATH 502-503 is a master-level version of this course.
One-term course offered either term
Prerequisites: MATH 240 and Math 314, or permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and Math 313/513.

MATH 371 Algebra
Continuation of MATH 370.
One-term course offered either term
Prerequisites: MATH 240, Math 314 and Math 370, or permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and Math 313/513.

MATH 410 Complex Analysis
Complex numbers, DeMoivre’s theorem, complex valued functions of a complex variable, the derivative, analytic functions, the Cauchy-Riemann equations, complex integration, Cauchy’s integral theorem, residues, computation of definite integrals by residues, and elementary conformal mapping.
One-term course offered either term
Also Offered As: AMCS 510
Prerequisite: MATH 240 or permission of instructor
Activity: Lecture
1 Course Unit

MATH 420 Ordinary Differential Equations
After a rapid review of the basic techniques for solving equations, the course will discuss one or more of the following topics: stability of linear and nonlinear systems, boundary value problems and orthogonal functions, numerical techniques, Laplace transform methods.
One-term course offered either term
Also Offered As: AMCS 520
Prerequisite: MATH 240 permission of instructor
Activity: Lecture
1 Course Unit

MATH 425 Partial Differential Equations
Method of separation of variables will be applied to solve the wave, heat, and Laplace equations. In addition, one or more of the following topics will be covered: qualitative properties of solutions of various equations (characteristics, maximum principles, uniqueness theorems), Laplace and Fourier transform methods, and approximation techniques.
Course usually offered in fall term
Also Offered As: AMCS 525
Prerequisites: MATH 240 or permission of instructor. Knowledge of PHYS 150-151 will be helpful.
Activity: Lecture
1 Course Unit

MATH 432 Game Theory
A mathematical approach to game theory, with an emphasis on examples of actual games. Topics will include mathematical models of games, combinatorial games, two person (zero sum and general sum) games, non-cooperating games and equilibria.
One-term course offered either term
Prerequisites: Math 240.
Activity: Lecture
1 Course Unit

MATH 460 Topology
Point set topology: metric spaces and topological spaces, compactness, connectedness, continuity, extension theorems, separation axioms, quotient spaces, topologies on function spaces, Tychonoff theorem. Fundamental groups and covering spaces, and related topics.
Course not offered every year
Also Offered As: MATH 500
Prerequisites: MATH 240 and 241
Activity: Lecture
1 Course Unit

MATH 465 Differential Geometry
Differential geometry of curves in the plane and in 3-space; Enneper gauge theories Surfaces in 3-space; The geometry of the Gauss map; The language of intrinsic geometry of surfaces; Geodesics; Moving frames; of vector bundles, The Gauss-Bonnet Theorem; Assorted additional topics.
Course not offered every year
Also Offered As: MATH 501
Prerequisites: MATH 361 or Permission of the instructor.
Activity: Lecture
1 Course Unit
MATH 480 Topics in Modern Math
Mathematics 480 will open with a review of the basics of real analysis (brief or extended background requires). The review will include: introduction of the real numbers through Dedekind cuts, continuity of real-valued functions on the real line; Cantor nested-interval principle, basic results for continuous functions, Maximum and Intermediate Value theorems, Heine-Borel Theorem, Uniform Continuity on closed intervals; metric spaces, convergence of sequences, Cauchy sequences, completeness, more general uniform continuity and intermediate value theorems; general topology, separation, compactness, product spaces, Tychonoff’s Theorem. Special topics in analysis: Weierstrass Polynomial Approximation Theorem, Bernstein polynomials and simultaneous approximations and derivatives, topics from divergent series, summation methods; r measure theory, the Lebesgue integral, Lp spaces, Holder, Minkowski, and and Cauchy-Schwarz inequalities; basics of Functional Analysis, normed spaces, Banach spaces and Hilbert space, with examples (Lp spaces, continuous-functions spaces), Banach spaces and spectral theory, groups and Fourier transforms, Tauberian theorems; approximation theory, again, through the prism of functional analysis; extension of the polynomial approximation theorem (Stone-Weierstrass theorem), Muntz approximation theorem (by polynomials with preassigned powers), compact operators, the Spectral theorem, Stone’s theorem (representations of the additive group of real numbers); Peter-Weyl theory (representations of compact groups). A selection from these topics as time and class preparation allow.
Course not offered every year
Prerequisites: A year of analysis at the 300 level or above (for example, Mathematics 360-361,508-509); a semester of linear algebra at the 300 level or above (for example, Mathematics 370).
Activity: Lecture
1 Course Unit

MATH 499 Supervised Study
Study under the direction of a faculty member. Intended for a limited number of mathematics majors.
One term course offered either term
Prerequisite: Permission of major adviser
Activity: Independent Study
1 Course Unit
Notes: Hours and credit to be arranged

MATH 500 Geometry-Topology, Differential Geometry
Point set topology; metric spaces and topological spaces, compactness, connectedness, continuity, extension theorems, separation axioms, quotient spaces, topologies on function spaces, Tychonoff theorem. Fundamental groups and covering spaces, and related topics.
Course not offered every year
Also Offered As: MATH 460
Prerequisites: Math 240 and 241.
Activity: Lecture
1 Course Unit

MATH 501 Geometry-Topology, Differential Geometry
The course moves from a study of extrinsic geometry (curves and surfaces in n-space) to the intrinsic geometry of manifolds. After a review of vector calculus and a section on tensor algebra, we study manifolds and their intrinsic geometry, including metrics, connections, geodesics, and the Riemann curvature tensor. Topics include Eulerian curvature and Euler’s theorems, the Gauss map and first/second fundamental forms, the Theorema Egregium, minimal surfaces in n-space; other topics as time permits.
Course not offered every year
Also Offered As: MATH 465
Prerequisites: Math 240, Math 312 (or 370), and Math 361 (or 508); or Math 500; or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 502 Abstract Algebra
An introduction to groups, rings, fields and other abstract algebraic systems, elementary Galois Theory, and linear algebra – a more theoretical course than Math 370.
Course usually offered in fall term
Prerequisites: Math 240 or Math 260; and Math 314/514 or permission of the instructor
Activity: Lecture
1 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and Math 313/513.

MATH 503 Abstract Algebra
Continuation of Math 502.
Course usually offered in spring term
Prerequisites: Math 502 or with the permission of the instructor.
Activity: Lecture
1 Course Unit
Notes: Students who have already received credit for either Math 370, 371, 502 or 503 cannot receive further credit for Math 312 or Math 313/513. Students can receive credit for at most one of Math 312 and Math 313/513.

MATH 504 Graduate Proseminar in Mathematics
This course focuses on problems from Algebra (especially linear algebra and multilinear algebra) and Analysis (especially multivariable calculus through vector fields, multiple integrals and Stokes theorem). The material is presented through student solving of problems. In addition there will be a selection of advanced topics which will be accessible via this material.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MATH 505 Graduate Proseminar in Mathematics
This course focuses on problems from Algebra (especially linear algebra and multilinear algebra) and Analysis (especially multivariable calculus through vector fields, multiple integrals and Stokes theorem). The material is presented through student solving of problems. In addition there will be a selection of advanced topics which will be accessible via this material.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

2018-19 Catalog | Generated 02/28/19
MATH 508 Advanced Analysis
Construction of real numbers, the topology of the real line and the foundations of single variable calculus. Notions of convergence for sequences of functions. Basic approximation theorems for continuous functions and rigorous treatment of elementary transcendental functions. The course is intended to teach students how to read and construct rigorous formal proofs. A more theoretical course than Math 360. Course usually offered in fall term
Prerequisites: Math 240 and 241. Math 200 and 201 also recommended. Activity: Lecture
1 Course Unit

MATH 509 Advanced Analysis
Continuation of Math 508. The Arzela-Ascoli theorem. Introduction to the topology of metric spaces with an emphasis on higher dimensional Euclidean spaces. The contraction mapping principle. Inverse and implicit function theorems. Rigorous treatment of higher dimensional differential calculus. Introduction to Fourier analysis and asymptotic methods. Course usually offered in spring term
Prerequisites: Math 508 or with the permission of the instructor. Linear algebra is also helpful. Activity: Lecture
1 Course Unit

MATH 512 Advanced Linear Algebra
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Cononical forms; Scalar products; Euclidean, unitary and symplectic spaces; Orthogonal and unitary operators; Tensor products and polynomial maps; Symmetric and skew-symmetric tensors and exterior algebra.
Prerequisites: Math 114 or 115.
Activity: Lecture
1 Course Unit
Notes: Math 512 covers Linear Algebra at the advanced level with a theoretical approach. Students can receive credit for at most one of Math 312 and Math 512.

MATH 513 Computational Linear Algebra
A number of important and interesting problems in a wide range of disciplines within computer science are solved by recourse to techniques from linear algebra. The goal of this course will be to introduce students to some of the most important and widely used algorithms in matrix computation and to illustrate how they are actually used in various settings. Motivating applications will include: the solution of systems of linear equations, applications matrix computations to modeling geometric transformations in graphics, applications of the Discrete Fourier Transform and related techniques in digital signal processing, the solution of linear least squares optimization problems and the analysis of systems of linear differential equations. The course will cover the theoretical underpinnings of these problems and the numerical algorithms that are used to perform important matrix computations such as Gaussian Elimination, LU Decomposition and Singular Value Decomposition.
Also Offered As: MATH 313
Activity: Lecture
1 Course Unit

MATH 514 Advanced Linear Algebra
Topics will include: Vector spaces, Basis and dimension, quotients; Linear maps and matrices; Determinants, Dual spaces and maps; Invariant subspaces, Cononical forms; Scalar products; Euclidean, unitary and symplectic spaces; Orthogonal and Unitary operators; Tensor products and polynomial maps; Symmetric and skew-symmetric tensors and exterior algebra.
Also Offered As: AMCS 514, MATH 314
Prerequisite: Math 114 or Math 115
Activity: Lecture
1 Course Unit

MATH 520 Selections from Algebra
Informal introduction to such subjects as homological algebra, number theory, and algebraic geometry.
Course not offered every year
Also Offered As: MATH 702
Corequisite: Math 502 or permission of the instructor
Activity: Lecture
1 Course Unit

MATH 530 Mathematics of Finance
This course presents the basic mathematical tools to model financial markets and to make calculations about financial products, especially financial derivatives. Mathematical topics covered: stochastic processes, partial differential equations and their relationship. No background in finance is assumed.
Course not offered every year
Prerequisites: Math 240, Stat 430
Activity: Lecture
1 Course Unit

MATH 546 Advanced Probability
The required background is (1) enough math background to understand proof techniques in real analysis (closed sets, uniform convergence, fourier series, etc.) and (2) some exposure to probability theory at an intuitive level (a course at the level of Ross’s probability text or some exposure to probability in a statistics class). After a summary of the necessary results from measure theory, we will learn the probablist’s lexicon (random variables, independence, etc.). We will then develop the necessary techniques (Borel Cantelli lemmas, estimates on sums of independent random variables and truncation techniques) to prove the classical laws of large numbers. Next come Fourier techniques and the Central Limit Theorem, followed by combinatorial techniques and the study of random walks.
Course usually offered in fall term
Also Offered As: MATH 648, STAT 930
Activity: Lecture
1 Course Unit

MATH 547 Stochastic Processes
Course not offered every year
Also Offered As: MATH 649, STAT 931
Prerequisites: Math 546/Stat 930 the equivalent.
Activity: Lecture
1 Course Unit
MATH 560 Selections from Geometry and Topology
Informal introduction to such subjects as homology and homotopy theory, classical differential geometry, dynamical systems, and knot theory.
Course not offered every year
Also Offered As: MATH 760
Corequisite: Math 500 or permission of the instructor
Activity: Lecture
1 Course Unit

MATH 561 Selections from Geometry and Topology
Informal introduction to such subjects as homology and homotopy theory, classical differential geometry, dynamical systems, and knot theory.
Course not offered every year
Corequisite: Math 500 or permission of the instructor
Activity: Lecture
1 Course Unit

MATH 570 Introduction to Logic and Computability
Course not offered every year
Also Offered As: LGIC 310, PHIL 410
Prerequisite: Math 371 or Math 503
Activity: Lecture
1 Course Unit

MATH 571 Introduction to Logic and Computability
Continuation of Math 570.
Course not offered every year
Also Offered As: CIS 518, LGIC 320, MATH 671, PHIL 412
Prerequisites: Math 570 or with the permission of the instructor.
Activity: Seminar
1 Course Unit

MATH 580 Combinatorial Analysis and Graph Theory
Generating functions, enumeration methods, Polyá's theorem, combinatorial designs, discrete probability, extremal graphs, graph algorithms and spectral graph theory, combinatorial and computational geometry.
Course not offered every year
Prerequisite: Permission of the instructor
Activity: Lecture
1 Course Unit

MATH 581 Combinatorial Analysis and Graph Theory
Continuation of Math 580.
Course not offered every year
Prerequisites: Math 580 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 584 The Mathematics of Medical Imaging and Measurement
The last several decades have seen major revolutions in both medical and non-medical and imaging technologies. Underlying all of these advances are sophisticated mathematical tools to model the measurement process and reconstruct images. This course begins with an introduction of the mathematical models and then proceeds to discuss the integral transforms that underlie these models: the Fourier transform, the Radon transform and the Laplace transform. We discuss how each of these transforms is inverted, both in theory and in practice. Along the way we study interpolation, sampling, approximation theory, filtering and noise analysis. This course assumes a thorough knowledge of linear algebra and a knowledge of analysis at the undergraduate level (Math 314 and Math 360 and Math 361, or Math 508 and Math 509).
Taught by: Staff.
Course not offered every year
Also Offered As: AMCS 584, BE 584
Prerequisites: Math 314 and Math 360 and 361, or Math 508 and 509 or with permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 586 Topics in Mathematical Biology.
This course will cover various mathematical models and tools that are used to study modern biological problems. The specific emphasis will vary from year to year, but typically will include an introduction to stochastic processes and computational methods that arise in evolutionary biology and population genetics. No prior knowledge of biology is needed to take this course, but a strong background in probability and familiarity with algorithms and combinatorics will be assumed.
Also Offered As: BIOL 586
Prerequisites: Math 430 or equivalent is required. Math 241 and 340 are recommended.
Activity: Lecture
1 Course Unit

MATH 594 Mathematical Methods of Physics
Introduction to mathematics used in physics and engineering, with the goal of developing facility in classical techniques. Vector spaces, linear algebra, computation of eigenvalues and eigenvectors, boundary value problems, spectral theory of second order equations, asymptotic expansions, partial differential equations, differential operators and Green's functions, orthogonal functions, generating functions, contour integration, Fourier and Laplace transforms and an introduction to representation theory of SU(2) and SO(3). The course will draw on examples in continuum mechanics, electrostatics and transport problems.
Course not offered every year
Also Offered As: PHYS 500
Prerequisites: Math 241 or Permission of Instructor. Physics 151 would be helpful for undergraduates.
Activity: Lecture
1 Course Unit

MATH 599 Independent Study
One-term course offered either term
Activity: Independent Study
1 Course Unit
MATH 600 Topology and Geometric Analysis
Course usually offered in fall term
Prerequisites: Math 500 and 501 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 601 Topology and Geometric Analysis
Covering spaces and fundamental groups, van Kampen's theorem and classification of surfaces. Basics of homology and cohomology, singular and cellular; isomorphism with de Rham cohomology. Brouwer fixed point theorem, CW complexes, cup and cap products, Poincare duality, Kunnen and universal coefficient theorems, Alexander duality, Lefschetz fixed point theorem.
Course usually offered in spring term
Prerequisites: Math 600 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 602 Algebra
Course usually offered in fall term
Prerequisites: Math 370 and 371 or Math 502 and 503
Activity: Lecture
1 Course Unit

MATH 603 Algebra
Continuation of Math 602.
Course usually offered in spring term
Prerequisites: Math 602 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 604 First Year Seminar in Mathematics
This is a seminar for first year Mathematics graduate students, supervised by faculty. Students give talks on topics from all areas of mathematics at a level appropriate for first year graduate students. Attendance and preparation will be expected by all participants, and learning how to present mathematics effectively is an important part of the seminar.
Course usually offered in fall term
Prerequisites: Open to first year Mathematics graduate students. Others need permission of the instructor.
Activity: Seminar
1 Course Unit

MATH 608 Analysis
Complex analysis: analyticity, Cauchy theory, meromorphic functions, isolated singularities, analytic continuation, Runge's theorem, d-bar equation, Mittag-Leffler theorem, harmonic and sub-harmonic functions, Riemann mapping theorem, Fourier transform from the analytic perspective. Introduction to real analysis: Weierstrass approximation, Lebesgue measure in Euclidean spaces, Borel measures and convergence theorems, C0 and the Riesz-Markov theorem, Lp-spaces, Fubini Theorem.
One-term course offered either term
Also Offered As: AMCS 608
Prerequisites: Math 508 and 509
Activity: Lecture
1 Course Unit

MATH 609 Analysis
One-term course offered either term
Also Offered As: AMCS 609
Prerequisites: Math 608 or permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 610 Functional Analysis
Also Offered As: AMCS 610
Prerequisites: Math 608 or 609, some elementary complex analysis is essential.
Activity: Lecture
1 Course Unit

MATH 612 Selections from Algebra
Informal introduction to such subjects as homological algebra, number theory, and algebraic geometry.
Course not offered every year
Corequisites: MATH 600 and 602
Activity: Lecture
1 Course Unit

MATH 618 Algebraic Topology, Part I
Course usually offered in fall term
Prerequisite: Math 600/601 or with the permission of the instructor
Activity: Lecture
1 Course Unit
MATH 619 Algebraic Topology, Part I
Rational homotopy theory, cobordism, K-theory, Morse theory and the h-cobordism theorem. Surgery theory.
Course usually offered in spring term
Prerequisites: Math 618 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 620 Algebraic Number Theory
Dedekind domains, local fields, basic ramification theory, product formula, Dirichlet unit theory, finiteness of class numbers, Hensel's Lemma, quadratic and cyclotomic fields, quadratic reciprocity, abelian extensions, zeta and L-functions, functional equations, introduction to local and global class field theory. Other topics may include: Diophantine equations, continued fractions, approximation of irrational numbers by rationals, Poisson summation, Hasse principle for binary quadratic forms, modular functions and forms, theta functions.
Course not offered every year
Prerequisites: Math 602 and 603
Activity: Lecture
1 Course Unit

MATH 621 Algebraic Number Theory
Continuation of Math 620.
Course not offered every year
Prerequisites: Math 620 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 622 Complex Algebraic Geometry
Algebraic geometry over the complex numbers, using ideas from topology, complex variable theory, and differential geometry. Topics include: Complex algebraic varieties, cohomology theories, line bundles, vanishing theorems, Riemann surfaces, Abel's theorem, linear systems, complex tori and abelian varieties, Jacobian varieties, currents, algebraic surfaces, adjunction formula, rational surfaces, residues.
Course not offered every year
Prerequisites: Math 602 and 603 and Math 609
Activity: Lecture
1 Course Unit

MATH 623 Complex Algebraic Geometry
Continuation of Math 622.
Course not offered every year
Prerequisites: Math 622 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 624 Algebraic Geometry
Algebraic geometry over algebraically closed fields, using ideas from commutative algebra. Topics include: Affine and projective algebraic varieties, morphisms and rational maps, singularities and blowing up, rings of functions, algebraic curves, Riemann Roch theorem, elliptic curves, Jacobian varieties, sheaves, schemes, divisors, line bundles, cohomology of varieties, classification of surfaces.
Course not offered every year
Prerequisites: Math 602 and 603
Activity: Lecture
1 Course Unit

MATH 625 Algebraic Geometry
Continuation of Math 624.
Course not offered every year
Prerequisites: Math 624 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 626 Commutative Algebra
Topics in commutative algebra taken from the literature. Material will vary from year to year depending upon the instructor's interests.
Course not offered every year
Prerequisites: Math 602 and 603
Activity: Lecture
1 Course Unit

MATH 628 Homological Algebra
Complexes and exact sequences, homology, categories, derived functors (especially Ext and Tor). Homology and cohomology arising from complexes in algebra and geometry, e.g. simplicial and singular theories, Cech cohomology, de Rham cohomology, group cohomology, Hochschild cohomology, Projective resolutions, cohomological dimension, derived categories, spectral sequences. Other topics may include: Lie algebra cohomology, Galois and etale cohomology, cyclic cohomology, l-adic cohomology, Algebraic deformation theory, quantum groups, Brauer groups, descent theory.
Course not offered every year
Prerequisites: Math 602 and 603
Activity: Lecture
1 Course Unit

MATH 629 Homological Algebra
Continuation of Math 628.
Course not offered every year
Prerequisites: Math 628 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 634 Arithmetic Geometry
Arithmetic Geometry
Activity: Lecture
1 Course Unit

MATH 642 Topics in Partial Differential Equations
Problems in differential geometry, as well as those in physics and engineering, inevitably involve partial derivatives. This course will be an introduction to these problems and techniques. We will use PDE's as a tool. Some of the applications will be small, some large. The proof of the Hodge Theorem will be a small application. Discussion of the Yamabe problem and Ricci flow (used to prove the Poincare Conjecture) will be larger.
Prerequisites: Math 608, 609. This course will not presume courses in Partial Differential Equations or Differential Geometry. Background will be covered in the course.
Activity: Lecture
1 Course Unit
MATH 644 Partial Differential Equations
Subject matter varies from year to year. Some topics are: the classical
theory of the wave and Laplace equations, general hyperbolic and elliptic
equations, theory of equations with constant coefficients, pseudo-
differential operators, and non-linear problems. Sobolev spaces and the
theory of distributions will be developed as needed.
Course not offered every year
Prerequisites: Math 600 and 601, Math 608 and 609
Activity: Lecture
1 Course Unit

MATH 645 Partial Differential Equations
Subject matter varies from year to year. Some topics are: the classical
theory of the wave and Laplace equations, general hyperbolic and elliptic
equations, theory of equations with constant coefficients, pseudo-
differential operators, and nonlinear problems. Sobolev spaces and the
theory of distributions will be developed as needed.
Course not offered every year
Prerequisites: Math 600 and 601, Math 608 and 609
Activity: Lecture
1 Course Unit

MATH 649 Stochastic Processes
Conditional expectations, martingales, Markov chains, Brownian motion,
diffusions.
Also Offered As: MATH 547, STAT 931
Prerequisite: Math 648
Activity: Lecture
1 Course Unit

MATH 652 Operator Theory
Subject matter may include spectral theory of operators in Hilbert space,
C*-algebras, von Neumann algebras.
Course not offered every year
Activity: Lecture
1 Course Unit

MATH 654 Lie Groups
Connection of Lie groups with Lie algebras, Lie subgroups, exponential
map. Algebraic Lie groups, compact and complex Lie groups, solvable
and nilpotent groups. Other topics may include relations with symplectic
geometry, the orbit method, moment map, symplectic reduction,
geometric quantization, Poisson-Lie and quantum groups.
Course not offered every year
Prerequisites: Math 600 and 601, Math 602 and 603
Activity: Lecture
1 Course Unit

MATH 655 Lie Groups
Continuation of Math 654.
Course not offered every year
Prerequisites: Math 654 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 656 Representation of Continuous Groups
Possible topics: harmonic analysis on locally compact abelian groups;
almost periodic functions; direct integral decomposition theory, Types I,
II and III: induced representations, representation theory of semisimple
groups.
Course not offered every year
Activity: Lecture
1 Course Unit

MATH 657 Representation of Continuous Groups
Possible topics: harmonic analysis on locally compact abelian groups;
almost periodic functions; direct integral decomposition theory, Types I,
II and III: induced representations, representation theory of semisimple
groups.
Course not offered every year
Activity: Lecture
1 Course Unit

MATH 660 Differential Geometry
Riemannian metrics and connections, geodesics, completeness, Hopf-
Rinow theorem, sectional curvature, Ricci curvature, scalar curvature,
Jacobi fields, second fundamental form and Gauss equations, manifolds
of constant curvature, first and second variation formulas, Bonnet-
Myers theorem, comparison theorems, Morse index theorem, Hadamard
theorem, Preissmann theorem, and further topics such as sphere
theorems, critical points of distance functions, the soul theorem, Gromov-
Hausdorff convergence.
Course not offered every year
Prerequisites: Math 600 and 601, Math 602 and 603
Activity: Lecture
1 Course Unit

MATH 661 Differential Geometry
Continuation of Math 660.
Course not offered every year
Prerequisites: Math 660 or with the permission of the instructor.
Activity: Lecture
1 Course Unit

MATH 671 Topics in Logic
Discusses advanced topics in logic.
Course not offered every year
Also Offered As: CIS 518, LGIC 320, MATH 571, PHIL 412
Prerequisites: Math 570 and 571
Activity: Seminar
1 Course Unit

MATH 694 Mathematical Foundations of Theoretical Physics
Selected topics in mathematical physics, such as mathematical methods
of classical mechanics, electrodynamics, relativity, quantum mechanics
and quantum field theory.
Course not offered every year
Also Offered As: PHYS 654
Activity: Lecture
1 Course Unit

MATH 695 Mathematical Foundations of Theoretical Physics
Selected topics in mathematical physics, such as mathematical methods
of classical mechanics, electrodynamics, relativity, quantum mechanics
and quantum field theory.
Course not offered every year
Also Offered As: PHYS 655
Activity: Lecture
1 Course Unit

MATH 702 Topics in Algebra
Topics from the literature. The specific subjects will vary from year to
year.
Course not offered every year
Also Offered As: MATH 520
Activity: Lecture
1 Course Unit
MATH 720 Advanced Number Theory
Ramification theory, adeles and ideles, Tate's thesis, group cohomology and Galois cohomology, class field theory in terms of ideles and cohomology, Lubin-Tate formal groups, Artin and Swan conductors, central simple algebras over local and global fields, general Hasse principles. Other topics may include the following: zero-dimensional Arakelov theory, Tate duality, introduction to arithmetic of elliptic curves, local and global epsilon factors in functional equations, p-adic L-functions and Iwasawa theory, modular forms and functions and modular curves.
Course not offered every year
Prerequisites: Math 620 and 621
Activity: Lecture
1 Course Unit

MATH 721 Advanced Number Theory
Continuation of Math 720.
Course not offered every year
Prerequisites: Math 720 or with the permission of the instructor
Activity: Lecture
1 Course Unit

MATH 724 Topics in Algebraic Geometry
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisites: Either Math 622 and 623 or Math 624 and 625
Activity: Lecture
1 Course Unit

MATH 730 Topics in Algebraic and Differential Topology
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisites: Math 618 and 619
Activity: Lecture
1 Course Unit

MATH 731 Topics in Algebraic and Differential Topology
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisites: Math 618 and 619
Activity: Lecture
1 Course Unit

MATH 748 Topics in Classical Analysis
Harmonic analysis in Euclidean space, Riemann surfaces, Discontinuous groups and harmonic analysis in hyperbolic space, Pseudodifferential operators and index theorems, Variational methods in non-linear PDE, Hyperbolic equations and conservation laws, Probability and stochastic processes, Geometric measure theory, Applications of analysis to problems in differential geometry. The specific subjects will vary from year to year.
Course not offered every year
Prerequisites: Math 608 and Math 609 and permission from the instructor
Activity: Lecture
1 Course Unit

MATH 752 Topics in Operator Theory
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Activity: Lecture
1 Course Unit

MATH 753 Topics in Operator Theory
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Activity: Lecture
1 Course Unit

MATH 760 Topics in Differential Geometry
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Also Offered As: MATH 560
Prerequisites: Math 660 and 661
Activity: Lecture
1 Course Unit

MATH 761 Topics in Differential Geometry
Topics from the literature. The specific subjects will vary from year to year.
Course not offered every year
Prerequisites: Math 660 and 661
Activity: Lecture
1 Course Unit

MATH 820 Algebra Seminar
Seminar on current and recent literature in algebra.
Course not offered every year
Activity: Seminar
1 Course Unit

MATH 830 Geometry-Topology Seminar
Seminar on current and recent literature in geometry-topology
Course not offered every year
Activity: Seminar
1 Course Unit

MATH 831 Geometry-Topology Seminar
Seminar on current and recent literature in geometry-topology
Course not offered every year
Activity: Seminar
1 Course Unit

MATH 871 Logic Seminar
Seminar on current and recent literature in logic.
Course not offered every year
Activity: Seminar
1 Course Unit

MATH 878 Probability and Algorithm Seminar
Seminar on current and recent literature in probability and algorithm.
Taught by: Staff
Activity: Seminar
1 Course Unit

MATH 881 Combinatorics Seminar
Seminar on current and recent literature in combinatorics.
Course not offered every year
Activity: Seminar
1 Course Unit
Mechanical Engineering and Applied Mechanics (MEAM)

MEAM 091 Shop Tr: Manual Milling
Fundamental principles of manual milling of metals, including hands-on training in the machine shop.
One term course offered either term
Activity: Lecture
0.25 Course Units

MEAM 092 Shop Tr: Manual Tuming
Fundamental principles of manual turning of metals using a lathe, including hands-on training in the machine shop.
One term course offered either term
Activity: Lecture
0.25 Course Units

MEAM 093 Shop Tr: Hybrid Milling
Building upon the basics covered in MEAM 091, this intermediate-level course includes detailed operation sequencing, fixture design, and hands-on conversational CNC programming for the ProtoTrak Hybrid Mill.
Activity: Lecture
0.25 Course Units

MEAM 094 Tr: CNC Milling/solidcam
Building upon proficiency in MEAM 091 and 093, this hands-on course covers the details of full computer-controlled machining using SolidCAM and the Haas MiniMill.
One term course offered either term
Activity: Lecture
0.25 Course Units

MEAM 095 Shop Tr: CNC Tuming
Building upon the basics of MEAM 092, this course explores advanced computer-controlled turning using SolidCAM and the Haas TL-1.
One term course offered either term
Activity: Lecture
0.25 Course Units

MEAM 099 Independent Study
An opportunity for the student to become closely associated with a professor in (1) a research effort to develop research skills and technique and/or (2) to develop a program of independent in-depth study in a subject area in which the professor and student have a common interest. The challenge of the task undertaken must be consistent with the student's academic level. To register for this course, the student and professor jointly submit a detailed proposal. Subject to the approval of the MEAM Undergraduate Curriculum Chair.
One term course offered either term
Activity: Independent Study
1 Course Unit
Notes: Open to all students. A maximum of 2 c.u. of MEAM 099 may be applied toward the B.A.S. or B.S.E. degree requirements

MEAM 101 Introduction to Mechanical Design
This hands-on, project-based course covers the fundamentals of the modern mechanical design process, from needfinding and brainstorming to the basics of computerized manufacturing and rapid prototyping. Topics include: product definition (needfinding, observation, sketching, and brainstorming); computer-aided design (part creation, assemblies, and animation using SolidWorks); fundamental engineering design practices (material selection, dimensioning, tolerances, etc.); basic computer simulation and analysis; and rapid prototyping (laser cutter, 3-D fused-deposition modeling, and an introduction to computer-controlled machining).
One term course offered either term
Activity: Lecture
1 Course Unit
Notes: This course is available to all Engineering majors.

MEAM 110 Introduction to Mechanics
This lecture course and a companion laboratory course (MEAM 147) build upon the concepts of Newtonian (classical) mechanics and their application to engineered systems. This course introduces students to mechanical principles that are the foundation of upper-level engineering courses including MEAM 210 and 211. The three major parts of this course are: I. Vector Mechanics; II. Statics and Structures; and III. Kinematics and Dynamics. Topics include: vector analysis, statics of rigid bodies, introduction to deformable bodies, friction, kinematics of motion, work and energy, and dynamics of particles. Case studies will be introduced, and the role of Newtonian mechanics in emerging applications including bio- and nano-technologies will be discussed. Course usually offered in fall term
Corequisites: MATH 104 (The Engineering section of this class is strongly recommended) and MEAM 147.
Activity: Lecture
1 Course Unit

MEAM 147 Introduction to Mechanics Lab
This half-credit laboratory class is a companion to the Introduction to Mechanics lecture course (MEAM 110). It investigates the concepts of Newtonian (classical) mechanics through weekly hands-on experiments, emphasizing connections between theoretical principles and practical applications in engineering. In addition to furthering their understanding about the workings of the physical world, students will improve their skills in conducting experiments, obtaining reliable data, presenting numerical results, and extracting meaningful information from such numbers. Course usually offered in fall term
Corequisite: MEAM 110
Activity: Laboratory
0.5 Course Units

MEAM 201 Machine Design and Manufacturing
Building upon the fundamentals of mechanical design taught in MEAM 101, this hands-on, project-based course provides students with the knowledge and skills necessary to design, analyze, manufacture, and test fully-functional mechanical systems. Topics covered include an introduction to machine elements, analysis of the mechanics of machining, manufacturing technology, precision fabrication (milling, turning, and computer-controlled machining), metrology, tolerances, cutting-tool fundamentals and engineering materials. Enrollment is limited.
Course usually offered in spring term
Prerequisite: MEAM 101; MEAM 210 or equivalent as co/pre-requisite (or permission of the instructor)
Activity: Lecture
1 Course Unit
MEAM 203 Thermodynamics I
Thermodynamics studies the fundamental concepts related to energy conversion in such mechanical systems as internal and external combustion engines (including automobile and aircraft engines), compressors, pumps, refrigerators, and turbines. This course is intended for students in mechanical engineering, chemical engineering, materials science, physics and other fields. The topics include properties of pure substances, first-law analysis of closed systems and control volumes, reversibility and irreversibility, entropy, second-law analysis, exergy, power and refrigeration cycles, and their engineering applications.
Course usually offered in spring term
Prerequisites: MATH 104 and MATH 114
Activity: Lecture
1 Course Unit

MEAM 210 Statics and Strength of Materials
This course is primarily intended for students in mechanical engineering, but may also be of interest to students in materials science and other fields. It continues the treatment of statics of rigid bodies begun in MEAM 110/PHYS 150 and progresses to the treatment of deformable bodies and their response to loads. The concepts of stress, strain, and linearly elastic response are introduced and applied to the behavior of rods, shafts, beams and other mechanical components. The failure and design of mechanical components are discussed.
Course usually offered in fall term
Prerequisite: MEAM 110/MEAM 147 or PHYS 150
Corequisites: MATH 240 and MEAM 247 are strongly recommended
Activity: Lecture
1 Course Unit

MEAM 211 Engineering Mechanics: Dynamics
This course introduces the basic concepts in kinematics and dynamics that are necessary to understand, analyze and design mechanisms and machines. These concepts are also fundamental to the modeling and analysis of human movement, biomechanics, animation of synthetic human models and robotics. The topics covered include: Particle dynamics using energy and momentum methods of analysis; Dynamics of systems of particles; Impact; Systems of variable mass; Kinematics and dynamics of rigid bodies in plane motion; Computer-aided dynamic simulation and animation.
Course usually offered in spring term
Prerequisite: MEAM 210
Corequisites: MATH 241 or ENM 251 and ENGR 105 or equivalent
Activity: Lecture
1 Course Unit

MEAM 220 Introduction to Materials Science and Engineering
The course is an introduction to the most important concepts in materials science and engineering with a goal of building the foundations for all other courses related to materials and how to think about materials in other areas of engineering and the physical sciences. It covers atomic bonding, crystal structure and symmetry, glasses, defects, diffusion, elasticity, plasticity, fracture, phase diagrams, phase transformations, and an introduction into thermal, electrical, magnetic and optical properties and materials processing. Material classes will include metals, ceramics, polymers, semiconductors, and composites.
Course usually offered in fall term
Also Offered As: MSE 220
Prerequisites: Knowledge of basic calculus and chemistry
Activity: Lecture
1 Course Unit

MEAM 247 Mechanical Engineering Laboratory I
This is the first of a two semester sophomore level laboratory sequence that students complete over the fall and spring semesters. The course teaches the principles of experimentation and measurement as well as analysis and application to design. This fall semester course follows closely with MEAM 210, involving experiments to explore the principles of statics and strength of materials.
Course usually offered in fall term
Prerequisite: Sophomore standing in engineering
Corequisite: MEAM 210 strongly recommended
Activity: Laboratory
0.5 Course Units

MEAM 248 Mechanical Engineering Lab I
This is the second of a two-semester sophomore level laboratory sequence that students complete over the fall and spring semesters. The course teaches the principles of experimentation and measurement as well as analysis and application to design. The spring semester course follows closely with MEAM 203 and MEAM 211, expanding upon the principles of experimentation, measurement, analysis, and design of systems through hands-on laboratories and projects in thermodynamics and dynamics.
Course usually offered in spring term
Prerequisite: Sophomore standing in engineering
Corequisites: MEAM 203 and MEAM 211 are strongly recommended
Activity: Lecture
0.5 Course Units

MEAM 302 Fluid Mechanics
Physical properties; fluid statics; Bernoulli equation; fluid kinematics; conservation laws and finite control-volume analysis; conservation laws and differential analysis; inviscid flow; The Navier-Stokes equation and some exact solutions; similitude, dimensional analysis, and modeling; flow in pipes and channels; boundary layer theory; lift and drag.
Course usually offered in fall term
Prerequisites: MATH 241 or ENM 251 and PHYS 150 or MEAM 110/MEAM 147
Activity: Lecture
1 Course Unit

MEAM 321 Vibrations of Mechanical Systems
This course teaches the fundamental concepts underlying the dynamics of vibrations for single-degree of freedom, multi-degree and infinite-degree of freedom mechanical systems. The course will focus on Newton's Force Methods, Virtual-Work Methods, and Lagrange's Variation Methods for analyzing problems in vibrations. Students will learn how to analyze transient, steady state and forced motion of single and multi-degree of freedom linear and non-linear systems. The course teaches analytical solution techniques for linear systems and practical numerical and simulation methods for analysis and design of nonlinear systems.
Course usually offered in spring term
Prerequisites: MATH 241 or ENM 251 and MEAM 211
Activity: Lecture
1 Course Unit
MEAM 333 Heat and Mass Transfer
This course covers fundamentals of heat and mass transfer and applications to practical problems in energy conversion and conservation. Emphasis will be on developing a physical and analytical understanding of conductive, convective, and radiative heat transfer, as well as design of heat exchangers and heat transfer with phase change. Topics covered will include: types of heat transfer processes, their relative importance, and the interactions between them, solutions of steady state and transient state conduction, emission and absorption of radiation by real surfaces and radiative transfer between surfaces, heat transfer by forced and natural convection owing to flow around bodies and through ducts, analytical solutions for some sample cases and applications of correlations for engineering problems. Students will develop an ability to apply governing principles and physical intuition to solve problems.
Course usually offered in spring term
Prerequisites: MEAM 203 and MEAM 302
Activity: Lecture
1 Course Unit

MEAM 347 Mechanical Engineering Design Laboratory
This is the first of a two-semester junior level laboratory sequence that students complete over the fall and spring semesters. The course is project-based, with problems whose solution requires experimental data and quantitative analysis, as well as creative mechanical design. The technical content is connected to MEAM 302 and MEAM 354, including aerodynamics, applied fluid systems and structural analysis. The course also includes electromechanical systems and application s of finite element analysis.
Course usually offered in fall term
Prerequisite: Junior standing in engineering
Activity: Laboratory
1 Course Unit

MEAM 348 Mechanical Engineering Design Laboratory
This is the second of a two-semester junior level laboratory sequence that students complete over the fall and spring semesters. The course is project-based, with open-ended design problems that challenge students to develop original experiments and choose appropriate analyses, with an increasing emphasis on teamwork and project planning. The technical content is connected to MEAM 321 and MEAM 333, including multimodal transient heat transfer and dynamic systems modeling.
Course usually offered in spring term
Prerequisite: Junior standing in engineering
Activity: Laboratory
1 Course Unit

MEAM 354 Mechanics of Solids
This course builds on the fundamentals of solid mechanics taught in MEAM 210 and addresses more advanced problems in strength of materials. The students will be exposed to a wide array of applications from traditional engineering disciplines as well as emerging areas such as biotechnology and nanotechnology. The methods of analysis developed in this course will form the cornerstone of machine design and also more advanced topics in the mechanics of materials.
Course usually offered in fall term
Prerequisites: MEAM 210 or equivalent, BE 200 or permission of instructor.
Activity: Lecture
1 Course Unit

MEAM 405 Mechanical Properties of Macro/Nanoscale Materials
The application of continuum and microstructural concepts to consideration of the mechanics and mechanisms of flow and fracture in metals, polymers and ceramics. The course includes a review of tensors and elasticity with special emphasis on the effects of symmetry on tensor properties. Then deformation, fracture and degradation (fatigue and wear) are treated, including mapping strategies for understanding the ranges of material properties.
Course usually offered in fall term
Also Offered As: MEAM 505, MSE 405, MSE 505
Activity: Lecture
1 Course Unit

MEAM 415 Product Design
This course provides tools and methods for creating new products. The course is intended for students with a strong career interest in new product development, entrepreneurship, and/or technology development. The course follows an overall product design methodology, including the identification of customer needs, generation of product concepts, prototyping, and design-for-manufacturing. Weekly student assignments are focused on the design of a new product and culminate in the creation of a prototype, which is launched at an end-of-semester public Design Fair. The course project is a physical good - but most of the tools and methods apply to services and software products. The course is open to any Penn sophomore, junior, senior or graduate student.
One term course offered either term
Also Offered As: IPD 515, OIDD 415
Activity: Lecture
1 Course Unit

MEAM 421 Control for Autonomous Robots
This course introduces the hardware, software and control technology used in autonomous ground vehicles, commonly called "self-driving cars." The weekly laboratory sessions focus on development of a small-scale autonomous car, incrementally enhancing the sensors, software, and control algorithms to culminate in a demonstration in a realistic outdoor operating environment. Students will learn basic physics and modeling; controls design and analysis in Matlab and Simulink; software implementation in C and Python; sensor systems and filtering methods for IMUs, GPS, and computer vision systems; and path planning from fixed map data.
One term course offered either term
Also Offered As: ESE 421
Prerequisite: CIS 110 or CIS 120 or ENGR 105; ESE 210 or ESE 215 or MEAM 211 or permission of the instructor
Activity: Lecture
1.5 Course Unit

MEAM 445 Mechanical Engineering Design Projects
This capstone design project course is required of all mechanical engineering students. Student teams will design and test complex mechanical systems that address a societal or consumer need. Projects are devised by the team, sponsored by industry, or formulated by Penn professors. Each project is approved by the instructor and a faculty advisor. Topics treated in the course include project planning, prototyping, patent and library searches, intellectual property, ethics, and technical writing and presentations. The work is spread over MEAM 445 and MEAM 446.
Course usually offered in fall term
Prerequisite: Junior standing
Activity: Lecture
1 Course Unit
MEAM 446 Mechanical Engineering Design Projects
This is the second course in the two course sequence involving the capstone design project. See MEAM 445 for course description.
Course usually offered in spring term
Activity: Lecture
1 Course Unit

MEAM 455 Continuum Biomechanics
Continuum mechanics with applications to biological systems.
Fundamental engineering conservation laws are introduced and illustrated using biological and non-biological examples. Kinematics of deformation, stress, and conservation of mass, momentum, and energy, Constitutive equations for fluids, solids, and intermediate types of media are described and applied to selected biological examples. Class work is complemented by computational laboratory experiences.
Course usually offered in fall term
Also Offered As: BE 455
Activity: Lecture
1 Course Unit

MEAM 502 Energy Engineering in Power Plants and Transportation Systems
Most energy consumed in the U.S. and in the world is produced using thermal-to-mechanical energy conversion. In this course, students will learn the engineering principles that govern how heat is converted to mechanical power in electric power plants, jet aircraft, and internal combustion engines. Topics covered include a review of thermodynamics and basic power cycles, supercritical, combined, and hybrid cycles, cogeneration, jet propulsion, and reciprocating internal combustion engines. A brief introduction to desalination and combustion is also included. The material in this course will provide students a foundation important for industrial and research employment in energy engineering.
Course usually offered in fall term
Prerequisites: Undergraduate engineering thermodynamics (MEAM 203 or equivalent), and heat transfer (MEAM 333 or equivalent)
Activity: Lecture
1 Course Unit

MEAM 503 Direct Energy Conversion: from Macro to Nano
The course focuses on devices that convert thermal, solar, or chemical energy directly to electricity. i.e., without intermediate mechanical machinery such as a turbine or a reciprocating piston engine. A variety of converters with sizes ranging from macro to nano scale will be discussed, with the advantages offered by nanoscale components specifically highlighted. Topics will include thermoelectric energy converters and radioisotope thermoelectric generators (RTGs), thermionic energy converters (TEC), photovoltaic (PV) and thermophotovoltaic (TPV) cells, as well as piezoelectric harvesters. Additional topics may include magnetohydrodynamic (MHD) generators, alkali metal thermal-to-electric converters (AMTEC), and fuel cells.
One-term course offered either term
Prerequisites: Basics of thermodynamics (MEAM 203 or equivalent), Basics of heat transfer (MEAM 333 or equivalent)
Activity: Lecture
1 Course Unit

MEAM 504 Tribology
The course will comprehensively cover both theoretical and practical tribology, the science and technology of interacting surfaces in relative motion. The various modes of lubrication, hydrodynamic, elastohydrodynamic, hydrostatic, mixed, solid and dry, will be studied in detail. The contact between solid surfaces will be covered, leading to an understanding of friction and various modes of wear. At each stage, it will be shown how the tribological principles learned can be applied in practice to improve the efficiency and durability of mechanical equipment and thereby enhance sustainability through energy and materials conservation.
One term course offered either term
Prerequisites: Senior standing in Mechanical Engineering or Materials Science or by permission of the instructor.
Activity: Lecture
1 Course Unit

MEAM 505 Mechanical Properties of Macro/Nanoscale Materials
The application of continuum and microstructural concepts to the consideration of the mechanics and mechanisms of flow and fracture in metals, polymers and ceramics. The course includes a review of tensors and elasticity with special emphasis on the effects of symmetry on tensor properties. Then deformation, fracture and degradation (fatigue and wear) are treated, including mapping strategies for understanding the range of material properties.
Course usually offered in fall term
Also Offered As: MEAM 405, MSE 405
Activity: Lecture
1 Course Unit

MEAM 507 Fundamentals of Materials
This course will provide a graduate level introduction to the science and engineering of materials. It is designed specifically to meet the needs of students who will be doing research that involves materials but who do not have an extensive background in the field. The focus is on fundamental aspects of materials science and will emphasize phenomena and how to describe them. The course assumes an undergraduate background in any area of physical/chemical science and undergraduate mathematics appropriate to this. The course will also be accessible to students of applied mathematics.
One term course offered either term
Also Offered As: MSE 507
Activity: Lecture
1 Course Unit

MEAM 508 Materials and Manufacturing for Mechanical Design
The selection of materials and manufacturing processes are critical in the design of mechanical systems. Material properties and manufacturing processes are often tightly linked, thus this course covers both topics in an integrated manner. The properties and manufacturing processes for a wide range of materials (i.e., metals, ceramics, polymers, composites) are examined from both a fundamental and practical perspective. From a materials standpoint, the course focuses on mechanical properties, including modulus, strength, fracture, fatigue, wear, and creep. Established and emerging manufacturing processes will be discussed. Design-based case studies are used to illustrate the selection of materials and processes.
One term course offered either term
Activity: Lecture
1 Course Unit
MEAM 510 Design of Mechatronic Systems
In many modern systems, mechanical elements are tightly coupled with electronic components and embedded computers. Mechatronics is the study of how these domains are interconnected, and this hands-on, project-based course provides an integrated introduction to the fundamental components within each of the three domains, including: mechanical elements (prototyping, materials, actuators and sensors, transmissions, and fundamental kinematics); electronics (basic circuits, filters, op amps, discrete logic, and interfacing with mechanical elements); and computing (interfacing with the analog world, microprocessor technology, basic control theory, and programming). Course usually offered in fall term
Also Offered As: MEAM 410
Prerequisite: Graduate standing in engineering or permission of the instructor
Activity: Lecture
1 Course Unit

MEAM 513 Feedback Control Design and Analysis
Basic methods for analysis and design of feedback control in systems. Applications to practical systems. Methods presented include time response analysis, frequency response analysis, root locus, Nyquist and Bode plots, and the state-space approach. Course usually offered in spring term
Also Offered As: ESE 210
Prerequisites: MEAM 321 or ESE 210, Juniors and Seniors encouraged to enroll
Activity: Lecture
1 Course Unit

MEAM 514 Design for Manufacturability
This course is aimed at providing current and future product design/development engineers, manufacturing engineers, and product development managers with an applied understanding of Design for Manufacturability (DFM) concepts and methods. The course content includes materials from multiple disciplines including: engineering design, manufacturing, marketing, finance, project management, and quality systems. Course usually offered in spring term
Also Offered As: IPD 514
Prerequisites: MEAM 101 or equivalent, MEAM 210 or equivalent, senior or graduate standing in the School of Design, Engineering, or Business with completed product development and/or design engineering core coursework or related experience.
Activity: Lecture
1 Course Unit

MEAM 516 Advanced Mechatronic Reactive Spaces.
This course combines performance art and advanced mechatronics concepts that include the design and implementation of large-scale actuation, advanced sensing, actuation and control. This course pairs design school and engineering students to form interdisciplinary teams that together design and build electro-mechanical reactive spaces and scenic/architectural elements in the context of the performing arts. The two disciplinary groups will be treated separately and receive credit for different courses (ARCH746 will be taught concurrently and in some cases co-located) as they will be learning different things. Engineering students gain design sensibilities and advanced mechatronics in the form of networked embedded processing and protocols for large scale actuation and sensing. Design students learn elementary mechatronics and design reactive architectures and work with engineering students to build them. The class will culminate in a some artistic performance (typically with professional artists) such as a Shakespeare play, robotic ballet, a mechatronic opera. Course usually offered in spring term
Also Offered As: IPD 516
Prerequisite: MEAM 510 (Mechatronics) or equivalent
Activity: Lecture
1 Course Unit

MEAM 517 Control and Optimization with Applications in Robotics
This course covers a variety of advanced topics in model-based nonlinear control, primarily focused on computational techniques and dynamic robotic applications. Students will learn both the theoretical basics of nonlinear and optimal control along with computational algorithms. Topics include dynamic programming, trajectory optimization, canonical underactuated systems, control of limit cycles, stability analysis, nonsmooth mechanics, and model predictive control. Applications include walking and running robots, manipulation, and flying machines. As the course will cover state of the art techniques, we will review relevant research papers. At the end of the semester, students will prepare and present a final project on a related topic of their choosing. Prerequisites: MATH 312 or equivalent, MEAM 513/ESE 505, ESE 500, MEAM 520 or equivalent, MEAM 211 or equivalent, programming experience highly recommend, or permission of the instructor.
Activity: Lecture
1 Course Unit

MEAM 519 Elasticity and Micromechanics of Materials
This course is targeted to engineering students working in the areas on micro/nanomechanics of materials. The course will start with a quick review of the equations of linear elasticity and proceed to solutions of specific problems such as the Hertz contact problem, Eshelby’s problem etc. Failure mechanisms such as fracture and the fundamentals of dislocations/plasticity will also be discussed.
One term course offered either term
Also Offered As: MSE 550
Activity: Lecture
1 Course Unit
MEAM 520 Introduction to Robotics
The rapidly evolving field of robotics includes systems designed to replace, assist, or even entertain humans in a wide variety of tasks. Recent examples include human-friendly robot arms for manufacturing, interactive robotic pets, medical and surgical assistive robots, and semi-autonomous search-and-rescue vehicles. This course presents the fundamental kinematic, dynamic, and computational principles underlying most modern robotic systems. The main topics of the course include: rotation matrices, homogeneous transformations, manipulator forward kinematics, manipulator inverse kinematics, Jacobians, path and trajectory planning, sensing and actuation, feedback control, haptic interfaces, and teleoperation. The material is reinforced with hands-on lab exercises involving a robotic arm and a haptic interface.
Course usually offered in fall term
Prerequisites: MEAM 211 and MATH 240 or equivalent
Activity: Lecture
1 Course Unit

MEAM 527 Finite Element Analysis
The objective of this course is to equip students with the background needed to carry out finite elements-based simulations of various engineering problems. The first part of the course will outline the theory of finite elements. The second part of the course will address the solution of classical equations of mathematical physics such as Laplace, Poisson, Helmholtz, the wave and the heat equations. The third part of the course will consist of case studies taken from various areas of engineering and the sciences on topics that require or can benefit from finite element modeling. The students will gain hands-on experience with the multi-physics, finite element package FemLab.
Course usually offered in fall term
Also Offered As: ENM 427
Prerequisites: MATH 241 or ENM 251 and PHYS 151
Activity: Lecture
1 Course Unit

MEAM 529 Introduction to MEMS and NEMS
Introduction to RM MEMS technologies; need for RF MEMS components in wireless communications. Review of micromachining techniques and MEMS fabrication approaches. Actuation methods in MEMS, TRF MEMS design and modeling. Examples of RF MEMS components from industry and academia. Case studies: micro-switches, tunable capacitors, inductors, resonators, filters, oscillators and micromachined antennas. Overview of RF NEMS.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MEAM 530 Continuum Mechanics
This course serves as a basic introduction to the Mechanics of continuous media, and it will prepare the student for more advanced courses in solid and fluid mechanics. The topics to be covered include: Tensor algebra and calculus, Lagrangian and Eulerian kinematics, Cauchy and Piola-Kirchhoff stresses, General principles: conservation of mass, conservation of linear and angular momentum, energy and the first law of thermodynamics, entropy and the second law of thermodynamics; constitutive theory, ideal fluids, Newtonian and non-Newtonian fluids; finite elasticity, linear elasticity, materials with microstructure.
Course usually offered in spring term
Prerequisites: Multivariable Calculus, Linear Algebra, Partial Differential Equations
Activity: Lecture
1 Course Unit

MEAM 535 Advanced Dynamics
Course usually offered in fall term
Prerequisites: MEAM 211 and some Linear Algebra. Senior or Master's Standing in Engineering or permission of the instructor.
Activity: Lecture
1 Course Unit

MEAM 536 Viscous Fluid Flow and Modern Applications
This is an intermediate course that builds on the basic principles of Fluid Mechanics. The course provides a more in depth and unified framework to understand fluid flow at different time and length scales, in particular viscous flows. Topics include review of basic concepts, conservation laws (momentum, mass, and heat), fluid kinematics, tensor analysis, Stokes' approximations, non-Newtonian fluid mechanics, and turbulence. The course will explore important modern topics such as microfluidics, swimming of micro-organisms, wind turbines, rheology, biofluid mechanics, and boundary layers.
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: This course is intended for juniors, seniors and graduate students from the Schools of Engineering and/ or Arts and Sciences that have a general interest in fluid dynamics and its modern applications. Students should have an understanding of basic concepts in fluid mechanics and a good grasp on differential equations.
MEAM 537 Nanotribology
Engineering is progressing to ever smaller scales, enabling new technologies, materials, devices, and applications. This course will provide an introduction to nano-scale tribology and the critical role it plays in the developing areas of nanoscience and nanotechnology. We will discuss how contact, adhesion, friction, lubrication, and wear at interfaces originate, using an integrated approach that combines concepts of mechanics, materials science, chemistry, and physics. We will cover a range of concepts and applications, drawing connections to both established and new approaches. We will discuss the limits of continuum mechanics and present newly developed theories and experiments tailored to describe micro- and nano-scale phenomena. We will emphasize specific applications throughout the course. Reading of scientific literature, critical peer discussion, individual and team project assignments, and a peer-reviewed literature research project will be assigned as part of the course.
Course usually offered in spring term
Also Offered As: MSE 537
Prerequisites: Freshman physics; MEAM 354 or equivalent, or consent of instructor.
Activity: Lecture
1 Course Unit

MEAM 538 Turbulence
This course is an introductory course on turbulent flows. The course provides physical and mathematical framework for quantitative and qualitative descriptions of fundamental processes involved in turbulent flows. Topics include the Navier-Stokes equations, the statistical description of turbulence, equations for mean and fluctuations, energy cascade, turbulence spectra, Kolmogorov hypotheses, behavior of shear flows, and isotropic turbulence. The course will also explore modern topics such as computational modeling of turbulence.
Taught by: MEAM 302 or equivalent
One-term course offered either term
Prerequisite: MEAM 302 or equivalent
Activity: Lecture
1 Course Unit
Notes: Instructor Permission required for undergraduates

MEAM 543 Performance, Stability and Control of UAVs
This course covers the application of classical aircraft performance and design concepts to fixed-wing and rotary-wing Unmanned Aerial Vehicles (UAVs). A survey of the latest developments in UAV technology will be used to motivate the development of quantitative mission requirements, such as payload, range, endurance, field length, and detectability. The implications of these requirements on vehicle configuration and sizing will be revealed through application of the fundamentals of aerodynamics and propulsion systems. The course will also cover basic flight dynamics and control, including typical inner-loop feedback applications.
One-term course offered either term
Prerequisites: MEAM 210, 211, MATH 240 or equivalents
Activity: Lecture
1 Course Unit

MEAM 545 Aerodynamics
Review of fluid kinematics and conservation laws; vorticity theorems; two-dimensional potential flow; airfoil theory; finite wings; oblique shocks; supersonic wing theory; laminar and turbulent boundary layers. Course usually offered in spring term
Prerequisite: MEAM 302
Activity: Lecture
1 Course Unit

MEAM 550 Design of Microelectromechanical Systems
A course that covers the design and fabrication of micro- and nano-electromechanical systems. Topics in the course include micro- and nano-fabrication techniques, mechanics of flexures, thin film mechanics, sensing and actuation approaches (e.g., electrostatic, piezoelectric, and piezoresistive), as well as materials and reliability issues. The fundamentals of these topics will be augmented with device-based case studies.
Course not offered every year
Prerequisites: MEAM 354 or equivalent is recommended.
Activity: Lecture
1 Course Unit

MEAM 553 Atomic Modeling in Materials Science
This course covers two major aspects of atomic level computer modeling in materials. 1. Methods: Molecular statics, Molecular dynamics, Monte Carlo, Kinetic Monte Carlo as well as methods of analysis of the results such as radial distribution function, thermodynamics deduced from the molecular dynamics, fluctuations, correlations and autocorrelations. 2. Semi-empirical descriptions of atomic interactions: pair potentials, embedded atom model, covalent bonding, ionic bonding. Basics of the density functional theory. Mechanics, condensed matter physics, thermodynamics and statistical mechanics needed in interpretations are briefly explained.
Course usually offered in spring term
Also Offered As: MSE 551
Prerequisites: Ability to write a basic code in a computer language such as fortran, C, C++
Activity: Lecture
1 Course Unit

MEAM 555 Nanoscale Systems Biology
Nano-science and engineering approaches to systems in biology are of growing importance. They extend from novel methods, especially microscopies that invite innovation to mathematical and/or computational modeling which incorporates the physics and chemistry of small scale biology. Proteins and DNA, for example, are highly specialized polymers that interact, catalyze, stretch and bend, move, and/or store information. Membranes are also used extensively by cells to isolate, adhere, deform, and regulate reactions. In this course, students will become familiar with cell & molecular biology and nanobiotechnology through an emphasis on nano-methods, membranes, molecular machines, and ‘polymers’ from the quantitative perspectives of thermodynamics, statistical physics, and mechanics. We specifically elaborate ideas of energetics, fluctuations and noise, force, kinetics, diffusion, etc. on the nano- thru micro- scale, drawing from very recent examples in the literature. Laboratory experiments will provide hands-on exposure to microscopies in a biological context (e.g. fluorescence down to nano-scale, AFM), physical methods (e.g. micromanipulation, tracking virus-scale particles or quantum dots), and numerical problems in applied biophysics, chemistry, and engineering. A key goal of the course is to familiarize students with the concepts and technology (plus their limitations) as being employed in current research problems in nanoscale systems biology, extending to nanobiotechnology.
One-term course offered either term
Also Offered As: BE 555, CBE 555
Prerequisites: Background in Biology, Physics, Chemistry or Engineering with coursework in Thermodynamics or permission of the instructor.
Activity: Lecture
1 Course Unit
MEAM 564 The Principles and Practice of Microfabrication Technology
A laboratory course on fabricating microelectronic and micromechanical devices using photolithographic processing and related fabrication technologies. Lecture topics: clean room procedures, microelectronic and microstructural materials, photolithography, diffusion, oxidation, materials deposition, etching and plasma processes. Basic laboratory processes are covered in the first two thirds of the course with students completing structures appropriate to their major in the final third. Students registering for ESE 574 will be expected to do extra work (including term paper and additional project).
Course usually offered in fall term
Also Offered As: ESE 460, ESE 574
Prerequisites: Any of the following courses: ESE 218, MEAM 333, CBE 351, PHYS 250 or permission of the instructor
Activity: Lecture
1 Course Unit

MEAM 570 Transport Processes I
The course provides a unified introduction to momentum, energy (heat), and mass transport processes. The basic mechanisms and the constitutive laws for the various transport processes will be delineated, and the conservation equations will be derived and applied to internal and external flows featuring a few examples from mechanical, chemical, and biological systems. Reactive flows will also be considered.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

MEAM 571 Advanced Topics in Transport Phenomena
The course deals with advanced topics in transport phenomena and is suitable for graduate students in mechanical, chemical and bioengineering who plan to pursue research in areas related to transport phenomena or work in an industrial setting that deals with transport issues. Topics include: Transport processes with drops, Bubbles and particles; Phase change Phenomena: condensation, evaporation, and combustion; Radiation heat transfer; non-participating media, participating media, equation of radiative transfer; optically thin and thick limits; Introduction to Hydrodynamic and Thermal Instability; Microscale energy transport; Nano-particle motion in fluids and transport.
Course not offered every year
Prerequisites: Either MEAM 570, MEAM 642, CBE 640 or equivalent, or written permission of the Instructor.
Activity: Lecture
1 Course Unit

MEAM 575 Micro and Nano Fluidics
The course focuses on topics relevant for microfluidics, lab on chip technology, point of care diagnostics, nano-technology, biosensing, and interfacial phenomena. Although we will discuss briefly the fabrication of micro and nano fluidic devices, the course will mostly focus on physical phenomena from the continuum point of view. The mathematical complexity will be kept to a minimum. The course will be reasonably self-contained, and any necessary background material will be provided, consistent with the students' background and level of preparation. Specifically, we will examine fluid and nanoparticle transport under the action of pressure, electric, magnetic, and capillary forces; the structure and role of superhydrophobic surfaces; how the solid/liquid interface acquires electric charge; ion transport in electrolytes (Poisson-Nernst-Planck equations); colloid stability; electroosmosis, electrophoresis, and particle polarization; electrowetting and digital microfluidics; particle and cell sorting; immunoassays; and enzymatic amplification of nucleic acids.
Course not offered every year
Activity: Lecture
1 Course Unit

MEAM 580 Electrochemistry for Energy, Nanofabrication and Sensing
Principles and mathematical models of electrochemical processes in energy conversion and storage, water desalination, nanofabrication, electroplating, and sensing for engineering and science graduate students and advanced undergraduates, lacking prior background in electrochemistry. The course covers equivalent circuits, electrokinetics, electrokinetic and transport phenomena, and electrostatics. The course will introduce and use the finite element program COMSOLTM. We will discuss, among other things, applications to stationary and flow batteries, supercapacitors, integrated electric circuit fabrication, electrokinetics, and biosensing. In contrast to CBE 546 Electrochemical Energy Conversion that focuses on solid state electrochemistry, this course emphasizes liquid-based electrochemistry.
One term course offered either term
Prerequisites: Undergraduate course in Fluid Mechanics (MEAM 302), and in Heat and Mass Transfer (MEAM 333)
Activity: Lecture
1 Course Unit

MEAM 597 Master's Thesis Research
One term course offered either term
Activity: Masters Thesis
1 Course Unit

MEAM 599 Master's Independent Study
One term course offered either term
Activity: Independent Study
1 Course Unit
MEAM 613 Nonlinear Control Theory
This course studies issues in nonlinear control theory, with a particular emphasis on the use of geometric principles. Topics include: controllability, accessibility, and observability, for nonlinear systems; Forbenius' theorem; feedback and input/output linearization for SISO and MIMO systems; dynamic extension; zero dynamics; output tracking and regulation; model matching disturbance decoupling; examples will be taken from mechanical systems, robotic systems, including those involving nonholonomic constraints, and active control of vibrations.
Course not offered every year
Also Offered As: CBE 617, CIS 613, ESE 617
Prerequisites: A sufficient background to linear algebra (ENM 510 or ENM 511 or equivalent) and a course in linear control theory (MEAM 513 or equivalent), or written permission of the instructor.
Activity: Lecture
1 Course Unit

MEAM 620 Advanced Robotics
This course covers advanced topics in robotics and includes such topics as multi-body dynamics, nonlinear control theory and planning algorithms with application to robots and systems of multiple robots.
Course usually offered in spring term
Prerequisites: Graduate standing in engineering and MEAM 535 or ESE 500 or CIS 580 or MEAM 520.
Activity: Lecture
1 Course Unit

MEAM 630 Advanced Continuum Mechanics
This course is a more advanced version of MEAM 530. The topics to be covered include: tensor algebra and calculus, Lagrangian and Eulerian kinematics; Cauchy and Piola-Kirchhoff stresses. General principles: conservation of mass, conservation of linear and angular momentum, energy and the first law of thermodynamics, entropy and the second law of thermodynamics. Constitutive theory: ideal fluids, Newtonian and non-Newtonian fluids, finite elasticity, linear elasticity, materials with microstructure.
Course not offered every year
Prerequisites: One graduate level course in applied mathematics and one in either fluid or Solid Mechanics.
Activity: Lecture
1 Course Unit

MEAM 632 Plasticity
This course develops the mathematical theory of plastic deformation for both crystalline and disordered materials. Phenomenological models for strain-hardening, creep and size-dependent plastic flow as well as physically-based theories for single crystals are discussed. Applications are drawn from problems in structural mechanics, deformation processing, friction and contact, and fracture. Large strain deformations and problems involving strain localization are considered.
Course not offered every year
Prerequisites: MEAM 519 or permission of instructor.
Activity: Lecture
1 Course Unit

MEAM 633 Mechanics of Adhesion and Fracture
This course focuses on mechanics aspects of adhesion and fracture of solids. The topics are intimately related, as fracture involves decohesion. Topics include forces of interaction between surfaces of solids, perfect versus imperfect adhesion, aspects of contact mechanics, linear analysis of cracks in elastic materials, non-linear analysis of cracks in elastic-plastic materials, J-integral methods, phenomenological theories, crack growth and healing, and stability. Micro-mechanical models of fracture are analyzed using non-linear elasticity and energy methods.
Applications to various material systems and processes, including structural materials, layered materials, friction and wear.
Course not offered every year
Prerequisites: Background equivalent to MEAM 519 and ENM 510
Activity: Lecture
1 Course Unit

MEAM 634 Rods and Shells
This course is intended for 2nd year graduate students and introduces continuum mechanics theory of rods and shells with applications to structures and to biological systems as well as stability and buckling.
The course begins with topics from differential geometry of curves and surfaces and the associated tensor analysis on Riemannian spaces. A brief introduction to variational calculus is included since variational methods are a powerful tool for formulating approximate structural mechanics theories and for numerical analysis. The structural mechanics theories of rods, plates and shells are introduced including both linear and nonlinear theories.
Course not offered every year
Prerequisites: First year graduate level applied mathematics for engineers (ENM 510 and 511) and a first course in continuum mechanics or elasticity or permission of instructor.
Activity: Lecture
1 Course Unit

MEAM 635 Composite Materials
This course deals with the prediction of the average, or effective properties of composite materials. The emphasis will be on methods for determining effective behavior. The course will be concerned mostly with linear mechanical and physical properties, with particular emphasis on the effective conductivity and elastic moduli of multiphase composites and polycrystals. However, time-dependent and non-linear properties will also be discussed.
Course not offered every year
Prerequisite: ENM 510
Corequisite: ENM 511
Activity: Lecture
1 Course Unit

MEAM 642 Advanced Fluid Mechanics
Fluid mechanics as a vector field theory; basic conservation laws, constitutive relations, boundary conditions, Bernoulli theorems, vorticity theorems, potential flow, Viscous flow; large Reynolds number limit; boundary layers.
One-term course offered either term
Activity: Lecture
1 Course Unit
MEAM 646 Computational Mechanics
The course is divided into two parts. The course first introduces general numerical techniques for elliptical partial differential equations - finite difference method, finite element method and spectral method. The second part of the course introduces finite volume method. SIMPLER formulation for the Navier-Stokes equations will be fully described in the class. Students will be given chances to modify a program specially written for this course to solve some practical problems in heat transfer and fluid flows.
Course not offered every year
Prerequisites: ENM 510, ENM 511, and one graduate level introductory course in mechanics. FORTRAN or C programming experience is necessary.
Activity: Lecture
1 Course Unit

MEAM 650 Mechanics of Soft and Biomaterials
This course is aimed to expose the students to a variety of topics in mechanical materials via discussion of "classic" problems that have had the widest impact long period of time and have been applied to analyze the mechanical behavior a variety of biological and engineering materials.
One term course offered either term
Also Offered As: MSE 650
Activity: Lecture
1 Course Unit

MEAM 662 Advanced Molecular Thermodynamics
This course begins with a brief review of classical thermodynamics, including the development of Maxwell relationships and stability analysis. The remainder of the course develops the fundamental framework of statistical mechanics, then reviews various related topics including ideal and interacting gases, Einstein and Debye models of solids, lattice models of liquids, and the basis of distribution function theory.
Course usually offered in fall term
Also Offered As: BE 662, CBE 618
Activity: Lecture
1 Course Unit

MEAM 663 Entropic Forces in Biomechanics
This course is targeted for engineering/physics students working in the areas of nano/bio technology. The course will start with a quick review of statistical mechanics and proceed to topics such as Langevin dynamics, solution biochemistry (Poisson-Boltzmann and Debye-Huckel theory), entropic elasticity of bio-polymers and networks, reaction rate kinetics, solid state physics and other areas of current technological relevance. Students will be expected to have knowledge of undergraduate mechanics, physics and thermodynamics.
One term course offered either term
Activity: Lecture
1 Course Unit

MEAM 690 Advanced Topics in Thermal Fluid Science or Energy
This course will be offered when demand permits. The topics will change due to the interest and specialties of the instructor(s). Some topics could include: Computational Fluid Mechanics, Visualization of Computational Results, Free Surface Flows, Fluid Mechanics of the Respiratory System, and transport in Reacting Systems.
Course not offered every year
Activity: Lecture
1 Course Unit

MEAM 691 Special Topics in Mechanics of Materials
This course will be offered when demand permits. The topics will change due to the interests and specialties of the instructor(s). Some topics could include: Compliant Mechanisms, Optimal Control, and Fluid-Structure interaction.
Course not offered every year
Activity: Lecture
1 Course Unit

MEAM 692 Topics in Mechanical Systems
This course will be offered when demand permits. The topics will change due to the interests and specialties of the instructor(s). Some topics could include: Electromagnetics, Control Theory, and Micro-Electro-Mechanical Systems.
Course not offered every year
Activity: Lecture
1 Course Unit

MEAM 699 MEAM Seminar
The seminar course has been established so that students get recognition for their seminar attendance as well as to encourage students to attend. Students registered for this course are required to attend weekly departmental seminars given by distinguished speakers from around the world. There will be no quizzes, tests, or homework. The course will be graded S/U. In order to obtain a satisfactory (S) grade, the student will need to attend more than 70% of the departmental seminars. Participation in the seminar course will be documented and recorded on the students transcript. In order to obtain their degree, doctoral students will be required to accumulate six seminar courses and MS candidates (beginning in the Fall 2001) two courses. Under special circumstances, i.e. in case of conflict with a course, the student may waive the seminar requirement for a particular semester by petition to the Graduate Group Chair.
One term course offered either term
Activity: Seminar
1 Course Unit

MEAM 895 Teaching Practicum
This course provides training in the practical aspects of teaching. The students will work with a faculty member to learn and develop teaching and communication skills. As part of the course, students will participate in a range of activities that may include: giving demonstration lectures, leading recitations, supervising laboratory experiments, developing instructional laboratories, developing instructional material, preparing homework assignments, and preparing examinations. Some of the recitations will be supervised and feedback and comments will be provided to the student by the faculty responsible for the course. At the completion of the 0.5 c.u. of teaching practicum, the student will receive a Satisfactory/Unsatisfactory grade and a written evaluation from the faculty member responsible for the course. The evaluation will be based on comments of the students taking the course and the impressions of the faculty.
One term course offered either term
Activity: Lecture
0.5 Course Units
MEAM 899 Independent Study
For students who are studying specific advanced subject areas in mechanical engineering and applied mechanics. Before the beginning of the term, the student must submit a proposal outlining and detailing the study area, along with the faculty supervisor’s consent, to the graduate group chair for approval. At the conclusion of the independent study, the student should prepare a brief report.
One term course offered either term
Activity: Independent Study
1 Course Unit

MEAM 990 Masters Thesis
Master’s Thesis
Activity: Masters Thesis
1 Course Unit

MEAM 995 Dissertation
Activity: Dissertation
1 Course Unit

MEAM 999 Thesis/Dissertation Research
For students working on an advanced research program leading to the completion of master’s thesis or Ph.D. dissertation requirements.
One term course offered either term
Activity: Independent Study
1 Course Unit
Notes: Both terms.

Military Science (MSCI)

MSCI 101 Basic Leadership I Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.
Course usually offered in fall term
Corequisites: Enrollment in MSCI 110 Basic Leadership I Lecture required.
Activity: Laboratory
1 Course Unit
Notes: 1 h. No credit, or as awarded by cross-enrolled schools

MSCI 102 Basic Leadership I Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.
Course usually offered in spring term
Corequisites: Enrollment in MSCI 120 Basic Leadership I Lecture required.
Activity: Laboratory
1 Course Unit
Notes: 1 h. No credit, or as awarded by cross-enrolled schools

MSCI 110 Leadership and Personal Development
Introduces students/cadets to the personal challenges and competencies that are critical for effective leadership. Focus is placed on developing basic knowledge and comprehension of the U.S. Army’s Leadership Dimensions while gaining a "big picture" understanding of the Army ROTC program, its purpose in the U.S. Army and our nation, and its advantages for the student. Classes are conducted for one hour each week.
Course usually offered in fall term
Corequisites: Enrollment in MSCI 101 Basic Leadership I Lab required.
Activity: Lecture
1 Course Unit
Notes: 1.00 CU - Credit excluded from full-time calculation.

MSCI 120 Foundations in Leadership
Reviews leadership fundamentals such as setting direction, problem solving, listening, presenting briefs, providing feedback and using effective writing skills. Students/cadets are also exposed to key fundamentals of skills required to be successful as an MS II cadet; namely military map reading and land navigation, and small unit operations/leadership drills.
Course usually offered in spring term
Corequisites: Enrollment in MSCI 102 Basic Leadership I Lab required.
Activity: Lecture
1 Course Unit
Notes: 1.00 CU - Credit excluded from full-time calculation.

MSCI 201 Basic Leadership 2 Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.
Course usually offered in fall term
Corequisites: Enrollment in MSCI 210 Basic Leadership 2 Lecture required.
Activity: Laboratory
1 Course Unit
Notes: 2 h. No credit, or as awarded by cross-enrolled schools.

MSCI 202 Basic Leadership Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills.
Basic Course Leadership Laboratory. 2h. Open only to (and required of) students in the associated Military Science course. Series, with different roles for students at different levels in the program. Learn and practice basic skills. Gain insight into Advanced Course in order to make an informed decision whether to apply for it. Build self-confidence and team-building leadership skills that can be applied throughout life.
Course usually offered in spring term
Corequisites: Enrollment in MSCI 210 Basic Leadership 2 Lecture required.
Activity: Laboratory
1 Course Unit
Notes: 2 h. No credit, or as awarded by cross-enrolled schools

MSCI 210 Innovative Tactical Leadership
Explores the dimensions of creative and innovative tactical leadership strategies and styles by studying historical case studies and engaging in interactive student exercises. Focus is on continued development of the knowledge of leadership values and attributes through an understanding of rank, uniform, customs and courtesies.
Course usually offered in fall term
Corequisites: Enrollment in MSCI 201 Basic Leadership 2 Laboratory required.
Activity: Lecture
1 Course Unit
Notes: 1.00 CU - Credit excluded from full-time calculation.

MSCI 220 Leadership in Changing Environments
Examines the challenges of leading in complex contemporary operational environments. Students/cadets are exposed to more complex land navigation/map reading tasks, as well as more advanced small unit operations/leadership drills. Cadets develop greater self awareness as they practice communication and team building skills.
Corequisites: Enrollment in MSCI 202 Leadership I Lab required.
Activity: Lecture
1 Course Unit
Notes: 1.00 CU - Credit excluded from full-time calculation.
MSCI 301 Leadership Laboratory/Practicum 3
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. Course usually offered in fall term.
Prerequisites: Completion of MSCI 100 and 200 level courses.
Corequisites: Enrollment in MSCI 310 Basic Leadership 3 Lecture required.
Activity: Laboratory
1 Course Unit
Notes: 2.5 hours. No credit, or as awarded by cross-enrolled schools.

MSCI 302 Leadership Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. ROTC Advanced Camp. A six-week camp conducted at an Army post. Only open to (and required of) students who have completed MS 301 and 302. The student receives pay. Travel, lodging and most meal cost are defrayed by the US Army. The Advanced Camp environment is highly structured and demanding, stressing leadership at unit levels under varying, challenging conditions. Individual leadership and basic skills performance are evaluated throughout the camp. The leaders and skills evaluations at the camp weigh heavily in the subsequent selection process that determines the type commission and job opportunities given to the student upon graduation from ROTC and the university. Course usually offered in spring term.
Prerequisites: Completion of MSCI 100 and 200 level courses.
Corequisites: Enrollment in MSCI 320 Basic Leadership 3 Lecture required.
Activity: Laboratory
1 Course Unit
Notes: 2.5 hours. No credit, or as awarded by cross-enrolled schools.

MSCI 310 Leadership in Contact
Uses increasingly intense situational leadership challenges to build cadet awareness and skills in leading small units. Skills in decision-making, persuading, and motivating team members when "in combat" are explored, evaluated, and developed.
Prerequisites: Completion of MSCI 100 and 200 level courses.
Corequisites: Enrollment in MSCI 301 Leadership 3 Lab required.
Activity: Lecture
2 Course Units
Notes: 1.00 CU - Credit excluded from full-time calculation.

MSCI 320 Complex Team Leadership Issues
Challenges cadets with more complex leadership issues to further develop, practice, and evaluate adaptive leadership. Cadets continue to analyze and evaluate their own leadership values, attributes, skills and actions in preparation for the Leadership Development and Assessment Course (LDAC). Primary attention is given to preparation for LDAC and the development of both tactical skills and leadership qualities.
Course usually offered in spring term.
Corequisites: Enrollment in MSCI 302 Leadership 1 Lab required.
Activity: Lecture
1 Course Unit
Notes: 1.00 CU - Credit excluded from full-time calculation.

MSCI 401 Leadership Laboratory/Practicum 4
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. Course usually offered in fall term.
Prerequisites: Completion of MSCI 100, 200 and 300 level courses.
Corequisites: Enrollment in MSCI 410 Leadership 4 Lecture required.
Activity: Laboratory
1 Course Unit
Notes: 1.00 CU - credit excluded from full-time calculation.

MSCI 402 Leadership Laboratory/Practicum
Provides hands-on experience to reinforce leadership fundamentals, while emphasizing increased awareness of and proficiency in military skills. Advance Course Leadership Laboratories. 2h. Open only to students in the associated Military Science course. Series, with different roles for students at different levels in the program. Involves leadership responsibilities for the planning, coordination, execution and evaluation of various training and activities with Basic Course students and for the ROTC program as a whole. Students develop, practice and refine leadership skills by serving and being evaluated in a variety of responsible positions.
Course usually offered in spring term.
Prerequisites: Completion of MSCI 100, 200 and 300 level courses.
Corequisites: Enrollment in MSCI 420 Basic Leadership 4 Lecture required.
Activity: Laboratory
1 Course Unit
Notes: 2.5 hours. No credit, or as awarded by cross-enrolled schools.

MSCI 410 Developing Adaptive Leaders
Develops cadet proficiency in planning, executing, and assessing complex operations, functioning as a member of a staff, and providing leadership performance feedback to subordinates. Cadets are given situational opportunities to assess risk, make ethical decisions, and provide coaching to fellow ROTC cadets.
Course usually offered in fall term.
Prerequisites: Completion of MSCI 100, 200 and 300 level courses.
Corequisites: Enrollment in MSCI 401 Leadership 4 Lab required.
Activity: Lecture
1 Course Unit
Notes: 1.00 CU - credit excluded from full-time calculation.

MSCI 420 Leadership in the Contemporary Operating Environment of the 21st Century
Explores the dynamics of leading in the complex situations of current military operations. Cadets examine differences in customs and courtesies, military law, principles of war, and rules of engagement in the face of international terrorism. Aspects of interacting with non-government organizations, civilians on the battlefield, and host nation support are examined and evaluated.
Prerequisites: Completion of MSCI 100, 200 and 300 level courses.
Corequisites: Enrollment in MSCI 402 Leadership 1 Lab required.
Activity: Lecture
2 Course Units
Notes: 1.00 CU - Credit excluded from full-time calculation.
Music (MUSC)

MUSC 005 College Music Program
Private study in voice, keyboard, strings, woodwind, brass, percussion, and non-western instruments. Such study is designed to meet the artistic, technical, and/or professional needs of the student. Note: This is not a syllabus. Course requirements and assessment will be determined by the private instructor. Private lessons in the College House Music cannot be taken Pass/Fail. Please visit http://www.sas.upenn.edu/music/performance. Students cannot register through Penn In Touch. Registration will be maintained by the music department upon receipt of application and instructor permission.
Activity: Studio
0.5 Course Units
Notes: Permits will be entered after student completes College Music House form. Forms available in Music department.

MUSC 007 Ensemble Performance
Successful participation in a music department sponsored group. Ensembles groups: University Orchestra, University Wind Ensemble, Choral Society, University Choir, Ancient Voices, Baroque and Recorder Ensemble, Chamber Music Society, Arab Music Ensemble, Samba and Jazz Combo. This course must be taken for a letter grade (Pass/Fail registration option may not be utilized for this course).
Activity: Studio
0.5 Course Units
Notes: Please contact Ensemble Director if you are interested in taking Music 007 for credit.

MUSC 010 Marian Anderson Performance Program
Special instruction in vocal and instrumental performance for music majors and minors only. Students must demonstrate in an audition that they have already attained an intermediate level of musical performance. They also must participate in a Music Department ensemble throughout the academic year, perform in public as a soloist at least once during the year (recital), perform a jury at the end of the spring semester, and attend and participate in masterclasses.
Two terms. student must enter first term. 
Prerequisite: Must be a music major or minor
Activity: Lecture
0.5 Course Units

MUSC 016 Freshman Seminar
The primary goal of the freshman seminar program is to provide every freshman the opportunity for a direct personal encounter with a faculty member in a small setting devoted to a significant intellectual endeavor. Specific topics will be posted at the beginning of each academic year. Please see the College Freshman seminar website for information on current course offerings http://www.college.upenn.edu/courses/seminars/freshman.php. Fulfills Arts and Letters sector requirement.
Course not offered every year
Also Offered As: COML 015
Activity: Seminar
1 Course Unit

MUSC 018 Freshman Seminar
The primary goal of the freshman seminar program is to provide every freshman the opportunity for a direct personal encounter with a faculty member in a small setting devoted to a significant intellectual endeavor. Specific topics be posted at the beginning of each academic year. Please see the College Freshman seminar website for information on current course offerings http://www.college.upenn.edu/courses/seminars/freshman.php.
Course not offered every year
Also Offered As: URBS 018
Activity: Seminar
1 Course Unit

MUSC 030 1000 Years of Musical Listening
We know that we like music and that it moves us, yet it is often difficult to pinpoint exactly why, and harder still to explain what it is we are hearing. This course takes on those issues. It aims to introduce you to a variety of music, and a range of ways of thinking, talking and writing about music. The majority of music dealt with will be drawn from the so-called “Classical” repertory, from the medieval period to the present day, including some of the ‘greats’ such as Handel, Beethoven, Mozart, Berlioz, and Verdi, but will also introduce you to music you will most likely never have encountered before. This course will explore the technical workings of music and the vocabularies for analyzing music and articulating a response to it; it also examines music as a cultural phenomenon, considering what music has meant for different people, from different societies across the ages and across geographical boundaries. As well as learning to listen ourselves, we will also engage with a history of listening. No prior musical knowledge is required. (Formerly Music 021).
Fulfills College Cross Cultural Foundational Requirement.
For BA Students: Arts and Letters Sector
Taught by: Calcagno, Caldwell, Goodman
One-term course offered either term
Activity: Lecture
1 Course Unit
Notes: Open to all students

MUSC 031 Symphony
This course will focus on a specific repertoire of representative symphonies by such composers as Haydn, Mozart, Beethoven, Schubert, Berlioz, Schumann, Brahms, Tchaikovsky, and Mahler. Historical developments will be considered, along with the effects upon symphonic literature of such major sociological changes as the emergence of the public concert hall. But the emphasis will be on the music itself—particularly on the ways we can sharpen our abilities to engage and comprehend the composers’ musical rhetoric. Topics will alternate term to term. Fulfills College Cross Cultural Foundational Requirement.
Taught by: Bernstein
One-term course offered either term
Activity: Lecture
1 Course Unit
MUSC 032 Composers
This course will center on the biography, works, and cultural context of a specific composer or group of composers. As well as introducing students to the musical works of the composer(s), the course will examine issues such as reception history, the canon, mechanisms of cult formation, authorship and attribution, identity, historical and social contexts, and nationalism and patriotism. Fulfills College Cross Cultural Foundational Requirement.
For BA Students: Arts and Letters Sector
Taught by: Calcagno, Caldwell, Goodman, Kallberg
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 033 History of Opera
An investigation, through a series of representative works, of the central problem of opera: how does the combination of music, text, and visual spectacle create an art form in which the whole is more powerful than its parts. Today this issue can be examined not only in live performances but also through media such as film, DVD, streaming video—media to which this four-centuries-old multimedia form has adapted, evolving in still compelling ways. The works chosen for the course provide a chronological survey but also represent the variety of sources on which opera has drawn for its subject matter: myth and legend, the epic, the novel, and the play.
For BA Students: Arts and Letters Sector
Taught by: Calcagno, Goodman
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 034 Music Makers
Courses under this number will treat composer performers and performance. Courses will include a class on Haydn and Mozart (formerly 027), Beethoven (Formerly 028), and Mahler (formerly 025).
Taught by: Caldwell, Goodman, Kallberg
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 035 Jazz Style and History
This course is an exploration of the family of musical idioms called jazz. Attention will be given to issues of style development, selective musicians, and to the social and cultural conditions and the scholarly discourses that have informed the creation, dissemination and reception of this dynamic set of styles from the beginning of the 20th century to the present. Fulfills Cultural Diversity in the U.S.
Taught by: Ramsey

Notes: This course is an exploration of the family of musical idioms called jazz. Attention will be given to issues of style development, selective musicians, and to the social and cultural conditions and the scholarly discourses that have informed the creation, dissemination and reception of this dynamic set of styles from the beginning of the 20th century to the present. Fulfills Cultural Diversity in the U.S.

MUSC 044 Popular Music
This course traces the history of popular music in America from the nineteenth century to the present. We will start with parlor songs and social class and the racialized rise of minstrelsy in the antebellum period, track the separation of highbrow and lowbrow culture in the 19th century, explore the explosion of new styles in the early twentieth century, and witness the birth of hugely influential genres such as rock n roll in the 1950s and hip hop in the 1970s and 1980s. Throughout the semester we will consider how popular music intersects with and reflects individual and social identity, particularly in terms of race, class, gender, and sexuality. Students will engage intensively with popular songs and pieces while also gaining a firm grounding in the historical and social forces of which music was a part.
Taught by: Goodman
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 049 Listening to Nostalgia from the Phonograph to YouTube.
In revising the past, nostalgia invites us to also rethink the present, its ideals and its utopias. This CWIC course covers a century of nostalgia s aural technological mediation, from the invention of the phonograph to today s digital media such as YouTube. We will explore how conflicting forms of aural nostalgia (the longing for the sounds of other times or other places) are seen either as a suspicious refuge or an empowering cultural resource, and how they affect personal and collective identities, such as enhancing self-esteem or providing interpersonal bonds. The objective is to develop the students public speaking skills by voicing their own experiences of nostalgia while trying to understand the broader social, cultural, and communal issues at stake in nostalgic sounds. Through the examination of readings, analyses of recent and archival recordings, exhibits, and discussions, we will examine the intricate roles nostalgia has played at the intersections of aesthetics, technology, politics, marketing, the environment, and various audiovisual media, and how they affect us as individuals and communities. In order to develop their oral communication skills, students will be required to give presentations on two nostalgic topics of their choice in formats that employ different research, organization, and presentation competencies. Every week a small group of students will report on an example of sonic nostalgia found in Philadelphia in the style of a nostalgic radio program (or podcast). Each student will give a more formal oral critique of a nostalgic artifact of their choice, engaging with the plurality of oral (and aural) forms of nostalgia.
Taught by: Pare-Morin
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: Communication within the Curriculum.
MUSC 050 World Musics and Cultures
This course examines how we as consumers in the "Western" world engage with musical difference largely through the products of the global entertainment industry. We examine music cultures in contact in a variety of ways--particularly as traditions in transformation. Students gain an understanding of traditional music as live, meaningful person-to-person music making, by examining the music in its original site of production, and then considering its transformation once it is removed, and recontextualized in a variety of ways. The purpose of the course is to enable students to become informed and critical consumers of "World Music" by telling a series of stories about particular recordings made with, or using the music of, peoples culturally and geographically distant from the US. Students come to understand that not all music downloads containing music from unfamiliar places are the same, and that particular recordings may be embedded in intriguing and controversial narratives of production and consumption. At the very least, students should emerge from the class with a clear understanding that the production, distribution, and consumption of world music is rarely a neutral process.
Fulfills College Cross Cultural Foundational Requirement.
For BA Students: Arts and Letters Sector
Taught by: Muller,Rommen,Sykes
One term course offered either term
Also Offered As: AFRC 050, ANTH 022, FOLK 022
Activity, Lecture
1 Course Unit

MUSC 051 Music of Africa
African Contemporary Music: North, South, East, and West. Come to know contemporary Africa through the sounds of its music: from South African kwela, jazz, marabi, and kwaito to Zimbabwean chimurenga; Central African soukous and pygmy pop; West African Fuji, and North African rai and hop hoph. Through reading and listening to live performance, audio and video recordings, we will examine the music of Africa and its intersections with politics, history, gender, and religion in the colonial and post colonial era. (Formerly Music 053). Fulfills College Cross Cultural Foundational Requirement.
Taught by: Muller
Course not offered every year

MUSC 056 Seeing/Hearing South Africa: Politics and History through Contemporary Performance
This course begins in the regular semester--students are provided a general introduction to South African history, politics, environment, and performance through a range of resources: scholarly literature, film, music, and online resources; with particular focus on sites, communities, and events included in the two week intensive travel to South Africa (either Fall semester Intro with winter break travel; or spring semester Intro with late spring intensive travel). Students are given guidelines for writing about and representing live performances and experiences of exhibits and heritage sites. For fall/winter travel: focus is on Cape Town's New Year's Festival performed by those historically called "Cape Coloured" a Festival that makes complicated understandings of race, slavery, and transatlantic translation of borrowed culture. For the Spring late spring travel, the destination is music festivals in mid-May. Both classes include visits to Robben island, Kirstenbosch gardens; "Cape Malay' heritage sites; travel to KwaZulu Natal, and to Johannesburg's apartheid museum, Soweto's anti apartheid destinations, the Cradle of Humankind works heritage site, a game park, and the Union Buildings in Pretoria. En route we will stop over to view Khoisan rock art.

MUSC 060 Beginning Tabla I
An introduction to the tabla, the premier drum of north Indian and Pakistani classical music traditions.
Course not offered every year
Also Offered As: SAST 104
Activity, Lecture
1 Course Unit

MUSC 061 Indian Musical Performance A: Elementary
Introduction to the fundamentals of Indian music; instruction in performance on the sitar.
Taught by: Naibandian
One term course offered either term
Also Offered As: SAST 106
Activity, Lecture
1 Course Unit

MUSC 062 Beginning Tabla II
Continued study in Tabla
Course usually offered in spring term
Also Offered As: SAST 105
Activity, Lecture
1 Course Unit

MUSC 063 Beginning Sitar II
Taught by: Naibandian
One term course offered either term
Also Offered As: SAST 107
Activity, Lecture
1 Course Unit
Notes: Continuation of MUSC 061
MUSC 070 Introduction to Theory and Musicianship: Making Sense of Music
This course will cover basic skills and vocabulary for reading, hearing, performing, analyzing, and writing music. Students will gain command of musical rudiments, including notation, reading and writing in treble and bass clefs, intervals, keys, scales, triads and seventh chords, and competence in basic melodic and formal analysis. The course will include an overview of basic diatonic harmony, introduction to harmonic function and tonalization. Musicianship skills will include interval and chord recognition, rhythmic and melodic dictation and familiarity with the keyboard. There will be in-depth study of selected compositions from the "common practice" Western tradition, including classical, jazz, blues and other popular examples. Listening skills—both with scores (including lead sheets, figured bass and standard notation), and without—will be emphasized. There is no prerequisite. Students with some background in music may place out of this course and into Music 170, Theory and Musicianship I. (Formerly Music 70, 71). Fulfills College Formal Reasoning and Analysis Foundational Requirement.
Taught by: Waltham-Smith, Weesner
One-term course offered either term
Prerequisites: There is no prerequisite. Students with some background in music may place out of this course and into Music 170, Theory and Musicianship I.
Activity: Lecture
1 Course Unit

MUSC 080 Literatures of Jazz
That modernism is steeped as much in the rituals of race as of innovation is most evident in the emergence of the music we have come to know as jazz, which results from collaborations and confrontations taking place both across and within the color line. In this course we will look at jazz and the literary representations it engendered in order to understand modern American culture. We will explore a dizzying variety of forms, including autobiography and album liner notes, biography, poetry, fiction, and cinema. We’ll examine how race, gender, and class influenced the development of jazz music, and then will use jazz music to develop critical approaches to literary form. Students are not required to have a critical understanding of music. Class will involve visits from musicians and critics, as well as field trips to some of Philadelphia’s most vibrant jazz venues.
Course not offered every year
Also Offered As: ENGL 080
Activity: Lecture
1 Course Unit

MUSC 081 Film Music in Post 1950 Italy: Nino Rota and Ennio Morricone
An exploration of cinematic sound through the lens of specific composer/director collaborations in post-1950 Italy, examining scores, soundtracks, and the interaction of diegetic and non-diegetic music with larger soundscapes. Composers Nino Rota and Ennio Morricone serve as case studies, in partnership with directors Fellini, Visconti, Leone, Pontecorve, Pasolini, and Coppola. Highlights include several excerpts from the Fellini/Rota collaboration, including The White Sheik, I vitelloni, The Road, Nights of Cabiria, La dolce vita, 8 1/2, Juliet of the Spirits, Satyricon, The Clowns, Roma, Amarcord, Casanova, and Orchestra Rehearsal. Rota’s music for Visconti will be examined in Senso, the Leopard, and Rocco and his brothers, along with his Transatlantic collaboration for The Godfather. Morricone’s work with various directors will be discussed in The Good, the Bad, and the Ugly, The Battle of Algiers, and Teorema, as well as for American films such as Malick’s Days of Heaven and Tarantino’s The Hateful Eight. Weekly screenings required. Open to all: music majors, minors, and non-majors; will count toward requirements for music minor. Knowledge of music and Italian helpful but not required. All readings and lectures in English.
Taught by: Samuel
Also Offered As: CIMS 081, ITAL 081
Activity: Seminar
1 Course Unit

MUSC 082 African-American Literature
An introduction to African-American literature, typically ranging across a wide spectrum of moments, methodologies, and ideological postures, from Reconstruction and the Harlem Renaissance to the Civil Rights Movement. Most versions of this course will begin in the 19th century; some versions of the course will concentrate only on the modern period. See the English Department’s website at www.english.upenn.edu for a description of the current offerings.
Course not offered every year
Also Offered As: AFRC 081, ENGL 081, GSWS 081
Activity: Lecture
1 Course Unit

MUSC 130 Introduction to European Art Music
This course aims to introduce students to what it means to study the European musical tradition. Students will approach the diverse music that constitute the classical tradition from a variety of scholarly perspectives. The goal of this class is to listen deeply and think broadly. Students will consider questions such as: what sort of object is music? Where is it located? What does it mean to say a work is "canonic”? What is left out of the story? This class will be in dialog with other tier-one classes, and will consider what the historian can bring to the study and understanding of music.
For BA Students: Arts and Letters Sector
Taught by: Calcagno, Caldwell, Goodman, and Kallberg
Course not offered every year
Prerequisite: Music 070
Activity: Lecture
1 Course Unit
Notes: Fulfills the requirements of the Music Major. Music 070 prerequisite.
MUSC 135 Introduction to the Music Life in America
This course surveys American musical life from the colonial period to the present. Beginning with the music of Native Americans, the European legacy, and the African Diaspora, the course treats the singular social and political milieu that forged the profile of America's musical landscape. Attention will be given to the establishment of the culture industry and to various activities such as sacred music, parlor music, concert and theater music, the cultivation of oral traditions, the appearance of jazz, the trajectory of western art music in the United States, and the eventual global dominance of American popular music. Music 070 prerequisite. Preference given to music Majors and Minors. Fulfills the Cultural Diversity in the U.S. College Requirement.
Taught by: Ramsey, Goodman
Course not offered every year
Prerequisite: Music 070
Activity: Lecture
1 Course Unit

MUSC 150 Introduction to Ethnomusicology
This course introduces students to the field of ethnomusicology through a series of case studies that explore a range of traditional, popular, and art music from around the world. The course takes as a point of departure several works of musical ethnography, musical fiction, and musical autobiography and, through in-depth reading of these texts, close listening to assigned sound recordings, and in-class case studies, generates a context within which to think and write about music.
Taught by: Müller, Rommen, Sykes
Course not offered every year
Activity: Lecture
1 Course Unit
Notes: Fulfills the requirements of the Music Major.

MUSC 161 Intermediate Sitar I
North Indian classical music is performed in a format shared by stringed, bowed and wind instruments. Intermediate North Indian Instrumental performance is open to students who play a Western or Indian instrument with at least an intermediate degree of proficiency and to those who have completed Beginning Sitar. The course will cover North Indian methods of composition, rhythm and improvisation and focus on two or three performance pieces. A group performance will be given at the end of the semester.
Taught by: Miner
One term course offered either term
Also Offered As: SAST 108
Activity: Lecture
1 Course Unit

MUSC 170 Theory and MusicianShip I
Introduction to and development of principles of tonal voice-leading, harmonic function, counterpoint, and form through written analysis, composition, improvisation, and written work. Course covers diatonic harmony and introduction to chromaticism. Repertoires will focus on Western classical music. MusicianShip component will include sight-singing, dictation keyboard harmony. Fulfills College Formal Reasoning and Analysis Foundational Requirement.
Taught by: Moreno, Primoch, Reise, Waltham-Smith, Weesner
Course usually offered in fall term
Prerequisite: Music 070 or successful completion of diagnostic test
Activity: Lecture
1.5 Course Unit
Notes: Required of music majors.

MUSC 171 Theory and MusicianShip II
Continuation of techniques established in Theory and MusicianShip I. Explores chromatic harmony. Concepts will be developed through analysis and model composition. MusicianShip component will include sight singing, clef reading, harmonic dictation and keyboard harmony.
Taught by: Moreno, Reise, Waltham-Smith, Weesner
Course usually offered in spring term
Prerequisite: Music 170
Activity: Lecture
1.5 Course Unit
Notes: Required of music majors.

MUSC 230 Historical Eras and Topics: Earlier Periods
This course offers an in-depth look at topics and repertoires of the "earlier" periods, namely one (or more) of three historical epochs: Medieval, Renaissance, or Baroque. The purpose of this course is to give students the opportunity to engage deeply with musical works historically, analytically, and contextually, in addition to introducing a range of methodologies within the historical study of Music. (formerly Music 120, 121, 122).
Taught by: Calcagno, Caldwell, Goodman
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 231 Historical Eras and Topics: Later Periods
This course offers an in-depth look at topics and repertoires of the eighteenth century to today. Classes focus on one (or more) of four historical epochs: Enlightenment, Romantic, Modern, and Postmodern. The purpose of this course is to give students the opportunity to engage deeply with musical works historically, analytically and contextually, in addition to introducing a range of methodologies within the historical study of music. (formerly 123, 124).
Taught by: Goodman, Kallberg, Ramsey
Activity: Lecture
1 Course Unit

MUSC 232 Themes in Music History
In this course, students will have the opportunity to explore music history from a thematic or conceptual perspective, frequently through several eras. Past themes organizing the course include the Voice, the Sacred, Uncanny, Technology, Instruments, Orality and Literacy, and Machines.
Taught by: Calcagno, Caldwell, Goodman, Kallberg, Ramsey
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 234 Music Makers
Courses under this number will treat composer, performers, and performance. This class may also on occasion have a performance component, including collaborations with local performance venues, artists in residence. Courses will include a class on Haydn and Mozart (formerly 027); Beethoven (formerly 28); Mahler (formerly 25); Monks and Nuns; String Quartets.
Taught by: Calcagno, Caldwell, Goodman, Kallberg, Ramsey
Course not offered every year
Activity: Lecture
1 Course Unit
MUSC 235 Studies in African-American Music
This course explores aspects of the origins, style development, aesthetic philosophies, historiography, and contemporary conventions of African-American musical traditions. Topics covered include: the music of West and Central Africa, the music of colonial America, 19th century church and dance music, minstrelsy, music of the Harlem Renaissance, jazz, blues, gospel, hip-hop, and film music. Special attention is given to the ways that black music produces “meaning” and to how the social energy circulating within black music articulates myriad issues about American identity at specific historical moments. The course will also engage other expressive art forms from visual and literary sources in order to better position music making into the larger framework of African American aesthetics. (Formerly Music 146).
Taught by: Ramsey
Course not offered every year
Also Offered As: AFRC 147
Activity: Lecture
1 Course Unit

MUSC 236 Performance, Analysis, History
Participation in the course is contingent upon a successful audition. This course must be taken for a letter grade (pass/fail option may not be utilized for this course). This weekly seminar will explore music from the past and present through class discussions of performance, historical context, and analytical aspects of the music led by a professor and/or performer. One example of a class in this number will be an in-depth study of chamber music repertoire led by the Daedalus Quartet. Students will prepare for a final performance at the end of the semester as well as a paper/presentation. Students interested in this applied approach to music may also wish to take 256 and/or 276.
Taught by: Weesner
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 239 Guided Reading in Musicology
Individual research under the supervision of a member of the faculty. Students who take Music 239 may not take Music 259 or 279.
Prerequisite: 130 and one other class from tier 1 or 2. Student must complete one guided Reading Course in order to be eligible for departmental honors.
One-term course offered either term
Prerequisites: Musc 130 or 135; and 170
Activity: Independent Study
1 Course Unit

MUSC 246 Sound Studies
This course provides an introduction to the burgeoning field of sound studies. With clear roots in Music studies, sound studies is at the same time a trans-disciplinary endeavor that spans literature, media theory, sensory history, and anthropology, and is engaged with substantive issues of race, gender, and global politics. Students will engage with texts drawn from a variety of fields, as well as sound and performance art, fiction, podcasts, and film, and they will be encouraged to experiment with creative, multimedia elements in their final projects.
Taught by: Waltham-Smith
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 252 Music, Religion, Ritual in South and Southeast Asia.
What role does music play in articulating religious identities and spaces? What is the importance of ritual musics as they persist and change in the modern world? How does music reflect and articulate religious ways of thinking and acting? In this course, we explore these and other questions about the interrelations between music, religion, and ritual in South and Southeast Asia. Focusing on India, Sri Lanka, Malaysia, and Indonesia, the course emphasizes musics from Hindu, Buddhist, Muslim and Christian traditions; nevertheless, it draws widely to touch upon sacred musics in Pakistan, Nepal, Burma, Thailand, Vietnam, and among some indigenous peoples in the region. Throughout, we explore ontologies of sound; sonic occurrences in religious structures, public processions, and pilgrimage sites; the construction of religion and ritual as ideas forged through colonial encounter and modern scholarship on religion; the politics of sacred sounds in today’s public spaces and contemporary media, such as television and online; and the surprising fluidity between popular and sacred musical genres.
Taught by: Sykes
Course not offered every year
Also Offered As: ANTH 242, SAST 252
Activity: Lecture
1 Course Unit

MUSC 255 Accordinos of the New World
This course focuses on the musical genres and styles (both traditional and popular) that have grown up around the accordion in the New World. We will begin our explorations in Nova Scotia and move toward the Midwest, travelling through the polka belt. From there, our investigation turns toward Louisiana and Texas—toward zydeco, Cajun, and Tex-Mex music. We will then work our way through Central and South America, considering norteno, cumbia, vallenato, tango, chamame, and forro. Our journey will conclude in the Caribbean, where we will spend some time thinking about merengue and rake-n-scraper music. Throughout the semester, the musical case studies will be matched by readings and film that afford ample opportunity to think about the ways that music is bound up in ethnicity, identity, and class. We will also have occasion to think about the accordion as a multiply meaningful instrument that continues to be incorporated into debates over cultural politics and mobilized as part of strategies of representation through the New World. (Formerly Music 157).
Taught by: Rommen
Course not offered every year
Also Offered As: AFRC 157, FOLK 157, LALS 157
Activity: Lecture
1 Course Unit

MUSC 256 Music and Performance of Africa
This class provides an overview of the most popular musical styles and discussion of the cultural and political contexts in which they emerged in contemporary Africa. Learning to perform a limited range of African music/dance will be part of this course. No prior performance experience required. (Formerly Music 253).
Taught by: Muller
Course not offered every year
Also Offered As: AFRC 253, ANTH 263, FOLK 253
Activity: Lecture
1 Course Unit
MUSC 257 Caribbean Music and Diaspora
This course considers Caribbean musics within a broad and historical framework. Caribbean musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Caribbean contexts—concepts such as post-colonialism, migration, ethnicity, hybridity, syncretism, and globalization. Each of these concepts, moreover, will be explored with a view toward understanding its connections to the central analytical paradigm of the course—diaspora. Throughout the course, we will listen to many different styles and repertoires of music ranging from calypso to junkanoo, from rumba to merengue, and from dance hall to zouk. We will then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own North American contexts of music consumption and production. (Formerly Music 258).
Taught by: Rommen
Course not offered every year
Also Offered As: AFRC 258, ANTH 256, LALS 258
Activity: Lecture
1 Course Unit

MUSC 258 Latin American Music
This survey course considers Latin American musics within a broad cultural and historical framework. Latin American musical practices are explored by illustrating the many ways that aesthetics, ritual, communication, religion, and social structure are embodied in and contested through performance. These initial inquiries open onto an investigation of a range of theoretical concepts that become particularly pertinent in Latin American contexts—concepts such as post-colonialism, migration, ethnicity, and globalization. Throughout the course, we will listen to many different styles and repertoires of music and then work to understand them not only in relation to the readings that frame our discussions but also in relation to our own, North American contexts of music consumption and production. (Formerly Music 158).
Taught by: Rommen
Course not offered every year
Also Offered As: AFRC 158, LALS 158
Activity: Lecture
1 Course Unit

MUSC 259 Guided Research Ethnomusicology
Individual research under the supervision of a member of the faculty. Students who take Music 259 may not take 239 or 279.
One-term course offered either term
Prerequisites: Music 150 and 170.
Activity: Independent Study
1 Course Unit

MUSC 255 Performing Arts in South Asia
This course is a survey of selected traditions of theater, music, and dance in India and surrounding regions. Topics include ritual practices, theater, classical dance, classical music, devotional music, regional genres, and contemporary popular musics. Readings and lectures are supplemented by audio and visual materials and live performances. The aim of the course is to expose students to a variety of performance practices from this part of the world and to situate the performing arts in their social and cultural contexts. The course has no prerequisites.
For BA Students: Arts and Letters Sector
One term course offered either term
Also Offered As: SAST 005
Activity: Lecture
1 Course Unit

MUSC 256 Music Cult in India & Pak
One term course offered either term
Also Offered As: SAST 116
Activity: Lecture
1 Course Unit

MUSC 270 Theory and Musicianship III
Continuation of techniques established in Theory and Musicianship I and II. Concepts will be developed through analysis and model composition. Musicianship component will include advanced sight singing, clef reading, harmonic dictation and keyboard harmony.
Taught by: Moreno, Primosch, Reise, Waltham-Smith, Weesner
Course usually offered in fall term
Prerequisites: Music 170 and 171
Activity: Lecture
1.5 Course Unit
Notes: Required of music majors.

MUSC 271 Composition I: Historical Practices
Studies in selected 16th through 19th century compositional practices. Possible topics may include 16th century modal counterpoint; sonata forms in Viennese classicism; advanced chromatic harmony. Course includes analysis of relevant pieces and student compositional projects reflecting course topic.
Taught by: Primosch, Reise, Waltham-Smith
Course not offered every year
Prerequisites: Music 170, 171, 270
Activity: Lecture
1 Course Unit

MUSC 272 Composition II: Contemporary Practices
Studies in selected 20th and 21st century compositional practices. Possible topics may include symmetry in post-tonal harmony; composing for piano; the sonata in the 20th century. Course includes analysis of relevant pieces and student compositional projects reflecting course topic.
Taught by: Reise
Course not offered every year
Prerequisites: Music 170, 171, 270
Activity: Lecture
1 Course Unit
MUSC 273 Orchestration
An introduction to writing for the instruments of the orchestra. Course will include study of individual instruments and various instrumental combinations, including full orchestra. Representative scores from the 18th century to the present day will be analyzed. Students will be responsible for several scoring projects and will have opportunities to hear readings of their projects. Prerequisite: at least two semesters of music theory or permission of instructor. (Formerly 285).
Taught by: Primosch
Course not offered every year
Prerequisite: Music 70 or 170
Activity: Lecture
1 Course Unit

MUSC 275 Electronic Music
MUSC275 offers an introduction to electronic music/sound production with a focus on analogue systems and performance. Guest artists will join us for in-class visits and performances during the semester. Meetings will take place in the classroom, in concert spaces and in the studio. Preference given to Music majors and minors for registration.
Taught by: Lew
Course not offered every year
Prerequisite: Music 070 or 170
Activity: Lecture
1 Course Unit

MUSC 277 Recording Music.
An introduction to music and sound recording with a focus on concerts and live performances. The entire process will be examined from start to finish, including the roles played by composers, musicians, listeners, performance spaces, and recording technology. Meetings will take place in the classroom, in concert spaces and in the studio. Music majors and minors will be given preference for registration.
Taught by: Lew
Course usually offered in fall term
Prerequisites: Music 170.
Activity: Seminar
1 Course Unit
Notes: This course is for Music Majors and minors.

MUSC 278 Composition for Musicians
Music 278 is a Composition Seminar that treats composing as both an end in itself and a means for thinking broadly and speculatively about music. We will work on various compositional techniques through exercises as well as ‘free’ composition, giving attention to skills as well as to personal voice. We will survey the current musical landscape through listening, analysis and discussion. The question of musical style itself will be pursued, and while we will be oriented to western art music, we will consider a wide range of styles, including popular music. It is assumed that students will have fluency with musical notation. Prerequisite: Music 171, or permission of the instructor.
Taught by: Weesner
Prerequisite: Music 171
Activity: Seminar
1 Course Unit
Notes: Music 171 prerequisite

MUSC 279 Guided Research in Theory and Composition
Individual research under the supervision of a member of the faculty. Students who take Music 279 may not take Music 239 or Music 259. A research paper (15-20 pages in length with a bibliography) is expected at end of term summarizing research.
Prerequisites: Music 170, 171 and one other tier 2 class
Activity: Independent Study
1 Course Unit

This global cities seminar will discuss the cultural politics of memory as they develop through the spatial and sonic atmosphere of post-war Berlin. A city rich in history and focused on the future, Berlin is a laboratory for how exploration of the recent past is re-scripting the near future. The city becomes a palimpsest sonically, visually, and spatially that is available for investigation and interpretation as a means to understand historical patterns and their relationship to novel practices and methods in the present. Media, and in particular sonic cultures, as well as real estate economics and ecological design will form interrelated prisms through which to understand cities, urban practices, urban memory and the transformation of the environment. Methodologically, the course will be an experiment in the use of media to understand cities and engage with urban practices. The course also involves a mandatory, funded field trip to Berlin during spring break when students will participate in the ongoing Anthropocene Curriculum at the Haus der Kultur der Welt and will visit sound art galleries and sound design studios, as well as meeting with practitioners and researchers. Entrance to the course is via application. Music:320(naomiwal@sas.upenn.edu)&ARCH320(barberda@design.upenn.edu)
Taught by: Daniel Barber and Naomi Waltham Smith
Course not offered every year
Also Offered As: ARCH 320
Activity: Seminar
1 Course Unit

MUSC 330 Seminar in Music History
Advanced seminar in topics in musicology.
Taught by: Calcagni, Caldwell, Goodman, Kallberg, Ramsey
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 350 Seminar in Ethnomusicology
Advanced study in a selected topic in Ethnomusicology.
Taught by: Muller, Rommen, Sykes
One term course offered either term
Activity: Seminar
1 Course Unit

MUSC 370 Seminar in Theory and Composition
Advanced seminar in topics of music theory and compositions.
Taught by: Waltham-Smith, Weesner, Moreno
Course not offered every year
Activity: Seminar
1 Course Unit
MUSC 508 Advanced Musicianship
Advanced techniques of score reading and general musicianship at the keyboard. Goals of the course include increasing proficiency in sight singing (including C clefs), taking harmonic, melodic, and rhythmic dictations. Accurate performance of rhythms.
Two terms. Student must enter first term.
Prerequisites: Reasonable keyboard and sight-reading facility
Activity: Lecture
1 Course Unit

MUSC 515 Analysis of Twentieth-Century Music
Analytical studies of twentieth-century music.
Taught by: Primosch
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 516 Analysis of 20th Century Music II
Analytical Studies of 20th century music focusing on post World War II music.
Taught by: Primosch, Reise
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 520 Orchestration
A study of the instruments of the orchestra and their combination.
Frequent written projects.
Taught by: Reise
Course not offered every year
Activity: Lecture
1 Course Unit

MUSC 525 Composition in Selected Forms
Study of the style and form of one genre, composer, or historical period, with emphasis on written projects.
Taught by: Reise
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 530 Composition and Electronic Media.
This course is intended for advanced composers who have substantial experience and training in composition. Students in MUSC530 will complete short études utilizing the student's choice of media. Examples from the literature will be discussed.
Taught by: Primosch
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 603 Aesthetics and Criticism
Topics may include hermeneutics, methods of formulating value judgments, the relationship of evaluation to interpretation, and the role of aesthetics in history.
Taught by: Kallberg
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 604 Historiography and Methodologies.
Theories and models of historical investigation. Analysis of historiographic writings and musicological works exemplifying particular approaches, such as transnational, environmental/landscape, gender/sexuality, critical race studies, performance studies, archives, and the digital humanities.
Taught by: Calcagno, Caldwell, Goodman
Course not offered every year
Also Offered As: COML 602, ITAL 602
Activity: Seminar
1 Course Unit

MUSC 605 Anthropology of Music
Topics may include the intellectual history of ethnomusicology, current readings in ethnomusicology, a consideration of theoretical principles based upon the reading and interpretation of selected monographs, and area studies. Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Taught by: Muller, Rommen, Sykes
Course not offered every year
Activity: Seminar
1 Course Unit
Notes: Open to graduate students from all departments

MUSC 606 The Interpretation of Oral Traditions
Topics may draw on methodologies derived from jazz studies, chant studies, and ethnomusicology. Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Taught by: Ramsey
Course not offered every year
Also Offered As: AFRC 606
Activity: Seminar
1 Course Unit

MUSC 620 Analytical Methods: Tonal Music
Current methods in the analysis of tonal music. Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Taught by: Moreno, Waltham-Smith
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 621 Analytical Methods: Twentieth-Century Music
Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Taught by: Moreno, Waltham-Smith
Course not offered every year
Activity: Seminar
1 Course Unit
MUSC 622 Tonal and Post-Tonal Music
Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 630 Perspectives on the String Quartet
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 650 Field Methods in Ethnomusicology
The goal of the seminar is to give students a compressed dissertation research experience-taking them from the beginnings of “researching” a community and its music, through the documentation and representation stages. Students do background and methods reading, though the focus of the class is the development of basic ethnographic and documentary skills. This is a community partnership seminar which means that all forms of representation are produced in collaboration with community partners in West Philadelphia. These include photographic essays, an NPR style audio documentary, but most significantly, twenty thirty minute documentary films on a particular subject. See sample syllabus and projects on http://ccat.sas.upenn.edu/music/westphillymusic Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Taught by: Muller, Rommen, Sykes
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 700 Seminar in Composition
Seminar in selected compositional problems, with emphasis on written projects. Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Taught by: Prinosch, Reise, Weesner
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 705 Seminar in Ethnomusicology
Topics in Ethnomusicology. Please see department website https://www.sas.upenn.edu/music/node/53425 for current term course descriptions.
Taught by: Muller, Rommen, Sykes
Course usually offered in fall term
Also Offered As: AFRC 705, ANTH 705, COML 715, GSWS 705
Activity: Seminar
1 Course Unit
Notes: Open to graduate students from all departments

MUSC 710 Studies in Medieval Music
PLEASE see department website for current term course description.
http://www.sas.upenn.edu/music/courses/music/courses .
Taught by: Caldwell
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 720 Studies in Renaissance Music
Seminar on selected topics in the music of the Renaissance.
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 730 Studies in Baroque Music
Seminar on selected topics in the music of the Baroque period. Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Taught by: Calcagno
Course not offered every year
Also Offered As: ITAL 540
Activity: Seminar
1 Course Unit

MUSC 740 Studies in Classical Music
Seminar on selected topics in the music of the Classical period. Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Taught by: Goodman, Kallberg
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 750 Studies in Romantic Music
Studies of Music in the 19th Century. Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Taught by: Kallberg
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 760 Studies in Twentieth-Century Music
Seminar on selected topics in the music of the twentieth century. Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Taught by: Kallberg
Course not offered every year
Activity: Seminar
1 Course Unit

MUSC 770 Seminar in Afro-American Music
Seminar course description offerings can be found on the Music department website: https://www.sas.upenn.edu/music/courses. Scroll through Current graduate seminar offerings on right.
Taught by: Ramsey
Course not offered every year
Also Offered As: AFRC 771
Activity: Seminar
1 Course Unit

MUSC 780 Studies in Music Theory and Analysis
Seminar on selected topics in music theory and analysis. Please see department website https://www.sas.upenn.edu/music/courses for current term course descriptions.
Taught by: Moreno, Watham-Smith
Course not offered every year
Also Offered As: COML 780, GRMN 529
Activity: Seminar
1 Course Unit
MUSC 781 Writing Sound—Sounding Literature
Seminar on selected topics in sound studies. Please see department
website https://www.sas.upenn.edu/music/courses for current term
course descriptions.
Taught by: Waltham-Smith
Course not offered every year
Also Offered As: COML 781
Activity: Seminar
1 Course Unit

MUSC 799 Guided Reading in Musical Scholarship
Guidance in preparation for the A.M. comprehensive examination in the
history and theory of music.
One-term course offered either term
Activity: Independent Study
1 Course Unit

MUSC 800 Teaching Music History
The teaching of music history courses to undergraduates.
Course not offered every year
Activity: Independent Study
1 Course Unit

MUSC 801 Teaching Music Theory
The teaching of music theory courses to undergraduates.
Course not offered every year
Activity: Independent Study
1 Course Unit

MUSC 802 Teaching World Music
The teaching of world music courses to undergraduates.
Taught by: Müller, Rommen.
Course not offered every year
Activity: Independent Study
1 Course Unit

MUSC 994 Preparation of Ph.D. Proposal
Preparation of Ph.D. essay. Completion of Course and submission of
Ph.D. essay marks official entry to Ph.D. program.
One-term course offered either term
Activity: Independent Study
1 Course Unit

MUSC 998 Independent Study in Composition
Private instruction in musical composition.
One-term course offered either term
Activity: Independent Study
1 Course Unit
Notes: May be taken for multiple course-unit credit

MUSC 999 Independent Study and Research
Individual study and research under the supervision of a member of the
faculty.
One-term course offered either term
Activity: Independent Study
1 Course Unit
Notes: May be taken for multiple course-unit credit

Nanotechnology (NANO)

NANO 599 Master's Independent Study
One-term course offered either term
Activity: Independent Study
1 Course Unit

NANO 990 Masters Reg
One-term course offered either term
Activity: Masters Thesis
1 Course Unit

Naval Science (NSCI)

NSCI 100 Naval Science Drill
A professional laboratory covering various aspects of naval leadership
and professional development. While emphasis is given to military
marching, formation, and parade, the course also includes lectures
from sources in and out of the Navy. Guest speakers cover topics
such as leadership, Navy career paths, equal opportunity, rights and
responsibilities, AIDS awareness, terrorism/counterterrorism, naval
warfare doctrine, employment of naval forces, ethics and values,
operations security, and safety.
One-term course offered either term
Prerequisites: Prerequisite (Sophomores, Juniors, Seniors) Fall NSCI 101/
Spring NSCI 102
Corequisite: Corequisite (Freshmen) Fall NSCI 101/Spring NSCI 102
Activity: Lecture
1 Course Unit

NSCI 101 Naval Orientation
A course designed to familiarize the student with the history,
characteristics and present employment of sea power. Particular
emphasis is placed upon our naval forces and their capability in
achieving and maintaining our national objectives. Naval organization
and operational functions are discussed in conjunction with sea power
concepts. Additionally, the student is given an insight into the Naval
Service, shipboard organization and safety, time management skills and
study techniques.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NSCI 1102 Seapower and Maritime Affairs
A broad survey of naval history designed to add historical perspective
to current defense problems. Topics covered include: naval power as
an aspect of national defense policy, navies as an instrument of foreign
policy, strategy selection, resource control, technology, and manning.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Engineering and Nursing students receive credit

NSCI 201 Leadership & Management
This course emphasizes principles of leadership, personnel and material
management, and subordinate development in the context of the naval
organization. Practical applications are explored through experiential
exercises and case studies.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Only Engineering, Nursing, and Wharton students receive credit.
NSCI 202 Navigation I
A comprehensive study of the theory and practice of terrestrial, and electronic navigation and the laws of vessel operations. Topics include fundamentals of coastal and harbor piloting, electronic navigation and mean of navigating without reference to land. An in-depth study of the international and inland nautical Rules of the Road is also included. Case studies and practical exercises are used to reinforce the fundamentals of marine navigation.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Only Engineering students receive credit.

NSCI 301 Engineering
This course provides an overview of how propulsion and electricity are provided to our Navy’s fighting ships. The basic engineering principles relating to thermodynamics, steam propulsion (conventional and nuclear), gas turbine propulsion, internal combustion engines, electricity generation and distribution, and various support systems will be taught. Ship design, stability, damage control, and some engineering-related ethical issues will also be discussed.
Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Only Engineering students receive credit.

NSCI 302 Weapons
This course provides an overview of the theory and concepts underlying modern weapons systems. The principles behind sensors and detection systems, tracking systems, computational systems, weapon delivery systems, and the fire control problem will be examined, with a consistent emphasis on the integration of these components into a “weapons system”. Case studies will be used to illustrate and reinforce concepts introduced in the course.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Only Engineering students receive credit.

NSCI 310 Evolution of Warfare
This course is designed to add broad historical perspective to understanding military power. Treating war and the military as an integral part of society, the course deals with such topics as: war as an instrument of foreign policy, military influences on foreign policy, the military as a reflection of society, manning and strategy selection. Course offered fall; even-numbered years
Activity: Lecture
1 Course Unit

NSCI 401 Navigation II
Insight into modern naval operations is gained through analysis of relative motion pertaining to ships at sea, underwater replenishment, shiphandling, and tactical communications. The process of command and control and leadership is examined through case studies of actual incidents at sea.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NSCI 402 Leadership and Ethics
The capstone course of the NROTC curriculum, this course is intended to provide the midshipman with the ethical foundation and basic leadership tools to be effective junior officers. Topics such as responsibility, accountability, ethics, the law of armed conflict, military law, division organization and training, and discipline are introduced through practical exercises, group discussion, and case studies.
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Only Wharton students receive credit

NSCI 410 Fundamentals of Maneuver Warfare
This course prepares future military officers and other leaders for service by studying modern tactical principles, current military developments, and other aspects of warfare and their interactions with the influence of maneuver warfare doctrine. There is a specific focus on the United States Marine Corps as the premier maneuver warfare fighting organization. Study also includes historical influences on tactical, operational, and strategic levels of maneuver warfare practices in the current and future operating environments.
Course offered fall; odd-numbered years
Activity: Lecture
1 Course Unit

Near Eastern Languages & Civilization (NELC)

NELC 010 Archaeology & Technology
Spring 2018: This seminar explores how humans apply and modify technologies in contexts as diverse as everyday life, major political-economic undertakings, or scholarly research. We investigate this through a comparison of technologies of the past with technologies of the present used to study the past. We will dig into the details of topics like building pyramids and tombs, the function of ancient astronomical devices, pre-telegraph long-distance communication, tools for cutting and carving stone, and kilns for firing pottery. Archaeologists study these issues by examining the material remains of past societies: the cut-marks on stone blocks, extant tomb structures, the debris of manufacturing activities, and much more. Today’s technologies enable the detailed scientific examination of the evidence, improving our understanding of the past. Thus, in parallel with our investigation of past technologies, we will also study the history of the application of present technologies to research on the archaeological record. We will dig into topics like the first uses of computers and databases, the development of statistical methods, early digital 3d modeling of objects and architecture, the adoption of geophysical prospection and geographic information systems, and the emerging uses of machine learning. In some cases, we can even compare old and new technologies directly, such as with land measurement and surveying techniques. Throughout the class we will engage in readings and discussions on the theory of humans and technology, to gain a better understanding of how processes such as innovation function in all time periods.
Taught by: Cobb, Peter
Also Offered As: ANTH 010, ARTH 010, CLST 010
Activity: Seminar
1 Course Unit
NELC 031 History of the Middle East Since 1800
A survey of the modern Middle East with special emphasis on the experiences of ordinary men and women as articulated in biographies, novels, and regional case studies. Issues covered include the collapse of empires and the rise of a new state system following WWI, and the roots and consequences of the Palestinian-Israeli conflict, the Iranian revolution and the U.S.-Iraq War. Themes include: the colonial encounter with Europe and the emergence of nationalist movements, the relationship between state and society, economic development and international relations, and religion and cultural identity. Requirements: one paper and two take-home exams.
For BA Students: History and Tradition Sector
Taught by: Kashani-Sabet
One term course offered either term
Also Offered As: HIST 081
Activity: Recitation
1 Course Unit

NELC 032 Topics in 20th C. Middle East
If "the clash of civilizations" is the first image that jumps to mind when thinking about the modern Middle East, then this is the course for you. From the familiar narratives about the creation of modern nation-states to the oft-neglected accounts of cultural life, this course surveys the multi-faceted societies of the twentieth-century Middle East. Although inclusive of the military battles and conflicts that have affected the region, this course will move beyond the clichés of war and conflict in the Middle East to show the range of issues and ideas with which intellectuals and governments grappled throughout the century. The cultural politics and economic value of oil as well as the formation of a vibrant literary life will be among the topics covered in the course. By considering illustrative cultural moments that shed light on the political history of the period, this course will adopt a nuanced framework to approach the Arab/Israeli conflict, the history of the Gulf States, the Iran-Iraq War, and U.S. involvement in the region.
Taught by: Kashani-Sabet
One term course offered either term
Also Offered As: HIST 084
Activity: Lecture
1 Course Unit

NELC 034 Israel in the Middle East
This introductory level course will offer an in-depth look at Israeli history and society, and how it relates to the Middle East through varying lenses. We will consider such topics as the rise of Jewish, Palestinian, and Arab nationalisms in the context of changing imperial control over Palestine/Israel (from Ottoman to British), and the emergence of the Middle East in its current borders; Conflict and conflict-resolution in Israel, Palestine, and the Middle East; Israel's Palestinian minority; Jewish immigrants to Israel from the Middle East, food and music culture in Israel, and their connection to the Middle East; or the place of the Middle East in Israeli literature and film. We will use cutting edge research from several disciplines, as well as literature, film, audio, and photographic evidence. Students will leave the class with a firm grasp of Israeli history and society, and will be widely familiar with the different narratives, viewpoints, and complexities concerning Israel and its position in the Middle East. Prior knowledge of Israeli or Middle Eastern history is not required.
Taught by: Tam
Also Offered As: JWST 041
Activity: Seminar
1 Course Unit

NELC 036 The Middle East through Many Lenses
This freshman seminar introduces the contemporary Middle East by drawing upon cutting-edge studies written from a variety of disciplinary perspectives. These include history, political science, and anthropology, as well as studies of mass media, sexuality, religion, urban life, and the environment. We will spend the first few weeks of the semester surveying major trends in modern Middle Eastern history. We will spend subsequent weeks intensively discussing assigned readings along with documentary films that we will watch in class. The semester will leave students with both a foundation in Middle Eastern studies and a sense of current directions in the field.
Taught by: Sharkey H
Course usually offered in fall term
Also Offered As: CIMS 036
Activity: Seminar
1 Course Unit

NELC 046 Myths and Religions of the Ancient World
This course will survey the religions of the ancient Middle East, situating each in its historical and socio-cultural context and focusing on the key issues of concern to mankind: creation, birth, the place of humans in the order of the universe, death, and destruction. The course will cover not only the better-known cultures from the area, such as Egypt and Mesopotamia, but also some lesser-known traditions, such as those of the Hurrians, the Hittites, of or the ancient Median town of Ugarit. Religion will not be viewed merely as a separate, sealed-off element of the ancient societies, but rather as an element in various cultural contexts, for example, the relationship between religion and magic and the role of religion in politics will be recurring topics in the survey. Background readings for the lectures will be drawn not only from the modern scholarly literature, but also from the words of the ancients themselves in the form of their myths, rituals, and liturgies.
For BA Students: History and Tradition Sector
Taught by: Frame
Course usually offered in spring term
Also Offered As: ANCH 046, RELS 014
Activity: Lecture
1 Course Unit

NELC 051 Jews and Judaism in Antiquity
A broad introduction to the history of Jewish civilization from its Biblical beginnings to the Middle Ages, with the main focus on the formative period of classical rabbinic Judaism and on the symbiotic relationship between Judaism, Christianity, and Islam.
Taught by: Doehrmann
Course usually offered in fall term
Also Offered As: HIST 139, JWST 156, NELC 451, RELS 120
Activity: Lecture
1 Course Unit

NELC 052 Medieval and Early Modern Jewry
Exploration of intellectual, social, and cultural developments in Jewish civilization from the dawn of rabbinic culture in the Near East through the assault on established conceptions of faith and religious authority in 17th century Europe. Particular attention will be paid to the impact of Christian and Muslim "host societies" on expressions of Jewish culture.
For BA Students: History and Tradition Sector
Taught by: Ruderman
Course usually offered in fall term
Also Offered As: HIST 140, JWST 157, NELC 452, RELS 121

Taught by: Silverman Course not offered every year Also Offered As: NELC 668 Activity: Lecture 1 Course Unit</td>
</tr>
<tr>
<td>NELC 101</td>
<td>Introduction to the Ancient Near East</td>
<td>The great pyramids and mysterious mummies of Egypt, the fabled Tower of Babel, and the laws of the Babylonian king Hammurabi are some of the things that might come to mind when you think of the ancient Near East. Yet these are only a very few of the many fascinating – and at times perplexing – aspects of the civilizations that flourished there c. 3300-300 BCE. This is where writing first developed, where people thought that the gods wrote down what would happen in the future on the lungs and livers of sacrificed sheep, and where people knew how to determine the length of hypotenuse a thousand years before the Greek Pythagoras was born. During this course, we will learn more about these other matters and discover their place in the cultures and civilizations of that area. This is an interdisciplinary survey of the history, society and culture of the ancient Near East, in particular Egypt and Mesopotamia, utilizing extensive readings from ancient texts in translation (including the Epic of Gilgamesh, &quot;one of the great masterpieces of world literature&quot;), but also making use of archaeological and art historical materials. The goal of the course is to gain an appreciation of the various societies of the time, to understand some of their great achievements, to become acquainted with some of the fascinating individuals of the time (such as Hatshepsut, &quot;the women pharaoh,&quot; and Akhenaten, &quot;the heretic king&quot;), and to appreciate the rich heritage that they have left us. For BA Students: History and Tradition Sector Taught by: Frame Course usually offered in fall term Also Offered As: ANCH 025, HIST 024 Activity: Lecture 1 Course Unit</td>

NELC 102 Introduction to the Middle East
This is the second half of the Near East sequence. This course surveys Islamic civilization from circa 600 (the rise of Islam) to the start of the modern era and concentrates on political, social, and cultural trends. Although the emphasis will be on Middle Eastern societies, we will occasionally consider developments in other parts of the world, such as sub-Saharan Africa, Central Asia, and Spain, where Islamic civilization was or has been influential. Our goal is to understand the shared features that have distinguished Islamic civilization as well as the varieties of experience that have endowed it with so much diversity.

NELC 103 Origin and Culture of Cities
The UN estimates the number of the world's 6.1 billion people live in cities and that this percentage is rapidly increasing in many parts of the world. This course examines urban life and urban problems by providing anthropological perspectives on this distinctive form of human association and land use. First we will examine the "origin" of cities, focusing on several of the places where cities first developed, including Mesopotamia and the Valley of Mexico. We will then investigate the internal structure of non-industrial cities by looking at close studies from around the world and from connections between the cities of the past and the city in which we live and work today.

Activity: Lecture
1 Course Unit

NELC 106 Pastoral Nomadism in the Past and Present
Pastoral nomadism is a "third way" of human subsistence separate from farming and foraging. It is a sustainable human adaptation to grassland and arid environments practiced through particular technologies and domesticated animals. This course begins by examining the human ecology and social organization that emerge from mobile ways of life, drawing on modern, ethnographic, and archaeological examples of pastoral nomadic groups in the Middle East and Central Asia. Academic readings and ethnographic films will form the basis of discussions about several larger themes, including: the origins of pastoral nomadism and horse riding; the development of dairy-based foods and human adaptations allowing the digestion of lactose; the historical relationship between mobile groups of pastoralists and territorial states; popular perceptions of nomads in various forms of historical and modern media; and the influence of ideas about nomads on modern senses of heritage and nationalism in the Middle East and Central Asia.

Also Offered As: ANTH 108, NELC 606
Activity: Seminar
1 Course Unit

NELC 111 Water in the Middle East Throughout History
The role of water in the Middle East cannot be overstated. The Middle East is an arid region, but human and natural systems have interacted to determine relative water scarcity and abundance at different times and places. The location, accessibility, yield, and quality of natural and managed water resources significantly influenced the location and longevity of ancient and modern settlements. Control of water has always affected the economic, political, social life of the communities inhabiting these settlements. This course examines the distribution of water resources throughout the Middle East and the archaeology and anthropology of water exploitation and management over the last 9000 years. It will consider water in river valleys, deserts, highland zones, steppe, and coastal areas of Mesopotamia, Egypt, the Levant, and Arabia from environmental, political, social, cultural, and technical perspectives. We will engage with a variety of media, including academic readings, popular journalism, films, satellite imagery, and digital maps. We will examine irrigation, water supply, sanitation, and water-driven power systems known from ethnographic studies and archaeological excavations. These data will allow us to engage with debates in Middle Eastern anthropology, including those concerning the relationship between water and political power, the environment in which the earliest cities arose, and present and potential future water crises and "water wars." In our final weeks, we will discuss archaeology and historical anthropology's contribution to conceptions of water "sustainability" and examine attempts to revive traditional and ancient technologies in an effort to better manage modern water resources.
Taught by: Hammer
Also Offered As: ANTH 110, NELC 611
Activity: Lecture
1 Course Unit

NELC 118 Iranian Cinema: Gender, Politics and Religion
This seminar explores Iranian culture, society, history and politics through the medium of film. We will examine a variety of cinematic works that represent the social, political, economic and cultural circumstances of contemporary Iran, as well as the diaspora. Among the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the role of cinema in Iranian society and beyond. Discussions topics will also include the place of the Iranian diaspora in cinema, as well as the transnational production, distribution, and consumption of Iranian cinema. Films will include those by internationally acclaimed filmmakers, such as Rakhshan Bani-Etemad, Asghar Farhadi, Bahman Ghobadi, Abbas Kiarostami, Mohsen Makhmalbaf, Dariush Mehrjui, Tahmineh Milani, Jafar Panahi, Marjane Satrapi and others. All films will be subtitled in English. No prior knowledge is required.

NELC 130 Introduction to the Qur’an
The goal of this course is to provide students with a general introduction to the holy scripture of the religion of Islam, the Qur’an. In particular, students will become familiar with various aspects of Qur’anic content and style, the significance of the Qur’an in Islamic tradition and religious practice, scholarly debates about the history of its text, and contemporary interpretations of it. Through close readings of a wide range of passages and short research assignments, students will gain first-hand knowledge of the Qur’an’s treatment of prophecy, law, the Biblical tradition, and many other topics. No previous background in Islamic studies or Arabic language is required for this course.

Activity: Lecture
1 Course Unit

NELC 133 Penn/Philadelphia and the Middle East
This seminar explores the historic engagement of the University of Pennsylvania and its faculty, students, and graduates in the Near and Middle East. It does so while drawing on archives, rare books and manuscripts, and artifacts that are now preserved in the University Archives, the Penn Museum, and the Penn Libraries. Together we will consider how, beginning in the late nineteenth century, Penn scholars engaged in archaeological expeditions to celebrated sites like Ur (in what is now Iraq) and Memphis (in Egypt) and how some of these efforts influenced the late Ottoman Empire’s policies towards antiquities and museums. We will examine how Penn’s curriculum changed over time to accommodate Semitics, including the study of languages and biblical traditions, in light of or in spite of historic tensions at the university between secular and religious learning. We will assess how Penn responded to changing American popular attitudes and U.S. foreign policy concerns relative to the Middle East, including during the Cold War and post-2001 (post-9/11) eras. Finally, we will trace the stories or biographies of some individual objects in Pennsylvania collections in order to appreciate the university’s roles in collecting, preserving, analyzing, and disseminating knowledge about the region’s deep cultural heritage. Ultimately, by investigating and writing.

NELC 134 Getting Crusaded
What did it feel like to get crusaded? In this course, we will examine the roughly two-century period from the call of the First Crusade in 1095 to the final expulsion of Latin Crusaders from the Middle East in 1291. Our examination will be primarily from the perspective of the invaders, rather than the invaders, as is usually done. How did the Muslims, Jews, and Eastern Christians of the medieval Middle East respond to the presence of Frankish invaders from Europe?

1 Course Unit

NELC 136 Introduction to Islam
This course is an introduction to Islam as a religion as it exists in societies of the past as well as the present. It explores the many ways in which Muslims have interpreted and put into practice the prophetic message of Muhammad through historical and social analyses of varying theological, philosophical, legal, political, mystical and literary writings, as well as through visual art and music. The aim of the course is to develop a framework for explaining the sources and symbols through which specific experiences and understandings have been signified as Islamic, both by Muslims and by other peoples with whom they have come into contact, with particular emphasis given to issues of gender, religious violence and changes in beliefs and behaviors which have special relevance for contemporary society.

NELC 154 Women in Jewish Literature
This course introduces students of literature, women’s studies, and Jewish studies to the long tradition of women as readers, writers, and subjects in Jewish literature. All texts will be in translation from Yiddish and Hebrew, or in English. Through a variety of genres—devotional literature, memoir, fiction, and poetry—we will study women’s roles and selves, the relation of women and men, and the interaction between Jewish texts and women’s lives. The legacy of women in Yiddish devotional literature will serve as background for our reading of modern Jewish fiction & poetry from the past century. The course is divided into five segments. The first presents a case study of the Matriarchs Rachel and Leah, as they are portrayed in the Hebrew Bible, in rabbinic commentary, in pre-modern prayers, and in modern poems. We then examine a modern novel that recasts the story of Dinah, Leah’s daughter. Next we turn to the seventeenth century Gikl of Hamel, the first Jewish woman memoirist. The third segment focuses on devotional literature for and by women. In the fourth segment, we read modern women poets in Yiddish, Hebrew, and English. The course concludes with a fifth segment on fiction and a memoir written by women in Yiddish, Hebrew, and English. "Jewish woman, who knows your life? In darkness you have come, in darkness do you go." J. L. Gordon (1890)

NELC 155 ARCHAEOLOGY & THE BIBLE
Archaeology and the Bible is a chronological survey of the long span of human occupation in the Land of the Bible, known by the names of the modern nation-states and political entities that occupy the area, as well as various short hands such as Levant and Syria-Palestine, from ca. 10,000 BCE, when humans first began to farm and herd animals through the time of the Divided Monarchy of Israel and Judah. While archaeology has moved beyond a primary concern with illuminating the Bible, NELC 155 will investigate the broader import of archaeological discoveries for our understanding of ancient Israel and its neighbors.

NELC 156 Great Books of Judaism (Fall 2018: Lifecycle in the Talmud)
The Babylonian Talmud, known simply as the Bavli, is the foundational legal and ethical document of rabbinic Judaism. It is one of the best read works of world literature, and it is the most widely disseminated and revered rabbinic work. It not only contains legal discussions and rulings but rather it also presents the worldview of the rabbis. This course will analyze and contextualize the perspectives of the Talmud toward the important phases of life. We will examine in-depth several Talmudic passages relating to the various stages of the human lifecycle: birth and naming of the child; circumcision; bar/bat mitzvah and adulthood; earning a livelihood and choosing a career; marriage and divorce; procreation and raising children; death, burial, mourning and the belief in the resurrection of the dead among others. We will evaluate these teachings in light of other traditions and in their broader late antiquity and contemporary contexts. All texts will be read in their English translation but originals will also be provided.

NELC 166 The Religion of Ancient Egypt
Weekly lectures (some of which will be illustrated) and a field trip to the University Museum’s Egyptian Section. The multifaceted approach to the subject matter covers such topics as funerary literature and religion, cults, magic religious art and architecture, and the religion of daily life.
Taught by: Silverman/Wegner
Course not offered every year
Also Offered As: NELC 468, RELS 114
Activity: Lecture
1 Course Unit
NELC 168 Women in Ancient Egypt
This class will examine the many roles played by women in ancient Egypt. From goddesses and queens, to wives and mothers, women were a visible presence in ancient Egypt. We will study the lives of famous ancient Egyptian women such as Hatshepsut, Nefertiti and Cleopatra. More independent than many of their contemporaries in neighboring areas, Egyptian women enjoyed greater freedoms in matters of economy and law. By examining the evidence left to us in the literature (including literary texts and non-literary texts such as legal documents, administrative texts and letters), the art, and the archeological record, we will come away with a better understanding of the position of women in this ancient culture.
Taught by: Houser Wegner
Course not offered every year

Activity: Lecture
1 Course Unit

NELC 182 Ancient Civilizations of the World
This course explores the archaeology (material culture) of early complex societies or civilizations in Egypt, Mesopotamia, and the Aegean. According to the traditional paradigm, civilization first emerged during the fourth millennium BCE in Egypt and Mesopotamia. In the Mediterranean, state-level societies first appeared in Crete and mainland Greece in the early second millennium BCE. This course investigates how and why these civilizations developed, as well as their appearance and structure in the early historic (or literate) phases of their existence. A comparative perspective will illustrate what these early civilizations have in common and the ways in which they are unique. This course will consist largely of lectures which will outline classic archaeological and anthropological theories on state formation, before turning to examine the available archaeological (and textual) data on emerging complexity in Egypt, Mesopotamia, and the Aegean. This course does not presuppose any knowledge of archaeology or ancient languages; the instructor will provide any background necessary. Because this is a course on material culture, some of the class periods will be spent at the Penn Museum of Archaeology and Anthropology. These will consist of a guided tour of a relevant gallery, as well as a hands-on object-based lab with archaeological materials selected by the instructor. This course meets the General Education Curriculums Cross Cultural Analysis foundational approach, whose aim is to help students understand and interpret the cultures of peoples (even long-dead peoples) with histories different from their own; it also fulfills the History and Tradition Sector breadth requirement.

NELC 201 Modern Middle Eastern Literature in Translation
The Middle East boasts a rich tapestry of cultures that have developed a vibrant body of modern literature that is often overlooked in media coverage of the region. While each of the modern literary traditions that will be surveyed in this introductory course-Arabic, Hebrew, Persian, and Turkish-will be analyzed with an appreciation of the cultural context unique to each body of literature, this course will also attempt to bridge these diverse traditions by analyzing common themes-such as modernity, social values, the individual and national identity as reflected in the genres of poetry, the novel and the short story. This course is in seminar format to encourage lively discussion and is team-taught by four professors whose expertise in modern Middle Eastern literature serves to create a deeper understanding and aesthetic appreciation of each literary tradition. In addition to honing students' literary analysis skills, the course will enable students to become more adept at discussing the social and political forces that are reflected in Middle Eastern literature, explore important themes and actively engage in reading new Middle Eastern works on their own in translation. All readings are in English.

NELC 216 Persian Poetry in Translation
This course introduces some of the major genres and themes of Persian poetry from ancient to modern Iran. Epic and romance, love and mysticism, wine and drunkenness, wisdom and madness, body and mind, sin and temptation are some of the key themes that will be explored through a close reading of poems in this course. The course suits undergraduate students of all disciplines, as it requires no prior knowledge of or familiarity with the Persian language or the canon of Persian literature. All teaching materials are available in English translation. Students are expected to attend seminars and take part in discussions.

NELC 231 Modern Arabic Literature
This course is a study of modern Arabic literary forms such as the free verse poem, the prose poem, drama, the novel, and the short story. The class examines issues related to Arabic culture and identity in the modern and post-modern era through the study of Arabic literature. The aim of the course is to introduce students to key samples of modern Arabic literature which trace major social and political developments in Arab society. All readings will be in English translations. The class will also address the role of translation in shaping modern Arabic literary forms and creating the image of Arabic literature in other languages. Recent topics have included: Arab Women and War, Modernism and Arabic Poetry, The Arabic Free Verse movement.

NELC 235 Food in the Islamic Middle East: History, Memory, Identity
In the tenth century, a scholar named Ibn Sayyar al-Warrag produced an Arabic manuscript called Kitab al-Tabikh (The Book of Cooking). This volume, which compiled and discussed the recipes of eighth- and ninth-century Islamic rulers (caliphs) and their courts in Iraq, represents the oldest known surviving cookbook of the Arab-Islamic world. Many more such cookbooks followed; in their day they represented an important literary genre among cultured elites. As one food historian recently noted, there are more cookbooks in Arabic from before 1400 than in the rest of the world's languages put together. Ibn Sayyars cookbook can help us to think about the historical and cultural dynamics of food. In this class, we will focus on the Middle East across the sweep of the Islamic era, into the modern period, and until the present day, although many of the readings will consider the study of food in other places (including the contemporary United States) for comparative insights. The class will use the historical study of food and foodways as a lens for examining subjects that relate to a wide array of fields and interests. These subjects include economics, agricultural and environmental studies, anthropology, literature, religion, and public health. With regard to the modern era, the course will pay close attention to the consequences of food for shaping memories and identities including religious, ethnic, national, and gender-based identities particularly among people who have dispersed or otherwise migrated. It will also focus considerably on the politics of food, that is, on the place of food in power relations. Among the questions we will debate are these: How does food reflect, shape, or inform history? By approaching the study of Middle Eastern cultures through food, what new or different things can we see? What is the field of food studies, and what can it offer to scholars? What is food writing as a literary form, and what methodological and conceptual challenges face those who undertake it?
Taught by: Sharkey
Course not offered every year
Activity: Seminar

NELC 238 Introduction to Islamic Law
This course will introduce students to classical Islamic law, the all-embracing sacred law of Islam. Among the world's various legal systems, Islamic law may be the most widely misunderstood and even misrepresented; certainly, misconceptions about it abound. Islamic law is, however, the amazing product of a rich, fascinating and diverse cultural and intellectual tradition. Most of the readings in this course will be taken from primary sources in translation. Areas covered will include criminal law, family law, law in the Quran, gender and sexuality, the modern application of Islamic law, Islamic government and other selected topics.

NELC 239 Migration and the Middle East
This reading and discussion-intensive seminar examines the phenomenon of migration into, out of, within, and across the Middle East and North Africa. We will focus on the period from the late nineteenth century to the present, and will emphasize the cultural (rather than economic) consequences of migration. Along the way we will trace connections between the Middle East and other regions--notably the Americas, sub-Saharan Africa, South Asia, the Caucasus, and Western Europe. Readings are interdisciplinary and include works of history, anthropology, sociology, medical research, literature, political science, geography, and human rights advocacy. As students develop final projects on topics of their choice, we will spend time throughout the semester discussing tactics for research and writing.

NELC 241 Iraq: Ancient Cities and Empires
Iraq: Ancient Cities and Empires is a chronological survey of the ancient civilization that existed in the drainage basin of the Tigris and Euphrates Rivers from the early settled village farming communities of the 7th millennium BCE to the middle of the 1st millennium BCE, when Nebuchadnezzar II ruled Babylon and much of the Middle East. Though organized period by period, NELC 241 explores various social, political, economic, and ideological topics, exposing students to various strands of evidence, including settlement survey data, excavated architectural remains, artifacts, and documentary sources, as well as an eclectic mix of theoretical perspectives. The course aims to provide students with a strong foundation for the further study of the ancient and pre-modern Middle East.
Taught by: Zettler

Activity: Lecture
1 Course Unit

NELC 244 Reading Ancient Mesopotamia
An introduction to the literature of Ancient Mesopotamia. The literature of ancient Mesopotamia flourished thousands of years ago in a culture all of its own, yet the survival of hundreds of thousands of written records challenges us to read it and make sense of it without simply approximating it to the realm of our own understanding. How can we learn to do this? Situating our understanding of how we read and how we understand culture within an interdisciplinary range of literary-critical and analytic approaches, we will approach this question by immersing ourselves in the myths tales and mentalities that made Mesopotamian literature meaningful. To give us a measure of our progress we will bracket the semester by reading Gilgamesh which is never less than a great story, but which will take on new layers of meaning as the semester develops and we learn to read the text in more and more Mesopotamian ways. As we journey through these mysterious realms we will reflect not only Mesopotamia and its immortal literature but on what it means to read and understand any cultures other than our own.

NELC 320 Digital Exploration of the Past: Archives, Databases, Maps, and Museums
This course exposes students to digital methods for investigating past environments and societies, including digitization of analog records, the construction and querying of databases, and the creation of digital maps. The ultimate goal of the course will be to carry out a final project that benefits the Penn Museum and the public. In fall 2018, our exploration of digital methods will center around the archaeological site of Ur (Tell el-Muqayyar), located in southern Iraq. Ur was one of the earliest cities in the world, and, thanks to campaigns partly funded by Penn in the 1920s and 1930s, is one of the best-excavated sites in southern Mesopotamia. Here at Penn, we have unparalleled access to archival documentation and artifacts from the site. We will draw upon this access to contribute to an ongoing digital humanities project in the Penn Museum (the public "Ur Online" database). In the process, students will re-assess data that has the potential to change anthropological ideas about issues such as the environmental setting of the earliest cities and archaeological ideas about demographic and urban structure within the city of Ur itself. There are no prerequisites, but students must bring an interest in Mesopotamian archaeology and/or the origins of urbanism and be motivated to carry out individual and group research guided by the instructor & classmates.
Taught by: Hammer
Also Offered As: AAMW 619, NELC 620
Activity: Seminar
1 Course Unit

NELC 323 Origins of Art / Origins of Writing
Each of the earliest systems of writing had intimate and enduring ties to pictorial traditions. This seminar addresses the fundamental relationship between texts and visual imagery in the Mesopotamian, Egyptian, Chinese, and Maya traditions. The class will take a comparative approach to examine the parallel development of scripts and images, extending from their earliest beginnings to their on-going lives as mature systems. As the individual scripts became more capable of representing speech, the subject matter, composition, and function of images changed, and one goal of this class is to identify these processes. Emphasis will be put on seeing text and image as collaborative and interactive constructions, in which parts of a single message can be encoded and presented in different ways. The class will make extensive use of the collections and the curatorial expertise of the Penn Museum.

Also Offered As: AFST 373, HIST 412
Activity: Seminar
1 Course Unit

NELC 335 Muslims, Christians, and Jews in the Middle East: Historical Perspectives
A reading- and discussion-intensive seminar that addresses several recurring questions with regard to the Middle East and North Africa. How have Islam, Judaism, and Christianity influenced each other in these regions historically? How have Jews, Christians, and Muslims fared as religious minorities? To what extent have communal relations been characterized by harmony and cooperation, or by strife and discord, and how have these relations changed in different contexts over time? To what extent and under what circumstances have members of these communities converted, intermarried, formed business alliances, and adopted or developed similar customs? How has the emergence of the modern nation-state system affected communal relations as well as the legal or social status of religious minorities in particular countries? How important has religion been as one variable in social identity (along with sect, ethnicity, class, gender, etc.), and to what extent has religious identity figured into regional conflicts and wars? The focus of the class will be on the modern period (c. 1800-present) although we will read about some relevant trends in the early and middle Islamic periods as well. Students will also pursue individually tailored research to produce final papers. Prior background in Islamic studies and Middle Eastern history is required. This class is intended for juniors, seniors, and graduate students.
Taught by: Sharkey
One term course offered either term
Also Offered As: HIST 479, JWST 335, NELC 535, RELS 311
Activity: Seminar
1 Course Unit
NELC 336 Nationalism and Communal Identity in the Middle East
This seminar views the phenomenon of nationalism as it affected the modern Middle East in the nineteenth and twentieth centuries. Together we will consider the diverse components of nationalism, including religion, language, territorial loyalty, and ethnicity, and test the thesis that nations are "imagined communities" built on "invented traditions." At the same time, we will examine other forms of communal identity that transcend national borders or flourish on more localized scales. This class approaches nationalism and communal identity as complex products of cultural, political, and social forces, and places Middle Eastern experiences within a global context. Students must take a survey of modern Middle Eastern history or politics before enrolling in this class. This class is intended for juniors, seniors, and graduate students.
Taught by: Sharkey
Course usually offered in fall term
Also Offered As: NELC 536
Prerequisites: NELC 102 or other relevant introductory courses on the Middle East.
Activity: Seminar
1 Course Unit

NELC 339 Descent to the Underworld in Ancient Near Eastern and Western Literature
From antiquity to the present the hero’s journey to the underworld, or the land of the dead, has offered poets and philosophers a metaphor to express our search for life's meaning. In antiquity that meaning was to be found by an extraordinary quest beyond the grave. In this course we will consider various interpretations what of this "katabasis” means within the context of our everyday struggle to find meaning.
Taught by: Foley
Also Offered As: CLST 339
Activity: Seminar
1 Course Unit

NELC 346 GIS for the Digital Humanities and Social Sciences
This course introduces students to theory and methodology of the geospatial humanities and social sciences, understood broadly as the application of Geographical Information Systems (GIS) and spatial analysis techniques to the study of social and cultural patterns in the past and present. By engaging with spatial theory, spatial analysis case studies, and technical methodologies, students will develop an understanding of the questions driving, and tools available for, humanistic and social science research projects that explore change over space and time. We will use ESRI's ArcGIS software to visualize, analyze, and integrate historical, anthropological, and environmental data. Techniques will be introduced through the discussion of case studies and through demonstration of software skills. During supervised laboratory sessions, the various techniques and analyses covered will be applied to sample data and also to data from a region/topic chosen by the student.
Taught by: Hammer
Also Offered As: ANTH 346, NELC 646
Activity: Lecture
1 Course Unit

NELC 359 Seminar in Modern Hebrew Literature
This course introduces students to selections from the best literary works written in Hebrew over the last hundred years in a relaxed seminar environment. The goal of the course is to develop skills in critical reading of literature in general, and to examine how Hebrew authors grapple with crucial questions of human existence and national identity. Topics include: Hebrew classics and their modern "descendants" autobiography in poetry and fiction, the conflict between literary generations, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students' literary understanding.
Taught by: Gold
Course usually offered in spring term
Also Offered As: NELC 659
Prerequisites: Hebrew 059 or the equivalent, per instructor’s evaluation
Activity: Seminar
1 Course Unit

NELC 362 Intro to Digital Archaeology
Digital methods allow archaeologists to approach research questions about the human past with increasing accuracies on larger datasets and at multiple scales. This class introduces students to the three main steps of digital archaeology: data management, analysis, and sharing. Data management involves the design, creation, and curation of digital objects that capture the archaeological process and evidence. Students will gain deep familiarity in working with the main types of digital archaeological data: structured data (relational databases), 3D models/spatial data, and raster images. The class will provide abundant hands-on experience with the latest equipment and software for working with many different kinds of data. We will learn about data analysis techniques through a close examination of a variety of case studies in the literature that demonstrate how other archaeologists have applied digital methods to their archaeological questions. Finally, we will discuss the importance of sharing data through open access data publication and we will apply our skills with structured data to existing online archaeological datasets.
The goal of this class is to prepare students to make methodological decisions during future research endeavors, both in the field and in the archaeological lab.
Taught by: Peter Cobb
Also Offered As: AAMW 562, ANTH 362, ANTH 562, CLST 362, CLST 562
Prerequisite: Prior archaeological classwork and/or experience preferred
Activity: Lecture
1 Course Unit

NELC 383 The Religious Other
Course explores attitudes toward monotheists of other faiths, and claims made about these "religious Others" in real and imagined encounters between Jews, Christians and Muslims from antiquity to the present. Strategies of "othering" will be analyzed through an exploration of claims about the Other's body, habits and beliefs, as found in works of scripture, law, theology, polemics, art, literature and reportage. Attention will be paid to myths about the other, inter-group violence, converts, cases of cross-cultural influence, notions of toleration, and perceptions of Others in contemporary life. Primary sources will be provided in English.
Taught by: Fishman
Course not offered every year

NELC 422 Intermediate Urdu Part II
This continuing second-year course allows students to continue improving their Urdu proficiency while also gaining a broad foundational understanding of Urdu society and culture throughout South Asia. The course provides students the tools needed to handle a variety of authentic written and spoken Urdu sources including film, music, media reports, folk tales, and simple literature. Students will also continue to increase their speaking and writing proficiency to be able to discuss a broad range of concrete, real-world topics. The course is designed for students with one year of previous Urdu or Hindi study or the equivalent proficiency.
For BA Students: Last Language Course
Taught by: Pien
Also Offered As: URDU 422
Activity: Seminar
1 Course Unit

NELC 434 Arabic Literature and Literary Theory
This course will explore different critical approaches to the interpretation and analysis of Arabic literature from pre-Islamic poetry to the modern novel and prose-poem. The course will draw on western and Arabic literary criticism to explore the role of critical theory not only in understanding and contextualizing literature but also in forming literary genres and attitudes. Among these approaches are: Meta-poetry and inter-Arts theory, Genre theory, Myth and Archetype, Poetics and Rhetoric, and Performance theory. This course in taught in translation.
Taught by: Fakhreddine
One-term course offered either term
Also Offered As: COML 353, COML 505
Activity: Lecture
1 Course Unit

NELC 437 Islamic Intellectual Tradition
This comprehensive survey of the traditions of rational thought in classical Islamic culture is distinguished by its attempt to contextualize and localize the history of what is best described as philosophy in Islam, including not only the Islamic products of the Hellenistic mode of thought but also religious and linguistic sciences whose methodology is philosophical. The course examines the influence of these different disciplines upon each other, and the process of the Islamic “aspecting” of the Greek intellectual legacy. The readings thus include not only the works of Hellenized philosophers (falsafis) of Islam, but also those of theologians (mutakallimun), logists (fiqh scholars), and grammarians (nahw/lughha scholars). No prerequisites. Additional advanced-level assignments can be given for graduate credit.
Taught by: Lowry
Course not offered every year
Activity: Seminar
1 Course Unit

NELC 450 Introduction to the Bible (The "Old Testament")
An introduction to the major themes and ideas of the Hebrew Bible (the Old Testament), with attention to the contributions of archaeology and modern Biblical scholarship, including Biblical criticism and the response to it in Judaism and Christianity. All readings are in English.
For BA Students: Humanities and Social Science S
Course usually offered in fall term
Also Offered As: JWST 150, NELC 150
Activity: Lecture
1 Course Unit

NELC 451 Jews and Judaism in Antiquity
A broad introduction to the history of Jewish civilization from its Biblical beginnings to the Middle Ages, with the main focus on the formative period of classical rabbinic Judaism and on the symbiotic relationship between Judaism, Christianity, and Islam.
Taught by: Dohrmann
Course usually offered in fall term
Also Offered As: HIST 139, JWST 156, NELC 051, RELS 120
Activity: Lecture
1 Course Unit

NELC 454 Spirit and Law
While accepting “the yoke of the commandments”, Jewish thinkers from antiquity onward have perennially sought to make the teachings of revelation more meaningful in their own lives. Additional impetus for this quest has come from overtly polemical challenges to the law, such as those leveled by Paul, medieval Aristotelians, Spinoza and Kant. This course explores both the critiques of Jewish Law, and Jewish reflections on the Law’s meaning and purpose, by examining a range of primary sources within their intellectual and historical contexts. Texts (in English translation) include selections from Midrash, Talmud, medieval Jewish philosophy and biblical exegesis, kabbalah, Hasidic haminies, Jewish responses to the Enlightenment, and contemporary attempts to re-value and invent Jewish rituals.
Taught by: Fishman
Course not offered every year
Also Offered As: JWST 320, JWST 520, RELS 321, RELS 520
Activity: Seminar
1 Course Unit

NELC 456 Great Books of Judaism (Fall 2018: Lifecycle in the Talmud)
The Babylonian Talmud, known simply as the Bavli, is the foundational legal and ethical document of rabbinic Judaism. It is one of the best read works of world literature, and it is the most widely disseminated and revered rabbinic work. It not only contains legal discussions and rulings but rather it also presents the worldview of the rabbis. This course will analyze and contextualize the perspectives of the Talmud towards the important phases of life. We will examine in-depth several Talmudic passages relating to the various stages of the human lifecycle: birth and naming of the child; circumcision; bar/bat mitzva and adulthood; earning a livelihood and choosing a career; marriage and divorce; procreation and raising children; death, burial, mourning and the belief in the resurrection of the dead among others. We will evaluate these teachings in light of other traditions and in their broader late antiquity and contemporary contexts. All texts will be read in their English translation but originals will also be provided.
For BA Students: Arts and Letters Sector
Course usually offered in fall term
Also Offered As: COML 057, JWST 151, NELC 156, RELS 027

NELC 458 Jewish Literature in the Middle Ages in Translation
Course explores the cultural history of Jews in the lands of Islam from
the time of Mohammed through the late 17th century (end of Ottoman
expansion into Europe) -- Iraq, the Middle East, al-Andalus and the
Ottoman Empire. Primary source documents (in English translation)
iluminate minority-majority relations, internal Jewish tensions (e.g.,
Qaraim), and developments in scriptural exegete, rabbinic law,
philosophy, poetry, polemics, mysticism and liturgy. Graduate students
have additional readings and meetings. Spring 2015

NELC 463 Literary Legacy of Ancient Egypt
This course surveys the literature of Ancient Egypt from the Old Kingdom
through the Graeco-Roman period, focusing upon theme, structure, and
style, as well as historical and social context. A wide range of literary
genres are treated, including epics; tales, such as the "world's oldest fairy
tale," poetry, including love poems, songs, and hymns; religious texts,
including the "Cannibal Hymn"; magical spells; biographies; didactic
literature; drama; royal and other monumental inscriptions; and letters,
including personal letters, model letters, and letters to the dead. Issues
such as literacy, oral tradition, and the question poetry vs. prose are also
discussed. No prior knowledge of Egyptian is required.
Taught by: Silverman
Course not offered every year
Also Offered As: NELC 061
Activity: Lecture
1 Course Unit

NELC 467 History of Egypt - New Kingdom
Covers principal aspects of ancient Egyptian culture (environment,
urbanism, religion, technology, etc.) with special focus on archaeological
data; includes study of University Museum artifacts. Follows
NELC 266/466 - History of Egypt taught in the fall semester.
Taught by: Wegner
Course not offered every year
Also Offered As: AFST 467

NELC 469 The Archaeology of Nubia
The course will examine the archaeology of Ancient Nubia from Pre-
history through the Bronze and Iron Ages, ca. 5000 BCE to 300 AD. The
course will focus on the various Nubian cultures of the Middle Nile, and
social and cultural development, along with a detailed examination of the
major archaeological sites and central issues of Nubian archaeology.
Taught by: Wegner
Course not offered every year
Activity: Lecture
1 Course Unit

NELC 481 Elementary Amharic I
The Elementary Amharic I course can be taken to fulfill a language
requirement, or for linguistic preparation to do research on Ethiopia/Africa-related topics. The course emphasizes communicative
competence to enable the students to acquire linguistic and extra-
linguistic skills in Amharic. The content of the course is selected from
various everyday life situations to enable the students to communicate in
predictable common daily settings. Culture, as it relates to language use,
is also part of the course content.

NELC 489 Medieval Islamic Art and Architecture
An introduction to the major architectural monuments and trends, as
well as to the best-known objects of the medieval (seventh-to-fourteenth-
century) Islamic world. Attention is paid to such themes as the continuity
of late antique themes, architecture as symbol of community and power,
and the importance of textiles and primacy of writing. Suitable for
students of literature, history, anthropology as well as art history.
Taught by: Holod
Course not offered every year
Also Offered As: AAMW 435, ARTH 435, COML 415
Activity: Lecture
1 Course Unit
NELC 518 Media and Culture in Contemporary Iran
This course is an introduction to the major cultural themes and trends of contemporary Iran. Through the lens of press, cinema, literature and drama, the course will examine the ways in which contemporary Iranian society has been subject to rapid change and transformation over the past century. This class is designed for both junior and senior students who are keen to better understand the cultural context of Iran as one of the most influential and significant countries in the Middle East.
Taught by: Shams Esmaeili
One term course offered either term

1 Course Unit

NELC 544 Reading Ancient Mesopotamia
An introduction to the literature of Ancient Mesopotamia.
Taught by: Tinney
One term course offered either term
Also Offered As: NELC 244
Activity: Seminar
1 Course Unit

NELC 550 The Bible in Translation
This course introduces undergraduates and graduate students to one specific Book of the Hebrew Bible. "The Bible in Translation" involves an in-depth reading of a biblical source against the background of contemporary scholarship. Depending on the book under discussion, this may also involve a contextual reading with other biblical books and the textual sources of the ancient Near East. Although no prerequisites are required, NELC 250 is a perfect follow-up course for NELC 150 "Intro to the Bible."
One term course offered either term
Also Offered As: COML 380, JWST 255, NELC 250, RELS 224
Activity: Seminar
1 Course Unit
Notes: May be repeated for credit.

NELC 552 Themes Jewish Tradition
Course topics will vary; they have included: Holy Men & Women (Ben-Amos); Rewriting the Bible (Dohrmann); Jewish Political Thought & Action (Fishman) When did the Bible become the Bible? What was the nature of canon and authority in early Israel and Judaism, and how did biblical communities think about their sacred texts? How and what did the Bible mean to ancient readers? The answers to these questions are varied and surprising. This course looks at early biblical and Jewish texts that both write and re-write the tradition's own central texts. We will think widely and creatively about ancient textuality, orality, interpretation, composition, and authority. Drawing on literary theory, the course will examine the ways that biblical and post-biblical literature from the Second Temple to the rabbinic period (with some forays into contemporary literature) manifest complex ideas about power, meaning, and religiosity in early Judaism.
Taught by: Ben-Amos/Dohrmann/Fishman
One term course offered either term
Also Offered As: NELC 252, RELS 129, RELS 523
Activity: Seminar
1 Course Unit
NELC 557 Seminar in Rabbinic Literature
Most of the foundational writings of rabbinic Judaism corpora of Midrash, Mishna, and the two Talmuds were in existence by the end of the sixth century CE. Yet, for several centuries thereafter, there is little evidence attesting to the lived nature of rabbinic culture and society. Course will focus on writings by Jews and about Jews, produced between the 7th and 10th centuries, complemented by secondary sources. Texts will include selections from archaeological inscriptions; Midrash; liturgical poetry; Targum; Masora; geonic responsa, writings by Muslims and by Church Fathers. While students must be able to read Hebrew, much class time will be devoted to the improvement of reading and comprehension skills. Undergraduates should seek permission of the instructor. Course usually offered in spring term
Also Offered As: HEBR 557, JWST 553, RELS 557
Prerequisites: Proficiency in Hebrew and/or Greek recommended. Undergraduates need permission to enroll.
Activity: Seminar
1 Course Unit
Notes: May be repeated for credit

NELC 559 Introduction to Modern Hebrew Literature
The objective of this course is to develop an artistic appreciation for literature through in-depth class discussions and text analysis. Readings are comprised of Israeli poetry and short stories. Students examine how literary language expresses psychological and cultural realms. The course covers topics such as: the short story reinvented, literature and identity, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students' literary understanding.
For BA Students: Arts and Letters Sector
Taught by: Gold
Course usually offered in fall term
Also Offered As: COML 266, JWST 259, NELC 259
Prerequisites: Hebrew 054 or the equivalent, per instructor's evaluation
Activity: Seminar
1 Course Unit

NELC 562 Intro to Digital Archaeology
Digital methods allow archaeologists to approach research questions about the human past with increasing accuracy using larger datasets and at multiple scales. This class introduces students to the three main steps of digital archaeology: data management, analysis, and sharing. Data management involves the design, creation, and curation of digital objects that capture the archaeological process and evidence. Students will gain deep familiarity in working with the main types of digital archaeological data: structured data (relational databases), 3D models/spatial data, and raster images. The class will provide abundant hands-on experience with the latest equipment and software for working with many different kinds of data. We will learn about data analysis techniques through a close examination of a variety of case studies in the literature that demonstrate how other archaeologists have applied digital methods to their archaeological questions. Finally, we will discuss the importance of sharing data through open access data publication and we will apply our skills with structured data to existing online archaeological datasets. The goal of this class is to prepare students to make methodological decisions during future research endeavors, both in the field and in the archaeological lab.
Taught by: Peter Cobb
Prerequisite: Prior archaeological classwork and/or experience preferred
Activity: Lecture
1 Course Unit

NELC 567 Seminar on Egyptian Archaeology and History
Specific topics will vary from year to year.
Taught by: Wegner
Course not offered every year
Activity: Seminar
1 Course Unit

NELC 568 Women in Ancient Egypt
This class will examine the many roles played by women in ancient Egypt. From goddesses and queens, to wives and mothers, women were a visible presence in ancient Egypt. We will study the lives of famous ancient Egyptian women such as Hatshepsut, Nefertiti and Cleopatra. More independent than many of their contemporaries in neighboring areas, Egyptian women enjoyed greater freedoms in matters of economy and law. By examining the evidence left to us in the literature (including literary texts and non-literary texts such as legal documents, administrative texts and letters), the art, and the archaeological record, we will come away with a better understanding of the position of women in this ancient culture.
Course usually offered in spring term
Also Offered As: NELC 168
Activity: Lecture
1 Course Unit

NELC 582 Prose Narrative
Historical, literary, comparative, and ethnographic methods contribute to study of prose narratives which were told in oral societies in antiquity and in modern times and were documented in literary societies for different purposes. Oral storytellers, both professional and amateurs, performed them in private and public spaces. Their recording from antiquity to modern times became an integral element of modern life in general and in education and arts in particular. The storytellers, their performances in oral and literary cultures, their genres, and their symbolic meanings are the subjects of the course, together with the analytical methods that help mapping their distribution worldwide.
Also Offered As: FOLK 531
Activity: Seminar
1 Course Unit

NELC 606 Pastoral Nomadism in the Past and Present
Pastoral nomadism is a "third way" of human subsistence separate from farming and foraging. It is a sustainable human adaptation to grassland and arid environments practiced through particular technologies and domesticated animals. This course begins by examining the human ecology and social organization that emerge from mobile ways of life, drawing on modern, ethnographic, and archaeological examples of pastoral nomadic groups in the Middle East and Central Asia. Academic readings and ethnographic films will form the basis of discussions about several larger themes, including: the origins of pastoral nomadism and horse riding; the development of dairy-based foods and human adaptations allowing the digestion of lactose; the historical relationship between mobile groups of pastoralists and territorial states; popular perceptions of nomads in various forms of historical and modern media; and the influence of ideas about nomads on modern senses of heritage and nationalism in the Middle East and Central Asia.
Taught by: Pastoral Nomadism in the Past and Present
Also Offered As: ANTH 108, NELC 106
Activity: Seminar
1 Course Unit
NELC 617 Topics in the Art of Iran
Topic varies. Spring 2018: The pro-seminar will examine aspects of continuity and rupture in the visual culture(s) of the Iranian world. This is an opportunity for students whose preparations may be centered on other contiguous periods or regions to consider the manner in which Middle Asia and its rich visual cultures contributed to the forging of Late Antique and medieval Islamic visual expressions of kingship, territory and religion. The seminar will consider a range of materials from archaeological sites, rock reliefs and wall paintings to textiles, silver vessels, coins and ceramics, with special attention to materials excavated or otherwise held by the Penn Museum.
Taught by: Holod, Kuttner
Course not offered every year
Also Offered As: AAMW 537, ANCH 527, ARTH 537
Activity: Seminar
1 Course Unit

NELC 618 Iranian Cinema: Gender, Politics and Religion
This seminar explores Iranian culture, art, history and politics through film in the contemporary era. We will examine a variety of works that represent the social, political, economic and cultural circumstances of post-revolutionary Iran. Along the way, we will discuss issues pertaining to gender, religion, nationalism, ethnicity, and the function of cinema in present day Iranian society. Films to be discussed will be by internationally acclaimed filmmakers, such as Abbas Kiarostami, Mohsen Makhmalbaf, Rahshon Bani-Etemad, Tahmineh Milani, Jafar Panahi, Bahman Ghobadi, among others.
One-term course offered either term
Also Offered As: CIMS 118, COML 120, GSWS 118, NELC 118
Activity: Seminar
1 Course Unit

NELC 620 Digital Exploration of the Past: Archives, Databases, Maps, and Museums
This course exposes students to digital methods for investigating past environments and societies, including digitization of analog records, the construction and querying of databases, and the creation of digital maps.
The ultimate goal of the course will be to carry out a final project that benefits the Penn Museum and the public. In fall 2018, our exploration of digital methods will center around the archaeological site of Ur (Tell el-Muqayyar), located in southern Iraq. Ur was one of the earliest cities in the world, and, thanks to campaigns partly funded by Penn in the 1920s and 1930s, is one of the best-excavated sites in southern Mesopotamia. Here at Penn, we have unparalleled access to archival documentation and artifacts from the site. We will draw upon this access to contribute to an ongoing digital humanities project in the Penn Museum (the public "Ur Online" database). In the process, students will re-assess data that has the potential to change anthropological ideas about issues such as the environmental setting of the earliest cities and archaeological ideas about demographic and urban structure within the city of Ur itself. There are no prerequisites, but students must bring an interest in Mesopotamian archaeology and/or the origins of urbanism and be motivated to carry out individual and group research guided by the instructor & classmates.
Taught by: Hammer
Also Offered As: AAMW 619, NELC 320
Activity: Seminar
1 Course Unit

NELC 632 North Africa: History, Culture, Society
This interdisciplinary seminar aims to introduce students to the countries of North Africa, with a focus on the Maghreb and Libya (1830-present). It does so while examining the region’s close economic and cultural connections to sub-Saharan Africa, Europe, and the Middle East.
Readings will include histories, political analyses, anthropological studies, and novels, and will cover a wide range of topics such as colonial and postcolonial experiences, developments in Islamic thought and practice, and labor migration. This class is intended for juniors, seniors, and graduate students.
Taught by: Sharkey
Course not offered every year
Also Offered As: AFRC 332, AFRC 632, NELC 332
Prerequisites: A university-level survey course in Middle Eastern, African, or Mediterranean history.
Activity: Seminar
1 Course Unit

NELC 633 Seminar in Selected Topics in Arabic Literature
This is the graduate seminar course in which a variety of aspects of Arabic literature studies are covered at the advanced graduate level. Students in this course are expected to be able to read large amounts of literature in Arabic on a weekly basis and to be able to discuss them critically during the class itself. Topics are chosen to reflect student interest. Recent topics have included: 1001 NIGHTS; the short story; the novel; MAQAMAT; classical ADAB prose; the drama; the novella; modern Arabic poetry.
Taught by: Allen
Course usually offered in spring term
Activity: Seminar
1 Course Unit

NELC 638 Approaches to Islamic Law
This course aims to introduce students to the study of Islamic law, the all-embracing sacred law of Islam. In this course we will attempt to consider many different facets of the historical, doctrinal, institutional and social complexity of Islamic law. In addition, the various approaches that have been taken to the study of these aspects of Islamic law will be analyzed.
The focus will be mostly, though not exclusively, on classical Islamic law. Specific topics covered include the beginnings of legal thought in Islam, various areas of Islamic positive law (substantive law), public and private legal institutions, Islamic legal theory, and issues in the contemporary development and application of Islamic law.
Taught by: Lowry
Course not offered every year
Also Offered As: LAW 737, RELS 648
Prerequisites: Some background knowledge about Islam is an asset.
Activity: Seminar
1 Course Unit
NELC 641 Iraq: Ancient Cities and Empires
This course consists of an analytical survey of civilization in the ancient Mesopotamia from prehistoric periods to the middle centuries of the first millennium B.C. A strong focus is placed on Mesopotamia (Iraq, eastern Syria) proper; but it occasionally covers its adjacent regions, including Anatolia (Turkey), north-central Syria, and the Levantine coast. As we chronologically examine the origin and development of civilization in the region, various social, political, economic, and ideological topics will be explored, including subsistence, cosmology, writing, trade, technology, war, private life, burial customs, and empire. Based on both archaeological and historical evidence, these topics will be examined from archaeological, anthropological, historical and art historical perspectives. Students will be exposed to a variety of theoretical approaches and types of relevant evidence, including settlement survey data, excavated architectural remains and artifacts, and written documents. The course aims to provide students with a strong foundation for further study in Near Eastern civilization.
Taught by: Zettler
Course not offered every year
Also Offered As: ANTH 236, NELC 241
Activity: Lecture
1 Course Unit

NELC 646 GIS for the Digital Humanities and Social Sciences
This course introduces students to theory and methodology of the geospatial humanities and social sciences, understood broadly as the application of Geographical Information Systems (GIS) and spatial analysis techniques to the study of social and cultural patterns in the past and present. By engaging with spatial theory, spatial analysis case studies, and technical methodologies, students will develop an understanding of the questions driving, and tools available for, humanistic and social science research projects that explore change over space and time. We will use ESRI's ArcGIS software to visualize, analyze, and integrate historical, anthropological, and environmental data. Techniques will be introduced through the discussion of case studies and through demonstration of software skills. During supervised laboratory sessions, the various techniques and analyses covered will be applied to sample data and also to data from a region/topic chosen by the student.
Taught by: Hammer
Also Offered As: NELC 346
Activity: Lecture
1 Course Unit

NELC 659 Seminar in Modern Hebrew Literature
This course introduces students to selections from the best literary works written in Hebrew over the last hundred years in a relaxed seminar environment. The goal of the course is to develop skills in critical reading of literature in general, and to examine how Hebrew authors grapple with crucial questions of human existence and national identity. Topics include: Hebrew classics and their modern "descendants," autobiography in poetry and fiction, the conflict between literary generations, and others. Because the content of this course changes from year to year, students may take it for credit more than once. This course is conducted in Hebrew and all readings are in Hebrew. Grading is based primarily on participation and students' literary understanding.
Taught by: Gold
Course not offered every year
Also Offered As: NELC 359
Prerequisites: Hebrew 059 or the equivalent, per instructor's evaluation
Activity: Seminar
1 Course Unit

NELC 664 The World of Cleopatra
The figure of Cleopatra is familiar from modern stories, legends, and film. Was this famous woman a brazen seductress or a brilliant political mind? How many of these presentations are historically accurate? This class will examine the Ptolemaic period in Egypt (305-30 BCE), the time period during which Cleopatra lived, in an attempt to separate myth from reality. The Ptolemaic period is filled with political and personal intrigue. It was also a time of dynamic multiculturalism. Arguably one of the most violent and fascinating eras in ancient Egyptian history, the Ptolemaic period is largely unknown and often misunderstood. This course will examine the history, art, religion and literature of Egypt's Ptolemaic period which culminated in the reign of Cleopatra VII.
Taught by: House Wegner
Course not offered every year
Also Offered As: NELC 064
Activity: Lecture
1 Course Unit

NELC 666 History of Ancient Egypt
Review and discussion of the principal aspects of ancient Egyptian history, 3000-500 BC.
Taught by: Wegner
Course usually offered in fall term
Also Offered As: NELC 266
Activity: Lecture
1 Course Unit

NELC 668 Art and Architecture in Ancient Egypt
This course will be an introduction to the art, architecture and minor arts that were produced during the three thousand years of ancient Egyptian history. This material will be presented in its cultural and historical contexts through illustrated lectures and will include visits to the collection of the University Museum.
Taught by: Silverman
Course not offered every year
Also Offered As: NELC 068
Activity: Lecture
1 Course Unit

NELC 681 Topics in Anthropology and the Modern World
This course relates anthropological models and methods to current problems in the Modern World. The overall objective is to show how the research findings and analytical concepts of anthropology may be used to illuminate and explain events as they have unfolded in the recent news and in the course of the semester. Each edition of the course will focus on a particular country or region that has been in the news.
Taught by: Spooner
Course usually offered in spring term
Also Offered As: ANTH 100, ANTH 654, NELC 281, SAST 161
Activity: Lecture
1 Course Unit

NELC 686 Topics in Middle East History
Reading and discussion course on selected topics in Middle Eastern history.
Also Offered As: HIST 640
Activity: Seminar
1 Course Unit

NELC 731 Topics in Islamic Archaeology
Course not offered every year
Also Offered As: AAMW 738, ARTH 738
Activity: Seminar
1 Course Unit
NELC 999 Independent Study
Directed research or candidacy exam and proposal preparation.
One-term course offered either term
Activity: Independent Study
1 Course Unit

Network and Social Systems Engineering (NETS)

NETS 112 Networked Life
What kind of science is appropriate for understanding the Facebook?
How does Google find what you're looking for... and exactly how do they make money doing so? What properties might we expect any social network to reliably have, and are there simple explanations for them? How does your position in an economic network (dis)advantage you? How are individual and collective behavior related in complex networks? What might we mean by the economics of spam? What do game theory and the Paris subway have to do with Internet routing? Networked Life looks at how our world is connected -- socially, economically, strategically and technologically -- and why it matters.
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NETS 150 Market and Social Systems on the Internet
Want to understand the sociological and algorithmic aspects of friend recommendation? Want to know how Google decides what 10 answers to return, out of the 10 million matching results? Want to understand how search engines have revolutionized advertising? Then this is the course for you! NETS 150 provides an overview of the issues, theoretical foundations, and existing techniques in networks (social, information, communication) and markets on the Internet. Subsequent NETS courses are available for students wishing to explore any of these topics in greater detail.
Activity: Lecture
1 Course Unit

NETS 213 Crowdsourcing and Human Computation
Crowdsourcing and human computation are emerging fields that sit squarely at the intersection of economics and computer science. They examine how people can be used to solve complex tasks that are currently beyond the capabilities of artificial intelligence algorithms. Online marketplaces like Mechanical Turk and CrowdFlower provide an infrastructure that allows micropayments to be given to people in return for completing human intelligence tasks. This opens up previously unthinkable possibilities like people being used as function calls in software. We will investigate how crowdsourcing can be used for computer science applications like machine learning, next-generation interfaces, and data mining. Beyond these computer science aspects, we will also delve into topics like prediction markets, how businesses can capitalize on collective intelligence, and the fundamental principles that underlie democracy and other group decision-making processes.
One-term course offered either term
Prerequisite: CIS 120 or prior programming experience
Activity: Lecture
1 Course Unit

NETS 312 Theory of Networks
Want to understand how memes spread across the Internet? How organisms exhibit flocking behavior? How the structure of a network can help predict behavior among the nodes? This course is a rigorous study of the structure and function of complex networks. From World Wide Web to networks of banks and lenders that form the financial sector, to friendship networks that influence our opinion and everyday decision-making, networks have become an integral part of our daily lives.
One-term course offered either term
Activity: Lecture
1 Course Unit

NETS 412 Algorithmic Game Theory
How should an auction for scarce goods be structured if the sellers wish to maximize their revenue? How badly will traffic be snarled if drivers each selfishly try to minimize their commute time, compared to if a benevolent dictator directed traffic? How can couples be paired so that no two couples wish to swap partners in hindsight? How can you be as successful as the best horse-racing expert at betting on horse races, without knowing anything about horse racing? In this course, we will take an algorithmic perspective on problems in game theory, to solve problems such as the ones listed above. Game theory has applications in a wide variety of settings in which multiple participants with different incentives are placed in the same environment, must interact, and each "player"’s actions affect the others.
One-term course offered either term
Activity: Lecture
1 Course Unit
Neuroscience (NGG)

NGG 510 Neurotransmitter Signaling & Neuropsychopharmacology
The goals of this course are threefold: 1. Provide an overview of major psychiatric disorders. 2. Provide in-depth information on neurotransmitters, emphasizing their role in new molecular information on how neurons function and communicate, as well as the basis for psychotherapeutics (one class per week). 3. Develop skills to appreciate, present, and evaluate the current literature in neurotransmitter signaling and neuropsychopharmacology (one class per week).
Taught by: Steve Thomas, Chris Pierce, Wade Berrettini, Liz Heller-Mesznik
Course offered spring; even-numbered years
Also Offered As: PHRM 510
Activity: Lecture
1 Course Unit

NGG 521 Brain Computer Interface
This course is geared to advanced undergraduate and graduate students interested in understanding the basics of implantable neuro-devices, their design, practical implementation, approval, and use. Reading will cover the basics of neuro signals, recording, analysis, classification, modulation, and fundamental principles of Brain-Machine Interfaces. The course will be based upon two weekly lectures and "hands on" weekly assignments that teach basic signal recording, feature extraction, classification, and practical implementation in clinical systems.
Assignments will build incrementally toward constructing a complete, functional BMI system. Fundamental concepts in neurons, hardware and software will be reinforced by practical examples and in-depth study.
Guest lectures and demonstrations will supplement regular lectures.
Also Offered As: BE 521
Prerequisites: BE 301 (Signals and Systems) or equivalent, computer programming experience, preferably MATLAB (e.g., as used in BE labs, BE 209/210/310). Some basic neuroscience background (e.g., BIOL 215, BE 305, BE 520, NGG core course), or independent study in neuroscience is required. This requirement may be waived based upon practical experience on a case by case basis by the instructor.
Activity: Lecture
1 Course Unit

NGG 534 Seminar in Current Genetics Research
In this course we will focus on examples of human disease gene models and examine how these genetic model systems can be used to learn more about how and why a disease occurs and how it might be better diagnosed or treated. The course will meet once a week for 1.5 - 2.0 hours. Prior to each class, the student discussion leader for the week is expected to meet at least once with the assigned faculty preceptor to discuss their presentation.
Taught by: Thomas Jongens
Course usually offered in spring term
Also Offered As: CAMB 534
Activity: Seminar
1 Course Unit

NGG 572 Electrical Language of Cells
This course introduces students to high-speed electro-chemical signaling mechanisms that occur in nerve and other excitable cells during normal activity. Topics considered in substantial detail include: a) basic description of the passive and active membrane electrical properties; b) the molecular architecture and functional role of ion channels in cell signaling; c) the role of the calcium ion as an ubiquitous chemical messenger, with applications to neurosecretion; d) excitatory and inhibitory transmission in the central nervous system; e) sensory transduction, as illustrated by the visual, olfactory, and auditory pathways. The course assumes a standard background in cell biology, as well as basic concepts from college physics and college calculus.
Taught by: Toshinori Hoshi, Doug Coulter
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NGG 573 Systems Neuroscience
This course provides an introduction to what is known about how neuronal circuits solve problems for the organism and to current research approaches to this question. Topics include: vision, audition, olfaction, motor systems, plasticity, and oscillations. In addition, the course aims to provide an overview of the structure of the central nervous system.
A number of fundamental concepts are discussed across topics, such as: lateral inhibition, integration, filtering, frames of reference, error signals, adaptation. The course format consists of lectures, discussions, readings of primary literature, supplemented by textbook chapters and review articles.
Taught by: Yale Cohen, Christopher Pierce
Course usually offered in spring term
Also Offered As: PSYC 609
Activity: Lecture
1 Course Unit

NGG 575 Neurobiology of Learning and Memory
This course focuses on the current state of our knowledge about the neurological basis of learning and memory. A combination of lectures and discussions will explore the molecular and cellular basis of learning in invertebrates and vertebrates from a behavioral and neural perspective. This course is intended for upper level undergraduate and graduate students.
Taught by: Hilary Gerstein
Course offered fall; odd-numbered years
Also Offered As: BIBB 442, BIOL 442, PSYC 421
Activity: Seminar
1 Course Unit
NGG 578 Advanced Topics in Behavioral Genetics
The first half of this course focuses on the use of genetic techniques to study the molecular and cellular bases of behavior. Reverse genetic approaches utilizing gene knockout and transgenic technology and forward genetic approaches using mutagenesis and quantitative genetic techniques will be discussed, as well as application of these studies to different model organisms. Genetic approaches to behavior and complex disease in humans will be illustrated with a lecture on neurodegenerative disorders. The second half of this survey course will provide an introduction to autism and other neurodevelopmental disorders. The class will include clinical descriptions of autism as well as closely related disorders such as Fragile X syndrome for which there are now well developed model systems. It will be team taught by experts in each of the content areas covered including psychology, neurology, genetics, animal modeling, cognitive neuroscience. The scope will be from genes to brain to behavior to treatment.
Taught by: Maja Bucan, Robert Schultz
Course offered spring; even-numbered years
Also Offered As: BIOL 488
Activity: Lecture
1 Course Unit

NGG 584 Neurobiology of Sleep and Arousal
The objectives of this course are to discuss mechanisms controlling sleep and arousal; to survey novel approaches to investigations in these areas; indicate the clinical relevance of these ideas where possible. The course is run in the style of a journal club where in each weekly session, students review and discuss influential papers in the field.
Taught by: David Raizen, Max Kelz
Course offered fall; even-numbered years
Activity: Lecture
1 Course Unit

NGG 588 Topics in Translational Neuroscience
This course will introduce graduate students in neuroscience and related disciplines to basic mechanisms and clinical features of major categories of nervous system disease. Each two-hour class will consist of two parts: a formal lecture followed by a seminar on the same topic. The formal basic science lectures will discuss genetic, molecular, and cellular mechanisms relevant to the disease examined while the seminar will illustrate how that information can be used in the clinical setting to promote further discovery and inform treatment. Some of the seminar will be associated with the Clinical Neuroscience Training Program (CNST) to provide the opportunity to interact with medical students and clinicians. The course will rely on assigned readings of primary research papers and discussions during class.
Taught by: Mariella De Biasi
Course usually offered in spring term
Activity: Lecture
1 Course Unit

NGG 594 Theoretical and Computational Neuroscience
This course surveys recent theoretical models of neural function. Students will be introduced to the basic techniques of modelling and computer simulation. Topics include models of synaptic plasticity, neuronal processing and oscillations, and models of various brain regions including cortex, thalamus, cerebellum, and hippocampus. Particular emphasis will be placed on models of the visual system from development to perceptual phenomena such as structure-from-motion, shape-from-shading, and stereopsis. Higher level processes including cortical integration will be considered. Applied neural network models of Hopfield, Sejnowski, and parallel distributed processing will also be presented.
Taught by: Vijay Balasubramanian
Course usually offered in spring term
Also Offered As: BIBB 585, PHYS 585, PSYC 539
Prerequisites: Previous coursework in physiology and in differential equations and some familiarity with computers, or instructor’s permission.
Activity: Lecture
1 Course Unit

NGG 597 Neural Development, Regeneration and Repair
The goals of this course are to examine the principles underlying nervous system development and to learn how understanding developmental mechanisms can inform strategies to promote regeneration and repair. This is not a survey course. Rather, the course will focus on selected topics, for which we will discuss the genetic, molecular and cellular strategies employed to study these problems in different model organisms. Emphasis is on how to interpret and critically evaluate experimental data. Each class is 1.5 hours in length. During the first hour and assigned paper will be discussed in detail. During the last 20-30 minutes, faculty will introduce methods, concepts and background information prentent to the paper that will be discussed at the following meeting.
Taught by: Greg Bashaw, Wenqin Luo
Course usually offered in fall term
Also Offered As: CAMB 597
Activity: Lecture
1 Course Unit

NGG 598 Advanced Systems Neuroscience
This course takes an integrative approach to the study of nervous system function. We will explore neural strategies for transforming sensory information into motor commands that specify specific behavior. We will use example systems of different modalities to explore concepts such as neural coding, action selection and learning etc., at levels ranging from synaptic input analysis at single sensory neurons and their effect on local network processing to larger scale population analyses. The course will consist of an introductory section to provide a conceptual framework for studying neural circuits at the systems level. This will be followed by additional sections that each explores specific neural systems within the context of this conceptual framework. Prerequisite: CORE III (NGG 573, Systems Neuroscience) or Permission of the Course Director.
Taught by: Marc Schmidt, Long Ding
Course offered fall; odd-numbered years
Prerequisite: Core III or Permission of course director
Activity: Lecture
1 Course Unit

NGG 600 Topics in Neurobiology of Disease 001: Neurodegenerative Diseases
Activity: Seminar
0.5 Course Units
NGG 615 Protein Conformational Diseases
Protein misfolding and aggregation has been associated with over 40 human diseases, including Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, prion diseases, alpha (1)-antitrypsin deficiency, inclusion body myopathy, and systemic amyloidoses. This course will include lectures, directed readings, and student presentations, to cover seminal and current papers on the cell biology of conformational diseases including topics such as protein folding and misfolding, protein degradation pathways, effects of protein aggregation on cell function, model systems to study protein aggregation and novel approaches to prevent protein aggregation.
Taught by: Yair Argov, Harry Ischiropoulos
Course offered fall; odd-numbered years
Also Offered As: BMB 518, CAMB 615
Activity: Lecture
1 Course Unit

NGG 618 Recovery After Neural Injury
The human nervous system is subject to several types of injury, (traumatic, ischemic, epileptic, demyelinating and/or inflammatory) that cause serious functional deficits. The mechanisms used by the central and peripheral nervous systems for functional recovery from these injuries will be described in this course. The molecular and cellular pathobiology of CNS injury will be reviewed and methods to enhance functional recovery will be discussed in detail. These include the limitation of secondary neuronal damage by pharmacological manipulations (neuroprotection), the promotion of regeneration, and plasticity, the application of bioengineering strategies, and the use of behavioral rehabilitative approaches. Course Format: a combination of lecture, journal club, and student presentations and classroom discussion.
Taught by: Akiva Cohen, D Kacy Cullen
Course offered spring; odd-numbered years
Activity: Lecture
1 Course Unit

NGG 695 Scientific Writing
This 3-credit course is intended to introduce students to basic scientific writing skills and is timed for second year graduate students preparing for qualifying examinations. Participants will review the general principles of clear, persuasive writing, and will apply these principles to writing for a scientific audience. Particular emphasis will be placed on conveying the significance of your research, outlining the aims, and discussing the results for scientific papers and grant proposals. The course will also provide an overview of the structure and style of research grant proposals and scientific manuscripts. Classes are highly interactive, and the majority of class time will be spent discussing student scientific writing. The goal of the course is to encourage active and open interaction among students. Ideal endpoints include improved self-editing, and development of effective strategies for offering and receiving editorial recommendations among peers.
Taught by: Harry Ischiropoulos, Joshua Ian Gold
Course usually offered in spring term
Prerequisites: NGG Pre-candidacy exam students only.
Activity: Seminar
0.5 Course Units

NGG 699 Lab Rotation
Activity: Laboratory
3 Course Units

NGG 706 Neureconomics
This seminar will review recent research that combines psychological, economic and neuroscientific approaches to study human and animal decision-making. This course will focus on our current state of knowledge regarding the neuroscience of decision-making, and how evidence concerning the neural processes associated with choices might be used to constrain or advance economic and psychological theories of decision-making. Topics covered will include decisions involving risk and uncertainty, decisions that involve learning from experience, decisions in strategic interactions and games, and social preferences.
Taught by: Joseph Kable

Nonprofit Leadership (NPLD)

NPLD 510 Social Innovation
This is a class focused on understanding how innovation plays a central role in public problem solving. We will explore how social entrepreneurs develop their ideas, define intended impact, market their solutions, understand competition, and collaborate with other actors. At the end of the course, students will have mastered a set of conceptual tools that will allow them to be effective problem solvers in diverse settings throughout their careers. The course has five core objectives: 1) To introduce students to the concepts and practices of social entrepreneurship; 2) To introduce students to the components of a successful social enterprise; 3) To equip students with the tools to be able to accurately identify and assess innovation and impact in social enterprises; 4) To train students to view the world from a perspective of social innovation; and 5) To empower students to develop their own innovative solutions to difficult social problems around the world.
Taught by: Frumkin
Course usually offered in spring term
Activity: Lecture
1 Course Unit
Notes: Open to graduate and undergraduate students
NPLD 561 Nonprofit Branding
This course will provide the tools and framework for helping to understand the role that marketing and brand building can play in the nonprofit sector. As such, we will create a shared understanding of the key concepts that help define branding and the classic elements of marketing that will serve as a foundation for discussion and analysis throughout the semester. We will identify the fundamental differences that nonprofit organizations face in building their brands and how those challenges differ from traditional for-profit brand building. We will identify tools and frameworks that brands/organizations can use to help design and implement marketing strategy. We will utilize current and relevant case studies that help demonstrate the core concepts of this course. Taught by: Rhode
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: half credit course

NPLD 562 (Almost) Everything You Need to Know About Nonprofit Law
This half credit course will provide a basic understanding of the law that applies to nonprofit organizations, with an emphasis on the law affecting 501(c)(3) public charities. It will focus on ways to obtain and maintain federal tax exempt status, including issues of private inurement and private benefit, limits on advocacy, lobbying and electioneering, unrelated business income tax, and excess benefits taxes. It will show how legal structure and governance procedures affect the answer to the questions "Whose Organization Is It?" Students will review bylaws of multiple organizations to see how differences in structure reflect the great diversity of nonprofits and why "one size does not fit all" within the sector. They will learn how to avoid bad legal drafting that can create problems for dysfunctional organizations. The course will explain the fiduciary duty of officers and directors, explore the extent of potential personal liability, and review necessary insurance and indemnification. It will review Form 990 publicly available tax returns of multiple nonprofits to see why a tax return may be a nonprofit's most important public relations document. It will also review the basics of charitable giving through a mock meeting of university development officers, outline the concepts of planned giving, and discuss the requirements for charitable solicitation registration at the state level. It will explain the legal requirements for maintaining endowments and discuss a series of ethical issues that can face nonprofit executives and their lawyers.
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

NPLD 563 Raising Philanthropic Capital
Americans gave more than $350 billion to nonprofit organizations last year, the highest total ever recorded. Now, more than ever, it is crucial that nonprofit leaders master the art and science of raising philanthropic capital. Participants in this innovative class will: 1) acquire an understanding of the nonprofit funding landscape; 2) learn proven and creative strategies to secure investments; 3) gain the experience of giving and motivating charitable commitments; and 4) receive peer evaluation and professional consulting feedback. This experiential and interactive learning course will provide students an opportunity to evaluate a nonprofit organization endeavoring to attract voluntary support, and coach students to think through and develop the ideas, skills, and tools required to participate personally in today's philanthropic market.
Taught by: Hagin
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

NPLD 564 Social Entrepreneurship at the Bottom of the Pyramid
This half credit course will offer a broad and pragmatic perspective on social impact at the Bottom of the Pyramid. The early part of the course will focus on general characteristics, challenges, and opportunities of resource-poor settings and high-uncertainty environments. The bulk of the course will focus on tools and frameworks designed to operationalize such Social Impact initiatives. The course is aimed at students with no mod experience in entrepreneurship/international development. Students with extensive work experience in for-profits, nonprofits, NGOs, or development work are most welcome.
Taught by: Thompson
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

NPLD 565 Financial Management of Nonprofits
The half credit class will provide students with the ability to use the financial tools of cash flow, budgeting and forecasting models to assist in strategic thinking as it relates to a nonprofit organization. In addition, the class will provide tools that can be used to follow implementation of such strategies including: personal cash flow; basic financial statements; supplemental schedules; and cash flow, budgeting, and forecasting.
Taught by: Boylston
Course usually offered in spring term
Activity: Lecture
0.5 Course Units

NPLD 566 Social Media Strategies
This course is intended as an introduction to strategic use of social media for social ventures. Many of you already use social media platforms in your personal lives, and have developed an intuitive understanding of how they work, and use them reflexively. If you're unfamiliar with various social media venues, that's ok! Many social media platforms will be described briefly in the lectures, but the course is not intended as a how-to for using them. We suggest that if you're new to the various social media platforms mentioned, that you jump in and try them out! These platforms are designed for individuals with all levels of technical proficiency, and they're designed to be inviting. You might find that with only a bit of effort that you become comfortable with them quickly. We expect that, regardless of your skill level, comfort, and current personal use of social media, you will gain real value from this course. Much of this value relates to conveying an understanding of how to use these tools strategically, and on behalf of a social venture or a social cause you care about. This sort of use of social media is significantly different than the way you would use it in your personal life. We hope, as you move through this course, you will wonder: 1) What does it mean to craft the voice of an institution? 2) What is it like to speak in the voice of an institution instead of my own? 3) How could one possibly develop a strategic plan to organically and authentically engage a community? 4) How do you define, find, and build community? 5) More than retweets and likes, what is engagement, how do you measure it, and how do you create engagement to spark social change?
Course usually offered in fall term
Activity: Online Course
0.5 Course Units
Notes: Open only to students in the hybrid NPLD program

2018-19 Catalog | Generated 02/28/19
NPLD 580 Effective Governance Practices for Nonprofits
Effective governance relies upon consistent and ethical board leadership, yet nonprofit organizations that exemplify truly model governance are few and far between. This course introduces students to broad frameworks of governance, but will focus most deeply on the human dimensions of board leadership. In particular, we will examine real examples and cases of moral and ethical dilemmas faced by nonprofit boards and executive leaders, and the nuanced practices required to achieve effective board governance. This will involve a careful look at several real cases, as well as guest lectures from 3-4 different nonprofit board and CEO leaders. The invited leaders will use their own experiences to guide students through some of the most challenging ethical and managerial situations that can be encountered, with the goal of providing a practical grounding for students who expect to contribute to nonprofit leadership in their careers - either as executive staff or as board members.
Taught by: Shmavonian
Course usually offered in fall term
Activity: Lecture
0.5 Course Units
Notes: 5 cu course

NPLD 582 NGOs and International Development
The course will offer a broad perspective on international development, aid, and the roles of NGOs and social enterprises. The latter half of the course will focus on issues in NGO management: fundraising, staff (expatriate and local), monitoring, and evaluation (including randomized controlled trials). The course is aimed at students with no to moderate experience in international development, but students with extensive work experience with NGOs or development work are also welcome.
Taught by: Thompson
Course usually offered in fall term
Activity: Lecture
1 Course Unit

NPLD 585 Social Impact Lab: Grand Canyon
This is a 5-day, off-site, intensive service-learning course in social innovation. Students will learn how innovation and entrepreneurship play a central role in public problem solving. We will explore how social entrepreneurs co-develop new ideas with key stakeholders, articulate problems and solutions, define intended impact, understand competition, and collaborate with other actors. At the end of the course, students will have mastered a set of conceptual tools and strategies that will allow them to be effective problem solvers in diverse settings throughout their careers. Bring your purpose, passions, and pet societal challenges to share. The course has five objectives: 1) To introduce students to the concepts and practices of social entrepreneurship; 2) To introduce students to the components of a successful social enterprise; 3) To train students to view the world from a perspective of social innovation; 4) To encourage and empower students to develop their own innovative solutions to different social problems around the world; 5) To introduce students to real social issues and social innovations in a real-world setting.
Activity: Lecture
1 Course Unit
Notes: Application required; course meets in Grand Canyon with some pre-trip course sessions; program fee applies

NPLD 587 Interpersonal Dynamics in Nonprofits That Thrive
This course is designed for interdisciplinary students with an enthusiastic interest in cultivating flourishing organizations, engaged stakeholders, and inspiring leaders across sectors and especially within nonprofits. Over the past several years, the field of Positive Organizational Scholarship (POS) has proliferated, yielding a compelling body of knowledge on how and when people thrive at work. This course focuses on both the theoretical and practical insights that can be gained from cutting-edge POS research and applied to help practitioners enrich people’s experiences at work. Special attention is placed on how this wisdom applies not only across sectors but also specifically to the nonprofit organizational context. The course is built upon a foundation of experiential learning, such that students can expect to experiment and apply course concepts in their own lives throughout the semester.
In other words, students will start with themselves as the first site of learning and development. The experiential community is enhanced further with team projects where students assess and consult with local nonprofit organizations. These team projects culminate in students presenting to their actual nonprofit organizations their recommendations for enhanced strategy and practices. In particular, the learning objectives of the course provide students with: 1) Techniques and real-world experience in using positive leadership concepts to enrich one’s own career, relationships, and life; 2) Ability to identify opportunities to use positive leadership practices in the workplace to enhance stakeholder engagement, individual and organizational performance, and collective impact; 3) Tools for applying positive leadership concepts in nonprofits, as well as all other organizational domains (e.g. business, government, coaching, the family etc.); 4) Research and consulting experience with a local nonprofit organization.

NPLD 589 Ethics and the Pursuit of Social Impact
Leaders of organizations must often make difficult decisions that pit the rights of one set of stakeholders against another. Having multiple stakeholders or bottom-lines brings with it challenges when conflicts arise, with the perennial question of whose rights/benefits prevail? What trade-offs need to be made between multiple bottom lines? Does the mission of the organization prevail over the privileges of employees/ clients? To what extent can large donors influence the mission of the organization? What is an appropriate social return on investment? This course will introduce the factors that influence moral conduct, the ethical issues that arise when pursuing social goals, and discuss the best ways to promote ethical conduct within such organizations. The course will use specific case studies, real and hypothetical, to analyze a variety of ethical issues that arise (including finance, governance, accountability, fundraising, labor (paid and unpaid), client groups, and service provision) among the multiple stakeholders. This course is offered in the fall semester and will conclude by discussing ways that organizations can prevent and correct misconduct, develop a spirit of ethical behavior and institutionalize ethical values in the organization’s culture.

Course usually offered in fall term
Activity: Lecture
1 Course Unit
Notes: Section 002 open only to students in the hybrid NPLD program
NPLD 590 Social Finance
Economic analysis and financial accounting are like languages: fluency comes with practice. In-class review of case studies (including in-person discussions with the representatives of diverse agencies and organizations featured in the case studies) will enable students to test and develop their capacity for applying conceptual tools and analytical methods to the sometimes messy and always complicated, real-life situations. The course objective is to develop theoretical understanding, critical judgment, and practical skills for sensitive and effective engagement with financial and economic matters of significance. Students will learn: (a) different ways of thinking about the economic foundations of social policy, (b) the basic terminology, tools, and methods for analyzing the financial statements of a wide range of organizations, and (c) accounting procedures for business, government, and organizational operations, policies, and practices.
Taught by: Lamas
Course usually offered in fall term
Also Offered As: NPLD 790
Activity: Lecture
1 Course Unit
Notes: The course is open to students across the University. All graduate students who take this course must register under NPLD 790. All undergraduate students must register under NPLD 590.

NPLD 591 Change Making: Personal Traits and Professional Skills
Over the past decade, researchers have identified some of the key skills that people need to succeed in their work and in their lives. These are skills that anyone can develop with practice. In this class, we will teach three of the key skills: resilience (the ability to thrive in difficult times); creativity (the ability to come up with innovative solutions to problems); and productivity (the ability to make the best use of your time and find balance). This summer session will take place through dynamic, interactive workshops. During the first session we will learn the key skills. Over the course of the next three weeks, we will practice these skills to see significant improvement in important areas of our daily lives. By the final day of class, we will talk about how to sustain these gains in our personal and professional lives long after the course has ended. This course is not a traditional lecture course. While we will review the best scientific research on the skills for effective change makers, the main part of the course is devoted to practicing these skills. In other words, this is a highly experiential, interactive, and dynamic course!
